to say, along these lines, in recalling a precedent in this country of some years ago, undoubtedly within the recollection of many hon. members sitting in this House, that the Canadian Pacific Railway was projected by a corporation which is now perhaps the greatest corporation in the civilized world. It had its conception and birth in this House of Commons. At the time it was projected and at the time it was partially put through, what happened in so far as what was given to that railway was concerned? There was given to that railway $25,000,000 in cash and millions of acres of land. I have endeavoured to show by figures that in 1903 the resources and production of this country were vastly different from what they were in 1908. How much different were they when the Canadian Pacific Railway was first projected? Then it was that the west was absolutely or practically unknown; then it was that we knew not what we had west of Lake Superior; then it was that west of Lake Superior we had from 20,000 to 30,000 of a population, and then it was that in British Columbia we had a population of whites numbering about 10,000 souls. I pay this tribute to him when I say as a Canadian that Sir John Macdonald was the very personification of that Canadianism that was in him when he stood behind that project. Although it was objected to, not wisely objected to as we know by after events, he stood behind that project, he showed the faith that was in him and the Canadian Pacific Railway has gone on until it has become the very greatest corporation on earth. I say to this country and to the House of Commons, that there is no reason why, with the development that is taking place in that western country and in those portions of the Dominion that have not yet been exploited, the Grand Trunk Pacific should not be just as great a corporation and should not enure just as much to the benefit of Canadians as the Canadian Pacific Railway. That, to my mind, is the way that this project should be looked at. Twenty-five millions in cash and millions of acres of land were given to that great corporation. The Canadian Pacific Railway started and the Canadian Pacific Railway met the same fate as every enormous undertaking must and will meet, I venture to say, for many years to come; aye, practically for all time to come. Estimates were made, estimates were brought down, work went on but the estimates were not complete and what happened?—simply what is happening to-day in the case of the National Transcontinental Railway, although not to such a great extent. The Canadian Pacific Railway found that obstacles, arose; that their estimates had not been sufficient; that they could not complete their work without aid from the Dominion of Canada and they came to this parliament and asked for a loan of $30,000,000. That was in 1885, and again I say the conditions then, proportionately speaking, were absolutely not to be compared with the conditions that at present exist and have existed for some years past in the Dominion of Canada. Yet, there was no hon. gentleman on the other side of the House that did not rise in his place and say that in so far as that $30,000,000 loan went it should absolutely be given to that railway for the purpose of carrying it to completion. They gave good and cogent reasons for it. They said that the $30,000,000 should be granted, and the $30,000,000 was granted with the result that the great Canadian Pacific Railway was completed and it stands to-day a monument to Canada. What did Sir Charles Tupper, a gentleman whom hon. gentlemen on the other side of the House revere and honour, have to say in so far as the Canadian Pacific loan of $30,000,000 was concerned? Speaking in 1884, as reported in 'Hansard' of that year, vol. 1, page 105, he made these remarks:

> But while they do not ask the House to give them a single additional dollar, they ask us to use the credit of this country, to obtain the means of accomplishing this great national work by the end of 1885, and that without imposing the slightest shadow of a shade of additional burden upon the government, or upon the country for the repayment of every dollar by the time the contract was to be completed, 1st May, 1891. I say that this is the position in which they are—honourable gentlemen opposite will not controvert the soundness of that position, we should not hesitate a single moment in giving that measure our support.

That is what Sir Charles Tupper said. Then let us see what was said by an hon. gentleman who now sits in this House and who represents the constituency of North Toronto (Mr. Foster), and let me say that the conditions are absolutely on all fours to-day with those which existed in 1884. As reported in 'Hansard,' vol. 1, 1884, page 242, that hon. gentleman said:

> Let us suppose that the hon. gentleman who sits in his seat before me, smiling so complacently, should engage a contractor to build his house, that the contractor had started upon the house, that he had made his plans and calculations for raising money, but found when the house was three-fourths completed, that his plans had some how or other not turned out as he anticipated—suppose he came to the hon. gentleman and said, Sir, you see the amount of material I have, the amount of property I possess, I want an advance of money from you, of a loan of so many thousand dollars. I have property good and realizable to the extent of five times the amount, and, if you will give me that loan, I will finish the contract in two months instead of eight, and I will pay you a percentage on your money as large as you can get elsewhere—would the hon. gentleman be justified in stating to his neighbour that this contrac-

tor was down on his knees before him asking for money? I think not, and I take it that this is an exactly similar or nearly similar case in point.

There we are. We are asked here, as I submit, for a loan on sufficient security. The policy of the government was submitted to the people, the people said build the road as quickly as possible, and, in order to carry out that mandate, this loan is being asked for. The cases are identical. Then again what did the hon. member for North Toronto say, as reported at page 243 of 'Hansard,' 1884, vol. 1:

What he meant to say was this, that the Conservative party in this railway policy had a record which had gone before the country, and that record should not be falsified by their not carrying out, to the very letter, the idea with which they started, and with which they went before the people. What was that policy? The policy of the Liberal Conservative party has been: a railway—a railway on Canadian territory—a railway completed just as quickly as it possibly can be completed.

Again I say the cases are absolutely on all fours, and we are simply, if it can be put in that way, proving our case out of the hon. gentleman's own mouth.

Mr. GEO TAYLOR. Would the hon gentleman kindly read what his leader said in reply?

Mr. PARDEE. I am not particularly anxious about that. The hon gentleman had better take his medicine as it comes ; it will do him good.

Mr. GEORGE TAYLOR. I was in the House then and I took my medicine.

Mr. PARDEE. That is all right; you are an ornament to the House; you voted for the $30,000,000.

Mr GEORGE TAYLOR. And your leader voted against it.

Mr. PARDEE. Further on the hon. member for North Toronto (Mr. Foster) said:

I say we have an honourable and honest right to state that the Conservative party has a policy and a record in this respect, a policy in favour of building this Transcontinental Railway as soon as it possibly can be built, and that the Conservative party by the vast majority by which it was returned in 1882 has been sent here commissioned to carry out that idea, and that they would fail in their duty to this House and to the people who sent them here by such a majority, if they did not carry out that idea with all the speed and promptness compatible with safety and security.

Let me quote further from his remarks along the same line because I think they are worthy of being known to the House at this juncture. Speaking of the fact that the proposed legislation to give a loan to the Canadian Pacific Railway had been before the country for a month or so, the hon. member for North Toronto said: ('Hansard' page 243, 1884):

For nearly two weeks that idea has been before the country.

So has this idea been before the country and for more than two weeks.

For nearly two weeks that idea has been before the country,—and yet I challenge the hon. gentleman to point to the record of a single public meeting which has been called to protest against the proposed action of this government. I say that is proof conclusive that the public mind has settled down to acquiescence in these proposals. Before his argument can have a feather's weight with the country or this House, the hon. gentleman will have to get up an agitation outside the party press, and show a spontaneous uprising of the people here and there throughout the country in protest against these terms.

And this resolution which to-day has been introduced by the Minister of Finance has been before the country for many days, the terms of it have been perfectly well known, there has been no uprising by the people in any section of the country against it; on the contrary there has been acquiescence in this proposal because the people think to-day as they did on the 26th day of October last when they gave a mandate to the government to carry the Grand Trunk Pacific to completion. Again, speaking at page 247 'Hansard,' the hon. member for North Toronto said :

Then there was a hostile spirit. It was expressed in what way? It was exhibited by hostile combinations of rival roads in the great stock markets of the world. It was shown in hostile articles which were written from this country to American papers, and in telegrams sent from this country to American papers, and in cablegrams sent to the old country. In these and a hundred different ways, the fact is as clear as the sun at noonday that there were hostile combinations, that there was hostility both at home and abroad, and that this hostility must have had, and did have, an effect on the securities and assets of the company. Sir, is the second contention a reasonable one—that there was a shrinkage of values generally throughout the country, and a demoralization and fall in the value of stocks. Looking at these points, I say it is a reasonable contention on the part of the company that they were prevented from realizing many of these assets by the demoralization of the stock market, and shrinkage of values.

Sir, the argument advanced by the member for Toronto then is equally applicable to the conditions to-day. Who will deny that during the past year there has not been shrinkage of values; who will deny there has not been a falling off in the values of stock; who will deny that the English market is not glutted with securities, and who will deny, say, that many hostile influences have not been exercised against the Grand Trunk Pacific. These are things that should be and must be

taken into consideration, and I believe the people will weigh them carefully and endorse the policy of the government as now presented to parliament. Exactly the same arguments can be advanced in favour of this ten million loan to the Grand Trunk Pacific as our Conservative friends advanced in support of the thirty million dollar loan to the Canadian Pacific Railway, and further, Canada is to-day a thousand-fold better able to stand a ten million dollar loan than in those other days she was able to afford a thirty million dollar loan. In view of all this there ought to be no hesitancy whatever on the part of members on both sides of the House in declaring: Here is a great national undertaking; here is an undertaking which, if we are to take the precedent of the Canadian Pacific Railway, is bound to enure to the benefit of the whole people of Canada; let us carry it to completion, let us crown this great undertaking with success. In view of the surprising growth and the great prosperity of this country there ought to be no caviling at the proposition which the government makes. Here is Canada on the northern half of the North American continent with 50,000 more square miles of territory than the United States possesses, with an energetic and industrious people and a fertile soil, and why need we fear? One hundred years ago the United States of America had about the same population and about the same per capita indebtedness as we have to-day. They had faith in their country; they kept pace with the march of events, and to-day the United States has a population of 80,000,000 and is one of the richest countries on the face of the earth. The people of the United States had faith in their future, and Sir, if we have confidence in our destiny I have not the slightest doubt but that long before the century closes Canada will have 80,000,000 people tilling her fertile soil and developing her unlimited resources. We Canadians are a hardy race, we are a vigorous, intellectual people, why should we fear comparison with the people to the south. I say in all sincerity and earnestness that in our broad Dominion we have everything which is calculated to contribute to greatness in a nation, and why then should we retard our progress, why hang back when every interest calls on us to take a leading rank amongst the greatest nations of the world. Is a paltry ten million dollars distributed over the whole Dominion of Canada to make us wince?

Some hon. MEMBERS. Oh.

Mr. PARDEE. Hon. gentlemen opposite may jeer if they wish, but in a few short years their minds will expand and they will then realize the fallacy of their policy of to-day. The west calls for development; the west demands that the men of the east should have confidence in its future, and this government is ready to respond to that demand. Not so long since I heard an hon. gentleman who is now sitting not far from me, say that Canada had pushed herself forward into the front rank of nations, that never had a country a better stage setting than ours, that we were actors upon that stage, and that our country called on us to play our part well. And if we lift the curtain of the stage on which we are playing we can see the illimitable resources we have in this country, and to what large extent their development depends upon the building of the Grand Trunk Pacific Railway.

You start in the province of New Brunswick; you come up through those magnificent stretches of northern Quebec which may hold untold millions; you go through the northern portion of the province of Ontario, half way to James bay, where you bring into mercantile use those marvellous resources with which Ontario is known to be endowed; you go on to the great province of Manitoba and through to the wheat and cattle country of the western provinces, and on into British Columbia with its magnificent timber, minerals and fisheries. There you have an all-British railway from coast to coast, opening up perhaps things we know not of; and if we show the people of the old world just what we have in the way of rich resources, we may be sure that millions will teem to our shores. Then we shall in very truth be a nation. But I wish to say this, and say it emphatically, that if we would populate this country with millions, we must show to the world at large that we are fit to be nation builders by carrying on great national works such as the one under consideration to-night.

Mr. W. F. MACLEAN (South York). Mr. Speaker, as I intend to take a somewhat different line from that followed by the hon. gentleman who has just preceded me, I will not take up his argument other than to compliment him on the vigour of his speech and the patriotism of it in some respects. But I wish for a few moments to call the attention of the House to one or two important thoughts that have come to me in connection with this proposition. In the first place, after having listened to the able statement of the hon. leader of the opposition this afternoon, I am forced to the conclusion that his speech leads to a declaration in favour of public ownership; for he showed that this country is committed to nine-tenths of what the Grand Trunk Pacific will cost, the other one-tenth being supplied by the Grand Trunk Pacific Company, or its ally, the old Grand Trunk Railway Company. If that is the case, and I believe it is, then I go further and say that the peo-

ple of this country would support a movement—and I believe it is the wish of the people of this country to-day—that Canada should take over the whole proposition and own it for the people of Canada. Otherwise, according to the confession of Mr. Hays in his letter, disaster awaits this great proposition. We also heard this afternoon that the great American republic was building the Panama canal as a public undertaking which it decided to do after long and careful consideration. The work was not even passed over to government contractors, but is being built by a government commission. So that it is essentially a national work, owned and controlled by the American people, and to-day it is the pride of the republic. I wish to speak from the point of view of the wider and broader outlook of the people of Canada referred to by the hon. gentleman who has just preceded me. The day has come for a greater national policy for this country, from the outlook of the great Canadian prairies, and still more from the outlook of that greater Canada on the Pacific coast known as British Columbia. I wish to see not only the prairie section finished—and it must be finished, we cannot halt now in the work—but the railway pushed on to the Pacific. The outcome of all this is that the only way to attain that and to secure Canada in her investment is to take over the proposition. If we do not do this now, I wish to tell this House and the people of Canada what their great danger is in regard to this Grand Trunk Pacific Railway. It was pointed out this afternoon, as appears from the document laid on the table of the House by the Minister of Finance, that the Grand Trunk Railway Company, the parent company, to-day controls absolutely the Grand Trunk Pacific. That is a great fact which I wish this House and the people of this country to be seized of—that by the document laid on the table of this House to-day, and contrary to what we were told a few sessions ago would happen, the Grand Trunk Railway Company controls within a few shares the Grand Trunk Pacific Railway. And who controls the Grand Trunk Railway Company? The capitalization of the Grand Trunk Railway Company, so far as the common stock is concerned, and perhaps all the control is in that common stock, is about $100,000,000; and this common stock is to-day being kicked about the London stock market by brokers and others, and is only held by a certain clique of men for purposes of manipulation and for the purpose of controlling the old Grand Trunk. I venture again to indulge in prophecy—and I am not a false prophet on the floor of this House, though I do have to say it myself: either the Canadian Pacific or the Canadian Northern, when it becomes strong enough, will try to absorb the common stock of the Grand Trunk in the London market, and when it does this, it will control this great transcontinental system which we are now building. I do not wish to see that. Inasmuch as disaster is confessed by Mr. Hays in his letter, I would like to see Canada step in and save the situation and keep this great transcontinental road for itself; and I intend to move an amendment in that direction. My amendment may be out of order, because it may involve a money vote; but perhaps the Prime Minister will accept it, and in that way accomplish the public ownership of this great proposition. I would like to discuss some other questions in this connection, but I will do so later on. Inasmuch as the Grand Trunk Company is to-day a suppliant here, I hold that it ought to give certain concessions to the people in regard to freight and passenger rates; but I will reserve that for a later stage in this discussion. The point I wish to make to-night is that inasmuch as the control of the Grand Trunk Pacific is to-day in the hands of the Grand Trunk Railway Company, and inasmuch as the control of the Grand Trunk Railway Company is kicked about on the London Stock Exchange, there is no security for Canada in regard to her commitments in connection with this road; and that if we desire to have a great transcontinental road that will appeal to the Canadian west and to that newer and greater Canada on the Pacific, there is no way in which we can do that except by adopting the principle of public ownership; and my amendment, which I trust the Prime Minister will accept, is in this direction. I beg to move, seconded by Mr. Russell——

Some hon. MEMBERS. Oh, oh.

Mr. W. F. MACLEAN. The hon. Minister of Railways and Canals may jeer and laugh, but I know Mr. Russell, and there is no better citizen or a man more in touch with the people of Canada than Mr. Joe Russell of East Toronto. I beg to move in amendment:

That the said resolutions be amended by the addition of the following:—

And be it further resolved that in order to have still further security for its commitments, and to absolutely control and own a national transcontinental railway system, parliament is hereby authorized to purchase the controlling share of the Grand Trunk Company's common stock.

Mr. SPEAKER. I think this should be moved in committee.

Mr. W. F. MACLEAN. In that case it can stand. I want to give the Prime Minister the opportunity of considering whether he will accept it or not.

Mr. W. B. NORTHRUP (East Hastings). I had no intention, Mr. Speaker, of taking part in this debate when it began, and my only reason for doing so now, is the extraordinary statement made by the hon. the

Minister of Finance (Mr. Fielding) this afternoon, in proposing this loan of $10,000,000, that Canada already had a first mortgage on the property of the Grand Trunk Pacific. When he made that statement I felt it was due to myself and this House to call attention to the danger we are under of making most extraordinary and improvident loans when a gentleman, occupying the responsible position of Minister of Finance is so little acquainted with the nature of the securities given in return as the hon. minister evidently appears to be. The honesty of the Minister of Finance nobody on this side questions and his sincerity in this matter I do not for a moment doubt, but this statement of his is only an additional proof of the extraordinary amount of misconception, misunderstanding, ignorance or something worse which has been developed from the mountains of information that the right hon. the Prime Minister promised us. From the inception of this scheme down to the present, it has been impossible to find any minister who appears to have had the faintest conception, when addressing this House, of the nature of the transaction he asked us to ratify. When the Bill was first introduced, the Prime Minister took occasion to criticise a remark of Mr. Andrew Carnegie, and gave as one of the reasons for building the road his desire to refute Mr. Carnegie's assertion that Canada was ice-bound because her harbours were sealed during five months of the year. That, said the right hon. gentleman, is not the case, that is not the difficulty, but the trouble is we have no railways to reach our harbours. Ordinary mortals were under the impression that we had a railway running to Halifax and to St. John, and that these were winter ports, yet the right hon. gentleman gave as a reason for our undertaking this extraordinary project, the alleged fact that we had no railways to our harbours in the winter season and that therefore we had to build a railway from the Pacific coast to the town of Moncton. No one had before heard Moncton described as a harbour. Shortly afterwards when we were discussing the various schemes for raising the money required, the then Minister of Justice (Sir Charles Fitzpatrick), one of the ablest men in Canada, pointed out that, in addition to the moneys required to be raised for ordinary purposes, we would have to borrow money for certain other things and among them the building of the telegraph system for the Grand Trunk Pacific. But one had only to turn over the page to see that the statute provides that in the list of expenditures, allowed as construction expenditure, was the building of telegraph lines, so that the minister's whole argument to justify the raising the large amount required dissolved into thin air. Without enumerating other instances—and many might be given—I am justified in saying this afternoon that when my hon. friend, the Minister of Finance, told us that Canada has a first mortgage on the Grand Trunk Pacific as security for our guarantee of its bonds, we are justified in saying that there does not seem to be any great improvement, in one respect at least, in 1909 over the surprising state of affairs that existed on the opposite side in this House in 1903 and 1904.

I suppose there can be no difference of opinion as to what a first mortgage and a second mortgage mean. I take it for granted that every one understands the difference between the two. If one gentleman here had a first mortgage and another had a second on a piece of property and the property was insufficient in value to pay the two, there would be no doubt in the mind of the holder of the second mortgage as to the difference between his security and the other. In ordinary business transactions, a first mortgage has rights paramount to the second. Its holder is at liberty to sell out the property regardless of the interests of the second mortgage and is entitled to be paid a hundred cents on the dollar before the second mortgage can get anything. Is that the case with the security which the Grand Trunk gave the government? When the statute was passed in 1903, it was provided that a first mortgage should be given the government, and I take it for granted that the government received the first mortgage and the Grand Trunk Railway the second. I take it for granted that the government received a first mortgage for the 75 per cent it guaranteed and that the Grand Trunk Railway received a second mortgage for the 25 per cent which it guaranteed. But although that is what was done in 1903, that, and a good many other things, did not stand in 1904. When in 1903, in the debate on the agreement then submitted to the House, point after point was urged against it, which hon. gentlemen opposite were unable to answer, they sheltered themselves behind the statement that the agreement had been duly signed, sealed and delivered and consequently it could not be changed. That answer was taken by hon. gentlemen opposite as a justification for voting down every suggestion made from this side even when they had to admit that it was made in the public interest. But when another session came around, it turned out that although the people of this country were bound by the original agreement, the Grand Trunk Railway were not. They refused to accept this agreement so solemnly made and executed and came back and demanded its revision. And in compliance with their demand, the statute of 1904 was passed, entirely revolutionizing the position of both parties under the agreement of 1903. It would be well, therefore,

for hon. gentlemen opposite to further study the Act of 1904 and see how far the engagements made in the statute of the previous year were altered by it. The first change made in 1904 was a change providing that the government, instead of guaranteeing 75 per cent, were to guarantee sufficient bonds to realize 75 per cent. Then a change was made in the mountain section; and although we are only discussing the prairie section, it is necessary to refer to the change made in the mountain section, because by one clause of the Act, the mountain section is so incorporated with the prairie section as to make them for certain purposes one and the same. By clause 32 of the statute of 1903, the government was to pay the interest on the mountain section of the bonds to the extent of 75 per cent for seven years. The next three years the company was to pay the interest; but if it was unable, it could, at the end of the ten years, capitalize the interest and give bonds for the amount running over forty years. Then after this period of ten years the company was to begin to pay interest. When this Act was passed in 1903, the government had the first mortgage and the Grand Trunk Railway the second. But when we look to the Act of 1904, we find these extraordinary provisions:

Notwithstanding anything in the said contract contained, the government shall not exercise any rights in respect of possession, foreclosure, or sale by reason of non-payment of interest by the company under the thirty-first——

that is one that relates to the prairie section.

thirty-second——

that is one that relates to the mountain section.

or thirty-third——

that is one that deals with the bonds after the expiry of ten years.

paragraphs of the said contract or under all or any of them, unless and until there shall be such default to the extent in the whole sum equal to five years of such interest, as the company is not relieved from payment of or permitted to defer or capitalize by the provisions of the said paragraphs.

So, we find that, for the first seven years, they are not bound to pay the interest; for the next three years they can pay or capitalize as they choose; at the end of ten years, the payment of interest is to begin. But the government is not allowed to take a single step to enforce the payment of interest until after five years more have elapsed. So, here you have two mortgages, a first and a second. But the rights of the first mortgagee are held up for fifteen years, during which time he is absolutely helpless, while the second mortgagee has the right to exercise any powers he enjoys under his mortgage. Will any man tell me that if one person holds a first mortgage and another holds a second mortgage, and the one holding the the first mortgage has no standing for the enforcement of his claim until after the end of fifteen years while the second mortgagee can sue or put in a receiver, the first mortgage is better than the second? But that is not all, for, when the government can at last move, after the expiry of fifteen years, what can they do? Clause 7 provides for this. Let us see what they can do:

In case of such default being made by the company in respect of the interest of the said bonds so guaranteed by the government as would, under the provisions of the said contract as amended hereby, entitle the government to take possession of the said western division, or to foreclose or sell the same, the remedy of the government shall, notwithstanding anything in the said contract contained, be the taking possession thereof by and through an agent or manager to be appointed as hereinafter provided, whose powers and duties shall be to manage and operate the said western division, to receive all the tolls and revenues thereof, to pay thereout working expenses as defined by the Railway Act, 1903, including the expenses of such management or agency, and to distribute the surplus tolls and revenues, after payment of such working expenditures, pari passu between the government or other holders of the bonds secured as provided by paragraph 35 (a) of the said contract and guaranteed by the government and the holder of the bonds secured as provided by paragraph 35 (b) of the said contract and guaranteed by the Grand Trunk Railway Company, in the proportion of seventy-five per centum of such surplus tolls or revenues to the holders of the former issue of bonds and twenty-five per centum to the holders of the latter issue.

And though the government had guaranteed 75 per cent and the Grand Trunk 25 per cent, it has to wait fifteen years before it can claim this right of sharing pari passu with the other. Now, would any business man, except the Minister of Finance, ever dream for a moment of saying that that was, in fact or in law, a first mortgage? The holder of this so-called first mortgage is tied hand and foot, while not the slightest obstacle is placed in the way of the second mortgagee. So there is nothing to prevent the agent operating the Grand Trunk Pacific —and it would not be too much to assume that he would not be painfully hostile to the Grand Trunk—paying every dollar he could rake and scrape on the bonds guaranteed by the Grand Trunk. It may be that the Grand Trunk Pacific will have paid off seventy-five or ninety per cent of the bonds due to the Grand Trunk, then, when the receiver came in and paid these pari passu with those of the government, in a year or two all the Grand Trunk bondholders would have received all their money and the government bondholders practically nothing. Therefore, it is not accurate to say that the

government of Canada holds a first mortgage to secure the seventy-five per cent that we are bound here to guarantee.

A great deal has been said, and especially by the last speaker, concerning the loan made by this country to the Canadian Pacific Railway years ago, and an effort is made to withdraw a similitude between that case and this as proving the propriety of this transaction. Before I go into that to show the nature of the Canadian Pacific Railway transaction, let me show what the Grand Trunk Pacific offers to-day. It comes to this House and to the people of this country, through the government, and asks for a loan of $10,000,000. It does not ask this as a right. True, it is sometimes said that the faith of Canada is pledged to this contract, and where the faith of Canada is pledged we must make good—no man on the other side of the House will subscribe to that view more readily than I. But is the faith of Canada pledged? We know that the government not only declined to increase the amount, but they limited it to $13,000 on the prairie section and to a certain other amount on the mountain section. They have carried out their part of the contract. The Grand Trunk Pacific come now and ask for a loan of $10,000,000. On what security? They offer their own bond. From the statement placed in our hands by the Minister of Finance I gather that they have $5,200 altogether paid for stock. My hon. leader (Mr. R. L. Borden) said it was $200,000. But, looking at page 16 of the statement brought down by the Minister of Finance, taking this list of subscribers, the largest of them $400, and I make out that $5,200 in cash has been contributed by the owners of this great company to build a transcontinental line. With that cash capital at their back, the Grand Trunk Pacific comes and asks for a loan on their own bonds. But something more—they offer the guarantee of the Grand Trunk Railway Company of Canada. As my leader pointed out, we heard a great deal five years ago about the marvellous advantage to this country of having the Grand Trunk in and over, through, under and around this great undertaking. And now it all comes down to this—that they will give their guarantee to back the guarantee of the road which, as I understand, has $5,200 of stock paid up. What is the position of the Grand Trunk? I see by the statement of the Minister of Finance that it has advanced $7,000,000 to this company. If the Grand Trunk has advanced $7,000,000 and we are to pay it back, consider the impudence of the Grand Trunk Pacific, egged on and led on by the Grand Trunk, asking us to advance $10,000,000 more, in order to give the Grand Trunk which owes us between $30,000,000 and $40,000,000, a return of this sum of $7,000,000. Is there any greater height of impudence than this? If the Grand Trunk ever had $7,000,000—and I hope I may be excused for being somewhat sceptical on that point—why does not the government take steps to collect some of this $30,000,000 or $40,000,000? Why not begin, for instance, by collecting the paltry $21,000 owed by the Grand Trunk in relation to a railway in my own riding to which I called attention a year or two ago? The government, knowing perfectly well that the Grand Trunk Railway improperly, dishonestly, obtained $21,000 of the money of the people of this country, in a position to sue and make them refund the money, sat there and did nothing. Even since the knowledge came to them that the Grand Trunk had $7,000,000 in its coffers to lend to other corporations the government have done nothing. What are we to expect of this government, if it should be in power a couple of years hence, if default is made on this $10,000,000. How can they be expected to collect $10,000,000 from their lord and master when they will not even collect $21,000? I do not know the facts, but I saw a statement in the press that the Canadian Pacific Railway had lent the government $5,000,000, that is that they had bought debentures to that amount. If that be true it is certainly extraordinary that our government, who we know have not $10,000,000 in their strong box, should go to the Canadian Pacific Railway and borrow $5,000,000 in order that they might give it to their old friend the Grand Trunk Railway.

As I said, comparisons have been drawn between the bargain made by a former government with the Canadian Pacific Railway and the bargain now proposed to be made by this government with the Grand Trunk Pacific. What did the old Conservative government get as security for their loan? They had a railway to which they had given an immense amount of constructed railroad costing some $30,000,000, they had given 25,000,000 acres of land, and $25,000,000 to the Canadian Pacific Railway and a railway over 1,100 miles in length was in operation. The Canadian Pacific Railway came to the government and asked for a loan of $30,000,000. They offered—

> As security for the repayment of the said loan, with interest as aforesaid, and as additional security for the payment of the said sum of seven million three hundred and eighty thousand nine hundred and twelve dollars and interest falling due on the seventh day of November, one thousand eight hundred and eighty-eight, the government shall have a first lien and charge,——

that is what the Conservative government got in those days——

upon the entire property of the company, real and personal, now owned or hereafter to be acquired or owned by them,——

Every dollar's worth of property to be acquired by the expenditure of the $30,000,000 to be borrowed was to become the property of the government by way of security—

including their main line of railway, the extensions thereof, their branch lines of railway, the whole of their equipment, rolling stock and plant and all their steamers and vessels, and also upon the land grant of the company, earned and to be hereafter earned; saving always, however, the rights of the holders of the existing mortgages on the extensions of the line of the railway from Callander to Brockville and Montreal.

With these exceptions everything the Canadian Pacific Railway had and were thereafter to acquire would, if the country would put up the $25,000,000, be given as security to the government. But more than that let us turn to clause 8:

Until the payment in full of the indebtedness of the company to the government with interest, all moneys earned and to be earned by the company as postal subsidy and for transport service shall be retained by the government and shall be applied first on account of the interest to become due from time to time upon the indebtedness aforesaid hereby authorized, and then to the payment of the principal.

Thus it will be seen that at that time ample security was given by the Canadian Pacific Railway when it asked for a loan of $30,000,000.

An hon. MEMBER. And the directors gave security.

Mr. NORTHRUP. I have heard it stated that the directors gave a personal guarantee but I have no knowledge of that and do not wish to speak of anything which I cannot affirm with a fair degree of accuracy.

In view of this difference in the position of the two companies it seems to me that we ought to lay aside all this high fallutin' comparison between things that in no way resemble each other and try to get down to business. What is the use of telling us that the crops in the west require to be moved, that they are rotting on the ground, and will be lost if this railway is not completed very shortly, when we all know the reason for the non-completion of the railway before this time was that the government interfered and would not allow the Grand Trunk to build the road where they wished to! If there is to be any blame, if there has been any suffering, any loss to the country through the crops not being moved, let the supporters of the government lay the blame where it rightly rests, on the government who, when the Grand Trunk Railway Company applied for a charter to build from North Bay to the Pacific coast, compelled them to change the eastern terminus. I was rather amused when the last speaker, after quoting the Canadian Pacific Railway loan as a parallel instance and an unanswerable argument in favour of this loan, referred to the Temiskaming & Northern Ontario Railway which he claimed to be another parallel case. What are the facts in regard to the Temiskaming Railway? It is rather odd but the Temiskaming & Northern Ontario Railway starts from North Bay where the Grand Trunk wanted to start the Grand Trunk Pacific, and to have the cases parallel the Grand Trunk Pacific should have been built from North Bay on to the Pacific coast and should not have been diverted to Quebec.

Mr. TALBOT. Were they not relieved of that obligation to build from North Bay to Winnipeg?

Mr. NORTHRUP. Certainly, to their great regret and to the loss of the country, at the request of my hon. friends opposite. If the Ontario government had followed the plan of this administration in the construction of the Temiskaming & Northern Ontario Railway, they would have started to build it from Toronto. They would have built it through the constituencies at any cost. But no, they started to build from North Bay, going only where they had a reason for going. Had they any reason for going where they did? The last gentleman who spoke (Mr. Pardee) said that Mr. Ross never signed a contract until the surveys had been made. When the surveys had been made and the wealth of minerals and timber had become known to every member of the legislature, and with the full understanding that the objective point was James bay to give an outlet to Hudson bay, picking up enough timber and minerals in the intervening country to make the road pay, and after ample surveys, the government stepped in and constructed the road. No one can compare that with the hop, skip and jump course of this government in 1903. We all remember that we came here led by the advertisement in the 'Canada Gazette' to believe that we were to be asked to give assent to the construction of a road from North Bay to the Pacific ocean. When that application came before the committee, it was changed, at some one's request, to an application to build to Quebec. We all remember Sir Charles Rivers Wilson and Mr. Hays appearing before that committee with the government supporting them in the desire to build a great trunk line of railway from Quebec to Winnipeg,—and the hon. member for Bellechasse (Mr. Talbot) was one of the most obstinate opponents of the original suggestion to build from North Bay to the west.

Mr. CONMEE. Does the hon. member now argue that it would have been better

in the interests of this country if that road was built from North Bay instead of where it is to be built?

Mr. NORTHRUP. My hon. friend has a perfect right to ask questions and I will answer him to this extent, that it is beyond all peradventure—and the application for $10,000,000 in addition to the indebtedness and liabilities we have incurred is a proof—that it would have been far better for this country if the government had held its hand and allowed the Grand Trunk to build the road as they wished, from North Bay through to the Pacific Coast, so that long ere this the crops would have been hauled out of the great Northwest over that road. If my hon. friend knew as he should have known, that all the government was asked to give was the ordinary bonus of perhaps some $13,000,000 or $14,000,000, and that in consideration thereof the Grand Trunk Pacific had offered to hand over every pound of freight from the west to the Intercolonial Railway at Montreal, then I think my hon. friend will admit it would have been better for the country had the project been accepted. The more closely we look into the comparison made by hon. gentlemen between this scheme and the Canadian Pacific Railway project, the more remote the two schemes seem to be from any resemblance or propinquity to one another. The Minister of Finance says that the government in this case is acting as a banker. If he means they are acting as the manager of a bank would act, I agree, but if he means as a banker in the sense of putting up the cash I would be inclined to say that the railway is coming to the people of Canada and not to the government for this loan. This is a pure business proposition. It is impossible perhaps to discuss such a question entirely without party sentiment, but I regret that that is the case if it is the case, as this is an important national question, and we ought at least to try to discuss it on its merits.

If any hon. gentleman opposite really believes it is in the interest of the country, after weighing the facts and arguments, he has a perfect right to support the resolution. But if, on the other hand, any hon. member of this House, I care not on which side he sits, honestly believes that it is not a business proposition—and that is the ground upon which the hon. Finance Minister laid it down before the House— if any hon. gentleman opposite says that this is not such a proposition as a banker should accept, then, I do not think he is doing his duty to himself, and he is certainly not doing his duty to this country, if he votes for that loan believing it to be wrong. Supposing now that we were to put ourselves in the position of bankers for a moment—and it would be rather a pleasant supposition for each of us to think of a needy mendicant coming to us and asking for a loan of

$10,000,000—let us see what inquiries we would make before we advanced this amount of money. Supposing the railways came to the people of Canada and asked for a loan of $10,000,000; would it be untrue if the people said: 'We are very sorry but we have not $10,000,000 to loan?' It is customary for bankers, when they have not the money, to go out and borrow it at a higher rate of interest to loan it to another man? Is that the custom? If this is a Conservative attack on a government scheme, I would ask calmly, is that the custom of bankers and would bankers say that it is good business? If a person came with ample security and said that he wished to borrow $10,000,000, if the bank had not $10,000,000 and if the banker had been trying to borrow many millions of dollars in the past year and was only able to borrow forty per cent of what he wanted in the markets of the world, does it strike any one as a business proposition that the banker would entertain any such project? We will suppose that the banker was good natured and, like some other bankers, wished to do business regardless of whether the business was profitable or not, and he undertook to raise $10,000,000 and to lend it to you at four per cent; would that be considered a business transaction? What is your security? First the security of the Grand Trunk Pacific and then the guarantee of the Grand Trunk Railway Company which owes the country millions and millions of dollars, which has not paid a cent which it does not have to, and which has not paid its preference bonds. Would not Miss Canada be apt to say to the members of the government who have been introducing this deputation: 'You have been here before with these same gentlemen; I will just look up my notebook and see what you told me upon the other occasions when you were here and see if you knew then what you were talking about.' Supposing that Miss Canada turned up 'Hansard' and saw what these gentlemen had told her when they came to her in 1903. Every supporter of the government must believe that if Miss Canada were acting intelligently, if she knew nothing about this transaction except that the members of the government had come and asked for a loan, and if she wanted to see what was their business capacity she would say to them: 'We will see how your promises in the past have been fulfilled.' It is only fair to say that the fulfilment of these promises would justify their loan. Miss Canada would say: 'It is true you gave us a lot of promises in 1903, but I will look at the statute-book and see what I have of them there.' She looks at the statute-book and finds that what was pledged to Canada in the form of contracts and in other ways was, in 1904, blotted out of the statute-book of Canada. Would not Miss Canada be likely to receive with suspicion a proposition from gentlemen who came so

accredited? But the Minister of Finance, in laying that proposition before her says: 'Oh, Miss Canada, you should not be afraid of us; look carefully into the section and you will see that you have your first mortgage on this great system of railway.' And then, when Miss Canada looked in and saw that she did not have a first mortgage, that she had not a first class mortgage, that she did not have a mortgage that any lawyer in Canada would take for any client, except the Laurier government, would she not be justified in declining with thanks to enter into such a bargain? But then, the Minister of Finance may say that they have a statement showing the large amount of money that has been spent by this virtuous corporation. They show that $8,000,000 has been put into rolling stock. Would it strike Miss Canada as being any certificate of business integrity, of business ability on the part of this insolvent corporation, the Grand Trunk Pacific Railway Company, which seeks to borrow $10,000,000, that it had put $8,000,000 into rolling stock for a road that had not been opened? Does it strike one as a business transaction? When we find that the Grand Trunk Pacific Railway Company, which has no money, which is getting all it can get out of the Grand Trunk, has spent $8,000,000 on rolling stock and loaned that rolling stock to the Grand Trunk Railway Company at 4 per cent, when we remember that the lifetime of rolling stock would not at the most be more than fifteen or twenty years, and when we find this insolvent corporation paying its debt back to its friends the rich no less poor corporation in this way, we can judge whether it is a transaction that would appeal to any business man in this country. Do you think Miss Canada would be inclined to treat with such a company as that? Miss Canada might well say: 'I wonder if everything has been honest and square about this road from the beginning to the end? You gentlemen are coming here for $10,000,000, and it is a case of your honesty or nothing.' This corporation is honest or dishonest. It is not for me to say which. No honest man objects to letting his books be looked at. No honest man who wants to borrow money is ashamed to show where the money that he has already borrowed went.

Will the right hon. Prime Minister say that the Grand Trunk Pacific are so secure in their honesty, so proud of their expenditure that they are willing to allow their books to be looked into? Many hon. gentlemen in this House remember that when we took evidence before the Public Accounts Committee we found that it cost a Grand Trunk official thousands of dollars to come from Montreal to Ottawa although he travelled in his private car and probably lunched at the Rideau club and paid his bill at the end of the month? We remember how thousands were paid to lawyers in the city of Ottawa, we remember how $150,000 were spent before the charter was granted and although the evidence before the committee showed that the Grand Trunk had charged this amount against the Grand Trunk Pacific, and that when they were asked for the vouchers they preferred to allow such items as $30,000 or $35,000 to go by the board rather than show the vouchers in reference to them. In addition we remember the fact that supporters of the government refused to allow gentlemen on this side of the House to probe these accounts in order to find where this $150,000 went. If any men or any company were to come and ask for a loan and knowing that they had made charges in their books, that they had rendered their accounts, that these had been submitted to an auditor and that when the auditor had asked for vouchers they had voluntarily withdrawn thousands and thousands of dollars rather than show their vouchers. I would like to ask the Premier himself if he would not insist upon a proper audit of their books before he advanced any money? We have had rumours throughout the country. My attention has just been called to the fact that after they had withdrawn the vouchers the evidence before the Public Accounts Committee showed that they had carefully burned them. At all events, these vouchers were recalled, the Grand Trunk Pacific were willing to forego the payment of their accounts, the vouchers were destroyed by the order of an officer of the company and when the Public Accounts Committee tried to secure the presence of an officer of the Grand Trunk Railway Company who could have told us about these matters he started for the Mediterranean on the first train and the man they sent up knew nothing at all about them. I think that the right hon. gentleman, if he himself were aware of such facts, would be inclined to be sceptical about advancing any more money if it is a business transaction as the Finance Minister says it is, and we are looking at it as bankers and asking ourselves if we can in justice to the country make such a loan. There have been rumours in the country and there has been evidence given in the Public Accounts and other committees which would lead people to think that neither on the government division nor on the western division has the road been economically constructed. Is there a single man in this House that believes that the building of a prairie road would cost $36,000 a mile. Why, Mr. Hays ought to be flayed alive; the government ought certainly to discipline him for daring to taunt them as he did when he writes about the

improved character of the road, when we remember that the justification given by the government originally for the high estimate of cost was that they were going to build a road equal to the Grand Trunk between Montreal and Toronto which is universally admitted to be one of the finest pieces of railroad on the American continent. There cannot be any improvement on the character of the road which was guaranteed when the original money was advanced, and therefore I call the attention of the Prime Minister to the fact that Charles M. Hays when he gives that as a reason is telling something he knows is not true, just as well as he knows of the burning of the vouchers and the refusal to show the accounts.

There is another feature in this: The Grand Trunk is mainly owned, I believe, in the old country. I am sorry, and every Canadian must be sorry, that the investment of the original Grand Trunk shareholders has turned out so badly. But does the government think it has any right to run the risk of making the position of the shareholders more desperate than it is, by lending money to a company that has so thrown away money in construction that when it comes to begin operations there will be such a burden of interest that the rates they will have to charge for transportation of freight and passengers will put them out of business in competition with other better managed railroads? Will not the last end of the English investors be worse than the first? Could anything be more calculated to injure the credit of Canada in the old country than to have our government hand and glove with a corporation that has not kept its word, that is so grasping that it wants everything in sight, that is so determined to make something out of nothing that without having put up anything themselves, they have walked off with twenty-five million dollars of the common stock of this railway? That stock is worth something or it is worth nothing; if it is worth nothing what are we to think of these gentlemen who perpetrate what I might call petty larceny in taking a worthless stock, and, if it is worth something, why should not the country have control of it in view of this advance of ten million dollars. It has been said that this road has gone so far that it must be completed. What has that got to do with the question now before the House. Here is a railroad which made certain promises in 1903 and which broke these promises one after another in 1904, and we paid the bill. Here is a road that made certain other promises in 1904 and which has been breaking them religiously, consistently, and persistently ever since, and which now comes and asks for ten million dollars, the first of probably half a dozen more ten millions for all we can tell. What guarantee can we have that a corporation that has deceived us every time up to date is suddenly going to reform and lead another and a better, and to us, a more satisfactory life. It seems to me, Sir, that after all the proposition is a simple one. We on this side of the House wish to preserve the credit of Canada, to do everything that is proper to attain that end, but when an insolvent company comes to us and says: 'If you don't advance us ten million dollars the work will fail,' I would answer: 'Are you the only company in the world; are you the only people who can build a railway; are we absolutely dependent on the Grand Trunk Pacific and the Grand Trunk that we must put our necks under their heels and let them crush us into the ground? No, if you cannot build it somebody else can.' Sir, there is nobody in this country so poor or so simple or so ignorant that if you give him one hundred per cent of the cost of a railway he cannot build that railway. And when you think of a company which has been given one hundred per cent of the cost of construction, and then think of its magnates cooly and deliberately buying the town sites all along the line at $3 per acre, and when you think of them holding up municipality after municipality and saying they won't put their yards or their tracks here or there until blackmail is paid, when you find all this on top of the 100 per cent of the cost of the road we have given to them, are we to be blamed if we are a little suspicious of the honesty or the business capacity of the company that in face of all that comes and asks us as a first instalment for ten million dollars more?

Now, Sir, if on the prairie section, which every one will admit should be enormously less expensive than the mountain section, calculations were so far astray that they were ten million dollars out, who will dare to say they can build the mountain section for the sum they promised. Is it not a moral certainty that this is but the beginning of the end; is it not certain that this government will find they have an old man of the sea on their shoulders who every year will be here kicking for another ten millions or twenty millions? Why the day may not be far distant when we shall be thankful that the Grand Trunk Pacific will let us off for ten millions a year when they reach the mountain section. If that is to be, why should we not as a business transaction apart from all sentimental feeling, say to this company: 'There are other companies that can build this road; you have

had the grandest opportunity any company ever had in this world, first to build the road and next to make a fortune for everybody in connection with it; you failed utterly in the first, though rumour says you succeeded admirably in the second, after all the advantages you have had.' Then, would it not be the common sense view, would it not be the view of the man who has confidence in Canada and Canadians to say: 'If you, mainly foreigners. have fallen down, we have have good native Canadians who have the brains and the brawn to build that road and we will see it is built whether the Grand Trunk Pacific Company turns another sod or not.'

Mr. W. M. MARTIN (Regina). Mr. Speaker, I have listened with a good deal of attention to the speeches delivered by the leader of the opposition and by the hon. member for East Hastings (Mr. Northrup), but I have failed to discover whether these gentlemen are in favour of this loan or opposed to it. The fact is, Sir, that the interests of all Canada and the interests of western Canada in particular demand that this loan shall be granted by the government to the Grand Trunk Pacific in order, if possible, to complete the prairie section from Winnipeg to Wolf creek before the end of the present year. The transportation problem is the most important we have to deal with in Canada to-day, and it is of supreme importance to the west. There are settlers in that country cultivating land who live as far as 100 miles from a railway, and these men for whom we should have consideration cannot possibly make the profit out of their industry which they should. The hon. member for East Hastings stated that there have been some discreditable disclosures before the Public Accounts Committee, and although I was not here last year I presume that statement is on a par with the statements made throughout the length and breadth of Canada by hon. gentlemen opposite during the last campaign. I presume it is about as true as the statement of the hon. member for St. Antoine (Mr. Ames) who went throughout the country telling what was absolutely untrue with regard to our western timber lands, and carrying with him his little magic lantern, taking upon himself to teach the people of the west what they should do with respect to their resources. If I remember correctly, the hon. leader of the opposition made a statement that the building of this road had been conceived in haste. I want to say that the people of western Canada are of the opinion that the building of the road was not conceived hastily enough. We think it ought to have been conceived three or four years sooner than it was; and if hon. gentlemen will take the trouble to inquire in western Canada, to read the papers there, and even to read 'Hansard' of those days, they will find that the opinion was unanimously expressed throughout that country that there was absolute need for another transcontinental railway. I have here copies of two or three resolutions which were passed in western Canada in the years 1901, 1902, and 1903; and I want to call the attention of this House to these resolutions to show the incorrectness of the statement of he hon. leader of the opposition, that the building of this road had been conceived in haste. The 'Regina Leader' in 1903 said:

> For many weeks past first one merchant and then another has in vigorous language, drawn the attention of the 'Leader' to the fact that the condition of railway traffic in the west is continually getting worse. The situation last year was bad enough, when for days and sometimes weeks, merchants were completely out of certain lines of goods because the railway could not get them in. This year it was infinitely worse, for many business houses have been completely sold out of certain lines for weeks and months, notwithstanding the fact that their orders were placed in plenty of time and the goods promptly shipped by wholesalers in the east.

If that was the condition of affairs in 1902, it was equally so in 1903; and I speak from personal knowledge when I say that it was equally so during the years that succeeded. The legislature of the Northwest Territories in the fall of 1902 passed the following resolution, which I believe was forwarded to the Governor in Council at Ottawa:

> The prospective increase in the volume of traffic, which largely increased cultivation and settlement of lands in these territories will gradually create, will further tend to congest traffic between these territories and the provinces to the east, and unless it is held desirable to divert part of the traffic through foreign channels, adequate facilities for transportation must be immediately provided. That this assembly does therefore humbly pray that Your Excellency may be pleased to take such action as may be necessary or expedient to insure that the people of these territories are provided with an efficient transportation system as contemplated by the contract made between the people of Canada and the Canadian Pacific Railway Company.

With respect to the question whether or not cattle and grain produced on the western prairies were being diverted through American channels, I may say that I know of my own personal knowledge that cattle have been driven by farmers in Saskatchewan across the boundary line into the states of Montana and Dakota to be shipped on American trains; and thousands of bushels of wheat have been drawn during the past year by farmers in the southern portion of the province of Manitoba across the boundary and shipped by American

lines. The hon. member for Assiniboia (Mr. Turriff) informs me that 150,000 bushels of grain from the southern part of his own constituency were drawn across the boundary and shipped by American lines during the past year. I could give you other expressions of opinion in regard to the need of more railway facilities in the northwest prior to the time of the making of the contract with the Grand Trunk Pacific. Here is a statement made by Mr. Wm. Whyte, the present vice-president of the Canadian Pacific Railway, made in 1903, when the Grand Trunk Pacific contract was under discussion:

There is lots of room for the Grand-Trunk Railway in the Northwest. I am glad to hear they are coming. You must remember that the Grand Trunk Railway is a national road and it is far better to have it than an American road. If the people of the east had any idea of the rapidity with which the country is settling out there, they would not be surprised to hear me say: 'There is room for the Grand Trunk Railway and others as well.' The conditions of affairs has completely changed even since a year ago. The traffic is not only abnormal east-bound but also west bound. It is this fact which has simply rendered it impossible to handle the crop with the despatch which was necessary.

I could give you statements to the same effect from other western papers. The Winnipeg 'Telegram' and the Toronto 'Mail and Empire' agreed that another transcontinental railway was necessary. In the face of these facts, I was somewhat surprised, as a resident of the western provinces, to read at that time statements by prominent members of the Conservative party in this House that they were absolutely opposed to a third continental railway project.

Some hon. MEMBERS. No, no.

Mr. W. M. MARTIN. If hon. gentlemen will permit me, I will quote from 'Hansard' statements made by prominent members of the Conservative party to that effect. I must say that it did occasion a good deal of surprise to residents of the vicinity in which I reside to find that there were men in the House of Commons so absolutely ignorant of western conditions as not to know that we were so hampered for the lack of transportation facilities that every farmer lost possibly an average of 10 cents a bushel on his grain because of that lack, as he is doing at the present time and will continue to do, so long as adequate transportation facilities are lacking.

Mr. WRIGHT. May I ask the hon. gentleman this question: when he speaks of farmers drawing their grain across the boundary, does he mean to give this House to understand that they will now draw it up to the Transcontinental Railway?

Mr. W. M. MARTIN. If my hon. friend knows anything about railway transportation in the western provinces, he knows that every railway built must necessarily relieve the tension that exists.

Mr. WRIGHT. I know that the building of the Transcontinental Railway will not cure the difficulty he refers to.

Mr. W. M. MARTIN. The hon. gentleman will have plenty of time to reply in a few moments. I want to refer, for instance, to what was said by the hon. member for East Grey (Mr. Sproule), who I am sorry is not in his seat at the present time. Referring to 'Hansard' of 1903, vol. 4, at page 8761, that hon. gentleman spoke as follows:

Let us examine for a short time the reasons they give to justify this undertaking. The first is the urgent need of the west for increased facilities to handle its grain. Now, this brings up the question whether such urgent need in the west exists to-day. Where is the urgent need for this new railway in the west, a need so urgent, as the Premier says, we cannot wait another day, another hour, we cannot put it off till to-morrow, we have not a moment to spare; and he expressed the hope that we had not waited too long already. Now this suggests the question, how are the products of that country handled to-day? Is there such urgent need at the present time? I do not think so. If we look into it carefully, I am sure we will not come to that conclusion.

That surely is a definite enough statement in opposition to the main project of the Grand Trunk Pacific Railway. Another statement made by the same hon. gentleman, in the same volume of 'Hansard', at page 8770, was as follows:

I have said that the sentiment of the country, in Ontario at least, is against the subsidizing of railways largely in the future. Has the government had any mandate from the people to put through this project? No. I challenge the Prime Minister to-day to dissolve this House and go to the country upon this scheme. Dare he risk it? If he should do it, and if the people should return him to power, then he may carry out his scheme and I shall not offer any objection.

At page 8775 of the same volume, the same hon. gentleman denounced the project in the following very strong terms:

Let them ask themselves whether they will be justified in endorsing that undertaking, that baby policy, that monstrosity of politics, that has been launched upon the world in connection with this scheme. When the people of Canada have digested this policy properly I am quite sure what the result will be. Sir, once more I dare the government to dissolve this House and appeal to the country to-day. Dare they ask a mandate from the electorate for this heavy undertaking? They dare not do it, I challenge them to do it.

As far as the province of Saskatchewan is concerned, the main issue discussed in the election campaign of 1904 was the building of the Grand Trunk Pacific. Did the

people endorse that scheme? There can be but one answer to that question. One of the main issues discussed by the people during the election campaign of 1908 was the Grand Trunk Pacific project. Did the people endorse it in 1908? I venture to say that there were two Liberal votes cast in that province endorsing the Grand Trunk Pacific for every vote cast against it.

Let me refer to what was said by the hon. member for South Simcoe (Mr. Lennox) in the session of 1903. I am quoting from 'Hansard,' page 8810. He said:

> Go where you will, and the preponderating voice, the overwhelming voice will be, when the scheme is fully understood, an absolute condemnation of this measure.

Well, since this statement was made, I have heard hon. gentlemen opposite speaking in western Canada on political subjects, and I never heard one of them condemn the Grand Trunk Pacific project. The reason is obvious. They knew they were in a country where the people were all in favour of building the road and recognized it as an absolute necessity. I challenge any Conservative member from the west in this House to say he is against the loan of $10,000,000 to pay for the completion of the prairie section. I challenge the hon. member for Qu'Appelle (Mr. Lake) to say that he is adverse to that loan for the completion of the prairie section of the Grand Trunk Pacific. I challenge any Conservative member from Manitoba to say that he is adverse to that loan. They dare not oppose it. There would not be a Conservative returned in Manitoba at the next election if they took that position.

I do not intend to take up any time of the House discussing the securities which are being obtained by the government from the Grand Trunk Pacific. The majority of members from the west have sufficient confidence in the growth of Canada in the next few years to believe that the Grand Trunk Pacific will be a huge success and be able to pay back all money borrowed by it from the government.

The hon. member for East Hastings (Mr. Northrup) drew some comparisons. He called the Grand Trunk Pacific an insolvent road, and contrasted the securities got from that road with those we got from the Canadian Pacific Railway. Well, all the security which the Canadian Pacific Railway could give to this country was the land and the money and the six hundred miles of railway given to that company by the Conservative party. This government took certain precautions before deciding to grant this loan to the Grand Trunk Pacific. As appears by the papers laid on the table, a request was made for the loan by Mr. Chas. M. Hays on behalf of the Grand Trunk Pacific. At that particular time, Mr. Hays submitted a statement showing the actual cost of the western section and the amount of money put into it up to the present. The government took the trouble to have their own engineer, Mr. Collingwood Schreiber, go carefully over the figures and report as to whether this statement of Mr. Hays was correct or not. He reported that it was. As regards the security, I am content to leave that matter in the hands of the government. Any man who has any confidence in the growth of Canada cannot fail to admit that we are bound to grow to such an extent in the next few years, that the Grand Trunk Pacific cannot help but be a success and pay back any amount borrowed by it from the government to build the prairie section.

Look at the position which the provinces of Saskatchewan and Alberta occupy as contrasted with other grain producing countries. Every one admits that Canada is bound to become possibly the greatest wheat producing country in the world. One of our greatest competitors is the Argentine republic. How does the Argentine republic compare with Canada in the matter of transportation facilities? The republic has something like 240,000 square miles of area and 8,000 miles of railway. It is said that the average Argentina farmer is 10 miles distant from a railway. In Saskatchewan and Alberta, the total area is 300,000 square miles, and we have 2,800 miles of railway. And the average distance of the average farmer from the railway is much greater than 10 miles. It costs the average Argentina farmer two cents or three cents a bushel to get his grain to the initial shipping point and it costs the average farmer in Saskatchewan six cents or seven cents a bushel. It costs the Argentina farmer 16 or 17 cents a bushel to get his grain from the initial shipping point to the Liverpool markets, and it costs the Saskatchewan farmer 30 cents a bushel. How can the farmers of our country compete in the European market when they have to pay rates of that description? The only solution of the difficulties under which the producers of the west labour is to get railways into that country. Every railway must necessarily relieve a certain amount of traffic handling by other companies and assist more and more our farmers each year in getting their crops promptly to market and obtaining the best market prices.

One more point, and this is a matter which affects particularly the western grain producer. According to the best authorities I have been able to consult, one of the difficulties our farmers have to contend with, in shipping their grain, is the spread between the track price and the street price on the western wheat market. Take the markets in any locality, as soon as a farmer has his grain loaded on a car, he gets what is known as a track price.

But if he has to put his grain into an elevator, he gets the street price, and the difference between the two is something like 10 cents a bushel. Let me point to the evidence taken before the Grain Commission last year and Sir Richard Cartwright. You will find that the farmers who appeared before Sir Richard Cartwright said that in some instances they knew the spread to be as high as 30 cents a bushel. What is the cause of this spread. The late Mr. Drinkwater said it was the difficulty in getting cars.

If I wished to take the time I could read extracts from the statements made; but the consensus of opinion was that this difference in price, which is a total loss to the western farmer, was caused by the difficulty of getting cars. And railway men and elevator men went so far as to say: Give us cars and we will reduce the spread to three cents a bushel. Take a production of 100,000,000 bushels of grain, and suppose you save seven cents a bushel to the western farmer, you have there a saving of $7,000,000 per annum; save ten cents a bushel and you have a saving of $10,000,000. I do not mean to say that the building of the Grand Trunk Pacific will do away with all the difficulty, but I do say that the building of the Grand Trunk Pacific and the building of branch lines by the Grand Trunk Pacific and the other railways will alleviate the conditions to a very great extent.

I might go on and give reasons why I approve the building of the Grand Trunk Pacific through western Canada, and to point out many provisions in the contract which are decidedly in favour of the people of Canada and of the west in particular, when you compare them with those of the contract for the building of the Canadian Pacific Railway with its iniquitous tax exemption on land, rolling stock and roadbed placed, as a burden, upon that western country by the late Conservative government. I do not intend to take up time to deal with these questions, but I may say a word with regard to what has been said concerning the Temiskaming & Northern Ontario Railway. I am informed on good authority that the riches of the Cobalt district were only discovered through the actual construction of the Temiskaming & Northern Ontario Railway, that before the railway was constructed the mineral wealth was not known. That being the case, it is not unreasonable for us to believe that the building of the Grand Trunk Pacific will open up new wealth yet undreamed of. In the great northland we believe that there is territory which, when opened up, will yield great wealth. If the Temiskaming & Northern Ontario Railway has opened up so rich a new territory for this province, we are justified in believing that the National Transcontinental will open up northern Ontario and the northern parts of the west as well.

I approve of a loan being made to the Grand Trunk Pacific to aid them in the completion of the line, because it means railway competition in the west in a measure we have not at the present time. It means increased railway transportation facilities. It means reduction of freight rates—where there is competition we must have reduction. It must assist in placing Canada in a favourable position in the European market. It means the completion of a great national undertaking tending to promote national development, national expansion and national solidarity.

Mr. J. W. MADDIN (Cape Breton South). The resolution before the House has for its object the handing over to the Grand Trunk Pacific Railway Company of a sum of $10,000,000 for the purpose of completing the prairie section of the transcontinental line. The object sought is, in effect, to make the government of this country bankers for the Grand Trunk Pacific Railway to the extent of this sum. It is a unique position in this country; there is only one partial parallel to it in our history, and that was when the government of this country granted assistance in a somewhat similar manner to the Canadian Pacific Railway in 1884. Some hon. members have suggested that hon. members on this side were opposed to the building of the Grand Trunk Pacific Railway. I submit that hon. members on this side of the House will be found as faithful to their obligations in respect of public contracts as hon. members on the government side. There is no member on this side who does not feel that the people of Canada are bound by this contract and wedded to it, and they will favour the carrying out of the contract in full. There is no member on this side who is opposed to carry to its fullest completion the building of this railway. There may be a difference in method, but there is no member on this side of the House who has offered any suggestion that will delay the completion of this road for a fraction of a day.

The hon. member for West Lambton (Mr. Pardee) in his remarks this afternoon pointed out, as a precedent for this position—and so did the mover of this resolution—that in 1884 the Liberal-Conservative government had advanced the sum of $30,000,000 to the Canadian Pacific Railway Company. The member for West Lambton said that the resolution now before the House was 'on all fours'—to use his own words—with the resolution brought down by Sir Charles Tupper in 1884. I take issue with the hon. member when he makes that statement. There is little or no similarity in the circumstances of 1884 and those of 1909 with regard to these railway lines. Let us look at the preamble of the Act of 1881 by virtue

of which the Canadian Pacific Railway Company was incorporated:

Whereas by the terms and conditions of the admission of British Columbia into union with the Dominion of Canada, the government of the Dominion has asssumed the obligation of causing a railway to be constructed, connecting the sea-board of British Columbia with the railway system of Canada.

Until British Columbia entered confederation, we had no outlet on the Pacific seaboard. The American boundary line came down from Alaska, running along a great part of the Pacific coast, and there was only, proportionately, a small strip of the Pacific coast on British soil. It was necessary, in order to reach British dominions beyond the Pacific that British Columbia should be induced to enter Canada. And one of the inducements offered was that a railway would be built from ocean to ocean. As one hon. member pointed out, there was then a population of less than 20,000 white people between Lake Superior and the Rocky mountains, and less than 11,000 beyond the Rocky mountains in British Columbia. The hon. member (Mr. Pardee) asks us to have faith in our country and in the resources and wealth of our country. I may tell my hon. friend that there were found among the pioneers of this confederation in 1881 men who, under circumstances that called for deep faith, undertook the building of a railway of greater magnitude than that which is sought to be built at the present time.

The leaders of the old Conservative party were never lacking in faith in their country and the hon. member failed utterly in his attempt to draw a parallel between the resolution of 1884 and the resolution now before us. I have spoken of the population of the Northwest in 1881 when the Canadian Pacific Railway was being built. At that time the Liberal leaders then in opposition in this House said it was folly to undertake to build a railway through that country, that it contained nothing but buffaloes and wild Indians, and that a railway through it would not pay for its axle grease. The Canadian Pacific Railway commenced the work of construction. The government built the eastern part of the road at a cost of $28,000,000 and gave it to the Canadian Pacific Railway, they gave them a grant of $25,000,000 and 25,000,000 acres of land. The railway was to be finished by May 1, 1891. In 1884, Sir Charles Tupper moved a resolution in the House to grant to the Canadian Pacific Railway a loan aggregating practically $30,000,000. What were the circumstances? The promoters and stockholders of the Canadian Pacific Railway had then spent $10,000,000 of their own money. Of their $100,000,000 of capital stock they had sold $65,000,000 and had thus raised $63,000,000, every cent of which had been spent in the work of construction. They had then used the subsidies and had sold more than three million acres of the land grant given to them by the government. They had left on their hands stock to the value of $35,000,000 and more than 21,000,000 acres of their land grant in the west. Sir Charles Tupper in moving the resolution in 1884, submitted to the House a statement prepared by the Canadian Pacific Railway setting forth the amount of money expended, the amount of railway completed, and showing resources from which this money was derived, demonstrating to the satisfaction of the House that the moneys which had been raised from the sale of the stock of the company had been used in the construction of the road. As a matter of fact they had then not less than 1,370 miles of road completed and actually running, notwithstanding that it was only three years from the time they had entered into the undertaking. They were not obliged under their contract to finish the railway until May 1, 1891. Before submitting that statement to parliament, Sir Charles Tupper sent two auditors to Montreal, Mr. Collingwood Schreiber, now chief engineer of the Grand Trunk Pacific Company and Mr. E. Miall, to make an examination of the books and vouchers of the Canadian Pacific Railway in order to satisfy themselves that the report submitted by the Canadian Pacific Railway to the Minister of Railways was a true and correct report. The minister instructed these gentlemen to make such a close and accurate examination of the accounts as a business or banking concern would require before advancing or loaning money or entering into a partnership with a reliable business firm. The books of the company and the company's auditor and his staff were placed at the disposal of these two auditors. After a careful examination they certified the statement submitted to the minister to be correct.

Then it was shown that with the depression existing at that time, the railway presumably having no great future before it, the prospects not being very bright that the railway would ever be a paying concern and that the railway had received financially a black eye in the English money markets, that cablegrams and letters had been sent to the English money markets which affected the credit of the Canadian Pacific Railway. It must be remembered that the Canadian Pacific Railway did not have freight lying at the side of the track with which to begin earning dividends when the road was completed. You will see the vast difference between it and the Grand Trunk Pacific to-day. The Prime Minister in proposing the construction of the Grand Trunk Pacific urged

that whilst Canada had a sufficient number of open harbours, it had not enough railways to carry the freight to those harbours, and so it was proposed to build this great national highway. This railway was designed to go from coast to coast. It was submitted by the Liberal party in 1903 that the Grand Trunk Pacific would follow along the coast of Lake Superior and would seek a northerly route from that point, thereby opening up a new and heretofore untouched portion of Canada. What do we find in fact? From Port Arthur to Winnipeg the Grand Trunk Pacific practically parallels the Canadian Pacific Railway. From Winnipeg to the Rocky mountains it is at no time more than 100 or 150 miles distant and for much of that distance it is only from two to four miles distant from the main line of the Canadian Pacific Railway. To the north of it lies the Canadian Northern Railway which was built through the industry and business capacity of Messrs. Mackenzie & Mann, with merely the government subsidies. To the south of it lies the Canadian Pacific Railway, and the day the Grand Trunk Pacific is completed the freight is there for it to move. In 1884, when Sir Charles Tupper's resolution was before the House, the condition confronting the Canadian Pacific Railway was that when they completed their line their first freights out into that country were to be the immigrants and farming materials for the breaking of the soil to commence to raise the first crops to be moved. No such condition obtains with regard to the Grand Trunk Pacific. Their routed freight is lying there.

When the Prime Minister spoke of having this railway reach more of our seaports did he forget that before the Grand Trunk Pacific was undertaken we had a railway running into Vancouver, and into Quebec and Montreal on the St. Lawrence, that we had the Canadian Pacific Railway and the Intercolonial Railway running into St. John, that we had the Intercolonial Railway running into Halifax and Sydney, and that with railway connection via the Intercolonial Railway between Louisburg and Halifax on the Atlantic, and Vancouver on the Pacific, we had outlets all the year round with the existing railways.

But, what is proposed to be done by the Grand Trunk Pacific Company? They wish to have the building and owning of this railway out to the Pacific coast in order to have a feeder from the west and from the prairie provinces for the eastern section of their road. They have an object in view. They have as their Atlantic seaports the towns of New London in Connecticut and Portland on the Atlantic seaboard and the object in view of this railway company is to run in between the Canadian Northern on the north and the Canadian Pacific Railway on the south, grasp the freight that is routed by these two lines and which would carry it to a Canadian seaport and translate it to the American seaports of the Grand Trunk Railway Company. If that be the object of the Grand Trunk Pacific it is nothing short of treason to this country that our own seaports should be robbed of the freight from the prairie provinces. The Canadian Pacific Railway Company had exhausted their resources, they had spent $10,000,000 of their own money, they had spent the proceeds of the sale of $65,000,000 of their stock, they had spent the money derived from the sale of over 3,000,000 acres of land, and every dollar was invested in the road and they had 1,370 miles in actual running order. There was a depression in the money markets of the world. The depression was not, however, even in the minds of the people at that time, of such a character as to seriously interfere with the Canadian Pacific Railway living up to their actual original contract. There was nothing apprehended at that time that would interfere with the Canadian Pacific Railway completing their road on the 1st May, 1891. But, rather than go into the money market with their bonds at that time they proposed to surrender to the government the stock which they held and that portion of the railway that was completed, upon which there had been expended $63,000,000 from stock as well as the government subsidies paid up to that time. This was offered as a guarantee for the repayment of the sum which was asked to be loaned. One of the strongest considerations that moved the Liberal-Conservative party in 1884 to grant $30,000,000 to the Canadian Pacific Railway was that the railway would be completed in 1886, five years earlier than the contract called for. This railway was actually completed in 1886. What do we find in regard to the Grand Trunk Pacific? They were to have had their road completed by the 1st of December, 1908. Up to the present time we find, by looking at the returns handed down the other day by the Minister of Finance, that the amount of railway completed at present is 667 miles from Winnipeg to Wainwright and it is completed and working under construction, not absolutely completed but working under construction. After over five years of operation by this Grand Trunk Pacific Railway Company they have not one single mile of that railway completed and passed by the government engineers. They are operating, it is true, 667 miles under construction, but they have not one single mile of that road completed, whereas the Canadian Pacific had 1,370 miles of railway completed be-

sides 239 miles of branches and 160 miles north of Lake Superior, which was very heavy work, was almost completed. The result was that the road was absolutely completed in 1886. In 1884 the Canadian Pacific Railway came to the government not pretending to be in the embarrassed condition that the Grand Trunk Pacific is in. All they said was that if they could get an advance of this money they would complete the road five years sooner than they had promised to do it. Bear in mind that time was an essential element entering into the contract at that time. When the people of Canada undertook to build the Canadian Pacific Railway the American transcontinental railway companies looked upon the undertaking as a huge joke. They did not think it would be possible for the people of Canada to finance and build a railway across the continent, but as time rolled on and and they saw that the work was being carried on they began to be apprehensive that they would have an active competitor in the Canadian Pacific Railway and it was they who were principally responsible for stampeding the stock of the Canadian Pacific Railway and making it hard for them to sell the last $35,000,000 of it. The railways of the western states thought that the Canadian Pacific Railway would be an important competitor of theirs and the Union Pacific sent out agents to canvass the country and get pledges of freight from Canadian territory for the American railway lines. It was of paramount importance that this railway should be finished five years earlier than the time specified in the contract in order to get Canadian freight routed over the Canadian route and brought eastward to the Atlantic sea-board. As a security for this loan in 1884 the Canadian Pacific Railway handing over absolutely all they were owners of in the world. I quote from the remarks of Sir Charles Tupper at this time. He said:

> If there is default in payment of interest or principal, if by the 1st of May, 1892, every dollar of interest and every dollar of principal is not refunded to the government of this advance, they (Canadian Pacific Railway Company) propose that we shall become at once the possessors of the entire property of the Canadian Pacific Railway Company.

I ask hon. members of this House to compare the conditions that obtained in 1884 with the conditions that obtain in this year—1909. As my hon. friend from East Hastings (Mr. Northrup) has pointed out this evening this government is not in a position to become bankers for the Grand Trunk Pacific. The Grand Trunk and the Grand Trunk Pacific are so wedded together financially, by contract and otherwise, that they are, for the purposes of this resolution, inseparable, and I submit that our relations in the past with the Grand Trunk Pacific have been of such a character that we cannot accept from them in good faith the representations which they have submitted to this House at the present time. As far as has been made known to this House no steps have been taken by the mover of this resolution or any one upon the government side to verify the statements submitted by the Grand Trunk Railway. These two companies are practically inseparable and the people of this country should not undertake to be their bankers on such poor security as is being offered at the present time. Since this House opened on the 20th January last it has been a common thing, when estimates were being put through, to be met by minister after minister from the different departments with the complaint that the finances of the country were in such a condition that much needed as many public works were they were unable to undertake them at the present time. In New Brunswick and Nova Scotia important railway undertakings have been laid over by the government on the pretense that the country has no money. And if we cannot afford to spend a few hundred thousand dollars on important public works, what grave reasons are there why we should place ourselves under an obligation to plunge into the money markets of the world for ten million dollars to tide the Grand Trunk Pacific Company over their financial difficulties. The financial statistics of Canada show that there are $400,000,000 belonging to the depositors of Canada in the various banking institutions of the Dominion, and I would like the Minister of Finance to tell me if any financial concern in Canada would advance one million cents on the security offered by the Grand Trunk to the government. I think not. We have been told by gentlemen opposite that the country endorsed the policy of the government in 1904. It is true that while approving in a general way of the construction of the Transcontinental Railway the Conservative party took issue with the government as to the best means to accomplish that end, and in a sense that became the main issue before the people. But the right hon. the Prime Minister on every platform assured the people solemnly that it would not cost them one dollar more than $13,000,000 to build the transcontinental railway from ocean to ocean, and the people took him at his word and endorsed his administration. But now these same people realize to their great discomforture that the road is to cost $250,000,000. So long as Canada remains a borrowing country she must live religiously up to her public contracts, but every contract we have made with the Grand Trunk Pacific from 1903 down to the present moment has been flagrantly broken by that company. It was

improvident on the part of the government to enter into the contract of 1903; it was improvident on the part of the government to have changed that contract from time to time; it is improvident on the part of the government to do what they now propose. The contract with the Grand Trunk Pacific Company was conceived in unwisdom, conducted with unparalleled extravagance and improvidence, and we are now reaping as we have sown. The government has pledged the credit of Canada to relieve the broken fortunes of the Grand Trunk Pacific Railway Company until we have now invested in this concern not less than $200,000,000.

We are meeting with the fate of the gambler who foolishly only buys stock on margin and who must buy out the stock if he is not to be ruined. Why not let Canada buy out the stock of the Grand Trunk Pacific Company without risking any more margins on it? I say, Sir, that we can consistently live up to our obligations with the people of the west and the people of the east by saying to the Grand Trunk Pacific Railway Company: 'Every contract we have made with you, you have flagrantly broken; your contractual obligations with us are at an end, give us your vouchers for the money expended by you and we will pay you every dollar you have put into the enterprise, hand us over the railway and we will build it ourselves.' Anyway, if the country is to pay nine-tenths of the cost of construction, why should not that railroad become a national asset of the people? I would go further and say, that after we have completed the railroad, if need be we could hand it back to the company to operate, always providing certain restrictions with regard to the routing of the freight in order to preserve our Canadian seaports. In view of the disclosures made in the Public Accounts Committee with regard to the item of $162,000, and as to which the vouchers were subsequently burned, the government and the people of Canada should hesitate before advancing ten million dollars more to such a company. In the estimates brought down by the Minister of Finance it is shown that a further sum of forty-eight millions will be required, ten millions of which are being asked now. Why does not the Minister of Finance muster up courage enough to ask parliament for the full sum at once? Is it pretended that the Grand Trunk Pacific Railway Company can raise the forty million dollars more which is required to complete this road; is it not common sense to suppose that if they were financially in a position to do that they would not now be knocking at the door of the government asking for this money? I regret to have to think that this is not the last ten millions that will be demanded. What guarantee have we that the Grand Trunk Pacific can finance the other forty millions estimated as required to complete the mountain section? Failing to get a satisfactory answer to that question, we discharge them from any further obligations with respect to this road, and assume the obligation of finishing it, and do it promptly, for the people of Canada. Let us lease it to these people, but let us build and own it ourselves.

The hon. member for West Lambton (Mr. Pardee) said that the hon. member for North Toronto (Mr. Foster) was wont to say that a great stage had been prepared for Canada and that we were the actors upon it; and he went on to ask, shall we raise the curtain and proceed to act, or shall we halt for a paltry $10,000,000? I would say, Mr. Speaker, that he might raise the curtain and show us vouchers for the expenditure of all the moneys that have been raised by the sale of stock, or all that have been paid by this government by way of subsidy. He might show to the satisfaction of this House that these moneys have been spent legitimately for the purchase of right of way, for railway material or railway construction, and that there are no vouchers that they will be ashamed to show or be obliged to go and burn.

In conclusion I have only this to urge. Hon. members on this side of the House are as anxious for the hasty completion of this road as hon. members on the government side of the House; and it is, as I conceive, the duty of this government to cut loose from the Grand Trunk Pacific Railway Company, that company having violated every contract that it has entered into up to the present time, and take possession of the road, reimburse those people for every dollar they have spent on it, with interest up to date, and complete the road ourselves and own it as a national asset for the people of Canada in the future

Mr. J. G. TURRIFF (Assiniboia). Mr. Speaker, as this is a matter that affects to a very large extent the province from which I come, I would like to take ten or fifteen minutes to express to this House and the First Minister my complete sympathy with the action that the government is taking at the present time. I do not think it is worth while to spend half an hour or an hour, as some hon. gentlemen on the other side of the House have done, in discussing the construction of the Canadian Pacific Railway. We all know that the construction of the Canadian Pacific Railway was a necessity, and we all recognize—I believe every member on the other side of the House just as much as members on this side—that the construction of the Grand Trunk Pacific is just as much a necessity to-day, and was when it was undertaken, as the construction of the Canadian Pacific Railway was at the time it was

undertaken. If that is the case, why waste time discussing the advisability of the construction of these roads? What we have to deal with to-night is the motion before the House—the advisability of making a loan of $10,000,000 to enable the Grand Trunk Pacific to complete the prairie section of the road in a better manner and with less strain on their credit and with more credit to the Dominion of Canada than it could be completed in any other way. That is the point we have to deal with, and I would ask if any hon. member on the other side of the House would say that that money should not be advanced to the company to enable them to complete the road? I do not believe, when it comes down to the fine thing, that any hon. gentleman on the other side of the House will take the position that we should not make the loan to enable the company to complete the prairie section, and to complete it before the end of the current year. What does that mean? It means that if the prairie section of the road is completed during the present year, the section between Fort William and Winnipeg will be completed also, so that by the time the next crop is ripe, we shall have a third outlet for the season's crop to the lakes. It was pointed out by the hon. member for West Lambton (Mr. Pardee) what a great advance had taken place in the country during the last five years, since the inception of the Grand Trunk Pacific. If that line was a necessity then, and no one will deny it, it is doubly a necessity at the present time. It is all very well for gentlemen who live in the east to criticise the construction of the Grand Trunk Pacific; but we who come from the west and who represent men living thirty or fourty miles from a railway, know that the advent of another railway in the country means an increase of transportation facilities, because the construction of the main line of the Grand Trunk Pacific means the construction of feeders through all parts of the grain-growing districts of the prairie provinces, and every one of these branch lines will bring railway facilities to hundreds of men who haven't them now.

Mr. HUGHES. Will the hon. member please give the House the names of a few points east of Edmonton that are even twenty miles, much less thirty miles, from a railway?

Mr. TURRIFF. I would like to inform the hon. gentleman that the whole country does not lie east of Edmonton. There are parts of the country a thousand miles from Edmonton which are in dire need of railway facilities at the present time.

Mr. HUGHES. Will the hon. gentleman name a point west of Edmonton that is going to be touched by this railway that is not now within ten miles of a railway?

Mr. TURRIFF. There is a great stretch of prairie country between Winnipeg and Edmonton, 800 or 900 miles in length and 300 miles in breadth, that is greatly in need of railway facilities. Fifty or 100 miles west of Edmonton you get into a different kind of country. You are in the foothills of the mountains, but it is a different country from the country to the south, where the Canadian Pacific Railway passes through the mountains. You are in a country where the mountain ranges are lower and the valleys wider, and where there are hundreds of settlers on farming lands to one along the main line of the Canadian Pacific Railway. So that in running the main line of the Grand Trunk Pacific through that country, you are running it through a country that will yield largely of farm produce, as well as of timber, minerals and fruit.

The Grand Trunk Pacific is a necessity, and a great necessity. I am not going to take up time considering the securities that we are going to get for this loan. All I need to do is to point to what the hon. leader of the opposition said this afternoon. He spent some time criticising the securities the government were getting for the advance of this $10,000,000, and how did he wind up? By saying that the common stock of the Grand Trunk Pacific was worth from 100 to 150. If the common stock is worth 50 per cent above par, there is not much danger of our not getting the interest on the bonds for the money advanced to help to complete the construction. Is there any man in this House or out of it, who has knowledge of that western country, who will say that a road built over the line of the Grand Trunk Pacific, with all its branches in that country, the greatest wheat producing country in the world, and in the great farming valleys of British Columbia, with their vast timber and mineral resources, will not earn interest on the cost of construction? When the road is built through British Columbia, through the great farming valleys and vast timber resources of that province, will any man in this House say that it will not earn interest on its cost?

Hon. gentlemen opposite have criticised this road from the point of view of its cost. Let me say that if a mistake was made some years ago, when the government made an estimate of its cost, I am very glad that mistake was discovered and rectified before the road was built and that a road is being built which, when completed, will be the finest on the continent, and not such a road as the Canadian Pacific Railway constructed, when they built their main line, and as the Canadian Northern is constructing. We are having a road built which will stand for hundreds of years. Look at what is taking place to-day both on the

Canadian Pacific Railway and the Canadian Northern. We were told in the Railway Committee this morning that the Canadian Pacific is spending $18,000,000 on its road. But the great bulk of that is being spent on the main line in cutting down grades and straightening out curves. Why is this expenditure being made? Because the company was in such a position that it could not haul freight cheaply. Every one knows that in building a road now, great attention is paid to the road bed and the grades. The Grand Trunk Pacific are constructing a road superior to any transcontinental line that has yet been built and are getting a maximum grade of four-tenths of one per cent. What does that mean? I have here a comparison of what that grade, which the Grand Trunk Pacific will have from Edmonton to Prince Rupert, will enable one engine to do compared with what is being done by one engine on other transcontinental roads. I saw the complete figures given by Mr. Hays in one of the newspapers, but in that paper, which was friendly to the Canadian Pacific Railway, the Canadian Pacific Railway figures were left out, so that I cannot give an exact comparison. Here is what an engine will haul on the Grand Trunk Pacific when completed. It will be able to haul over the worst grade between Edmonton and Prince Rupert 2,041 tons. What is done on transcontinental roads in the United States? An engine on the Great Northern hauls 572 tons, on the Northern Pacific 572 tons, also on the Union Pacific, and on the Santa Fee Railway 376 tons. With the grades existing on the main line of the Canadian Pacific Railway up to a year ago, the amount that an engine could haul was less than 200 tons. So that it is advisable, when making a road bed, to get the grades right and spend whatever money is necessary, rather than have to change your grades, location and curves after the road is built. Hon. gentlemen opposite talk about what the Canadian Pacific Railway has cost. There is no man living who can tell what that road cost. You cannot tell what we have paid, and no one can tell what we will pay, because we are paying to-day for the building of the Canadian Pacific Railway and will continue to pay for many years to come. What about the exemptions from taxes for all time to come on their lines? What about the 10,000,000 acres of land which they hold at present, the patents for which are in their pockets and on which they are not paying a cent of taxes? That is what we are paying to-day and what we will continue to pay so that we cannot compute what the Canadian Pacific Railway has cost us. And while the Canadian Pacific Railway got millions of dollars and millions of acres of land, the Grand Trunk Pacific do not get any bonus or subsidy except the interest on the cost of capital during construction. Whatever else is advanced they have to pay interest on. I thought myself that the government had driven too hard a bargain with the Grand Trunk Pacific especially when we consider that it will have to compete with the Canadian Pacific Railway, which was practically built by the government, and with the Canadian Northern which has been built by subsidies from both the federal and local governments. The Grand Trunk Pacific has not been treated nearly as favourably as either of the other transcontinental roads.

I do not think that our hon. friends opposite need be in the least degree afraid of the Grand Trunk Pacific not being able to pay back this money. Mr. J. Pierpont Morgan said some years ago that anybody who took the bear side on the United States market would eventually go broke. Well, anybody who takes the bear side on the market against Canada will meet with the same fate. No one can tell what the future of our western and our eastern country is going to be. The Dominion is just beginning to grow. A moment ago we heard an hon. gentleman talk about the Grand Trunk Pacific borrowing $10,000,000 from the Dominion of Canada just when we are in an impoverished condition, and in the very next breath he told us that there are $400,000,000 on deposit in the banks of the people of Canada. Does that look as if the country was impoverished? Not at all. The country was never in better shape than it has been for a number of years past.

As to the necessity for this road, I might point out that in all parts of the country every year there are freight blockades. Two years ago we could not get cars to haul coal and wheat. A friend of mine in Medicine Hat had a lot of cattle to ship and he drove in two hundred or three hundred head, and kept them around Medicine Hat two months without being able to get any cars to ship them in. He had to take them back to his ranch and during the hard winter he lost three or four thousand dollars worth. In the face of that condition of things, will any one say that this road is not a necessity? The question is, as I said before: What is the best way? I claim that the government has taken the proper course in lending the money. We lend it for a period not exceeding ten years; we shall get as much interest as it costs us; and we shall get our money back. Something was said by the hon. member for East Hastings (Mr. Northrup) about the Grand Trunk Pacific and the Grand Trunk being bankrupt. Where would the Canadian Pacific Railway have been in 1884, when Sir

Charles Tupper came to this House for a loan of $30,000,000 if that sum had not been advanced?

Mr. AMES. They gave security.

Mr. TURRIFF. Yes, they gave simply what the government had given them, the completed road, and 25,000,000 acres of land. Will any hon. member point out what else they gave? Hon. gentlemen opposite need not be a bit alarmed about the Grand Trunk Pacific being able to pay back this money and pay it back before the ten years' term is up. At the present time, the Grand Trunk Pacific have 670 miles in operation. This road may not have been finally accepted by the government, but for months the Grand Trunk Pacific has been running trains over that line from Winnipeg to Drinkwater. The Grand Trunk Pacific has a much greater mileage in proportion to the amount it is borrowing than the Canadian Pacific Railway had in proportion to the amount it borrowed. If the Grand Trunk Pacific does cost a considerable sum of money, we will get the interest of the money, and as we only guarantee the bonds on three-quarters of it, the country is absolutely safe.

Representing, as I do, a western constituency, I want to say to the House and to the government, that the west at all events, is right behind the government in this matter. The people of the country endorsed the leader of this government on this question in 1904 and again in 1908, and I want to tell my hon. friends opposite that they will endorse him when he goes to the country again either on this or any other question.

Mr. H. B. AMES (Montreal, St. Antoine) moved the adjournment of the debate.

Motion agreed to.

ADJOURNMENT — BUSINESS OF THE HOUSE.

Mr. FIELDING moved the adjournment of the House.

Mr. GEO. TAYLOR. What business does the leader of the House intend to take up to-morrow? Second, are we to expect the Budget before the Easter holidays? And third, when will the holidays commence and end?

Mr. FIELDING. As to the business for to-morrow, as we are on the eve of a new fiscal year, it is very important that we should facilitate the voting of such supplies as are needed at the beginning of the year. We propose, therefore, to take up to-morrow a number of items in the main estimates and ask the approval of the House, first, probably some items of the Civil Service, but there are a number of services for which appropriations are needed at the beginning of the year. We shall endeavour to select these items, and give precedence to them to-morrow, and, if necessary, on Friday. As soon as a number of these items have been passed in Supply, we shall take concurrence and ask the House to pass a Supply Bill.

As regards the budget speech, it was contemplated to bring it on before the recess, but as this debate has intervened, and as it is desirable to close it up, the budget speech will have to stand over until after the holiday.

As to the third point referred to by the hon. gentleman (Mr. George Taylor), I think the intention is to ask the House to adjourn on Wednesday. As to the date when it will resume, I would prefer to ask the Right Hon. Prime Minister (Sir Wilfrid Laurier) to-morrow. I think, probably, the adjournment will be moved on Wednesday.

Mr. AMES. Will the Bill with reference to the Grand Trunk Pacific immediately follow on adoption of the resolution?

Mr. FIELDING. Yes, and, if it will facilitate the discussion, the House might pass the resolution in committee and leave the further discussion to take place on the Bill. However, in that respect, we are in the hands of the House. For the present, we shall proceed along the lines of to-day.

Motion agreed to, and House adjourned at 11.10 p.m.

HOUSE OF COMMONS.

WEDNESDAY, March 31, 1909.

The SPEAKER took the Chair at Two o'clock.

DEPARTMENT OF PUBLIC WORKS— PURCHASE OF MATERIALS AND SUPPLIES

Hon. WM. PUGSLEY (Minister of Public Works). Mr. Speaker, I beg leave to lay on the table a copy of the notice sent to all the officers of the Department of Public Works charged with the purchase of materials and supplies and the certifying of accounts for the same, under the different branches of the chief architect, the chief engineer and the superintendent of telegraphs. One of these notices was sent to the chief engineer's staff on September 16, 1908, one to the chief architect's staff on December 18, and one to the superintendent of telegraphs' staff on December 18. As the notices are all in the same language, I need read only one:

Sir,—I am directed by the hon. the Minister of Public Works to call your attention in a special manner to the question of purchase

of materials and supplies required for the use of the Department of Public Works, and which are obtained either by yourself personally or under your supervision, and to impress upon you the necessity of exercising the greatest care and caution in obtaining same at the very best possible prices, and that the most careful scrutiny should be given to all accounts before certification.

I am also to caution you emphatically regarding the acceptance of any gifts or favours of any kind at the hands of contractors or merchants with whom you may have dealings on behalf of the department and, further, if any such transaction should come to your knowledge, that it is your duty as an official of the department to report same at once to the minister or deputy minister, in order that such investigation may be made and action taken as may be deemed proper.

I have the honour to be, Sir,

Your obedient servant,

NAP. TESSIER,

Secretary.

FIRST READINGS.

Bill (No. 114) to incorporate the British Colonial Fire Insurance Company.—Mr. Turriff.

Bill (No. 115) for the relief of Victor Eccles Blackhall.—Mr. Turriff.

Bill (No. 116) for the relief of Annie Louisa Coltman.—Mr. Turriff.

QUESTIONS.

GRAND TRUNK STOCK.

Mr. MIDDLEBRO asked:

1. What is the present amount of Grand Trunk consolidated debenture stock now outstanding?

2. What is the present amount of Grand Trunk 4 per cent guaranteed stock outstanding?

3. What is the amount of Grand Trunk first preferred stock, second preferred stock, third preferred stock, and ordinary stock, respectively, now outstanding?

4. Which of the above stock is a charge or lien on the property of the Grand Trunk Railway, and which will have precedence, or will rank as a prior lien or charge on the road over the proposed guarantee by the Grand Trunk Railway of the proposed loan by the government of ten million dollars to the Grand Trunk Pacific?

5. What are the total liabilities or obligations of the Grand Trunk Railway, and what amount of such will be a prior lien or charge on the assets of the said company over the liability of the Grand Trunk Railway in respect of said proposed guarantee?

Hon. W. S. FIELDING (Minister of Finance).

1. £22,825,297. In addition, there are outstanding bond issues of £1,488,500, making a total of debenture stocks and bonds of £24,313,797.

2. £9,840,010.

3. (a) First preferred stock, £3,420,000; (b) Second preferred stock, £2,530,000; (c) Third preferred stock, £7,168,055; (d) Ordinary stock, £22,475,984.

4. The debenture stocks and bonds above mentioned amounting to £24,313,797 constitute a charge and lien upon the property of the Grand Trunk Company, and will rank as a prior lien or charge over the proposed guaranty.

5. It would be impossible, the company state, to say what the total liabilities or obligations of the Grand Trunk Railway Company amount to, as they vary from day to day. Some are fixed, others are contingent.

Prior liens or charges on the revenues of the company over the liability of the Grand Trunk Company in respect of the proposed guaranty are—

Debenture stock	£22,825,297
Bonds	1,488,500
Total	£24,313,797

The annual charge in respect of these obligations is £1,064,217-19s.-10d.

The company state that, under the earlier legislation of the company, rentals of certain leased lines, amounting half yearly to £77,603, 'would probably be regarded as working expenses,' and hence a prior charge to this guaranty. In the statement which follows this deduction has been made.

After deducting the net revenue charges of the company, including the rentals above referred to, the surplus for each half of the following years, compiled from the accounts of the half yearly meetings of the company as reported in the 'Economist,' is as follows :

1904 1st half surplus	£124,610
1904 2nd half surplus	£432,103
1905 1st half surplus	£285,033
1905 2nd half surplus	£428,778
1906 1st half surplus	£309,861
1906 2nd half surplus	£523,465
1907 1st half surplus	£315,319
1907 2nd half surplus	£527,175
1908 1st half surplus	£180,494

The full statement for the 2nd half of the year 1908 is not available in the usual course until April, 1909.

These respective sums, if the proposed guaranty had been then outstanding and a liability, would have been available to meet the interest charges upon the sum so guaranteed.

RAILWAY MAIL CARS.

Mr. SPROULE asked:

1. Is the government aware of the great variety and unsuitability of the railway mail coaches now in use on Canadian railways, and the consequent danger, inconvenience and hardships suffered by railway mail clerks in the performance of their duty, and of the recommendation of the Royal Commission to the effect that the Railway Commission be

authorized and requested to have plans prepared for proper standard mail cars, to be placed on the several lines of railway carrying or to carry His Majesty's mails?

2. If so, is it the intention of the government to carry out the Royal Commission recommendation at an early date?

Hon. RODOLPHE LEMIEUX (Postmaster General). The attention of the department has been directed to the varying standards of cars used for the conveyance of mails, and the matter is now the subject of consideration.

NIPIGON RIVER DREDGING.

Mr. BOYCE—by Mr. Geo. Taylor—asked:

1. What amounts were paid by the government during the year 1908 for dredging at the mouth of the Nipigon river and Nipigon bay, in Lake Superior?

2. To whom were such amounts paid, and what was the date of the contract under which the same were paid?

3. When was the work in respect of which such amounts were paid, commenced, and when and by whom were representations made as to the necessity for the same?

4. What were the rates, according to classification, paid by the government for this dredging?

5. Were tenders invited for the work? If so, how many tenders were received, who was the successful tenderer, and was the contract awarded to the lowest tenderer?

6. What is the estimated cost of completion of the work?

7. What were the names of the dredges employed, and who were appointed as inspectors or superintendents by the government?

8. What other work, if any, was done during the year 1908 by the government on the Nipigon river, or its approaches, what was the nature and cost of the work, and to whom were the moneys paid in respect to the same?

Hon. WM. PUGSLEY (Minister of Public Works):

1. 238,826 cubic yards were excavated during the season of 1908; the sum of $57,459.45 was paid in 1908, leaving a balance for work done in that year, but still unpaid, of $50,012.25.

2. The Great Lakes Dredging Company, Limited, under contract dated 9th October, 1908.

3. (a) Work commenced 8th September, 1908; (b) Petition from residents of Nipigon dated 30th April, 1908; petition from vesselmen of Thunder bay sent in May, 1908.

4. Price per cubic yard, scow measurement, rock, $3; other materials, 45 cents. Material cast over, rock $3; other materials, 45 cents.

5. (a) Yes. (b) One. (c) The Great Lakes Dredging Company, Limited. (d) Yes.

6. $15,750.

7. (a) Dredge 'No. 6.' (b) W. Stuart McKirdy.

8. Nothing by this department.

TERCENTENARY POSTAGE STAMPS.

Mr. PERLEY asked:

1. What was the total amount received by the Post Office Department from the sale of the special Tercentenary stamps?

2. What part of this sum would probably have been received as ordinary revenue if there had been no special issue of stamps?

Hon. RODOLPHE LEMIEUX (Postmaster General). The following was the issue to postmasters of the tercentenary postage stamps:

Denominations.	Quantities.	Value.
½ cent..	2,000,000	$ 10,000 00
1 "	22,530,000	225,300 00
2 "	35,100,000	702,000 00
5 "	1,200,000	60,000 00
7 "	700,000	49,000 00
10 "	500,000	50,000 00
15 "	300,000	45,000 00
20 "	304,200	60,840 00
Totals..	62,634,200	$1,202,140 00

The department has no knowledge whether the stamps in question have all been sold, as during their issue the ordinary postage stamps were also on sale, both issues being in use as preferred by the public. The proceeds derived from the sale of stamps of the two issues were not kept separately, but treated as arising from a common source. It is, therefore, impossible to state to what extent the issue of the Tercentenary postage stamps may have affected the ordinary revenue. At the ordinary period fixed by the department for squaring these accounts, we may be able to give the approximate value.

GOVERNMENT LOANS.

Mr. PERLEY asked:

What are the amounts and dates of the loans falling due prior to December 31, 1913?

Hon. W. S. FIELDING (Minister of Finance). The information is all contained in the Public Accounts, but if the hon. gentleman will permit the question to stand I will give in in the form of an answer later on.

Question stands.

4 PER CENT LOAN OF 1874.

Mr. PERLEY asked:

1. On what date in 1904 was the first public notice given of the terms of the proposed extension of the 4 per cent loan of 1874?

2. At what rate did the notice offer to give 3 per cent inscribed stock in exchange for the 4 per cent debentures?

Hon. W. S. FIELDING (Minister of Finance):

1. March 11, 1904.

2. £105 of three per cents for each £100 of four per cent 1874.

CUSTOMS STAFF AT DEBEC.

Mr. CROCKET asked:

1. When was Mathias Meagher appointed to the customs staff at Debec, New Brunswick, on whose recommendation was he appointed, what is his salary and what are his duties?

2. How many officers are employed at Debec?

Hon. WM. PATERSON (Minister of Customs):

1. Mathias Meagher was employed as customs preventive officer under the sub-collector of customs at Debec, N. B., January 20, 1909. He was appointed by the Minister of Customs at a salary of $400 a year to prevent smuggling over the boundary line south of Debec.

2. There is a sub-collector of customs at Debec besides this preventive officer.

PUBLIC WORKS, SOUTH WELLINGTON.

Mr. T. CHISHOLM asked:

How much public money has the Dominion government expended on the construction of public works in the constituency of South Wellington during the past twenty years?

Hon. WM. PUGSLEY (Minister of Public Works). $189,242.92.

BRIGHTON AND CAMPBELLFORD MAIL ROUTE.

Mr. OWEN. The contract price for carrying the mails between Brighton and Campbellford is this year $600, while last year it was $465, an increase of $235. What is the reason of that increase?

Hon. RODOLPHE LEMIEUX (Postmaster General). I cannot answer that question just now, but generally speaking there are complaints throughout the country that these prices are too low. We call for tenders and give the contract to the lowest tenderer. I will make inquiry and give the information later.

Mr. OWEN. Is the mail carrier on that route performing the rural mail delivery service?

Mr. LEMIEUX. The rural mail delivery service may account for the higher price. If the contractors do not accept the sum offered by the department we call for tenders and, generally speaking, the rate is higher.

INQUIRY FOR A RETURN.

Mr. BRADBURY. On the 7th of February an order of the House was passed for correspondence between F. W. Colclough and the Department of Marine and Fisheries, and I would ask the minister when that will be brought down. I would like it as soon as possible, because the delay is keeping me back in my work.

Mr. FIELDING.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). I find from the Votes and Proceedings of March 29, that apparently the return referred to has been brought down.

Mr. BRADBURY. I inquired at the office and was informed it had not been brought down.

SUPPLY.

House in Committee of Supply.

Northwest Mounted Police, $750,000.

Right Hon. Sir WILFRID LAURIER. This includes $325,000, pay of the force, and $425,000 for subsistence. There is an increase of $25,000 for pay and a decrease of $25,000 for subsistence, leaving the appropriation the same as last year. This estimate is for a force of 700 men, 500 being in Alberta and Saskatchewan, 100 in the Yukon, and 100 in the Northwest Territories. We estimate that the cost per man in Alberta and Saskatchewan will be $900 per year and in the Northwest Territories and the Yukon $1,500 per year. The increase of $25,000 in the pay is due to the rapid settlement of the provinces, which affords so much employment for labour generally that it is difficult to get men to join the force. The pay is 50 cents per man per day with an increase of 5 cents each year to the maximum of one dollar per day. But if there is a disinclination on the part of the younger men to enlist, it has been found that there is, especially among the non-commissioned officers a disposition to re-enlist at the expiration of their term of five years. We have therefore a good many veterans in the force, so that the pay, which commences at 60 cents and goes to a maximum of $1 per day, is on the average 85 cents.

Mr. FOSTER. What is the disposition of the 500 men in the provinces?

Sir WILFRID LAURIER. I shall come to that presently. The force is composed of 700 men. We have one commissioner at $3,000, two assistant commissioners at $2,000 each, eleven superintendents at from $1,500 to $1,800 each, thirty-six inspectors at from $1,050 to $1,400 each, two surgeons, one at $1,700 and the other at $1,600; three assistant surgeons, two at $1,400 and one at $1,100. There is a special allowance to the fourteen officers serving in the Yukon and Hudson bay of $1.25 per day, and of $2 per day to the officer commanding in the Yukon. There are eleven sergeant-majors, ten at $1.75 per day and one at $2; thirty staff sergeants, five at $1.50, 22 at $1.75 and three at $2 per day; forty-six sergeants at $1.25 per day, sixty-five corporals at $1.10 per day, four hundred and ninety-three special constables and constables at 85 cents per day, and then there

is special allowance to officers and constables in the far north of $12,000. With regard to the subsistence, we distribute the item of $425,000 as follows: Subsistence of men and horses, $110,000. The details are as follows:

Pay of force			$325,000
Subsistence—men	$62,000		
" horses	48,000		
		$110,000	
Light and fuel	$50,000		
Clothing	48,000		
Repairs and renewals	50,000		
Horses, arms and ammunition, books and stationery, hospital	25,000		
Billeting and travelling	72,000		
Transport and freight	30,000		
Contingencies	20,000		
Buildings	20,000		
		315,000	
			425,000
			$750,000

We have in the two provinces of Alberta and Saskatchewan 500 men, 100 in the Yukon and 100 in the Territory. We have 12 principal stations distributed in Alberta, Saskatchewan, the Territory and the Yukon. In each of these 12 stations is a district, at the head of which is an officer and a small staff, and each one of these stations has a certain number of detached stations. We have 150 subsidiary stations dependent upon these 12. In Alberta there are 63 such stations; in Saskatchewan, 70; in the Yukon, 10; in the Northwest Territories, 7. We propose to distribute them from the United States boundary line up to Whitehorse and Dawson in the Yukon, to the mouth of the Mackenzie river in the north and to the Hudson bay in the east.

Mr. FOSTER. How many men have you in Alberta?

Sir WILFRID LAURIER. Two hundred and fifty, and 250 in Saskatchewan, 100 in the Northwest Territories, and 100 in the Yukon. There are 12 posts where the men are distributed. My hon. friend is familiar with the duties of those men. They include not only the duties of police officers in the ordinary sense, but they are of great assistance to colonization and settlement. I may say that the force is all the time patrolling; the men are all the time on horseback, visiting every settlement and every settler, visiting the ranchmen, asking if there are any complaints, rectifying erroneous reports, and reporting anything out of the ordinary. I may say that though we ask for an appropriation of $750,000, the cost to the federal treasury is only $600,000, because we receive $75,000 each from the provinces of Alberta and Saskatchewan.

Mr. FOSTER. What rifles is the force armed with now?

Sir WILFRID LAURIER. The Lee-Metford and the Winchester.

Mr. FOSTER. I would like a little more explanation as to the disposition of the men. Is it a part of the policy of the department gradually to withdraw the men from the more thickly settled portions of Alberta and Saskatchewan, the large towns for instance, the large villages along the line of railway, and distribute them to the outlying portions, where there is lesser civic authority, and influences that come from the more settled conditions, especially in view of the fact that the time is approaching when these provinces must, the same as British Columbia and Manitoba, look after their own civic affairs, in so far as this force takes the place of bailiffs and constables, and that kind of officer which, in other provinces, is provided by the provincial authority. So it is a matter of some importance to know whether the policy of the department is to withdraw from the older portions and gradually to distribute the force, send them into the outlying districts where the power of the civil authority is not so strong. There is another point which I would like to mention to the Prime Minister, and I will be frank about it: Does he allow local party interests to have any part or lot in this matter, or is he keeping this force in that respect on the high level of a military force? Is he sure that it is not used in any way to advance the interest of—we may be frank about it—the party, or the party representatives?

Sir WILFRID LAURIER. With regard to the first point, my hon. friend has anticipated the policy of the department; it is gradually to withdraw police protection from the larger and older sections of the community and give it to the new settlements. I am afraid that for some years to come we will be forced to keep a portion of the force on the frontier of the United States until settlement becomes thicker there. It is a matter of necessity for the protection of the revenue, and of the settler, and the preservation of peace, to keep a little closer watch on the line than in the interior. But gradually we are reducing the force in the larger towns, and extending it northward to the newer settlements. The day cannot be far distant when the provinces of Alberta and Saskatchewan can dispense with a large portion of the force; but I imagine that as long as immigration flows in at the rate it is doing now, it would be a mistake to withdraw the force altogether. The sight of the uniform is an encouragement to the settler, he feels more secure; especially those who come from the continent of Europe feel more safe when they know that the police constable is not far distant, and they can have recourse to

him, not only for the purpose of protection against violence, but for all sorts of needs. If the settler feels a difficulty about anything he goes to the police force, and that force is of great value to him in many ways. With regard to the second question of my hon. friend, I do not think that my hon. friend has received any complaint of the action of the police, I think it has been kept absolutely free from any partisan action. I have received complaints, perhaps on one or two occasions. The instructions are very severe to the officers that they should not interfere in politics in any way. But more than one or two complaints I have not received, and I do not think my hon. friend has received any either, or at most, very few.

Mr. FOSTER. The right hon. gentleman says there are a hundred men in the Yukon. Would he tell me how they are distributed in the Yukon?

Sir WILFRID LAURIER. We have reduced the force there from 300 to 100. At present there are two chief stations in the Yukon, at Dawson and at Whitehorse. In the Dawson division there are substations at Town Station, Grand Forks, Selkirk, Quartz creek, Granville, Selkirk and Forty Miles. In the Whitehorse division there are substations at Carcross, Livingstone creek and Champagne's Landing. They are looking after the miners chiefly. Of course it is our intention to reduce the force and eventually to withdrraw it completely. The experiment was tried two years ago in Dawson of having their own police force, but it did not work and they had to fall back upon the Mounted Police.

Mr. FOSTER. As far as I am concerned, I agree entirely with the general idea of the Prime Minister that the force is of inestimable value to us and to the Northwest. The only points I think we ought to guard against, beside those I have mentioned, are that we do not give up its consummation, in the not very far distant future, of the idea that the provinces as they grow become densely populated and get their municipalities organized will ultimately have to look after their own police work.

Sir WILFRID LAURIER. Hear, hear.

Mr. FOSTER. There are two influences which, I suppose, the Prime Minister has constantly upon him. The local governments themselves, for various reasons, would be loath to see a single man of the Mounted Police disappear from either of the provinces and the localities seem to have a decided preference for the Mounted Police over a provincial constable or officer. These two influences would work towards the perpetuation of the force in all its fulness and it is against that that I think the Prime Minister is wise in having his policy definitely stated and currently carried out. The real need comes where settlement is more sparse. But, I think, that no one can question for a single moment that the force has been worth its cost a hundred times over in the development of the Northwest. It has not only been a credit to Canada but it has really been the backbone and support of the people of that country. It has kept order, maintained respect for the law and it has given to scattered families and homesteaders a real peace and comfort to know that the mounted policeman was within hail and made his occasional visit. Nothing could compensate for the loss of that, and I think the Dominon has done properly and rightly in keeping this force at its high level and distributing it through those portions of the Northwest. It is one thing, that, if it is kept out of party politics and kept up to its original excellence, there will never be much quarrel between the two sides of the House upon it.

Mr. SPROULE. The right hon. Prime Minister did not know what the force in the Yukon cost. There are a hundred men, I understand?

Sir WILFRID LAURIER. There are one hundred men in the Yukon.

Mr. SPROULE. What is the cost?

Sir WILFRID LAURIER. We estimate that in the Yukon the cost per man is $1,500. We estimate that the cost per man in Alberta and Saskatchewan is $900.

Mr. LAKE. How much is contributed by the provinces of Saskatchewan and Alberta to the maintenance?

Sir WILFRID LAURIER. $75,000 by each province, or $150,000 in all.

Mr. SPROULE. Then the cost of the force in the Yukon will be $150,000, I take it?

Sir WILFRID LAURIER. Yes.

Mr. SPROULE. Can the Prime Minister give us any information as to the population of the Yukon?

Sir WILFRID LAURIER. About 10,000 I understand.

Mr. FOSTER. All told?

Sir WILFRID LAURIER. I am afraid so

Mr. J. D. REID. Does this include the police along the Hudson bay?

Sir WILFRID LAURIER. In the Northwest Territory, which now extends from the boundary of British Columbia and Alberta to Hudson bay, we have 100 men scattered all the way from Athabaska Landing to Churchill on the Hudson bay and to the mouth of the Mackenzie river.

Mr. J. D. REID. Did the steamer 'Arctic' take up some supplies for the men on Hudson bay last year?

Sir WILFRID LAURIER. That is not within my jurisdiction.

Mr. J. D. REID. It was the last time.

Sir WILFRID LAURIER. It is no more.

Mr. J. D. REID. The right hon. gentleman will remember when she made her first trip about half her cargo was supposed to be for the Mounted Police along the shore of Hudson bay.

Sir WILFRID LAURIER. Yes.

Mr. J. D. REID. I thought probably that she had taken food up there for the men.

Sir WILFRID LAURIER. She is now under the control of the Department of Marine and Fisheries.

Mr. FOSTER. The mention of the name calls up memories. Where is the vessel now? We have not heard of her lately. From the great prominence which the name gained in the country not very long ago it seems to have sunk into oblivion. Has the vessel gone down or what has happened to her?

Sir WILFRID LAURIER. She has not gone down. She has gone up. She has gone up to the northern waters and at the present time Captain Bernier is seeing that the British flag is protected in every land that belongs to Canada.

Mr. FOSTER. How many flags did he take up?

Sir WILFRID LAURIER. Enough to cover the ground.

Mr. J. D. REID. Has he the wireless telegraph on board so that you can communicate with him occasionally?

Sir WILFRID LAURIER. I am not aware of that. I have told my hon. friend that the 'Arctic' is not under my jurisdiction now.

Mr. FOSTER. Does the Prime Minister know what quantity of anchors and chains he took up to chain those islands that he discovered and put a flag on?

Sir WILFRID LAURIER. No, he chained them to the north pole.

Mr. SPROULE. We have several times asked the question whether the government did not think, in view of the reducing population of the Yukon, that they could do with less men and less expense. It seems a pretty large item for policing that territory. If the population is about 10,000, it costs $10.50 a head for policing that country. When the police force was first sent there the population was very much larger than it is now and things were supposed to be not in as high a state of civilization as at the present time. Do the government think it necessary to keep up such a large force (100) to look after about 10,000 people, and do they think that the expense cannot be reduced materially in a part of the country where we are told that the streets of Dawson are just as quiet as the streets of Ottawa, and where there is no more lawlessness and no more disposition to lawlessness than in the older settled portions of the country? If that is a fact it seems to me that we should be able to make some reduction in the number of the force and in the expense that is incurred in maintaining it.

Sir WILFRID LAURIER. I think it is quite true, and it is our boast that the streets of Dawson, Whitehorse and all the creeks in the Yukon are just as safe as are the streets of the city of Ottawa, but that is the result, I believe, of the presence of the police. If the police were not there I think the result would be very different and we could not hope that the streets of those places would be as secure as they are to-day. There are now 10,000 people in the Yukon, but it is a mining camp. Mining camps are not proverbially very orderly, and unless we have police the order may not be what it is to-day. At all events, that is our supposition and that is the representation which is made to us. We started in the Yukon with 300 men and we have reduced the force to 100 men. It is our intention to reduce it still further as we think we are justified in doing so. At the present time I do not know whether it would be justified or not. We have had no mail from the Yukon of late and we would not undertake to reduce the force unless we had had previous communication with the commissioner, Mr. Henderson. If we are advised that we can, with security to the territory, reduce the force it is our intention to do so. At the same time I would remind my hon. friend that I would doubt the wisdom of withdrawing the whole force at the present time. The Yukon is far away from communication. At one time we had information that there was a party of desperadoes in Skagway that wanted to raid the territory and that was the first reason that induced us to send in the force. If that was the case, and I think there was good reason for so believing, for self-protection it is advisable that we should not withdraw the force altogether at this moment but that we should reduce it as far as circumstances will allow.

Mr. SPROULE. While we may not take the force away entirely it does seem to me that it might be materially reduced without any great danger of a disturbance of the peace. The minister says that mining camps are proverbially turbu-

lent. We have two important mining camps in Ontario, Cobalt and Gowganda. The provincial constables look after the policing of those mining camps, and we do not hear of any outrages being committed there any more than in the Yukon. Yet there is not one constable there for every ten, perhaps every fifteen, that there is in the Yukon. With the reduced population, and with the turbulent element largely gone, if we can believe the information which we have received from year to year, it does seem to me that it ought to be part of the duty and of the desire of the government to get an annual report from their inspectors on that phase of the question. There is in the Yukon a quasi form of government that ought to do a great deal in the administration of justice to relieve us of the necessity of maintaining a police force there. It is true, we have reduced the force from 300 to 100, but still it seems to me that the 100 is a large number of men to look after 10,000 people, if there are that number—because we are sometimes told that there are only 5,000 or 6,000 in that country. Does the force do any other material work that could not be done by civil officials? They used to collect the customs revenues, I think; are they doing that work any more than they did, or are they simply performing the duties of police constables?

Sir WILFRID LAURIER. My hon. friend will agree with me that there is no comparison whatever between the Yukon and Gowganda and Cobalt. The latter places are within easy reach of the forces of the government of Ontario in case a riot should break out. But if we had a riot at Dawson, unless we had a military force there, how could we assert the authority of the law? This consideration alone is, I think, sufficient to warrant us in maintaining the force there. We do not want to see a repetition there of the early days of California, when every man was his own constable. We must maintain law and order in the Yukon. I agree with my hon. friend that we should reduce the force when possible, and we are reducing it gradually. My hon. friend asks if the force continues to do the service it did at one time in collecting the revenue. We are gradually withdrawing it from that duty, and when we do that altogether, there will be less occasion for the number of men we have. I think we have reduced the force as rapidly as it has been possible to do it without jeopardizing the peace of the country.

Mr. SPROULE. Are there any of the police force in Manitoba now?

Sir WILFRID LAURIER. No, not at all.

Mr. SPROULE. There is none in British Columbia?

Sir WILFRID LAURIER. No.

Mr. SPROULE. Is there any in the unorganized territories?

Sir WILFRID LAURIER. Yes. In all the Northwest Territories, including the Yukon, we have 150 stations and 700 men.

Mr. MAGRATH. Of all the great changes which have taken place in our great west, the one which causes the old timers the greatest regret is the passing away of the Royal Northwest Mounted Police. For some time the withdrawal of the police from the centres has been going on, and we do not see them on our streets to-day as we did in former years. I personally endorse the policy the right hon. gentleman has followed, but I am sorry that we cannot see more of these men. They have done a great and valuable service in our country; they have served the country and served it well, and I am sorry that we cannot do more for these men than we have done. I am quite in accord with all the right hon. gentleman has done, and I support the vote.

Mr. CONGDON. I wish to point out a reason why the vote should be taken at the figure stated, even though later experience should show that the number of men mentioned in the vote is not required. In a country like the Yukon it is a very difficult thing to estimate a year beforehand what number of police may be required. At any time there may be a fresh discovery and an influx from the neighbouring portions of Alaska or from other places, of a population which would necessitate the presence of a large force of the police. I think in any case that when we are making an appropriation of this kind we should provide for a sufficient number of men to render the force capable of coping with any possible contingency that may arise.

Subsistence, forage, fuel and light, clothing, buildings, repairs and renewals, horses, dogs, arms and ammunition, medical stores, billeting, transport, water service, stationery and contingencies, $425,000.

Mr. FOSTER. I understand these supplies are almost entirely got by contract and tender?

Sir WILFRID LAURIER. Seventy-five per cent of them. I can give a list of the contracts if my hon. friend wants that.

Mr. FOSTER. No.

To compensate members of the Royal Northwest Mounted Police for injuries received while in the discharge of duty, $3,000.

Mr. FOSTER. How much was paid for compensation last year?

Sir WILFRID LAURIER. $2,343.

Mr. FOSTER. What was the nature of the compensation?

Sir WILFRID LAURIER. Some twenty men were disabled last year in the discharge of their duty and I think every one will agree that they should receive compensation.

Department of Public Works — salaries, $324,800.

Hon. WM. PUGSLEY (Minister of Public Works). The leader of the opposition asked that this item should stand until the classification of the staff was brought down. I went into the explanation quite fully when this appropriation was last under consideration by the House.

Mr. SPROULE. The trouble is that perhaps not one member out of twenty may have read the statement submitted to the House.

Mr. PUGSLEY. I supposed that hon. gentlemen would look at it. The reason for the large increase under civil government is that whereas formerly we had only 36 employees in the permanent inside service there were in the neighbourhood of 200 in the service in Ottawa who were paid from the outside service vote. The department was organized first when Sir Hector Langevin was minister and further under Mr. Hyman. Now under the provisions of the Civil Service Act instead of there being 36 in the inside service there will in future be 237. That accounts for the increase in this vote. If my hon. friend will turn to other items he will find there is a reduction corresponding to the increase under civil government.

Mr. SPROULE. Is the reduction in one case equal to the increase in the other?

Mr. PUGSLEY. Yes, with the exception of some increases in salaries and in the staff.

Mr. SPROULE. How much additional cost is incurred by the transition of these 237 officials into the inside service?

Mr. PUGSLEY. The memorandum I have is that the present salaries amount to $237,387 to be increased to $263,175, or an increase of $25,787 under the new organization. Then there is one additional clerk in the third division sub-division A provided for. Then there are the statutory increases for 1909-10 to 196 employees, $5,262.52. Then we make provision for additional appointments or any other changes necessary in the departmental staff, $5,000. The balance, covering the difference between the annual increases in salaries authorized by the orders in council of 1908, and the portion of such annual increases actually paid to employees to be transferred to civil government during the fiscal year ending March 31, 1909, $8,958.81.

Mr. SPROULE. Would not that be part of the statutory increases already provided?

Mr. PUGSLEY. No, they were special increases by orders in council, and these are set forth in the orders in council which have been laid on the table. That makes a total of $25,728.98. In the memorandum from the Finance Department, on page 26, that amount is given just as I have given it here, as a footnote. The other increases are accounted for by the increases to those who were already members of the permanent staff. We have picked out all those who were in the inside temporary service and who have been brought, by virtue of the Civil Service Act, into the permanent staff, and we deduct their salaries from what had been hitherto provided for in these miscellaneous votes, and add them under the head of civil government.

Mr. SPROULE. Where the civil servants have received an additional amount over what they were receiving heretofore, for the purpose of putting them in a certain class under the new Act, do they receive this year the statutory increase?

Mr. PUGSLEY. They begin to earn their statutory increase, but do not get it until they have served a year.

Mr. SPROULE. Did they get it last year?

Mr. PUGSLEY. Those who were in the outside service did not receive statutory increases. Their increases had to be by order in council.

Mr. SPROULE. What has been done with that class who were induced to resign and go into the outside service for the purpose of getting in in a higher class at an increased salary?

Mr. PUGSLEY. There was not one instance of that kind in my department.

Mr. SPROULE. I am credibly informed there were some in the other departments.

Mr. PUGSLEY. I can only answer for my own.

Mr. FOSTER. The other night this point was raised. Take the order in council of May 5, 1908, which is in these words: 'That authority be granted for the continued employment of the undermentioned officers in one of the permanent branches of the Department of Public Works at the salaries hereinafter specified from July 1, 1908, to July 1, 1909.' The order in council is silent as to whether the salary set opposite the name of each one was the salary of the preceding year. As far as we can judge

from anything said in the order in council, each one may have had $150 or $500 added to his salary. Were these the same salaries that these employees were being paid the preceding year?

Mr. PUGSLEY. In quite a number of cases there were slight increases in salary provided for by that order in council. Every year there must have been an order in council, for the continuance of those engaged in the outside staff. The appointments were for the year and were renewed by order in council and the salaries provided for.

Mr. FOSTER. It seems to me the order in council ought to state what is really being done or else council may be very easily misled. Of course the minister might have gone over it in detail with his colleagues and shown exactly what he did.

Mr. PUGSLEY. That information is given to the Treasury Board and that board has before it the salaries of the previous year in every case.

Mr. FOSTER. But the Treasury Board gets what comes before it second-hand. It is a subsidiary council of the council. Surely the minister does not reserve the question of increases for the Treasury Board alone? The increases in salary come first before council. If they go to the Treasury Board first, the report from that board must come back before the council. It is not the Treasury Board which can either give salaries or increase them; it is the council alone which can do that. The Treasury Board has other duties to perform; they have to see that the regulations and conditions are the proper ones as prescribed by law. That opens the whole question. The minister will remember that I stated in that general debate that in the orders in council which had been brought down later, a large number of these outside employees received special increases running from $50 up to $200 or $300, and I tried to calculate the total increase which had been, as I contended, given by the minister outside the spirit of the Act, to take effect on the 1st of September, as grading these into the service under the new Civil Service Act. The whole of it was not shown, unless we can find out what increases were given by this order in council, which purports, on the face of it, to provide simply for a continuance of office, and impliedly a continuance of salary. Now, the minister says that while it was a continuance in office it was in many cases an increase of salary. I do not want to take up too much time to find out just what increases were given, but in that large number of clerks, the minister will see there is room for a good deal to happen under that concealed order. It is rather blind, I think, to say the least of it. The minister is sending down an order in council with reference to employees that have been employed year after year, and asking that they be continued at the salaries placed opposite their names. I think the inference is that the salaries are simply continued salaries.

Mr. PUGSLEY. The usual course was followed in this case. The order in council of the previous year would show the salaries which were paid in that year, and, as is customary, and as I think my hon. friend will agree is a proper course in this case, this recommendation to council was referred to the Treasury Board. The Treasury Board then had before it the salaries of each of these officers had received the previous year, and saw what were the recommendations for increases; the Treasury Board then reported to council, and upon the report and recommendation of the Treasury Board the order was passed. I do not think my hon. friend is right in calling it a concealed order.

Mr. FOSTER. Well, it is a blind order.

Mr. PUGSLEY. Not at all. The most my hon. friend can say is that it does not show what were the salaries these officers received in the previous year. Though I would be sorry to see the item delayed. I will be glad to lay on the table of the House a copy of the order in council of the previous year so that my hon. friend can compare the two.

Mr. FOSTER. That raises the question as to whether this was the custom in the other departments. We have found out so far in our investigation that some of the ministers in some of the departments carried out this whole business on a different plane from others, and it raises the question now as to whether the ministers generally, in reporting to council with reference to the vast outside body, gave increases then, upon which afterwards special increases, sometimes repeated, have been made. In the other case we saw what the special increases were; they could not be put in any other way but in the first continuing order. If all the reports had been the same as my hon. friend's, we do not know, by looking at it, how much the increase was given and in what cases. I would like to go into the new system and ascertain how each division of the service entered it; and if the minister will amend that report that he brought down with his order in council of the 5th May, 1908, by having one of his clerks put alongside the list that is here each case of increase, probably they were not all increases, that would lighten the labour somewhat. If he would do that, and have it ready before we get into the Civil Service discussion, I would be very glad.

Mr. PUGSLEY. I will do that.

Mr. FOSTER. Then I raised the question before by what authority it was that you come in along the last of August, and you make increases, and you date the increase back by the order in council, two months, may be, to the beginning of the then fiscal year. I cannot find any authority in the Civil Service for that. I do find that this has been done, that you come down to parliament and you ask that an increase be granted, and that the increase be voted to take effect at a certain time. But out of the vote that you can, on the 27th day of August, make an increase of salary of $100 or $200 to men in the service, and then say that it may be dated back to the 1st of April—I do not find any authority for that. Anyway, it seems to be a rather dangerous form of proceeding, you are doing what parliament has had no advisement of. That is altogether different from the case where you come down in an estimate and say: Here, I want $50, or $100, or $200 increase in this item for such a clerk, and I want to pay him from the first of the year, or from any particular month.

Mr. PUGSLEY. I do not know whether that could be done in the case of one who was under the Civil Service Act, but I presume it could not be done. I would agree with my hon. friend in that respect. But with respect to those who are on the temporary, and what is known as the outside service, that authority has always been recognized, because the vote is for a lump sum, and when the question came up with regard to fixing the date from which the increase would take effect, my deputy informed me that it had been the practice ever since he had been in the department, and there seems to be no limitation under the Act with regard to that power. It occurred in two or three cases, I think that was done by the order of May. My hon. friend is aware that the order in council was not an order made under the old Civil Service Act, it was made before the new Act came into force—that was my information. The vote being a general one and these officers not being under the old Civil Service Act, the council, if they thought fit to do so, could fix a date anterior to the order from which the increase of salary would take effect. Now, with regard to making the increases themselves, I think we threshed that out pretty fully some time ago. But I think my hon. friend will realize that as there were a large number of officials who were going to be brought by force of law under the Civil Service Act and were to be placed side by side with those who were under the new Act, it was proper that the deputy minister of my department should have regard to the merits, so far as possible, of the different officers, to their length of service, the importance of the duties which they were discharging, and endeavour to do justice as between them all, and so start them upon the 1st of September upon a proper and justifiable basis, leaving their remuneration and their classification after that to be fixed from time to time under the provisions of the Civil Service Act. That is what he sought to do, and it is what I sought to assist him in doing so far as my knowledge would enable me.

Mr. FOSTER. I do not wish to go again over the discussion we had the other night, but I would point out to the minister that I do not think his ground is a good ground. He may say that he thought he had more liberty under the outside vote than he had under the appropriation for what we call the regular Civil Service. But in theory they are the same. You ask for your vote to pay for the services of your officers, and, when you get your vote you administer the fund under the authority given. The fact that these men were to be brought in on September 1, and up to that time had not been brought in, does not, I think, make against the argument that the spirit of the legislation of last year was to place the service on a permanent basis and on a basis of competition and merit in appointments, which, up to that time, had not been the case. As I said then, so I believe now, that the outside service should have been administered in the spirit of that Act. While I do not want to go over that discussion again, I find that there are new appointments, for which, as yet, I think we have no reasons. A draughtsman was appointed in the chief engineer's branch at $700, the appointment being made by order in council on August 6, 1908, and dated back to April 1, 1908.

Mr. PUGSLEY. That was the beginning of the fiscal year.

Mr. FOSTER. But the appointment was not made at the beginning of the fiscal year, but was dated back. Now, the Civil Service Act provides, both with reference to the outside and the inside service, that no appointment shall be made until the office has been created, in the case of the regular Civil Service, and, in any case, until the amount has been voted by parliament. The whole spirit of the Act is against dating appointments back. Mr. F. O. Hamel was appointed at $700 in the chief architect's branch. What is the explanation of that appointment?

Mr. PUGSLEY. Mr. Hamel is a draughtsman, and the services of a draughtsman were required and accordingly he was appointed. That is all I can say.

Mr. FOSTER. That answer might be set up and stereotyped. Was the appointment so urgent that it could not be left over from August 6, when it was made, to September 1, when the machinery of the

Civil Service Act would be at the disposal of the minister for all appointments?

Mr. PUGSLEY. There was a good deal of work on hand last year, and the chief architect was very much in need of additional assistance. I was very desirous, as far as possible, to carry out the views expressed in the House that architectural work should be done in the department. So, it became absolutely essential to have additional help.

Mr. FOSTER. The minister has not been very explicit as to what would have happened had he waited for twenty-five days later and made the appointment in the regular form.

Mr. PUGSLEY. Plans on important public works would have been delayed. This young man had been employed temporarily because the services of one of his profession were needed, so he was actually in the office before the order in council was passed, and I think probably had been working from about April 1.

Mr. FOSTER. I suppose he must have been there, or the minister, surely, would not have paid him.

Mr. J. D. REID. There was an item relating to rents that stood over. Is it to come up this afternoon?

Mr. PUGSLEY. I tried to bring it forward two or three times before. I shall be glad to have it dealt with this afternoon.

Mr. J. D. REID. The hon. minister promised us some information on the subject. I do not wish the item to stand any longer than is necessary.

Mr. FOSTER. There is a new appointment at $1,250, the appointee being Mr. Arthur Barsalou—made on the same date, 6th August. Apparently, the minister could not wait twenty-five days in this case either.

Mr. PUGSLEY. Unfortunately, his predecessor died unexpectedly, and we had to fill the office. Mr. Barsalou's salary was not dated back, was it ?

Mr. FOSTER. Yes, to April 1. The minister could not have had both the living and the dead on the salary list at the same time.

Mr. PUGSLEY. My deputy tells me that Mr. Barsalou was in the department before that, perhaps performing the duties while his predecessor was ill.

Mr. FOSTER. Then, he was not appointed before the death of his predecessor ?

Mr. PUGSLEY. He was appointed because of his predecessor's death, but I fancy he was discharging the duties during his predecessor's illness.

Mr. FOSTER. The minister will get the information to which I have referred ?

Mr. FOSTER.

Mr. PUGSLEY. Yes.

Contingencies, $15,000.

Mr. AMES. Does this cover printing and stationery ?

Mr. PUGSLEY. Yes. It is the same as last year.

Mr. AMES. I believe this covers the printing of the annual report of the Public Works Department. I desire to mention a matter which was called to my attention by a chemistry professor and a prominent paper manufacturer in Montreal recently. These gentlemen tell me that the report of the Public Works Department and other blue-books are printed upon paper which will not stand the test of time. Are steps taken to have a limited number of these reports printed upon paper of such a character that these books will be available twenty-five or fifty years from now ?

Mr. PUGSLEY. I have not heard that question raised before. It concerns the Stationery Department rather than my own. I shall be glad to bring the matter to the attention of that department to see if there is anything in the point my hon. friend raises.

Mr. AMES. The point is this: If the paper on which the records of the Public Works Department and others are printed is of wood pulp or chemical pulp, in twenty-five or thirty years from now it will crumble away and the books made of it will be useless. I would ask the minister if he will have inquiries made whether the paper used is wood pulp or chemical pulp paper. If it is, it would be well that a limited number of copies of reports should be printed on better paper.

Mr. PUGSLEY. I suppose my hon. friend would not suggest parchment——

Mr. AMES. No, but linen paper.

Mr. PUGSLEY. I suppose there is a difference between ground pulp paper and chemical ?

Mr. PATERSON. The reports of the different departments are found in the bound sessional records. Whether that is the same kind of paper or not, I do not know.

Mr. AMES. I think the bound sessional records are simply the regular blue books. However, the matter is worth looking into, because these records should be preserved.

Rents, repairs, furniture, heating, &c.—Dominion buildings—rents, &c., $200,000.

Mr. FOSTER. Our time is somewhat limited. We shall probably not have much leisure left this week, and next week will be a busy one, according to the work arranged for. I understood the Minister of Finance was anxious to get a supply bill of the supplementary estimates and such

others as were neecssary. While we are willing to facilitate that, we do not propose to shove through all these items within the time proposed. So, I think, if the ministers want to get their original estimates through, they should give their time to the urgent portions of them.

Mr. PUGSLEY. We might take some of the items under 'Public Works—Miscellaneous.' This includes salaries for a number of employees.

Mr. FOSTER. But they are salaries for next year.

Mr. PUGSLEY. Yes, but standing in the same position as those under 'Civil Government' that we have just put through. And the money is needed.

Mr. FOSTER. This is a very inclusive item. I think you will see a lot of discussion on it.

Mr. PUGSLEY. It relates altogether to my own department.

Mr. FOSTER. But you have here the Deep Waterways Commission and other important items. Of course, the minister can take up time on this if he likes. But my desire is to facilitate what seems to be a matter of some urgency. There are some votes in Civil Government left.

Civil Government—Department of Mines—salaries, $148,831.50.

Mr. FOSTER. With reference to this department, I have been puzzled over it. It is difficult for me to find out how it came, and pretty nearly as difficult to find out ' whither it goeth.' The minister, it may be, will enlighten me. Under the Department of Mines, he has fifty of the old permanents, and thirty-eight whom he has taken in from outside. Where did he get the fifty permanents? What does the department in that respect include? Does it take in the whole of what was the old Geological Survey?

Hon. WM. TEMPLEMAN (Minister of Mines). The permanent officials, according to my addition, number 46 not 50. However, these are the permanent members of the old Geological Survey, and also several permanent officers of the Mines Branch of the Department of the Interior. The Mines Department, as at present constituted, is made up of these two—the Geological Survey and the Mines Branch of the Department of the Interior, over which Dr. Haanel presided. I think I have not increased the number of officials—not very considerably at all events. That is whence the department came ; as to ' whither it goeth,' that remains to be seen It is going along very successfully, and doing, I think, very good work.

Mr. FOSTER. There are three permanents, a deputy minister, one in subdivision B of the 1st division, and one in the third division, subdivision A. Where did these three come from ? I suppose the deputy minister was Mr. Low, director of the Geological Survey.

Mr. TEMPLEMAN. Yes. When the department was organized, he occupied the position of director and deputy head of the Geological Survey and became deputy minister of the Department of Mines. Mr. Marshall was accountant of the Geological Survey and is now accountant of the Mines Department.

Mr. FOSTER. At the same salary?

Mr. TEMPLEMAN. Yes. His salary was $2,275. We are giving him an increase of $100.

Mr. FOSTER. That is the statutory increase?

Mr. TEMPLEMAN. Yes.

Mr. FOSTER. Then, there is a third division clerk, sub-division 'A'. Who is that?

Mr. TEMPLEMAN. That is Miss B. Urquhart, stenographer and she was in the geological survey.

Mr. FOSTER. Last year this clerk received $837.50 and the estimate this year is $937.50. How is it that she comes in with an increase of salary instead of being transferred at the same salary?

Mr. TEMPLEMAN. I am advised that this lady was a junior second-class clerk and the Act provided that she would go into a class with a minimum salary of $900.

Mr. FOSTER. Do the junior second-class clerks go into that division or into the $800 minimum division?

Mr. TEMPLEMAN. Into 'A' of the third division. She goes into the class from $900 to $1,200.

Mr. FOSTER. Well then $37.50 would be the statutory increase for her. Whether this is the place or not to raise the question, it comes in here. What is the basis, supposing they are getting $700, or whatever they are getting as junior second-class clerks, upon which you put these into the $900 to $1,200 division instead of the $800 to $1,600 division?

Mr. FISHER. That would depend entirely on the quality of the work that the clerk was doing. It is open to the minister to decide into which of these divisions the clerk would go. Wherever the salary was common to two divisions certain clerks, if they got so much salary, say $800, who were doing work that is of a quality that is intended for the third division would go

into that division, whereas, certain other clerks, who were getting $800 and who were doing work of a quality which is intended for the second division, would be put into 'B' of the second division instead of 'A' of the third division.

Mr. FOSTER. Is that left entirely for the minister to say?

Mr. FISHER. As far as those in the service, before 1st September, are concerned, the commissioners have nothing to do with it. In future it will depend upon examination. In future, applicants for entry into the service will go into 'B' of the third division or 'B' of the second division, according to the examination they pass.

Mr. FOSTER. But where there is a certain salary, such as that which has been mentioned, the discretion is entirely with the minister as to whether they shall go into the $800 to $1,600 division or the $900 to $1,200 division?

Mr. FISHER. If they were in the service, yes. In future that cannot occur.

Mr. FOSTER. Then there are five from the outside service in the first division. Was there any addition made to the salary of these five during the six months preceding the first of September, or during any part of the fiscal year?

Mr. TEMPLEMAN. I do not think there were any increases made. I am advised by the director that there were no increases made to bring any of these officials into other classes than those that the salaries which they were then receiving entitled them to.

Mr. FOSTER. There are 38 brought in from the outside service and, as I understand, the minister says there were no increases in the salaries of the 38 immediately prior to the 31st September and that they were transferred on the same salaries as those which they were receiving during the year?

Mr. TEMPLEMAN. Quite right.

Mr. FOSTER. So that in this case there was no boosting of salaries in order to give them a better position. Well, I commend the minister for the policy of his department. It is in strong contrast with the policy of some of the other departments, the head of one of which is sitting very close to us now.

Mr. ARMSTRONG. Would the minister be good enough to give a general idea of what the extra clerks are doing? The Mines branch has only been organized two or three years but the increase in the number of clerks in the geological survey and the mines branch has been considerable. What is the cause of the increase and what is the great need of it?

Mr. TEMPLEMAN. It is news to me to be told that there has been a considerable increase in the number of technical officers or clerks of any kind in the Department of Mines.

Mr. ARMSTRONG. Would the minister give us the expenditure five years ago and the expenditure to-day?

Mr. TEMPLEMAN. I have not the expenditure five years ago. The expenditure has increased somewhat in the last few years, but it has not increased very largely. The additions to the staff, speaking from recollection, have been those of technical officers. We have in the Mines Branch, several new technical men, mining engineers and others of that kind. But as to clerks, stenographers and other officials of that kind, there has been very little increase in the department. I am not speaking from notes or memoranda but I know the demands made upon me to increase the staff have not been met very largely because we could not find the men we desired to have in those positions.

Mr. ARMSTRONG. What was the expenditure in the mines branch and the geological survey branch during the last year?

Mr. TEMPLEMAN. The total vote for 1908-9 was, for the Mines branch, $100,000. This year the vote is $81,000. For the assay office in Vancouver the vote last year was $26,000 and this year it is $18,000, a decrease in both cases. There is an increase, which will probably equal the amount of that decrease, in the geological survey vote from $204,750 to $240,000. Therefore, I think, we are hardly open to criticism for having increased the expenditure.

Mr. ARMSTRONG. I am very glad to see that the minister is so well satisfied with the amount of work being done for that amount of money. If we will look back ten years we will see that the department got along with about $110,000. When the expenditure was increased from that to over $200,000, we would naturally expect that there would be some material benefits derived from it. Is the minister continuing the practice of allowing officers of the survey to work for private companies during the summer months and then to come back in the fall and step into the department, their salaries going on as usual?

Mr. TEMPLEMAN. I would prefer that the discussion on the work of the department should be on the main estimates when I shall have considerable information to give. The work that is being done to-day by the department in infinitely greater than it was ten years ago; whether it be

greater relatively to the increased expenditure I cannot for the moment say. The policy of the department is not to permit its officers to do private work. There have been one or two instances in which the officers of the department were needed by explorers, private companies if you will, for a season's work. They could not find experienced men along these special lines elsewhere in Canada and in one or two instances, only one instance this last year, an officer was permitted to leave the department, but without salary, and to return afterwards, giving to the department all the inforamtion he had obtained while working for the private company.

Mr. LANCASTER. He was of course well paid by the private company?

Mr. TEMPLEMAN. I have no doubt he was probably paid more than he would be paid by the government, and right there you touch on a very important point. Our difficulty is to retain in the service of the government the best men. During the last few years two or three officers of the survey have left our employment simply because instead of being satisfied with $2,000 a year or so they have been able to receive $5,000 from private companies. In one or two cases the question for us was whether we should permit one of our best men to take service with a company exploring for coal for a few months, or lose his services altogether as his resignation was practically in our hands. If it were a general practice it perhaps might not be a good one. Of course while that officer is in the employ of the private company he is not paid by the government. There a few private geologists throughout the country, and many mining engineers, but we have in the survey most of the prominent geologists in Canada, and I believe it is desirable to occasionally permit them to leave the employment of the government in the summer months and do work for a private company, they giving to the government for publication in the reports the information they had obtained. There is another practice of the department somewhat similar. At present there is very great interest in the exploration of iron ore deposits throughout Canada, and within the last two or three weeks three applications have been made to me to permit one of the officers who is an expert in iron and the magnometric survey of iron deposits to make surveys of privately owned property. Some of these applications have come from within a short distance of Ottawa. We permit the officers to do the work, and I think it is conducive to the development of the iron industry. It does not cost the government very much, we simply loan the man for a few weeks. We are not interfering with the business of any outside geologists or mining engineers because there is a great dearth of specialists in Canada for this work.

Mr. ARMSTRONG. The minister has laid down a very dangerous proposition. He knows well that for five years one of the prominent men of the geological survey, in company with a number of employees of the government, located the best coal mines in the Northwest, and hardly had he handed over his report to the department, and before it could be circulated amongst the public generally, he went into the employment of a private company and started out west and located twenty-six of the best coal mines in that territory. A $6,000,000 company, controlled by a few men who are able to get this official away from the department, has been organized. If the minister will go back a few years he will see that other men have been doing the same thing, going out for members of parliament who were interested in these mines, spending their summers on the work and then stepping in to the department and getting their salaries during the winter months when they had nothing else to do. True, they may turn over the information to the government but it is after the companies have made all the use they could make of it. It is a very dangerous precedent for the minister to lay down.

Mr. LANCASTER. The remarks of the member for East Lambton (Mr. Armstrong) are worthy of considerable attention. It is a vicious principle to lay down, that these men who are presumably acting for the country at large and who acquire experience in the discharge of their duties, should place their knowledge at the disposal of private persons or companies. To let these men go out and give the benefit of their information to private corporations for a few months in the year and then come back and spend the winter in the government service, dumped again on the people at a good salary, and go out again the next spring or summer to the private corporations, it seems to me is absolutely wrong in principle and in practice. We are told that the corporations need these men. If they do they should employ them for the year round and pay them substantial salaries. I must protest against this whole practice.

Mr. TEMPLEMAN. My hon. friend is making a mountain out of a mole hill. The practice is in the interest of the mining industry of Canada, although I admit that it should be exercised with due caution. I understand that it is the practice of all geological surveys to do the very thing we are doing. Many years ago Dr. Barlow went to Sudbury and made a scientific survey of the nickel deposits in the interest of the nickel industry there, and his work is said to have resulted in very great benefit to the country. The department

lost nothing whatever by that; nor did it lose anything by permitting one of the geologists, who is an expert in coal, to go into the country west of Edmonton and assist in the exploration of an area of land in the mountains known to contain coal, and known long ago to contain coal. He did not lead the company to the coal field or give them any information as to the location of the coal deposits. We have known for many years that the coal existed in that northern country.

Mr. LANCASTER. Should not that information be kept for the benefit of the people and not used to enable private individuals to make money?

Mr. TEMPLEMAN. It is published in the report of the Geological Survey.

Mr. LANCASTER. Then why did these people want the man?

Mr. TEMPLEMAN. Because they needed his services and paid for them. If we had not allowed him to go, he would have been in the employ of that company to-day, and we would have lost his services; there is the whole question. Until two years ago Dr. Barlow was in the service of the Geological Survey at a salary of between $2,000 and $3,000; he was one of the best men in the service, and was offered $5,000 a year by a German company operating in the west and having large investments in Canada, and he is with that company to-day and we have lost his services. Mr. McEvoy, who was a long time in the Survey, and was one of our best men, was until recently in the employ of the Crow's Nest Coal Company, receiving three times the salary we paid him.

Mr. ARMSTRONG. Is the minister aware that Mr. Dowling, after making his report, spent five years in this district with a number of employees, all of whom were paid by the government, and that he did not make his final report on these locations until last year?

Mr. TEMPLEMAN. My hon. friend is not well informed. It is true Mr. Dowling worked in that part of the country for many years. He always returned to Ottawa in the fall, wrote his report, and it was published. The country at large has all the information collected by Mr. Dowling and has had it for years, so that any person could have gone to that country and staked out a coal location. If my hon. friend wants to stake out a coal location, he can do so, as there is plenty in British Columbia ; the whole country is full of coal. I think the practice is in the interest of the mining industry.

Mr. ARMSTRONG. If Mr. Dowling made a report in regard to these mines, why was it not made in connection with these companies? Other companies who are anxious to operate in that country send out men themselves to locate the mines, but Mr. Dowling, having been there for years, knew exactly where he could go and locate them, which he did. I do not think it is fair to the people of the country generally to say that anybody is allowed to go and locate mines.

Mr. J. A. CURRIE. In what year was Mr. Dowling in this district?

Mr. TEMPLEMAN. In 1906.

Mr. J. A. CURRIE. When was his report published?

Mr. TEMPLEMAN. Every year.

Mr. J. A. CURRIE. But all these reports are generally about two years late, and the department allows these men to go out and give information to private parties before it is given to the public. I think it is most reprehensible.

Mr. TEMPLEMAN. I do not know whether or not my hon. friend has read the reports of the Geological Survey. The report in question, which my hon. friend criticises is found in the report of the Geological Survey of 1906.

Mr. J. A. CURRIE. And what was the date of his exploration?

Mr. TEMPLEMAN. The same year. The report was laid on the table of the House in the session of 1907.

Mr. J. A. CURRIE. The hon. gentleman must know that engineers of this character are employed in the provinces, especially in the province of Ontario. These men are drawing small salaries, and yet they have absolutely refused to join large corporations in the Cobalt district, where they could get five or six times their present salary, simply because they thought to do so would be an imputation on their honour. If this department is to be manned by that class of men, you will find you are simply sending men out who will examine areas and make valuable discoveries and then go outside the department and disclose what they have found for the benefit of private speculators. I have had occasion once or twice in this House already to reflect on the Mining Department. If there is one department in this government which is a sink-hole for public money and doing very little good for the people, it is that one. Its report is the laughing stock of every other geological department in the world. That report contains about 3,000 pages, comprising simply a recital of brick yards and oil companies and other things which any one could get in Bradstreet. You can get all that information in the reports of the Manufacturers Association. There is no one who could not in his own office compile just as much information as is given in that report. But the size of the volume is intended to im-

press every one with the fact that the department is doing enormous work. I find that the smallest reports are those of departments which do the most work. When I see the bulky volume and the enormous amount of words and figures given in it, I cannot help coming to the conclusion that there is not much doing in that department, and that this report is only issued as an excuse for three or four men to draw big salaries. The department has not issued a single really good geological map, but you will find in this report stories about its officers getting up at six in the morning and paddling down the river and meeting a flock of wild ducks and returning in the afternoon and such particulars which are no earthly use to any one. What the people want is a report in accord with the best practice of other geological departments. We ought to have a man at the head of this Geological Survey who knows his business and not simply one who wants to draw a big salary and do nothing. How many of these men have given us any information about the various provinces? We have hardly anything in the reports about the great province of Quebec, yet every one knows there must be a lot of mineral wealth lying along the route of the Transcontinental Railway where it runs through that province. The geology there is the same as in Ontario where the silver mines have been discovered. You never find anything of value in this report, but when any valuable mineral discovery is made, you do not get news of it in this report until a year later, and in the meantime private indivduals have gone to work and staked out valuable claims. I hope that the minister will become impressed with the idea that the class of men we want are mining engineers who think more of their honour and profession than of the money they may make.

Mr. SEALEY. While my personal knowledge of the subject would not warrant my expressing an opinion on this matter, I may say that I have had applications from engineers for copies of this report, and through the kindness of the minister I have received two copies more than my allowance, and I have letters certifying that the report is a most valuable one. It seems to me that this is strong evidence from practical men that the report does not deserve the criticism we have just heard.

Mr. TEMPLEMAN. Criticisms of the department such as we have just had from the hon. member from Simcoe (Mr. Currie) cannot, because of their exaggerated character, do any injury to the department in the opinion of the public. It is not correct to say that in the Bureau of Mines of Ontario the practice is not in vogue of occasionally permitting men on the staff of that bureau to work for private companies.

Mr. J. A. CURRIE. Will the hon. minister name one case? He has contradicted my statement and ought to give his authority.

Mr. TEMPLEMAN. I might say that Professor Miller, an eminent geologist and expert, one of the best men in Canada, was permitted by the Ontario government to do private work and did it for the Larose mine. There are other cases of a similar kind. I am not defending or condemning the practice. It was a great advantage to the Larose people to have Mr. Miller's opinion regarding the geology of that mining claim. The practice is probably not indulged in any more there than elsewhere. It is followed in Washington in the geological survey there, and I am advised that in Germany geologists in the employ of the government are from time to time used by private companies, and at such times of course do not draw pay from the government. The criticism of the hon. gentleman is so exaggerated and unfair and inaccurate that it cannot possibly be received seriously, especially by hon. gentlemen who are better informed of the work done and the personnel of the men at the head of the Geological Survey and the Mines branch than my hon. friend appears to be. It is not correct to say that the report of the Mines branch issued recently has not been well received. We have had from all over Canada, from mining engineers and others, numerous demands for copies of that volume, and we have received compliments from mining men every where as to its value. It is a large volume, and it costs a good deal of money, but to say that you could get the information it gives in Bradstreet's is simply absurd.

Mr. J. A. CURRIE. I might say to the hon. minister that Professor Miller was sent by the Ontario department to settle a dispute in which the Ontario government was interested and to make an investigation of the Larose mine when the charge was made that it was stealing government ore.

Mr. FOSTER. I find in the return brought down that Mr. Dickinson is represented as having had an increase of $200, on the 17th of June, 1908. Was he in the outside service ? If so, the minister was hardly correct in saying that no increases had been made. Mr. Matheson, field explorer, had an increase of $300 on June 17, 1908.

Mr. TEMPLEMAN. I am advised by the director that these increases were made before the Civil Service Act was discussed.

Mr. FOSTER. It was before the Civil Service Act was passed, but not before it was discussed.

Mr. TEMPLEMAN. The director says that the recomendation for the increase was

made at a time when the department had no knowledge of the proposed Civil Service Bill. It had absolutely no connection with it.

Mr. FOSTER. That may be all right, but it modifies, to a certain extent, the statement made by the minister. However, it is not a very large one.

Mr. J. A. CURRIE. When the items of the Minister of Inland Revenue (Mr. Templeman) were under discussion here, the Minister of Customs (Mr. Paterson) being in charge, the items were passed under the understanding that, when the other estimates of the minister were under discussion, any matter relating to the department could be taken up on any item. I think that you, Mr. Chairman, will bear me out in that. I desire to bring to the attention of the minister an important matter relating to a question of weights, concerning which a difference now exists between vessel owners and the railways. I would like to know the position the department is going to take in the matter. If it is desired that I should not discuss it upon this item, I will take it up under any other item that may be agreeable to the minister.

Mr. DEPUTY SPEAKER. It would not be applicable on this item.

Mr. J. A. CURRIE. All the items were permitted to go through on the condition that we were to be allowed to discuss any subject on any item of the department.

Mr. FOSTER. Are all the minister's main estimates through?

Mr. TEMPLEMAN. Yes, all the estimates of the Inland Revenue Department. I was not present on the occasion referred to by the hon. gentleman (Mr. J. A. Currie), but I read 'Hansard' and, while I will not dispute the statement made by the hon. gentleman I am inclined to think that 'Hansard' does not report it that way.

Mr. J. A. CURRIE It ought to. If the minister has any objection——

Mr. TEMPLEMAN. I have no objection. But we are dealing with the Department of Mines, and that is hardly an occasion for discussing a matter of weight and measures.

Mr. J. A. CURRIE. Will there be any other opportunity to discuss the matter? If the minister will name an item under which the discussion can go on, I shall be pleased to postpone the discussion.

Mr. TEMPLEMAN. I do not know that I can name an item.

Mr. TEMPLEMAN.

Mr. J. A. CURRIE. Are there other estimates to come down?

Mr. TEMPLEMAN. No estimates in the Inland Revenue Department, so far as I know. But, if there is no other statement of that department, I submit that either the Minister of Finance or the Prime Minister is the person to suggest when the hon. gentleman (Mr. J. A. Currie) should discuss a matter of this kind. I would point out also that the deputy Minister of Inland Revenue is not here, nor is the inspector of weights and measures. The question is a technical one, and I am frank enough to admit that I must be coached by the inspector of weights and measures on a question of that kind.

Mr. FOSTER. I would suggest to my hon. friend (Mr. J. A. Currie) that, if there are other estimates of the minister to come down, the matter can be taken up then; if not, he can bring it up on going into Supply.

Mr. SPROULE. It is much more convenient to discuss these matters in Supply than on Concurrence. It is the right of the hon. member to proceed with the discussions on Concurrence, and, undoubtedly, he will avail himself of his privilege if opportunity is not given to him to go on with the discussion now. The convenience of the House as well as of the minister should be consulted, and the discussion should go on in Supply rather than when Concurrence is taken, and we are all in a hurry to get it through.

Mr. TEMPLEMAN. The leader of the opposition (Mr. Foster) has indicated when the matter can be discussed.

Mr. J. A. CURRIE. Though I have been here but a few weeks, I know one or two of the rules of the House. The discussion of the matter I wish to bring to the attention of the minister should be, as far as possible, non-partisan. Moreover, it can be dealt with more readily and with greater freedom in Committee of Supply. In Supply, we are not narrowed down to the discussion of the exact terms of a resolution, and often we can have the minister give expression to views quite in line with the suggestion made from this side. But to bring forward such matter in the form of a want of confidence vote on going into Supply would be to give the discussion a partisan tone, which is not desirable. If the minister will name an item on which we can go on with this discussion, that will satisfy me completely. If the minister is going to bring down even one item of supplementary estimates——

Mr. TEMPLEMAN. I cannot say that there will be even one item. I do not

know that there will be any supplementaries at all. Again, I do not want to make an agreement for the leader of the House as to the time when a discussion may take place.

Mr. J. A. CURRIE I am prepared to go on now.

Mr. TEMPLEMAN. If it is a proper thing to bring on a discussion of a matter of weights and measures on an item relating to the Mines Department, it will be all right to have the discusion, but I do not think it is, and I do not think the Chairman will permit it. I may mention that the main estimates of the Department of Mines have yet to be considered.

Mr. FOSTER. Then what the minister has to do is to say that when that item comes up we can discuss weights and measures, or any other thing.

Mr. TEMPLEMAN. If the chairman of the committee is willing. I have no right to lay down the rule that any hon. gentleman may discuss a question of weights and measures on an item relating to the Department of Mines; it is for the chairman to say whether that can be done. I would prefer not to discuss the question of weights and measures until I have the inspector of weights and measures here, to give me the information that I might require.

Mr. LANCASTER. If I recollect rightly, when the Minister of Public Works was passing Supply he could not give information about some of his items because they related to the Department of Inland Revenue, and as the Minister of Inland Revenue was absent it was understood that we would have plenty of opportunity to discuss these questions with regard to weights and measures when the Minister of Mines was passing his Supply. If the Minister of Inland Revenue has no other item for his department, it is up to him now to make good that understanding. When his colleague promised us that the Minister of Inland Revenue would give us certain information, it is up to the Minister of Inland Revenue to give us that information now, or else to tell us that he will do so on some other item of his department, if he has any other item. But it will not conduce to getting his items through the House for him to refuse now to carry out an understanding made between the Minister of Public Works and some opposition members.

Mr. TEMPLEMAN. If the chairman would rule that the discussion might go on now I would have no objection to doing so, if my deputies were here. But they are not here. I have not the information at hand, and on that score I would object to the discussion taking place now.

Mr. LANCASTER. Then let the item stand.

Mr. J. A. CURRIE. The Minister of Public Works stated when we were discussing an item with reference to the astronomical building and asked us to let the item go through, that a full explanation would be given by the Minister of Inland Revenue when he appeared in his place. We treated the Minister of Inland Revenue with the utmost courtesy and passed every item in his department without question, on the understanding that when he came to take his seat in the House we would be permitted to open up the discussion and get some information from him, even if there were only one item to come up in his department. I understand that the main estimates are now going through, and that the minister wishes to pass the item so that he can get the money at the beginning of next month. Now, if there is no other item coming up under weights and measures, I hold that we are entitled to discuss this item now, or ask that the item stand.

Mr. FOSTER. The minister can get out of the difficulty by saying five words. The fact is that another minister was putting these estimates through for the hon. gentleman's department, and the other minister did not know a blamed thing about them. We kindly consented to let them go through, on the minister's explaining that on another item, or on any other item, when the Minister of Inland Revenue was present he would give us full explanation. Now the minister says that he is not the boss of the committee, that it is the chairman. Well, all the minister has to say is that he has other estimates coming down for mines, and that when these come for discussion he is willing to hear a discussion upon weights and measures, or any other thing which was delayed because of his absence, and in regard to which the Minister of Public Works became responsible for giving us an opportunity of making these criticisms.

Mr. TEMPLEMAN. I have already said that I would be quite willing to do that. But the main estimates of this department have yet to be voted. The Minister of Public Works was putting through a vote for a building for the Mines Department, not for the Inland Revenue Department, and he said at that time that the Minister of Mines being absent, he could not give the information, but he held it over a day or two, and he read a long statement. But that was with reference to the Mines Department. However, whatever agreement was made by my colleague I am willing to carry out. The hon. member for North Toronto suggested that I might give the information when

some further estimates were being considered. I am quite willing to discuss weights and measures when I have my deputies here.

Mr. LANCASTER. If the hon. gentleman said that a while ago we would not have lost so much time.

Mr. TEMPLEMAN. I did not say so, but I said that was a question for the chairman to determine, not for me.

Mr. DEPUTY SPEAKER. While I do not want to draw the line too closely, yet when a discussion is evidently not relevant to the item, it will require the very apparent desire of the committee before I would feel at liberty to allow it. No doubt all understandings on which a previous item has gone through should be honoured. At the same time, the chairman finds it necessary that in all these cases where there should be some special item before him in order that he may be able to maintain the relevancy of debate. I think I should fairly point out that on the general question of the Mines Department it might be inconvenient to bring in the question of weights and measures, unless some items relating to that subject were before the committee, so that the committee could be held to relevancy and to that one subject.

Mr. J. A. CURRIE. I think no one questions your position; I think, however, it is not borne out by the authorities.

Mr. DEPUTY SPEAKER. I would prefer that there should be no discussion of my ruling in the matter.

Mr. SPROULE. We have always understood that an agreement of this kind by a minister of the Crown would be honourably carried out, because it was made for the convenience of the government, and it was expected as well that the chairman will concur in the arrangement which has been made by the minister. It is taken for granted that no objection will be raised in the way of applying the rules of debate which prohibit the discussion of a question when an arrangement of this kind is made as a matter of convenience to the government.

Department of Marine and Fisheries—salaries (including Prof. E. E. Prince at $4,000), $228,640.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). There were 77 permanent employees and 78 outside and temporary employees, making a total of 155. It is proposed to increase the number by 16. In the first division, subdivision 'A,' there is an amount of $4,000 which is asked for Professor Prince. That sum was voted the other day in the Supplementary estimates for the current year. We have to provide also for his salary next year. Professor Prince was receiving the salary of $2,500, and it is proposed to give him $4,000 and to put him in the first division, subdivision 'A.' Professor Prince has been appointed international commissioner under the fishery treaty, and I understand that the salary that was paid to the American commissioner is even higher than the one we are going to give Professor Prince. It is proposed that Professor Prince shall not only busy himself with this international commission, but also with other commissions which we may appoint in this country. He will remain the scientific expert of the Fisheries branch.

Mr. FOSTER. You have one extra there?

Mr. BRODEUR. No.

Mr. J. A. CURRIE. The minister gave us to understand the other day that such regulations as Professor Prince would make as an international commissioner would be laid before the department and parliament and would be liable to be changed by parliament. I think the minister was in error, and I want to call his attention to the fact that the treaty states that the finding of the commissioners is final and that the department and parliament has nothing to do with it.

Mr. BRODEUR. Except that there is a provision in the treaty to this effect:

Article III. The two governments engage to put into operation and to enforce by legislation and executive action, with as little delay as possible, the regulations, restrictions, and provisions with appropriate penalties for all breaches thereof.

So that when the regulations have been adopted by the two commissioners they are to be laid before the government and the government has to come before parliament for the purpose of securing the necessary legislation to enforce the regulations.

Mr. LANCASTER. But parliament would be obliged to pass them. They could not change the regulations or reprimand Professor Prince if he had done wrongly. Therefore, the minister will see that my hon. friend from North Simcoe (Mr. Currie) is quite right in saying that parliament has no control over the matter. The treaty is that the two governments engage to enforce by legislation what these two commissioners do.

Mr. BRODEUR. We will have to come to parliament for the purpose of having legislation passed to enforce these regulations.

Mr. LANCASTER. You bind yourself to adopt them.

Mr. BRODEUR. Of course, the government would have to take the responsibility

of these regulations and if they are not proper regulations the government would be liable to censure.

Mr. SPROULE. That does not appear to be the feature of it at all. We understood that whatever these regulations were parliament had to concur in them or otherwise they could not become law. Now, we find that we have to pass legislation affirming them but that does not mean that we can change them.

Mr. BRODEUR. Parliament would have to pass legislation to enforce these regulations, and if they did not meet with the approval of the House parliament would have the right to refuse the necessary sanction.

Mr. LANCASTER. No; the treaty says distinctly that the two parties bind themselves to carry into effect the regulations which may be made by these two commissioners.

Mr. BRODEUR. Suppose the government were not able to secure the passage of this legislation ?

Mr. LANCASTER. The argument could be made that you would be liable to get into a war with this other country for breaking the treaty if you failed to carry it out. Surely the British government, when it makes that treaty, expects to carry it out and engages to enforce the regulations that the two commissioners make in so far as they can be enforced by legislation. The hon. gentleman pre-supposes that parliament might not concur in them, but parliament would have to swallow them or else throw the British government into the most deplorable position of having broken a treaty made with another country and which might be a cause for war.

Mr. BRODEUR. It is the same with all treaties made by Great Britain. My hon. friend knows perfectly well that treaties made by Great Britain are not submitted to or approved by parliament except in cases where an expenditure of money is involved. I think also there is an exception in the case of commercial treaties which require some amendment to the Customs Act. These are the only cases provided for by the constitution in which treaties are referred to parliament. In other cases a treaty, as passed by the Crown, becomes the law of the land.

Mr. CROCKET. Did not the French and Japanese treaties require the ratification of this parliament ?

Mr. BRODEUR. Yes, because it was formally provided in these two treaties that they had to be approved by parliament. These two treaties fell within the category of the treaties which I have just mentioned; that is to say, they were treaties requiring a change in customs law. There is a principle in the British constitution to the effect that taxation cannot be imposed even by the King without the sanction of parliament. The King would have no right to make any treaty by which taxation would be levied or expenditure incurred without the consent of the parliament of Great Britain. Such a treaty affecting Canada would require to be submitted to the Canadian parliament by the representative of the King here. But, those treaties which are signed by the King or his representative have not to be approved by parliament, and this is a treaty made by the King with the president of the United States.

Mr. J. A. CURRIE. It is an old established principle of international law that where there is constitutional government when a treaty is made affecting territory or property or money, that treaty must be laid before parliament.

Mr. BRODEUR. Not in the case of territory, I think.

Mr. J. A. CURRIE. Yes; if you have read the discussion on the Napoleonic Code you will know that.

Mr. BRODEUR. Under the British constitution a treaty made by the King is law without being submitted for the approbation of parliament. There are only two cases where such treaties have to be ratified by parliament. First, where they may levy taxation on the country and, second, where they may cause expenditure.

Mr. LANCASTER. Then these reasons apply in the case of this treaty, because those two commissioners are given power with regard to our fisheries that may result in more concern to the country than if they affected either territory or taxation. Upon the minister's own statement this parliament would be bound to ratify the regulations laid down by these two commissioners under that teraty. There is no use trying to hypnotize ourselves into any other belief, for we would have no power to change these regulations without putting Great Britain on the verge of war.

Mr. BRODEUR. It is the same with any treaty which the King makes.

Mr. LANCASTER. If it is the same it is time Canada should raise her voice to stop it. I am not here to dictate what Great Britain should do, but if Great Britain says that we must approve of any regulations which these two men may make it seems to me it is practically unconstitutional. This country elects 220 members of parliament to deal with her affairs, and we should not be asked to leave it in the power of two men to dispose of our great assets in the fisheries for four years. If Great Britain has not said that these regulations shall be subject to the approval of the Canadian parliament, Great Britain ought

to have said it. Such a proceeding renders this parliament helpless and pledges us ahead of time to do what these commissioners may decide or else to place Great Britain in the position of breaking her contract with the United States. I am still of the opinion that we have no power whatever over these regulations once they are made.

Mr. GEO. TAYLOR. It has been one of the boasts of this government and of the Minister of Marine in particular that a new era had arrived and that Canada herself had now all to do with the making of treaties.

Mr. BRODEUR. Commercial treaties.

Mr. GEO. TAYLOR. But now the minister announces that these treaties are made by England and that we have nothing at all to say about them. How can he justify that statement with his declarations to the contrary all over the country?

Mr. BRODEUR. Formerly commercial treaties were made without the concurrence of the Canadian parliament or the consent of the Canadian government.

Mr. LANCASTER. Are they yet?

Mr. BRODEUR. There are many commercial treaties affecting Canada which have never been submitted to the Canadian parliament or to the Canadian government. In the case of Switzerland, a treaty is declared to include Canada, although Canada has absolutely nothing to do with the negotiation of that treaty in 1885. Later on when commercial treaties were being negotiated Great Britain began at first by giving us a plenipotentiary on the commission, and then she gave us the advantage of negotiating them absolutely ourselves. In some cases where negotiations had been carried out entirely by Great Britain there was a clause in the treaty providing that it would not affect Canada without her consent.

Mr. LANCASTER. Which class does this one belong to?

Mr. BRODEUR. This belongs to the class which is known as political treaties. I am afraid there may be some misapprehension with regard to this matter and so I may be permitted to explain. Mind you, we are living under the principles of the British constitution, and in Great Britain all treaties made by the King—with the exception of commercial treaties by which taxation may be levied or expense incurred —become law without the sanction of the British parliament.

Mr. SPROULE. Would the King consent to give away colonial territory without the consent of the parliament of the colony?

Mr. BRODEUR. I do not know whether that would be done without submitting the question to the Canadian government, and I make a distinction between the Canadian government and the Canadian parliament. The point of the hon. member (Mr. Lancaster) is that all these treaties should be submitted to the Canadian parliament before they are ratified, but I think he is going too far in that. I think we should be very well pleased that no treaty should be made affecting Canada without the consent of the Canadian government.

Mr. LANCASTER. Is this treaty one of these?

Mr. BRODEUR. Yes.

Mr. LANCASTER. The Canadian government consented?

Mr. BRODEUR. Certainly.

Mr. LANCASTER. Then the Canadian government is to blame.

Mr. BRODEUR. Yes, if there is anything wrong in that treaty we are responsible for it just the same as the British government would be responsible for any similar treaties made in Great Britain. They are signed in the name of the King, and the British government is responsible for them. In the same way we assume the responsibility of this treaty. I do not know whether we get by it everything we asked, but I think we get almost everything. What my hon. friend suggests is that all treaties affecting Canada should be submitted to the Canadian parliament for its approval. Treaties made by the British government are not submitted to the British parliament for its approval, and can we ask the King to do for the Canadian parliament what he is not doing for the British parliament?

Mr. LANCASTER. If conditions exist which make it reasonable, why should we not?

Mr. BRODEUR. That has been the rule of the British constitution for centuries, and before we can get that changed for Canada, I suppose the British parliament will ask that it be changed for Great Britain.

Mr. LANCASTER. The British government has changed its habits with respect to consulting Canada with regard to treaties affecting this country. It is said that it will not make such treaties without the consent of the Canadian government. I do not see why it would not be proper to ask the British government to make such treaties subject to the approval of the parliament of Canada, to which that government is responsible.

Mr. BRODEUR. We are taking the constitution as it is. We have made a step

in the right direction, I think, because formerly these treaties were made without being submitted to the Canadian government. In England no treaty is made without the consent and concurrence of the British government, not the British parliament. The British parliament never interferes in the making of treaties except in cases where there is a question of taxation or expenditure. In no other case has the British parliament ever been called upon to approve of a treaty, though it might pass a vote of censure on the government for having agreed to it. The constitution is precisely the same in Canada. We are now in this position, that no treaty affecting Canada will be made without being submitted to the approval of the Canadian government. I think that is a step in the right direction. Perhaps changes may some time be made in England in the direction my hon. friend suggests; I would not object to that. But for the moment I suppose we must be satisfied that the parliament of Canada is treated in the same way as the parliament of Great Britain, because we are living under British institutions and under the rules of the British constitution.

Mr. CROCKET. Does the hon. minister say that the Canadian authorities could not have insisted on a provision in that treaty that it should be ratified by the Canadian parliament, just as the United States authorities insisted that it must obtain the ratification of the Senate of the United States?

Mr. BRODEUR. I am glad my hon. friend has brought up the question of the United States constitution. There is a great deal of misapprehension in this country on that subject. In the United States there is no responsible government. The President and his ministers are not responsible to parliament. The constitution of the United States provides that a treaty may not be made by the President and his ministers alone, but must be made with the advice and consent of the United States Senate—not Congress. The house of representatives is not called on to express any view of a treaty, unless, I suppose, it related to taxation or expenditure. But the United States Senate, under the constitution, participates in the making of treaties.

Mr. LANCASTER. And is responsible to the people.

Mr. BRODEUR. Senators are not elected directly by the people, but by the local legislatures. Some people in this country have thought it extraordinary that the United States Senate had something to do with the treaty recently made, and I am giving my hon. friend the reasons for that. We are not living under the United States constitution. I hope we shall never have a constitution like that of the United States. I do not want to make any comparisons, but I think our constitution is far superior to theirs. We are living under British constitutional principles, and according to those principles the King has the right to make treaties without submitting them to parliament.

Mr. LANCASTER. But if the government is responsible to the people, I cannot understand why the hon. gentleman objects to the government seeing that parliament shall approve of their action in the important matter of making treaties. What I want to protest against is that this government has consented to this clause, which gives this one man, representing the whole of Canada, the power to tie us up, without any changes or qualifications, for four years, to anything he chooses to do with regard to the fisheries of this country. No matter how bad it may be we cannot object to it.

Mr. BRODEUR. I do not know whether it is necessary for me to say anything about Professor Prince. I think every member of this House will agree with me that he is well able to carry out the duty imposed upon him by that treaty. He has been in the service of the department for many years, and there is no man in Canada perhaps who knows more of our fisheries. He has been connected with all the investigations into the subject made during the years that he has been in the department, and has always given satisfaction and promoted the interest of the country. I am not going to-day to discuss the merits of that treaty; I hope we may have an opportunity to do so on another occasion. I will only say that I believe it will be found to be a treaty that will be to the advantage of our Canadian fisheries.

Mr. HENDERSON. I hope it will be to the advantage of our Canadian fisheries; but before we can discover whether it will be or not, it will be too late; the opportunity to make any protest will have gone. The discussion this afternoon has rather surprised me. I was not aware that the British government or the King would undertake to negotiate with the United States in a matter of such special interest to the people of this country, without being called on to do so by the Canadian government, or without having the subject matter of the treaty brought to their attention.

Surely the government must have taken the initiative and requested that a treaty be negotiated between Canada and the United States touching the important matter of our inland fisheries. It will be a surprise to those deeply interested in that industry to learn that their interests can be

dealt with in this manner. I am saying nothing about the qualifications of Professor Prince. I am confident that he will do his best in our interests, but he is only one and will be obliged to give way in certain matters if regulations are to be mutually agreed upon. While I have every confidence in Professor Prince, I regret that a treaty should have been negotiated in the manner in which this has been with regard to such an important interest. I assume that this government must have submitted the question to the King with the view of obtaining a treaty, and I regret that they did not insist so that it should not go into force before getting the assent of parliament.

Mr. BRODEUR. It has been submitted to the government.

Mr. HENDERSON. But the people are to have no opportunity of seeing it or saying a word about it until it comes into force. This is a very far reaching treaty, embracing interest of great importance to a large section of our people, and I can only express my surprise and regret that the government should have permitted a treaty to be negotiated under such conditions.

Mr. SPROULE. My understanding of several replies given with regard to that treaty was very different from what we are given to understand by the minister to-day. Several times the question has been brought to the attention of the House, and on each occasion the answer given created the impression on my mind that if there was anything in the treaty not satisfactory to parliament, parliament might not concur in it and it could not become law. The minister draws a distinction between government and parliament. Well, the government is the executive of parliament, and when the hon. minister was explaining the advantages accruing to our country from the wider rights secured by the present government, among these he put the right of Canada to concur in everything and negotiate everything affecting her interests before anything could be done. Now he says that the King makes the treaty and parliament has nothing to do with it at all. That does not leave parliament free to decide whether the treaty is good or bad.

Mr. BRODEUR. That is the way it is done in England.

Mr. SPROULE. That is not what the minister this session led us to believe was the right his government has secured from the imperial parliament in the making of treaties.

Mr. BRODEUR. Commercial treaties.

Mr. SPROULE. The hon. gentleman did not distinguish ? He says now that this is a political treaty and different from a commercial one. Well, it is a treaty in which we have an interest that may be represented by money. Was there not a provision in the Fisheries treaty of 1888 that it was to be submitted to parliament and approved by parliament ?

Mr. BRODEUR. No. My hon. friend is referring to the Bayard-Chamberlain treaty. That was never approved by the United States Senate, and consequently never came into force.

Mr. SPROULE. Was there not a provision in the agreement that it should have the concurrence of the Canadian parliament before it became law ?

Mr. BRODEUR. The treaty was never submitted to our parliament. I am not sure whether there was such a clause or not, but at all events it was never put before parliament here. In fact the treaty was never made because by the United States constitution a treaty must receive the approval of the United States Senate, and this never got that approval.

Mr. FOSTER. The treaty was made just as much as the French treaty, which was negotiated by this government within the last year or two. So far as the two governments are concerned, their representatives discussed the whole question and signed the treaty.

Mr. BRODEUR. The Chamberlain-Bayard treaty never got the consent of the United States Senate.

Mr. FOSTER. Neither has the French treaty received the assent of the French Senate. The treaty was concluded and signed by the plenipotentiaries of both countries, then it went to the president of the United States and he approved it and sent it to the United States Senate, and that body smothered it.

Mr. BRODEUR. Under the British constitution a treaty is negotiated by the King or his plenipotentiaries with the advice and consent of his government. In the United States a treaty is negotiated by the plenipotentiaries, but before it is ratified it must have the assent of the United States Senate. In fact the United States Senate, in the negotiation of treaties, takes the same position as the British government.

Mr. SPROULE. It is the treaty making power.

Mr. J. A. CURRIE. I would suggest that it would be well to let Professor Prince's duties be entirely devoted to international work. I know that the minister is very anxious to employ him, but he holds a very honourable position and I would like to make this suggestion.

Mr. BRODEUR. Of course, it might be very becoming to have Professor Prince devote all his time to this International Com-

mission. But he has been our scientist expert for many years and the chairman of many commissions. My hon. friend knows how competent he is on these questions. We cannot spare him from the department. We have men in the department who are qualifying themselves for these duties, and some day Professor Prince may be able to devote himself exclusively to the international commission. But, at present, the department cannot spare him.

Mr. CROCKET. The minister spoke of the differences between the American and the British constitution. I assume that all the members of this House were aware of the differences pointed out by the minister, but I do not think that anything the hon. gentleman said answered the suggestion I made that the British plenipotentiaries representing the British government on behalf of the Dominion of Canada might have proposed the insertion of a clause in this treaty requiring ratification by the parliament of Canada. I am satisfied that the British ministers would not have made any objection to such a course if it had been proposed by the Canadian government. There are several reasons why it seems to me ratification by the parliament of Canada should have been made a condition of this treaty. The province of New Brunswick is interested, not only with respect to the waters that form the international boundary line, but with respect to all of the waters of the St. John river, the principal waterway of the province, which is wholly controlled so far as its fisheries are concerned, by the provisions of this treaty. Formerly, the fisheries of the St. John, as all the fisheries of the Dominion, were under the control of the people through their representatives in the parliament of Canada. Now, this treaty has been negotiated——

Mr. BRODEUR. If the hon. gentleman (Mr. Crocket) will permit me: This question has to be discussed in a few days on the motion of my hon. friend from New Westminster (Mr. J. D. Taylor). If it is possible I would like to have these estimates go through. The question of the St. John river is one on which there is much to be said, and on which I would like some time to answer. The matter is outside this vote——

Mr. CROCKET. I will not take much time. I was saying that, formerly, the fisheries of the St. John river, as the fisheries of all Canada, were under the control of the parliament of Canada. We had a fisheries law, passed by the people's representatives, regulating these fisheries. This treaty, as I understand it, has absolutely taken out of the control of parliament, and placed in the hands of a commission of two, one of whom is representative of a foreign government, the control of the waters of the St. John river, so far as fisheries are concerned,—not only where that river forms the international boundary, but down to the harbour of St. John.

Mr. BRODEUR. And also in the United States.

Mr. CROCKET. I am speaking of the effect on the Dominion of Canada. It seems to me most surprising that a government which professes to represent the Dominion of Canada should have placed in the hands of a commission of this kind such immense powers and that we can have no regulation of the fisheries, not only of the St. John but of its tributaries, without the consent of an appointee of the United States government. Nothing that the minister has said this afternoon justifies this treaty as it has been negotiated, and I think that the very fact that these fisheries are taken out of the control of the parliament of Canada and these large powers which were formerly vested in this parliament placed in the hands of a commission composed as I have indicated was good reason why there should have been inserted in that treaty a provision that it should not be effective without the consent of the representatives of the people in this parliament.

Now, one word—as I may not have an opportunity when the matter comes up—on the practical effect of what has been done. I would point out to the minister that great interest is taken in this matter by the people living along the St. John river. The minister knows that we had on the statute-book a law prohibiting salmon fisheries in the non-tidal waters of the St. John, and other rivers. But, for years, that law was a dead letter; so far as the St. John river was concerned, it was not observed, and the government did not attempt to enforce it. A few years ago, the government began the enforcement of the law in the non-tidal waters of the St. John river, with the result that such a furore was raised among the people, that the government were compelled last year to put through an order in council giving the people living along the St. John the right to fish for salmon with nets during every alternate fortnight during the open season. That concession has been done away with by the negotiation of this treaty, without reference to the wishes of the people or of their representatives, and without giving the people's representatives any chance to be heard with respect to the matter. For my part, I have not been able to see why the residents along the St. John river above Fredericton should not be entitled to the same privileges as those below Fredericton.

In the tidal waters, the people have the right to fish for salmon during the open season. Under the order in council passed last year, the people above Fredericton were limited to fishing during every alternate fortnight. This treaty has taken the question out of our hands, and I can say to the minister that the treaty will be most unpopular among the people living along that river, and he will find that the provision divesting this parliament of such powers will raise a pretty serious issue in the province of New Brunswick. I do not think that one word the minister has said this afternoon answers the objection I have made that there might have been inserted in this treaty a provision requiring ratification by this parliament before the treaty became effective.

Mr. BRODEUR. I will not discuss the question of the River St. John, because we will have an opportunity of dealing with it when the motion of my hon. friend from New Westminster (Mr. J. D. Taylor) is made, and I understand that will be within a few days. The hon. gentleman (Mr. Crocket) says that this treaty does away with the present regulations. Let him wait until the regulations have been passed by the Commission, and he will find, probably, that the present regulations have not been done away with.

Mr. CROCKET. Does not the treaty give to the International Commission the right to make regulations?

Mr. BRODEUR. Yes. But that does not mean that the present regulations will necessarily be done away with. The hon. gentleman says the present regulations will disappear. But nothing has been done to justify him in saying that. As to the St. John river, of course the hon. gentleman confines himself to that part which is in Canadian territory. But the St. John river flows through a part of the state of Maine, and over that part the Canadian commissioner will have as much to say as the American commissioner will have to say with regard to the lower part of the river. The object is to protect the fisheries in both countries. My hon. friend is aware that one of the serious questions in relation to the St. John river is the throwing of sawdust into the river, and that difficulty arises principally in that part of the river which is in the United States. Suppose that some regulations are made by the commissioners under which this throwing of sawdust into the river will be done away with, does not the hon. gentleman (Mr. Crocket) think that will greatly improve the situation? Does he not think it would be a great improvement upon the situation? Does he not think it would be worth while to have more investigation in such a case. I suppose he would agree with me. Well, these affairs which have been exclusively exercised by the state of Maine, are now going to be exercised by an independent commission. That is where I see some advantage.

Mr. CROCKET. It is quite true, as the minister states, that this treaty gives the International Commission control of the waters of the St. John river that are in the United States as well as of the waters that are in the Dominion of Canada. But I think the minister will see that that does not count for much in so far as the fisheries are concerned. The United States have practically no interest in the fisheries of the St. John river because Grand Falls is an absolute barrier to the progress of fish up the river; fish do not go further up the river than Grand Falls, and Grand Falls is a good many miles from the international boundary. So in that view it seems to me a most extraordinary thing to contemplate that a commission composed of two members, one of them an appointee of the United States government, a citizen of a foreign country, should have any voice in regulating the fisheries in all the waters of the St. John, even in the St. John harbour, and in every tributary of the St. John river. Now that the minister has admitted, as we were all well aware, that this government were responsible for negotiating this treaty, I am satisfied he will find before long that the treaty will not have done the government very much good, at least in the province of New Brunswick.

Mr. BRODEUR. The statement just made by my hon. friend proves that the government was justified in putting the St. John river among the boundary waters, and the regulations regarding the fisheries in that river under the control of this commission. The hon. gentleman says that the fisheries exist in that part of the river which is wholly in Canadian territory.

Mr. CROCKET. And the United States has no interest in them. Why should it control them?

Mr. BRODEUR. Let us see what interest Canada has in it. Our fisheries are being depleted in the St. John river to-day by the dumping of sawdust in a part of the St. John river which is in American territory. From this cause our fisheries in Canadian territory were threatened with absolute destruction. Now when we get permission from the American authorities to appoint a commission with power to deal with this question of sawdust, I think we have done a great deal for the protection of our fisheries in the St. John river. I am surprised that the hon. gentleman should find fault with this government, when he knows that the Americans are dumping sawdust in the St. John river and its tributaries, the result of which our fisheries from the bound-

ary to the sea were likely to be destroyed. Now, through this commission, we are going to have some jurisdiction over those waters, a jurisdiction that we had not before; therefore, instead of blaming this government for negotiating this treaty, I think this government is deserving of commendation for having included the St. John river among those over which the commission will have authority.

Mr. CROCKET. As to the regulation of salmon fishing in the non-tidal waters of the St. John, I understand the minister to say that there are no regulations promulgated as yet. Now if the minister has any control over this subject, I trust that he will see that the people living along the banks of the St. John in the non-tidal waters above Fredericton, will be put in the same position as those living below Fredericton. I trust that the minister will bear that representation in mind, if he has any voice in making these regulations.

Mr. FOSTER. Will the minister tell us what are Admiral Kingsmill's duties?

Mr. BRODEUR. Admiral Kingsmill has charge of the fisheries protection service; he discharges the same duties as were performed by Commander Spain.

Mr. FOSTER. He is discharging no other duties except those that come under the ordinary routine covered by Captain Spain?

Mr. BRODEUR. He has charge of the discipline and control of the fleet, if I may call it so; he has also to see that discipline is observed on the other boats engaged in buoying and lighting.

Mr. FOSTER. Is that the line of service for which the government secured Admiral Kingsmill?

Mr. BRODEUR. We secured his services to take charge of our fisheries and protection service, and to develop the naval militia which was mentioned some time ago.

Mr. FOSTER. What has he done with reference to that matter?

Mr. BRODEUR. He has been instructed to look into the matter, and to prepare information for the government and the minister.

Mr. FOSTER Has he made any progress up to the present time?

Mr. BRODEUR. I have not yet received any formal report.

Mr. FOSTER. With reference to these 78 outside and temporary employees, were these all transferred into the service on the 1st of September at the same salaries with which they began the year, that is, April 1?

Mr. BRODEUR. They have all been transferred with the same salary, with some exceptions. My hon. friend wants to know the increases in salaries since the 1st of April to the 1st of September, because the other information is supplied in the report which has been brought before parliament. Out of the 78 there were Bourgeau, 400; Longtin, $350; Roy, $200; Hamel, $250; Boulay, $100.

Department of Marine and Fisheries—contingencies, $21,000.

Mr. FOSTER. The minister is making no reduction in his contingencies.

Mr. BRODEUR. No, the vote is the same as last year.

Mr. FOSTER. And some of the clerical force has been put on the permanent list.

Mr. BRODEUR. There were no salaries under contingencies before; so I am informed by the acting deputy. We had a special vote for that purpose.

Mr. FOSTER. Who is now the deputy minister ?

Mr. BRODEUR. There is no one. Mr. Desbarats is acting deputy.

Mr. FOSTER. Who is intended to be deputy minister ?

Mr. BRODEUR. It is not decided yet.

Mr. FOSTER. The minister has not made up his mind ?

Mr. BRODEUR. Not absolutely.

Mr. FOSTER. Now; now !

Mr. BRODEUR. I have an open mind.

Mr. FOSTER. As I understand it, the old deputy is superannuated ?

Mr. BRODEUR. Yes.

Mr. FOSTER. The superannuation has actually taken place ?

Mr. BRODEUR. No, it has not passed the Treasury Board. I understand that it has to go before the Treasury Board.

Mr. FOSTER. Until it passes the Treasury Board the minister has an open mind?

Mr. BRODEUR. An open mind as to the appointment of a new one.

Some resolutions reported.

REPORT PRESENTED.

Report of the Experimental Farm for the year 1908.—Mr. Fisher.

BUSINESS OF THE HOUSE.

Mr. FOSTER. I would like to know if the hon. Minister of Agriculture intends to bring on the Civil Service resolution and Bill to be founded thereon before Easter ?

Mr. FISHER. I should be very glad to do so but I doubt if there will be an opportunity. We cannot proceed until the classifications of the House and of the Senate have been passed. The classification of the House has been before the House for some days in the name of the Prime Minister. That as well as the Senate classification will have to be adopted.

Mr. FOSTER. There is not much probability of it going on ?

Mr. FISHER. No I do not think so.

Mr. FOSTER. I suppose we might say the same as to the Finance Minister's budget speech ?

Mr. FIELDING. Yes; I contemplated that I would be able to proceed next Tuesday with the budget speech but it will have to go over until after the holidays.

Mr. FOSTER. Will the minister go into Supply immediately after the opening of the session to-morrow ?

Mr. FIELDING. Not to-morrow. I understood that hon. gentlemen opposite desired to-morrow for another purpose.

Mr. FOSTER. Will the motion for Supply be made ?

Mr. FIELDING. Yes. We desire afterwards to give priority to Supply.

At six o'clock House adjourned.

HOUSE OF COMMONS.

THURSDAY, April 1, 1909.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 118) respecting the Anglo-Canadian and Continental Bank.—Mr. Talbot.

Bill (No. 119) respecting the Quinze and Blanche River Railway Company.—Mr. D. A. Gordon.

QUESTIONS.

GRAZING LEASES.

Mr. HERRON asked:

1. What are the total areas under lease for grazing purposes in the provinces of Saskatchewan and Alberta, respectively, distinguishing between irrevocable leases and leases with the two-year cancellation clause?

2. What is the annual rental payable thereon to the government, and how much was collected during the year ending 31st March, 1908?

Hon. FRANK OLIVER (Minister of the Interior).

1. Saskatchewan. Area under open lease, 430,118 acres; area held under leases subject to cancellation on two years' notice, 77,449 acres; area held under irrevocable leases, nil acres. Total area under lease, 507,567 acres.

Alberta. Area under open lease, 345,116 acres; area held under leases subject to cancellation on two years' notice, 1,232,891 acres; area held under irrevocable leases, 359,232 acres. Total area under lease, 1,937,239 acres.

2. Saskatchewan. Present annual rental, $10,151.34; amount collected year ending March 31, 1908, $7,499.10.

Alberta. Present annual rental, $38,744.78; amount collected year ending March 31, 1908, $26,455.12.

GOVERNMENT LOANS.

Mr. PERLEY asked:

What are the amounts and dates of the loans falling due prior to December 31, 1913?

Hon. W. S. FIELDING (Minister of Finance):

£1,763,678 4s. 10d., 1st May, 1911; £1,500,000 0s. 0d., 1st October, 1910; £1,700,000 0s. 0d., 1st October, 1913; £6,443,136 2s. 9d., 1st January, 1910; £1,380,900 0s. 0d., 1st October, 1912; £5,000,000 0s. 0d., 1st May, 1912.

In addition to the above there is a loan of £4,000,000 0s. 0d., which the government have the option of paying in 1910, or at any time thereafter, but which does not become due until 1935.

Of the above loans there is held in sinking funds and investment account, £3,207,774 2s. 5d.

NATIONAL TRANSCONTINENTAL RAILWAY EXPENDITURE.

Mr. PERLEY asked:

1. What was the total amount expended to February 28, 1909, on the building and equipment of the National Transcontinental Railway, from Winnipeg to Moncton?

2. What is now the government estimate of the further amount required to finish it and put it in working order ready to hand over to the Grand Trunk Pacific?

Hon. G. P. GRAHAM (Minister of Railways and Canals):

1. $48,372,560.01.

2. $66,021,206.00 exclusive of Quebec bridge, Quebec terminals, and line thereto, Winnipeg terminals or large shops in that vicinity.

IMMIGRATION BONUSES.

Mr. VERVILLE asked:

1. Is it the intention of the government to do away with the bounties on immigration?

2. If not, to what companies, individuals or associations will they be paid?

3. Does the government intend to have the restrictions on immigration observed? If so, in what manner?

4. Is the government informed of the methods of propaganda employed by the Salvation Army in England on the subject of immigration bounty?

5. If so, what attitude will the goverment take in this matter?

Hon. FRANK OLIVER (Minister of Interior):

1. No.

2. Bonuses will be paid as at present to steamship booking agents, and money grants in aid of their immigration work will continue to be made to the societies &c., now receiving such grants year by year. Such as the Repatriation Society, of Montreal, the Quebec and Lake St. John Railway Company, the Salvation Army, and the Western Canada Publicity office.

3. Yes, as at present.

4. Speaking generally.

5. The government will maintain its present attitude until reason for change is seen.

THE EASTER RECESS.

Sir WILFRID LAURIER moved:

That when this House adjourns on Wednesday next, 7th April, it stands adjourned until Tuesday, the 13th April.

Motion agreed to.

THE LOBSTER FISHERIES.

Mr. J. W. DANIEL (St. John City). Before the orders of the day are proceeded with, I wish to call the attention of the Minister of Marine and Fisheries to a statement which I find in the St. John 'Standard' with regard to the violation of the Lobster Fishing Act. It is as follows:

It is reported that undersized lobsters are being caught and sold in enormous numbers along the western coast of Nova Scotia. A commercial traveller, whose business frequently takes him to that section of the maritime provinces informed the 'Standard' that the hotels and canneries in the vicinity of Digby and Yarmouth were buying wholesale quantities of undersized lobsters for three and three and a half cents each.

I wish to ask the minister if his attention has been brought to this statement, and if so, what he proposes to do in the matter.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). My attention has not been brought to that statement. I will make inquiries, however.

SUPPLY—THE CASSEL'S COMMISSION.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. C. J. DOHERTY (St. Annes, Montreal). Mr. Speaker, before you leave the Chair, I desire to submit to the consideration of this House, and more particularly of the government, a matter which seems to me to be of grave importance to the people of this country, and one upon which I regret to say there is as yet no indication of an intention on the part of the government to take any steps in the direction in which it appears to me such steps are imperatively called for. As this House knows, in 1907 the Civil Service Commission, after making a more or less complete examination into the working of the different administrative departments of this government, submitted a report very severely condemning the workings of one department in particular. This was a department concerning which the commission had made a more careful investigation; but it criticised also other departments with regard to which it expresesd its regret that time had not allowed it the opportunity of making closer inquiry. Upon that report, the hon. the Minister of Marine and Fisheries thought it desirable, in the exercise of the power conferred upon him by statute, to appoint a commission to inquire into the operations of his department. And he appointed the Hon. Mr. Justice Cassels as commissioner to elucidate the question whether or not its officials had so conducted themselves as to deserve the scathing condemnation pronounced by the Civil Service Commission.

In the month of January of this year, the commissioner appointed by the Minister of Marine and Fisheries made his report. That report has been in the possession of the government since some time in January and has also been in the possession of this House for some time; and early in this week we had laid upon the table an order in council in which was set forth the steps which this government had decided to take in consequence of the conclusions reached by the commissioner and set forth in his report.

It is not my purpose to deal in detail with the recommendations contained in that report. To my mind the report is more remarkable for what it ignores than for what it contains. It is more remarkable for what it declines to deal with than for what it has dealt with. While the government has seen proper to deal with some of the questions and with the cases of some individuals in particular condemned by the commissioner, it has kept an absolute silence on some things which are obviously the necessary consequence of the findings

of His Lordship Mr. Justice Cassels. Among those is one which, I think, completely overshadows all the others. If there be one thing that should have been brought clearly home to the minds of the government by the successive investigations and reports, that thing, it seems to me, was the need of immediate investigation into the other departments as well in order to determine whether practices similar to those found to exist in the Marine and Fisheries Department do not exist also in the others. One would have thought that the ministers in control of the other departments would not have waited for the report of Mr. Justice Cassels to see the duty incumbent upon them to look into their own respective departments and see to what extent these require to be set in order. While I said the Civil Service Commission in 1907 more specifically condemned the Marine and Fisheries Department, as showing lack of conscience, as conducted without regard to the principle that no man can serve two masters, as conducted in such a manner as to foster dishonesty among the employees and bring about loss to this government—while the Civil Service Commission has reported in this special manner with regard to this one particular department, their report is full of reflections on the other departments, not so detailed or specific, but which ought to have made perfectly clear to the government that the Marine and Fisheries Department is not the only one in which inquiry was called for. If you look at page 23 of their report, you will find that the commissioners tell us that:

In addition to the efficiency in the administration of the departments, a wider and broader question is raised, and that is how far the departments are efficient in looking after the best interests of the Dominion as respects the general expenditure.

And at page 24 they tell us—and they are not now talking of the particular Department of Marine and Fisheries, but of the departments generally:

Instances have been found of departments giving orders for stores and other services to be delivered within a year, in excess of the vote granted by parliament. Large amounts have been spent at different places in the Dominion for supplies bought from those enjoying political patronage at what may be called retail rates. Heavy expenditures have been incurred without the necessary consideration or supervision.

The Auditor General, in his examination on the question of stores, informed the commissioners that he really audited and took stock of only two public departments. He examines, through his officers, the accounts in connection with the Printing Bureau and also the stores in connection with the government railways, but not the stores of the militia or any other of the departments; and even if he did, while no doubt it might be found that in the great majority of the departments the stores would represent the balances as shown in the different stock books, neither the Auditor General nor his officers could certify as to the quality of the stores detailed in the several stock books, or whether the prices for which payment had been made were proper or excessive. Your commissioners are of opinion that in many instances stores are ordered unnecessarily, and it might be doubtful that a good quality is always delivered. Mr. Pottinger states in his evidence that it is his opinion that the amount paid by the Intercolonial Railway for coal was higher than it ought to be. In instances which have been brought to the notice of the commissioners, stores have been received which were not wanted and which it is difficult to get rid of. In fact, at different points stores have been shelved where in all probability they were unnecessary. The commissioners of 1892 dwelt on this matter and stated that they had had under consideration the question of having a director general of stores or a supply agent to purchase supplies for all services, but they had not had an opportunity of developing the subject. Your commissioners have come to the conclusion that the time has now arrived when it would be desirable in the public interests that purchasing agents, probably three, should be appointed at good salaries to make all purchases of goods required for the public service, and that all purchases required by the several departments should be procured by this means.

And they conclude—and this is a most remarkable statement, taken in connection with what precedes.

In this connection, your commissioners respectively beg to recommend that inquiry be made as to the working of the Prevention of Corruption Act of the imperial parliament passed in 1906, and in the bribery clause in connection therewith.

Could there be any more clear indication that in the minds and conviction of these commissioners there was work for a law of that kind to do in more than one department of the Civil Service? And then, after the scathing indictment which they laid against the officials of the Marine and Fisheries Department as having acted in a manner to indicate that they had discovered the secret of serving two masters, Scripture to the contrary notwithstanding, the commissioners go on to say—and I note that they make this observation apply to some of the other departments—and not to one department alone:

It seems amazing that this question has never been courageously faced and dealt with. There is evidently a power in the hands of responsible officers of some of the departments which they can exercise without the necessity of giving any account of it, and with the most demoralizing consequences all round. It is certain that under such a state of things it must be impossible to develop high character in the service, or rather to prevent the deterioration of what character there is.

And, finally, as showing that they felt that their work was not done, and that the investigation of other departments than

that of the Marine and Fisheries remained still to be done, we find them saying in conclusion:

> Your commissioners regret having been unable to investigate the condition of things in some of the other departments. But to do the work with any pretensions to thoroughness would take much more time than would probably be agreeable to the government.

Mr. Speaker, it seems to me that if ever a government was put fairly in default by the trusted officers whom it had charged with the duty of looking into these affairs, to proceed to a second and thorough inquiry, an inquiry destined to ascertain to what extent there was going on in these different departments, operations which, in the opinion of these commisioners, would properly form a subject to be dealt with by the criminal law, this government was, by that report, put in that position. But the Minister of Marine and Fisheries alone seems to have considered that there was any occasion for anything to be done. It is a case in which the Marine Department seems to have had a courage far in excess of that which characterized the other departments of the government. And I would have thought that my gallant and hon. friend the Minister of Militia (Sir Frederick Borden) would, under these circumstances have felt ashamed that his branch of the service should hold back when the marines were going to the front.

But, Mr. Speaker, it does not end there. The action of the Minister of Marine and Fisheries led to an inquiry, conducted as I have already said, and as this House knows, by his Lordship Justice Cassels. Much might be said with regard to the limitations imposed upon the scope of that inquiry. It is painful, as one goes through the volumes of evidence, to find the frequent occasions on which the learned and honourable judge conducting that inquiry felt himself constrained by the limited terms in which his powers were defined, to stop evidence at points where it had become, probably, of the greatest importance to the people of Canada that the evidence should proceed. I am saying not a word in criticism of the rulings of the honourable judge upon these questions. I think that every one who reads his commission and understands that his powers began and ended within the limits of the express terms of that commission will feel that he had no liberty to go any further, that he was strictly within his duties in insisting that the inquiry should be kept within the scope of the precise terms of the commission. But, at the same time, it will be difficult for any one reading that evidence and knowing the restrictions put upon it to avoid the inquiry. Why were these limitations inserted in the terms of the commission that appointed that man to inquire?—was there a real desire to know the truth and the whole truth and nothing but the truth about the administration of that department when the terms of that commission were settled and fixed? But, whatever may be said about the limitations imposed in that commission, from it did result some consequences, which, I venture to say, it has been of advantage to this country to have brought about. Facts were brought out into light concerning the department that I am sure it is a matter of regret for all of us, should ever have existed. No doubt it would have been a subject of greater gratification to the people of Canada had the result of that investigation been such as to show that the suspicions which floated over that department were without foundation. We would all have taken pride in the fact that this particular department had given no ground for serious suspicion in the minds of the Civil Service Commissioners, and as a matter of fact had been free from that lack of conscience with which it has been charged. But all have to recognize with regret that the department, as regards those of its officials into whose action the commissioner was permitted to inquire, has not come unscathed through the ordeal. Guilt was established. I am not going into the details, this House is as familiar with the report of the commissioners as I am. The government is, or should be, more familiar with that report than I am, and the government itself has taken action upon that report which indicates that, in some cases at all events, in its judgment, guilt was brought home to officials by that report. But the government's action has been as limited as the powers which they thought proper to confer upon the commissioner. There were many things which, under his commission, he was not allowed to see.

The order in council laid on the table of the House would seem to indicate that there are many things in the evidence before that commission and in that commissioner's report which the government will not see. And, first, we have it established by that report, that in one of the departments of this government it was possible for a system of bribery of officials to be carried on with the result that they had paid for different supplies required by the department very much more than could be called in any sense a reasonable price; that it was possible that a system of corruption should be established and carried on that tainted, in different cities of this Dominion, practically every one of the commercial transactions to which that department was a party and we must conclude further from the action of the government that with these facts before them, clearly resulting from the evidence before the commissioner and his report, they were convinced that that system could be established, maintained and carried on for years without the knowledge of the respon-

sible minister. Mr. Speaker, I am not here to make any attack upon the honour, nor do I propose to make any appreciation of the conduct of that hon. minister that might reflect upon him in any way. It seems to me that what his personal position in this matter may be is a question of minor import compared with the greater question to which I would call attention, and in regard to which I only wish it were possible for me to hope that I shall be able to induce action by this government. I take it, as I have said, from the action of the government that they cannot but know that the result of that investigation, the report made upon it, is to establish the possibility that I have indicated, that a permanently established system of corruption should have gone on without the knowledge of the responsible minister, and that in that particular case, it did go on without the knowledge of the responsible minister, and I am not here to question their conclusions in that matter at all.

I am free to say that, in so far as I am concerned in making this motion, I have not risen to make it because of any doubt in my own mind of the personal integrity of the hon. the Minister of Marine and Fisheries. What may be his position upon the point of constitutional responsibility is quite another question, and one which, however, I do not propose to touch. But what I do desire to point out is that the action of the government, indicating as it does their belief that this system of corruption, not only could, but did go on without the knowledge of the minister responsible for the administration of that department, conclusively establishes that it is in their judgment possible in this country that such a system may be inaugurated and carried on year after year without the responsible minister having knowledge of it. If that is true, I would ask the ministers who preside over the other great spending departments of this government, and I would ask the right hon. the Prime Minister, who is responsible for all these ministers, and who presides over their operations, whether they are prepared to say that in these particular departments, which have gone uninvestigated, in the face of what has been pointed out by the Civil Service Commission, there is nothing to look into. If the ministers charged with these different departments take the position that under them nothing of this kind can happen without their knowledge, and if the right hon. the Prime Minister approves that position on their part, then I say that the government to-day is doing what I have declined to do, and making a direct and most condemnatory attack upon the Minister of Marine and Fisheries. If all these other hon. ministers can sit back in the absolute consciousness that nothing can go wrong in their departments without their knowledge, it is because they have discovered the secret of watching and supervising all the details of administration. If they take the position that they have been able to do that, then I am at a loss to understand how it is that they condone—because from their point of view it must be something that requires to be condoned—the fact that the Minister of Marine and Fisheries was not able to so control his department that things of that kind could not go on without his knowledge.

I am perhaps wasting the time of the House in discussing the question from that point of view. It is manifestly clear that the government recognize the possibility of this state of affairs prevailing in a department without the knowledge of a responsible minister, and as I have said I am not questioning the correctness of that proposition as a proposition of fact. Is it then that these hon. ministers feel that there is something connected with the peculiar operations of the Department of Marine and Fisheries that is of a nature to germinate this corruption and from which their own operations are absolutely free? Do they think that in their commercial transactions they are dealing with a quality of human nature with which the Department of Marine and Fisheries does not come into contact? What is the difference in the Department of Militia and Defence, what is different in the Department of Public Works that gives us any reason to suppose that there would not be the same temptation which we have seen to exist in the Department of Marine and Fisheries, that there would not be the same human nature subject to those temptations, and that there would not be the same succumbing to those temptations that we have unfortunately seen to take place in the Department of Marine and Fisheries? The responsible ministers of those departments do not need to read between the lines of the report of the Civil Service Commission to see that in the judgment of those gentlemen the system that in their opinion calls for a careful investigation of the operation of a criminal law in England, existed in their (those minister's) departments as well as in the Department of Marine and Fisheries. They have no reason, I respectfully submit to suppose that in their operations they may expect any greater immunity from the spirit of graft than has been found in the Department of Marine and Fisheries.

But there is more than that. If you go through the evidence and the report of Mr. Justice Cassels you will find evidence that the same men who, in their dealings with the officials of the Marine and Fisheries Department, were guilty of bribery,

have been dealing with the other departments. Is it to be expected that the briber will change his character when he is dealing with one department from that which he has shown when dealing with another? If you consult the returns laid on the table at the instance of the hon. member for North Ontario (Mr. Sam. Sharpe), you will find the names of a number of people who were proven guilty of bribery in their dealings with the Marine Department figuring as having received large sums of money from each of the other spending departments within the last few years. Was there any reason to expect that the man who would bribe a Marine Department official would be above the idea of trying to cultivate, by irregular means, an official, say of the Department of Public Works or of the Department of Mititia and Defence? You will find in the very report of Mr. Justice Cassels and the evidence of Mr. Halliday, a gentleman who is shown by the report of the honourable judge to have in some very mysterious manner been enabled to be paid by the Department of Marine and Fisheries at the rate of $200 a day, less a rebate I believe of $20, for the use of a vessel which he had contracted to furnish at $125. You will find in that very evidence that, at the very same time, that gentleman was engaged in carrying on a contract for another department of the government of this country and yet that gentleman, as I have said, had managed to receive this extraordinary addition to his contract price from the Marine Department—and nobody can tell the reason why, at least that is the conclusion of the Hon. Mr. Justice Cassels, the commissioner in the matter. A suggestion was made as to the reason why, but the commissioners concluded that that suggestion, which afforded an explanation which would have involved a gentleman more highly placed than any official of the department, was not established. I hasten to say, bearing out what I said in the outset, that the gentleman more highly placed whom I desire to indicate is not the present Minister of Marine and Fisheries (Mr. Brodeur). But the remarkable fact remains that that gentleman Mr. Halliday, was dealing at the same time with at least one other great spending department, and that his name will be found in the return to which I have referred as having received very considerable sums of money from the other departments of this government within the period of time covered by that investigation and even since then.

In the report itself you will find evidence as to the dealings of these gentlemen with other departments of this government, and names crop up which are quite familiar to us in connection with certain discreditable transactions that we have heard of in this House and out of the House. If, for instance, you accompany the commissioner to the city of St. John you will find figuring—not as deserving of words of praise from the commissioner—a name that perhaps might evoke some recollections in the mind of the Minister of Public Works, who, I am sorry to see is not present in the House just now, because these recollections might be most pleasant for him; you will find figuring among the men whose dealings with the Marine and Fisheries Department did not meet the approval of the commissioner, a gentleman who by the present Minister of Public Works during the reign of a preceding minister had been described as being a very nice person to be represented by at Ottawa; the result being that that recommendation and what came of it proved a very nice thing for the gentleman so recommended. And so I say that in the report itself you have intrinsic evidence that these bribers are, or rather have been, in business relations with the other departments of government. I said that the bribers 'are', but I corrected myself to say that the bribers 'have been' in business relations with the other departments of this government, because I could hardly invoke the evidence in the report as proof of what has been going on since it was presented. But, outside that report there is evidence which justifies us in concluding that the bribers still are dealing with other departments of this government, and that justification is to be found in 'Hansard' of March 22 last, in a reply of the Prime Minister to the hon. member for North Ontario (Mr. Sharpe). The hon. member asked:

> Has the Marine and Fisheries Department continued to buy supplies, or give contracts to the individuals, supply men, or companies on whose behalf commissions, gratuities or interest were paid to officials of the department, as found by the Cassels commission?
>
> If so, what are the names of such individuals, supply men and companies, and the amount paid or to be paid to them since the receipt of said report by the government?
>
> Have any other departments purchased supplies or given contracts to any such individuals, supply men or companies since the receipt of said report by the government? If so, what are the names and amounts thereof?

To these questions the right hon. the Prime Minister gave an answer. To the question whether the Department of Marine and Fisheries, or any other department of the government had been continuing to deal with the persons who were found guilty of bribery in the investigation before Mr. Justice Cassels, the answer of the Prime Minister was :

> There may be cases in which it will be in the public interest to do business with some of the parties referred to. Each case will have to be considered on its merits as it arises.

And then, to the question as to the names of these persons and the amount of the

transactions the government had with them, the Prime Minister gave the oracular reply:

If any particular name be mentioned the information will be given to the House.

Does not that answer come perilously near to saying: 'If you will just show us that you know all about it why then we will tell you all,' Mr. Speaker. I say that in these answers of the right hon. gentleman we have evidence that justifies us in the conclusion that the men who have been guilty of bribery and found to be so guilty by Mr. Justice Cassels are still considered a worthy class of men with whom, not one department of government in particular but different departments believe they should continue to transact business. The right hon. gentleman tells us that it may be in the interest of the country that the government should continue to give its patronage to the men who have been so convicted; men who have been proven out of their own mouths to have paid bribes to our servants, then added that bribe and Heaven knows what percentage in addition to the price charged to the people of this country, and then pocketed the whole thing to our detriment. And, the Prime Minister tells us in this answer that the attitude of the government towards those bribers remains a matter to be determined in each particular case. Why in England, a man who would be discovered giving a bribe to a public official, would, without any ceremony whatever disappear from the list of those from whom the British government would under any circumstances purchase supplies. I have before me the report of the Public Accounts Committee of the imperial parliament for the year 1907 and I find there two cases which are quite in point to this discussion. One of these cases occurred in the Admiralty Department, and I sincerely trust the inference will not be drawn that there is anything peculiar to Marine Departments or Admiralty Departments which provokes this kind of conduct. In the Admiralty Department it was shown that certain officers had received a commission of five per cent, and by the way I think five per cent was the amount of the commission that played such a large role in the dealings of the Marine Department in Quebec. These officers had received a commission of five per cent upon some clothing purchased by the Admiralty and which it was their duty to pass. And, when the British Admiralty had to deal with that matter they dealt not only with the officials who had received the commission, but they dealt and dealt immediately with the contractors who paid it, and these contractors were at once stricken from the list of persons from whom the government would purchase supplies of any kind. You will find that case referred to at page 4 of the report of the Public Accounts Committee, and you will find it more specifically dealt with in questions from 271 to 280 in the appendix which contains the report of the proceedings. Now, let me call the attention of the House to this, and let us contrast the practice of this government with the practice of the British government under similar conditions. When the question was asked of the responsible minister, if he had determined that the department should cease to purchase goods from the men found guilty of giving bribes, his answer was: 'certainly.' In the report to which I have referred you will find another case in point, and this time it is in the War Department, so that any possible suggestion that there is any particular connection between salt water and this sort of an offence disappears. There was a similar case in the War Department, and when the minister was asked what action he had taken his reply was: 'Why, automatically' — remark the word 'automatically' — 'automatically that man ceases to be a person with whom the government or any of its officials may in future have dealings.' It was not in England, a question of considering each particular case as it is with the right hon. the Prime Minister; it was not considered that it might be in the interests of the country to have dealings with these men; it was not a question of encouraging the man who had been guilty of this despicable crime of bribing his way into the pockets of the people of the country.

But we need not go to England to learn how men who do that ought to be treated, and whether it is a matter to be dealt with in each particular case. If you turn to our own Criminal Code and look at sections 158 and 159, you will find that every one of these bribers was guilty of a penal offence. We had it some time ago in this House from the lips of a much greater legal authority than I can pretend to be; and if you turn to section 159 of the Criminal Code, you will find that the law of this country has decreed that a portion of the proper penalty to be inflicted upon the man guilty of that offence is that he shall cease to be recognized as having a right to have any contract or any dealing with the government of this country. And yet in the eyes of this government it is a question to be dealt with in each particular case. I say that those answers, indicating as they do a line of conduct that looks upon the action of a briber as something to be leniently dealt with, notwithstanding the letter of the law combined with the terms of those answers, which refused to us in effect information which the hon. gentleman who asked for it and all the members of this House were entitled to

have at the hands of the government, justify us in concluding that to-day the departments of this government are still dealing with these bribers. If we are making any mistake in drawing that inference, I can only say that the responsibility for the mistake lies at the doors of those who refused to us, as they effectually do, this information properly asked for, and lies at the door, too, of the government that has laid on this table the report of what it has decided to do with regard to the report of Mr. Justice Cassels, and has confined itself to telling us simply what it has done or is going to do with regard to certain of its officials, and maintains an eloquent silence with regard to what is going to happen to those political friends, the bribers, whom the report of Mr. Justice Cassels declares to have been guilty, if not more guilty, than the officials who received their bribes. It was this action on the part of the government that led me to say, in opening these remarks, that I regretted that there was absolutely nothing to indicate that this government in the slightest degree contemplated taking steps to investigate the other departments. While in the eyes of this government the bribing of its officials calls for no action so far as the bribers are concerned, the law of this country says that those men should be prosecuted and convicted, and above all should not be dealt with thereafter by the government. I say in all earnestness that I would have welcomed, and would welcome still, from this government, any indication of intention on its part to push through to its proper conclusion this investigation which began with the Department of Marine and Fisheries—to push it through on broader lines, on lines that would indicate an intention on its part to hew to the line, let the chips fall where they may; and if anything that I say now, by way of emphasizing what I consider are the conclusions to be drawn from the inaction of the government, should look as though I were speaking with a desire simply to condemn, I desire to say that all my purpose is to try if I can to bring home to those who are responsible for the conscience of this country the position in which they stand and the responsibility which they are assuming, not by their action, but by their inaction, with regard to what has been established by this commission. Not only is the fact of what has gone on in the Department of Marine and Fisheries in itself sufficient to cause hon. ministers in control of other departments to inquire whether all is well within their households, but we have had the evidence, within the present session of this parliament, of this House putting itself on record as being of the opinion that this sort of iniquity, which we now know to have existed in at least one of the departments of the government, is so generally prevalent throughout the commercial life of this country, that it was necessary that we should enact a special criminal law to reach it. The government knows that; it knows how prevalent this offence is in the general business of the country; and the inaction of the government leads us to suppose that we are expected to believe that there is no suspicion in the minds of the men responsible for the spending departments of this government that any such thing exists in the course of the immense transactions which some of those departments carry on.

Now, Mr. Speaker, I do not know that it is necessary that I should dwell at any greater length upon considerations tending to demonstrate the truth of the proposition which I am free to confess seems to me so obviously true. I may say that it seemed to me so obviously true that I have sat in this House since the opening of the session waiting day by day to hear an announcement that this government of its own motion meant to carry the investigation, which had begun in this one department, through to its ultimate conclusion. I am not here to say that such an investigation will necessarily result in the discovery of regrettable facts similar to those which have been brought to light in the Department of Marine and Fisheries. But if such an investigation should demonstrate the entire absence, or even approximately the entire absence of any such corruption in the other departments, that investigation would be worth whatever money it may cost. The people are anxious that matters of this kind should be cleared up. They are interested not merely because of the heavy loss in money, which the prevalence of such a system as has been found to exist in the Department of Marine and Fisheries, must entail, but chiefly because of their desire to ascertain whether, from the highest to the lowest, those charged with the administration of public affairs are perfectly honest, and that the public service of the country may be taken as characteristic of the honesty of the people at large. The people expect our public service to be of such a character that we need not, when speaking of it, hide our heads in shame. In the report of the commissioner and in the evidence, there are weighty reasons why the government should proceed with such an investigation. Look at the conclusions of that report, and surely the government must pay some attention to the opinion of the distinguished judge whom they selected to make this investigation. What does he tell us is the remedy? You must, he says, rouse the public conscience. Mind you, not the conscience of the employees of the Marine and Fisheries Department, but the public conscience. Why? Because to every reasonable and reflecting man, the evidence leads inevitably to the conclusion that there has grown up among a certain class the belief that the government—not any one department in par-

ticular—but the government as a whole, is fair game and that a legitimate means of making money out of it is to bribe the servants of the country. Then, Mr. Justice Cassels goes on to suggest some other improvements with regard to the Marine and Fisheries Department, and he cannot restrain himself from asking: 'Are there not other departments in which this may be done?' His question implies the suggestion that the conditions in the other departments are similar to what they have been shown to be in the Department of Marine and Fisheries. That is the impression brought home to the public mind by this impartial investigator. I ask the government whether they have any confidence in the man they chose to make the recommendation? If they have, how can they flout his recommendation? Are they going to sit back and say: 'What is the public conscience to us? We sit in our seats, we hold the reins of power, we may do as we please at all events until another election—what care we for the public conscience? We will satisfy the public by passing a law to prevent the bribery of the servants of individuals, but we will not take any steps to see whether servants of the public are being bribed.' Sir, the government of this country is in a very special manner keeper of the public conscience. I ask you how it is possible to suppress bribery and corruption among our people when we find that those who hold in their hands, for the time being at all events, the control of the destinies of this country, declare that, so far as the departments for which they are responsible are concerned, so far as the business of the people which they are doing is concerned, it does not interest them in the slightest whether the corruption which has been demonstrated to exist in one of the departments does not also exist in the others. Rouse the public conscience, if you will, but our consciences are not to be aroused, would be a fair inference to draw from the inaction of the government.

I do not propose to extend my observations to any further length. The people of this country, I venture to say, look for a thorough investigation of the administrative departments of this government. Such an assertion may not be entitled to any weight coming from myself, and possibly might be questioned, as coming from the opposition benches, but I can support it by authorities which cannot be charged with political bias. Let me cite two quotations from newspapers which support the government and which appeared after the general elections had taken place. These newspapers have told the government in no uncertain tone what I have been trying to impress on the House this afternoon, namely that there is need for, and this country demands, a thorough investigation into all the spending departments, were it only as an earnest of the sincere intention of this government to give us an honest administration of the public business. I read from the Ottawa 'Free Press' of 22nd October, 1908:

Sir Wilfrid's individual strength is great; he has shown on many occasions that he cares for no man. There is an opportunity now for him to prove to the people that they have reason for confidence in him, that not only is he himself a man above suspicion, but that his whole administration is clean and beyond reproach.

The Liberals as a whole have been classed as a gang of looters.

I am not classing them; I am only reading.

Sir Wilfrid owes them a clearance certificate.

From what we know of the administration of Sir Wilfrid Laurier in the last twelve years, we believe that it will bear the closest scrutiny; from our knowledge we have been able to characterize as a gross slander the wholesale charges that have been made against it; but there are those not as well informed who are not able to refute the accusations of their fellows, and it is in justice to these men that the most searching investigation should take place, as is now taking place in the Marine Department.

The other I propose to recite is from a newspaper published in the city of Montreal, a newspaper whose devotion—and effective devotion—to the right hon. prime minister (Sir Wilfrid Laurier) and to the party he leads will not be questioned. I read from the Montreal 'Herald' of 26th October last:—

In the administrative services it is the time for an overhauling and a fresh start. There are departments to which the strong hand must be applied, and people will not be satisfied unless proofs are given that this is understood. Efficiency is demanded and will be insisted upon. At the same time, every reasonable effort to add to the dignity of the service, to minister to the independence and self-respect of the man who works for the country, will be approved.

And, returning to the charge, on 31st October last, the same paper said:—

Similarly, the Liberal press is not disposed to take the triumph of Monday last as absolving the party from inquiring if all is well within it. The Ottawa 'Free Press' demands an impartial investigation, such as is being made into the Marine Department, into the workings of any other department which has come under suspicion. The Toronto 'Globe' urges the abolition of the patronage system in the purchase of supplies, the reform of the Senate, legislation bettering the conditions of life, the punishment of incompetency and dishonesty in public office, the completion of the scheme of Civil Service reform.

Then, it goes on with its own commentary on what others have said.

All this is good journalism, good partisanship, and good patriotism. The Montreal

'Gazette,' however, sees in it only evidence that the election was won under false pretences. The Liberal press and speakers, it declares, claimed that all the charges of the Conservatives were unfounded, and that the country took them at their word. What a narrow, partisan view. No wonder the Toronto 'Telegram' claims the 'Gazette' as a reactionary. No man or journal of any standing in the Liberal party has assumed what the 'Gazette' claims was the general assumption. On the contrary, confession has been made, time and again, that in the spending of millions of money, spread over twelve years, mistakes may have been made. The argument presented to the country, and accepted by it, was that the government, as a whole, was clean and honest; that it had instituted reforms of administration as the necessity developed; that it had ordered independent investigations of alleged evils; that the Premier could absolutely be depended on in every emergency where courage and honesty were required;.....

Now, after the conflict, with five years of work before the government, surely it is the part of well-wishers of it, and of the party, to point out the work that is to be performed.

. . . . . .

Sir Wilfrid has the ball at his foot as never before. He is under no obligation to any man, or group of men, to refrain from doing as he will along the line of departmental reform, of legislative reform, or of financial retrenchment. In the past he has faced, with courage, and intelligence, and fine public spirit, every issue that presented itself. He has shirked no task, once he saw his duty and his way. Thus he gained that confidence of his fellows so signally defined on Monday. And thus, we may be confident, he will face the tasks that the campaign may have uncovered to his mind. He has been engrossed for twelve years in the great work of nation-building, the work of harmonizing our diverse races, of cementing confederation, of peopling half a continent. Perhaps, for a season, the labours of our Canadian Hercules are to be in a large measure the humbler, but not less necessary, labours of perfecting administration, of safeguarding the public domain from the assaults of the selfish, of creating a healthier public opinion in regard to electoral corruption, and generally in strengthening the moral fibre of the party and the country.

The purpose of my motion is to call upon the government to do the work of generally strengthening the moral fibre, not of the party—I am not so much concerned about that—but of the country. It seems to me that the first step towards that is to make it quite clear that the departments of the government are not afraid to put their operations before the public, but that they are as anxious as the public is, that if there are wrong doings in the operations of those departments, they should be discovered and corrected. And I desire that this should be done, not only so far as the officials of the lower grades are concerned, but from top to bottom of these departments. I trust that I may be proven to have been mistaken in my view that all the indications were that we need not expect such action on the part of the government. If so, I for one shall hail with pleasure the fact that the government shows itself equal to the task that, it seems to me, clearly lies before it; and I shall be happy to congratulate the government and this country if the result of the investigation should be to show that there was no occasion to make that investigation save in so far as it might serve to relieve the public mind. I hardly venture to hope that that will be the result, but, if it should be, surely the government will not have reason to regret that it made the investigation, and most assuredly the country will congratulate the government and congratulate itself upon such a result having been shown.

But to do that—and I want to insist, just for a moment, on that point—we must have an untrammelled investigation; it must not be a matter of stopping when you strike at the members or when you strike at the man who was a member and is a candidate, nor of stopping when you strike at the man whose bribe went as an election subscription, nor of stopping even if you should reach up—which I am not insinuating in any way; it is foreign to my purpose to do so—to the very head of the department himself. To make it worth anything, we must have an untrammelled investigation.

We must not have an investigation that—take one startling instance in this investigation—will make it possible for a government to whom it is reported by an official, a judge entrusted by them to investigate, that an official occupying the highest position in the department under the minister himself, has improperly, at the instigation of two candidates in an election, put 100 men unnecessarily at work upon public work for the sole purpose of influencing their votes—that shall make it possible, I say, for the government, or the minister to whom this report was made, to do absolutely nothing about it. Yet that is what we have in this very report, which is perhaps the most startling instance, or one of the most startling instances of the undesirable effects of the limitation of the power of that commission. Yet I leave it to the common sense of this House if there is any more despicable form of bribery in this world than that which makes the labouring man's bread and butter the price of his vote. I therefore beg to move that all the words of the proposed motion after the word 'that' be left out, and the following be substituted therefor:

That the commission of 1907, in the course of their investigations into the conditions of the Civil Service, having made incidental in-

quiry into the workings of one of the departments at Ottawa, characterized that department as wanting in organization, lacking in conscience, and some of its officials as serving two masters, Scripture notwithstanding, and also criticised other departments.

That the Cassels commission was limited in scope to an inquiry into implied official incompetence and dishonesty in the Department of Marine and Fisheries, and the report thereof with attached evidence simply sustains the charge of official negligence, wastefulness and corrupt dealing in that department, and affords ground for the conviction that similar methods prevail in other great spending departments.

That in order to lift the cloud of suspicion that rests upon the administration of the various departments, to satisfy the demand of the country for honest and businesslike methods, and to purge the public service of inefficiency, reckless waste and corrupt practices, it is advisable and necessary in the public interest that a thorough and untramelled investigation be made by a competent business commission into the workings of all the great spending departments of government.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). Mr. Speaker, I must say at the outset that I do not find any fault with my hon. friend (Mr. Doherty) for the way he has presented the case he has just laid before the House; I desire even to offer him my sincere thanks for the personal allusion which he made to me during his remarks. I am exceptionally grateful to him for these kind remarks, because I have not been accustomed in the past to receive that sort of treatment. Ever since I have been in the department I have been doing all that I could to put it upon a proper footing. I was appointed Minister of Marine and Fisheries a few months before the session of 1906, when I had no time to put myself thoroughly au fait of the situation in that department. During that session, several investigations took place in the Public Accounts Committee, and some other committees, concerning the administration of that department. As a result of those investigations, I became aware that some reforms were necessary, especially with regard to the accounting system, which was particularly defective. I appointed some persons who were strongly recommended to me for the purpose of establishing in that department an accounting system which would permit the minister and the superior officers to exercise more effective control over the administration. Later on, when the Civil Service Commissioners came into my department to make an investigation, they may bear testimony to the fact that I gave them the fullest latitude to discover everything which might be wrong in the administration of that department. At last the commissioners reported, stating that:

There would also seem to be a lack of conscience. In connection with the enormous expenditures which are deemed necessary, the

word 'discount' never appears. It is tacitly assumed that there is no such thing; but the whole commercial world knows otherwise. If no one gets any benefit from trade with the government except the trader, then it must be clear that in these great purchases made for the government, without discount, its officers must be assisting the trader to get better prices from the government than he can get anywhere else; for everywhere else he has to give discount. In other words, some of the government's officers are serving two masters, and apparently succeeding with both—Scripture notwithstanding.

I then reported to His Excellency the Governor General and to my colleagues that:

It is assumed by that statement that commissions are received improperly, or enhanced prices paid through dishonesty on the part of the officials of the Department of Marine and Fisheries. But, unfortunately the report does not mention any names which would enable him to take definite action concerning those officials. It is, however, in the interests of the Department of Marine and Fisheries and of the country that immediate steps should be taken in order to determine what officials (if any) deserve condemnation and to give to all an opportunity to meet the charges implied.

That recommendation of mine was concurred in by His Excellency the Governor General and by my colleagues, and the Hon. Mr. Justice Cassels, whom I think everybody in this House recognizes as one of the ablest jurists in this country, a man of impartiality, a man of rectitude, was appointed to discharge the duties of investigating the charges made against the officers of the department. The report is now before us and we have taken action upon it. My hon. friend from St. Anne's (Mr. Doherty) has given us a synopsis of what has been done in connection with officers who were implicated in that report, but now my hon. friend states in his speech that though acknowledging the personal integrity of the minister he cannot fail to say that the minister is constitutionally responsible for the conduct of these officers.

Mr. DOHERTY. I think what I said was that what the constitutional responsibility might be was a question on which I did not want to express an opinion.

Mr. BRODEUR. As the question of constitutional responsibility has been raised, I may be permitted to say a few words upon it and once for all to lay the responsibility where it should rest, to ascertain whether the minister of the day should be held absolutely responsible for everything that has been done since confederation. Mr. Justice Cassels, in his report, says that the system which has been found defective in the department is mostly the purchasing of supplies, what he calls the patronage system, and he says:

The system seems to have been handed down from one administration to another since confederation.

That is the system which has always prevailed. I shall not take the statement of the hon. judge alone but I think I shall be able to prove to the House by correspondence and documents that the system has also been in vogue when members of the opposite party were in control of the department, and that I was the first minister to make the change which commends itself, to the judgment of Mr. Commissioner Cassels. I have been preceded in the department by a number of ministers, all men of greater ability than I. My predecessors and their terms of office have been:

Ministers.	Dates.
Hon. Peter Mitchell..	1867 to 1873
Hon. Albert J. Smith..	1873 to 1878
Hon. J. C. Pope..	1878 to 1882
Hon. A. W. McLelan..	1882 to 1885
Hon. G. E. Foster..	1885 to 1888
Hon. Sir Chas. Hibbert Tupper	1888 to 1894
Hon. John Costigan..	1894 to 1896
Hon. Sir Louis Davies..	1896 to 1902
Hon. Raymond Préfontaine.. ..	1902 to 1905

I was appointed at the beginning of 1906. Some of my opponents argue that I should be held responsible for a system which has prevailed under ministers who were very superior in ability to me, but as I have said I was the first minister to get rid of the patronage system in 1908. As this is likely to be the last chapter of this famous marine investigation it may be as well to review what has been done in the past. Let us look at the record since 1867 and ascertain whether I should be held constitutionally responsible for everything which has occurred during that period. In the report of the Auditor-General of 1887, page 393, will be found a letter written by the Auditor General, the late Mr. J. Lorne McDougall, to the Deputy Minister of Marine and Fisheries, on August 21, 1886. In that letter Mr. McDougall said:

I was recently at Quebec and visited the office of your agent there. I find that the supplies purchased by Mr. Gregory are not obtained under contract, and that the prices paid are apparently higher than those which are paid for the same kind of goods for the marine hospital under contract. The differences probably arise from tenders being called for in the latter case and not in the former.

Then the Auditor-General in this letter not only suggests but requests that Mr Gregory should be ordered to purchase his supplies by tender.

An hon. MEMBER. Who was then minister?

Mr. BRODEUR. The hon. member for North Toronto was then minister.

Some hon. MEMBERS. Oh, oh.

Mr. FOSTER. Oh come off.

Mr. BRODEUR. I do not wish to find fault with the hon. member for North Toronto; he was simply doing what other ministers had done before him. My contention is that it is unfair for my opponents to endeavour to charge me with responsibility for every thing which has been brought out during this investigation when that investigation simply disclosed the same system as has existed since 1867.

In 1886, then, the Auditor-General requests that tenders be called for. A few months afterwards, on February 21, 1887, Sir Hector Langevin telegraphs to the deputy Minister of Marine and Fisheries as follows:

I wish that as usual paint, powder, oils, drugs, common stationery for lighthouses, groceries, hardware and dry goods be purchased in Quebec, also provisions at once.

(Sgd.) HECTOR L. LANGEVIN.

On February 10, 1887, a telegram was sent by the present member for North Toronto (Mr. Foster) to the deputy Minister of Marine and Fisheries, Mr. William Smith, as follows:

Continue usual patronage Baudet & Chinic, Quebec, with conditions as per letter sent concerning Sir Hector's request, inform Caron.

(Sgd.) G. E. FOSTER.

This telegram was signed by the then Minister of Marine and Fisheries (Mr. Foster). On the 21st of February, 1887 Mr. Gregory telegraphs to the department as follows:

Navigation nearly open, say whom I am to purchase supplies from and prices to pay. Captains lightships want usual advance. Shall I pay, it takes $2,000.

(Sgd.) J. U. GREGORY.

Here is the memorandum which was prepared by the deputy minister for the then minister:

Please inform me what plan you have decided to adopt about Gregory purchasing supplies, as he does not like to purchase now without authority. The best plan in the public interest is to advertise openly for tenders and let all get a chance to state prices for the principal articles.

21st April, 1887.

WM. SMITH,
Deputy Minister.

Memorandum for the Minister of Marine, relative to the purchase of supplies at Quebec. Immediate.

Mr. McGreevy has handed in the accompanying list of names whom he recommends should receive patronage at Quebec in the purchase of supplies. With reference to the first list marked for tenders he recommends that tenders should be asked from the different parties mentioned therein when any articles are required.

Not public tenders mind you, but simply that tenders should be asked from those

who were political friends of the government of the day, these persons being recommended by Mr. McGreevy the then member for Quebec west.

With reference to the second list he recommends that these persons should be employed if their services are required, or that supplies should be purchased from them without tender as it would be difficult to make contracts for these articles mentioned in the second list.

(Sgd.) WM. SMITH.

22nd April, 1887.

Minister approves W.S. 23rd April, 1887.

This is a sample of how things were done under the Conservative administration, and if we look at what happened after the member for North Toronto (Mr. Foster) left the department we will find that the same system was perpetuated. In a memorandum from Mr. Smith deputy minister, to the minister on the 27th of October, 1888, he says:

I have visited the different light stations at Anticosti in the government steamer, and while on board the vessel I examined into her internal economy. On inquiry as to prices of provisions it appeared to me that everything was purchased at the fullest market prices, and the captain mentioned to me confidentially that the vessel could be provisioned much cheaper if he would be allowed to purchase in the open market without reference to political patronage.

There had been a change of Minister of Marine in the meantime and this memorandum was for Sir Charles Hibbert Tupper, in 1888, and here is what Sir Charles Hibbert Tupper wrote upon this memorandum:

Arrange a fair rate with each captain accordingly, slightly under existing extravagant system, and have it understood that in the event of complaints being made, if found to be reasonable, fines will be made and deductions from masters' pay for same.

(Sgd.) C. H. TUPPER.

March 11th, 1889.

From this it will be seen that Sir Charles Hibbert Tupper desired to make a change in the manner in which supplies had been purchased and he suggested that a rate should be made with each captain and a contract entered into with him. This system was in force for some years, and after giving the question some consideration I have come to the conclusion that it is certainly the best way in which to provision our vessels; we could contract with the steward or the master of the vessel paying a certain sum of money per head of the crew and no more and no less. But, in 1891 Sir Charles Hibbert Tupper changed this system and Mr. Smith the deputy minister in a report to the minister says:

As I presume it is intended to go back to our old system of provisioning the steamers at Quebec, namely, by allowing the agents to purchase the materials as required, and allowing them to use as much as crew wish, but holding the captain and steward responsible for the total average cost per month.

Then he suggested a plan of purchasing supplies from the different firms that were recommended, and letters were sent to Mr. Gregory in Quebec and Mr. Harding in St. John as follows:

I have to request you to invite tenders from a number of friends of the government in the trade for the provisions required during the coming season.

There were to be no public tenders and no public competition, but the purchases were to be made just from friends of the government. Then, I find that on the 4th of May 1891, Mr. Gregory states that he had complied with the instructions, that he had called upon all the friends of the government in the trade to send tenders for the provisions required, that he had consulted Mr. McGreevy and Mr. Chateauvert in order that he might not commit any error in calling on the tradesmen in question, and then he incloses tenders from two or three persons who were friendly to the Conservative government. However, Mr. Gregory was reproached for the manner in which he had done this, and then he answered that there were only two grocers who were friendly to the government and that he could not ask the others to tender because he was told to do business with the friends of the government only. Mr. Speaker, that is the system of purchasing supplies which existed under the Conservative government, and which has also existed since the Liberal government came in power until last year. Looking at the evidence before us I find, however, that in Montreal from 1888 to 1896 there were only 22 names on the patronage list, whereas from 1896 up to last year there were 170 names on that list, which goes to show that the persons from whom tenders were invited were much more numerous under the Liberal regime than under the Conservative regime. This system as I have shown has existed for many years, but I have come to the conclusion that it should be a system of the past, and last year I changed it and now goods are purchased by public tender in every case where it is possible to do so, without any reference to a patronage list. The system now established is that the purchasing agent should have the right to go not only to friends of the government, not only to my own political friends, but to go any where he wishes in order to obtain the best prices possible in the interest of the country and of the department.

I do not want to find fault with any person in particular for these abuses. The name of my hon. friend from North Toronto (Mr. Foster) has been mentioned; but I do not blame him in any shape or form. He simply followed the practice that had previously been in existence. But I ask for myself the same consideration

that I am willing to give to my opponents; I ask to be treated with the same leniency with which I am willing to treat my opponents who were maintaining a system which was bad.

Mr. SPROULE. Might I ask the hon. member this question: If the same thing took place under a dozen governments before his advent to the department, would that make it less an offence now, that it is continued under his regime, when it is drawn to his attention by his own commissioner?

Mr. BRODEUR. I am drawing attention to the fact that this system and these abuses have been at all times in existence in the department. At all times it has been represented by officers of the department and by the Auditor General that public tenders should be called for, and that the patronage system should be abolished; and I am glad to say that the first one who had the courage to change that system was myself. My hon. friend will probably one day be a minister of the Crown, and he will then learn how difficult it is to change any system of administration; he will find how difficult it is to eradicate abuses. But I hope he will be able to do his duty, as I know he will be anxious to do it in the best interests of the country. In the meantime, I ask him whether he does not consider that I have done my duty in doing what I have done.

Mr. SPROULE. If the hon. gentleman asks me that plain question, I tell him that I do not think he has by any means done his full duty, in face of the report of the commission appointed by himself as one of the ministers of the Crown.

Mr. BRODEUR. Of course, that is a question of opinion; but when I have had the courage to remove abuses which I have proven existed since confederation, abuses which my hon. friend from North Toronto, one of the ablest men we have in this country, was not able to remove, my hon. friend must admit that the member for Rouville has shown some courage and energy, and has shown that he was willing to discharge his duty.

Now, Mr. Speaker, the work of the department has enormously increased during recent years, and some new and important works have been added to it. We must take that fact into consideration in examining the situation of that department. Take, for example, the services under the control of the department; there were 19 twenty years ago; there are now 40, an increase of more than 100 per cent. The expenditure in 1886 was $1,144,520; ten years later it was $1,136,254; last year it was $6,174,855. What caused this great increase? Additional services in the department. I have in my hand a statement showing that the new services taken charge of by the department since 1896 entailed upon it last year an expenditure of over $2,000,000. These include the St. Lawrence Ship Channel, the dockyards at Esquimalt and Halifax, wrecking plants, the ice breaking steamer at Fort William, wireless stations, a naval militia, marine schools, reporting stations, pilotage, ice-breaking steamers, submarine bells, Parry Sound depot, the lighthouse depot at Prescott. Here are new services that did not exist in 1896, or were not then under the control of the department. If we look at the number of vessels, there were only eight twenty years ago, while there are now fifty-three. Of letters received there were last year 38,190, against 7,800 in 1886, and 13,000 in 1896. Of light stations there were in 1886, 534; in 1896, 629; and in 1908, 957. Of light-keepers, there were 682 in 1886; 646 in 1896; 914 in 1908. Of gas buoys there were 39 in 1886 and 470 in 1908. Of wharfs there were 134 in 1886, 416 in 1908. That shows the immense quantity of work which has been added to this department.

Mr. SPROULE. How much was dropped in the department when the department was divided into two—the Marine Department and the Fisheries Department?

Mr. BRODEUR. I am speaking of the whole department—the two branches of the department.

Mr. SPROULE. You are practically only dealing with the Marine Department to-day whereas before you dealt with both.

Mr. BRODEUR. I am dealing with the two branches of the department. They were divided, I think, in 1886, but in 1891 they were brought together again. We have done, I think, some useful work, and in the criticisms to which my department has been subjected, these works have been lost sight of. But I have testimony to the value of what we have done in improving the St. Lawrence. Take the resolutions passed by the Shipping Federation in 1886, 1887, 1906 and 1907. Take those of the Montreal Board of Trade in those late years. I might quote those because they show that something has been done which is very useful. Take the resolution of the 15th of November, 1906, by the Montreal Board of Trade:

Resolved that having received from the president and the representatives of the shipping interests on the council their reports on the annual inspection of the channel, which inspection, by courtesy of the hon. the Minister of Marine and Fisheries, they attended, the council of the Board of Trade of Montreal hereby expresses its appreciation of the manner in which the Dominion government has met the desire of the country that a generous expenditure should be made for the purpose of improving our national waterways from Montreal to the ocean, and the council further expresses its gratitude to the hon. the min-

ister and to the engineers of his department for having so readily and promptly met the various specific requests for channel and lighting improvements made by this board and the shipping federation.

Here is the Montreal Board of Trade, the most important body in the country, praising the Department of Marine and Fisheries for what it has done in improving the St. Lawrence route. Take the resolution of the shipping interests of the 21st of November, 1906:

That this federation is extremely gratified with the permanent and substantial manner in which the many undertakings are being carried through and consider that great credit is due to the government and to the hon. Minister of Marine and Fisheries for the way in which this national work is being done. The beneficial effects have already been felt in the lowering of insurance rates by the St. Lawrence route, which not only benefits the ships, but also the producers in the west.

That the members of this federation are pleased to note the able manner in which the minister has mastered the many details in the short period in which he has held office.

A resolution to the same effect was passed by the Shipping Federation in 1907:

Be it resolved that the members of the federation express their satisfaction with the permanent and substantial manner in which the many undertakings are being accomplished and consider that great credit is due to the government and to the hon. Minister of Marine and Fisheries for the manner in which this national work is being carried through.

Those testimonies ought to be worth something. My hon. friend from St. Antoine division (Mr. Ames), who knows the people who have passed these resolutions, will appreciate their value. He knows that they were passed with the desire of being absolutely true and representing what really existed. I might quote also a resolution from the Board of Trade of Fort William of the 21st of May, 1907, in which they congratulate us for the work we were carrying out at that particular time in connection with the breaking of the ice:

This board fully appreciates the action taken by the Minister of Marine and Fisheries in putting the ice-breaker 'James Whelan' at work to break the ice blockade on Thunder bay and in the harbour of Fort William this spring. The fact that this breaker opened navigation at least two weeks, and probably three weeks, earlier than it would have opened, fully justifies the action of the Minister of Marine and Fisheries.

That this Board of Trade felt that the work of opening this harbour, so well begun, should be continued each year. The result will be that navigation will open from two to four weeks earlier than it usually does, and such a result is a very important factor in the development of the west, and is of national importance.

Mr. BRODEUR.

What has been the result of our policy and of the work we have been doing on the St. Lawrence? One result has been the lowering of insurance rates to a very considerable extent. On grain these rates have been reduced by 60 per cent of what they were in 1900. On provisions they have been reduced by 54½ per cent, and the president of the Canadian Bank of Commerce, a man who is pretty well posted on all questions concerning finance and transportation, spoke in his speech at the annual meeting of the Canadian Bank of Commerce, as follows:

The Marine and Fisheries Department have also for some years past been steadily improving the lighting of the St. Lawrence, and it is claimed that during the last eight years the decline in insurance rates has been such as to make a saving to freight and vessel owners combined of about $6,000,000.

Here are $6,000,000 which we have saved to the country by improving the St. Lawrence route. Of course during the last elections not a word was said by our opponents about this very beneficial work done by the Department of Marine and Fisheries. They were too busy slandering the minister and his department, for small, petty things, to think of saying a word about the good work we have done in the public interest.

When I took charge of the department, I wanted to make some reforms, and I propose to state in a few words what reforms I have succeeded in making. When the investigation of 1906 took place in the Public Accounts Committee, I found that our system of bookkeeping was absolutely defective. At that time I was told that some changes were being made in the accounting system of the Department of Railways and Canals and that I might get experts who would establish in my department what is called the Cost System. What is that system; it is one by which we can find out in our different stations and places where we manufacture, the cost of each part of a manufactured article. We have not only the cost of the total article but of each part, so that we can easily ascertain whether it will be better for us to continue manufacturing or purchase at the prices elsewhere. Suppose we wanted to purchase anything which pertains to a boiler. What the cost of that part manufactured in one of our establishments was, I could not tell, but by the system I have introduced we can find out exactly what it costs. Then, we can compare that cost with the prices quoted by other dealers and in that way ascertain whether it would be better to continue the manufacture or purchase elsewhere.

That was the reason of the cost system. Formerly, we could not tell whether given parts of the manufacturing articles we were making were too expensive or not. Now, the exact cost to us of manufacturing any part of any article is known to the

officers of the department, and so we can judge whether it is advisable to continue manufacturing or to purchase. I think the establishment of this system will commend itself to the judgment of the House.

I found in the department a system, which had been in existence for many years by which there could be overlapping payments—in other words, the expenditure in each year was not kept within the appropriation. I do not remember exactly the amount paid out of the appropriations ot 1905-6 on account of expenditures incurred in the previous year, but I know that the amount was a very large one. I thought this system extremely detrimental to the administration of the department, and decided to change it. Within a few weeks after I took charge of the department, I instructed the proper officers to see to it that each officer under whom expenditures were made should make a statement showing exactly what he required to complete the expenditures of the year, and what money remained to meet these requirements. I was very sorry to find that, in the first report laid before me by Mr. Falconer, no less than $484,000 was paid during 1906-7 for expenditures incurred in the previous year. My hon. friend from North Toronto (Mr. Foster) knows what abuses such a system can bring about. Being determined to change this system, I gave such formal and unmistakable instructions that now, to-day, on this first day of April, 1909, at the opening of the fiscal year, I am in a position to state that all the expenditures incurred in the fiscal year closing yesterday can be paid out of the appropriations for that year. I have here a monthly statement such as I get from my officers regularly, showing the amount of each appropriation, the amount spent during the month, the total amount spent to date and the balance available. Not only expenditures for the current fiscal, but also those made on account of last fiscal year must be clearly shown. With such a statement before me, I am able to judge whether there will be enough money to provide for the necessities of the year. I can completely control every expenditure, and can see whether each officer is living up to my instructions or whether he is transgressing those instructions. The report I have now in my hand is that of March 1, 1909. It shows that, on appropriations representing a total of $7,055,600, there was a balance available of $1,870,000, or enough to cover all the expenditures to be incurred during that year. This method enables me to absolutely prevent overlapping payments, a system which, perhaps, led to the abuses which were discovered in Quebec. Such abuses cannot occur under the system I have established. As a part of this system, I have a statement prepared by my officers, every month showing the amount of the appropriation and the amount expended and the balance available. For the fiscal year, 1908-9, the year which closed yesterday, is a balance of our appropriation of $883,000 that will not be required. In other words, there will be no overlaping payments for the fiscal year just closed.

Another reform that I made in the department was the classification of the lighthouses. I found that the salaries of the light-keepers were graded, not according to the work they had to do, not according to the importance of the lights they had to take care of, not according to any good business principles which should guide in such cases, but according to the favoritism a man might be able to claim, according to his influence, sometimes even according to the number of children he had. I thought that was a system that should be put an end to, and so I asked my officers to make a classification of all the lights according to their importance, according to their sites, according to the illuminating apparatus installed in them, in order that the salaries of these light-keepers should not be purely and simply at the discretion of the minister but should be regulated according to business principles. I did the same thing in the classification of the fog alarms, no such classification having existed up to that time.

I come now to another reform—the fifth —which I consider I have introduced in the department: the appointment of a purchasing agent. Abuses have been proved by the investigation to have existed because purchases were made without much consideration for the price, sometimes without much consideration for the quality or even the quantity of goods. I thought that we should centralize these purchases, and that local parties should not be the only ones to quote our prices. However, in order to protect the local dealers, to-day, when we advertise for goods we always state, if these goods have to be delivered at Quebec, Halifax, St. John or elsewhere, that tenderers shall quote prices for goods delivered at the point selected. The results have been very satisfactory. We call publicly for tenders in all cases where the amount is large enough to justify us in doing so. In all cases of purchases exceeding $5,000 we call in this public way for tenders. For smaller purchases, the purchasing agent is absolutely free to go where he likes to make these purchases, his instructions being to get the lowest prices and the best conditions possible.

Also , some two years ago, I abolished the free importation of goods, because I found there were abuses in connection with that system. Even before a law was passed by parlia-

ment declaring that goods purchased by government should pay duty, I gave instructions that goods purchased in my department should pay duty, and consequently I do not think that we will experience any longer the same troubles that were disclosed, in some cases, by the investigation. The contract system has been established on the boats, and now we have given contracts for supplies on all the boats of the government, with one or two exceptions. Last year my hon. friend from North Toronto (Mr. Foster) discussed this very question, and urged that it would be a good thing to provision the boats, not by purchasing the goods ourselves, but by making contracts through the captains and stewards of those boats. That system is now in vogue, it was in vogue even when he drew my attention to it on several of our boats, and at present the contract agent is completing arrangements for the other boats we have. I think I may also mention the great improvement that has taken place with regard to the works under the Harbour Commissioners of Montreal. My hon. friend from St. Anne, Montreal, (Mr. Doherty), knows very well how those works were carried on previously in the Montreal harbour. A new commission has been appointed, and now the work is being done in a way which is creditable, not only to the commissioners, but to the whole country.

My hon. friend from St. Anne states that corrupt acts have been committed; it is true. He states that corrupt acts have been disclosed; it is true. But let me assure him that these corrupt acts were unknown by the minister or by any of the superior officers of the department. Those acts took place under a system which had been in vogue for many years, a system which had not given satisfaction, and a system which we are now changing. I do not desire to prolong my remarks. I think I have shown that the Department of Marine and Fisheries is now on a footing which will commend it to parliament and to the country. Should we go further? My hon. friend says we should go further, and make a further investigation. In all cases there is not the same justification as there was in the Department of Marine and Fisheries. Does he want to have all the officers branded as robbers? Does he want all the officers of the government branded as thieves, or as having received gratuities? I know he does not want that. We must take it for granted that these officers are honest. There was justification for an inquiry in the Marine and Fisheries Department, because we had before us the report of the Civil Service Commissioners, in which they stated that there was a lack of conscience in the department. But I do not think my hon. friend is justified in going any further.

Now, some allusion has also been made to the dismissal of officers from my department. I must say, Mr. Speaker, that it was a very painful duty for me to perform. I received a great many letters, supplications from mothers, sisters, wives and children, imploring me to show compassion on those who had been implicated in the disclosures of the Cassels investigation. I did find that in some cases it was very hard to resist the appeals of these persons. But I approached the matter, neither with antipathy nor with sympathy, but with the sole desire of rendering justice to all those who were the subjects of the investigation. I have tried to do my duty, not as an enemy, not as a friend, but purely and simply as a judge in the discharge of his duty. The report on this matter, which was laid before the House a few days ago, was a result of the mature judgment and consideration of all the cases of men who were implicated in those disclosures. I think, Mr. Speaker, that in doing this I have only fulfilled my duty, as I was bound to fulfil it, in view of the disclosures which were made. Finally, I place myself in the hands of parliament. I am ready to submit to the judgment of the country, and it is my belief that the country will see the Department of Marine and Fisheries conducted in future in such a manner that is will be at all times a credit to this country.

Mr. J. W. MADDIN (South Cape Breton). Mr. Speaker, the resolution which has been placed in your hands, moved by the hon. member for St. Anne, Montreal, (Mr. Doherty), has for its object to impress upon the government the necessity of making an inquiry into the other spending departments of this government, such as has been made into the Department of Marine and Fisheries by His Honour Mr. Justice Cassels. In fact, the resolution goes further than that, it suggests a searching, untrammelled and a more thorough inquiry than that which was held by Mr. Justice Cassels. The hon. the Minister of Marine and Fisheries, after occupying the attention of the House for something more than an hour, endeavouring to answer the arguments of my hon. friend from St. Anne, has not succeeded in answering one of them. During nearly the whole of his speech he seemed only anxious to defend himself, and to make out for himself a good character in respect of his administration and the efficiency of his department. He appeared to be very anxious to exhibit the endorsations

which he had received from various boards of trade throughout the country. Sir, in that respect his department is not in question in this resolution, nor is it before the House at the present time. No one at this time is making any complaint that his department is not efficient, no one on this side of the House denies that improvements have been made in his department. That might be said at another time and under other circumstances; that aspect of the minister's department is not now before the House. The question before the House is simply this: Do we learn sufficient from the report submitted to us by Mr. Justice Cassells to warrant us in taking the public behind the scenes in the other great spending departments of this government? The Minister of Marine has not offered one reason why such an investigation should not be had. He asks that his conduct in the department should be condoned and points out that he is the least of a great number of men who have filled that office, and then he tries to show that he was the one man of all these who had the courage to boldly come out and undertake reform. He tells us that he was appointed Minister of Marine in February, 1906. On May 8, 1906, only a few months after the hon. gentleman undertook the duties of that office, the member from Grenville (Mr. J. D. Reid) in addressing the House, spoke as follows:—

Up to about two or three years ago, we had the Pintsch gas system by which we had a permanent light on the gas buoys. It was changed then to the acetylene gas system.

Further on he says:

I have not the slightest hesitation in saying, as I see from the Auditor General's report, that the government have spent in the neighbourhood of $1,000,000 in the fiscal year of 1905 in making these changes, that there has been a very considerable rake-off, say from 25 to 50 per cent. Some one is getting that rake-off. There is a system going on in the Marine and Fisheries Department by which, on almost every item in connection with this matter, there is a rake-off of at least 25 per cent, and the Minister of Marine and Fisheries, when he examines the accounts that go through his department, will have to come before the House and admit that there is 25 per cent at least paid on every item in connection with this matter over and above what I or any other member of this House could purchase these appliances for. That is a fact, and I defy the minister to dispute it. I can prove it here by the items in the Auditor General's report. It is most unfair to have a system of that kind going on in the Marine and Fisheries Department. It is not going on without some one getting a rake-off. We should know who is getting that rake-off. It is a shame that this country has to pay these exorbitant prices.

This was in May, 1906. Yet the Minister of Marine boasts here of the virtue in his department. When a woman boasts about her virtue we at once become suspicious. The minister did not waken to his sense of duty until in 1908 he says he had the courage to order goods to be purchased in his department by public tender. Further than that, after the hon. member for Grenville (Mr. J. D. Reid) brought this matter to the attention of the Minister of Marine, a new system of bookkeeping was introduced into that department at the instance of the minister; at a very great expense to the people of this country, Falconer & Co. of New York made a searching inquiry and audit of the books of the Marine Department. What did they discover? They discovered a system prevailing there that was even worse than Mr. Reid in his modesty had suggested. Although this investigation took place in 1907 the minister undertakes no reform until 1908. The minister says that from the earliest time in this department of the government the system of buying goods through government patronage has obtained and after doubtless searching the records of the department with the greatest care he brings here a letter written in 1886 and points out that it is shown in that letter that when the hon. member for North Toronto was Minister of Marine and Fisheries, the purchase of supplies at Quebec was under the patronage system, that the sale of supplies for the St. Lawrence branch of the Department of Marine and Fisheries was not open to the public but was circumscribed to the extent that purchasers were obliged to buy from certain Conservatives whose names were put on the patronage list. For years preceding 1896 hon. gentlemen opposite were wont to go to the country and point out amongst other evils which characterized the Conservative administration that of the patronage system. They boasted on every platform that when they got into power they would abolish that system forever. In that way they obtained the confidence of the people and were entrusted with the administration of the affairs of the country and why did they not then bring about these reforms? It ill becomes the Minister of Marine in 1909 to say that because in 1886 a system obtained which was bad the government were justified in carrying on the same system. Two wrongs cannot make a right and the minister's statement that this system obtained in the past does not by any means exculpate his department and the present administration.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. MADDIN. When you left the chair at six o'clock, Mr. Speaker, I was referring in detail to some of the instances disclosed

by this report of the Cassels commission. We find that a man named Wm. Blackeson, who followed the occupation of his father as a sail maker, testified that he paid five per cent commission to Mr. Gregory as his father had done before him. Mr. J. J. Murphy paid five per cent commission to Mr. Gregory, and Mr. Murphy received 15 per cent profit on his sales to the government over and above what he paid Gregory. We find also that no less than 28 officials of the department in the city of Quebec received from Mr. Drolet a sum of $9,342 in a period of three years, an average of $3,114 per year, on an average per head of $111 for these 28 men. Then we have it in evidence that Mr. P. J. Mailloux knew of payments being made to Mr. Gregory, and that George Davie of the firm of Davie & Sons paid Gregory $500 per year on an average for eleven years, in addition to paying $75 to Mr. Petty, engineer of the 'Montcalm.' Mr. Davie, who had large contracts with the department, well knew that in receiving these payments Gregory was violating the law of the country, and he doubtless also knew that he himself was guilty of an offence because he admits that he departed from the ordinary custom of his business, and, in order, as he says, to shield Gregory, he took the extraordinary course of drawing the $500 on McGee & Company, brokers, and having it paid in five-dollar American green-back bills so as to leave no record of the payment. This man also testifies that a further sum of $800 was paid to Mr. Gregory on August 30, 1906, and a still further sum of $500 was paid to him in August, 1907. This same man Davie was making a profit of 50 per cent on his contracts with the department. Among other favours conferred on Mr. Gregory by Mr. Davie the latter paid Gregory $400 to go to New York to transact some business for him, and it developed that he was paid this sum to use his influence as a government official to assist Mr. Davie in selling some dredging apparatus to an American firm. In addition to this, in December, 1907, Mr. Davie paid the captain of the La Canadienne $25; in December, 1906, $50, and in 1905, meeting him on the street one day, he casually handed him a one hundred dollar bill. Here are specific instances in which a briber approached the officers of the government and bribed them, not with trifling sums, but with sums aggregating more than a year's wages for most of the artisans and labouring men of the Dominion. An artisan who averages $800 per year thinks he is well off, and yet on one occasion this lump sum was paid by one contractor to this official of the government. The evidence with regard to the Halliday Bros. is a striking illustration of how things were manipulated at Quebec. They had a contract with the government for the services of the S.S. 'King Edward' by which originally they were to be paid $135 a day, and these men were receiving pay from another department at the same time they were under contract with the Marine and Fisheries Department. They subsequently rendered a bill to the Marine Department for $200 a day for the steamer, and eventually they were paid at the rate of $180 per day or $45 per day more than the original contract. A Mr. George B. Hall handed Mr. Gregory a gratuity of one hundred dollars, and although Mr. Hall is a lumber merchant, yet he was selling oil to the department and making a rake-off from 25 per cent to 30 per cent as a middleman in that business. Mr. Wm. Doyle paid Mr. Gregory a commission of 3½ per cent or $495 on $17,300 worth of goods which he sold to the department. It seemed that Mr. Gregory owed Mr. Doyle $613.90, and that account was wiped out by Gregory paying Doyle $117.77. Mr. Drouin allowed Gregory five per cent on the purchases which Gregory made from him for the department, the scheme being that Gregory paid the amount to Drouin previous to the receipt of the government cheque and this five per cent was said to be by way of discount. Then, Mr. Gillespie also borrowed from Gregory so as to allow him five per cent. I shall not go further into minute details in connection with this matter, but I do wish to draw the attention of the House to the fact that section 158 of the Criminal Code, was framed to meet such cases. Section 158 reads as follows:

Every one is guilty of an indictable offence and liable to a fine of not less than one hundred dollars, and not exceeding one thousand dollars, and to imprisonment for a term not exceeding one year and not less than one month, and in default of payment of such fine to imprisonment for a further time not exceeding six months who—

(a) makes any offer, proposal, gift, loan or promise, or gives or offers any compensation or consideration, directly or indirectly, to any official or person in the employment of the government, or to any member of his family, or to any person under his control or for his benefit, with intent to obtain the assistance or influence of such official, or person to promote either the procuring of any contract with the government for the performance of any work, the doing of any thing, or the furnishing of any goods, effects, food or materials, the execution of any such contract, or the payment of the price or consideration stipulated therein, or any part thereof, or of any aid or subsidy payable in respect thereof; or,

(b) being an official or person in the employment of the government, directly or indirectly, accepts or agrees to accept, or allows to be accepted by any person under his control or for his benefit, any such offer, proposal, gift, loan, promise, compensation or consideration; or,

(c) being an official or employee of the government, receives, directly or indirectly, whether personally or by or through any member

of his family or person under his control or for his benefit, any gift. loan, promise, compensation or consideration whatsoever, either in money or otherwise, from any person whomsoever, for assisting or favouring any individual in the transaction of any business whatsoever with the government, or who gives or offers any such gift, loan, promise, compensation or consideration; or,

(g) having dealings of any kind with the government through any department thereof, pays to any employee or official of the government, or to any member of the family of such employee or official, or to any person under his control or for his benefit, any commission or reward or within one year before or after such dealings, without the express permission in writing of the head of the department with which such dealings have been had, the proof of which permission shall lie upon him, makes any gift, loan, or promise of any money matter or thing, to any such employee or other person aforesaid; or

(h) being an employee or official of the government, demands, exacts or receives from such person, directly or indirectly, by himself, or by or through any other person for his benefit, or permits or allows any member of his family, or any person under his control, to accept or receive (i) any such commission or reward, or (ii) within the said period of one year, without the express permission in writing of the head of the department with which such dealings have been had, the proof of which permission shall lie upon him, accepts or receives any such gift, loan or promise.

Now, I wish to read section 159:

Every person convicted of an offence under the last preceding section shall be incapable of contracting with the government, or of holding any contract or office with, from, or under it, or of receiving any benefit under any such contract.

I have read these portions of section 158 which are pertinent to this resolution and the whole of section 159, in order to emphasize to this House that in 1892, and I doubt not previous to that, there were provisions in the Criminal Code of this country for the punishment of the identical offences which Mr. Justice Cassels has found to be so rampant in the Department of Marine and Fisheries. I do this to emphasize the fact that the criminal law of this country was framed and passed in order to meet just such cases as have arisen here. This report of Mr. Justice Cassels came down in the latter part of January, and on the first day of February a Bill, entitled 'An Act to prevent the payment or acceptance of illicit or secret commissions and other like practices,' received its first reading in this House. The first section of that Act is as follows:

This Act may be cited as 'The Secret Commissions Act, 1909.'

When that Bill was introduced into this House by the hon. the Minister of Justice, while agreeing with him that the provisions contained in it would meet with the approval of a majority of the people, I endeavoured to point out that it was most desirable that the criminal law of this country should be preserved in the codical form in which it had been handed down to us by the late Hon. John S. D. Thompson; so that we should have our criminal law in one volume and not distributed through the various statutes of Canada under different headings, and with various high-sounding titles. Was there any special motive for introducing that Bill at that particular time? As up to that time there had been no persons prosecuted under the Criminal Code for receiving secret commissions, was it hoped that the people throughout the length and breadth of the country would, by the introduction of that Bill, have their eyes closed to the lack of prosecutions by the government for the flagrant disclosures made in the report of Mr. Justice Cassels? When it became known that that report would bristle with the most flagrant instances of violations of the criminal law of the country, it was sought to draw a red herring across the trail, by introducing a piece of legislation which, although it does not on its face say so, implies that it was framed for the purpose of meeting any future cases that might arise similar to those disclosed by the investigation into the affairs of the Marine and Fisheries Department. The criminal law of the country is quite clear with regard to these offences. I have read what sections 158 and 159 of the Code have to say, and I can readily appreciate the sentiments in the mind of the hon. the Minister of Marine and Fisheries when he says that no one knows how hard it was for him to apply the pruning knife to his department, to the extent he did, as shown by the order in council brought down the other day. I can readily understand how, moved by letters addressed to him from the wives, mothers, sisters, and children of officials in his department, he is loath to institute prosecutions against them. I would not for a moment advocate that an example should be made in every individual instance in which an offence has been disclosed by this investigation; but I say this, that when it comes to the knowledge of a community or a country that a part of the criminal law of the country has been openly and flagrantly violated for a period covering several years, it becomes the duty of the person responsible for the administration of the department in which these crimes arose, to make an example of someone;—to single out some of the more flagrant instances—and there are many—and institute proceedings against the parties.

The hon. Minister of Marine and Fisher-

ies, in replying to the mover of this resolution, in a speech which occupied the attention of this House for a full hour, claimed to have been the one who had the courage to undertake reforms in his department. He said that whilst the mover of the resolution had criticised his conduct, he had not given him credit for the reforms which he had effected. During the election campaign in his own province the hon. gentleman had a very different reason to offer. To-day he tells us that he was not given credit for the good his department did, but that he was subjected instead to a campaign of slander. Why, in his own province, the Liberal press, which advocates the virtues of his administration as well as its vices through thick and thin, in season and out of season, claim, and that claim was put forward by the minister himself, that the only reason for criticisms of himself and his department was because he was a Frenchman. That was the reason given by the 'Soleil' and 'La Presse' and another French-Canadian paper as well as by the minister himself.

Mr. BRODEUR. Will the hon. gentleman be kind enough to quote one instance when I said anything of the kind.

Mr. MADDIN. I am not prepared to state on what platform or on what day the hon. minister said it, but I promise him that I will furnish him with the place and date.

Mr. BRODEUR. I never said anything of the kind.

Mr. MADDIN. In deference to the hon. minister and to the rules of the House I am obliged to accept his denial, but I was told this on the authority of members from the province of Quebec.

Some hon. MEMBERS. Name them.

Mr. MADDIN. I do not propose to name them. They are not on that side of the House at any rate. This was the reason put forth by the French-Canadian press in the province of Quebec to account for the attacks made on the Minister of Marine and Fisheries. Let me say that the Liberal-Conservative party has never been found wanting in regard and esteem for French-Canadians. That party, from the beginning of confederation, and long previous to confederation in Upper Canada, held the French-Canadian people in the highest esteem. Hon. gentlemen on this side are always willing to pay any tribute due to the memory of Champlain and Cartier and even to the right hon. the leader of the government, in so far as he is a Canadian citizen. We have never been lacking on this side in regard for our compatriots of French origin, so that it cannot be said, with any degree of truth, that it was because of the hon. minister's origin, he and his department were attacked.

Let us trace the history of this investigation. A commission was appointed and this commission reported in 1907, and in its report reflected on the administration of the Department of Marine and Fisheries. The hon. minister then suggested this inquiry, urged on by his colleagues in the cabinet. It was they who instituted these proceedings, and for any disclosures which have arisen, they have only themselves to thank. But the resolution moved this afternoon has for object an inquiry into the other spending departments of the government; and unless hon. gentlemen opposite support this resolution, it may be said, with some degree of truth, that the Marine and Fisheries Department was made the scapegoat for the sins of the other departments as well as its own. Unless this resolution be accepted by the government, they must consider that the Department of Marine and Fisheries is better administered than the others. After the mover of this resolution (Mr. Doherty) had addressed the House this afternoon, the Minister of Marine and Fisheries rose to reply; and I venture to say that this is the first instance in the history of confederation, when a minister of the Crown replied to a resolution without committing himself either to an endorsement of it or to opposing it. He did not intimate how he proposed to vote if the House came to a vote on the question. He did not say that he was opposed to the resolution or that he approved it; but by inference, perhaps, it may be concluded that he does not intend to support it. The hon. minister went back through the history of the Liberal-Conservative party looking for precedents. It is remarkable how, when this government wishes to find a precedent for anything that will hardly bear close scrutiny, it always endeavours to find one in the past records of the Liberal-Conservative party. Well, after going through the records of that party from 1878 to 1896, one letter was discovered written in 1886.

Why, asked the minister, do not my opponents give me credit for the great results I have accomplished, for the good I have done? But on the other hand, why does not the minister play fair? Why does he not give credit to the then Minister of Marine for the good things done under the Liberal-Conservative party in the eighteen years they were in power? Instead of looking up ancient history, why does not he apply himself to something more modern and look through the correspondence on the files, from 1896 to the present, regarding expenditures of the character described in Judge Cassels' report? If he had any desire to act fairly, he would do that, but evidently he has no such intention.

In conclusion, I have only to observe that the minister has not met the issue

raised in this resolution, but has simply contented himself pointing out the reforms undertaken and carried out by his department. He has argued in a most peculiar fashion, and made some very illogical deductions. In effect, he says. 'Under my administration I have improved the St. Lawrence service, as you will see by resolutions passed by the Quebec Harbour Commission; I have introduced ice breakers, and call your attention to the resolution adopted by the Board of Trade of Port Arthur. I have caused the rates of insurance to be reduced on the St. Lawrence route; I have introduced a new system of bookkeeping in the Department of Marine and Fisheries; and because I have done all these things there should be no inquiry into any other spending departments of the government.' Would any one call that a logical argument? In his report Mr. Justice Cassels states that in order to bring about a successful reform in the spending departments of the government, it was advisable to awaken the public conscience. Why then will not the government accept this resolution? Have they anything to fear from it or to lose by it? Does the government consider that suspicion, as a result of this Cassels inquiry, is not deeply rooted in the public minds? If the other spending departments of this government are above reproach, an inquiry will redound to the credit of the administration, and I believe that there is no member on this side of the House but will be only too happy to find that there was no ground for such an inquiry. But that the circumstances demand that the inquiry be made, I think no reasonable man can deny. Why, what would be thought of a business man, say Mr. Thomas Lindsay, of the city of Ottawa, who runs the department store down town, if he, upon investigation, found fifteen or twenty people trading with the clerks in his grocery department had been bribing those clerks with thousands and thousands of dollars which they had added to the price of goods which they sold to the department, and, though these identical men were doing business with his millinery department, his furniture department and other departments, should still say: 'Oh, it's all right; I will not inquire into these other departments; probably everything is straight there'? Do not you suppose that under such circumstances any business man would at once investigate every department under his control? And do not you suppose that, in any event, he would at once cut off from the list of those with whom he transacted business the names of persons whom he found guilty of corrupting the employees under his control? Will the government follow the counsel of this commission and make an endeavour to awaken the public conscience? Or are they afraid that they may awake the wrong passenger, that they may awake public indignation?—that they fear that an investigation into the other spending departments of the government would not redound to the credit of their administration? I wonder if the Minister of Railways and Canals (Mr. Graham), the Minister of Militia (Sir Frederick Borden), the Minister of Public Works (Mr. Pugsley), the Postmaster General (Mr. Lemieux), the Minister of the Interior (Mr. Oliver), and the Minister of Mines (Mr. Templeman)—I wonder if these gentlemen were to take the evidence submitted by Mr. Justice Cassels in his report and make a careful perusal of it, if they would not recognize the names of those who have corrupted officials in the Department of Marine and Fisheries as the names of those who are still doing business with their several departments. For the Minister of Marine and Fisheries to argue that this system of patronage obtained under Liberal-Conservative rule is no justification. In his perusal of the files in his department from 1896 to date, he does not show us any instances such as the dozen or more that I cited to him here to-night; all that he does show—and I suppose he has shot his bolt, that he has selected that specific case which he thought would apply here—is that a system of competition by which the late government practised the custom of buying from friends of the administration. They bought by tender from amongst the supporters of the Liberal party who were on the patronage list of the government. But still there was competition among the supporters of the government to get the contract whatever it might be. That is entirely different from the condition that has obtained under the present government up to this time. I submit that it is one matter to have a patronage system where goods are bought in competition between friends of the government and an entirely different matter to have a system under which friends of the government are put up to compete against each other, the contract to go to the one who will give the highest bribe to the officials. I say that in view of the evidence submitted in this report showing the relation of these bribers to this department and other departments (the significance of the report being as much in what it does not say as in what it does say), and in view of the circumscribed nature of the commission which Mr. Justice Cassels had which would not let him go beyond certain means and abuses, taken under these circumscribed conditions, it is of such a character as not only requires but demands the fullest and most untrammelled inquiry that the government can hold.

Mr. GEO. W. KYTE (Richmond, N.S.). I desire to offer one or two observations touching the matters that have been discussed this afternoon in connection particularly with the report of Mr. Justice Cas-

sels in his investigation into the Department of Marine and Fisheries. I presume that there will be no question on the part of gentlemen on either side that it is in the highest degree desirable that the very best officials, the most competent and honest men, the most trustworthy men, should be employed by every department of the government throughout the whole country. I think that every hon. member will agree that the Minister of Marine and Fisheries (Mr. Brodeur), like every member of this government, is not anxious to retain in the employ of the government men who are guilty of a breach of trust or of violating the sacred honour reposed in them in respect of their employment. But we must not lose sight of the fact that the government of Canada is a large institution, that it employs a horde of officials from one end of this broad Dominion to the other, that these employees are not brought directly under the supervision of the minister responsible for their actions, and it naturally occurs—it must inevitably occur— that much must depend on the personal integrity of the men so employed. It has happened that certain officials of the Marine and Fisheries Department have been proven guilty of wrong-doing and of neglect of that standard of honesty and rectitude set up for the guidance of public officials. The question is not whether the government has acted faithfully in carrying out its trust in this matter—the charge is not made that the government or any department has not dealt out summary punishment to those officials when any wrong-doing was brought to their notice. The report of Mr. Justice Cassels deals with a number of officials in Quebec, in St. John, in Halifax, who have been more or less derelict in respect to their obligations to the government and of the code of honour which they should apply to their own conduct. We have before us an order in council submitted by the First Minister a couple of days ago in which is recited what has been done with respect to the officials thus wanting in their duty and honesty. One would think, from the address of the hon. member for Ste. Anne (Mr. Doherty) and the hon. member for Cape Breton (Mr Maddin), that the government, having learned that its officials had been derelict in their duty or guilty of breach of trust, instead of summarily punishing them had condoned the offences of which they were proven guilty. That is not the case. The evidence before us in respect of that order in council goes to show that every official who was guilty of wrong-doing has been punished in the manner called for by the obligations of the government in this regard. I am not going to enumerate the names of those officials, because I think it is not desirable that their names should be embalmed on the public records of this country. I will merely repeat, that every one of those officials who has been proved guilty of dishonesty has been dismissed, and they are no longer in the employment of the government.

Now, with respect to the ministers themselves, I beg to remind the hon. gentleman that there is not one single word censuring any member of the government, in the whole of this inquiry and report of Mr. Justice Cassels. I am well aware, and the House is well aware, that for the past twelve months the atmosphere resounded with all kinds of charges of wrong-doing and wholesale corruption in respect of the various departments of this government. During the last election campaign we remember that every minister was put upon his trial, and charges the most flagrant and most unjust were levelled against them. But the report of the commissioner exonerates absolutely every minister whose name was dragged into this question. Inasmuch as the hon. member for St. Anne devoted a great deal of attention to the report of the Civil Service Commission, I wish to call attention to the fact that that commission did not examine any person upon oath. They had a commission to inquire into certain departments of the government, and as a result of that inquiry, not based upon any sworn testimony, they came to the conclusion that there were certain things transpiring in some of the departments that were not desirable. Referring to their strictures in respect to the light house board, on page 8, Judge Cassels says:—

> I am quite satisfied that had Messrs. Fyshe and Bazin heard the evidence adduced before me, the language quoted above would not have been used by them.

That is, language referring to certain maladministration with respect to the Lighthouse Board, in which wrong-doing or want of conscience, as they put it, was charged. But, as I said a moment ago, Judge Cassels having heard the sworn testimony of every person giving evidence, came to the conclusion that if these gentlemen had heard the sworn evidence adduced before him, they would not have used that language. With respect to their references to other branches of the Civil Service, I desire to point out that the commissioner does not censure the minister of any one of the departments of the government. As a matter of fact, the Civil Service Commission does speak of the Post Office Department, the Department of Railways and Canals, the Department of Customs and the Department of Secretary of State, but in terms which do not at all imply that they had discovered the slightest trace of wrong-doing. The only two departments referred to at length by the commission were the Department of Marine

and Fisheries and the Department of Militia and Defence. Let me refer for the moment to the statement with respect to the Department of Militia and Defence. The only charge made against that department is the charge that they were spending a great deal of money, and this is what the report says:—

The expenditure in this department is going up by leaps and bounds. In 1903-4 the total expenditure, both in capital and consolidated fund, was in the neighbourhood of three and a half million dollars. In the estimates lately submitted to parliament for the fiscal year ending March 31, 1909, appropriations are asked for aggregating $6,500,000. That is to say, in four years and three-quarters the expenditures will have increased, if the supply asked for is granted, to the extent of three million dollars.

Now, that in itself does not imply any wrong-doing in the Department of Militia, though one might be inclined perhaps to suppose that the commissioners had in mind some suspicion that money was improperly spent. I need scarcely remind you that within the period referred to by the Civil Service Commission during the last four years the Department of Militia and Defence, in pursuance of that policy of expansion and with the object of relieving the mother country of some of the burdens that she bore for a hundred years in our defence, came to the conclusion to assume the maintenance of the fortifications at Halifax and Esquimalt. Hon. gentlemen opposite are loyal to the British empire, are loyal to the flag of Great Britain, and we had evidence a few evenings ago of what these hon. gentlemen think of Canada's duty to aid in the defence of the empire. Surely, then, those hon. gentlemen will not censure the government because the expenditure in the Militia Department has increased two or three million dollars by reason of the added responsibilities assumed by that department in taking over these fortifications. It is a fact that the estimates of the department were increased by over two millions on the single item to maintain the garrison at Halifax, but surely no hon. gentleman opposite will find fault with the department for undertaking this expenditure, inasmuch as by so doing they are relieving the mother country of a great burden. Now, with respect to the internal management of the Militia Department, they do make some criticisms of certain officials, and of the duties assigned to them, and they point out that perhaps in some respects the expenditure might be decreased and greater economy practised if that department were reorganized. Well, I have every confidence that the Minister of Militia and Defence will not lose a moment to investigate in what respect he can reduce the expenditure, while at the same time providing for the increased expenditures that must come from time to time. With regard to the Post Office Department, the commissioners say as follows:—

Your commissioners find that this is the third of the big departments scheduled under the Civil Service Act. As far as the commissioners can ascertain, the working of this department is conducted in a good businesslike manner, and except for the intervention of politics, and, possibly, the desire to run the department too cheaply, no fault can be found with the administraion.

I wonder if our hon. friends opposite complain of the Post Office Department because it is running affairs too cheaply. While we would regret if the Postmaster General were obliged to turn a deaf ear to certain requests made to him for improvement of postal facilities, I am sure every hon. gentleman in this House will rejoice that the Civil Service Commission state that the only fault to be found with that department is that the minister is running it too cheaply. There is no suggestion there of any wrong-doing. Now, I come to the Department of Railways and Canals:

Your commissioners do not propose to make any specific remarks about this department, although it is a great expending department and also has large revenues derived from the government railways. The present Deputy Minister of Railways, who has not been long in office, has established a new system of bookkeeping on the Intercolonial Railway, and it would seem probable that improvements will be effected generally.

I might go through all the departments referred to, and not in one instance do the commissioners reflect in the slightest degree upon the minister in charge, or upon the administration of the department. Then I come back to the sole point under discussion, and when I state that the Minister of Marine and Fisheries has discharged his duty in dismissing the officials who have been found guilty of wrong-doing, when I state that by order in council the government have undertaken to dismiss every one of those men who have been proved guilty of dereliction of duty, I am satisfied that no reasonable gentleman on either side of the House can refuse to accept that act as an answer to the charge made by the hon. gentleman who moved the resolution. Another matter I desire to refer to is of the contract entered into between the department and Halliday Bros., of the city of Quebec. It was stated by the hon. member for St. Annes that the original contract was for the use of their steamer at $125 a day, and that subsequently that sum was increased to $200 a day, and the insinuation is there made, that the late minister in charge of the department was responsible for that. But Mr. Justice Cassels in his report states:

Repeatedly during the examination of Colonel Gourdeau he stated that he could bring evidence to corroborate his statement that the variation took place with the assent of the late minister. The witness referred to was Mr. Power, late member for Quebec. I invited Colonel Gourdeau to produce the evidence. No such evidence has been given and I have to judge of the matters on the evidence adduced before me. In a great many respects the evidence of Colonel Gourdeau was unsatisfactory and contradictory.

Not a single suggestion is made in the report of Mr. Justice Cassels to show that the late Minister of Marine and Fisheries was in any way responsible for increasing the amount of Halliday Brothers' contract; but on the contrary he stated that Mr. Gourdeau's promise that he would produce evidence in that regard had not been fulfilled and he was obliged to come to the conclusion that the late minister had nothing whatever to do with it. The hon. member for South Cape Breton (Mr. Maddin) referred to the fact that hon. gentlemen who were implicated with respect to these charges had not been haled before the court. I shall speak for a moment of the hon. the Minister of Marine and Fisheries. There is a court in this conutry, the highest court we have, the high court of public opinion. Down in the county of Rouville there is such a court, the court of the people of the county of Rouville, the county represented by the hon. Minister of Marine and Fisheries. In view of all the charges made against the minister in the last 12 months with respect to maladministration in his department one would imagine these hon. gentlemen would have made good and would have availed themselves of the earliest opportunity to appeal to that court and to prove there that the Minister of Marine and Fisheries was no longer worthy of their confidence and should not be returned to represent them in parliament again. It is a most extraordinary circumstance that the one minister against whom all their attacks and all their shafts were levelled for 12 months was allowed on the 26th of October to be returned by acclamation to this House. Surely if these hon. gentlemen were sincere, surely if they felt the full responsibility of the charges they made against the Minister of Marine and Fisheries and against his department, they would have taken the earliest opportunity to have prevented the minister from coming back to preside over the department which they insinuated he had so ineffectively and so dishonestly administered. If there was one constituency in the whole of this broad Dominion that they should have fought and fought to the death in the last election that was Rouville, in order to prevent that minister coming back to disgrace the high office he had held, as they would have expressed it. But the only constituency in Canada which they allowed to go by acclamation was Rouville, and surely that is the best answer and the only answer that is required to the charges against the Minister of Marine and Fisheries. It is quite true that we had the pleasure of listening to a high certificate of character in respect to the Minister of Marine and Fisheries this afternoon given by the hon. member who moved this resolution (Mr. Doherty). I was not unprepared to hear that because I had felt ever since the election of the 26th of October last, that the hon. gentlemen opposite when it would be up to them to produce evidence to support their contentions would find it exceedingly difficult to carry on their campaign any longer. I was prepared to hear the hon. member for St Anne (Mr. Doherty) paying high enconiums to the Minister of Marine and Fisheries and why should I devote one instant of time more to defend the hon. minister against charges which have been thoroughly dissipated, from which he has been completely vindicated, charges which hon. gentlemen themselves testified this afternoon are absolutely without any foundation in fact. But, Sir, perhaps it is not desirable that the senses of the people of Canada should be steeped in forgetfulness with respect to the record of the Conservative party themselves when they were in power. The hon. member for South Cape Breton made an admission which was so significant that I shall refer to it. He said that whenever the Liberal party wanted a precedent for corruption they went back to the regime of the Conservative party. That statement is so absolutely true that I was rather amazed that the hon. gentleman found himself called upon to make it. I shall not go over the lurid history that filled the pages of 'Hansard' from 1878 to 1896, but I shall cite one case to show that the Minister of Marine and Fisheries should not be held responsible for anything that his officials did, particularly when those acts were committed hundreds of miles away from his direct supervision. I shall refer to the case of the Curran bridge which was investigated here in 1894, and was one of the last cases investigated prior to the defeat of the Conservative party. A vote of $170,000 was asked by the Conservative government for the construction of the Curran bridge in Montreal. The hon. member for South Lanark (Mr. John Haggart) was then Minister of Railways and Canals. The construction of the bridge was undertaken by day's work, not by tender and contract, and it was found that instead of $170,000 being sufficient to complete that work, it cost nearly $400,000. No pains were taken by the Minister of Railways of that day to supervise the carrying out of that contract or to ascertain for himself whether the money was honestly spent. I exonerate the ex-minister from any dereliction of duty in that regard, for notwithstanding the fact that the work was carried on only three

hours' ride from here, in Montreal, within easy rail, telephone and telegraph communication, although the minister could much more easily have an eye on the supervision of that work than the Minister of Marine and Fisheries could have upon a horde of officers scattered all over Canada, I do not say that the mere fact that money was grossly misspent is any personal reflection on the ex-Minister of Railways. When this came up in parliament it was proved beyond peradventure that this money was misspent to such a degree as had never been heard of in any committee of this House. The quantity of lumber required to be used was 2,594,000 feet, and there was charged and paid for 3,613,000 feet, or a steal of over 1,000,000 feet representing over $15,000. The stone-cutting which should have been $16,000 was $40,000. Upon the Wellington street bridge the cost of stone-cutting by day's work, which should have been $3,000, was $16,715, and the Grand Trunk bridge work, which should have cost $3,000, cost the government $23,180. The attention of the government was called to that condition of affairs by certain references made to it in this parliament and by certain items in the Montreal press. The ex-Minister of Railways then undertook to investigate and he found every charge made in respect to the expenditure of that money was absolutely true. In the session of 1894, Sir Richard Cartwright, then a member of this House, moved a resolution censuring the government in respect to that work. The concluding paragraph of that resolution reads:

That in the opinion of this House, the Department of Railways and Canals is deserving of the severest censure for inefficiency, neglect of duty, extravagance and the general management in connection with the said works.

The defence made then by the Hon. Mr. Haggart, Minister of Railways, was just such a defence as I would expect he would make, and I believe every word of it; he said:

I never heard, until the evidence was given in the Public Accounts Committee the other day, that there were a number of men transferred from Mr. Kennedy's roll to Mr. St. Louis's pay-roll, and I may as well here show how impossible it was for me to find out the frauds which I knew were being committed there. I knew that the timber charged for was in excess of what was required for the purpose of building that bridge; I knew that the labour charged for could not possibly be employed in its construction, and I knew that the demands made upon the department were in excess of what was honestly used in the construction of the work. I tried every possible means to get at the bottom of the frauds, and to that end I had the detective force employed on the Intercolonial Railway sent up and put on the Montreal works; but I found it impossible to discover where the frauds were committed. I had great difficulty in obtaining the evidence of the time-keeper, Mr. Doheny, for the purpose of defending the government against an action brought by Mr. St. Louis in the Exchequer Court for a sum of money, amounting, I think, to $67,000 or $68,000. I had great difficulty in getting evidence sufficient to prove that there had been frauds on the work.

Again he said:

The chief engineer reported the condition of affairs to me, setting forth that, so far as Mr. Douglas had been able to investigate, he believed the cost would reach no less a sum than $360,000, but that Mr. Douglas would continue his investigation. Mr. Douglas continued his investigation, and reported that he believed the cost of the bridges would exceed the amount he had already named.

Here we have the Minister of Railways in the Conservative government setting up as his defence that it was impossible for him to be cognizant of this wrong-doing which was perpetrated only 100 miles from the city of Ottawa; that defence prevailed, and the motion of Sir Richard Cartwright was voted down, every Conservative member voting to justify the minister. The hon. Mr. Haggart declared that the money was mis-spent without his knowledge, that he could not personally supervise the expenditure, that he was deceived and misled by his officials, and is it not fair to ask this House now to declare that the wrong-doing in the Department of Marine and Fisheries was absolutely without the cognizance of the minister and was such that it was absolutely impossible for him to detect it.

Mr. STAPLES. I was not in when the hon. gentleman began his remarks, but might I ask him if he is referring to the Quebec Bridge?

Mr. KYTE. I was referring to the Curran bridge.

Mr. STAPLES. Is the Curran bridge still standing?

Mr. KYTE. The Curran bridge was completed, and was supposed to stand. Now, Mr. Speaker, with regard to the conditions that existed in Canada from 1891 to 1896 let me quote the utterances of some English newspapers. The London 'Times' says:

Here in the mother country there can be only one feeling, that of deep regret for the wrong done to the fair fame of the eldest of her daughters.

The London 'Graphic':

It is no longer possible to doubt that corruption in its worst form is rampant in a large portion of the Canadian Civil Service.

The London 'Telegraph':

Enough, unfortunately, is already known in England to make it clear that only the most resolute and drastic purification can redeem

public life in Canada from the taint of corruption, the like of which we have not seen in our own country for hundreds of years.

The London 'Echo':

No country can prosper where public departments are in league with fraudulent contractors, and where ministers are open to offers.

These English newspapers perfectly describe the condition of affairs in Canada from 1891 to 1896, and there is absolute truth in the statement made by the hon. gentleman for South Cape Breton when he said that we were obliged to go to the regime of the Tory party to find precedents for corruption in this country. The hon. member for St. Anne (Mr. Doherty) gave a certificate of character to the Minister of Marine and Fisheries, and although the hon. member for South Cape Breton (Mr. Maddin) used much stronger language and exhibited much more temper than his colleague (Mr. Doherty) he also paid a compliment to the minister. He said that he would not now make a complaint against the administration of that hon. gentleman, but that a charge would be made at another time. I wonder if the hon. gentleman had in mind the time some years hence when this parliament will be dissolved and the right hon. the Prime Minister will again appeal for the support of the electors. I wonder if the hon. gentleman from Cape Breton thought that when that time comes around he will revamp these charges against the Minister of Marine. Well, Sir, I tell him and I tell others that here and now are the place and time to make charges against any minister of this government and not when the election campaign is on and when they can give free scope to their unfettered imagination and irresponsible rhetoric. When the Liberals were in opposition in this country they made charges in this House, they met the accused face to face and they asked for committees to be allowed to prove these charges. That was the manly course to take, but the Conservative government then in power made sure that if an inquiry were granted the accused should be surrounded by all the technicalities the law afforded for their protection. The resolution of the hon. member for St. Anne simply calls for an inquiry into other departments of government to see if any wrong-doing has been committed. We are bound to assume, as these gentlemen opposite have failed to make charges, that the truth is that having made all the inquiry they could they are unable to point a finger at one single act of maladministration committed by any minister of the Crown. The hon. gentleman from St. Anne gave his case away when he said a cloud of suspicion rested on the department. Well, there is no cloud of suspicion in the minds of gentlemen on this side of the House, and in view of the result of the elections on the 26th of October last I venture to say there is no cloud of suspicion in the minds of the electorate of this country. And, Sir, the government having been charged by the people of Canada with the full responsibility of conducting the affairs of this country, I believe they can find themselves much better employed than in appointing roving commissions to investigate foundationless charges. The motion of the hon. member (Mr. Doherty) is one of non-confidence, and it asks us who support the government to say that the ministers are not worthy of our confidence. I believe, Sir, that the members of this government are at present, and have at all times been exercising such care over their departments, that where there is wrong-doing shown to have been committed they will treat the guilty officials in the same way as they have treated certain officials of the Marine Department, and it seems to me that is all the country can reasonably expect the ministers to do.

Mr. THOMAS W. CROTHERS (West Elgin). As I understand it, the charge made against the government is not that certain officials of the Marine and Fisheries Department have been guilty of wrong-doing. One can easily understand some of the officials of so large a department as the Department of Marine and Fisheries going wrong, and it would be unreasonable to find fault with the minister or the government if the minister, on ascertaining the wrong-doing, or at the time he should have ascertained it with ordinary vigilance, had dismissed the wrong-doer and punished him, as the law provides. What we charge is, that not only the head of the Department of Marine and Fisheries, but the head of the government who knew, or ought to have known, of the wrong-doing of these men three or four years before they were dismissed, did not take the course they should have taken. We also charge that at the present time, they are not taking the course they should take with reference to the men whose guilt has been established. They knew at least three years ago of the misconduct of one of the men whom they dismissed only a day or two ago.

The hon. member for Richmond (Mr. Kyte), who has just sat down, said that the report of the commissioner found no fault in any of the ministers. Let me remind that hon. gentleman that the scope of this commission did not warrant the commissioner in going into any investigation of the conduct of the ministers, and when some of the witnesses were asked respecting the conduct of the ministers,

and respecting what the ministers knew of the wrong-doing, they were not allowed to give evidence with regard to that. The commissioner himself gives in substance the scope of the inquiry where he says:

Thereupon the commission, dated the 6th April, 1908, appointed me commissioner 'to investigate and report upon certain statements contained in the report of the Civil Service Commission reflecting upon the integrity of the officials of the Department of the Marine and Fisheries, or some of them.

Not the integrity of the government or the integrity of the ministers, but the integrity of the officials. Then he goes on to say:

Some limitation had to be given to the inquiry, and as the charges made by the report of the Civil Service Commission are mainly confined to the fiscal years 1904-5, 1905-6 and 1906-7, I limited the investigation in the meantime to those years.

So that the scope of the investigation is to inquire as to the integrity of certain officials and as to their conduct during those three years. The evidence adduced before the honourable the commissioner, covers nearly 2,200 large pages of printed matter, and the report of the commissioner, which is composed largely of quotations from the evidenc, covers 78 pages. I do not propose to detain the House to go over all the evidence contained in these 2,200 large pages of printed matter; but any hon. member who has read that evidence and the report of the commissioner must have reached these conclusions which I propose to read as the conclusions which I have reached on a fair reading of the evidence and the report:

(1). That the Department of Marine and Fisheries as a whole was loosely, extravagantly and dishonestly carried on.

(2). That both judge and counsel were anxious that all the officials should be able to prove themselves innocent, and that every opportunity to that end was given them. I have not drawn this conclusion with any intention of reflecting on either the counsel or the judge, but simply to show that every individual who was charged, or against whom there was any suspicion, was accorded the most ample opportunity to come forward and clear himself.

(3). That the investigation which was actually had, was fragmentary, disconnected and incomplete.

(4). That large numbers of officials were shown, even by such a partial inquiry, to have been dishonest.

(5). That the fraudulent transactions extended over at least three years, from 1904 to 1907, to which the inquiry was limited, although there was some evidence reaching into the year 1908.

(6). That there was an utter absence of any man, from the Prime Minister down to the petty agent, exerting any intelligent zeal for the protection of the treasury.

(7). That owing to the limited scope of the commission, the responsibility for the shameful conditions exposed, was not fixed.

(8). That grounds are disclosed, which demand a thorough examination into the workings of the other great spending departments of the government and a completion of the partial investigation already had in the Department of Marine and Fisheries.

As I have said, I do not propose to travel over these 2,200 pages of evidence, but I propose to confine my observations to a little evidence that was given by the Auditor General, beginning at page 230:

By Mr. Watson:

Q. Now, in the first place, take the deputy minister of the department, Colonel Gourdeau. What, if anything, has come to your knowledge in your official capacity bearing upon acts of irregularity and of that character as issuing from him? If that is too close and specific broaden it if you please. You know the scope of the investigation?—A. Well, I felt he did not sufficiently control or ascertain the manner in which the business was done by his officials although he was the responsible head.

Q. Then will you just state what you have in regard to the matters as issuing from him?—A. Well, I have had to complain very frequently about the prices, the cost of goods, the manner of purchase, the lack of calling for tenders, and all that sort of thing.

At page 232, I find the following evidence:

By Mr. Watson:

Q. Will you proceed then?—A. I notice another one on page 208 headed, Silverware for steamers 'Montcalm' and 'Champlain,' December 26, 1905,——

You will notice that this transaction precedes that date, December, 1905,—

By Mr. Watson:

Q. Will you proceed then?—A. I notice another one on page 208, headed 'Silverware, &c., for steamers 'Montcalm' and 'Champlain,' December 26, 1905.' Sir,—I beg to bring to your notice the accounts rendered by Messrs. B. J. Coghlin & Co., for silverware, glassware, and other table furnishings to the amount of $3,492.79 for the steamers 'Montcalm' and 'Champlain.' I should like to be informed of the advantage to the department of purchasing the articles in question through Messrs. Coghlin instead of direct from the trade. I should also like to be informed if it is customary to equip these vessels, which are not passenger carrying vessels, with silverware, cutlery, &c., of such an expensive nature as that which appears in the accounts above referred to.

We find that afterwards that the man who got the amount of $3,492 admitted that he had made a rake-off on the transaction of $1,100 and refunded it to the government. And this government knew, or ought to have known in 1905 of that trans-

action; and knowing of it, I submit they should have dispensed with the services of the man who was guilty of such a transaction.

Mr. A. K. MACLEAN. Might I put the hon. gentleman a question? I desire to ask him if he will give the evidence of an accountant named William Duff at Montreal, selected by the Cassels Commission, and who gave evidence respecting this particular transaction?

Mr. TAYLOR. Let the hon. gentleman take the evidence given before the Public Accounts Committee.

Mr. CROTHERS. I think that before I get through I shall have given the hon. member all the evidence he would like to hear. I find this evidence on page 234:

By Mr. Watson:

Q. I understood you to say before the silverware was not in his line?—A. No, although he may have had facilities for purchasing. He did buy some few years before, I ascertained, for some other steamers some silverware. When I confronted him with the original invoices he said there must be some mistake, and in fact he did not know what to say. It ended, however, in Mr. Coghlin refunding about $1,100.

Q. Oh, indeed, Mr. Coghlin refunded about $1,100 on the purchase price of something over $3,000—A. Yes, taking the contract to be what Colonel Gourdeau told me, and as it was confirmed by Mr. Coghlin, that they were to be furnished at the original wholesale price and 5 per cent commission allowed.

By Hon. Mr. Cassels:

Q. That would mean he utilized his being in the wholesale business to get from some other trades wholesale prices, that is what that would mean?—A. Yes.

Mr. Watson.—But the statement of the wholesale price was not correct.

By Hon. Mr. Cassels:

Q. I understand that. But he was using his position as dealer to get wholesale prices?—A. Yes.

Q. What did the deputy minister know about the contract originally?

By Mr. Watson:

Q. Yes?—A. Well, I think if I recollect he had something to do with ordering the goods.

Q. Oh yes, ordering the goods, but about the prices. What information did you get from him as to his personal knowledge about matters of contract?—A. He said that was the bargain they made with Mr. Coghlin.

That he was to buy the goods and get 5 per cent commission on the invoice price. Then take the evidence on page 235:

Witness—I understand they had the original invoice in the department? I dont know. I could not get it there.

By Mr. Watson:

Q. You mean showing smaller prices?—A. Yes.

Hon. Mr. Cassels—What you mean is, Colonel Gourdeau knew the prices being charged were less than the prices contracted for.

Mr. Watson—More, my lord.

Mr. CROTHERS.

At page 236:

By Hon. Mr. Cassels:

Q. Had you any conversation with Colonel Gourdeau after the refund of $1,100? We want to get all the information you can give us?—A. Yes. Colonel Gourdeau asked me since if we should not pay the $1,100 back to Mr. Coghlin,, as it came out in evidence afterwards that he should not have refunded that according to his contract.

Q. That Coghlin should not have?—A. Coghlin.

Q. Coghlin should not have refunded the amount?—A. Yes.

Q. That was the attitude of the deputy minister?—A. The peculiar thing was that they were both agreed on this statement, that the goods were to be supplied at the original cost price and 5 per cent commission charged, and on the strength of that Mr. Coghlin had made the refund of the overcharge, the apparent overcharge. Afterwards, some months afterwards, when the agreement in writing was produced at the Public Accounts Committee he wanted to get his money back. It has always seemed strange to me ever since that neither of them had any recollection of the original agreement, why they should contend that the agreement was one thing, which would mean a lower price to Mr. Coghlin, and it should transpire afterwards that there was the higher price he should have got.

Perhaps I had better read just in that connection another little passage showing what the contention of Mr. Coghlin was. It was that a year or two before he had an agreement with the government, under which he was to get the regular discount, and the Auditor General said that this discount amounted to between 40 per cent and 60 per cent. He discovered that he had been purchasing years before and getting 40, 50 and 60 per cent from the government, and therefore ought to have got it on this particular transaction instead of 5 per cent, so that the agreement does not help us very much. Then at page 238:

Q. Yes, I am aware of that. Now, let us exhaust the information you have in regard to each, first in regard to the deputy minister. You have spoken of one or two matters, is there anything else that has been called to your attention as affecting his position?—A. Well, his certificate came in the same category, after I had found out in the case of the silverware that the prices were not fair and just.

Q. Yes. Then did you get any specific information afterwards which would lead to any inference other than a favourable one as to his conduct?—A. In connection with the silverware?

Q. Yes, other than that?—A. No. It has been in that unsatisfactory condition to my mind ever since, that the matter was never satisfactorily explained.

Q. That is as to the silverware?—A. Yes.

Q. But I am seeking to carry it on to any other transaction by him. Have you a knowledge of any other transaction of a similar character or in which you were not satisfied

with the evidence of proper business transactions?—A. Well, I have seen his certificate in connection with the admission of goods free of duty where the certificate was not correct.

Q. Do you mean in favour of importers, contractors?—A. No. This is a certificate that the goods were required for the use of the government, and they were not.

Q. When they were not?—A. Yes.

Q. Yes?—A. To that extent the government was deprived of revenue.

That is another case where the falsity of the certificate was made apparent to the Auditor General. Now we have another one on page 240:

By Mr. Watson:

Q. Did you actually?—A. When he was present in the department here.

Q. I see. Well, I asked—probably there was some information that I had not been able to obtain when I examined Commander Spain yesterday, but I intended my questions to cover everything, and I think they did cover everything. His statement was they were correct. What did you find, Mr. Fraser, in regard to that?—A. Well, he had to make a refund, I think, between $800 and $900 on one year's travelling expenses.

Q. What year was that, 1905? I see in that year the expenses charged at $4,627. I called his attention to that yesterday. A refund of $800 or $900,—do you mean that expenses were charged for being out when he was in?—A. Yes.

Q. Is that the character of the charge? It is not excessive payments, that is where he paid $2, $3, $4 or $5 a day too much, you don't mean that; you mean, I understand, charges he made for being out when he was inside?—A. Precisely. Railway fares and the ordinary expenses.

Q. And did you ascertain the fact that he was actually in Ottawa when he was charging for expenses outside of Ottawa?—A. Yes, by the record.

Q. And you say that that existed to the extent in one year of $800 or $900?—A. That is as far as I could check it. I could not get the whole of the records.

Q. Why not?—A. I could not find them.

By the Hon. Mr. Cassels:

Q. Did you get the records in the Marine Department?—A. Yes.

Q. Who keeps them?—A. Well, it was the attendance book I asked for, and I don't know, the books usually run a month or two months, something like that, and I could not get the whole of the books for that year.

Q. Was part of that $800 the $6 a day allowance?—A. Not at that time. At that time he got $6 a day or a per diem allowance, I think it was $6, while investigating wrecks; on any other business he got his actual expenses.

Q. This was $800 actual expenses which you say he should never have charged?—A. Yes.

* * * * * *

Q. Then you mean there was no satisfactory explanation?—A. No, I did not consider that was a—it was unsatisfactory. that he had to refund the money.

Q. Had he to certify to that account?—A. Yes.

Q. Any one else?—A. The deputy minister's initials were on it.

Q. Yes.—A. I do not know whether that account is the one on file. I think it was remodelled.

Q. Oh, the account was corrected?—A. I think so.

Q. Well, the original account should remain on record, should it not?—A. Well, they got it back to examine it and see what was the trouble with it, and I think I got a new account.

By Hon. Mr. Cassels:

Q. Was the old account not kept?—A. It was out of my hands then.

Q. What?—A. It was out of my hands.

By Mr. Watson:

Q. You have not any personal knowledge whether that was kept or not?—A. No.

Q. You indicate a doubt?—A. I do not know anything about whether it was kept or not.

Q. I see. Have you knowledge of the system sufficiently to say whether or not the deputy should have personal knowledge that he was in and not out when those expenses were charged for?—A. He should have personal knowledge.

By Hon. Mr. Cassels:

Q. Was this fact brought to the attention of the minister or anybody else?—

He was so startled that it struck him at once that such a state of things should be reported at once not only to the minister, but to the head of the government if reporting it to the minister was not enough.

A. Your lordship. I might be permitted to say just at this point——

Q. What?—A. At this point I would like to say, if it were possible, that I would not like to go into any confidential conversations with the minister.

Q. I don't want any conversations, but it seems to me on the statement you made this morning the first duty of somebody would be to report the fact to the minister?

Not only to the minister, but to the Prime Minister; and if the minister or the Prime Minister would not pay attention, then the Auditor General should have reported it to the people of this country through the press.

Q. I don't want any conversations, but it seems to me on the statement you made this morning the first duty of somebody would be to report the fact to the minister?

That would strike anybody. And what answer do we get from the Auditor General?

A. His deputy should have done it.

That is to say: 'I knew all about it as Auditor General; I knew that this man had certified to an account of $800 larger than it should have been and that he had to refund half of it; I knew that he gave a certificate to a party for an amount of something over $3,000, and that of this the party had to refund $1,000; I knew that he gave a false certificate to enable a party to bring in goods free of duty;—and still I thought it was the duty of the deputy minister to tell the minister.

Then, down near the bottom of the page you have the following:

Q. You do not know whether the matter was ever attempted to be cleared up. Did you ever get any clearing statement of that afterwards?—A. No. I never had any doubt in my own mind as to the padding of the account.

Q. Because it is inconceivable——

I should think so.

—in the absence of explanation that the matter was not put in the hands of the County Crown Attorney.

—that an officer of this government had falsely charged up $800 to travelling expenses, that that fact had come to the knowledge of the deputy minister and the Auditor General, and that the facts are in possession of the government to-day and still the matter is not in the hands of the County Crown Attorney as far as I know. Why, we have had cases of poor washerwomen stealing a few red herrings and being sent to jail for six months, here in this province of Ontario, and here we have public officials, not only one but three or four, knowing of the grossest irregularities—to use a mild word—in the handling of the public funds, and still the government does nothing to punish the man who placed himself in that position. Not only that, but they actually retire the deputy minister, give a comfortable allowance for the rest of his life to a man guilty of the offences here charged against him by the Auditor General.

At all events you do not know what explanations were made or were not made afterwards?—A. No, I have no administrative duties at all.

Q. Then anything else in regard to Commander Spain?—A. Oh, I think his next account following that one had two or three items in that had to be struck out.

Q. You mean not excessive charges, but wholly false items, distinguishing them in that way. It would be an entirely false item if he charged an item for expenses out when he was in, would it not?—A. My recollection is it was some boat-hire or horse-hire, some thing of that sort, he charged in his next account that I called his deputy's attention to.

That was a second offence.

Q. Yes?—A. And he ordered it to be struck out.

By Hon. Mr. Cassels:

Q. Was that because it had not been used, or because it was not a proper payment? There would be a great difference between the two?—A. In that case the deputy said it had not been expended.

Q. What?—A. It had not been expended.

By Mr. Watson:

Q. That is, the deputy told you?—A. Yes.

Q. It had not been expended at all. Was that in 1906?—A. That would be 1905 or 1906.

Q. Anything else, Mr. Fraser?—A. Well, I asked the deputy then to keep a record for the next year's audit, that I would require a memorandum at the end stating the dates on which Commander Spain left the department on business, what the business was, and when he returned, to enable me to check his next year's account properly.

Mr. CROTHERS.

After the close of the year when I asked to be furnished with that information I was told that it had been kept, but they thought it was not necessary, or something, at the end of the year, and it was thrown in the waste basket?

Q. Who told you that?—A. The deputy minister.

Q. Yes.—A. So his accounts were in that unsatisfactory condition that they may be right or not.

Q. I see. You have the instances which you have given where you learned they were positively wrong, in fact false?—A. Yes.

Q. Did you ascertain that any other items afterwards were false, that is, the next year 1906 and 1907, did you get evidence of falsity of items?—A. No, I had no means of getting it.

Q. I mean by inquiry or otherwise. you did not get it?—A. No.

Q. Then did you pass it?—A. I had to, certified correct.

Q. I see. Certified correct by whom, by him and the deputy minister?—A. I could not say now what certificates were on.

Now, Mr. Speaker, it would be very interesting to complete this investigation, that has only gone a little way. When the Auditor General came up to a certain point, and then stopped, saying, 'I would not like to say anything further about any private conversation I had', it would be interesting to trace this up to its source, and fix the responsibility for these large expenditures of public money, and for keeping men in public office where they could repeat that sort of thing year after year. It would be interesting to fix the responsibility for that, and that is what this investigation did not fix; and for that purpose alone I submit that the investigation in the Marine and Fisheries Department ought to be completed. Now I want to read a letter that was sent away back in 1908 by the Auditor General with respect to this same matter. It was addressed to the acting deputy minister Mr. Desbarats, and read as follows:

I wish to call your attention to the accounts of Commander Spain of your department for travelling expenses for the fiscal year 1907-8, and to say that notwithstanding the fact that these accounts appear to have been approved by Col. Gourdeau, deputy minister, I cannot accept them, as they bear on their face the too evident appearance of incorrectness.

This is in 1908, although they had this deputy minister's certificate, the man who has been by this generous government superannuated for life.

It is almost an impossibility for this office to test anything more than the mathematical correctness of an account for travelling expenses unless we take unusual and distasteful means to obtain information. It is sufficient under the Consolidated Revenue and Audit Act to have the accounts bear evidence of having been examined by the department having control and vouched for by some officer having a personal knowledge of the

expenditure, and in most cases this is found sufficient. For various reasons I cannot, in the case of Commander Spain's account, accept these conditions.

On an examination of his accounts for 1904-5 they were found to bear such evidence of incorrectness that unusual means were adopted, with the result that about one-sixth of the whole sum had to be refunded, and the circumstances were such that the deputy minister undertook to say that future accounts should be correct.

That is away back in 1908.

The present difficulty appears to be a continuance of the practice complained of in 1904-5, namely, charges for railway fares, &c., when, in my opinion, no travelling such as charged for was done.

Then at page 245 we have counsel asking this question:

I do not quite understand the functions of the auditor. What actually is your duty, simply to represent to the deputy minister, and then if he passes the matter that is the end of it?—A. Well we have to question anything that we think is not in accordance with the rules and regulations or with the Act, or anything improper.

Q. Well, supposing he says it is all right, is that the end of it?—A. Oh no. We have got to get a better explanation than that, we have got to satisfy ourselves in some shape or form that the matter is all right, or report it to the Treasury Board.

Now, Mr. Speaker, who compose the Treasury Board? By section 9, chapter 23 of the Revised Statutes, it is to be composed of the Finance Minister and five other ministers of the Crown. Now the Auditor General tells us that unless he gets a satisfactory explanation it is his duty to report to the Treasury Board. He has told us over and over again during this evidence that for four years he did not get satisfactory answers, and therefore it was his duty to report to the Treasury Board. Mr. Speaker, did he report to the Treasury Board? One of two things exists: Either the Auditor General did report these transactions, not merely to the Treasury Board, but to the Prime Minister of this country, or he did not. It was clearly his duty to do it. If he did not do it, I submit that it is up to us to get another Auditor General; and if he did do it, it is up to us to get another Prime Minister. Now I do not propose to read any more evidence. I have gone over enough to satisfy, I think, every hon. member that we have several high officials who, for three or four years, were guilty of offences, not one slip, but repetitions of offences, known to the Auditor General, it being the duty of the Auditor General in such cases to report these offences to the Treasury Board. Nay, more, although the Audit Act may not require it, still I submit that it was his duty to report a transaction of that kind to no one lower than the right hon. the Prime Minister of this country. Surely the Auditor General would not stand upon the matter of the Audit Act; surely he would not repeat the act of the man who preferred to drown rather than be rescued from the water by a man to whom he had never been introduced. Surely some one is to blame. If the Auditor General reported, as we have a right to assume he did report, to the Treasury Board, composed of the Finance Minister and five other gentlemen, members of the government—I do not know whether it includes the Prime Minister—but I think it will occur to every member of this House that it was the duty of the watchdog of the treasury, in circumstances such as these, not to stop until he went to the head of the government and told him the conditions that were existing in the Department of Marine and Fisheries.

What have we now? We had the Civil Service Commission referring to lack of conscience in the lower officials, and we had the commissioner who was appointed suggesting as a remedy the awakening of the public conscience.

Did it ever occur to these gentlemen that as in nature decay very often sets in at the head, so in the body politic lack of conscience at the foot is often the result of lack of conscience at the head. And, Mr. Speaker, a government that had been convicted—I do not wish to speak excitedly, but I say correctly and advisedly—a government that has been convicted of squandering millions of the people's money and of plundering the public domain of this country and of appointing to high public office men who had been guilty of the most serious election offences against the state—I say that when we have such grand larceny at the head we cannot be surprised to find so much petty larceny at the bottom.

To show that these officials received fair play from Mr. Justice Cassels and counsel I would refer to page 3 of the report of the commissioner where he says:

I think what we want is to do everything possible to free these gentlemen from the suspicion they are under.

That was the attitude of the judge, not a hostile attitude and not an improper attitude. I quote that to show that every official got the fairest opportunity. Many of us know His Lordship Judge Cassels; we know he is a very kindly disposed man, a generous soul, a man who endeavours to find everybody innocent if he possibly can, and he says:

I think what we want is to do everything possible to free these gentlemen from the suspicion they are under, and I would like it to be understood that every officer will have the fullest opportunity if occasion arises of clearing himself, and every official of the Marine Department who feels that without specific charges being brought up, their honour or reputation is stained in any way will have an

opportunity to come forward and clear themselves under oath.

A word with reference to one or two other departments, because this resolution says that other departments should be inquired into. I find at page 32 of the report of the Courtney Civil Service Commission a reference to one of the departments. The commissioners say:

The same remark to a certain extent applies to the Department of the Interior. With its large staff of 500 employees at Ottawa, it would require months to thoroughly inspect the work and see that the several officials are properly employed.

The commissioners regret extremely that with the short time at their disposal they were unable to visit the Northwest, much as they desired to see how the land, and more especially the timber sales, are effected.

They would perhaps not find it necessary to do that now since my hon. friend from St. Antoine Division (Mr. Ames) has given us such a clear and full exposition of that work in the west.

At page 37 we find this reference to the Militia Department:

Militia and Defence.

The expenditure in this department is going up by leaps and bounds. In 1903-4 the total expenditure, both in capital and consolidated fund, was in the neighbourhood of three and a half million dollars. In the estimates lately submitted to parliament for the fiscal year ending March 31, 1909, appropriations are asked for aggregating $6,500,000. That is to say, in four years and three-quarters the expenditures will have increased, if the supply asked for is granted, to the extent of three million dollars. Your commissioners have made a comparison between these two years for specific reasons. In 1904 there was introduced into parliament an Act respecting the Militia and Defence of Canada.

The Governor in Council may appoint a Militia Council to advise the minister on all matters relating to the militia which are referred to the council by the minister . . . .

It follows, therefore, that the Militia Council have the full control of the department; that it is in effect the department; and in presenting the report the department as an entity is swallowed up by the council.

* * * * * * * *

It follows, therefore, that the control of expenditure is in a great measure the business of the Militia Council, and in gauging the efficiency of the department attention should be given to the composition and powers of the council.

In Canada the Militia Council is made up of seven members—the Minister of Militia and Defence, four military members bearing titles of Chief of the General Staff, Adjutant General, Quartermaster General and Master General of Ordnance; the titles also borne by the professional members of the Army Council in Great Britain—but the other two members of the Canadian Militia Council are the deputy head of the department and the accountant. That is to say, the Militia Council in Canada differs from the Army Council in Great Britain in that the department is swallowed up in the one and entirely distinct in the other.

* * * * * * *

In fact, for the service performed, the Militia Department awards to its officers pay vastly higher in proportion than any other of the departments under the Crown. Since the formation of the Militia Council several adjuncts to the militia service have been created. This will be seen by reference to the evidence of Major General Lake. Your commissioners are not prepared to say whether the Ordnance Store Corps, or the Army Service Corps, or other corps are necessary, but one particular corps your commissioners regard as unnecessary and undesirable. Your commissioners refer to the staff of paymasters.

* * * * * * *

The Auditor General in his evidence shows the evil effects of this system. Large sums are sent to the district paymaster, portions of these sums are sent to the sub-paymasters, until at one time as much as $60,000, according to the Auditor General, was held by the paymaster at Halifax.

* * * * * * *

Your commissioners have referred to the high rates of pay enjoyed by the officers in the service of this department. This is no doubt a cause of grave dissatisfaction to the members of the other departments in the public service, who, while occupied with grave questions relating to the government of the country, with their time fully occupied in the earnest pursuit of their duties, see in a favoured department people paid much better than themselves and working no harder, even if as hard, and in work of less paramount importance. The accountant of the Militia Department, who has an expenditure of six million dollars a year confined to a few appropriations, is much more highly paid than any of the accountants of the other departments. The accountant of the Railway Depart has to adjust accounts relating to a revenue of six or seven millions and has also to do the bookkeeping in connection with the expenditure of eighteen millions a year. The accountant of the Public Works has under his control accounts connected with appropriations totalling ten millions a year, and numbering some hundreds. The accountants of the Finance Department, gathering up the details from all the other departments, have under their examination a daily turn over in cash of one million dollars a day, and the accountants of the Audit Office have under examination the expenditure of all the other departments. None of these accountants are so highly paid or so highly placed as the accountant of the Militia and Defence, and the result causes grave dissatisfaction.

In conclusion, your commissioners have to point out that the expenditure has grown in a little over four years from three and a half millions to six and a half millions; that the permanent and headquarters staff have increased to the number of about 220; that in addition to the general system of high pay the favoured men of the militia service in Canada draw pensions not only for themselves but for their wives and children; that the staff is sufficient for a corps of one hundred thousand men, according to the evidence submitted; that the permanent corps are under three thousand men; that

the desertions have been one in three; that the number of militia trained in the annual camps is about 40,000 men; that according to the evidence of Major General Lake, the men attached to the rural battalions have no drill except at the annual camps, and it is arguable whether the city corps are as efficient as they were some years ago; that while only 40,000 men come out for drill of ages from 18 to 50, yet compared with the population of over a million men in Canada between the ages of 20 and 40 the proportion seems small. Whether with all the large expenditures of public moneys the result as detailed shows efficiency, your commissioners leave to the consideration of Your Excellency. Your commissioners have not gone deeply into the question of stores purchased for the militia service, as there is no means by which they could appreciate whether the amounts payable for sub-target guns or for Ross rifles are proper and just, but according to the evidence the contract for the Ross rifle was prepared by the counsel employed by the company, and no security was exacted.

If with all the consideration of the Public Accounts Committee and the War Office, the expenditure in Great Britain is such that the Public Accounts Committee consider it their duty to draw attention to expensive ideas, particularly amongst military men, and that grave irregularities are punished by reprimand, the system in Canada where the control is not as effective as in the motherland would seem to be more disadvantageous to the Dominion.

I ask hon. gentlemen to listen to the conclusions of these commissioners:—

While the commissioners have felt bound to point out what they consider the several defects in the Militia Department, they are constrained to report that in some cases the officers employed by that department are men of high character and fully alive to their responsibilities.

This refers to men who are getting bigger salaries than any one else in the service, and after looking into the whole matter, the commissioners find that in some cases they are men of high character and fully alive to their responsibilities. Don't you think, Mr. Speaker, it would be advisable to have a little peep into the Department of Militia and Defence in view of that report from the commission? Next comes the Public Works Department, and the commissioners say:—

This department has largely increased its expenditure during the last few years, although a large expenditure, that of the ship channel, has been transferred from the Public Works Department to the control of the Department of Marine and Fisheries. The expenditure of the Public Works Department in 1903-4 was, in round numbers, $5,000,000; and this is to be increased during the coming year, according to the estimates recently brought down, to about $11,250,000. In looking over the system adopted in this department it will be found that with the exception of a very few instances all the officials both at Ottawa and in the outside are not under the Civil Service Act. In Ottawa alone hundreds of labourers are employed and in the outside service there are engineers, archiects, clerks of works, foremen and outside labourers to a very large number.

In certain cases there may be overpayments of wages such as the notorious instance which was brought to light about a year ago, when a clerk of works appointed by political influence was found to have sublet his work to another person at a much lower rate. Your commissioners consider that some steps should be taken to organize the large army of employees in connection with this department, many of whom have served their entire lifetime in its employ, and bring them under the definite regulations so that their employment may be considered fixed and stable. Your commissioners desire to point out that in this department the services of officials are often charged to several different votes. Your commissioners are of opinion that in all cases the salaries of officials should be charged against one appropriation only; and that no allowances for extra services should be paid unless a sum for the purpose has been voted by parliament, not in a general clause merely, but individually and by name. This remark should be of general application to all departments. In all such cases parliament should be fully advised of the circumstances.

Your commissioners are led to believe that in many cases works have been undertaken by the Department of Public Works at the instance of municipalities or bodies of people locally interested, in which the opinion of the outside officers of the department as to the desirability of the proposed works was not asked for. The only information sought for related to the feasibility of the works in question.

Now, Mr. Speaker, I submit that this report shows that the investigation into the Marine Department should be completed by tracing these things to their source. That is what the people of Canada want. The people of Canada do not want a witness to be cut off when he is asked whether or not he conveyed this information to the Treasury Board, or to the ministers, or to the Prime Minister himself. What the people of Canada want is an investigation that will go to the root of the matter, and which will show, if it be a fact, that lack of conscience at the bottom has been caused by lack of conscience at the top. We have had it constantly said by hon. gentlemen opposite that on the 26th of October last there was a majority returned to support the government, and time after time have they boasted of that majority. Why, there is not a man in this House but who knows that no part of that majority rests upon the peoples' approval of the administration. We have that statement upon the evidence of no less a person than the distinguished and shrewd politician, the right hon. the prime minister of Canada, because he has stated this very session that in the province of British Columbia alone

were the recent elections conducted on anything like principle. That being so, the result was just what we might expect, one member returned to support him and the others against him. We had the right hon. the prime minister finding fault with that state of things. I was astonished that he was surprised at that result, because it is nothing new in his career for him to find that where principle is involved he is always worsted. The right hon. the Prime Minister's talents and skill find their broadest scope and shine the brightest when he is inciting passion and generating magnetizing and utilizing prejudices. And so I say that as we have it on the authority of the Prime Minister himself that in all the other provinces the contest was not fought on principle but on prejudice, his supporters will not again boast of the majority they have in this House.

Mr. ARTHUR ECREMENT (Berthier). (Translation.) Mr. Speaker, the hon. member for Cape Breton (Mr. Maddin), on resuming his seat a moment ago, was obliged to take back the statement he had just made to the effect, that the Minister of Marine had complained of being attacked on account of his being a French Canadian.

I may then be allowed, Mr. Speaker, as one of the younger members on this side of the House, to say in French, a few words of praise concerning the Minister of Marine, in regard to whom so many unkindly references have been made, in English, by hon. members on the other side.

In my case, as in that of the hon. member for Elgin (Mr. Crothers), it happened that I visited this House, without ever dreaming that I would occupy a seat within its precincts. I admired, as he did, its severe style of decorations, and the impression it made on my mind, was one of awe and grandeur. It seemed to me as if there remained something of the minds of bygone generations of members flitting within its walls, and I almost broke the impressive silence reigning all around, to say to myself, what great respect should inspire such an institution, wherein men endowed with the authority of a whole people work out the improvement and progress of the country.

I am free to admit that I felt unwilling to drop all my illusions on entering this House. However, we young members of the House, are bound to drop one of these on witnessing the re-opening of this debate. We are led to believe in consequence that we are old members, considering the length of time this famous question has occupied the attention of the House and that we are called upon once more, to listen to unfair criticisms of the management of the hon. minister, whose useful career I bow to with respect and whose reputation will once more come out unsullied from the fray. It would be unbecoming on my part, Mr. Speaker, to go over all the details of the Cassels inquiry, which supplies the basis for the amendment introduced by the hon. member for St. Anne's. That evidence has for months been served out to the public by our large daily newspapers, and in any case, the hon. member for Elgin, who has just taken his seat, would not have omitted reading it all for the edification of the House.

Nevertheless, that evidence, whether obtained in Halifax or in Quebec, goes to show primarily, as stated this afternoon, by the hon. Minister of Marine, that previous to the changes brought about by the present head of the department, the condemned system had been long in existence. The hon. member for St. Ann's wishes to know what is going on in the other departments, but how embarrassing it would be to hear, from him or from some of his neighbours, what some witnesses only let us surmise as to what was going on in the department of Marine under the Conservative governments from 1869 to 1896!

Reference was made a moment ago to favouritism and partisanship. Were I willing to go over some of that evidence, I might bring to light some interesting facts. Is there not, for instance, a protracted correspondence between the department and a high official, because the latter had made the grievous mistake of buying a knife from a Liberal dealer. We see in another part of the evidence that this same officer had received instructions from the then Minister of Marine, to take good care of his friends, because he needed his friends badly.

Let our friends on the other side consider their own case, and then let them taunt the Minister of Marine for trying to lay down rules for the better and more efficient management of public affairs; let them taunt him for dismissing negligent or dishonest men; let them taunt him for discovering defective features, dating back twenty years, legacies of the Conservative rule. All such reproofs cannot withstand the facts, which afford the most complete vindication of the Minister of Marine.

Called upon to take charge of that department, in the month of February, 1906, as early as the month of June of that same year, according to one of the principal witnesses examined, he sets down to work with vigour and energy to improve a system in existence since the glorious days of Sir Hector Langevin.

Deeds cannot be obliterated, in spite of hostile efforts, and the work accomplished by the Minister of Marine remains, in spite of all that can be done to cast a shadow over it. I would fear praising in-

adequately a work of such importance were I not aware that parliamentarians whose fund of information is large and whose opinions carry weight, brushing aside generalities with which I must be content to deal, will fully deal with the subject.

Following on the interesting statement which the hon. Minister of Marine presented to us this afternoon, as to the improvements and changes effected in his department, I may be allowed simply to recall that it is under the rule of the present minister that there was introduced a new system of book-keeping which ensures to the country, as we have seen, a large saving; that careless officers have been suspended; that a central purchase office, praised by Judge Cassels, was instituted; that a system of calling for tenders was adopted and patronage lists abolished.

The conduct of the minister on that occasion, as on many others, will have been for us of the younger generation of Canada, an object lesson in uprightness and energy.

Who is it, Mr. Speaker, who has helped the most in winning that economic victory whereby we are enabled to lead an independent life and to realize with pride that there exists a Canadian nation, an industrial and commercial nation, which has taken its place among the others by asserting what has been very aptly termed its economical independence.

Who is it, Mr. Speaker, if not the Minister of Marine, who has contributed in the greatest measure to ensuring to the business classes of this country the benefit of that great deed which has for its title the 'Franco-Canadian Treaty'.

You have read, Mr. Speaker, that statement of a writer particularly well informed as regards our country, in a book entitled 'Canada and its two nationalities'. The time is probably not far away when the development of the Dominion's resources will be on a great scale and possibly will bear comparison with that of its neighbour the United States. It is creditable to us that such a comparison should be made, and the mere fact of its being possible is in itself an argument.

Indeed the hon. Minister of Marine in providing so thoroughly for the improvement of our ports and our great river St. Lawrence —having perceived that there lies the key to our future success as a business people, and that since it reaches into the heart of the country, we are bound to deepen it to the innermost point, so as to carry the ocean as it were to the threshold of the Western country—has frightened that giant of producers, the United States, and more particularly New York.

In view of these gigantic works and useful reforms, it might have been expected that the opposition would look beyond their ordinary range and spare their criticism to the man who had accomplished such things. However, in the light of the discussion which has taken place this evening, I see that they expect the minister to have like themselves, the power of effecting miracles ; and in the same way that they have succeeded in changing into wine boxes bearing a different brand, they expect the Minister of Marine to change the character of the men which the Conservative party had in their service, and whom the Liberal party inherited from them.

Accordingly, I shall vote against the amendment of the hon. member for St. Anne's (Mr. Doherty), in the first place, because it appears to me as misty as the cloud of suspicion, to which it refers ; then, because its adoption would entail considerable expenditure, interfere with the management of the various departments, and as stated in yesterday's 'Patrie,' a paper which has always been outspoken in its support of the member for St. Anne's, because the stand taken by the Minister of Marine will have its effect on the other departments, and a most beneficial one, and lastly, because, to my mind, we are in a position to attain the same object by other means. Careless or dishonest officers in other departments, should there be any, knowing what treatment they may expect as a result of any wrong-doing, will take means to conceal the truth from any commission of inquiry, and thereby will prevent any such commission from getting at the facts.

No doubt criticisms will be forthcoming. Partisan newspapers and speakers. well known to hon. gentlemen on the other side, will cast aspersions on honest men, who are bound to vindicate their reputation for the sake of their family, of their province, of their country. However, such criticisms will always have the same effect on the people, that great judge. An insight into the nature of their verdict may be obtained from the fact that in October last the Conservative organization found it impossible to obtain the signatures of twenty-five people in the county of Rouville to start an opposition to the Minister of Marine ; not at all, as stated by the hon. member for Cape Breton, because he is a French Canadian, but because he has remained faithful to the great Liberal principles of honesty, dignity, sincerity. Another fact to be taken into account is, the impossibility of finding in the province of Quebec, while under the leadership of the Minister of Marine, more than twelve wise men, who following in the footsteps of those people mentioned in the gospels, are sent here and flush with indignation at the sight of wrong-doing, which they themselves or their leaders are responsible for.

Mr. SAMUEL SHARPE (North Ontario). Mr. Speaker, the Civil Service Commis-

sion, appointed in May, 1907, was composed of three business men of the highest character. As they were appointees of the government, it is to be presumed that they were favourable to the administration; but their scathing arraignment of the Department of Marine and Fisheries made a further investigation imperative. Their report was full of serious and grave charges. In consequence of that report, Mr. Justice Cassels was appointed on April 6, 1908. He is a gentleman held in the highest esteem and respect wherever he is known. At great expense of labour and time, he inserted the probe a little deeper into the affairs of the Marine and Fisheries Department; but, unfortunately, the worst disclosures were not revealed until after the general elections were held. The result of that investigation by Mr. Justice Cassels was to verify the disclosures of the Civil Service Commission. Now, there has been a great deal of discussion as to what the real scope of the commission should have been. On this side of the House there is but one opinion, namely, that a free hand should have been given to Mr. Justice Cassels to inquire into the Marine and Fisheries Department, not confining him to the years from 1904 to 1907, or to any special years or any particular subject. The conception of his duties by the Hon. Mr. Cassels was very limited and circumscribed. According to his own idea, he was merely to investigate the contracts entered into during the years from 1904 to 1907, and ascertain the prices that were paid, the current market prices, and the discounts, if any. His attitude towards the officials of the department is thus expressed in his own words, as found on page 1723 of the evidence:—

> As far as I am concerned, I am here to protect these officials in every possible way. I do not want to see them guilty if it is possible to acquit them.

In my opinion, that was not the proper attitude in which to approach the investigation. He should have gone into it as an investigating judge to find guilty any who were guilty. At page 7 of the report, he also says:—

> My desire has been to exculpate and not to incriminate.

According to the scope of his commission, I submit that Mr. Justice Cassels' inquiry should have embraced the names of the beneficiaries of the excessive prices. No one in this House imagines for a moment that the contract and supply men who received such excessive prices, kept those excessive prices for themselves. Another branch of the inquiry that would have been beneficial, would have been the part certain members of parliament, and the Minister of Marine and Fisheries himself, had in these transactions. It is extraordinary that no members of parliament were called to give evidence in that investigation, although the names of some were repeatedly mentioned during the course of the investigation. I submit that the inquiry should also have extended to all the spending departments, particularly those which are unfavourably mentioned in the report of the Civil Service Commission, namely, the Militia Department and the Public Works Department. But notwithstanding the limited scope of the inquiry, notwithstanding the fact that the hands of Mr. Justice Cassels were tied, notwithstanding the fact that he himself had a circumscribed notion of his authority, and of the scope of his commission, he disclosed a mass of seething, reeking corruption in that department, which it will take a long time to remove, unless the most heroic remedies are applied, and that immediately. What was the effect of that disclosure on the government? I submit that it has only been superficial. Apparently, they are callous, giving the impression to the country that every large spending department of the government is permeated with the same evil. What has been the action of the government in consequence of that report? Two officials superannuated. The deputy minister, who, the hon. member for Elgin told us, was guilty of such irregularities, has been superannuated—no punishment meted out to him. The next official, Harding, is superannuated, although, according to the evidence and the report, he had financial transactions with contractors dealing with the department, and was concerned with the destruction of papers of the department and with false entries made in books, in order to protect him. This is the net result of the government's action on that report: two officials are superannuated; nine officials are really dismissed, twelve other officials are dismissed, with an intimation that they may be re-appointed if they apply for reinstatement. I ask if this is all the action that the government intends to take after all the expense and trouble and time that have been incurred in this investigation? Is this the limit of the government's efforts? They are not stayed by considerations of mercy or sympathy, as the Minister of Marine and Fisheries might say; but I submit that the real consensus of opinion in this House and in the country is, that they are stayed by considerations of self-preservation. They dare not punish the officials as they deserve according to the findings of Mr. Judge Cassels to be punished, and I think that the utter failure of the government to mete out condign punishment to those officials, will meet with the disapprobation of the country and certainly should not satisfy the demands of this House.

Now, I desire for a few moments, to consider the results of the investigation, and what they prove. They conclusively prove: first, that the officials were negligent, pliant, dishonest, and in some cases capable of stealing, second, the necessity of extending the investigation into all the spending departments; third, that members of parliament and officials of the Liberal party are implicated; fourth, that the Minister of Marine and Fisheries is personally implicated by the evidence adduced, directly and by implication. I am not going, at this late hour, to occupy the time of the House, by going extensively into the evidence; but I wish to refer to the evidence on page 1358, where Mr. Melvin states that he paid money to Mr. MacNamara, the storekeeper; to the evidence of Mr. Longard, on page 1421, where he states that he supplied a hot-water boiler for Mr. Parsons' house; to the evidence of Mr. Thompson-Schmidt, on page 1452, where he states that he borrowed money from one of the contractors, and to the evidence of Mr. Joseph Ferguson, on page 1397, where he says he got large sums of money from contractors and supply men. Senator Choquette admitted on behalf of his client, Mr. Gregory, that Mr. Gregory had received 5 per cent on $24,831. That admission will be found on page 1046 of the evidence. On page 1388 it will be found that a witness, Mr. Merlin, admitted that employees used to help themselves out of the stores of the department.

By Hon. Mr. Cassels:

Q. You mean to say that all the employees there used to go into the stores and help themselves?—A. They could if they liked, it was open enough to do so.

Consequently there was no proper supervision in connection with the management of the Marine and Fisheries Department. On page 1,277 Mr. Macaulay admitted that he made false entries in order to square the accounts of Mr. Harding, and Harding was one of the officials whom the government has superannuated in consequence of Mr. Justice Cassels' report.

The result of the investigation shows the necessity of extending it into the other departments. It is remarkable that there were no contracts, that the contractors made the prices themselves, that the men who furnished the supplies did not have the prices fixed for them but fixed the prices themselves. No wonder the prices and the profits were excessive. It is only reasonable to assume that if the prices and profits were excessive in the Department of Marine and Fisheries, the same thing prevails in the other departments and these also should be investigated. For instance we find that Mr. Alliston Davie of Quebec, testified—see page 872—that no prices were discussed:

Q. Now, here is an account amounting to $7,795.70, and this is certified to by him in the same way. Prices just and reasonable. This in November, 1906. Now, just look at that account and tell me whether or not the prices were ever riscussed between you and him, or between you and any other official of the department?—A. No, sir, they were never discussed.

A. No, prices were never discussed with Mr. Gregory or any other official.

George Wooten, on page 1410, said he received 10 per cent or so over the retail prices, thus showing the excessive prices paid by the department. A. N. Melville, on page 1359, said that he was paid from 10 per cent to 25 per cent over the ordinary retail price. On page 1447, Mr. Stevens, who gave evidence regarding Howell and Company's accounts, said that their accounts amounted to $28,000 with the Department of Marine and Fisheries in the three years, and that no prices were fixed before hand, and that in fixing the prices they added profits to the amount of about 50 per cent. They added that to the cost. He was asked:

Q. Added on to the cost about 50 per cent profits, is that about right?—A. That may be a little high. I would not like to swear it is right.

On page 1429 Mr. Langard said that he might have received 50 per cent profits in his dealings with the department. On page 1737, Ernest G. Odell, a young man only 23 years old, a grandson of the notorious official, Gregory, said that he received as much as 100 per cent profit. This is his evidence:

Q. Your grandfather knew nothing about your arrangements I see? Then what profit did you and Mr. Ritchie get in the sales that you made to the department?—A. That was a private arrangement between Mr. Ritchie and myself, sir. Am I obliged to answer, your lordship?

Hon. Mr. Cassels.—Yes, I think so. It is important. It has been told already in Quebec. You had better tell everything; it is no use keeping back?—A. I made 50 per cent.

Mr. Watson.—That was your share of it. And how much above that did Mr. Ritchie get?—A. If I got 50 per cent, he must have got 50 per cent.

Q. That would make 100 per cent?—A. Yes.

J. J. Murphy, who had dealings with the department for three years amounting to $43,000, said he made 25 per cent over the closest retail prices. Here is part of his evidence:

Q. I take it from what you said that you found the department a very easy buyer?—A. Yes.

Q. In fact you got from the department much more than you got from other retail purchasers, 25 per cent?—A. Oh, no.

Q. Now then, just try and think; will you

say it was less than 25 per cent that you got in excess of your retail prices from the department—in excess of your closest retail prices?—A. Well, in some cases, but not in all.

Q. In some cases you got as much as 25 per cent?—A. But not in all.

Q. In excess of your closest retail prices?—A. Yes.

If this is a fair sample of the prices that prevail in the Marine and Fisheries Department and of the profits exacted by the contractors, the inference is irresistible that a similar condition of affairs must have existed in the other departments and that therefore the investigation should be extended to them also. We find that the same contractors who dealt with the Marine and Fisheries Department also had dealings with the others. A return was laid on the table yesterday, in response to a motion of mine, showing to what extent the supply men and contractors who had been mentioned in the Cassels' report as having had illicit dealings with the other departments. What do we find? We find, for instance, that J. J. Murphy who for three years had dealings with the Marine and Fisheries Department to the extent of $32,449.29 also had dealings with the Department of Public Works to the extent of $8,508.59. Is it not reasonable to assume that he obtained the same rate of profits from the Public Works Department as he did from the other? Jos. Samson, who had dealings with the Marine and Fisheries Department in the three years amounting to $22,158, also had dealings with the Public Works Department amounting to $3,369.59. Samson and Filion dealt with the Marine and Fisheries Department to the extent of $65,809, with the Public Works Department to the extent of $10,444, and with the Militia Department to the amount of $3,490. Napoléon Mercier dealt with the Marine Department to the extent of $3,471 and with the Public Works Department to the extent of $8,000. Terreau and Racine sold the Marine and Fisheries Department $8,000 of goods, to the Public Works Department $1,000, to the Militia Department $6,000, and to the Post Office Department $487. I desire to emphasize the fact that these men were those reported by Mr. Justice Cassels' report as paying illegal commissions and giving illegal favours to government officials. Jean Drolet sold to the Marine Department to the extent of $12,502, to the Public Works $1,287, and the Militia $21,782. Howell and Company had dealings with the Marine Department to over $20,000, with the Public Works Department, $1,000; the Polson Iron Works Company had dealings with the Marine and Fisheries Department to the amount of $150,493, with the Public Works Department $364,798.70 and with Militia and Defence $1,200.

These returns verify the suspicion in the minds of hon. gentlemen on this side that these contractors and supply men who were receiving extensive contracts and obtaining excessive, illegal, improper profits from the Marine and Fisheries Department, had dealings with other large spending departments, and it is natural to assume that the same evils, the same abuses, the same irregularities, the same corruptions, the same crimes existed in regard to the other departments as in regard to this. And, when the administration raises such a suspicion, it is but right that they should clear themselves from the suspicion by granting the investigation called for by the terms of this resolution.

Another reason why this investigation should be extended to the other spending departments is found in the statements of the Civil Service Commission. One of the hon. members on the other side who preceded me said that there were no other departments brought into condemnation by the Civil Service Commission. I dispute that and will quote the report of the commission in support of my contention. At page 37 of the Civil Service Commissioners' report, you will find these words:

> Your commissioners regret that they have been unable to investigate the condition of things in some of the other departments. But to do the work with any pretensions to thoroughness would take much more time than would probably be agreeable to the government.

No doubt it would.

> They have been able to go over only a very small section of even the Marine and Fisheries Department.

Yet, after going over only a small part of one department, they bring in this scathing arraignment. They speak of two other departments, and this is what they say :

> Organization, discipline, zeal for the public service and regard for economy are all conspicuous by their absence. Money is wasted in small things as in great because no one seems to have any motive to do otherwise.

In reference to the Department of Militia and Defence, this is what the commissioners say :

> In conclusion, your commissioners have to point out that the expenditure has grown in a little over four years from three and a half million to six and a half million; that the permanent and headquarters staff have increased to the number of about 220; that in addition to the general system of high pay the favoured men of the militia service of Canada draw pensions not only for themselves but for their wives and children; that the staff is sufficient for a corps of one hundred thousand men according to the evidence submitted; that the permanent corps are under three thousand men; that the desertions have been one in three; that the number of militia trained in the annual camps is about 40,000 men.

Your commissioners have not gone deeply into the question of stores purchased for the militia service as there is no means by which they could appreciate whether the amounts payable for sub-target guns or for Ross rifles are proper and just, but according to the evidence the contract for the Ross rifle was prepared by the counsel employed by the company and no security was exacted.

Hon. Sir FREDERICK BORDEN (Minister of Militia). Which was absolutely untrue. I explained that to the House.

Mr. SAMUEL SHARPE. I would suggest to the hon. minister (Sir Frederick Borden) that if this is absolutely untrue, he should not raise any objection to the investigation into his department. In reference to the Public Works Department, the report of the commissioners says:

The expenditure of the Public Works Department in 1903-4 was, in round numbers, $5,000,000 and this is to be increased during the coming year, according to the estimates recently brought down, to about $11,250,000. In looking over the system adopted in this department, it will be found that, with the exception of a very few instances, all the officials both in Ottawa and outside are not under the Civil Service Act.

And this is the point to which I wish to direct the attention of the House.

In certain cases there may be overpayments of wages such as the notorious instance which was brought to light about a year ago when a clerk of works appointed by political influence was found to have sublet his work to another person at a much lower rate.

If that is a fair sample of what is going on in the Public Works Department, it behooves this House to extend the investigation further into all the great spending departments. Now, I wish to draw the attention of the House to the report of Mr. Justice Cassels, page 78:

According to the evidence, a saving of about one hundred thousand dollars per annum would be effected in the Marine and Fisheries Departments alone by the change. Are there not other departments administered by the government which could be dealt with in the same manner?

The change referred to is the abolition of the patronage system. Here is an open suggestion that the other departments should allow the investigation to be extended to them and so have them put into a position to effect a saving too.

Would it not be feasible to appoint a board of, say, three competent men, assisted by inspectors, conversant with ruling market prices, to act as purchasing agents for all the departments?

Another result of the investigation was to show that Liberal members of parliament and officials of the Liberal party were implicated in the illegal and grossly improper transactions in the Marine and Fisheries Department :

Q. Yes. Did you speak to anybody else?—A. It seems to me I spoke to Mr. Russell, when he was a member, Judge Russell.
Q. Yes. Did you speak to anybody else here?—A. I don't think. . . .
Q. I understand you got that.

This has reference to an order.

from Mr. Roche or Mr. Carney?—A. Mr. Roche, I think.
Q. Mr. Roche or Mr. Carney gave you that specific order?—A. Yes.
Q. What was it for?—A. Ventilators.

If we refer to page 1410, we find that some of these supply men getting excessive profits and large returns from the Marine and Fisheries Department contributed out of these extra profits to the election expenses of candidates.

Q. Then, what about those extra profits;—now, try and think; some sort of distribution made of those extra profits, Mr. Wooten?—A. Not that I made.
Q. No, not of your profits?—A. I could not tell you, Mr. Watson.
Q. The profits of others?—A. I could not tell your, sir; I do not know.
Q. But don't you, and some others with you, participate, not in your own individual profits, but in one way or another in the extra profits that are made?—A When I take on a district I generally pay for it out of my own pocket. Do you mean in a political way?
Q. I do not say a political way.

Here we have the natural result of the system of granting extra profits to these supply men. During the elections they 'take on districts' and finance them out of their own pockets.

Q. Now, is that as far as you can go, because I was expecting you could go further than that; that is the reason I am asking you. The question, is that as far as you can go—I am putting it directly—that is, that you know of an understanding that these firms and houses that put on extra prices are afterwards to pony up,—some of them—you know what I mean by the expression—to some others?—A. I don't think,—but I think if I was getting some big patronage and there was an election on and my side was running, I think I would subscribe pretty well, you know.
Q. Out of those extra profits?—A. Yes.

Then, at page 1462, Mr. Harry C. Stevens being under examination.

By Hon. Mr. Cassels:

Q. I suppose in plain English the members recommended you for a profitable contract?—A. They would not.
Q. They recommended what turned out a profitable contract?—A. They would not.
Q. And then when an election came on the committee came and asked for contributions?—A. Yes. And what is between the members and the committee we know nothing about.
Q. I understand. You are supporters, and they wanted you to subscribe, and you were

subscribers. That is the story?—A. Yes. That is what I wanted to convey.

Again, at page 1462, Hon. Mr. Cassels takes up the question, and the examination proceeds as follows :

Q. What do you wish to say?—A. In our work with the department we have no competitors, and the recommendation of the members was all we wanted, and we worked on that basis.

Q. Did you pay the members anything?—A. No.

Q. Did you pay to any fund?—A. Political fund?

Q. I don't care, any fund?—A. Not for the members.

Q. Well, what for?—A. I think we have been, we may have put a little in for legitimate expenses, but I don't care to answer anything about it.

And that opens up a prolific field. Had the investigation gone a little further, had the scope been a little broader, a great deal more would have been disclosed than was disclosed in Judge Cassels' report.

There is one other matter to which I desire to direct attention. Not only did the members of parliament nominate the patronage list, but they actually dictated the man on that list who should get the contract. Not only did they dictate the man on the patronage list who should get the contract, but they actually went so far, the department fell so low, that the members of parliament were allowed to dictate the prices of the articles that were sold to the department by the different supply men. On page 1426, Mr. Longard gave his evidence with reference to members of parliament dictating prices:

Q. Then the line of business, I suppose, has been the same since 1896. Perhaps this would cover the condition of affairs as applicable to you as well as to some others. I see by a memorandum here contained in an official file from the department at Ottawa this note: 'Mr. Carney, member of parliament, requests that 30 barrels of linseed at 65 cents raw and 68 cents boiled and 2 tons of sheet lead at 7 cents per pound be purchased from Messrs. William Robertson & Son. The oil and the lead might be purchased and kept in store as the price is low, but it cannot be paid for until the estimates pass this session.' That has the initials W. W. S. That would be Mr. Stumbles. This is a memorandum he made for the deputy minister according to the original file. Now, does that illustrate the nature of the interviews and transactions between you and the members?—A. I cannot say it does.

Q. But of the same character?—A. I cannot say the same character.

Q. What was it then, please? That is dated 17th December, my lord. Then what was the character of the interviews between you and the members bearing upon this question of ordering and supplying goods?—A. Just to recommend us for a particular job that was going on at the time.

Q. Did either of the members speak to you about prices?—A. I don't remember.

Q. I see, that is the way it is, you don't remember. Now, according to this memorandum you see, one of the members defined the prices. Has that been done with you sometimes?—A. I cannot say.

Even counsel for the government found to his great surprise that actually members of parliament were defining the prices at which goods should be sold to the department by different supply men. Then I think the result of the investigation shows conclusively, both by direct evidence and by implication, that the Minister of Marine and Fisheries had personal knowledge both by direct evidence and by implication. Now, the report of the commissioner is full of instances where goods were bought without tender, and I think it is a fair assumption to say that where the minister departs from the recognized business methods of conducting his department he must be held responsible for the evil results that follow. I will not take up time by quoting from the evidence that is in my hand, showing where thousands and hundreds of thousands of dollars worth of goods were purchased by his department without asking for tenders. Another thing for which the minister must be held responsible, is paying excessive prices for patented goods. Patented goods costing $150 were sold to the government for $4,500 in defiance to the Patent Act. That is a statement made by His Honour Mr. Justice Cassels, based upon the evidence. Then another piece of evidence that I think directly affects the minister who was the head of the department at that time, was that in respect to the Halliday contract. The witness, Mr. Van Felson, being examined stated that he had written to the head of the department many times, but nothing was done towards liquidating this claim. Now, in the light of subsequent events the minister's failure to reply to those letters was significant. Was the head of the department delaying payment of that Halliday account? Was he purposely playing into the hands of the deputy minister, because we find Mr. Van Felson swears in his evidence that before the Halliday account was paid he had to pay $3,000 to Boudreau, an official in the department, and that Boudreau told him that $3,000 had to be divided up with somebody in the department. If that is the case, I say the circumstance is most significant. I do not know whether the present minister was head of the department at that time or not, but if he was at the time that money was paid over, I think the evidence is such as to fix responsibility upon him, and should have compelled him to go into the witness box and disavow any connection with the distribution of that $3,000.

Mr. TALBOT. Is it not a fact that Judge Cassels, in his report, distinctly

says that the report of Van Felson against Boudreau was never proved, that he never gave any evidence to the effect that he paid the $3,000.

Mr. SAMUEL SHARPE. I agree with the hon. gentleman that Mr. Boudreau was exonerated in a half-hearted manner in the report. But at the same time, Van Felson was a gentleman of undoubted integrity, and he had no motive whatever to go into the witness box and swear falsely that the $3,000 was paid by him to Boudreau. Mr. Justice Cassels in his report remarks that he could not see any motive for Van Felson, a perfect stranger, going into the witness box and falsifying himself with regard to that $3,000.

Mr. TALBOT. The hon. gentleman must admit that Judge Cassels says positively that Van Felson never proved that he paid that money.

Mr. SAMUEL SHARPE. I think when Van Felson, a disinterested party, went into the witness box and swore to a statement of that kind, it was up to the minister to go into the witness box and swear that so far as he was personally concerned, he had no connection with it.

Mr. BRODEUR. I think the hon. gentleman is going very far when he said I should be held responsible for that. Those things happened in 1905 when I was not minister of the department. The hon. gentleman has just said that I should be held responsible for purchases made in the department, because no public tenders were called. Public tenders have always been called for since I have been a minister.

Mr. SAMUEL SHARPE. I am speaking of the evidence that was adduced before Judge Cassels. I did not say that the present minister was head of the department when this payment was made; I said that if he was head of the department at the time the $3,000 was paid, it was his duty, to relieve himself from suspicion, to disavow any connection with that payment, because Boudreau, an official in the department, told Van Felson that he had to divide that with somebody in the department.

Mr. BRODEUR. I am very sorry that my hon. friend should make an allusion of that kind. I never had anything to do with that matter.

Mr. EDWARDS. My hon. friend said, whoever was head of the department at that time.

Mr. BRODEUR. No, he said, if the hon. gentleman was then minister, he should be held responsible.

Mr. SAMUEL SHARPE Now, the minister says that goods were not bought without tender. I will refer him to the evidence of Mr. J. J. Murphy, page 1829:

Q. Now, with regard to that, out of the $20,000 which you had sold to the department during those three years, you had tenders, or public tenders had been asked for about $5,000 worth ?—A. Yes, sir.

So that out of $20,000 worth there were only $5,000 in respect of which tenders had been asked. At page 1824 it appears that J. W. Woods Company sold to the department $11,492 worth and that of this only $230 was tendered for.

Q. You are right, $11,492. And outside of $230 worth, according to your own statement for the balance you were never asked for tenders, prices were never fixed, you sent in your account, and got paid?—A. In some cases we did.

I do not see how the minister can say that tenders have been asked for in view of the evidence given before Mr. Justice Cassels.

Mr. BRODEUR. It was not during my time.

Mr. SAMUEL SHARPE. Another question of which the present Minister of Marine must have knowledge is the Johnston matter. Mr. Johnston, according to Mr. Justice Cassels' report, is to blame in connection with two matters. At page 48 of his report Mr. Justice Cassels says:

Captain Johnston, of the steamship 'Lady Laurier,' has to discharge himself from blame in respect to two matters brought to light in the evidence adduced at Halifax.

First, in respect to the receipt by him of the sum of $1,550, apparently paid him on account of so-called salvage service performed by the 'Lady Laurier' and the officers and crew for the steamship 'Hestia'.

The second, in respect to a sum of $400 received by him for services performed by the 'Lady Laurier' and by the officers and crew of a somewhat similar character in aid of the steamship 'Mount Temple".

I understand that Capt. Johnston was never called on to give evidence, that he was represented by counsel, that he retained in his possession the money so received and yet the minister has nothing to say in connection with his case. Yet hon. gentlemen opposite stated that every man found guilty of irregularity in Mr. Cassels' report has been dismissed from the service. I believe that Capt. Johnson is still in the employ of the government, that he has been reported guilty of two irregularities, the first being the retaining of $1,900 of the people's money. Has that money been obtained from Capt. Johnston?

Mr. A. K. MACLEAN. If my hon. friend is stating that to the House he should give some evidence to support it. I say the finding is absolutely incorect and there is not a line to corroborate it.

Mr. SAMUEL SHARPE. It is extraordinary to hear the hon. gentleman attacking his own commissioner's report. I am quoting from the findings in Mr. Justice Cassels' report on the evidence adduced before him.

Mr. TALBOT. You are doing nothing of the sort.

Mr. SAMUEL SHARPE. Hon. gentlemen opposite accept his findings when they suit them but reject them when they do not.

Mr. BRODEUR. Does my hon. friend think the captain of a government vessel should not be entitled to salvage dues?

Mr. SAMUEL SHARPE. Mr. Justice Cassels says it is a most improper charge.

Mr. BRODEUR. I am asking the opinion of my hon. friend.

Mr. SAMUEL SHARPE. I agree with the opinion of Mr. Justice Cassels.

Mr. FOSTER. Does the minister believe that a government steamer in the service of Canada paid by the money of Canada is doing its proper duty towards Canada when it allows its officer to demand and take and keep salvage?

Mr. BRODEUR. The rule in England in the Admiralty, where the rules are very severe, is that an officer is entitled to salvage dues.

Mr. FOSTER. If an agreement has been made, clear and definite, that he is not to do it, does the minister think the captain should pay no heed to the instructions of the department and keep the money in his pocket?

Mr. A. K. MACLEAN. Those are not the facts at all.

Mr. SAMUEL SHARPE. I understand Capt. Johnston has written to the department that he had the money and was going to keep it and has dared the department to do anything. Is that corect?

Mr. BRODEUR. I think there is such a letter.

Some hon. MEMBERS. Oh, oh.

Mr. BRODEUR. It is a question of some importance whether the captains of government steamers are to be allowed to retain salvage. The rule in the British Admiralty is that the captains are entitled to salvage dues.

Mr. R. L. BORDEN. They are settled by the Admiralty Court and in this case there was an express contract between the Crown and the owners of the salvaged vessel.

Mr. BRODEUR. As to the use of the vessel itself.

Mr. R. L. BORDEN. Yes, and that implies the services of the crew.

Mr. BRODEUR. That is a different question from the salvage dues to the officers and crew of the vessel.

Mr. R. L. BORDEN. No, the salvage is one indivisible thing and it is distributed in each award by the Admiralty Court; a portion goes to the owner, a portion to the captain, a portion to the crew, according to their respective ratings.

Mr. BRODEUR. That is not the rule followed in England.

Mr. R. L. BORDEN. I beg pardon, it is.

Mr. BRODEUR. The Admiralty rule is that the captains and crew are entitled to salvage dues and the government claims nothing for the use of the Admiralty vessel itself.

Mr. R. L. BORDEN. Precisely. The hon. gentleman is not instructing us as to anything new. In Great Britain they have a rule which prohibits the Crown from making any claim in respect to the services of the vessel and there the Admiralty Court even makes an allowance to the officers and crew. But here there was a distinct contract.

Mr. A. K. MACLEAN. There was no service under that contract.

Mr. SPEAKER. I am afraid I shall interfere. This discussion is most irregular, the hon. member for North Ontario (Mr. Sharpe) has the floor.

Mr. SAMUEL SHARPE. It shows the laxity of the department when such an official can write in such a dictatorial way, and say he has the money and purposes keeping it although the officials of the department have stated repeatedly in the correspondence that he has no right to the money. I read from page 1342 of the evidence:

> Q. And now then, the whole subject being before Your Lordship as commissioner here, I find endorsed upon that original memorandum, which I have last read, this further statement: 'You may make'—and the statement is over the initials of the minister of the department, my lord. 'You may make the claim against Pickford and Black, and we do not recognize as part of what is due to the department the amount that was paid to Captain Johnston'—it is either 'without' or 'against.' I cannot make out which—'the authorization of the department.—L.P.B.'

In the memorandum signed by the Minister, 'L.P.B.,' he states that it is without the authorization of the department that Capt. Johnston had that money.

In reference to the question of salvage and the right of Capt. Johnston to the money I quote from page 50 of Judge Cassels' report:

Captain Johnston was represented by counsel. He was not examined.

Another extraordinary case where an official was not examined, although he was represented by counsel:

In my opinion he was not entitled to claim salvage without the approval and consent of the department.

I do not think language could be plainer than that statement that Capt. Johnston, in the opinion of the Hon. Mr. Cassels, was not entitled to salvage. The report continues:

I think the conduct of Captain Johnston in retaining this money is without justification.

Speaking of the 'Mount Temple' Judge Cassels says:

The sum of $400 was paid to him and retained by him. He had no right to keep this money.

I shall abide by the opinion of Mr. Justice Cassels, and I think the department which appointed him should also rely upon his finding and proceed against Captain Johnston and make him return the money. The failure of the minister to prosecute, although the funds of the department had been misappropriated, shows acquiescence in the criminal acts committed, and makes him to that extent responsible. I submit that the accumulation of evidence against the minister fixes the responsibility upon him, and in order to refresh the memory of the hon. gentleman, I desire to repeat the facts in connection with the investigation which in my opinion fasten responsibility upon him. First, that goods were bought by the department without tender; patented goods were bought at excessive prices in defiance of the patent Act; men were kept in their positions and some of them like Captain Johnston promoted when they were guilty of irrgularities; that the minister was written to several times in regard to the Halliday account but paid no attention; that that account was delayed for nine months before a settlement was made by the department, and that $3,000 had to be paid to Mr. Boudreau an official of the department before it was paid.

Mr. TALBOT. That is not true.

Mr. SAMUEL SHARPE. I am taking the sworn evidence of Van Felson that $3 000 was paid before the account was settled, and that Mr. Boudreau told him that before that account would be settled there had to be $3,000 paid and divided between Boudreau and some one else in the department. The next thing that fixes responsibility upon the minister is the increase in the staff during October, and that the minister knowing that Captain Johnston had kept $1,900 of the public money improperly, failed to prosecute. The question is: what is the responsibility of the minister and the cabinet. Under the principles of the British constitution there were two courses open to the first minister, one being to ask for the resignation of the responsible head of the department, to reorganize the department and to let the blame rest where it should rest, namely, on the head of the department. The other course was for the Prime Minister to retain in the cabinet the head of that department and to shoulder the responsbility. I submit that in England the responsible head of a department which had fallen into such disgrace would not have been retained in the cabinet for 24 hours. No government in the old country would be able in defiance of public opinion to retain a responsible minister of the Crown whose department had been so discredited. It has been proven by incontrovertible evidence that the Department of Marine and Fisheries is a mass of jobbery and corruption and crime. This has been proven and reported upon by Mr. Judge Cassels, and notwithstanding, it would appear that the government is determined to defend the Minister of Marine at all hazards. Whether that be a case of choice or necessity I know not, but my own opinion is that it is a matter of necessity because the Minister of Marine and Fisheries, conscious that his department is no worse than others, is not prepared to be made the scapegoat of the administration. He has his back to the wall and he tells the others that they have to stand or fall together, and so he refuses to resign or to relieve the government from responsibility. The Minister of Marine in his defence stated that he should not be held responsible, and he gave as a reason that he was only continuing the system that had been inaugurated by his predecessors. All authorities on the question of ministerial responsibility fix the responsibility first on the minister himself and secondly on the cabinet as a whole if the minister remains in the cabinet and is defended. I quote from Mr. Todd's parliamentary government volume 1, page 628, 2nd edition.

As a necessary consequence of the division of the Civil Service into political and non-political officers, and of the acknowledged supremacy of the members of the administration over all the subordinate employees, it is required by our parliamentary system that every branch of the public service should be represented, either directly or indirectly, in the Houses of parliament. This duty is performed by the political heads who are themselves solely responsible for every Act of administration down to the minutest details of official routine.

In the face of such a high authority how can the Minister of Marine hold up his

officials hands and say they are clean, and that he is not responsible. Todd, page 472, volume 2, speaking of the responsibility of ministers of the Crown to parliament, says:

Notwithstanding the modern rules of parliamentary government whereby responsibility is attached to the whole administration for the acts of the several members of which the same is composed, the ancient rule that the constitution of this country always selects for responsibility the individual minister who does any particular act continues to hold good, and is directly applicable in cases of personal misconduct for which the collective administration decline to be answerable.

Speaking of the collective responsibility of the ministers Todd says. Todd, vol. ii, p. 477, 2nd edition:

The true doctrine on this subject was afterwards enunciated by the Earl of Grey in the following terms: the essence of responsible government is, that mutual bond of responsibility one for another, wherein a government, acting by party, go together, frame their measures in concert, and where if one member falls to the ground, the others, almost as a matter of course, fall with him.

But the application of this principle would be often partial and insufficient for the ends of justice were it not for the exception implied in Lord Derby's definition and which admits of a definite and unqualified responsibility being exclusively attached to a minister of the Crown who is proved to have done anything which renders him personally liable to the censure of parliament or to punishment by legal process.

In view of that authority, the responsibility is upon the administration for the acts of the Minister of Marine and Fisheries. And what does the government propose to do? I submit that their action in superannuating two head officials, dismissing nine others, and dismissing 12 others with a string to their dismissal, is not sufficient in view of the serious charges made against the department. For the sake of the Civil Service and for the sake of the country do they purpose inaugurating any reform? I do not believe that the poor officials in the Marine Department are alone responsible for the woeful lack of moral stamina in the service. As was eloquently said by the member for Elgin (Mr. Crothers) it is not at the bottom but at the top we should look for the lack of moral stamina which prevails in the public service of the country. I believe, Sir, that in view of the evidence brought out by the Cassels investigation this House should extend the investigation to all the other spending departments of the government, and adopt the resolution moved by my hon. friend from St.Anne (Mr. Doherty.).

Mr. L. A. A. RIVET (Hochelaga). Mr. Speaker, I do not purpose in the course of the few remarks I intend making, to answer—and I say it without wishing to be offensive—the scrap-book oration of the hon. gentleman from North Ontario (Mr. Sharpe). In my humble judgment, in spite of the numerous quotations with which he has favoured us to-night, he has not succeeded in advancing a single argument to justify this House in passing a condemnation upon the Minister of Marine and Fisheries, or upon the Cabinet of which he is a member, or in voting for the resolution which has been placed before you by the hon. member for St. Anne (Mr. Doherty). I do not propose either to defend the hon. Minister of Marine and Fisheries. The hon. minister showed, this afternoon, in the most remarkable manner, that he is quite able to defend himself and the administration of the department of which he is the head. But my object in rising to-night is simply to place myself on record, in order to show my appreciation of the most excellent work which the hon. minister has performed for his country, and especially for the great port of this country, which I have the honour to represent in this House, since he has been entrusted with the responsibility of a minister of the Crown. Before proceeding any further, Mr. Speaker, I must congratulate most heartily the hon. member for St. Anne, on the fairness and moderation which have characterized the address which he has delivered in support of his motion. I may say that I have known that hon. gentleman for many years, and I expected that while he might feel it to be his duty to offer the resolution which he has submitted to-night, he would do it in a manner that would be consistent with the tone of our debates and the dignity of this House. Looking back to the record of this House for the last year, and remembering the discussions which took place last session, when the hon. Minister of Marine and Fisheries was trying to get his estimates passed, and when the hon. members opposite felt it to be part of their duty to resort to obstructive tactics, I think I am justified in believing that if the hon. member for St. Anne had had a seat in this House at that time, instead of joining in the chorus, he would have entered a vigorous protest against such conduct. However, I regret that I cannot congratulate the hon. member for St. Anne upon either the logic of his motion or the greater part of the address which he has delivered in support of it. The whole of his motion, as well as his argument in support of it, are based upon the assumption that because some wrong-doing was found to exist in some of the departments of the administration the other large departments, which he has not even named, must be subject to suspicion, and that, in order to lift the cloud of suspicion which overhangs them, this House should appoint a

commission, which might be called a fishing commission, in order to ascertain whether these suspicions are well-founded or not. This is the whole argument of the hon. gentleman, and I believe I am fair to him in stating that he has not advanced another argument to justify the position he has taken in this House upon this question.

In all fairness I must say that the hon. member for St. Anne has exonerated the hon. Minister of Marine and Fisheries from any blame, so far as his personal honour is concerned; and in giving expression to that sentiment he is certainly reflecting the sentiment not only of all of the members on this side of the House, but also of those who had an opportunity of becoming acquainted with the minister's policy, his method of administration, and his patriotism. He is also expressing the sentiment of the whole country, which, in the last general election demonstrated their approval, not only of the administration, but most particularly of those members of the administration who have been most signally attacked by the opposition, either in the press or on the hustings.

In regard to the matter under discussion, there are two questions which have to be considered: First, a question of fact; and second, a question of law, constitutional law—a question of ministerial responsibility. As to the question of fact, everybody admits that there was in the Department of Marine and Fisheries a condition of affairs that was certainly regrettable, and that it was the duty of the government to apply the proper remedy. I cannot understand how hon. gentlemen opposite are trying to argue that the condition of affairs as disclosed by the report of Mr. Justice Cassels, was calculated to cast suspicion on the department, when that very commission was appointed as a step towards applying a remedy. I do not understand why our hon. friends opposite are insisting on so many conditions, in view of the fact that the hon. minister has accepted the conclusions of the commission and himself has applied the remedy.

As regards the question of ministerial responsibility, I am at a loss to understand the logical connection between the acts of some officials who were appointed under the late administration and the administration of the minister. The minister certainly had every right to believe that these officials were worthy of their trust, since hon. gentlemen opposite had given them, during their 18 years' administration, their fullest confidence and had never lifted a finger to remove one of them from office. I am at a loss, therefore, to see what logical connection there can be between the acts of these officials and the conduct of the head of the department. But if there were circumstances which justified the appointment of Mr. Justice Cassels as commissioner, those circumstances are entirely lacking to justify the appointment of the commission asked for by the hon. member for St. Anne (Mr. Doherty). There is no doubt responsibility in this matter, but what is the responsibility with which the Minister of Marine and Fisheries may be charged? It is the responsibility of having attempted to do, and having succeeded in doing, what none of his predecessors ever attempted, namely, to reform his own department. In this connection, I quite agree with my hon. friends opposite that there is responsibility to fasten upon the minister, but not responsibility of a nature calculated to reflect injuriously upon him or upon his colleagues. Some of the reforms inaugurated by the minister have been mentioned by some of the preceding speakers. The hon. minister himself, speaking in his own defence, said that during the three years of his tenure of office he had made some improvements, not only in the ordinary management of his own department, but also outside his department, in the line of bettering our system of transportation and in a general way seconding the efforts of nature and extending to the St. Lawrence route the advantages nature intended it to enjoy, and which are destined to make it the navigation route par excellence of the North American continent. But with that modesty which characterizes him, he did not tell the House that, of all the Ministers of Marine and Fisheries, he is surely the one who has done the most to improve our system of transportation by water and to put our River St. Lawrence in a condition which makes it the rival route of New York to-day, and will to-morrow make it the superior of that route in every respect. Speaking particularly as the representative of a division which forms part of the great metropolis of Canada, I consider it my duty to say that in Montreal there is but one voice in admitting that the present Minister of Marine and Fisheries has done remarkably well in putting the River St. Lawrence, and the port of Montreal in particular, upon a first-class footing. My hon. friend the minister quoted some of the resolutions passed by the board of trade and other commercial bodies of Montreal, but he did not say that to-day it is universally admitted in the commercial and financial circles of Montreal that the present government, and particularly the present Minister of Marine and Fisheries, have done more for the people of this country and the port of Montreal than was accomplished in any previous regime.

Speaking in a language with which I am not very familiar, I cannot help but feel that I am wearying the House and shall consequently not make any lengthy remarks. But referring again to what has been accomplished by this government with

regard to navigation, I shall take the liberty of quoting the report of the Hon. Mr. Justice Cassels. On page 9 of that report, Mr. Justice Cassels says:

The improvements of the navigation of the St. Lawrence and the upper lakes has been the subject of consideration by various administrations that have held office since confederation. In 1900 a more vigorous policy was adopted than has been pursued to the present time.

Well, in 1900, by the grace of God, a Liberal government was presiding over the destinies of this country, and because of that fact, a vigorous policy was adopted in order to make the River St. Lawrence and our general system of water transportation the best in America. There is another reform which has been effected by this government, and for the initiation of which we must give credit to the Minister of Marine and Fisheries. Those who were in this House three years ago will remember that I had the privilege of advocating a reform which, in my opinion, was intimately connected with the future of Montreal. I said that the time had arrived to introduce into the management of that port a new system which would give impetus to the various works undertaken in it and would place that port upon a footing it had not then reached, owing to the laxity of its former management. And I had the pleasure of seeing that a few days after the hon. minister, understanding the requirements of the situation and feeling that the time had arrived to infuse a new spirit into the management of the port, introduced a Bill whereby the old management was done away with and a new management substituted, more in harmony with the situation and the conditions in the port.

And, Mr. Speaker, I have the evidence of the commercial men, and financiers of Montreal, whether Liberal or Conservative, that no reform was ever made calculated to so greatly advance the progress of the great metropolis of Canada. And perhaps I may be permitted, in passing, to pay a deserved tribute to the new commissioners who have been appointed under the guidance of the Minister of Marine and Fisheries for the noble work they have performed. I am in a position to declare, under the responsibility that attaches to my declaration as a member of this House, that to-day the port of Montreal is in a position to compete with American ports, and especially with the port of New York. I may be charged with taking a narrow view of this question, and advocating only the interest of the city of Montreal; but, as I have said, this is not a local question or one to be treated from a selfish or narrow standpoint of local interest, but from a broadly national standpoint. And, as I have said, the interests of the port of Montreal are undoubtedly bound up with the interests of all Canada. We members must all recognize, whether we be from Quebec, from Toronto, Halifax, or St. John, that we must equip our national port—if I may be permitted to use the expression—in a first-class manner, if we want to compete in a successful way with the port of New York. Well, Sir, this is no new thing. Everybody has seen in the newspapers that, not long ago, the railway companies of the United States decided to reduce their rates to New York in order to enable the New York route to compete with the St. Lawrence route, because last year the grain traffic, instead of taking the route to Buffalo and New York, took the St. Lawrence route by way of Montreal. But, in spite of this reduction, we are in a position to compete successfully with the port of New York, and I believe that if Montreal has been placed on such a footing, it is due largely, if not wholly, to the wise policy, the noble efforts and the far-sighted administration of this government under the initiative of the Minister of Marine and Fisheries.

The fact has been referred to in this House that, owing to the improvements made, the rates of insurance have been reduced by a total of about $200,000. Everybody understands that, if the owners of steamers are able to save so much simply on the rates of insurance, they are immediately put in an advantageous position as compared with their rivals of other countries. Everybody knows that to-day great improvements have been made in the channel between Quebec and Montreal. Some people may say: 'You speak always from the standpoint of Montreal.' I do not wish to be charged with a selfish spirit. If I were not convinced, as I am, that the interests of Montreal are the interests of the whole country, I would not stand up in this House and advocate discrimination even in favour of my own city.

In view of the attacks which have been heaped upon the methods of administration of the Minister of Marine and Fisheries, I thought it was my duty, as I think it the duty of every member, whether he comes from the province of Quebec or not, to stand up in this House and—to use the expression of the hon. member for Berthier (Mr. Ecrément), to say a little on his behalf'. I believe that everybody who knows the minister will agree with me when I acquit him of any wrong-doing or even bad intention. At the last election, as some of the speakers have said, a compact was entered into between the administration and the electors of this country. They had gone before the people and had told them that, in view of the attacks and criticisms levelled against the Department of Marine and Fisheries, the government had appointed a commission which would investigate and probe to the bottom every charge made against the department, and, should the report of His Lordship Judge Cassels

pass condemnation upon any official in the government that official would be dealt with. The electors listened to that proposal and extended their confidence and support to the present administration. And now, when the first opportunity presents itself to go into the recommendations of the commissions, the Minister of Marine and Fisheries does his duty, and redeems his pledge to the people by dismissing these officials—very much against his feelings. As he said this afternoon he has been in receipt of pathetic appeals from mothers and wives. But in the conscientious discharge of his duties towards the administration and the country, he dismissed all who were found guilty of wrong-doing. We have fulfilled our contract with the people. And what have hon. gentlemen opposite to say? I say that they stand up there one after another, trying to open a case which, to my mind, is closed forever. They are not sincere, because, when the government appointed Mr. Justice Cassels, the opposition as well as the government supporters felt that the appointment was a worthy one, and that the country could trust Mr. Justice Cassels' findings. But now, because those findings do not go as far as their wishes—the wish being father to the thought—they place themselves in the position of a judge and try to render a verdict which the judge has not rendered, in order to satisfy themselves and their sympathizers that the government is not worthy the confidence of the country. Now this is the position, and it is a position which justifies the representatives of the electorate in placing their confidence in the members of the administration, and especially in the hon. the Minister of Marine and Fisheries.

It was said by the last speaker (Mr. Samuel Sharpe) that now, surely, the minister ought to resign. Why, Mr. Speaker? Because, during the three years of his administration he has performed his duty, a thing which the head of that department during the Conservative regime had never done. The hon. minister must resign, because he enjoys the fullest confidence of the country, and particularly of his native province. He must resign, because, in the last election, the opposition, though well organized, could not find 25 men to place a candidate in the field against him. The minister must resign, because he has proved to be a worthy leader of his own province. The minister must resign, because to-day there is only one voice to testify to his sterling qualities, to his noble character, to his honest purpose, to his patriotism, to all those qualities which make a man worthy to represent his constituents in the councils of the nation. The minister must resign, because to-day we are just as proud of him as we were yesterday, and just as willing to follow him and to serve our country under his direction. Sir, in conclusion let me say that I have read carefully the motion which has been placed in your hands, I have listened attentively to the addresses which have been delivered in support of that motion, and sitting as a member of the popular jury, I must come to the conclusion that no argument has been adduced which would justify me in giving a verdict in favour of the motion now before the Chair.

Mr. ARTHUR MEIGHEN (Portage la Prairie). One of the last remarks made by the hon. member for Hochelaga (Mr. Rivet), who has just taken his seat, was to the effect that he had carefully read the motion which is before the House. Of all the remarks uttered by that gentleman that was the most surprising to me, because, throughout the entire course of an address lasting I believe over an hour, it was the only remark that bore any possible relation to the words of the motion at all. I regret that, owing to the lateness of the hour, and owing to the fact that to answer the hon. gentleman would require me to disregard utterly the motion itself, it will be impossible for me to give much attention to his address. As to the gentleman who preceded him, the hon. member for Berthier (Mr. Ecrement), who spoke in French, I regret, with my hon. friend from North Ontario (Mr. Sharpe) that I was unable to understand his address. I regret it all the more because, though not able to understand it, I was able to appreciate the music of his voice and accent, and the apparent eloquence of his language.

The Minister of Marine and Fisheries has exhibited some remarkable qualities during the present session. I must congratulate him on the marvellous facility of intellect and the bewildering dexterity of mind that enable him to come to almost any conclusion that may be congenital to him, or satisfactory to his conscience, utterly irrespective of the facts. On April 30, almost a year ago, when his department, in conjunction with other departments, stood charged before the country with the most serious delinquencies, when he himself, as part of the department, stood charged with a lack of conscience, when his department stood charged with being utterly wanting in a directing head, as far as the commissioners could see, the minister saw fit to come before the House and tell of the hard work he had done in his department, to recount the undertakings he had carried out in the St. Lawrence river, and up in the neighbourhood of Port Arthur. No doubt he conceived that that was an answer to the charge of the Royal Commission. And when the hon. member for St. Anne (Mr. Doherty) saw fit to state that the resolution as it stands does not call in question, and does not make a question in this debate,

of the character and integrity of the minister himself, the minister saw fit at once to come to the conclusion that the member for St. Anne, speaking for this side of the House, had acknowledged the integrity of the character of the Minister of Marine and Fisheries as head of that department. Surely that was a delightful contortion of the mind, that was a beautiful piece of reasoning. The Minister of Marine has also come to another conclusion very satisfactory to his conscience. He comes before this parliament, and before we were in session more than a week, he assured this House that he had received a certificate of character, not only from the hon. member for St. Anne, but from this commission. He assured this House, and it is now on record, that he came out with his skirts clear from the report of Mr. Justice Cassels. Now it is indeed a beautiful piece of reasoning for the minister to come to the conclusion that his skirts are clear by an investigation through a commission which was forbidden above all things to investigate anything about him at all. The hon. member for Richmond also says that it can no longer be said that there is any charge against the minister, or any suspicion that can be levelled against him, because, he says, the minister is cleared by the report of Mr. Justice Cassels. But the hon. member for Richmond made that statement in face of the assurance of the Minister of Agriculture, in face of the assurance of the Attorney General of this country, in face of the assurance of the Minister of Marine himself, and of the Prime Minister himself, that Mr. Justice Cassels was forbidden to investigate any of the conduct of the minister of that department, but was restricted in his investigation to the underlings. Surely, it ill becomes a minister to look for a certificate of character to a commission that was forbidden to investigate anything that might throw any light on his own transactions in the department, or upon his own connection with the delinquencies that existed. We have heard about drowning men clutching at straws, but the anxiety of the Minister of Marine and his followers to obtain a certificate of character for their chief certainly bears a very strong resemblance to that picture. The minister in his defence practically repeats the speech he delivered in this House on April 30, 1908. He goes back and tries to show that the system which is now so much abused by this government was in vogue under Conservative administration. That argument has been very frequently combatted in this House and I do not think it can be combatted too strongly. It does seem to me that the country, and I think most members of this House, are tired of it. Surely the Minister of Marine, surely members on the other side of the House do not pretend to say that a system that fits one time will fit all times. Surely they do not pretend to say that the successors of the Conservative party for all time to come are to be bound within whatever limits the Conservative party, 20 years ago or 30 years ago saw fit to be bound; surely they would not say that their successors in office for years to come, that their political successors shall have a circle drawn around them and be confined within the narrow limits by virtue of the present administration; surely they will allow some scope for the evolution of political morality and for improvements that will take place. It does not seem to me that it is a sufficient answer to this House and the country that the use of a patronage list in 1886 is a justification for its use years afterwards; surely they ought to make some allowance for the progress of time, surely they must admit that the times have out-grown that system. Supposing they do not admit that, it is not so much the system that is attacked, it is not so much the system that brings disgrace on this government and discredit on its members, as it is the abuse of the system. The abuse of the system seems to have taken root within the last few years. The abuse of this system has not been traced back by Mr. Justice Cassels nor indeed by the previous commission beyond the days of this government. Surely, therefore, they cannot hide behind the fact that the system existed to shield themselves from the consequences of their abuse of that system.

The Minister of Marine and Fisheries (Mr. Brodeur) very rightly suggests that he should not be held responsible for the sins of his predecessors. Personally it would be unjust to hold him responsible. But the Minister of Marine, in common with other members of this government who were members of the government when the minister's predecessor, Mr. Prefontaine, held that portfolio, was responsible for the discrepancies of the Marine Department at that time. I need not take the statements of Conservatives in support of that doctrine of ministerial responsibility, but shall refer to the speeches delivered by prominent Liberals in 1891 when the late Hon. Sir Hector Langevin was charged in this parliament with misconduct in his own department. They will find that one of the strongest constitutional lawyers in this conutry, the late Hon. David Mills, speaking on behalf of the opposition of that day, was very emphatic upon this point. Before quoting his words, let me briefly state the circumstances: The late Hon. Sir Hector Langevin was charged with serious misconduct in connection with the Department of Public Works. Specific charges were made against him. The matter was submitted to a special committee of this House. Two reports were presented to this House, a minority report and a majority report. The majority report specifically

and unequivocally acquitted Sir Hector Langevin from anything in the nature of active participation or any connection with the irregularitites found to exist in the department. The minority report also went so far as to find that they had not evidence to connect Sir Hector with any improper transactions. The two reports coincided in that particular, but the minority report went on—and I draw the attention of the Minister of Marine to this particularly, because they are the words of his colleague in this House, the late Hon. David Mills, and the Hon. Sir Louis Davies of the Supreme Court. At page lxxxii of the Journals of the House of Commons of Canada, A. 1891, appendix No. 1, they say :

Except the desire to please and obey the minister at the head of the department, we cannot discover any motives which would induce these engineers to assist in defrauding the public in order to put money in the pockets of Larkin, Connolly & Co.

Therefore, the ground that these men considered sufficient to connect the head of the department with the frauds perpetrated by those beneath him was that they could conceive of no other motive except that they wished to please and obey the minister at the head of the department. If that ground was good then it is good today, and if it is good now it distinctly implicates the head of the department and puts him on his defence. If the same circumstances exist now as existed then they should lead to the same conclusion.

Speaking in the light of those findings of both the majority and minority reports of those days, Mr. M. C. Cameron, then member for Huron, speaking in the House of Commons of Canada, used the following words at page 5824 of the 'Hansard':

A member of parliament, a former political friend and supporter of hon. gentlemen opposite, has, for three hours arraigned the policy and the conduct of the hon. gentlemen opposite with respect to their administration of public works, and yet upon the ministerial benches, behind them and on each side of them, there is not a man who has courage enough to rise in his seat and defend the position of the government. Hon. gentlemen will remember that this is not an assault solely upon the late member for Quebec West or an assault solely upon the late Minister of Public Works. It is an assault upon every hon. gentlemen who was the colleague of the Minister of Public Works while he was a member of the present administration. They supported and sustained him, and if they know anything about parliamentary, constitutional rule, they must know perfectly well that each one of them is just as responsible as the late Minister of Public Works. I am astounded at the Minister of Justice, and the Minister of War, and the Minister of Marine and Fisheries, and the Minister of Finance, and above all the Secretary of State, should remain silent in their seats. Are they going to plead guilty to the charges levelled against them?

That is to say, Mr. M. C. Cameron, who was at that time put up by the right hon. gentleman who now leads the government to argue the constitutional aspect of this case as it affected the individual responsibility of the other ministers of the Crown, was made to say and did say that they all shared the responsibility for the guilt even of officials of the department on the ground only as stated in the minority report that there was a reasonable inference that these acts were done either in obedience to their wishes or their orders. As the hour is late I beg to move that the debate be adjourned.

Motion agreed to, and debate adjourned.

On motion of Sir Wilfrid Laurier, House adjourned at 12.20 a.m., Friday.

HOUSE OF COMMONS.

FRIDAY, April 2, 1909.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 121) for the relief of John Grant Ridout.—Mr. Guthrie.

Bill (No. 120) respecting the Windsor, Essex and Lake Shore Rapid Railway Company.—Mr. Clarke, Essex.

Bill (No. 122) to incorporate the Cabano Railway Company.—Mr. Gauvreau.

POST OFFICE ACT AMENDMENT.

Hon. RODOLPHE LEMIEUX (Postmaster General). I beg to move that on Tuesday next the House go into Committee of the Whole on the following resolution, which His Excellency the Governor General recommends to our consideration:—

Resolved, that it is expedient to amend the Post Office Act and the Civil Service Act and to provide as follows:—

That in the outside division of the Post Office Department the salaries of messengers, porters, letter-carriers, mail transfer agents or box collectors shall, in grade A be at the rate of $1.75 per day, in grade B at the rate of $2 per day, in grade C at the rate of $2.25 per day, in grade D at the rate of $2.50 per day, in grade E at the rate of $2.75 per day; that the salaries of the fourth-class clerks shall, on appointment, be $500 with annual increases of $100 up to $700; and that if the salary of an stamper and sorter or fourth-class clerk is at present less than $500, it shall forthwith be increased to that minimum.

Motion agreed to.

MANITOBA BOUNDARIES.

Mr. GLEN CAMPBELL. I beg to give notice to the right hon. the First Minister

that on the earliest opportunity I shall take up the Manitoba boundaries question.

SUPPLY—THE CASSELS COMMISSION.

House resumed adjourned debate on the proposed motion of Mr. Fielding, that Mr. Speaker do now leave the Chair for the House to go into Committee of Supply, and the amendment of Mr. Doherty thereto.

Mr. ARTHUR MEIGHEN (Portage La Prairie). When the House adjourned last night, Mr. Speaker, I had just concluded some references to a debate that took place in this House in 1891, and had quoted from the remarks of one of the supporters of the right hon. gentleman. I had shown that the Liberal party then subscribed to the doctrine that the sins of any one department were attributable to the entire government, that is to say that the Cabinet and the members of the Cabinet collectively were jointly and individually responsible for the delinquencies in the administration of each and every department. I wish to commend that view to the members of the government to-day and to ask the Minister of Marine and the Prime Minister if that doctrine has any application in this instance, and if, when the Minister of Marine asks that he should not be held responsible personally for the faults of his predecessor in office, he will not admit that, as a member of the Cabinet during the time his predecessor was in office, he and the other members of that Cabinet were equally responsible for the appalling abuses of the patronage system, which existed under their direction and control. What is the answer of the government to the charges made? The right hon. the Prime Minister, during the last election, replied that no member of his administration had been charged with any crime. The right hon. gentleman appears to have been converted to a new doctrine since the days of 1891. Now, it appears, he considers himself entirely irresponsible and his colleagues as well, until someone rises in the House and charges that any member of the government has been guilty of theft or some other crime. Let me remind the Prime Minister and the Minister of Marine and Fisheries that there are other crimes against public policy besides that of theft. There are other errors of public administration which call for public condemnation besides the taking of money directly from the public coffers or winking at its being taken. If members of the government have been in office during years in succession and have failed to detect theft, if they have failed to exercise that supervision, that organizing, disciplinary and directing power which good government demands, that is a crime against the constitution deserving the condemnation of this House. The only reason that I can see which can be accepted as any kind of a logical defense is that this resolution is a want of confidence in the government and therefore the party opposite have to vote against it. Sir, if the results of the investigation by the Hon. Mr. Justice Cassels are such as to warrant further investigation, then such further investigation should be made.

If therefore I succeed in showing that these reports are such as to warrant further investigation, then, according to the reasoning of my hon. friend the hon. member for Richmond, Nova Scotia, (Mr. Kyte) there is sufficient ground to vote want of confidence in the administration not only in the House but throughout the country. The First Minister told us that the commissioner found no fault with the members of the government. I claim that the report of the Civil Service Commission found direct fault with members of the government, it was the most powerful indictment that has been levelled against this government since it came into power. That fact was admitted by more than one honest Liberal speaker in the last election. Was there no indictment against this government and the minister in the finding of the Civil Service Commission that there was a lack of conscience in the Marine Department, and in the allegation that there was no visible directing power presiding over that department? If there was no allegation in the entire report of the Civil Service Commission against this government why was the report of that commission practically suppressed by this government? 'The duty of the hour' was distributed by the Liberal party throughout every constituency but we could not buy a copy of the Civil Service report for $100. If the Liberals can take comfort out of that report, as they tried to do yesterday, why was it not utilized by them in the last campaign? I think I can prove that although Mr. Justice Cassels was manacled hand and foot in that investigation still there is matter in that report which constitutes an indictment against the head of the department. Is it no indictment for Mr. Justice Cassels to find that the minister as head of the department permitted the purchase of diaphone fog signals at $4,600 each which cost $230 and that he permitted this price to be paid in direct contravention of the Patent Act which provides that only a reasonable price shall be charged for any patented article? Further than that, giving every possible latitude for the extraordinary profits which accrue to the inventor of a patented article, Mr. Justice Cassels finds that the minister would have been justified in justice and in the discharge of his duty as a responsible minister if he had refused to pay more than $840 for those diaphones. Is it no indictment or does it reflect any credit on the head of the department that a price six times what should have been paid was given for these articles? Is that

not a charge against his department even if it were done when he was not at its head? Is it not a charge against the government that they condoned a system that permitted Mr. J. W. Wood to sell goods valued at $11,492 in three years for only $230 of which tenders were called? Is it not a charge against the minister or his predecessors that Mr. P. H. Murphy was permitted to secure $20,000 worth of business in three years all but $4,500 without tenders? Is that the proper supervision and the proper direct control indicated by the commission, the supervision which this country has a right to expect from the responsible ministers in its pay and employ? The Minister of Marine has told us before and during this debate that he came out clear from the Cassels investigation. Will the Minister of Marine tell this House that his conduct was in any sense under review by Mr. Justice Cassels in that investigation? I will give him time to do so now, if he will make a statement. I notice the Minister takes no advantage of the offer, he sits in his seat and he admits that in no sense whatever was his conduct under review by Mr. Justice Cassels. Let him never again, let no man behind him in this House state here or elsewhere that the minister's skirts are cleared by the Royal Commission. If in any way whatever, directly or indirectly, inferentially or otherwise, the conduct of the Minister of Marine was under review by Mr. Justice Cassels it was his duty as Minister of Marine to have resigned before that investigation and not to have presided over the department whose head was under review. He knows his conduct was in no way under review. It is an appalling spectacle to have the minister proclaim as by-play in this country that he was cleared by a commission which had nothing to do with his own conduct at all.

The answer that the government and the government supporters have made to this resolution is that they were successful in the last election. If the members of the government would investigate the returns of the last election, they would not believe that there was much force in that argument. I would not attach much weight to the argument even if they had been elected by a large popular majority. We all know as has been pointed out, in language whose eloquence I regret I cannot emulate, by the hon. member for West Elgin (Mr. Crothers) that the prime minister utilized those extraordinary powers he possesses of appealing with force and effect to the passions and prejudices of the people of this country and utilizing that power in the last campaign through the press even more than the platform, a victory was secured that surely reflects little credit on him. What was that victory? An analysis of the figures shows that a majority of the Liberal party over the Conservative party was a fraction of one per cent, some 16,000 votes out of a total of over 1,000,000, and some 25,000 votes were cast for Socialists, Independents and Labour candidates, so that the Liberal party actually secured a minority of the votes cast in the last election.

Furthermore the Minister of Marine repeats with confidence in this debate what he stated in the first debate of this session —and his obedient followers echo his remarks—that he was elected by acclamation. He did not tell the House just how that trick was done, he did not tell the House that the Conservative party prepared a nomination paper for his opponent and secured 25 signatures, but that by some means two men were induced to withdraw just before the nomination was put in. I submit that if the Minister of Marine has immediately surrounding him and behind him and underneath him in his own constituency the class of employees he has in his department, it is easy to understand how the trick was performed which resulted in his election by acclamation.

Coming now to the resolution itself, we find that it calls for a further investigation into the other spending departments of the government. One speaker for the government professes not to know what these spending departments are. Well, it will not be hard for him to find out if this resolution is carried calling for further investigation. Now do the facts brought out, does the evidence brought out, do the findings as stated by Mr. Justice Cassels, warrant a further investigation? That is the primary question before the House. One hon. member who opposed the resolution stated that we wanted the investigation because we were not satisfied with Judge Cassels' work. I want to remind that hon. member that the only member of this House who has made any complaint whatever or cast any reflection on the findings of Judge Cassels, was the hon. member for Lunenburg (Mr. Maclean) who appears to be the first, or second, or third support of the Minister of Marine himself. Never in this debate, and never in this House, has the finding of Judge Cassels, as based on the evidence, been questioned by any member of the Conservative party. It is because we are satisfied with the great results, relative to the equipment which was allowed Judge Cassels, that have accrued from this investigation, that we want the inquiry resumed. When we consider that before the Minister of Marine and Fisheries and before the government permitted Judge Cassels to get at his work at all, they manacled his hands, they manacled his feet, and they took good care that no investigation should

proceed far enough to involve themselves. Considering these restrictions and limitations, it is really little short of marvellous the effect that has been produced by Judge Cassels' investigation and report. Why, here at the eleventh hour, right on the eve of this debate, the Minister of Marine goes through his department, and he reads out a few, not of the black sheep but of the black lambs, and he dismisses them from office; surely something has been accomplished by that. I read in the papers only yesterday that also, on the very eve of this debate, also on this, the eleventh hour, the Minister of Public Works sends a circular throughout the country and warns all those in the employ of his department that they must hereafter not pay excessive prices to tradesmen, that they must hereafter not accept any bribe or any loan or other favour from contractors. Surely these results are worth having. Surely it is worth while to bring these gentlemen to a state of consciousness as to their high duties to the people they represent. Surely these results are worth the whole cost of the investigation, and many times over. That investigation has furthermore accomplished the great result of bringing other members of the Cabinet to a fuller sense of their responsibility, and it has awakened throughout the country a sense of the duty of the people to hold members of the government to their responsibility. Surely these results call for a continuation of the good work. Surely the members of the government and the Prime Minister will respond to the appeal of Mr. Justice Cassels, and enter upon a course that will further enlighten public opinion and bring public opinion to a true sense of its responsibility, and ministers to a true sense of their own responsibility.

Now sir, what reason can be found, what reason within the realm of common sense can be adduced, by any hon. gentleman against such further investigation? No reason has been adduced. There is not a man in this House who will rise and put on his thinking cap and assert that a single reason has been advanced by hon. gentlemen opposite. It is no reason to say that because the Minister of Marine has continued the Conservative policy of deepening the St. Lawrence, has continued the policy of improving the waterways of this country in other parts, therefore the good work that has been done in this department should not be extended to other departments. Surely it was a travesty upon the name of reason itself for the Minister of Marine and Fisheries to advance such a hideous argument to the people of this country, and it is no less a travesty on reason, but rather a reflection on the intelligence of this House, that the argument advanced by him should have been the one argument reiterated by his subservient followers throughout the course of this debate. I stand here and I say that throughout the course of this debate not a single member of the government side of the House has come really to the kernel of the point at all, and shown that actual good would not be accomplished by extending the good work that has been begun, but was stopped so soon.

Now the question, I say, is whether the good work that has been accomplished so far does not warrant a continuation of the investigation. The Minister of Marine has referred to the success of his party in the last election. Another speaker has referred to the slogan of the Liberal party in the last election, that he thought was largely responsible for the government being returned to power, and that was the slogan repeated throughout the press and on the platform, 'Let Laurier finish his work.' Now the First Minister, speaking on various platforms throughout Ontario, as reported by his organ the Toronto 'Globe,' promised the people that if they would return him to office he would finish his work; he promised that he would find out who the black sheep among his followers were and weed them out of the party. Now, Sir, the First Minister, in order to give a proof of his good faith in that regard, started right at the city of Ottawa and he weeded out Mr. Fraser, who was then candidate for election in this city. Further than that he has not gone; further than that, I want to state and I want to charge, that he has done nothing whatever toward finding out the black sheep amongst his followers, much less weeding them out. He has weeded out a few of the little lambs of his flock, but so far as his political followers are concerned, no step has been taken, visible at all events, that could be considered even a pretext of investigating who are the black sheep amongst them. Now this resolution calls upon the government to go on and fulfil the pledge they made to the country in this regard, to allow the good work to go on, and to let Laurier finish his work. If they do this all is well. We are satisfied with the results accomplished, though we deplore the nature of those results; but we are satisfied that they are more than commensurate with the equipment allowed Judge Cassels. But if this resolution is rejected by the government then they will give the people of this country every opportunity to find fault with them again for breaking a very important pledge made in the last campaign. This is my final appeal to them: Let this resolution go through. If a further investigation is held, no harm will be done; but if they refuse a further investigation, they will be remiss in their duty to the people of this country.

Mr. A. K. MACLEAN (Lunenburg). The observations which I intend to address to

the House this afternoon will differ somewhat from the remarks made by speakers who have preceded me, and will perhaps treat more in detail some of the features of the report presented to parliament by the Civil Service Commission, as well as by the Cassels Commission. The hon. gentleman who has just taken his seat (Mr. Meighen) has ventured to criticise me for having questioned some of the findings of Mr. Justice Cassels, and it was intimated by one of the speakers last night that I was bound to accept the report of Mr. Justice Cassels simply because he was an appointee of the administration which I support. Well, Mr. Speaker, I am not going to submit to such an opinion being forced upon me. I surely do not consider Mr. Justice Cassels or the Civil Service Commission infallible or immune from error and I am sure that neither Mr. Justice Cassels nor the Civil Service Commission would expect me to do so. I think both reports are open to criticism, that each made mistakes, but still it does not necessarily follow that I wish to impeach the motives of either. The report of the Civil Service Commission and the report of Mr. Justice Cassels have gone a considerable distance in weakening my belief in the wisdom of appointing commissions.

Some hon. MEMBERS. Hear, hear.

Mr. A. K. MACLEAN. And the reasons perhaps which I have in my mind are not the reasons which hon. gentlemen opposite have in their minds. The report of the Civil Service Commission contained many manifest errors. They allowed themselves, through their carelessness, to reach improper conclusions. They made references, for instance, to the Department of Militia and Defence, without the slightest pretence to a knowledge of the facts which they were discussing. They made findings against the Department of Marine and Fisheries without having made the least effort to acquaint themselves with the facts, and, in many respects the findings of that commission are, to my mind, the findings of three fussy gentlemen who were anxious to report something of a sensational character and were not very anxious whether or not they were in a position to justify their findings. There is another feature of the findings and the procedure of the Cassels commission to which I wish to refer and that is, that in many cases witnesses who were not officials of the department and who appeared before Mr. Justice Cassels were denied counsel, and I submit that in many, many instances witnesses were done a grave injustice. I always did have considerable sympathy with my hon. friend for North Toronto 'Mr. Foster) for being refused counsel on the occasion of the insurance investigation and I would have believed that an injustice had been done him were it not for the fact that at the conclusion of that investigation he publicly himself declared that he had been properly treated by the commission. I think, Mr. Speaker, the Cassels inquiry was certainly——

Mr. FOSTER. Of course, my hon. friend means that I am to take that last assertion in a somewhat Pickwickian sense? Otherwise I may say that I did nothing of the kind.

Mr. A. K. MACLEAN. The Cassels inquiry——

Mr. FOSTER. I say I did nothing of the kind, and I think my hon. friend will have to retract it.

Mr. A. K. MACLEAN. I do not wish to misrepresent the position of my hon. friend, but, speaking from memory, I thought that during the discussion of that inquiry in this House a statement made by the hon. gentleman expressing his thankfulness to the commission and counsel, Mr. Shepley, was read. I may be mistaken in that, but it is not of very much importance. Now, I say that the inquiry——

Mr. FOSTER. Do I understand that my hon. friend accepts my word on that?

Mr. A. K. MACLEAN. Yes, I do——was a very extensive one, it was a very severe one, and as I have said already the cross-examination of witnesses, other than those who were officials of the department, was exceedingly severe and, in many cases, unfair and resulted in placing upon the records statements that I do not believe were actually correct. The commissioner also, did not consider himself restricted to the terms of the order in council appointing him. He in his wisdom, and I find no fault with that, roamed beyond the powers granted him by the order in council appointing him, and the investigation was sufficient to disclose irregularities and the public interests were amply satisfied by the scope of the inquiry. What was proven? Irregularities on the part of officials were proven. They had been dismised. Incompetency and lack of capacity on the part of certain officials was also amply proven. Some have been dismissed. I think it is quite possible that incompetency has been shown regarding other officials in the service of the Department of Marine and Fisheries, and I think the minister might very well take into consideration certain evidence respecting other officials. The findings of the Cassels Commission also disclosed the regrettable fact that the bribery of officials was not an uncommon

thing. Those who were guilty of accepting bribes have been punished or censured in some form or another. I agree with the hon. gentleman (Mr. Doherty) who moved this resolution yesterday, that we should be more inclined to censure the man who gives the bribe than the one who receives it. We should be fair and lenient, I think, in our view respecting the practice of receiving bribes. It is a fact, although the mover of the resolution will probably question it, that in connection with shipping the giving of gratuities, in this case called bribes, is not an uncommon practice and it may be that a great number of the officials who did accept these bribes believed them to be mere gratuities and that they were justified in accepting them because they were simply acting in accordance with a practice common to maritime ports. There should be a uniform standard or code respecting the giving of bribes. It is not an uncommon thing in commercial life. We must not have one code respecting bribes for the guidance of civil servants and another for bank managers, for the managers of trust companies and other people. We must be fair about these matters. I admit thoroughly that these disclosures were most unfortunate and I am sure that members of parliament and Canadians generally will hope that we have seen the last of them. The commissioner's report also disclosed that excessive prices were paid for goods. Now, I think that has been magnified altogether out of its true proportions. For instance, regarding the purchases made at Montreal, I think that, beyond the Merwin purchases, the evidence amply justifies the conclusion formed by Mr. Justice Cassels that on the whole the prices were fair, and they were, in fact, the ordinary prices. He also makes the same remark concerning the purchases made at Sorel. There is no evidence of improper or excessive charges at St. John, New Brunswick. There is very little evidence of excessive charges at the port of Halifax. True there is some, but it does not amount to a great deal. As far as the evidence taken at Quebec is concerned, it certainly amply justifies the finding of Mr. Justice Cassels that the charges there were exorbitant and unfair.

Well ,what is the Department of Marine and Fisheries doing to remedy this matter of excessive charges? Some time ago, and before Mr. Justice Cassels commenced his inquiry, the Minister of Marine and Fisheries (Mr. Brodeur) appointed Mr. Doutre as the purchasing agent of that department, and Mr. Doutre's duties, so far, have been so well discharged that upon the record we have the commendation of Mr. Justice Cassels. Mr. Doutre himself gave evidence to the effect that a great saving would be made by reason of his being placed in charge of this portion of the department's business. That is what the department has done to remedy this difficulty. Now, I admit that many of these practices to which reference has been made were irregular and indispensable. But let us be fair; the carrying on of the details of government is conditioned by circumstances which do not obtain in private business, and on many occasions in the future we shall find disclosures of improper conduct on the part of officials and of those who are selling goods to the departments. This, of course, requires vigilance on the part of the minister and his officials. But I am in the judgment of the House when I say that it can never be expected that any minister, or any official, or body of officials, will be able, at all times and on all occasions, to see that any department's business is so transacted as to be utterly beyond criticism.

Now, the resolution before the House asks that this inquiry be extended to other departments. I say that resolution is illogical; it is not supported by reason, for it is based upon the assumption that if irregularities occur in one department they necessarily must occur in another. If all human conduct and transactions were based upon that reasoning, one can readily see to what ridiculous conclusions we should be led. This resolution should not be supported, because there is no accusation or suggestion of wrong-doing as against any other department. It is true that the hon. member for West Elgin (Mr. Crothers) said, in a moment of counterfeited wrath last evening: 'When the heads of the government are guilty of grand larceny, how can it be expected but that the members of the Civil Service will be guilty of petty larceny?' But I suppose we can regard this merely as political sound and fury signifying nothing, and not intended to prove anything. Another reason why the resolution should not be affirmed is that the proceedings before the Public Accounts Committee during the last four or five years do not disclose irregularities of the magnitude or number of those in the Marine and Fisheries Department. And nothing that has occurred before this committee justifies anybody in making the assertion that inquiry should be made into other departments. The suggestion is further made that this inquiry should be granted because some of the contractors having dealings with the Marine and Fisheries Department and found guilty of irregular and improper practices have dealings with other departments. Supposing that this is absolutely true, does it follow that any other department must concur in this resolution and submit to an inquiry? What was the purpose

of the inquiry in connection with the Marine and Fisheries Department, if the other departments were not intended to receive some lesson from it? The hon. member for Portage la Prairie (Mr. Meighen) referred to the fact—which I noticed only a few moments ago in the Montreal 'Gazette' of this morning—that the Minister of Public Works (Mr. Pugsley) has issued a circular urging the officers of his department to observe great care and caution in making purchases on behalf of the government both as regards price and quality. They are also cautioned against the acceptance of gifts or favours of any kind from persons having dealings with the department. I naturally assume that the heads of all the other departments must take cognizance of the evidence disclosed during the Cassels' inquiry, and they must take cognizance of the names of the contractors dealing with the Marine and Fisheries Department and found guilty of improper practices, and must be, to some extent at least, guided by that evidence. Again, I say this resolution should not be confirmed, because, after all, what this country requires is that the irregularities prevailing in the past in the Marine and Fisheries Department should cease, as to that department and all others. The country is more interested as to the future than as to the past; and I submit that no good ground whatever can be given for supporting his resoluion.

Now, there are a few things in connection with the Cassels Commission report, with which I wish to deal, perhaps at some length; and possibly I may weary the House, but there are matters referred to in this report which have been the subject of discussion in this House for many years, which have been discussed frequently and persistently by gentlemen of the opposition, which have been constantly referred to in the press, and have found their resting place in the political campaign literature,—matters which relate to the policies of the Department of Marine and Fisheries, and which, I believe, should be discussed. In dealing with these matters, I propose to take them up almost in the order in which they appear in the report of Mr. Justice Cassels.

One of the severest strictures made by the Civil Service Commission in its report two years ago was in connection with the administration of the Lighthouse Board. I think it was in consequence of this particular branch of the Marine and Fisheries Department that the commission of that day made the remark that some people were serving two masters, Scripture to the contrary notwithstanding. Now, this is a very important feature of the work of the Marine and Fisheries Department, and I think that the little time I shall take in discussing it will be justified. The Lighthouse Board was constituted a few years ago, and consisted of the deputy minister, Mr. Gourdeau, Mr. W. P. Anderson, Commander Spain, Mr. J. F. Fraser, Mr. Hugh Allan, Montreal, representing the Canadian Federation of Shipping, and Captain J. W. Troupe, of Vancouver, representing the Canadian Pacific Railway shipping interests on the Pacific coast. The Civil Service Commission, in dealing with the Lighthouse Board, severely censured them. They say this :

> Between June, 1905, and June, 1907, this board approved of and passed applications for new and improved aids to navigation amounting to $1,691,813. With the voting away of this vast amount of money the responsible minister had nothing to do. He was simply asked to initial the minutes of the different meetings of this most powerful but irresponsible board. The effect of this state of things is disastrous. It means practically the removing of all responsibility from those to whom extensive powers of administration and expenditures are granted.
>
> When one realizes the enormous pressure being constantly brought to bear on the government of the day in favour of grants and bounties of all kinds, from one end of the country to the other, it would surely seem to be a most unwise thing to create a board with extensive powers which can be and are used in sympathy with this universal outside pressure, and without being accountable to anybody.
>
> The two outside members of this board simply represent the shipping interest, which is their own. They cannot serve the country and themselves equally well in the same matter. The other members of the board are government officials, who, whatever their standing may be, personally or officially, are not independent of political influence or departmental pressure. They are in no proper sense qualified to fill such a position of trust as a seat on this Lighthouse Board should mean—where the most absolute sense of justice, with complete independence, is called for; with a keen desire to administer the people's money with the utmost economy and good judgment, and with all personal considerations sunk.

Mr. Justice Cassels, in dealing with the findings of the Civil Service Commission, commends the improvements in the aids to navigation on the River St. Lawrence. He finds that an injustice was done to the Lighthouse Board by the Royal Commission; that the Lighthouse Board is merely advisory; that the statement that the minister is not responsible is not in accordance with the facts; that the representatives of the shipping interest on the Lighthouse Board were improperly charged by the Royal Commission with serving their own personal interests. I concur most heartily in the finding of Mr. Justice Cassels in respect to the Lighthouse Board. I say that the Royal Commission exhibited gross and unpardonable carelessness and stupidity in making the finding they did, and neither I nor anybody else in this

House can be too severe in condemning their criticisms regarding that board. Inasmuch as very prominent and eminent citizens of this country, such as the Messrs. Allan of Montreal, have been condemned by this report, I think it is only fair that anything they had to say in answer to those charges should be made a matter of public record, and I ask the House to bear with me while I read some of the evidence given by those gentlemen at Montreal before the Cassels Commission. Here is some of the evidence given by Mr. Hugh Allan:

Q. The Civil Service Commissioners, so-called, made some inquiries and a report, and in that report passed upon the functions and the performance of the duties by this board of which you are a member, and the usefulness, or rather the uselessness of your board? —A. Yes.

Q. I should like to know from you just in a word, what you deem the chief functions of the board?—A. Well, the object of this board is to discuss the recommendations that are sent in to the board by various bodies; and in some cases recommendations, as far as the river and gulf of St. Lawrence, and the coast from Belle Isle to St. John, New Brunswick, embracing the whole of the Bay of Fundy, are concerned, have been made through the Shipping Federation of Canada, an association of shipping men in Montreal comprising all the regular lines of steamships that come to this port, with the exception of the Canadian Pacific Railway Company. These recommendations have to a large extent, if not altogether, been based on an inquiry that was held, I think, in 1900, by the then minister of the department, at which the captains of all the regular lines running through the St. Lawrence were asked to give their views with regard to the improvements required in aids to navigation which had become, to a large extent, obsolete, and not at all suitable to the changed conditions that then prevailed and which have since, of course, grown immensely. These recommendations have all been endorsed by the Shipping Federation, have been passed upon by them, and after being passed at their meetings, have been forwarded to the Lighthouse Board for their consideration. In like manner the recommendations of the people on the Pacific coast —I am unable to say exactly what their organization is called, but it is practically the same as ours: that is to say Captain Troupe, I think, is the chairman, and all the interests out there are represented, and he calls them together, and they discuss what is required, and any improvements that commend themselves to this board are forwarded to the Lighthouse Board for their consideration. Sometimes individuals write to the minister or the deputy minister, or some member of the department, and they are put on the docket, and discussed, and if they commend themselves to the board, then they are passed, and if not, they are rejected. That is the mode of procedure at the board, and I may say that at that board a very full discussion is always had as to the advisability of every item before it is passed, but it has always been understood that these were recommendations when passed to the minister.

Q. Then the question has arisen out of the report of the Civil Service Commissioners as to whether or not the action of the board was independent, whether it was not merely the making of record of the views of the shipping interest, including the views of individuals who had personal interests to promote?—A. That is absolutely without any foundation in fact.

Q. No foundation for it?—A. No.

Q. How could such an idea arise? Apparently it was in their minds and their report is based upon it?—A. From what happened at the board meetings there was no reason why any one should come to such conclusions, and I can only imagine that such a conclusion would be arrived at by people who wanted to find fault and could not give any reason for finding fault. I think it is the most fortunate thing that ever happened for the shipping interests of this country that that board should have been established as it was. I think that anybody that knows the first thing about navigation, or shipping interests if he does not know anything about navigation, cannot have gone from Montreal to the sea, or from the sea to Montreal, without having forced upon his attention, even as a passenger in a steamer, what tremendous strides have been made in navigation and how much good has been done. Take merely the most elementary or the most striking instance; to-day the largest steamers can navigate between Montreal and Quebec by day or by night if the weather is clear, if there is no fog or something to prevent them, and they could not have done that before these lights were established. To talk about this being a thing to be deplored in any way is perfectly ridiculous, absolutely ridiculous; I cannot use words strong enough to express my surprise that any body of men should ever have said such a thing.

Q. The report says, 'And it certainly has not added to the general efficiency of the Marine and Fisheries Deparment.'—A. Well, my experience is that the formation of this board has been the occasion of other organizations in the department being formed whereby the whole service has been systematized in a way that it never was before to my knowledge. There may have been in the internal Department of the Marine and Fisheries a body of men who looked after the thing, but I never heard of it, and now the shipping interests are advised of everything of importance; we keep in touch with the officers of the department in regard to everything. If a light goes out it is reported to our pilots and we report it to them. Not only is the lighting better, but the control of the lights is infinitely superior to what it was before.

Q. That report continues—

'Figuring as an impartial and skilled tribunal, passing upon all demands for government money under the plea of necessary aids to navigation, they can do so without the slightest sense of responsibility, for they absolutely incur none.'

What do you say to that?—A. Well, I call that a miserable insinuation. If a body of men consisting of the principal officers of the department, that have served their lives in the department, and have shown their work that they have done, and if representatives of two interests, such as the shipping interest of the St. Lawrence, representing an enormous

number of vessels and an immense tonnage and great value, are men that are supposed to stoop to acting without any sense of their responsibility. I am very sorry for the people who would think so. I think the business community of this country has not fallen that far. We have always had in this country, we have now, and I hope we always will have a very different moral tone from that.

He is then asked as to the value of recommendations made by the board, and he says:

As I said before it has enabled ships to continue their voyages, and therefore from a shipping point of view it has made the route more economical. The insurance of cargoes also has been reduced, and will, I hope, continue to be reduced, but, of course, insurance companies, like every other business people, have to recoup themselves for losses in the past and their reductions have been gradual from year to year until they get down to a point where they consider they have gone as far as they can go and that will be gauged by the results of the steamers navigating the St. Lawrence route. If there are accidents they will have to recoup themselves for the accident, but by guarding against those accidents, we will finally reduce the insurance to the lowest possible point.

Then he is asked:

Q. Then in connection with the functions, the performance of the duties of the board and yourself as a member of the board, did anything ever come to your knowledge as evidence of dishonesty on the part of those officials or of any other officials of the department?—A. I never heard anything of it.

Q. The commission to his lordship calls for a report as to acts of dishonesty on the part of any official?—A. I have no knowledge of any.

In this evidence, which is available for the examination of any hon. gentleman, Mr. Hugh Allan, I think, absolutely justifies the increased expenditures made by the Lighthouse Board. He states, regarding the conduct of officials, that he always found them attentive to their duties, discharging them properly, and that in no instance in his experience did he know of any member of the Lighthouse Board or any official in connection with it doing anything that might be termed improper. The evidence of Mr. Hugh Allan was confirmed by that of Mr. Andrew Allan and another gentleman representing the shipping interest of the port of Montreal. Now, my only reason for referring to this is that a very considerable portion of the increased expenditure of the Marine and Fisheries Department has been in connection with aids to navigation.

I presume that one of the matters which the hon. member for Elgin (Mr. Crothers) had in his mind last night, when he charged this department with gross extravagance, was its expenditure in aids to navigation, but I am sure every good Canadian must feel proud of the fact that the Department of Marine and Fisheries inaugurated a progressive policy in respect of the navigation of the St. Lawrence and elsewhere. This House, I am sure, will justify every dollar of that expenditure as being entirely in the interests of the country. The findings of the Civil Service Commission were grossly and manifestly unfair. They reached conclusions without having called for any testimony or information from the members of the Lighthouse Board, and they presumed to make findings without having put themselves in possession of the facts. It was suggested further by the commission that some of the officials in the department and some members of the Lighthouse Board were given to serving two masters, Scripture to the contrary notwithstanding, and they insinuated strongly also that these officials were in receipt of gratuities or something of that character. Well, the findings of the Hon. Mr. Justice Cassels are in direct opposition. There is no portion of the evidence taken by him which would justify any charge of misconduct or irregularity on the part of any of the officials of the Lighthouse Board.

The next matter to which I wish to refer is the question of the Willson gas buoys, to which Mr. Justice Cassels refers on page 12 of his report. I am not referring to this matter because of any findings against the department by Mr. Justice Cassels. On the contrary, his findings are in every respect favourable to the department and to the gentleman who manufactures and sells these buoys. But I am inclined to discuss this matter for another reason, and that is that Mr. Justice Cassels dealt with it in an altogether different way from that in which he dealt with another subject of a kindred nature, namely, the diaphone fog signal. He found that there was no evidence of any improper expenditure by Mr. Willson or his employees to reward any of the officials of the Civil Service and promote the interests of the company. He found that the buoys are unquestionably of great value. He was furnished with a statement showing the cost of production of the buoys, and he found that the reasons given in support of the contention that these costs should not be made public were well founded and he declined to make any further public disclosure. I would like here to read the statement quoted by the hon. member for Cape Breton (Mr. Maddin) last night as a reason for inquiry into the other departments. That hon. gentleman quoted from remarks made by the hon. member for Grenville and Leeds (Mr. J. D. Reid) some two years ago in this House in which he referred to these particular buoys. And the passage he quoted was the following:

Up to about two or three years ago, we had the Pintsch gas system by which we had a permanent light on the gas buoys. It was changed then to the acetylene gas system.

I have not the slightest hesitation in saying, as I see from the Auditor General's Report, that the government have spent in the neighbourhood of $1,000,000 in the fiscal year of 1905 in making these changes, that there has been a very considerable rake-off, say from 25 to 50 per cent. Some one is getting that rake-off.

That was the statement made by the hon. member for Grenville and Leeds more than two years ago charging dishonesty on the part of departmental officials, and pretending to know sufficient to justify his making use of the term 'rake-off' and stating even the commission given government officials. But the finding of Mr. Justice Cassels completely disposes of that statement. Well, on statements just as ridiculous, the government are asked to consent to the appointment of another commission to make inquiries concerning the operations of other departments. Returning to Mr. Justice Cassels' report in this connection, what I cannot understand is that Mr. Justice Cassels should have adopted a certain procedure in the case of the gas buoys and another procedure in the case of the fog signals. In the case of the Willson buoys, he decided that it was not necessary to make public their cost. But in the case of the fog signal, he made a contrary ruling and obliged the manufacturer to go into the cost. In the case of the Willson buoys, he held it was not a matter of public importance what profit was made by Mr. Willson, but he found that it was matter of importance what profit the Canadian Fog Signal Company makes. In the case of the Willson buoy he did not invoke his interpretation of the patent law as against Mr. Willson, but he does as against the Canadian Fog Signal Company. I cannot understand this diversity in ruling upon two matters of a very kindred nature. I am inclined to think that his rulings in connection with the Willson gas buoy were the proper ones, and that those made in connection with the Canadian fog signals were not. They certainly could not both have been right.

Hon. gentlemen opposite for many years have had a great deal to say respecting the sale of these buoys to the department. It is a matter which we heard of frequently during the last election and which we often heard of in this House, but strange to say hon. gentlemen opposite, though threatening to investigate this matter in the Public Accounts Committee, have never ventured to make the final plunge and demand an inquiry. It was openly stated that Mr. J. F. Fraser, the commissioner of lights, was undoubtedly profiting by the many purchases of the department from Mr. Willson. The commissioner found there was no justification for this, also that Mr. Willson did not make any expenditure to government officials for the purpose of securing orders for these gas buoys. He also found that there is nothing in the evidence to justify the charge of excessive prices, and his finding with respect to all the purchases made from Mr. Willson, entirely frees the department from any censure in that direction.

Doubtless the purchasing of these buoys involved increased expenditure by the department, but in a word, I say it was a necessary expenditure, it was in the interest of navigation, and all men interested in shipping or marine matters in this country will justify the purchase of these buoys from Mr. Willson. There is no doubt that the cost of equipping the river St. Lawrence and other portions of our coast line with these gas buoys meant that the department would be obliged to pay a higher price than they were paying for the Pintsch buoys which they had been in the habit of purchasing for some years before. But while the cost of the Willson buoys was greater, it was a more efficient buoy, and the department and the country could well stand the increased expenditure. I submit that it is eminently satisfactory to the Department of Marine and Fisheries, to the members of the government and to the friends of the government to find that Mr. Justice Cassels, after an exhaustive inquiry into the whole matter, finds that the prices charged were not excessive, that the buoys were a great aid to navigation and their use was in the interest of shipping, that there was no improper conduct on the part of any member of the Lighthouse Board, who recommended the purchase of these buoys, and that no official of the department was guilty of any improper conduct in connection therewith. I say, these findings are satisfactory to the government and to the friends of the government, because, for several years, hon. members oppositive have been crying graft, and charging improper and extravagant expenditure in conection with these purchases. The next matter which I wish to take up is the findings of Mr. Justice Cassels concerning the Canadian Fog Signal. The question that he was considering was whether there had been a 'lack of conscience' in connection with this expenditure of the department by dishonesty on the part of the officials. From this point of view, he refused to allow the company, whose business was under consideration, to be represented by counsel. I am instructed that the Canadian Fog Signal Company asked to be heard by counsel. Mr. Cassels refused this. It does strike me that this was somewhat unfair. If Mr. Justice Cassels thought it proper on his part to inquire as to the cost and as to the price of the Diaphone Fog Signal, it was only proper that he should permit the owners or manufacturers of this pat-

ented article to be represented by counsel if they wished. In the case of the Canadian Fog Signal Company Justice Cassels however, comes to the conclusion that there was no 'lack of conscience' on the part of the officials, and that the whole course of the business of this company with the government had been absolutely regular and honest. Incidentally, he considered the question of manufacturing cost and the price as to which the manufactured product was sold to the government. I submit that, having decided to go into this, he should have gone further and permitted the Canadian Fog Signal Company to give evidence as to the elements of value that went to make up the cost of this manufactured article, and to explain the apparent discrepancy between the actual manufacturing cost and the selling price to the government. And, if that had been done, there would not have been shown the apparent discrepancy which we find to-day upon the records. The Canadian Fog Signal Company are the patentees, owners and manufacturers, of a sound-producing device as an aid to navigation and known as the Diaphone Fog Signal. Mr. Justice Cassels finds that this device is a great aid to navigation. This instrument was highly spoken of by Mr. Hugh Allan, by Mr. Andrew Allan and other gentlemen representing the Montreal shipping interest, in giving their evidence before the commission. Mr. Justice Cassels finds the cost of the device to have been $220, a figure that has been mentioned two or three times by hon. gentlemen opposite without explanation, one would not be surprised at finding hon. gentlemen opposite or people outside of this House criticising—as they might criticise with some degree of fairness—the great discrepancy between the cost and the selling price. Mr. Justice Cassels finds that the royalty paid on this machine was, on the average, $400, and he allows a profit of 100 per cent on the fog signal costing $220. Thus, he finds the total cost to the department should be $840, whereas the department to-day are paying $4,600 for this instrument. Now, I say that that finding is incorrect, it is not justified by the evidence. I say that the inquiry of the commissioner and the counsel representing the department on this occasion did not elicit, and did not attempt to elicit, sufficient facts, and the finding is therefore unfair and unsatisfactory. These instruments must necessarily be purchased from this company in the future, if they are purchased at all. I trust the Department of Marine and Fisheries will not refuse to purchase more of these fog signals—seeing they are such a great aid to navigation—by reason of the finding of Mr. Justice Cassels. I have made the statement that that finding was incorrect, and I think I can prove that in just two or three words. Let me premise my attempt to prove this by making the statement, that in only one year did the department buy any great number of fog signals from this company. The average number of sales in every year but one, was seven. Putting the profit at the figure named by Mr. Justice Cassels, viz., $220, the total profits for the year would be $1,540. When I tell the House that the evidence discloses the fact that the Canadian Fog Signal Company paid the government alone $500 a year for the use of their testing plant at Toronto, and when I say that the cost of fuel for operating this testing plant alone was, for some years, over $250, I have shown that more than half the alleged profit was absorbed, even without reference to any other fixed charges of the business. And, in stating these figures, I think, I amply make good my statement that the finding of the commissioner in this respect was absolutely valueless. Certain statements were filed by the Canadian Fog Signal Company as exhibits, during this investigation, and I wish to put on record one or two. One statement showed the receipts and disbursements of the company from October, 1902, to 1908, a statement prepared by Messrs. Barber and Gardner, chartered accountants, and by them certified. This statement shows that the total amount received by the government was $676,000 during all these years. It shows disbursements of $530,000, leaving a balance of $140,000 to be distributed as profits over the same six years, leaving available for dividends, this statement says, $22,600 per annum. This company also filed a statement showing their fixed charges per year, and I wish to put on record a sample statement for the year ending September 30, 1907, showing what were their fixed charges.

Storekeepers' wages	$ 624 00
Offices and workshop rent	1,925 04
Electric light	55 08
Telephone rent and long distance	259 87
Miss Mathews	624 00
Mr. Wadsworth	1,200 00
Stationery, printing, typewriting, books, magazines	128 53
Packing boxes, lumber, &c	84 53
S. L. Gibson	1,500 00
Office furniture	30 00
Patent fees	46 50
Cartage	118 72
Advertising	368 90
Insurance and taxes	166 65
Telegraph	136 06
Patterns	482 34
Jigs, tools, gauges, &c	95 38
Development and testing	2,080 40
Testing boat—	
Salaries: 1 engineer, 1 wheelman, 2 deckhands (6 months)	1,140 00
Expenses for 6 months, 4 men, 30c. per day each	240 00
Depreciation, 10 per cent	1,200 00
Power account at eastern gap	93 76
Travelling expenses—S. L. Gibson	270 89
	$12,870 65

Now, the commissioner apparently paid no attention to these statements filed by the Canadian Fog Signal Co., showing what were their fixed charges, and the finding, therefore, that this instrument should have been sold for $840 to the department, is I say, absolutely at variance with the facts, and I think very little apology can be made for the commissioner and counsel for making such an error. The company also filed statements showing that for the year ending September 30, 1906, their profits were $8,244, or at the rate of 16½ per cent; for the year 1907, their total profits were $32,743.99, or a profit of 40 per cent on the amount received; for the year 1908, the profits were 20 per cent on the amounts received. These profits are, of course, more than the profits which industrial concerns usually require; but I submit and I am sure any fair-minded member of the House will agree with me, that proprietors of a patented article having a limited sale, are entitled to a profit somewhere in the region of that which they received during the several years I have mentioned, namely, 20 to 40 per cent.

There is another feature I wish to mention here in connection with this Fog Signal Co., and I am referring to it solely that it may be placed upon the records; it is a statement showing a comparison of the cost of operation of the English siren which the government had in previous years purchased, and the diaphone at Father Point, Que.:

Comparison of operation of English Siren and 3' Diaphone at Father Point.

		Cost per year of oil for power purposes only.
The English siren required for its operations 3-12 H.P. gasoline engines, each using 2 gallons of gasoline per hour. At 600 fog hours per year and 20 cents per gal for oil, the cost was..	Siren.....	$720
The length of blast was 2½ seconds per minute.		
The diaphone now in operation requires 1-12 H.P. engine, and at the same figures the cost for power oil is..	Diaphone.	240
The length of blast is 8 seconds per minute.		
If the diaphone blast had been kept at 2½ seconds, the cost of oil would be only $75 per year..	Diaphone for same length of blasts..	75

The actual saving is $480 per year and is sufficient to pay a standard 3 feet diaphone outfit in less than 10 years. Had the blast been kept the same length the annual saving would have been $645, which would have paid for the diaphone outfit in about 7 years, and a complete new plant with diaphone in 12½ years.

Mr. A. K. MACLEAN.

Now, Mr. Northey, one of the persons interested in the manufacture of this fog signal, presented to the commission a statement which gives considerable information respecting the sales of these diaphones, and I wish to read a few clauses from this statement, as it will correct some of the errors which the commission fell into:

When the general business of the Northey Company, Limited, was sold in 1902, I retained the fog signal business, including the basic patent for the diaphone with four other patents purchased in the early part of 1902. My personal experiments and development of the diaphone resulted in the issue of the further patent to me in July, 1902. Before the diaphone was developed the Northey Company had furnished siren plants to the government, at that time the most efficient signals known.

In addition to the first patent issued to me in July, 1903, I applied for a patent in Newfoundland in December, 1903, which was issued in February, 1904. This was acquired by the Fog Signal Company by the agreement of April 13, 1904, covering also all developments, all Newfoundland contracts and all Canadian government contracts to instal plants in Newfoundland.

Now, Mr. Justice Cassels neglects to take notice of the fact that the instrument which Mr. Northey sold to the department was not the instrument which he purchased from the American patentees. True, that was the basic patent, and he was still paying a royalty upon it, but he improved that instrument by three or four patents which he subsequently took out himself. It was the basic patent that he bought from some gentleman in the United States and which he improved and sold to this department. Mr. Justice Cassels altogether failed to take that into consideration.

Mr. BOYCE. What was the price of that fog signal sold to the government, and the cost of production?

Mr. A. K. MACLEAN. The average price was $4,600; the actual cost, taking no account of any other consideration, according to Mr. Justice Cassels, was $220. Now, the diaphone before accepted, had been inspected a number of times by the then minister, and by officers of the Marine and Fisheries Department. This statement goes on to say:

The price tendered for the instrument, as would be apparent to any one, was not being based upon the cost to manufacture, looking at the size of the instrument and its general appearance. Its value was never considered in this way, but on the contrary, on the basis of its value as a new and important scientific invention.

Now, Mr. Speaker, it is unfair for hon. gentlemen to urge that the selling price of an instrument of this kind should be determined by the actual cost of manufac-

ture. Mr. Justice Cassels finds that the actual cost of the machinery and labour is $220. Supposing the inventor had devoted 25 years of his life to the development of this machine, supposing he had spent a million dollars in its development, are not these two elements to be taken into consideration in fixing the price of this machine? Is it not absurd to find that no other consideration was invoked in ascertaining what should be the price except the actual cost of the metal involved in the instrument. The statement goes on to say:

The character of the invention shows that the price is reasonable. It is admitted that the diaphone, as Col. Anderson put it in his evidence before the commission, is the best fog alarm in existence to-day. It marks a distinct advance in inventive science. Its character was explained to the Royal Commission on Lighthouse Administration in England, 1907, by Lord Rayleigh, scientific adviser to Trinity House, i. e., the British Lighthouse Department. In both the diaphone and the siren there are elongated apertures through which air is admitted periodically. In the siren these apertures are opened and closed by a revolving drum which passes over them. In the diaphone it is a piston which moves backwards and forwards and so alternately covers and uncovers the apertures. The great improvement of the diaphone is in its penetrating power, evenness of pitch, and by the application of certain principles of sound which produce consonance between the diaphone and the horn or resonator.

The commercial value of the diaphone is not to be measured by the cost of the materials and labour that will be required to make the instrument. The cost is excessive, as suggested only when the cost of materials alone is considered, but we contend that it is absurd to say that there should be only a profit of fifty per cent on actual materials and labour. This can best be illustrated by the difference in weight of the plant and instrument between the siren and the diaphone. The less effective siren and its plant weighed 9,280 pounds, the diaphone has a shipping weight of only 87 pounds. If the cost of the material is to be the criterion, then the less effective instrument should be entitled to over one hundred times the suggested price of the diaphone. What we contend is that the instrument which with less plant takes the place of the cumbersome instrument which weighs one hundred times as much is on every ground entitled to a higher price than the one it supersedes.

Now, this statement proceeds to make a comparison of the prices paid by the British government for the siren which this government previously used. The diaphone is, in every respect, a superior instrument. The initial cost is very little more and the annual cost of maintenance and operation is so much less that it more than offsets any difference in the original cost. Mr. Justice Cassels also proceeds to criticise the officials of the department for not knowing the patent law of this country This strikes me as being a peculiar finding, particularly when it is known that only a few months previous to the time of this examination, the Supreme Court of Canada held, confirming a judgment of the Exchequer Court, in a certain action which was brought in the Exchequer Court by Mr. Justice Cassels on behalf of a client, that a patent could be infringed or lost by reason of the owner refusing to sell. Now, the intepretation of the law, as propounded in this case, was a matter of only recent occurrence. The decision given by the Exchequer Court and affirmed by the Supreme Court was in an action which was brought by a certain client on the advice of Mr. Justice Cassels, then Mr. Walter Cassels. It seems to me that it was unfair to say that the officials of the Department of Marine and Fisheries should have known the patent law, and should have known that it was not what Mr. Justice Cassels thought it was just a few months before that. I must hasten on because I find I am taking more time than I intended. But, I wish, very briefly, to refer to a few matters, and one has reference to the purchase of certain silverware by Mr. Coghlin. I will not take time to read the evidence, but I would ask hon. gentlemen, at some time, to read the evidence given by Mr. Coghlin before the commission and also the evidence of Mr. J. M. M. Duff given at Montreal.

Mr. FOSTER. Which Mr. Coghlin is it to whom the hon. gentleman refers now?

Mr. A. K. MACLEAN. Mr. Coghlin, sr., the gentleman who sold the goods.

Mr. FOSTER. That gave the evidence?

Mr. A. K. MACLEAN. Yes. The son also gave evidence. This matter has been referred to by hon. gentlemen opposite as an evidence of improper dealings on the part of some departmental officials. There are some curious facts in connection with this transaction. There is no doubt Mr. Coghlin was obliged to refund to the department $1,100 on account of this purchase. This is the way he puts it:

A. In connection with that I may tell you the Auditor General and the deputy minister imposed upon me, absolutely imposed upon me. They summoned me up here to ask me some questions and they said, 'You have overcharged us on these invoices.' I explained matters to them as best I could from memory and they were not satisfied. Then I said, 'What will you be satisfied with? I don't want my name to be made public in this connection, I am not doing this sort of business.' I said, 'How much will you want'? They said so much. I said, 'Give me a cheque,' and I made it out there and then. On inquiry when I got back to the office I found I had not only returned my profit, but $400 or $500 more than the profit I made on the transaction.

Later on Mr. Coghlin says to Mr. Justice Cassels:

The Auditor General was over zealous.

I always was inclined myself to think, after hearing the evidence of this gentleman in the Public Accounts Committee, that there was something in explanation of it, and I think that in all probability he did give the true explanation there. He did not want to have his name used in the newspapers as having charged excessive prices for these goods, and so, to escape this criticism, he made this refund of money. At the inquiry in Montreal the commission, very properly, I think, appointed an expert accountant to examine many accounts, and this gentleman's name was J. M. M. Duff. I wish to read a few words from the evidence of Mr. Duff respecting the Coghlin purchase:

Q. And as a result what did you find?—A. I saw the original invoices of the goods purchased, I verified the amount of duty and freight paid from vouchers, and I found the charges to the government, I verified the amount of that from the blue-book, and the result is that I find after taking off the refund which Mr. Coghlin made the firm received the sum of $2,320.92 for the goods in question, and they cost them in actual cost laid down on the floor of their shop, $2,043.89. Besides that $2,043.89 there would be other expenses, such as freight to deliver the goods in Quebec and cartage and various things, small items.

By Mr. Watson:

Q. What was the percentage of profit in this transaction?—A. It looks to me as if they made no profit at all after giving back the $1,100.

Q. After giving back $1,100?—A. Yes.

Q. The $1,100 would be about what profit?—A. The $1,100 would be giving them about 40 per cent.

Q. 40 per cent?—A. Yes.

Q. That is a large profit?—A. Well, on some things it would be; not on that class of goods.

Q. Not on that class?—A. No, not extraordinary.

There is an explanation which I think must be accepted by the House concerning this matter. I think it is a very fair explanation and affords another instance to show how easy it is to have the actual facts perverted or not truthfully and in detail presented to the House or to a committee of the House. Mr. Duff examined the accounts of one concern in Montreal which sold to the steamer 'Arctic,' at the time of her expedition to the north, some $12,000 worth of goods, and the accounts were very severely criticised in this House and before the committee appointed to inquire into the purchases made for the 'Arctic.' But in this sale of $12,000 worth of goods for the steamer 'Arctic,' Mr. Duff found that the total profits were less than $500.

I wish to refer briefly to two or three other matters and one is in connection with Captain Johnson, of Halifax. At page 48 in this report, Mr. Justice Cassels makes this finding:

Captain Johnson, of the steamer 'Lady Laurier' has to discharge himself from blame in respect of two matters brought to light in the evidence adduced in Halifax. First, in respect to the receipt by him of $1,550, apparently paid him on account of so-called salvage services performed by the 'Lady Laurier' and the officers and crew for the steamship 'Hestia.'

I say that finding is not correct. There is nothing in the evidence to justify it, and it is most inexplicable how the commissioner came to make such an error. Let me preface my statement by two or three explanatory words. On the 12th of May, 1906, the steamer 'Hestia' was picked up off the Nova Scotia coast in a sinking condition. She was overtaken by the steamer 'Lady Laurier' and towed to Shelbourne roads. The towing took about half a day. The 'Lady Laurier,' after towing this stranded steamer to the shore, left her there and proceeded on her work. Later on, acting on instructions from the department, the 'Lady Laurier' was sent to the scene of the stranded ship with instructions to stand by until she was floated. In the meantime the Halifax Tow Boat Company was engaged to raise the steamer. The only service which the 'Lady Laurier' performed was to tow the sinking vessel to shore and stand by three or four days while she was being raised. The crew of the 'Lady Laurier' worked in assisting the salvors to raise the 'Hestia' and the Halifax Tow Boat Company paid the crew—not Captain Johnson—for work performed by them. Later, according to the evidence, the underwriters made a gratuity to Captain Johnson and the officers of the ship and I wish to read a letter respecting this matter sent to Cunard & Co., of Halifax, from an underwriters' association:

I confirm cable sent you to-day as per copy inclosed advising the payment to your credit with Messrs. Williams Deacons Bank, Ltd., of the sum of 200 pounds, the agreed amount to be allowed as gratuities to the captain and officers of the 'Lady Laurier.' You will no doubt arrange promptly for the captain of the 'Lady Laurier' to receive the equivalent of 150 pounds as his share of the amount, and will in conjunction with the owners' agents apportion and distribute the equivalent of the remaining 50 pounds among the officers.

It will therefore be seen that that $500 was paid by Pickford & Black, the agents of the 'Hestia' for labour performed by the crew of the 'Lady Laurier,' and merely for services rendered, and that $750 was paid to Captain Johnson by the underwriters as a gratuity and $250 to the other officers of the 'Lady Laurier.' In addition $350 were paid by Pickford & Black for damages done the 'Lady Laurier.' Therefore the findings of Mr. Justice Cassels are not correct. The hon. the leader of the opposition was under the same impression as Mr. Justice Cassels,

because he said last night that the 'Lady Laurier' was under contract at the rate of $400 a day to perform a certain service. I can understand anybody being misled by the evidence unless he went into the evidence thoroughly, but I cannot understand the commissioner making a mistake after the matter was explained to him thoroughly, even although he and Mr. Watson, the counsel, apparently did not wish to get an explanation from several of the witnesses. Captain Johnson of the 'Lady Laurier' received a message from the department to assist in towing the wrecked steamer. The Halifax Tow Boat Company objected, but nevertheless there was an understanding that if no other tow boat was available the 'Lady Laurier' was to do the towing at $400 per day. But she never did the towing.

Mr. MACKENZIE. Why was that service not performed?

Mr. A. K. MACLEAN. For the reason that it was performed by the Halifax Tow Boat Company and it was against the policy of the department to allow a government boat to engage in towing if private individuals were ready to do it. Surely Captain Johnson was entitled to the money he received. I think I can safely say that the commander or the crew of a merchant ship is obliged to render salvage service and may claim salvage. If you look on the gratuity of $750 as salvage, I say under our Canadian Shipping Act, Captain Johnson could have recovered that sum as a matter of law. If he was not entitled to it as a matter of law, I think he was a matter of custom. There is precedent for it. On the 10th of July, 1895, a letter was sent to H. W. Johnson, the agent of the Marine and Fisheries Department at Halifax:

> I have pleasure in informing you that by order in council of the 30th ult, the sum of $250 has been allowed you out of the amount of salvage of the wrecked steamer 'Amsterdam,' in recognition of the valuable services rendered by you and the extra labour performed in connection with this matter. Signed on behalf of the deputy minister.

Here is a case in which by order in council the agent of the department at Halifax received $250 and the man who was superintendent of lights occupying at that time the same position as Captain Johnson does to-day, was paid $500. I say that by custom and by law Captain Johnson was entitled without any departmental regulation prohibiting the same.

Then, there is the case in which Captain Johnson received $400 in connection with the wreck of the 'Mount Temple.' A little over a year ago one of the Canadian Pacific Railway steamers called the 'Mount Temple' went ashore near Lunenburg, Nova Scotia, with a large number of passengers on board. On the morning of the disaster I made it my business to go to the Marine and Fisheries Department to urge that the 'Lady Laurier' be sent to the scene, but the department had already sent the steamer. Under instructions from the department, Captain Johnson made three trips from Halifax to the steamer and rescued six or seven hundred passengers. While there he naturally observed the conditions of the wreck. The Halifax Salvage Association undertook the floating of the ship, and eventually succeeded in floating her. During their operations, which occupied several months, Captain Johnson rendered to the Salvage Association, they say, very valuable advice, and gave them the benefit of information he was able to give by reason of the facts that he was an experienced seaman and had visited the wreck and observed the condition of the ship on three occasions; and when they eventually recovered their salvage, they gave $400 to Captain Johnson, as a gratuity, and not, as it would appear from the findings, for the services rendered by the 'Lady Laurier'. Now, the very most that can be said of the acceptance of this payment by Captain Johnson is that it may be an act perilously near being censurable. The payment was made to Captain Johnson for services rendered outside of his official duties, and not as superintendent of lights, as the commissioner says.

I feel that I cannot close without saying a word or two upon the findings of the commissioner respecting the charge made against Mr. Boudreau, the accountant of the Department of Marine and Fisheries. The commissioner in his case finds the Scotch verdict of not proven. This I think is very much to be regretted. There certainly is no evidence of guilt on the part of Mr. Boudreau, and why the commissioner, after hearing the evidence, should feel justified, in his capacity as a judge, in finding the verdict he did is something I cannot understand. If Mr. Van Felson could not explain clearly every incident in connection with that alleged payment to Mr. Boudreau, the commissioner should have found that Mr. Van Felson was the guilty man. There is hardly an element of evidence in the whole case to justify the shadow of a suspicion against Mr. Boudreau, and I think the finding of the commissioner was both unfortunate and unfair. He should, in clear and unmistakable terms, have acquitted Mr. Boudreau of any guilt in that connection.

There are a great many other features of this report which I would like to discuss, but I find that it would take considerable time, and much to my regret I must conclude my remarks. As I have said, irregularities have been disclosed in the Marine and Fisheries Department. The commissioner, in the concluding portion of his re-

port, asks what are the remedies for the amelioration of the conditions found to exist, and he makes four very sound and fair suggestions. The first is that the department should have capable and efficient officials. It is perhaps not fair to make any remarks concerning some of the officials who have been retired; but I cannot help saying that while I entertain for the late deputy minister the most kindly feelings personally, having always found him a kind and agreeable official to have public business with, at the same time I cannot understand how many things could have occurred if he had exercised more than a technical responsibility as a deputy minister. It is impossible for a minister of a department, with his time divided by political, parliamentary and executive duties, to have control of the details of his department. Ministers come and go, and I think every minister should always make sure of having in his department a good, able, strong man as deputy minister, one who can resist the aggressions of men who operate by corrupt influences, men who at times appear to be friends of the administration, but who are too anxious to do things which easily discredit it. Mr. Justice Cassels also recommends that efficient officials be properly paid. I think that is an excellent recommendation. The government cannot obtain competent men to discharge the public business of a department unless they are prepared to pay them salaries somewhat corresponding to what their capacity and ability would obtain in outside markets. He further suggests that payments to those dealing with the department should be made promptly. I think this a very timely suggestion, and I trust that the Minister of Marine and Fisheries will hereafter see, if possible, that there are not long delays in making payments to those who are the creditors of the government.

In conclusion, let me say that the Department of Marine and Fisheries has for some years been the target of voluminous criticism from hon. gentlemen opposite. It has been a delirious and unbridled criticism. Hon. gentlemen have been very ready to whisper the good points of the administration of that department, and to megaphone the shortcomings of every official of the department. However, this is a good occasion for friends of the administration to be frank with the government and with the Minister of Marine and Fisheries. Transactions occurred in that department which were censurable. There has been inefficiency on the part of officials in the department as well as in the outside agencies. Friends of the Minister of Marine and Fisheries expect that he will make it sure that such things cannot occur again, and the friends of the administration will expect every minister to make sure that similar transactions cannot occur in other departments. I have sufficient confidence in the private and official integrity, in the capacity and ability as a departmental administrator, of the Minister of Marine and Fisheries, to believe that he will leave nothing undone to correct any irregularities which have characterized his department in the past. From my own personal knowledge, gained by close personal contact with him during the last few years, I am sure has has always been actuated by nothing but the strongest desire to give to this country a progressive and clean administration.

Hon. G. E. FOSTER (North Toronto). Mr. Speaker, I have listened with more than usual interest to the speech of the hon. member for Lunenburg (Mr. A. K. Maclean). I wondered what line of argument he would adopt and it has been interesting to follow his argument. I do not want to spend too much time upon that argument, for in the larger part of it he was in a far distant and foreign country and I do not propose to follow him in those, to him agreeable excursions. The hon. gentleman has of late lost faith in commissions. I wondered what had brought that about. Evidently he has no good will for the Civil Service Commission or for the Cassels Commission. I will leave the House to form its own judgment as to the reason for his somewhat sudden change of opinion. For a young man it seemed to me that he went a good distance when he characterized the three gentlemen who served on the Civil Service Commission as three fussy old gentlemen. Sometimes, you know, the youth thinks that he knows it all and he is not quite well enough on in years to prevent other people seeing that he thinks he knows it all. It is not so much a fault for a young man to think he knows it all but sometimes it is a great indiscretion to let it be publicly known. I almost think that the veteran gentlemen who formed that commission will still live in fair enjoyment of this world's pleasures and opportunities and will still be fairly well thought of by their not very small circle of old and tried acquaintances, even after this thunderous and ponderous condemnation of them which has been made by the hon. member for Lunenburg (Mr. A. K. Maclean).

The hon. gentleman (Mr. A. K. Maclean) went on to show reasons which appealed to him why this resolution should not be carried. I want to criticise just for a moment in all kindness and yet as trenchantly as possible his objections to it. He thought the resolution proposed was illogical and unintelligent. If the hon. member for St. Anne (Mr. Doherty) were here I would sympathize with him for this cutting criticism of the outcome of his public and

legal knowledge and standing. But how is the resolution illogical and how is it unintelligent? If my hon. friend will read it he will see that it is couched in plain English and says what it means. He may disagree with its meaning but in what sense is it illogical? First it says the Civil Service Commission was appointed and that it made certain strictures. Secondly as a result, and I think this comes in logically, the second commission was appointed and the second commission, even according to my hon. friend, has proved that the suggestions made by the first commission were in large measure true, and that the conditions were even worse than the first commission indicated. Now, these two statements are not illogical, neither are they unintelligent. The third statement follows from these two. If from a partial investigation in one department there has been all this beneficial exposure, it seems a fair and logical inference to make that if the probe had extended to other departments dealing with the same people we would have equally beneficial results from further investigations. I submit to you, Mr. Speaker, who have an eminently logical mind, that you cannot in any way agree with the hon. member for Lunenburg that this is an illogical and unintelligent resolution. I do not ask you to express a ruling in the matter, but I submit that my hon. friend failed to advance good reasons why this resolution should not be carried. What was his first reason? That the resolution is illogical and unintelligent. I have dealt with that, I think, satisfactorily. He says that it is not necessary to think or it is not thinkable that because certain things occur in one case then under similar circumstances they may occur in another case. I have always understood that similar forces under similar circumstances, will produce similar results. It seems fair to argue that with similar forces at work in other departments, under similar circumstances, there will be similar results. The argument is irresistible. What has gone wrong with the mental machinery of my hon. friend from Lunenburg this afternoon? Usually he does not put himself in such a box as that. Something must be the matter, up late last night, here with the rest of us? He says also that another irresistible reason why this should not be gone on with—and I commend this to the hon. member for St. Anne—is because there have been no suggestions of evil in any other department.

Honestly, let me ask my good friend from Lunenburg to revise that statement of his. Has he been in this House for the last four or five years, and not only in this House but in the Public Accounts Committee of this House, only to come to us from the very thick of the fight of these discussions to tell us that there have been no suggestions of evil doings in other departments than that of Marine and Fisheries? Why, these suggestions have been so frequent, so insistent, so startling, they have been with us whilst we have slept and whilst we have been awake. So common have they been that the constant practice in dealing with them has made of my hon. friend (Mr. A. K. Maclean) a most successful blocker. Has not the hon. gentleman heard these suggestions, and has he not fought them—manfully, I admit, and according to his lights though on bad grounds —in the Public Accounts Committee? Time and time again he and his valiant brothers in arms—one of whom, we hear, is to be translated to a sphere which will involve him in no more such contests—have stood against these suggestions of wrong-doing. Does not he remember how these three valiant brothers in arms, himself being one, have held the bridge, day and night, against the suggestions—and more than suggestions—of wrong-doing in other departments that were made in the Public Accounts Committee? Surely, as I have said, something has gone wrong with my hon. friend's upper storey, or he would never have made such an assertion as that which he made to-day.

The last reason he gave why this resolution should not be supported is that, while the same contractors are at work for the other departments that were at work for the Department of Marine and Fisheries, yet it is idle to put that forward as a basis for this resolution. The same malign influences of bribe-giving and of getting by means of bribes that which cannot be got by honourable competition, the same contractors and the same system may exist in the other departments that have been shown to exist in the Department of Marine and Fisheries, but that, we are told, is no argument for this resolution. If we must reach a conclusion, and if we are to be led by logical process, surely the conclusion must be that the evils that existed in the Marine and Fisheries Department are likely to exist in other departments also. Why not? Is it because the men of the Marine and Fisheries Department are of different natures from those of the Public Works Department? That is unthinkable. We cannot subscribe to such a view, nor do I believe that my hon. friend really thinks that his objection is a valid one. To me, the logic of the case leads all the other way—that the men in the Marine and Fisheries Department are not worse than those in the Public Works, and that, as some men in the Marine Department have been bribed, have fallen, have forfeited their positions as the result of exposure after examination, men in similar employ in the Public Works Department are not necessarily im-

mune from such influences, though the necessary conclusion of my hon. friend's argument is that their immunity is complete. When the microbe is abroad, it is just as apt to attack a person working for the Minister of Public Works as to attack one working for the Minister of Marine and Fisheries.

These are the four reasons according to the hon. member for Lunenburg, why we should not press our resolution. I commend them to you, Mr. Speaker, to this House, to the gentlemen of the press, and through them to the people of this country, who, I am sure, will value them at their worth. Having exhausted his reasons why this resolution should not pass, my hon. friend took his excursion ticket, and, leaving behind him the last vestige of the question we are discussing, went abroad into a long and interesting disquisition upon the theory of fog signals and their working, their price, and their excellence; he went up and down the St. Lawrence route, and told us how much better that route was than in 1896. He might have made the argument stronger, perhaps, and the explanation more lucid, if he had gone back to 1867 and showed the great advances made in the St. Lawrence navigation from the time of confederation. But what was the hon. gentleman's logical conclusion—and let me present it to my hon. friend from Nanaimo (Mr. Ralph Smith) who has a logical brain. Here is the argument: Because an instrument is good, you must not examine into how that instrument was bought and paid for; because the improvement of the navigation of the St. Lawrence is a desirable thing, you must not examine into the methods by which that desirable thing is attained; you must not consider extravagance, because, forsooth, some good has been accomplished. Do we believe that? Does my hon. friend from Lunenburg himself believe it? I do him the justice of thinking that, when he looks at his speech in 'Hansard' he will see that all this had nothing to do with the question in hand. It is all in line with the glorification club which has sprung into existence on the other side and which seeks diligently to find good things to say in order to draw attention away from things which are very much the opposite. And so, we have presented to us the excellence of the St. Lawrence route, the great power of the diaphone, the fine light of the gas buoy, and the fact that a treaty has been made between Canada and France—all these things have been trotted out in this argument in order to prove that we should not have an investigation into these other departments. I do not think it necessary to labour the argument. As Mr. Justice Cassels said of a case which was brought before him, and after but little evidence concerning it had been taken: 'Let us pass on to something else; there is no use in beating a dead horse.'

Now, if I come to a logical conclusion—and I hope my hon. friend will admit that I can make a fairly good approach to a logical argument—let me try to show the trend of his argument this afternoon and its necessary deduction. He has spent three-quarters of an hour and more trying to show that Judge Cassels made a faulty, inadequate and, in some cases, an absolutely vicious investigation, and came to absolutely wrong conclusions. Yet he told us that great good had resulted from this investigation. Well, I think that the only thing left for the hon. member for Lunenburg is to move in this House that some other gentlemen be appointed by the government to go over the work that Judge Cassels did so badly and do it better. If so much that is good has been attained in spite of the faulty method, and bad deductions, and wrong conclusions, of Judge Cassels, then for pity's sake let us put a better man on, go over the ground again and get still more good results. But the richest cream of the whole on the can of milk was this, when my hon. friend from Lunenburg (Mr. Maclean), with grey hairs streaming over his ample brow, with the marks of age and great experience everywhere upon him, sits in judgment on Judge Cassels' opinion with reference to Admiralty law; and then, after he has sat down on it, suddenly wakes up—if he has waked up yet—to the fact that the Prime Minister sitting just ahead of him has appointed Judge Cassels as judge in appeal in all Admiralty cases in this Dominion of Canada. Putting all these things together, I am going to sit right down close by Judge Cassels in this business, and not take any part in the excursions that my hon. friend has invited us to take this afternoon. I advise him not to take these excursions. Sometimes when you are improperly guided and your impulses are not quite to be relied upon, in strange countries and foreign lands you get into difficulty before you know it, and I am afraid that my hon. friend's excursion into Admiralty law has led him into one of those dangerous and unknown places.

I am not going through the course of questioning and answering and conclusion with reference to Captain Johnston's case. Would the minister tell me whether Captain Johnston is still in the employ of the government?

Mr. BRODEUR. Yes.

Mr. FOSTER. Then he has an officer who has absolutely snapped his finger in the face of the department and in face of his instructions, put money in his pocket, and has kept it there until this day. Why has he been kept there? Is it true that he has been promoted?

An hon. MEMBER. Yes.

Mr. FOSTER. Why has he been promoted? Is this the stern chastisement that was to purify and make better the department, and strengthen its discipline, when the commander of one of the high admirality ships says: 'A fig for your orders and your instructions!' I am afraid that discipline is very much threatened in my hon. friend's department, and soon, to lack of organization, lack of direction and lack of conscience, we will also have to add lack of discipline. For how can the master and servant walk together unless they be agreed in the way of instruction and carrying out of instruction? Well, we will leave that for the future.

My hon. friend—and I take the argument here just because he made it—has declared that there ought not to be and that there is not any reason for going into the other departments; that what may have occurred in one is not likely to occur in another. I asked the other day the Minister of Marine and Fisheries if he had yet appointed his deputy minister. He said he had not, he had an open mind, he had not decided. Well, there is another point that I wish to bring to his mind. He vaunted himself yesterday for having destroyed the patronage system in his department. Does he mean the system, or the patronage lists? Which is it? When he took the extraordinary care of getting his own paid advocate, hired by himself, to introduce into the records of the commission a statement that he had done away with the patronage system so as to gather strength for himself, although it was absolutely foreign to the investigation—when he did that, what is the communication that he sends? Judge Cassels is misled, I think, in making the statement that he has done away with the patronage system. Here is the return to the order, going beyond the scope of the commission and which was obtruded for an obvious reason by Mr. Watson who interrupted the regular work and said:

I desire, my lord, in connection with the matters that have been before your lordship as commissioner in this investigation, to state what I referred to before your lordship at the last sitting at Quebec city. I stated to your lordship at that time that I understood the Minister of Marine and Fisheries had taken official action in abolishing the patronage list. I merely want now to follow that up and to state that I desire to place before your lordship, the official notice and statement that I received from the deputy minister, by direction of the minister, showing that that is the fact and that the patronage list has been permanently and absolutely abolished in this department. I will put that upon the record.

Here is the statement sent by Mr. Stanton, assistant deputy minister, to the following effect:

I am, by direction, to inclose for your information a copy of the Hon. Mr. Brodeur's memorandum to the acting deputy minister, dated the 4th instant, instructing that the patronage files and lists containing names of firms which have been recommended to the department from time to time, are to be disregarded in future.

That is the whole of it. The minister can easily do away with the present files and patronage list and be a thousand miles distant from doing away with the patronage system. But the judge seems to have taken a wrong impression, and to have come to the conclusion that the patronage system was done away with by my hon. friend. Now let me say to him that if he has done or will do, away with the patronage system, fairly and squarely and wholly in his department, he will find no words of commendation more hearty from any one than from myself. But I asked him a question the other day, and I put a simple one to the Minister of Public Works, and I find that in each of their answers there are apertures through which you could pass a good sized automobile easily—it all depends on the will of the minister. The patronage system is done away with by my hon. friend, yet his acting deputy, Mr. Désbarets, went down to Halifax, and in the very heat of the election, put on, at the command of Carney & Roche, to aid them in their election, and admitted as such, a hundred extra men that the officers down there state were not necessary. 'Things that occur in one department are not apt to occur in another.' Are they not? What happened in the Intercolonial Department? The very same thing. August of last year saw 1,793 men temporarily employed on the Intercolonial, and the pay-list was $487,000. October saw 2,922 men employed, 1,200 more in a single month, and the pay-roll had gone up from $487,000 to $509,000. The next month the number went down to nearly the normal pay-list, to a little below the normal. In the province of Prince Edward Island the same thing took place on a smaller scale. In the Marine and Fisheries Department, in Halifax County, 92 men were on in August, and in October 288 men were on.

I say again what I have said a dozen times that if the Minister of Marine and Fisheries had a head on him, eyes in his head and a knowledge of the department he must have known that that thing was going on. In the city of Halifax for past years back—I am not going to say how many—the patronage of my hon. friend's department has been almost absolutely in the hands of Messrs. Roche and Carney and the minister knew it and knows it—knew it and knows it because he mingled with these men. They were here during the session of parliament, he listens to their soft persuasions, and if these do not prevail he gives attentive ear to their menacing threats. But soft persuasion or menacing threat, one way or the other, they get their will. And the Minister of Marine and

Fisheries, but yesterday, paraded his ample skirts as the greatest reformer of the age. I saw the tinge of shame upon the cheek of my right hon. friend and, although one would have to have a mighty big imagination to assist his vision, I thought I saw it also on the cheek of my hon. friend the Minister of Public Works, when this Luther of party purity paraded himself yesterday as the great reformer. How cruel of my hon. friend! Why could not he have said that the government has reformed things? Why could he not have linked his colleagues with him? Is he the superior mind in reformation, the only one in the cabinet, as he appears to be the only one and to have been the only one who was perfectly oblivious to the corruption and knavery in the department over which he presided? These men have nothing to reform! but my hon. friend had a lot to reform. Has he done it? What was one of these reforms? Wonderful! He plumed himself that he had kept within his appropriation. Why, the law obliges him to do that. He would be convicted at once of lack of conscience if he did not do it. He would have come under the ban of the Civil Service Commission and of Judge Cassels as well. What a splendid reform! Have it painted, let it be put up where generation after generation can see it so that they can be told that in the year of grace, 1908, and in the reign of His Gracious Majesty King Edward VII., a great reformer arose in the Department of Marine and Fisheries and that the reform that he actually carried out was that this last year he had kept within his appropriation! Let me clinch this argument. If this sort of thing is done in the Department of Marine and Fisheries, and if we have actually proved, out of their own mouths, that it was done in the Railway Department, is there not the very same necessity for an investigation into the Railway Department as there is for an investigation into other departments? I think there is. Let me go back a little farther. What is the whole effort, or rather the double effort, of hon. gentlemen opposite? The first one it to make it appear to the country that the government faced the occasion, was equal to the crisis, instituted an investigation into the working of the departments and punished the malefactors. Is not that what they tried to make us believe? Is not that the gist, is not that the tendency, is not that the purposes of their argument? What is the truth? The simple truth is that for weeks, months, years, we bombarded this government with suggestions, with intimations, warnings, facts, resolutions, Public Accounts investigations going to show that things were not well in the departments, and what reception did we get at the hands of these gentlemen? Did they ever allow one of our resolutions to pass? Did they ever grant us an investigation that we asked for? Did they ever fail to block as best they could an investigation in the Public Accounts Committee? Did they ever forward one of our investigations in this House? No. They met us with the statement: 'It is all froth and fury; there is nothing in it; the departments are all right. Peace, peace is the watchword and honesty is the motive. We cannot let you go into this because you are wasting time for nothing, and there is nothing in it. If this accident had not happened you would have had none of this debate here to-day, you would have had no Cassels' Commission and no probing of this department.' I want that to sink right into the heart of every man in this House and into the minds of the people of this country. I make the statement once more. If it had not been for the accident, unforseen and—oh, pity of pities—unprovided against by the Prime Minister, you would have had no investigation of this department, you would have had no Mr. Cassels and none of the report which we are discussing now. How do I prove that? The Prime Minister stood up in Welland or Niagara and said to the confiding, trustful people: How did the government meet these charges? This is how they met them. We had suspicions that things were not all right in the Department of Marine and Fisheries, we appointed a commission to investigate them, they found our suspicions justified; we appointed another commission, Judge Cassels, in order to find out the guilty persons. That is what we did. We did not wait for charges but we did that. What government could do more? That is nearly verbatim et literatim, what my hon. friend said, and every man who listened to him said: 'Laurier is a trump after all; he did not wait until they made charges before the House; he found out that there was something wrong in the department, he appointed a commission to trace that wrong, it was found that there had been bad practices, he put another commission to work to find out the bad practisers, and to pick the black sheep out from the white sheep before they would contaminate the whole bunch.' What are the facts? The right hon. Prime Minister refused every resolution, every plea, every argument for an investigation, every fact that we put before him and his government and would not allow us to investigate one of his departments. The Civil Service came to him for an increase of pay. They said: The cost of living has gone up and our salaries have not gone up in proportion. We want more pay. He procrastinated and there is where he fell into the hole. He did not want to meet the question with the knowledge he had as regards the cost of living, and the fact

that salaries had not been raised. Did not the right hon. gentleman know that the cost of living had increased? If he does not know it let him ask one of his officials and he will give him the figures in fifteen minutes. Did not the right hon. gentleman know that salaries had not gone up according as the cost of living had gone up? He had all the knowledge that he wanted, but he procrastinated and he procrastinated by resorting to the medium of a commission. Then he got a commission composed of Messrs. Courtney, Bazin and Fyshe, and he said to them: We are in a great hurry, go and examine into the condition of the Civil Service, the cost of living, their salaries, their system and report to us. Did he ask for any more? Did he tell them in his instructions that he had suspicions that things were going badly in the Department of Marine and Fisheries, and would they be kind enough when they dropped into that department to look carefully into its administration? Look at the commission and see if it is there. Study my hon. friend's first angry statement when the commissioners' report came down, when he declared that they had gone into his department without asking his leave and whilst there had gone beyond the scope of their commission? Did he do so or not? Ask the Minister of Militia (Sir Frederick Borden) who, with all his gallantry, in the full pomp and power of his military surroundings pitched into poor Messrs. Courtney and Fysche, and Bazin, hauled them over the coals and said they went where they had no business to go. The Minister of Justice (Mr. Aylesworth) clenched it all in his own constituency by quoting the words of the commission and giving his legal opinion that they had no right in the world to go into such an examination as they indulged in, in a spirit of mischief, in the Department of Marine and Fisheries. In this House he made the same argument. The commissioners during their investigation into the status of the Civil Service and the working of the system, took it into their heads to lift the lid a little bit from one of those boiling cauldrons in the Marine Department and, animated if not exhilarated by the stench that came from it, thought they would give a little bit of the perfume to the general public and they did it in their report. Then a critical condition of things arose, then there was peril and crises, then we had the three commissioners backing the opposition charges, then the country pricked up its ears, read the report of a Royal Commission, and the Prime Minister and the other ministers dared not go back of that. But they did not go any further and Mr. Cassels was absolutely restricted. In what way? In his commission what department was at stake? The department of the Minister of Marine and Fisheries. Who appointed the commissioner? The Minister of Marine and Fisheries. Who appointed the lawyers? The Minister of Marine and Fisheries from his own side of politics, in beautiful illustration of the firmness and thoroughness with which he had set his face against the patronage system. Liberal Conservative lawyers there may have been, perhaps just as good as those appointed, but the spirit of patronage was still there, the minister had not quite got the old Satan under and he appointed two Grits instead of one Grit and a Tory. So with his own commissioner, picked by himself, with his own counsel, picked by himself, with his own papers ladled out to these lawyers to set before the commission as they chose, with these lawyers following every bit of evidence watching for every ambush, the investigation proceeded, and when it came up close to a point where it was warm some one cried hot, hot, and they went off upon some other question. I will give one example. A stone-breaker whose name I think was Reid—not a broken reed but a Reid who broke stones—had a big contract, I think about $50,000, bringing up rocks to Sorel, crushing them in his breaker, and selling them to this munificent department. The investigation was being carried on, the lawyers sat there intent, looking for every clue. All at once the man in giving his evidence said: I had to get or I did get all my stone from the county of Rouville. If the ghost of the middle ages had appeared before these lawyers they could not have been more startled —and they did not follow up that clue. Mr. Power was said to have known a great many things about that famous Halliday contract. Mr. Gourdeau said that Mr. Power knew about it and could throw light upon it. It was understood that Mr. Power was to be called. Was he ever called? So I could take you through numerous instances in which they shut off just at the right time for fear somebody would be scalded by escaping steam. That was the genesis of the second commission, that was its method and scope and after all we got something out of it. Now these gentlemen have the shamelessness to pose before the people of Canada and say: 'We, of our own free will and accord, did not wait for charges, we sent a commission and a second commission hunting out the evil things and we have purged the departments of all the black sheep—nearly all the black sheep at least.' But my right hon. friend who made that solemn promise, did he implement it, did he make an examination in the other departments? My hon. friends say there is no reason why that should be done. What were the suggestions, what were the proofs, what were

the allegations, what were the concrete instances that were put before the Public Accounts Committee of this House with reference to the Department of Marine and Fisheries? What was the cry by the Minister of Marine and Fisheries and the right hon. gentleman? Nothing in it, you shall not have your commission, you shall not have your probing and examination. What is the cry to-day with reference to the other departments, the peculiar argument of the Minister of Marine? You should not touch the other departments. Why? Because you might blast reputations and you might hurt feelings and you might brand people as being dishonest. In heaven's name whilst we are to be humane-hearted, whilst we are to be sympathetic, have we ever yet heard a statesman plead that you should not turn a department wrong side out and fling it to the winds of heaven to purify it because you might find some portions of dust and vileness that you have to characterize as such? That argument is surely no argument. Oh what a feast it would have been for these 'three fussy old gentlemen' if they had just got inside of the Interior Department, if they had been at the coat tails of Mr. Fraser when he landed that most profitable transaction at the expense of the public, when they were on the scent of the land deals of the Burrows and the Adamsons and of those other numerous individuals who have grown rich out of the public franchises of this country, grown rich because the departments did not do their duty and officers of the departments were recreant to their trust. The right hon. gentleman himself has said that the 20th century is Canada's century. For what? For intelligence as to the conservation of our resources—and yet for years, the right hon. gentleman has seemed to be chiefly desirous of taking out of the control of the country in the shape of its finest franchises as much of our public domain as he possibly could and placing it in private hands. Take your Public Works Department: do you mean to say that no ragged ends have shown there? No man can deny it. What are you going to do, Mr. Prime Minister? May I ask you, just personally between ourselves, what you propose to do with reference to the men who have stolen money from the public treasury? You appointed Mr. Justice Cassels. You at any rate, when you appointed him, thought he was preeminently the man to do this work, and he has done it. What has he told you? He has told you, Mr. Prime Minister, that the man who bribes is more culpable and more dangerous than the man who takes the bribe. To-day Halliday, according to the judge's statement, has $6,600 of the people's money. Do you propose to get that from Mr. Halliday? The Drolets have paid out $9,000 and more in proved transactions, and the judge says that all of that comes out of the public till. Are you going to get it back into the public till? If not, why not? It is not your money; it is the people's money. The taxes of the people, piled up in the strong box, gave you that money, and you are the trustee to see that every cent of it is properly spent, or, if a man steals it, or takes it wrongly, to get it back from him. What are you going to do about it? Are you going to pursue Halliday and get that money back? Are you going to pursue Drolet and get that money back? Are you going to pursue McAvity and get that $35,900 back? When the names of the men who have been bribing your public servants, corrupting them, eating into the honour and manhood of your public service, and have been doing it greedily and systematically, have been exposed, are you going to proceed against them for that money? You do not seem to be getting much of a hustle on about it. That report has been before you for months. You have what you call the greatest Minister of Justice this Canada of ours has ever produced; what is he doing about it? You have a most distinguished and able and erudite Solicitor General; what is he doing about it? Why are not these two great powers, who represent the justice of the country in the interest of the people, getting their boots on and going out against these malefactors and getting the people's money back? Why don't you do it? Is it because you share in it——

Some hon. MEMBERS. Order.

Mr. FOSTER. Just wait—for party interest and for party advantage? If not, why are you so modest about getting after the people's rights, you who are the trustees of the people's interests?

At six o'clock House took recess.

After Recess.

The House resumed at eight o'clock.

MANITOBA AND NORTHWESTERN RAILWAY COMPANY.

House in committee on Bill (No. 81) respecting the Manitoba and Northwestern Railway Company of Canada.—Mr. Cash.

On section 1,

Mr. NEELY. I gave notice that I proposed to amend clause No. 1, but the law clerk informs me that the form of my proposed amendment is not just what it should be and suggests a change. If acceptable to the committee, I would like to change the form of my amendment. The effect is substantially the same.

Mr. LENNOX. Let it stand over and report progress.

Mr. NEELY. If members of the committee are anxious that no time should be lost in making this change, I have no objection to letting this amendment stand over until Monday. But I see no reason why the amendment should not be considered now.

Mr. CASH. I am not cavilling about letting the matter stand, but would like to know what this amendment means.

Mr. NEELY. Its effect is to strike out from the Bill that part which has reference to paragraph A, section 9, chapter 52 of the Statutes of 1893.

Mr. GRAHAM. What part of the line is that?

Mr. NEELY. That part of the Bill which refers to the old charter from York to Prince Albert.

Mr. CASH. And what is it the law clerk complains of?

Mr. NEELY. Just the form of the amendment—that is all.

Progress reported.

SUPERIOR AND WESTERN ONTARIO RAILWAY COMPANY.

House in Committee on Bill (No. 78) to incorporate the Superior and Western Ontario Railway Company.—Mr. Conmee.

On section 1:

Mr. LENNOX—A number of gentlemen wish to be heard upon this Bill who cannot be here to-night. The Bill could not get through to-night at all events, so I move that the committee report progress upon it. There will be no loss of time on it. We have not much time to-night any how.

Mr. CONMEE. Has the Bill been distributed as amended?

Mr. LENNOX—I expect so.

Mr. CONMEE. What is the object of holding it up ?

Mr. LENNOX. It is not going to be held up. But the discussion could not possibly be completed to-night, and I am instructed that a number of gentlemen who want to speak upon it cannot be here at this sitting. There will be no loss of time by a friendly arrangement under which it can stand over. Of course, if the hon. gentleman (Mr. Conmee) seriously objects, we will begin to discuss it.

Mr. CONMEE. I think the hon. member (Mr. Lennox) is mistaken as to the Bill. I do not think that this is the Bill concerning which he has been instructed. However, he can have his way this time.

Motion agreed to, and progress reported.

LONDON AND NORTH WESTERN RAILWAY COMPANY.

House in Committee on Bill (No. 102) to incorporate the London and North Western Railway Company.—Mr. Beattie.

Hon. WM. PUGSLEY (Minister of Public Works). I am not personally aware whether the Committee on Railways carefully considered this Bill in relation to section 2. Section 2—in order, I suppose, to make absolutely sure that this parliament shall have jurisdiction over this railway, declares that the undertaking is to be a work for the general advantage of Canada. I can understand that a railway wholly within a province might be for the general advantage of Canada; it might be so located as to be likely to become part of a trunk line, or it might have connections which would make it very important and therefore of advantage to the Dominion generally. But I observe that, under this section 8:

> The company may lay out, construct and operate a railway of the gauge of four feet eight and one-half inches (a) from a point in or near the city of London, in the county of Middlesex, to a point in or near the town of Sarnia, in the county of Lambton——

This is a comparatively short railway and wholly within the province of Ontario, not connected with any trunk line, and, apparently, not to become part of any great system.

> —and (b) from a point in or near the said city of London to a point on Lake Huron, in the county of Huron, passing through or near the towns of Ailsa Craig and Parkhill, or either of them.

That also is purely local in its character. I am not quite sure whether or not it would be well for parliament to lay down the principle that as a steam railway company may be incorporated by this parliament, the very fact of it being a steam railway makes it a work for the general advantage of Canada. But it does seem to me that we ought to have some rule to guide us, we ought to lay down some principle of bringing these to the notice of the committee, because I am not aware of any railway charter which has been granted by this parliament which deals with an undertaking more purely local and provincial in its character than does this Bill.

Mr. HENDERSON. The committee was perfectly cognizant of the character of this Bill, and considered the question I think very fully. The fact that it touches navigable waters at two points, I believe, weighed in the minds of the members of the committee; at any rate, after very full consideration the Bill was recommended and sent to the House. Nothing was overlooked, it was the fair judgment of the committee that it should pass.

Mr. CONMEE. Section 10 provides that the company may build and operate wharfs and other structures, and may operate steamers which naturally, in connection with this line of railway, would be steam ferries. As it connects with other trunk lines the operations of this company and the powers they are asking for, extend beyond the limits of the province.

Mr. PUGSLEY. Not beyond the limits of the province.

Mr. CONMEE. Navigation must mean that, because there is no navigation in that section of the country except beyond the limits of the province.

Mr. GRAHAM. It is true that the representatives of the Ontario government appeared against this Bill and against the one preceding it. If we want to get on I suggest that we let this Bill stand, and when the other gentlemen are here we will discuss the two Bills together. The same principle is in both.

Mr. BEATTIE. This is not a local line at all, it is connected with several other lines that cross the St. Clair river. It is as much a railway for the general advantage of Canada as any other railway we have in this country. It will have connection with the Pere Marquette. Of course, it was contended that it did not go to the boundary, because it did not go to the centre of the river. That is a foolish argument. There is no line that goes to the centre of the river. It goes to the boundary of Ontario, just as any other line in this country. In fact all the vessels go up through Canadian water; the channel is through the Canadian part of the river. If the Minister of Railways wishes it to be held over, I have no objection.

Mr. GRAHAM. We will put them both through at the next sitting.

Progress reported.

CONSIDERED IN COMMITTEE. THIRD READINGS.

Bill (No. 96) respecting the Kettle River Valley Railway Company.—Mr. Burrell.

Bill (No. 86) respecting the Cobalt Range Railway Company.—Mr. Hodgins.

SECOND READINGS.

Bill (No. 114) to incorporate the British Colonial Fire Insurance Company.—Mr. Turriff.

Bill (No. 115) for the relief of Victor Eccles Blackhall.—Mr. Sutherland.

Bill (No. 116) for the relief of Annie Louise Coltman.—Mr. Turriff.

Mr. HENDERSON.

Bill (No. 119) respecting the Quinze and Blanche River Railway Company.—Mr. McGiverin.

Bill (No. 118) respecting the Anglo-Canadian and Continental Bank.—Mr. Gervais.

SUPPLY—THE MARINE AND FISHERIES DEPARTMENT.

House resumed consideration on the motion of Mr. Fielding to go into Committee of Supply, and the motion of Mr. Doherty in amendment thereto.

Right Hon. Sir WILFRID LAURIER (Prime Minister). It never was my intention at any time to intervene in this debate, except in so far as it was necessary to state to the House the policy which the government intended to follow in this matter. The House has a right to know what is the attitude which we have taken, and the reasons therefor. The House is already aware of the attitude we have taken, and the House is entitled to know the reasons therefor, the motives which have impelled us to refuse to accept this motion. But before I proceed any further, if my hon. friend from Montreal, St. Anne, (Mr. Doherty) will permit me, I would offer him my sincere congratulations upon the manner in which he has presented this question to the House. I differ from him. I do not admit his premises, still less do I admit his conclusions, but I am in the judgment of the House when I say, after an experience of many years, that it was impossible to present such a motion, in a matter of this kind which involved some irritation, in a better or more dignified parliamentary style. I am sorry I cannot extend the same compliment to the hon. member for North Toronto (Mr. Foster). That hon. gentleman has made a speech that is very characteristic of him. It was clever—very clever—and, to a certain extent, perfectly unimpeachable, to a certain extent very fair criticism, witty, pungent, unobjectionable, but my hon. friend could not conclude his remarks without showing the cloven hoof. My hon. friend could not conclude his remarks without showing us the narrow side of his nature in all its naked deformity. My hon. friend, in the course of his observations, after, as I said a moment ago, having offered very pointed and fair criticism, ended up by addressing himself directly to me. He stated that certain persons whom he named as Drolet, Halliday and McAvity, had profited by their dealings with the department of Marine and Fisheries, had put in their pockets money which belonged to the people and then he struck an attitude and concluded by asking: Are you going to prosecute, and if not ,why not? Is it because you have shared in the proceeds? I have only to

say to my hon. friend, that, having enjoyed a prolonged life, I have never heard the man yet suggest to me that I had profited by the people's money.

Mr. FOSTER. Will the right hon. gentleman let me put him a question?

Sir WILFRID LAURIER. No, sit down.

Some hon. MEMBERS. Sit down.

Sir WILFRID LAURIER. I take this occasion to observe to my hon. friend that there is no man who is so ready to make insinuations——

Some hon. MEMBERS. No, no.

Sir WILFRID LAURIER. Yes, no man so ready to make insinuations and no man who will wince and whine so much when he receives a return blow. I have to say to my hon. friend that I never manipulated other people's money; I never manipulated trust funds.

Mr. FOSTER. Mr. Speaker, I rise to a point of order.

Mr. SPEAKER. Order.

Mr. FOSTER. The rules of order of this House demand that no member shall say an offensive thing of another.

Some hon. MEMBERS. Oh, oh.

Mr. FOSTER. That is a plain rule of order. The right hon. gentleman——

Mr. SPEAKER. Order.

Mr. FOSTER. The right hon. gentleman has put a statement into my mouth which I never made, and in his anger he refuses to allow me to correct him.

Some hon. MEMBERS. Order, order.

Mr. FOSTER. He prefers——

Mr. SPEAKER. Order.

Mr. FOSTER. I am speaking to the point of order. He prefers to make an argument on that false statement rather than on a true statement——

Mr. SPEAKER. Order.

Mr. FOSTER. And then proceeds to insinuate something with reference to myself.

An hon. MEMBER. Did you share in it?

Mr. FOSTER. Did I share it? I will give my hon. friend his answer. Let him get up on the platform in this country——

Some hon. MEMBERS. Order, order.

Mr. FOSTER. —and make the statement that I did and I will let him know whether I shared in it or not.

Mr. SPEAKER. Order.

Mr. FOSTER. I rise to a second point of order.

Mr. M. CLARK. I rise to a point of order.

Mr. FOSTER. I rise to a second point of order.

Mr. SPEAKER. The first has to be decided first.

Mr. FOSTER. Very well, we will decide the first. The rules of order seem to be clear and plain.

Mr. CONMEE. Are there any rules in this House?

Some hon. MEMBERS. Sit down.

Mr. CONMEE. If there are, they ought to be enforced.

Mr. FOSTER. Send him off upon his special train.

Mr. SPEAKER. Order, order.

Mr. CONMEE. Mr. Speaker——

Mr. SPEAKER. Order.

Mr. CONMEE. The rules require that no member shall make offensive remarks.

Mr. SPEAKER. Order.

Mr. FOSTER. Why all this excitement?

Mr. CONMEE. That is what I would like o know.

An hon. MEMBER. What is the point of order?

Mr. FOSTER. The point of order I have stated pretty plainly. I have not the rules. The Speaker knows the rules, or the clerk can turn them up. The rule of order is that no member of this House is allowed to say anything that is disagreeable to another.

Some hon. MEMBERS. Oh, oh.

Mr. CONMEE. You are the biggest sinner in this House on that point.

Mr. FOSTER. The Prime Minister insinuated that I had manipulated trust funds. I throw it back in his teeth. No man in this House can make such a statement.

Some hon. MEMBERS. Order.

Mr. SPEAKER. Order.

Sir WILFRID LAURIER. Mr. Speaker——

Mr. CONMEE. Mr. Speaker——

Sir WILFRID LAURIER. Mr. Speaker, the hon gentleman (Mr. Foster) tells us that it is a rule of the House——

Mr. FOSTER. Is the right hon. gentleman debating the point of order?

Mr. SPEAKER. Order.

Some hon. MEMBERS. Sit down.

Mr. SPEAKER. I appeal to the House to maintain the rules. The Prime Minister has the right to speak to the point of order.

Mr. FOSTER. If he speaks to the point of order.

Sir WILFRID LAURIER. The hon. gentleman very coolly tells us that it is a rule of the House that no man has the right to speak of anything that is offensive to another.

An hon. MEMBER. Disagreeable.

Mr. FOSTER. Disagreeable.

Sir WILFRID LAURIER. Disagreeable. Is he willing to be judged by that?

Mr. FOSTER. Certainly.

Sir WILFRID LAURIER. Well then he had better sit down quietly.

Mr. FOSTER. The right hon. gentleman had better speak to the point of order.

Sir WILFRID LAURIER. Is his memory so short he does not remember what he said two hours ago?

Mr. FOSTER. I do not think that is debating the point of order.

Mr SPEAKER. This point of order must be settled. I appeal to both sides of the House. This debate should be carried on with decorum and I beg hon. gentlemen——

Mr. FOSTER. If it had not been that the Prime Minister——

Some hon. MEMBERS. Order.

Mr. CONMEE. What is the point of order?

Mr. SPEAKER. I fail to see that there is any reason for me ruling on this matter. The hon. member for North Toronto (Mr. Foster) raised a point of order but I fail to find a point of order. As far as saying anything disagreeable is concerned, I do not think we have any rule on that point.

Mr. FOSTER. My point is that the Prime Minister made an insinuation against me.

Some hon. MEMBERS. Order, order.

Mr. FOSTER. Made an insinuation that I manipulated trust funds.

Some hon. MEMBERS. Order.

Mr. FOSTER. I demand a retraction.

Mr. CONMEE. The Prime Minister made no such statement.

Mr. FOSTER. The Prime Minister made such a statement.

Sir WILFRID LAURIER. Now, Mr. Speaker, that the point of order has been ruled upon——

Mr. SPEAKER.

Mr. FOSTER. I ask that the right hon. gentleman retract that statement. He is amenable to the rules of the House and of common decency just as I am.

Some hon. MEMBERS. Order, order.

Mr. FOSTER. And his followers will have to take their medicine.

Some hon. MEMBERS. Order, not yet.

Mr. FOSTER. This matter has come to a head now and we will have it tried out.

Some hon. MEMBERS. Oh, oh.

Mr. FOSTER. He has made an insinuation. This is the first time that the Prime Minister——

An hon. MEMBER. Take your medicine.

Mr. FOSTER. Let the Prime Minister—

Some hon. MEMBERS. You will have to take it.

Mr. FOSTER. Take it back.

Mr. GAUVREAU. Call for the Sergeant at Arms.

Mr. FOSTER. Look out, the Sergeant at Arms might get you.

Mr. R. L. BORDEN. I think it would be better perhaps if we returned to the usual tone of moderate discussion. I certainly understood, perhaps I misunderstood, the right hon. gentleman, but I certainly understood him to suggest in the plainest possible way that the hon. member for North Toronto had been guilty of manipulating trust funds.

An hon. MEMBER. No, he never said that.

Mr. SPEAKER. Order.

Mr. R. L. BORDEN. I am perfectly willing—I am bound to accept the statement of the Prime Minister as to what he intended. Every hon. gentleman is bound to accept that and I would accept it at once. I would suggest that the words as I heard them either meant that or they meant nothing, and if the right hon. gentleman is prepared to state that he did not mean that, of course the House is bound to accept his word; but if he did mean that. I venture to think that in the interest of future good order in this House it would be desirable that the right hon. gentleman should withdraw that expression.

Sir WILFRID LAURIER. Mr. Speaker, I am a pretty old member in this House. I have sat in the opposition, I have sat on the treasury benches. I have sat as a member of the House supporting the government and in opposition to the government, but I am not aware—and on this I place myself in the judgment of the House, hon. gentlemen on the other side as well

as on this side—that I ever said an offensive word to anybody. I have tried to carry on the debates in this House in a fair manner and in a polite manner also, I have tried to be fair and courteous to all sides of this House but, Sir, I am human after all.

Some hon. MEMBERS. Hear, hear.

Sir WILFRID LAURIER. And when an hon. member tells me to my face that if I did not take any certain action, if I did not prosecute certain parties, it is because I am afraid of the consequences, and the alternative is because I have shared in the proceeds——

Some hon. MEMBERS. No, no, he did not say that.

Mr. CONMEE. Yes, he did.

Sir WILFRID LAURIER. What did he mean?

Mr. FOSTER. Now we have got down to common sense again.

Mr. PATERSON. Oh no.

Mr. FOSTER. I state here as a member of the House, I call Mr. Speaker to witness, because the speaker was on the point of order in one minute—if I recollect my words, they were like this—asking why it was not done: 'It is because you have shared'—and as I said the word 'share' the Speaker rose to call me to order.

Some hon. MEMBERS. Is there any difference?

Mr. CONMEE. You repeated it——

Mr. GEO. TAYLOR. Keep your bull dog quiet over there.

Mr. CONMEE. Oh, you just keep quiet, we know all about your little firebrand. We will take care of that.

Mr. SPEAKER. Order.

Mr. FOSTER. Now there is a gentleman who sits there and insults me in sotto voce across the floor of the House.

Mr CONMEE. You started it.

Mr. FOSTER. I think the Sergeant at Arms should take care of him. The Speaker was just rising to call me to order when I finished my sentence exactly as I intended to do: 'for the party, for the interests of the party.' I call the Speaker's attention to that.

Mr. CONMEE. What is the difference?

Sir WILFRID LAURIER. And all the explanation which the hon. gentleman gives me is that after all he states I shared what? The profit for the party interest. That is to say, instead of putting it into my pocket I put it into the party pocket. Well, I do not accept any such retraction as that. I said I had never manipulated any trust funds, I had never touched any money either politically or otherwise, and there is no point of order there, we have the ruling of Mr. Speaker on that. Having said that I have only to say that I leave this matter to my hon. friend to settle, and I hold that he and I are too old parliamentarians to indulge in such language as he has indulged in this afternoon—but I say I never court a fight, but I am not afraid of a fight.

Mr. FOSTER. Mr. Speaker, will you allow me to read——

Some hon. MEMBERS. Order, order, sit down.

Mr. FOSTER. —allow me to read rule 19?

An hon. MEMBER. Take your medicine.

Sir WILFRID LAURIER. Is it a point of order?

Mr. FOSTER. A point of order.

Mr. GAUVREAU. Is it a new one?

Mr. FOSTER. It seems to be a little laughed at that there is such a rule of order, but if it is a rule of order it should not be laughed at, it should be lived up to. Rule 19 is:

> No member shall speak disrespectfully of His Majesty, nor of any of the Royal Family; nor of the Governor or person administering the government of Canada; nor use offensive words against either House, or against any member thereof.

The right hon. gentleman turned to me and in a voice and in language which it seemed to me was perfectly appreciated by every member in this House—that it was perfectly appreciated by every member on the other side was shown by the hearty applause which immediately followed—and said: 'I have never manipulated any trust funds.'

Mr. GAUVREAU. That is true.

Mr PATERSON. That is true.

Mr. SPEAKER. Order.

Mr. FOSTER. If there was any doubt——

Mr. HARTY. You called him the people's trustee before 6 o'clock.

Mr. FOSTER. If there was any doubt in your mind or in the mind of any hon. member that if that sentence had any reference at all, it was meant to be directed to me, and to charge me as a manipulator of trust funds. I say that is offensive.

An hon. MEMBER. The cap must fit you.

Mr. FOSTER. The right hon. gentleman must in perfect right and obedience to the rule either withdraw the words or declare that they had no reference to myself.

Sir WILFRID LAURIER. Mr. Speaker, my hon. friend actually read this rule to the House:

No member shall use offensive words against either House or against any member thereof.

Yet the hon. gentleman within the last five minutes has forgotten that he asked me to my face if I did not prosecute Mr. Drolet, Mr. Halliday and Mr. McAvity because possibly I had shared in the money they had received for party purposes; and he means to say that these words are not offensive. He said that to me personally.

Mr. SPROULE. But there was no objection taken to it at the time.

Sir WILFRID LAURIER. And now when I tell the hon. gentleman that I will not tolerate being insulted in this House, he becomes still more offensive. Mr. Speaker, I ask for your ruling.

Mr. SPEAKER. To my mind the words, 'I never manipulated any trust funds,' are not in themselves offensive words. They may be so by inference, but that is a matter that every member of the House can judge for himself.

Some hon. MEMBERS. Hear, hear.

Mr. SPEAKER. Order. I think it is in the interest of proper order in debate that there should be no misunderstanding on this point. I am not declaring one way or the other. I am only applying the rule. No offensive word can be used by any member; the rule is plain in that respect. The Prime Minister did not charge the hon. member for North Toronto with having manipulated trust funds. His exact words are not to that effect. I do not know that it is for the Chair to infer anything from the words. I have to take the words as they are actually uttered. The same rule might apply to the words used by the hon. member for North Toronto before six o'clock. When he used the words, 'Did the Prime Minister share.' I rose to call him to order; but when he added, 'for party advantage,' or something to that effect, this removed the personal aspect of his words. So that after hearing the explanations on both sides, I think the debate had better proceed.

Mr. FOSTER. Mr. Speaker,—

Some hon. MEMBERS. Order; sit down.

Mr. FOSTER. As I interpret the Prime Minister's words, I think he ought to withdraw them.

Mr. SPEAKER. Order. The Prime Minister has the floor.

Sir WILFRID LAURIER. Mr. Speaker,—

Some hon. MEMBERS. Take it back.

Sir WILFRID LAURIER. Here is what my hon. friend said this afternoon:

Mr. FOSTER.

Is it because you share in it——

Some hon. MEMBERS. Order.

Mr. FOSTER. Just wait—'for party interest and for party adantage?' If not, why are you so modest about getting after the people's rights, you who are the trustees of the people's interests?

Sir WILFRID LAURIER. This, Sir, my hon. friend does not call offensive. Well, Mr. Speaker, I have only to leave the question to the judgment of the House, and having said that, I pass on to the subject of debate.

Mr. FOSTER. Mr. Speaker, I ask that the right hon. gentleman retract those words. It is no argument to say that because I transgressed the rule, if I did, before six o'clock, that he should transgress it now. By inference the Speaker has ruled that the right hon. gentleman's words applied to me. To whom else could they apply?

Some hon. MEMBERS. Hear, hear.

Mr. FOSTER. I say it again: to whom else could they apply as they were uttered? I know what the English language means; I use it and I use it properly. If the Prime Minister, in the course of his argument, were addressing any one else, that would be a different matter. The right hon. gentleman applied the words to me, he meant to apply them to me, and I ask him to withdraw them.

Mr. SPEAKER. I can only repeat what I said before, that if those words had been applied directly to the hon. member for North Toronto, they would have been out of order; but I fail to see that they were applied directly to that hon. member. There is more than one member in this House, and I can only deal with direct imputations.

Mr. FOSTER. Does the Speaker himself think, or does he not, that the right hon. gentleman was applying those words to some one else or to me? He was addressing his argument to me and to me alone. He meant to cut me and no other man at that time. I stand here and demand that the right hon. gentleman prove himself equal to the occasion and withdraw that insinuation.

Mr. R. L. BORDEN. I do not think it is necessary for you to answer the question submitted to you, Mr. Speaker, by the hon. member for North Toronto, because the Prime Minister has answered it himself. He stated most explicitly, only a moment ago, in your hearing, that he had used those words in retaliation for a statement of the hon. member for North Toronto. Therefore he has most distinctly admitted, in your hearing and in the hearing of all of us, that he meant them to apply to the hon. member for North Toronto.

Sir WILFRID LAURIER. Mr. Speaker—

Some hon. MEMBERS. Take it back.

Mr. SPEAKER. Order. It is impossible for the Premier to speak under these conditions.

Sir WILFRID LAURIER. Mr. Speaker, I have never sailed under false colours; I have never made an insinuation that I have not been ready to back up. If the hon. gentleman had not spoken as he did, I would not have spoken as I did, and I have no hesitation in saying that in speaking as I did I applied my words to the hon. member for North Toronto. I state that like a man; and now, Mr. Speaker, I am in your ruling.

Mr. SPEAKER. I must abide by the ruling I gave: offensive words cannot be used in debate I fail to see that these are offensive words in themselves. If they had been applied directly, they would have been.

Mr. FOSTER. I desire, Mr. Speaker,—

Some hon. MEMBERS. Order. Sit down. Chair.

Mr. FOSTER. The right hon. gentleman has just now declared that he applied those words to me.

Sir WILFRID LAURIER. Mr. Speaker, I am here the first man who ought to set an example to the House. I do not disguise the fact—I am too much of a man for that—that I meant to apply my words to the hon. member for North Toronto.

Mr. FOSTER. I ask your ruling, Mr. Speaker.

Sir WILFRID LAURIER. You have said, Mr. Speaker, that these words applied to anybody were out of order, and I bow to your ruling, as it is my duty to do.

Mr. FOSTER. Then will you take back the words?

Sir WILFRID LAURIER. I obey the ruling of the chair, and I say to the hon. member for Toronto (Mr. Foster) that I stand by my words, and when I have any charges to make, I make them and make them openly; but as I am outside the rules of the House, I shall not proceed further, but withdraw everything I said.

Some hon. MEMBERS. Hear, hear.

Sir WILFRID LAURIER. I am bound to act according to the ruling of the chair. The chair has ruled that my words are not parliamentary, and I withdraw them. But my hon. friend from Toronto (Mr. Foster) must learn a lesson. He must learn not to treat other people as he has been doing. He has his own reputation to look after.

Mr. FOSTER. And is able to look after it.

Sir WILFRID LAURIER. We have here men who are not afraid to speak their minds. My hon. friend must know that there are two sides in this House and he cannot have everything his own way; and while there is no man more ready than he to throw insinuations, there is none who smarts so much when the lash is applied to himself. I have to say to my hon. friend from St. Anne's division (Mr. Doherty) that, while I give him great credit for his speech, he has been in one respect unfair to the government and myself personally. He said he had reason to believe that there has been no change in the department and that the same men who were guilty of giving commissions were still doing business with the government. He based this insinuation upon an answer which I gave some time ago to the House on a question put by the hon. member for North Ontario (Mr. Sharpe). This question was asked by that hon. member:

1. Has the Marine and Fisheries Department continued to buy supplies, or give contracts to the individuals, supply men, or companies on whose behalf commissions, gratuities or interest were paid to officials of the department, as found by the Cassels Commission?

2. If so, what are the names of such individuals, supply men and companies, and the amount paid or to be paid to them since the receipt of said report by the government?

3. Have any other departments purchased supplies or given contracts to any such individuals, supply men or companies since the receipt of said report by the government? If so, why are the names and amounts thereof?

To this I made the following reply:

1 and 3. There may be cases in which it will be in the public interest to do business with some of the parties referred to. Each case will have to be considered on its merits as it arises.

2. If any particular names be mentioned the information will be given to the House.

Thereupon the hon. gentleman asked if that answer was not tantamount to saying: 'If you will just show us that you know all about it, we will tell you all.' That is not a fair deduction. My hon. friend had better leave that kind of deduction to the hon. member for North Toronto (Mr. Foster) as such insinuations are more in his line. But to show how unfair his comment was, let me refer my hon. friend to another question which was put a few days ago, and to which I replied:—But first let me recall the reply I have just read:

There may be cases in which it may be in the public interest to do business with some of the parties referred to.

Implying that, as a general rule, we would not do business with these men. My

hon. friend said that in England, under such circumstances, no government department would have anything to do with a man who had paid commissions to any official of the government. And he contrasted that course with the conduct in this country. But the language I made use of showed plainly that we did not intend doing business with these men except in cases where we might have to do so in the public interest. For instance some of them might have the exclusive patents in certain things we absolutely require. What could we do under such circumstances? The same question was asked a few days ago by the hon. member for North Ontario (Mr. Sharpe):

1. Have the following persons had contracts for supplies, &c., with the Department of Marine and Fisheries since the date of Hon. Judge Cassels' report, viz.: James Murphy, W. R. Blakiston, James Halliday, Allison Davie, J. B. Cote, Jos. Samson, Terreau & Racine, Jean Drolet, E. Amyot, Charles A. Parent, A. N. Melvin, Howell & Co.?

My hon. colleague the Minister of Marine and Fisheries answered:

No contracts have been entered into with the following persons by the Department of Marine and Fisheries since the date of Hon. Judge Cassels' report: James Murphy, W. R. Blakiston, James Halliday, Allison Davie, J. B. Cote, Jean Drolet, Elie Amyot, A. N. Melvin, Howell & Company, Jos. Samson.

Orders have been given to the following persons by the Department of Marine and Fisheries since the date of Hon. Judge Cassels' report:

Terreau & Racine, $164.04. This purchase consisted of grate bars, patterns for which are the property of the above-mentioned firm.

This is one of the cases I have referred to. We had to do business with the firm of Terreau and Racine because they were proprietors of that patent and we had to make use of it. That is what we meant when we said that, in certain circumstances, the public interest would compel us to deal with some of these men.

Coming to the motion of my hon. friend, I said we could not accept it, and the reason was that the very premises upon which it is based are not in accord with the facts. Let me call attention to the first paragraph:

The commission of 1907 in the course of their investigations into the conditions of the Civil Service having made incidental inquiry into the workings of one of the departments at Ottawa, characterized that department as wanting in organization, lacking in conscience, and some of the officials as serving two masters, Scripture notwithstanding, and also criticised other departments.

I ask my hon. friend how he can say in the face of the record we have before us, that the investigation made by the Civil Service Commission was only thorough in one department. Is it not a fact that it was thorough, not only in the Department of Marine and Fisheries, but in all the departments?

Some hon. MEMBERS. Oh, oh.

Sir WILFRID LAURIER. I repeat, notwithstanding what may be said to the contrary, the commissioners themselves declare in their report that they made a thorough investigation of all the departments.

Some hon. MEMBERS. Oh, oh.

Sir WILFRID LAURIER. There are some hon. gentlemen evidently who doubt my word. Let me read what the commissioners themselves say at page 46 of their report:

Your commissioners endeavoured to the best of their power to thoroughly sift the conditions of the civil service.

Can any words be plainer?

Possibly they have allowed their inquiries to extend rather beyond what might have been considered the limits laid down, but your commissioners are of opinion that to get at the full knowledge required to make a report their inquiries should be as extensive as possible. With this view they construed the reference as to efficiency and sufficiency of the departmental staffs as including in its scope the control of the appropriations granted by parliament.

In fact your commissioners could hardly have done otherwise considering how their attention had been directed to these matters by statements in parliament and in the public press.

On the face of this report, how can it be said that the investigation by the commissioners was not as thorough as possible. They felt that to do justice they had to go beyond the letter of their instructions, and they did so. Under such circumstances, how can my hon. friend say that the examination was not as thorough as it should have been. He proceeds to say:

That the Cassels Commission was limited in scope to an inquiry into implied official incompetence and dishonesty in the Department of Marine and Fisheries, and the report thereof with attached evidence amply sustains the charge of official negligence, wastefulness and corrupt dealing in that department, and affords ground for the conviction that similar methods prevail in other great spending departments.

My hon. friend from Lunenburg (Mr. A. K. Maclean), speaking to the motion, declared that the language of it was very illogical, and I appeal to my hon. friend from St. Anne's division himself to agree that the language he uses and the deduction he makes are absolutely illogical. What is his premise, and what is his conclusion? His premise is that there was dishonesty in the Marine Department; that the officials there were proved to have been dishonest and to have taken bribes, and

his conclusion is that, therefore, there is ground for believing that there was dishonesty in other departments. That is the kind of logic in which the hon. member from North Toronto (Mr. Foster) indulges, but I should have expected better from my hon. friend from St. Anne's (Mr. Doherty). It does not follow because one man is dishonest that another man is dishonest also. The hon. member for St. Anne's has quoted scripture about a man serving two masters——

Mr. DOHERTY. I only quoted the commissioners in their quotation of scripture.

Sir WILFRID LAURIER. The commissioners quoted scripture, and my hon. friend quoted the commissioners, and I quote my hon. friend. But, now, I would like to quote scripture direct. Surely the hon. gentleman will remember a verse in scripture to this effect: 'To the pure all things are pure.' And I suppose it is a fair assumption that to the impure all things are impure. To the mind of my hon. friend from North Toronto, and a good many others, all things are impure. It is easy for a man to find others dishonest if he himself is not very sure of his own ground; but I would not expect that from my hon. friend from St. Anne's. The resolution goes on to say:

That in order to lift the cloud of suspicion that rests upon the administration of the various departments—

The cloud of suspicion! Where do we see that cloud of suspicion? I see it on the other side of the House, but not on this side. Surely, this is a perfect illustration that to the impure all things are impure. Well, I have only this to say: We are responsible to the parliament of Canada, we are responsible to the people of Canada. We cannot admit what is stated in this motion. If anybody believes what is stated in this motion, that there is in the public service 'official negligence, wastefulness and corrupt dealing,' it is not a commission of inquiry that should be moved, but a direct vote of censure. It is our duty to administer the affairs of Canada; it is our duty to manage the departments of the government. Our intention is to discharge that duty efficiently. If we do discharge that duty efficiently, well and good; if we do not discharge it efficiently, we are open to censure. If the departments are, as suggested, inefficient, wasteful and corrupt, it is our duty to remedy these evils, and if we do not discharge that duty we are open to the censure of the House. I deny that it is the right of the parliament of Canada to look into the administration; that is a thing which is the duty of those charged with the administration, and for the proper discharge of that duty they are responsible to the people. It would seem almost unnecessary in a matter of this kind to quote authorities, but I quote the authority of the English parliament on the point. On July 22, 1862, Sir George Bowyer made this motion:

That a select committee be appointed to inquire into the grievances alleged to exist and complained of by the persons employed in the Post Office Department.

This was a motion to investigate the practice of a certain department of government. Mr. Gladstone, who was Prime Minister, spoke upon that question to this effect:

He said that his hon. friend exercised a wise discretion in not proposing to press his motion on the present occasion, for it was obvious that the appointment of a committee of inquiry at the present period of the session must be perfectly futile. He should have felt it his duty, however, at any period of the session to oppose the motion, which he regarded as being of a most dangerous character not only to the good order of the Post Office Department, but of the entire public service,

After having reviewed the question and discussed the grievances complained of, he went on:

He hoped if his hon. friend dealt with the subject again, he would be careful to give an accurate impression to the House. The question had been settled by competent authority —namely, the executive government. The executive government were ready to defend what they had done in the face of the House of Commons.

And so are we here. Mr. Gladstone concluded in this way:

If they thought the executive government were to blame, let them take the proper course and pronounce their censure upon the executive government, but he was satisfied that no worse policy could be adopted than for the House to take into its own hands the management of the public services.

Now, this is the authority on which we rely upon this occasion. We are responsible, as I have said, to the people of Canada. We are primarily responsible to the House. If there is reason to believe, as is charged in this motion, that there is wastefulness in the departments, and if we fail to deal with that matter and rectify the evils we are liable to censure. But we do not admit that there is wastefulness, that there is inefficiency. We believe, on the contrary, that there is reasonable efficiency in these departments. We are ready to go on with the administration of the country's affairs. If we are in error, we are liable to censure; we are liable to be turned out of office; but so long as we retain the confidence of the people we are ready to discharge every duty connected with the administration of public affairs. We have shown that we will do so. The hon. member for North Toronto says that we were

driven into making an investigation. I will not discuss that; I merely say that we have dealt with the matter. We appointed a commission to investigate and report. Not satisfied with the first report, we had a second investigation of the Marine Department. Why did we appoint that second commission for the special investigation of the Marine Department? Because the first commission, in its report, stated that there was 'lack of conscience' in the Marine Department. If they had charged a 'lack of conscience' in the other departments, we would have had a special commission to investigate those departments also. But the commissioners did not say that there was 'lack of conscience' in the other departments; they said there was inefficiency, lack of organization—matters of that kind which could be rectified by each minister in his own department, and which have been rectified by each minister. I have only to say, in the words of the hon. member for Lunenburg (Mr. Maclean), that it is our duty to see that every officer of the public service does his duty well and faithfully, and it is our determination to do our duty in that respect to the fullest extent. Therefore, I ask this House to vote down this resolution.

Mr. R. L. BORDEN (Halifax). I join with the right hon. minister (Sir Wilfrid Laurier) in extending congratulations to the hon. member for St. Anne's division, Montreal (Mr. Doherty) who has moved this motion and supported it in a cogent, powerful and straightforward speech, which, it seems to me, ought to have commended the motion, not only to every hon. member on either side of the House, but to the members of the government themselves. I will not dwell upon the somewhat heated language of the Prime Minister at the opening of his remarks, nor to the very unfortunate incident which he brought about in this House. He told us in the end that he would set a good example. I think it is to be regretted that a gentleman in his position, responsible for the honour of this House, had not set a good example in the first instance. Now, the greater part of the time occupied by the right hon. gentleman has been taken up with that incident, and therefore he has afforded very little argument indeed, if you can dignify it by the name of argument, to hon. members of this House as a reason why this motion should be voted down. He has made statements of fact, and one of his arguments to which I will allude at once, because it is in my mind, is that no further investigation should be held because the investigation made by the Civil Service Commission of 1907 was a thorough one, and was stated by the members of that commission to be a thorough one. I ask my right hon. friend now whether he adheres to that statement which he made a moment ago, because if he does adhere to it, I will undertake to prove out of the mouths of the members of the commission themselves, in the words of their own report, that the statement made by the right hon. gentleman on that subject is absolutely unfounded and unwarranted. That was however one of the main grounds of his argument. I take direct issue with the right hon. gentleman on that point. Did he ever read the report of those commissioners, or if he has read it, is his memory so short that he does not remember the quotations from it which were brought to his attention only last year? Let me recall to his attention what was said by these commissioners, appointed by himself, as to the thoroughness of the investigation which they did make. On page 20 of the very report from which the right hon. gentleman quoted here to-night, what do I read:

> In dealing with this subject your commissioners have to submit that in a vast service such as exists at Ottawa, in the limited time at their disposal, it has been absolutely impossible for them to inquire fully into the efficiency of the officials in the several departments. There are probably, including labourers, some 3,000 employees at Ottawa. In the Department of the Interior alone there are 500 employees.

And this is the report of the commissioners who, according to the right hon. gentleman, made so thorough an investigation that he now asks his followers on the other side of the House to vote down the motion proposed by my hon. friend from St. Anne's (Mr. Doherty). I do not doubt they will vote it down. Any man in this House who can reconcile his conscience to voting for that iniquity, the Newmarket canal, may be expected to vote against a further investigation. Well, Sir, let us look a little further:

> It would take many months to examine the work of the Department of the Interior alone, and when so many officials are engaged in the several branches it would be hard to gauge with accuracy the extent, or character, or style of the work turned out by each.

Yet my right hon. friend appeals with every confidence, a well justified confidence, to his followers to vote down this proposed investigation, because there has already been a thorough and ample investigation into every department. Let us look a little further. Dealing with the outside service, on page 27 of the same report, they say this:

> Acting on this suggestion, as previously stated, your commissioners visited three places, and they only regret that the time at their disposal prevented them from pursuing their inquiries at other points. The information procured was most interesting and instructive, and even the chairman, who had spent nearly 40 years in the public service at Ottawa, had no idea of what constituted the

outside service until he visited the several localities.

Further on, referring to the Department of Railways and Canals, the commissioners say:

Your commissioners have not visited this department, believing that other departments required more immediate inspection.

Perhaps they did, perhaps they did not. I am not so sure of that. But at all events, this quotation will enlighten the House as to the thoroughness of the information of the right hon. gentleman as to the character of the investigation carried on by the commission of 1907. That is not all. Speaking of the Department of the Interior they say:

With its large staff of 500 employees at Ottawa, it would require months to thoroughly inspect the work and see that the several officials are properly employed.

The commissioners regret extremely that, with the short time at their disposal, they were unable to visit the Northwest, much as they desired to see how the land, and more especially, the timber sales are effected.

And it is because that investigation was absolutely sufficient and ample that the right hon. gentleman appeals to his followers to vote down this motion. Well, let us look a little further.

To do the work with any pretension to thoroughness—

I would ask especial attention to this language:

To do the work with any pretension to thoroughness would take much more time than would probably be agreeable to the government.

The right hon. gentleman, I presume, is convinced now that this was an extremely thorough and ample investigation, and that his argument to the House in that regard is absolutely justified by the report of the commission itself. Might I inquire now what the opinion of my right hon. friend is on that point, just at this juncture? Well, my right hon. friend refuses to satisfy what he would no doubt characterize as a too fastidious curiosity on my part.

An hon. MEMBER. To the pure all things are pure.

Mr. R. L. BORDEN. I am bound to say in view of that interruption, that I think the argument mentioned by the hon. member is much more cogent than that argument of the Prime Minister to which I am now addressing myself. Well, let us look a little further:

They have been able to go over only a very small section of even the Marine and Fisheries Department.

And the right hon. gentleman, within twenty minutes, has told this House, and on that ground has appealed to his followers to vote down this motion, that that was an ample, a sufficient and a searching investigation into all the departments, not into the Department of Marine and Fisheries alone, but into all the departments, including those that the commissioners did not even visit. Well, I imagine that my right hon. friend must have thoroughly satisfied his followers on that point in view of the quotations which I have read from the report of these very commissioners. This particular paragraph continues as follows. I will read the whole paragraph lest my right hon. friend may forget it, because, when one deals with so treacherous a memory as that of which he has given evidence to-night, it is well that the facts should be stated clearly. My right hon. friend will therefore direct his particular attention to this paragraph. I will read it again:

They have been able to go over only a very small section of even the Marine and Fisheries Department. If they had had time it would have been most desirable to have inspected the work of the department at the agencies—Quebec, Sorel, Halifax, St. John and Prescott — particularly Quebec and Halifax.

At page 42 they also declare that:

—there is no means by which they could appreciate whether the amounts payable for sub-target guns or for Ross rifles are proper and just, but according to the evidence——

I think that was contradicted afterwards.

Sir FREDERICK BORDEN. Yes, absolutely.

Mr. R. L. BORDEN. Not the part I have read, but the part I am about to read.

Sir FREDERICK BORDEN. The part that you have read, too.

Mr. R. L. BORDEN. These poor commissioners seem to be most unfortunate. They were appointed by the government, they bring in reports to which my hon. friend (Mr. A. K. Maclean) takes exception, as he did take exception this afternoon, and it appears that in this particular instance they have also made a mistake. Well, I am not concerned with the concluding part of the paragraph, as it has been corrected. I may say to the Minister of Militia that I was not aware that the first part of the paragraph had been in any way corrected.

Sir FREDERICK BORDEN. I took a good deal of trouble to do it last year and I think it stands as I stated it last year.

Mr. R. L. BORDEN. In what way?

Sir FREDERICK BORDEN. That they had made a mistake.

Mr. R. L. BORDEN. No, that is not the point. Perhaps the hon. gentleman will look at it again.

There is no means by which they could appreciate whether the amounts payable for sub-target guns or for Ross rifles are proper and just.

Sir FREDERICK BORDEN. Oh, well, I cannot supply brains.

Mr. R. L. BORDEN. I have no doubt that the intimation will be conveyed to them that my hon. friend will not undertake to supply them with brains and, if they were such commissioners in that regard as they have been described it may be deemed necessary to supply them from some other source.

Sir FREDERICK BORDEN. Thank you, I have no doubt my hon. friend can supply them.

Mr. R. L. BORDEN. Well, I would not like to go into comparisons on that subject.

Sir FREDERICK BORDEN. I quite agree with my hon. friend.

Mr. R. L. BORDEN. As long as we are both agreed on one subject at least, perhaps we will proceed to discuss some other portion of the remarks of my right hon. friend.

Sir FREDERICK BORDEN. Quite so. We both seem to agree that the commission require brains.

Mr. R. L. BORDEN. Well, I am not here to-night, Mr. Speaker, to argue the point with my hon. friend, that he and his colleagues saw fit to appoint a commission which was destitute of brains.

Sir FREDERICK BORDEN. I——

Some hon. MEMBERS. Order, order.

Sir FREDERICK BORDEN. I at once admit my responsibility and express my regret.

Mr. R. L BORDEN. Well, I think that not only the hon. gentleman but his colleagues as well have every reason to express regret at the appointment of that commission. As we once more agree we will return to the remarks of the right hon. gentleman. Let us consider for a moment the answer of the Prime Minister to certain remarks of my hon. friend from North Toronto. He said that there was an absolute rule of British parliamentary government that no investigation into administrative affairs should ever be undertaken by parliament or by any commission appointed by the executive. Why, Mr. Speaker, the whole history of British parliamentary government is full of illustrations of exactly the contrary doctrine. As to an inquiry for the purpose of regulating the interior workings of a department, matters for which the executive alone is responsible and responsible to parliament, there may be some force in what the right hon. gentleman has suggested. Parliament is not to take the administration out of the hands of the government. That and that alone is the result of the authority which the right hon. gentleman quoted to-night. But, as a matter of fact, the very rule which he has quoted was departed from when he appointed the Civil Service Commission of 1907. Therefore, he cannot surely quote now, in opposition to the argument of my hon. friend from Montreal, St. Anne, (Mr. Doherty), a rule which he violated only two years ago. Does he not remember the investigation into administrative affairs after the Crimean war? Does he not remember the investigation into administrative affairs after the South African war? I cite these two only because they occur to my mind at the moment; but the slightest examination of the authorities upon the subject would convince every hon. gentleman in this House that what I have stated to be the doctrine in that regard of British parliamentary practice is absolutely founded upon fact and precedent.

But, Mr. Speaker, the right hon. gentleman went farther. No, he did not go farther, he simply made a comment upon the argument of my hon. friend from North Toronto as to the reasons why the men now holding moneys belonging to this government in their possessions are not proceeded against in the courts. If the right hon. gentleman was dissatisfied with the tone of my hon. friend from North Toronto, why did he not, after criticising that tone, as he had a perfect right to do if he felt so inclined, tell us the real reason why these men are not proceeded against? Does he think it a wholesome doctrine that political pull and political influence shall be sold or bartered, and have not some matters been made public in the press of this country which would seem to indicate that such things were taking place? We have been told by no less an authority than one of the hon. gentleman's colleagues that there is absolutely no remedy for it and the money can never be recovered back to the treasury of this country. Shall it come to pass that political influence shall be quoted on our stock exchanges as having a certain market value—because it might as well come to that if we are to tolerate certain matters which have transpired within recent years and have gone without redress and without any effort by the government to bring about a better condition of affairs. No mock indignation, no real indignation, no heroics will satisfy the people with reference to such matters.

The right hon. gentleman says that this motion is illogical. Well let him make it logical but let us have the investigation, let him take the lack of logic out of it, let him put logic into it, but let him give the inves-

tigation that public opinion is demanding and without which the people of Canada will not be satisfied that the right hon. gentleman is disposed to deal with the administration of affairs as they ought to be dealt with. We are told also that these influences operating in one department are no indication that similar influences may have similar results in other departments of the government. Are they not some evidence at least? Where does the right hon. gentleman stand to-day? Where do he and his colleagues stand to-day? To the absolutely cogent argument made by my hon. friend from St. Anne (Mr. Doherty) no answer has been given across the floor of the House. The case presented by the hon. member for St. Anne is like the case of the Newmarket canal, it is absolutely undefended by the government. What position does the government take with respect to the Minister of Marine and Fisheries? I understand they have declared—and I am not quarrelling with their declaration—that the hon. gentleman had absolutely no knowledge of the inefficiency, the waste and the corruption going on in the department over which he presided. Let us start with that premise. To what does it lead us? Has the right hon. gentleman ever thought of that? Does he intend to suggest that the Minister of Marine and Fisheries was less capable than his other colleagues. If he does not suggest that, then there may be going on in every one of the great spending departments of this government exactly the same waste, exactly the same inefficiency and exactly the same corruption as that which has been shown, as the result of that investigation, to exist in the Marine and Fisheries Department. That is an answer to the suggestion, for it was a suggestion, it was not stated in so many words, that there could be no maladministration and no corruption and no inefficiency without the ministers knowing it. Well the Minister of Marine and Fisheries did not know it, we have started with that premise. Then exactly the same thing may be going on in every department of the government if the Minister of Marine is to be held guiltless of that which has been disclosed by the reports of these two commissioners.

How does the right hon. gentleman stand? He stands here with an inquiry begun in 1907 which has not been concluded. I have read extract after extract to show that that inquiry was never concluded. Why was it begun? We must assume, I presume, that there was some cause for undertaking it. Then if it was properly undertaken, if it was commenced for good and sufficient reasons, equally good and sufficient reasons, nay better and more cogent reasons, exist to-day for concluding that investigation than those which existed for its commencement. Therefore it seems to me that the right hon. gentleman has not made good his case in answer to my hon friend from St. Anne (Mr. Doherty).

What about the Department of Railways and Canals, which put on 1,100 temporary employees on the Intercolonial Railway in the month of October last? What does that mean? What about the Marine and Fisheries Department putting on 100 men in the Halifax dockyard in order that they might vote against myself and my colleagues at the election of the 26th of October last? Is there any connection between these two circumstances? If that sort of thing goes on in the Marine Department, if it is conceded by the officials of this government that those men were put at work solely on account of the elections, have we or have we not a right to believe and understand that of the 1,100 additional men hired on the Intercolonial Railway as temporary employees in October, 1908, a majority at least were put on for exactly the same reason? Under these circumstances it does indeed seem to me that the right hon. gentleman has made no defence to the motion of the hon. member for St. Anne.

He tells us in effect by his silence that the men who have bribed are to go free so far as criminal prosecution is concerned at least, and that the men who have been bribed are to be dismissed from the public service of this country, as indeed, of course, we all concede they should be dismissed. If the briber, who, as well as the man bribed, is amenable to the criminal law of this country, has committed an act which according to the report of the commission in this case was at least equally colorable with the act of the men bribed, why is it that the one man is punished and the other man goes free? Has the right hon. gentleman given any answer to that? He has not vouchsafed one syllable of answer in his address this afternoon.

I simply desire to say, in conclusion, that the motion of my hon. friend from St. Anne (Mr. Doherty) is the logical, necessary result of the two investigations already held, an incomplete investigation in 1907, an investigation in 1908 which dealt with the affairs of only one department and dealt with only one paragraph of the commissioners' report. And now we ask why the government will not accept our motion to supplement what has already been done by carrying to its conclusion an investigation which the government thought it proper to begin in the first instance. Up to the present I repeat there has been absolutely not one word which in my humble judgment justified the government in refusing that further investigation. Does my right hon. friend think there is no suspicion abroad in the public mind with regard to the administration of other departments? Is he so pre-

judiced as to suppose that the people of this country will believe that men operating in other departments of this government, supplying different departments of this government, have been carrying on certain iniquitous practices in one department and have absolutely refrained from these practices in other departments? Will public opinion be satisfied by any statement of my right hon. friend, eminent as he is and experienced in public life, to that effect? I say no, a thousand times no. So far as party advantage is concerned, I would welcome the voting down of this motion by the right hon. gentleman and his colleagues; but for the future decency of public life in this country, to remove suspicion that is already too prevalent, to cleanse the departments if they need cleansing, I still hope that my right hon. friend will change his mind in that regard, that he will remodel this resolution, if necessary, and give to the people of this country that investigation into the affairs of the various departments of this government which ought to be given, in view of what has been disclosed in recent years.

Mr. EMMANUEL B. DEVLIN (Wright). Mr. Speaker, I wish to offer to the hon. member for St. Anne (Mr. Doherty) my congratulations upon the moderate way in which he has placed his case before the House. I am sorry that I cannot agree with the conclusions to which he came, and that I shall not be able to support his amendment which he has placed before the House. The amendment is to the effect that the commission of 1907, in the course of their investigations into the conditions of the Civil Service, made extended inquiry into the working of one branch only of all the departments in Ottawa, and criticised other departments, and it ends up by calling for a competent business commission to make an investigation into the working of all the great spending departments of the government. Now, Mr. Speaker, if the amendment had stated that where any specific charges are made against any particular department of this government an investigation should take place, I would have been very glad to have supported the amendment. If the amendment had said that the investigation should be held by a judicial commission, I would have supported it. I think the hon. member for St. Anne will agree with me that in matters calling for the examination of evidence—in matters of this kind, where witnesses must be examined and cross-examined by counsel, where legal technicalities may constantly arise—the only possible way of holding an honest and a wise investigation is to have it conducted before a judge. He will also agree with me, I think, that human nature after all is human nature, and that it would be hard to find a commission composed to say of three men, who would not be somewhat influenced by party feeling and party prejudice and perhaps by party passion; whereas his own experience upon the bench would teach him that the moment a man is called to the high, honourable and dignified position of a judge in this country, he leaves his political affinities at the door, and goes on the bench sworn to do his duty by his God and by his country.

Mr. Speaker, this afternoon we heard a very eloquent speech delivered by our very sensitive friend the hon. member for North Toronto (Hon. G. E. Foster). An abler debater than he is I hardly think exists in this country; an abler reasoner hardly exists in this country; but a man with a poorer memory I have not yet met. My hon. friend entertained us this afternoon with a ghost of the middle ages. Would you believe, Mr. Speaker, that by chance I happened upon a certified copy of a report of a Committee of the Privy Council, approved by His Excellency the Governor General on the 21st of October, 1891; and if the ghost of my hon. friend's middle ages had appeared before me, I would not have been more astounded than I was to find that in 1891, when hon. gentlemen who sit upon this side were in opposition, charging the then hon. Minister of Finance, the present hon. member for North Toronto, and his colleagues with inefficient public servants, the hon. member for North Toronto, as Minister of Finance, stood up in the House and with his colleagues offered to the then opposition —what do you think? A competent business commission, composed of business men? No, Mr. Speaker, 'Scripture notwithstanding,' the hon. member for North Toronto stood up and said: 'If my conduct as an officer in the administration of this country's affairs is to be questioned by this parliament, if the conduct of my colleagues is to be questioned I, the Minister of Finance, will be the one to investigate it; if I am to be charged with any offence, or if the Civil Service is to be charged with any offence, I, the one charged, will examine into my conduct, and I will render the verdict which the country as a jury must accept.' This modern apostle of political reform was not satisfied with putting his name alone upon that committee, but he joined with it the names of two other gentlemen—not business men, Sir, but two of his colleagues; and I find—and I am very glad that that ghost of the middle ages is not here—that the two other names, accompanying the name of George E. Foster, were those of John Haggart and E. Dewdney, then ministers, who were to conduct the examination. This is a most interesting document; it is not ancient history, but it applies perfectly to the case. I do not think the hon. member for North Toronto will deny its contents. It reads thus:

The committee of the Privy Council, appointed to investigate and report upon the

cases of irregularity in the civil service as developed in the Public Accounts Committee, and to further report upon any similar cases in the public service, beg leave to present the following as their findings and recommendations in respect thereof.

And first as regards the Department of the Interior, your committee find from a careful perusal of the evidence and documents hereto attached:—

1. That the Civil Service Act of 1868 prohibited the payment, for extra services, of any sums of money to permanent clerks other than their regular salaries.

2. That from a period dating at least as far back as 1875 a practice began to grow up in the department under which occasional payments for extra work were made to permanent clerks in violation of this clause of the Civil Service Act.

3. That during the years 1882-1889 inclusive——

When our hon. friends opposite, then in power, were growing bolder,——

this occasional practice became frequent, and under it several permanent clerks received extra payments, either in the name of outsiders or fictitious persons

——you would hardly believe it,——

or through temporaty clerks, for work performed wholly or partly by themselves.

I shall not trouble the House by reading the whole of this report, but will go to the sixth clause:

That the whole sum, thus irregularly paid to permanent officials for extra work, amounted, as far as can be ascertained, to $9,017 from the year 1875 to date.

Will the hon. member for North Toronto (Mr. Foster) tell me if that amount of $9,017 of the people's money which he, as Finance Minister, was supposed to have control of, was ever refunded to the government of this country?

An hon. MEMBER. Who was prosecuting?

Mr. DEVLIN. The hon. member for North Toronto (Mr. Foster) and his colleagues were the investigating committee, and what do you think that committee found as its conclusion?:

That the practice of giving extra work to permanent clerks in the department, in conjunction with temporary men, was not known to the present minister.

My hon. friend the Minister of Marine and Fisheries (Mr. Brodeur) was asked to resign his seat because certain officials in his department had obtained moneys which did not rightly belong to them or were not paid to them in the due performance of their duties. Well, here was the then Minister of Finance, the present member for North Toronto (Mr. Foster) investigating into the acts of civil servants, and he found that certain employees in the service were receiving money through fictitious persons —moneys which they had not earned and which did not belong to them. Did that hon. gentleman then resign his seat? Were his skirts then clean? In some cases he and his colleagues did dismiss but in other cases they adopted a very peculiar course, and in these cases we find that this peculiar investigating committee recommended as follows:

That all those permanent clerks who, since 1880, have taken extra pay for services performed out of office hours, and those who authorized or certified to such payments be——

do you think dismissed, as the present Minister of Marine and Fisheries has done? No, Sir. Now, if the hon. the leader of the opposition were in his seat, how he would blush for the conduct of his hon. friend from North Toronto (Mr. Foster). Why, I see upon the countenance of the mover of the amendment, my good friend from St. Anne (Mr. Doherty) that virginal blush—because he was not in his seat at the time—do you know, Sir, what the then Minister of Finance did? Did he imprison them? Not a bit of it. What did he do? He recommended that they be fined one month's salary. This apostle of political purity recommended that they be:—

fined one month's salary which shall be deducted from their present salary in the proportion

——they did not want to be too hard——

of one-half thereof from the amount falling due in each of the next following two months.

Then they came to a very hard case and were a little stricter with it. I do not think it necessary to mention the name; but in the case of another party, it appears:

That he applied in 1886 to the deputy minister for a bonus of $500 as a remuneration for work done after office hours,

——the minister did not resign——

in keeping up his regular office duties, which were at that time pressing; that the deputy minister declined to recommend the bonus but hinted at a recommendation for promotion and intimated that the work he had done would be mentioned in support of the same; that the clerk in question then arranged with another one, who was a temporary clerk, to use his name for getting a portion of what he thought he was entitled to for working overtime, and in the name of that temporary clerk drew $73 on an account certified by himself; that he received also a present of $20 from another temporary clerk who was paid on his certificate.

Presents were going in those days. What did the committee recommend? They recommended that the party in question:

be reduced to the minimum of his present class and suffer the consequences of his suspension to the date of this report.

There was no question of dismissal. And this report is signed by Geo. E. Foster, John Haggart, and E. Dewdney. I do believe in playing the game but in playing it fairly. If that was the proper constitutional course to follow in 1891, I fail to see why, upon suspicion, and upon criticism, the money of the people should be expended in investigating all the departments of this government. Sir, the Cassels' commission cost this country $55,000. That could have been expended in the interests of the farming classes. That would have helped the labouring classes. Hon. gentlemen opposite are not satisfied with taking from the pockets of the farmers and the poor people $55,000, and giving it to judges and lawyers, but they want to vote for a proposition which will take a million dollars of the people's money, and take it in order to obtain what? To obtain what hon. gentlemen opposite have obtained through the investigation—the opening of the doors of some homes and the throwing out upon the roadway of the poor bread-earners of these homes. That is what they have obtained, Sir.

Some hon. MEMBERS. Hear, hear.

Mr. DEVLIN. Hon. gentlemen opposite may smile, but I ask if some of these hon. gentlemen themselves, being placed in the way of temptation, have not fallen? I ask these hon. gentlemen if when, perhaps, almost starvation faced them, they were offered a hundred dollars, would they not accept it? After all, we must be fair. We took, perhaps, excessive means. We took the course suggested by justice and reason; we found that one department of this government was charged with offences, and we investigated it. And hon. gentlemen opposite are criticising every day. Do they want us to go further with that investigation? I think it is absolutely unnecessary.

Now, I do not think I shall feel justified in detaining the House at greater length——

Some hon. MEMBERS. Hear, hear.

Mr. DEVLIN. Hon. gentlemen opposite do not seem to like the reading of certain reports—but I hardly think that the hon. member for North Toronto would pardon me if I did not refer to some of the language which he used, and which some hon. members seated here last session heard him use, with respect to the Minister of Marine and Fisheries. I have sat in my place during the last few days expecting that the hon. member for East Grey (Mr. Sproule), and the hon. member for Victoria and Haliburton (Mr. Hughes), would be men enough to stand up and utter the same words, the same manly words, that were uttered by the hon. member for St. Anne's division, and declare that they believed that personally the Minister of Marine and Fisheries was an innocent man. Where is that hon. member who, last session, prior to this investigation, said that the name of the Minister of Marine and Fisheries reeked throughout this country? He is not in his place to-night to stand up and give credit to the Minister of Marine and Fisheries for the reforms he has accomplished. What shall we say of the hon. member for North Toronto (Mr. Foster) in view of the language he used last session in speaking of my hon. friend the Minister of Marine and Fisheries. I quote from page 3990 of 'Hansard' of last year:

> Mr. BRODEUR. The hon. gentleman (Mr. Foster) makes the statement that I have been in the habit of taking money from the public chest, and using that money for my own purposes and have been obliged to refund a part of that money. That is the charge he has made.

Now, Mr. Speaker, this sensitive man who does not like to hear offensive language used against himself, yet who uses more disagreeable language than any other hon. member had not the courage to stand up and say: 'That is not what I said, that is not what I meant to say.' But here is the mean insinuation used by the hon. member for North Toronto (Mr. Foster):

> You are pretty close to it.

That is the charge the hon. gentleman made against the Minister of Marine and Fisheries—that he had kept for his own purpose for months money that he had no right to keep. Is that a charge, or is that an insinuation? And, Sir, he had not the manliness to do what the right hon. Prime Minister (Sir Wilfrid Laurier) nobly did to-night, but he kept his seat and said: 'You are pretty close to it.' I feel that I am in the judgment of the House and will be in the judgment of the country by voting against the amendment as it is proposed. The leader of the opposition (Mr. R. L. Borden), very ingeniously said: 'Change the amendment in any way you like, provided you give us an investigation.' The hon. leader of the opposition knows full well that by constitutional practice and parliamentary rule no amendment can be offered to an amendment such as that before the House, because it is in the form of a vote of want of confidence in the government. Had an amendment been possible, we might have moved, as we would have moved, that whenever there was a direct and specific charge against any department we would afford an investigation. And, Sir, in conclusion, I say that when any hon. gentleman opposite has a charge to make against a department of this government and makes that charge, as constitutionally he should make it, upon the re-

sponsibility of a member of this House, then this government certainly will give a thorough and true investigation, and I will be the first to support them in taking that course.

Mr. WM. PRICE (Quebec West). My hon. friend from Hull (Mr. Devlin), seemed to have no argument against the amendment, but he has a great deal to say about the hon. member for North Toronto (Mr. Foster). The hon. member for North Toronto is well able to defend himself, but it seems to me rather absurd that so many members attempt to cross swords with that hon. member. I find that I have practically no arguments to rebut; I have heard simply nothing against this amendment. What I did hear was that Conservatives before 1896 did the same thing. I can only answer as, I believe, a member of the British House of Commons did, 'I am glad to see that the Liberals of this day are now as advanced as the Conservatives were in 1896.' One would suppose that in thirteen years we should make greater advances than that. One would suppose that, by this time, we would drop this tu quoque argument and bring forward solid arguments before the House. It is tiresome, indeed, to a business man to come to Ottawa and to listen to this sort of thing in place or argument. The Minister of Marine and Fisheries (Mr. Brodeur) told us yesterday that the responsibility for the state of affairs in his department as shown by the report of Mr. Justice Cassels rests as much with his predecessors as with himself. He goes as far back as 1867. This may be so, and let us assume that it is correct. In 1867, the expenditure on fisheries and coast service was something over $205,000. In 1896, the expenditure was $893,000, an advance during that time of $688,000. In 1907-8, the expenditure was $3,791,737, an increase since 1896 of over $2,900,000. I am not going to find fault with that increase now, because a great deal of the money was well spent in lighting the St. Lawrence channel and in many other important works.

I would like to draw attention to the salaries received by the agents of the Marine and Fisheries Department. Have they been increased or not? I find that Mr. J. U. Gregory, late agent at Quebec, was getting a salary of $2,200, a man who had been there 38 long years. This man was in charge of expenditures, averaging during the last three years $904,000. Mr. Harding, of St. John, was getting $1,800 a year after 13 years' service, and was handling an average expenditure of $250,000. Mr. J. O. Parsons, of Halifax, was getting a salary of $1,600 after 14 years' service, and was spending on an average $674,000 annually. Now, it seems to me that in view of the enormously increased expenditures since 1896, and particularly during the last four or five years, the Minister of Marine and Fisheries ought to have had some thought for the agents at those places. Enormous responsibilities were laid on the shoulders of these men. They were expected to look after the spending of these enormous sums, they were expected to look after all the shipping and all the multifarious interests of the department. During the last five years the cost of living has greatly increased, and every one knows that men in those positions are supposed to maintain a certain style of living. Do you mean to tell me that many of those officials, who are paid salaries averaging from $1,600 to $2,200, salaries that are paid to ordinary bookkeepers because they keep their books correctly, are receiving what simple justice requires they should receive? I say the Minister of Marine is responsible for not having raised the salaries of those men. It is no wonder that some of those agents have done some things that they should not have done, or that things have gone wrong in this department, seeing that its agents were so poorly paid. I think they deserve sympathy, and that the government deserves condemnation for the parsimonious way in which it has treated those men. I noticed in reading the evidence taken at Halifax that the late members, Roche and Carney, were allowed to employ men during the election, or at least that they got men employed during the election. What has the minister done about that? Is he going to allow that to go on year after year? Are members and candidates on the government side to be allowed to have men employed in that way? I have myself suffered from the unfair interference of the Department of Marine and Fisheries in employing extra men during my election in Quebec West, men that were employed on purpose to vote against me. We are told that there is no reason why a further investigation should be held by the department. I think there are many reasons why a further investigation should be undertaken. Many of the men who have been proven by the Cassels investigation to have given bribes are still supplying goods to the Department of Public Works, and to several other departments. What kind of work is being done by the government at various wharfs? We have had the case of the Sorel wharf slipping into the water, after we have spent large sums of money upon it. We have been told about the absurdly high cost of the servants' quarters at Kingston. We know that there are various wharfs built in different parts of the country to many of which vessels cannot go. Now, it seems to me that if the public money is being wrongfully spent in these ways, an investigation should be held in regard to it. I submit that the amendment moved by my hon. friend from St. Anne's is a good one, that the reasons he has given in support of it are sound, and that the

government, if they wish to do their duty, should accept it and immediately order another investigation into the various departments. I do not suppose they will do it, they are altogether too well satisfied with themselves. To the pure all things are pure. I think it might be better said that to the impure all things are impure on the other side of the House.

Mr. GEORGES PARENT (Montmorency). I was rather anxious to hear my hon. friend from Quebec West (Mr. Price) express his views on this question. As many hon. members are aware, the member for Quebec West lives in the district in which most of these pretended scandals took place. Mr. Gregory, of whom we have heard so much, is living in the hon. member's county, as well as several other gentlemen who have been concerned in the Cassels investigation. I am not surprised, therefore, to hear the hon. member for Quebec West express his sympathy with these men who have been dismissed by the Minister of Marine and Fisheries. I think the hon. member might have gone a little further and told the House why he had sympathy for these gentlemen, but he did not. Perhaps the reason he did not was that the hon. member for North Toronto (Mr. Foster) and the leader of the opposition has spoken of these gentlemen in such language that the member for Quebec West did not dare to say anything further in their favour. After the words which have been pronounced to-night by the member for North Toronto about the Quebec merchants and the Quebec officials, I am not surprised that the hon. member for Quebec West could not say much more about them. If he did speak in that way concerning them, it was because he knew better than the member for North Toronto that these gentlemen who were concerned in that investigation were not as bad as the member for North Toronto has painted them. The member for North Toronto mentioned several names when he was replying to the hon. member for Lunenburg; he spoke, for instance, of Mr. Drolet, and he read some of the evidence taken with regard to him, but the hon. member did not read that evidence as he should have read it. He only selected certain words, or perhaps something that he might have heard from certain persons who were hostile to this gentleman, and then he brings them forward in the House of Commons. I might tell the hon. gentleman that if he had ever met Mr. Drolet personally, if he had ever known him, he would not have used that language. Let me tell you that Mr. Drolet is not a man to bribe anybody. He does not know how. He never learned, and he cannot even understand it. He is simply a skilled worker; he is a man of genius, a man who devotes his attention to mechanics. The business and financial affairs of his firm are in the hands of his bookkeepers. I mean to say that while he is at the head of his firm the business and financial side of it is managed by others, and he does not himself know anything about payments made on behalf of the firm. The same thing might be said of others whose names are mentioned in the report of Mr. Justice Cassels. I make this statement because I believe it to be true. I do not think there is any proof at all which would satisfy the country or parliament that Halliday has done anything wrong so far as his dealings with the Department of Marine and Fisheries are concerned. It has been said that he has received $6,000 more than he was entitled to. That is an affirmation which is entirely wrong and is not founded on fact. If Mr. Halliday has received $6,000 more than what his original contract called for, as stated in Mr. Justice Cassels' report, it is because of the subsequent agreement which he entered into with the Department of Marine and Fisheries and under which he was entitled to receive that amount. It is easy to say that he has received more money than he was entitled to, but do hon. gentlemen know the circumstances under which he received it? Mr. Halliday had a contract with the Department of Marine and Fisheries by which a boat of his was hired to the department at $125 a day. There was a condition that he should be entitled to a certain part of the service of the boat for his own trade, and it was agreed that the moment the department wanted the entire service of the steamer for its own use the department would pay more than the first contract called for. That is the whole story, and yet we hear hon. gentlemen opposite making the statement that Halliday has received more money than he was entitled to. We hear these hon. gentlemen saying that men like Mr. Drolet were bribers. The statement is entirely wrong; it is entirely false, and there is no reason whatever for making it. Of course, I do not get up to defend any person who has given money to officials of the department. I do not say it is right, but I am taking special individuals, that hon. gentlemen opposite do not know at all, whose names they have put before the country as being bribers, and I am showing that their accusations are entirely wrong and that they do not know what they are talking about. They may find enjoyment in slandering these men, but the name of Drolet will remain in the minds of the people of the city of Quebec as that of a man of genius and integrity.

I would call the attention of the hon. member for North Toronto (Mr. Foster) and of the hon. leader of the opposition (Mr. L. R. Borden) to the fact that the

hon. member for Quebec West (Mr. Price) had not a word to say against Mr. Drolet or Mr. Halliday. Yet, we hear these hon. gentlemen trying to cast discredit upon these men. They admire very much the hon. member for Quebec West, they have great confidence in him, but still he does not share their views. He said to-night that he had a feeling of sympathy for the merchants and officials in Quebec. If I have referred to Quebec to-night it is because the hon. member for Qubeec West has spoken. It was not my intention to say anything about it, but I, in common with other Quebecers, feel sore because of the dismissals that have taken place in the Department of Marine and Fisheries. There were in the department men who had done a great deal for the public service. There were certain men who, if I am permitted to say what I think, should not have been dismissed, and who should not have been treated as they were. I might mention the case of Geo. O'Farrel, for instance, who, under special circumstances, happened to borrow money from some person who had business relations with the department. He borrowed money from him one day, it was made public and as a result of that the decision was arrived at that O'Farrel had to go. Any one who has followed O'Farrel's career knows that he has given valuable services to the department. He entered the department many years ago and since that time his life has been devoted to the public service. He continued in the service for many years at a very small salary, because as every one knows, the officers of the Department of Marine and Fisheries are not well paid. What were the circumstances under which he received the money which was the basis of the charge against him? He has explained them. His explanation is this: 'I was in Halifax when I received a telegram saying that my son was dying, that my wife was very sick and that everything was going wrong as far as my family were concerned. I came to Quebec without any money. Whom did I meet? I met some persons in the office who were doing work for the department and I happened to borrow $100 from one of these persons.' For the sake of $100 you put that man out of the service; and what can he do now? You have said to him: 'You are dismissed.' That is the voice of the department, that is the voice of the minister, that is the conclusion of Mr. Justice Cassels' report. I might say the same for others but it is not my duty. We are bound under circumstances of this kind to sacrifice a few heads, and perhaps there are others in the department who might have been treated in a different way. That, of course, is a matter of personal opinion I leave it at that.

I would also say a word for another official of the Department of Marine and Fisheries, Captain Spain. It is of course a good rule that when an employee of a department has to travel on government business, he should give an account of his expenses from day to day, but if an official happens to make a mistake, if he happens to forget, surely there must be enough leniency in the minds of the people to overlook the disappearance of a few hundred dollars, and if Captain Spain was a good servant of the country, as Mr. Justice Cassels says, should we for the sake of $500 for which he cannot account, deprive the country of the very valuable services which he has rendered in the past? I cannot believe that we should do that. What is $500 or even $1,000 that for it we should sacrifice the services of a man of that sort.

I wish now to refer to the work performed by the Minister of Marine and Fisheries. Unfortunately the member for Quebec Centre (Mr. Lachance) who is much better able than myself to express the views of the Quebec members in this House, is absent, but I felt it my duty to say a few words about the work which I know has been performed in Quebec. I have admired the position taken by the hon. member for St. Anne (Mr. Doherty). He has presented an amendment to the motion for Supply and he has done it in such language and in such a way as will surely appeal to the members on this side of the House. He has praised the Minister of Marine and Fisheries (Mr. Brodeur) and he has done it probably because he knew that such praise was deserved. His language to-night was in striking contrast to that uttered by hon. gentlemen opposite last year. To-day the hon. member spoke not against Mr. Brodeur personally, not against the Minister of Marine and Fisheries as being Mr. Brodeur; he was criticising his administration, but not his personality. That is something to which we have not been accustomed, because during the time I have had the honour of a seat in this House, the Minister of Marine and Fisheries has been the most bitterly attacked and criticised member of the administration. We have seen him for days and nights trying to pass a few dollars of his estimates, but prevented from doing so, by whom? By the members of the opposition, the same members who now recognize his merit and who now say he has done his duty and has been a good administrator of public affairs. When we say he has been a good administrator of the affairs of his department we know something about it and I probably know more than many other members in this House, because it is my good fortune to represent a county situated on the shores of the St. Lawrence river. My constituency is a maritime constituency; I have there sailors, navigators, captains.

pilots, and all classes of men connected with navigation. From all these men there comes nothing but compliment for the Minister of Marine and Fisheries because he has rendered every one of them full justice and has given them every aid in their profession that they could demand. A passenger travelling on one of the great ocean liners, going through the channel from Montreal to the gulf does not realize what the maintenance of that river navigation means; he does not think of the pilot who guides the ship, he forgets the men in charge of the lighthouse, and he forgets the man at the head of the river service. The Minister of Marine and Fisheries has to look after all that , and to-day he has all the lighthouses and aids to navigation from Montreal to the gulf in such a state of efficiency that a steamer can start from Montreal at any hour of the day or night and traverse the St. Lawrence river as safely by night as by day. This has been the work of the present Minister of Marine. His predecessors tried to accomplish this, but they did not succeed. He has succeeded and the country should be thankful for his efforts and should give him credit for that great achievement. Not long ago the Shipping Federation, whose opinion will not be opposed by the hon. gentlemen opposite, enjoyed an excursion down the St. Lawrence river as the guests of the minister in order that they might see the work that the department was performing. I need not repeat the opinion expressed by the Shipping Federation; it was published in the papers. They recognized that the work of the Minister of Marine and Fisheries was the very best effort that any Minister of Marine had performed. I shall not longer detain the House in demonstrating that the minister has done his duty towards his country. To prove that, I need only take the words of the hon. member for St. Anne (Mr. Doherty) who has said plainly that the personality of the Minister of Marine and Fisheries is not in question. It cannot be, for those who know the minister feel that his name stands for honesty, for integrity, for everything that is the very best.

I wish to state now why I shall not support the amendment of the hon. member for St. Anne (Mr. Doherty.) I do not believe that sufficient reasons have been advanced to induce us to vote for that amendment. Without any reasons and without any justification, we have the hon. gentleman's assertion that other departments may be wrong; but we do not know it, and until we have from hon. gentlemen opposite a definite charge, we cannot justify an amendment of this kind, and therefore I wish to put myself on record as saying that I will vote against it.

Mr. A. C. BOYCE (West Algoma). Mr. Speaker, I must congratulate my hon. friend from Montmorency (Mr. Parent) upon the courtesy he has done those of us, who would have been unable to follow him in the beautiful language in which he is accustomed to address the House, in making his speech in English; and if I do not pay that attention to it to which it is entitled, he will have to pardon me because of the lateness of the hour. If this debate has been somewhat protracted, it has not been lacking, at any rate in the later hours, in interest. To that interest the Prime Minister has largely contributed. I fancy that it is many years since this House has witnessed such a scene as has been enacted here to-night, for which the Prime Minister and he alone was responsible. What position has the right hon. gentleman taken with regard to this resolution? He has taken the position of obstructing it, opposing it upon premises which were absolutely untenable, and, as has been pointed out by the hon. leader of the opposition, upon grounds which the right hon. gentleman demonstrated clearly he was not sure of, and which I am quite sure he is satisfied now were incorrect. The right hon. gentleman, in making the attack he did upon my hon. friend from North Toronto (Mr. Foster), boasted of his manliness and of his long parliamentary career; yet he did not hesitate to make an imputation against the hon. member for North Toronto which he was afterwards obliged to retract. That was the commencement of a scene which was somewhat extraordinary, and following which the right hon. gentleman, with a fluency to which he is quite accustomed, quoted scripture. We have heard the right hon. gentleman quote scripture before, I think pretty often during the last campaign. The right hon. gentleman to-night quoted this saying: 'To the pure all things are pure.' When the right hon. gentleman made that very apt quotation, it occurred to me that I would like to quote to him, not from scripture, but from Shakespeare, apropos of the right hon. gentleman's specious explanation or apology for calling upon his party to vote down this resolution:

> In law, what plea so tainted and corrupt,
> But being season'd with a gracious voice,
> Obscures the show of evil.

It is not extraordinary to find the right hon. gentleman opposing this motion, in view of the fact that during the last five years we on this side of the House have made similar motions to the present one, though limited in their scope to one department or another, and they have been met invariably with the same reply from the right hon. gentleman, that these departments were above suspicion, that he did not propose to investigate them no matter what scandal was charged against them. To

'the pure all things are pure,' is the song the right hon. gentleman constantly sings. Let me remind the right hon. gentleman of some of the pure things which he has called upon his followers to vote down a reasonable, fair and full investigation into. I remember a debate which took place in this House two or three years ago, in regard to the action of a gentleman named Philip Wagner, who was in the civil service somewhere in the North West Territories. This gentleman had been convicted of stealing from the very men with whom as a public official he was brought into contact. After having been twice in gaol, he was brought out, re-appointed to the Department of Interior, promoted, and given an increase of salary; and when a motion was made on this side of the House that Philip Wagner be dismissed or that his conduct be inquired into, the right hon. gentleman rose in his place and called upon his followers to vote down the motion, and it was voted down, because to the right hon. gentlemen then, as now, 'to the pure all things are pure.' I might refresh the right hon.gentleman's memory with one or two other instances in which he has voted and called upon his followers to vote against similar resolutions. He remembers well the case of one Joseph Nixon, another gentleman who in his office stole from the people with whom he was brought into contact. A motion to condemn that man, made from this side of the House, met with the same reply from the right hon. gentleman—'to the pure all things are pure.' As long as this government is in power, as long as this right hon. gentleman sits here, thieves in the public service are safe and immune from prosecution, because the right hon. gentleman says that 'to the pure all things are pure,' and by the thief all things may be thieved. Is the right hon. gentleman's memory so bad that it cannot carry him back to only a few days ago, when a measure of reckless extravagence was passed in this House, namely, the wilful and unjustifiable expenditure of $1,000,000 of the money of this country at a time when this country could ill afford it, when we have lectures on retrenchment preached to us by ministers of the Crown, for a work said to be a public work, but one that served no other purpose than either to satisfy election pledges or the greed of some contractor and to endeavour to entrench this government in power.

Does the right hon. gentleman remember this? I might cite several votes which the right hon. gentleman gave to burk investigation, even when there was a case made out so clear that he himself had to admit there was evidence in support of it and considerable suspicion. On each occasion the right hon. gentleman blocked the way. He prevented any attempts to clear the atmosphere of those charges which hung so black and low upon the government and refused, as he is now doing, investigation after investigation. We have here facts which undoubtedly point to corruption and irregularities in the various departments of the government, but all the reply we can get from the right hon. gentleman is a misapplication of the words of the scriptures. I do this, he says, because to 'the pure all things are pure.' With regard to the scope of the investigation there is a somewhat extraordinary divergence between the position taken by the government now and that which they took prior to the Cassels inquiry. When the Civil Service report was laid on the table, the Minister of Marine and Fisheries made certain explanations. Let me draw a contrast between what the government promised in the shape of an investigation and what the government gave. In the session of 1907-8 the Minister of Marine and Fisheries, on page 5621 of 'Hansard' said:

> While I am aware that some officials have been open to censure for the manner in which they have discharged their duties, I never had any evidence to show dishonesty on their part.

Note that at the time the Civil Service Commission report was brought down, the minister admitted that he knew that some of the officials of the department had been open to censure. Well, is there one jot or tittle of evidence to show that there was any attempt made by him at any time to censure any of his officials or dismiss one of them, or hold an inquiry on his own account into the administration of his department? On page 3725 of 'Hansard,' I find the hon. minister saying with regard to the scope of the commission:

> I may say at once that, so far as the government is concerned, nothing will be done to prevent this investigation being as thorough and as extended as possible. As head of that department I have every interest in seeing that it shall be as complete as it can be. I want to see this investigation conducted in such a manner that the people of Canada may be satisfied that the intention of the government and of the department is to make the investigation absolutely right in all respects.

Contrast with that declaration the fact that at that time the minister had written out, in the inner chamber of his department, a commission which circumscribed and limited the commissioner in such a way that it was absolutely impossible for him, according to his own ruling, to make a thorough and complete investigation into all the matters and in such a way as to satisfy the people that the intention was to have a thorough investigation. My hon. friend the Minister of Finance had also something to say with regard to the position in which the department found itself. On page 7330 of the 'Hansard' of 1908, he said:

It is practically stated in the report of two of the commissioners, Messrs. Fyshe and Bazin, that there has been corruption in the Department of Marine and Fisheries. The word is not used, but my hon. friend says he knows what the report means.

And again, on the following page:

If they wished to go into that branch of the question—and I do not say they should not have done so—as to whether or not the officials in the service were corrupt, then they were bound in justice to themselves, to the House and the individuals concerned, to go further and say in some detail who was corrupt and wherein the corruption lay.

Therefore, I say that what the minister and the government promise, and what they gave, are so far apart that the only possible reparation they can make now, in view of the circumstances as they are, in view of the insufficiency of this report, in view of the fact that this report in every way breathes of matters behind the scenes which ought to be, and which some day must be, investigated, is to open the doors of each department and extend the investigation along the lines of the resolution of my hon. friend (Mr. Doherty).

Now, what has been said by the other side in answer? Mainly, there are two grounds of opposition to this amendment. The first is that when the Conservatives were in office there was great corruption in the departments; and the other is one on which the right hon. Prime Minister and his supporters greatly plume themselves—that the people last election returned the right hon. gentleman and his party to power and thereby declared themselves completely satisfied with this investigation. How did they satisfy the people? I have shown that the Minister of Marine and Fisheries and others were telling the country that the investigation would be thorough and efficient and that justice would be done all round. And the Prime Minister (Sir Wilfrid Laurier) told the people on the hustings at Niagara Falls that the people believed his government was an honest government, and, as the hon. member for North Toronto showed, he took to himself the credit of directing the holding of an investigation by the Civil Service Commission, and, as it was not sufficient, of ordering the one which he said would satisfy the people that there was nothing wrong left undisclosed to the public gaze. I say that the report of Mr. Justice Cassels, in certain respects which have been pointed out, and which I shall not go into in detail, shows that the cloud which rests upon the government has not been dissipated and that a further investigation is necesary. The inquiry stops short at most important points; very important subjects are not followed up; conclusions are not drawn; witnesses who could give most valuable testimony on certain points are not called; and the result of the whole report is most unsatisfactory in that those who are most guilty are not disclosed and do not appear in the evidence.

I desire to refer to one feature of that report, the attitude taken with regard to the relations between Mr. Gregory, of Quebec, and the deputy minister of the department.

The Minister of Marine and Fisheries will tell me if I am wrong in believing that the deputy minister has been retired with a superannuation allowance of $3,000 per annum, while Mr. Gregory, of Quebec, has suffered the pain of dismissal. Some animadversions have been made in the report on the deputy minister. I have not made an extended or analytical examination of the report, but I think there is a great deal that might have been brought out if witnesses had been called whom the deputy minister wanted to have called to complete the investigation. Extraordinary facts are brought to light. For instance, at page 55 of the report, the comissioner purports to quote the first part of a letter from the deputy minister to Mr. Gregory:

My dear Gregory,—As regards the letters which have been written to you lately, and which will probably be written again, they are simply to save the department in the eyes of the Finance Minister, they are doing all they can to curtail our expenses, but that cannot be done.

That clause, standing alone, seems to be rather peculiar; it would appear to bear only one construction, and that is that the deputy minister was instructing Mr. Gregory in one way by letters which were on file in the department and instructing him privately to pay no attention to these letters. I do not know whether the Minister of Marine and Fisheries (Mr. Brodeur) has laid on the table, or intends to lay on the table, the correspondence with Mr. Gourdeau in that connection. I would like to ask the minister that question. Apparently, the hon. minister does not consider the question of sufficient importance, so I will pass it by.

Mr. BRODEUR. Do I understand the hon. gentleman (Mr. Boyce) to ask me a question?

Mr. BOYCE. Yes. Will the minister lay on the table the correspondence between Mr. Gourdeau and Mr. Gregory relative to the circumstances referred to in this letter?

Mr. BRODEUR. I do not know of any correspondence, except that Col. Gourdeau sent some letters last year with regard to his resignation. I think these letters have been brought down.

Mr. BOYCE. Last year, Col. Gourdeau sent some letters—that is all the minister tells us. Let me ask the minister if he

recognizes this as being the context of that part quoted from Col. Gourdeau's letter?

In the meantime, I have obtained the Prime Minister's approval for the large expenditure for repairing the lightship and provision will have to be made, some way or other, to meet this.

What does that mean? It means that the Deputy Minister of Marine and Fisheries was telling Mr. Gregory that expenditures were being made beyond the estimated amount, that he was telling him to curtail, but only in order to blind the eyes of the Minister of Finance, and that he had, in the meantime, obtained the fiat of the Prime Minister (Sir Wilfrid Laurier) to the expenditure, and following that had got a warrant from the Governor-General in order to defray the expense. Well, Sir, it is an extraordinary fact, but I understand it to be a fact, that Col. Gourdeau also contends that there was—and I say this subject to correction by the Minister of Marine and Fisheries if I am wrong—an interview in the city of Quebec between the right hon. Prime Minister and Mr. Gregory with reference to the expenditure, and that only a few days before this letter was written, the right hon. gentleman expressed himself to Mr. Gregory in the presence of Mr. Gourdeau as being satisfied with the explanation that Mr. Gregory gave as to his position at that time and the reason for the expenditure he had made, and that the Prime Minister came back, and, in order to provide for the expenditures, which then exceeded the estimates, he went to the Governor General and got a Governor General's warrant. Am I right or wrong? I ask the Minister of Marine and Fisheries. Then, if that be the case, what becomes of the statement in Mr. Justice Cassels' report with regard to this paragraph?

Col. Gourdeau, I understand, contends that the paragraph which was alleged to have been untrue was absolutely true, and that he was so instructed to notify Mr. Gregory. At that time the affairs of the department were under the management and control, not of the present minister nor of the late Mr. Prefontaine, but of the Prime Minister of the country himself. If there were irregularities which ought to have been brought to light as between the late deputy minister and Mr. Gregory at Montreal, surely it would have been proper, and in accordance with the scope of the investigation, if these statements are true, that the right hon. gentleman should have been called to the witness box to give evidence, seeing that he was in charge of the department at that time, and who, it is said, had conversations relative to these very matters with both the deputy minister and Mr. Gregory, and who gave his fiat for the increased expenditure. Without referring at greater length to the matters which are the subject of this resolution, I want to point out to the Prime Minister that the people of Canada demand a full and searching investigation into the expenses of this country, and I think I am only echoing the sentiments of the people when I say that they will not submit to an investigation being choked at its birth, as the government are trying to do in opposing this resolution. The resolution of the hon. member for St. Anne (Mr. Doherty) grows out of the facts referred to in Judge Cassels' report, and it follows as a logical sequence, that there should be a further investigation, an investigation not limited to one department, but extending to all the spending departments of the government. And I say that just so long as the government stand in the door and bar the way to a complete and thorough investigation into these departments, just so sure will the government lose the confidence of the people.

Mr. CYRIAS ROY (Montmagny). (Translation). Mr. Speaker, I do not propose speaking at great length on the question now before the House. I do not propose going into the details of the inquiry which has been carried on at the request of hon. members and with the approval of the government. The hon. member for North Toronto (Mr. Foster) charged some hon. gentlemen sitting on your right, Mr. Speaker, with not being well posted on the rules of the House and having shown a lack of logic in their remarks. As regards myself, I think that if the mover of this amendment had proceeded in such a way as to permit our accepting his proposition, that is, if instead of introducing a non-confidence motion, he had applied directly to the government with a view to obtaining a continuation of the inquiry they had willingly granted in the case of the Marine Department, there would not have been a head of department who would not have agreed to such a request, and myself, as a liberal, I would have been in favour of such a move. But to-day a non-confidence motion is laid before the House asking for a general inquiry into the departments, and that after the government, through the Minister of Marine, has announced the policy he intends to follow in pursuance of the report of Mr. Justice Cassels. Seeing that the opposition has thought fit to take that stand, the proposal of a non-confidence motion, I consider it the duty, not only of the members on the government side, but of the whole House, to vote against the proposed amendment.

What reasons have been advanced in support of the amendment? Was there any

reference made to the report of Mr. Justice Cassels? Incidentally some members have mentioned it. We have it from the very mouths of those who have taken part in the debate on behalf of the opposition, that the Minister of Marine and his department are in no way involved in the findings of the Cassels inquiry. That is no doubt the reason why efforts are now being made to mix up things. What the minister has agreed to is declared insufficient. It must be stated publicly that the government is responsible for the circumstances brought out by the Cassels inquiry, since they refuse to grant the request implied in the said amendment. Well, Mr. Speaker, I say that such a mode of proceedure cannot be approved.

As I stated a moment ago, the hon. member for North Toronto has had the courage, relying on the experience he gained in this House, to rebuke an hon. member on your right, Mr. Speaker, for his so-called lack of experience and the illogical stand taken by him in consequence. Well, at the risk of being dealt with in like manner, being also a new member, not very familiar with the rules of the House, I shall undertake to express briefly the opinion I have as regards the question now before us. If I were called upon to answer the hon. member who has just taken his seat, I think that would be an easy matter, as he would have to admit that he has not dealt with the question before the House, that is to say the report of Mr. Justice Cassels. The hon. member stated that, if the report referred to is to be believed, all the ministers, and among them the right hon. Prime Minister, are to be held accountable for the findings contained in Mr. Justice Cassels' report. Now, what are those findings? Does not the report clear the department of Marine and all other departments of any charges made against them?

To show the good faith of the Minister of Marine, it will be sufficient to recall that this inquiry was made following on a report made by the Civil Service Commission appointed by the government. It has been claimed that the inquiry was incomplete, that the Minister of Marine was interested in preventing any light being thrown on the management of his department. Now, what is stated in the report of the Civil Service Commission, which has been the occasion for instituting the Cassels' inquiry? That paragraph has already been read, and in order to save time, I shall quote only the two last lines:

> In other words some of the government's officers are serving two masters, and apparently succeeding with both—Scripture notwithstanding.

Mr. ROY.

Mr. Justice Cassels, after quoting that sentence from the report of the Civil Service Commission, goes on as follows:

> Some limitation had to be given the inquiry and as the charges made by the report of the Civil Service Commission are mainly confined to the fiscal year 1904-5, 1905-6 and 1906-7, I limited the investigation in the meantime to those years.

An hon. gentleman on the other side charged the minister with having limited the inquiry. The above quotation from Mr. Cassels' report shows that, in limiting the scope of the inquiry to those three years, he took his inspiration from the report of the Civil Service Commission.

Then, by referring to the instructions given to Mr. Justice Cassels, it will be found that they do not contain any restriction as to the scope of inquiry. I quote the following lines from the commission signed by the hon. Minister of Marine appointing Mr. Justice Cassels 'Commissioner to investigate and report upon certain statements contained in the report of the Civil Service Commision reflecting upon the integrity of the officials of the department of Marine and Fisheries, or some of them.'

In view of the above quotations, on what grounds can it be contended that the Minister of Marine is responsible for restricting the scope of the inquiry? There is nothing to support such a contention.

As I stated a moment ago, the finding contained in the report of Mr. Justice Cassels, is that certain officers regarding whose conduct the inquiry was held, have received certain amounts which they should not have received. Well, my views may differ from those of some of the hon. members on whose side I happen to occupy a seat, but seeing that the inquiry has been granted at their request, and that as a result, some officials have been found guilty, should the House now, in accordance with the wishes of some hon. members, start a fresh inquiry? Of course, we have the right to do so, but would we be justifiable in so doing? I do not think so. Unless there are some very sound reasons for believing that the commissioner erred, it seems to me hon. gentlemen are not justifiable in discussing these conclusions. We are bound to accept them. And they go to show, unfortunately for the province of Quebec, a constituency of which I represent in this House, that certain officials have committed a breach of duty in accepting what they should have refused.

In view of the promptness and cheerfulness with which that inquiry was granted by the minister, who, though unaware of what had been going on, was anxious to dispel any suspicions resting on his depart-

ment, it seems to me that all that can be expected now from the Minister of Marine is that he should give effect to the findings of the commissioner.

Mr. Speaker, I have noticed, and I make the statement in all sincerity, that in regard to certain questions, members on both sides of the House are apt to repeat the same arguments. I noticed it and took note of it. I do not wish it to be said that I am committing the same error. Considering the lateness of the hour, and as I understand the question will shortly be put, I shall discard the copious notes I had jotted down. However, I may state that for the reasons above mentioned and for others which I might state, I shall vote against the amendment introduced by the hon. member for St. Anne's.

Mr. JOSEPH DEMERS (St. Johns and Iberville.) (Translation.) I apologize to the House for having to take up some of its time at such a late hour. I listened with great interest and care to the speech delivered yesterday by the member for St. Anne's (Mr. Doherty). I am happy to say that, like the whole House, I appreciated his remarks in reference to the hon. Minister of Marine.

The hon. member for St. Anne's has deemed it his duty to publicly acknowledge the honesty of the hon. minister. Possibly he thought it incumbent on him to relieve his party of an obligation incurred, that of making amends for an injury unjustly caused to others.

The hon. minister had surely no need for the certificate of high honourability, which has been thus granted to him ; at the same time, the stand taken by the hon. member for St. Anne's is not the less meritorious, and is evidence on the part of the mover of the amendment of a spirit of fairness, which is creditable to him, and for which I sincerely congratulate him.

That is sufficient compensation to the minister for the attacks directed against him, during last session and this, as well as in the course of this very debate, attacks which have been of such a violent character, that we could not help wondering whether those who directed them were conscious of the part they were playing, and whether the minister was being attacked because of his being Minister of Marine or for some other reason.

The hon. minister had the right to expect an apology from some member of the opposition. True, the hon. member for St. Anne's has not thought fit to go to the point of congratulating the minister on his administration, but I think he could have done so just as well.

Just think what an enormous amount of work the hon. Minister of Marine has taken on himself to accomplish since he came into office ! Appointed in 1906, his first step was to go into the working of his department, so as to put himself in touch with all details of its management. Very soon, however, he realized that such a task was very difficult of accomplishment, on account of the defective system of bookkeeping in use. He then decided to effect a change and to introduce a new and business-like system of bookkeeping. That required several months and entailed a pretty heavy expenditure ; but that expenditure was justified, I think, in view of the benefits derived therefrom.

Shortly after, the Civil Service Commission started its inquiry, one of the findings of which informed us that some wrongdoing had been committed by high officials of the Department of Marine. However, as that report did not mention any one, it was impossible to find out who the guilty officials were. The hon. minister then decided to require on his own account a thorough inquiry, in order to get to the bottom of the whole matter and insure the punishment of all offenders. The inquiry was held and the guilty officials have been punished. The department is to-day on the best possible footing.

Was the hon. minister right in trusting the officials of his department, from the time he took office until the facts were brought out in the course of the Cassels' inquiry. Surely it is unbecoming on the part of hon. members on the other side to find fault with him on that account, considering that the officers in charge when he came into office had all been appointed by the late Conservative administration.

Could the minister be expected to do more than he has done? Appointed, as I have already stated, in 1906, that is three years ago, twenty months of which have been taken up by the work of succeeding sessions, he has been called upon to spend five or six other months in Europe, negociating the Franco-Canadian treaty. In spite of his numerous occupations, the hon. minister has found time to introduce in his department an admirable system of bookkeeping, which ensures a considerable saving. He has, moreover, vigorously prosecuted the great national work of deepening, lighting and providing with buoys the channel of the St. Lawrence. In spite of these enormous undertakings, the hon. minister has time to reform and renew the Montreal harbour commission, and to hold an inquiry which has enabled him to rid his department of a number of people who were not qualified to occupy important public positions.

The above statement of facts warrants me in saying that the hon. Minister of Marine has set himself to accomplishing a tremendous task, and I think he may well be proud for having carried it out in so short a time, by dint of unrelenting energy. The hon. member for St. Ann's might therefore

very well have gone a little further and instead of being content with praising the minister personally, have congratulated him also as to his administrative work.

As regards the amendment submitted to the House, I do not think we should agree to it. No new facts have been brought forward of a nature to warrant our starting a further inquiry into the management of the various departments. Inquiries are expensive, as we all know, and before granting them we should carefully consider that aspect of the question, and grant them only for very good reasons. I for one can see neither in the Cassels' report, neither in the speeches of hon. gentlemen opposite anything sufficient to warrant such action on the part of parliament.

As regards the Department of Marine the circumstances were different. The facts brought forward by the Civil Service Commission were such as to render an inquiry without hesitating a single moment, without even waiting that the request be made. That action of the government is an assurance to us that if it had been necessary to institute inquires in regard to the other departments, such inquiries would have been instituted and all the circumstances brought to light, as easily as in the case of the Marine Department.

To my mind, the hon. member for St. Ann's and other hon. gentlemen opposite have not brought forward any arguments warranting such an inquiry. Besides, an amendment such as this one, coming from hon. gentlemen on the other side, is rather a matter for surprise and a subject for laughter, when it is remembered that the state of things revealed by the Cassels' inquiry has been in existence from 1878 to 1896, during the long period of office of the Conservative government; when it is remembered, also, that the Auditor General, in 1886—as stated yesterday by the Minister of Marine—went to the length of notifying the department of the existence of the deplorable state of things then in existence, notwithstanding which these gentlemen never raised their voice in favour of instituting an inquiry. We have, in view of these circumstances, every reason to be surprised at the motion introduced by the hon. member for St. Ann's.

I have faith in the government, and I know they will take necessary measures for the safeguard of the people's interests. They can very well do without the dictates of the opposition when it comes to reforming or setting matters right.

As for the speeches delivered by the members of the opposition, a number of them, while too long, were made up wholly of quotations from the evidence taken in the course of the inquiry and from the report of Mr. Justice Cassels. I cannot see what bearing nor what expediency these speeches can have, when the reading population has been thoroughly posted on the whole matter through the great daily newspapers which have printed that evidence and even Mr. Justice Cassels' report. A considerable saving of time might then have been effected by leaving out such quotations.

The hon. member for Elgin (Mr. Crothers) charged the government with carelessness and neglect for not having discovered promptly enough the existing state of things, the outcome of the bad behaviour of the officers of the department of Marine.

To that I answer that the system recognized as bad has been in existence since confederation, as shown in the evidence and in the conclusions of Mr. Justice Cassels. I cannot admit for one moment that the Conservatives, from 1878 to 1896, realized what was going on, without seeking to apply a remedy; otherwise they should be held criminally responsible. Now, if they have failed during all those years in bringing to light the wrong-doing of certain officers of that department, is it surprising that this government should have let eleven or twelve years go by before finding out what was going on and applying a remedy?

The government have done their duty, and I trust they will continue to do so as in the past. By carrying on this inquiry they have shown of what metal they are made and what is their energy; they have shown themselves to be inspired by the purest motives of public interest.

As long as the government is favoured with a government such as this, the people may rest assured that public affairs will be managed in the best possible manner within the range of human power.

Mr. A. LANCTOT (Richelieu). (Translation.) Mr. Speaker, I listened with a great deal of interest to the various speeches which were delivered yesterday and to-day, in support of the motion introduced by the hon. gentleman from St. Anne's (Mr. Doherty). Of the various reasons put forward by hon. gentlemen who favour this motion, I fail to see a single one warranting its adoption.

In short, the hon. member for St. Anne's proposes by this motion that a general inquiry be carried on regarding all departments, so as to dispel, he says, any cloud of suspicion resting on the management of such departments; he adds that such an inquiry is called for by public opinion, by the whole electorate of this country.

I submit, Mr. Speaker, that if there rested a cloud of suspicion on the management of the various departments, that cloud has been dispelled and carried away by the wind

which blew on the 26th of October last, and brought about the victory of the present administration. It will be remembered that the Civil Service Commission was appointed on May 8, 1907, and submitted its report on February 28, 1908. In that report some charges against officers of the Marine Department whose names are not given, are mentioned.

On April 6 of the same year, a further commission was appointed at the suggestion of the Hon. Minister of Marine, under the chairmanship of Mr. Justice Cassels, to look into some indefinite charges contained in the report of the previous commission, and summed up into an imputation of lack of conscience directed against public servants in the carrying out of their duties, and particularly against officers of the Marine Department.

That commission was issued about seven months previous to the last general elections. The result of the electoral campaign largely hinged on the discussion of that issue, and the people's verdict was that the scope of the inquiry as suggested by the Hon. Minister of Marine was sufficiently wide. The electors of this country took that stand, in spite of the charge preferred by our opponents that the same system of corruption was rampant in all departments. Whereof, I say that this issue has been settled at the last general election. There is no sense in insisting to-day on a further inquiry being carried on as regards the other departments, and in contending that such further inquiry is called for by public opinion.

The hon. gentleman from St. Anne's, in the course of his remarks yesterday, contended that the state of things which has been found in existence in the Department of Marine was to be found in the other departments as well; because the same people who have intercourse with officers of the Department of Marine must have acted in the same way in their dealings with the officers of other departments.

The hon. member for St. Anne's will allow me to ask him this question : he was for many years a judge of the Superior court at Montreal, and with honour to the bench ; would he advise a jury to force an inquiry on a party for the purpose of finding out whether he has committed some fraud, although no specific charge is made against that man ? I am satisfied the hon. gentleman will answer in the negative. Now, the proposition set forth in his motion is identical to the one I have just stated.

Allow me also, Mr. Speaker, to congratulate the hon. member for St. Anne's on the courtesy he has shown in his dealings with the Minister of Marine, when he stated that the hon. member for Rouville was an honest and upright man. We had not been accustomed on this side of the House to such expressions on behalf of members of the opposition. In the course of the last two years that I have had the honour to occupy a seat in this House, I have never until the day before yesterday, heard a single kindly word in reference to the hon. Minister of Marine fall from the lips of members on the other side. It was necessary that a judge should come down from the bench and enter the political fray to have it proclaimed in the midst of his political allies in this House and before the country, what all his friends, no doubt, thought in their hearts, but had not had the courage and generosity to state in public. Political partisanship has its exigencies, Mr. Speaker, I am aware of it ; and it is seldom that from the ranks of a party there stands out a man generous enough to state the truth, in spite of party prejudices, and do homage to an opponent whom he has to fight, but whom he cannot help esteeming and admiring. Such is the purport of the hon. gentleman's remarks, and I congratulate him once more on that account.

Mr. Speaker, my intention is not to take up the criticisms of the opposition regarding the management of the Marine department. However, I may be allowed to state that, since the minister holds that important portfolio, he has invariably done his duty. He has accomplished in the interest of shipping and transportation more than any of his predecessors. It is under his rule, for instance, that the building of dredges has been started throughout the country, and particularly at Sorel, in the constituency which I have the honour to represent here.

The deepening of the channel of the St. Lawrence, as was stated yesterday, has had the effect of lowering the rates of ocean insurance. Manufacturers, farmers and shippers have largely benefited thereby, owing to the reduced cost of transportation in connection with the products imported or exported by them.

The policy of the hon. Minister of Marine which makes for the building in our own country of dredges and boats, which used to be imported from abroad, is also worthy of general approval. While deepening the St. Lawrence, lowering the rates of insurance and putting manufacturers, farmers and business men in a position to ship their products to the markets of Europe under more favourable conditions, the hon. minister has also had in mind that other very interesting class, the mechanics. He was anxious that people engaged in the trades should take a hand in forwarding the success of his undertaking; he was anxious of satisfying foreigners and the country as a whole that, within the bounds of the Dominion, within the province of Quebec, within my own constituency, there were men capable of building these dredges, these

boats, used by the Department of Marine; in other words, he was anxious that our craftsmen, particularly those familiar with work of that kind, should be in a position to put their talents to use right here, without having to go abroad for a living.

Such is Mr. Speaker, the showing made by the hon. Minister of Marine. Such is the showing of that utterely incapable and incompetent man, who should resign his portfolio, to please the virtuous member from North Toronto (Mr. Foster).

As a representative of the province of Quebec, Mr. Speaker, I wish to say that the hon. minister has always enjoyed the confidence of his fellow-citizens in that province and since he has taken office he has always been trusted and held in high esteem by his English-speaking fellow citizens.

While I am on my feet, Mr. Speaker, allow me also to congratulate the hon. minister of Marine on the firm stand he has taken in connection with the dismissal of the men who had been found guilty of wrong-doing in the Cassels' inquiry.

I am aware, Mr. Speaker, that it is not without some misgivings that a man of fine feelings, such as the hon. Minister of Marine, deprived of their means of living heads of families, who, I am satisfied, were not the greatest sinners. But it was necessary that severity should be shown; it was necessary that the good should be separated from the bad. The hon. minister has not hesitated one moment in doing his duty.

Allow me, Mr. Speaker, to state my satisfaction, as representative of the county of Richelieu, at being in a position to state in this House and before the people of Canada that the searching inquiry held on the extensive and multifarious works carried on at Sorel has not brought out any facts of a nature to discredit in any way, any of the officers or honest men employed at Sorel, and that the honour of the county of Richelieu has not thereby suffered the least injury.

Hon. WM. PUGSLEY (Minister of Public Works). Mr. Speaker, I would not have taken part in the debate, particularly in view of the very exhaustive manner in which the questions of interest in the discussion have been referred to on both sides of the House, if it were not for the fact that I feel that if I were not to make some observations, I might allow a grave injustice to be done to the gentleman who was the representative of the Department of Marine and Fisheries in the constituency which I have the honour to represent and upon whom a very unfair attack was made by one of the gentlemen who spoke from the other side of the House. I refer to Mr. F. J. Harding, who has been, for a good many years, agent for the department in the city of St. John. I thought that perhaps the House would pardon me for having felt it necessary to rise in order to do justice to that gentleman. I find, in the remarks which the hon. member for North Ontario (Mr. Sharpe) made, that he referred in terms of condemnation to the government because we had retired Mr. Harding from the service and given him a superannuation allowance. The hon. member for North Ontario, in referring to Mr. Harding, said:

> The next official, Harding, is superannuated, although, according to the evidence and the report, he had financial transactions with corporations dealing with the department, and was concerned with the destruction of papers of the department and with false entries made in books, in order to protect him.

In justice to that gentleman I desire to say that there is not a shadow of foundation for the statement made by the hon. member for North Ontario. I cannot but express my surprise, that, when the hon. member for North Toronto (Mr. Foster) was addressing this House, knowing the grave injustice which had been done to that gentleman, a gentleman who is well known to the hon. member for North Toronto, a gentleman whose father before him was well known to the hon. member, because both he and his son were under him when he was Minister of Marine and Fisheries, and having knowledge of the general character of that gentleman and of the faithful manner in which he has performed the duties devolving upon representatives of the Marine Department in the city of St. John, should not have felt it incumbent upon himself to do a small measure of justice to Mr. Harding by calling attention to the evidence and pointing out that the hon. member for North Ontario was entirely mistaken in the references which he made to Mr. Harding. It would have been but a simple act of justice on the part of that hon. gentleman and, coming from him as one of the leading members upon the opposition side, would have carried great weight in this country and would have afforded some measure of satisfaction to the friends and relatives of the gentleman who was so unjustly attacked by the hon. member for North Ontario. As far as Mr. Harding is concerned, the government has superannuated him because the evidence failed entirely to show that he had been guilty of any wrong-doing or of any corrupt act. Mr. Justice Cassels, in his findings, expressly reports that there has been no corrupt act proved against Mr. Harding. The one thing that was found against him was that he had the misfortune to be poor. For a good many years he had been in the habit of borrowing money from some gentlemen who had been for a number of years supplying goods to the department, which

moneys he had from time to time returned. Even before any of these gentlemen had business with the department he was in the habit of obtaining loans from them. But, in so far as the evidence shows, Mr. Harding always faithfully and honestly discharged the public duties which he owed to the department. Unfortunately, he had been stricken with paralysis a few months before the investigation took place. He was not able to give his evidence and because of his very severe affliction my hon. friend, the Minister of Marine and Fisheries, has felt it in the public interest to retire him from the public service, but he has retired him honourably. He goes out from the public service without a stain upon his character and he receives the superannuation which he is entitled to by law.

With regard to the deputy minister, he also has been superannuated. I do not wish to add anything to what has been said in regard to him, but I would say to my hon. friend from North Ontario, if he were in his place, that if he searches the evidence from beginning to end, while he may find that Colonel Gourdeau has at times been lacking in discretion, or may not have been as firm as he should have been in the interests of the department, the evidence fails to disclose any corrupt act on the part of Colonel Gourdeau; it fails to disclose that he at any time profited by anything that was done by the different people referred to in the report, and, therefore, it seems to me, that it was not improper, in view of the forty years service which Colonel Gourdeau had rendered to the department and the country that he should be retired with a superannuation allowance. I, as one member of the government, am prepared to take the full responsibility for the superannuation of these two officials. In addition, having made these remarks and done, as far as Mr. Harding was concerned, the justice, which was due to him, of defending him from the attack which was made upon him, perhaps, while I am on my feet, it might be proper for me to give reasons why I think this amendment which the hon. member for Montreal, St. Anne (Mr. Doherty) has moved should not commend itself to the judgment of this House. My right hon. friend the Prime Minister (Sir Wilfrid Laurier) referred in most eulogistic terms to the observations which the hon. member for St. Anne addressed the House in support of the resolution, and a good many compliments have been showered upon that hon. gentleman by other gentlemen who have addressed the House. With regard to the observations of my hon. friend I do not differ at all in my appreciation of his remarks, but I am not prepared to give to my hon. friend that credit which I would like to give him for the resolution which he has presented and for which he asks the support of the members of this House. It does seem to me that when an hon. gentleman presents a resolution to the House he should be sure that the statements which are made in it are accurate. He ought to be sure that he is calling upon the members of the House to support statements which they can justify afterwards and which are supported by evidence sufficiently strong to justify their actions in that regard. My hon. friend in his resolution calls upon this House to ask for an investigation into the other great spending departments of the government. And what does my hon. friend by this resolution say? He says:

> The report of the commission affords ground for the conviction that similar methods prevail in other great spending departments.

In other words, that the report of the commission affords ground for the conviction that there is official negligence ; there is wastefulness, and there is corrupt dealing. That is what he says by this resolution and what he asks this House to say. Let me ask him what there is in the report to justify a statement of that character? He may read the report from beginning to end and he will not find any suggestion of any wrongdoing upon the part of any officials of any other department of the government. Therefore, my hon. friend is asking the House to affirm something which upon its face is absolutely without foundation, and may I say without offence to my hon. friend, is absolutely false. Surely when my hon. friend prepared the resolution he should have taken pains to examine the report and see if he would be justified in asking the House to affirm the statements made there, which I have said are absolutely without foundation. Then by this resolution he makes the statement to this House that the commission of 1907 simply made inquiry into the workings of one department at Ottawa. As my right hon. friend the Prime Minister has stated, it is absolutely clear that the commission must have made inquiry into the Public Works Department, into the Customs Department and into the Military Department, because at page 42 you will find what they have to say of the Department of Public Works, and at page 37 what they have to say of the Militia Department, and also in another place as to the Customs Department. It is true that they did not go as fully into the departments as they might have gone if they had had a longer time, if they had had years to make an inquiry, because then they might have gone to all parts of the country and made inquiry as to all transactions between the public and the various officials of the different departments of the government. The remarks which they make with regard to the Public Works Department and with regard to the Customs and Post Office Departments I think are sufficient to satisfy

this House that if the commissioners had seen any evidence of wrong-doing in any one of those departments they would have fully set out what they had discovered in their report. That they have not done, and the fact that although they made inquiry into those departments they make no suggestion of having discovered anything wrong ought to be sufficient evidence that they did not observe there was anything wrong or anything that should be reported to His Excellency the Governor General. Therefore, it seems to me that my hon. friend in making the statement that the commission had only made incidental inquiry into one department, states something which is absolutely without foundation, and is asking this House to affirm something which is not only without proof, but which is absolutely contradictory to the proof as we have it in the Civil Service Commission and the report made by Mr. Justice Cassels.

Mr. R. L. BORDEN. Is the hon. gentleman under the impression that the word 'only' is in the resolution in the sense that only one department was investigated?

Mr. PUGSLEY. It is absolutely clear, I think:

> The commission, in the course of their investigation into the condition of the Civil Service, having made incidental inqury into the workings of one department at Ottawa——

Mr. R. L. BORDEN. But not only one.

Mr. PUGSLEY. My hon. friend is right, it does not say 'only one,' but surely if any meaning can be given to language, that is intended to convey the meaning that there was inquiry into only one of the departments and the hon. gentlemen who have spoken on that side have advanced the argument that there was no inquiry except into one of the departments, and the same meaning is to be taken from the resolution of my hon. friend. The hon. gentleman in his argument said that because irregularities had been shown in the Department of Marine and Fisheries it was to be presumed that there would be irregularities and wrong-doing in the other departments Sir, in considering the foundation for that inference, we should bear in mind this fact that the only wrong-doing of any very great moment that will be discovered in reading the report, took place in the city of Quebec where the trusted agent of the department was a gentleman who had not been appointed by this administration, but who had received his early training not under any minister who was at any time a member of this administration; that agent had received his training under previous governments and was for a number of years under the control of my hon. friend the member for North Toronto (Mr. Foster). I do not say there was anything in the course of the administration of the department which came to his knowledge which would account for the conduct of that official, but we must bear in mind that he had been for a lifetime in the department. He has now reached the age of 70 years and upwards and it is not reasonable to suppose that this practice of taking commissions, this practice of making advances to the people who delivered supplies and did work for the department has been indulged in only of late years. We may fairly assume that he had been doing this for a great many years. Unfortunately Mr. Justice Cassels, although he was in no way limited by the order in council, did not feel that he could go back beyond 1904, that is to say beyond the administration of the last three or four years. If he had been able to go back 15 or 20 years he might have found—I will not say he would have found—that Mr. Gregory, the agent at Quebec, had been pursuing the same practices for a great many years. In the other departments, in my department for instance, there are many young men. I have a deputy who was appointed in recent years, who came in there bringing new blood and new life into the department and who is vigilant, I believe, in the discharge of the duties which pertain to his position. We have in this country resident engineers, many of them young men, active young men, ambitious young men, ambitious to serve their country and to rise to positions of responsibility and influence in connection with the work of the department. They are the men who are engaged in hiring labourers, in buying supplies, in purchasing materials for the different works we are carrying on. Because the gentleman who had charge of the agency in Quebec has been guilty of wrong-doing, has allowed excessive charges to be made against the department and has received commissions from those having dealings with the department, is it a fair matter of inference that my deputy minister and the resident engineers of my department in different sections of the country would be guilty of wrong-doing also? It is an inference which my hon. friend cannot draw and which no person can be justified in drawing. Let me say that I would have no objection myself to the very fullest investigation being made in my department by the commission. If any hon. member of this House has asked for a paper or an account in connection with my department since I have been minister he has had the fullest opportunity of having access to the documents. We have a Committee on Public Accounts in which is vested the duty of examining into all the expenditures of the different departments and whenever any question comes up with reference to an account it is quite open to that committee to call witnesses as to the reasonableness of the prices which have

been charged, and if there have been excessive charges witnesses can also be called to show whether there has been any corrupt or improper conduct in connection with the purchase of those supplies. I have in my mind one or two cases in which it has been shown that excessive charges have been made; but it is quite open to any hon. member of the Public Accounts Committee, whether in the majority or the minority, to summon witnesses before it, take their evidence under oath, and have a full and complete investigation. But, Sir, is it to be said, with this Committee on Public Accounts before which there is every opportunity for the fullest investigation, and without any charge of any kind being made against any department of the government, that a commission is to be appointed to go into the expenditures of every department and into the conduct of all the officials of this government, to turn the departments inside out, in order to ascertain — what? Not the truth of any charges that are made against the government or against various officials; but to find out whether they are honest men or not— to find out whether there is anything wrong in the departments or not. You know, Mr. Speaker, that the cost of the commission which we have had has amounted to upwards of $50,000. Its investigations took in Montreal, Quebec, Prescott, Halifax, St. John and Ottawa. If that investigation had been carried to the west, if it had taken in British Columbia, its cost would probably have been double what it has been. There are thirteen different departments of the government. If you even multiply the cost of the investigation which has already been held by thirteen, you will find the expenditure running to three-quarters of a million dollars. Suppose my department were to be investigated by a commission, with a judge, a registrar, stenographers and lawyers in attendance, if they made a full investigation they would not limit their inquiries to Montreal, Quebec, Prescott, Halifax, St. John and Ottawa; but they would have to go to Toronto and Hamilton, to Kingston, to all the towns in which public works had been carried on—to Winnipeg and Edmonton and Prince Albert, to Vancouver and Victoria and New Westminster, away up to the Fraser river and on to the Yukon, in order thoroughly to investigate the working of my department. They would have hundreds and thousands of officials to examine as well as people doing work for or furnishing supplies to the department. And if a commission were appointed, and did not take in all sections of this country in its inquiry; if, instead of being limited to one year, it did not go back at all events as far as 1896, when this government came into power, it would be charged by the other side that it was only a limited and partial inquiry. I venture to say that a million dollars would not cover the expense of such an investigation as that proposed by the hon. member for St. Anne; and with what purpose? In order to determine whether we are able efficiently to carry on the affairs of our departments or not; in order to determine whether or not our officials are honest—whether or not there has been any wrong-doing in the various departments; and without the slightest tittle of evidence which can warrant the suspicion that there is any wrong-doing of any kind or description. What has the investigation before Mr. Justice Cassels disclosed? So far as the city of St. John is concerned, it has not disclosed, after the most full and complete investigation; after Mr. Watson, the counsel, and the gentleman associated with him went around among the different merchants supplying goods to the department and examined their books and accounts so that they could compare the prices paid by the government with the prices paid by other parties —they were not able to show that in one single instance any of the merchants in the city of St. John had charged one dollar beyond the fair value of the goods. My hon. friend from North Toronto (Mr. Foster), in my absence this afternoon, asked whether the government was going to prosecute among other people the McAvitys of St. John. Let me say to my hon. friend that if he reads the evidence given before Mr. Justice Cassels from beginning to end, he will not find that the McAvitys charged one cent beyond the reasonable and fair price of the goods they delivered to the department; and, more than that, he will not find that the McAvitys were shown by the evidence to have ever given a gift of any kind or description to any one of the officials of the department. And yet my hon. friend asks the Prime Minister, in a manner as insulting as a question could be put by one hon. member of this House to another—looking towards the Prime Minister, and departing from the parliamentary practice of addressing the Speaker, he said: 'Why don't you prosecute those people who robbed the people of this country? Is it because you shared in'— and then my hon. friend was stopped by the Speaker because he was proceeding in an unparliamentary way, and then he said: 'Because you shared in it for party purposes?' Let me say in asking that question, so far as the McAvitys of St. John are concerned, that, my hon. friend has done a wrong and an injustice to gentlemen of the highest reputation and integrity —men who stand just as high in the commercial world as any business firm in the Dominion of Canada from the Atlantic to the Pacific.

Mr. DANIEL. Will the minister allow me to ask him a question? Did George McAvity, who received $35,933 from Mr. Gershon S. Mayes, keep that money in his pocket, or did he hand it over to the Liberal association for party purposes?

Mr. PUGSLEY. I do not know of any amount which Mr. George McAvity received from Mr. Gershon S. Mayes, nor do I know of any amount that Mr. George McAvity may have contributed for party purposes. My hon. friend professes to have a knowledge of that kind. If he has, he might acquaint the House with his knowledge. My hon. friend from North Toronto was not referring, I understand, to the alleged incident between Mr. McAvity and Mr. Mayes, but was referring to gifts alleged to have been made by these parties to officials of the Marine and Fisheries Department. I have already referred in this House to the matter about which my hon. friend asks, and if the matter is brought up in such a way that it can be discussed, I shall be ready at all times to discuss it; but of course this is not the proper and suitable time to do so. It does seem to me that when my hon. friend from St. Anne puts before this House the statement that there is ground for suspicion that the other departments of government have been wrongly administered, that there has been—to use the words of the resolution—official negligence, wastefulness and corrupt dealing in the departments,—let me say to my hon. friend that if he has any suspicion of that character, it is due to himself as an hon. member of this House that he should acquaint this House with the grounds of his suspicion. If he has any suspicion against any individual official in my department, it is his duty to acquaint me and the public with the name of that official. And let me say to my hon. friend if he has any suspicion that I, as Minister of Public Works, am improperly discharging the duties of my office, or have been guilty of negligence or wrong-doing of any kind, it is the part of a man of courage to come forward and make his charge; and, so far as I am concerned, and so far as any member of this government is concerned, I am satisfied that if any hon. member will take the responsibility of rising in his place and charging any one of us with maladministration of the affairs of our departments, we shall be only too willing and happy to afford to him every opportunity of having a full and complete investigation. But that is a different thing from going on a fishing expedition in order to see whether we are properly administering our departments or not.

One word in conclusion. I want to refer to what I think is going to be the beneficial results of the investigation before Mr. Justice Cassels. Let me say that that was not an investigation induced by hon. gentlemen opposite, but instituted by the Minister of Marine and Fisheries himself on his own initiative. When the report of the Civil Service Commission was brought down, it contained certain reflections on certain officials of the Marine and Fisheries Department; and when my hon. friend saw that the commissioners had not gone as far as they might have, he, out of regard for the proper administration of his department, asked His Excellency to appoint a Royal Commission to complete the work which the Civil Service Commissioners had not carried to a successful conclusion, and make a thorough investigation. What has been the result of that Royal Commission? It has been to show that practically all the evils which Mr. Justice Cassels complains of have resulted from the patronage system which has been in force ever since confederation.

Mr. DANIELS. The hon. minister has said that the commission was a Royal Commission. I understood that it was a departmental commission appointed by the Minister of Marine and Fisheries.

Mr. PUGSLEY. I think it was a royal commission. I do not know that there is much difference between the two.

Mr. BARR. Oh, yes, there is.

Mr. PUGSLEY. There is none as regards the power of taking evidence under oath and the summoning of witnesses.

Mr. BARR. Surely the Minister of Marine and Fisheries could tell us which it was?

Mr. BRODEUR. It was a royal commission instituted under the statutes. The statute provides that investigations of this kind may be made under it, and these investigations are called royal because the appointments have to be made under an order passed by the King or his representative.

Mr. PUGSLEY. A royal commission simply means a commission issued by His Majesty, or with his authority, for the investigation of certain matters. This commission was issued under the statute, in His Majesty's name, to Mr. Justice Cassels. It has been declared by Mr. Justice Cassels that the evils complained of are the result of the patronage system which was introduced, not by this government, but by the first government which held power after confederation, and which has been continued ever since. I am not going into the merits or demerits of the system of having a certain number of prominent merchants and manufacturers in each community, whose name might be kept on file, and from whom purchases might be made after competition. There is no doubt

that there was a patronage list and that the prices were asked only from the few on that list, and there is no doubt that such a system is always likely to lead to confusion. But what has the Minister of Marine and Fisheries done? He has abandoned the patronage list. In my department, which is another great spending department, the patronage list has also been abolished. My hon. colleague the Minister of Militia, as I have understood, never had a patronage list in his department. Most of the supplies there are obtained by tender. I have found in my own department great benefit arising from asking for tenders and giving everybody an opportunity to tender. One great advantage, of course, is that it leaves no chance for favouritism, because the contract is given to the lowest tenderer. We have made a distinct move in the way of reform by doing away with the patronage list. When the furnishing of supplies is open to public competition, there will be no motive for any one to make gifts to certain officials in order to secure their influence or favour. In my own department I have realized, even in the case of smaller articles, where the amount involved was not very large, the great advantage of introducing tender and competition. What the country wants us to do is to profit by the examination which has taken place into the affairs of the Marine and Fisheries Department. The country does not ask that we should spend three quarter of a million or a million dollars on further investigations into departments with respect to which there is no ground for suspicion. What the people expect is that we should cary on the business of the different departments in an efficient and prudent manner. If we do that the country will continue to give us its confidence, and if we fail to do it then we shall have to meet public condemnation. I apologize for having taken up so much time, but I felt it was my duty to refer briefly to what I think are reasons why this amendment should not be carried. My hon. friend has taken a course which is calculated to induce every member of this House, who has confidence in the government, to refuse to vote for his amendment. He has not chosen to adopt a course which would enable an amendment to be made to his motion, but has moved it at a time when it must be regarded as a motion of want of confidence, and has asked the House to say that it has no confidence in my hon. friend the Minister of Marine and Fisheries, even when the hon. member for St. Anne's (Mr. Doherty) himself is obliged to admit that he has nothing whatever to say impeaching the integrity of my hon. colleague. but that, on the contrary, my colleague has done everything he could to secure the efficient administration of his department.

I oppose this resolution on two grounds. First, because it is a motion of want of confidence, and second because it is based on statements without foundation and contrary to evidence contained in the Civil Service report, and the report of Mr. Justice Cassels, and I appeal to the House with confidence to reject the amendment moved by the hon. member for St. Anne's division (Mr. Doherty.).

Mr. GEO. TAYLOR (Leeds). I had no intention of speaking, and would not have spoken at this hour of the night had not the Minister of Public Works (Mr. Pugsley) taken the floor. With the consent and approval of my leader (Mr. R. L. Borden) I suggested to the whip of the government side that, after the two leaders had spoken, we should take the vote. Again, after the hon. member for Wright (Mr. Devlin) had spoken I made the same proposition. This was not accepted. I thought the government were anxious to get supply and concurrence to-night. But, after several speakers from that side not being replied to from this, the Minister of Public Works having got up and occupied three quarters of an hour, I think it my duty to draw his attention to some facts that have an important bearing on this case. I will not take my facts from the report of Mr. Justice Cassels, but from the report of the Auditor General, and I think those facts should convince the hon. minister that there is need of an investigation. I fully concur in the amendment moved by my hon. friend from Ste. Anne's (Mr. Doherty), and I agree with the language used by that hon. gentleman in his speech as quoted by the hon. minister, except that those words are not strong enough to properly characterize and duly condemn the reckless manner in which the government has expended the money of the people of this country. In 1896, the public debt was something over $258,000,000. In 1909, it is $308,000,000, an increase of $50,000,000 under this government. In 1896, the estimates of the Conservative government amounted to $43,000,000. Sir Richard Cartwright said this expenditure was outrageous. And the present Prime Minister (Sir Wilfrid Laurier) promised the people that if they put him in power he would reduce the expenditure by two, three or four millions, that he would surround himself with business men and conduct business on business principles. The Minister of Public Works rises to-night and tells us that the patronage system was in existence under the previous government. But how can he justify himself by the acts of the previous government when the Prime Minister promised to make such changes as would greatly reduce the expenditure? As

a matter of fact the expenditure is increasing until the estimates last year amounted to $129,000,000, and the supplementary estimates which have just been passed amount to $3,000,000 more, making a total estimated expenditure of $132,000,000, or almost $90,000,000 increase over the Conservative government. If we take the increase of expenditure and the addition to the public debt, we find a total of $140,000,000 of increase under this government instead of the promised reduction of two, three or four millions.

Out of this $132,000,000 which they asked for on account of last year's expenditure, I admit that a part is uncontrollable. The statutory expenditures amount to $26,000,000. Of course, we had statutory expenditures in our $43,000,000. Then, there is about $14,000,000 of salaries and other uncontrollable expenses. This would make a total of $40,000,000, leaving a controllable expenditure of $92,000,000. And where has that money gone? I say that every dollar of that wants investigating. If my hon. friend (Mr. Pugsley) will take the Auditor General's Report—and I wish him to follow me, for I am going to give him page and date for everything—and if he will turn to page V—52, he will find that his men in Montreal purchased 391 feet of five-inch belting and paid an average of $2.12 a foot for it. The invoice came to $924. They got a discount of 10 per cent, leaving $831 of the public money paid for that belting.

Mr. PUGSLEY. Was that Lymburner?

Mr. GEO. TAYLOR. Yes, if they had gone to any manufacturer, they could have got the same belting for $293. So, the middleman made a profit of $538. When I was a boy and went to school the schoolmaster used to propound this question: If a herring and a-half cost a penny half-penny, how many can you get for a shilling? I will ask the Minister of Public Works that question.

Mr. PUGSLEY. Are you the schoolmaster? The question is too much for me, at this time of night.

Mr. GEO. TAYLOR. Then, let me ask the minister to work out this: If on an expenditure by this government of $831, the middleman makes a profit of $538, how much has been made by the middlemen out of the controllable expense of $92,000,000? That can be worked out by the rule of three—every school boy can do it. If the minister will figure it out, he will find, at this proportion, the middlemen got a rake-off of $59,000,000. Now, if the hon. gentleman will turn to the Auditor General's report, page O—21, he will find that they went to a friend of his in St. John, having some little repairs to do, and they hired from this friend of the minister's two cross-cut saws for 100 days at 10 cents a day each, a total of $20. If they had stepped into any hardware store, they could have bought those saws for $7, but they paid $20 for the use of them. And they paid the same man, Mr. Daniel McLaughlin, $24 for the hire of three planking screws that they could buy for $4.50 each. They paid $5 for the rent of a grind-stone, and they could buy the grind-stone at one cent a pound and the frame for $3.50. They paid this man $50 for the rent of tools that they could have bought for $17 and could have owned the tools when they were through. On this, the middleman got a rake-off of $33. On this basis, how much rake-off did the middlemen get on the controllable expenditure of $92,000,000? They got $60,763,000. Now, if the minister will return to page V—53, he will find the record of purchases made for the repair of some buildings in Montreal. This was not let by tender, but they went to a political friend, Mr. Marchand, and they paid him for 11,000 feet of lumber, ash, basswood and elm, a total of $997. They paid $150 a thousand for ash, and $100 a thousand for basswood—and you can buy basswood anywhere for $28 a thousand. The average paid for ash, elm and basswood was $90 a thousand, and it can be purchased anywhere at an average of $35 a thousand. The middleman got a rake-off there of $55 a thousand. On that deal of $977 there was a rake-off of $607 to the middleman; what would be the rake-off on $92,000,000? The middleman would make out of that expense $57,000,000 of the people's money, if that rule applied as it applies everywhere else. After they got the building completed they went to a Mr. Thibault and got him to put in a floor upstairs, of hardwood, 216 squares, and they paid him $16 a square, amounting to $3,456; for birch flooring, 40 squares at $16 a square, amounting to $636.

Mr. PUGSLEY. What is the square?

Mr. GEO. TAYLOR. I am surprised that my hon. friend, being Minister of Public Works, does not know what a square is. Any schoolboy knows what a square is, it is 10 feet each way.

Mr. PUGSLEY. I must confess I did not know that.

Mr. GEO. TAYLOR. Then you are not fit to be Minister of Public Works. And yet he is building all over the country. He will pay $16 a square when it is only worth $7. I went home on Saturday, and went to a firm of the largest lumber merchants, Mitchell & Wilson, and I said to them: What will you put me in squares for, hardwood lumber, maple or birch, and they said they would do it for $7 per square, or for red beech, at $6.50 per square. Yet the minister paid $16 to a political friend in Montreal. He paid for 256 squares $4,090. If he had called for tenders he could have got it done for $7 a square. The middleman made there a rake-off of $2,300. At

that rate how much have they made on $92,000,000 of controllable expenditure? In V—103, the minister wanted some basswood lumber for his ships and he went over to Hull, to a Mr. Desrosiers, and got 3,010 feet of basswood lumber, for which he paid $60 a thousand, and he could have purchased it for $18 to $25 a thousand. The Minister of Railways knows something about the quantity they consume in the railway shops, where they buy the best. But here the Minister of Public Works pays $60 a thousand for the same goods. On that $180 worth, which he could have bought for $75, there was a rake-off to the middleman of $105. At that rate how much did the middleman make on $92,000,000? $54,000,000. In every case it works out between $50,000,000 or $60,000,000. I could cite a hundred cases like that all through the Auditor General's Report. No wonder they do not want an investigation. But the country does want an investigation into the accounts for the last 12 years, in every department, and this is one sample of many of them. I want to refer now to the cost of the steamers. In 1896 the government had nine steamers, named 'Aberdeen,' 'Alert,' 'Druid,' 'Le Canadian,' 'Lansdowne,' 'Newfield,' 'Quadra,' 'Sir James Douglas' and the 'Stanley.' The government to-day have nine also, but they have replaced some of the old ones with larger ones. In 1896, $150,000 was the entire cost for these nine steamers. To-day the government have nine steamers, the 'Aberdeen,' the 'Champlain,' the 'Druid,' the 'Lady Laurier,' the 'Lansdowne,' the 'Minto,' the 'Montcalm,' the 'Quadra' and the 'Stanley,' and these nine steamers cost last year $696,000, or an increase of $519,000. How has all that money been spent? Here is a sample. In 1896 they paid the salaries of the captains and crews of these steamers, amounting altogether to $138,000. They paid for provisions to feed them, $77,000. Now the provisioning of the 'Aberdeen,' as a sample, cost $13,059, or $32.50 per month per man the year round, allowing the steamer had a full crew for a full year. They paid $32.50 per month just to feed the men on that boat, and the government furnished besides the cooks, the waiters, crockery and everything else. When I brought this matter up a few years ago my hon. friend promised me that he would make a change, and have the captain and steward board the men by the day. He did so, and how much did he save? On the 'Montcalm' he paid the captain, or steward, 50 cents a day for the men, and the cost for that steamer amounted to $8,693, or $16 per month. But where the patronage system prevailed they paid their customers at the rate of $10 a barrel for apples for one of the steamers, and everything else in the same proportion. When the steward boarded the men and purchased the provisions, it cost the government $16 per month, whereas, when the provisions were furnished on the patronage system it cost $30 to $32.50 per month. Is not that squandering the people's money? If the minister will turn up the Auditor General's Report, page O—16, he will find why it cost so much. On the 'Lady Laurier' the board was $30 per month.

John Tobin & Co., Halifax: Apollo water, one case, $9; condensed cream, 5 cases at $4.60; condensed milk, 5 cases at $5.20; herring, 4½ barrels at $2.50; jam, &c., $6.60; pork, 2 barrels at $22; Radnor water, 8 cases splits at $8.38; 7 cases pints at $9.50; shad, one half barrel, $12.50.

That is the way they fed the men on the 'Lady Laurier,' and that is why it cost so much. If the hon. gentleman will turn to page O—25, steamer 'Minto,' he will find that Louis Marois at Quebec was paid $10 for a barrel of apples, and there are other items in keeping—turkeys at $3.75 each and so on. Ten dollars for a barrel of apples when they were $2.50 and $3 in Ottawa. Then there is another case in which they helped a political friend very nicely to which I wish to refer.

Some hon. MEMBERS. Carried.

Mr. GEO. TAYLOR. It will be carried when I get through, and not a moment sooner. Here is J. J. Yorston, Pictou, for hauling up the steamer 'Minto' on two occasions, 1,451 tons at 20 cents, $580; laying on ways, 29 days, $4,207.90. If my hon. friend the Minister of Marine and Fisheries would go to Kingston dry docks or to any other dry dock in the country and have this boat hauled up would he pay half that amount for having it done? I have made up a statement here. In 1896 the cost to the country for the uniforms of the men on the nine steamers that the Conservative government controlled was $150. What does it cost to-day? The government are not satisfied to give each man a cap for a uniform, but they clothe every man from top to bottom. The total cost for uniforms last year was $14,500, as compared with $150 in 1896. Let me read you a few items of expenditure for uniforms for the men employed on these boats. They did not buy the uniforms for the men on all the boats from the same firm, but they travelled all over the country from Halifax to Quebec and they went to different firms for the supplies for each boat. To some of their friends they went two or three times. We pay the captain, the engineers and the men good wages and, under those circumstances, why do they not furnish their own uniforms? Let us take the case of the 'Montcalm:'

8 uniforms at..	$25
10 "	21
3 dress suits at..	45

Suits fit for members of parliament. They cost $135.

Some hon. MEMBERS. Oh, oh.

Mr. GEO. TAYLOR. I will give the minister something to laugh at before I get through.

41 blue jumpers at..	$3 50
41 " pants at..	3 50
41 " collars at..	0 35
41 white dickies at..	1 00
41 white duck suits at..	2 50
41 sweaters at..	2 75

Then they go across the road to another gentleman and they buy $301 worth from him, which, with $1,114.50, makes $1,415 in all for uniforms for the officers and crew of the 'Montcalm.'

An hon. MEMBER. What is the rate by the rule of three?

Mr. GEO. TAYLOR. If the rule of three were applied to that we should not furnish anything. The men in our employ get good wages and they have a right to furnish everything they require to wear. I will give you another example. I want to ask the minister how much mud this expenditure took out of the ship channel? The money is charged to the ship channel. He will find these accounts in the Auditor General's Report at page O—163:

7 ladies blouses at $13.

Some hon. MEMBERS. Oh, oh.

Mr. GEO. TAYLOR. I am surprised that the right hon. Prime Minister can laugh at that. He is the trustee of the people of this country, and yet he will allow one of his ministers to put his hand in the public chest and spend money like this.

1 ladies cloak..	$25
8 ladies costumes, each..	30

The total of these accounts is $744. I would like the right hon. Prime Minister to apply the rule of three to that. If one suit will move 20 yards out of the ship channel, how much will these eight costumes, which he has paid $30 apiece for, move? Then we have another which is worse than that, and the Minister of Public Works will say that there is no necessity for an investigation.

An hon. MEMBER. Who were the ladies?

Mr. GEO. TAYLOR. I do not know. I will put these facts on record some day before the session is over. These hon. gentlemen had a political friend at Toronto and he had to have a pull:

63-5-12ths doz. black neckerchiefs... ..	$686 90
18 doz. petty officer's badges..	34 50
31 doz. badges..	57 18
100 gross Canadian gilt buttons..	613 10
20 yds. 1¼ gold wire navy lace..	46 13
400 yds. ⅞th gold wire navy lace.. ..	271 70
300 pairs officer's shoulder straps.. ..	109 50
25 pairs commanding shoulder straps.	17 74
24 doz. officer's cap badges..	$385 44
119-11-12th doz. cap ribbons..	189 68

Mr. EMMERSON. Who says Canada has not spent anything for a navy?

Mr. GEO. TAYLOR. The duty on these articles was $456, the freight $18 and two cases $9, making $2,896 of the people's money that might as well have been thrown into the river. Why should we buy 52 dozen neck handkerchiefs, I ask the Minister of Public Works? I have given him the date and the page in the Auditor General's Report. In the other departments he will find the same story. All of these items make up a total of from $51,000,000 to $60,000,000 that has gone to the middle man for which the country has received no benefit. Yet we are told that in that department there is no need of an investigation. The Prime Minister laughed so hard that he did not hear what I read to-night, but I ask why we bought eight ladies costumes at $30 each which are charged to the ship channel. Does that need investigation? Was that brought before Judge Cassels? I want my hon. friend to ask his three officials in Montreal who certified that account for $831 why they did so, when they could have bought the goods for $209.

Mr. PUGSLEY. I have already asked them.

Mr. GEO. TAYLOR. I want to know where the $531 went if it did not go to the political supporters of my hon. friend for campaign purposes? Why was $100 a thousand feet paid for basswood and $150 for ash. Gentlemen opposite who will vote against this motion know in their inmost hearts that $1,000 is nearly four prices for that timber. They will vote for anything. I think I have said enough to convince the hardest conscience that it is the duty of this government to grant an inquiry into this loss to the country, which is really an increase in the national debt. Why should the government pay $10 for the rent of two bucksaws that they could buy for $7?

Mr. PUGSLEY. I thought they were cross-cut saws.

Mr. GEO. TAYLOR. The minister should know that he can buy them in any hardware store for 50 cent a foot.

Mr. PUGSLEY. They cost more than that.

Mr. GEO. TAYLOR. They do not cost more than that; I have sold many of them. For these clamp screws to hold a plank on a vessel when it is being spiked the government paid $8 a day although you can buy the whole outfit for $3.50. Who got the rake-off there? I could cite many similar instances, but I think I have adduced enough to show that the middleman receives from $51,000,000 to $60,000,000 out

of the controllable expenditure of $92,000,000. The members of this House should certainly vote for the amendment proposed by my hon. friend from Ste. Anne (Mr. Doherty).

Hon. R. LEMIEUX (Postmaster General). At this early hour in the morning I shall not detain the House at any length. I would not add anything to the debate but I think it is due to my colleague who represents the province of Quebec in the House, that I should say a word not in his defence, because he needs no defence, but in justification of the attitude taken by the Liberal party which is being assailed through him to-day. I was pleased to hear my old friend from Ste. Anne (Mr. Doherty) speak yesterday. I was not surprised at the tone which he adopted in moving his amendment. I have known him for many years. I am well aware that he is above all things an honourable gentleman. I know that he possesses a judicial mind and I believe that he is unbiased by party politics. Thanks to the hon. member for Ste. Anne the cloud has lifted and we know, the country knows and the House knows that the hon. Minister of Marine is an honest man. Under ordinary circumstances, I would not mention the fact, nobody would take notice of it; I suppose a man's first duty to himself and to his country as a public man is to be of sterling honesty. However, we have heard so much for two or three years with reference to the honesty and integrity of the minister that it is refreshing indeed to hear a man of the position of the hon. member for Ste. Anne declaring that in his opinion the hon. Minister of Marine is indeed an honest man. Parliament, as you well know, is not a school for mutual admiration. But as this is probably the closing chapter of a very sad story, may I say a word about the hon. gentleman who has represented Rouville since 1891? He sat from 1891 to 1896 on the opposition benches. As private member for Rouville, a county which in the past has always elected men of ability, he enjoyed the esteem of all his fellow members in the House. He was highly esteemed and respected when in 1896 he was elected deputy speaker and later speaker of the House of Commons. It will be remembered by the older members that as speaker of the House he adorned the chair which you, Sir, occupy. He again enjoyed the respect and esteem of the House when later on he was called by the Prime Minister to fill an important position as Minister of Inland Revenue. He certainly possessed not only the esteem and respect of both sides of the House but also the confidence of all.

We all know that this man who has been branded before the country as a criminal and against whose character insinuations of the basest kind have been made, fought, as Minister of Inland Revenue, not a lonely battle, but a manly battle indeed against the trusts. I contend that at that time he possessed the full confidence of both sides of this House. Suddenly, he was called to fill the position of Minister of Marine and Fisheries, and then the onslaught against him began. I am not at all surprised that the onslaught was made against one member of the Reform government two years ago. The Conservative party had to find some one in the Liberal party as a scapegoat for the approaching elections. History only repeats itself. In 1900, after four years of Liberal rule, finding nothing against the Liberal policy, realizing on the contrary, that this country had been prosperous in spite of themselves, hon. gentlemen opposite had no other war cry but that of corruption to raise against the Liberal party. The cry then was directed against the hon. member who sits to-day as the representative of the county of Brandon. The country was filled with posters representing that hon. gentleman, who was then among the most prominent members of the Liberal Cabinet, as having acted dishonestly in his administration of the then newly-discovered Yukon district. You remember, Mr. Speaker, the battle he fought in the Northwest against Sir Charles Hibbert Tupper on that very question. The elections of 1900 were not fought on the fiscal policy of the Liberal party or on any of the principles which divided the two parties; but they were fought on loud accusations of graft. It was the same with the elections of 1904. Then rumours were afloat that some members of the Liberal party were to be brought not merely before the bar of public opinion, but before the bar of the criminal courts of justice. During the last campaign the accusations were again repeated, and again a scapegoat had to be found. Unfortunately, circumstances have helped our hon. friends on the other side of the House in their campaign of defamation. We all know that important additions were made to the Department of Marine and Fisheries; it had become a great spending department. The minister who had that department in charge, the late Hon. Raymond Prefontaine, had died suddenly in Paris and his remains had been brought back to Canada. My hon. friend (Mr. Brodeur) had to assume the direction of that department; and, Sir, as soon as the session opened, charges were hurled against the Department of Marine and Fisheries. Insinuations were made, not against the living minister, but against the dead minister, both in the press and on the platform; but there was such a protest from every section of the country, even from Conservatives themselves, that immediately the charges against the dead minister ceased, and they were directed against my hon. friend. Everybody will admit that he assumed a noble attitude

under these conditions. The elections were fast approaching, and on the eve of last session a commission had been appointed to investigate, not the administration of the departments, but the status of the Civil Service. We had heard in this House and out of this House, that the Civil Service of this country was underpaid, and that the work was not well apportioned among the employees of the various departments, and that commission was appointed by this government to investigate the two above mentioned facts. Three independent gentlemen were appointed, and they reported to this parliament generally on the status of the Civil Service, but as they investigated the Department of Marine and Fisheries, they found what they thought to be very serious irregularities, which they mentioned in their report. The hon. member for St. Anne has embodied in his amendment the very words which were used by these commissioners. What was the duty of the government when these three independent and honest men reported that that department was lacking in organization, lacking in conscience, and that some of the officials were serving two masters, Scripture notwithstanding? Sir, the government did not remain silent under these general charges made against the Department of Marine and Fisheries. We appointed another commission under the direction of a judge. Mr. Speaker, I call your attention to the fact that other judges have been appointed by preceding governments to investigate. In this instance the Reform party did not inquire whether Judge Cassels had been during his past political career a friend of the government or a Conservative. We all know that Judge Cassels had been an independent Conservative during the time he was practising law in the city of Toronto. He was therefore appointed to investigate the very vague and general charges which had been made by the three commissioners without naming any one. Judge Cassels accepted the task and investigated. Lawyers were retained by the government, we secured the best legal talent in the country to assist Judge Cassels. Sir, I will not repeat what has been said on both sides of this House ; I will not read the conclusions of Judge Cassels' report. He reported that serious irregularities had been committed in the Department of Marine and Fisheries. Sir, let me point out a fact which our hon. friends on the other side should not lose sight of, and which the country in the last general election did not lose sight of, namely, that the officials whose names were branded before public opinion as having been guilty of very serious offences, had nearly all been appointed by the Conservative government thirty or forty years ago. I do not say that officials appointed by the Liberal party cannot be derelict in their duties. But, Sir, the public knew that in the present instance, the officials who were the cause of all the troubles in the Department of Marine and Fisheries were old-time nominees of the Conservative party. Sir, the report of Mr. Justice Cassels has been published. Has the Minister of Marine and Fisheries been found wanting in taking action upon that report ? Here is the chain of facts; accusations made by the three commissioners ; the investigation immediately ordered by this government, in order to find out who were the guilty officials; names of the guilty officials published in the report of Judge Cassels. Has the minister not done his duty like a man under very difficult circumstances, because, as you very well know, Sir, it is always a hardship for any employer, more particularly a minister of the Crown, to dismiss any of his officials. My hon. colleague has dismissed the guilty ones, and therefore has wiped out the evil complained of in the report of the Civil Service Commission and of Mr. Justice Cassels.

Insinuations may be made, but there has been nothing charged against any minister of the Crown. I appeal to the sound judicial sense of my hon. friend from St. Anne (Mr. Doherty) who asks this parliament to appoint a commission—to investigate what? Charges made? He knows full well that in no British parliament, unless a member puts his seat in jeopardy by making a direct charge, will the government grant a commission of inquiry. The government can afford to disregard mere insinuations. Can we be reasonably asked to investigate general insinuations? We have had no charges made against any minister of the Crown. We had charges made against officials, we have had an independent investigation into these charges, and the officials have been dismissed. Sir, charges were made against the officials and also against the patronage system which has prevailed since confederation. What has happened? Let me refer my hon. friends to that portion of the report of Mr. Justice Cassels in which he states that unfortunately many of the minor officials sometimes fell into temptation because their salaries were too low, and where he points out that perhaps those who offered the bribes may have been more guilty than those who had accepted them. For the removal of the patronage list, all credit is due to my hon. colleague the Minister of Marine and Fisheries. It was he who took the bull by the horns and did away with that list The patronage system has been abolished by the Liberal party. Then take the second evil complained of and that is the underpaying of the officials. This government has gone to the very root of that evil. Last year, under the inspiration of my hon. friend who administers the Department of Agriculture (Mr. Fisher) a Bill was introduced to reform the Civil Service. In future our civil servants will not be ap-

pointed on the mere caprice of any party, but will be selected by an independent commission. We have now an independent commission which will select our officials, regardless of politics, and solely on their merits, and this parliament only a few weeks ago has passed legislation in order to raise the salaries of our under-paid civil servants. This is a great reform due to the Liberal party. I claim that we have eradicated the evil. Now we are asked to appoint another commission to investigate the other departments. What departments? Has my hon. friend named any one minister whose department requires investigation or scrutinizing? He has not. I appeal again to his judicial sense and his knowledge of parliamentary government. Is it not a fact that the regular process in such matters is to first, when there is anything wrong in connection with the administration of public affairs, to make a charge before the high court of parliament and await its decision This House is elected by the people, and amongst the representives of the people is chosen a cabinet. The cabinet is after all only a committee of the House of Commons. If there are charges made affecting the government, they must be brought before parliament, and if the majority of this House find that these charges are unfounded, these charges fall through. But the members of this House are responsible to the people who elect them and who will in last resort, pass judgment on their conduct. Such is the doctrine of British parliamentary government. It is a sound doctrine to which, for my part, I shall give my adhesion. I therefore decline to accept the amendment of my hon. friend from St. Anne.

Mr. J. D. TAYLOR. The closing arguments of the Postmaster General and his quotations from the scriptures remind me of the several illustrations we have had this evening of Satan quoting scripture for his justification. Immediately after the general elections on the 26th of October last, a number of newspapers engaged in a contest to find out the reason or the meaning of what had occurred; and one paper, not unfavourable to hon. gentlemen opposite, suggested that the meaning of the results of the elections of the 26th of October was that the people had decided that 'He that is unjust let him be unjust still; and he that is filthy let him be filthy still.' I would ask whether the argument put before the House does not bear out the answer given by this newspaper? We are asked to vote down this resolution, demanding impartial inquiry into the conduct of important departments, on the ground that while the scandals complained of were fresh before the public we had a general election and that the government was sustained in that election by the majority which supports it in this House.

I do not intend at this hour to dwell upon that, further than to say that the majority by which this government has been sustained is not larger than the number of persons upon the pay-roll in the several constituencies. In fact, I would venture to say that, if we took the total number of people on the pay-roll in the constituencies, especially on election day, the total majority by which this government has been sustained will be found far less than the number of persons in their direct employ. The reason why I have arisen at this hour to take part in this debate is that I think the record would not be complete without the addition of a chapter contrasting the attitude of the right hon. Prime Minister (Sir Wilfrid Laurier) now with the attitude taken by him on a very important occasion when the report on an investigation of one of the departments was before parliament for adoption or rejection. At that time he did not lead the government, but occupied the seat of leader of the opposition and the post of chief inquisitor for the opposition of that day. We had an investigation into the Department of Public Works in consequence of grave charges which has been canvassed for a time before parliament and in the press, and which were at last put into such shape that they were referred to the Committee on Privileges and Elections for thorough inquiry. In that investigation we did not find the spectacle presented now by hon. gentlemen opposite opposing at every step the work of a commission with authority to investigate only into the minor officials employed by the department; we did not have a commission restricted so that the moment a point of danger was arrived at, the moment, for instance, when a witness said—as I have seen reported in the press one witness did say in the present investigation—that one reason why he charged excessive prices to the department was that he was expected to contribute to the party campaign funds, the inquiry was checked. On the contrary, whenever in that investigation such a suggestion was made the inquiry got hotter than ever, the activity of every person was aroused, and summonses were issued for all those concerned in the allegation made, and they were brought before the committee to be questioned as to even the smallest detail. When they got the case of a minister under suspicion of having received from the government—or having stood in with the contractor who received from the government—sums to which he was not entitled, what did they do? Did they take his word for it that he was innocent?—word which he gave on his responsibility as a member of this House that, so far as he was concerned, there was nothing in the accusation. No; they

brought that minister with his little bank pass-book, and the accountants from the bank came with their ledgers, showing his account from the first day of the acceptance of office by the minister until the day the investigation was carried on, and an inquisition was held into every item of that account. After such an investigation, the committee came before the House with certain findings. And, when it was moved in this House that the report should be accepted—and it took four months to carry out the investigation, which was as complete as an investigation could be, for the government appointed leading counsel to conduct the inquiry, including counsel from the other side of politics, so that there could be no suspicion of bias—we found, according to the report in 'Hansard' of September 24, 1891, that Mr. Laurier made these observations:

Sir, this is not a question of individual offences. Individual offences may always take place; frauds may be perpetrated in the most honest communities, but in this case, we have to grapple with a system which permeates the whole public service from the top to the bottom. We have often boasted of our political morality in this country, especially in contrast with that of our neighbours to the south. But the American people have given us an example which should help us on this occasion. Twenty years ago, comparing ourselves with our neighbours with our eyes turned up to Heaven, we thanked the Lord that we were not like other nations. I admit that our neighbours had much to be ashamed of in those days.

Omitting a passage which is not relevant to the present discussion, we find that the hon. gentleman proceeded:

But I almost despair of my country when I see the government willing to punish the minor offenders, but receding before the mighty—when I see them willing enough to punish clerks in offices, but refusing to censure the men who are the most blameable of all. How can this nation expect to live if such offences are condoned? No nation can live in which public moneys are not applied exclusively to public purposes. In discussing this case the other day, the hon. member for Jacques Cartier was only too happy to have a fling at the Liberal party, and to point out that there are accusations pending against it in the province of Quebec. Sir, I will not prejudge the case; I have only this to say, that that measure of justice which we call for in this parliament we want applied also in the province of Quebec. Wherever, after investigation, blame and censure are found to be deserved, blame and censure should be pronounced. Upon this occasion, I appeal especially to my fellow countrymen of French origin, to stand up to the duty of the hour——

The 'duty of the hour' seems to have been a spectre in those days as it was in 1908.

——painful as that duty is. I do not appeal to them in any words of my own; but I appeal to them from the teaching of their history. The old city of Quebec has been the victim on this occasion of most of the malversations which have been unearthed. Let them remember that this is not the first time in her history that she has thus suffered, and let them remember at what cost to the country.

So you will see in a great many phases of these two investigations the situation in 1891 was similar to that before this parliament to-day. The hon. gentleman continues:

Sir, the system which has been revealed in this investigation was not invented by the Department of Public Works. This system of manipulating contracts for the profit of the contractor, this system of substituting private for public interest, this system of plundering the treasury to enrich individuals, was not invented by the Department of Public Works, but was practised in those days by the administration, by Bigot the Intendant, and his creatures Pean, Vergor and others. In the month of August, 1757, M. de Doreil, one of the commissioners of the army, thus wrote to the Minister of War, concerning Pean, one of Bigot's creatures: 'Pean has made so rapid a fortune in eight years that he is now supposed to be worth two millions.'

Mr. Speaker, I am not authorized to make any application of that, but I would ask those familiar with the records of this country, and of the popular report voiced by the members of this House if there have been any fortunes similar to this made under the aegis of the Liberal party now in power in Canada? This very eloquent passage concludes:

Canada was the prey of official jackals—true lion providers, since they helped to prepare a way for the imperial beast, who, roused at last from his lethargy, was gathering his strength to seize her for his own.

That is a quotation from Parkman. Then Mr. Laurier proceeds:

How humiliating the language, but how true—how painfully true! The resources of the colony were exhausted in shameful peculations, the way was prepared for the invader, and after her first defeat Canada had not the strength to retrieve the loss. Sir, 130 years have rolled over since those unfortunate days, and time and freedom have obliterated the grief, but the shame is always there, and there is not to-day a cottage in Lower Canada where the names of Bigot and Pean and the other official jackals who sucked the life blood of their country in the hour of danger, are not remembered with abhorrence. Sir, Canada is to-day again the prey of official jackals—the jackals of this government. Again there is robbery everywhere; if again cupidity has taken hold of clerks and storekeepers and officers, again everywhere false certificates are admitted. Montcalm is not here, but if he were, and if he were a member of this parliament, with the right to speak and vote, is there any one who doubts that he would denounce the conduct and the infamy

of the Bigots and the Peans of to-day, as vigorously as he denounced Bigot, Pean and Vergor in his own day. But if Montcalm is not here, we have his example; and if his stern patriotism still lives in the hearts of his countrymen, to them I appeal, and as he would now do, so now let us do.

Now, Mr. Speaker, I do not know why I should not appeal to my fellow countrymen of the province of Quebec, which I am proud to claim as the province of my nativity, as the right hon. gentleman appealed to his fellow countrymen on that occasion —I do not know why I should not appeal to them to follow the noble example of Montcalm. The government of Canada has now been entrusted to men of their race, to men of their province whom they had delighted to honour, and who have so deservedly occupied positions of leaders in the political and social life of that province, and now when these hon. gentlemen have the government in their possession, I do not know why I should not appeal to them to preserve the record unsullied, and not to add their names to those of Bigot, Pean and Vergor on the roll of dishonour referred to in this narrative.

Mr. J. E. O. GLADU (Yamaska). (Translation.) Before speaking to the motion which is just now occupying the attention of the House, I wish to say a few words in answer to the hon. member for Leeds (Mr. Taylor). He recalled a moment ago an incident of his youth. His appearance shows that he is no longer a child, but his speech leads one to believe he is in his dotage. That hon. member stated with a groan that the country's debt has to-day reached $309,000,000. If that is not mere childishness on his part, I am at a loss to know what name to give to such a statement on the part of the hon. member. He knows very well that the financial situation of a country cannot be gauged merely by the amount of its public debt; its assets should also be taken into account, that is to say the financial status should be considered in all its aspects.

The hon. member finds fault with us for having considerably increased the expenditure. But when these hon. gentlemen were in power in 1896, the country's trade barely reached $200,000,000, so that the revenue at the time was very far from reaching the figures reached nowadays, when the trade aggregates $600,000,000.

To return to the motion submitted for our consideration, I intend to deal briefly with it, on account of the lateness of the hour and seeing that there is very little left that has not been said. However, there is one point which, if I am not mistaken, has not been dwelt upon in the course of this debate, and to which I shall refer. We are being called to task on account of wrongdoing and deeds of extortion committed in the Department of Marine. No doubt, you have not forgotten, Mr. Speaker, that in 1896 and 1897, when the government resolved to make some changes in the staff of the various departments, in pursuance, as it were, of the verdict of the people who had decided on a change of government, you have not forgotten, I say, how these gentlemen on the other side waxed indignant and branded us as persecutors. You have not forgotten with what energy they protested against the ways of the government whom they called persecutors because they were dismissing, they claimed, public servants of many years standing in the service.

Well, what does the Cassels inquiry now bring to light? That all those who have been guilty of extortion, who have committed the greatest frauds in the management of that department are those very men of the old regime whom we were prevented from expelling, under the threat of being branded as persecutors.

Of course, I do not contend that the present staff is unimpeachable. It is a human institution and therefore may have its imperfections. But we are free from all stain, and if to-morrow the people thought fit to change the government—I say so with a feeling of pride for the party to which I belong—if to-morrow the country though fit to send us back to the cold shades of opposition, our last moan, when descending into our political grave, would be the faithful echo of the first wail heard in our cradle when we came to power: there would be just as much honesty in one case as in the other.

I stated that, while not contending that our management of affairs was free from imperfections, it was at any rate free from all stain. I congratulate the hon. Postmaster General on his eulogy of the late hon. Raymond Prefontaine ; I congratulate him on the lesson he has taught a moment ago to those occupying seats on the other side and who still go through the country casting aspersions on the memory of the late Mr. Préfontaine. I trust they will not forget that lesson, and it is this : in the grave there is room only for the corpse ; there is room for nothing else, not even the poisonous breath of the serpent.

It seems strange to me that the hon. member for North Toronto should have grown so indignant and shown himself so touchy in connection with some remarks made by the right hon. Prime Minister. If those remarks had been uttered by a private member, it is just possible they would not have been taken back as they were by the Prime Minister, on account of the high position he occupies in the House.

If those remarks grate on the nerves of the hon. member for North Toronto, one thing only remains for him to do, and that is to read over once more the fearful arraignment of himself by the Minister of

Justice a year ago, when direct and formal charges of which he has never cleared himself, were made against him. As a matter of fact, he has never got rid of the blemishes which for the last twelve years have made him as well as his party, an object of scorn in the eyes of the public, not only in this House, but in the country at large ; nor did the abuse with which he and his friends have loaded the hon. Minister of Marine, tarnish the high reputation of the hon. minister as an honourable and respectable man.

I do not intend, Mr. Speaker, to speak much longer, it being so late. In the meantime I was anxious to make known my views on the question, and to state in all sincerity my admiration for the Minister of Marine personally, and for the able way in which he has administered his department in the interest of the country at large, of the government of which he is a member and of the whole Dominion.

Mr. J. W. EDWARDS (Frontenac). Mr. Speaker, I had no intention, until, a short time ago, of taking any part in this discussion this evening, or, I might say more properly, this morning, if it had not been for certain statements made by the hon. Minister of Public Works (Mr. Pugsley) in the course of his remarks. I have listened to many of the speeches which have been made here during this debate with a great deal of interest and pleasure. I have listened with some surprise to some of the remarks which have been made. I have listened to speeches made by some hon. gentlemen opposite with a great deal of surprise because of the lack of argument which they contained relevant to this resolution. The hon. member for Leeds (Mr. Taylor) furnished two very strong arguments, for further investigation, or rather he furnished one direct to the members on the government side of the House and when he was furnishing that argument they furnished this House with another argument. My hon. friend from Leeds made some very serious charges as regards the expenditure and as regards the prices paid for articles in different departments of this government. Those statements, which must be taken seriously, have furnished this House with something that we should think of very seriously and they have furnished us with an argument that this investigation should be carried on further. The mirthfulness with which they were received by hon. gentlemen opposite is a still further argument why this investigation should go further. It is a serious matter indeed that statements such as those which were made by my hon. friend from Leeds should only elicit from members of the government and their supporters laughter and jeers. By that very act of laughing and jeering at statements so serious as those, the government have inadvertently furnished this House with an argument why this investigation should go further because as evidently the Cabinet Ministers are disposed to look on matters such as that in a light manner we naturally think that there is ample reason for further investigating the affairs of the different departments of the government. Before referring to the remarks of the hon. Minister of Public Works I want to call attention to some statements made by the hon. Postmaster General (Mr. Lemieux). The Postmaster General said that the Conservative party went into the last election with the cry of graft and corruption. I would like to ask the hon. gentleman and the members of this House who forced the Conservative party to refer to graft and grafters: Was there not evidence enough to attract the attention of the Conservative party to graft and grafting? What about the case that was referred to by one of the speakers this afternoon of Philip Wagner, the man who was taken out of prison and appointed to a responsible position at an increased salary? Was that not sufficient to call the attention of the Conservative party and of the people of the country to graft and grafters? What about the importation of ballot boxes into the ridings of Frontenac and Hastings by men connected with the party across the way? Is not that sufficient to attract the attention of the country and would not the Conservative party be open to censure if they passed matters of that kind without comment? The Liberal party, from the Atlantic to the Pacific, has furnished the Conservative party with lots of reasons for speaking of graft and grafting. I regret that the Liberals have done so. Another reference made by the Postmaster General was to the effect that the officials who had been dismissed after the Cassels inquiry were officials who had been appointed by the Conservative party. Very well; it does not matter ,as far as I can see, whether they were officials who had been appointed by the Conservative party or whether they were Conservatives or Liberals. I think he makes a case out against himself and the government in making that reference because the fact shows that if these men were appointed by the Conservative party the Conservative party were successful not only in keeping them but other officials in their places while the Liberals were not capable of keeping them in their places when they came into power.

Now, I want to call your attention to one or two remarks made by the hon. Minister of Public Works. He said that he rose for the purpose of defending a gentleman by the name of Mr. Harding, but it struck me that he was more concerned about doing

justice to or putting up a defence on behalf of one of his party friends than he was in discussing the resolution of my hon. friend from St. Anne (Mr. Doherty). The Minister of Public Works criticised my hon. friend from Montreal, St. Anne, on the ground that he had made inaccurate statements. He said that he should be sure his statements were accurate before he made them. I could not help but take particular notice of a statement like that from the Minister of Public Works and I repeat that it was the statements made by the hon. gentleman which led me to speak at all upon the matter under discussion. I had before my mind, when he made that statement, certain statements which had been made by the Minister of Public Works in reference to expenditures in the neighbourhood of the city of Kingston. Let me refer to one or two statements made by that hon. gentleman. The Minister of Public Works has been more than inaccurate. He appealed to this House for $15,000 to build a veterinary hospital. When that expenditure was criticised he defended it. What did we find later on? We have the hon. gentleman, after obtaining that appropriation, coming forward and admitting that the year previously he had talked the matter over with the Minister of Militia and Defence, and had made up his mind not to indulge in the expenditure, stating that it was a printer's error and that he would, with the concurrenec of the House, cut it out of the estimates. Yet, the hon. gentleman comes here and criticises the mover of the resolution as to the accuracy of his statements. Do you want another instance of the inaccuracy of the Minister of Public Works? A certain contract was let in the city of Kingston for some sixteen cottages, now famous, and the contract called for $77,000 of expenditure. Some $55,000 was voted last year. The hon. gentleman asked for $57,000 additional this year. Gentlemen on this side of the House criticised that, and said that the expenditure was ridiculously high and absolutely indefensible. The Minister of Public Works put up a defence for that. He argued that the amount was not too much and went into details about rock excavation and so on. After defending this expenditure of $112,000 and the additional expenditure of $57,000 the minister announced that it was a mistake, that a five had been put down instead of a three, and he reduced the item by $20,000. Then he presumes to criticise the mover of this resolution on the ground of inaccuracy. The very manner in which money was expended in the Public Works Department as we have seen this session calls for further investigation, and shows the need for further investigation. I was surprised to hear the hon. gentleman state that works in his department were carried on by tender and the patronage list was abolished. This statement was repeated by the Postmaster General in reference to all the departments. In Kingston alone we have had the Royal Military College stables for which the contract price was $6,960. They were built several years ago at a total cost of $8,573. An extra of over $1,500 was given without tender to the man who had the original contract. As these stables were built four or five years ago and have never been used, surely there should be an investigation of that expenditure. Do the ministers think that the people of Kingston are not asking for it? I can assure them they are, and that there is room for investigation. For the barrack accommodation in connection with the stables the contract price was $9,490, and the work has cost $15,000. $5,000 or $6,000 going to the fortunate contractor. The Royal Military College cottages were to be erected for $77,739. The minister says he has abolished the patronage system, yet he gave to Michael Sullivan without tender extras in connection with these buildings amounting to $6,237, and other works to the amount of $3,034, a total of $9,361. The only amount above the original contract let by contract was $3,695 for lighting to the Halliday Company. The Royal Military College gymnasium cost $40,000 without being equipped, and it is common street rumour in Kingston that the specifications required that that building should be lined with pressed brick, but that ordinary brick was substituted and painted red. Do the members of this House not think that the people in Kingston, knowing these things, are asking for an investigation into all these departments? That is the opinion of the people down there. They believe there is need of investigation in the different departments as called for in this resolution. The Minister of Public Works (Mr. Pugsley) admits that the investigation of Mr. Justice Cassels was not thorough and did not cover the whole ground. He said it would cost $1,000,000 to make a thorough investigation. Would it not be more sensible and more in the interests of the country to spend even $1,000,000 on that work than to throw it away in the Newmarket ditch or in such useless expenditures as the building of those cottages in Kingston at that price?

I believe there is a general feeling throughout the country that these matters should be further investigated. Prior to the last election if these questions were raised in the country the Liberal party would appeal to the people, it was one of their election cries that because the Civil Service Commission reported certain irregularities Sir Wilfrid Laurier would investi-

gate further, he would probe to the bottom and had appointed Mr. Justice Cassels for that purpose. They appealed for support for Sir Wilfrid Laurier on that ground and in that way many votes were cast in his favour. When we referred to the irregularities, we were met with the argument that Sir Wilfrid Laurier was disposed to be fair and to go to the bottom of these things, that he had shown that by appointing Judge Cassels. In that way they appealed to the people to give the Prime Minister an opportunity to finish his work. To-day not a man has attempted to prove that the investigation has been anything but a partial investigation. The amendment which has been moved by the hon. member for St. Anne is one which should appeal to all members of this House, but more strongly to members on the other side than to those on this side. The public honour is in the keeping of the Prime Minister and his cabinet and it is up to them and not to this side to keep that honour unsmirched and to probe this matter to the bottom. I repeat they are not doing their duty by the country in voting down that resolution.

Mr. P. A. SEGUIN (L'Assomption). (Translation.) I do not intend giving a silent vote on the amendment which is now before the House; but I shall be short. I wonder why the hon. member for St. Anne's has introduced a motion on those lines. He proposes that an inquiry be carried on concerning all the departments, because the inquiry relating to the Marine Department has brought to light certain frauds, certain extortions already condemned by the Liberal party.

I do not wish to fritter away the time of the House; however, as a young member, I must say that I was really surprised to hear old members, who have occupied seats in this House for several years, or even members who have been entrusted in years past with the administration of justice, suggest into the various departments, inquiries entailing heavy expenditures, without having any idea of the outcome of such inquiries.

I am perfectly satisfied that the policy adopted by the Minister of Marine is absolutely correct. He has thought fit as a result of the Cassels inquiry to dismiss some of the men and to superannuate others. I must say that some of his followers have possibly disapproved that policy to a certain extent. We were of opinion, especially if yielding to the impulse of youth, that some of the officers who have been superannuated, might have been dismissed purely and simply. We considered that some of the worse cases of extortion were attributable to officers who have been kept on through condescension, through the good-heartedness of the Liberal ministers, and among others the Minister of Marine and Fisheries who wished in that way to give fair play to the appointees of the old regime.

Mr. Speaker, I do not wish to detain the House very long. I am bound to say that the Minister of Marine has acted with all the earnestness that might have been expected in starting this inquiry, that he has followed it up with unrelenting zeal, and has meted out punishment to the guilty men. I shall vote against the motion of the hon. member for St. Anne's, because it strikes me rather as a pretext for empty talk, as a means of making political capital, as an attempt at slandering our government. We are interested in maintaining in power the honest government which we have since 1896. I shall not detain the House any longer at this late hour of the night. However, I must add that the carrying on of an inquiry into any of the departments would not satisfy the opposition, and particularly those who, while holding here a mandate as members of the House of Commons, are at the same time pensioners of the state.

We have a duty to fulfil here, it is to administer the public funds in such a way that every dollar expended may accrue to the benefit of the state. Mr. Speaker, I am satisfied that if further inquiries were granted, the net result would be the condemnation of friends of hon. gentlemen on the other side, who were appointed while these gentlemen were in power. Those who are in favour of a general inquiry have not shown that we would be justifiable in spending such a large sum of money as an inquiry of the kind would entail.

I know moreover that the inquiry which has been carried through will cause the ministers to keep their eyes open, and that some day or other we shall witness the disappearance from the service of those people who are there only for the purpose of intriguing in the interest of persons occuping seats on the opposition side.

Mr. J. P. TURCOTTE (Quebec County). (Translation.) Mr. Speaker, I request a moment's hearing. I have made up my mind to vote independently of all party prejudice; and I am even willing to close my ears to anything that has been said by members on this side of the House and to rely solely on the remarks made by hon. members on the opposition side. But there is one circumstance that is somewhat annoying to me. I would like to know from the leader of the opposition whether he intends starting a new inquiry into the Marine Department in case the amendment carried. I am waiting for an answer.

I want to know from the leader of the opposition if, in case the amendment is adopted he will be ready to begin over again the investigation in the Department of Marine and Fisheries?

Mr. R. L. BORDEN. (Translation.) I would be entirely disposed to do so. There are some matters in that department which have not been fully investigated. The Commission which began its work in 1907 only partially completed it, and the investigation made by Mr. Justice Cassels was confined to a single paragraph of that Commission's report.

Mr. TURCOTTE. (Translation.) Then, if I understand correctly, we have this extraordinary statement: An inquiry has been ordered for the purpose of discovering all that has taken place in one particular department, that of Marine. That inquiry was open to the public; the opposition was entitled to have a representative present.

Mr. BORDEN. (Translation.) That enquiry was only partial.

Mr. TURCOTTE. (Translation.) I cannot see how it can be called partial. It bore on all questions relating to the Department of Marine and it was open to the public at large. The hon. leader of the opposition was at liberty to take a hand in it. He is a distinguished lawyer and might have summoned witnesses, questioned or cross-questioned those that were called upon to testify, so as to bring out the whole truth.

Should it be understood that the leader of the opposition has failed to do his duty? Where was he, what was he about when the commission was travelling from town to town? How is it that we have to-day, from the mouth of the leader of the opposition, the admission that he is not satisfied with the inquiry.

Well, if so, he can only lay the blame on his own gross negligence. He gets a salary because he is expected to look after public business the whole year round; why did he not think proper to appear before the commission and do the work the country pays him for ? Thus, on that occasion the hon. leader of the opposition was obviously neglecting his duty.

Then, if such an investigation costing $55,000 do not answer his expectations, will he be any more satisfied with a general investigation ? Or perhaps he thinks that we are going to order as many inquiries as there are departments.

There is a touch of irregularity in the resolution of the hon. member from St. Anne's. The hon. gentleman acknowledges that the Minister of Marine is not guilty, that he is honest. On the other hand, we heard the hon. member for North Toronto making insinuations and taking to task not only the Minister of Marine, but the whole cabinet, and even the Prime Minister himself.

Another surprise was sprung upon us when the hon. member from West Quebec (Mr. Prince) came here and stated that as for him not only is the Minister of Marine honest, but even those who have been found guilty by Mr. Justice Cassels, and dismissed, did not deserve it.

Finally, the hon. member from Leeds (Mr. Taylor) stated this evening that for his part he thought the whole system was faulty and needed a thorough cleaning

Thus we have four different views. I rely on the evidence of our oponents themselves. I can see them altogether surrounded by a mist or by that cloud which is mentioned in the amendment. This is not only a suspicion, it is naked truth. Evidently, those gentlemen did not put their heads together beforehand, for one says white and the other says black, and they pull different ways. Therefore, how could I conscientionsly pass sentence without knowing anything positively, how could I blame the government and ask that they be put on trial when there is no cause for it.

The hon. leader of the opposition is an eminent lawyer, and let him say what scandal he is after. Why not be courageous enough to make a change and we shall answer you. There are eighty members on the other side of the House, but not one of them is able to proffer a formal charge against a single member of the government.

The Cassels inquiry was regularly held in such a manner as to enlighten public opinion. For that reason, I shall vote against the amendment.

House divided on amendment of Mr. Doherty.

Amendment negatived, motion agreed to, and House went into Committee of Supply.

SUPPLY.

Mr. FIELDING. I desire to make a general motion. The committee has passed a large number of items, but I desire to move that one-fourth of each remaining item be voted by the committee. The clerk can work out the details, so that we need not go over the items.

Mr. R. L. BORDEN. There is no objection to that, subject to the usual reservation always made in such cases as to our right of discussion on the balance.

Mr. FIELDING. I could not deny that right if I wished.

Mr. R. L. BORDEN. A reservation of that kind is usually made.

Motion agreed to, and committee rose and reported accordingly.

On motion of Sir Wilfrid Laurier, House adjourned at 3.12 a.m. Saturday.

HOUSE OF COMMONS.

MONDAY, April 5, 1909.

The SPEAKER took the Chair at Three o'clock.

REPORT PRESENTED.

The Department of Trade and Commerce for the fiscal year ended March 31, 1908. Part II, Trade of Foreign Countries and Treaties and Conventions.—Rt. hon. Sir Wilfrid Laurier.

COMMERCIAL FEEDING STUFFS.

Hon. WM. TEMPLEMAN (Minister of Inland Revenue) moved for leave to introduce a Bill (No. 127) respecting Commercial Feeding Stuffs. He said: This Bill proposes to deal with feeding stuffs for domestic animals. There is no law dealing with these substances other than indirectly. The Bill runs pretty much along the line of another Bill now on the Order

Paper dealing with agriculture fertilizers. It is proposed to compel manufacturers of commercial feeding stuffs to register and sell their products under a number given by the Inland Revenue Department, and to put upon the packages the guaranteed analyses of the contents of the food sold, thus creating to some extent, a standard by which the manufacturers of these foodstuffs will sell and affording the purchaser some guarantee of the genuineness of the article bought. The Bill is believed to be very much in the interests of the purchaser and has been approved by agricultural associations and others interested.

Mr. J. D. REID (Grenville). Do I understand that other cattle foods than bran or shorts must have branded on the package the contents showing exactly what the mixture is made of? Farmers complain that when they buy bran, instead of getting pure bran, sweepings and other stuff are mixed with it, so that the purchaser does not know what he is buying.

Mr. TEMPLEMAN. The Bill covers the point raised by the hon. member. It relates to any article offered for sale for the feeding of domestic animals, including those claimed to possess medicinal as well as nutritive properties. Hay, straw, roots, the ordinary meals of wheat, rye, barley, oats or corn, and also bran or middlings of any of these grains sold separately, must be genuinely what they profess to be, and must not be mixed.

Motion agreed to and Bill read the first time.

INQUIRIES FOR RETURNS.

Hon. GEO. E. FOSTER (North Toronto). Before the orders of the day are called, I would ask the Minister of Finance (Mr. Fielding) if he will hurry down the returns ordered by the House with respect to loans since January 1, 1907?

Hon. W. S. FIELDING. Minister of Finance). If not to-day, I think they will be ready to-morrow without fail.

Mr. FOSTER. I would like to have it before the Easter holidays.

Mr. FIELDING. I think it will be ready.

Mr. FOSTER. I understood from the Minister of Militia and Defence (Sir Frederick Borden) when I asked about the return of the armouries, that it was practically ready. But I do not find that it has been brought down. I would like to get it also before the Easter holidays.

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence). I said that, so far as my department was concerned, it was ready, awaiting the principal part, which comes from the Department of Public Works.

Mr. FOSTER. Am I right in thinking that the government have taken Mondays?

Sir WILFRID LAURIER. That resolution will be introduced to-morrow.

Mr. FOSTER. If that resolution were introduced to-morrow and carried, and were made the rule for the first Monday thereafter, we might get at the motions to-day, and there are a number of motions which would be unopposed. There are also certain orders on the paper that some members would like to drop. It might be possible for the government to take unopposed motions before private Bills, with the consent of the House.

Sir WILFRID LAURIER. I think we will come to motions presently. I do not think there are any contentious private Bills. But we will consult the convenience of the House with regard to it.

AGRICULTURE COMMITTEE.

Mr. URIAH WILSON. I desire to call the attention of the Minister of Agriculture to the fact that the report of the Committee on Agriculture and Colonization last year has not been distributed. I think it is very important we should have it.

Mr. FISHER. The evidence of each officer is generally taken and distributed. I do not remember that they were all bound together.

Mr. URIAH WILSON. Every year that is done, and most of us have not got the evidence that was given before the committee last year that is bound in blue book form.

Mr. FISHER. The Minister of Agriculture is not responsible for that evidence. The Committee on Agriculture is responsible, and I decline to have the responsibility put upon me.

THE LOGBERG PRINTING COMPANY.

Mr. G. H. BRADBURY (Selkirk). I desire to bring a matter before the attention of the House. On the 17th of February I asked for a return of the amount that was paid to the Logberg Printing Company. On the 26th of March that return was brought down, stating that the amount was some $500, for the Public Works Department only. All other departments return report nil. In looking over the Auditor General's Report I find that for the year 1908 alone there was a sum of $4,752 paid to this company. Taking the years I asked for in the return, the sum would amount to at least $25,000. But the return actually brought down says there was only $572. There was certainly a great error made in this return. If all the returns brought down to parliament are as unreliable as that, it is a serious matter.

Mr. FIELDING. Is there any question as to the period which the return covers? Can there be any misunderstanding?

Mr. BRADBURY. No, the returns are brought down by the Public Works Department for each year.

SUB-CONTRACTORS ON GRAND TRUNK PACIFIC—BRITISH COLUMBIA SECTION.

Mr. J. D. TAYLOR (New Westminster). I wish to call attention to a matter which refers to the departments of the Minister of Labour and the Minister of Railways and Canals. I have here a report sent to me from Prince, a Prince Rupert paper, based upon the telegram from Vancouver.

Vancouver, March 27.—Royal mail steamer 'Monteagle' arrived from the orient yesterday with sixty Russian moujiks from Siberia, imported to work on the Grand Trunk Pacific construction from Prince Rupert east. The moujiks are to replace the English-speaking labourers, who do not really conform to hard conditions and to the wages they have been receiving. The Russians are to work in a colony by themselves, just as Italian gangs do, if they prove satisfactory. They are to be taken to Prince Rupert on the 'Princess May.' It is not learned what they are to be paid; but it is evident they are under something like the padrone system. Another and larger party is to arrive on the next Canadian Pacific Railway steamer.

If this despatch represents the true condition of affairs, it shows that contract labour of a very degraded kind is being imported for service on the Grand Trunk Pacific. On another page of the same paper there is an article setting forth that a year ago the firm of Foley, Welch and Stewart, of St. Paul, Minnesota, of Spokane Washington, and of Winnipeg, Manitoba, entered into a contract to grade 100 miles of the Grand Trunk Pacific Railway beginning at Prince Rupert. The Prince Rupert 'Empire' states that they had 2,500 men at work a month ago, but that the work was going on very slow, and it gives as a reason that the sub-contractors were employing labour of an inferior quality. The 'Empire' goes on to say:

Foley, Welch & Stewart, as practical railway builders, have a system of carrying on their business. The system is a good one for Foley, Welch & Stewart, however poor it may be for the men who do the work. They will not change it, no matter if men injured on the work are treated worse than brutes are treated on farms in Ontario; no matter if men who earn wages are put to undue expense to collect the wages earned; no matter if the subcontractors, who are judgment proof, cause loss to station men; no matter if expensive plant remains idle for weeks at a time owing to petty disputes over wages. They know that the Dominion government moves slowly, if it moves at all.

On another page of the same paper I find a report of a case that was tried in the county court at Prince Rupert before Judge Young, showing the relations that exist between the main contractors and the sub-contractors. The report states that a number of labourers got work from Fred. Petersen, a sub-contractor under Foley, Welch and Stewart. Not being able to get their pay, the men brought suit to recover pay for work done and the jury gave them a verdict for $2,548 for work done and $5,000 for damages. Foley, Welch and Stewart claim this is excessive and refuse to pay, claiming that Peterson is in debt to the old firm of Foley Brothers, Larson and Company for $15,000. The 'Empire' article goes on to say:

It is not known to the 'Empire' what action the station men will take who have a $7,548 judgment against Fred. Petersen, who is apparently judgment proof, although he has $8,000 worth of tools and supplies in his camps. The $7,548 represents work done or in shape to be done at a minimum cost by the ten station men in six months. If the amount is not paid them, it will wipe out half the $15,000 Petersen owes Foley Bros., Larson & Co., of St. Paul, Minnesota, and Helena, Montana. It will help swell the personal fortune of Timothy and Michael Foley and of the Larson estate, both millionaires many times over, and all of their millions are invested in the United States.

But while Foley, Welch and Stewart are wielding a big club here in Skeena district it is just possible a bigger club can be wielded on the head of Chas. M. Hays, of Montreal, who is president of the Grand Trunk Pacific Railway Company, and that Premier Laurier will yield the club, for is it not the money of the people of Canada that Foley, Welch and Stewart are withholding from the ten station-men——

Mr. SPEAKER. The hon. gentleman (Mr. J. D. Taylor) knows the rule under which it is not permitted to discuss a matter of this kind upon the orders of the day. It is allowable to put a question to the government relating to the business of the House, but the discussion of a question of this nature is out of order. The hon. gentleman may state the facts or he may put a question which will not entail a debate.

Mr. J. D. TAYLOR. I have to leave today and if I do not present it now I cannot present it at all.

Mr. SPEAKER. The hon. gentleman will have to be satisfied with calling the attention of the government to the facts without discussion.

Mr. J. D. TAYLOR. That is what I propose to do.

Mr. SPEAKER. There seems to be an attack upon the government which will entail a reply.

Mr. J. D. TAYLOR. No, I am not proposing to make an attack upon the government.

Some hon. MEMBERS. Order.

Mr. J. D. TAYLOR. The paragraph says.

It is just possible——

Mr. SPEAKER. Order, these are not the facts; these are the ideas of the editor. If the hon. gentleman will rest satisfied with putting the facts he will be in order.

Mr. J. D. TAYLOR. I will proceed then to present the facts in this way: Section 40 of the National Transcontinental Railway Act, chapter 71, 1903, provides that:

The company shall, before being entitled to the guarantee provided by this agreement, furnish evidence, satisfactory to the government, that all just claims of contractors and for materials, wages and supplies, and all just claims against contractors and sub-contractors for materials, wages and supplies, entering into and supplied for the construction of the railway have been duly paid.

Here is a firm of contractors who are violating the conditions of the Act by preventing these people from getting the money they have earned. As the government have contracted to see that they get that money I want to call the attention of the government to the fact that this state of affairs exists and to ask that they put the necessary machinery in operation to assist these men in the obtainment of their wages.

PERSONAL EXPLANATIONS.

Mr. M. CLARK (Red Deer). Mr. Speaker, I desire to crave your indulgence and that of the the House for a very brief personal explanation. The explanation refers to a paragraph which appears in a newspaper called the 'Toronto Sunday World.' In that paragraph the writer purports to give an account of the proceedings in this House last Friday evening and in that report he uses these words:

Mr. Stanfield, the husky member for Colchester, overheard the member from Red Deer apply an insulting epithet to Mr. Foster. He warned Dr. Clark that if he did not instantly withdraw he would thrash him; and after looking Mr. Stanfield carefully over, the apology was forthcoming.

Mr. Speaker, during the time that I have had the honour of knowing the hon. member for Colchester, I wish to ask you, Sir, and this House, to believe me when I state that he has never addressed to me one single word which, interpreted according to the strictest canons, could be called ungentlemanly or impolite, much less has he ever used to me language which, by any stretch of the imagination, could be called threatening. I wish the House to believe this further statement that there was no language of this description used towards me; so that there was no withdrawal or apology forthcoming from me. I regret to have to call attention to this incident at all, because I may say that I have carefully read a large number of the newspaper accounts of what happened on Friday night and these accounts are very generally truthful, very generally unexaggerated and reflect the very greatest credit upon the press of this country. In regard to the paragraph to which I have just referred and to which I wish to give the most emphatic contradiction, I can only say, in quoting the language of Macaulay in regard to certain scribes of his day, that the people who compose these paragraphs 'act after their kind.'

Mr. D. B. NEELY (Humboldt). Mr. Speaker, I would like to draw the attention of the House to the fact that there is another member of this House who has been maligned to some extent by the same article in this edition of the 'Toronto Sunday World.' A little farther on this article proceeds to say:

Later in the House Mr. Stanfield got into a heated argument with Mr. Neely, of Humboldt and threatened that member with extermination if he did not withdraw a remark, also applied to Mr. Foster. The affair was patched up by friends.

I want to say, Sir, that I am sorry the hon. member for Colchester (Mr. Stanfield) is not here to-day, because I am sure that he would give to this quite as emphatic a denial as my hon. friend from Red Deer (Mr. Clark) has to the paragraph just preceding. The hon. member for Colchester could not possibly have had any excuse or reason for threatening to exterminate me on account of any statements or epithets applied to the hon. member for North Toronto (Mr. Foster) because I did not apply any epithets to that hon. gentleman. I did not say anything to the hon. gentleman for North Toronto, either agreeable or disagreeable, unless it might be something in the way of mild admonition that he should take his medicine in common with remarks of that kind applied by quite a number of the members of this House.

MANITOBA AND NORTH WESTERN RAILWAY.

House in committee on Bill (No. 81) respecting the Manitoba and North Western Railway Company of Canada.—Mr. Cash.

Mr. NEELY. When this Bill was before the committee on Friday last, Mr. Chairman, I placed in your hands an amendment. I would point out that paragraph A of section 9, of chapter 52, of the statutes of 1893, refers to that part of the charter of this company granted in 1893 for the building of a branch line from the town of Yorkton to the city of Prince Albert in the present province of Saskatchewan. The effect of my amendment, if it is carried, is to strike out the particular paragraph in the Bill now before the committee, which has reference to the building of the branch line from Yorkton to the city of Prince Albert.

The reason I have brought this matter before the committee is, that this Manitoba and Northwestern charter has had a very striking history; a histroy which if thoroughly known to the members of the House would not I am sure inspire in them any feelings of sympathy towards that charter. I have had very strong representations from the people in that part of the country protesting against the renewal of this charter. The Canadian Pacific Railway have held the Manitoba and Northwestern charter, as the House knows, since 1893 or practically for sixteen years, and the charter was in existence for some twelve or thirteen years previous to that. Therefore, the charter for this particular line of railroad that I am referring to has been in existence practically since the year 1880, the year in which the original Manitoba and Northwestern charter was passed by the Manitoba legislature. The Canadian Pacific Railway therefore have held this charter for sixteen years, and while they have made surveys two or three times, and while they have gathered together a few shovels full of earth in the shape of starting to grade at one or two points along the proposed line, they have practically made no use whatever of this particular charter. I want the committee to understand that this has been a very great hardship to a great many people who have gone into this section on the understanding and with the expectation that the Canadian Pacific Railway had taken over the charter in good faith for the purpose of building this piece of road. Every means possible have been taken to bring pressure to bear upon the Canadian Pacific Railway to construct this piece of road. For instance, in looking up chapter 52 of the statutes of 1893, I find that section 9 gives the power to build these particular lines of railroad, and subsection 3 of that section provides:

> The company shall construct and complete to the satisfaction of the Governor in Council, not less than 20 miles of railway on or before the 31st day of December in each calendar year after the year 1893, or otherwise their powers under this section shall cease as regards so much of the said lines of railway as is not completed by the said date in each calendar year.

That means that there has been a provision in this charter ever since the Canadian Pacific Railway have taken it over, as there was before that time, to the effect that this company was to build twenty miles every year. To show what attention they have paid to this provision, I may mention that they have not built one single mile of line from the town of Yorkton to the city of Prince Albert. Then again, I object to the way in which the Canadian Pacific Railway undertake to get their extensions of time for these charters so long over due. I object to the way in which they undertake to get such legislation through the Railway Committee and through this House. In this Bill (No. 81) which is before us at present, they are asking for an extension of time on some other branch lines, the charters for which they have obtained since 1893. In order to cover up the fact that they have held the charter for this particular branch line for the past sixteen years they run in three or four other charters which have been granted in more recent times. This particular charter that we are considering illustrates very well the futility of putting in any requirements as to building a road in the case of the Canadian Pacific Railway; because as I say there is this provision in the charter ever since they took it over, and for that matter before they took it over, to the effect that they must build twenty miles every calendar year. The fact of the matter is that they have never carried out that condition, but they apparently find it easier to come back to parliament to obtain a renewal of the charter. Now, Sir, I think that sixteen years is a reasonable length of time in which to have allowed the Canadian Pacific Railway to accomplish something on this road.

Mr. J. D. REID. Twenty-nine years.

Mr. NEELY. Twenty-nine years so far as the whole charter is concerned, but the Canadian Pacific Railway have held it since 1893 or for sixteen years. I think something should be done now, and I would like the promoter of the Bill to tell this committee, what he did not tell the Railway Committee, why it is that the Canadian Pacific Railway are asking to have this charter renewed. It is only a couple of weeks ago that in Bill (No. 79) the Canadian Pacific Railway obtained from this House an extension of time for the construction of the branch line from the town of Lanigan on the Kirkella branch up to the city of Prince Albert. I am sure the hon. gentleman who is promoting this Bill has no confidence in his own mind that the Canadian Pacific Railway intends to build this particular piece of road, or at all events that it intends to build it in the immediate future. Why should this House grant this renewal of time when we have no evidence whatever that the Canadian Pacific Railway intend to build. If they did intend to build they should at least say so, and yet I have it on good authority that this branch line is not part of their programme for this next year, and so far as I can obtain any information it is not a part of their programme for the year following. The people in that part of the country do not want this extension granted. Their view is that if this charter is not renewed that probably some local capitalists or promoters may become interested in building a railway from Prince Albert to some point on the main line of the Grand Trunk Pacific Railway.

Whether they are right or wrong the people of that part of the country feel that the granting of a charter to the Canadian Pacific Railway tends to prevent other railroads from seeking for charters through the same territory. I am strongly of the same opinion. We know perfectly well that in a great many cases the obtaining of a charter by promoters who are not actual railroad builders does not prevent others from obtaining charters and constructing railroads; but in the case of the Canadian Pacific Railway it is an entirely different proposition because so long as that road holds a charter for a certain territory and the section will support only one line, no other railroad company will undertake to get a charter through that territory, and if another railroad company should obtain a charter and begin building the Canadian Pacific Railway would immediately get busy in order to stop the construction of the competing line of railroad. That is the policy of the Canadian Pacific Railway, and I am convinced in my own mind that that is the only reason why they are seeking an extension of time for this particular charter, in order to blanket this territory and keep any other railroad from undertaking to build through it. So I think the view of the people of that part of the country is reasonable, and that unless the Canadian Pacific Railway immediately commence construction the charter should be taken away from them. It is merely a question of asking the Canadian Pacific Railway to quit playing dog in the manger. I am not finding any fault with the operation of the Canadian Pacific Railway. The argument most frequently advanced in favour of granting such extensions of time to the Canadian Pacific Railway is that they have such an extensive programme of railway construction in the west. I do not think that is any excuse for the Canadian Pacific Railway not building this particular line. Why should the Canadian Pacific Railway not have an extensive programme of building branch lines and other lines in the Canadian Northwest? I would like to know whether the people of the Canadian Northwest are under any compliment to the Canadian Pacific Railway for the amount of railway construction they are carrying on there. The wealth of the Canadian Pacific Railway Company has been obtained to a very large extent from the resources of the Canadian Northwest, and the people of that country do not feel under any compliment to the Canadian Pacific Railway for the building of their branch lines. They are using the people's money, they are using the resources of western Canada, which were given to them by the terms of their original contract That argument I say, therefore, does not hold water, because we feel that we are entitled to all the railroad construction we are getting from the Canadian Pacific Railroad. Whether this amendment of mine carries or not, I shall continue so long as I am a member of this House to use every legitimate means I possess to prevent these extensions of time to the Canadian Pacific Railway or any other company unless the company is in a position to give some reasonable excuse or reason for not having carried out the terms of its charter, I shall oppose the granting of any extensions which will enable a company to blanket territory for no other purpose than to keep other railroads from building through it.

Mr. HENDERSON. Mr. Speaker, I shall not discuss the mode of construction of railways by the Canadian Pacific Railway in the west. I assume that hon. members fully appreciate what the Canadian Pacific Railway has done and what they are endeavouring to do, but I must say that I think it is a mistake to depreciate, as some hon. members have done, what that great railway corporation are and have been doing. I do not believe in throwing obstacles in their way if they are endeavouring to give railway accommodation to the people in the west. The whole matter lies in a nutshell. In 1903 the Manitoba and Northwestern Railway Company applied for and obtained a charter to construct a railway from Yorkton in a northwesterly direction to Prince Albert on the north branch of the Saskatchewan river. The sub-clause of section 9 now in question reads:

> The company may lay out, construct and operate the following lines of railway of the gauge of 4 feet 8½ inches.
>
> (a) An extension of the main line from the present terminus at Yorkton in a northwesterly direction to a point at or near Prince Albert on the north branch of the Saskatchewan river.

The hon. member's amendment repeals this subsection which would have the effect of repealing the right to construct a railway, repealing a charter which gave the Manitoba and Northwestern Railway Company the power to construct a railway from Yorkton to Prince Albert. The hon. gentleman forgets or perhaps he is not familiar with the territory. I do not claim to be very familiar with it; I have been in Yorkton but I was never beyond Yorkton on that road, but I understand distinctly from my hon. friend from McKenzie, that the Canadian Pacific Railway or the Manitoba and Northwestern Company, whichever it is, has already constructed nearly 50 miles of that road and that it is in operation today. I spoke to a gentleman to-day who told me he had travelled over that road, that it is in actual operation; yet here is an attempt on the part of an hon. gentleman from the west to repeal an Act of parliament which authorizes the construction of a road of which nearly 50 miles has been

built and is now in operation. I submit to the House that such a thing was never attempted in parliament, and although parliament has the power to do almost anything it would be interfering with the right of that railway company in reference to an undertaking which it is now carrying on that I do not think this parliament would for a moment tolerate.

Mr. NEELY. I would say to the hon. member that his statement that 50 miles had been built on the line from Yorkton to Prince Albert is absolutely contrary to the facts of the case.

An. hon. MEMBER. How many miles?

Mr. NEELY. None whatever.

Mr. HENDERSON. I think there are men in the House who know that territory better than the hon. gentleman does.

Mr. NEELY. I know the country very well.

Mr. HENDERSON. The hon. member from Huron told me he had travelled over that road.

Mr. T. CHISHOLM. So I did, from Yorkton to Sheho.

Mr. HENDERSON. I am satisfied that the hon. gentleman who is promoting this Bill (Mr. Cash) is familiar with the fact that that portion of the road has been constructed from Yorkton to Sheho, a distance of 40 or 50 miles, sufficient to warrant this House in defending the charter of the company which constructed that road. My hon. friend seems to be entirely mistaken. He will find on inquiry that he is attempting to repeal the charter of a road, a considerable portion of which has already been constructed. The Minister of Railways (Mr. Graham) is not in his place but I am sure the right hon. the Prime Minister will not consent that, where a charter has been granted and the company has constructed such a large portion of the road, that the charter will be taken from the company. The charter was obtained in 1893. In 1902 the time was extended for the construction of the line mentioned in subsections A and B. In 1907 it was extended for the completion of the railway authorized by section 9 of chapter 52. Not only have these charters been kept alive by parliament, but the company has gone ahead in good faith and constructed nearly 50 miles of road. That surely entitles them to the consideration of the House, and I do not think that, under the circumstances, the House will repeal the very charter under which the company are now operating the railway to that extent. I submit that my hon. friend must be labouring under a serious mistake or he would not have introduced this amendment.

Mr. HENDERSON.

Mr. NEELY. The hon. gentleman is entirely wrong and so is the hon. member for East Huron (Mr. Chisholm). The line of railway from Yorkton to Sheho has nothing to do with the line from Yorkton to Prince Albert. That is a line going westward and which will connect with the Kirkella at the town of Lanigan.

Mr. T. CHISHOLM. I do not understand it in that way. I travelled over that road before the extension was made to Lanigan, and I understood it was part of this very road to Prince Albert.

Mr. NEELY. I think that the hon. gentleman who is promoting the Bill will say that the line from Yorkton to Sheho is being extended to Lanigan and is almost completed at present.

Mr. HENDERSON. The clause of the Act of 1893, which it is sought to repeal, is the clause that authorizes the construction of a road from Yorkton to Prince Albert. I am not speaking of the road from Sheho westerly as that is a different charter altogether. The language is unmistakable that this is a charter for a road now in operation, and I cannot see how the hon. member for Humboldt can fail to be mistaken. The section says:

> Extension of the main line from the present terminus at Yorkton in a northwesterly direction to a point at or near Prince Albert on the Saskatchewan river.

There is no other railway running from Yorkton in that direction to Sheho. The road from Sheho to which the hon. gentleman has referred is another charter running westward from Sheho to a place called Lanigan, but the hon. gentleman has made a mistake. He is repealing too much. If he had submitted an amendment to repeal a portion of subsection A in section 9 of the Act of 1893—that portion lying between Sheho and Prince Albert, he might have had some ground for his appeal; but he is asking the House to repeal the entire charter from Yorkton to Prince Albert or the road running from Yorkton, through Sheho and on to Prince Albert. The hon. member for McKenzie (Mr. Cash) will substantiate what I have said with reference to the portion of the road constructed and now in operation.

Mr. CASH. I am perfectly familiar with the conditions. The road runs from Portage La Prairie with a terminal at Yorkton. The line extended to Prince Albert under the old survey; and the line built from Yorkton to Sheho is on that old Manitoba and northwestern survey, right in a section where fault was found with the Canadian Pacific Railway for not building the road, many settlers having gone there from Dakota under the conviction that that line

would be built. The line remained at Yorkton quite a number of years, but since 1903 it has been extended, on the old survey to Prince Albert, as far as Sheho. After it arrived at Sheho, for some reasons known best to the Canadian Pacific Railway, they went westward to join with their Kirkella branch at a place called Lanigan. They have graded that line and have built to about half way between Sheho and Lanigan and what they are asking now is to go on the old survey from Sheho to Prince Albert. I presume they want to build that road, and I am anxious they should because it will give my section of country the shortest route possible to Prince Albert, and from Prince Albert to Winnipeg. I think that this extension of time should be granted for several reasons. I have no particular interest in the line, but it is of considerable importance to the people in my section of the country that it should be built. The Bill was handed to me to take charge of, and I did so as I was interested in the Manitoba and Northwestern to this extent. I can see the advantage the road will be to my section of the country and to Prince Albert and the country through which it will pass. The people are complaining at not having got the road sooner, and I do not know how they will get it any sooner if we refuse this extension. The Canadian Pacific Railway will probably build the line this summer. I have no doubt that, with the force of men they have on hand, they will begin construction to Prince Albert possibly this fall; but I am not stating this on the authority of the Canadian Pacific Railway people but simply on my own judgment. In my opinion it is their interest to do so as it is the shortest line to Prince Albert and the best. I think the amendment is a great mistake and consequently ought not to be considered. I do not find that the amendment as read by you, Mr. Chairman, agrees with the notice in the Votes and Proceedings.

Mr. DEPUTY SPEAKER. There were two amendments proposed. If the hon. gentleman will look at some other copy of the Votes and Proceedings, he will see that the amendment as now put is properly put.

Mr. CASH. I have the second amendment before me and also the other. The amendment in Friday's Votes and Proceedings reads:

That clause 1 be amended to read as follows: Paragraph A, of section 9, of chapter 52, of the statutes of 1893, is hereby repealed.

There is no question of the clause reading as clause No. 2.

That would practically cut out the whole of the clause and all the branch lines connected therewith. If clause No. 1 were repealed it would practically cut out the whole of the line, and all the branch lines connected therewith.

Mr. DEPUTY SPEAKER. The amendment is really that clause 1, instead of being as it is in the Bill, should be as the hon. member has read it. But, as I stated, the intention was that clause 1 of the Bill should become clause 2, and I mentioned that. The amendment is simply that clause 1 should read as follows:

Paragraph A, of section 9, of chapter 52, of the statute of 1893, is hereby repealed.

But as the hon. member stated that the present clause 1 would become clause 2, I thought in explanation in committee I was justified in mentioning it.

Mr. CASH. I think that ought to be stated in the notice.

Mr. RUTAN. As a portion of this line runs through my constituency I wish to support the protest of the hon. member for Humboldt (Mr. Neely). The people who live in that section have grave doubts of the intention of the Canadian Pacific Railway to extend this line to Prince Albert. After sixteen years of promises by the company the people there feel that it is now about time that something should be done. They have been promised this road for many years. People came into that section of the country with the expectation that this road would be built, and they went through many of the hardships of pioneers. They lived from 40 to 80 miles from a railroad. When the Candian Pacific Railway acquired the Manitoba and Northwestern road there was a clause in the agreement that they should build 30 miles of this road each year until it was all built. The people thought that it would be done, but they were disappointed. In 1903 they, the people, were given to understand that the company would build their road west to parallel with the Canadian Northern. In 1902, when the Canadian Northern were extending their lines from the boundary of Manitoba west to Prince Albert, the Canadian Pacific Railway did become active for a little while. They put forth considerable effort and ran two surveys, and they got all their friends to talk for them and help them make the people believe that they were going to Prince Albert, that they were going on at once to build that road following the surveys. However, nothing was done. They ran their survey lines, and as the Canadian Northern did not stop, they dropped the project and at once turned their road west to parallel the Canadian Northern main line. The people who live in that section of the country and who have undergone great hardships in pioneering felt

very much disappointed. They have been obliged to haul their grain to market, as I said, all the way from 40 to 80 miles. It took them a week to make a trip to Prince Albert, and their expenses about ate up whatever they received for their produce. As this road has turned west and the company has not yet manifested any intention of building, I think the people have a right to doubt their intention to go on and build this road. No doubt ultimately they will build it, because the growth of the country and its products will sometime or other induce them to construct it. But the people want it now. We know that if another charter was granted to run over this line, no matter to whom it was granted, the Canadian Pacific Railway, being a very powerful company, could in 48 hours put on enough men to start construction, and in this way prevent the other company from going on. There is another reason why we doubt their sincerity. They have not selected any land in the north part of Saskatchewan, their lands are all else where, as are the rest of their interests, and we think they are holding this charter as a blanket. Further than that, this great road in the last eight or ten years has done nothing to promote immigration into our country. When people come up from the States with the intention of going to Prince Albert and other northern points, the company carries them elsewhere, gives them transportation clear out to Calgary in another province entirely. The Canadian Pacific Railway was willing to undertake their transportation and send them on further west rather than allow them to go to the northern parts. Therefore, I say we have certainly reason to doubt their sincerity. We think it is now about time that they should get out and allow us to give a charter to some other company who will be willing to help us develop our section of the country. I shall support the amendment to the hon. member for Humboldt.

Mr. LANCASTER. How would the repealing of this charter facilitate you in getting your railroad built?

Mr. RUTAN. If this charter was out of the way we could get a new one. But as long as the Canadian Pacific holds the charter they can go to work at any time and start construction and head off any other project.

Mr. TURRIFF. When this matter was before the Railway Committee I supported the contention of the hon. member for Humboldt. I quite agree that the Canadian Pacific Railway has done a great deal of work in that country, and is doing a great deal of work, and everybody gives them credit for what they are doing. But it seems to me the fact they are building a certain number of roads is no argument why a charter should be renewed year after year when nothing is being done on that particular charter, and especially when it is a charter that has been in existence for the last 29 years, for the last 16 of which the Canadian Pacific Railway has held it. The Canadian Pacific Railway has had all consideration; but don't you think there ought to be some consideration shown to the settlers in that part of the country? What is the position? The hon. member for Humboldt and the hon. member for Prince Albert came before the Railway Committee representing those people, and stated that the people in those sections where this line is to run are against the renewal of that charter, simply because, as I have been told, the Canadian Pacific Railway have stated that they have no intention of doing anything on that charter this year.

They have no intention of building for the next two years. Why should not the charter be cancelled so that somebody else may be given an opportunity to come in and build the road, especially when the people of that part of the country ask that that should be done? It comes to this: Are the wishes of the people of the section affected to have any weight with the members of this House, or are the wishes of the Canadian Pacific Railway, who want the charter kept in force and have no intention of building at the present time, to have weight? I, for one, am going to take the ground that the voice of the people should be heard and not the voice of the railways. We do not want to oppose the Canadian Pacific Railway wherever they want to build, but they have had this charter sixteen years and have no intention of building now. There is a misapprehension between the hon. member for Humboldt (Mr. Neely) and the hon. member for Mackenzie (Mr. Cash). The road is already built from Yorkton to Sheho. I am not prepared to say whether that was built under the original Manitoba, Northwestern charter, or whether it was built under the new charter the Canadian Pacific Railway has got. But this I am certain of—they got a charter from Sheho, not in a northwesterly direction, but rather in a southwesterly direction to Lanigan, and from Lanigan they got a charter this session to extend through to Prince Albert. This is the second charter they want to get—this being a renewal—from Sheho to Prince Albert. The hon. member from Humboldt (Mr. Neely) is not to blame, for he is taking the language of a former Act of parliament. But what he wants to have cancelled is not the line from Yorkton to

Prince Albert, but the line from Sheho to Prince Albert.

Mr. LANCASTER. But does not the hon. member (Mr. Turriff) say that the effect of the motion is the opposite of what he says is intended?

Mr. TURRIFF. There may be something in that. The amendment may not be properly worded. But this branch comes up in connection with five or six others, making it almost impossible to cut out one without cutting out all. But the voice of the people should be heard, and they do not want this charter revived or given any longer existence, for they want to give somebody else an opportunity to go in and build the road.

Mr. FOSTER. Will the hon. member allow me to ask a question? I want to find out for myself, if I can, what would be the effect of passing this resolution. As I understand it, the Canadian Pacific Railway now can build from Sheho to Prince Albert.

Mr. TURRIFF. Via Lanigan—they have that charter now.

Mr. CASH. They have a charter from Sheho to Prince Albert.

Mr. TURRIFF. That is what they are asking.

Mr. FOSTER. Is this by a new charter or by renewal?

Mr. TURRIFF. By renewal.

Mr. FOSTER. They have had, and if this passes they will continue to have?

Mr. TURRIFF. They have a charter from Lanigan to Prince Albert.

Mr. FOSTER. Each of these charters running through Sheho?

Mr. TURRIFF. Yes.

Mr. FOSTER. Very, well; then they have a charter to run from Lanigan——

Mr. TURRIFF. From Sheho to Lanigan and Lanigan to Prince Albert.

Mr. FOSTER. That is, if they get this they will have the right to build two roads to Prince Albert?

Mr. TURRIFF. Yes.

Mr. FOSTER. Suppose the amendment were to pass, what will they have?

Mr. TURRIFF. They have the road built to Sheho, and they have it built half way from Sheho to Lanigan. They will have the right to continue from Lanigan to Prince Albert.

Mr. FOSTER. And cut the people out from Sheho to Prince Albert. What do they say?

Mr. TURIFF. Nine-tenths of the people from Sheho to Prince Albert say that this has been in existence for sixteen years, and nothing has been done with the charter and so they ask that it be cancelled.

Mr. FOSTER. How will that help them?

Mr. TURRIFF. It will let somebody else come in and build. They have no hope or faith that the Canadian Pacific Railway will build the road. This charter has been in existence for twenty-nine years, and the Canadian Pacific Railway have had it for sixteen years. As the people have no hope that the Canadian Pacific Railway will build, they ask that somebody else be given a chance to do so. They are suffering, and they are the people whose voice should be heard, and not the voice of the railway company. That is what it comes down to. Let the people themselves judge whether they want the charter or not; they are the ones who will suffer, if, by cancelling this charter, the road is not built. And they ask that that be done. For once, let us do what the people along the line ask should be done.

Mr. SPROULE. If we do what the hon. member (Mr. Turriff) asks the House to do, the result would be absolutely absurd It would repeal the charter under which a road has been built, and is being operated.

Mr. TURRIFF I stated that there was a mix-up, and that all that was wanted was to cancel the motion as relating to that part from Sheho to Prince Albert, but not the whole line from Yorkton to Prince Albert.

Mr. SPROULE. That is not the amendment. Its effect would be to cancel the whole line. I see by the Canadian Pacific Railway report that a portion of the line has been built. The Manitoba North Western from Portage la Prairie to Yorkton, 229·9 miles has been built. From Yorkton to Sheho, 42·2 miles, has been built. If this amendment passes, it would repeal the Act which gave authority to build that line and run it. The hon. member must see how absurd this amendment would be if carried. I see it stated here also that the line from Sheho to Lanigan is under construction, 82·8 miles. Part of the road has been built and running for years, and we are asked to repeal the law under which it is operated. It must be obvious that that is something that cannot be entertained.

Mr. TURRIFF. It is an easy matter to change the wording to make it apply only to that portion of the line for which they are asking a renewal, from Sheho to Prince Albert.

Mr. J. A. CURRIE. The hon. member (Mr. Turriff) has spoken of the people wishing to have this charter not renewed. Have the people petitioned this House to that

effect? Another question: Is there a bunch of capitalists standing by ready to build this road if the Canadian Pacific Railway loses this charter? These are important questions. It is all right enough to make a great talk before the committee for the benefit of the people, to talk about 'the wishes of the people,' and so on, but the fact remains that no independent company, no company outside the Canadian Northern, the Canadian Pacific Railway and the Grand Trunk Pacific has built ten miles of road in that western country in the last ten years. If the big concerns desire to build twenty lines into Prince Albert or any other place, why should this House stand in the way? The Minister of Railways (Mr. Graham) in discussing the National Transcontinental—the government part of the line —and the government policy in relation to the building of roads, declared that it was a competitive policy, not a pioneer policy. From the standpoint of competition, it would be advisable for Prince Albert to have several roads. I quite approve of the stand taken by the hon. member for East Grey (Mr. Sproule) that the amendment is irregular. In addition I do not think that it is in the interest of the people of the west that any charter held by a bona fide railway building company should be struck out.

Mr. TURRIFF. Let the people of the west judge.

Mr. J. A. CURRIE. I ask the hon. member for Humboldt, or yourself, whether there has been a petition presented to this House against the renewal of this charter.

Mr. NEELY. As far as notice of the intention of the company to apply for a renewal of the charter is concerned, frequently this notice is very limited, but I have had information that within a few days a very largely signed petition from the farmers all along the line would be forwarded to my hon. friend the Minister of Railways and Canals (Mr. Graham) and to myself protesting against a renewal of the charter unless the Canadian Pacific Railway guarantee to go on and build the road.

Mr. LANCASTER. We had better wait until we see what they say.

Mr. NEELY. In so far as this amendment not being in proper form to attain the result I desire is concerned, I have just to say that the clause referred to, in my motion, subsection A of section 9 of chapter 52 of the statutes of 1893, reads as follows:

> An extension of the main line from the present terminus thereof at Yorkton, in a northwesterly direction to a point at or near Prince-Albert, on the north bank of the Saskatchewan river.

I am not going to say definitely—hon. gentlemen may say the opposite—that under this charter the line has been extended to Sheho. That may be the case but I have this to say that in so far as using the charter for the purpose for which the charter is intended is concerned, it has not been used in that way from Yorkton to Prince Albert. No line has been built in the direction of Prince Albert from Yorkton. This line has already been extended westward showing what the original object of the Canadian Pacific Railway in so far as they have extended the line from Sheho practically to the town of Lanigan. It will be completed to Lanigan before the shipping season commences. The extension from Sheho is an extension in a westerly and not in a northwesterly direction. I do not care under what charter they built this particular line to Sheho; it does not affect the argument at all in favour of the amendment which seeks to cancel the charter that gives them power to build in a northwesterly direction to Prince Albert.

Mr. CASH. I do not like the members of this House to be misled by statements which must have that result. For instance, the first statement made is that this company do not intend to build this road. I do not know where hon. gentlemen get that information. I cannot get it. I assume that when they are asking for a renewal of this charter they do intend to build within two years.

Mr. NEELY. What assurance can the hon. gentleman give?

Mr. CASH. The assurance that they are not asking for a renewal of this charter without a purpose. My hon. friend from Humboldt (Mr. Neely) states that the road has been built from Yorkton to Sheho in a westerly direction. That line runs in the direction of Prince Albert. Sheho is northwest of Yorkton. I forget the township although I ought to know because it is in my own constituency. The line runs in the direction of Prince Albert and the survey has been extended in as nearly a direct line to Prince Albert as it would be possible to obtain. The hon. member for Assiniboia (Mr. Turriff) tries to make this committee believe that they have built to Sheho, but that this carries them west and that they are seeking authority to build their line from Lanigan. That is misleading. Lanigan is in another direction. It is on the Kirkella branch. When this railway got to Sheho it wanted to connect with the Kirkella branch so as to be on the main line to Edmonton. Therefore, they have built something like 50 miles of this line from Sheho to Lanigan.

Mr. SPROULE. 82 miles.

Mr. CASH. They have built that distance to Wynward. They have graded the line to Sheho. To show that it is not their intention to run the main line to Lanigan I may state that they have graded the line part of the way to Fishing lake. They turn off a few miles from Sheho and then go west. I think there was some condition that they should build so much of each line each year. I imagine that their principal object in asking for this renewal at the present time is that they may complete the forty or fifty miles that they have already built of their western line towards Prince Albert. I see no reason why this renewal should not be granted. It seems to me that some hon. gentlemen have taken a great objection to the Canadian Pacific Railway because it is that particular line, not giving sufficient consideration to the fact that the people living in this neighbourhood are desirous of obtaining railway facilities. If they are desirous of obtaining railway facilities they can get this line quicker by having the Canadian Pacific Railway construct it than by having it constructed by a private company. It would take a private company a year to get their charter and we know that it is seldom that railway companies are able to go to work immediately after they get their charter. The result is that two years might elapse before actual operations are commenced.

Mr. THOS. CHISHOLM. We have heard considerable to-day about the influence of the railway and the influence of the people. I would just say that this appears to me very much like an effort on the part, not of the Canadian Pacific Railway, but of some other railway to keep the Canadian Pacific Railway out of Prince Albert. We found the same influence working against the wishes of the people in the construction of a branch line from Lanigan to Prince Albert. We know that it also has worked against the construction of other branch lines. We know that it is also the same influence which has been continuously working against the building of a line to Prince Albert on other occasions, but what we and the people wish to see in that western country is competition. That is what the people of the west, one and all, want. I would say that it is not 30, or 40 or 50 miles of this road that have been built but over 200 miles.

Mr. SPROULE. 293 miles.

Mr. THOS. CHISHOLM. From Portage la Prairie I think it has been built?

Mr. SPROULE. Yes.

Mr. THOS. CHISHOLM. And what has been built is directly in line between Yorkton and Prince Albert; so that, instead of using the line running by way of Fishing lake and Lanigan, they have built a branch line from Fishing lake to Lanigan and in that way they have shown themselves entitled to more consideration and respect. They have finished nearly 82 miles of the branch lines from a little north of Sheho to Lanigan and while they have built a line to Lanigan they expect to build the other branch. They have pretty nearly completed the branch line from Sheho to Lanigan, and they are now preparing to build the main line directly to Prince Albert. We must remember that Lanigan is 82 miles out of the way, and that the traffic of Prince Albert will be compelled to go 82 miles out of the way for all time if the construction of this line is prevented. Eighty-two miles in that country is a great distance and there is a large section of country adjacent to Lake Leonore that would be benefited by the construction of this branch line. During all the years I have been in this House I have never heard of a railway company that had built so many miles of railway or which had proceeded with the construction of its line in the same manner as this has been proceeded with and, having constructed 82 miles of a branch line covered by another and recently granted charter, and then having the charter for its partly constructed main line refused a renewal. It is perfectly absurd to say that they do not intend to proceed and complete the road, therefore the extension of their charter should certainly be granted, and the absurdity appears still stronger when I see the careless way in which the amendment has been drawn up, so careless indeed that even the mover of the amendment has to admit that it does not say what he really meant it should say. I am surprised that a man living in the west, and living at Humboldt at that, should come here and know so little about his own country.

Mr. NESBITT. I would point out to hon. gentleman that the Railway Committee has laid down the principle this year, that they would not oppose the granting of such charters as this, and the Minister of Railways has himself emphatically stated two or three times in the House that such is the policy of parliament. I do not see how the members of the west are going to benefit their people by refusing to extend these charters. If I thought it would benefit the people I would vote in favour of it, because I have great sympathy with the people in the west who are badly in need of railway facilities in some districts. I have not the least doubt in the world that the Canadian Pacific Railway Company will build this line of railway and other lines similarly situated just as soon as they are able, and when this particular branch line is built it will be operated in connection with one of the largest and best managed railways in the world and

will afford every facility to the people, and I do not agree with the contention that the existence of this charter stops other people from getting charters, because I have not the slightest doubt that if any other company wants to build a railway over this route they can apply to parliament tomorrow and they will get a charter, probably whether they intend to build or not. This is a prairie country, there are no passes to go through, there is room for any number of roads, and there is no blocking or blanketing. I think the hon. gentlemen from the Northwest who have spoken against this Bill are standing in their own light.

Mr. RUTAN. I would point out to the hon. gentleman that this is not a prairie country, but on the contrary there are many hills which the railways have to go through. I also want to tell hon. gentlemen on both sides of the House that there are many petitions from Prince Albert and from the people living in that section of the country opposing this charter. They have good reason to believe that the Canadian Pacific Railway are not sincere in their intention to build. The people in that country believe that if this charter were out of the way they could deal with other people and get a line of railroad built quicker than the Canadian Pacific Railway would build it.

Mr. LANCASTER. Does the hon. gentleman seriously believe that any company would build a little bit of a road like that leading no where and commencing practically nowhere?

Mr. RUTAN. My experience both in the United States and in Canada is that many short lines of railroad have been built through new country, and although of course they were afterwards devoured by the other companies, yet they afforded means of transportation to the settlers and relieved them from the disabilities under which they laboured. We cannot raise grain profitably and haul it 40 or 50 miles to a railroad; we must have railway transportation facilities or our land is of no value to us. I am entirely opposed to placing in the hands of the Canadian Pacific Railway, the Canadian Northern Railway, or the Grank Trunk Pacific either, the monopoly of building railways throughout that country, a monopoly which we practically give them if we allow them to blanket the country with charters, and come here year after year asking for extensions of time. It may be all right to have free trade in railway charters when you are granting new charters, but when you come to these renewals it is an entirely different thing. Now, I object to this system of the railway company including in one Bill legislation for the renewal of several charters. The Minister of Railways has distinctly stated that we should deal with these charters each on its own merits, but so long as the railway companies jumble the whole thing up into one Bill for the purpose of misleading the people of the country it is impossible to treat each on its own merits. There are several branch lines included in this one Bill, and while it may be fair in the case of some of them to grant an extension of time, in other cases it undoubtedly should not be granted. We have the right to know now whether the Canadian Pacific Railway are ready to build this road or whether they simply intend to get an extension of time now and to come back a few years hence for a further extension. There has been settlement in that part of the province of Saskatchewan as long as in any other part of the province, and we have a right to expect that we should have railway facilities. We know that it is the policy of the Canadian Pacific Railway and the Canadian Northern Railway to divert settlement from one section of the country and to scatter it in other sections so that they may have the benefit of the long haul on the freight in and out, and that is no doubt a natural thing for a railway company to do in its own interest, but we certainly should not allow these railway companies to blanket the country with charters so as to prevent other roads from coming in there. Prince Albert needs another railway and Lake Leonore country wants a railway badly. People have been settled in there for five or six years; there is a large colony of French people who have settled there in the expectation that they were going to get a railway. They have gone through a great deal of hardship, they have obtained accommodation until they were able to get their patents and they now want to relieve themselves of their obligations. Every gentleman in this House knows that if you have 160 acres of land twenty-five miles from a railway, even though it is the best land in the world, you cannot get a loan company to help you. I have been trying personally for the past few years to help some of these poor people. If I had the money myself I would be willing to lend it because I know the time will come when they will have a railway in there and then they will be able to meet their obligations, but you cannot get a loan company to take chances on that. There are people in some sections of that country who have been settled ten or fifteen years there and who are miles away from a railway and they would like now to experience some of the comforts of life. They do not want the road for their grandchildren, they wish to see it during their lives they would like to see the amendement; carry and this company who have shown no evidence of intention to build, should get out of the way and let

some other road have a chance to get in there.

Mr. J. A. CURRIE. I presume from the way the hon. gentleman has spoken that he does not desire either the Manitoba and Northwestern or the Canadian Pacific Railway to build this road at all.

Mr. RUTAN. It does not make one bit of difference to me who builds the road so long as we get it built.

Mr. J. A. CURRIE. Then why do you not approve of this charter?

Mr. RUTAN. Because it has been in existence for 16 years under the Canadian Pacific Railway and we are no nearer getting it built that we were 16 years ago. I would say further that when this matter came before me and I had to investigate it to see if the Canadian Pacific Railway intended building into Prince Albert this year, I was plainly told by the man who knows that they were not going to build any of it this year, that their plans were all made. I asked whether they would build in another year and he said he could not say that, he might not be here and he did not want to say anything that would bind his successors.

Mr. HENDERSON. I stated on the authority of a member of the House familiar with that part of the country that the Manitoba and Northwestern Railway had built about 50 miles on their line from Yorkton to Prince Albert under their charter. I believe the correct distance is 42·2 miles. It was contended that this 42 miles was not built under the Manitoba and Northwestern charter but on another route under a charter obtained later running from Sheho towards Lanigan. I find in the statutes of 1904 that the Manitoba and Northwestern Railway Company obtained a charter giving them authority to build that road. The section reads:

The Manitoba and Northwestern Railway Company of Canada, hereinafter called the company, may construct or acquire and operate a branch line of railway about 100 miles in length from a point on its main line near Sheho, westerly and northwesterly, southward of Quill lakes, to a point in township 33 or township 34, in range 23, west of the 2nd principal meridian.

That is the road that is being built towards Lanigan, a different charter altogether from the old Manitoba and Northwestern charter. It seems clear to my mind that the 42 miles to which I referred from Yorkton to Sheho has been built under the old Manitoba and Northwestern charter and not under this new charter authorizing the construction of a road from Sheho towards Lanigan. It would therefore be absurd to say that we should repeal or desire to repeal this charter for the construction of a road from Yorkton to Prince Albert, because 42 miles of that line has been built and is already in operation. To cancel the charter would cancel their power of operation of these 42 miles and might get somebody into serious trouble. I do not think the House intends to do this, and I trust the committee will vote down the amendment.

Mr. TALBOT. I am not in the habit of interfering with any legislation affecting any part of the country which is better known to other hon. members than it is to myself. There is no doubt that the hon. members for Assiniboia (Mr. Turriff), Prince Albert (Mr. Rutan) and Humboldt (Mr. Neely) have voiced the disappointment of their people, because they have been disappointed through not having the railway constructed before now; but I ask them if their arguments are of any weight to affect the judgment of this House? Have they any proof or guarantee that should the House not grant this extension of time, any company or individuals would build the road? Would it not be worse for their people if we should forbid the Canadian Pacific Railway to build there? No private corporation will build in that country in opposition to the great companies now operating there, and I think it would be far better for these people if we should grant the extension and allow the Canadian Pacific Railway to build the road. The Canadian Pacific Railway has no interest in preventing the settlers from getting transportation.

Sir WILFRID LAURIER. I am sorry the Minister of Railways (Mr. Graham) is not in his seat this afternoon because the motion made by the hon member for Humbolt (Mr. Neely) deserves some answer from him. I know the views he entertains on that question and I can state them. All the considerations involved in the Bill and the amendment of my hon. friend have been, as I understand, discussed and considered by the Railway Committee, and while it is not an absolute rule it is a rule I think of great convenience and safety that when a matter of this kind has been considered by the Railway Committee the judgment of the the Railway Committee should be accepted, unless there be some very strong reason to the contrary. The only reason which has impressed me to-day is that advanced by the hon. member for Assiniboia (Mr. Turriff) that we should consult and abide by the wishes of the people in a matter of this kind. But what are the wishes of the people? There is a serious discrepancy as to that. Two of my friends on this side of the House state that the wishes of the people are against an extension of this charter, and on the other hand my hon. friend from Mackenzie (Mr. Cash) who is as much interested in this matter as any one else and who ought to know the country and the circumstances is strongly in favour of this extension. The argument made by my hon. friend

from Humboldt (Mr. Neely), supported by my hon. friend from Prince Albert (Mr. Rutan), is that the Canadian Pacific Railway have been remiss in the duty imposed on them by a charter as far back as 1883, and have not done anything. What is the reason? The reason is that to-day the western provinces are developing so rapidly that it is not possible to keep abreast of the demand for railways. At this moment if the Canadian Pacific Railway, the Canadian Northern and the Grand Trunk Pacific were to undertake the construction of 1,000 miles of railway each during the coming summer they would not meet all the requirements of the people of the country. The demand comes from all quarters for more railways, and if such a strong railway as the Canadian Pacific Railway has not been able up to the present time to meet the demands of the new settlers, is it to be supposed or believed that any other company could have done it? Suppose the Canadian Pacific Railway does not go on with this work? Is it to be supposed that an independent company will be formed and will be ready to undertake the task any sooner than the Canadian Pacific Railway will do it? I think not, and I think my hon. friends had better rely on the will of the Canadian Pacific Railway to perform this work. It is to their interest to do so. That section of the country is developing very rapidly, as has been stated by the hon. member for Prince Albert, and therefore it is to the interest of the Canadian Pacific Railway Company to be able to serve that section of the country as soon as they can, and I think on the whole we had better rely on the judgment of the Railway Committee in this matter.

Amendment (Mr. Neely) negatived; Bill reported, read the third time and passed.

SUPERIOR AND WESTERN ONTARIO RAILWAY.

House in committee on Bill (No. 78) to incorporate the Superior and Western Ontario Railway Company.—Mr. Conmee.

On section 8,

Mr. BOYCE. What point is this going to connect?

Mr. CONMEE. The railway is projected from a point on the branch line of the Grand Trunk Pacific, about 200 miles west of Fort William, to the main line of the Transcontinental, about 125 miles. It will connect with Sturgeon lake, which is a mining centre in that locality, by a short line, and there is in the neighbourhood 100 miles of navigation as well as the railway. It is partly graded already. The intention is to hurry the construction so as to meet the requirements of that section.

Mr. SPROULE. How can it be graded when it is not incorporated?

Sir WILFRID LAURIER.

Mr. CONMEE. They have taken the risk of forestalling the granting of the charter. The line is located and they are actually at work constructing. There are no municipalities there but simply mining and lumber interests. There is no real settlement because there have been no facilities for transportation.

Mr. SPROULE. Under what authority are they constructing? Does the Minister of Railways approve of the plan? They have no charter, yet the hon. gentleman says they have surveyed the line and have begun construction. I have always thought that a company could not begin constructing until the minister approves of its plans.

Mr. CONMEE. This is not the only set of promoters who have taken a little risk. there are no engineering difficulties and no interests to be prejudiced. Of course, until they get their plans approved they cannot operate the road.

Mr. SPROULE. But the Railway Act says they shall not construct at all until their plans are approved of.

Mr. PUGSLEY. I assume they must be going on as private individuals. If an individual owns the right of way there is nothing to hinder his building a railway. They must be going ahead on their own property, or, if through Crown lands, with the consent of the Ontario government. The railway charter is necessary to enable them to expropriate land, but if they own the right of way, there is no reason why they should not build a railway if they wish to do so. Of course, they take the risk of afterwards getting a license from the government to operate, but owners can build a railway over their own land or over right of way that they have acquired from the provincial government.

Mr. BOYCE. Would the minister consider it a proper thing, in the Public Works Department over which he presides, for a contractor to proceed with work before a contract was entered into?

Mr. PUGSLEY. That is a different case.

Mr. BOYCE. I would like the minister to answer the question.

Mr. PUGSLEY. Certainly I would not consider it proper.

Mr. BOYCE. But the minister does it in connection with a company to which the hon. member for Rainy River (Mr. Conmee) belongs.

Mr. PUGSLEY. This is a case of a railway——

Mr. BOYCE. I am talking about the public works.

Mr. PUGSLEY. I think we had better stick to the question.

Mr. BOYCE. I was asking the minister a question in view of his pointed argument in favour of the hon. member's Bill.

Mr. CONMEE. They have obtained the right of way from the Ontario government.

Mr. LANCASTER. Have they an Ontario charter?

Mr. CONMEE. No, but they submitted it to the Ontario government and pointed out that it was necessary in their opinion, to have a Dominion charter because of the connections that they were making. But notwithstanding that they did not ask for a provincial charter, the Ontario government not only gave them a right of way but gave them a land grant as well.

Mr. LANCASTER. A right of way through Ontario land?

Mr. CONMEE. These are all Crown lands of Ontario. They got permission there—at least, so I am informed. And, though their company is not incorporated, the Ontario government gave them al land grant on the strength of their expected incorporation. So, I do not think the House shuold take objection to it. The hon. member for Sault Ste. Marie (Mr. Boyce) intimated, as I understood him that I had some interest possibly in this railway. I have no interest in it.

Mr. BOYCE. I did not make such a suggestion.

Mr. CONMEE. Then, I misunderstood.

Mr. HENDERSON. This discloses a very extraordinary state of affairs. We understood from the promoter of the Bill that the Ontario government approved of the measure, and, notwithstanding that, their representative appeared before the committee the other day to oppose it. I would like to understand how this conflict of authority comes in.

Mr. BOYCE. In view of the statement made by the hon. member for Rainy River (Mr. Conmee) and the extraordinary position he has taken of constructing a road without filing the plans, incorporation powers, restrictions or limitations, and in the absence of the hon. Minister of Railways (Mr. Graham) who certainly ought to be informed about this, and be ready to give us information, I move that the committee rise, report progress and ask leave to sit again, in hope that the minister will be in his place when we take it up.

Mr. CONMEE. That is entirely unnecessary.

Mr. LANCASTER. The charter is unnecessary, apparently.

Mr. CONMEE. No, the whole question was fully discussed in the Railway Committee. I made the same statement there that I made here, that the road was being constructed. These people have taken the risk of going on with construction in advance of the charter. This is not the only road that has been gone on with in that way; I can assure my hon. friend (Mr. Boyce) that many railway companies have gone a little in advance of their charter where there was no possible difficulty to be met with. If there were highways to be considered, or surveys of municipalities, it would be different. This is what might be called a wilderness, except so far as the mining and lumbering to which I have referred are concerned.

Mr. BARR. We have been opposing these companies because they were not going on with the work, and not likely to do so. But this company seems to be going on. I remember that we had opposition to some clauses of this Bill in the Railway Committee from a representative of the Ontario government. But, as the company is to go through and connect with the Grand Trunk Pacific it seems to me that is the reason why it should have a Dominion charter.

On section 9,

Mr. A. C. MACDONELL. I understood from the promoter of the Bill, both here and in the Railway Committee, that this was a charter for a railway company. Apparently, it is a charter for a company very different—it is really a power company, and, under the provisions of this section, a most extraordinary power company.

Mr. CONMEE. I think the hon. member is reading from the first draft of the Bill. It was amended in the Railway Committee, and the model clause used instead of this.

On section 9 b,

For the purposes of its undertaking, and subject to the provisions of section 247 of the Railway Act, the company may acquire electric or other power or energy which may be transmitted and delivered to any place in the district through which the railway is authorized to be built, and may receive transform, transmit, distribute and supply such power or energy in any form, and may dispose of the surplus thereof and collect rates and charges therefor; but no such rate or charge shall be demanded or taken until it has been approved of by the Board of Railway Commissioners for Canada, who may also revise such rates and charges from time to time.

Mr. A. C. MACDONELL. I do not know whether this is the standard clause or not, nor do I care very much. This is a clause to permit the company to acquire power, and there is no limitation or restriction as

to the manner of acquiring that power, whether by generation or by taking over existing powers. There is no limitation to the localities in which it is to be acquired. It seems to me the committee is entitled to a very much fuller explanation of the objects of the company and its powers than is contained in the clause just read. In the first place, it is undoubtedly a power clause, and, in the opinion of many hon. members of this House, it is entirely within the control of the provincial legislature. The hon. gentleman who moves this Bill has more than once taken that stand in this House. I ask the hon. gentleman to explain what he means, what he proposes to do by the power clause, and what restriction he proposes to put upon the company with regard to generating that power, with regard to distance, and locality, and so on.

Mr. CONMEE. The clause is the usual clause that is inserted in nearly all the Railway Bills that are passed in this House, there is no difference. It is a clause that is approved by the Railway Committee and by the Minister of Railways, and it has appeared I think in the majority of Bills. It is not giving to the company the general powers of a power company, it gives them power to expend their money as a corporate body for the purpose of acquiring water-power or generating electricity for the operation of their road; that is all.

Mr. A. C. MACDONELL. There is power there to dispose of the surplus.

Mr. CONMEE. If they have more than they require for their own use, they may dispose of it. But that does not constitute this company a power company instead of a railway company.

Mr. LANCASTER. What would prevent it, as the Bill stands ?

Mr. CONMEE. What would prevent it in the other Bills ? This provision does not move this company out from under the general law of the province or of the Dominion. How are they going to become a power company ? They are subject to all the restrictions and conditions of the provincial law. They have got to acquire the water-power; this Bill does not empower them to take water from any particular place.

Mr. LANCASTER. It allows them to do it everywhere.

Mr. CONMEE. Not at all, only for the operation of their road. At the present time power is merely an incidental.

Mr. PUGSLEY. They have no power of expropriation.

Mr. CONMEE. They have got to show that they want it for their road, that is the first thing. But incidentally if they have more than they want, who wishes to prevent them from selling it ?

Mr. BOYCE. Will the hon. gentleman point out that clause in the Bill that makes the disposal of the surplus power subject to such rules and regulations as the provincial law may impose ?

Mr. CONMEE. It is not in the Bill, but I want to ask the hon. member why should it be in the Bill? Is it in any other Bill? There is no power under this Bill to expropriate a water-power, they have the power of the Railway Act for the purpose of constructing their railway only. This clause has been adopted in other Bills, why object to it in this case? If there is any Bill I know of that has passed this House in recent years where such a power ought to be given, it should be given to a road of this character that is being built in an absolutely new country, entirely unsettled, and unoccupied except by mines, lumbering and construction.

Mr. SPROULE. Suppose that a water-power had been developed so as to generate electricity and they acquired control over it, would they not then have control over it?

Mr. CONMEE. If a company owned a water-power and developed it, and obtained it from either the Dominion or provincial authority, that company would be bound by the conditions under which they obtained the power to develop it, and if this company acquired it they would be bound by the same conditions. I know of nothing that would prevent a company from selling a water-power. But that is not the point in this Bill, the point is, does this give power to expropriate and take it without consent of the owner ?

Mr. J. D. REID. Does this railway cross the Nipigon river ?

Mr. CONMEE. No, it is about 200 miles west of the Nipigon river.

Mr. J. D. REID. What river does it cross ?

Mr. CONMEE. I do not think it crosses any river, it runs along what is called the English river for a portion of the way which, is I believe in some sections of its course an interprovincial boundary between the province and the district of Keewatin.

Mr. LANCASTER. I think the hon. gentleman is promoting his Bill very cleverly, but I cannot adopt his view that because the Bill is silent as to the right to expropriate that therefore they could not expropriate. Why, they could not expropriate for railway purposes according to his argument. The Bill itself does not give him the right to expropriate. They can go on and construct and operate a railway, but not a

word about expropriation. The hon. gentleman will not admit that he cannot expropriate for railway purposes under the Railway Act. And they go on and say that for the purpose of the undertaking they may also acquire these water-powers.

Mr. CONMEE. This company has not got specific powers of expropriation in the Bill, but they have them under the Railway Act. Then they are thrown back on the Railway Act, and how could my hon. friend argue that the Railway Act gave this company power to expropriate a water-power ?

Mr. LANCASTER. I did not say they could, but I say it could be well argued before a court that inasmuch as the special Act gave them the right to acquire these water-powers and that the Railway Act applies to it, they would have the same right whether by expropriation or by private purchase, in regard to the one matter as to the other. If they are going to take water-powers by expropriation when people are not willing to sell them, they will be causing a great deal of trouble. Even if it was limited to the purposes of the undertaking, I think the point is just the same. 'For the purpose of the undertaking' means for the purpose of carrying on everything that is authorized by this charter. Then without the words of limitation that you cannot expropriate, certainly when you say you want the water-power for the purpose of using and working the railway, you can at once use every right of expropriation that you could for the other purposes of the undertaking.

Mr. PUGSLEY. I cannot think upon reflection that my hon. friend (Mr. Lancaster) will adhere to the view which he has just expressed. There is no power contained in this Bill to expropriate land. As far as the railway is concerned, the Railway Act would apply. Then, we have to look to the Railway Act to see what are the powers of expropriation which are there given and they are to expropriate a right for the railway of, I think, not exceeding six rods in width and what is necessary for station purposes. That is the only land which can be expropriated under the Railway Act.

Mr. LANCASTER. That is to say that they do not have this power but practically we declare in this charter that they may do these other things for the purpose of this undertaking. The special Act extends the Railway Act and makes it apply to the very things in question.

Mr. PUGSLEY. If this Act contained a clause saying that the provision of the Railway Act should apply to all properties that the company might desire to acquire for the purposes of the undertaking.

Mr. LANCASTER. Is not that so ?

Mr. PUGSLEY. No, it is not, because all this Act does is to give to the company the power to acquire land; that is to acquire it in the ordinary legal way by agreement with the people who happen to own it. The company is not given power to take land without the consent of the party who owns it. The only power of expropriation which exists is the power which is contained in the Railway Act and that is limited to six rods in width for the right of way and such lands as may be necessary for station purposes. If a water-power happened to be within the right of way or within the six rods, of course, it might be acquired by expropriation.

Mr. LANCASTER. That is exactly where the acuteness of the company would cause them to operate. If they should say: We will put this line of railway within the 90 or 100 feet belt that we are allowed to expropriate and thereby take in a water-power, under the Bill they could do it.

Mr. PUGSLEY. They might do that.

Mr. LANCASTER. Exactly; and yet it stated distinctly that they are not going to expropriate water-powers.

Mr. J. D. REID. I would like to ask the hon. gentleman who has charge of this Bill why they want water-powers to operate this railway. When the Bill was before the Railway Committee the understanding was that this was to be a railway operated by steam entirely. Now we all know that if there are any water-powers in the district between the Canadian Pacific Railway and the Grand Trunk Pacific they are all entirely within the control of the Ontario government, and if this clause is allowed to remain in, such a thing might occur as my hon. friend from Lincoln (Mr. Lancaster) has just stated. They might run this railway 20 or 30 miles along one of these rivers, expropriate a water-power and the Ontario government could not interfere. If that is the object of the Bill we certainly must have a different impression of it than that which was sought to be conveyed in the Railway Committee. When it was stated that the usual standard clause as far as water-powers are concerned was to be put into the Bill nobody ever thought it meant what has been suggested here today. I was in favour of the Bill and am now in favour of the granting of a charter by this parliament provided it does not mean practically taking all the water-powers in that district and locking them up. I do not see why the clause referring to water-powers should not be dropped. We were assured in the Railway Committee that this was a railway to be constructed from

the Canadian Pacific Railway to the Grand Trunk Pacific and that it was to be a steam railway throughout its whole length. With reference to the clause dealing with boats and docks, it was mentioned by the hon. gentleman in charge of the Bill that they might want to run boats on the lakes and take people to summer resorts. There was no objection to that. But it seems to me, from the discussion which has taken place, that there is another object altogether behind this Bill. I think it would be better to refer the Bill back to the Railway Committee and let us get it thoroughly threshed out there rather than to try to push it through here to-day in its present form and containing a clause the effect of which we may not be able at the present time to fully appreciate.

Mr. TURRIFF. This is the same clause that we have put in practically every railway charter.

Mr. LANCASTER. No.

Mr. TURRIFF. Most of them. This clause has appeared in most of the charters that have passed through the Railway Committee during the present and previous sessions. The fact that this is a steam railway should not prevent the company at some future time, if it found it advisable to run their trains by electricity, from adopting that motive power. The Canadian Pacific Railway is a steam railway and at the present time the management have under consideration the electrifying of certain portions of the line. I do not think my hon. friends need be alarmed about the power of expropriation where it only extends to a strip of land six rods wide. Any one knows that they could not have a water-power and a railway working together on a right of way of that width.

Mr. J. D. REID. How would it be crossing the river.

Mr. TURRIFF. It might be possible, but I do not think it would be. Railways do not want a water-power right at a bridge where they cross, because there is always the danger of the dam going out and taking away the railway bridge. The clause is one which we have put in before, and I do not see any reason why this particular Bill should be picked out or why the same provisions should not be given to this company as are given to others.

Mr. LANCASTER. Will the hon. gentleman name any charter that has passed this House within the last two or three years containing a clause such as this? I do not know of any, and I am a pretty regular attendant at the Railway Committee. I never saw such a clause as that in a Steam Railway Bill in my life.

Mr. J. D. REID.

Mr. CONMEE. When this Bill was before the Railway Committee the clause dealing with water-powers was withdrawn and the model clause which the Railway Committee have accepted with regard to water-powers was inserted in lieu of it. This is the model clause.

Mr. LANCASTER. What does the hon. gentleman mean by the model clause? I am afraid he is dignifying this with a name that it is not entitled to.

Mr. CONMEE. That is what it was called by the chairman and it was inserted. My hon. friend is borrowing trouble when he imagines that the railway company might run its line purposely to get a water-power. I wonder if the Railway Board or the Minister of Railways would ratify the plans of a railway company that would try a trick like that?

Mr. LANCASTER. They might not know it.

Mr. CONMEE. They would know it. It would be plain because it would require 60 or 100 acres to enable any person to operate a water-power. It would be absolutely useless in the charter. It is only borrowing trouble; it is a suspicion without any foundation.

Mr. LANCASTER. I am afraid I am not borrowing trouble. I wish I were because I do not want to keep this discussion up unnecessarily. This clause says that this power shall be exercised subject to section 247 of the Railway Act. That strengthens my argument and strengthens the contention of my hon. friend from Grenville (Mr. Reid). The Railway Act is brought in and then this special Act is brought in and it provides that this power can be exercised provided it does not interfere with section 247 of the Railway Act. It may be held that as long as it does not conflict with section 247 of the Railway Act the provisions of the Railway Act are complied with. Section 247 presupposes that these rights will be purchased, and it simply restricts them from using them on the highways without the consent of the municipalities. Then, if the municipalities cannot agree with the company, the Railway Board decides upon what conditions these rights are to be acquired. How can my hon. friend contend that it is quite sure they cannot expropriate. My point is that this charter is made subject to section 247 only, and 247 provides that you must not put your lines and poles along the highway without the consent of the municipality, and if the municipality does not consent you have to go to the board, who can order in what manner the wires shall be placed.

Mr. PUGSLEY. By section 3 of the Act passed last year respecting the Edmonton Dunvegan and British Columbia Railway

even broader power is given than is contained in this Bill.

Mr. LANCASTER. But that Act does not say that the company is subject to section 247 of the Railway Act. It does seem to me that the hon. gentleman (Mr. Conmee) is in this Bill getting much more than he wants.

Mr. SPROULE. Oh no, he could not.

Mr. LANCASTER. The hon. gentleman tells us that he does not want expropriation powers and I have to accept his word. If the hon. gentleman does not want power to expropriate it is very easy to insert words excluding that power.

Mr. PUGSLEY. In the Edmonton, Yukon and Pacific Railway Act, also passed last year, there are still broader powers given to acquire for the purpose of developing electricity.

Mr. LANCASTER. All that shows that this is not a model Bill.

Mr. PUGSLEY. It might be called a modest Bill.

Mr. TURRIFF. In Bill (No. 11) passed this session respecting the Canadian Western Railway Company, there is a clause subjecting it to the provisions of 247 of the Railway Act, as to the charges which may be made for electricity, &c., and the Board of Railway Commissioners have the power to decide.

Mr. SPROULE. Did that Bill pass as the hon. gentleman has read it?

Mr. TURRIFF. I think there was no change whatever made in that Bill.

Mr. LANCASTER. Why is it that the Bill referred to by the hon. gentleman (Mr. Turriff) subjects that company to the provisions of section 247 of the Railway Act, while the Bill mentioned by the Minister of Public Works does not?

Mr. PUGSLEY. The Bills I refer to were passed last session.

Mr. CONMEE. It is because of amendments to the Railway Act which gives the board powers they did not have before. It is a further protection for the public; that is all.

Mr. LANCASTER. It is all right to say it is a further protection to the public, but when you make this company subject to one specific clause of the Railway Act, any court will decide that you have not restricted it in any other way than in respect to whatever restrictions may be in that particular clause. Under section 247 the board may order that the wires shall be placed in a certain way for the protection of the people, and that being so you cannot work out section 247 unless you do give them power to expropriate under certain conditions to be decided by the board. If this House is of opinion they should have power to expropriate that is one thing, but if we are deciding they should not have power to expropriate then the Bill should say so.

Mr. McKENZIE. At one time the law was that unless a company were restricted down to certain things they could do anything which they were not prevented specifically from doing in their charter. If it were fairly within the bounds of their charter the courts held they could do that thing whatever it was, if it could be said to be akin to their business. But that is not the law to-day and that has not been the law for the past ten years. The law is now that before a company can do any specific thing it must be set forth in its charter.

Mr. LANCASTER. It says so in this charter.

Mr. McKENZIE. There is nothing in this charter so far as I can see that specifically gives this company the right to expropriate.

Mr. LANCASTER. It says they may acquire.

Mr McKENZIE That is not expropriation. I should judge from the manner in which my hon friend (Mr Lancaster) discusses questions in this House that he is a good lawyer and he knows that there is nothing by inference to be decided in favour of a corporation. There is no intendment in their favour at all. The power must be defined in clear language, and particularly a power so drastic as expropriation. They cannot by inference, or by reading half a dozen Acts together patch up a case for expropriation. The power must be given specifically, and if it is not given specifically the court will decide it was not intended they should have it.

Mr. LANCASTER. It is not a matter of inference, it is a matter of the gentleman opposing the Bill thinking there is a limitation that is not expressed in the Bill that the railway company 'may acquire.' I contend that there is no limit in the way of acquiring, it is not a matter of inference but a direct statement that they can acquire whatever any other railway company can acquire.

Mr. McKENZIE. That is what I said. The Railway Act is construed by the courts in the light of its purpose and will not be strained by them to give any corporation the right to get water-power which, as a rule, is not used in connection with railways. From my knowledge of corporation law and the common law generally I do not think there is need to be alarmed. This provision has been inserted in several other Bills. I do not think an argument in

favour of expropriation of water-power could be based under this Bill.

Mr. A. C. MACDONELL. The point I desire to make is with regard to the power this company is seeking to acquire in connection with the generation and sale of electricity. I asked the promoter to explain that and he explained it partly. I am not opposing the Bill as a railway Bill, I desire to be perfectly fair, but I am opposing it inasmuch as it is a power Bill. The promoter says that the Bill as it stands now would make the company subject to the general legislation of the province of Ontario regarding electric companies generating and selling and dealing in electric power and fluid. I differ from the hon. member principally because of section 2, which declares this work to be one for the general advantage of Canada which, as my hon. friend knows, brings it by the force of the British North America Act directly under the control and legislation of the Dominion parliament, so that it would pass away from the control and jurisdiction of the provincial parliament. That is to my mind the effect of this Bill, it will be freed entirely from the effect of the general legislation of the province of Ontario regarding electric companies. It would also be freed from the general legislation of the province regarding railway companies, because the undertaking is declared to be for the general advantage of Canada. It thereupon ceases to be a provincial undertaking. My hon. friend says that as the Bill is worded the company would still be under provincial control. If he will submit to an amendment simply declaring that it is subject to the general legislation of Ontario regarding electric power companies, the Bill might pass. Several other Bills have that clause.

Mr. CONMEE. What Bill has that clause in?

Mr. A. C. MACDONELL. A number of railway Bills. The charter for running the railway in this city has that clause. Such an amendment would remove the objection of my hon. friend from Lincoln (Mr. Lancaster).

Mr. CONMEE. That is an electric railway.

Mr. A. C. MACDONELL. Because the general legislation of Ontario regarding electric companies provides safeguards regarding expropriation for electric purposes.

Mr. CONMEE. My statement was that this company would be subject to any general law of the province or of the Dominion affecting its works.

Mr. A. C. MACDONELL. What objection is there to putting in a clause to that effect?

Mr. McKENZIE.

Mr. CONMEE. There is a great deal of objection to putting in a clause to that effect. There is this objecion that it is unfair to put burdens upon this company and surround it with legislation different from that applying to other companies.

Mr. A. C. MACDONELL. Why?

Mr. CONMEE. Simply because this company are here within their rights asking for certain legislation. If it is the general rule of this parliament to give general powers, why insert such a restriction in this Bill?

Mr. BOYCE. The hon. member says there is no power of expropriation; then why not specify it?

Mr. CONMEE. You might say why do you not do many things. The general law of this province will apply to this company, and its acts just as to any other company. The declaration that it is for the general advantage of Canada will only affect it so far as it is a railway. The moment the company go outside of their railway work and establish workshops, the general Factory Act of the province, for instance, will apply.

Mr. LANCASTER. Oh, no; oh, no.

Mr. CONMEE. Oh, yes; oh, yes.

Mr. LANCASTER. By declaring it to be for the general advantage of Canada you remove it from provincial control.

Mr. CONMEE. Not at all.

Mr. BOYCE. Does the hon. gentleman think that by statute from this government he can get water-power?

Mr. CONMEE. Certainly, I think this is the only government that can grant powers in certain cases. I do not know anything about the water-power that this company have in view, I do not know if there is any. The Act to incorporate the Vancouver Island and Eastern Railway Company passed last session containing exactly the same clause, word for word.

Mr. J. A. CURRIE. The hon. gentleman states that there will be no expropriation powers as far as water-powers and electric development are concerned, that that will apply only to the railway. I would suggest as a solution of the difficulty that the word 'railway' be inserted in clause 2 so that it will read:

The railway undertaking of the company is declared to be a work for the general advantages of Canada.

That will settle all the trouble and the Bill could go through.

Mr. CONMEE. That may be a very reasonable proposition, but I am only the member to whom this Bill has been referred and I would not undertake to make any changes

in it; it is for the promoters to advise me through their solicitors and so far as I am concerned I would not agree to any amendment.

Mr. LANCASTER. It is not quite for the promoters and their solicitor to say what legislation we shall pass. We are here to pass legislation in the interests of the people. I think the suggestion of the hon. member for South Toronto (Mr. Macdonell) is most reasonable; it would carry out what we all intend. But I want to settle with the hon. member for Rainy River (Mr. Conmee) this question. I want to understand whether he means that the whole of the undertaking will not be for the general advantage of Canada if this Bill passes. Does he really believe that the water-powers will be in any different position from the railway when the whole Bill is declared for the general advantage of Canada.

Mr. CONMEE. There is no power under this Bill by which this company could expropriate a water-power. As to the question whether its particular works, after they are established, in so far as they relate to its actual undertaking, might be somewhat removed from provincial legislation or not, I am not prepared to say because I do not profess to have any information on that point.

Mr. LANCASTER. What harm will be done by putting in a clause, such as suggested by the hon. member for South Toronto, to the effect that the provincial laws shall apply to the regulation and expropriation of these water-powers ?

Mr. CONMEE. I would not agree to that.

Mr. LANCASTER. Then the hon. gentleman means to override provincial legislation ?

Mr. CONMEE. No, but I would not agree because that would prohibit the company taking a water-power which would be on an international or a navigable stream. I do not propose to have the hands of the company tied up by any such a condition.

Mr. LANCASTER. We must not tie our own hands by giving to the company what they should not have. Between now and eight o'clock the hon. gentleman had better consider that.

At six o'clock, committee took recess.

After Recess.

Committee resumed at eight o'clock.

Mr. A. C. MACDONELL. Before we rose at six o'clock, I asked the promoter of the Bill what reason he had to give for incorporating in a railway Bill power privileges, and especially when as under section 2, all the works of the company are declared to be works for the general advantage of Canada. I can quite understand why this provision bringing the company's works under the control of this parliament should be passed in relation to a railway company of this kind. But here is a purely provincial adjunct inserted in this Bill, here is a clause dealing with a purely provincial matter, and yet this part of the works of the company is also brought under the control of this parliament and removed from the control of the province. The promoter of the Bill, if I understood him aright, said that the sections to which I refer had not the effect I attribute to it. But I refer the hon. gentleman to the well known section 92 of the British North America Act, subsection 10, clause (c). As we all know, section 92 deals with those powers which are exclusively within the control of the provincial legislature. Subsection 10 declares that local works and undertakings other than certain classes enumerated are provincial undertakings. Of these exceptions clause (c) relates to ' such works as, though wholly situate within the province are before, or after execution declared by the parliament of Canada to be for the general advantage of Canada or for the advantage of two or more of the provinces.'

By this declaration under the authority of this clause, these works and undertakings of this company are removed from provincial jurisdiction. As the promoter (Mr. Conmee) before recess gave it as his opinion that the works of the company, so far as they related to power distribution are provincial in their character, I think it only fair that he should insert in this Bill a declaration that, so far as these works are concerned, they are excepted from the declaration as to the works of this company being for the general advantage of Canada. Or, as an alternative, let the hon. gentleman make it plain that the law of Ontario relating to electric companies, including the Hydro-Electric Power Commission Act, shall apply to this part of the company's undertakings. Then the hon. gentleman will have the powers he wants, and the others will remain subject to the jurisdiction of the province. Whoever heard of the undertakings of a power company, wholly within one province and purely local in their character, being declared works for the general advantage of Canada? It was stated this afternoon that this power clause is what is called the model power clause. I never heard of a model power clause in any railway company's Bill. I can understand a model power clause in a power Bill. But this is primarily a railway Bill, and I am not aware of any practice in regard to this model clause in the case of such Bills. There is none, so far as this House is aware, and if there is a model clause, it surely does not apply to merely provincial undertakings. I think the promoter should give some better reason than he has given

why these works, purely provincial in their nature, should be declared works for the general advantage of Canada. There is no desire to obstruct this Bill. As a railway company's charter, I quite agree with it. I think this undertaking is a Dominion undertaking, as it connects with the Transatlantic line. But, as a power company Bill, I object to it being brought under Dominion control.

Mr. TURRIFF. I find, on looking over the Bills that have been before the House this session, that the clause giving these same powers have been embodied in Bills Nos. 11, 44, 50, 59 and 62. It is also in Bill 102, which has passed the Railway Committee, but has not yet passed this Committee of the Whole. But these powers have been granted in the Railway Committee, and supported by all those gentlemen who are now opposing this Bill. In all these Bills, the only change that was made was to substitute the model clause for the clause that happened to be in the Bill. I do not know that this power has been refused to any railway company that has asked for it, and I fail to see why this railway company should be selected for refusal of these powers especially when the matter is placed under control of the Railway Commission as it is in this Bill.

Mr. MACDONELL. I have not had time to look up the Bills to which the hon. gentleman refers, but in the first one I look at, which is the last one he mentioned, No. 102, I find—and I suppose, should find it in all the others—the same words that I am now contending for.

Mr. CONMEE. That clause was taken out of the Bill in the Railway Committee, for the reason that the minister rather objected to that character of legislation, and in lieu of it was substituted the very same clause that is in this Bill.

Mr. SPROULE. So far as I understand the clause, it does not seem to be very objectionable, but I think it is liable to the very abuses which my hon. friend from Lincoln referred to before six o'clock. Moreover, the hon. gentleman promoting the Bill has a reputation that is so well known, both in this parliament and in another, that though his name is not placarded on the outside of the Bill, we suspect this hon. gentleman's sign manual is to be found somewhere in it. That is what makes every one suspicious of the Bill, and therefore we are obliged to look into it more carefully than we would other Bills.

Some hon. MEMBERS. Order.

Mr. SPROULE. I am merely saying that the sign manual, the astute Chinese hand, is to be found somewhere in the Bill. We are consequently doubly suspicious of any Bill which that hon. gentleman introduces here, because we fear that there is something occult in it, something that is not disclosed at the first reading. In other respects I do not see anything very objectionable in it.

Mr. PUGSLEY. I suppose the hon. gentleman feels that the Bill introduced by the member for London (Mr. Beattie), which is in identical words, is all right?

Mr. SPROULE. I was not referring to that at all. I have not read the Bill introduced by the hon. member for London, and the hon. Minister of Public Works is a little too previous, as he usually is. He is attributing to me something that emanates from, I was going to say the evil designs of an evil heart. 'Evil be to him who evil thinks.' So far as this Bill gives the right to construct a railway, and operate a railway and railway property, I am sure that, so far as I can judge the sense of this side of the House, there is no objection to it whatever. But it is because we believe that it is intended to carry the right to take over, or expropriate, or secure control of water-powers that are to-day under the control of the provincial government, and upon which they have announced their policy to the world as one which they desire to carry out in the future—it is because of that danger that we look upon this Bill with suspicion. The hon. member himself says that it is subject to the control of the provincial government, which every parliamentarian knows it cannot be and could not be, by any provision which is in the Bill to-day. I think the hon. member went further and stated that he had the consent of the Ontario government, and their approbation of this Bill. But how can he reconcile that statement with the fact that the Ontario government has sent one of their supporters down here to oppose the Bill. If they were satisfied with it and had given their approval, why should they send a man here to oppose it? That is what increases our suspicion. I think therefore we should try and make this enactment as plain as possible, so that no abuses may develop afterwards.

Mr. CONMEE. The hon. member I think has told the truth in one respect. Because he happens to see in the Bill the name of the member who is promoting it, he is suspicious of it.

Mr. SPROULE. That goes a long way, I confess.

Mr. CONMEE. They say that open confession is good for the soul, so I suppose my hon. friend is relieved now that he has got that off. Then he says that those who know the hon. member are suspicious of the Bill. Now, he is wrong in that. It is because my hon. friend does not know the hon. member who is promoting the Bill that he is suspicious. I guarantee that he

cannot find any one who does know him, whether he be Liberal or Conservative, who will give him the character that the hon. gentleman would like to impute to him.

Mr. SPROULE. My hon. friend behind me (Mr. Macdonell) sees it in the same way.

Mr. CONMEE. Perhaps he is as prejudiced as the hon. member for Grey (Mr. Sproule), and objects to the Bill for the same reason. Now, I did not say that the Ontario government approved of this Bill; what I said was that I was apprised that the Ontario government were giving them the right of way free.

Mr. BOYCE. Did not the hon. gentleman say the Ontario government had approved of this Bill?

Mr. CONMEE. No, I did not. As a matter of fact, I think they have approved of it. But what I stated was that they had given it a land bonus, although it was not yet actually chartered, and they did so knowing that the application for a charter was made to this parliament and not to the legislature. They I assume are not prejudiced against this Bill.

Mr. A. C. MACDONELL. Why did they send their representative here to oppose it?

Mr. CONMEE. I do not know, but I will give the hon. member my opinion. I think that the legal gentleman who appeared here was not instructed to oppose this Bill particularly. He is here as the representative of Ontario to oppose all Bills that, in his judgment, he thinks conflicts with provincial rights, and he opposed this Bill as he opposed a dozen other Bills, and for no other reason. It is not conceivable that the Ontario government would grant a bonus to a company if they had serious objection to their charter, and they knew the company was getting their charter here.

Mr. SPROULE. When did they grant the bonus, and what did the bonus consist of?

Mr. CONMEE. Land. The hon. member will see it reported in the returns and in the press. For this very railway they gave 1,000 acres of land per mile, as I understand the return.

Mr. SPROULE. The Superior and Western?

Mr. CONMEE. Yes.

Mr. BOYCE. Could the hon. gentleman say the distance this line is projected?

Mr. CONMEE. About 125 miles from the branch to the main line.

Mr. BOYCE. Can he give the House any information about the waterways that lie on the route of the railway?

Mr. CONMEE. So far as I have personal knowledge there are no water-powers. I believe they go close to what is known as the English river. It is merely a branch of the Albany river, but whether there are water-powers on the line I do not know. They go to Sturgeon lake and I think in passing north they pass what is known as the English river. I am not sure whether it is the English river or the Albany river which is right close to it at that point which forms the boundary between Ontario and Keewatin, but one or the other does.

Mr. BOYCE. Do I understand the hon. gentleman to say that this road has already been surveyed and that the work is under construction? If so, how much has been surveyed and constructed?

Mr. CONMEE. I am not aware of how much has been surveyed but the road has been located to Sturgeon lake and my information is that a portion is under construction. They are grading now.

Mr. BOYCE. How much is under construction?

Mr. CONMEE. About seven miles.

Mr. MACDONELL. Does the hon. gentleman consider that this Bill considers power company clauses? If so, does he consider that this is the proper authority to grant a charter to a power company whose works are entirely within the borders of a province and in no way touch or affect international or interprovincial waters?

Mr. CONMEE. In regard to this being the proper authority to give the powers, that would depend. If the waters affected were interprovincial, or international, or navigable——

Mr. MACDONELL. I excepted that.

Mr. CONMEE. This would be the proper authority. If it were otherwise I would assume that perhaps the legislature would have the control.

Mr. MACDONELL. Are the waters with which this Bill is concerned interprovincial, international or navigable?

Mr. CONMEE. I am not prepared to say that they are interprovincial but I do say that they are navigable as far as I know.

Mr. BLAIN. I think this matter is of sufficient importance for the hon. Minister of Railways and Canals (Mr. Graham) to give the committee an opinion upon it. I do not wish to be a party to any Bill that would interfere with provincial rights over water-powers. I do not think the Minister

of Railways would consent to the adoption of any such policy by this parliament. I am quite sure that he is conversant with this question and that he will give us his opinion upon the subject.

Mr. GRAHAM. This Bill was thoroughly discussed in the committee and all these points were raised. They were raised also, in so far as the Bills are identical, against the Bill introduced by the hon. member for London (Mr. Beattie). The clause to which the hon. member for South Toronto (Mr. Macdonell) refers as to water-powers, he will find, I think, in the great majority of the railway Bills by which charters have been given in recent years. There was a clause in the Bill introduced by the hon. member for London, such as the hon. member for South Toronto suggests, but the committee, without any dissenting voice, struck it out and put into the Bills the usual clause that we have put into other railway Bills governing the question of the right to distribute surplus power.

Mr. J. D. REID. The same clause as this?

Mr. GRAHAM. The clause we put into the other Bill is the clause we put into this. My hon. friend will remember that we struck out certain clauses and left the clerk to put in what we call the model clause because that clause was one which was decided upon by the committee, not this session, but on a previous occasion as one which should be introduced into Bills of this character. As to this being for the general advantage of Canada, I do not think it is an extreme view to say that in so far as practicable every railway that does a general business should have a charter granted by this House so as to place it under the control of the Railway Commission and thus secure uniform rates. As to the power of expropriation, this Bill does not give the company any extraordinary rights with regard to water-powers.

Mr. FOSTER. Where would they get these powers?

Mr. GRAHAM. They would have to buy them. They cannot expropriate water powers under this Act.

Bill reported, read the third time and passed.

LONDON AND NORTHWESTERN RAILWAY COMPANY.

House in Commitee on Bill (No. 102) to incorporate the London and North Western Railway Company.—Mr. Beattie.

Mr. CONMEE. I rise to remark that my hon. friend from North Grey has lost all his suspicions with regard to this Bill although it is similar to the one I proposed.

Mr. SPROULE. If this Bill, which contains a similar clause, had been taken before the hon. gentleman's Bill I would have had far more confidence in the Bill which he introduced.

Bill reported and read the third time and passed.

CONSIDERED IN COMMITTEE.—THIRD READINGS.

Bill (No. 85) respecting the British Columbia Southern Railway Company.—Mr. Taylor (Leeds).

Bill (No. 84) respecting the Athabaska Northern Railway Company.—Mr. Turriff.

Bill (No. 75) respecting the Canadian Northern Ontario Railway Company.—Mr. Pardee.

SECOND READINGS.

Bill (No 120) respecting the Windsor, Essex, and Lake Shore Rapid Railway Company.—Mr. A. H. Clarke.

Bill (No. 121) for the relief of John Grant Ridout.—Mr. Guthrie.

QUESTIONS.

TORONTO OLD FORT AND ADJACENT LAND.

Mr. FOSTER asked:

1. Has there been any correspondence between the Premier or Minister of Militia and the Mayor of Toronto looking towards the reclamation by the government of the land held by the Park Blackwell Company, near the old fort in Toronto? If so, is it the intention of the government to reclaim it?

2. Have the Historic Society and the Army and Navy Veterans Association pressed to have this portion restored?

3. What is the present situation as regard the possession, restoration, preservation and care of the old fort itself.

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence):

1. (a) Correspondence has passed between the government and the mayor of Toronto looking towards the reclamation by the government of a small parcel of land held by the Park Blackwell Company near the old fort, Toronto.

(b) On June 4, 1898, a parcel of land adjacent to the old fort was conveyed by letters patent to the Park Blackwell Company. Subsequently the company applied to be allowed to straighten the boundary of the land acquired by it and to build a stone wall to prevent the embankment from falling into the company's yard, which permission was granted by letter, dated September 19, 1901. The company was thus given a license of occupation of a corner of the old fort property, which is the piece of land respecting which correspondence has been exchanged with the mayor.

The sale of the Garrison Common property, which included the old fort property, to the

city of Toronto was authorized by order in council of May 16, 1904, or two years and seven months after the license of occupation was given to the Park Blackwell Company. Letters patent conveying the Garrison Common property to the city are now being prepared, but the area to be thus vested in the city does not include the small corners occupied by the Park Blackwell Company under the authority of the license of occupation dated September 19, 1901.

2. Representations have been made by the historic and other societies with a view to reclaiming from the Park Blackwell Company the small parcel of land occupied by them.

3. It will be a condition in the letters patent that the city shall restore the old fort property as far as possible to its original condition, as per plan, dated Quebec, June 24, 1816, drawn by G. Nicholls, government engineer.

PORT HOPE METEOROLOGICAL STATION.

Mr. THORNTON asked:

1. Is the Port Hope meteorological station situated within the town limits? If not, how far out and where?

2. Is there a meteorological tower in the township of Clarke, county of Durham, Ontario?

3. If so, when was it built, at what cost, who has charge, what are his duties and what expense?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. The meteorological station at Port Hope is near the centre of the town. The observer reads thermometers and records rainfall, and forwards monthly reports to the Central Meteorological Office in Toronto. He receives no remuneration.

There is a mast on the wharf at the harbour, Port Hope, from which storm signals are displayed. The agent receives $60 per annum.

2. There is not.

3. Answered by No. 2.

CEMENT CONTRACTS.

Mr. S. SHARPE—by Mr. Geo. Taylor—asked:

1. Has the Department of Railways and Canals recently given a contract for cement to the William G. Hartsanft Cement Company, Limited, of Montreal? If so, for what quantity and at what price?

2. What was the specified brand of cement, and where is it made?

Hon. G. P. GRAHAM (Minister of Railways and Canals):

1. Yes. A contract was awarded to the Vulcan Portland Cement Company through their agents, The Wm. G. Hartsanft Cement Company, Limited, Montreal, for cement as follows: 43,500 barrels for the Quebec canals delivered at Montreal at the rate of $1.06 per barrel, and for 1,750 barrels for the Cornwall canal, delivered at Cornwall, at $1.17 per barrel. The above prices are net.

2. 'Vulcan,' manufactured in Montreal.

LAND GRANTS TO CIVILIANS.

Mr. AMES—by Mr. Geo. Taylor—asked:

Have representations been made to the government by or on behalf of the Canadian volunteer teachers who, during the South African troubles taught in the concentration camps, for similar consideration as to land grant to that which has been granted the female nurses? If so, what reply did the government give to these representations, and what are the government's intentions in this matter.

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence). The Volunteer Bounty Act, 1908, does not make provision for the issue of land warrants to the teachers referred to, or to any person or persons employed in a civil capacity. The nurses referred to in the question ranked as lieutenants in the militia, and the Act specifically provides for the issue of warrants to them.

DUTY ON PASSOVER BREAD.

Mr. PERLEY—by Mr. Geo. Taylor—asked:

1. Have any parties, within the last six months, approached the government with the object of securing a higher rate of protection upon what is known as Passover bread?

2. If so, by whom was such advance in duty asked, when and to what extent, and what reply was made by the government to their request?

Hon. WM. PATERSON (Minister of Customs). Not that I am aware of.

EMPLOYMENT OF REV. E. P. BERUBE.

Mr. PAQUET—by Mr. Geo. Taylor—asked:

1. Is the Rev. E. P. Bérube, of Vonda, Saskatchewan, employed by the Minister of the Interior as an immigration agent or otherwise?

2. If so, from what date, what amount has he received since his appointment, and what is his monthly salary?

Hon. FRANK OLIVER (Minister of the Interior):

1. Yes.

2. Engaged for three months, from February 15, 1909, at one hundred dollars per month, paying his own expenses. Has received one payment of one hundred dollars thus far.

GOVERNMENT FOREIGN CORRESPONDENCE.

Mr. J. A. CURRIE asked:

What was the number of letters and despatches and quantity of correspondence generally, received and despatched between the government of Canada and of Great Britain

and other countries during the years 1886, 1887, 1888, 1889, 1890, 1891, 1903 and 1904?

Hon. CHAS. MURPHY (Secretary of State):

NUMBER OF COMMUNICATIONS.

Year.	Colonial Office.		Govs. of Colonies.		H.M's. Representatives Abroad		Total.		Grand Total.
	From.	To.	From.	To.	From.	To.	From.	To,	
1886	574	496	12	10	167	128	753	634	1,387
1887	705	597	9	5	111	113	825	715	1,540
1888	606	446	33	37	74	71	713	554	1,267

CONTRACTS FOR PRAIRIE SECTION, NATIONAL TRANSCONTINENTAL RAILWAY.

Mr. J. A. CURRIE asked:

1. Who are the contractors in the first instance, other than sub-contractors, for the prairie section of the National Transcontinental Railway?

2. What contracts have been given by the Grand Trunk Pacific Railway Company or by the National Transcontinental Railway Commission, to the Grand Trunk Pacific Construction Company or the company controlled by the directors of the Grand Trunk Pacific Railway Company?

Hon. G. P. GRAHAM (Minister of Railways and Canals):

1. The work of grading, building culverts and small bridges has been executed by the following named contractors:

Messrs. McDonald, McMillan & Company.
Messrs. Treat & Johnson.
Messrs. Canadian White Company.
Messrs. Foley Brothers, Larson & Company.
Mr. John Bradley.
Mr. J. R. Booth.
Messrs. Bishop & Huck.
Mr. C. H. Richards.
Mr. C. Frost.
Messrs. Foley, Welch & Stewart.

The steel bridges were built by the following named contractors:

Messrs. John Gunn & Son, masonry substructures.
Messrs. The May Sharpe Construction Company, masonry and substructures.
Messrs. Canadian Bridge Company, superstructures.

For buildings Messrs. McDiarmid & Company are the contractors.

For fencing, Canadian Steel and Wire Company are the contractors.

The work of tracklaying and ballasting has been carried on by the Grand Trunk Pacific Railway Company.

2. Contracts were given by the Commissioners of the National Transcontinental Railway to the Grand Trunk Pacific Railway Company for the construction of the following sections of the eastern division:

District 'A.'

Contract No. 1, from the city of Moncton, New Brunswick, for 50 miles westerly.

Contract No. 3, from Chipman, New Brunswick, westerly 39·7 miles.

Contract No. 4, from near the crossing of the Fredericton section of the Intercolonial Railway to the Tobique river, about 67 miles.

District 'B.'

Contract No. 11, from 150 miles west of the Quebec bridge to Weymontachene, a distance of about 45 miles.

Districts 'C' and 'D.'

From about 8 miles west of the Abitibi river crossing easterly for a distance of about 150 miles.

COBOURG HARBOUR EKPENDITURE.

Mr. THORNTON asked:

1. What amount has been expended on Cobourg harbour during the year 1908?

2. What contracts, if any, have been made by the government for improvements and repairs on Coburg harbour during the last two years?

3. With whom have such contracts been made?

4. What amount is involved in such contract?

Hon. WM. PUGSLEY (Minister of Public Works):

1. $34,601.59.

2. Contracts have been made for the construction of two breakwaters at entrance of harbour and for dredging.

3. The Randolph Macdonald Company, Limited; W. E. Phin.

4. The Randolph Macdonald Company, Limited, construction of breakwaters, contract price, $139,000.

Paid to W. E. Phin for dredging, season of 1907, $20,721.69.

Paid to W. E. Phin for dredging, season of 1908, $24,187.68.

MR. WALLBERG'S CLAIMS.

Mr. SAM. SHARPE—by Mr. Geo. Taylor—asked:

1. Has Mr. Wallberg entered an action at law for moneys alleged to be due him? If so, what is the amount of the claim?

2. What was the original amount of the contract in respect to which this balance is claimed?

3. At whose request was a fiat granted allowing Mr. Wallberg to proceed with his action?

4. Who are the solicitors, and who is the counsel for Mr. Wallberg?

Hon. G. P. GRAHAM (Minister of Railways and Canals):

1. Mr. Wallberg has made a claim for payment of ' $105,940.15, with interest from the 25th day of January, 1909; his costs of reference; and such other relief as to the court may seem meet '—being for the construction of a sewerage system and water system and other work in connection with the same, on the Intercolonial Railway at Moncton, New Brunswick.

2. The original lump sum of the contracts for the buildings to which the above work was appurtenant, but not forming a part, aggregated $682,975, with provision for payment of additions at prices set out in the schedules contained in the said contracts; the total value approximating in the neighbourhood of one million dollars.

3. No fiat has been granted to Mr. Wallberg, but his claim has been referred to the judge of the Exchequer Court under the statute.

4. The statement of claim is signed by Mr. Harold Fisher, counsel for the petitioner.

IMMIGRATION AGENTS.

Mr. PAQUET asked:

What are the names of our immigration agents who reside in Canada, and what is the address of each?

Hon. FRANK OLIVER (Minister of the Interior:

J. P. Lavoie, M.D., Quebec, Que.
John Hoolihan, Montreal, Que.
J. V. Lantalum, St. John, N.B.
F. W. Annand, Halifax, N.S.
Rd. Hickey, North Sydney, C.B.
Geo. L. Stewart, Toronto, Ont.
J. H. MacGill, Vancouver, B.C.
G. L. Milne, M.D., Victoria, B.C.
R. A. Burriss, Port Arthur, Ont.
Damase Gauthier, Laurentides, Que.
Rev. L. P. Gravel, Moosejaw, Sask.
Rev. J. C. Sinnett, Sinnett, Sask.
Rev. Laganière, Montreal, Que.
Rev. Jos. A. Ouellette, Montreal, Que.
Rev. Ernest Gauthier, St. Alphonse, Que.
René Dupont, Quebec, Que.

DEPARTMENT OF RAILWAYS AND CANALS.

Mr. MONK asked:

1. Referring to the report of the Auditor General for the fiscal year ending the 31st of March, 1908, showing an item of $1.40 having been paid to J. A. Lussier, of St. Johns, Quebec, and another item of $98.65, what were those payments for?

2. Did Dr. A. Godin, of St. Johns, Quebec, or his wife draw at any time from the government an amount of indemnity for damages to some land at the island of Ste, Thérèse, caused by the waters of the Richelieu river? If so, what was the amount so paid, was the interest allowed on the amount, and has the government a receipt for said interest?

3. Is Joseph Bonin, of Iberville, Quebec, in the employ of the government at St. Johns, Quebec. If so, in what capacity and what necessitated his nomination?

4. Is Hormidas Martial in the employ of the government at St. Johns, Quebec. If so, has he been doing all that is necessary in connection with the supervision of the harbour at St. Johns, and what is his salary?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. $1.40 was paid to J. A. Lussier for a certified copy of a deed from Cecil Briggs to His Majesty. The sum of $98.65 was paid to J. Aimé Lussier on August 16, 1907, by the Department of Public Works for legal services (from December 28,1905, to May 8, 1907) in connection with the purchase of land for a wharf at St. Blaise, Que., from one Napoleon Harbec.

2. Mrs. Cecilia Briggs, wife of Dr. Godin, was paid the sum of $2,000, on August 11, 1904, for damages caused to her property at Ste. Therèse island, by the waters of the Richelieu river. No interest was allowed on the amount.

3. Joseph Bonin is employed as watchman in the harbour at the head of the Chambly canal. He replaced Hormisdas Martial, who has been given other duties.

4. Hormidas Martial, formerly the watchman in the harbour at St. Johns, is now in charge of the lands and canal banks between the guard lock and Ste. Therèse island; he has no longer anything to do with the harbour at St. Johns, his salary is $45 a month.

PUBLIC WORKS, WELLAND.

Mr. T. CHISHOLM asked:

How much public money has been expended during the past twenty years by the Dominion government on public works in the territory now constituting the constituency of Welland?

Hon. Wm. PUGSLEY. (Minister of Public Works). $805,695.10.

RED RIVER EXPEDITION.

Mr. BOYCE asked:

1. Has any provision been made by way of land grant or otherwise for recognition of the services of officers and men in the Red River Expedition of 1870, under General Lord

Wolseley? If so, what provision has been made, and what form does the recognition take?

2. If no such form of recognition has been arranged, is it the intention of the government to take the same into consideration in the near future?

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence). Officers and men who served in the Red River expedition of 1870 have been, severally, granted 160 acres of land in recognition of their services.

MR. W. T. R. PRESTON.

Mr. AMES asked:

1. Does W. T. R Preston still occupy the position of Canadian Trade Commissioner in Japan?

2. Has he been requested to return, or has leave been granted him by this government to return to Canada? If so, for what reasons?

3. Has the government in contemplation the transfer of Mr. Preston to another post? If so, where?

4. Will the government lay on the table of the House the communications from the Kobe Foreign Board of Trade and the Yokohama Foreign Board of Trade protesting against the actions of the said W. T. R. Preston?

Hon. WM. PATERSON (for the Minister of Trade and Commerce):

1. Yes.
2. No.
3. Yes. Holland and Northern Europe.
4. Yes, if so requested.

GEORGIAN BAY ISLANDS.

Mr. WRIGHT asked:

1. Referring to the sale of eighty islands and portion of islands in the Georgian bay, notice for the reception of tenders for same up to the 1st of June next appears in the Ottawa 'Free Press'. Does this advertisement appear in the Toronto 'Globe,' 'Mail and Empire,' and the Midland and Penetang papers?

2. Are these islands known by name or number?

3. Are there maps available showing the location of the islands and portions of islands to be sold, giving a description of the same?

Hon. FRANK OLIVER (Minister of the Interior):

1. The advertisement appears in the Toronto 'Globe,' the 'Free Press,' Midland; the Penetanguishene 'Herald,' Penetanguishene, but not in the 'Mail and Empire.'

2. The islands are known by numbers.

3. The schedules of islands and portions of islands to be sold, giving description of each, and maps showing islands are available and are being sent to all applicants therefor, as stated in the advertisement.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a copy of all correspondence and reports respecting the Colonization and Repatriation Society of Lake St. John from 1900 to this date, and a detailed statement of the moneys paid to the society and of the manner in which they have been expended between these dates.—Mr. Girard.

For a copy of all documents, complaints, correspondence and decisions arrived at relating to a contract of lease entered into between Alphonse Laberge, lessor, and the Government of the Dominion of Canada, lessee, of date 20th day of July, 1904.—Mr. Roy (Montmagny).

For a return of all correspondence between the Marine and Fisheries Department and any person or persons relative to the cancellation of the certificate of Thomas Bibbington, or the removal of his name from the list of certified pilots for the port of Victoria, B.C.—Mr. Barnard.

For a copy of all correspondence, memorials, reports and decisions arrived at respecting the construction of a tank at the Intercolonial Railway station at Cap St. Ignace, and the increased cost to be paid to the Aqueduct Company supplying the water for the engines running on the said railway.—Mr. Roy (Montmagny).

For a copy of all petitions and correspondence, whether by letters or telegrams, and all plans submitted either to the Railway Department or to the authorities of the Intercolonial railway, and of all decisions arrived at, relating to the enlargement of the station of the Intercolonial railway at Cap St. Ignace, or the construction of a new station.—Mr. Roy (Montmagny).

For a return showing the amount of money received from the government by the 'Canada Posten' of Winnipeg during the years 1907 and 1908.—Mr. Bradbury.

For a return showing the names of all persons residing in the town of Liverpool, Nova Scotia, or in its vicinity, who were paid fishing bounties in the year 1908, and the names of all persons residing in Liverpool, Nova Scotia, or in the vicinity thereof, to whom seine trap licenses were issued in 1908, and the amounts paid for the same in each case.—Mr. Crosby.

For a copy of all papers, letters and correspondence relating to, and an itemized statement of, the account of Mr. H. M. Howell in regard to the surrender of St. Peter's reserve.—Mr. Smyth.

For a return showing how many seining licenses for fishing in Pacific coast waters are now current; to whom they have been granted; the area covered by each license, and how many of these licenses are being operated by the original licensees, and how many by aliens.—Mr. Cowan.

For a copy of all correspondence, reports, papers, and communications in the possession of the Dominion Lands Office at Prince Albert and the Department of the Interior at Ottawa, in connection with the application for patent for the n.e. ¼ section 10, tp. 47, r. 1 w. 3rd meridian,—of A. A. Strachan and the performance of his homestead duties.—Mr. Lake.

TERMINAL AND TRANSFER ELEVATORS—GOVERNMENT OPERATION.

Mr. F. L. SCHAFFNER (Souris). I beg to move the following resolution which stands in my name:

That in the opinion of this House the present system of operating terminal and transfer elevators is detrimental to the interests of the western grain producers, and that the government should take immediate steps to operate terminal elevators at Fort William and Port Arthur, and the transfer elevators between those terminals and the Atlantic seaboard

I cannot help saying at once that I feel my inability to present the subject covered by this motion in the manner in which it should be presented; at the same time, I cannot help saying also that I feel honoured in having the opportunity to move a resolution so important as this. Having spent a little time in the study of the subject, I am thoroughly convinced that the grain elevator question is one of the most important to come before this parliament and I am equally convinced that, in a few years, the country will so regard it. We have been all day talking on transportation questions. I do not say that we have spent too much time. Everybody admits, who has been in this parliament a few years, that the transportation question of necessity and rightly occupies a great deal of the time of the House. This question of grain elevators is so closely allied with the question of transportation that we cannot separate the two, and, when we take up so much time in discussing transportation, our time cannot but be well spent when we discuss the pros and cons—if there are any cons—of this resolution dealing with this vitally important question. Sometimes we are criticised because our resolutions are local or sectional. I do not think that criticism applies to the resolution which I now place before you Mr. Speaker. This resolution affects Canada from the Pacific to the Atlantic, and I for one hope that soon it will affect Canada from Hudson bay to our southern boundary. Let me say at once that I have no desire to make this a party question; I believe it is too big and too far-reaching to be considered in that light. I am confident that, at least so far as the members of the House from the western provinces are concerned, I shall have their sympathetic support regardless of their party affiliations.

This question of grain elevators is one which has agitated the minds of western people for a very long time. I find, in talking the matter over with eastern men, with the men of our financial centres if you like, that they have heretofore failed to grasp the importance of this question of our grain elevators as it affects the producers, and not only as it affects the producers, but also as it affects our financial centres as well.

You will observe that my resolution is confined, so far as its words are concerned, to terminal and transfer elevators. But the internal elevators are so closely allied to terminal and transfer elevators, that I hope you, Mr. Speaker, and this House, will not consider me out of order if I incidentally refer to this class that are not specifically mentioned in the resolution. I find—not on the part of western members, but of eastern members,—the lack of a clear definition in their minds of the three sets of elevators to which I have referred. Without occupying unnecessary time, let me give a definition of these three classes. We have, first, our internal grain elevators, scattered all over the provinces of Alberta, Saskatchewan and Manitoba. Wherever there is a railway, even a branch railway, the first thing that appears in some places and sometimes the only thing that appears,—I was going to say in a town, but I will say in a settlement is a grain elevator. Before I get through I intend to show though briefly how many of these elevators existed up to 1908. If our point of observation could be high enough, and our range of vision long enough, we could see a very large number of elevators scattered all over the western provinces. These elevators are the buildings in which the farmer deposits his grain from the wagon in which he has hauled it. There are loading platforms, of course, and according to the Act farmers are permitted to load their grain on to cars direct. But, as a rule—and I personally believe it is a legitimate and proper way and most convenient way to handle grain—the grain is put through the elevator. The veins of circulation by which this grain is brought to Winnipeg are numerous. After it reaches Winnipeg, there are two great arteries to carry it to the head of the lake. We hope soon to have three. We have the Canadian Pacific Railway, and the Canadian Northern, and I hope from the bottom of my heart—and it cannot be too soon,—we shall have the Grand Trunk Pacific. This will give us three great arteries emptying the grain from these three provinces into what is called the terminal elevotors at Port Arthur and Fort William. We have also what are called transfer elevators. After this grain reaches Port Arthur and Fort William and is placed in the terminal elevators, it is either carried by boat to Kingston, Montreal, Goderich or some other port, or it is taken all-rail to St. John. The transfer elevators are the links between the terminal elevators at Port Arthur and Fort William and the Atlantic coast where the grain is shipped to go to the markets of the world. The House can easily see what a complete chain there is in these elevators. And, so far as the producer is concerned, it is absolutely im-

possible to separate these elevators in our argument.

I do not stand here to say that government ownership is to be the great panacea for all alleged grievances in the state to-day. But I do say that according to the great law of selection, there are industries to which government ownership is applicable, and I believe there is no industry more so than this one of terminal elevators. I do not minimize for a moment the tremendous difficulties that surround this question, I admit at once there are difficulties that will have to be overcome in connection with the government ownership of these terminal and transfer elevators, but I believe that when this government makes an honest and earnest effort to meet those difficulties, they will find them to be far less formidable than they appear. As to this question of terminal elevators, I am sure that every western man who has been in that country for some time will agree with me that it is a source of great agitation. Having spent about twenty-five years of my active life in the west, and having spent some years before that in the far east, I think I can realize perhaps better than some others how closely the west is connected with the east. I realize to-night, and I have realized many times in this House, how these two sections of our country are mutually dependent on each other. Within the last few days I have heard the remark: Why are these men talking all the time about the west? Why, there would not be any west if there were no east. That is quite true. I say that western Canada and eastern Canada are to-day component parts, and interdependent. You have your great financial centres, you have your manufacturing institutions that are absolutely necessary for us in the west. Only the other day an hon. gentleman on the other side of the House, a gentleman whom I very much respect, a gentleman who is engaged in a very large industry, came to me and said: Have you people in the west yet determined the amount of grain that you produced last year?' He said, 'You have made estimates during the summer, but what I would like to know as a manufacturer is whether you people have as yet realized to its full extent the amount of grain your country will produce?' He said, 'I do not believe you of the west understand how we people in the east are dependent upon your crops. When you have a good crop I can sell my machinery, and I can get my pay for it.' Well, I think that bears out a sentiment which I wish to express, that it is not a question of the west against the east. All the east has to do is to recognize the importance of the west, and especially the importance of this great question of grain elevators, and then there will be a common feeling between us.

But some one will say, 'How is it that although this question of government-owned elevators has been so many years a source of agitation, you have never yet reached any conclusion about it? Well, the reason to my mind is just this: The farmers up to a few years ago had not recognized this great principle of concerted action, they failed to apply the great principle of co-operation in order to get the best results, either for capital or for labour. Had the farmers co-operated, as they might have done, and as other industries in Canada have co-operated, they would not now be in the position in which they find themselves. Let me give one or two examples. Take the manufacturers. Have they been going for the last dozen or twenty years on their own hook, as the individual farmer apparently has been. The manufacturers in each line of business have associations among themselves, but there is one great association comprising them all, called the Manufacturers' Association. What do they do? What are some of the problems these manufacturers have solved? They have their freight rates, they have their competition, they have the tariff, and many another problem coming before them for solution. But they have adopted concerted action, they co-operate, and are thereby able to meet these problems more successfully. When the Finance Minister of this country talks about changing the tariff, we find the manufacturers getting together, coming down here with delegation after delegation to visit the Minister of Finance and members of the government, and placing before them their propositions. They go further. They know that people are human, and I have not the slightest doubt in the world that the ministers of this government are just as human as anybody else. The Manufacturers' Association have every year a great banquet to which they invite the Prime Minister and other ministers of the government, and they also invite leading members of the opposition. What is the first thing they do? The first thing they do is to dine and wine these hon. gentlemen, get them feeling good, and then present their wishes to them—all which is absolutely legitimate, I am not claiming for a moment that their course is not perfectly legitimate. But the fact remains that the Manufacturers' Association recognize what co-operation will do for them. What do we find in the Railway Committee? What do we find around these corridors almost every day of the session? A private member has a railway he wants built or a company has a railway it wants built. You find them, not coming as they formerly did on their own hook, and trusting to providence that their railway scheme will go through as they desire to have it, but they employ the very best lawyers in this country to come and plead for their

undertaking—all of which is perfectly legitimate.

Now apply that method of action to the farmers. I say that the farmers, for some reason or other, have been slow to recognize this principle of co-operation. But I assure you there is not a gentleman here from the west to-night but will bear me out in saying that the farmer is waking up, he is beginning to realize his needs and his power. I would advise this government, as I did the other day, and I would advise the leader of the opposition, that if they want to be in the running they had better pay more attention to what the farmers say and what the farmers are doing than they appear to do at present. In my own constituency of Souris I will guarantee that there are twenty associations of grain growers. What is true of my constituency I am sure is true of every western constituency. These men seem to be very much in earnest, and all they have to do to get their rights is to go about it in earnest, and tell the government that if they want to get their votes they must give them what they want. The twenty associations in the constituency meet together. They elect delegates to the provincial association. Saskatchewan does the same thing. The association there is under the same name, while in Alberta, although it is practically the same organization, it is called, I think, the farmer's association. But, they are not content with that. They have what they call an interprovincial association which is made up of delegates from the different associations. The one question that has received the most careful consideration of this association during the past three years is the elevator question, not only as affecting internal, but also as affecting terminal and transfer elevators. As far as internal elevators are concerned the question was considered so important by the farmers of Manitoba, Alberta and Saskatchewan that they called upon the premiers to meet them in conference and discuss it. This meeting is rendered still more interesting by the fact that these premiers are not all upon the same side of politics, there being a Conservative government in the province of Manitoba and Liberal governments in the provinces of Saskatchewan and Alberta. I do not think these premiers, Grit or Tory, were particularly anxious to meet upon this question, but they did. They met because they have begun to feel in that western country that the farmer has to be listened to. They met delegates from the farmers' association. They sat for some time and then, like the wise judge who is not sure of what he is going to do, they reserved judgment. They did not give the farmers an answer at that time. It was not very long, however, before these three premiers gave judgment, and it was adverse to the taking over of the internal elevators. But that did not end it and this I consider to be an important point. Notwithstanding that these gentlemen did not grant what the farmers of these three provinces asked, the premier of Manitoba and Mr. Rutherford, of Alberta, did not think it well to allow the matter to drop there. They said: We cannot deal with this question, it would be unconstitutional, it is a matter for the Department of Trade and Commerce, it will have to be dealt with by the Dominion government. What did they do? I had Mr. Rutherford's resolution, but I am sorry to say that I cannot lay my hand on it at the moment, but I know that all western men will agree with me when I say that it was absolutely similar to the resolution introduced into the Manitoba legislature. Mr. Roblin thought he had better make the matter public in that country because he knew very well that these farmers are not to be put down. Here is the resolution that Mr. Roblin moved in the House within the last four weeks:

Resolved, that a memorial be presented to His Excellency the Governor in Council setting forth that:

Whereas the farmers of Manitoba are dissatisfied with the present arrangements for storing grain at initial points, the elevators being in the hands of the grain dealers;

And whereas, the farmers believe that it would be in their interests and in the interests of the public generally that the initial elevators be publicly owned and controlled;

And whereas, under our constitution the power to control and regulate the storage and handling of grain, the weights and grades, the power to control and regulate the transportation companies and make the provision for the granting of elevator sites on railways, as well as the distribution of cars and generally all matters relating to the grain trade in Canada, rests in the federal parliament and not in the provinces, as provided in the British North America Act;

Therefore, this assembly begs to call Your Excellency's attention to the desirability of the government of Canada dealing with the initial elevator situation either by (a) making provision for government ownership and operation of the grain elevators in Manitoba; or (b) by having conferred upon this province, either by Dominion or imperial legislation, the power to fully deal with the question of storage transportation and grading of grain.

Perhaps the members of this House do not see the same significance in this resolution that I do, but I would like to say that practically the same resolution has been introduced into the Alberta House by the First Minister of that province. It is to me an indication of what I have seen coming for some time, and that is that these men think it is proper to get right with the farmers, and they are good politicians for seeing that.

What they are asking for was not only possible but was highly desirable in the interests of the grain growers of this country.

This is what Mr. Roblin says:

No utility or public service that has been taken over by any government and operated by them has been what has been called or is known as a monopoly, a public monopoly, such service as could best secure the convenience of it to the general public when in the form of a monopoly.

One of the excuses which these three premiers gave us was that it was establishing a monopoly. But while they said it was establishing a monopoly it was not very long until they secured the adoption of resolutions asking this government to take over these initial elevators or to give them the power to take them over. So, their reasoning and their conclusion are not very logical.

Under the provisions of the British North America Act it is specially provided that in all matters pertaining to trade and commerce the federal authorities shall be, and are, supreme. The fact that in holding or operating elevators it was requisite to weigh and to inspect grain put the proposition immediately in opposition to that portion of the British North American Act that refers to weights and measures and the inspection of grain. Further, under the general law, transportation companies, such as we have in this western country, are subject also to federal law.

In the event of the Dominion parliament failing to take that position, then the provinces would be justified in assuming functions they did not possess. . . . We therefore felt that it is necessary for us, being in full sympathy with the purposes and objects the grain growers have in securing conditions that will secure them the fullest and largest measure of reward for their industry and their labour, to take such action as would indicate the position we have taken in this connection. To this end the government of Alberta, led by the Hon. Mr. Rutherford, introduced a resolution exactly the same as I have on the Order Paper to-day, and it was passed unanimously through. I am submitting it the same way as being part of the arrangement made by the premiers to this legislature for their endorsement. . . . Speaking for the government of Manitoba and the legislature of Manitoba, we are in the fullest accord with every legitimate constitutional movement that may be made to better the conditions of the grain growers in the province, and the actions of this House in the past is evidence of the bona fides of this statement. I therefore move the resolution.

I do not think anything could be clearer, and I think it means a great deal that these three gentlemen who are in close touch with the farmers of that western country consider that this question is one of such importance that it is incumbent upon them to deal with it. They believe that these initial elevators are just as important as the terminal and transfer elevators. I do not need to tell our western men why, because they know all about it, but in order to make my argument as complete as I can make it, I would like for a moment to state how closely allied all these elevators are and how important they are to the farmer. The manufacturer and the railway man have problems to solve, but does any one present to-night imagine that the farmer has not greater problems to solve than any other class of our citizens? He has to decide how best to cultivate the soil, and like the manufacturer he has to meet strong competition whether it comes from his own or from a foreign country. True, only the fringe of the western prairie is yet cultivated, and, comparatively speaking, but a little patch of land here and there is under crop, but we grow 200,000,000 bushels of grain in Canada, and when cultivation extends over a larger area that production will be enormously increased. But the Canadian farmer has competition from Russia, which grows 500,000,000 bushels, and from India, which grows 300,000,000 bushels, and from Argentine, which grows 200,000,000, and all that grain enters into competition in the British market with the grain grown by the farmers of Canada.

In view of this strenuous competition it is exceedingly important that the Canadian should be able to get his grain from the farmers' wagon to the British market under the most reasonable conditions. If he can save 2 cents per bushel it means $100 to the farmer who grows 5,000 bushels, and that will buy him a good suit of clothes, and his wife a pretty fair dress, and a good many pairs of boots for the children. You see how important then is this 2 cents a bushel saved at the elevator, or in the freight rates. No one denies that the great problem with the farmers' associations during the past two or three years has been the elevator question. Last year the interprovincial association sent three or four delegates to Ottawa to meet in one of the most important conferences that was ever held here. That conference was held in the office of the Minister of Trade and Commerce with Sir Richard Cartwright in the chair, and it was attended by representatives of the railways, of the grain exchange, and of the banks and other financial institutions. The representatives of the farmers presented their case for terminal elevators, and it is not flattering them too much to say that they held their own with the representatives of the other great institutions present. These representatives tried to get a condition of affairs which will enable the farmer to get the best possible price for his products under the keen competition which there will be in the world's market. The purpose I have in view is that the wheat as the farmer sells it from his farm shall arrive at the ultimate market in the condition in which he sells it. This can be accomplished only by full government control of internal term-

inal and transfer elevators. The farmers did not get exactly what they wanted; they never do at first; it is the man who keeps persistently at it who gets what he wants, and these farmers will keep persistently at it until they do get what they want. They know what they want and the people of eastern Canada will understand it when they take a little time to study the question. These farmers' delegates made a plea for government operation of terminal elevators and I quote from the pamphlet which was prepared by them:

We the undersigned members of the delegation representing the organized farmers of the three prairie provinces, at the request and on behalf of the whole delegation, beg to submit the following re-statement of the requests and recommendations made by us on behalf of our people at the conference held last week, with a view of putting them and the arguments advanced in their support, in a more orderly and concise form.

These farmers' delegates as I have said met with the members of the government and the representatives of the financial and transportation interests, and believing they did not get what they deserved, they prepared, after they returned home, the pamphlet from which I quote. It will be remembered that in the dying hours of last session at four o'clock in the morning some members of this House referred to the conference which had just been completed and they endeavoured to convince the government that the farmers of the west asked what was proper and fair:

At the outset it is proper that we should state whom we represent, the circumstances which led up to a delegation being appointed and our mission to Ottawa.

There are three large organizations of farmers in the west—the Grain Growers' Association of Manitoba, the Grain Grower's Association of Saskatchewan and the Alberta Farmers' Association, the aggregate membership of which is in the neighborhood of ten thousand.

I would point out that the farmers are scattered throughout the west; the manufacturers are close together, and they have the impetus of contact which means a good deal in discussing any question. Supposing we had 10,000 farmers, and I would like to see it, marching up the street and taking their place in front of this building, then would the government of this country begin to realize that the farmers are a force in our national affairs. I hope the farmers of this country will never have to do that:

But we do not represent these alone. As the direct representatives of these ten thousand organized farmers who embrace the most intelligent and articulate portion of the farm population, we claim the right to be regarded as representatives of the whole body of western agriculturists.

Our presence as a delegation at Ottawa is the outcome of a conference of the representatives of the above mentioned farmers' associations which met at Saskatchewan last February and which after passing a number of important resolutions, arranged that two delegates should be sent from each association to press for the legislation required by these resolutions.

I think no one will deny that these gentlemen represented the sentiments of the western farmers as a whole:

We may add with respect to all the important resolutions passed at the conference, that they had been thoroughly discussed in approximate forms and agreed to by each of the provincial associations prior to being dealt with by the conference, so that most emphatically they represent the sentiments of the western farmers as a whole.

The resolution growing out of this asks that the Dominion government operate the transfer terminal elevators. Another resolution asks for the special binning of grains at the terminal elevators in order that a satisfactory market might be developed in Winnipeg for the common benefit of the farmer and the miller. I am not dealing to-night with the question of a sample market.

It is sometimes said that the farmers are not very definite in their requests and statement of grievances. I think their requests are definite. On four definite points which they believe to be grievances they are agreed: first, they believe that there is improper or too low grading of their wheat; second, they believe there is dishonest weighing; third, they believe there is excessive dockage, and fourth, they believe that there is loss of identity of the wheat. Any one familiar with the grain trade will realize that these are definite grievances. The hon. member for Regina (Mr. W. M. Martin) the other night referred to the Grand Trunk Pacific Railway. If it would not be too much of a digression I would say that my position on the Grand Trunk is and always has been that we must have the Grand Trunk Pacific Railway, we need it in that western country and no man can show that I have ever said anything to the contrary. The hon. member said that grain was being taken across the line, and I inferred from his statement that it was taken into the United States for transportation because it was not possible to secure transportation on the Canadian side. If that condition exists in Manitoba, it exists to a very limited extent. Our wheat is going across the border for quite a few miles north of the boundary although that movement was larger in the first part of the season than it was towards the last. Why was it going into the United States? Because it secured a better grade there than in Canada. Wheat that would grade in Boissevain, Waskada and Lyleton as No. 3 Northern

can get a No. 1 Northern under American grading.

The farmers are anxious to avoid the manipulation of their grain by these grain dealers who are always trying to make people believe that they have such tremendous interest in the farmer. Last year when the Roblin government introduced legislation in connection with the Winnipeg Grain Exchange, I happened to be in Winnipeg, and two of the first men I met, both pronounced Tories, spent two hours trying to convince me that the Roblin government had wronged the grain exchange, had ruined it. The Grain Exchange had commenced the erection of a great building and they said it would never be finished. What occurred? The Grain Exchange men fired off a little hot air, but it was not very long before they got together and the fine building went on and to-day the Grain Exchange is going on just as before. What does it mean? It means that when they could not fool the farmer in that particular respect they accepted what the farmer desired, and what was not absolutely against the interest of the Grain Exchange. The farmers believe that the only way in which their grievances and difficulties can be overcome is by having the whole system for the handling of the grain from the farmers' wagon to the markets of the world under the control of a staff of men who are not interested in the grain trade. They believe that the government should control the interior, terminal and transfer elevators, so that they may avoid injustice in reference to grades, weighing, dockage and the preservation of the identity of grain. If the government owned the internal elevators only, then when the grain reached the terminal elevators at the head of the lakes it would be mixed, there would be loss in weight and excessive dockage. I shall not deal to-night with the question of weight in relation to shipping between Port Arthur and the transfer elevators as I believe an hon. member who will follow me is far more familiar with that part of the question than I am. A very serious condition has arisen in connection with this link in the train of transportation. If the government controlled the elevators as far as the head of the lakes only, then the grain would leave the terminal elevators properly graded and unmixed, but the mischief would be done in the transfer elevators, so that the farmers are convinced that the only remedy is to have government control throughout the whole system. The farmers say with reference to that:

That the fact that our wheat is now received by eastern Canadian and British millers out of the terminals not cleaned as required by the Act, and sometimes showing evidence of being tampered with, although put out under the supervision of a government inspector,indicates that so long as those elevators are operated by parties who may profit by evading the provisions of the Act, no system of supervision can be relied on to prevent such practices nor in the light of such past experience, restore the public confidence.

That the government supervision and private operation would require two sets of employees under different control. Apart from the danger of friction between the operators and supervisors, the cost of maintaining two sets of employees where only one would be required under government operation, is a strong argument in favour of our contention.

What occurred after that convention of last year? The government did not give us what we asked, they did not say that they would operate the elevators—and the delegation did not ask the government to buy the elevators but to lease them to carry on the experiment for a few years. The government put on more inspectors, adding at Port Arthur and Fort William 25 additional men. That meant an unnecessary number of men to be paid ultimately out of the price of the wheat. It will be seen at once that under this system two set of men are employed to do the work that one set of men could do. The grain dealer will have his set of men and there is also the government staff, and no matter by whom they are employed, these men have to be paid out of the price of the wheat. Then we have perhaps too many elevators. I do not know whether that statement will be accepted by this House, but that nevertheless is the case. It may not exist to such an extent in the provinces of Saskatchewan and Alberta, but it certainly exists to some extent in Manitoba. An ordinary elevator can take care of about 150,000 bushels of grain during the season. Every little town in Manitoba—take for instance Miami—will have about four or five elevators. Well, if one elevator can take care of 150,000 bushels of grain, the strong probability is that three out of the four or five elevators in Miami last year did not handle more than about 30,000 bushels each. Nevertheless, each one has to keep its full staff of officers and it costs just as much to maintain it as if it handled 150,000 bushels. If that condition of affairs exists, it must add to the cost of transporting our grain, and the way to avoid that would be by government control. If we had government control, we would have just sufficient elevators in one town to take care of the grain shipped from that town and just sufficient men employed to take care of these elevators. Every one who has lived in the western provinces knows how the business is done. A farmer comes in with a load of grain.. If there are five or six elevators in the town, there are five or six men on the street. They run out to meet the farmer. They jump on to his wagon and make a grade; and 90 times out of a 100, the grade which the first man puts on the wheat is the grade that goes,

and the price which the first man offers is the price that goes. Only about two years ago, I believe there was a pooling system, and one of the results of this conference was to do away with that system. If we have in all these towns too many elevators and too many men employed, we are put to too much expense and we can lessen that expense by having one control of the wheat, by having a man to weigh and grade and ship our wheat, who has absolutely no interest in it. To-day a man takes the wheat off the farmer's wagon at a low grade. Perhaps he pays the farmer for grade three. Then he mixes that wheat with other wheat grade number one or two, and sells it for grade number one. It makes of course quite a difference to the farmer whether he gets paid for grade one or grade three. In that country we get very little number one hard. The great bulk of the grain last year was number one northern or number two northern.

Let me give an illustration of this taken from the United States, because I believe the same condition exists in Canada as exists on the other side. In the state of Dakota the farmers, believing that something was going wrong in connection with the milling of their wheat, appealed to the Bankers' Association and that association appointed five bankers, prominent men—and no doubt considered by the farmers reliable men—and sent them to Duluth to take charge of an elevator for three months. I wish to place on 'Hansard' what these men discovered, as I believe similar conditions exist on this side. They took charge of this elevator and they bought:

99,000 bushels of No. 1 northern.
141,000 of No. 2 northern.
272,000 of No. 3 northern.
201,000 of No. 4 northern.
116,000 of no grade.
59,000 rejected.

That is what was shipped into this elevator at Duluth. What came out:

196,000 No. 1 northern.
467,000 No. 2 northern.
215,000 No. 3 northern.

How much number four northern? How much no grade? How much rejected? Absolutely not a bushel. Not a bushel of these three last grades went out of this elevator. There was on hand 12,733 bushels. This with the amount shipped out, equalled the amount taken in. These bankers signed their names to the report they made in connection with that elevator for three months. That same condition of things exists on this side and will continue until this government takes some means whereby we can establish the identity of the grade of our wheat from the time it leaves the farmer's wagon until it reaches market. Those who were here in 1906 will remember that up in the Agricultural Committee, there was an agitation, and this government was induced to appoint a commission of three men, consisting of Mr. Millar, Mr. McNair and Mr. Goldie. What were they asked to do? They were asked according to their commission:

To take into consideration all or any matters connected with the Inspection and Sale Act and the Manitoba Grain Act; and in connection therewith have power to visit the grain growers, the elevators all over the great wheat-growing regions, the methods of handling the grain at the various stations, farmers' elevators, as well as companies' elevators, the distribution of cars.

And right here there is something I forgot to mention. These farmers, by their co-operation, have been able to secure the privilege of loading their grain direct onto the cars, and secure a more equitable distribution of cars. But our grain dealers, who are so mightily interested in the farmers, made a tremendous effort last year to take away this privilege from the farmers. The farmers, believing that, though the system may not be perfect yet it is the best we have ever had, put up a determined opposition and insisted that the present system of the distribution of cars should be maintained. They got another very important improvement, in relation to the transportation of coarse grains, which were carried at a higher freight rate than wheat, and on which they got a reduction. This was a very important concession, and made it possible to ship the coarser grains in many cases where it would otherwise have been impossible.

To take into consideration all or any matters connected with the Inspection and Sale Act and Manitoba Grain Act, and in connection therewith shall have power to visit the grain growers, the elevators all over the wheat-growing region, the methods of handling the grain at the various stations, farmers' elevators as well as companies' elevators, the distribution of cars, methods of the grain dealers in Winnipeg, Toronto and Montreal, and the system of government inspection and collection of fees, selection of grades, and the methods of handling the grain at Fort William and Port Arthur, at the lake ports, at Montreal, St. John and Halifax, and also the condition existing as to the manner of handling the grain upon its arrival in England.

That was pretty broad. If these men were competent,—I have no reason for saying they were not—and if they spent the necessary time in their work, and did their work efficiently, then this report ought to have some weight with this government and with the country. I shall read but little of the report, but I desire to take a few sections of it:

Proceeding to Fort William and Port Arthur, we inquired into the operation and status of the terminal elevators there, and then followed the course of the grain to the

Georgian bay and Lake Huron elevators, investigating the system of handling, binning, storing and weighing of the grain.

Sittings were held in Toronto, Kingston and Montreal, and after considering the marketing and the handling of grain at those points, we returned to Winnipeg via Buffalo, Port Huron, Chicago, Minneapolis and Duluth, having conferences at those places with inspectors, weighmasters, elevator operators and other persons in the grain trade, for the purpose of comparing our system of handling grain with the systems in vogue in the United States. We wish here to acknowledge the many courtesies extended to us in these cities, and to express our appreciation of the assistance afforded us.

During our eastern tour, we were in communication with the Grain Growers' Associations of Manitoba, Saskatchewan and Alberta, with reference to places and dates of meetings in those provinces.

I would particularly call attention to the next quotation:

The private corporations operating the terminal elevators at Fort William are composed largely of the shareholders, officers and directors of grain firms and country line elevator companies in Winnipeg, and as such having a direct financial interest in much of the grain passing through their elevators at Fort Wiliam.

That is, a firm might control the grain from the time it left the farmer's wagon through the initial elevator terminal and transfer elevator.

Regarding the operation of these elevators in general it is very difficult, and in fact impossible, for a commission following from public sittings and inspection of the elevators to determine whether they are being operated strictly according to the provisions of the Manitoba Grain Act and the Inspection and Sale Act, but from the evidence received in Ontario, and from samples submitted to us there, and from samples taken directly by the commission from arrivals at bay ports, it is quite clear that there is not sufficient supervision or control of the cleaning of grain at Fort William. There is a very general complaint throughout Ontario that they do not get the regular grades of Manitoba grain, of wheat especially, in as clean a condition as is called for by the inspection department. We also found from examination of arrivals in Great Britain that the grain as received there contains too great a percentage of foreign matter. It is quite evident to us that there should be a complete supervision of the cleaning operations of these elevators. . . .

To Kingston and Montreal we find that the weights are much more regular and closer to those given by Fort William and Port Arthur. At Buffalo, from statements issued by the Buffalo Chamber of Commerce Weighmaster, we find that in nine out of the past ten years Fort William and Port Arthur shipments have shown a surplus at this point on the grain weighed in by this weighmaster, but even there we find some very large individual overages and shortages. The shipments to the Georgian bay and Lake Huron ports show a heavy shortage, and it seems to us advisable that a special weighing department should be created.

This is a very important matter, and my hon. friend (Mr. Lake) may deal with it when he speaks.

This would indicate that the weighing is very irregular, and it seems to us advisable that a special weighing department should be created. . . .

As our whole system of inspection and the handling of grain under the Inspection and Sale Act and the Manitoba Grain Act depends upon the forwarding of our grain through the channels of transportation to final destination with identity of grade preserved, it seems to us that the system is imperfect, owing to the fact that east of Fort William there is no control whatever of grain going forward under government inspection certificates. As it is of the utmost importance when the trade is doing business on the western inspection that lots of grain so bought in the east or in foreign countries should go forward the exact grade and in the condition in which it leaves Fort William and Port Arthur, we would therefore suggest that all public elevators which handle grain grown in the Manitoba inspection division, east of Fort William for storage or transhipment should be placed under restrictions similar to those of terminal elevators in the Manitoba division as to licensing, bonding, binning and weighing of grain.

A gentleman from the east said to me the other day—and I believe that when he gives this question further study he will change his opinion—that he thought I ought to stop at the Fort William and Port Arthur and not include these transfer elevators. But we miss the point if we do not include all these elevators in the great system that our farmers are trying to carry on to-day of having their grain placed on the market.

Some hon. members may say that the farmer is satisfied with the supervision given. With the addition of these twenty-five men at Port Arthur and Fort William, it may be that some of our farmers are satisfied in the meantime. But I have a letter from the Interprovincial Association, dated January 30, 1909. The writer says:

We take the stand that the Dominion government should acquire, either by purchase or lease, the terminal and transfer elevators, and operate them in the public interest. The government, at the conference, led as to understand that they would not acquire the elevators, but that they would establish a system of supervision. Our reply to this was that no system of supervision would guard grain in transit through those elevators when they were operated by the grain trade.

That should be manifest to any business man in this House.

I believe the government has established a system of supervision this session as perfect as they can make it, yet the condition of grain shipped out of the terminals does not seem to be any better.

And they give the evidence, which is worth paying attention to.

An Ontario miller purchased two cars of 1 Northern wheat shipped out of one of the private terminal elevators at Fort William this month. Samples of the car were sent on arrival to the seller, and then presented to Mr. Horn. He inspected one sample 2 Northern and the other 3 Northern. Both cars carried a government certificate for 1 Northern ex Fort William. This will indicate to you to some extent the situation of the terminal. To those who have given the matter the most earnest consideration, it is quite clear that nothing short of the terminals being taken out of the hands of the grain men will be satisfactory.

Only government operation and government control of our wheat from the time it leaves our wagons until it reaches the British market will bring about the result we have the right to desire to reach in connection with the selling of wheat.

Now, Sir, I had no idea of taking up so much time with this question, but as I said in the beginning, I have no apology to make, for the governments of this country will very soon have to recognize and deal with this question of elevators. The elevator is the proper way of handling wheat. We have the privilege of loading wheat directly on the cars; we have our car platforms all over the country. But the most convenient way to transfer our grain is to transfer it through these elevators.

There is another point that I forgot to mention, and I will mention it now, because I think it will give some information to this House of a useful character. As a matter of fact we only shipped about 78,000,000 bushels of wheat last year, and we have in this country internal and transfer elevators to the capacity of 75,000,000 bushels. We do not need as much elevator capacity as we can grow grain, that is self-evident to anybody. I want to say that these terminal elevators at Fort William and Port Arthur, with the exception of the elevators owned by the Canadian Pacific Railway Company, are owned and operated by private companies. The Canadian Pacific Railway Company has three elevators at Port Arthur and three elevators at Fort William, with a capacity of 7,777,700 bushels. At Keewatin, the Lake of the Woods Milling Company has one elevator and the Lake of the Woods Manufacturing Company has one. At Port Arthur, Joseph G. King & Co. have a terminal elevator. There we have five elevators with a capacity of over 13,000,000 bushels. The Canadian Northern has two elevators at Port Arthur with a capacity of over 7,000,000 bushels. These are terminal elevators. Then we have transfer elevators, and there are more of them than I supposed. At Kingston the Canadian Pacific Railway have an elevator of the capacity of 500,000 bushels, the Montreal Transportation Company have one with a capacity of 761,000; James Richardson & Son have one with a capacity of 235,000, or a total of 996,000 bushels. Then the Grand Trunk—I am not giving all the figures—at Collingwood, Depot Harbour, Meaford, Midland, Prescott and Tiffin have seven elevators with a capacity of 7,000,000 bushels. Of eastern transfer elevators, there are three at Montreal with a capacity of about 2,500,000. The Canadian Northern has at Quebec four elevators with a capacity of about 3,000,000. The Canadian Pacific Railway have an elevator in St. John with a capacity of 1,000,000. The Intercolonial has one at St. John with a capacity of 500,000; one at Halifax with a capacity of 500,000; total, three elevators with a capacity of 2,000,000. Now, we have in Manitoba 689 elevators with a capacity of over 20,000,000 bushels; Saskatchewan has 615 elevators with a capacity of about 18,000,000 bushels; Alberta has 109 elevators with a capacity of 4,000,000 bushels, totalling over 43,000,000 bushels. Adding the Ontario terminals with a capacity of over 20,000,000 bushels, we have a total capacity in the western division of 63,190,000. Adding those in the eastern division we have, as I have said, a total capacity of 78,000,000 bushels.

When we consider the amount of capital that is invested in these elevators, is it not about time that we had some better system of running the business? Does anybody in this House pretend to tell me that the manufacturers or the railway men would conduct their business in this way? What have the manufacturers of this country been doing for years in order to meet competition? They have tried to manufacture with less expense; they have tried to get better results from the labour employed, and we find combinations formed. We find the Massey Company and the Harris Company combined into the Massey-Harris Company. I am well acquainted with these companies and have known them a good many years. They found that by bringing their men and plants together they could manufacture more machinery, and perhaps better machinery, and could manufacture it cheaper. Now, as we grow more grain in the west we shall need more elevator capacity. Wheat is bringing a good price now, and we do not feel the need of these things quite so much. When the farmer gets $1 a bushel for his wheat he doesn't do quite so much kicking if he has to pay a little more. Everybody in the west has been getting that price for the last couple of years. But for many years previously the farmer sold his wheat at a price that barely paid expenses. Who knows but what that condition of affairs may come again. In all probability it will come. Then I say that now is the time, when things are prosperous and prices are good, that we should set to

work and try to regulate and improve the present condition of affairs in the best interest of the farmers. I say that this elevator question is just as important as any railway question, and I ask the government to give the matter their careful consideration. The farmers deserve it. It would pay our great financial centres, it would pay Montreal, St. John, Toronto and every other city to give this matter their consideration. While eastern Canada is a very important part of confederation, everybody admits that if Canada is going to become a great nation it depends upon the west. At some future time we may have to go into mixed farming, and perhaps dairying; but to-day, and for a number of years to come, the great industry of that country will be the growing of wheat. Consequently it becomes of the utmost importance that we should get our wheat to the market as cheaply as possible. Nine-tenths of the products of the soil that we export in Canada go to the British markets. What are we doing as legislators? We are sent here by the farmers to look after their interests, and it is our duty to see that they get their products to the foreign markets under the best possible conditions and at the lowest possible rates. In conclusion, I believe that a tax of 1½ cents or 1¼ cents per bushel for grain going through an elevator would pay the cost of operation, pay the interest on bonds necessary to purchase the present system and also create a sinking fund which would pay the bonds off when they come due. I ask the government to give this matter their very serious consideration, and if they can help the farmers in any way they will not only be benefiting them, but the whole country.

Mr. R. S. LAKE (Qu'Appelle). As the hour is getting late I shall not trespass long on the patience of the House. I feel that my hon. friend from Souris (Mr. Schaffner) has dealt so exhaustively and with so much ability with this subject that there is very little to be added in favour of the motion he has placed on the Order Paper. Let me say first of all that it is universally admitted that it is a matter of the very first importance that the grain grown in the northwestern part of Canada should be carried to the point of debarkation in as nearly as possible the same condition as it was grown by the producer. After it has received the government inspection, been graded by the government and received the government certificate there should be no tampering with the grain. As a matter of fact I think it will be conceded that this has been the aim of the legislation in connection with the grain trade for many years past. All grain for export has to be examined by a government official whose headquarters are at Winnipeg and graded by his inspectors. It is of the utmost importance that the certificate which these inspectors give should command the respect and confidence of the buyers in the great markets of the world and that these certificates should be accepted by them without any demur whatever. Under the present system government-control is actually effective only until it reaches the terminal elevators at Fort William and Port Arthur. After the grain arrives at these terminal elevators the government-control, in so far as the evidence before us shows, is no longer effective. The evidence which has been placed before this House in the report of the Royal Grain Commission and in the report of the conference with those gentlemen who assembled at the invitation of the Minister of Trade and Commerce last year and gave evidence before him, shows that there is a weakness somewhere and that a great deal of the grain, after reaching these terminal elevators and after having received the official stamp of the government, is tampered with before it is placed on the markets of the world. According to the evidence which my hon. friend from Souris gave with regard to it, the system at the present time, the system which was elaborated last year and which entailed the employment of a large number of official inspectors, it has been found to be defective and the manipulation of grain is still going on after it has been inspected by the government. I have not yet seen any report by the inspectors of the government in regard to the way in which this special inspection is working out, but I think it could be readily understood, quite apart from the evidence which we have already had to support that view, that it is quite impossible that it can work out as satisfactorily as a complete system of government operation would. If the terminal and transfer elevators were all in the hands of great transportation companies and were kept under the control of their officials the situation would not be nearly so bad as it is at the present time, because the transportation companies would have no particular interest in allowing the grain to be tampered with. In fact, their interests would be the other way. But the tendency, of late years, has been for these terminal elevators to pass into the hands of large private corporations. It is perfectly obvious that a careful and judicious system of mixing may be of immense benefit to the exporters if they succeed with that pernicious system. My hon. friend from Souris has given a concrete instance of the manner in which that is worked out in connection with the terminal elevators at Duluth. It was found that grain which was purchased by the exporters there at low values, being grain of low grade, was so judiciously mixed with smaller proportions of grain of high grades that it was graded out at a considerably higher figure than it was graded in. The profits on these

transactions, lasting over a period of three months, must have been simply enormous to the exporter. These profits were absolutely illegitimate and contrary to the spirit and intention of the laws of the country. That must mean a loss to the producer in two ways; in the first instance, because he is unable to get the best price which his grain should legitimately command, and, secondly, because, by this system of mixing, the general standard of the grain is bound to be lowered to a certain extent. The purchasers in the great markets of the world and in Great Britain especially will find that they are not getting the grain which they buy up to the standard which they have a right to expect and which they should receive in view of the fact that it has received the certificate of the government inspector. I contend that no system of inspection could guard against this system of mixing.

There is a further loss involved in the present system, a loss which was referred to briefly by my hon. friend from Souris. It involves the employment of a double system of officials. The owners of the elevators themselves have to employ one set of officials for the purpose of operating their elevators. The government has to employ another set of officials, probably very nearly as numerous as the officials who are operating the elevators, in order to supervise the operation and to watch the grain from step to step as it passes through these elevators. There is no need whatever for two sets of officials. Government operation would do with one of these sets of officials. The government operators themselves could attend to the inspection and that would mean an immense saving to the producer of the grain, because, after all, the amount which is paid for the operation of these elevators and for their inspection has ultimately to come out of the value of the grain itself. That is a proposition which, of course, will be universally recognized. So, the fact of having two sets of officials only means so much loss to the producers. In addition to that, the fact that the terminal elevators are passing into the hands of the large corporations who are themselves exporting grain and members of the Winnipeg Grain Exchange, which is known all through this country as a wealthy and powerful association, militates against the facilities which are given to the independent buyers for shipment through the terminal elevators. I think that also would be quite clear to the members of this House. The fact that the large elevators are in the hands of large corporations who are themselves purchasing grain, dealing in it and exporting it, means that they are not likely to give the same facilities to independent buyers as would be given under a system of government operation when naturally the government operators would give the same facilities to all no matter whether they were the wealthy and influential members of the Winnipeg Grain Exchange or whether they were the smaller and more struggling concerns known as the independent buyers. The independent buyers have been of immense benefit to the grain producers of the north west. In my opinion their action enormously increased the value of the grain to the producer by giving really effective competition as against the members of the Winnipeg grain exchange who at one time though comparatively small in numbers, regulated, very much to the disadvantage of the farmers, the price paid for grain for export. Government operation would make it absolutely certain that an independent buyer would be able to get all the facilities he required for the export of grain, and so enable him to stay in the field against the grain buying corporations. Another question which has quite recently come up, and which I think points to the advantage and the necessity almost of the government operating these elevators, is the question of weighing. Circulars are now being sent out by the Winnipeg grain exchange stating that a new form of bills of lading has been adopted by the Dominion Marine Association, and under these bills of lading the lake boats refuse to be responsible for more than a very small shrinkage in the weight. It is pointed out that the government weigh master weighs the grain into these boats but that the grain is weighed out of these boats at the various transfer elevators by men employed by the different elevators and not by employees of the government. If you extend the system of government operation not only wouid the grain be weighed into the boats, but it would also be weighed out by government officials. If the Dominion Marine Association is allowed to enforce these bills of lading, it is stated that the Winnipeg Grain exchange and all grain dealers will have to make a deduction from the export price of the grain so as to ensure themselves against losses. That reduction, of course, must come out of the pockets of the unfortunate producer of the grain who will not only have to pay for the operation of the elevators and for the inspection at the elevators but who will also have a fine levied on him to ensure the exporters against shrinkage. Only within the last few weeks we have seen that a further increase in grain rates has been made by the government to meet the additional cost of the inspection provided for last session of parliament. To my mind, and I think to the mind of any one who studies the question, government operation is the only possible solution which is likely ever to prove satisfactory both to the producers and to the exporters. I think

I have said enough to prove the first part of the resolution, that the present system is detrimental to the western grain producers. The second part of the resolution reads:

That the government should take immediate steps to operate terminal elevators at Fort William and Port Arthur, and the transfer elevators between these terminals and the Atlantic sea-board.

I take it, that we are first likely to be met with objection on the score of expense, but that objection can only be urged by those who have not closely studied the question. To my mind there will be no expense whatever incurred. The fees charged for having grain inspected by the public inspectors usually meets the whole cost of that inspection so far as the western part of the inspection is concerned. In addition to that there will be the cost of operating, but that comes out of the grain itself now, and it will so continue if the government take charge of the operation. The government will still charge probably very much the same fees which are now charged by the private corporations, but the cost of inspection will be saved. The system of government operation should be and would be self-supporting, and would be no charge whatever on the country.

A second objection which may be urged by the government is the old stock objection, the question of government ownership. In this connection I would point out that the government already is the owner of a transfer elevator at Port Colborne and as the proprietors of the Intercolonial Railway, they own elevators at some of the eastern ocean ports. In addition to that I would point out that through the Prime Minister the government have made a definite promise when the Hudson Bay Railway is completed the government will build and own and keep under their own ownership the terminals and the elevators which will be erected at the Hudson Bay port. The Prime Minister, as it will be clearly remembered, made a great speech at Niagara in the early part of the recent campaign That speech was considered and treated by speakers throughout Canada as the great exposition of the policy which the government was prepared to carry into effect if they were returned to power. It has already been quoted in the House by the Minister of Railways and Canals (Mr. Graham) as a statement of what the policy of the government will be in one respect, and I have no doubt whatever that it will be confirmed by other members of the government as an exposition of the government's policy in regard to the ownership of terminal elevators at the Hudson's Bay port. Speaking at Niagara on September 16, 1908, Sir Wilfrid Laurier is thus reported in The 'Globe': Speaking of the Hudson's Bay railway, he said:

The government will build the railway or rather somebody will be entrusted with the building but whatever we do, all the terminals and all the elevators shall be built by the government and retained, under all circumstances, by the government so as to ensure the largest measure of benefit possible to the Canadian people in the northwest provinces.

There is a most definite and distinct promise of government ownership and operation of the elevators which are to be constructed on the shores of Hudson bay and so the Prime Minister and head of the government having adopted the principle of government ownership in connection with terminal elevators at one ocean port, surely he cannot see any insuperable difficulty in adopting the same principle in regard to terminal elevators and transfer elevators at other ports. It would be only an expansion of the system which they themselves proposed of their own volition to carry into effect in the Hudson bay, and it would certainly be an anomaly to have the government adopting one system on the Hudson bay and a miscellaneous series of systems in other parts of the Dominion. There would, I think, be no objection on the part of the present elevator owners. We had that from the mouths of some of them who gave evidence before the Minister of Trade and Commerce at the conference which took place last year. The great transportation companies, I think, would actually welcome the government coming in and operating their elevators. Their great fear in connection with this increased system of inspection was that the dual system of control would probably be an obstacle in the way of the efficient and speedy operation of the elevators. I was personally told by a representative of the railways who was then present that he would be very glad to see the government step in and operate all these elevators so long as they did it efficiently, and I think there ought to be very little difficulty in having an efficient administration at any rate of an elevator system by the government. A gentleman who attended that conference representing the Winnipeg grain exchange and also representing the owners of some of these private-owned terminal elevators at lake ports, stated that there would be no objection so far as he could see to the government taking these elevators over and operating them; in fact the impression made on my mind by his evidence was that these private corporations would welcome government operation. I am quite confident, to sum up this matter, that there would be no objection to it on the part of the trans-

portation companies and there should be no objection on the part of the grain exporting companies who intend to do a legitimate business, and the objections of those who do not intend to do a legitimate business I do not think should be considered. The action called for is the corollary of the position which is taken by the government in the matter of grading and inspection, it is the logical sequence to the inspection by the government of all grain, and the granting of government certificates, that the grain should remain under the absolute control and in the hands of government officers so long as it remains within the borders of the Dominion and until it is placed on the ocean-going steamers. That seems to be the logical sequence of our system of grading and certificating grain.

I believe, as I have said that the whole business would be self-supporting. It would cost no more than the present system, in fact it would be a less costly system as it would be all under the government operation and the fees charged at the present time would more than cover the whole cost. No burden whatever would be placed on the government in carrying the system through.

Mr. D. B. NEELY (Humboldt). Mr. Speaker, I am sure that all members of the House appreciate the very great importance of the subject that has been brought to our attention by the hon. members for Souris (Mr. Schaffner) and Qu'Appelle (Mr. Lake). We are aware that the grain question is of prime importance to the western Canadian farmer. Whatever other products may be raised, we must all recognize this fact that wheat is, par excellence, the product of western Canada. We are all aware of the enormous amount to which the production of grain, and particularly of wheat and the coarser grains, has increased throughout the three prairie provinces. In the province of Saskatchewan, from which I come, the production this last year was in round numbers over 100,000,000 bushels of coarser grains, of which over 50,000,000 bushels was wheat. In Manitoba the amount was somewhat smaller. In Alberta the grain growing industry has not been developed to the same extent, but the amount each year is rapidly increasing. We therefore can all appreciate the great importance to the western farmers of everything which has any bearing on the price of their chief commodity. I have before me some statistics furnished by the Department of Trade and Commerce, in its weekly report of March 15, 1909, which show how rapidly the production of grain is increasing in western Canada. For the six months ending in February of this year, from September, 1908, to end of February, 1909, the total amount of grain received in the terminal elevators at Fort William and Port Arthur was something over 60,000,000 bushels. For the same period in 1907-8 the amount was a little under 40,000,000 bushels. So that in one year alone, we have increased the amount of grain shipped in these corresponding periods of six months 50 per cent.

Of course anything which affects the price of wheat must necessarily be of great interest to the western grower, and any movement made in this House or outside it for the purpose of procuring to the western farmers a proper price for their grain must have the cordial sympathy and support of this House, especially of representatives from the west of Lake Superior. There is equally no doubt that the farmers of western Canada are not content with the present conditions surrounding the grain trade, not only as regards the export of grain, by the terminal and transfer elevators at Fort William and eastwards, but also as regards the purchase of grain from the farmers' wagons. The greatest loss to the western Canadian producer does not come from the operations of the terminal elevators at Fort William and Port Arthur and the transfer elevator further east but from the very great spread between what are commonly known as track and street wheat. Ever since our farmers have had the privilege of getting their own cars and shipping direct their own wheat, a condition prevails under which the small farmer, who is compelled to sell by the wagon load on the street, gets a very large margin less than the farmer who loads his own car and ships direct to the terminal elevators. The reason given by the elevator companies for this disparity is the great difficulty they experience in getting sufficient cars from the transportation companies to ship out the grain when they want to ship it. They say that when they purchase a wagon load, they do not know when they will get a car to ship it in, and for this they blame the car distribution clause of the Manitoba Act. Therefore, they say, they must sell for a future market and not the market that obtains at the moment, and for that reason have to allow a reasonable spread between the price of street wheat and that of track wheat. To my mind the greatest loss that comes to the farmer does not come from the operations of the terminal or transfer elevators referred to in the resolution, but from the very great spread between the price of the street and the track wheat in the country town where the farmer brings his wheat either for sale or shipment, and I cannot understand why this resolution did not include a recommendation that the government should also take over the interior elevators. If they are going to do the thing at all, why not do it entirely? Therefore, while my sympathy is strongly with any movement tending to enhance the price of wheat to the farmer and give him proper remuneration for his toil, I do not think that the

resolution submitted by my hon. friend from Souris (Mr. Schaffner) would by any means combat all the evils, or even the most important, which the farmer has to contend with. I am quite aware that the Grain Growers' Associations of Manitoba and Saskatchewan and the Farmers' Association of Alberta have made certain representations to this government. One of these is that the government should take over the terminal elevators at Fort William and Port Arthur and the transfer elevators further east. So far as the principle involved is concerned, I have no serious objection to offer except this. Canada is a young country and these large elevator interests have vested rights in this country. They have established themselves at Fort William and Port Arthur, they have established transfer elevators further east, and I would like to call the attention of the mover and seconder of this resolution to a series of practical difficulties. They have established these transfer elevators, and I would call the attention of the mover and seconder of this resolution to the fact that there is a serious practical difficulty in the way. Suppose the government did accept this proposition, what should they do? Should they lease these elevators? The owners might not be willing to lease them. Should they expropriate them? That would be a very radical measure to take. Suppose they were to construct opposition terminal and transfer elevators, how would the capitalists all over the world, to whom a young country like Canada must look for necessary capital to carry on great industrial operations, view such a step on the part of the government? I am not objecting to this resolution now, but I am calling attention to this practical difficulty, which, apparently, these hon. gentlemen have not thought of, which, at least, they have not discussed.

The hon. member for Qu'Appelle (Mr. Lake) stated that the leader of the government had told the people that when the government of this country built the road to Hudson bay it was their purpose to own and operate the terminals there. That is a very much simpler proposition. There are no terminal elevators there now, and so there will be no vested interests established through the investment of private capital to be affected by these governmental terminal elevators. It would be quite reasonable to ask the government to undertake such a work, and one which we of western Canada are glad the leader of the government has promised the people of the west he will undertake in the immediate future. It strikes me as a very peculiar thing that according to the statements of these hon. gentlemen no system of government control or supervision of these terminals and transfer elevators could successfully meet the difficulties of the western Canadian farmers who think there is manipulation of the grain passing through them. We had a case of an investigation of the practices of terminal elevators at Duluth, and how these elevators manipulate the grain that came from the producers of the western states; so that, whereas a large amount of wheat of low grade went into these elevators, when it was shipped out all these low grades were found to have disappeared and nothing but high grades were shipped. Surely this House is not asked to believe that these elevators were under a system of government supervision such as the terminal elevators at Fort William and Port Arthur? I am willing to admit that the farmers of the west have had serious objections to these terminal elevators. One of the strongest objections is that the corporations that operate the majority of these terminal elevators are those interested in the grain trade further back—that is men who are back of the corporations hold elevators at different points along the great lines of railway throughout the three provinces. The contention of the farmers is that on account of these grain dealers having control of the terminal elevators they are in a position to manipulate the grain that passes through and to carry on practices similar to those described as having been carried on in the terminal elevators at Duluth. I admit that the evidence taken before the Grain Commission appointed by this government in 1906 did give support to that suspicion in the minds of the western Canadian farmers. As a result of that commission and its report, and as a result of the inquiry and report made last session, the Department of Trade and Commerce, I understand, has increased the number of officers in the terminal elevators at Fort William, I believe by twenty-five men. Yet the hon. member for Souris (Mr. Schaffner) tells us that the management of the grain that passes through these elevators is not satisfactory; that wheat shipped out of lots inspected by the grain inspector at Winnipeg, and graded No. 1 Northern, were received at certain points in Ontario and were found to be only No. 2 or No. 3 northern. I cannot understand how such a thing could possibly occur, if the inspectors at Fort William and Port Arthur are doing their work as it ought to be done. If these things are true, to my mind there should be a thorough investigation, and if these men representing the government are doing their work in an unsatisfactory way, it is time we had a change in the government officials at these points. There might be an isolated instance, but if this is a common occurrence it is time for an investigation into the methods of our officials. While I am not opposing this resolution, I think that the present system at Fort William and Port Arthur ought to be given a fair trial. It has had just one year of

operation, and we cannot very well judge of a system of this kind as the result of one year. I think we should be careful in adopting a resolution of this kind, one which, if carried out, entails very serious practical difficulties. Especially should we be careful about advocating this system before we have given the existing system of government supervision a fair trial. I maintain that that system has not had a fair trial; one year is not a sufficient time, and that an isolated instance such as given by the hon. member for Souris when he referred to this grain shipped from the elevators in the month of January and found to be of lower grade is not a sufficient reason why the government should take this important step.

Now in 1906 this government appointed a Royal Commission to investigate the grain trade. Here I want to say that we must not be led by the remarks that have been made here to-night in support of this resolution, to think that all the farmers of the west are agreed on the proposition that the government should own and operate the terminal elevators at Fort William and Port Arthur and further east; because, as far as my opinion goes, there is a great diversity of opinion on that question. I want just to read from the last page of the report of the Royal Commission on the Grain Trade of Canada to confirm what I have said; I want to read the conclusions that were arrived at after thorough investigation of this subject by the Royal Commission. After stating that they found the terminal elevators at Port Arthur and Fort William were largely in the hands of private companies, this report goes on to say:

8. We believe the operating of terminal elevators by private companies under the present regulations would be detrimental to the interests of the trade, and would tend to destroy public confidence in the results obtained therefrom. Our reasons for believing this are, that the elevator companies (if they so wish) would be able to manipulate the grades for their own benefit and not to clean grain up for the dockage set by the government inspector.

9. The fact that an elevator is owned and operated by a railway company does not with the present regulations, in our opinion, necessarily ensure protection to the public. We would like, however, to see the elevators at present owned, or to be owned, by the railways operated by them.

10. To prevent the evils that are made possible by the operation of terminal elevators under the present system, we do not think it wise to advise the government to go to the length of taking over the terminal elevators or of prohibiting persons engaged in the grain trade being interested in such terminals. We believe it is possible to obtain a good service from these elevators under the present ownership by having a more thorough system of supervision and control.

This report is signed by John Miller, W. L. MacNair and George E. Goldie, the three commissioners who were appointed to investigate the grain trade. They went thoroughly into the whole question, and their view is that the radical step—or what seems so to many of us—of the government taking over all the terminal and transfer elevators from Fort William eastward, is not one on which the western farmers are unanimous. This commission also recommended, as you have noticed, a more thorough supervision and control on the part of the government to meet the needs of the grain trade so far as these terminal and transfer elevators are concerned. I may say that as a result of this investigation into the grain trade of the west, and as a result of their report, and the investigation into the report held last year, some important improvements were made to the Manitoba Grain Act, and some amendments were made to the Inspection and Sale Act that met at least a part of the objections of the farmers to the way in which the grain trade had been handled previous to that time. But I am free to say that there are still some serious handicaps on the grain trade in the way in which it is handled from Fort William eastward. One of the things that is harmful to the grain trade of the west and to the producer, one of the conditions that is injurious, is met by the vessels employed in the carrying trade on the great lakes. When they carry grain from Chicago, or from Duluth, or from ports on the American side, they find at those points, established by the grain trade itself, clearing houses where a vessel can go to one elevator, or to two or three at most, and obtain a full cargo of grain. As a result of these clearing houses for documents at those ports on the American side, a vessel can go to one of those ports and take a load of grain in a few hours, not exceeding in any case half a day. What is the condition of affairs at Port Arthur and Fort William? In a place where they have a dozen terminal elevators, in order to get her cargo a vessel has to go from one to another, she has to go around six or seven, or eight elevators before she has obtained her load. That means, not a matter of a few hours, but a matter of two or three days, in many cases; that means a great increase in the cost of carrying this grain, because the owners of these vessels cannot afford, when so much time is lost in loading the grain, to charge the same freight rates from Fort William as they do from corresponding ports on the American side. Now I think the government should require the grain trade that is interested in these terminal elevators at Fort William and Port Arthur, to establish a clearing house for documents whereby a vessel could go to one or two elevators and receive her cargo, and the other elevators interested could use this elevator as a clearing house for the quantity that

they propose to ship. That could easily be done, that would be an easy matter to accomplish, and I think that would remove one of the very serious sources of loss to the producer of western Canadian wheat. Then again the mover and seconder of this resolution have referred to the fact that when these vessels, that are loaded at Fort William and Port Arthur, where the grain is weighed into them by a government weighmaster, reach the Georgian bay and other eastern ports, in many cases very serious shortages are found, and of course the carrying trade refuse to be responsible for those shortages. That again is another slap in the face for the producer of western Canadian wheat. I think there is another instance where the government might do a little something in the interest of the grain trade. It seems to me that if we are to have an effective system, if we are going to have men to weigh out this grain into the vessels at Fort William and Port Arthur, we should also have government weighmasters to weigh this grain into the eastern transfer elevators, and in that way another source of loss to the producer in the west would be removed. In my opinion the grain trade of western Canada is one of absorbing interest and importance, and when we come to consider the amount of grain that is being produced, and that will be produced in those prairie provinces the next few years, anything that will effect a saving to the farmer of a cent a bushel, or half a cent, or even a quarter of a cent, or of a less fraction than that, means the saving of a large sum of money to the people of western Canada.

The farmer works hard, as we know, for his living. He earns his bread by the sweat of his brow, literally, and I maintain that everything that can be done by this government and the House to lighten the burden of the western Canadian farmer, to bring to him a fair and just reward of the toil that is necessary for the production of grain, of wheat, oats and other cereals on our western farms, ought to be done. I am sure that the members of the government who are listening to me do so with sympathetic interest. The farmers of the west appreciate very much what the government have already done along this line. We know that last year, when the farmers interviewed upon this grain question the right hon. the Minister of Trade and Commerce, there were very powerful interests present at that interview, and that these other interests sought in every way possible to influence this government to abolish certain provisions of the Manitoba Grain Act which were in the farmers' interests. I say that it is to the credit of this government that they did not listen to these other powerful interests, but that they listened to the voice of the western Canadian farmers. It would have been a great calamity to the western farmer if the car distribution clause had been altered. I hope the government, even if they do not see their way clear to adopt the resolution of the hon. member for Souris, will manifest a sympathetic interest, as they have done in the past, in the representations made by the people of western Canada in connection with everything necessary to improve and promote the welfare of the grain trade of the west. In conclusion I have to say that I quite agree with the view that government supervision and control should follow the farmers' wheat from the time it is taken off the railway car at Winnipeg or Fort William right through to the Atlantic seaboard. A complete and efficient system of control and supervision should be established, as it has been at Fort William and Port Arthur, in connection with the transfer elevators farther east. If that system is given a fair trial and if it is put into effective working order, if this supervision which has been brought into force as far as the terminal elevators at Fort William and Port Arthur are concerned, is extended to the eastern transfer elevators, so as to see that the identity of the farmers' grain, as it is shipped from his own town, is preserved right through to the Atlantic seaboard, the farmers of the west will be very well satisfied with the condition of affairs that will be brought about by this increased supervision and improved control.

Mr. G. H. BRADBURY (Selkirk). I did not intend to take any part in this discussion and I do not intend to detain the House at any great length at this late hour. I thought when the hon. member for Humboldt (Mr. Neely) rose to address this House that I would have been able to have congratulated the west on being united on this very important question. There is no doubt that this is a very important question to the west and every argument that the hon. gentleman has used here to-night in support of a better system of supervision at the terminal elevators has, I think, been a very strong argument in support of the resolution before the House for government ownership of the terminal elevators. I do not intend to detain the House. Everything I might say would simply be a repetition of what has been so well said by the mover and seconder of this resolution. There is no doubt that something ought to be done to protect the farmer, to make it possible that the grain that he ships from the great provinces of the west would reach the markets of the world in the condition in which it leaves those provinces. The information that we have had laid before us to-night and the information that every man from the west has had time and again placed before him proves conclusively that the grain has been tampered with at the elevators en route to market and that the

grain that leaves the western provinces does not reach the consumer in the British market in the condition in which it leaves. This is a very important question not only for the farmers of the west, but for the whole of Canada. We have the reputation of raising the finest grain in the world, and I believe there is no question that we deserve that reputation. Manitoba and the other two great provinces of the west are producing to-day a sample of grain that has no equal in the world and it is the duty of the government to see that from the time it leaves the farmer until it reaches the consumer in the old land it is not tampered with. In conclusion, I had hoped that the west would be united in support of this resolution. I was a little surprised to hear the argument advanced by the hon. member for Humboldt, and I was surprised that he should desire to throw any obstacle in the way of a resolution of this kind. But, while he did not wish to come out openly and oppose this resolution, he went on to say that what the government had done and were doing was sufficient for the present and that the present system of government-supervision should be given a further trial. I do not know what the government are accomplishing upon these lines, but I say that anything that will improve the condition of the farmer and make it possible for his wheat to reach the markets of the world in a better condition than it does at the present time ought to be supported by every hon. member from the great west. I have much pleasure in concurring in the resolution which has been so ably presented by the hon. member for Souris, and seconded by the hon. member for Qu'Appelle. The information that has been laid before this House ought to convince every man in the House, if it has not succeeded in convincing the hon. member for Humboldt, of the necessity of doing something along these lines. I hope the time is coming when the government will take action. I regret very much that the provincial governments could not see their way clear to do something in the way of taking over the internal elevators. There is no doubt that there have been very serious complaints made as to the manner in which the farmers have been treated by these elevators. But they have, in their wisdom, decided that they have no power to do this and in fact they have stated practically that it belongs to this parliament to take action in this matter. I can only say that I had hoped that the government would have accepted and made this a government measure, and I am sure that every man coming from the west would have been glad to have seen the resolution accepted and put through in that way. I trust that the speakers who will follow me from the other side of the House—because there are a number of them who are better qualified to speak on this question than I am—will support the resolution moved by my hon. friend from Souris and seconded by my right hon. friend from Qu'Appelle.

Mr. W. M. MARTIN (Regina). Mr. Speaker, like other hon. members who have spoken in regard to this subject, I want to state that I thoroughly agree that it is of the utmost importance not only to the farmers of western Canada but also the business men, professional men and inhabitants generally of that western country. If by any legislation that can be passed in this House changing the present method of handling grain, an additional return is obtainable by the producers of western grain, then the whole Dominion of Canada will be benefited. When we consider that the production of grain in the west is only in its infancy and that it is almost impossible to estimate the vast quantity which can be produced in that country, and when we consider that part of that western country is wholly dependent upon the production of wheat and other grain, it must be admitted that this question is of great importance not alone to the people of western Canada but to the people of the east. Now, referring to the question of government ownership which is included in the motion of my hon. friend (Mr. Schaffner) I have to say that taking government ownership as a general principle I am opposed to it. But, if it can be shown that under the present system of government control there is dishonest weighing at the terminal elevators at Fort William and Port Arthur, and that grades are being manipulated, and if these abuses should continue to exist after the system of government control has been given a fair chance I would most certainly support government ownership in the interests of the grain producing industry of the west. I congratulate the hon. member for Souris (Mr. Schaffner) on the manner in which he presented his case to the House, but it does seem to me that he offered no conclusive argument in favour of government ownership as compared with government control. I was not able to gather from the remarks of the hon. gentleman that the defects existed at the terminal elevators of Fort William and Port Arthur, because when he began to find fault with the system he went back to the small country elevators and said that the fault lay there. He spoke of the improper grading of the grain, but where is it graded? So far as I know it is graded at Winnipeg, and I do not see how you can get over improper grading at Winnipeg by adopting a policy of government ownership of terminals at Fort William and Port Arthur. The hon. gentleman spoke of dishonest weights, but I take it that this and other evils are provided against in the amendment to the Manitoba

Grain Act and to the Inspection and Sale Act which were passed by parliament last year. I claim that government control if properly carried out should be as efficient as government ownership, if not more so. Under the present system you have two sets of officials, the government officials and the employees of the terminal elevators, who act as a check upon each other. But if the elevators were owned and operated by the government there would be only one set of officials to weigh in the grain and to weigh it out, so that the present system if properly carried out ought to give us more efficient control than the system of government ownership. I had expected that the hon. member for Souris (Mr. Schaffner) and the hon. member for Qu'Appelle (Mr. Lake) would give us some concrete instances of the success of government ownership, but in that I was disappointed. No doubt there are cases in which government ownership has been a success but there are many instances in which it has been a failure, and if we look at the examples of government ownership in this country we all have to admit that there is not much comfort for us in the prospect. One of the main arguments against government ownership is that it interferes more or less with individual enterprise, and the moment a government steps into that field it is going beyond what is the primary function of government. A government is intended primarily to legislate and to administer; it is not its function to engage in private enterprise. I hold that the system of government control has not yet been given a fair trial because the Act only came into force on the 1st of September, 1908, and only one crop has been handled under it. I would advocate giving that system a fair chance to work out, and if it is not effective no doubt amendments can be made to the legislation which will make it effective. I believe that so far as terminal elevators are concerned, government ownership should only be adopted as a last resort and after it has been demonstrated that government control will not protect the grain producers of the west. The last part of the resolution moved by my hon. friend would seem to be all right if we once admit the principle of government ownership, but, I cannot at all agree with the first part of the resolution which says:

That in the opinon of the House the present system of operating terminal and transfer elevators is detrimental to the interests of western grain producers.

In the year 1906 we had a grain commission consisting of three prominent western men who followed the grain from the time it was harvested and threshed until it reached the Liverpool market, and that commission presented a report to the government. Following the presentation of that report all the grain interests of the west were represented before the Minister of Trade and Commerce, and as a consequence of the conference then held certain amendments were made last session to the Manitoba Grain Act and to the Inspection and Sale Act, all of which amendments were in the interests of the western grain producers. I therefore cannot subscribe to the first part of that resolution which is in reality a criticism of the legislation passed by the government last session, and which legislation, was, I say, in the interest of the western grain producers. I referred a moment ago to the report of the Grain Commission. As I stated that commission followed the course of the grain from the thresher to the Liverpool market. They made certain recommendations to the government, among them the recommendation referred to by the hon. member for Humboldt (Mr. Neely) that they did not believe it would be to the advantage of the grain trade that the government should take over the terminal elevators at Port Arthur and Fort William. At page 9 of their report they say:

Requests were made of us in the country that the elevators at Fort William and Port Arthur should be taken over and operated by the government in view of the fact that so many of them were operated by private corporations interested in the grain trade. We also had a communication from the department, under date January 23, 1907, inclosing a petition of members of parliament addressed to the right hon. the Prime Minister, requesting that we be instructed specifically to inquire into and report whether it is in the public interest that terminal elevators continue to be operated by common carriers or allowed to pass into the hands of or be operated by persons, firms or corporations engaged in the grain business.

In reply to this communication we addressed to the Rt. Hon. Sir Richard Cartwright, Minister of Trade and Commerce, a letter dated February 1, 1907, a copy of which is appended hereto. We can see no reason for changing the conclusions arrived at at that time, and we believe that if our recommendations are carried out they will give to the public the same confidence and protection in the operation of these elevators as if they were owned by the government.

The communication addressed to Sir Richard Cartwright was referred to by the hon. member for Humboldt. The commissioners refer to it on page 19 of their report and say that they had no reason at the time they drew up their report to change their opinion with respect to the government ownership of terminal elevators at Fort William and Port Arthur. That is the view of the three men appointed by the government to investigate the conditions of the grain trade; they reported that they were not in favour of government ownership of terminal elevators and did not think it would be in the

interest of the trade to have the elevators taken over and operated by the government.

As I understand, the main objection that can be raised to the present method of handling the terminal elevators at Fort William or Port Arthur is that except the Canadian Pacific Railway elevator they are either leased or owned by private companies engaged in the grain trade. The element of personal gain, of illegitimate gain in some cases, enters into the operation of these elevators, and if we can get some legislation in addition to what we have, eliminating that element of personal gain, I believe we will go a long way towards securing what is desired as to terminal facilities at Fort William and Port Arthur. The commissioners in their report refer to these elevators being owned in this way and I have some evidence here which goes to show that the grain coming out of the Canadian Pacific Railway elevator and going towards the eastern transfer elevators is in better condition than that from private company-owned elevators. The secretary of the Dominion Millers' Association, under date of January 9, 1909, communicated with the Department of Trade and Commerce as follows:

There is a marked difference in the quality of the grain coming out of privately owned or operated terminal elevators as compared with the Canadian Pacific Railway elevators. Both dealers and millers tell me that the wheat out of the Canadian Pacific Railway elevator is on an average one-half to one cent a bushel, and sometimes the difference is considerably greater, better value than out of elevators owned or operated by companies interested in buying and selling grain. All the terminal elevators except those owned by the Canadian Pacific Railway are operated by men dealing in grain and largely controlled by United States concerns and managed by experts from across the line.

That bears out what I said in regard to private gain entering into the management of the elevators at Fort William and Port Arthur, the evidence going to show that the Canadian Pacific Railway elevator put out their grain in better shape than the elevators operated and owned by private corporations.

To refer again to the report of the grain commissioners, in their letter to Sir Richard Cartwright in the year 1907 they practically bear out what is stated by the Dominion Millers' Association, because they say the terminal elevators would be operated in a better way and more in the interests of the grain producers of the west if they were handled by the transportation companies. Apart from the question of government ownership altogether, there is a method of getting free from this element of personal gain, which will continue as long as human nature exists as it is, for the grain men are not in the business for nothing, they are in it to make as much money as they can. Why should not legislation be passed providing that no warehouse man at either point should be engaged in the grain business, simply make him a warehouse man pure and simple, or instead of that provide that the railway companies must not only build elevators but operate and own them. Take away the element of personal private gain from these elevators, take away from the grain men the gain derived from manipulating the grain in the terminals and I think it will go a long way towards eliminating the difficulties now existing in the handling of grain.

I have referred to the legislation passed last year. I claim that if this legislation is properly enforced under the system of government control, it must remove the difficulties of mixing grades which are alleged to exist at these terminal elevators. For instance, we find in the Act to amend the Manitoba Grain Act of last year, chapter 45 of the statutes of 1908, section 10, the following:

2. Every public terminal elevator warehouseman in the Manitoba inspection division shall receive for storage any grain tendered to him in a dry and suitable condition for warehousing, in the usual manner in which terminal elevators are accustomed to receive grain in the ordinary and usual course of business.

3. Grain so received shall in all cases be inspected and graded by a duly authorized inspector, and shall be stored with grain of a similar grade.

4. No grain shall leave a public terminal point without being officially weighed, unless the owner or his agent orders otherwise.

The Act then speaks of a record to be kept of this grain, and then refers to the preservation of the identity of the grain, the clause reading:

The identity of each parcel or lot of western grain shipped to an eastern transfer elevator shall be preserved, except that different parcels or lots of the same grades may be binned together when there is not sufficient space in the elevator to keep the parcels or lots separate.

8. In no case, whether in a public terminal elevator in the Manitoba inspection division or in an eastern transfer elevator, shall grain of different grades be mixed together while in store.

Provision is also made to prevent the mixing of grain. Also in the Inspection and Sale Act, section 9, there is a provision that the inspector is to have control of the storage and shipping of grain, and shall keep proper records of all grain received into store in any terminal elevator, and the Act prevents the transfer of grain from one bin to another. Then it enumerates the powers which the inspector has with respect to the cleaning of grain in these elevators. So that the provisions of the Act passed last year, if enforced by proper and capable government inspectors would ensure just as good preservation of the grain at these terminals and give just

as much satisfaction as any system of government ownership.

Let me point out that every one in western Canada is not in favour of government ownership of terminal elevators. I do not believe that there is any great agitation among the farmers in that respect, although there is for the government ownership of elevators in the interior. I have yet, however, to find that there is any serious agitation for the government ownership of terminal and transfer elevators. I have here two or three opinions from western men on this very point to which I would like to refer. I have, for instance, the opinion of Mr. John Millar, who was chairman of the Grain Commission, and which opinion he expressed at the grain growers' convention at Weyburn on the 20th of February last:

> The weights both in and out of the terminal elevators had been found to be satisfactory, but the grain going out seemed to contain rather too much extraneous matter as some of the cleaners were not of the best. It was pointed out that there was a tendency for the elevators to go into the hands of private companies who were themselves handling grain and the report of the commission had recommended that these and the transfer elevators farther east should be placed under strict government control. This had been done and he believed the producer now had as much protection as government ownership would give him.

I also have here an opinion on the present situation from the Hon. D. W. R. Motherwell, Minister of Agriculture in Saskatchewan:

> The government control secured over these elevators by amendment to the Grain Act last session by the federal parliament has given the producer practically every safeguard and security in the way of control which government ownership could possibly give.

There are just one or two points to which I shall refer briefly before taking my seat. There were certain arguments in favour of government ownership advanced at the grain growers' convention at Weyburn, which were practically the same as those put forward to-day by the hon. member for Souris (Mr. Schaffner). The first was that government supervision and control is objectionable because you cannot have proper supervision or effective control. But I reply that you would have proper supervision and effective control if the system were properly enforced, as I believe it will be if reasonable time be given the government to work it out.

The next objection is that the warehousemen should have no interest in manipulating the commodity he stores. In that opinion I agree, but I do not agree that to eliminate that interest we require to go the length of government ownership. We can put through legislation which will just as effectively accomplish the same object. Another objection is that manipulation was going on at the terminal elevators before the last change in the Manitoba Act respecting the supervision of binning and is going on still. Well, no evidence has been produced to-night to show that manipulation is going on to-day. I may believe that it is, but before supporting such a radical measure as government ownership, I would require some evidence that these abuses were going on. These are the main objections raised to the present system of government control. At that convention there were many men who were in favour of government ownership of the interior elevators, but no one expressed himself regarding government ownership of terminal elevators to any extent. However the points to which I wish to refer briefly are these. It is said, and I believe truly, that there is a serious shortage in grain shipments going from Fort William and Port Arthur to eastern points, such as Owen Sound and Buffalo and others. It is said that the average shortage during the year 1908, after the grain was weighed by government inspectors, was 44 lbs. per 1,000 bushels from Fort William and Port Arthur as compared with 15 lbs. per 1,000 bushels from Chicago and 10 lbs. per 1,000 bushels from Duluth, and that the total shortage in shipments from these elevators at Fort William and Port Arthur this year amounts to 50,000 bushels. At present the men who ship that grain hold the vessel owners responsible, but the vessel owners claim they should not be responsible, although legally they are, owing to the manner in which the grain is weighed. That surely is a hardship to the vessel owners. I was present at a conference before the Minister of Trade and Commerce, in which the vessel owners, shippers, and grain men from Winnipeg appeared, and all agreed that this grain shortage must be in those elevators at Fort William and Port Arthur. Well, if these elevator companies are getting that 50,000 bushels, they are getting what they are not entitled to. According to the Manitoba Grain Act and its amendments last year, they are entitled to a certain amount for binning and a certain amount for storage, but if they are getting that 50,000 bushels they are getting what does not belong to them. Some amendment should be introduced into the Manitoba Grain Act to provide that the surplus be taken over by the government and thus eliminate the question of personal gain. Another matter is that of screening. Before the inspector in Winnipeg grades a car of grain, he marks it so much dockage, sometimes two per cent, and sometimes more and sometimes less. The grain goes into

the elevators at Fort William and Port Arthur, and is supposed to be cleaned to whatever percentage of dockage was set. The elevator men get the screenings. I have heard the amount estimated last year all the way from 300,000 bushels to 1,400,000 bushels. On these screenings the farmers of the west have to pay freight, and they should not belong to the elevator men, but should go to the producer or at least the producer should be re-imbursed for his outlay in freight for what at present he gets no return. It is of course to the advantage of the warehouse men to take every possible bushel of screenings they can get. I am advised that they sold the screenings last year to one firm at $7 per ton and that firm retailed it at $16 per ton. But take the price at $7 a ton, and on 300,000 bushels, that amounted to $63,000. On 1,400,000 bushels, it would be five times that sum. Some legislation should be passed to the effect that the surplus screenings and grain found in the elevators at any time shall be confiscated and taken over by the government and thus you will eliminate the element of illegitimate gain which these elevators are getting at present.

I desire to refer in closing to what the Inspection and Sales Act provides with respect to the surplus of grain in the terminals. Subsection 7 of sec. 9 of chapter 36 of the Inspection and Sales Act of 1908 says that:

In the month of August in each year stock shall be taken of the quantity of each grade of grain in the terminal elevators.

Why do not they go a step further and say that the grain and the screenings found there shall belong to the government? I believe that these difficulties could be removed by these suggestions, and I hope that at some future day legislation of this kind will be introduced into this House. A very simple amendment would effect it, and I think it would cure a great majority of objections raised to the handling of grain in these elevators. I am as much interested as are the hon. member for Souris (Mr. Schaffner) and others from the west in seeing that a proper system is devised for handling the grain of our western provinces. I am interested in seeing that the producer, no matter how small a producer he may be, gets as much as the market will allow him at the time of sale. I am as much interested as these hon. gentlemen in seeing that no discrimination shall exist between small shippers and large shippers, or, if there is to be an advantage, that it shall be to the small shipper. I believe in the system of government control of these utilities, but I do not believe in the government going aside from its true duty and engaging in mercantile business. I believe that, at least, the government should try in every way to regulate the grain trade of the west before they embark upon the management of terminal elevators and become grain men. As that is my belief, I will move an amendment to that effect, and in doing so I have every confidence that this government—which has been in power since 1896 and under which the Manitoba Grain Act has come into existence and under which the farmers of the west have the right to get cars and ship their own grain—if government control does not prove effective, will be ready to adopt such measures as they deem necessary from time to time to protect the grain interests of western Canada. The amendment I move is as follows:

That all the words after 'that' be struck out, and the following be substituted therefor:

The amendments of last session to the Grain Act whereby all transfer and terminal elevators were put under government control have produced good results. And if, on further experience, it is found that the present system of supervision is not adequate to prevent the undue mixture of grain in such elevators, this House will be prepared to accept such further legislation as may be needed to that end.

In conclusion, I wish to refer to the fact that since September 1, 1908, only one complaint has been received by the Department of Trade and Commerce from men purchasing grain shipped through these elevators, and this in contrast with the fact that many such complaints were received in former years. The complaint referred to was from the Dominion Millers' Association, and I have here a short extract from that complaint. It will be observed that they go so far as to admit that there has been an improvement in the handling of the grain in these elevators, although they state it is not yet all it should be.

While there has been a certain improvement in the grain as it comes from the public elevators at Fort William and Port Arthur since the government took closer control, yet we regret to say that matters are not yet in a satisfactory condition.

If, under the present system, after it has been in existence but a few months the condition of things is better than before, there is every reason to believe that it will still further improve, especially when the system itself is improved as experience may indicate to be necessary.

Mr. SCHAFFNER. Do I understand the amendment to say that the terminal elevators were put under government control?

Mr. SPEAKER (reading):

——all transfer and terminal elevators were put under government control——

Mr. SCHAFFNER. That is not the case.

Mr. JOHN HERRON (Macleod). Mr Speaker, I should not attempt to speak at any length either on this motion or on the amendment, but I wish to put myself on record so that the people of the west may know where I stand on this very important question. I am glad that the hon. member for Souris (Mr. Schaffner) has introduced this motion. I believe that no motion has ever been introduced into this House, no discussion has ever taken place in the House, of greater importance and interest to the farmers of the western prairies than this. I am much surprised at the hon. member for Regina (Mr. W. M. Martin) stating that the terminal elevators are now under government control. This is the first time I have heard such a statement made. I have always understood that there were government inspectors to supervise the taking in and shipping out of the grain, but so far as general government control is concerned, the idea is entirely new to me. The principal argument put forward by the hon. member on the other side against the government taking actual control of the terminal and transfer elevators seems to be that vested rights stand in the way. Well, I do not know what this House may think of that, but my personal opinion is that, if private corporations invest money in terminal elevators and they are not doing what is honest and just by the farmers, the government is perfectly justified in taking control, or in expropriating, or going into competition with them. And it is the general opinion of the western farmers that they are not getting justice in the terminal elevators. I have not had much experience in the handling of grain myself, and do not pretend to be an authority on the subject, but those from the west who were in the House a year ago, and who took a deep interest in the matter, know what went on before the Department of Trade and Commerce when representations were made by the delegation sent here from the Western Farmers' Associations. That delegation consisted of members from each of the provinces appointed by the different associations, and represented the entire grain growing interest of the three prairie provinces. No one could listen to their arguments without coming to the conclusion that it would be of great advantage to the western grain growers if the government would take over these elevators and control and operate them. I might suggest that, if vested rights are going to be a great obstacle in the way of taking control of the elevators at Port Arthur and Fort William and the transfer elevators further east, the government will have an opportunity to experiment on the Pacific coast. I understand that meetings have been held in Alberta and Saskatchewan recently which have taken up the question of shipping grain to Europe by the Pacific coast. There are no elevators there as yet, so there will be an opportunity for the government to step in and experiment with government-owned elevators. From what I have heard from the farmers who laid the case before the Minister of Trade and Commerce representing the government, I am led to believe that, if the government could see their way clear to take over these existing terminal elevators, they would be rendering one of the greatest services ever rendered to the farmers of the western country. They talk about one or two cents a bushel being taken from the farmers by the manipulation of wheat in these elevators. I have heard it stated that in many cases they take as high as seven cents a bushel from the farmers, at least the farmers think so, I do not know whether that is the case or not.

Mr. NEELY. Does the hon. gentleman refer to the terminal elevators?

Mr. HERRON. Yes, that they are making an undue charge at the terminal elevators at Port Arthur and Fort William; in fact it is claimed that they are making almost double the charge they should make, at the terminal elevators in particular. The grain pays for all this. This House need not think that if the government take the action suggested by the resolution they would have to pay the expense, because the country would not be out by it. The grain is going to pay for all the handling, and even if the government did step in and operate the elevators five years as an experiment, no doubt some arrangement could be made by which the government would not be out a cent of money. I think this resolution is a step in the right direction, and I sincerely hope the government will accept it, and make an experiment of controlling and operating the terminal and other elevators on the great lakes.

Mr. NESBITT. As the hour is late, I beg to move the adjournment of the debate.

Motion agreed to, and debate adjourned.

BUSINESS OF THE HOUSE.

Mr. FIELDING. There are one or two motions on the Order Paper that I propose should be called, in case any hon. gentleman wishes to drop them. For instance, No. 4—the hon. member for Wentworth (Mr. Sealey) is not here, but I understood he wished to drop the resolution, in order that he may bring the matter up in another way.

On the order:

That in the opinion of this House, so long as the Canadian tariff affords, incidentally or otherwise, a considerable degree of protection to manufacturers, some protection may fairly and properly be afforded by our tariff to Canadian agriculturists and stock raisers upon hogs, hog products, garden vegetables and such other items as it may appear possible to so protect with advantage to the agriculturist, and without undue injury to the Canadian consumer.—Mr. Sealey.

Mr. FIELDING. Dropped.

On the order:

For a copy of all memorials, reports, correspondence, and documents in the possession of the Department of Marine and Fisheries, in the Department of Trade and Commerce and in any other department, relating to the route of the winter steamers between Prince Edward Island and the mainland of Canada, and suggesting and recommending a change or changes in the said route and an increase in the number of trips daily of such winter steamers. Also a copy of all memorials, reports, correspondence and documents relating to the route of the summer mail steamers between Charlottetown and the mainland of Canada, and suggesting or recommending a change or changes in that route, and an increase in the number of trips daily of such summer mail steamers, and also with regard to connecting such suggested new summer route or routes with a point or points on the Intercolonial Railway.—Mr. Warburton.

Mr. WARBURTON. Dropped.

Mr. FIELDING moved the adjournment of the House.

Mr. BLAIN. Will the Grand Trunk Pacific resolution come up to-morrow?

Mr. FIELDING. Later in the day. We propose to begin the day's work by concurrence and a Supply Bill. If that be disposed of early we will take up the Grand Trunk Pacific resolutions.

Motion agreed to, and House adjourned at 12.20 a.m. Tuesday.

INDEX

FIRST SESSION—ELEVENTH PARLIAMENT, 1909.

Abbreviations of well known words and Parliamentary expressions are used in the following :—1°, 2 3°, First Reading, Second Reading, Third Reading ; 3 m. h., 6 m. h., 6 w. h., Three Months' Hoist, Six Months' Hoist, Six Weeks' Hoist ; *, without remarks or debate ; Accts., Accounts; Adjn., Adjourn; Adjd., Adjourned ; Amt., Amendment ; Amts., Amendments ; Amalg., Amalgamation ; Ans., Answer ; Ass., Assurance ; B., Bill ; B.C., British Columbia ; Can., Canada or Canadian ; C.P.R., Canadian Pacific Railway ; Com., Committee ; Co., Company ; Conc., Concur, Concurred, Concurrence ; Consd., Consider ; Consdn., Consideration ; Cor., Correspondence ; Deb., Debate ; Dept., Department ; Depts., Departments ; Div., Division ; Dom., Dominion ; Govt., Government ; His Ex., His Excellency the Governor General Hse., House ; H. of C., House of Commons ; Incorp., Incorporation ; Ins., Insurance ; I.C.R., Intercolonial Railway ; Man., Manitoba ; Mess., Message ; M., Motion ; m., moved ; Neg., Negatived ; N.B., New Brunswick ; N.W.T., North-west Territories ; N.S., Nova Scotia ; O.C., Order in Council ; Ont., Ontario ; P.E.I., Prince Edward Island ; P.O., Post Office ; Par., Paragraph ; Prop., Proposed ; Q., Quebec ; Ques- Question ; Recom., Recommit ; Ref., Refer, Referred, Reference ; Rep., Report, Reported ; Reps., Reports ; Res., Resolution ; Ret., Return ; Ry., Railway ; Rys., Railways ; Sel., Select ; Sen., Senate ; Sp., Special ; Stmnt., Statement ; Sup., Supply ; Suppl., Supplement, Supplementary ; Wthdn., Withdrawn Wthdrl., Withdrawal ; Y.N., Yeas and Nays ; Names in Italics and parentheses are those of the mover.
