House of Commons Debates

OFFICIAL REPORT—REVISED EDITION

HOUSE OF COMMONS.

Speaker: HON. THOMAS SIMPSON SPROULE.

Wednesday, March 25, 1914.

The House met at Three o'clock, the Speaker in the Chair.

POLLUTION OF NAVIGABLE WATERS.

Mr. BRADBURY presented the first report of the Select Committee on the prevention of the pollution of navigable waters.

On motion of Mr. Bradbury, it was agreed, in accordance with recommendations contained in the said report, that the said committee have leave to have its proceedings and any evidence taken by it printed from day to day; that the quorum of the committee be reduced to six members; and that the committee have leave to sit while the House is in session.

Mr. BRADBURY moved:

That the reports and proceedings of and the evidence taken by the Select Special Committee appointed last session to consider Bills No. 2 and No. 116, Letter A of the Senate, respecting the pollution of navigable waters and laid upon the table on Monday, June 2, 1913, be referred to the Select Committee appointed to inquire into the prevention of the pollution of navigable waters.

Motion agreed to.

Mr. BRADBURY moved:

That a message be sent to the Senate requesting Their Honours to give leave to the Hon. Napoleon Antoine Belcourt, one of their members, to attend and give evidence before the Select Committee appointed to inquire into the prevention of the pollution of navigable waters.

Motion agreed to.

QUESTIONS.

(Questions answered orally are indicated by an asterisk.)

INTERCOLONIAL RAILWAY—STE. LOUISE IMPROVEMENTS.

Mr. ERNEST LAPOINTE:

1. Has the management of the Intercolonial railway or the Railway Department been asked to make certain urgent works of fencing and draining along the line of the Intercolonial railway at Ste. Louise, county of L'Islet?
2. Were those petitions investigated?
3. Is the Government aware that owing to the non-execution of such works a great deal of damage is said to have been done and is still being caused?
4. Is it the intention of the Government to have those works completed next summer?

Mr. REID:

1. The management of the railway has been asked to perform certain work in connection with ditches and repairs of fences along the line of the railway at Ste. Louise, P.Q.
2. The matter of this request was investigated.
3. No.
4. It is the intention of the Government to have any necessary work performed during the coming summer.

BEAR RIVER WHARF.

Mr. KYTE:

1. Did the Department of Public Works, since the 10th of October, 1911, purchase property from H. H. Marshall, M.P.P., for Digby county, N.S., for the site of a wharf at Bear River, N.S.?
2. What was the amount paid for said site?
3. Has the wharf been built and what did it cost?
4. When was said wharf completed?
5. How many tons of freight were landed on and shipped from said wharf since it was built, and how much wharfage was collected?

Mr. CODERRE:

1. Yes.
2. $1,800.
3. $7,542.05 including the purchase price.
4. October, 1913.
5. No returns have yet been made to the Department of Marine and Fisheries.

NIAGARA FALLS MAIL DELIVERY.

Mr. NESBITT:

1. When was a mail or letter delivery establishd at Niagara Falls, Ontario?
2. What was the population at the time?
3. What was the revenue at the time?
4. What was the population at the time the last Dominion census was taken?

Mr. PELLETIER:

1. On the 30th May, 1911, under the late Government, when the population was less than 12,000, and the revenue a little less than $20,000. It is presumed that this was done for political reasons.
2. 10,036—municipal census, 1910.
3. $19,684.50.
4. 9,248.

THREE RIVERS MAIL DELIVERY.

Mr. NESBITT:

1. When was a mail or letter delivery establishd at Three Rivers, Quebec?
2. What was the population at the time?
3. What was the revenue at the time?
4. What was the population at the time the last Dominion census was taken?

Mr. PELLETIER:

1. The letter delivery in Three Rivers was established on the 22nd August, 1907, under the late Government, when the revenue of the office was under $20,000. It is presumed that this was done for political reasons.
2. 12,200.
3. $11,096.
4. 13,691.

FREDERICTON MAIL DELIVERY.

Mr. NESBITT:

1. When was a mail or letter delivery established at Fredericton, N.B.?
2. What was the population at the time?
3. What was the revenue at the time?
4. What was the population at the time the last Dominion census was taken?

Mr. PELLETIER:

1. 7th May, 1913. This was done because the rule as to population does not apply when the service is, as in the case of Fredericton, for the capital of a province.
2. 7,250—census, 1901.
3. $21,072.
4. 7,208.

ST. HYACINTHE MAIL DELIVERY.

Mr. NESBITT:

1. When was a mail or letter delivery established at St. Hyacinthe, Quebec?
2. What was the population at the time?
3. What was the revenue at the time?
4. What was the population at the time the last Dominion census was taken?

[Mr. Coderre.]

Mr. PELLETIER:

1. 29th August, 1907, under the late Government, presumably for political reasons.
2. The population of St. Hyacinthe was 9,500, and the villages of St. Joseph de Hyacinthe and La Providence, both of which are in the area to which the letter carrier service was given, had a population of 1,500 and 1,000 respectively, making the total 12,000.
3. The revenue of St. Hyacinthe was $10,799.91 and that of St. Joseph de Hyacinthe $346.80, making a total of $11,146.71. There was no post office in the village of La Providence; the residents used the St. Hyacinthe post office.
4. The population of St. Hyacinthe was 9,797 and that of St. Joseph de Hyacinthe and La Providence 514 and 894 respectively, making a total of 11,205.

OWEN SOUND MAIL SERVICE.

Mr. NESBITT:

1. When was a mail or letter delivery established at Owen Sound, Ontario?
2. What was the population at the time?
3. What was the revenue at the time?
4. What was the population at the time the last Dominion census was taken?

Mr. PELLETIER:

No. 1. June 1, 1910.
No. 2. 12,091—Municipal census, 1909.
No. 3. $23,633.72.
No. 4. 12,558.

SAULT STE. MARIE MAIL DELIVERY.

Mr. NESBITT:

1. When was a mail or letter delivery established at Sault Ste. Marie, Ontario?
2. What was the population at the time?
3. What was the revenue at the time?
4. What was the population at the time the last Dominion census was taken?

Mr. PELLETIER:

1. February 8, 1912.
3. $22,751.

2 and 4. At that time the census of 1911 showed that the population was 10,984, but the Postmaster General received very reliable information that the population was over 12,000, and acted on that information.

CHARLOTTETOWN MAIL DELIVERY.

Mr. NESBITT:

1. When was a mail or letter delivery established at Charlottetown, Prince Edward Island?
2. What was the population at the time?
3. What was the revenue at the time?
4. What was the population at the time the last Dominion census was taken?

Mr. PELLETIER:

1. November 26, 1907.

2. 12,080—Census 1901.
3. $20,648.07.
4. 11,203.

TRADE WITH THE WEST INDIES.

Mr. CARVELL:

1. What was the total trade between Canada and the British West India islands, included in the West India Trade Convention from July 1, 1912, to December 31, 1912, as to exports and imports respectively?

2. What was the total trade between Canada and the British West India islands, included in the West India Trade Convention from July 1, 1913, to December 31, 1913, as to exports and imports respectively?

Mr. REID:

Statement showing the imports and exports of Canada with the undermentioned countries during the six months ended December, 1912 and 1913.

—		Imports for Consumption.	Exports.		
			Domestic.	Foreign	Total.
		$	$	$	$
British Honduras	1912	126,931	6,940	90	7,030
"	1913	19,071	5,460	60	5,520
Bermuda	1912	4,871	207,976	5,574	213,550
"	1913	3,144	210,059	5,826	215,885
British Guiana	1912	2,045,606	334,799	1,981	336,780
"	1913	1,419,064	316,330	970	317,300
British West Indies	1912	3,172,923	1,951,123	17,853	1,968,976
" "	1913	2,812,953	2,257,845	5,976	2,263,821

The Trade figures for the British West Indies are compiled together, the various islands not being shown separately.

LENNOXVILLE EXPERIMENTAL FARM.

Mr. TOBIN:

1. Before the purchase of the experimental farm in the Eastern Townships at Lennoxville, Quebec, were any farms examined on behalf of the Government by Mr. Duncan Anderson, in the electoral division of Richmond and Wolfe?

2. If so, where are the said farms situated, and what are the names of the proprietors of the said farms?

3. What was the price demanded by the proprietors of each of the said farms?

4. If any price was offered by Mr. Anderson on behalf of the Government, what was the amount of the said offer in each case?

Mr. BURRELL:

1. Yes. Several farms were examined in the county of Richmond.

2. Close to the town of Richmond. Owned by Mr. Lemoine and Mr. Fortier. Also the farms owned by Messrs. Beattie Bros., and Mr. Berwick. They are situated about four miles north of the city of Sherbrooke, in the county of Richmond.

3. The price asked by Mr. Berwick was $10,000. Messrs. Beattie Bros. offered their farm at the same price, $10,000. No value was placed on the farms examined near the town of Richmond.

4. No offer was made by Mr. Duncan Anderson on behalf of the Government for any of these farms.

RIMOUSKI CUSTOMS OFFICERS.

*Mr. GAUVREAU:

1. What is the salary of Mr. Omer Beaulieu, customs officer at Rimouski, and of his assistant, Mr. L. O. Lavallee?

2. What was the salary of Mr. Martin Lepage, customs officer and of his assistant respectively, prior to 1911?

Mr. REID:

1. The salary of Mr. Omer Beaulieu, collector of customs at Rimouski, is $900; that of his assistant, Mr. L. O. Lavallee, preventive officer, is $400.

2. The salary of Mr. Martin Lapage, collector of customs at Rimouski, was $800 prior to 1911; but on April 1, 1911, it was increased to $900. The salary of his assistant, Mr. J. S. Gauvreau, acting preventive officer, was $300 prior to 1911; but on April 1, 1911, it was increased to $400.

RIMOUSKI MEDICAL SERVICE.

Mr. GAUVREAU:

1. How many doctors have been appointed to the transatlantic steamers' service at Rimouski?

2. What are the names and salary of each?

3. How many of them were there prior to 1911?

4. What were their names and salaries?

Mr. BURRELL:

1. There are at present three doctors, one coming up to Quebec for each steamship line.

2. Dr. L. F. Lepage, Dr. Alf. Bouillon, and Dr. J. A. Lord, at the rate of $1,200 each per annum.

3 and 4. Dr. Ernest Belisle made inspections himself at Rimouski prior to 1911 without coming up to Quebec, at $15 per inspection.

INTERCOLONIAL RAILWAY ICE SUPPLY.

*Mr. GAUVREAU:

1. What are the names of the tenderers for the contract for supplying the ice to the Intercolonial at Ste. Flavie ?
2. What was the amount of each tender ?
3. To whom was the contract awarded and on what conditions ?

Mr. REID:

1 and 2. Tenders per 2,000 pounds:

J. A. Boulay, Sayabec, $1.05, delivered and packed in the icehouse, freight and all other charges paid.

J. H. Rioux, St. Fabien, 60 cents, f.o.b. cars, St. Fabien, railway to carry ice free of charge from St. Fabien to Ste. Flavie.

Ernest Dastous, St. Fabien, 64 cents for ice; $1.40 for freight; $2.04, packed in icehouse.

Sirice Rioux, St. Fabien, 59½ cents, f.o.b. cars, St. Fabien, cars to be furnished free by the railway, and the railway to carry ice free of charge from St. Fabien to Ste. Flavie.

J. A. Pelletier, Rivière du Loup, 69½ cents, f.o.b. cars, Rivière du Loup.

3. The contract was awarded to Mr. J. A. Boulay at $1.05, delivered and packed in the icehouse at Ste. Flavie, all charges paid, his tender being the lowest. The freight on a minimum car of 30,000 pounds from St. Fabien to Ste. Flavie is 6 cents per 100 pounds or $1.20 per ton, which, added to Sirice Rioux's tender price of 59½ cents, made his tender $1.79½ at Ste. Flavie.

PLAINFIELD POST OFFICE.

Mr. WILLIAM CHISHOLM:

Does the Post Office Department intend to close the Plainfield post office, Pictou county, as a result of the establishment of rural mail delivery routes, as has been done with other offices in the vicinity?

Mr. PELLETIER: Yes, if it is found after the establishment of the rural mail delivery routes that the patrons of the Plainfield post office are within the scope of rural delivery.

INTERCOLONIAL RAILWAY MINIMUM FREIGHT RATE.

*Mr. SINCLAIR:

What is the minimum local freight rate on small parcels on the Intercolonial railway west of Chaudière ?

[Mr. Burrell.]

Mr. REID: 35 cents.

EMPLOYMENT OF MR. PHILEAS DUBE.

*Mr. LEMIEUX:

1. Is Mr. Phileas Dubé employed on the construction of the workshops of the Transcontinental railway at St. Malo, Quebec ?
2. If so, what is the nature of his work and what is his salary?

Mr. REID:

1. Mr. Phileas Dubé is not employed by the Transcontinental Railway Commission nor by the Government on the construction of the work shops of the Transcontinental railway at St. Malo, Quebec.

2. Answered by No. 1.

BALANCE OF TRADE ADJUSTMENT.

Mr. BURNHAM:

If Canada during 1913 imported six hundred and seventy-five million dollars worth, and during the same period exported three hundred and ninety million dollars worth, in what manner was the excess of imports provided for by Canada ?

Mr. WHITE: The excess of imports over exports would represent principally capital borrowed abroad and money and effects brought in by immigrants.

UNDISCUSSED AND UNOPPOSED MOTION.

Mr. Truax.—Returns showing: How many private cars are owned or leased by the Government, and their names or numbers; the total cost of said cars; the cost of operating same during the calendar year 1913; what, if anything, was paid for haulage or shunting of said cars during the said calendar year; where the said cars are located respectively, how many at Moncton, how many at Ottawa and how many elsewhere; what departments of Government or the ministers of same, if any, have cars for their particular use, which are sometimes placed at the disposal of other ministers; whether any of the railways in Canada or in the United States make any charge for transportation or hauling of said cars; and whether the companies in Canada by courtesy deadhead said cars; and, if so, at what rate.

QUESTION OF PRIVILEGE.

On the Orders of the Day being called:

Mr. C. A. WILSON: Mr. Speaker, I wish to draw your attention to the fact that on Friday last I put in the hands of Mr. Laplante and Dr. Thos. B. Flint the following question:

Mr. C. A. Wilson—On Thursday next—Inquiry of Ministry—1. Has the Government, or any member thereof, received the communication referred to in the following announcement, published in the Sentinel of March 19, 1914?

Mr. SPEAKER: I think the hon. member is out of order. I looked over the question,

and, in my judgment, it was not a proper one to go on the Order Paper, as it was founded on a newspaper clipping relating to subjects which are not proper for the consideration of this House. Rule 37, which governs the asking of questions by members, reads as follows:

Questions may be put to ministers of the Crown relating to public affairs—

This, in my judgment, does not relate to public affairs.

—and to other members, relating to any Bill, motion, or other public matter connected with the business of the House, in which such member may be concerned.

The question that was submitted to me did not, in my judgment, relate to public affairs. Part of it related to bilingual schools, which are under the control of the provincial Government. Another part of the question asked whether the Government had received any protest regarding the reading of the prayers in French by the Speaker of the House every second day. That appeared to me to be too frivolous to put on the Order Paper.

Mr. C. A. WILSON: Mr. Speaker, may I be allowed to state my case—yes or no?

Mr. SPEAKER: The hon. member has a right to do it, if he brings it up as a question of privilege.

Mr. WILSON: In order that there shall be no misunderstanding, I rise to a question of privilege; and the first privilege I claim is to state my case in both English and French. I have read of Richelieu saying that the execution should sometimes take place before the trial, but this is not such a case. My case is this: on Friday last, I put in the hands of Dr. T. B. Flint—

Mr. SPEAKER: May I ask the hon. member to state his question of privilege? I shall then be in a better position to judge whether it is or is not a question of privilege.

Mr. WILSON: I am rising to a question of privilege, and I want to state my case. I ask you frankly, Mr. Speaker, whether I am to be allowed to state my case—yes or no? Je vous demande, monsieur l'Orateur, si j'ai le droit d'exposer mon cas. I wish to state my case.

Mr. PELLETIER: The hon. member asked, in French, to be allowed to state his case, and proceeded to make comments. Surely my hon. friend understands—he speaks English very well—that the Speaker asked him to state his question of privilege and not to make comments. I think a spirit of fairness should prevail here.

Mr. C. A. WILSON: I made no comments at all. I am going to speak in this House in both languages, and I am going to state my case in English first, then in French, so that every hon. member will understand me. On Friday last I put in the hands of Mr. Laplante and Dr. Flint the following question:

Mr. C. A. Wilson—On Thursday next—Inquiry of Ministry—1. Has the Government, or any member thereof, received the communication referred to in the following announcement, published in the Sentinel of March 19, 1914.

'Collingwood Lodges protest againt French in Schools and on Post Cards and Government Stationery—Express dissatisfaction with local Representatives.

'The brethren of L.O.L. Victoria, No. 934, and Golden Lion No. 1990, Collingwood, at their regular meetings held on the 9th and 11th of March, 1914, adopted the following resolution, and instructed their secretaries to forward same to the Orange Sentinel, to the Hon. R. L. Borden, Ottawa, and to acting Premier, the Hon. J. J. Foy, Toronto, also to their representatives, Col. J. A. Currie, Ottawa, and Hon. Jas. Duff, Toronto:

'Moved by Bro. Wm. Elliot, P.M. L.O.L. 1990, seconded by Bro. Peter McMillan, W.M. L.O.L. 943, and resolved:

'That we, the members and officers of Victoria Lodge No. 943, and Golden Lion No. 1990, assembled at our regular meetings, take this opportunity of condemning in the strongest terms the action of the federal Government in permitting the issuance of the bilingual post cards, and the use of the French language upon official stationery of the departments, and consider this departure an insult to the other nationalities, such as Germans, Highland Scotch and others, inasmuch as the English is the language of this country.

'We also demand the immediate abolition of bilingual schools, as English must be the only language taught in our public schools, if we desire to grow up as a united body of citizens. And we do not uphold the attitude of our representatives in both Parliaments, as so far we have not noticed that they have taken any part, or raised their voices in opposing any of those encroachments, which is bound to be detrimental to the unity of this country.'

2. If so, what was the answer, or what were the answers given?

I also put in the hands of Dr. Flint question No. 3, reading:

3. Has the Government, or any member thereof, received any protest on account of the fact that His Honour Mr. Speaker, recites prayers in the French language in Parliament every second day of sitting?

Dr. Flint corrected this question as follows:

Has the Government received any protest on account of the fact that the Speaker of the House of Commons recites prayers in the

French language in Parliament every second day of sitting?

Of course, with my French education, I put the words 'His Honour' before 'Mr. Speaker'. There was another question, reading as follows:

4. If so, from whom and upon what grounds?

Questions 3 and 4 were returned to me with the following note:

Dear Mr. Wilson:

His Honour the Speaker thought the above part of your question somewhat irregular as being put ironically and as not arising out of the main question. So I inserted the principal question, with this latter part eliminated for the present.

T. B. Flint,
Clerk.

What is the reason that it is not on the Order Paper? The question may be irregular or it may be ironical—I have nothing to say about that for the moment; but it seems to me that, according to all precedents, your judgment, Mr. Speaker, should be rendered in this House anyway. I ask that this question No. 3 be put on the Orders of the Day. If you say that the question is irrelevant or ironical, I want this House to pass judgment upon your decision. That is all I have to say at the moment, and, as a member of this House, I ask you now, that this question be put upon the Orders of the Day and that the House pass judgment upon it whether it is ironical or not.

Mr. SPEAKER: The only question involved is the question of privilege. Is it the privilege of a member of this House to ask questions? I have only to say in reply to that—

Mr. WILSON: Would Mr. Speaker allow me just one question? Is it the privilege of a member to go to the Clerk and put a question in his hands in order that that question may be placed upon the Order Paper? It is on that question that I want your ruling, and not as to the propriety or impropriety of the question itself. It seems to me that the House must decide this point. Was it the right of Dr. Flint, for instance, not to put this question on the Orders of the Day? Let us be frank. If the question has not been put on the Orders of the Day, has it been submitted to you; or do I assume too much, Mr. Speaker? I do not think I do. Until I get further information I assume that the question has been withheld from the Order Paper upon your orders. I want to know whether it is the privilege of a member to put a question on the Orders of the Day or whether the matter is controlled outside of the House of Commons.

[Mr. C. A. Wilson.]

Mr. SPEAKER: The question involved is one of privilege. Is it the privilege of a member to put a question? I quote again rule No. 37, which is one of the clearest rules in the book and the rule that governs as to the subjects upon which questions may be asked:

Questions may be put to any ministers of the Crown relating to public affairs.

As it is the right and duty of the Speaker for the time being to see that no improper questions are put on the Orders of the Day, this question was submitted, of course, to the Speaker's judgment, and, in my judgment, it did not come within the rules. Or questions may be put:

—and to other members, relating to any Bill, motion, or other public matter connected with the business of the House, in which such members may be concerned.

The question did not seem to me to come within these rules. I have in my hands Mr. Speaker Peel's Decisions in the House of Commons in England, and in this book I find the following statement:

Mr. Speaker discourages the practice of asking questions based on statements in the public press. It is desirable that members should undertake the responsibility of the questions thus put. A member who puts a question is responsible for the facts alleged therein.

If a question contains a statement, the member who makes it should vouch for its being a fact.

With reference to the duty of the Clerk of the House, I have not the authority under my hand at the moment, but the clerk has to consult with the Speaker in reference to any question that is handed in to him and that he thinks is irregular. In my judgment this question was irregular, and I notified the clerk to consult with the hon. member (Mr. Wilson) for the reasons which I have already given.

Mr. C. A. WILSON: If I understand your statement, Mr. Speaker, the report from Dr. Flint to myself was a correct one, and therefore this question, according to your judgment should not have been put upon the Order Paper.

Mr. SPEAKER: I have not looked over the report of the clerk; consequently I could not express an opinion.

Mr. WILSON: There it is, Mr. Speaker.

Mr. SPEAKER: I have just now had a copy of it handed to me by the clerk. He submitted the question to me before the opening of this sitting of the House, and I

instructed him to have it put on the Order Paper.

Mr. WILSON: Do I understand you to say, Mr. Speaker, that you gave Dr. Flint instructions to put that question on the Orders of the Day?

Mr. SPEAKER: The first part of the question.

Mr. WILSON: Why the first part?

Mr. SPEAKER: I instructed the clerk that, in my judgment, the first part of the question might be put upon the paper, but I thought the last part of the question too frivolous to engage the attention of the House.

Mr. WILSON: I beg leave of the House to ask that this question, No. 3, be put on the Orders of the Day.

Mr. SPEAKER: Orders of the Day.

Mr. WILSON: No, Mr. Speaker.

Mr. SPEAKER: Order, order.

Mr. WILSON: But, Mr. Speaker, I think we should understand each other now. I understand that Mr. Speaker said that in so far as question No. 3 was concerned he would leave it to the judgment of the House. Is that correct or not?

Mr. SPEAKER: Not exactly.

Mr. WILSON: If I understood you, Mr. Speaker, you said that you would leave the question to the judgment of the House.

Mr. SPEAKER: Order; the hon. gentleman is not exactly correct in that respect. I did not say that I would leave it to the judgment of the House, but I said that if my judgment was called in question I would certainly submit it to the judgment of the House to say whether the question was out of order or not.

Mr. WILSON: Do you rule, Mr. Speaker, that question No. 3 is out of order, and should not be put on the Orders of the Day?

Mr. SPEAKER: That is my judgment.

Mr. WILSON: With all due respect to you, Mr. Speaker, I appeal from your decision.

Mr. BORDEN: I do not think that there is any appeal from such a decision as the Speaker has announced, and I think that my hon. friend (Mr. Wilson) is making a great deal of fuss about a very frivolous matter. In order that his mind may be set at rest, with respect to the question which Mr. Speaker thinks is not proper to be put on the Order Paper, I may tell him now that the Government have not received any such protest as he has alluded to.

Mr. WILSON: Mr. Speaker,—

Some hon. MEMBERS: Order, order.

Mr. WILSON: If there is no discussion on the appeal, the Prime Minister should not have got up.

Mr. PUGSLEY: What is the point of order, Mr. Speaker?

Mr. SPEAKER: The point of order is that the decision of the Chair has been given, and if that decision is called in question, there can only be an appeal to the House.

Mr. WILSON: Then why has the Prime Minister spoken?

Mr. BORDEN: Because the Prime Minister has a right to speak on any point of order.

Mr. WILSON: Have I the right to answer?

Some hon. MEMBERS: Order, order.

Mr. WILSON: Mr. Speaker,—

Mr. SPEAKER: Order. The hon. member has appealed from the decision of the Chair, and there must be no debate while the Chair is preparing the appeal to the House.

Mr. PUGSLEY: Then the Prime Minister was out of order?

Mr. WILSON: Has the Prime Minister the right to speak?

Mr. SPEAKER: The question is as follows:

Mr. Wilson, the member for Laval, had submitted a question: 'Has the Government, or a member thereof, received any protest on account of the fact that His Honour Mr. Speaker reads the prayers in the French language in Parliament every second day of the week?' to which the Speaker ruled that it was not a proper question to be put on the Order Paper. From that ruling the member for Laval (Mr. A. C. Wilson) has appealed to the House.

The House divided on the question: Shall the ruling of the Speaker be confirmed?

Mr. EMMERSON: I was paired with the hon. Minister of Finance. Had I voted I would have voted against sustaining the ruling of the Chair.

Mr. GUTHRIE: I was paired with the hon. member for Lincoln. Had I voted I would have voted against sustaining the ruling of the Chair.

Mr. BEATTIE: I was paired with the hon. member for Montcalm. Had I voted I would have voted to sustain the ruling of the Chair.

Mr. STANFIELD: I was paired with the hon. member for West Lambton. Had I voted I would have voted to sustain the ruling of the Chair.

Mr. TRUAX: I was paired with the hon. member for Parry Sound. Had I voted I would have voted against sustaining the ruling of the Chair.

Mr. RAINVILLE: I was paired with the hon. member for L'Assomption. Had I voted I would have voted to sustain the ruling of the Chair.

Mr. COCKSHUTT: I was paired with the hon. member for Norfolk. Had I voted I would have voted to sustain the ruling of the Chair.

Mr. BELAND: I was paired with the junior member for Ottawa. Had I voted I would have voted against sustaining the ruling of the Chair.

Mr. McCREA: I was paired with the hon. member for North Lanark. Had I voted I would have voted against sustaining the ruling of the Chair.

Mr. ROSS: I was paired with the senior member for Ottawa. Had I voted I would have voted against sustaining the ruling of the Chair.

Mr. GRAHAM: I was paired with the hon. Minister of Railways. Had I voted I would have voted against sustaining the ruling of the Chair.

The ruling of the Chair confirmed.

Mr. C. A. WILSON: Has the hon. the Postmaster General voted?

Mr. SPEAKER: Orders of the Day.

Mr. PUGSLEY: Mr. Speaker, an hon. member has the right to call your attention to the fact that another hon. member has not voted. If an hon. member is in the Chamber, he is bound to vote unless he is paired.

Mr. SPEAKER: As I understand it, the hon. member did not call my attention to the fact that the Postmaster General had not voted, but he asked the question directly to the Postmaster General, and I took it to be in the discretion of the Postmaster General whether he should answer the question or not.

Mr. C. A. WILSON: I call your attention, Mr. Speaker, to the fact that the Postmaster General has not voted.

Mr. PELLETIER: My hon. friend's mind will be set at rest when I state that I never vote in this House on any question when the hon. member for Rouville (Mr. Lemieux) is not in his seat, but I do not think it is necessary to say so every time.

THE NATIONAL TRANSCONTINENTAL RAILWAY.

Consideration of the proposed motion of Hon. W. T. White (Minister of Finance) for Committee of Supply, resumed from March 24.

Hon. GEORGE P. GRAHAM: When the House adjourned last night, I had been dealing with several important items in the report of the National Transcontinental Railway Investigating Commission. I think I dealt with all the large items included in the $40,000,000. At the time of adjournment I was discussing that part of the report where Mr. Gutelius suggested that the money spent on the line east of Quebec should not have been so expended, but that a portion of it should have been expended in reducing the grades and curves on the Intercolonial railway, particularly, because that railway lends itself to the introduction of gradients of 0·4 per cent against eastbound traffic and 0·6 per cent against westbound traffic.

4 p.m.

Before I leave the question of grades, I want to ask the Government and the members of this House to look at the question of velocity grades from another angle. I stated yesterday what is an evident fact that there is a difference of opinion as to the practicability of velocity grades, particularly in a country like ours. The Maintenance of Way Association of America, composed of the chief engineers of the great railways and members of the engineering staffs, have intimated that the introduction of velocity grades in the construction of a new line ought to be practiced only under very extraordinary circumstances. There are authorities both pro and con, but I think that the most eminent authorities are against velocity grades in the construction of new lines and in a country where we have snow and frost to the extent that we have in this country.

For a moment I want to ask the House to view this matter, so far as the Transcontinental railway is concerned, from another standpoint. Granted that there is disagreement of opinion, there can be no dispute as to whether a four-tenths or a six-tenths grade is equal to a velocity grade. No engineer or operator will say that a velocity grade line is superior to a level line; many of the most eminent authorities do say that a velocity grade line is inferior to a level line. That being true, why should the Government, when the country is expending so many millions of dollars in this project, substitute a policy in respect of which there is grave disagreement for a policy on which there is absolute agreement, particularly when the line is nearly finished? Would any business man take such a course in his own business? At least there is no dispute as to the equality of the level line with the velocity grade line; there is a disagreement as to whether the velocity grade line is equal to the level line. Therefore I say it is poor judgment, it is not good business, to accept that policy upon which there is grave disagreement and to substitute for it a policy upon which there is no disagreement whatever.

I want for a moment to refer to the last clause of this report—and here, I think, we find a condensation of the views of the commissioners. I submit to this House and to the country that the statement and the criticism found in this clause is unwarranted, and, to put it mildly, a most egregious blunder so far as the Dominion of Can-

ada is concerned. Leaving out, for the moment, every other consideration, I say that this attack found on page 12 of the commissioners' report is absolutely unwarranted and may be fraught with grave results to a great national undertaking, to a company now engaged in completing a great national enterprise, and that that result will indirectly reflect upon the business of Canada and upon the standing of Canadian enterprises in the financial markets of the world. This is the clause to which I refer:

> We find that the Transcontinental Railway Commission, the Grand Trunk Pacific railway and those having charge of the construction of the railway did not consider it desirable or necessary to practise or encourage economy in the construction of this road.

What does that mean? It is charged that the Transcontinental Railway Commission was derelict in its duty—was extravagant, I dealt with that yesterday at some length, and I am not going to deal with it again; I think I answered that charge very well. Then, the commissioners imply that every man on the engineering staff, every individual connected with the construction of the road, did not consider it desirable or necessary to practise or encourage economy. Does any one imagine that the people of Canada will believe that sweeping assertion made against men who have spent the whole of their lives in the service of the public? I refer not to members of any particular party; I refer to eminent professional men. This assertion on the part of the commissioners means that every engineer on the line who was engaged in the supervision of construction did not find it necessary to be honest, and thought it wise to be extravagant. I am not going to take up and present to the House the names of these gentlemen, but I do say that there are on that staff men of as high ability as will be found anywhere on this continent; men whose honesty at least cannot be challenged by any living soul. Yet the commissioners make the sweeping assertion that all these men practically conspired to neglect their duty. I say that if we had nothing more, these words are in themselves a refutation of the reliability of this report. The judgment of the public is generally very well balanced, and when men go so far, be they commissioners or any other persons, as to make a sweeping charge, without one iota of foundation for it, against men whose reputation has hitherto been unimpeachable, they condemn their own utterance; the people will take no stock whatever in their assertion in that respect, and, not taking stock in that statement, will discount every other assertion such men may make.

I do not intend to defend the professional gentlemen who are engaged in this work; they are well known, but I come to another thing which I think is absolutely an outrage—and I use the word advisedly. It is found in these sentences:

> We find that the Transcontinental Railway Commission, the Grand Trunk Pacific Railway, and those having charge of the construction of the railway, did not consider it desirable or necessary to practice or encourage economy in the construction of this road.

What does that mean? It means that the commission appointed by this Government publicly charge, in a document being circulated throughout Canada, that the Grand Trunk Pacific officials in Canada conspired to defraud the Grand Trunk Pacific Railway Company. Is there any substantiation for that charge, which is one of the gravest made in this country for many years? I say there is no substantiation, there is not the shadow of substantiation for that charge. Mr. Hays, who in his time was one of the ablest men at the head of any railway in this country, and Mr. Chamberlin, his successor, are, without any evidence, charged by Mr. Lynch-Staunton and Mr. Gutelius with not thinking it desirable to practise economy in the construction of a line which they were going to operate, and on the cost of which they were to pay interest. It is inconceivable; it is unthinkable that men should make such a charge and place it not only before the people of this country, but before the financiers of the old land as well, who are being asked for money to carry on this great project. I ask hon. gentlemen who are connected with companies of any magnitude what they would think if such a charge were made against them? They would demand absolute proof, and if this were not furnished, the men who made the charge would suffer the consequences. I say this matter will never be settled until the gentlemen who made this report are compelled to substantiate that charge against the Grand Trunk Pacific, or retract it on behalf of the Dominion of Canada. Is it an attack on the Grand Trunk Pacific Railway Company only? Not at all. Even that is serious enough. At the very time when the finan-

cial situation in Canada is tense, when some of our great industries are finding it difficult to finance their transactions and carry on their undertakings; when the weak ones in the industrial world are being crowded to the wall; when capital is exceedingly sensitive and it is difficult to obtain it, even on good security, this charge is hurled headlong at a company which is linked up with the Dominion of Canada in a great enterprise. That charge against this company is a charge against the Dominion of Canada and the way it manages its affairs. What will the Finance Minister think when he goes to the old land and that charge meets him? What will representatives of industrial concerns think when they go to the old land, as some of them have done, and are met with this unfounded charge against this company? The men against whom these charges are made are well known in the old land; they are men of probity, men of means, men of high standing, and I say it is a most serious thing that this charge should be placed before the public on the streets of London, as it has been, and in the offices of some of the leading men. This Government has a duty which is as clear as the noonday sun, and that is, on behalf of the Grand Trunk Pacific Railway Company and on behalf of the good name of Canada, to repudiate the charge which has been made against that company and which has not one iota of foundation. This unfounded charge has had its influence. Men are out of employment in one of the big cities of this Dominion on account of the publishing of that unfounded report. Some of the leading men of Montreal, close friends of the Prime Minister politically and personally, have no hesitation in saying that this attack is unwarranted, should not have been made, and will injure the Dominion of Canada if not repudiated. And it does not take much intelligence to see that that is the case. I am making a strong plea, Mr. Speaker, on behalf of Canada and this great transportation company under the present financial conditions. The Government may do as they please about the party charges, these are in the political arena; but in the interest of Canada, in the interest of our great industries in Canada, in the interest of this great enterprise the Government ought to repudiate that unfounded charge against the Grand Trunk Pacific railway. Every country has what are known as wild cat projects. They find their way, through their prospectuses, into the money markets of the world. Often the financiers are deceived and bitten. They have been warned from this side of the water many times to beware of the gilt-edged and gold-lined prospectus and we are not anxious as to results to these financiers if they dip into these get-rich-quick schemes. But on behalf of the Dominion of Canada I want to say, and I feel I have a personal responsibility in saying it, that, in the main, the industries of Canada and her great enterprises are sound at heart, that the financial institutions of the old land are perfectly safe not only in continuing but in increasing their investments in Canada, so long as they investigate thoroughly before they go into these investments. We have in this country great industries. We have great enterprises that are going to the old land every day asking for financial aid; and what we in this House ought to do, and what is the duty of the Government above all, is to see that the legitimate enterprise is protected and that the legitimate borrower is not deprived of his rights by any false reports such as the one before me. I am speaking thus strongly because the matter before me has been pressed on my attention during the last few weeks by many prominent men who have no sympathy with the Liberal party whatever; but they feel that a great error has been made in the present financial situation, at least in allowing a report of that kind to be spread broadcast not only throughout Canada but throughout the old land and throughout the United States, where it is having and must have the effect of injuring the credit of Canadian industries and Canadian enterprises unless the Prime Minister of Canada, in the words of an eminent statesman, is honest enough to be bold and bold enough to be honest and repudiates at least that part of this report. I am not pleading at all that he should repudiate that part of the report in which attacks are made of a political nature; we will look after them ourselves in the country. But I am asking him, on behalf of the industries of Canada, on behalf of the borrowers of Canada and on behalf of the Grand Trunk Pacific railway, not to allow his Government to be tied up to such a report as that, because the injury to Canada from such a report cannot well be estimated.

Now, I come to the actual cost to the country. I must again protest against the typewritten report sent out to the newspapers of the country which also, in this case, was a bit misleading. Under headlines already prepared, this item was sent

to the press. The sending out of this item synchronized with the laying of the report on the table.

Assuming that the Grand Trunk Pacific Railway Company will commence to pay interest on the cost of construction in 1922, the road will have cost the country, for principal and interest, $234,651,521. This amount has been arrived at by calculating the interest on the amount expended during each year from the end of the year up to the end of 1921.

These gentlemen are not as fair as my hon. friend the acting Minister of Railways. You see now the false impression—just really to show the trend of this whole thing. This report as sent out, neglected to state that the compilation was arrived at by a computation of compound interest, not simple interest. It makes quite a difference in the impression created in the public mind. The report says compound interest, but the item sent out to the papers leaves it to be understood that the amount was arrived at by the computation of interest in the ordinary way. The amount of interest that it will cost the country during the seven years of free rental of the line forms no part of the cost of construction of the line, everybody agrees with that now. The payment by the country of the interest on the amount the Grand Trunk Pacific would pay for the first seven years, were they not rental free under the agreement, has nothing whatever to do with the cost of the laying of the rails, with the cost of embankments, with the cost of construction, be it great or small. This investigation was to ascertain if there had been extravagance in the construction of the line, and the interjection of this dissertation as to what it would cost the country after the end of the seven years is altogether outside of the instructions given that commission, because it forms no part, directly or indirectly, of the cost of the construction of the line. This amount of the rental for seven years was really a subsidy given to the Grand Trunk Pacific railway, nothing more, nothing less; a subsidy equal to a good many million dollars in cash, it is true, but a subsidy nevertheless. It is a part of the agreement with the Grand Trunk Pacific and has nothing whatever to do, directly or indirectly, with the cost of the construction of the line. But if that be true and it be a subsidy, what earthly excuse is there for the commission computing interest on a subsidy? We have given millions to other railways. We are giving subsidies every year. Now, has any person ever thought that, in order to find out the amount of subsidy we have given to the Canadian Northern railway or the Canadian Pacific railway, we should compute compound interest from the day we gave it until the present? That is what has been done by this commission in this report referring to the National Transcontinental railway. It shows a total unfairness and a desire to treat this enterprise on an altogether different basis from any other enterprise of this kind that the Government has ever aided. I shall make a computation from which I think the Government will see the unfairness and the foolishness of this commission endeavouring to lead the people to believe that interest ought to be computed on what was really a subsidy.

In 1885 the Canadian Pacific railway handed back to the Government certain lands for which they received cash to the amount of $10,198,520.23. This decreased the land grant but increased the cash so that up to 1887 the Canadian Pacific railway had received in cash $72,000,000. Mark you, $72,000,000, in cash or its equivalent. Does any person say that the Grand Trunk Pacific received $72,000,000 with compound interest added? It stands in the books of the Government, in the Auditor General's Department, at $72,000,000; but calculating it as these commissioners insist upon doing, and adding compound interest for thirty years at 3½ per cent, we should find that the Canadian Pacific railway up to 1887 had received in cash, and railways constructed and handed over, $202,089,110. I have just as much right to say that at the end of that thirty year period the Canadian Pacific railway will have received $202,000,000, as this commission has to say that the Grand Trunk Pacific will have received this amount, plus the compound interest. This is the first time in the history of Canada that compound interest has been added to a subsidy given to a railway when endeavouring to show what aid that railway has received.

Mr. MEIGHEN: Where does my hon. friend get his authority for calling that a subsidy?

Mr. GRAHAM: I will tell my hon. friend after a while. Let me now make a comparison between this railway and some others. Considering the difficulties under which it was constructed, the country through which it runs, the exceedingly high cost of labour and material, and the high standard of the road, I assert that the Transcontinental railway has been con-

structed as cheaply as any line on the continent of America during the past ten years. There is no line like it, so far as standard is concerned, so no real comparison can be made. I wish to give the capitalization of some of the leading railway companies. The first companies I shall deal with, I am introducing as a matter of information to the House and not for purposes of comparison, because they have two, three, or four tracks, very expensive terminals and all that kind of thing, but I thought it would be of interest to the House to know the cost of some of the large railway companies on the other side of the line. The Pennsylvania road capital $371,023 a mile; the New York Central $418,370 a mile; Lehigh Valley $437,643 a mile; the New York, New Haven and Hartford $187,426 a mile. Now we come to two roads that might fairly be compared with the Grand Trunk Pacific, although they are not up to its high standard: The Union Pacific cost $150,925 a mile; the Southern Pacific $142,360. For the information of the House, I might give two or three other figures in regard to the capitalization of these roads. The first four roads operate in the eastern and central States and their capitalization is therefore high, but the average capitalization of all the railways of the United States in 1911—the most recent statistics available—was $64,000 per mile. That includes every little branch line, and every cheap line constructed at a cost of $15,000 or $20,000 per mile. None of the lines in the western States can begin to compare with the Grand Trunk Pacific for standard. The average capitalization of all the eastern lines in 1911 was $167,885 a mile, and of the western roads $73,000 a mile. While the average capitalization of all the western roads in the United States, including the cheap, prairie or colonization roads, is $73,000 a mile, the cost of the Grand Trunk Pacific from Moncton to Prince Rupert, with its high standard of equipment will only be $85,000 a mile.

Let me give some figures of Canadian railways. The Grand Trunk railway capital $133,939 a mile. That is a very high capitalization and I gave one reason for its being high yesterday; that the road was built cheaply, as some hon. gentlemen wanted to build the Transcontinental. As a result great portions of the road have been abandoned altogether, millions have been spent in reducing grades, and millions more will be spent in bringing the road up to a high standard. The money invested by some of the original shareholders stands to-day without a cent of dividend ever having been received, and probably will for many years to come, if not for all time. One of the reasons for that, is that wisdom was not shown in the original construction of the Grand Trunk railroad.

The Algoma Central railway, which runs through New Ontario, has a capitalization of $152,891 a mile; the Canada Southern, $99,000 a mile; I now come to the Canadian Pacific railway. I have two reasons for taking this railway: one is that the railway is one of the best managed transportation institutions in the world, and perhaps one of the largest. It is the railway to which Mr. Gutelius looked for guidance or for comparisons in his investigation. I take the Canadian Pacific railway because it is practically the only Canadian road from which we can get the information I desire. The Canadian Pacific railway, it is true, gives its capitalization as $46,000 a mile, but no person for one moment thinks that is all the Canadian Pacific railway cost. The Canadian Pacific railway received from the Dominion of Canada many gifts, and the proceeds of at least some of these went into the construction of the road, or if not, the Canadian Pacific railway is not playing fair. But it is playing fair in that respect. Let me read what aid the Canadian Pacific has received:

Cash aid, Dominion	$ 29,944,660
" " provinces	412,878
" " municipalities	464,761
Lands handed over at cost ..	37,785,320
Value of land, put at $5 an acre .	174,081,010
Total	$242,688,629

That total, figured as this commission figures, would be swelled to $500,000,000 by adding compound interest up to the present time.

Mr. MEIGHEN: Have we not been getting a little service from the company all these years? The commission have only figured up to the time we get returns from the company.

Mr. GRAHAM: They have figured interest on a subsidy, but they never figured on a subsidy for the Canadian Pacific railway or any other line.

Mr. MEIGHEN: They were not appointed to investigate the Canadian Pacific railway.

Mr. GRAHAM: Has my hon. friend figured out the compound interest in regard to the Canadian Pacific railway?

Mr. MEIGHEN: Up to the time the Canadian Pacific railway was in operation?

Mr. GRAHAM: I would like to find the figures that my hon. friend made in that respect.

Mr. MEIGHEN: The hon. gentleman is making a point. If he wants to make it clearly, let him bring the Canadian Pacific railway subsidy up to the date of operation as against the National Transcontinental railway up to the date of operation.

Mr. GRAHAM: My hon. friend knows what he did and tried to do last night. It is just as unfair to charge compound interest on the subsidy to the Transcontinental, be the time long or short, as it would be to charge interest on the subsidy to the Canadian Pacific railway up to the present time.

Mr. MEIGHEN: Without compound interest at all, but figuring the interest at the least rate we pay, or the rate of 3½ per cent, it amounts to $235,000,000 more than the report says.

Mr. GRAHAM: Then, my hon. friend is a better figurer than I am.

Mr. MEIGHEN: No, the report figures it at 3 per cent, which is almost one per cent below what we actually pay.

Mr. GRAHAM: I think if my hon. friend will look into it he will see that it is different. Last night I stood more interruptions than any man in this House has ever stood in making an important statement, and I will say further that I am informed I was interrogated from the galleries through one of the members of this House.

Mr. SPEAKER: I knew nothing about it. Had I known it I should have promptly stopped it.

Mr. GRAHAM: I like to answer all reasonable questions, but when a member starts in to make a prepared statement of this kind I do not think it is fair that his speech should be broken into.

Mr. MEIGHEN: Does the hon. member—?

Some hon. MEMBERS: Order. Sit down.

Mr. MEIGHEN: I can speak with the hon. member's permission. Did he refer to me in his last remarks?

[Mr. Graham.]

Mr. GRAHAM: I saw notes coming in from the outside, not one but several; and a great many questions were asked me, and I was told before the House rose that they were sent by a gentleman from the gallery. If that is not true I gladly take the denial of my hon. friend.

Mr. MEIGHEN: They never came to me. I did not know that the gentleman that the hon. member refers to was sitting in the gallery. I never got any note from any gentleman. I never got any communication from any person, and I never asked any questions suggested to me by anybody else.

Mr. GRAHAM: I accept the statement of my hon. friend. Now, having got over that difficulty, my hon. friend will hold himself entirely responsible for my having to go over these figures again:

Cash aid received from the Dominion	$ 29,944,660
Cash aid from the provinces	412,878
Cash aid from municipalities	464,761
Lines handed over	37,785,320
Land valued at $5 per acre	174,081,010
Total aid without any interest added	242,688,629

The capital of the Canadian Pacific railway on June 9, 1913, was, according to their own statement, $455,276,084. That makes a total of $697,964,713, or a capitalization spread over the whole system of $70,437 per mile. But, Sir, I might add that this is not all that the Canadian Pacific railway got or all that they should have put into their line. I think that $5 per acre is perhaps too large a sum in that calculation.

An hon. MEMBER: No, it is not.

Mr. GRAHAM: Perhaps it is not. That is the calculation I made. Then, it is well known that the Canadian Pacific railway stock to-day does not sell at par, even when distributed amongst the original shareholders, but that for every hundred dollars charged to capital the company has received $175. During recent years it would be unfair to say that the capitalization, even taking my figure of $70,437 per mile, at all represents the amount that is in the road, or ought to be, because for the stock sold they got $175 a share.

Then, there is another point. This includes all the branch lines, some of which did not cost $15,000 per mile, some of which were laid with iron rails, some of which were laid practically without ballast in the prairie country, and these are all

included in this capitalization. Strip the main line of the branch lines and there would be at least from $8,000 to $10,000 a mile to add to the capitalization of the main line. That is a very mild estimate. My hon. friends behind say that I should place it at twice that amount. Well, put it at $10,000 and you have $80,000 per mile as the capitalization of the Canadian Pacific railway without the 75 per cent premium.

But there is something further. During the last few years the Canadian Pacific Railway Company have expended out of earnings on that line, and on account of other companies, at least $100,000,000 in betterments that do not appear in the capital stock at all, and which they could not spend in the way they did under the Inter-State Commerce Commission. I am not criticising the expenditure, as it was probably good business. But that ought to be added to the capitalization as well. If you take this into consideration, the capitalization of the Canadian Pacific railway would be much higher than the cost of the Transcontinental railway per mile from Prince Rupert to Moncton and the Canadian Pacific railway is not, and on account of its position, never can be, a road equal to the Transcontinental.

Mr. EMMERSON: Who owns it?

Mr. GRAHAM: The people do not own one foot of it and will never get any rental in the way of interest or from any investment they have in that road. I want to make another calculation, but lest there might be some mistake, I am not going to make it myself. I want to allow some other person to make it for me, in whom, I think, the Solicitor General has more confidence than he has in me. I think he had a good deal in me at times. I am going to ask you to take the figures given to this House by the Finance Minister of Canada. In speaking in this House on June 3, 1913, in support of aid to the Canadian Northern, the hon. the Finance Minister (Mr. White) said this:

> What did the Canadian Pacific railway get? They got $25,000,000 in cash; they got 25,000,000 acres of land which have turned out to be worth a greater sum than the capital stock of the Canadian Pacific Railway Company. I shall not take it on the basis of to-day's value; I shall deal with it on the basis at which it was deemed proper it should be taken at that time. The 25,000,000 acres of land were stated to be worth from $1 to $1.50 an acre. With the development of this land, which has been brought about not only by the Canadian Pacific railway, but by all these other railway companies which have been built, it has turned out to be worth a sum in excess of $250,000,000. What else did they get? They got in addition to that 700 miles of completed line of railway from Prince Arthur's landing to a point west of Winnipeg, 500 miles; and from Port Moody east through the Fraser canyon, 200 miles. They got all these grants from the Dominion Government in consideration of their undertaking to build the line. What would that subsidy amount to at that time? It is the very opposite of an extreme statement to say that the cash subsidy given to the Canadian Pacific Railway Company in consideration of building the line would run at least to $25,000 or $30,000 per mile upon the part of the line which they constructed.

The Minister of Finance himself said this; it is a most moderate estimate, but I will take it for my calculation. Thirty thousand dollars a mile on the part of the line which they constructed, roughly speaking, would be from $22,000 to $25,000 a mile on the balance of their main line. And mark you, Mr. Speaker, that on some of the lines at this end of the main line, subsidies were given under other names to what is now the Canadian Pacific railway, which do not appear in these figures at all. The Canadian Pacific railway got the benefit of these subsidies in taking over these roads. Forty-six million dollars practically, capitalization; $25,000 per mile, would make about $71,000 a mile, calculated by the Minister of Finance himself. But add to that the enhanced value of the main line by cutting off all the branch lines and the cheap lines, and you have at least $10,000 more per mile, to put it very mildly. There you have $81,000 a mile. And, if to that we would add the premiums they received on stocks; if to that we would add the hundreds of millions of dollars they have expended in betterments, out of revenue from the Canadian Pacific railway and from other companies, we would have a capitalization far and away in excess of the cost of the Transcontinental railway from Moncton to Winnipeg.

Mr. EMMERSON: And you have not calculated in that the exemption from taxation and customs duty.

Mr. GRAHAM: Yes, there are other items in the agreement with the Canadian Pacific railway which are not calculated in this at all. After figuring all that, we come again to this point: that, having a road of a higher standard that has not cost any more than the Canadian Pacific railway, we own 1,804 miles of that road,

and we own not a foot of the Canadian Pacific railway.

I want to clear up another point which has been raised, and that is as

5 p.m. to what was meant by the free rental period of seven years given to the Grand Trunk Pacific Company. I say it was a subsidy pure and simple, and should be treated like every other subsidy. It should be treated as an outright gift on which no interest is to be calculated, as no interest was ever calculated on any subsidy given to any other company. I am going to ask the House to take a leading authority for this opinion also. Speaking of the Transcontinental railway in this House, a gentleman named the Hon. Mr. White, Minister of Finance of Canada, said:

> The Government of Canada undertook to build that line (the Transcontinental), and from the day it was undertaken by the Grand Trunk Pacific Railway Company, their interest ceases for seven years. The Dominion of Canada loses three per cent upon $175,000,000, and money is worth more to-day to the Dominion of Canada than three per cent. But take it on that basis, and you have a direct subsidy to the Grand Trunk Pacific Company of $5,000,000 per annum, or $35,000,000 for seven years.

The Minister of Finance of Canada, in his statement before this House, treated the seven year rental free period of the Grand Trunk Pacific Railway Company just as I have treated it, namely, as a subsidy, and there is no other fair way to treat it in comparing it with other subsidies to other companies.

Some gentlemen have said that owing to the high cost of this road it would be impossible to operate it at all; others have said it could not be operated at a profit. We were told by the acting Minister of Railways that it would be a burden on the people. I pointed out last night that the head of the commission, Major Leonard, who is building this so-called burden on the people, said it is not a burden on the people at all, but an asset. I can place before the House a few figures that will show, that with the estimate of traffic, given by Mr. Tye himself to this commission, trains can be operated from Winnipeg to Moncton, not only to pay the running expenses, but at a small profit, or at least some profit to the Grand Trunk Pacific Railway Company. That is, if the standard of the road is placed back where it was in 1911. Mr. Tye, in his evidence before the commission, gives an estimate of the probable traffic to be expected between Winnipeg and Quebec. This estimate is very conservative, but it will answer the purpose. As Mr. Tye gave no estimate east of Quebec, the same number of trains per day has been assumed between Quebec and Moncton as between Quebec and Cochrane, namely five per day. This gives an average for the whole line from Winnipeg to Moncton of 8·5 trains per day, both ways. I had an estimate given me a day or two ago, of eight trains per day, but this is an estimate worked out on Mr. Tye's own estimate of the traffic.

Mr. AMES: Eight trains each way?

Mr. GRAHAM: I have said that I speak of a total of 8·5 trains per day. I want to explain here that local trains will interfere perhaps with the calculation one way or the other. There will be local trains from Cochrane east, and local trains perhaps from Cochrane west. On the Temiskaming and Northern Ontario there will be freight going west from there, and freight coming east, in, and down that line. They are not through trains but they are taken at an approximation and calculated as equal to through trains, by a practical railway man, and based on the figures given by Mr. Tye himself. Railway statistics of the United States and Canada indicate that a charge of $1.65 would be an ample amount to allow as the cost of running a train a mile over this road, or a total charge of $3,000 to run a train from Winnipeg to Moncton, or a total charge of $25,500 to operate the 8·5 trains over the line each day. Over a road of this standard, an average of 1,000 tons per train is a conservative allowance, and I might say that these trains, if the road is left up to its standard, could carry 2,000 tons just as easily almost as 1,000 tons. Indeed, one of the standard locomotives could haul more than 2,000 tons, and 2,000 tons is a very moderate estimate, and Mr. Leonard himself put the estimate at 1,600 tons. For the purposes of this calculation, I will say that these trains would average 1,000 tons, and that makes a total tonnage of 8,500 tons per day.

The latest returns of the Canadian Pacific railway show that the average gross revenue per ton per mile is in the neighbourhood of three-quarters of a cent per ton. As a considerable proportion of the Transcontinental tonnage will be wheat, a lower average should be taken, say, one-half cent per ton, or $9 to transport a ton from Winnipeg to Moncton. I want to explain that this is the average. There is much of the traffic that will pay a much higher average than that, and much of it will pay a lower rate.

Grain, of course, will pay a rate very much lower than that, while manufactured articles going west will pay a much higher rate. The Canadian Pacific railway receives about three-quarters of a cent per ton per mile, and this calculation is averaged on half a cent per ton per mile. This rate applied to the 8,500 tons handled per day gives the company a gross revenue each day of $76,500. In this calculation I have not figured any passenger trains at all. But it may be well to be on the safe side, and say that the tonnage may not be this large, but the passenger traffic will certainly make up for any difference in that calculation, and the extra tonnage that can be drawn will again help to make up the deficiency. I believe the conclusion is a very moderate one. The following then is the situation:

Gross revenue to the company from operating 8.5 trains per day	$76,500
Cost of operation	25,500
Interest charges per day, as per commissioners' report	14,800
Total charges per day	$40,300
Net revenue per day	$36,200

If you cut this calculation in two, and that is giving absolutely all the facts against the project, the company will still have sufficient money to pay the operation of the road, the interest to the Government, and will have at least $18,000 a day left for other charges and expenses. That is what the experts of the commission themselves estimate will be the traffic of the road at an early date; but when you take into consideration the traffic that must accrue from the West to the East and from the East to the West during the years that are to come, as the eastern and western provinces develop, as the northern part of the province of Ontario opens up with farm houses dotted here and there, it is no mad proposition to say that in ten years the traffic of this line will be doubled and, instead of this line being a burden, in spite of all the pessimistic talk of hon. gentlemen opposite, it will be a profit-making line to the Grand Trunk Pacific Railway Company of Canada. I have thought it fair to go to the extent of working out this calculation with a man who has some experience in these matters, and I have based it on the figures given by the commission in order to show the capitalists of the old land that, when the Grand Trunk Pacific Railway Company ask for money, they are not being placed by the people of Canada in a position where they cannot earn interest on their indebtedness.

I want to turn to another phase of the same question. I am sorry that my right hon. friend the Prime Minister is not here. My conviction is that the Prime Minister of Canada and the city of Halifax; that the Minister of Marine and Fisheries and the city of St. John, and the Postmaster General and the city of Quebec, are being misled at the present time as to the benefits to be derived from the Grand Trunk Pacific by our ocean ports. I say that they are being misled and are taking it for granted that Halifax, St. John and Quebec under the present conditions will receive the benefits that they expect to receive from this great undertaking. I say that they may not. I will point out to my hon. friend from Quebec county (Mr. Pelletier), as I know he is interested, why I think so. I firmly believe that, when he considers this question, he will use his influence to see that the wrong that has been perpetrated on the city of Quebec, on the city of Halifax and on the city of St. John, as our ocean ports, is remedied without delay. How was it expected that with this railway we would be able, particularly at Halifax and St. John and I might also include Quebec, to compete with American ports? Not by building a road as good as any other road. That would not have the desired effect. To reach the American ports requires a larger haul than to St. John and Halifax. The object in building this road to such a high standard was that, by the superior standard of the National Transcontinental railway, the difference in distance might be overcome. I discussed that question with the late Mr. Hays; I discussed it with Mr. Chamberlin and they assured me time and again that what they hoped to accomplish in making our Canadian ports what we all want them to be, could be accomplished only through having their road able to carry a bigger load than any competing road. I have discussed the question of grades. I want to point out again to the Postmaster General, to the Prime Minister and to the Minister of Marine and Fisheries representing these ocean ports that, to put it mildly, they are on unsafe ground in acquiescing in the changes in these grades. Last night I quoted as high an authority as there is on the continent of America on grades, and he distinctly says, on his authority as an engineer of great experience, that velocity grades on a new line and in our country are not to be depended upon for carrying the load that can be carried by a train loaded for a level line. He

stated that most emphatically. If that is the case, if the people of the old land believe that—and this engineer is an influential man—they will at once say: Here is another instance why we should not give the Grand Trunk Pacific Railway Company money fully to equip and operate this line, because it is an inferior line according to the highest authority, and is not the line which they told us they were going to be able to operate so cheaply. Mr. Chamberlin made that absolutely clear in a letter addressed to Major Leonard which I will read again. He had in mind the very matter, to which I have referred, that the only way to make these Canadian ocean ports a success is to have a road better than any other. He at once took exception to this Government changing or altering the grades on the National Transcontinental railway, which he had agreed to operate and which the country had agreed to build as he wanted it, so far as grades and curves were concerned: This is his protest:

July 18, 1912.

Major R. W. Leonard,
Chairman Transcontinental Commission,
Ottawa, Ont.

Dear sir,—I learn from our engineers that the standard of work on that portion of the Transcontinental railway between Lake Superior Junction and Cochrane, which was at the outset adopted and has so far been complied with, is being departed from, and that instead of four-tenths grade and permanent structures, you have authorized grades up to one per cent and the erection of temporary wooden structures. In regard to this I would call attention to clause 7 of this agreement of the 29th July, 1903, which provides that the work of construction of the eastern division shall be done according to the specifications approved by the company and shall be subject to the joint supervision, inspection and acceptance of our chief engineer and the chief engineer of the commission. I beg to say if this work is done in accordance with what I understand to be your recent instructions, it will not be in compliance with the agreement nor satisfactory to this company and cannot be accepted.

(Sgd) E. J. Chamberlin.

Within a very few months after this Government came into power, Mr. Chamberlin served them with notice that, if they changed the grades on this road, he would not accept the change. I should think that in the face of that the Government would have hesitated long before they would have proceeded with changes on the work. Not only did they proceed with the change of grades west of Cochrane to which Mr. Chamberlin objected, but they introduced similar changes by the dozen between Cochrane and the city of Quebec. I was asked by an Ontario man whether I would do anything that would prevent traffic coming down the Temiskaming and Northern Ontario railway from Cochrane, and I said: You do not know your man. I am not from the province of Ontario only; I am proud to be a resident and a native of the province, but when I am in the House of Commons I am from the Dominion of Canada. If that line were run through my own constituency, I would take the same view I do now. This is a great national undertaking for the people of the Dominion of Canada, and any effort made to cripple any part of it is not creditable to the men who make that effort. My desire is not to make an attack but to point out that Mr. Chamberlin, in so many words, informed the Government that if they made these changes he would not accept the road. He has never gone back on that notice, and the changes have been made. Let me read some of the changes that have been made west of Cochrane:

At mile 175, from station 1,784 to 1,817, there are 2,700 feet of .45 against eastbound traffic instead of four-tenths.

Mr. AMES: What is the hon. gentleman reading from?

Mr. GRAHAM: From a statement I made in the House last year, based on an examination of the profiles by an eminent engineer:

Then follows 1,000 feet of level and immediately 1,300 feet of .65 against westbound traffic, an increase here in the grades both ways.

At mile 177, station 1,876 to 1,889, there is 1,400 feet of 3/10 against eastbound traffic, followed by 1,000 feet of 8/10 against westbound traffic, another distinct increase in the grade.

At station 1,928 to 1,936, there is 800 feet where the 4/10 grade against eastbound traffic has been raised to .76, an increase of practically 100 per cent, followed by 1,600 feet of 6/10 grade against westbound. At mile 179 there is a siding. Some slight changes have been made at this point, but they are trifling. At mile 180, station 2,024 to 2,039, there is a stretch of 1,500 feet where the grade has been raised from 4/10 to .48 against eastbound traffic. At mile 181, station 2,104 to 2,115, the 6/10 grade against westbound traffic has been raised a trifle to .63. At mile 182, station 2,154 to 2,169, after 1,400 feet of level track, it is immediately raised to .75, which runs for 1,800 feet against westbound traffic.

A distinct violation of the agreement which will, if it means anything, increase the freight rates against the manufacturers of eastern Canada who want to send their goods to the West over this line.

Possibly that would not be a momentum grade. There is no momentum, as I gather

from the profiles, to compensate for the rise in the grade from 6/10 to .75. At mile 183, there have been several slight changes from the original, introducing what the engineers call 'sags.' At mile 184, from station 2,261 to 2,265, after 400 feet of level there are 1,000 feet raised from 6/10 to 8/10 against westbound traffic. At mile 185, following 1,300 feet of .31 against westbound traffic, 800 feet were raised to 8/10. At mile 187, station 2,385 to 2,401, a grade of 4/10 against eastbound traffic was raised to .42 for 1,600 feet.

This shows that there seemed to be a desire to change the grade just a little. Not one farthing would be saved by such a slight change as that.

At mile 188, station 2,471 to 2,475, there is something over 500 feet of level, followed by 1,475 feet, and the grade was raised from 6/10 to 8/10 against westbound traffic. At miles 190 and 191, station 2,594 to 2,616, there is 2,200 feet of 4/10 raised to 7/10 against eastbound traffic. At mile 193, station 2,720 to 2,741, there is 2,100 feet of 4/10 raised to .62 against eastbound traffic, and at station 2,751 there is 1,000 feet of 6/10 raised to 8/10 against westbound traffic. At mile 194, station 2,760 to 2,770, the grade has been raised against eastbound traffic to 6/10. At mile 196, station 2,884 to 2,900, after 1,600 feet of practically level track comes 1,500 feet where the grade has been raised from 6/10 to 8/10 against westbound traffic. At mile 197 to 199, sags again have been introduced, as stated before, apparently to save a few loads of fill, without having any regard to the appearance of the road. At mile 200, station 3,090 to 3,110, after 2,000 feet of 4/10 grade against westbound traffic, the grade suddenly rises to 8/10 against westbound traffic for 2,000 feet. At mile 202, station 3,225 to 3,240, there is 1,500 feet where the grade of 4/10 against eastbound traffic has been raised to .51.

These changes west of Cochrane were made in the face of the protest of the President of the Grand Trunk Pacific Railway Company, and of a notice that if the changes were made the road would not be taken over by the company.

I come now to the changes made east of Cochrane—and that this materially affects the cities of Quebec, St. John and Halifax I say without any fear of contradiction. I will repeat in the presence of the Minister of Marine and Fisheries what I said when he was out: that the Minister of Marine and Fisheries in St. John, the Prime Minister in Halifax, and the Postmaster General in Quebec stand on very dangerous ground in allowing these changes to be made or to remain made in the grade of the line from Winnipeg east, because Mr. Chamberlin says that if they are left as they are he will not take the road. If he does take the road, the consensus of opinion of very good authorities is that he will never be able to haul as much tonnage per train as he could have hauled had the grade been left at the standard. If this contention be true, St. John will get little benefit from the Grand Trunk Pacific railway; if it be true, Halifax will get little benefit from the Grand Trunk Pacific railway; if it be true, the benefits expected by the city of Quebec will be largely diminished by the putting in of these grades. If it be possible that the power of haulage may be decreased, would it not be a safe thing for these three members of the Government, coming from the great ocean ports, to insist that that doubt be removed, and that everything be taken out of the way that might prevent the Grand Trunk Pacific from feeding traffic into our great Canadian ocean ports and receiving traffic therefrom. It is common sense that they should do that, and I believe that it will be done before very long, if I know the temper of the people of these cities when they understand the situation, as I hope to be able to point it out to the Government.

Now, I come to the grades that have been changed east of Cochrane. Hon. gentlemen may laugh, but this is not a very laughing situation. This is a situation in which the Dominion of Canada, by an agreement with a company, is investing $181,000,000, one of the great objects in view being the development of our own Canadian ports. The violation of that agreement is not a small matter, particularly when the gentleman who is at the head of the operating company that should lease this line says he will not take over the line at all if these grades are put in now. I shall give the changes made east of Cochrane:

At mile 86, what was originally designed as a four-tenths per cent has been raised to a six-tenths per cent grade. At mile 90, station 1,545 to 1,660, there is another rise in grade, 1,500 feet of .56 against eastbound traffic instead of four-tenths as per original instructions, and at station 1,694 there is 600 feet of .53 grade against eastbound traffic instead of four-tenths.

The very first change made east of Cochrane is made against eastbound traffic and against the cities of Quebec, St. John and Halifax

At mile 93, there is 2,000 feet where a slight sag has been introduced without any apparent reason except for the purpose of introducing it.

At mile 99, station 2,160 to 2,172, there is 1,200 foot level, then 2,000 feet of one per cent grade instead of six-tenths against westbound traffic, originally contemplated, followed by a slight grade against eastbound traffic.

The same argument applied to 86, will, I believe, apply to this grade, and I leave it to the staff themselves, if they look over the pro-

files carefully, if they will not find in at least two places a grade where there is no attempt at a velocity or compensating grade, if it is not a straight run from the level at the grade, I am not prepared to say at what mile it is.

At mile 101, station 2,226 to 2,233, there is 700 feet of level, then 1,300 feet of .84 grade against westbound traffic instead of six-tenths, which merges into 3,300 feet of six-tenths. On the 700 foot level, a full train will be expected to get up sufficient speed, not only to climb 1,300 feet of .84 grade, but added to this without any easement of grade at all, a stretch of 3,300 feet of 6/10.

And I say now that a loaded train of empty cars, perhaps being taken back in a rush to Winnipeg and the West to receive grain will stall on this grade under the best conditions.

Again, before the 6/10 grade begins there is a continuation of .84 grade for 1,300 feet, so that the original intention that the train would only have to climb the 6/10 grade is altogether obviated, and the reasoning that there will be a great reduction of speed will apply to this grade as well as to the other.

Then, on contract 14, at mile 65, there is 1,400 feet of 4/10 against westbound traffic and then a stretch of 2,200 feet rise of from 6/10 to .73 running into a long stretch of 6/10. The same argument as to the necessary speed of a train when striking the 7/10 grade in order to assist it up that 2,200 feet, and also the additional distance of the 6/10, is applicable.

At mile 175, from station 1,784 to 1,817 there is 2,700 feet of .45 against the eastbound traffic instead of 4/10. Then follows 1,000 feet of level and immediately 1,300 feet of .65 against westbound traffic, an increase here in the grades both ways.

At mile 177, station 1,875 to 1,889 there is 1,400 feet of 3/10 against eastbound traffic, followed by 1,000 feet of 8/10 against westbound traffic, another distinct increase in the grade.

At station 1,928 to 1,936, there is 800 feet where the four-tenth grade against eastbound traffic has been raised to .76, an increase of practically 100 per cent, followed by 1,600 feet of six-tenth grade against westbound. At mile 179 there is a siding. Some slight changes have been made at this point, but they are trifling.

At mile 180, station 2,024 to 2,039, there is a stretch of 1,500 feet where the grade has been raised from 4/10 to .48 against eastbound traffic. At mile 181, station 2,104 to 2,115, the 6/10 grade against westbound traffic has been raised a trifle to .63. At mile 182, station 2,154 to 2,169, after 1,400 feet of level track, it is immediately raised to .75, which runs for 1,800 feet against westbound traffic. Possibly that would not be a momentum grade. There is no momentum, as I gather from the profiles, to compensate for the rise in the grade from 6/10 to .75. At mile 183, there have been several slight changes from the original, introducing what the engineers call 'sags.' At mile 184, from station 2,261 to 2,265, after 400 feet of level there are 1,000 feet raised from 6/10 to 8/10 against westbound traffic. At mile 185, following 1,300 feet of .31 against westbound traffic, 800 feet were raised to 8/10. At mile 187, station 2,385 to 2,401, a grade of 4/10 against eastbound traffic was raised to .42 for 1,600 feet. At mile 188, station 2,471 to 2,475, there is something over 500 feet of level, followed by 1,475 feet, and the grade was raised from 6/10 to 8/10 against westbound traffic. At miles 190 and 191, station 2,594 to 2,616, there is 2,200 feet of 4/10 raised to 7/10 against eastbound traffic. At mile 193, station 2,720 to 2,741, there is 2,100 feet of 4/10 raised to ,62 against eastbound traffic, and at station 2,751 there is 1,000 feet of 6/10 raised to 8/10 against westbound traffic. At mile 194, station 2,760 to 2,770, the grade has been raised against eastbound traffic to 6/10. At mile 196, station 2,884 to 2,900, after 1,600 feet of practically level track comes 1,500 feet where the grade has been raised from 6/10 to 8/10 against westbound traffic. At miles 197 and 199, sags again have been introduced, as stated before, apparently to save a few loads of fill, without having any regard to the appearance of the road. At mile 200, station 3,090 to 3,110 after 2,000 feet of 4/10 grade against westbound traffic, the grade suddenly rises to 8/10 against westbound traffic for 2,000 feet. At mile 202, station 3,225 to 3,240, there is 1,500 feet where the grade of 4/10 against eastbound traffic has been raised to .51.

I find that the following grades were changed east of Cochrane, in district 'C,' contract 14:

At mile 115, station 2,996 to 3,000, there is 400 feet of a level and 3,000 feet of six-tenths against westbound traffic, and 1,300 feet of .49 against westbound traffic. At mile 125, station 3,476 to 3,495, there is another change, making six-tenths grade, which, while being only the standard grade in the agreement, still is an increase over what was intended originally, and a violation of the chief engineer's instructions. At mile 141, station 4,360 to 4,370, there is 1,000 feet of seven-tenths grade against westbound traffic, an increase over the standard. Then from 4,370 to 4,390 there is 2,000 feet of six-tenths grade, followed by 1,150 feet where it drops to four-tenths, which is increased again from station 4,405 to 4,417 for 1,200 feet to six-tenths. This shows that the train will not only have to climb the increase of one-tenth of one per cent over the standard, for the 1,000 feet, but it must keep up this momentum for 2,000 feet on a six-tenths grade. In fact, for 5,350 feet it is here continually climbing. At mile 157, station 5,206, there is 1,200 feet of practically level stretch, then 2,100 feet of four-tenths against eastbound traffic, and 1,600 feet of a grade of a little over five-tenths against eastbound traffic, this being another increase in grade. At mile 167, the four-tenths grade is changed into 1,200 feet of five-tenths and 1,200 feet of three-tenths, both against eastbound traffic. At mile 181, there is another change from six-tenths to nearly eight-tenths against westbound traffic. At mile 189, there is 3,000 feet raised from four-tenths to five-tenths against eastbound traffic. At mile 191, station 1,121 to 1,137, there is 1,600 feet of level, but at station 1,145 there is 800 feet of 1 per cent grade against eastbound traffic which must depend for its safe and successful operation in momentum or a reduced train load proportionately.

I put these figures again on 'Hansard' to show these changes in grade divided into east and west of Cochrane. They were taken from the profiles by a competent engineer. I did not locate them last year as east and west of Cochrane. I want to

make clear again, because this is of paramount importance, more important than any party gain or consideration, that, there being a difference of opinion, some of the most competent engineers in America contending that these grades do not produce as good a road as a four-tenths and six-tenths, a grave doubt has been raised, to put it mildly, of the efficiency of this road with the velocity grades. It is therefore the duty, I say, of the gentlemen representing Halifax, Quebec and St. John particularly, to see that this doubt is removed and these velocity grades replaced by four-tenths and six-tenths per cent real grades.

Mr. PELLETIER: Has the hon. gentleman given the name of the engineer from whom he obtained these figures?

Mr. GRAHAM: I submitted these profiles last year to Mr. M. J. Butler and he had an assistant with him. I did not tell him what I was going to do with his statement, I asked him to make out the grades and to give me the figures. The profiles have been before Mr. J. B. Berry, one of the greatest authorities on this continent and the opinion he gave me on them I gave to the House last night. He had these profiles all before him, as I submitted them myself and asked his opinion, and he is wholly disinterested in the information he gave. I think his authority will not be questioned.

I was saying a few moments ago that the late Mr. Hays and Mr. Chamberlin, in discussing this question of the standard of the road with me some years ago, took the ground absolutely that the only way in which St. John and Halifax could receive the benefit of the Grand Trunk Pacific traffic, as was intended, was by building a road, not equal but superior to the standard of American roads; so that the superiority of the Canadian road over the American roads would overcome the difference in distance as between Canadian ports and American ports. As Minister of Railways, I insisted that, wherever possible, this high standard should be maintained, and that there should be no doubt as to the efficiency of the road. If there is any doubt about velocity grades injuring the efficiency of the National Transcontinental railway, should not the members of the Government who represent these great ocean ports of St. John and Halifax remove that doubt? Do they not owe it to themselves and to the cities which they represent? Halifax, St. John and Quebec are the three ports of entry for all the traffic that comes across the Atlantic to the Dominion of Canada or goes out that way. It is well to develop the port of Quebec, and it is well to spend millions in the city of Halifax and in the city of St. John, but if these cities are not to get the benefit of our own road, then I say that the large expenditure being made in these great ports is being made for other railway companies, and not for the National Transcontinental railway. After spending millions of dollars, why take any chance—to put it in the mildest form—in order to save a comparatively small amount, and Mr. Berry says a far smaller amount than is named by this commission. I put it strongly because I feel the situation. I discussed it thoroughly with the late Mr. Hays and Mr. Chamberlin some years ago, and we arrived at the conclusion that our great Canadian ports could not be kept up unless the high standard of the road was maintained. I urge the Prime Minister, as representing Halifax, and the Minister of Marine, as representing St. John, and the Postmaster General, as representing Quebec, to look into this matter most thoroughly, and not take the word of any engineer who may say that this is as good a way to build a road as any other, or even the word of an engineer who says it is not as good a way. They should remove the doubt that has been raised so that there can be no mistake, so that if the Canadian ports are not developed it will not be the fault of the Grand Trunk Pacific construction. If I were discussing a party question, I would not take up so much of the time of the House, but I feel that this is of vital importance to the Dominion of Canada, and should not be made a football for any one province as against another, or for any one set of ideas as against another. We want the trade of Canada for Canadian ports, and the Transcontinental was constructed for that purpose; and if we take any chance whatever when we know the situation, then in the years to come there is one man in the Dominion of Canada that will not be responsible for the consequences if they are not up to the expectations of the gentlemen who represent these ports.

In the city of Quebec some changes have been made, and while for the present moment those changes will be for greater benefit in the way of labour for the city of Quebec, I want to call the attention of the Prime Minister,

representing the city of Halifax, and the Minister of Marine and Fisheries, representing the city of St. John, and the Postmaster General, representing Quebec, to this: The shops in the city of Quebec have been removed several miles away from the main line. The late commission and the late Government were building a station of their own of magnificent proportions at Champlain Market. That station is to be of a smaller character now, and the Grand Trunk Pacific will not own a station in the city of Quebec, outside of this little station which is being constructed by the Canadian Pacific railway under certain conditions. I am not going to discuss those conditions as other hon. gentlemen from Quebec will do that. But I want to point out to the members representing these three great ocean ports that every car that breaks down on the main line and needs to be repaired —as will happen time and again—will have to be hauled miles down to the repair shops and miles back again to the main line, and every time that is done it adds to the freight rates, to the city of St. John and the city of Halifax. Under the old arrangement, repair shops were on the main line and there were no transportation expenses for crippled cars being moved to and fro from the main line to the repair shops. The new shops at St. Malo are not on the line of the Transcontinental at all. They are on another line and in order to get to these shops the Transcontinental has to do one of three things: either to get running rights over another line and be second fiddle in the city of Quebec; or build a line of its own about four or five miles; or build a tunnel from the main line between Champlain Market and the Quebec bridge; across to the shops at St. Malo. In only those ways can they get to the shops. On page 183 of the report of the Quebec Board of Trade I read this from a speech of the right hon. the Prime Minister:

> The site originally selected at St. Foye will nevertheless be utilized in the first instance for a large through freight yard which is necessary at that point in order to provide for the distribution of cars on different roads. Moreover a large handsome station has been completed at St. Foye as well as an eighteen stall engine house and every building necessary for the efficient operation of the railway. Between the Quebec bridge and the Champlain market a double track has practically been completed.

Where is that commission which said that it was illegal to build a double track?

> There is also a connection with the Canadian Northern railway at Cap Rouge which permits entrance to the St. Charles side of the city and which can be utilized for this purpose pending the completion of the tunnel that will connect the St. Lawrence water front with the new union station on the Palais site.

In the plans there is a tunnel, or there ought to be a tunnel. The Prime Minister told them at Quebec that there was to be a tunnel. The Prime Minister, in answer to a question I put to him the other day—an innocent question, I admit—asking what the estimate of the tunnel was, said: It is not customary to give an estimate of a public work before the tenders are in. I asked the Minister of Railways and Canals if these shops, or the station, were on the Transcontinental railway, and he said: Yes, when the railway is completed. That means that a tunnel must be built. I would ask the Postmaster General to look at that map and see if the tunnel is not wiped out altogether from the map. Where that yellow blotch is there was a red line marked 'tunnel', but in the map given to me it is marked out and no tunnel is shown. I will tell the House why that is done. I will give my hon. friend the Postmaster General this other map and he will see some lines there. The amateurishness with which they tried to mark this out is so evident that I would like the Postmaster General to show this to his colleagues, and ascertain from them what has become of the tunnel. One part of the Government says there is going to be a tunnel at Quebec and another part says there is not going to be. The Transcontinental Railway Commission say there is going to be no tunnel, the Prime Minister says there is going to be a tunnel and the acting Minister of Railways and Canals, said the other day also that there was going to be a tunnel. I want to point out to the Prime Minister and the Postmaster General that, according to the present figures given to me by the commission, no tunnel is provided for in the city of Quebec. I asked for a return showing the difference between the cost as estimated under the original plan and the cost as estimated under the present plan and I am going to read the figures to the House. They will find no tunnel in those figures. Why was it erased on that map? Absolutely to convince the people that the new plan is to cost a million dollars less than the old one, while, as a matter of fact, it will cost $2,000,000 more. This Government and this commission, who are going to build the Transcontinental railway and save money, who are going to be more economical than were the old Government, who charged the old Government with ex-

travagance, are spending more money on the Transcontinental railway proportionately than their predecessors in office.

Mr. PELLETIER: The hon. gentleman shows me one plan where the word 'tunnel' is stricken out. I see that on the same plan the words 'St. Malo shops' are also stricken out. However, these shops are now in course of construction with 600 men working.

Mr. GRAHAM: That is what I say; notwithstanding the finding of this commission, these shops are being built. What I say is that these maps were given me by this Government or its officers, and that in one of the maps the tunnel is stricken out and in the other the shops are stricken out.

Mr. PELLETIER: No, both are stricken out.

Mr. GRAHAM: Why?

Mr. PELLETIER: Ask the people who struck them out; I do not know, I know the work is going on, and that is better than mere words on all the plans which you may show.

Mr. GRAHAM: I know it is and I am finding fault, not that the work is going on, but that the maps were given to me in order to carry out the statement which was handed to me. These maps are not true. It is unfair. I am going to read the report given to me in a return and I am going to call the attention of the hon. acting Minister of Railways and Canals to it. I want the Postmaster General to listen because he is conversant with the situation. What I invite attention to is this:

Estimated cost of Quebec Terminals under present plans.

Cost of work done and right of way taken over from the Quebec Bridge Company between Point à Pizeau and Quebec bridge (including track material)	$ 287,169 90
Cost of grading to date, Quebec bridge to Champlain Market	543,000 00
Estimated cost of completing grading, Quebec bridge to Champlain Market	57,000 00
Cost of track material, Point à Pizeau to Champlain Market	40,000 00
Cost of land, Point à Pizeau to Champlain Market (includes to deep-water line)	1,368,050 00
Estimated cost of station and terminals at Champlain market	60,000 00
Total	$2,355,219 90

Joint Terminals.

Estimated cost of joint terminals, on which the Government pays as annual rental a sum equal to 2¾ per cent:		
Canadian Pacific railway property at Quebec	$3,300,000 00	
Additional land to be purchased for joint terminals	800,000 00	
Terminal station and yards to be built by Canadian Pacific railway	1,500,000 00	
Total		$5,700,000 00
Annual rental, $128,250, capitalized at 4 per cent	3,206,250 00	
Land and right of way	285,780 10	
Total		$5,847,250 00

Can my hon. friends now see why the tunnel is stricken out of this map because it is not given to me in this statement at all? This statement given to me by the commission of the cost of the present arrangement leaves the shops of the Transcontinental railway miles away from any part of the main line. But this statement is incorrect because the Prime Minister said they were going to build the tunnel and the acting Minister of Railways and Canals said so too. I understand it is in the plan. Why is it left out of the statement that is given to me?

There is another error in this statement in order to bring the cost below the cost of the old plan. The annual rental of $128,250, capitalized at 4 per cent gives $3,206,250. Why is it capitalized at 4 per cent when the Transcontinental railway is only going to pay 3 per cent? That reduces the amount by about a million dollars. Taking that $128,250 as the proper sum, we know that the Grand Trunk Pacific will never pay 4 per cent, as they are required to pay only 3 per cent; therefore, their capitalization ought to be practically $1,000,000 more than it is given. If we have to pay interest on that at 3 per cent, the cost, without the tunnel, is as high as the cost under the old plan with the shops on the main line of the Transcontinental.

I want to point out something further, and I may say here that it is very difficult to get at these things when information of this kind is given to me. I want to point out to the Prime Minister and to the Postmaster General, to show that there is a spirit somewhere that does not want the tunnel at Quebec. They can figure it out, but the plans given to me, and the statements given to me, show no connections between the Transcontinental

railway and its own shops, or with the Union Canadian Pacific railway station. If we take the correct figures, we find the capitalization at four per cent to be $3,206,250. The amount capitalized would be something over four million dollars. The tunnel will cost, at the very lowest valuation, at least $1,500,000, for it will have to be a double tunnel. The old scheme would cost $6,406,152, while the new scheme will cost $8,416,000, and the Grand Trunk Pacific Railway Company will be playing second fiddle to the other companies in the city of Quebec.

Now, Mr. Speaker, to conclude. I have discussed this question from higher than party motives; I have discussed it with the main object of showing that this report is unfounded and untrue in its chief findings. I have tried to show that the gentlemen who composed this commission had their views fixed, so far as the Grand Trunk Pacific railway is concerned, long before they ever were put on this commission; I have shown that one was an enemy of the policy, and the other, an enemy of the project. I have shown that they were totally unfitted, no matter what their other qualifications might be, to serve independently on such an investigation into the construction of the Transcontinental railway.

I have tried to show that the Government of Canada will not act on the findings of this commission, because every day of its life the Government of Canada is violating the chief findings of the commission. I have tried, as conscientiously as I could, and with as much force as I am possessed of, to show, particularly to the representatives from Halifax, St. John and Quebec, the result that may accrue to those great Canadian ports, if these hon. gentlemen are not alive to see to it that the high standard of the Transcontinental railway be restored, and restored immediately.

I have tried, as faithfully as I could, and in all earnestness and conscientiousness, to warn the Government against allowing this attack on the Grand Trunk Pacific directly, and indirectly on our great Canadian enterprises, to go unanswered and unchallenged. I have urged, and I urge again, that the Prime Minister should rise to the situation, and so far as the attack on this great undertaking is concerned, should denounce this report as unfounded, which it is, and which every man in Canada who has studied it, knows it to be. I have said that the legitimate industries of Canada and the legitimate undertakings of Canada are on a sound basis, and the financiers of the world need have no hesitation in continuing to invest their money in this Dominion. I have tried, feebly it may be, to tell the country and the financiers of the world that the men of Canada will stand side by side, the peers of any men in any country in the world, for honesty, for ability, and for integrity. It is in the interest of the people of Canada, rather than in the interests of party; it is in the interest of the great undertaking in which every man, woman, and child in Canada is concerned; it is in the interests of the British Empire itself, that nothing be done to loosen the bonds of confidence that exist between the motherland and the young dominions across the seas. Sir, it is in the hope that the Prime Minister of Canada will rise above his party; it is in the hope that he will rise higher than partyism, and repudiate a report which affects our national welfare and our financial standing at the present time that I make one more appeal to the right hon. gentleman.

I have spoken from conscientious motives; I have spoken at length; I have devoted much energy and time to a study of this question; and, in the years to come, if St. John, if Halifax, if Quebec, if the eastern part of Canada, do not receive the benefits they expected from this great enterprise, then the member for South Renfrew will have his conscience clear in the knowledge that he has done his duty in notifying and warning the people of this country, and the members of this Government, and the members representing these constituencies of what he conscientiously believes the evil result of all this will be.

Before taking my seat, Sir, I move, seconded by Dr. Pugsley:

> That the report of the commissioners appointed by the Government to inquire into the construction of the Transcontinental railway is so wilfully partisan and misleading as to be wholly unreliable; that the manifest object of the said commissioners was to misrepresent for party purposes rather than to investigate in the public interest, without regard to the serious consequences to the country or this great national undertaking; and that for the appointment of such commissioners, and for accepting and endorsing their report, the Government deserves the severe censure of this House.

At six o'clock, the House took recess.

The House resumed at eight o'clock.

Mr. W. S. MIDDLEBRO (North Grey): Mr. Speaker, at the outset I am sure that hon. members on both sides of the House will be pleased to know that I do not pro-

pose to occupy one-fourth of the time that has been occupied by my hon. friend from South Renfrew (Mr. Graham) in defending the policy of the late Administration and in attacking the report of the Commission now before the House. If I recollect aright, in commencing his speech he said that this report bore upon its face the imprint of partiality and unfairness, and that any one who read the report would come to the conclusion that it was a partisan one from beginning to end. He even went so far as to say that the report was so partisan and unfair that even members of the Administration and other hon. members on this side did not believe in that report themselves after perusing it. If that is the case, I can only say that I cannot comprehend for one minute why it has been necessary for the hon. gentleman to devote eight hours to attacking the report and to attempting to defend the late Administration. I venture to say that the hon. member for South Renfrew has never devoted the same amount of time, study and energy to any other speech in his political career that he has devoted to the speech he has just delivered. I want to congratulate him upon the physical energy he has displayed in delivering that speech. I do not know that I can congratulate him upon the contents thereof. His speech, from its length, in my opinion, was not intended to elucidate the question before the people of this country, but was intended to befuddle their minds. What the people want to know is this: First of all, what was the object of this railway; secondly, what were the promises and representations made at that time by the Government as to its cost; thirdly, what has been the cost of that railway; fourthly, what has been the reason of the excessive cost of the railway; and lastly, has the railway accomplished the purposes for which it was intended? If we can answer these five questions, we shall have solved the questions as to whether or not the report is a fair and impartial one, and as to whether or not the promises of the late Administration have been carried out.

Let us see what was the object of the railway. Sir Wilfrid Laurier, in introducing the measure into the House of Commons, stated that the primary object of the Bill for the construction of the National Transcontinental railway was to convey freight from East to West and from West to East at a reasonable cost; in other words, to make the cost so low that this railway would relieve the freight situation in the West; that it would facilitate the handling of traffic, and that it would do so at the least possible cost; that is, that this road would act as a regulator of freight rates from east to west. It was upon that assumption and principle that the people of this country approved the construction of a National Transcontinental railway. The Conservative party never opposed the construction of a National Transcontinental railway. They opposed the means and methods by which it was proposed to construct that railway, but they agreed that there was a need for a second national transcontinental railway.

I want to take up this question from two aspects. In the first place I will take up the representations made at that time by the Liberal Administration that this railway could be built for $13,000,000. I understand quite well that that statement was made by the then Prime Minister upon the understanding that what we would pay out over what we would take in would amount to only $13,000,000. It is upon that basis that I propose to discuss the first branch of this case. In discussing that, as it is ten years ago since these representations were made, I intend to give the quotations from 'Hansard' to show the representations upon which the people of this country ratified the Bill for the construction of the National Transcontinental railway.

On the 30th of July, 1903, Sir Wilfrid Laurier, at page 7676 of 'Hansard,' spoke as follows:

> Therefore let our friends on the other side of the House take note of this fact: That, with the exception of a few years' interest, to which I shall allude later on, we shall have this portion of the railway built by the Government from Moncton to Winnipeg without the cost of one dollar to the Canadian people. We shall receive interest upon the money advanced at the same rate, whatever we give with the one hand we shall receive back with the other.

I am fair to admit that the then Prime Minister meant by that statement, that we would receive 3 per cent upon the cost of construction of the eastern section of this railway and that we would receive 3 per cent rental in return after the interest for the first seven years, but that the interest for the first seven years which we would lose would be $13,000,000. Therefore he told the people of this country that $13,000,000 was all that it would cost for the construction of the National Transcontinental railway.

On page 7691 of 'Hansard' Sir Wilfrid Laurier spoke as follows:

The sum total of the money to be paid by the Government for the construction of that line of railway from Moncton to the Pacific ocean will be in the neighbourhood of $12,000,000 or $13,000,000 and not a cent more. Now, Sir, what is $13,000,000 in the year 1903—it is about our surplus of revenue over expenditure; the surplus for this year will pay for the construction of this road.

Again at page 7695, Sir Wilfrid said:

The cash subsidy which is promised and which is to be given under this contract to the Grand Trunk Pacific Company will not exceed $13,000,000 or thereabouts. Now, Sir, I think under the circumstances that I can appeal with some confidence to the judgment of the House to ratify, and to ratify with earnestness and with joy, the contract which I have the honour to lay upon the table.

This was followed by a speech from the Hon. Mr. Fielding. I shall not read his quotation because it is too long, but it was simply to say that he corroborated all that Sir Wilfrid Laurier had said. A report by the Globe of this speech concludes as follows:

When Mr. Fielding sat down at 11.20, after speaking for nearly four hours, there was a tumultuous outburst of cheers.

As these statements were made in Parliament, there was a sufficient justification for the people of this country to believe that the total cost of the National Transcontinental railway would be $13,000,000. That statement was followed up by the authorized and revised version of the campaign literature which was placed before the public in 1904. I remember that literature quite well, because in 1904 it was like butting up against a stone wall to run up against the policy of the Government of the day, namely a National Transcontinental railway for $13,000,000. On a page of that pamphlet in large black type, there was the following heading:

A Transcontinental railway for $13,000,000. It is an actual fact, an indisputable fact, that $13,000,000 will cover every cent of the country's expenditure in connection with this railway.

I have in my hand a copy of the Owen Sound Advertiser of 1904, the Liberal organ in my riding. I am going to quote from the speech of the Hon. A. G. MacKay, formerly Minister of Crown Lands in the Ontario Government and late leader of the Opposition in the Ontario Government. Let us see what he said to the people of my constituency upon that occasion.

Referring to the Grand Trunk Pacific railway scheme, he dealt effectively with the question, showing what would be the result of Government operation of the road. He then went on to ask where would the estimated cost of the road, $13,500,000 be when this railway went through as a colonization road and opened up 16,000,000 square miles of country growing valuable spruce which will be increased in value in this way? The money necessary for its construction could be borrowed in England for 3 per cent, and as the Government would receive an equivalent of 3 per cent rental from the Company it was simply a matter of receiving the money from the Company with one hand and paying it out with the other on the interest and it was no hard or expensive business to transact.

I am therefore perfectly justified in saying that no matter what the present leader of the Opposition meant when he spoke in the House as I have stated, certainly the country believed that we were going to get a national transcontinental railway for $13,000,000. I am going to take the right hon. gentleman at his word; I am going to compare what he now says was his meaning with the facts and figures as they exist to-day. I am going to make my computations upon the basis of four per cent, and I will give the House the reason why. I have taken the trouble to ask the Finance Department what is the rate of interest that we have paid on all that portion of the national debt which has been paid off in the last ten years, what is the rate of interest which we will have to pay on that portion of the national debt which we will pay off in the next ten years, and what is the rate of interest which we will pay for the loan of $25,000,000 which we raised the other day. I think hon. gentlemen will agree that that is a fair way of getting at the root of the matter. What are the facts? My questions were as follows:

What is the average rate of interest paid on that part of the national debt which matured in the last ten years?

The answer was 3.82; we will say 3.83.

What is the average rate of interest paid on that part of the National debt maturing in the next ten years? and the amount of said debt as maturing?

The answer was 3.74; we will say 3.75. Our last issue of $25,000,000 of 4 per cent bonds sold not at par but at 99, which means that we are paying more than 4 per cent for them. The Finance Department tells me that it cost .23 per cent for commission, brokerage and expenses of loan. If you add .23 per cent to 3.83, the cost of the loans which expired in the last ten years, you have 4.06. If you add .23 to the cost of the national debt which will expire in the next ten years, you have 3.98, and the cost of the loan which we have just put through, adding .23 per cent for brokerage, commissions, is 4.25. The cost of the three loans, the $27,000,000 which will mature,

the $38,000,000 which did mature within the last ten years, and the $25,000,000 which we have just put through averages 4⅛ per cent. So that in reckoning the cost of the National Transcontinental railway to the people of this country, I am justified in saying that it is costing us 4 per cent. If we had the money we could pay off a portion of our national debt and save 4 per cent; if we have not the money we have to pay 4 per cent to get it.

According to the statement of the commission, which the hon. member for South Renfrew does not deny, the cost of the Transcontinental, with interest computed to date of its completion, will be $181,000,000. I placed it at $180,000,000 before I got these revised figures. For the first seven years, as we all know, we make an absolute and complete gift to the Grand Trunk Pacific railway of seven years interest on $180,000,000, which, compounded at 4 per cent, amounts to $56,867,000. In addition to that, we pay interest on the bonds of a portion of the cost of the mountain section at 4 per cent for seven years, making a direct gift to the company of $13,473,000. Then, because of a blunder which was made by the late Administration by reason of the contract with the Grand Trunk Pacific being improperly drawn up, we were led into another expenditure in connection with the implementing of the bonds of the western section which, notwithstanding the efforts made by the Finance Minister, will cost us $10,000,000. At the end of the ten year period we will be getting three per cent on that $180,000,000 and paying four per cent. If you capitalize the difference of one per cent on the cost of the railway—because we get only three per cent rental—you have $45,000,000 more. What does it all mean? It means that instead of the $13,000,000 which the present leader of the Opposition said this railway would cost the country, taking it upon his own basis the amount is $125,000,000. I defy any member on the other side of the House to say that these figures are wrong. $125,000,000 is the pure gift which we make to this company, which we do not get back, and for which we have no recourse. I hope hon. gentlemen will all understand that this amount does not represent the cost of the railway; that is the figure which the hon. member for South Renfrew said was a bonus or subsidy. Did you ever hear the question of bonus or subsidy mentioned when hon. gentlemen opposite went to the country in 1903? Did they tell the people at that time that they were going to give the company a straight gift of $125,000,000? The hon. gentleman said that we should consider that as a bonus or subsidy to the Grand Trunk Pacific Railway Company. Taking his own argument, we have a subsidy of $125,000,000 for 1,800 miles of railway, $75,000 a mile. Hon. gentlemen will see, therefore, that my hon. friend has not been fair; he had not figured it out; he did not think what he was saying when he said we were giving that interest as a subsidy to the Grand Trunk Pacific Railway Company. He did not know that he was telling the people of this country that we were giving them a subsidy of $75,000 a mile, besides building the railway ourselves.

I now propose to deal with the cost of the railway. In order that there may be no mistake about this matter, I will quote again from 'Hansard.' On July 30, 1903, the then Prime Minister (Sir Wilfrid Laurier), spoke as follows in this House:

> It is our duty to provide immediate means whereby the products of these new settlers may find an exit to the ocean at the least possible cost.

'At the least possible cost' solves the whole question. If these means are not obtained at the least possible cost, you cannot get the volume of trade; if your rates are too high you will not get the traffic. The means of transportation, must, therefore, be obtained at the least possible cost if the railway is to fulfil the purposes for which it is being constructed. He goes on to say:

> To those who would advise to pause, to consider, to reflect, to calculate, and to inquire, our answer is: No, this is not a time for deliberation, this is a time for action. The flood of tide is upon us that leads on to fortune; if we let it pass, it may never recur again.

That is what M. P. Davis said when he got contracts 16 and 17: The flood of tide is upon me that leads to fortune; if I let it pass it may never recur again. So he kept hold of contracts 16 and 17, the flood of the tide of fortune. For eleven months the tide was dammed back, and when it receded it left upon the sands of time the sum of $740,000 for M. P. Davis. The flood of tide was indeed upon him; if he let it pass it might never recur again. Then my right hon. friend went on to say:

> We cannot wait, because time does not wait.

But M. P. Davis waited for a year

> Time lost is doubly lost—

M. P. Davis evidently thought that time lost was doubly gained so he held these contracts for a year. (Reading):

It is not of to-morrow, but of this day, of this hour, of this minute—Heaven grant that it is not too late.

And no man echoed that sentiment more fervently than Mr. M. P. Davis, when he got his $750,000 for nothing.

But that is not all. In the same debate Sir Wilfrid said:

It has been stated and restated in all possible tones from the faintest wail to the indignant protest, that we are launching into railway construction of gigantic magnitude through a country of which we know absolutely nothing and without taking the usual elementary precautions of having a previous exploration. I say again there is not a shadow of truth in this charge as I shall show later on.

But I have to say this more, that we have a wealth of information on the subject; we have more information on this scheme than ever was possessed by former governments when they decided upon the Intercolonial or the Canadian Pacific railway.

But I shall be asked what about the Rocky mountains? My answer in regard to the Rocky mountains is: that we have mountains of information, we have mountains of books, pamphlets and reports from traders, from explorers and from engineers.

Any one who to-day would care to look into the reports now accumulated in the Archives or the Railway Department will know that country just as well as he will know his own home.

That is what Sir Wilfrid said. But what did Mr. Blair say? Mr. Blair, the man who was at the head of the department, the man who knew what he was talking about; Mr. Blair the man who was not consulted when this contract was entered into or when the Government was committed to it, because he did know what he was talking about; Mr. Blair who resigned from the Government because he would not commit himself to this foolish expenditure without the necessary information. And what did Mr. Blair say?

He was not in favour of impetuously rushing into the construction of the Transcontinental railway above Quebec through an unknown country to Winnipeg and the West until we knew something about it, until we had the fullest possible information about it.

So that we have the late Government representing themselves in this position: We know all about that railway, we know all about that country, we know it as well as we know our own homes; we have had engineers out there, we have taken the necessary borings, we know the kind of material, whether rock, hard pan, clay or common excavation; we know all about it, we have mountains of information, and we tell you, knowing that, that this railway will cost, according to the usual subsidy requirements, with a grade of one per cent and a curvature of not more than ten per cent, $49,132,000.

But, said Mr. John Charlton, when we are going to build a Transcontinental railway that kind of a railway will not do. It is all right enough on the ordinary subsidized railway to require grades of one per cent and a curvature not exceeding ten per cent, but we want a first-class railway, we want a railway with a grade of ·04 per cent and 4 per cent maximum curves. That is the kind of railway Mr. Charlton speaking in this House said he wanted, and that is the kind of railway that the then Minister of Finance, after revising his estimate and adding twenty-five per cent, said he would give the people. What did Mr. Fielding say?

I propose to add 25 per cent to my first estimate of the cost of construction of the eastern division, and to add 25 per cent to the present value of seven years' interest on that portion of the road. This is equivalent to an advance on the cost of $21,000 to $31,000 a mile on one part and from $25,000 to $35,000 for another part. That is a pretty liberal estimate and ought to build the kind of road called for by the hon. member for Norfolk.

Referring to the late Mr. John Charlton. That was a road with a ·04 per cent grade and a four per cent curvature. So we were there informed by the late Government that that was intended by them, and in the same year, after the Amending Act of 1904 was passed we find that the instructions given to the engineers bear out this idea. The report of Mr. Lumsden, June 30, 1905, is contained in the report of the Railway Commission for the year before, that is from June, 1904, to June, 1905. The instructions therein were as follows:

District engineers were furnished with printed instructions for their guidance and for that of the engineers in charge of parties under them, giving full particulars as to their various duties. They were also instructed to adhere to grades not exceeding 0.4 per cent adverse eastbound or 0.5 per cent adverse westbound although in regard to the last mentioned it was changed to 6 per cent in one or two exceptional cases, the maximum curvature being limited to 4 degrees.

I point that out for this purpose. The hon. member for South Renfrew (Mr. Graham) devoted eighteen columns of 'Hansard' for the purpose of proving that they had a ·04 per cent gradient and a four per cent curvature on the National Transcontinental railway and therefore his assumption was that it cost more than it would have otherwise cost; when, as a matter of fact, we were promised in the

beginning, and the instructions were given to the engineers that we should get that grade and that curve and yet we were told it would cost only $61,000,000. So we may wipe out the seventeen pages under that head, as we are simply getting the kind of railway we were told we would get for $61,000,000, and that does not account in any way for the greater amount that this road has cost the country over the estimate. I want to say that at the time this contract was brought before the House, as I said before, the Conservative party did not oppose it, but we did move several amendments. One amendment, for instance, was that the rental of the eastern division should be secured upon the property of the Grand Trunk Pacific railway. You will understand that, as the situation is now, if the Grand Trunk Pacific did not pay the rental on the 1,800 miles of the eastern division, we would have no lien whatever on the western division for the payment of that rent, and no lien upon the Grand Trunk railway itself, which is supposed to be behind this thing and which, as Mr. Fielding said, was to be in it and of it and form the whole thing. We moved another resolution that, as the Grand Trunk railway was getting all the benefit from the Grand Trunk Pacific contract, the Grand Trunk Railway Company should therefore assume the obligations. That was voted down. We moved a great number of amendments with the object of bettering the conditions of this contract, which were all voted down, but we never opposed the construction of the railway itself. Now what do we find? Notwithstanding that we were to get the same kind of railway which my hon. friend from South Renfrew says we are getting to-day, for $61,000,000, it is costing five times that much. That means at 3 per cent a rental of $5,400,000 a year, or $14,800 a day, or $616 an hour. Now let us see in detail what the railway is to cost the country, taking it from a capital point of view, that is the cost of the railway itself to Canada. In the first place we have $180,000,000. Then we add to that seven years' interest at 4 per cent, which is $56,857,720. Next we have seven years' interest on the mountain section amounting to $13,472,099. Then, the implementing of those bonds which cost the country $10,000,000, that makes $260,339,819. In the next place we have to pay the difference between 3 per cent and 4 per cent, that is one per cent, on $180,000,000 for all time to come, and that capitalized makes $45,000,000 more. That makes $305,339,819. I add to that the cost of the Quebec bridge because, notwithstanding what my hon. friend from South Renfrew says, I have come to the conclusion that the Quebec bridge is more useful for transporting trains over the St. Lawrence than the armouries that are being built by the Minister of Militia, and it would not have been built had it not been for the National Transcontinental railway. So I add the cost of the Quebec bridge, $23,314,099. I do not know whether I should say anything about the Quebec bridge, but I would like to say this. My hon. friend says it should not be included as part of the cost of the National Transcontinental railway. I am free to admit that Sir Wilfrid Laurier did not include it in his estimate of what the road would cost, nor did Mr. Fielding include it, but I think the people of the country will come to the conclusion that it should be included; and in view of the fact that Mr. Fielding included part of the cost of that bridge I think that is another reason why it should be included. My hon. friends on the other side should not be very proud of their record in connection with that bridge, at any rate. In the first place, the contract was given to a local company of political friends, the whole paid-up capital of which was only about $40,000, to build a bridge estimated to cost $8,000,000 or $9,000,000. They gave the contract to a company of that kind, who only put $40,000 into it, one-half of which was paid out in directors' fees attending the meeting. The company, of course, was unable to finance the work and asked the Government to finance the bonds, which it did to the extent of something like $6,000,000. The Quebec bridge through the fault of some one—I do not say the Government—fell into the river at a time when the Government had guaranteed the bonds of the worthless company, and the Government had to put up $6,000,000 themselves, for which they have never got a cent to this day. The bridge is lying in the bottom of the river; perhaps I should not say that, because the Government had to pay $50,000 more to take the scrap iron out of the river. That is the history of the Quebec bridge, except this: that the estimated cost of the Quebec bridge including what has fallen in the river, what we have spent to date, and what will be necessary to complete it, is $23,000,000, nearly twice as much as Sir Wilfrid Laurier said the whole National Transcontinental railway would cost. Including the Quebec

bridge I have now the cost of construction up to $328,000,000. If I am wrong in these figures I want hon. gentlemen on the other side to correct me, but I may say that I have verified them. What has cost the country $328,000,000 in cash is going to produce this company a rental of $5,400,000, that is a return of 1.63 per cent on the capital cost, assuming that the Grand Trunk Pacific are able to carry out their obligations when the time arrives. But that is not all. We are not satisfied with putting up $328,000,000 in cash. We have guaranteed the bonds of the mountain section to the extent of $56,000,000 more, and we have guaranteed the bonds of the prairie section to the extent of $11,000,000 and given them a loan of $10,000,000 as well. So that the total obligations we have assumed in respect to the eastern section and guaranteeing the bonds of the western section, amount to $406,000,000. Just a word in reference to the $328,000,000 that we will have paid out in actual cash of the people of this country for the National Transcontinental railway and the Quebec bridge. The whole national debt of Canada on the 1st of this month was only $317,165,000, so that we have the amazing spectacle of having to pay out for the National Transcontinental railway in cash $11,000,000 more than the whole national debt of Canada and what have we got for it? No probability of reduced rates.

These figures are made upon the assumption that the Grand Trunk Pacific are going to carry out their obligations. Let us see whether it is probable that they will carry out their contract. They will have to make a sum sufficient to pay working expenses, betterments, and general maintenance of the road, and above that a clear profit of $5,400,000 for rent on a bald 1,800 miles of railway running through a new and practically uninhabited country. Is there any probability that they will be able to do that? If you look at the report of the Canadian Pacific railway of last year, you will find that, with a total mileage of 12,000 miles, and running through all the populated districts of our Dominion, with all its vast resources, with the experience it has gained and the customers it has made during the many years it has been in operation—even with all those advantages their working expenses are equal to two-thirds of the gross revenue of the company. If you put the Grand Trunk Pacific railway, the eastern section of which runs through more or less barren country, on the same basis as the Canadian Pacific railway, that portion of it will have to earn $16,200,000 in order to enable the Grand Trunk Pacific to carry out its contract and pay 3 per cent on the cost of construction of 180 millions. Is there a sane man in this room who believes that railway can do anything like as well as the Canadian Pacific railway? I think I am quite safe in saying that for the first ten years of its existence it will not be able to pay more than its working expenses, and for that reason I am quite justified in saying that for the last three years of the ten year term the rental would not be paid; the contract provides that if they are not able to provide this 3 per cent interest over and above their working expenses, they are allowed to capitalize that portion of the 3 per cent which they are not able to earn above the expenses, and they will, no doubt, do so under the terms of the agreement. Upon that basis, capitalizing three more years will amount to $21,600,000. Capitalizing three more years interest of the mountain section bonds—and they are allowed the same privilege with respect to that—will give $11,250,000 more. Add that to the above cost of $328,000,000 and you get $361,000,000 which would be a charge against that road at the time that we could first take possession of it, upon default. In addition to that, we have guaranteed their bonds to the extent of $78,000,000 making a total liability in cash and bonds against the road before we could enter into possession of it, of $439,636,000. I think I am safe in assuming that they will not carry out their obligations in that respect. When we have arrived at that point, when we have spent $328,000,000 in cash and have guaranteed bonds to the extent of $78,000,000 at the end of the ten years whom have we got for our lessee? Have we got the Grand Trunk railway? No, we have the Grand Trunk Pacific. And who are the Grand Trunk Pacific? How much have they paid into the treasury on account of this great national undertaking? You would think that in an undertaking running up into the hundreds of millions we would be dealing with a company worth something commensurate with those figures, but what do we find? According to a return which was brought down we find that the Grand Trunk Pacific was composed of seventeen promoters who put in $400 each, making

$6,800, and the Grand Trunk, not the Grand Trunk Pacific, paid in less than $200,000. That is, we have as our tenant a company which has only paid $206,000 and we are handing over to them a road which will have cost us in cash $328,000,000 and a guarantee of $78,000,000 as well. If the road does not pay, if they cannot pay the rent they simply drop out and that is the end of it. You cannot get blood out of a stone. That is why we moved that as the Grand Trunk were getting all the benefit of this contract they should guarantee the payment of the rent. We made a motion to that effect but it was voted down by my hon. friends opposite, so that we may be in the position of having a worthless tenant against whom we have no recourse, if we cannot get the money out of the road itself.

It has been said over and over again that the construction of the National Transcontinental railway was a partnership between the Government and the railway. Let us take it upon that basis. The element of partnership, as I have always understood it, is a ommunity of interest, a community of profit and the profit is the determining element in the partnership according to the amount of money that each party to it has invested. In the present instance we will have invested $328,000,000 by the Government and the Grand Trunk will have guaranteed bonds to the extent of about $20,000,000 for the Grand Trunk Pacific. Let us see how the profits are and how they will be divided between the two parties, the Government on the one hand and the railway on the other. This is a contract that was drawn by the late Administration. Let us see what the Grand Trunk Pacific and the Grand Trunk Railway Company get out of this contract as compared with what we get out of it. This is what I call the great divide.

First, they get one per cent interest on $180,000,000 of the cost of construction because we pay four per cent and they give us three per cent and that one per cent capitalized is $45,000,000.

Second, we give them a clean gift of rent for the first seven years of the eastern section which is the equivalent of $56,867,000.

Third, we gave them a clean gift of interest on the mountain section bonds amounting to $13,472,099.

Fourth, we had to make them a gift of $10,000,000 to implement their bonds.

Fifth, we gave them a guarantee of $67,133,000 on their mountain section bonds to enable them to build the mountain section.

Sixth, we gave them permission to capitalize three years rent and interest after the first seven years, to the amount of $24,633,000.

If we take over the road after we have paid $328,000,000 upon it, under the provisions of the contract, we keep it for how long? We keep it under the contract until the road becomes a paying concern and then we hand it back to the Grand Trunk Pacific. The Grand Trunk Pacific keep it how long? So long as it is profitable, as it is able to pay the rent. When it does not pay the rent what becomes of the road? It comes back into the hands of the Government again. How long do we keep it? Until such time as the road becomes profitable and back again it goes into the hands of the company. It is a case of heads I win and tails you lose for all time in so far as this contract is concerned.

But that is not all. We allow the Grand Trunk railway to take $25,000,000 of the common stock of the Grand Trunk Pacific as a present without paying anything for it, to keep it and to do as they like with it. They have a perfect right to take that $25,000,000 of common stock and sell it, put it on the market. It gets into the hands of bona fide holders and they may pay any price they like for it. We allow the Grand Trunk to get this $25,000,000 of common stock, we pay $328,000,000 and they put up a guarantee of $20,000,000—an unfair division of the liabilities and the profits. We put up $328,000,000 in cash as against a $20,000,000 guarantee, they take the whole of the $25,000,000 and we get none of it. Again, I say, it is a case of heads I win, tails you lose.

Not only that, but we have allowed them to construct separate branch lines from the main line. They have built separate branch lines themselves, and we have no security from them on these lines. For the construction of the lake Superior branch line they received the following sums by way of assistance:

Dominion of Canada cash	$1,209,000
Provinces cash	378,000
Municipalities cash	350,000
Ontario Government land grant, 675,000 acres at $2 per acre	1,350,000

For this branch line therefore from lake Superior Junction to Fort William, they received in cash and land grant $3,287,000. What for? To tap the freight which would naturally go by way of our own line through the province of Quebec, to allow

it to go down over their own line to Fort William and thence by boat, thus robbing our own line of that trade. But if we had to take over the line of the National Transcontinental railway we would find ourselves in this position, that they keep their lucrative western lines and their branch line to Fort William and elsewhere, while we keep the unremunerative line running through Quebec, and we cannot help ourselves. That is the kind of contract that they have made for us.

But that is not all. Perhaps this does not directly affect the question, but it does more or less. They allowed the Grand Trunk Pacific, which is a railway company and not a contracting company, a company that never turned a shovelful of earth in connection with railway construction in its life, to come in, tender, and receive contracts for the construction of this road to the extent of $17,000,000. They did not do a single thing in the way of carrying out the contract at all, but they got a straight commission of 5 per cent, and in that way they received a rake-off of about $850,000 clear to themselves—another instance of why that road is costing so much money.

At what point are we now? We have arrived at the point where we must consider whether or not we can accomplish the object we had intended, and that is cheaper transportation. What have you got for the purpose of effecting cheaper transportation? You have 1,800 miles of railway costing over $180,000,000, and according to the figures of the hon. acting Minister of Railways and Canals, costing $102,000 a mile. Do you think that a railway costing $102,000 a mile is going to help you cheapen freight rates in their country? Do you think that a railway that has cost that amount of money will cheapen freight rates when you have no control whatever over those freight rates, that shall be charged not only on the western section but also on the eastern section, except what is provided by the common law of the land through the Railway Commission. There was no reservation made as to freight rates. You have no justification for asking the Grand Trunk Pacific to lower its rates on a railway which is costing $102,000 a mile if its earnings will not justify a cut. Therefore, I say that we have not done anything to cheapen freight rates.

Now let me give you a few figures in reference to the Canadian Pacific railway. The hon. member for South Renfrew (Mr. Graham) gave a few figures this afternoon, but they were all argumentative and based upon a certain assumption. I want to give you some figures that I have taken from authoritative sources. I want first to show what the cost of the Canadian Pacific railway system was in 1886.

Canadian Pacific Railway borrowed	$44,250,000
Took over from Government railway estimated at	35,000,000
Proceeds of sale of land and townsites	13,500,000
Common stock amounting to $65,000,000 sold realizing	30,000,000
Rental leased lines, capitalized	25,000,000
Total	172,750,000

This is the amount that the Canadian Pacific railway paid for 4,500 miles of railway. In other words, in 1886 they had a railway which cost them $38,300 a mile, as compared with $102,000, the cost of the National Transcontinental railway. But somebody will say: That is not a fair comparison; you should take the charges that are against the Canadian Pacific railway and compare them with the charges against the National Transcontinental railway, by which I mean the funded debt, mortgages which are charged against the property itself in the one case, and compare that with the funded debt and mortgages which are charged against the property in the other case. Well, let us take it on that basis. The Canadian Pacific railway has 12,000 miles of railway with a funded debt of $235,000,000. That is $19,500 a mile. In that is included steamships, but I will give you the benefit of that. The Grand Trunk Pacific, with 1,804 miles on the eastern division has a funded debt of $180,000,000 on the western section and the lake Superior branch, according to Poors Manual for 1913, which is the best railway authority upon these matters, the funded debt is $126,000,000. These figures show $306,000,000 of a funded debt against 3,799 miles of railway, or $80,000 per mile funded debt on the Grand Trunk Pacific, as compared with $19,500 per mile on the Canadian Pacific railway. But, said my hon. friend from South Renfrew (Mr. Graham), that is not fair; give us all the debenture stock, common stock, preference stock, and all other stock standing against the Canadian Pacific railway, and compare that with all the stocks and bonds of various kinds against the National Transcontinental railway, and let us see how it stands. Well, let us see; let us take the debenture stock, common stock, preference stock, and all other stocks of the Canadian

Pacific railway. The funded debt of the Canadian Pacific railway is $235,000,000, the preference stock $74,000,000, the common stock $260,000,000, or a total of $569,000,000. Deduct $23,000,000 from that for the steamships, because there are no steamships connected with the Grand Trunk Pacific, and it leaves $546,000,000 of all kinds of charges against the Canadian Pacific railway, or about $45,500 per mile.

The Grand Trunk Pacific has a funded debt of $306,000,000, preference stock $20,000,000, common stock, $25,000,000, and I think I could add $20,000,000 more for the stock they have issued themselves, and which we have not guaranteed in any way, and that makes a total of $371,000,000 or practically $100,000 per mile, or, more than double that of the Canadian Pacific railway.

Take it in any shape you like, and you find yourself in this remarkable position, that, while you are building the Transcontinental railway for the purpose of cheapening rates, it has cost more than double what the Canadian Pacific railway has cost, and we have been complaining that the rates on the Canadian Pacific railway are too high. I think I am safe in assuming that by the construction of the Transcontinental railway we will get no relief from high rates in the West.

Let me see what has been the reason for the excessive cost of construction of the eastern section of the Transcontinental railway. I make the charge, notwithstanding what has been said by my hon. friend (Mr. Graham), that one of the elements which has entered into the excessive cost of this railway is the manner in which the tenders were called for and the contracts let. There are twenty-one contracts, covering the entire length of the eastern section of the Transcontinental railway, and let us see what were the conditions imposed on the tenderers. I should have thought that the proper way to have proceeded would have been to divide the work into fifty-mile sections, but the Transcontinental Commissioners divided it into sections to suit themselves, and they provided that the tenderers should not only put up a cash deposit with their tender, but that they should put up such further security as the commissioners might require, not exceeding thirty-three per cent; and they said to the tenderers: if you do not put up that thirty-three per cent security within ten days, you will be liable to forfeit the deposit you have already put up in cash. What position would that put the contractor in, who was not a favourite of the commissioners, who did not stand in with them, and who was not on the inside track? The tenderer knew that if he got the contract and was not persona grata to the commissioners, the commissioners would say to him: here is your ten per cent or whatever deposit you have put up, and if you take this work which will cost six million dollars you will have to put up a further security of two million dollars within ten days, and if you do not do so you have to forefeit your ten per cent deposit. Well there are not many men in Canada, who, taking a six million dollar contract—and one man took a thirteen million dollar contract—who could put up not only a deposit of five or ten per cent on that, but who could within ten days put up security for one-third the contract price, or two million dollars.

Now if these commissioners had insisted on these terms in all cases, that might have been some excuse for them, but what did they do? At page 21 of the report is set out the twenty-one tenders, covering the whole National Transcontinental railway eastern section, and I find that the total amount of these tenders for grading was $65,000,000. I find that the total amount of the deposit put up was $2,285,000 or four and one-third per cent of the contract price. The amount which the commissioners could require the contractors to put up, in addition to that, was $21,727,000; but, strange to say, the amount which they actually did require these favoured contractors to put up in all, was only $4,239,000, or six per cent. In other words, the commissioners said to those who tendered: you must put up four and one-third per cent deposit in cash, you are liable to put up thirty-three per cent more, but, as a matter of fact, when we know whether we have favourite contractors or not, we will only exact six per cent in all.

9 p.m.

The result of this was that for nine contracts, which covered one-half the line, only five firms tendered. In one case there was only one bid, while in all the others there were only two bids, and the result was that M. P. and J. T. Davis secured 204 miles; M. J. O'Brien secured 246 miles, and the Grand Trunk Pacific Company secured 256 miles.

And, having so advertised the contracts, that only the very richest contractors could undertake the work, what do we find? We find that contracts were sublet to 100 subcontractors, and we say that if the condi-

tions had been reasonable, there would have been more tenders put in, there would have been more competition, and many of these 100 sub-contractors would have tendered in the first instance, and would have done the work at the lower price which they got from the head contractors, in the second instance as sub-contractors. My hon. friend (Mr. Graham) entered into a tirade against the report of the commission because it referred to the sub-contracting. I have no fault to find with sub-contracting, and the charge made is not what my hon. friend seems to think. The charge is: that the Transcontinental Commissioners let the contracts, in the first place, in such a way and with such onerous conditions, that only a certain favoured few could tender, and having done that the commissioners allowed these favoured contractors to assign the contracts to the men who should have got the work in the first instance.

Let me give an example of this: in contracts Nos. 16 and 17, the contract price which the contractor eventually received was $7,400,000, and that contract was allowed to remain untouched for a period of eleven months. The work was in a portion of the country which, at the time the contract was let, was inaccessible to a very great extent, and consequently the tender prices were very materially higher than would otherwise have been the case. The successful tenderers were M. P. and J. T. Davis, and the commission allowed that contract to remain untouched for about a year, when the other ends of the railway being closer to the work, and the work having become more accessible, M. P. Davis, without doing a single tap on the job, in any way, shape, or form, was able to sell his contract to another firm, at a clean profit of ten per cent. He was able to sell that contract to Mr. O'Brien, at a profit of ten per cent, which amounted to $740,000 and he did that without doing a single stroke of work. In addition to that, he was paid six per cent on his deposit, during the whole time it remained with the Government. I will read Mr. O'Brien's evidence on that point, and the hon. member for Renfrew has been good enough to admit this, because he could not help it. He is quite ready to admit what is in black and white and what Mr. O'Brien himself swears to.

Mr. GRAHAM: That seems reasonable.

Mr. MIDDLEBRO: My hon. friend from St. Antoine (Mr. Ames) reminds me that when Mr. Davis got his contract and when he was allowed to wait for a year without doing a single stroke of work on it, he started to hawk it about and to endeavour to sell it like any other commercial commodity.

He had a good thing from the commission and he knew it. He had good prices. He started to hawk the contract around. He said to one man: I will give you the contract if you will give me 20 per cent. He offered it to another man if he would give him 15 per cent. At last he gave it to Mr. O'Brien for 10 per cent. I will read Mr. O'Brien's evidence at page 529 of the report:

Q. When you took these contracts Nos. 16 and 17 east of lake Nipigon, off the hands of Davis & Company, did you go over the work?—A. We sent a man over it.

Q. And you looked over it?—A. Yes.

Q. And you made a bargain with Davis to take it off his hands?—A. Yes.

Q. Were you substituted for him in the contract or are you sub-contractors under him?—A. I think if my memory serves me right, that we just stepped into Mr. Davis' place.

Q. And his security remained?—A. Yes.

Q. Did you put up any security?—A. Not in that case, we are paying our share of the amount.

Q. What do you mean by saying you are paying your share of the amount?—A. We would have to pay that money anyway.

Q. Do you mean to say that you pay the interest on the deposit?—A. Half of it.

Q. And you also pay Mr. Davis 10 per cent on the gross?—A. Yes.

Q. How much more did you pay him?—A. That is enough, I suppose.

Q. I think so, but I was just wondering how generous you might be?—A. It is conceded that I am generous.

Q. On that work which you took from Mr. Davis, do you think you will have a fair profit?—A. Yes, I think we will make a fair profit.

Q. You took the contract after sending a man over the work?—R. Yes, sir.

Q. Did you negotiate this bargain with the Davises?—A. Well, I concluded it in Montreal.

Q. When you negotiated with the Davises, did they want any more than 10 per cent?—A. Yes.

Q. What did they ask you?—A. 15 per cent, I think.

Q. Did they also ask you to pay interest on the deposit?—A. Well, you see it was like this: Mr. Davis' deposit was up. His deposit is there yet. I said to them, the first thing to do was to leave that undisturbed, the commission is paying 3 per cent for this deposit, and the money will cost us more. Of course we could not get it for 3 per cent so I suggested myself paying the other 3 per cent, which made 6 per cent and it cost Mr. Davis nothing. My suggestion was accepted and that is the way it stands.

Q. So that you and the Government are paying the interest on the deposit?—A. Quite true.

Q. And Davis gets clean and clear 10 per cent on the gross cost of the work?—A. Yes.

Q. How did you bring him down to 10 per cent and give away half a million dollars difference between the 10 per cent and the 15 per

cent?—A. We would not give him more than that and besides there were others who were negotiating as well as us and they were not offering as much, so that I think we went a little better to get the work.

Q. As compared with the prices on the adjoining contracts, how do the prices on contracts 16 and 17 compare?—A. I think they compare favourably with the prices on the adjoining works.

Q. That is to say they are higher?—A. That is what I mean.

Q. You could afford to pay Davis 10 per cent on the gross cost and still make as well out of it as you did on the adjoining works?—A. That is my recollection of the figures.

Q. That is the way you viewed it?—A. Yes.

Yet my hon. friends wonder why the Transcontinental railway has cost so much. When they can let the contract in such a manner, on such terms and allow the contractor to hold the contract over for a year until the prices come down to such an extent that he can make $740,000 without doing a single turn and then hand it over to Mr. M. J. O'Brien who can still make a reasonably fair profit on the work, is it any wonder why the Transcontinental cost so much? As I said before, the Grand Trunk Pacific, backed by the Grand Trunk, came in and took $17,000,000 worth of the contract. What for? Are they behind the commission too?

Have they the favoured entrance? Are they, with the Grand Trunk, the firm that can put up the money? They have never built a line of railway; they have never owned a shovel or a wheelbarrow. They did not build a foot of the Grand Trunk Pacific although they took $16,000,000 or $17,000,000 worth of the contract. They simply came in as the favoured contractor who could put up a deposit; they signed their name and handed the contract over to the man who did the work and took a rake-off of $850,000. Yet my hon. friends opposite ask why the Transcontinental railway has cost so much. It was partly due to their unbusinesslike way in calling for tenders.

Let me give you another instance of why this railway has cost so much. I do not intend to give many of these instances because they become tiresome, but I will just give one or two instances to show what I mean. Contract No. 11 was called for in the usual way. There were several tenders on the contract. The lowest was that of the Grand Trunk Pacific at $1,691,000. The next lowest tenderers were Macdonell and O'Brien at $260,000 higher. Remember that. The Grand Trunk Pacific did not do any work. They never intended to do any work, and they immediately began to look for somebody to whom they could hand over the contract. They sold the contract to whom? To the man who had bid $260,000 higher on a contract of $1,691,000. Macdonell and O'Brien said: We will throw off the $260,000; we will come down to your figure of $1,691,000 and will give you 5 per cent as well. They gave the Grand Trunk Pacific $105,000 to step out and then according to their own evidence, they made a profit of $500,000. Is it any wonder that the National Transcontinental railway has cost $100,000 a mile, when this is the manner in which the contracts have been let?

Mr. MORPHY: Does that principle run through all the work?

Mr. MIDDLEBRO: Yes. Perhaps one of the easiest ways of making money is for the engineer to certify that the common excavation is solid rock, and that is one of the hardest things to detect. If the engineer says that, he converts thirty cents into $1.50 for every cubic yard of material he certifies in that way. The strangest thing about this contract is, that, notwithstanding the fact that the Government had stacks of information, that they knew this country as well as they knew their own home, in almost every instance the estimated amount of common excavation largely was converted into solid rock. Here is one instance. In contract No. 10, the estimated solid rock was 779,000 cubic yards. By some inconceivable means that was converted into 2,712,000 cubic yards or four times as much as the estimate. Do not forget, however, that excavation in solid rock is worth five times as much as in common clay. The excavation in loose rock was estimated at 211,000 cubic yards. That was converted into 1,513,000 cubic yards. Then they estimated that there were 4,242,000 yards of common excavation; but because common excavation is poor paying work, they got that down to 1,501,000 cubic yards. So far as the quantity is concerned, they were fairly accurate. The estimate of the total quantity was 5,233,000 cubic yards, whereas the actual amount returned was 5,727,000 cubic yards. Nobody will find fault with that. If they made a mistake of even twenty per cent of the quantity, nobody would find any fault. They made practically no mistake in the quantity, but in the quality, and the difference between the two qualities is what produces the money. This is how it figures out. According to their estimate there would be solid rock excavation to the value of $1,169,000.

Remember that this is only in a contract for 100 miles.

They converted that into $4,068,000. According to their estimates there would be loose rock $105,000; they converted that into $756,000. According to their estimates there would be common excavation $890,000; they cut that down to $315,000, with the result that according to their estimates this 100 miles of cutting and filling which was to cost $2,000,000, cost $7,108,000.

Mr. BRODER: Who were the contractors?

Mr. MIDDLEBRO: O'Brien and McDougall. O'Brien was the gentleman who put up the large deposit; the same man who took the contract over from Davis at ten per cent; the same man who took the contract from the Grand Trunk Pacific at five per cent and made $500,000. According to the calculation which I have given they made a profit of $1,275,000 on these three materials alone, and on the whole contract they made a profit of $1,547,000. Let us see what Mr. O'Brien himself says in regard to this; you can get no better evidence of recklessness and extravagance than the evidence under oath of the men who get the benefit of that recklessness and extravagance. Mr. O'Brien had contracts for work on the Transcontinental railway amounting to $26,000,000; I am going to read what he himself said with regard to this classification. I quote from page 533 of the report:

Q. Did you ever get paid for clay, where you had the three classifications of solid rock, loose rock, and common excavation; did you ever get paid for clay with these classifications at solid rock price?—A. I have no recollection.

Q. If you signed a contract embodying the three classifications, solid rock, loose rock, and common excavation, in your most bountiful frame of mind you would never expect clay to be classified as solid rock?—A. Ordinary clay?

Q. Yes?—A. Oh, no.

Q. You would not have clay, no matter how hard, if it was not mixed with stones, classified as solid rock?—A. I think not.

Q. So therefore when you talk of solid rock you mean rock?—A. Do you means rock ledge?

Q. You mean rock, stone?—A. Yes.

Q. And when you talk of indurated clay, you expect that it is to be loose rock, don't you?—A. Well, it depends. As I said before if it is mixed with rocks of all sizes and kinds, then I think it should be classified as solid rock.

Q. Where did you ever get it before?—A. I never worked on specifications like that before.

Q. I am not talking about specifications, when, under Heaven, did any one ever pay you for clay mixed with rock of less size than a cubic yard, as solid rock, before the Transcontinental Railway Commissioners set the pace?—A. I have no recollection myself, except as I say in Nova Scotia in the eighties.

Q. In Nova Scotia, where you had signed a contract for solid rock, loose rock, and common excavation, did they ever pay you solid rock prices for any kind of clay intermixed with stones of less than a cubic yard?—A. I have no recollection of it.

Q. You have no recollection, have you, of anybody or any railroad ever paying solid rock prices for clay intermingled with stones of less size than a cubic yard?—A. Well, where the stones are thickly assembled.

Q. Keep outside of the Transcontinental practice now, and give your answer?—A. I said before, so far as the other roads are concerned and under the specifications under which we were working, I had no recollection that it came that way, and perhaps we were not properly entitled to it.

Q. Have you worked for the Canadian Pacific railway?—A. Yes.

Q. Have you worked for the Canadian Northern railway?—A. Yes.

Q. Have you worked for these corporations in grading?—A. Yes.

Q. Now then, have you not, as a matter of fact, in the case of the Transcontinental railway, been paid for material as solid rock for which you were only paid as loose rock in these other cases, never mind the specifications now?—A. I have no doubt as to that.

Q. That is right, is it?—A. That is right I believe.

Q. To use a familiar phrase, this assembled rock was a new one on you when you got into the Transcontinental?—A. Do you mean that assembled rock is a new phrase?

Q. Yes?—A. Yes.

Q. It is a new phrase and a might good one for you, is it not?—A. It is very appropriate.

The contractor himself, therefore, admits that he got paid for material as solid rock which should not have been so classified, and that he got paid for loose rock which should not have been so classified. In this way you will readily see that he would be overpaid to the extent of thousands of dollars, and the commission found upon this evidence—evidence which must be accepted, having been given by the persons most directly concerned—that $1,300,000 was lost to the country in that respect.

The hon. member for South Renfrew seems to think that because upon such evidence as this we complain of this loose classification, we are reflecting upon the staff of the Railway Commission and upon all the district engineers and sub-engineers connected with the work. That is not the point we take. The point we take is that the head of the commission insisted upon these classifications and the district and sub-engineers were bound to follow the instructions given. We charge that the commission smothered the opinions of Chief Engineer Lumsden and made him classify higher than he otherwise would have done. First Mr. Hodgins resigned because he refused to classify this material higher than he himself thought it should be classified. He was

kicked out, and Mr. Lumsden was appointed. Mr. Lumsden said his opinions were smothered and overridden, and he resigned because he was standing by the country and trying to resist the demands of the contractors. I will read part of his evidence, which appears on page 390 of the report, as follows:

Q. Will you tell us how you happened to be persuaded to make this compromise classification ?—A. While at La Tuque with the commissioners on their car, they brought up the subject of solid rock, the interpretation of the solid rock, and I then stated that my interpretation of it was that it meant rock in ledges, or boulders over a cubic yard, or masses of detached rock over a cubic yard. They all disagreed with me; that is, the commissioners and the contractors; and the only person who sided with me on that occasion was Mr. Woods, assistant chief engineer of the Grand Trunk Pacific. Then, after returning here, opinions were handed me by, I think, the chairman—I cannot be positive who handed me these opinions—of different K.C.'s on the interpretation of the specification.

He was smothered by the commission; he was smothered by the contractors; he was smothered with legal opinions; he was smothered out of his opinion that these men were getting more than they were entitled to get. Finally, he said that he could not remain in there with dignity to himself, and he resigned his position as chief engineer of the National Transcontinental railway.

Let me for a moment refer to a few other similar cases. I may say that I have not had time to make as thorough a preparation in this matter as the hon. member for South Renfrew did; most of what I am giving I have picked up since the debate began. This afternoon, while the hon. member for South Renfrew was referring to us as maligning the district engineers, I looked over this evidence myself for the purpose of observing the attitude of these engineers. And I find that, almost without exception, these sub-engineers come forward to this commission and say: We did not believe in the classification that was forced on us, but we were bound to do it in that way following instructions from the head office, from the fountain head of authority. One can hardly blame them. Being in that position, earning their daily bread, if they did not do as they were told they would be told to get out. I wish to quote briefly from the evidence of one of these sub-engineers named Halliday.

Mr. BURNHAM: Where did the money go to?

Mr. MIDDLEBRO: We have a pretty good idea, but we cannot quite prove it yet. Mr. Halliday, at page 269 of the evidence, was asked:

Q. Could you consistently have given any solid rock for that material which was composed of clay and sand, which we call cementing material, and stones less than a cubic yard ?—A. No, sir.

Q. So that the instructions and the assembled rock clause is your authority for calling this material which is composed of loose rock, clay and sand, solid rock ?—A. Yes.

That man says: I did not believe it was solid rock, I did not believe they were entitled to $1.50 per yard. I would not certify it, but I had my positive instructions from headquarters and could not do otherwise. We are not blaming that man, certainly we are not blaming him to the extent that we blame the commissioners who issued the instructions and who seemed to have in mind the fact that they wanted to make the road cost as much as it could cost. I remember reading in the Globe not very long ago a report of a meeting addressed by the hon. member for South Renfrew before the Liberal club of Toronto University, and one poor innocent young Liberal there, the chairman of the meeting, in introducing Mr. Graham, said: Look what the Liberal party have done for Canada, enumerating the various policies but winding up by saying: Look at the huge amount of money they have spent on the Transcontinental railway. Even my hon. friend himself had to smile when he heard that—but he is justifying it all to-day.

I shall take the evidence of another of these sub-engineers, Mr. Dick, found at page 261 of the evidence:

Q. Can you conceive of anything else being included in it, if you confine it to rock ?—A. No.

Q. But you did include something else in it, did you not ?—A. Yes.

Q. In your personal opinion, ought there to be anything else included in it ?—A. Well, I have just classified according to my instructions. We got instructions supplementary to the specifications, giving the chief engineer's ruling, and were guided by those instructions.

Now, while he does not say specifically that that was because of the changed instructions, I think that the fair inference is that he had classified it in that way because he had instructions from the head office.

At page 278 we have the evidence of Mr. Black, who had had eleven years experience on the Canadian Pacific railway. He was asked:

Q. In the classification on the Canadian Pacific railway work did you ever classify such

material as is known on the present work as assembled rock as solid rock ?—A. No, sir, not as solid rock.

Q. Did you ever know of any material which was not rock being classified as solid rock on the Canadian Pacific railway ?—A. I never had a case.

Q. You never heard of anyone else, either, classifying mixed material as solid rock ?—A. No, sir.

So in the whole report you will find the sub-engineers, with few exceptions, would not have classified this material as solid rock, if left to their own judgment.

I wish to say a word or two with reference to wooden trestles. My hon. friend from South Renfrew seems to claim now that it is not proper, economical railway policy to build standard wooden trestles when constructing a railway. I may say that the best way of estimating what is the most economical way of building a railway is to see what those men are doing who are experts in that line. The hon. member for South Renfrew has told us that Mr. Kelliher, engineer on the Grand Trunk Pacific, is a man whose experience and whose intelligence as a railway engineer cannot be questioned. He is an engineer of the Grand Trunk Pacific and the engineer supposed to be directing the building of the western section of that railway; and we must assume that the Grand Trunk Pacific, who will own the road, are going to build it in the most economical fashion possible so that they can carry freight at the lowest possible rates. What do we find on the western section of this railway? Do we find all steel and concrete structures in their bridges and trestle work there? No, we do not. I have a letter here from Mr. C. Schreiber—and by the way the hon. member for South Renfrew will not question the accuracy of Mr. Schreiber's statement, because he said that he is one of the most reliable men we have on the railway engineering in Canada. If it is a good thing, an economical thing to do as we have been doing on the eastern section of the Transcontinental railway, that is to go in at once for expensive steel bridges instead of doing as is usually done, build trestles and fill them up afterwards when required, by train haul fill, when you can haul economically, can any one tell me why that course was not adopted on the western section? On the contrary, we find that on the western section, the Grand Trunk Pacific, who are building it themselves for their own use as their own road, in the most economical manner, built, on the prairie section, eleven steel bridges and 197 wooden bridges and 1,687 wooden culverts. On the mountain section, they built 57 steel bridges and 209 wooden bridges and trestles and 1,388 wooden culverts. I think that proves conclusively that the proper, economical manner of building a railway to produce the best results and the cheapest freight rate is to do as those do who know what they are talking about, the Grand Trunk Pacific, the Grand Trunk railway and the engineers of those railways. It is evidently not the proper method to do as has been done on the eastern division, apparently for the purpose of increasing the cost in the first instance, building permanent steel structures from the first, thus increasing the cost and delaying the completion of the road.

I wish to speak briefly on the Transcona shops. I do not pretend to have studied the question of the Transcona shops from the legal standpoint, but what passes through my mind is that if it was intended that these shops were to be built by the Government, would there not have been some specific mention of an item which was to cost $4,500,000? In the second place, if it was intended that these shops were to be built by this Government and to be used exclusively for the eastern section of the Transcontinental railway, was it not reasonable to suppose that they would have limited their use to the rolling stock of the eastern division of the railway? What do we find? We find shops costing $4,500,000 placed at the end of the Government railway, placed at the centre of the complete railway from the Pacific down to Moncton. That looks to me very much as if the shops were intended to be used by the Grand Trunk Pacific for their western section, 1,800 miles, just as well as for their eastern section. In other words, we are supplying shops so large that they must be intended for the use not only of our own line but of the entire Grand Trunk Pacific line, the western line as well. The hon. member for South Renfrew says that these shops are admittedly larger than is called for for present use, but that they will provide for future development. Where will the future development come from? It cannot come from eastern section branch lines because we have no eastern section branch lines, and the development will have to come from the western section and its branch lines, such as that from lake Superior junction to Fort William. The Grand Trunk Pacific company have now been authorized by this Parliament to build 8,000 miles of branch lines in the West. They have built 1,000 miles of branch lines. They have had their

bonds guaranteed to the extent of $15,000,000 by the provinces of Alberta and Saskatchewan for the purpose of building these branch lines and these two provinces have authorized an issue of bonds for five more branches.

And these two provinces have authorized an issue of bonds for five more branches, and the inference is that those shops were put there at a cost of probably two or three million dollars more than they should have been, for the purpose of meeting the development of the western section of the Transcontinental railway and making the Government of Canada pay for it by placing it at the end of the eastern section.

My hon. friend has referred to the question of the letting of contracts for the Welland canal, which of course he is quite entitled to do. I want to say to my hon. friend that I have taken the trouble to look into those contracts to see the conditions of tendering there and I find that the contractors were asked to put up a certain deposit and they knew they could not be called upon to put up any more. They were not called upon to put up any more. Those deposits in the aggregate were less than five per cent of the aggregate contract price. What is the result? The result is that for the first section there were ten tenderers, for the second section seven, for the third section nine, and for the fourth section nine tenderers. With regard to the Grand Trunk Pacific there was one tenderer for one contract, and only two tenderers for each of the other eight contracts. In one case we have competition and no competition in the other, with the result that the work of the Welland canal is all being constructed within the estimates of the Government engineers. That is the difference between the two contracts.

Mr. CROTHERS: Less than the estimates.

Mr. MIDDLEBRO: My hon. friend says at less than the estimates. I say they were at least within the estimates.

Mr. GRAHAM: Not built yet; it makes all the difference in the world.

Mr. MIDDLEBRO: In conclusion, I think I have shown that this railway will never be able to reduce freight rates in the West because of its exceptional cost. If the Grand Trunk Pacific at any time are charged with having an excessive rate what will their answer be? They will come before the Railway Commission and say: This railway has cost us $102,000 a mile, here are our working expenses, here are our bonds and our stock; we are not able to pay a dividend nor even the rental and we cannot possibly reduce our freight rates. You are in the position then of having paid for something which does not answer the purpose for which it was intended and have paid three or four times the estimated cost. And this Government having been elected on the representations which they made to the people it is high time something was done by a commission for the purpose of letting the people know exactly what the railway is costing and the reasons therefor, and that there is no prospects in future of reduced railway rates in Canada by reason of its construction.

Mr. F. B. CARVELL (Carleton, N.B.): At this very late hour, I hope my hon. friend will pardon me if I do not attempt to follow him in his very interesting historical references to things that took place ten years ago: matters of policy that have been discussed and rediscussed both in Parliament and in the country, questions of policy upon which two general elections were run, and decided adversely to the views of my hon. friend. I want to get down to the real question under discussion. Do not let us get away from the fact that the question we are discussing now is an amendment on going into Supply, condemning this Government for submitting to this House and the country the report of Messrs. Staunton and Gutelius in regard to the construction of the Transcontinental. So far as I am concerned, I will keep pretty close to that subject.

Mr. R. B. BENNETT: Hear, hear.

Mr. CARVELL: My hon. friend says, hear, hear. I hope that when he has an opportunity to address the House, he will not do as my hon. friend from North Grey did, but will get down to brass tacks and talk about Mr. Gutelius and Mr. Staunton.

Mr. BENNETT: Let Laurier finish his work.

Mr. CARVELL: My hon. friend from Calgary seems to be somewhat excited.

Mr. BENNETT: Not a bit.

Mr. CARVELL: My hon. friend from North Grey has discussed the real subject of the report to some extent, and before I am through I promise that I will try to answer any arguments he has put forward in reference to such matters as classification. When gentlemen opposite assumed the reins of office a little over two years ago, we all knew they were seized with a burn-

ing desire to create a scandal, if possible, out of the construction of this great national enterprise. By hook or crook a scandal must be created. Of course, the most important thing in the whole matter was to find the machinery by which to create the scandal. They hunted this country from one end to the other to get the men. Finally they got two men against whom, personally, I have not a word to say. One is a lawyer, a Tory, a would-be politician, from the city of Hamilton, a man who is stated to have said in this city before men who are in this city to-night, that it did his Tory heart good to get a chance to get after these horrible Grits. The other man is an engineer who was, I understand, originally a United States citizen. I am not saying anything against him on account of his citizenship because, if he possesses the proper engineering qualities, he is qualified to pass judgment on the work of the late Government and the late commission. He came to this country ten or twelve years ago, and shortly after coming here was employed by the Canadian Pacific Railway Company to do a certain amount of work in the West. When that work was finished, this gentleman was taken to the head office in Montreal and placed in a position of some responsibility, I admit. I understand he was assistant to the chief engineer. That chief engineer resigned and went back to the United States, but Mr. Gutelius was not promoted to the vacancy. Another man was appointed, and Mr. Gutelius still remained in his old position. That man retired, and still Mr. Gutelius was not promoted. After remaining in the office in Montreal for some time, with no experience whatever in field work, classification or construction work, simply doing ordinary routine work in the office, Mr. Gutelius was taken out of the engineering department of the railway and sent to North Bay in the operating department, and made divisional superintendent in a road which was completed twenty-five years ago. All he had to do was to report on what went on from day to day, and month to month, a position which has frequently been referred to as the bone-yard by engineers and railway employees of that great company. For some strange reason not made public, this is the gentleman whom my hon. friend the Minister of Railways took up out of the woods around North Bay and brought down here, not only to blacken, if possible, the character of the late Government—that is a small matter—but to make a report which has done Canada more harm and will do Canada more harm than this Government could do it good in ten years. The report has gone out to the people of this country and to the financiers of the world from whom we borrow money, that the Grand Trunk Pacific can never possibly earn enough money to pay its expenses and interest. It has placed the Grand Trunk in a position where they will find it almost impossible to borrow more money. It has told the people of this country that we have squandered $40,000,000 of money. It has done this country incalculable injury. These are the two gentlemen employed by my hon. friend to make this report, and it is with this report, and this report alone, that I wish to deal in the few remarks I shall make.

We know that some four or five months ago an inspired article appeared one morning in the Conservative press throughout this country to the effect that the Investigating Commission had found that something like $44,000,000 or $45,000,000 had been absolutely wasted, and worse than wasted, in the construction of the Transcontinental. That was heralded all over the country, and sent to Europe, to the United States, in fact all over the world.

The hon. member for Mackenzie (Mr. Cash), at the beginning of this session, produced here a paper published in Los Angeles, California, with a great big headline declaring that: The Liberal Government of Canada stole $45,000,000. Then you will remember that we had the further statement in the Conservative press of this country that the Liberal party had stolen a lot of money. Finally they screwed up their courage sufficiently to bring down a sort of synopsis of what the report was going to be and they sent that broadcast over the country. If you want yellow journalism in its very essence—yes, in its quintessence—go into the library and get the front page of the Montreal Star the morning after that statement appeared. All the lesser Tory journalistic lights throughout the country published practically the same report only they could not afford as much space and they could not put on as big headlines.

Mr. MURPHY: There was not as much in it for them.

Mr. CARVELL: My hon. friend (Mr. Murphy) says there was not as much in it for them, but in so far as it paid them

they pursued exactly the same tactics all over Canada. We at once wanted the evidence upon which this most wonderful report had been made. We were told that they would get it for us as soon as they could. The evidence was being printed in a newspaper office in the city of Montreal and, day by day, as the evidence was printed, certain deductions from the evidence were dribbled out to the Tory newspapers and the people of Canada were flooded with these unfair and dishonest statements for over a fortnight before we even could get the documents in our hands. Finally we got the documents in our hands and wanted to discuss them a week ago in order to place the matter before the country at the earliest possible moment, but we were politely asked to allow it to stand over for another week and of course we had to consent.

Now we are here to discuss this matter but after the wonderful and masterly speech made by my hon. friend from South Renfrew (Mr. Graham) yesterday and this afternoon, it is almost unnecessary for any hon. member of this House to take up any further time. But in order that we may supplement, if it be possible, to some extent, the exhaustive statement made by my hon. friend from South Renfrew, I desire to say a few words upon this important question. In so far as I am concerned, and I think I am speaking for all my hon. friends on this side of the House, we intend to give the truth of this matter to the people of Canada. We hope that this truth will filter beyond the bounds of Canada and that those people in other parts of the civilized world who have read the false and damaging statements sent out as a result of this report will be to some extent placed in possession of the facts and that they will entertain a somewhat different view of the people of this country than that which no doubt many of them have entertained as a consequence of reading these reports.

I have read every word of the evidence which has been submitted to us and if one will refer to that evidence he will find that these two commissioners were obsessed by certain ideas. They had not bees in their bonnets but one would imagine that they might almost have had wheels in their heads. Mr. Lynch-Staunton had but one theory and that was to prove by every witness that there had been overclassification and that the overclassification existed in allowing as solid rock what has been called assembled rock and also the converting of what he called common excavation into loose rock. Mr. Gutelius, on the other hand, did not care two straws about classification but his theory was: Wooden trestles and velocity grades. That is the substance of the examination of all the witnesses by these two gentlemen.

I was not only pleased, but somewhat surprised, something like a week ago, in attending a dinner given by McGill students in Montreal at a statement made by Mr. C. H. Cahan, a gentleman well known to the right hon. Prime Minister (Mr. Borden), a gentleman well known all over eastern Canada as a lawyer of repute and not merely a lawyer of repute, but, as he stated on that occasion, a Tory of the Tories, a man who had opposed the Liberal party all his life and who was the leader of the local Conservative Opposition in Nova Scotia for some years. My hon. friend may have seen in the newspapers what the hon. gentleman stated on that occasion. The newspapers did not put it half as strongly as Mr. Cahan stated it but he said that it was not playing the game fair, as the hon. Minister of Trade and Commerce (Mr. Foster) used to say to us, by means of a star-chamber investigation to take people before them without the assistance of counsel and to get information which was false, which characterized one-half of the people as dishonest and the leader of a great party as being responsible for this condition. It was not playing the game fair, he said, to send these reports broadcast over Canada and over the civilized world. Let any man acquainted with the principles of fairness and justice recognized in courts of law in getting at the facts of a case, read this evidence through, and he will come to the conclusion that there has been a determined attempt to paint the picture as black as it could be painted. If you read this evidence through you will find that these two gentlemen have acted, in the prosecution of this inquiry, very much in the regular police court style.

They brought witnesses before them, and practically all the witnesses, except three or four, were men in their own employ who were being examined, men with families that had to be fed, men whose positions meant something to them and men to whom it meant a good deal to be summarily dismissed from the positions that they occupied as resident engineers. This was the class of men that these gentlemen brought before them. This was the class

of men who were dragooned, in so far as it was possible, into making statements which would bear out the theories of these two inquisitors, because I cannot call them commissioners. If my hon. friends want an illustration of the manner in which these witnesses were treated I would refer them to a witness by the name of Mr. Charlton. I do not know who Mr. Charlton is, but we find his evidence at page 225 of the case. Hon. gentlemen will find evidence extending over four or five pages showing that Mr. Lynch-Staunton went at him ten times, and Mr. Gutelius ten times. They had to take ten runs at the man in order to get him to give the kind of evidence they wanted. The kind of inquisition which they conducted regarding this man practically characterized their treatment of every man who appeared before them. There was a deliberate attempt to bulldose the men under their control, to bulldose the men to whom they were paying money, to bulldose the men who were looking to them for a living and this was done in order to induce them to make statements to carry out the pet theories of these two inquisitors.

There is one thing that I will give these two gentlemen some degree of credit for and that is that they have carefully avoided making the direct statement that there was fraud on the part of anybody from the head man down to the resident engineers. I submit that you can read that report from cover to cover and you cannot find a solitary statement imputing fraud to anybody. You do find there statement after statement that the road cost more money than it should have cost. You find statement after statement that if wooden trestles had been used instead of solid fills it would have cost less money. You do not have to go to Mr. Staunton or Mr. Gutelius to have them tell you that. Why, any ordinary farmer in the country could tell you that.

Mr. BELAND: And you would not have to pay him so much for the information.

Mr. CARVELL: You do not have to pay $65,000 to get two men to tell you that, and it will be $100,000 before we get through with it. You do not have to get $65,000 men to tell you that if you put in wooden bridges instead of steel bridges, it will cost you less money, and you do not have to get such expensive men to tell you that if you build a road with a one per cent grade instead of a 0·4 per cent grade, it will cost you less money. Why, in many parts of the country if you take one per cent grades or one and a half per cent grades you practically have no work to do, because you simply go up one hill and down another; that is a velocity grade.

An hon. MEMBER: A toboggan.

Mr. CARVELL: But if you want a road on which you can do your business properly, you have to get it level and make it fairly straight, and these gentlemen tell you it will cost more money to build such a road than the cheaper concern they would advise.

Then, these gentlemen proceed to show the manner in which more money was expended than should have been expended. My hon. friend from South Renfrew has dealt with all the matters regarding the Transcona shops, the Quebec shops, the wooden trestles, etc., and I shall not cover the same ground, but I shall attempt in as terse a manner as possible to deal with the question of classification. I shall do so for the reason that while the commissioners were very careful to make no charges of fraud, in fact hardly to make the insinuation of fraud, yet every Conservative newspaper in Canada did not hesitate to come out with the biggest type in its whole institution, and say that the Liberal party stole $40,000,000 in the construction of this railroad. And to-night my hon. friend from North Grey (Mr. Middlebro) came perilously near to the insinuation of fraud, in respect to the classification. The hon. member (Mr. Middlebro), as well as the commissioners, seems to have a particular spite against one M. P. Davis. Now, M. P. Davis is a gentleman whom I do not happen to know; I never had the pleasure of meeting him, but I know him as a public man and as a contractor, and gentlemen opposite know him also. The principal things on which they are attacking Mr. M. P. Davis in particular and the Transcontinental railway as a whole, are on this question of improper classification of solid rock, and of loose rock. I see my friend from St. Antoine (Mr. Ames) is paying some particular attention to this matter, and in dealing with the classification I suppose I am intruding on his particular preserve. For fear that the hon. gentleman has not gone into the history of it, I will ask the House to bear with me while I give a short account of this question of the classification of

10 p.m.

solid rock, in what is called assembled rock. The hon. member for North Grey took particular pains to read the evidence of Mr. O'Brien, the contractor, in which he was asked if he had ever been allowed solid rock for what is called assembled rock before, and he said he had not. But the commissioners did not ask Mr. O'Brien if he had ever met this same class of material before. Oh, no. These inquisitors took pains never to ask a question from a witness which by any possibility would lead to an answer which they did not want. Of all the leading examinations I have ever heard of, the manner in which these gentlemen carried out this investigation is the most extraordinary. They asked Mr. O'Brien only such questions as would produce the answers they wanted, and, as Mr. O'Brien, and as the former Transcontinental Railway Commissioners were not represented by counsel, and had no opportunity of cross-examining the witness. The result is that these inquisitors were able to secure favourable evidence to bear out their contentions.

But fortunately for us and for the country, this question of assembled rock classification is nothing new. It has been threshed out in this House on many occasions; it has been threshed out in the country, and I presume, practically every hon. gentleman present is pretty nearly as familiar with it as I am. But for fear there may be some of my hon. friends on the back benches, men like my hon. friend from Calgary (Mr. Bennett), who was not here in the early days, and who has not taken the trouble to read up this matter, I purpose giving a short history of this assembled rock classification. Away back in 1907, Mr. Woods, who was the assistant chief engineer of the Grand Trunk Pacific, found fault with the commissioners because there was an excess of solid rock being classified in the province of Quebec. Hon. gentlemen will not forget that under the arrangement made between the Government and the Grand Trunk Pacific Railway Company, the company were to be consulted in the letting of the contracts and were to have the right to place upon the work their own inspecting engineers. These inspecting engineers had not only the right, but it was their duty, to protest to the commission against anything, which in their judgment, was not in the best interests of the country and of the Grand Trunk Pacific Company. Remember that the Grand Trunk Pacific Railway Company are to operate this road and are to pay three per cent upon its cost after the termination of the free period. Mr. Woods, in his capacity of assistant chief engineer of the Grand Trunk Pacific, complained about the quantity of solid rock being returned in District B. He wrote to the chief engineer, Mr. Lumsden, and a good deal of correspondence ensued. Opinions were obtained from some of the ablest counsel in the Dominion of Canada, and these opinions are to be found in a return brought down some years ago. I will not read them, but I will mention that the men who gave opinions were Mr. George F. Shepley of Toronto, Mr. Eugene Lafleur, of Montreal, Mr. Ritchie, and half a dozen of the leading counsel in Canada.

Mr. MACDONALD: And Sir Alexander Lacoste.

Mr. CARVELL: Yes, Sir Alexander Lacoste.

Mr. MACDONALD: A good authority for the hon. member for St. Antoine.

Mr. CARVELL: Yes, and it ought to be a good authority for any man in this House, whether he comes from the province of Quebec or elsewhere. Here were men of the highest standing in the legal profession giving their opinion as to what was the proper construction of the clause of the specification referring to solid rock. Perhaps I had better read this clause of the specification, so that there may be no doubt about it, it is to be found on page 98 of the exhibits.

> Solid rock excavation will include all rock found in ledges or masses of more than one cubic yard, which in the judgment of the engineer may be best removed by blasting.

The question arose as to whether the word 'masses' meant a solid mass of rock of one cubic yard or over, or a mass of rock composed of a number of smaller pieces cemented together so as to make it a solid whole. I put that in my own language, but I think it fairly well describes the contention between the parties.

All the eminent counsel to whom I have referred gave it as their opinion that the proper construction of this clause of the specification was that, no matter how big or how small the pieces of rock were, so long as they were rock fastened together, they were solid rock under that specification; and that if that material was found, the contractor was entitled to the solid rock price for removing it. Then they appealed to Mr. Newcombe for his interpretation of that specification. His interpretation will

be found on page 384 of the evidence. This wonderful engineer, Mr. Gutelius, after reading Mr. Newcombe's letter, still says that Mr. Newcombe did not agree with the contention of the other gentlemen, but that he agreed with Mr. Lynch-Staunton and himself in their interpretation of this clause of the specification. Therefore, I will read Mr. Newcombe's letter and let hon. members and the people of the country judge whether Mr. Gutelius was able to understand the English language properly or to appreciate the true meaning of a legal opinion given by such a man as Mr. E. L. Newcombe. The letter, dated the 6th day of January, 1908, and addressed to the secretary of the Transcontinental Railway Commission, is as follows:

Referring to your letter of 20th ultimo with which you submit the correspondence with regard to the classification of excavated material and the interpretation of clauses 33, 34, 35 and 36 of the general specifications for construction of the eastern division of the National Transcontinental railway, I have the honour to state that upon consideration of the papers submitted I see no reason to differ from the classification stated by the chief engineer in his letter to the commissioners of 16th ultimo except as to the statement that 'rock assembled (the individual pieces of such assembled rock exceeding one cubic foot in size). . . such as in the judgment of the engineer may be best removed by blasting,' is to be classified as solid rock excavation under clause 34. I do not understand upon what principle the chief engineer limits the size to pieces exceeding one cubic foot. The specifications speak of rock found in ledge or masses of more than one cubic yard which in the judgment of the engineer may be best removed by blasting. If 'rock assembled' may be regarded as a mass of rock and if it may be best removed by blasting, I do not see why under the specification it is material whether the individual pieces exceed or are less than one cubic foot in size, and if 'rock assembled' is not regarded as a mass, the minimum limit of size which can be classified as solid rock exceeds one cubic yard.

In the rest of the letter Mr. Newcombe says that this is purely a question for the engineers to decide on the ground and as the matters come up. As to the construction of that clause of the specification, however, I have read Mr. Newcombe's opinion, and yet Mr. Gutelius stated that he did not consider that Mr. Newcombe agreed with those gentlemen as to its construction.

After that, Mr. Lumsden, who was at that time chief engineer of the commission, went to Mr. Collingwood Schreiber. I do not think it is necessary for me to give a certificate of character for Mr. Collingwood Schreiber, a man who has been at the very zenith of the engineering profession of this country for the last thirty or forty years, a man who has had to do with every big railway undertaking in Canada since Confederation, a man whose word would be taken by any engineer in Canada, by any railway contractor in Canada, by any politician in Canada, whether Liberal or Conservative. Mr. Collingwood Schreiber was appealed to by Mr. Lumsden, and I think no person would deny the fact that Mr. Lumsden was not at first in accord with the gentlemen whom I have named in his interpretation of this clause of the specification. Mr. Lumsden is a very old man; and when the commission had him before them, it is almost a work of art to watch the manner in which they guided this poor man along. They did not ask him any questions they said to him: You did so and so, and he said yes; and you did so and so and he said 'yes.' He said 'yes' to everything they said to him. Amongst other things he said that he was always opposed to this classification. In some way his views were smothered out and he was compelled to accept the views of others. I might say that at that time Mr. Collingwood Schreiber had been assigned a special position as consulting engineer for the Government. He was perhaps in the most independent position in which any man in Canada could be on this question. Some of the gentlemen who had given their legal opinion were paid counsel for the contractors, and perhaps my hon. friends will argue that their opinion should not be taken as of very much value because of that fact. Here is a gentleman who had been in the employ of the country for a third of a century, who had been chief engineer of the Railway Department, who had been taken out of that position and had been given, almost as an honourary position, that of consulting engineer for the Government and for the Transcontinental Commission, the man whom everybody employed as the last resort for an interpretation on an engineering question. Mr. Schreiber was sworn and gave his evidence on page 447. I will only read a portion of it. My friends can follow it up and they will find that I am giving in a nutshell the substance of this gentleman's opinion, as follows:

Q. Do you know that Mr. Lumsden construed that clause 34, which is the one relating to solid rock excavation, so as to exclude from solid rock excavating everything which was not rock?—A. Yes.

Q. Would you agree with that?—A. Everything which was not rock certainly would be excluded.

Q. And afterwards Mr. Lumsden tells us

that he was shown the opinions of several eminent counsel, obtained by the contractors, to support their contention respecting the construction of these specifications, and that, as the opinions differed from him, and as the commissioners differed from him, that he was brought to make a modification of his own views of the specifications; did you know that?—A. I knew that eminent counsel had submitted their views with regard to the specification, but I did not know that he had modified his views.

Q. He tells us that he did, and I think in the Lumsden inquiry he said he did; he is made to modify his views so as to include in the classification material which was not solid rock, when mixed with solid rock; that is, the matrix in which the rock lay?—A. Do you refer to what he calls assembled rock?

Q. I do.—A. Yes, I was aware of that assembled rock, but I did not know he did not agree about it before.

Q. Do you know that he at first contended that even in assembled rock none of the interstitial material should be classified as solid rock?—A. No, I did not understand that. What I understand by his assembled rock, was that it was fragments of rock cemented together in bodies of not less than a cubic yard.

And so it goes for the rest of that page and part of another. In other words, Mr. Collingwood Schreiber, says that he exercised no influence over Mr. Lumsden and that he did not know that Mr. Lumsden disagreed with him or with anyone else. A few days after that Mr. Lumsden issued what is called the famous blue print. A copy of this blue print will be found as No. 16 in the book of exhibits. In this famous blue print an illustration is given of the cuttings which ought to be classified as solid rock, and the one particularly referred to now is No. 5. No. 5 shows the number of pieces of rock of different sizes, all smaller than a cubic yard, securely joined together by some sort of cementing material. That blue print is sent out to the engineers and they are told that when they find material of that kind they are to classify it as solid rock. From that time forward when this material was found it was classified as solid rock, and it was so classified according to the instructions of the chief engineer of the commission. The chief engineer told the engineers to do this because he was convinced, and every other man about him was convinced, that the only proper way to construe that specification was to construe the material referred to as solid rock. This was rock in masses of one or two cubic feet; of course, if it was a cubic yard there could be no question as to its being solid rock. That document is signed by Hugh T. Lumsden, chief engineer, and is dated at Ottawa, January 10, 1908. The commissioners had nothing to do with this classification or with this blue print.

Mr. AMES: Perhaps some pressure was brought to bear.

Mr. CARVELL: Where was the evidence of pressure? I want the hon. member for St. Antoine to answer that, and I will give him an opportunity to do so. Will my hon. friend not explain it? He cannot do so. The member for St. Antoine is doing what he has been doing for the last four years—making insinuations which he cannot prove. The hon. gentlemen on the other side of the House who have discussed this question and many of the newspapers throughout Canada which have discussed the matter have been up to the same tricks as those of the hon. member for St. Antoine to-night. I tell the hon. gentleman that he cannot put his finger on a particle of evidence to prove that Mr. Lumsden was ever coerced by the commission or any member of it. We have heard enough of this kind of thing during the course of this discussion, and the time has nearly come when we ought to put a stop to it.

As I was saying, this material was subsequently classified as solid rock. But the commission produces the evidence of different persons to show that they had never seen this classification before. My recollection is that they got that evidence from M. P. Davis and M. J. O'Brien, contractors of large experience, who said that they had worked with other railway companies and had never met with this classification. I suppose that the hon. member for St. Antoine, if I were not here to watch him, would argue that because M. P. Davis and O'Brien said that something was crooked, or there must have been some unfair or dishonest collusion between the contractors and the engineers, and the engineers must have been giving M. P. Davis classifications to which he was not entitled. It must be borne in mind that out of $65,000,000 worth of grading on this road only $1,800,000 is involved in this assembled rock proposition.

Mr. MACDONALD: A tempest in a teapot.

Mr. CARVELL: During the last seven years there has never been a session of this House—except the last, when hon. gentlemen opposite let us discuss the navy—during which we have not heard this same old story, which has been heralded from one end of the country to the other, about the immense amount of thieving that was going

on in connection with the classification of gravel as solid rock. But, as I have said, according to the biased and unfair report of Gutelius and Staunton, only $1,800,000 is involved in this matter. I think it will be admitted without any hesitation that these gentlemen have made the case just as strong as they possibly can. So far as Staunton is concerned, that was his whole business; that was the only interest he had in the whole investigation. Every man who was called before Mr. Staunton was asked this question about assembled rock. Perhaps I can do no better than give the evidence of Mr. Grant with regard to this matter. Mr. M. P. Davis and the gentlemen who gave evidence along this line had never in their experience met the same kind of material, but Mr. Grant, a man of as large experience as they, a man of much larger experience than Mr. Gutelius, when it comes to the construction of railroads, a man who for the last twenty years has been engaged in construction work and classification work, a man who is so big that this commission did not dare to dismiss him, a man whom they have kept in their employ up to the present time, and whom they will keep in their employ until the road is finished—

Mr. AMES: A strong advocate of mountain grades.

Mr. CARVELL: I would advise my hon. friend to keep quiet. He will have an opportunity of speaking later.

Mr. MACDONALD: His business is to insinuate.

Mr. CARVELL: That is right, or to take pictures that do not show things as they are—to take pictures from the wrong angle. I would call my hon. friend's attention to the evidence of Mr. Grant, which he will find on page 380 of the report.

Mr. R. B. BENNETT: Take a picture of the hon. member for Carleton.

Mr. CARVELL: I am always pleased when I get my friends on the other side a little excited, for I feel then that I am getting under their hides. It is always a matter of congratulation to me when I make them feel uncomfortable, and that is what I am trying to do to-night. I am going to try to give my friends the whole of the facts with regard to this matter of classification, and if I can make them feel a little more uncomfortable than they have felt in the past, I shall be somewhat gratified. I think I may safely say that I am giving my friends opposite something which they have never heard before. On page 380 I find this evidence given by Mr. Grant:

> Q. Did you ever come across the term 'assembled rock' before?—A. I did not.
>
> Q. In the other specifications with which you are familiar did you have any trouble to classify all sorts of material without using such a classification as assembled rock?—A. I never classified anything else as solid rock on any other road except ledge rock and boulders over a yard.
>
> Q. And you never found it necessary to find any kind of solid rock such as assembled rock?—A. No, because the specifications of the other roads as a rule would define anything or would include an item for anything out of the ordinary such as on the Cape Breton railway we had classification for gypsum. On other roads we would have a special item for shale rock, rock debris, and such material as that.
>
> Q. Where it occurred in sufficient quantities to justify a special price?—A. Yes.

There is the answer to the whole question. Mr. Grant had met with this class of material, but in every case he had an item in the specifications to cover it. On the Transcontinental it was found in two places; it was found in New Brunswick—not a very large quantity—it was found west of Quebec, and, I think, to some extent east of Quebec. This matter came up, and I have given the House the history of it. I would like my hon. friends, if they wish to be fair, to say if they see anything crooked or dishonest in that proposition. They have got to assume that every man who gave his opinion on this was either a fool or a knave. I think they have got to say both. They have got to assume that every man was crooked. That Mr. Collingwood Schreiber was crooked, that Mr. Newcombe was crooked, that Mr. Gordon Grant was crooked, and that all the men under them and every man connected with this work, from the highest down to the lowest, was crooked and trying to defraud the Government in this classification. What have they got against this? Mr. Speaker, I make the statement here with a full sense of its importance, the only opinion they have put up in this House against that proposition is the statement of Mr. Geo. Lynch-Staunton, the man who started out to prove this whole commission to be a set of crooks if it could be done by hook or by crook. My hon. friends cannot find in the evidence, or in the records of this Parliament or in the records of the commission, the opinion of any man of any importance, in Canada or out of it, to substantiate that proposition, except the opinion of Mr. Geo. Lynch-Staunton—and then they want you to say that the

whole commission, all the engineers and everybody connected with it, were a set of crooks and stole from the coffers of this country $1,800,000, because Mr. Staunton says he does not agree with their interpretation of that classification.

I wish to refer briefly to the evidence of Mr. Woods, which I think it important to have for this reason, that the Grand Trunk Pacific are to pay interest on the total cost of the construction of this road at 3 per cent after the expiration of seven years from its completion for the term of forty-three years; therefore it is in the interests of the Grand Trunk Pacific to have this road built as cheaply as possible, consistent, of course, with proper grades and curves and a proper roadbed. Now, if anyone will read the evidence of Mr. H. A. Woods, he must be convinced that Mr. Woods tried in every way to have the road built as cheaply as he could consistent with the idea that it must be a first-class road. So I look upon the evidence of Mr. Woods on this question as perhaps being of greater importance than of that of anyone else. He is a man whom I know well; he has had long experience in the railway world, and is a man of sufficient importance to be made assistant chief engineer of the Grand Trunk Pacific railway, a man who has occupied that position from the beginning of construction to the present time, who is there to stay, doing justice to himself, to his company and to the Government as well; a man who is trying to work this matter out just as honestly as it can be done. Mr. Woods' statement is to be found at page 431 of the evidence.

Q. You say there was an amendment made to the specification?—A. Yes, which I think had the approval of the Government.

Q. You think that amendment or blue print issued by Mr. Lumsden, dated January 7, 1908, widened the definition of solid rock, so as to include material which had theretofore not been classifiable, if I may use that word, as solid rock?—A. I think so, yes.

Q. To what part of the blue print do you refer as having that effect?—A. I refer to where it shows a stone of smaller dimensions. I refer to number 5; it shows smaller fragments of rock, 'Rock in masses of more than one cubic yard, which, in the judgment of the engineer, can be best removed by blasting.' I mean that that it is not solid rock in the ordinary acceptance of sold rock, but it was decided to term it solid rock, because it is as difficult to move as solid rock.

Q. I do not think you have read that carefully, because it does not say 'rock in masses'?—A. It does.

Mr. Woods was not the man to be browbeaten by Mr. Lynch-Staunton. Remember that Mr. Woods is not in the Government employ, and the moment Mr. Lynch-Staunton starts to crowd something down his throat he contradicts him. Mr. Staunton goes on:

Q. Pardon me, it does not; it says 'rock in masses,' just exactly as the original specification said. It does not say 'rocks in masses' but rock in masses, and the original specification said rock excavation. I have tried to find out how this modified the specification, and I have been unable to do so personally?—A. Well, it probably grew, if you will allow me to say so, out of the interpretation placed upon article 35 by the engineers, in which masses, although not solid, not ledge, might be termed solid rock.

That is all the evidence I wish to give on the question of solid rock. I have given shortly practically all the facts in connection with it, and I have stated that in the report of these gentlemen they state that $1,800,000 is practically the amount which they claim was paid for solid rock classification, or that should have been paid by reason of introducing this assembled rock question.

I come next to the loose rock, and I will go over that very hurriedly. There has always been a great deal of talk about the loose rock classifications. You will find the specifications for loose rock also at page 98 of the exhibit. It is known as section 35.

All large stones and boulders measuring more than one cubic foot and less than one cubic yard, and all loose rock whether in situ or otherwise, that may be removed by hand, pick or bar, all cemented gravel, indurated clay and other materials, that cannot, in the judgment of the engineer, be ploughed with a 10-inch grading plough, behind a team of six good horses, properly handled and without the necessity of blasting, although blasting may be occasionally resorted to, shall be classified as 'loose rock.'

The only place on this road where this loose rock classification became important was on contracts 14, 15 and 16, and, to some slight extent, on 13. There the engineers found a peculiar condition of affairs. They found a material which some of them called gumbo and some blue clay. It was not rocks from the size of your fist up to a cubic foot in diameter, but it was a material which cost more to remove than the ordinary material which would come under the classification of loose rock, and the question arose as to whether the engineers were justified in classifying any of that material as loose

rock. I want to put this clearly, and I think I am putting it practically as it works out. In order to test the question as to whether this could be classified as loose rock or not, the question arose: Could it be successfully ploughed with a team of six good horses, properly handled, drawing a 10-inch grading plough? If, in the opinion of the engineer this could be done, the material ought not to be classified as loose rock, but, on the other hand, if it was the opinion of the engineers that that could not be done, it should be classified as loose rock. Therefore the question came up: Could this material have been ploughed by a team of six horses such as I have described as set forth in the specification? All the engineers contended that a large amount of this material could not be ploughed by a team of six horses.

I think practically three-fourths of the witnesses who appeared before the commission were examined on this point. I am not going to read the evidence as it would take too long. But I would like to read the evidence of two or three witnesses as it describes what the work was like. On page 221, you will find the evidence of a Mr. Holland, an engineer who had been in British Columbia, on the Canadian Northern railway, on the Quebec, Ontario and Hawkesbury line and who was finally promoted to the position of divisional engineer on contract No. 14 or 15. He describes one of the cases in which they attempted to make this plough test:

Q. You say you made no tests; do you know whether any tests were made ?—A. Well, there was one test made at Mettagami. I did not see it myself, but I saw the result of it.

Q. That was a plough test ?—A. That was a plough test.

Q. Where was this plough test ?—A. Mileage 134.

Q. Who made it ?—A. The sub-contractors, Videau and Overend.

Q. What did they make it with ?—A. Grading plough and four horses.

Q. You saw it after it was ploughed ?—A. Yes.

Q. How much did they plough ?—A. They ploughed a strip five or six hundred feet long.

Q. How wide ?—A. Twenty feet.

Q. Did they turn it over ?—A. Parts of it; the plough would jump out.

Q. But, generally speaking, did they turn it over ?—A. Yes, they turned it over.

Q. What shape was it in when it was turned over ?—A. Just one length; it did not break or crumble.

. Do you mean turned over like a piece of rubber ?—A. Yes.

Q. How long afterwards did you see it ?—A. Next morning.

Q. How long did it take to fall apart ?—A. It was picked apart.

Q. How long would it take to fall apart ?—A. A week.

[Mr. Carvell.]

Q. It would crumble all up in a week ?—A. Some of it, not all of it, some never would.

Q. Does not all this crumble when it is exposed to the atmosphere ?—A. Not all; some hardens.

Q. That which does harden will crumble by a blow ?—A. Yes, it has a tendency that way.

Q. How long had this surface been exposed to the atmosphere that was ploughed ?—A. When I saw it?

Q. How long had it been exposed before it was ploughed ?—A. They ploughed it the first thing, as soon as they grubbed it.

Q. Do I understand that this was the original surface of the soil ?—A. Yes.

Q. And do you mean to tell me that that stuff turned over and stood like a ribbon ?—A. Yes, not a ribbon for two or three hundred feet, but for fifteen or twenty feet it was a ribbon.

By Mr. Gutelius

Q. Were there any pieces longer than a foot or two ?—A. Well, they ran over that.

By the Chairman:

Q. What was the average ?—A. Well, they looked to me to be much longer than the plough, and the plough is eight feet.

Q. What did they do with that stuff when they turned it over ?—A. They picked it and wheeled it in a dump.

Q. Did you see any of them cross it with a scraper ?—A. Yes, we tried to load the scraper, but could not get the stuff in.

That is the evidence of an engineer of repute who saw this plough test made. He had no hesitation in saying that while you might possibly plough that ground you could not possibly plough it in such shape that it could be removed. You might as well break it to pieces with a pick and shovel in the first place, as have to do that after it has been ploughed.

Then there is the evidence of a Mr. Balkam, whom I know personally and I think the Minister of Trade and Commerce knows him too, a man of the highest reputation who has been in the engineering business for probably a quarter of a century. He has worked in many parts of Canada and knows as well, probably, as any man on the Transcontinental how material should be classified, a man of sufficient importance that from the day he went on the road his career was a series of promotion after promotion until four years ago he assumed the position, practically, of assistant to the chief engineer of the work. The man who held the title of assistant was MacPherson, but the man who did the inspecting and engineering was H. M. Balkam. He travelled over the road from Moncton to Winnipeg, week by week. Every contract received his particular attention and inspection. Mr. Balkam was sworn and gave evidence, which you will find on page 317:

Q. Explain, please; you are doing the explaining?—A. Well, the fact that you can pull a team through it is no use. You plough for a certain purpose, to break it and handle it. If ploughing made this clay readily handable, I

would consider it ploughing; otherwise, I would not.

Q. You thought it could be turned over, but you classified without seeing it done?—A. There was never any plough work on this to my knowledge.

Q. You concluded that you would never accomplish your purpose by ploughing?—A. You had not accomplished your purpose.

Q. You concluded you had not accomplished your purpose?—A. Yes.

Q. What reason have you for concluding that?—A. My judgment.

Q. How did you arrive at that?—A. Because a man is supposed to exercise his reason.

Q. How did you arrive at that?—A. From the nature of the material.

Q. Had you ever tried it in your life on that kind of material?—A. Not just exactly on this kind of material.

Q. So that you had no experience in it; you could do no more than guess, could you?—A. Oh, yes.

Q. How can a man form a judgment without experience?—A. You know it is a tough, hard material. You can form some idea by the way a pick or shovel works on it how a plough would work it.

Q. How was it taken out?—A. A great deal of it was blasted.

Q. Was there any continuous blasting in the whole district?—A. Yes, there has been continuous blasting in my time.

I have given the evidence of two men as to the nature of this material. It all comes down to the question of one man's judgment against another's. The whole question is, could that material be properly and economically ploughed into such shape that it could be removed? If in the judgment of the engineer it could not be so ploughed, the engineers were not only right but were practically compelled to find that this should be classed as loose rock and not as common excavation. After the change of Government and the change of commission, following out the old policy that everything possible must be done in order to show that something wrong or crooked had been committed, a man was chosen by the name of Goodwin, who was at one time, I think, a divisional engineer on the Transcontinental but who had been dismissed from his position—I know not for what reason, but his services had been dispensed with. This man was found somewhere around North Bay and was made inspecting engineer over the whole work. He was sent out over sections 14, 15, 16, not to properly inspect them, I submit, but to find fault and make trouble if he possibly could, and he went the limit in trying to find fault. He at once attempted to make a plough test. I will not take the trouble to read his evidence, but hon. gentlemen will find the plough test described on page 293 by a man named Mattice, an assistant district engineer. Let me show how unbiased and perfectly fair-minded Mr. Goodwin was in his attempt to find out whether the land could be ploughed, and whether or not these engineers were crooks and thieves because they had returned a certain percentage of it as loose rock instead of common excavation. He went into the Cochrane yard, a place within forty feet of a cut along the Temiskaming and Northern Ontario railway, a cut that had been taken out years before. On one side of this land was the Temiskaming and Northern Ontario railway and on the other side the Transcontinental. Both railways had been taken out for some two or three years. A little piece of land was left in the middle that time had drained out. It had become dry and ceased altogether to have its original consistency. It was no more like the ordinary land in that country than bog is like solid rock. This man cleared the bush from it, got a team and a plough, and ploughed it. He found they could plough down to the extent of three or four feet. He then comes back to the Government and says: I ploughed that and I did not have to use my horses, I only had four; and because I ploughed that piece of land that had been drained out for years, forty feet from the Temiskaming and Northern Ontario railway, therefore I say the whole division of 400 miles could have been ploughed and consequently every engineer who returned this as loose rock instead of common excavation is a crook, the Government are crooks, and the commissioners are crooks, and there was some sort of unholy conspiracy between the Government, the engineers and the contractors. I want to ask any hon. member—I do not care what his politics may be—if he considers that a fair statement to the country as to the condition of that material. You only have to state the proposition to show its unfairness. You only have to do that in order to show that it was an unfair test meant to give an unfair result and meant to take an unfair advantage of the men who made this contract. Then Mr. Goodwin comes back and says: I tested that, and as a result of my test I am satisfied that the engineers classified $670,000 worth of material as loose rock which should have been classified as common excavation, and, therefore, the Government have been mulcted by that amount of money. I have gone as hurriedly as possible into these two questions of the classification of solid rock, assembled rock and loose rock.

I want to go back upon that question

for a moment. When hon. gentlemen opposite took possession of this road it had not been finished; every contractor had a big deposit with the Government. My hon. friend from North Grey found fault with the big deposits, but the big deposits were there. More than that, the greater proportion of their ten per cent remained in the hands of the Government, because the Government had kept a drawback of ten per cent in order that they might be perfectly safe. In addition to that, they had a lien upon the plant and they had enough to pay this $700,000 three or four times over. They had the money in their hands. Did they take it out of the hands of the contractors? Not a dollar of it. They paid practically every dollar of it over to the contractor. When my hon. friend from South Renfrew said last night that the Government did not believe the report of these commissioners was he not justified in doing that? If my right hon. friend believed them, if the Minister of Railways and Canals believed them, if the Government as a whole believed them, would they have paid these men for the classification which they said was dishonest?

This commission have in some way attempted to create the impression that there was a steal, that there was some kind of an understanding between Davis and the Transcontinental Railway Commission. They only insinuate it, they dare not state it. I do not have to tell you that Mr. Davis is one of the wealthy men of Canada. At the time that these hon. gentlemen came into power they probably had a million of Mr. Davis' money in their hands and there was not half of that amount involved in overclassification in connection with the Davis contract altogether. If they believed that they were right and that Lynch-Staunton was right with reference to classification, I ask again, why did they pay this money over to Davis? I would like my right hon. friend to answer that. I think my right hon. friend could give the most accurate answer of anybody in this House to-night. He knows why they did not take it out of the hands of Davis, we know why they did not take it out of Davis, and we know why they did not take it out of any one.

We know that in connection with contracts 14 and 15, after these gentlemen got into control, they reported that a certain amount of money should be taken out of the contractors on account of loose rock classification. They did do it; they transferred a certain number of thousands of yards from the loose rock column to the common excavation column and the contractor said: Put that back or I will fight it out. Did they fight him? No sir, they put it back, paid him the money, paid him his drawback and his deposit and they released his plant. Then, they say that these gentlemen did not construct their work in time. My hon. friend from North Grey has had a good deal to say in connection with contracts No. 16 and 17.

I do not suppose there is an hon. gentleman who will discuss this question but will rehash this old story about contracts 16 and 17 in connection with which they say that Davis made an unfair profit. They say that he made $746,000 without doing anything for it. The commissioners say that, because he did not commence this work when he should have commenced it, the Government should fine him $5,000 a month according to one of the conditions of the contract. Why did they not fine Davis? Why did they pay back Davis' deposit? There must be a reason for this. Either they do not believe the truth of that report or they are not straight with the country, one or the other—I care not which one of the dilemmas they have chosen to hang their hats on. This Government do not believe their commissioners or they are not playing the game with the country fairly. If they believed the report of the commissioners they would fine Davis $5,000 a month. When they pay him back his deposit I think it is proof positive that they do not believe the report of the commissioners and that that report was only printed for party purposes and for the purpose of making the people of the country believe that there was something crooked with the old Government.

It was a dishonest report and it had a dishonest object because if these hon. gentlemen did believe that it was an honest report they would carry out its provisions and fine Davis $5,000 a month and also fine the other contractors. They would not pay these men the solid rock price for assembled rock and they would not pay $600,000, at the loose rock price, for material which they claimed should only be paid for at the common excavation price. I think this is a matter of sufficient gravity to demand an explanation, not from men like Lynch-Staunton or Gutelius, but from the Premier who is really responsible for the commissioners, responsible for the Minister of Railways, responsible for the commissioner

of the National Transcontinental railway, and responsible to the people of Canada for the way in which they managed these financial matters as between the commission and the contractors.

The commissioners give instances of the ways in which money was taken from the country. They do not say that work ought not to have been constructed but they say that they were not necessary. Before I close I want to give a few illustrations in order to show the absolute unfairness, unreliability and, I would almost go as far as to say, the latent dishonesty of the report of these two commissioners. I will refer to three or four instances in my own province because I have some personal acquaintance with conditions there, and therefore I can speak about them more intelligently. I now come to what is known as the Coal Creek fill in connection with which they say that something like $250,000 was uselessly expended. My hon. friend will find the reference to this matter at pages 94, 95, 96 and 97 of the report. The facts are these: In the location of the railway between Chipman and Moncton they came upon a deep and wide ravine which had to be crossed. If they were going to build the road up to the grade which had been established this fill had to be crossed either by a wooden trestle, a steel trestle, or a solid fill. The distance was something over 2,000 feet and I think that in the centre it was probably 75 feet in height. After a great deal of engineering consideration and figuring it was decided by the commissioners that this valley should be crossed by means of an embankment at each end and that the middle thousand feet over the small stream should have a steel viaduct or trestle. That was decided upon and the work was proceeded with. Later on the contractor made a proposition to the commission by which he agreed to fill this thousand feet with solid material and put an arched culvert in the centre for the same money as it would take to build the viaduct. I ask hon. members opposite if they do not consider that a good business proposition, from the standpoint of the Transcontinental Railway Commission. If you can get a fill seventy-five feet deep with solid material, in place of a steel viaduct, without spending any more money, is it not good business? There was no guesswork about what the viaduct would cost, and they figured out how many thousand yards of material it would take to fill the hole, and they saw they could afford to pay the contractor thirty cents a yard, and that in the end it would cost exactly the same as it would to put in a steel viaduct. The price was low, but the contractor said he would take it at that price, and it was distinctly understood in the agreement that there was to be no overhaul; he was to get the material where he could and fill the hollow for thirty cents a yard. He proceeded to do so. Before they got far they found that the material they expected to use was of a soft consistency, and that when heavy quantities were placed in the fill it would slush out at the bottom, and that it was not safe to build the fill of that kind of material. But, the contractor had made an agreement to fill the hollow up with solid material at thirty cents a yard, and he did so. He did not do it with common excavation but with solid rock, and it took about 290,000 cubic yards, and he did it for thirty cents a cubic yard. I ask any engineer in Canada to tell me if it is possible for a man to move that material for less than sixty cents or seventy-five cents a cubic yard. I say that the contractor must have a splendid equipment and the most perfect conditions possible, to remove such material for seventy-five cents a cubic yard. And yet, that man removed the material and put it into the embankment for thirty cents a cubic yard. If you want any proof of that you can find it at page 96 of the report.

Another condition of affairs arose. They had decided to make an embankment of solid material leading from the bank on each side, up to within this thousand feet. That was the original understanding, and that was the contract the contractor entered into with the commissioners. And when they came to fill up the approaches, they found that the material available was not sufficient because it would slush out at the bottom, and they found they would have to go forty miles to get proper material, unless they took solid rock. One would think, from reading this report, that a special trade was made by which they agreed to pay this man $1.10¼ per cubic yard for putting in that solid rock. The report reads:

11 p.m.

> This rock borrow was approved of by the Grand Trunk Pacific (the contractors for this work), and paid for at the special rate of $1.10¼ per cubic yard, this rate being authorized by Order in Council, passed on January 13, 1911.

Before that the report says:

> As will be noted from these reports, the amount of available common location for the construction of this fill was largely ever-estimated, and it became necessary to borrow rock

to the extent of 205,876 cubic yards, to complete the embankment.

Is there a man in this House who can read that without coming to the conclusion that the Government paid the contractors $1.10¼ per cubic yard for filling up the embankment. That is what the inquisitors meant; that is the meaning they intended to convey, that is what they have been preaching all over the country. And yet, if you look at page 96 of the report, you will find that the material that went into that was paid for at thirty cents a yard and not at $1.10¼, and the contractor lost, I believe, from $75,000 to $100,000 in putting in the fill. The commissioners knew that. These figures are so juggled—and I cannot use a milder term—by this commission, that although knowing that, they tried to lead the people of this country to the conclusion that there was a steal made, and that the Transcontinental Commissioners made a contract to fill this at thirty cents a cubic yard but finally paid the contractor $1.10¼ a yard. More than that, these gentlemen tried to create the impression that this special price of $1.10¼ per cubic yard was made in 1911. Why, there was a return brought down in this House in 1909 or 1910 on the motion of Mr. Crocket, then member for York, which return showed that away back in 1908 that price of $1.10¼ was provided for rock borrow. And yet these gentlemen try to make the people believe that this was done in 1911, after the work was finished. The reason for the rock borrow was, that they found that in particular places they could not get common earth to borrow for making these big fills, and the contractor said: you figure how much rock it will take to fill up a certain hole, and then we will take the price which you will have to pay for common excavation and we will put it in for that price. Here is the way it figured out: we all know that when you dump earth over an embankment, that naturally it will spread out, what is known as 1½ to 1. If you have an embankment fifty feet high in the centre, it will be 150 feet wide in the bottom, because it will go out seventy-five feet from each side of the centre line, the slope being 1½ to 1. On the other hand, we all know that if you dump rock in, it will not go out to the extent of 1¼ to 1, and the result is that you would probably not have much more than one-half of such actual material in a dump of solid rock as you would in a dump of common excavation. Therefore, taking the solid contents of these different fills, they figured out, in the first place, how many cubic yards of earth it would take to fill, and then they took how many cubic yards of rock it would take. Then they know that the earth will settle to a much greater extent than the rock will, and the rock is measured in situ. Then, when the rock is broken by explosives, it expands and the result is that a yard of rock in situ will give more than a yard and a half in the dump. Taking all these things into consideration, they found that $1.10¼ for rock meant only the same cost to the country as forty cents for ordinary common excavation, and that is the way this price of $1.10¼ was arrived at, three or four years before the date given by the commissioners in this report. I say, Mr. Speaker, that if you had no other evidence than this, you have sworn evidence right there to condemn these men as making a dishonest, unfair, and partisan report for dishonest, unfair, and partisan purposes. They did use a large amount of solid rock and they used it in the approaches to that thousand feet span, and they would have to use it, no matter whether they put in steel or not. They had to make this embankment any way, and if the common material there was not sufficient, they had to get proper material, and they used rock borrow at $1.10¼, and the change made in that respect did not amount to one ten cent piece to this Government one way or the other.

They would have had to fill those embankments, no matter whether they put in steel or solid material. So far as the thousand feet which was originaly to have been in steel is concerned, it was put in in solid rock at 30 cents a cubic yard, and the contractors lost probably $60,000 or $75,000 in doing it. That is one illustration, and is one of the big things which this partisan commission find and send broadcast over this country as evidence of mala fides on the part of the former Administration.

Mr. AMES: If I understood my hon. friend rightly, he said that 282,000 cubic yards went in at 30 cents a cubic yard?

Mr. CARVELL: Yes.

Mr. AMES: Where was that put in?

Mr. CARVELL: In the thousand feet, in place of the steel.

Mr. AMES: Where were the 205,000 cubic yards put in?

Mr. CARVELL: In the approaches.

Mr. AMES: In two different places?

Mr. CARVELL: At each end.

Mr. AMES: That would be 487,000 cubic yards?

Mr. CARVELL: That is right.

Mr. AMES: Part of it at 30 cents and part of it at $1.10¼?

Mr. CARVELL: No doubt of it at all, and these approaches would have to be put in, no matter whether steel was put in the middle or not, unless wood trestles were put in. That is another question entirely; but if you want to build a railroad, you want to build a proper one, and not put in wooden trestles that will burn down. My hon. friend has understood my meaning. I did not have to read the report because I knew all about it beforehand. I have been on the spot and have seen the work. My hon. friend will find it all in the report, if he will only spell it out. The commissioners, however, never intended it to be spelled out; they intended to create the impression that a huge steal had been made; that the contractors had agreed to build this at 30 cents a cubic yard, and had received $1.10 for doing it. That is only one instance of the unfair statements made by the commission from beginning to end. Their very conclusions are intended to give the same impression. They will be found on page 97, as follows:

> When it was discovered that the cost of this fill was to be so largely in excess of the estimate the local officials should have reported the matter to headquarters, when some means might have been found of overcoming this extra expense, involved by borrowing 205,876 cubic yards of rock at $1.10½ per cubic yard.

When the commission are putting it down in black and white, they are very careful to use the amount which went into the approaches. They did not say that this went into the fill; they tried to leave the impression that something crooked took place over the filling of that Coal Creek fill. My hon. friends would say: Give us a wooden trestle, 75 feet high and 2,000 feet long.

Mr. GRAHAM: They would not say so.

Mr. CARVELL: No, I do not think they would, but the commissioners say so. The other commission said: We will build solid approaches to within a thousand feet and then we will put in a steel viaduct. They were able to make an arrangement by which they got this approach filled up with solid material, and it is there for a thousand years or for ten thousand years if the world lasts that length of time. Would a steel viaduct be as good a piece of railway construction as solid rock fill? Would it be as much in the interest of the country? Yet that solid rock fill has not cost the Government of this country one dollar more than it would have cost to put in a steel trestle. The commission criticise this as one of the great examples of extravagance, and I think you will not have very far to go to read into it as one of the examples of fraud in making up this $40,000,000.

Let me give a few more illustrations of matters about which I know very well. If my hon. friend from St. Antoine (Mr. Ames), who is doing me the honour to follow me very intelligently, will read this report through, as I am satisfied he has done, he will find that these commissioners take up every one of those twenty-one contracts seriatim. In the first place they give the number of tenders, the amounts of the tenders, the successful tenderers. They give then the estimated quantities and the actual quantities. I do not for a moment wish to deny that the actual quantities differ from the estimates. I do not want to deny that there is a larger quantity of classified material than there was in the estimates. I do not think it makes any difference whether there is or not. The question is not what the engineers estimated. It is what the contractors found. When they say that they found 1,000,000 cubic yards of solid rock, the question is, did they find that quantity. If they say that they found 2,000,000 cubic yards of loose rock, the question is, did they find that quantity. Is an official or a Government to be bound hand and foot by an estimate made by an engineer as to the probable cost of something 100 feet under the surface? It would cost a huge sum to bore test pits on every cutting in the rock. It would take years to do it and would be simply impracticable. All that engineers can do is to use their very best judgment. In this case they did so. They found that they could tell practically the number of cubic yards of material to be removed. They said: We believe from our observations that there will be so much loose rock and so much solid rock to be excavated. If it turned out that they were wrong in their estimates, is that an evidence of fraud? It is put forward in this report as such, and I am afraid that, before this debate is over, some of my

hon. friends opposite will say—yes, my hon. friend from North Grey (Mr. Middlebro) read to-night from one of the contracts the estimate made of solid rock and the actual quantity of solid rock, and I believe that he has gone home feeling justified that there is a big steal because there turned out to be more solid rock than the engineer estimated. Yet he did not do himself, nor this House, nor the commission, nor the contractor the justice to get at the bottom of the work and find out whether that cut was properly classified or not.

Another very common mode of finding fault with the construction of this railway is to say that the contracts were sublet. I am coming to that in a moment. I would like my hon. friend from St. Antoine (Mr. Ames), when he follows me as I presume he will, to tell me how in the world you would build a railroad in any other way than by subletting the contracts, and how you would go to work to let the construction of that road, 200, 300 or 400 miles in the wilderness to men who are able to take ten miles and build that amount of the road. Let us forget that we are talking politics; let us forget this Lynch-Staunton, Gutelius report and get down to common sense. This matter has been referred to by my hon. friend from South Renfrew (Mr. Graham). I only refer to it here by way of illustration. When my hon. friends opposite are called upon to act, they act in exactly the same way as our party has acted, as any business man will act. When it came to letting the Hudson Bay railway, they let it in 150 or 200-mile contracts. Why did they not let it out in ten-mile contracts? When it came to the Welland canal, they let it out in contracts for $1,000,000 to $6,000,000. Why did they not divide that up into smaller contracts so that the small fellow with the steam shovel and perhaps a few horses could go in and do the work? They know that that man could not do the work. They did not let out the Hudson Bay railway in ten-mile cantracts to small men, because they know that the small men have not the finances to carry on the work. They let it out in big contracts for the very same reason that the Transcontinental Commission let it out in big contracts; because in doing so they were sure to get men of sufficient financial ability to ensure the construction of the road with no loss to the Government. I wonder if my friends opposite were ever on railway construction work? I wonder if they know anything about the work connected with the construction of a railway? Do they realize that the main contractor—we will say M. P. Davis, because he seems to be the bête noir of my friends opposite when he takes the contract for the construction of 100 miles of railway in a wilderness section of Quebec or Ontario, has to finance the undertaking from start to finish? Do they realize that when he lets the work to a sub-contractor he has to stand behind him financially? Do they realize that he is the man who has to advance the money to that sub-contractor with which to buy horses, wagons, ploughs, picks and shovels? Do they realize that the main contractor has to take the responsibility for the wages that are paid? Do they realize that if the sub-contractor goes broke—as he has done many times—the main contractor is the man who has to stand behind him? Do they realize that horses die and are killed in the course of the work? Do they realize that it takes possibly $100,000 of machinery to carry out a fifteen or twenty mile contract? Do they realize that that machinery depreciates in value at least 20 per cent in one year? Who is going to furnish this $100,000 of machinery? Your small contractor cannot do it. Can a man with half a dozen horses, a few dump carts and a pile of twenty pound rails finance a scheme like this? The commissioners appear to think that he could. If these commissioners know anything about railway construction they are crooked; if they do not know anything about railway construction they should never have been put on the job. I do not know that any other argument is necessary to meet the assertion of the commissioners with regard to sub-contractors.

My hon. friends opposite proceed to say: Oh, the sub-contractors made money; they made profits on the work. With regard to every one of these twenty-one contracts, in order to prejudice the minds of the people of this country and make them believe that the men connected with the work were crooked, they tell you the prices received by the main contractor and the prices at which he sublet the contract. This they did, forgetting that the main contractor has to advance the money; forgetting that he has to put up the plant; forgetting that he has to supply the horses, the machinery, the bread which the men eat; forgetting that he has to stand all the loss that takes place. Yet they say, figuring the price which the main contractor got and the price at which he sublet the contract, that so much profit is shown and that the contractor put this money in his pocket, never

having lifted a finger to earn it. I can only say again that if they believe that, they are not fit for the job, and if they do not believe it, they are crooked.

Mr. AMES: What did M. P. Davis do for his $740,000?

Mr. CARVELL: My hon. friend cannot get me away from the subject which I am discussing; he will have an opportunity later of talking as long as he wants to.

Mr. AMES. What did he give the country for his $740,000?

Mr. CARVELL: That was an assignment of the main contract. I will tell you what he did, he put up the deposit which my hon. friends opposite say was so large; he left that deposit there until the work was completed, and took the chances of losing it if the work was not completed according to contract.

Mr. AMES: Was $740,000 not more than double the amount of his deposit?

Mr. CARVELL: I do not know, and I do not care.

Mr. AMES: You should know.

Mr. CARVELL: I suppose Mr. Davis made a dollar on the contract, just as my hon. friend makes a dollar on his shoe business, and does not do anything for it, either. I am finding no fault with my hon. friend because he does not drive the pegs himself; he has his money invested in the business, and I think he is entitled to a reasonable profit. My friends opposite will commence to see, I am sure, in what a ridiculous position they are placing themselves in respect of their commissions. By the time we are through with them, they will curse the day they ever thought of Gutelius.

Mr. REID: Do not swear.

Mr. CARVELL: Yes, and they will curse the day or night they ever accepted his report. The hon. member for Colchester (Mr. Stanfield) laughs; he has had something to do with Mr. Gutelius. Last summer the hon. member for Colchester was going to resign on account of Gutelius.

Mr. STANFIELD: That is a mistake; I want the hon. gentleman to withdraw that assertion.

Mr. CARVELL: I will withdraw it, but that is what the newspapers said. At any rate, my hon. friend will not deny that he made a very hurried trip to Ottawa on account of Gutelius.

Mr. STANFIELD: I did not.

Mr. CARVELL: Well, I will withdraw that also, but a good Tory newspaper in my hon. friend's own town must be wrong.

Mr. MACDONALD: A newspaper that the hon. gentleman owns himself.

Mr. CARVELL: My friends opposite are not through with Gutelius by any means. I can prophesy this much: just as soon as the hon. acting Minister of Railways becomes Minister of Railways and Canals he will be through with Gutelius.

Mr. MACDONALD: They do not intend to keep him.

Mr. REID: The best man we ever had.

Mr. CARVELL: My friend the Minister of Marine and Fisheries (Mr. Hazen), who, I am sorry to say, is not here to-night, has had something to do with Gutelius, and he is not through with him either. There are a lot of Tory politicians in the Maritime provinces who know something about Gutelius, and who wish they were through with him.

As I have said, these two gentlemen have pointed out the profits made by these contractors. I want to give to the House, from my own personal knowledge, two illustrations of the almost dishonesty of these statements.

Mr. GRAHAM: Why use the word 'almost?'

Mr. CARVELL: The matters to which I am about to refer were within the knowledge of Gutelius and Staunton, or if they were not they ought to have been, because they were matters of public notoriety in the province of New Brunswick, having been threshed out in the courts in the provinces of New Brunswick and Quebec. As a matter of fact they referred to these very matters in the report itself. Referring to contract 3, on page 27 of the report, the commissioners give the price which the main contractor received, and the price which the sub-contractors received. They say:

The value of the work done by sub-contractors at their rates..	$280,766
Amount paid Toronto Construction Company for their work	352,291
Profit..	72,145
Percentage of profit, 20 per cent.	

On another part of the page they say:

> The Toronto Construction Company had four firms of contractors who undertook the grading on this forty-mile stretch, and another firm of sub-contractors for the concrete work. We

are, however, advised by the Toronto Construction Company that their concrete sub-contractors failed and they were obliged to finish the work themselves.

I am reading this from the report of the commission, thus showing that the investigators had gone into the thing deep enough to know the whole story. The facts are that the concrete man fell down on his work—that is just one of those things to which I have been referring. The contractor falls down on his work and the loss is sustained by the main contractor. In this case a man named Ferguson was sub-contractor. He went wrong. I am not going into the details, but in the end the main contractors were obliged to pay him $10,000 to get rid of him. That this amount was a total loss to the main contractors was sworn to in court both in the province of New Brunswick, and in the city of Hull, Quebec. Then they were compelled to fight two lawsuits on account of this sub-contractor. One was a case tried in the constituency of my hon. friend from Victoria and Madawaska. As usually happens in cases of that kind, the verdict went against the corporation and the Supreme Court set it aside. Another suit was by an Italian, against this construction company and that was fought out in Hull. As usual the verdict went against the corporation. It was taken to the Court of Review, argued twice in Montreal and finally decided in favour of the company. I want to tell my hon. friend that to my own knowledge these two lawsuits cost this company $6,000 to $7,000. There is a case where $16,000 or $17,000 was absolutely lost, and instead of that company making a profit of $72,000 that meant that they lost $16,000 of that profit. This is a small matter, but it takes off a pretty big slice from the $72,000. These are matters about which Messrs. Gutelius and Staunton should have known and I believe did know and yet they did not hesitate to publish to the House and to the country that this company made $72,000 out of the contract.

Mr. MACDONALD: What is the total value of the contract?

Mr. CARVELL: $350,000. Another illustration is on contract 5. I have explained to the House the arrangement made between the commission and the different contractors that they would have a right to put in what they called rock borrow at $1.10¼ per yard. What I am saying is a matter of co mon knowledge, not only amongst contractors on the Transcontinental in New Brunswick, but among many other people as well. You will find at page 29 of the report the particulars of this contract No. 5. This was the big contract, the contract in which occurred the big viaduct, the contract which cost most per mile of any on the whole road. The commissioners give here the main contractor's price and the sub-contractors' prices, as in every other case, and figure out that the main contractors made I think something like $699,000 profit. But that was on a big work amounting to $2,518,000. They say this was a profit of 27¾ per cent. One of the sub-contractors of the main contractors were two young men, sons of one of the principal stockholders in the main company. And these two young men took the contract for this rock borrow, for which the Government paid $1.10¼ per yard, at the ridiculous rate of 75 cents per yard. I do not know why it was done, but it was done anyway, and you will find at page 30 the report of this sub-contract; solid rock borrow, main contractors, $1.10¼, sub-contractors, 75 cents. It was necessary to have one of these big fills put in as early as possible in order to get the steel to the big viaduct. The result was that these sub-contractors worked day and night and summer and winter for a year and a half to get it through and lost about $50,000 on the transaction. The sub-contractors did not have that much money, or anything like it. The result was that the $50,000 came out of the main contractor—and Mr. Gutelius knows it, or ought to know it. There is not a contractor on the Grand Trunk Pacific in New Brunswick but knows it, hardly a business man but knows it. They know that the main contractor lost about $50,000 on this rock borrow and this $50,000 should have come off the profit; but Mr. Gutelius and Mr. Staunton do not say that, they do not hesitate to tell the House and the country that these men have made all this profit. I venture to say that if you went from Moncton to Winnipeg and could find out the inside history of all these contracts you would not find a contract on the whole road that was free from such things as this.

Mr. AMES: Why did the main contractors have to pay that $50,000? Were they legally bound or was it just because of the relationship between them?

Mr. CARVELL: They had to pay it. Does not my hon. friend know that they had to pay for the wages and the supplies? These

young men did not have any steam shovels or any heavy plant. They had to buy three steam shovels and a lot of donkey engines and track equipment, as well as furnishing probably thirty of forty horses. They had to spend $100,000 on plant to carry out the work. These young men did not have the money, they were like the rest of the sub-contractors; and the main contractors advanced the money with which to buy the plant.

Mr. AMES: They loaned it.

Mr. CARVELL: All right, they advanced it anyway, they paid the money out. Then they had to pay the wages every month and whatever the expenses were and when they came to settle the matter up in the end they found they were $50,000 out of pocket. That is the way it works out, that is what I have been trying to explain and I do not believe that there is any contract on the road in which you will not find that something has happened exactly as I have described in reference to contract No. 5.

Mr. GUTHRIE: Is there anything in the evidence about the $50,000?

Mr. CARVELL: No, I am saying that it is well known to every contractor in the Maritime provinces. It is something about which my hon. friends can satisfy themselves, the commission can give them the information. The chief engineer knows all about it, he has been over the work again and again. Mr. Woods, the chief engineer of the Grand Trunk Pacific, knows all about it. They all know all about it and I believe that Mr. Gutelius and Mr. Staunton knew all about it, but they took mighty good pains not to say anything about it.

I have given you three illustrations taken from these contracts in New Brunswick that I know all about myself, and I have pointed out the manner in which these gentlemen have, in my judgment, absolutely suppressed the evidence necessary to give the real facts of the case. Do you wonder that the hon. member for South Renfrew told you that he did not believe the Government believed in the truth of this report, and do you wonder that we attack it and ask this House to pass an amendment to the motion to go into Supply, condemning the Government for asking the country and this House to accept such a report?

We have heard a good deal about the question of overbreak and improper classification. I have described the classification. I am going back now to another phase of it. My friends say that there was practically collusion existing between the commission and its engineers and the contractors by which the contractors were allowed to take out much larger quantities of solid rock than were necessary because they were getting a big price for it and making money out of it. Witness after witness was examined as to how much overbreaks ought to be taken out. One man said from 25 to 30 per cent. I think the commission find as a fact that a man ought not to be fined if he takes out 20 per cent more than the actual prism measurement of the cut. My friend the acting Minister of Railways will understand that if you put in a blast of explosives and you have a rock face of 10, 20, 30 or 40 feet high, you have to take that out wide enough and deep enough to meet your prism measurement, you cannot hew that as you would with a chisel. You have to put in enough explosives to take it out, because if you leave what is called a toe at the foot it will cost you three or four times as much to take that out as it is worth.

In every case they took out more than the actual amount required. As I stated before, the commission found that twenty per cent would not be an unreasonable amount, but evidence was given by engineers to the effect that twenty-five per cent or thirty per cent would not be unreasonable. In contract 'F' it was admitted that they took out more than twenty-five per cent in many cases. The engineers said they wanted the material to fill up holes and the chief engineer said: You must get out so much every month. And they took it out and filled up the holes and very little material was wasted. Trouble arose about this overbreak. They said it was unfair classification and therefore something which should be condemned. We threshed this out in the House time and again between 1907 and 1910, and in the end it became so serious that a board of arbitration was appointed and sent out to make a report. My hon. friend from Renfrew has already referred to that. I need only say that under the National Transcontinental Act, in case the engineers could not agree upon any question of this kind, it was to be referred for final decision to a board of arbitrators composed of the chief engineer of the commission, the Grand Trunk Pacific engineer and a third man to be appointed by them, if they could agree. If they could not agree, the third man was to be appointed by the Chief Justice of Canada. They failed to

agree and the Chief Justice appointed Mr. Collingwood Schreiber. They went out on the work and finally found that about 525,000 yards of overbreak was taken out more than should have been. They said the contractor must not receive pay for that 500,000 yards. Messrs. Staunton and Gutelius report that the amount should have been a little over 700,000 yards, but my hon. friend the acting Minister of Railways knows that since this Government came into power they have settled with that contractor not for 500,000 yards, not for 700,000 yards but for a sum not much more than half the cost of the 500,000 yards.

Mr. J. D. REID: I do not know anything about that.

Mr. MACDONALD: Who was the contractor?

Mr. CARVELL: J. D. McArthur.

Mr. GERMAN: When did they settle?

Mr. CARVELL: Since this Government came into power. They have paid that man probably a quarter of a million dollars more than the arbitrators said he should have got.

Mr. GERMAN: I think the minister should know that.

Mr. CARVELL: It is another proof that they do not believe the Staunton-Gutelius report. They know it is not a fair report. Either it is a fair report or it is crooked, one or the other; if it is straight, the Government is crooked, and they can take which horn of the dilemma they like.

Mr. MACDONALD: They are both crooked.

Mr. CARVELL: I am not making any assertions. I am only giving the arguments and my hon. friend the acting Minister of Railways can make the application. The more we delve into this thing the more we feel that the minister, at least, realizes he has made a mistake. They were so anxious for political capital against their opponents that they chose two men not one-quarter big enough for the job, who simply went at it blind and reported everything that came into their small minds in order to hurt their opponents. Now the whole thing is acting as a boomerang against the men who have to father the report. And that report is to be sent broadcast all over the country. I am told that they are printing a quarter of a millions copies, so that one may be put in the hands of each elector, to make a little political capital for themselves. But I hope that my hon. friend, now that we have pointed out the iniquities of the report, will cancel the order and leave well enough alone, or bad enough alone.

Mr. GRAHAM: The people will cancel the Government.

Mr. AMES: I would like to ask the hon. member a question. Did it ever strike him as strange that there was no trouble about overbreak on the line between Graham and Port Arthur where the Grand Trunk Pacific used wooden trestles?

Mr. CARVELL: I do not know anything about it. We are not investigating that part of the line. The Government of this country did not build that portion, but the Grand Trunk Pacific. My hon. friend may know. He has been over the line, but I have not. I do not see the application. If my hon. friend will point out to me any section of the National Transcontinental railway on which that occurred, I will try to answer him. I do not think he can.

Mr. AMES: If you wish me to make my point clear I will do so.

Mr. CARVELL: I understand the point of my hon. friend. He says that there were wooden trestles on the Grand Trunk Pacific line from Graham to Port Arthur and no overbreak on that road. I do not know anything about that. The Government of this country had nothing to do with it. My hon. friend might as well say there was no overbreak on the Canadian Pacific railway through the Rockies.

Mr. AMES: The hon. member recognizes the significance of my question.

Mr. MACDONALD: Has the hon. member seen the classification on that road?

Mr. AMES: That is not the point. The point I wish to bring to the attention of the House is this: wherever there was not a demand for an unnecessary fill, there was not a corresponding increase in overbreak.

Mr. CARVELL: Is my hon. friend such a simpleton as not to know that these holes have to be filled up some time? If the Grand Trunk Pacific chooses to fill these trestles two or five years from now, or the Government chooses to fill them as construction proceeds, where is the difference? I do not know what my hon. friend is driving at.

Mr. AMES: There is a great difference in the price of material used.

Mr. CARVELL: I want to ask my hon. friend a question. Will he tell me why this Government has not obeyed the findings of their arbitrators, and why they have allowed McArthur a quarter of a million dollars more than he ought to have got according to the findings of the commission?

Mr. AMES: You will have to ask somebody else.

Mr. CARVELL: When my hon. friend is asked a question germane to the issue he gets behind anything, rather than give a straight answer. He knows the trouble.

Mr. AMES: I do not.

Mr. CARVELL: And others know the trouble too. A great deal has been said about the over-classification of cemented material. The board of arbitration sat upon that question as well. I want to tell my hon. friend what took place in my own province.

There is a statement to be found on page 24 of this report, which I want to read, as follows:

> Excepting where Mr. Hays urged the cancellation of contracts Nos. 16 and 17, and where he gave his not too strong support to District Engineer Doucet, in his efforts to have a pusher grade at La Tuque, and where the company offered to do train-hauled filling after the railroad was completed at half the cost paid by the commissioners, appreciating the gravity of our statement, we unhesitatingly find that the Grand Trunk Pacific Railway Company, instead of discountenancing, has rather encouraged this inexperienced commission in its extravagant expenditure on this railway.

Mr. Speaker, there is no more dishonest statement in the whole 500 pages of this document than that, and dishonest to the knowledge of the men who make it. You will find, if you look at the evidence of Mr. C. Foss, district engineer in 'A,' that a gentleman by the name of Bullion was appointed district engineer under the Grand Trunk Pacific, having control of the whole of the New Brunswick section. Mr. Bullion not only made one objection, but dozens and dozens and dozens of objections, and you will find them in Mr. Foss' evidence. He made two hundred objections about all sorts of things in connection with the work of the engineers in the province of New Brunswick. He objected to classification, to measurements, to putting in certain foundations for culverts, to everything that you can conceive of. There was nothing to which he did not object. We had the same thing in the Hodgins investigation. From one end of the road to the other, these Grand Trunk Pacific engineers were objecting to what the commission's engineers were doing. It was one series of objections from beginning to end, and I find no fault with these men for making objections. They themselves probably did not believe in them, but their duty was to keep the cost of this road down to the minimum. Their idea was to build this road as cheaply as they could, because they were paying interest at three per cent on the total cost after completion. In the province of New Brunswick they objected hundreds of times and then they got together, compromised and did the best they could.

But it finally reached the point where Messrs. Woods and Foss got together and they settled a number of these things. In the end it got down to where they could not settle anything more, and they asked that a board be called in to arbitrate. A board of arbitrators was sent down, and it was composed of Mr. Gordon Grant, Mr. Kelleher and Mr. Collingwood Schreiber. They went down and went over the whole of contract No. 6. They got off their car, dug into the bank, the same as my hon. friend did, called witnesses, both Grand Trunk Pacific and commission engineers, they investigated the matter, and on contract 6 they took out a very small amount from the rock classification. They then went down to contract No. 5. You will find it all detailed in Mr. Foss' evidence, and I know because I was on the ground myself. They went down from Grand Falls to the big viaduct on contract No. 5 and investigated the question in dispute there. They went to Plaster Rock and investigated there. They went to contract No. 4 and to contract No. 3, then to No. 2 and then to No. 1. They went through all the cuts and examined them, and we will see that the board unanimously approved the finding and the classification of the Transcontinental Railway Commission engineers and that not a yard was taken out of their estimate except a small amount out of contract No. 6.

That was supposed to be finally settled. The contractors, to a great extent, paid off their sub-contractors because they supposed that that was the end of it. But after the change of Government and after Mr. Gutelius got busy, they sent other inspecting engineers. They sent this same man, Goodwin, down three years after the cuts had been taken out. This was three or four years after the cuts had been taken

out, after everything had dried up, after the rain had broken up the small pieces, and after the surface had all been smoothed down and the grass had grown up. There was an entirely different condition of affairs. The net result of Mr. Goodwin's and Mr. Gutelius' efforts with reference to contract No. 1, a contract involving $2,000,000, was that they reported that about $45,000 should be taken off this whole amount after it had been settled by the Board of Arbitration. That was a Grand Trunk Pacific contract, too. Then they came next to contract No. 2, but they did not touch that at all. Contracts Nos. 3 and 4 were sub-let to the Toronto Construction Company, and they took about the same amount from them. Then they came to the Kitchen contract—contract No. 5—and they took about $35,000 from him.

Either these men were right or they were wrong in taking from the contractors this amount of money, either they were honest or dishonest, either they were ignorant or they were knowing—I do not know which they were, and my hon. friends can take whichever horn of the dilemma they choose. If Gutelius and Goodwin were right in taking that $35,000 from the Kitchen contract, they should have taken it off and kept it off. If they were right in taking $35,000 from the Corbett contract, they should have taken it off and kept it off. But they were up against men who knew as much as they did, and both Corbett and Kitchen said: We will not allow this thing to take place; we will fight you. Having got up against two men who had a good deal of sand and a little money besides, they said to them: Come, let us reason together, let us see if we cannot compromise this matter; we say that the commission should take this money off, but we do not want to take it off; let us get together. The result was that they allowed on No. 1 contract about $18,000, and on No. 5 about $15,000. I want to know if these men are big enough for their jobs. If these men were right in taking off that money, were they right in making the compromise and in paying money which they ought not to have paid? Remember, they had the money in their own hands. At that time they had probably $100,000 of Mr. Kitchen's money in their own hands, probably more. Although they had that amount of money in their hands, did they keep it out? No, Sir, they did not keep it out. They quibbled, but when they found they were up against a lawsuit they backed down.

Mr. AMES: Had the contractors the engineer's certificate?

Mr. CARVELL: The contractors had the ordinary progress estimates.

Mr. AMES: Signed by the engineers?

Mr. CARVELL: Certainly, they got them month by month. But my hon. friend cannot get behind that. If my hon. friend will read the contract he will find that everything is put up to the final decision of the chief engineer. No matter what the progress estimates say, it is the chief engineer who decides, and if they cannot agree with the chief engineer, then it is submitted to arbitration. It only comes back to this again that these men, in order to find fault with the former commissioners, in order to prove that there was something crooked, started in to do that which they did not have the manhood to stand up to and see through to the end. Then they said that they could take $35,000 off these contracts, but they did not have the sand to stand by that declaration, and when they found themselves face to face with a lawsuit, and when they found themselves up against the judgment of bigger men than themselves, they backed down, just as you would expect men of that class to do, and they said: Let us settle this. These contractors, rather than have a lawsuit over a paltry sum of $15,000 in a contract involving $2,000,000, accepted the settlement. They will go before the country and they will say: look at these crooked engineers, they allowed Kitchen $15,000 more than they ought to have allowed him, and we will make him give restitution. That is an illustration of what has been going on, ever since these gentlemen took possession of this road in 1911.

Mr. KYTE: Are these district engineers still in the employ of the Transcontinental Commission?

Mr. CARVELL: Some of them are. Mr. Foss was kept in their employ until the month of January last and then he was told that they had no further use for him. I do not know why they kept him; he had nothing to do and they paid him a big fat salary for doing it. I am glad they did, however, because he is a man for whom I have the highest esteem. There was no-

body more surprised than Mr. Foss at being kept on, but I presume they kept him on for some purposes. There are some lawsuits that are not settled yet, and perhaps they kept him on to have a string on Mr. Foss, but if they did they did not know their man, and when the lawsuits come on, as probably they will, you will hear of Mr. Foss and have his opinion put up against that of Mr. Gutelius.

I am sorry the Minister of Marine is not here, because I have a few things I would like to say in his presence, and I am also sorry the Prime Minister is not in the House. As an eastern man, if there is one statement in this most remarkable document to which I take more violent exception than to another, it is the concluding paragraph of the report, at page 138, which reads:

> This commission does not think that the National Transcontinental railway should have been constructed east of Lévis, which was done at a cost of $35,000,000, first,—because the Government at that time had a railway in operation between Lévis and Moncton, the Intercolonial; second,—because the National Transcontinental railway would only be thirty-three miles shorter; third,—because the gradients on the National Transcontinental railway are greater than those on the Intercolonial railway; and fourth,—because the grades on the Intercolonial railway can be reduced to four-tenths per cent, eastbound and six-tenths per cent westbound, whereas it is practically impossible according to the construction of the National Transcontinental railway, to reduce the 1.10 per cent grade at 146 miles west of Moncton and the 1.10 per cent grade at lake Pohenagamook.

There are two reasons why I violently dissent from the conclusion found in that statement. In the first place, while it may not be a false conclusion, it is an unfair conclusion from the facts. They attempt to leave the impression that the general grades, on that portion of the road east of Lévis, are greater than they are on the Intercolonial. These gentlemen know better than that, but they also know there are thousands of people in the country who will be deceived by the false statement they are making. It is a fact that there are two points on the road, between Lévis and Moncton, on which there is a grade of 1·1. The reason for that is, that they figured out that two engines will draw the same load on a 1·1 grade that one engine will on a 0·4 grade. Therefore, in two cases where the cost of making the 0·4 road would be exceedingly excessive, they resort to what is called a pusher grade. In one case, it is something like ten or eleven miles long, and in the other case it is thirteen miles long, and these grades are on different divisions. This means that for heavy traffic they would simply have to keep an extra engine at the foot of these grades. On the 500 miles between Quebec and Moncton there are only two spots where they have exceeded the ruling grade of 0.4 east and 0.6 west. But if the present Government introduced these grades everywhere, then you would have to keep an engine everywhere there was such a grade, and you would be reducing the hauling capacity of the road to a one per cent road. That is a thing that these commissioners did not report to the public, but they tried to leave the impression that this road is practically a one per cent road. They know better than that.

These gentlemen find a great deal of fault with the construction of the Little Salmon river viaduct. I know that my friend from St. Antoine will say that Mr. Foss advocated the construction of pusher grades at the Little Salmon river viaduct, and I admit that. But if that had been done, the character of the road would have been degraded. The hon. member will have to know something about the history of the location of this road in the province of New Brunswick to understand the real reason why this report was made. It was made for the purpose of eliminating expense, and Mr. Foss stated that probably one and a half million dollars or a little more could have been saved by putting in a pusher grade across the Salmon river, a few feet above the water level, rather than building a viaduct. But if that were done you would be getting back to what the Intercolonial is; you would be degrading the whole road. If you put in that kind of grade at Coal creek and Chipman crossing, you would have the same condition of affairs. It is purely a question of policy whether the Government should have adhered to the 0.4 road or not. I do not have to call on the evidence of engineers to tell me that you can haul more freight and haul it cheaper over a level road than you can over a hilly road. Neither do I have to be told that on a velocity grade, if you strike a slippery rail, or if your engine is not steaming properly, you are stalled, and there is nothing to do when you are stalled but cut your train in two, haul over the hill what cars you can, and then come back for the rest, losing several hours and eating up all the profit you get for carrying that freight. Any man who ever drove an automobile knows what you can do and what you cannot do on a velocity grade. He knows that you start down a hill on one side, and sometimes you

12 m.

will get over the opposite hill, if everything is all right, but sometimes your carbureter is out of order and you will get stalled.

Or it is a question whether your gasoline is as good as the last tankful was. It is a question of a hundred different things. The same question that applies to a man driving an automobile over a velocity grade applie to an engineer who is trying to haul freight over a velocity grade. While I am not an engineer, I profess to have some common sense. So far as I am concerned, if there is anything for which I give the old commission credit it is for the fact that they were willing to accept the opinions of the best engineers in the world; that they wanted to build a road that would carry the grain from the West to the seaboard and carry back the manufactured articles.

There is one thing that my hon. friends have failed to recognize in all this transaction. We were not doing as the former Conservative Government did, when they subsidized the Canadian Pacific railway. I am not finding any fault with the Government for the assistance they gave to the Canadian Pacific railway. I have a wonderful admiration for the Canadian Pacific railway except at election time. I am a very good friend of the Canadian Pacific railway and they are very good friends of mine except at election time. When an election comes on, they absolutely put out of my constituency every man who they think will vote for me.

Mr. MICHAUD: And send him up to my constituency

Mr. CARVELL: Yes. As a railway corporation they have done a wonderful work in developing and opening up Canada. The old Conservative Government gave them $25,000,000, some million dollars of completed road and land which is worth at least $300,000,000 to them. They exempted them from taxation; they gave them a subsidy on pretty nearly every mile of road they own in Canada. The Conservative party have assisted them in every form from the beginning of the road down to the present day and they are still assisting them. They are assisting Mackenzie and Mann; they gave them $17,000,000 last year and are going to give them $50,000,000 this year.

Mr. AMES: Not on your life.

Mr. CARVELL: My hon. friend from Calgary is not here, so I am safe in making this statement. Remember that every dollar of money, every acre of land, every exemption from taxation, everything which they have given to the Canadian Northern railway or the Canadian Pacific railway, they have given to those railways. It has gone from the people of Canada. We have no string upon it; we shall never get it back; we do not expect to get it back; it is theirs and theirs absolutely. Every dollar we are putting into the National Transcontinental railway is our own money, no matter whether it be $161,000,000, or whether you add compound interest for the next fifty years and make it $300,000,000 or $400,000,000 by simply compounding the interest long enough, no matter how much the road may have cost in the gross or per mile, no matter whether we have absolutely solid fill instead of wooden trestles, no matter whether we have steel bridges instead of wooden ones, no matter whether we have 0.4 per cent grades on which we can haul 2,000 or 2,500 tons per train as compared with 800 or 900 tons on the best road in Canada outside of the National Transcontinental railway, no matter what conditions may exist the Nation Transcontinental railway belongs to the people of Canada. We are leasing the railway to a company which will pay us three per cent for forty-three years, and at the end of that period every dollar put into that road, every dollar of improvement upon it, every bit of improvement that has taken place in the country along the location of the road, everything that has gone into that road will come back absolutely to the people of Canada, exactly as we gave it to the railway only made more valuable by the improvements, by the opening up of the country and by the business developed. In my judgment it is one of the finest assets which the Dominion of Canada possesses to-day. If I had not enough faith in the future of this great country to justify the building of a road like that, when it is our own road and will come back to us, I would consider myself a pretty small Canadian and not fit to occupy a seat in this Parliament or in any other parliament in Canada. When my hon. friends come to discuss this question I hope they will not fail to realize the difference between the fact that, as far as other railway companies are concerned, we are giving money away by tens and hundreds of millions of dollars, whereas in this case we are putting the money into our own road; we are going to receive interest on it for forty-three years and then the road will come back to us and will be the property of Canada and of every man who lives in Canada. There is every difference in the world between the two

cases. What is the use of handing over to the Grand Trunk Pacific Railway Company to operate a road built of wooden trestles, with velocity grades on which you cannot do business. What is the use of it when it comes back to us? If they fill these trestles later on, we shall have to pay for the work. My hon. friends do not imagine for a moment that the Grand Trunk Pacific Railway Company are going to fill these trestles. My hon. friends say: Oh, but we could have filled these trestles more cheaply than you did. They try to prove that by saying that the Grand Trunk Pacific railway said: We will fill these trestles for 25 cents a yard. Do they realize that probably 50 cents a yard was the average cost of filling up these holes? It is in the evidence; it is a well known fact, something that Gutelius and Lynch-Staunton took great pains to keep in the back ground, that it has cost practically 25 cents a yard to build those trestles. When those trestles have been built, you will have to cover them up. You cannot take them out and use them over again. The Grand Trunk Pacific Railway Company said: After the trestles are built for us, we will haul material and put it down there for 25 cents a yard. They could afford to do so but they would not build the trestles in addition to that. The ordinary contractor does not build standard trestles as a rule; he builds temporary trestles. The great majority of these fills were made with pony equipment, donkey engines as they are called. The contractors run out a trestle; they fill up a grade probably ten, fifteen or twenty feet; then they raise the grade and put another temporary trestle on top of that. It probably does not cost them more than three or four cents a yard for temporary trestles, whereas if they had to build standard trestles it would cost them 25 cents and the cost of filling them in afterwards. How much would the people of this country have saved if wooden trestles had been built instead of standard ones?

Mr. GRAHAM: Very little, if anything.

Mr. CARVELL: The commissioners take care to say, in regard to every one of these contracts, that the contractors make so much money on this and so much on that. In every case they say that the contractors made money on their train-hauled material. I believe that the contractors made more money on the train-hauled material than they ever expected to make, and I believe that there is perhaps no item in the specification that was so profitable to the contractors as was the train-hauled material, and why? When these gentlemen were called upon to tender, they only tendered for a price for train-hauled material per yard. These prices all averaged around forty or forty-three cents. They were basing their price upon their previous experience, and they had been building railroads of one per cent grades; they had never built a four-tenths road. When they got down to a four-tenths road they found that they were able to haul their material for a great deal less money than they could on a one per cent road. I do believe they made money on it; I will give my friends an illustration. In New Brunswick a firm of sub-contractors engaged on contract 6 had a splendid standard outfit, and could haul twenty to twenty-one cars of gravel to the trainload. That same firm are building a Gutelius road in my county at the present time—one of those tramways with seven and eight degree curves and over one per cent grades. It is costing the province of New Brunswick a nice penny to build it too. The province of New Brunswick has guaranteed the bonds for $25,000 a mile; it is one of those Tory political roads. Now they are coming back to the provincial legislature for an additional guarantee of bonds to the extent of $10,000 a mile, and I suppose they will get it.

Mr. KYTE: Where is the money going?

Mr. CARVELL: It is going into the hands of a Yankee by the name of Gould. I wish my friend the Minister of Marine and Fisheries were here, because he is particularly interested in that line. In addition they get from this Government a subsidy of $6,400 a mile.

Mr. KYTE: Is it let to sub-contractors?

Mr. CARVELL: Every yard of it. The contractor has not a shovel, a cart—even a horse. He has nothing there but an automobile.

Mr. KYTE: Send Gutelius after him.

Mr. CARVELL: Gutelius knows all about him; Gutelius is one of his particular chums. They are building one of Gutelius's favourite roads—the same contractors, with the same engines, the same shovels, the same outfit, and they are able to haul at the very best seven cars of material, and sometimes only six, to the train. This illustrates the difference between a four-tenths road and a one per cent road.

Mr. MICHAUD: Is it a surface road?

Mr. CARVELL: It is practically a surface road. There is no doubt of the fact that they are making a lot of money out of it. However, I am pointing that out merely to show the results of operations so far as the two different kinds of roads are concerned; when these contractors get on a four-tenths road I do believe they make money on their train-hauled material. Do you mean to tell me that if a man tenders for a contract against the whole world—and in every case the low man gets the contract—it being found later that he is going to make money on a certain portion of his contract, the Government should say to him: We made a mistake; you are going to make money on that particular part of your work; we will take that from you and you can finish the part of the work on which there is no profit? It is all very well for Gutelius to preach that principle, but no man knows better than he that that does not work out in actual practice. This is but another evidence of the utter nonsense of the whole report.

There is another reason why I object to the last clause of this report even more strongly than to the other misstatements it contains about the character of the road. If there is any portion of this Dominion which did not make any too good a bargain when it came into Confederation, it is the Maritime provinces. I do not say that these provinces would like to withdraw from Confederation; we are in, and perhaps it is best for us to stay in, but up to the present time it has been a losing game. We have had no opportunity of selling our produce to the rest of Canada; we have had to find a market for our produce, with the exception of coal, and, perhaps, potatoes, wherever we could. On account of transportation and tariff conditions, we have been compelled to buy our machinery, flour, clothing and, to a considerable extent, our manufactured articles, from the provinces of Ontario and Quebec. It has been a long, hard and up-hill fight. If the Maritime provinces have not increased in population as rapidly as the other provinces of Canada have, it is because of the economic conditions against which we have been fighting. We have paid our proportion of the $100,000,000 which has gone into the construction of canals, and we are getting not a dollar in return for it. We are paying our share of all the millions of dollars that have gone into great public works—millions of dollars in the harbour of Montreal, millions in the harbour of Quebec, millions in Toronto, millions in Vancouver, millions in Victoria, millions all through this country.

Mr. STEVENS: Millions in Halifax, millions in St. John.

Mr. CARVELL: Very few. We are coming to our own at the present time, but we started only four or five years ago to do it—no thanks to this Government. We have paid our shares, and we have paid it willingly. Any man from the Maritime provinces who will vote to sustain this report is a traitor to this country and has not the best interests of his province at heart. I will watch this vote with interest. I want to see what attitude my hon. friend the Minister of Marine and Fisheries will take on this question; I want to see what attitude every other member from the Maritime provinces will take in the matter. It is said that we should pay our share of the $150,000,000 for building a railway from Winnipeg to Quebec, though the Maritime provinces have no rights of extension in the eastern provinces, no right to obtain the benefit of cheap transportation from west to east or to build up their ports. Do my hon. friends tell me it is reasonable to expect the Maritime provinces to accept a situation like that? Are my friends the Prime Minister and the Minister of Marine and Fisheries going to vote for a proposition of that kind? If for no other reason than the nature of the conclusion of this report, I would feel that every man from the Maritime provinces, no matter on which side of Mr. Speaker he sits, is in honour bound to condemn this report not only by his word but by his vote and by every means in his power. It should be condemned if for no other reason than because of the gratuitous insult it offers to the people of the Maritime provinces in its concluding words. In the first place the matter to which it refers is a question of policy which was settled by the people of this country in two elections: it does not concern these commissioners at all. The report offers a gratuitous insult which I do not believe the Prime Minister knew was in the document or he would not have allowed it to be circulated in its present form. It is there, however, and the Prime Minister must take the responsibility.

Mr. SINCLAIR: The acting Minister of Railways approved the report.

Mr. CARVELL: I was not here and I did not hear his remarks. I must confess that I had a better opinion of him.

I think I may be pardoned if for a few moments I refer to a matter connected with the Grand Trunk Pacific railway which is not dealt with in this report. In the province of New Brunswick the people were led to believe that the city of St. John would be one of the terminals of the road. The late Government when in power had made arrangements to build the road of which I have been speaking, the Valley railway, which was to be the connection between the Grand Trunk Pacific railway and the city of St. John. My hon. friends the enemy have possession of things down there now; they are building a tramway, which I have described, which does not go within 25 miles of the Grand Trunk Pacific railway. It does not go to St. John, and they never intend that it shall go there.

It starts from the Canadian Pacific railway at Andover, and it is going to end on the Canadian Pacific railway at Westfield, at least that is my prophecy, and it will only be a matter of a week or so now until we see if my prophecy is correct. Years have gone by, and not a finger has been lifted to give St. John access to this great work. We are paying our share and getting no benefit, and as far as I can see years more will go by and we will not have any chance of participating in the benefits I wish that the Minister of Marine and Fisheries (Mr. Hazen) were here to-night. I hope that before the debate concludes he will take the people of New Brunswick into his confidence and tell them what he is doing and what he hopes to do in order to give his own city connection with this work, and put the people of that city in a position to receive their portion of the benefits which they have fondly hoped they would receive from the expenditure of millions on this great project. He is not here; I am afraid he will be as mum on this question as he was during the debate in this House on the famous Gutelius agreement by which our rightful freight business is carried by Mr. Gutelius, for one-half what it actually costs to transport it, away to Halifax. The hon. minister was very anxious to have a chance to talk about it, so anxious that he got the Minister of Public Works to adjourn the debate in order that he might discuss it later on. The resolution went to the bone pile and is there yet, it has never been called up and never will be. The minister has not had an opportunity to discuss it, he never will, and I am afraid he will be quite as silent in this debate as he has been on all other matters referring to his own city, his own constituency, and our great commercial port. These things are not in the report, but they are of great importance to all the electors of New Brunswick, and of more special importance to the electors of the Minister of Marine and Fisheries than all of us put together.

I have discussed this report at greater length than I intended. It is a rather fascinating subject; a man might speak for three or four hours to-day and go on for three or four hours more to-morrow because, Sir, it is, in my judgment, so unfair, so full of unfair statements, so unfair to the Liberal party, so unfair to the former commissioners, so unfair to Canada as a whole, that a man hardly has parliamentary language in which to describe his real feelings, not only towards the report but towards the men who are responsible for it—and when I use that expression I do not mean simply the two tools, Gutelius and Staunton, but I mean the whole Government that stands behind it. I hope that before the debate concludes the acting Minister of Railways will be convinced, as he must in fact now be convinced, that it is a partisan report, founded upon false premises, founded upon lack of evidence, a report not justified by the evidence, a report not in the interests of the country, and that he will see that the Government will either accept the amendment of the hon. member for South Renfrew or formally state in the House that they do not father the report, do not stand by it—because we know by their conduct that they are not standing by it—and that they will by their words say to the people of Canada, as they have been doing for months by their actions in allowing moneys which these men say should not be allowed and doing a hundred things which these men condemn, that they do not endorse the report. I have tried to present this matter exactly as I feel about it, not only from the standpoint of my native province but of Canada as a whole. As the hon. member for South Renfrew said, this is not a question involving New Brunswick or Nova Scotia, but a question involving the good name, the honesty, the business reputation and the financial standing of the whole of Canada. That report is one which I believe has done more to injure our fair name in the markets of the world than anything that has happened in our lifetime and is something which I hope never will be repeated. I certainly hope it will never be repeated merely for party purposes, for that has been the whole object and aim of this nefarious report.

On motion of Mr. Stanfield the debate was adjourned.

On motion of Mr. Reid the House adjourned at 12.30 a.m. Thursday.

Thursday, March 26, 1914.

The House met at Three o'clock, the Speaker in the Chair.

QUESTIONS.

(Questions answered orally are indicated by an asterisk.)

NEW BRUNSWICK DREDGING.

Mr. CARVELL:

1. What persons, firms or corporations are engaged dredging for the Government in the bays, harbours and rivers along the coast of New Brunswick, except the harbour of St. John and the St. John river and its tributaries?
2. What amounts have each of these persons, firms or corporations been paid since October 1, 1911?
3. Who is the president, secretary and manager of each corporation?
4. Where has the dredging been done, and who have acted as inspectors for the Government?

Mr. ROGERS:

1. W. E. Forbes; Maritime Dredging and Construction Company, Limited; Eastern Dredging Company, Limited; W. J. Poupore Company, Limited; A. and R. Loggie; Peter England; J. S. Gregory; Northern Dredging and Construction Company, Limited; Felix Michaud; General Construction and Dredging Company, Limited; M. J. Poirier; F. A. Fowlie.

2. Maritime Dredging and Construction Company, Limited, $64,339.12; W. J. Poupore Company, Limited, $63,807.55; General Construction and Dredging Company, Limited, $28,347.28; Eastern Dredging Company, Limited, $10,792.24; A. and R. Loggie, $791.25; Peter England, $19,150.51; J. S. Gregory, $35,361.05; Northern Dredging and Construction Company, Limited, $180,112.03; M. J. Poirier, $1,707.20; F. A. Fowlie, $11,214.88; Felix Michaud, $5,144.91; W. E. Forbes, $2,195.94—total, $422,963.96.

3. Contracts are signed for Maritime Dredging Company, Limited, by Manning William Doherty, manager; Eastern Dredging Company, Limited, by Robert Loggie, president, F. P. Loggie, secretary-treasurer; the W. J. Poupore Company, Limited, by W. J. Poupore, president; A. and R. Loggie, by Andrew and Robert Loggie; Northern Dredging and Construction Company, Limited, by R. O'Leary, president; General Construction and Dredging Company, Limited, by W. A. Warren, president. No information as to names of other officers.

4. Localities and inspectors: St. Stephen, V. V. Vanstone, Walter J. Commins; Richibucto, John Curwin, Peter L. Richard, W. F. McKinnon, James Long; Shediac, Thomas Gorman, Eustace Legere; Miramichi Bay, R. Ahearn, Edward Kirby; Loggieville, D. McIntyre, R. Ahearn, F. J. Legere, G. McEwen, Robert England, Charles Stephenson; Caraquet, F. G. Legere, Charles J. Poirier; Campbellton, C. J. Robins, W. A. Murray, James Hamilton; Buctouche Beach, John S. Mullin, Zaddus Desroches; Dipper Harbour, Charles W. Masson, William Harkins; Chatham, D. McIntyre, Peter R. Moor, Frank D. Gunn; Little Aldouane, Pierre Babin; Newcastle, D. McIntyre, Frank Masson; Dalhousie, H. J. Hubert, James Hamilton, George H. Seeley; Shippegan Gully, John de la Garde; Bathurst, James McGinley, E. J. Palmer, Charles Landry, Percy Wilbur, Stuart Hodgins, M. T. Daley; St. George, Herbert Harvey, James Jack, H. V. Connell, James Waugh; Little Black River, A. MacLean, Hugh MacKay, Robert Macdonald; St. Andrews, S. E. Field, James Waugh; N. W. Miramichi River, John Wilson; Grande Dune Flats, F. D. Gunn, D. McIntyre; St. Louis River, David Babineau; Lawlors Shore, David Powers; Douglastown, F. D. Gunn, D. McIntyre; Nelson, F. D. Gunn; Bridgetown, D. McIntyre.

COAL FOR DREDGES.

Mr. OLIVER:

1. What amount of coal was used on the Government dredges working in Victoria harbour during the nine months from March 31, to December 31, 1913?
2. What was the price paid per ton?
3. What part of the total tonnage came from mines in the United States?

Mr. ROGERS:

1. 3,351 tons.
2. $5.50 to $7.50; average about $6.50.
3. About 1,500 tons.

STE. ANNE WHARF.

Mr. E. LAPOINTE:

1. To whom was the sum of $747.90 paid for the extension of the wharf at Ste. Anne de le Pocatière, as mentioned in the public accounts ending on the 31st March, 1913?
2. For what works or material was said sum of money paid, and when was it paid?

Mr. ROGERS:

1 and 2. Paylist: From 28th June to 16th August, 1912: Amable Bérubé, conductor, 30 days at $2.50, $75; Leon Pelletier, carpenter, 22 days at $1.75, $38.50; Joseph Bérubé, carpenter, 22 days at $1.75; $38.50; Alphonse Benoit, labourer, 17 days at $1.40, $23.80; Louis Emile Bérubé, labourer, 18 days at $1.40, $25.20; Eleuthère Pelletier, labourer, 1 day at $1.40, $1.40; Charles Verrette, carter, 11 days at $2.25, $24.75; Adrien Bérubé, carter, 5 days at $2.25, $11.25; total, $238.40.

Accounts: Ones. Carbonneau, lumber, $232.01; Alexis Michaud, lumber, $29.40; Charles Verret, lumber, 70c.; Charles Bérubé, hardware, $3; Joseph Bérubé, hardware, $1; Amable Bérubé, petty disbursements, $14.45; L'Union Agricole-Hardware, $15.64; N. Lizotte, hardware, $36.24, $21.61; total, $354.05. King's Printer, $155.45. Grand total,, $747.90.

Paylist paid by paymaster 5th September, 1912. Accounts paid by departmental cheque dated 18th September, 1912.

ENGINEERS AT RIMOUSKI.

*Mr. GAUVREAU:

1. What are the names of the engineers, assistant engineers, apprentices, or of any other employee of the office of the engineers at Rimouski?
2. What is the salary of each of them?
3. What have been the total expenses of that office since 1911?

Mr. ROGERS:

1 and 2. J. C. Taché, district engineer, $2,650; L. G. Trudeau, jr., assistant engineer, $1,200; J. L. Fyfe, clerk, $1,200; Maurice Leblanc, general foreman, $1,200; Mr. A. Lavoie, general foreman for Rimouski county, $1,200; J. E. Letendre, jr., assistant engineer, $1,080; Jerome Legaré, draughtsman, $1,000.

3. Office expenses, other than salaries as above: 1911-12, $714.17; 1912-13, $1,799.47; total, $2,513.64.

RIMOUSKI HARBOUR.

*Mr. GAUVREAU:

1. Is it the intention of the Government to have certain work done in the harbour of Rimouski?
2. If so, were tenders asked for?
3. Who are the tenderers and what is the amount of each tender?

Mr. ROGERS:

1. Matter under consideration.
2. Yes.
3. Paul Raymond, Joseph A. Talbot, as per unit prices, scow measurement, $334,-250; O'Brien & Doheny, $497,801.80. As per unit prices, place measurement, Paul Raymond, Joseph A. Talbot, $355,445.50; O'Brien & Doheny, $501,023.40.

MONTREAL POSTAL STATION.

*Mr. LEMIEUX:

1. Is the Government negotiating to purchase the property known as the Carslake Hotel, near Bonaventure station, Montreal?
2. Who are the owners of said hotel?
3. For what purpose does the Government contemplate purchasing above property?

Mr. ROGERS:

1. Yes.
2. The Carslake Hotel Company, Limited.
3. For a postal station.

*Mr. LEMIEUX:

1. Who are the valuators said to have been appointed by the Government for the proposed expropriation of the property known as the Carlslake Hotel, Montreal?
2. When were the expropriation proceedings begun?
3. What is the amount claimed by the proprietor of said hotel?

Mr. ROGERS:

1. A. F. C. Ross, J. Stevenson Brown, J. Craddock Simpson.
2. On 2nd inst., the Department of Justice was instructed to expropriate.
3. Approximately $407,880.

OTTAWA CUSTOMS BUILDINGS.

*Mr. CARVELL:

1. Did the Dominion Government enter into a contract with the Foundation Company, Limited, on or about 20th August, 1913, for the completion of the foundations of the new Customs building on Sussex street, Ottawa?
2. When did said company begin above mentioned works?
3. Is the Foundation Company still working on the foundations of above mentioned Customs house?
4. Who owns and operates the machinery, plant, derricks, hoisting engines, boilers, pumps, tools, concrete mixers, etc., used by said company on above mentioned works?
5. Did the Government, or any of the departments, at any time since above work was commenced, rent or lend to the Foundation Company any machinery, plant, derricks, hoisting engines, boilers, pumps, concrete mixers, tools or materials owned by the Government? If so, what department, when and for what rental or on what terms?
6. Has the Foundation Company been using and operating its own machinery plant, derricks, hoisting engines, boilers, pumps, concrete mixers or tools on above work? If so, on what terms, or what sums has it received or is to receive from the Government for above machinery or plant, etc.?
7. Who employed the men for above mentioned work, the Foundation Company or the Government?

Mr. ROGERS:

1. Yes.
2. July 26, 1913.
3. Yes.

4. Some owned by the Government, some by the Foundation Company and some is rented.

5. Yes, the Department of Public Works, according to the agreement all plant then on the work was to be used by the company.

6. A few special machines were supplied by the company for which a charge of three per cent per month was paid.

7. All employed by the Foundation Company.

HOUSE OF COMMONS ROOMS.

Mr. ALFRED THOMPSON:

1. How many rooms in the House of Commons are set aside for members?

2. How many members are allotted to each room?

Mr. BORDEN:

1. Sixty-seven rooms are set aside for the use of ministers and members of the House of Commons.

2. The number of occupants of each room varies from one to twelve according to the size of the room, as follows:

Room No. 12, 2 members.
" " 15, 6 "
" " 16, Conservatives, general.
" " 17, 1 member.
" " 18, Liberals, general.
" " 108, 3 members.
" " 109, 4 "
" " 110, 4 "
" " 113, 12 "
" " 115, 5 "
" " 125, 2 "
" " 126, 8 "
" " 127, 4 "
" " 128, 2 "
" " 130, 2 "
" " 131, 4 "
" " 132, 4 "
" " 136, 3 "
" " 137, 6 "
" " 138, 7 "
" " 200, 6 "
" " 201, 2 "
" " 202, 4 "
" " 203, 5 "
" " 204, 3 "
" " 205, 4 "
" " 206, 2 "
" " 207, 3 "
" " 208, 4 "
" " 209, 3 "
" " 212, 8 "
" " 213, 8 "
" " 214, 2 "
" " 215, 3 "
" " 300, 8 "
" " 303, 6 "
" " 304, 2 "
" " 305, 2 "
" " 306, 5 "
" " 307, 2 "
" " 308, 4 "
" " 309, 5 "
" " 310, 6 "
" " 313, 6 "
" " 316, 5 "

[Mr. Rogers.]

FENIAN RAID APPLICATIONS.

Mr. WILLIAM CHISHOLM:

1. Referring to an advertisement in the Casket newspaper, published at Antigonish, N.S., which reads as follows:

'Ottawa, March 16, 1914.

'To my constituents:

'The Government have decided to extend the time for Fenian raid applications to December 31, 1915. Provisions will also be enacted to enable heirs and widows of those living at the time the Act was passed to draw the amount. I shall be very glad to furnish further information to any one who cares to write me about the matter.

'E. Lavin Girroir.'

2. Is it the intention of the Government to enact such provisions as are above set forth?

3. In what proportion will the widows and the heirs share in the bounty?

4. Will all the heirs of a deceased volunteer, who, if living, would be entitled to the bounty, and who left no widow surviving him, share alike in the bounty?

5. Has the Government, or the Department of Militia, authorized Senator Girroir to make the above statement?

6. Who are the constituents of Senator Girroir, and what constituency does he represent?

Mr. SAM. HUGHES:

1 and 2. These provisions are already in the Bill, and it is the intention of the Government to propose such provisions as are set out in the proposed resolution, notice of which was given to the House on March 13, 1914.

3 and 4. Answered by No. 2.

5. The Government or Department of Militia and Defence has published the resolution upon the Bill, and it is open to every intelligent person to read and understand the language therein.

6. Question is improper.

CANSO REDUCTION WORKS.

Mr. SINCLAIR:

1. With reference to the reply given by the Minister of Marine and Fisheries on March 16, instant, to question No. 3, relating to the Canso Reduction Works, what are the names of the farmers who purchased the said fish scrap in 1913 and the number of tons purchased by each?

2. On what date was the said fish scrap sold to A. H. Whitman?

Mr. HAZEN:

1. James Stevenson, Woodburn, N.S., 1¾ tons; James McConnelly and Sons, Port Hilford, 1 ton; A. W. Reid, Port Hilford, ½ ton; Jesse A. Wright, North Bedeque, P.E.I., 1 ton; Lewis D. McDonald, Port Hood, ½ ton; John D. Chisholm, Malignant Cove, N.S., ¼ ton; Joseph M. Grant, Antigonish, ¾ ton; E. E. Olding, Woodburn, New Glasgow, 5 tons; Alex. Sinclair, Country Harbour, N.S., ½ ton; A. G. Archibald,

Country Harbour, N.S., ½ ton; Frank McLean, Port Hilford, 1,400 lbs.; James W. McIntosh, Country Harbour, ½ ton; A. W. Reid, Port Hilford, ½ ton; J. F. Leblanc, Margaree Ford, 700 lbs.; J. O'Leary, Lochaber, Antigonish Co., ½ ton; J. W. McDougall, New Glasgow, 5 tons; Cadegan Bros., Bridgeport, C.B., 1½ tons; John Newson, Charlottetown, P.E.I., 1 ton; C. P. Roy, Woodburn, N.S., ½ ton; Michael Gillis, Dunvegan, C.B., 2,200 lbs.; H. E. Stewart, Melrose, N.S., 1,400 lbs.; Ronald McDonald, James River Station, ½ ton; James W. Sutherland, West Merigomish, ½ ton; W. H. Woodworth, Berwick, N.S., 1 ton; James McConnell and Sons, Port Hilford, ½ ton; A. W. Reid, Port Hilford, ½ ton; Hugh McPherson, Antigonish, ½ ton; P. G. Grant, New Glasgow, 700 lbs.; John E. Hudson, Isaacs Harbour, 1½ tons; Thos. C. Hart, Leitches Creek, 1,300 lbs.; Burton Hadley, Guysborough, 300 lbs.; Alex. Harton, Canso, 600 lbs.; James Sullivan, Canso, 200 lbs.; A. Cameron, Canso, ¼ ton;John Bollus, Guysborough, 200 lbs.; E. S. Camo, Arichat, ¼ ton; Parker Hart, Guysborough, 300 lbs.; Wm. Kavanagh, Canso, 1 ton; Mr. Teiror, Arichat, ½ ton; Fred. Johnson, Canso, ¼ ton; Godfrey Leblanc, Arichat, ¼ ton; James Stevenson, Woodburn, 1,400 lbs.; Father Robitaille, River Bourgeois, C.B., 1 ton; R. McRae, West Bay, C.B., ½ ton.

FRENCH RIVER IMPROVEMENTS.

*Mr. MURPHY:

1. Was a contract awarded in the year 1913 for the construction of a dam or other improvements on the French river in the district of Nipissing?

2. What was the date and amount of the said contract and the name of the contractor?

3. What was the amount of the deposit put up by the contractor?

4. Has the said contract been abandoned or cancelled? If so, has the deposit been forfeited?

5. Will a new contract be let for the work? If so, when will tenders be invited?

Mr. ROGERS:

1. Contract awarded on 14th January, 1914.

2. Dated 26th December, 1913, for $23,124.40, based on unit prices from Jennings and Ross, Limited.

3. $2,312.40.

4 and 5. No.

MILITIA AUTOMOBILES.

Mr. PROULX:

1. How many automobiles have been purchased by or for the Militia Department since October 15, 1911?

2. Were the said automobiles purchased after tenders were invited, and what was the price paid for each?

3. What amount has been paid for repairs, furnishings, storage and the upkeep of the said automobiles from October 15, 1911, to date?

Mr. HUGHES:

1, 2 and 3, answered last session and this. (See unrevised 'Hansard' February 29, 1912, p. 4118, and unrevised 'Hansard,' February 16, 1914, p. 850.)

COLLINGWOOD ORANGE LODGES.

Mr. C. A. WILSON:

1. Has the Government, or any member thereof, received the communication referred to in the following announcement, published in the the Sentinel of March 19, 1914?

Collingwood Lodges Protest Against French in Schools and on Post Cards and Government Stationery—Express Dissatisfaction with Local Representatives.

The brethren of L.O.L. Victoria No. 934, and Golden Lion No. 1990, Collingwood, at their regular meetings held on the 9th and 11th March, 1914, adopted the following resolution, and instructed their secretaries to forward same to the Orange Sentinel, to the Hon. R. L. Borden, Ottawa, and to the acting Premier, the Hon. J. J. Foy, Toronto, also to their representatives, Col. J. A. Currie, Ottawa, and Hon. Jas. Duff, Toronto:

Moved by Brother Wm. Elliot, P.M. L.O.L. 1990, seconded by Brother Peter McMillan, W.M. L.O.L. 943, and resolved:

That we, the members and officers of Victoria Lodge No. 943, and Golden Lion No. 1990, assembled at our regular meetings, take this opportunity of condemning in the strongest terms the action of the federal Government in permitting the issuance of the bilingual post cards, and the use of the French language upon the official stationery of the departments, and consider this departure an insult to the other nationalities, such as Germans, Highland Scotch and others, inasmuch as the English is the language of this country.

We also demand the immediate abolition of bilingual schools, as English must be the only language taught in our public schools, if we desire to grow up as a united body of citizens. And we do not uphold the attitude of our representatives in both Parliaments, as so far we have not noticed that they have taken any part, or raised their voices in opposing any of those encroachments, which is bound to be detrimental to the unity of this country.

2. If so, what was the answer, or what were the answers given?

Mr. BORDEN: A copy of the communication was received this morning. No answer has yet been sent.

UNOPPOSED AND UNDISCUSSED MOTION.

Mr. Sevigny.—For a return showing what amounts have been paid by the Government of Canada from Winnipeg to Moncton for damages to lands, fences, roads, rivers, buildings, etc., during the works going on, and after they were completed by the contractors of the Transcontinental, in connection with the build-

ing of the railway; whether the contractors were charged by the Government of Canada for the amount thus paid, as per clause 24 of the contracts.

A MILITIA POSTER.

Mr. EMMERSON: I wish to direct the attention of the Minister of Militia and Defence to a question I asked at a former sitting. He will recall that I mentioned that a poster had been put up through the county of Westmorland, presumably on behalf of the Department of Militia and Defence, and signed, 'Captain L. G. Carey, 74th Regiment,' in which poster is recited the following:

> The undersigned has been requested by the Militia Department to submit the names of all men who, in the event of a general mobilization, would be willing to enlist in 'E' Company, 74th Regiment, also all retired officers, ex-militiamen and civilians who would be willing to accept employment with the Army Service Corps, Army Medical Corps, Ordnance Corps, Army Veterinary Corps, or Army Pay Corps.
>
> By sending or handing in your name you will not be enlisting, but merely showing your willingness to serve your country in the event of war.

The minister promised, on that occasion, to furnish to the House information as to the request that was made of the officer in question by the Militia Department. I simply want to know what the nature of that request was, what it included and what it contemplated.

Mr. SAM. HUGHES: I am delighted to see my hon. friend so interested in this matter. I presume he would join the Army Service Corps as that is where the rations are kept. In conformity with the custom of previous years the divisional officers send out mobilization plans each year. That has been done from time immemorial. The paragraphs in the Canadian mobilization regulations bearing upon this matter are:

> (13) Divisional and district commanders are responsible for arrangements connected with mobilization, and they are required to make themselves thoroughly acquainted with the resources of their several commands in regard to men, horses, supplies, stores and means of transport.
>
> (14) They will not be required to adopt a uniform system; their arrangements must accord, and vary, with local conditions; and within reasonable limits they will decentralize authority and delegate responsibility to subordinate commanders.
>
> (17) To co-ordinate arrangements a mobilization committee has been established at militia headquarters, and, with a similar object, a committee will be formed at the headquarters of each division and district. Staffs (general and adminstrative) and each service and department will be represented thereon, and the divisional or district commander will himself preside.

The divisional officer at Halifax who is, I understand, an enthusiastic and very capable officer, in order to save himself the trouble of calling on all the people in the county to ascertain their views, took the way that my hon. friend takes in his county, and, let the broad light of heaven in on his plan. I expect my hon. friend will be the first man to send in his name as being ready to serve his country in case of necessity.

Mr. EMMERSON: What about the member for Brockville (Mr. Webster)?

Mr. HUGHES: I did not disable him completely.

Mr. GRAHAM: What about you?

Mr. HUGHES: I took just two out of him and he took one out of me.

Mr. EMMERSON: You are evidently interested in the ambulance corps.

Mr. HUGHES: The order sent by the divisional officer contains this paragraph:

> It may be noted that it is understood that the returns herein called for are to be prepared and submitted without expense to the public.

The mobilizations are all here; I will lay them on the table.

ALLEGED CABLEGRAM TO SIR EDWARD CARSON.

Mr. PROULX: I would like to ask the hon. member for Centre York (Mr. Wallace) a question. He is reported in The Citizen of this morning to have sent a cablegram yesterday afternoon to Sir Edward Carson. The Citizen states:

> Captain Tom Wallace, member for Centre York, sent the following cablegram—

Mr. SPEAKER: Order. The privilege in regard to the asking of questions of members, other than members of the Government, is governed by the following rule:

> Questions may be put to ministers of the Crown relating to public affairs; and to other members, relating to any Bill, motion, or other public matter connected with the business of the House in which such members may be concerned.

And after giving the usual notice. The matter to which the hon. gentleman refers would not, in my judgment, come within the rule because it has nothing to do with any business of this House with which the member is concerned.

Sir WILFRID LAURIER: But my hon. friend (Mr. Proulx) has not stated it yet.

Mr. PROULX: With your permission, Mr. Speaker, I wish to ask the hon. Minister of Militia (Mr. Hughes) if he ever gave permission to the hon. member for Centre York to send this cablegram. Here is the cablegram.

Some hon. MEMBERS: Order, order.

Mr. PROULX: I want to read the cablegram.

Mr. SPEAKER: No, the hon. member cannot do so, because he is doing it in violation of a rule of the House, which is intended for a very good purpose.

Mr. PROULX: I beg to remark, Mr. Speaker—

Some hon. MEMBERS: Order, order.

Mr. SPEAKER: Order.

Sir WILFRID LAURIER: Do you rule, Mr. Speaker, that a member cannot state his question and that it is out of order before he has had an opportunity of stating it? How do you know?

Mr. SPEAKER: Having heard the hon. member say that he desired to ask a question of the hon. member for Centre York regarding a cablegram which was sent by him in regard to something with which this House is not concerned, I ruled that it was out of order for him to ask any such question.

Sir WILFRID LAURIER: May I ask how you know that the House is not concerned in any such cablegram as that?

Mr. SPEAKER: The rule says plainly that it must be some 'public matter connected with the business of the House in which such member may be concerned.' Then he has to give the regular notice, neither of which conditions has been complied with.

Mr. PROULX: I will put it in this way: The hon. member for Centre York is an officer of the militia—he is a captain—and I want to ask the hon. Minister of Militia if he has taken cognizance of the cablegram which was sent by Captain Wallace to Sir Edward Carson.

Mr. BORDEN: Might I suggest that if the hon. member has any question to put to the Minister of Militia he take the ordinary course and put it on the Order Paper so that it may be answered in the regular way?

Mr. PROULX: This matter is very urgent.

Mr. SPEAKER: Order. I was about to say, in view of the version which the hon. member has given of it, that it would be a proper question if he desired to put it on the Order Paper in the usual way.

PRIVILEGE.

Mr. SAM. HUGHES: Mr. Speaker, I find in the Montreal Star of yesterday, and in other daily papers—

Sir WILFRID LAURIER: Does this concern this House?

Mr. HUGHES: I shall rise to a question of privilege. I find in the Montreal Star that my old friend, Mr. Hamar Greenwood, in the House of Commons in England, made a statement to the effect that he deplored something with all his heart, and then went on to say that:

> The feeling in the Dominions was that the British officers were drawn from a class antagonistic to democratic ideals. It was a great wrench to him as an imperialist when quite recently the Minister of Militia in Canada had appointed a new Commander-in-Chief, and he did not consult the War Office. The Canadian army for the first time now had not got a single imperial officer serving under the Canadian flag.

I wish to state that I have not appointed a new commander-in-chief; there is no such office in existence. I did appoint a chief staff officer and I consulted Sir John French and Colonel Seeley before I appointed him—not that I had to do it at all, but I did it out of courtesy. We have upwards of seventy of the best British officers to be obtained in the empire in our Canadian permanent service, some on loan, some on exchange and others for instructional purposes. We have also a great many British non-commissioned officers in the service and I hope it will be a long day to come when we will be without the services of these gentlemen.

While I am on my feet, I should like to refer to an incident that occurred in this House the other evening. A few nights ago, on a matter altogether irrelevant to the business of the House, a member put a question founded on one of their 'slanderbund' cablegrams, or emanating from the 'boozarium'—I do not know which—

Some hon. MEMBERS: Order, order.

An hon. MEMBER: It was published in the Montreal Star.

Mr. HUGHES: The Montreal Star, I presume, repeated the cablegram coming from the slanderbund.

Mr. PARDEE: Mr. Speaker, I rise to a question of privilege.

Mr. HUGHES: I am not through with my question of privilege yet.

Mr. PARDEE: Then, I rise to a point of order. The Minister of Militia and Defence has just been referring to a matter that was brought to the notice of the House the other night which he says came from the 'slanderbund' or the 'boozarium.'

Mr. HUGHES: I do not know what the correct name is.

Mr. PARDEE: I beg the minister's pardon.

Mr. HUGHES: I do not know what the correct title of the institution is.

Mr. PARDEE: You do not? Well, if you do not you ought to. It shows your utter ignorance when you make a statement of that kind in the House.

Mr. SPEAKER: Order. What is the question of order?

Mr. PARDEE: The hon. Minister of Militia and Defence refers to the fact that this cablegram was read the other night. I read the cablegram and I have nothing to take back. The minister knows, when he makes the statement that it came from the 'slanderbund' or the 'boozarium,' that he makes a statement that is absolutely outside of the facts and one that he knows is false. I demand—

Some hon. MEMBERS: Order, order.

Mr. PARDEE: No, I demand—

Mr. SPEAKER: Order.

Mr. PARDEE: I demand the withdrawal of that statement.

Mr. SPEAKER: Order.

Some hon. MEMBERS: Withdraw, withdraw.

Mr. SPEAKER: Order.

Some hon. MEMBERS: Take it back.

Mr. SPEAKER: Order; I am sure that the hon. member (Mr. Pardee), being an old parliamentarian, must know very well that it is not permissible for an hon. member to say that another hon. member has made a statement which he knew to be false.

Sir WILFRID LAURIER: The insinuation made by the hon. Minister of Militia and Defence had reference to my hon. friend (Mr. Pardee). The minister was referring to the cablegram that was brought to the attention of the House by my hon. friend and you, Mr. Speaker, heard the minister say that it was from the 'boozarium.' Was that in order?

Mr. SPEAKER: Had any member risen to a point of order and asked me to rule on it, I should have said that it was not in order, but since it was not challenged I passed it over. I think that the hon. member for West Lambton, who is an old parliamentarian, will understand the desire to maintain the rules of the House.

Mr. PARDEE: I quite understand the desirability of keeping within the rules of the House as far as possible, but I rose to a point of order the moment that the hon. Minister of Militia uttered those words, and I demand a withdrawal of them.

Mr. SPEAKER: I did not see the hon. member rise to a point of order at that particular moment. Had I seen him I would certainly have given him the right to explain his point of order. In my judgment, the word used was not a suitable expression, and I think it ought to be withdrawn.

Mr. SAM HUGHES: Mr. Speaker, if you will state the word which I have uttered and which you consider unparliamentary, I will gladly withdraw it.

Mr. SPEAKER: The word was 'boozarium.'

Mr. HUGHES: I withdraw the word 'boozarium.'

Mr. GAUVREAU: Do it like a man.

Mr. HUGHES: I want to point out the fact that these gentlemen dilated at very great length the other evening, violating the rule of Parliament that newspaper clippings should be verified before being allowed to be used in this House. No attempt was made to verify their truth, either directly or indirectly. I have been a cabinet minister for the last two and a half years, and I challenge any hon. gentleman opposite to point out any instance in which I have not rigidly adhered to the rule not to express views on matters not pertinent to this House.

Mr. GERMAN: I rise to a point of order. I submit that this is not a question of privilege

Mr. SPEAKER: In speaking to a question of privilege, an hon. member should confine himself to the question of privilege and not debate it.

Mr. HUGHES: I am not debating the question of privilege, I am pointing out that these gentlemen, taking my record and the common sense view of the case—

Some hon. MEMBERS: Order.

Mr. HUGHES: I am in order.

Some hon. MEMBERS: You are not.

Mr. HUGHES: I know that it is a little hard for the ex-First Minister to—

Some hon. MEMBERS: Order.

Mr. HUGHES: During the two and a half years that I have been a cabinet minister, I have never once violated the rules of the House. I have neither directly nor indirectly sent a cable that had anything to do with the affairs of the Ulstermen, or in relation to any one leaving Canada for Ireland. If any men were leaving Canada for Ireland, they would not see the hedge fence artists that are discussing this question, going—

Some hon. MEMBERS: Order.

FENIAN RAID BOUNTIES.

On the Orders of the Day being called:

Mr. J. J. HUGHES: I wish to ask the Minister of Militia and Defence if he will tell me why the province of Prince Edward Island has been left out of the resolution re Fenian bounties, which he intends to submit to the Committee of the Whole to-morrow.

Mr. SAM. HUGHES: I answered that question long ago. There were no volunteers ordered out in Prince Edward Island either in 1866 or in 1870. My hon. friend received the official answer long ago.

QUESTION OF PRIVILEGE.

Mr. WILLIAM CHISHOLM: I rise on a question of privilege to say that the hon. Minister of Militia has not answered certain questions. I refer to question No. 24 on the Order Paper. The 6th question he has considered to be improper. Perhaps it is, I do not dispute that. The 5th question, however, is a straight question and is as follows:

> Has the Government, or the Department of Militia, authorized Girroir to make the above statements?

Referring to the advertisement contained in the first part of the question. The answer prepared by the department was:

> The Government, or the Department of Militia, has not requested any one to make any such statements.

Somebody has changed that answer and now it reads:

> The Government, or the Department of Militia and Defence, has published the resolution upon the Bill and it is open to every intelligent person to read and understand the language therein.

Some very intelligent person prepared that answer. I submit that that very intelligent person is not treating the members of this House with proper courtesy in giving such an answer.

THE NATIONAL TRANSCONTINENTAL RAILWAY.

Consideration of the proposed motion of Hon. W. T. White (Minister of Finance) for Committee of Supply, and the proposed amendment of Mr. Graham thereto, resumed from March 25.

Hon. ARTHUR MEIGHEN (Solicitor General): Mr. Speaker, it is a matter of regret to me that I was not able to stay in the House during the address of the hon. member for Carleton (Mr. Carvell). It was my privilege to hear the very vigorous speech of the hon. ex-Minister of Railways (Mr. Graham); and from the report I get of the effort of the hon. member for Carleton, he followed closely the manner, if not the matter, of his predecessor. The hon. member for South Renfrew (Mr. Graham) was in a form not unusual to him in this House. I have heard the hon. gentleman on previous occasions exhibit much the same animation, much the same indignation, much the same panic dealing rhetoric as he displayed in his address on his amendment. The last time we heard the hon. gentleman in that vein was last session, when, in a most impassioned speech he pictured the calamity that was to befall the House of Commons when the closure resolution he so much dreaded should go into operation. He announced that he was making his last speech in a free Parliament, and that thereafter the liberties of this House were to be demolished and his privileges were to go with them. If the very vigorous, very vehement, and very violent address over seven and a half hours with which he favoured us in three or four laps, has served any useful purpose, it has

at least demonstrated the folly of his great denunciation. The hon. member, having been Minister of Railways during the time when the matters dealt with in the Gutelius-Staunton report were going on, might naturally be expected to agitate himself very seriously in an endeavour to get from under, so far as he could, the consequences of that report. I have some admiration for the manner in which he addressed himself to that task. The importance of it was worthy of his effort, and his style of delivery, I must say, was impressive. And, though he has not convinced me that the responsibility of his misconduct while in charge of that department, is not serious for him and serious for Canada, and though he has not convinced me that there is any substantial error in the Gutelius-Staunton report, he has succeeded in convincing me that, in some small respects, he really believes there is.

The hon. gentleman was, first, very much agitated because there was a commission at all. He thinks the Government is to be severely condemned because they appointed Mr. Lynch-Staunton and Mr. Gutelius to investigate the Transcontinental. He inveighs against Mr. Lynch-Staunton; he reproduces the brief of the Liberal press of this country whose objections to Mr. Lynch-Staunton are, first, that he is a Conservative, and, second, that he spells his name with a hyphen; but the hon. member stops at the first objection, and so his only point against Mr. Lynch-Staunton is that he is a Conservative in politics. 'A very prejudiced commissioner' says the hon. gentleman, 'utterly incapable of coming to a just conclusion'—yes, indeed, a very unfair and a very prejudiced commissioner in the mind of the hon. gentleman—because he is a Conservative. The hon. member knows that in our selection of judges, whose office doubtless compares in dignity and in consequence with that of a commissioner, we are compelled to resort to party lines on one side or the other for appointees; and so the same objections which the hon. member hurls against Mr. Lynch-Staunton could be hurled against every man appointed to the bench by the Government of which he himself was a member. He tells us that Mr. Lynch-Staunton took the stump for the Conservative party in 1904 and 1908.

Mr. GRAHAM: And in 1913.

Mr. MEIGHEN: In the South Bruce election.

[Mr. Meighen.]

Mr. GRAHAM: While he was a commissioner.

Mr. MEIGHEN: But the hon. member is on record as saying that before Mr. Staunton took the stump in South Bruce his report was complete. No doubt the hon. gentleman has scoured the record of Mr. Lynch-Staunton and endeavoured to find where he has complained of or attacked the Transcontinental railway or the Transcontinental railway project, but he fails to show where Mr. Lynch-Staunton ever on any occasion pronounced himself one way or the other on that subject.

The hon. gentleman has strictures just as severe for Mr. Gutelius. 'Why,' he says, 'Mr. Gutelius was actually employed by the Canadian Pacific railway, and consequently he should not have been selected,' although in the course of his address he continuously assured the House that the Canadian Pacific railway was the best managed railway on this continent. If so, it must have the best officers on this continent, of whom Mr. Gutelius was one.

Mr. GRAHAM: But the Canadian Pacific keeps its good officers; it does not let them go.

Mr. MEIGHEN: The hon. member is bound to hit Mr. Gutelius, and is endeavouring to insinuate that Mr. Gutelius lost his position with the Canadian Pacific railway. Does he believe it?

Mr. GRAHAM: I did not say so.

Mr. MEIGHEN: He told us in almost every sentence he uttered that Mr. Gutelius was loaned to this country by the Canadian Pacific railway.

Mr. GRAHAM: I beg the hon. member's pardon; I quoted the statement of the Minister of Railways, that the Canadian Pacific railway had only loaned Mr. Gutelius to him.

Mr. MEIGHEN: Then, apparently, the Canadian Pacific railway have as much confidence in Mr. Gutelius as ever they had.

Mr. GRAHAM: Possibly.

Mr. MEIGHEN: The hon. gentleman can take whichever horn of the dilemma seems most comfortable to him. Mr. Gutelius was assailed last night, I am told, by the hon. member for Carleton, N.B. (Mr. Carvell), who told the House, from that pinnacle of information that he alone can attain, that this poor Mr. Gutelius did not know anything about railroad construction, that the Canadian Pacific railway em-

ployed him in operating and put him in the little town of North Bay. The fact is that Mr. Gutelius was engaged in railway construction as early as 1888, and continued to be engaged in railway construction until 1908, a period of twenty years. He was superintendent of constructive operations of the Pennsylvania railway; he supervised and controlled the construction of the Columbia and Western railway in British Columbia, and operated it as well. For ten years of his tenure of office in the Canadian Pacific railway he was in charge of railway construction, and for four years in charge of the operating. Does the hon. member for South Renfrew really believe that on this continent, or any other continent, there was a man better qualified than Mr. Gutelius to undertake this work?

Mr. MACDONALD: Would the hon. member permit me, before he leaves the question of Mr. Gutelius' appointment, to ask when Mr. Gutelius became a naturalized Canadian—

Some hon. MEMBERS: Oh, oh.

Mr. MACDONALD: —and whether it was only after this Government had appointed him commissioner that he took the oath of allegiance to His Majesty?

Mr. MEIGHEN: I will answer the hon. gentleman. He seems to think that Mr. Gutelius would not be competent to do the work if he were not a naturalized Canadian, and he tells us that Mr. Gutelius has only been naturalized two years. Is that correct?

Mr. MACDONALD: The hon. gentleman's own department, or that of the Secretary of State, should be able to inform him whether Mr. Gutelius was naturalized only after he had been appointed commissioner by this Government.

Mr. MEIGHEN: I have never looked the matter up because I have never seen, and do not now see, that it has any bearing on the case; but if the hon. gentleman thinks that British naturalization is an important qualification for knowledge of engineering, what has he to say to that supreme engineer of this continent and all other continents whose single letter to the hon. member for South Renfrew is depended upon to destroy Mr. Gutelius and every other engineer who fails to accept his view?

It is not to be expected that either the appointment of this commission, or the commission itself, would satisfy the hon. gentlemen opposite, including the hon. member for Pictou (Mr. Macdonald). Who ever heard, in the history of this Parliament, of a commission to satisfy hon. gentlemen opposite? Why they themselves could not appoint a commission to satisfy themselves. They are no strangers to investigating commissions; they have a record in such commissions. On several occasions when in power they appointed investigating commissions, but those commissions failed to satisfy themselves.

They could not elect anybody from the Liberal ranks to satisfy them; they could not select anybody from the Conservative ranks to satisfy them; they could not select anybody from the independent ranks to satisfy them, and they could not select anybody from the judicial ranks to satisfy them. They appointed a civil service investigating commission in 1907. That commission was composed of two Liberals and one gentleman who had very little politics, but who, if anything, was a Liberal. That commission investigated their own conduct and administration of the Civil Service. No sooner had they made their report than the vials of wrath from hon. gentlemen opposite were poured upon them, and the diatribes the hon. member for South Renfrew levelled at Mr. Gutelius and Mr. Lynch-Staunton were mild and weak and watery compared with what hon. gentlemen opposite levelled upon their own appointees in 1908. Not satisfied with the appointment of one commission, they decided to appoint another, in order, if possible, to correct the effects of the first commission. So they appointed Mr. Justice Cassels—I do not know whether he was on the bench when appointed or not, but at all events before he was on the bench he certainly was not a Conservative—to review the work of the commission they had appointed a year before. Mr. Justice Cassels reported, and day after day in this House hon. gentlemen opposite never ceased to inveigh against Mr. Justice Cassels. I remember, as if it were yesterday; the hon. member for St. John (Mr. Pugsley) and the hon. member for Carleton using language that verged as close as it could upon exceeding the rules of this House in order to show the country that Mr. Justice Cassels did not know anything about investigating the Civil Service, had no idea whatever about the weight of evidence, and, having heard the evidence, had not enough common sense to make a report. The hon. member for St. John seemed to be deeply shocked a couple of days ago when he heard from the hon. member for South Renfrew that Mr. Gutelius was actually at one time in the

trusted employ of the Canadian Pacific railway, and that Mr. Lynch-Staunton was a Conservative. He seemed to think that as a consequence we had wasted our money in asking these men to investigate a public work. The hon. member for St. John will be the last member in this House ever to be satisfied with any commission. Scarcely a session has passed since he entered this House, in which he has not occupied a great deal of time in condemning and berating, and in pouring vitriol and virulence upon commissions. He remembers the Central Railway Commission—it did not suit him; he remembers the Landry Commission, and even that great representative of the Acadian race, Mr. Justice Landry, did not suit him as commissioner. There has never been an investigating commission appointed even by themselves that suited hon. gentlemen opposite, so it is out of the question that the party now in power could possibly have suited hon. gentlemen opposite, no matter whom they appoint.

The Transcontinental Inquiring Commission was appointed, and the hon. gentleman says that the way they went about their work shows that they were biased; that they had no desire to use their witnesses fairly; and that they did not intend to make a just or an honest report. Why, he said, the first thing they did—and he showed the record to prove it—was to promise Mr. Parent that he would be allowed to read over his evidence after it was typewritten and before it was printed. The hon. gentleman read a letter from the secretary which promised Mr. Parent that
4 p.m. that opportunity would be given him. Mr. Parent wanted to read it over with the commission, and the secretary said in the letter he would advise him when Mr. Gutelius returned to Ottawa in order that it might be done.

Mr. GRAHAM: When Mr. Lynch-Staunton returned.

Mr. MEIGHEN: Thank you. Apparently, so far as is shown from the correspondence, that matter was overlooked by the secretary. The hon. member for South Renfrew showed that he had been in communication with Mr. Parent and that Mr. Parent had complained to him about this very unjust treatment, but he never brought into the House a sentence or a word or a syllable to show that there had been the slightest error in the transcription of the notes of evidence in this report. The conclusion is irresistible—that the evidence was faithfully reported and faithfully transcribed. If so, where is the injury?

The hon. member thinks that a very serious wrong was also done because this commission did not examine Mr. Charles Young on the question of the Winnipeg terminals. Having some knowledge of this subject myself, aside from the report, I was at a loss to understand what the reference of the hon. member for South Renfrew was as to the failure to take the evidence of Mr. Young. It will be remembered that in connection with the Winnipeg terminals the hon. member for South Renfrew said that whereas it was the first intention to bring the Transcontinental line into Winnipeg by connection at Dundee siding with the Canadian Northern, and running along the Canadian Northern into the joint terminals on the Winnipeg side of the Red river, as a consequence of an investigation made personally by himself another route farther to the north was decided upon, and as a result the route of the road as now constructed was determined. It is quite true that the first route contemplated was a ground-level route, running alongside the Canadian Northern, and immediately to its north, or by the use of the Canadian Northern on a joint traffic basis.

Mr. GRAHAM: My hon. friend, speaking from memory, has neglected to mention the whole of my statement in that respect. It was not only on account of a personal investigation I made that the present route was decided upon. My hon. friend will remember that I mentioned the fact that the Minister of Railways had the right to locate the route. I heard in my office the arguments of all companies and all those interested, and in addition to that I made a personal investigation. I would not like the country to think that it was only on a personal investigation made by myself that the route was decided upon.

Mr. MEIGHEN: I had no intention of leading the House to believe that it was only on account of my hon. friend's personal investigation that the decision was made. I know the hon. member did hear the interested parties; I know that as a consequence he came to the conclusion that the north route should be selected, that the wishes of the Canadian Pacific railway in that regard should be respected, and that the route should go just as it goes to-day, through a high-level line from St. Boniface across the Red river into the Winnipeg terminals. But what I want to draw attention to is, that the hon. member is

complaining that the commission had suppressed the evidence of Mr. Charles Young in their endeavour to show that due regard for economy was not observed in selecting this entrance in preference to the other. The hon. member must know, and he does know, that Mr. Charles Young was the commissioner who refused to consent to the selection of the ex-Minister of Railways himself, and that he was the only member of the commission who resisted, and continued to protest after the ex-Minister of Railways had come to his decision.

Mr. GRAHAM: To be fair, the hon. gentleman should say that I mentioned that fact in my remarks.

Mr. MEIGHEN: I do not think the hon. gentleman did say that.

Mr. GRAHAM: I said that Mr. Young dissented.

Mr. MEIGHEN: Then what had the commission to gain in making a point against the ex-Minister of Railways by suppressing the evidence of the one commissioner who resisted him? I do not think the hon. member for South Renfrew told the House at the time the decision was come to that the high-level entrance was not contemplated, and that afterwards when the high-level entrance was decided upon by the Railway Commission as being necessary, the consent of the engineer of the hon. ex-Minister of Railways to the adoption of that entrance was not secured.

The hon. member says it is all nonsense to complain of the Transcontinental Commissioners appointed by the Liberal Government because they were not practical railway men. Why, he says: we do not appoint practical railway men to run railways, we appoint any kind of business men and these men take the advice of their engineers. Here is an instance where they did not take the advice of their engineers, but took the advice of the Minister of Railways himself, against that of the engineers, and adopted the high level entrance.

Mr. GRAHAM: That is not the case.

Mr. MEIGHEN: Not the case?

Mr. GRAHAM: No.

Mr. MEIGHEN: I had a lawsuit on this subject.

Mr. GRAHAM: I hope my hon. friend won it.

Mr. MEIGHEN: What nonsense it is, says the ex-minister, to suggest that the Liberal Government should appoint practical men, either in constructing or operating, to take charge of a great national undertaking. such as the building of a railway. He says: if you adopt that principle you are bound to have the Minister of Railways an engineer, either constructing or operating, and the Prime Minister of Canada as well. If his theory is correct, the Prime Minister of Canada would have to be master of every art and profession known to mankind. He says the Canadian Northern and the Canadian Pacific railway do not appoint operating engineers to be heads of their railways; the Canadian Pacific railway did not do so when they appointed Sir Thomas Shaughnessy, and so we were quite justified in appointing a box manufacturer, a couple of lawyers, and a grain merchant from Deloraine to build the National Transcontinental railway. Can he give us an instance of the directors of the Canadian Pacific railway or the Canadian Northern railway or of that wonderful road, the Union Pacific, or of any railway in the world, appointing as its president and general manager any one excepting a practical railwayman? Can he give us an instance in the whole history of railroad construction on this or any other continent where the directors or stockholders, responsible for the building of a railway, entrusted its building and its initial operation to men who were not practical railway men, either constructing or operating? There is no such instance in history. I do not believe he could imagine one instance in fiction, where any railway ever perpetrated the folly that the Liberal Government perpetrated when they appointed this commission to take charge of the building of the National Transcontinental railway. I went to Winnipeg, said the hon. gentleman, I examined the surroundings, and I made up my mind that the National Transcontinental railway was not going to play second fiddle to the Canadian Northern railway or to any other road; I made up my mind that it was going to have an independent entrance of its own, and that there was going to be no second fiddle about it; that is the reason I adopted that north entrance. Let me picture to the hon. members of this House what that north entrance is. The railway comes in from Transcona, four and a half miles out. It crosses the Seine river and circles around until it gets to the Red river, through the flats of St. Boniface, which largely belong

to the Canadian Northern railway. It is built at an elevation of twenty-three feet and presents a hideous spectacle from the city of Winnipeg or any other standpoint, being a tremendous embankment, lifting the railway into the air throughout the whole extent of its approach to Winnipeg. It goes over the Red river at high level; it reaches the joint terminals at high level, and the consequence is that where it should have some connection with the business element of Winnipeg, if it intends to get any business out of Winnipeg, it is almost as near the occupants of the heavens as it is to the people of Winnipeg. The road has a sky line through St. Boniface, and it cannot get a spur line connection with any business interests in the city of Winnipeg. How does the ex-minister expect the Transcontinental to get business out of Winnipeg? He has made a joint terminal arrangement with the Canadian Northern railway. The Canadian Northern railway own the capital invested in the terminal, and except over lines owned by the Canadian Northern railway, the road cannot get a bit of freight out of Winnipeg. The hon. gentleman was very much afraid of making the Transcontinental play second fiddle to the Canadian Northern. What is that but having to play second fiddle to the Canadian Northern before they can get a ton of business out of that city? They have a connection whereby their trains must be pushed up to the high level line owned by the Transcontinental over a connecting link, which is the property of the Canadian Northern railway, and for the use of which the Transcontinental pays a certain rate of interest, and except over the line of the Canadian Northern railway and up to that connecting link, it cannot get business out of the city of Winnipeg. The hon. gentleman knows I am speaking correctly, he knows that is the only way they can get business there. They can get passenger business it is true out of the joint terminal, but they cannot get freight business, and they cannot connect with houses that would use the line as a freight line. Their whole terminal arrangement, their whole arrangement in Winnipeg even for passenger business, is to play second fiddle to the Canadian Northern railway. The Canadian Northern Railway Company own the joint terminal facilities in Winnipeg; they are the owners of the land on the west side of the Red river where the union station now stands, and the Transcontinental railway simply pays a rate of interest to the Canadian Northern railway for the purpose of using, as second fiddler, the Canadian Northern railway terminal.

Mr. GRAHAM: My hon. friend knows there is an agreement, perfectly fair to both companies, managed in a separate way altogether from the Canadian Northern railway arrangement. He knows that, as to the station.

Mr. MEIGHEN: I know there is a terminal agreement whereby it is laid down that the Canadian Northern railway are and are to be the owners of the whole terminal facilities, and whereby the Canadian Northern railway have bound the Transcontinental Commission to pay a rate of interest for the use of the terminal facilities owned by the Canadian Northern railway. That is the terminal arrangement they have, a joint board—

Mr. GRAHAM: Hear, hear.

Mr. MEIGHEN: Yes, certainly, in order to see that each gets its rights under that agreement.

Mr. GRAHAM: Hear, hear.

Mr. MEIGHEN: But by the very terms of the agreement the Transcontinental necessarily, under the joint board, plays second fiddle to the Canadian Northern railway. Oh, says the hon. member for South Renfrew, if we had come in alongside of the Canadian Northern railway we would have been so contaminated by them that we would have been playing second fiddle to them. Where is the second fiddle playing there? They could have got a right-of-way alongside the Canadian Northern railway so that they would have avoided breaking up the 110 acres owned by the Canadian Northern railway, and splitting in twain the property owned by that company in St. Boniface, and had that been done I do not see anything especially second fiddle about it. But if it had been considered more advisable, in the interests of economy and therefore in the interests of this country, that a joint arrangement should be made with the Canadian Northern railway whereby they would have entered the city of Winnipeg over the line of the Canadian Northern railway, with a terminal arrangement extending not only over the terminal facilities that now exist but extending out over the approach, wherein would that have been playing any more second fiddle than they are playing to-day in connection with the joint terminals? They could have had a

joint board to see that they got their rights under the agreement with the Canadian Northern railway in connection with the approach to Winnipeg.

But, all that was beneath the dignity of the hon. member for South Renfrew. It was beneath his dignity to have anything to do with the Canadian Northern railway before they crossed the Red river, but it was quite on a level with his dignity to have everything to do with them as soon as they crossed the Red river. And what is the result? I am not at liberty to discuss this subject as fully as I would like. As every one knows, an action has been entered by the Canadian Northern railway, in the Exchequer Court of Canada, against the Transcontinental Commission for damages to their terminals in St. Boniface by reason of the decision of the Minister of Railways to break into their terminal facilities. That suit is now pendente lite, and consequently the evidence, or anything in relation to it, is not subject to free discussion in this House. But, I am certainly free to say that the Canadian Northern railway produced an array of witnesses from the southern States, very eminent engineers, all introduced as the greatest experts in their line known to humanity—although Mr. Berry was not amongst them—to show that the Minister of Railways had taken a veritable garden of Eden from the Canadian Northern railway, the best terminal facilities on this continent or any other, and had destroyed the property of the Canadian Northern to the extent of at least $10,000,000.

Mr. GRAHAM: Oh.

Mr. MEIGHEN: The hon. gentleman laughs. I hope I shall feel as lighthearted as he does now, when the verdict is announced. No one hopes more than I, and no one worked more than I to bring the damages down as low as we could, but the situation is there. The suit is entered and whatever the verdict, one man is responsible for it, and that is the hon. member for South Renfrew (Mr. Graham).

The hon. member for South Renfrew says that the Transcona shops are another source of great pride to him; that if he had to build them again he would build them just as they are now; and that Mr. Lynch-Staunton is entirely wrong when he argues that the building of the Transcona shops, as a plant for repairs, was beyond the powers of the commission and should have been done by the Grand Trunk Pacific. I was aware, before the ex-Minister of Railways rose, and I think most of us were aware, that Mr. Staunton in that opinion did not agree with the Deputy Minister of Justice who gave the late Government his opinions and who gives this Government his opinions. We knew that Mr. Staunton was running counter to the opinions of eminent lawyers in this country, and we knew it was the duty of the Government to heed the opinion of the Department of Justice, but I was not aware, and I am not yet aware, that it was a crime on the part of Mr. Staunton to give his own opinion even if it did differ from that of the deputy minister. Mr. Staunton, himself, in his report quoted the opinion of the Department of Justice, and he quoted every line of it. He gave it to the people of Canada and told them it was the official opinion of the Department of Justice. This report itself takes exception to another feature of the Transcona shops, and I want to know what the ex-Minister of Railways has to say about that. The report says they have built at Winnipeg at a cost of $4,500,000 shops more than doubly sufficient for the necessities of the Transcontinental. The ex-Minister of Railways said they cost $4,500,000, and he tried to persuade the House of Commons that the shops at Transcona were a necessary investment in order that the Grand Trunk Pacific could repair engines and cars at that point. The ex-Minister of Railways also read a report from Mr. Hodgins, who was appointed by the Transcontinental Commission in 1912 for the purpose of investigating the work of the commissioners, in regard to the building of these shops, and the hon. gentleman says that Mr. Hodgins reported that the Transcontinental Commission had taken good care of future needs when they made the shops cost $4,500,000. I entirely agree with Mr. Hodgins in that. I fail to find in the whole report, though, a statement showing that there is any reasonable probability, within a reasonable time, that the whole or half the shops will be used in connection with the Transcontinental railway. It is as plain as anything could be, that when Mr. Hodgins made the very modest statement that these shops were built to amply take care of all future needs, he had in contemplation the needs of the Grand Trunk Pacific on the western line. Why do I say that? It is because Mr. Hodgins in his report, as quoted by the hon. member for South Renfrew, compares the facilities in these shops with the facilities of the

Canadian Pacific railway shops, and endeavours to show that in some respects they equal, or greatly exceed them, he evidently having in contemplation that the shops were to be used by both western and eastern lines just as Canadian Pacific shops are. That is plain on the very face of the report. There is no fault to be found with Mr. Hodgins' report, and not a line or a letter in it conflicts with the report of Messrs. Gutelius and Staunton. The hon. member for South Renfrew laughed at the suggestion that $4,500,000 was too much to spend in erecting shops to repair the engines and cars of the Transcontinental. Does he remember, as he sits there, that only as far back as 1908 he assured this House and the country that the Transcontinental shops would only cost $1,500,000. I see he does not contradict me, but in case any one would like the evidence it is to be found in 'Hansard,' July 11, 1908, page 12672, where Mr. Graham said:

> But we take the $2,000,000 for Quebec and we take $1,500,000 for the shops east of Winnipeg, and these will make $3,500,000 instead of the $5,470,000.

Again, on page 12664 of 'Hansard,' he says:

> For the shops east of Winnipeg the estimate is $1,500,000.

That is what he contemplated and that is what the commissioners contemplated when they felt it was their duty to make a capital investment there on shops sufficient to provide for the repair of engines and cars on the Transcontinental; but when they thought of lending the Grand Trunk Pacific sufficient money at 3 per cent to enable them to repair their cars and engines on their line and on our line they ran the cost up to $4,500,000. The Gutelius-Staunton report is verified line for line by the report of Mr. Hodgins, and by the words of the minister himself spoken only five or six years ago.

The hon. gentleman says we do not believe this report, or we would not be building shops at Quebec. While we have the utmost respect for the opinion of Mr. Lynch-Staunton on that matter—and no lawyer who reads that opinion, and knows the facts and arguments and deductions in support of the opinions will fail to have respect for the opinion of Mr. Staunton on that point—we recognize that it is the official opinion of this Government that we go by, and so we are building the shops at Quebec. But I will tell the hon. gentleman what we are not doing at Quebec, we are not spending money there for the Grand Trunk Pacific to use in connection with other lines they may own.

At the city of Quebec the estimated cost for shops is not $4,500,000, but it is $2,000,000, or less than half the cost at Transcona. At the city of Quebec, while the suggestion is that it should be limited to $2,000,000, and it is estimated not to exceed that amount, it has to be remembered that these shops have to take care of repairs for the line west of Quebec as well as east of Quebec, and consequently there will be every reason to believe there will be twice the business in repairs at Quebec that there will be at Transcona, which is the end of the line. Consequently it will be seen that a very different policy is in vogue in reference to the shops at Quebec. We pay respect to the suggestion of Messrs. Lynch-Staunton and Gutelius by seeing to it, that while we carry out the obligations of a very bad bargain made by hon. gentlemen opposite, we do not exceed these obligations in the interest of the Grand Trunk Pacific. So much for the Transcona shops.

The hon. gentleman says that at the city of Quebec there has been a very grave blunder made in that the shops have been moved some distance from the main line, and that consequently there is going to be all kinds of expense in the halt and crippled engines limping over from the main station at Quebec to the shops. He thinks we should have the shops right along the main line of the road, but if you do you have to haul your crippled engines from the n arest divisional point or the nearest station. Where did the hon. gentleman build the shops at Transcona? He built them four and a half miles out from the divisional point.

Mr. GRAHAM: They are on the main line.

Mr. MEIGHEN: They are on the main line, but the limping trains have to go four and a half miles to get to the shops. Where are they at Moncton? Are they on the main line? I do not think the hon. gentleman will say they are.

Mr. GRAHAM: They are right in Moncton.

Mr. MEIGHEN: They are right in Moncton, but a mile and a quarter away from the station, and the hon. gentleman selected the site himself.

Mr. GRAHAM: The Intercolonial shops at Moncton form part of the terminals in the city of Moncton.

Mr. J. D. REID: They are two miles out.

Mr. GRAHAM: They are not two miles out.

Mr. MEIGHEN: There is one to two miles that the limping trains have to go to get to them. The hon. gentleman said that all our estimates in connection with the cost of the transcontinental project are futile. He said that we included everything in them, no matter whether they should have been included or not, and he has been saying that for many years. I have no doubt he thinks he could appoint a much better commission than we did, but he had the opportunity of appointing a commission in 1910, and he refused to appoint one, and the reason he gave was that the gentleman who moved for the appointment of the commission had entirely over-estimated the cost of the Transcontinental railway. Mr. Lennox, of South Simcoe, said in 1910 that in his view the cost would run up to $218,000,000, and Mr. Graham then estimated the cost, inclusive of interest during construction, at $150,400,000, and he asks the House to believe that he was right as against Mr. Lennox, who wanted a commission appointed. Mr. Graham, then Minister of Railways, declined to avail himself of the privilege of appointing a commission that he could have selected himself. The hon. gentleman put the cost at $150,400,000, while Mr. Lennox put it at $218,000,000, or, as Mr. Graham said, $68,000,000 too high. He has to-day admitted that on the same basis of calculation, the correct figure is not $150,400,000, is not even $218,000,000, but, without figuring compound interest, that it runs up to $230,000,000.

Mr. GRAHAM: I do not admit anything of the kind. On this basis of calculation I state, and the hon. gentleman must himself agree, that the amount is $181,000,000 approximately.

Mr. MEIGHEN: I think the House has clearly grasped the interruption of the hon. gentleman, and what it means. On the basis of the calculation at which he arrived at $150,400,000 in 1908—it was $159,000,000 in 1910—he tells the House that the cost to-day is $181,000,000. He makes out the cost to-day to be $181,000,000 by including the $161,000,000, cost of construction, exclusive of interest, and adding to it the interest during construction, which would come to $18,000,000, making a total of $181,000,000. That is correct, is it not?

Mr. GRAHAM: That is correct.

Mr. MEIGHEN: Does the hon. gentleman say that in his $150,400,000 in 1908, or his $159,000,000 in 1910, he did not include the seven years' interest after construction?

Mr. GRAHAM: The seven years' interest after construction has nothing to do with the cost of construction.

Mr. MEIGHEN: But the hon. gentleman says that it was by the same basis of calculation he arrived at the $150,400,000. At page 12,680 of 'Hansard' of 1908 he gives $10,740,000 as the interest during construction, and $26,124,676 as the interest for seven years after construction, and he makes the total cost then $150,400,000. He, himself, included the $26,124,676 interest for the seven years. Now the hon. gentleman says that on the same basis of calculation it is only $181,000,000. It is $161,000,000 without interest at all, it is $181,000,000 with interest during construction, and it is $234,000,000 with seven years' interest compounded after construction, and it is approximately $230,000,000, if you do not compound at all, according to his own methods. So that Mr. Lennox, in 1910, not four years ago now, in estimating the cost at $218,000,000 was, according to the estimate of the hon. gentleman himself, about $12,000,000 short of actual cost instead of being $68,000,000 too high.

The hon. gentleman says: You should not include the Quebec bridge. I did not include the Quebec bridge in the last estimate, Mr. Gutelius and Mr. Lynch-Staunton did not include it in getting at the $234,000,000, but the hon. gentleman almost took a fit when the present acting Minister of Railways (Mr. Reid) included something for the Quebec bridge in getting at the cost of the road. He said: There is no more sense in including the item of the Quebec bridge than if you were to include all the armouries in this country. If that is the case there is very little sense in the position taken by Mr. Fielding, then Minister of Finance, who, himself, was acting Minister of Railways and Canals when these words were used, and who said, page 8587 of 'Hansard,' August 12, 1903:

> Whether the Grand Trunk Pacific had made a contract or not, whether we ever should build a transcontinental railway or not, the Quebec bridge has become a national undertaking, and in one form or other this Government has to see it through. As to what the Government

may do later, I am not in a position to say. Whether it would be wise to buy the bridge outright and make it part of the Government system or let the bridge company continue to manage it, will have to be arranged later on. But some part of the cost of that bridge is properly chargeable to the Grand Trunk Pacific railway.

He puts the cost at $4,500,000. (Reading):

What proportion of that would be fairly chargeable to this enterprise? I am going to assume that out of what it may cost we may fairly charge the Grand Trunk Pacific railway $2,000,000.

So that the Minister of Railways of the day, who himself fathered the whole scheme in this House of Commons, stated that about four-ninths of the cost of the Quebec bridge was properly chargeable to the Transcontinental. Four-ninths of the cost of the Quebec bridge is not quite the same as the armouries of this country; but what I want to draw my hon. friend's attention to is, that if we are to take what the cost of the Quebec bridge has been up to the present time, and its estimated cost for completion, and then take four-ninths of that as properly chargeable to the Transcontinental, we are going to add without interest at all, nearly $10,000,000 to the cost of the Transcontinental. On top of your $230,000,000, you have, on the authority of Mr. Fielding, to add that $10,000,000. On top of that also, you have to add interest for three years after the seven years, unless you are optimistic enough to think that the Grand Trunk Pacific Railway Company are going to find rental over working expenses for the three years. I do not believe that the ex-Minister of Railways in his heart of hearts would like to take as his share of the patrimony of this world, any part or all of the three years' rental we are going to get when the seven years are up. I do not think he would exchange it for his smallest possession in this world at the present time. If you add that three years' interest, and I think a sane regard for prospects will compel us to add it, you are going to add another $18,000,000 to the cost of the Transcontinental.

In all these calculations, which are sound, and which cannot be refuted, I have said noting at all about betterments until we get some return on the road. The ex-Minister of Railways knows that at the present hour the property of this country in the National Transcontinental, on the completed line not in use, or not in use to any serious extent, is depreciating day by day; that the rails are rusting; that the ties are rotting; that the road bed is getting out of shape, and that we shall have to spend huge sums of money in betterments before we have as good a road as when it was first constructed. He says we are making up the $230,000,000 in such a way that if we applied the same plan to the Canadian Pacific railway, it would have cost $200,000,000 or $300,000,000. In that calculation the hon. gentleman took into account interest on the money advanced to the Canadian Pacific railway and on the land given to the Canadian Pacific railway at a cost of $5 an acre, compounded up to the present time.

Mr. GRAHAM: I did not do that at all.

Mr. MEIGHEN: The hon. gentleman did do it in one calculation anyway.

Mr. GRAHAM: In my calculation, on which I computed the compound interest, there was no reference to the land at all; it was the cash given to the Canadian Pacific railway, and the value of the completed railway handed over to them at a valuation which in 1887 amounted, according to the figures in possession of the Government, to $72,000,000. I calculated cash and road completed, not land.

Mr. MEIGHEN: And he calculated interest on that up to the present time.

Mr. GRAHAM: Yes.

Mr. MEIGHEN: If he takes the interest for a long enough period, he will make the amount anything he likes.

Mr. GRAHAM: And, so can my hon. friend in regard to the National Transcontinental railway.

Mr. MEIGHEN: In my opinion if you compute interest, you should compute it up to the time when the country gets some service from the road.

Mr. PUGSLEY: Until the road is completed.

Mr. MEIGHEN: Well, who is objecting to that? What does the hon. member for St. John think about the method of the hon. member for South Renfrew (Mr. Graham) in calculating interest for thirty or forty years after the road is completed?

Then my hon. friend the ex-Minister of Railways went on to say that the capitalization of the road was quite reasonable, namely, $85,000 per mile, but if he calculates it at actual cost, plus interest, he is going to get $99,500 a mile.

Mr. GRAHAM: I did not say that.

Mr .MEIGHEN: I say that.

Mr. GRAHAM: I said $85,000 a mile, from Prince Rupert to Moncton. I took the figures given to me by the Government.

Mr. MEIGHEN: That is all right. I did not know that my hon. friend was referring to the road from coast to coast.

Mr. GRAHAM: I was taking the whole road.

Mr. MEIGHEN: Well, we do not know what that road is going to cost yet; it is yet some distance from completion. At all events the National Transcontinental railway is the line which we are discussing and you cannot get its cost by mixing up the figures of another road. The National Transcontinental road will cost $99,500 a mile or almost $100,000 a mile for every mile of the road from Winnipeg to Moncton.

Mr. MURPHY: Does that include the interest?

Mr. MEIGHEN: We will assume for the sake of argument that it does, although I am not sure. The hon. gentleman says that the road is well worth it, because it will carry trains so cheaply.

Mr. GRAHAM: Without interest.

Mr. MEIGHEN: I think I am too generous with hon. gentlemen opposite; that is the cost without interest.

Mr. GRAHAM: How much?

Mr. MEIGHEN: $99,500.

Mr. GRAHAM: No.

Mr. MEIGHEN: If there is an error at all, it is in favour of hon. gentlemen opposite.

Mr. BORDEN: If the road be 1,800 miles long, then without including this seven years' interest the cost would be about $180,000,000, or about $100,000 per mile.

Mr. GRAHAM: According to the contract and agreement with the Grand Trunk Pacific Railway Company, they are to pay rental on the cost of construction, which is made up of the actual cost of construction and interest on the cost of construction during the time of construction. That is $181,000,000 approximately, which is to be the cost of the road for rental purposes.

Mr. BORDEN: Certainly, for rental purposes.

Mr. MEIGHEN: I am very glad that the hon. gentleman (Mr. Graham) interrupted me because I see that I was much too favourable to his side of the case. I gave $99,500 a mile as the cost with interest. In the moment or two of recess caused by the interruption, I find that the total cost of the road plus interest during construction alone aggregates $100,000 a mile.

By adding the computed interest for seven years, the cost per mile would amount to $117,000 instead of $99,500. My hon. friend (Mr. Graham) says that the road is worth it, because he says I can show you railroads in Germany that have cost more than that.

Mr. GRAHAM: In speaking yesterday, I did not mention Germany directly or indirectly. In discussing railway matters here some years ago, I mentioned several railways in Europe. In my address of yesterday, taking the present Estimates, I mentioned the capitalization of four or five American roads, two of which I was giving for purposes of comparison. I did not mention any European roads at all.

Mr. MEIGHEN: I read in 'Hansard' a reference by the hon. gentleman to Germany.

Mr. GRAHAM: I did not say that.

Mr. MEIGHEN: I was not referring to my hon. friend's speech of yesterday. But, at all events, I do not know what point the hon. member expects to make by interrupting me, for it is just the same whether it was in Germany, or in England or elsewhere. He referred to the Canadian Pacific railway, and to three or four roads in the thickly-populated parts of the United States—as if there were any comparison between land values in the state of New York and land values at Graham, Redditt, Cochrane, Fitzpatrick and various other points in our yet unpeopled north. His method is to put the cost of this bare line of railway against the Canadian Pacific railway, with its telephone system, its telegraph system, its hotels, its lands, its steamships, and all its other multifarious assets.

Now the hon. gentleman says: Whatever it cost, it is worth the money. And that is the report we always get when we present the case of the people of Canada against the late Government for unneces-

sarily adding to the cost of the Transcontinental. Hon. gentlemen opposite say: Whatever it cost, and whatever blunders we made, whether in the agreement or after the agreement, or in the execution of the work, we put those blunders behind our backs and under our feet, because the road is worth the money anyway.

Well, the feature of the case I wish to present, with what emphasis I may, is just that in estimating the money that should be spent on a railroad, whether in whole or in part, some regard should be had to reasonable expectations of traffic for the years after the road is completed. And, however optimistic hon. gentlemen may be of the traffic that will go over this road, their optimism does not justify us in flinging reason and discretion to the winds and assuming that on the Transcontinental railway, immediately after construction or very shortly after construction, we can have a traffic comparable with the present traffic on the Canadian Pacific railway. It is pointed out in this report, and not refuted even by the hon. member for Carleton, N.B., so far as I am informed, that the equating tables presented to the engineers of this road, as they located the same and laid it out, were based upon the hypothesis that the road, as soon as it was open for traffic, would receive a traffic double that of the present traffic on the Canadian Pacific railway. And these equating tables, calculated for the purpose of showing under what circumstances it would pay to make capital investment rather than incur expense for operation, were based upon a hypothesis which no reasonable man would be justified in holding. As a consequence of this hypothesis, which violates every principle of discretion and common sense, the road was laid out and constructed at a cost that defeats the very purpose for which the road was projected. The hon. member for South Renfrew read some letters to show that because in this construction they had got down to a better grade than another transcontinental line, they could carry traffic much cheaper; he went on to show that the Transcontinental railway could carry wheat, I think he said, for about one-third the rate the Canadian Pacific railway could carry it for, and almost as cheaply as it could be carried by water. But no sooner was this said than the hon. member for St. Antoine (Mr. Ames) asked: What about the obligation of the company to pay rental on this tremendous capitalization as affecting their ability to make low traffic rates? And the hon. gentleman's answer was: I will tell the hon. member later on. But he has not told him about that rental yet; he has never admitted, in figuring the cost to the Transcontinental, the interest on the capitalization, which must be taken into account in arriving at the rates which that railway will be able to give its customers.

Mr. GRAHAM: I do not wish to interrupt the hon. member unduly, but I would refer him to page 2107 of 'Hansard' on that point. I know the hon. member was not here last night, and I am sure he has not read this or he would not make the statement he does. I gave the statement as to what it would cost to operate this line, taking the expected traffic as given by Mr. Tye before this commission. My hon. friend will see that I put in the cost of operation as one of the charges, the very amount figured out by the commission as rental:

> Interest charges per day, as per commissioners report, $14,800.

So, I answered the hon. member for St. Antoine as I promised.

Mr. MEIGHEN: Does the hon. member for a moment suggest that in his cost of operation he has included overhead charges?

Mr. GRAHAM: The hon. gentleman said I did not mention that. If he will follow out what I said he will see that there was a balance left to pay all other expenses.

Mr. MEIGHEN: Very well, but what I said was that the hon. member did not include the cost of rental in order to arrive at what the traffic would cost, and when he does include the rental he leaves out interest. The hon. gentleman admits that.

Mr. GRAHAM: I do not.

Mr. MEIGHEN: Then, I do not understand what he says. The hon. gentleman dwelt at great length on the question of grades, and he set about to convince the House that he was quite justified, and that the Transcontinental railway commissioners were quite justified, in entirely eliminating from this road what are known as momentum grades, and the Gutelius-Staunton report is entirely in error when it informs the people of Canada that $6,200,000 was thrown to the winds in this effort to do away entirely with the possibility of momentum grades. The hon. gentleman quoted letter after letter to show that the better grade you can get on a railway the cheaper you

can carry the traffic. Nobody disputes that general proposition. But still you have to keep in mind the cost of construction, and the interest on that cost if you are going to be fair in your calculations. But that is what the hon. gentleman did not do: that is what the eengineers of the Transcontinental were forbidden to do. That is why we have a cost of construction that defeats the very purpose of the road.

Hon. gentlemen opposite would convince us that momentum grades are fearful things. One would actually think, to hear the hon. gentleman describe them, that a train on a road on which there were momentum grades, would rock about like an automobile on a rough road, and that momentum grades were dangerous not only to the lives of those who rode over them but to the country through which the train passes.

Sir WILFRID LAURIER: Hear, hear.

Mr. MEIGHEN: It is well that we should grasp what momentum grades really mean. I understand that the leader of the Opposition (Sir Wilfrid Laurier) agrees with me in my description. Let me illustrate to the right hon. gentleman just how much truth there is in his belief. The momentum grades that have been allowed in the interest of economy on the Transcontinental have a maximum depth of eight feet; but the momentum grades on the Canadian Pacific railway between here and Carleton Place have a maximum depth of thirty feet. The right hon. gentleman himself has travelled over this Canadian Pacific line many times, and I do not think he has suffered very serious turmoil to his anatomy.

Now, what are these momentum grades?

Sir WILFRID LAURIER: Will the hon. gentleman tell the House where the momentum grades on the Transcontinental are? I have not been able to get that information so far.

Mr. MEIGHEN: I have a list of them here, but I do not think the right hon. gentleman would be very much edified if I were to read to the House about 1,000 figures. I shall be glad to send the list over to him. I understand that it was brought down in response to an order for a return to this House, but I may be misinformed as to that.

Sir WILFRID LAURIER: I have not seen them.

Mr. MEIGHEN: What are these momentum grades? The ruling gradient on the Transcontinental is 0.4 per cent as against eastbound traffic, and 0.6 per cent as against westbound traffic. Those were the grades determined upon, and they were determined upon without any reference to the character of the country through which the road was to be run, and without any reference to whether or not such construction would be in the interests of the road or would help fulfil the purposes of the road. Apparently the cost of the road was not considered in its relation to the rates to be charged on the freight that might be carried over it. The cardinal blunder in connection with putting into execution the design of the Government in connection with the Transcontinental was in heeding not in the slightest degree the necessity of keeping the capital cost down to a minimum, in the interests of the road itself. No attention, then, was paid to the equating tables. The engineers were told to make 0.4 per cent and 0.6 per cent grades and to have no momentum grades, no matter what the result might be. The consequence is that the interest charges on the road are so high that there is no hope whatever of securing low freight rates, which the road was built to secure. It would appear from the speech of the hon. member for South Renfrew that the moment you introduce a momentum grade you depart entirely from the four-tenths and six-tenths actual grade. You will do nothing of the kind. A four-tenths grade, if I understand it aright, means that there is at no place a greater rise than four-tenths of a foot in one hundred feet against eastbound traffic, and in no case a greater rise than six-tenths of a foot in one hundred feet against westbound traffic. Consequently, an engine of certain power can haul a train loaded to a certain capacity over that four-tenths grade eastbound and six-tenths grade westbound and, if the momentum grades that are introduced are really momentum grades in the real meaning of the term, they in no way interfere with the power of an engine to carry exactly the same load over exactly the same route. One would think that you limit the hauling capacity of your engine, the moment you introduce a momentum grade, no matter how slight, and that, at no matter what cost, such grades ought to be eliminated. Momentum grades, the hon. gentleman says, are of very doubtful advantage. He tells us that a momentum grade is of value to the road; at least he says it does not do it any harm. I admit

5 p.m.

that it does not do any harm, but the question of cost comes into the construction of a non-momentum railroad. It becomes a question how much you should pay to produce a non-momentum system. The hon. gentleman refused to let that question intervene at all; to him it did not matter what it cost. Ordinary business sense should have dictated to him to ascertain first of all whether a non-momentum road is any better than a momentum road for the traffic that this line is expected to carry, and, if you ascertain that it is better, then find out whether it is so much better that it warrants the paying of $6,200,000 for it. Surely that is a matter of ordinary business; but the hon. gentleman did not do that. The momentum grade means this: you carry the very same load with the very same power. By means of a down-grade for a short distance and up-grade the rest, the momentum that the train secures going down carries it up the other side, and as a result the principle of momentum is introduced and a great saving is effected without any detraction from the operating value of the road. The principle is not that of degrading the road to introduce momentum grades. The hon. gentleman has scoured the continent of America in order to produce the opinion of an engineer, if he could get one, that momentum grades should never be introduced. He scoured the continent of America and the continent of Europe to prove to this House that under no circumstances should momentum grades be used on the National Transcontinental railway. Having done this—and he has had seven or eight years in which to do it—he has not, in a speech lasting seven hours and a half, produced a single witness to show to this House that momentum grades should not be introduced. He could not and did not quote a line from either Mr. Berry or Mr. Cooper, one an engineer from the southern States and one from England, to show that momentum grades should not be used on the Transcontinental. He went to the American Association of Engineers, but the report of that association, from which he quoted, showed that he was wrong, and that there were circumstances under which momentum grades undoubtedly ought to be introduced in the interests of the road itself.

Mr. GRAHAM: I have always admitted that there are circumstances under which momentum grades are practicable. I never suggested anything else, but they are not practicable in a frost and snow country.

Mr. MEIGHEN: Not in a cold country?

Mr. GRAHAM: I said a frost and snow country.

Mr. MEIGHEN: The hon. gentleman's opinion is that momentum grades are all right under perfect circumstances, but that they are not all right in a frost and snow country.

Mr. GRAHAM: On new lines.

Mr. MEIGHEN: Here is the opinion of one of the engineers quoted by my hon. friend—and I venture to say it was the most in his favour of any that he could secure from the whole report:

> Modern railroad practice has substantially established the fact that momentum grades have their uses and are frequently of great value, but there are definite and well-known objections to their indiscriminate use.

Who would not know that?

> And that they should be adopted as a matter of course ordinarily or wherever opportunity offers, especially in original locations, may be seriously questioned.

Mr. GRAHAM: Hear, hear.

Mr. MEIGHEN: Does the Gutelius-Staunton report say in a single instance that momentum grades should be indiscriminately applied, or wherever opportunity offered? All Gutelius and Staunton said in the report was exactly what the American Association said in the report quoted by my hon. friend. The view of the association was:

> Modern railroad practice has substantially established the fact that momentum grades have their uses and are frequently of great value.

But the Transcontinental railway proceeded on the presumption that modern railway practice had established the fact that there was no value in momentum grades at all.

The hon. gentleman went down to the southern States and produced Mr. Berry, whose reputation is said to be international, but whom I never heard of before, although I have heard of many American engineers whose reputations became international very suddenly. However, I will accept Mr. Berry's opinion as that of an engineer of international reputation. In all the quotations which the hon. gentleman made from Mr. Berry, he cannot point to a line wherein Mr. Berry states that momentum grades

should not have been applied to the Tran - continental railway.

Mr. Berry was asked by the hon. gentleman himself to be a witness on this matter. I do not know whether Mr. Berry ever read the evidence. I have not seen the letter which the hon. gentleman wrote to him. I do not think he read the evidence, because he does not refer to it. But this gentleman from South America—

Mr. GRAHAM: Not South America.

Mr. MEIGHEN: The southern States—does say that there are circumstances when momentum grades should not be used, and he makes it as clear as day that there should always be an equation made between the advantage to be gained by momentum grades and the possible disadvantage. He thinks non-momentum grades are worth getting if you get them cheaply enough. Consequently he says there is a doubt amongst railway engineers whether or not a momentum grade is better than a non-momentum grade, and therefore, says my hon. friend (Mr. Graham), we are ready to pay any sum to remove the doubt. Whoever heard of reasoning like that. Mr. Berry almost says, and the ex-Minister of Railways does say, that you dare not have momentum grades in a cold country where there is snow and frost; and I wish to follow Mr. Berry and see just how far he establishes the point. Mr. Berry, in the course of his letter, points out that there are certain circumstances where a momentum grade may interfere with operating. He said that in the case of the momentum grade shown in the report, which was put there for the purpose of illustration, if you started out a fully loaded train of empties at the top of that momentum grade it would not get up the other side. There is his first objection. Whoever heard of putting in a momentum grade where you would be starting a fully loaded train of empties at the top? Would not a fully loaded train of empties, if that momentum grade was located in the only sensible place where any man would locate it, have a speed of ten or twenty miles an hour when it reached the foot of the down grade, and in that case it would get up the other side just as any other train would. That is what momentum means. Who would start a train over a momentum grade without any head at the top of the momentum? But he says a still more terrible thing might happen in a cold country of thirty degrees below zero. Mr. Berry says that if you strike a momentum grade in a cold country, thirty degrees below zero, with five inches of snow on the rails, and if, when you get to the bottom of the grade your engine goes up the spout, then you will not get to the top. Those are the only two circumstances that the ingenious mind of Mr. Berry can devise in order to show that you should never have a momentum grade in order to insure the country against the calamitous result of a train of empties started at the top of a momentum grade without any momentum and getting stalled before it gets to the other side, and the still more calamitous result of a fully loaded train of cars, at thirty degrees below zero and with five inches of snow on the rails getting stuck at the bottom through a dead engine, we ought to spend $6,200,000 of the money of the people of Canada. He cannot point to me in Mr. Berry's report a single other instance, a single other possibility that Mr. Berry's ingenious mind can devise that would defeat the real purpose of momentum grades. I read a few minutes ago what the hon. gentleman quoted from the report of the American Railway Engineering and Maintenance of Way Association. Just bear with me while I quote that again in order that I may show you the reasoning of the ex-Minister of Railways. Here is the quotation he made:

> Modern railroad practice has substantially established the fact that momentum grades have their uses and are frequently of great value, but there are definite and well-known objections to their indiscriminate use, and that they should be adopted as a matter of course ordinarily or wherever opportunity offers, especially in original location, may be seriously questioned.

Now let me give you the deduction which the logical mind of the hon. member for South Renfrew draws from that statement:

> This association takes the ground that even where the conditions are perfect, it is a mistake to introduce velocity grades—

Mr. GRAHAM: Go on.

Mr. MEIGHEN: —

> On a new line.

Mr. GRAHAM: Hear, hear. That makes a difference.

Mr. MEIGHEN: The hon. gentleman says 'hear, hear.' The Maintenance of Way Association said:

> There are definite and well-known objections to their indiscriminate use and that they should be adopted as a matter of course ordinarily or wherever opportunity offers, especially in original location, may be seriously questioned.

Mr. GRAHAM: Hear, hear.

Mr. MEIGHEN: It may be questioned whether you can adopt them indiscriminately or whenever opportunity offers, no matter what the result to be gained is, under those circumstances, in original construction. That is what the Maintenance of Way Association says. The deduction of the Minister of Railways is that unless conditions are perfect it is a mistake to introduce velocity grades.

Mr. GRAHAM: My hon. friend has left out again the word 'on a new line'.

Mr. MEIGHEN: On a new line.

Mr. GRAHAM: That makes a difference.

Mr. MEIGHEN: Does the hon. member say that the Maintenance of Way Association said that? They said that on new lines it may be questioned whether you should introduce them indiscriminately or ordinarily or wherever opportunity offers.

Mr. GRAHAM: Hear, hear.

Mr. MEIGHEN: Nobody would say anything else on new lines. This association says that you should use due care in the introduction of momentum grades. You would not introduce them, for instance, at a divisional point where you are going to start a train of empties at the foot of a momentum grade without any momentum. That would be their use indiscriminately, and ordinarily, and wherever opportunity offered. The Maintenance of Way Association say that you should not do that, but that is a long way from saying that you should never do it on a new line at all. It is just the difference between doing it without discrimination and doing it with discrimination. The hon. member for South Renfrew does not see that difference and the reason he gives is:

> For you do not know where the density of traffic is going to be and you cannot establish the velocity grades in the proper places.

That hon. gentleman says, that because we do not know, for example, what the traffic is going to be between Winnipeg and Lake Superior Junction, we do not know where the density is going to be along the line, such great density that you would not dare have momentum grades of that kind, at whatever cost he is going to abolish momentum grades altogether. Does the hon. gentleman fear a traffic along that line so great that you could not have momentum grades? The Canadian Pacific railway do not fear it. The Canadian Pacific railway have been running their line between Fort William and Winnipeg until now they have a double track, and on the revision of their line, knowing full well the traffic and having due regard for the future traffic, I have the evidence and the proof here to show that they have 85 momentum grades of importance on that line between Winnipeg and Fort William, or a momentum grade for about every three or four miles of the road.

But my hon. friend is fearful that we are going to have such a congestion of traffic between Lake Superior Junction and the city of Winnipeg that it would be a fatal thing to introduce a momentum grade at all. I have a letter here from an engineer who has the confidence of hon. gentlemen opposite. He was employed by them on the Transcontinental—or, perhaps not by them—at all events he was employed on the Transcontinental. He is an eminent engineer who made an inspection of the profiles of the Canadian Pacific railway at my own request. He writes:

> The ruling grade, that is the maximum grade when neither momentum or pusher grades are used, between these points is, according to the information given me, 0.4 per cent against both east and westbound. This information checks with the profiles.
>
> The momentum grades are not used to the same extent against eastbound as against westbound traffic as regards the rate of grade but there are probably about the same number of them each way. I counted 85 in all, and left out quite a number of the lighter ones. The rate of grade varies against eastbound from 0.5 per cent, 0.6 per cent, 0.7 per cent, 0.8 per cent to 0.9 per cent and in one case 1.0 per cent. Against westbound traffic the rate varies also from 0.5 per cent to 1.2 per cent, there being numerous cases of over 1.0 per cent. I noticed in a few cases that these grades were used in such a way as I would hesitate to adopt myself because of the high rates of speed required.
>
> If we leave out the 40 miles west from Fort William and 60 miles east from Winnipeg, the average of these grades for the remaining distance is roughly one to every four miles. In one section of 22 miles, however, I found 13 momentum grades with a more frequent use of the higher rates of grade, there being three cases of the use of 0.8 per cent against eastbound and 1.0, 1.15 and 1.3 per cent against westbound.

That is the judgment of the Canadian Pacific Railway Company; and they have lately revised their line and deemed it in the interest of the company and the purposes the railway was built to serve that they should introduce these momentum grades because of the great cost of obviating them. The hon. gentleman (Mr. Graham) says: 'If you look at the time sheets of that company, you will find that where there are momentum grades on a ruling grade of 0·4 per cent, they do not

load their trains to capacity. I understand the time sheets do not say anything about it.

Mr. GRAHAM: I did not say time sheets. I said weigh sheets. Perhaps that is not the proper term, but the sheet I mean shows the loading of the trains.

Mr. MEIGHEN: I have taken the trouble to consult a gentleman who was connected with the Canadian Pacific railway for many years, and he tells me that what the hon. gentleman says is not correct at all, and that they never make any difference whatever between the loading of a train where there are momentum grades and where there are not. The hon. gentleman says that the engineers are our experts, and if we defer to their advice that is all you can expect us to do. But did they defer to the advice of their engineers in the matter of momentum grades? Did he take the advice of the chief engineer or follow his own opinion, superinduced, perhaps, by the persuasion of the president of the Grand Trunk Pacific whose company did not have to pay the cost? Did he take the advice of Mr. Gordon Grant on that question? Mr. Grant, in a letter of December 3, 1912, to the Minister of Railways, which was read to this House just about a year ago, said —I will only read that part of his letter referring to momentum grades—

In so far as this concerns the Transcontinental railway.

That is, the question of virtual or momentum grades—and virtual, momentum and velocity grades are all the same thing.

I always was, and am still of opinion that virtual grades should have been used whenever it was practical and economical to do so, and that a very large amount of money could have been saved by their use, as the standard of grade adopted, together with the general topography of the country traversed by this line, effect a combination in favour of a virtual grade that an engineer will rarely or ever meet with.

Here is the chief engineer of his own commission assuring the Government that if there ever were circumstances under which momentum grades should have been introduced, the Transcontinental railway presented these circumstances. Here was a perfect example for the introduction of momentum grades. He goes on:

I may also add that, in so far as I am personally concerned in this matter, while I was employed on this line, as a locating engineer, I used in my location virtual grades whenever it was practical, economical and common sense to do so.

I leave you to judge of my surprise when orders came from Ottawa that these grades would not be allowed, and that the profiles so made must be changed. This was accordingly done, which greatly increased the cost of construction, without in any way, benefiting the line as regards operation.

Here is the chief engineer selected by the hon. gentleman himself, a man in whom my hon. friend still has confidence, in whose integrity and capacity he is compelled to profess confidence at this hour—this engineer, against his own best judgment and under compulsion of orders from Ottawa, builds this road on a non-momentum grade scale at huge cost to the country, and without any saving at all in the operating cost, and he leaves us and the country to judge of his surprise when these orders came from Ottawa.

Had these grades been adopted, where conditions warranted, if they did, the sags so introduced could have been removed wholly or in part by the operating company, at one-half the cost of contractors' prices.

But the hon. gentleman prefers not to save half the cost. The infatuation under which he laboured during his occupancy of the portfolio of Minister of Railways, seem to have led him to spend money just as rapidly as he could spend it, believing he was building a monument for Sir Wilfrid Laurier. And he seems to have felt that the more digits he could add to the cost and the more millions he could pile on this pyramid of folly, the measure of the greatness of his deed would be the grossness of his guilt. He sits in front of me and proclaims that he was right in defying his chief engineer.

Mr. GRAHAM: At the time Mr. Grant made that report as to momentum grades, he was not chief engineer.

Mr. MEIGHEN: Did the hon. gentleman take his advice as to momentum grades after he was chief engineer?

Mr. GRAHAM: I do not think my hon. friend will find that Mr. Grant, except in one or two instances, gave advice as to momentum grades. Grant did not pretend to be chief engineer at the time he wrote that report; he got his orders from the chief engineer.

Mr. MEIGHEN: He got his orders from Ottawa, he says. But did the hon. gentleman take his advice as to momentum grades after he became chief engineer? In two most important instances the hon. gentle-

man took his own opinion instead of that of his chief engineer.

The evidence is on file to show that the chief engineer before him was overpowered from Ottawa and that he was not allowed to exercise his own best judgment by this Transcontinental Railway Commission and the Minister of Railways and Canals. As a result finally of being impeded in the fair discharge of his duties by these orders from Ottawa, he threw up his post as chief engineer and retired from the service altogether.

Mr. GRAHAM: Mr. Grant did not do that.

Mr. MEIGHEN: Mr. Grant took his orders from Ottawa, Mr. Grant did it against his best judgment and on account of being compelled to do it he was made a party to the extraction from the treasury of this country of $6,200,000 which is chargeable to the policy of hon. gentlemen opposite.

Now, the hon. member for South Renfrew says that he is afraid of the snow and the ice of this country, and that therefore he refused to sanction momentum grades. Did he ever ask the chief engineer about snow and ice? Did he ever ask him if this gentleman from the southern States—

Mr. GRAHAM: No, Chicago; get it right.

Mr. MEIGHEN: From Omaha.

Mr. GRAHAM: No.

Mr. MEIGHEN: I think I am right when I mention Omaha because he reduced the grades of the Union Pacific. My information is that he did reduce the grades of the Union Pacific, but that he reduced them from two and a half per cent down to one per cent. That was the revision on the Union Pacific grades, and if you have a reduction of gradients to one per cent there is not so much need of introducing momentum grades as there is if you get down to 0.4 per cent or 0.3 per cent. It is then that the momentum grade is imperative in the interest of common sense and economy because you have not as much latitude in locating and constructing your line as you have with a one per cent grade. Momentum grades are introduced not when the gradient is high but when the gradient is low. If the gradient is high you can get economy without the momentum grade, but if the gradient is low you cannot.

Mr. GRAHAM: Then why did the hon. gentleman say that the momentum grade is used on the Canadian Pacific railway, when the Canadian Pacific railway has a grade of over 0.4 per cent?

Mr. MEIGHEN: Because, in the revision of their grade, they reduced the gradients.

Mr. GRAHAM: By the momentum grade?

Mr. MEIGHEN: It is when you get a 0.4 per cent grade that you want momentum grades. When the Canadian Pacific were getting their 0.4 per cent grade the momentum grade was regarded as an economic consideration and one in the interest of the road. But when the Transcontinental Railway Commission were getting a 0.4 per cent grade they flung economy and common sense to the winds. That is the difference between the Transcontinental and the Canadian Pacific railway.

As to this engineer from Omaha who reduced the grade of the Union Pacific from two and a half to one per cent. This is the engineer from the southern States who writes up to the Canadian people and tells them that the Laurentian and granite rocks in this northern country which have withstood the elements for ages, will be disintegrated beyond all recognition if exposed to rain and ice. That is the suggestion he makes with reference to the granite of northern Canada. The enigma has so frightened the hon. member for South Renfrew that he says that momentum grades are going to interfere so much, under conditions of snow and ice and frost, with the operation of the road and are going to impede trains to such an extent that it would not be right to introduce them. I desire to direct the attention of the hon. member for South Renfrew to the opinion of his own chief engineer, in whom he had confidence, in whom he still has confidence and whom he did not consult apparently at all on this question of snow and ice when he was in a position to consult him and when he should have taken his advice. Here is what the chief engineer of the Transcontinental railway says about it. I do not think it is too much to ask that the hon. member for South Renfrew should concede that the people will be a little better justified in taking the opinion of the chief engineer, to whom he entrusted this work, aided and abetted by the opinion of the leading engineer upon the Canadian Pacific railway and aided, abetted and supported by the opinion of every man who has

had to do with the great, successful railways of this country, rather than the opinion of a man from Omaha on the question of snow and ice. Here is what Mr. Grant says in a letter addressed to me on the 25th March:

Mr. PUGSLEY: Of the present year?

Mr. MEIGHEN: Of the present year. Mr. Grant says:

> In accordance with your verbal request for a statement regarding the contention of a certain engineer who lives in the southern states that momentum grades are objectionable in a cold climate, and that they are objectionable for the reason that a train of empty cars is liable to stall on them, and also that they are objectionable in the case of a broken down engine;
>
> I may say that the movement of a train over a momentum grade is affected by climate, length of train, and the inability of a broken down engine to haul her load, exactly the same as any other grade, no more and no less; or in other words there is nothing to your southern friend's contention.

Mr. GRAHAM: Does Mr. Grant say: There is nothing to your southern friend's contention?

Mr. MEIGHEN: The only error is apparently that he thinks he is my southern friend instead of the hon. gentleman's. Here is the opinion of the hon. member for South Renfrew in regard to Mr. Gordon Grant:

> Is there a man in this House who will say that Gordon Grant is crooked or incapable? They know that such a charge could not lie because he is kept in the employ of the present Government, and is an able, competent and honest man.

Mr. MEIGHEN: Now we have shown what the position has been with regard to momentum grades. I think it will be admitted that up to the very last no regard whatever was paid to the dictates of discretion in deciding before the conditions and the topography were known, that momentum grades would never be allowed to exist on the Transcontinental railway. The verdict of Mr. Gutelius and Mr. Lynch-Staunton is supported by every tittle of evidence that is before the House. It is disputed in no sense whatever by the witnesses brought here by raking with a fine tooth-comb through North America and Europe by the hon. member for South Renfrew. It stands to-day unmolested and undisturbed, and the responsibility for the damage that has resulted is on the Government then in power and particularly on the hon. member for South Renfrew.

There is something else. The hon. gentleman maintains that everything was all right in the way of the tenders. I will follow up one or two of the tenders in order to ascertain whether or not the remarks of the hon. member for South Renfrew were justified in relation to them. I shall take up at the present time contracts Nos. 16 and 17. I want to refer to them particularly because the hon. member for Carleton (Mr. Carvell) last night, in very vigorous language to which he is not a stranger, endeavoured to bring home to the present Government the responsibility for the loss to the country in connection with contracts Nos. 16 and 17. The undisputed facts of the matter appear to be that these two contracts, representing some 204 miles of railway north of the northern shores of lake Superior, were let at the request of the Grand Trunk Pacific on October 29, 1908, to Messrs. M. P. and J. T. Davis. The contract price was a huge figure, running up into the millions, and at the time the contract was let the conditions were such that whoever tendered on it would find very great difficulty in reaching the scene of their labours and getting their supplies and their men there. As a consequence, it must have been contemplated that the tenders that would be received in answer to the advertisement would be more than ordinarily high. The tenders were more than ordinarily high. The conditions in the advertisement were such that the contractors had to start the work at once, and that the work had to be completed on the 31st day of December, 1910. If I am wrong as to the date, I hope my hon. friend will correct me.

Mr. GRAHAM: The date is not very important.

Mr. MEIGHEN: The date makes a great deal of difference, because, unfortunately, it proves a very important statement made by the hon. member for South Renfrew to be incorrect. Contracts Nos. 16 and 17 were let separately to Messrs. M. P. and J. T. Davis. That firm took contract No. 16 and contract No. 17. The tenders were high, inordinately high. I do not know what the average would be, but they varied in excess of the average of the other tenders received, which were high enough, from say 10 per cent to 50 per cent to 100 per cent. The prices on some of the items tendered for were 100 per cent higher than the prices of the other tenders for the same work. Some were very little higher.

Mr. GRAHAM: All over the line?

Mr. MEIGHEN: Yes, all over the line. On solid rock the price was 20 per cent higher than the average, on loose rock 40 per cent, on common excavation 50 per cent, and on other items the price was 100 per cent higher.

Mr. GRAHAM: What ones would be 100 per cent higher?

Mr. MEIGHEN: I will get the information for my hon. friend. It is in the Gutelius report. It was on rip rap.

Mr. GRAHAM: Never mind; go on.

Mr. MEIGHEN: The reasons for the high tenders doubtless were the inaccessibility of the locality and the difficulty that would be encountered in getting supplies and men to the scene. But, under compulsion, at all events under the dictation of the Grand Trunk Pacific Railway Company, the commission deemed that they ought to advertise for tenders on that work, and ought to compel the tenderers to commence operations at once and to finish both contracts before the 31st of December, 1910. That is what they deemed advisable in the public interest, and they deemed it in the public interest that, in order to secure that completion, these excess prices had better be paid. What resulted? The contractors did nothing at all on that work in 1908; they did nothing at all up to September, 1909, except to send a party from Jackfish bay to the scene to see how best to get in their men and their supplies. The party went up in the winter and came back in the spring. The contractors rested on their oars from the spring until the fall and did absolutely nothing. In September of that year, the time approaching rapidly when the steel was to be laid at least close up to the extremities of these contracts from east and west, they sold their contracts to Messrs. O'Brien, Fowler and McDougall Bros., under an agreement which reserved to them 10 per cent profit on the same. They were to get 10 per cent of the total sum that would come to Messrs. O'Brien, Fowler and McDougall Bros. on the completion of the contract. Nothing more was done until, I think, December and all that was done was on contract No. 16. About 12½ per cent of that contract was done when the whole of the contract should, under the terms of the contract, have been completed. As to contract No. 17, not one dollar was invested in it; not one spade was put in; nothing at all was done until three months after contract No. 17 should, under the terms of the contract, have been completed. The hon. member for South Renfrew told us in the House the day before yesterday that immediately those contracts were taken over and before the expiration of the time, Messrs. O'Brien, Fowler and McDougall Bros., were on the ground. They were on the ground on contract No. 16; but they were never on the ground and did not do a tap on contract No. 17 until three months after the work should have been completed. The hon. member for South Renfrew said: It is true we approved the assignment from the Davis firm to Messrs. O'Brien, Fowler and McDougall Bros.; it is true the Transcontinental Railway Commission approved in September, although they knew at the time they approved, that Messrs. Davis and Davis, were in default; that they had not gone on immediately with the work; that they had not taken the steps they should have taken in prosecuting the work in order to fulfil the contract, although they knew that all this firm had done was to send a party into the district; that the party had gone back over one route in the spring of 1909 and that this firm had done nothing whatever between the spring and the fall when the contract was to be assigned.

Mr. GRAHAM: My hon. friend says Messrs. O'Brien, Fowler and McDougall Bros.; he means Davis.

Mr. MEIGHEN: Messrs. O'Brien, Fowler and McDougall Bros., did not come on the scene at all until September 29, 1909. What I was pointing out was that the hon. member told the House that the only time, if any, when the commission would have been justified in cancelling the contract of Messrs. O'Brien, Fowler and McDougall Bros., would have been at the time when the contract should have been completed, and at the time when he said they were on the work, actually doing construction. That was a mis-statement comparable with what he called the colossal blunder of the hon. acting Minister of Railways (Mr. Reid), who in estimating the cost of the Transcontinental railway dared to include the seven years' interest, instead of calling it a subsidy.

Mr. GRAHAM: He said that it was for rental purposes.

Mr. MEIGHEN: Well, I will not be diverted from my argument just now. My hon. friend told the House that the contractors were on the ground and at work

on the contract. That is true in regard to contract No. 16; but they had never started work on contract No. 17 until three months after the work should have been completed. Yet the hon. gentleman argued that the Transcontinental Commission could not have legally cancelled that contract.

Mr. GRAHAM: Will my hon. friend let me explain what I did say? We agree absolutely except on this, that I made the explanation that in discussing contracts Nos. 16 and 17, as they covered a continuous stretch of road and as the same firm had them, I would discuss them as one contract.

Mr. MEIGHEN: From that the hon. gentleman drew the conclusion that, inasmuch as the contractors were on the ground when the work should have been completed there could have been no cancellation. That conclusion was a wrong one, because it had no application to contract No. 17 at all. My hon. friend said that it would not have been legal to cancel the contract any sooner and that it was right that the commission should approve these two contracts. It must be remembered that before they got the notice that the contracts were assigned to Messrs. O'Brien, Fowler and McDougall Bros., the Prime Minister of Canada and the Chairman of the Transcontinental Railway Commission had both been notified that, inasmuch as these men had never gone on the ground and had never done a tap and inasmuch as the time was approaching when the road was to have been completed from both ends, the circumstances that justified the increased prices were removed and that as a result the commission should take advantage of the circumstances and secure tenders that were justified by the conditions then existing. They declined to do anything. The hon. gentleman has stated that he found a lawyer who has given an opinion that the Government could not cancel these contracts. I asked this lawyer's name, but he intimated that the lawyer was so sensitive that he did not like to have his name divulged.

Mr. GRAHAM: I did not make that statement. I do not see why the hon. gentleman should continually misquote me. I said they could not be cancelled without there being a chance of an action.

Mr. MEIGHEN: Does the hon. gentleman only mean that inasmuch as O'Brien, Fowler & McDougall Bros. might have started an action for which they had no ground, that therefore it would not be wise—

Mr. GRAHAM: I did not say a word about O'Brien.

Mr. MEIGHEN: Davis, then—what's in a name? Unless they had ground for an action that would enable them, in the opinion of the commission, to succeed, surely the contract could have been cancelled. Does the hon. gentleman's lawyer undertake to say that they had grounds—

Mr. GRAHAM: Does the hon. gentleman ask me the question?

Mr. MEIGHEN: Yes.

Mr. GRAHAM: He says: 'Unless in the opinion of the commission they had grounds for action.' I read the letter of the chairman, who is a lawyer of some eminence, stating that he thought they had grounds for action.

Mr. MEIGHEN: That is not the question. I wanted to know what this lawyer really said, who would not give his name. Does he say that in his opinion there would be ground for an action on which they would succeed?

Mr. GRAHAM: I would not say that.

Mr. MEIGHEN: What the lawyer said, then, was that in his opinion they might start an action whether they had ground for it or not?

Mr. GRAHAM: Anybody might do that.

Mr. MEIGHEN: If the commission were afraid—

Mr. GRAHAM: They were not afraid, and so stated.

Mr. MEIGHEN: No, but the hon. gentleman's lawyer appears to have been afraid. I know that the chairman stated in a letter that they could not cancel the contract. Now, I want to ask the ex-Minister of Railways if he could possibly imagine circumstances under which any contract could have been cancelled by these commissioners if this one could not. Is he going to lay at the door of his commission the charge that they entered into a form of contract with contractors that left them no means whatever for cancelling the contract if the contractors defaulted? But here these men lie back and do nothing, not a tap, nor do their assignees, until three months after the contract should have been completed; and the hon. gentleman wants to lead this House to believe

that even three months after the contract should have been completed, with nothing done, the contract could not have been cancelled. If the commission entered into a contract of that kind, their guilt is far heavier than it would be if they had simply failed to cancel the contract. The commission had a contract with these men which says:

> Section 8. The said work shall be commenced immediately after the execution of this agreement and shall be proceeded with continuously and diligently, and under the personal supervision of the contractor, until completed.

Was it commenced immediately? Was it carried on with diligence, or in any other way? It was not. So that clause of the contract undoubtedly was violated. Then further:

> Section 20. In case the contractor shall make default or delay in diligently continuing to execute or advance the works to the satisfaction of the engineer, and such default or delay shall continue for six days after notice in writing shall have been given by the engineer to the contractor requiring him to put an end to such default or delay, or in case the contractor shall become insolvent . . . the commissioners may take the work out of the hands of the contractor.

Then, it goes on to deal with the liability of the contractor. Not only have the commission power, in case of delay to sweep the contractor out of existence so far as profits go, but they can do more, they can hold him liable in case of loss. That is what it plainly means. No one will say that M. P. and J. T. Davis did not violate section 8; and, having violated section 8, they come under the condemnation of clause 20. So, if ever circumstances could arise that would justify the commission in cancelling a contract and advertising for new tenders, those circumstances arose in that case. I have nothing to say against the lawyer who advised the hon. gentleman that action might have been entered; I note that he was wise enough not to advise him that the action would succeed; so, I do not see why the hon. gentleman should be so sensitive about divulging his name. So, the contracts might have been cancelled, and if cancelled, the Government would have saved at least ten per cent, because the prices were more than ten per cent above the average price for the rest of the line. The responsibility is on the commission for that loss, and that loss amounted to $740,000. But the hon. gentleman says: We never in any way consented to this ten per cent being granted. It is true, he says: that in the deed of transfer between Davis and O'Brien, Fowler and McDougall Brothers, provision is made for reserving ten per cent, but we knew nothing about it when we consented to the assignment, and when I ratified it as Minister of Railways I did not know of it. But the hon. gentleman is wrong. If not, it would be better for him if he were. For, in the assignment to which they consented was embodied a reference to an agreement of transfer made between Davis, and O'Brien, Fowler and McDougall Brothers which made that agreement part of the assignment, and when they ratified the assignment they ratified the agreement. The hon. member says: The agreement never was on the file; we never ratified the agreement; it was made part of and embodied in the assignment but they did not know what was in it. Does he mean to say that the commission assented to assignments the purport of which they did not know? Does not he think it would be their duty to have the assignment on file, and that if they did not have it, the guilt and responsibility was greater than if they had consented to it after having it on file? But the hon. member for Carleton (Mr. Carvell) says that this Goverument is responsible, not the old Government; he says this Government should keep out the $5,000 a month, because there is a provision whereby the commission could elect to keep out $5,000 a month as damages in case of default or delay in the conclusion of the contract. And I am told that, with an air almost of thunder, he defied this Government to do this, the intimation, the insinuation, being, I am told, that in some way we were tied up to Davis. I wonder if the hon. gentleman was aware of the seriousness of the statement he made. He says the duty is upon this Government to insist on the $5,000 a month provided for in the agreement. I know it was within the power of the commission to elect whether or not, in this case as in any other, they would call for the $5,000 a month in case of default. But I wish to tell the hon. member, though he is not here, and I tell the ex-Minister of Railways (Mr. Graham) who did not correct him, that the commission which he appointed, the commission that operated under the old Government, themselves made that election and determined to release M. P. and J. T. Davis from that contract. I will read to the hon. gentleman the minutes of that meeting of the commission where they decided, that they would not insist on that $5,000 a month, thus relieving them of that $5,000

a month; and they did it at the request of the head of the Grand Trunk Pacific Company who themselves were contractors and who stood to lose if that penalty were exacted. In order to find out whether it was the duty of the late Government to call for that $5,000 a month, to whom did they write?

They wrote to Mr. Hays, President of the Grand Trunk Pacific railway, which company themselves were contractors for 353 miles of the line; which company themselves were in default and liable to the $5,000 penalty. That is where they went for advice. I have here a certified copy of the resolution which was passed by the Transcontinental Railway Commission. It reads:

> Extract from the minutes of a meeting held by the commissioners of the Transcontinental railway at Ottawa, May 26, 1911.
>
> Hon. S. N. Parent in the chair.
>
> Copy of letter from the chairman, dated 19 April last, to Mr. Charles M. Hays, president Grand Trunk Pacific Railway Company, and Mr. Hays' reply dated the 23rd instant setting forth his views in regard to the enforcement of the penalty clause in the various contracts for construction, advising his opinion that there is nothing to be gained in attempting to enforce the penalties prescribed, and that, should the commission determine upon this policy, it would meet with the approval and concurrence of the Grand Trunk Pacific Railway Company, was read, and it was
>
> Resolved, that in view of all the circumstances as set forth in the reports of the chief engineer, the various district engineers, and in the letter of president Hays of the Grand Trunk Pacific Railway Company, that no attempt be made to enforce the penalty clause in the various contracts for construction, unless, and except in such cases only, as the chief engineer can establish a clear cause of default on the part of the contractors, on account of which the public interest has suffered; and that a copy of the correspondence and of this resolution be forwarded to the honourable the Minister of Railways and Canals and to the Auditor General.

By that resolution the commission put upon the chief engineer the responsibility of showing that by reason of the delay the country suffered. How could he show that, when the rest of the line was not built up? Consequently, by virtue of that resolution they absolutely shut the door upon any collection of the $5,000 per month from M. P. and J. T. Davis.

At six o'clock the House took recess.

The House resumed at eight o'clock.

Mr. MEIGHEN: Mr. Speaker, I can conclude all I have to say on the subject of contracts by a reference to the discussion that has so far preceded in regard to sub-letting. It will be recalled that the report of this commission finds that as nearly as may be estimated, some $8,800,000 has been lost to the country by means of injudicious advertising and injudicious restrictions in the matter of the letting of the contracts. That was assumed by the hon. gentlemen who have spoken as a finding on the part of the commission that the whole principle of sub-letting was a vicious principle, and that it was not in the public interest. The commissioners were attacked in the severest terms of censure because they had attacked the principle of sub-letting, and the Government of to-day is charged with having no faith in that commission and with violating its findings because they absolutely countenanced sub-letting on the Hudson bay railway and the Welland canal. I have not been able to find any assertion in the report of the commission that there is anything inherently wrong in the principle of sub-letting. Nobody objects to the principle of sub-letting properly applied, the public interest being safeguarded. But is it only sub-letting that has taken place here on the Transcontinental railway? It is not sub-letting at all, in the main it is selling of the contracts; it is securing something under conditions that shut out competition, and, having secured it, turning it over to somebody who does the work that the primary contractor should have done, at an immense profit. For example, the sale of the Davis contract is not a sub-letting. O'Brien, Fowler and Macdougall Bros. may have sub-let afterwards. That is very frequently done. The contractors first sold, then the man who purchased from them sub-let, and perhaps two or three under him got contracts. Then they would sub-let again, and so on. All that has taken place under the conditions stipulated by the late Transcontinental commission. What was one condition that was severely to be criticised? The commission advertised for tenders and called for a certain deposit with the tender. But they inserted in their advertisement a provision that, not only did they require that deposit, but that they reserved to themselves the right to demand any further sum whatever, within a certain number of days; and unless this sum was put up, not only would the man who tendered be in danger of losing the contract, although he might be the lowest tenderer, but he would face the probability of losing his cash deposit. In other words, he delivered himself bodily into the hands of the com-

mission, because the commission might exact from him something which he could not possibly comply with. Surely no hon. gentleman opposite will say that this was not such a restriction as was calculated to shut out competition. I am at a loss to imagine what other purpose such a restriction could have had, or what the commission could have had in mind were it not to shut out competition in reserving to themselves the right to practically ruin the tenderer if he did not comply with conditions that in advance he knew nothing of. The clause to which I refer is as follows:

> And I hereby declare and agree that in case of refusal or failure to execute the said contract with the commissioners and also to furnish the approved security required—

Not knowing what it was.

> —to an amount not exceeding one-third of the estimated total consideration of the contract, for the faithful performance of the said contract, within ten days after the acceptance of this tender, the said cheque shall be forfeit to the said commissioners as liquidative damages for such failure, and all contract rights secured by the acceptance of this tender shall be forfeited.

The checks demanded varied in amount from $75,000 to $400,000, and the subsequent security varied from nothing up to about $1,300,000 in the case of the McArthur contract. But the point is that the contractor had no possible conception, except that he was limited to one-third of the whole contract price, as to what he might be called upon to do. If that were a justifiable proceeding in this case is it not in all Government contracts? Why is an exception made in the case of the Transcontinental Commission and their contracts? The Minister of Finance of that day saw that the effect of regulations that the Transcontinental Commission had put into effect, in this restrictive clause, inevitably would be to so discourage prospective tenderers as to limit very seriously their number and consequently to enhance very materially the cost. He wrote a letter of protest, asking that the commission should recede from that position and should be content with such conditions as prevailed in other Government contracts. But his request was not heeded and the Government of the day did not see to it that fair and reasonable conditions only were insisted upon, and in that way at least one element of cost eliminated. They decided in this case, just as in every other case, whenever a question was before them on one side of which was a reduction of cost and on the other side an increase of cost, they decided every time on the extra expenditure, whatever it might be. Was there ever a question or dispute that reached the commission, or, above the commission, reached the Government, that was not decided in favour of the extra expense? So that the attack on the system of advertising and tendering and the consequences of that system is not an attack on sub-letting as sub-letting, and all that the commission say is that one step in the process at least might have been eliminated, there might have been one clause struck out and one element of the cost prevented if a fair system had been adopted. In that way they estimate that $8,800,000 was wasted. The basis of this estimate is only a fair average between the first cost and the second cost, not between the first cost and the actual cost to the men who performed the work.

I have not yet dealt with the question of curvature. It is very much akin to the question of momentum grades. On the question of momentum grades I think it has been clearly established that a loss to this country of $6,200,000 has resulted; and in estimating that loss regard has only been had to what could have been saved after the line of railway was decided upon. If this stringent condition had not been laid down before the line was decided upon, a line of railway would have been laid out on which there could have been saved a great deal more than $6,200,000. The commission were not in a position to say what might have been done unless they went to work and laid out a different line altogether. They could only say what could have been saved with the line of railway as it is, had it not been determined that, come what might, and at whatever cost, momentum grades were to be absolutely debarred. As to curvature the very same words, in effect, apply. They determined in advance, without any regard to the topography of the country, and having no interest at all in what the result to the country might be of their determination—they determined in advance on a 6 degree curve as the maximum, no matter what the cost of that 6 degree might be to the country. The hon. member for South Renfrew says the curvature is as important as the grade, because if you increase the curvature you produce exactly the same result in retarding operation as if you increase the grade. That is very true. And he says, if you have an 0.4 per cent grade and then add

10 degrees curvature, you are doubling the 0·4 per cent grade; and the conclusion that might be very reasonably drawn from that is that you cannot afford to add a maximum curvature to the maximum gradient. That is to say, the conclusion put generally is this: That in curvature just as in gradients you cannot indiscriminately apply the maximum. You have to use judgment, take into account all the conditions surrounding each case, and decide each one on its merits. That is all that the commission report asked for. What is there in the argument of the hon. member for South Renfrew as against this proposition, that where the road is on the level it would not have been advisable to have used a 10 degree curvature instead of a 6 degree, even if a large saving might have been made thereby. Ten degrees curvature on the level is equal to 0·4 per cent grade. You are not in any way diminishing the hauling power of an engine: the engine could take just the same load as if that 10 degree curve were not there, but they had no regard whatever for this consideration, and just because it would cost more in all cases to have a 6 degree curve, they insisted upon it. They appear to have acted on the principle that the greater the cost the better for Canada, and in all cases they decided on the greater cost irrespective of the merits of the particular case in hand.

It is a fact established by the evidence, and which the hon. member for South Renfrew will not deny, that the 10 degree curve is used on all the important railways in this country. It is the best in the judgment of the Canadian Pacific railway and other roads, and surely the judgment of successful Canadian roads is the judgment that we would be wise in following. It is said by the expert from Omaha that the commissioners just made a wild guess in getting at $602,000 as the saving that would be effected if they had gone as far and no further than a 10 degree curve on this road, without in any degree diminishing the hauling capacity of the engines or the operating value of the road. I do not know upon what Mr. Berry bases his remark. The commission assert that they went thoroughly into it. They took the evidence, and I have before me a statement showing every detail by which this $602,000 was arrived at for one-quarter of the line; and inasmuch as the rest of the line bears a fair comparison with this one-quarter of the line in this regard, I think four times that is what the commission would be expected to arrive at as the saving on the whole line. I would like to place the figures on 'Hansard,' if I may do so.

Mr. SPEAKER: I understand that the same privilege has been extended to the ex-Minister of Railways; therefore I take it that the House will consent in this case.

Mr. MEIGHEN: The statement is signed by Alexander Ferguson, division engineer for the road, who was specially deputated to look into this question. He was division engineer under the late Government as well as under this. His letter, dated September 17, 1912, reads as follows:

> The following is an approximate estimate of the saving which could have been made in the construction of the line between the Quebec bridge and mile 200 westerly had the use of 10° curves been allowed with no tangent between spirals instead of 6° curves with 300 feet between spirals.
>
> I am familiar with the whole of the ground covered in the estimate and believe the figures given to be within 10 per cent of what could have been saved.

Mileage.	Quantities returned in Estimates.	Percentage could have been saved by using 10° curve.	Quantity could have been saved.	Price.	Amount.

			Total for Contract 11.....		146,510 00

Summary :

Mile 0 to 150 Contracts 9 and 10..... ....$455,000 00
Mile 150 to 200 part of Contract 11..... ..... 147,000 00

Total..... .....$602,000 00

Yours truly,
Alex. Ferguson,
Division Engineer.

In this statement, Mr. Ferguson says:

I am familiar with the whole of the ground covered in the estimate and believe the figures given to be within 10 per cent of what could have been saved.

That is certainly right, and the evidence of Mr. Tye and of Gordon Grant, I think, shows that it could have been saved without any detraction whatever from the operating value of the road. The figures are given in the above statement in detail and the total is $602,000, so that meets the objection levelled by the expert from Omaha, Mr. Berry. It was not a wild guess at all, nor a guess of any kind. There is the report of an engineer who worked under the late Government and who works under this, and I think four times the saving on one quarter of the rough country will represent what would have been saved on the whole rough country.

The hon. gentleman also produced a paper read by Mr. MacPherson on the 29th of January, 1909, before some society in Eng-

land as to the traffic-bearing powers of the National Transcontinental railway. This is what the hon. gentleman quoted from Mr. MacPherson:

> The distance on the Transcontinental railway will be 1,351 miles—

That is from Winnipeg to Quebec which is not correct.

> —and, as the maximum eastbound grade is 21.12 feet per mile, compensated for curvature, the heaviest locomotive built to-day, a 'Mallet Articulated Compound,' fully described in the Railway Age Gazette of April 30, 1909, is capable of hauling on this grade a gross load behind the tender of 4,290 tons.

I need not read all of this as it is already on 'Hansard.' I wish to point out a curious error into which MacPherson has fallen, and in which he has been followed by the hon. member for South Renfrew, a mistake which I have no doubt Mr. MacPherson would readily acknowledge; and that is, that a mallet, articulated, compound engine is such an engine as is used in mountain country. It is used on a heavy grade, on short distances, and has not the steaming capacity to pass from one division to another and consequently could not be used over the line. Mr. MacPherson says that if they could use a mallet, articulated, compound engine a load of 95,333 bushels of wheat could be hauled. Every one of us knows, and the hon. member for Edmonton will support me, that a car of wheat averages about 1,000 bushels. A small car runs to about 600 bushels; a medium car 800 bushels, and a large car about 1,000 bushels. I have figured it out on large car basis and on Mr. MacPherson's figures the engine would have to haul about ninety-seven cars in order to carry the load he mentions. I want to ask the hon. member for South Renfrew if he ever heard in his life of an engine pulling ninety-seven loaded cars? I think he will find out if he makes inquiry of any operating engineer that the coupling bars would break, that the very outside is sixty-five cars and that ninety-seven cars could not, under any possible circumstances, be drawn even if the engines were strong enough to draw them. There are two very serious errors in the foundation of the table that my hon. friend put upon 'Hansard' and from that table he left out entirely the overhead expenses of running the railway. There might be a useful deduction drawn in the way of showing the traffic-hauling powers of the National Transcontinental railway. I notice in the table also that he assumes, although I must say I could not find out by what process he arrived at that assumption, that on the average there will be 8·5 trains per day both ways between Winnipeg and Moncton.

Mr. GRAHAM: Not each way.

Mr. MEIGHEN: I think it says 'each way.'

Mr. GRAHAM: No, I was asked if it were each way and I distinctly said 'no.'

Mr. MEIGHEN: I have it before me:

> This gives an average for the whole line from Winnipeg to Moncton of 8·5 trains per day, both ways.

Mr. GRAHAM: It is not each way at all.

Mr. MEIGHEN: I think I can be excused from misunderstanding my friend's language. I do not know by what process he evolved that particular piece of evidence. Perhaps the reason is that I had not time to figure it out in two hours. At all events, he left out a very important element of cost, and I want to point out that the annual rental from Winnipeg to Quebec is about $4,200,000. On the basis of calculation of 25,000,000 bushels of wheat being shipped, it would require sixteen cents per bushel to pay the rental alone. On 50,000,000 bushels of wheat which, compared with the other traffic, would be a very large computation, and I do not think we could add everything else in and possibly hope to exceed that, you will have to get eight cents a bushel to pay the rental and then you have to pay the whole cost of operation and overhead expenses on top of that.

Mr. GRAHAM: Does my hon. friend not think it fair to admit that there will be something drawn besides wheat?

Mr. MEIGHEN: Yes, but I do not admit that there will be 50,000,000 bushels of wheat.

Mr. GRAHAM: No, and there will not have to be.

Mr. MEIGHEN: If the whole import of the United Kingdom is 260,000,000 bushels, how can we expect to get 50,000,000 bushels for the Transcontinental, 50,000,000 bushels for the Canadian Northern railway and from 75,000,000 to 100,000,000 bushels for the Canadian Pacific railway? To do that we will have to control the whole of the wheat from the rest of the world. So, I say, taking everything reasonable into consideration, it would require a traffic that would be fairly represented by 50,000,000 bushels

of wheat, at eight cents a bushel to pay the rental alone.

Mr. GRAHAM: If you did not draw anything else.

Mr. MEIGHEN: The hon. gentleman himself left out passenger traffic. It is impossible to estimate everything. Does the hon. gentleman believe that the whole traffic will exceed a traffic represented by 50,000,000 bushels of wheat?

Mr. GRAHAM: It would probably exceed the traffic that would be represented by half of 50,000,000 bushels of wheat anyway. The fallacy that my hon. friend is falling into is that the rate on grain is very low but the rate on manufactured goods going back, and goods coming from the old land, is much higher and you have to calculate that you will get as great returns from the other traffic as from the wheat.

Mr. MEIGHEN: I do not think that is the case. I do not think that the hon. gentleman will say that it is the experience of other roads that they get anything like the traffic in that they get out.

Mr. GRAHAM: Not in tonnage, but returns in money.

Mr. MEIGHEN: Or returns. I remember the hon. gentleman's remarks on another subject, a subject that I really thought he would be correct on if he could be correct on anything. He objected very strenuously to the evidence of Mr. Tompkins and to the conclusion from the evidence that there had been a huge loss in the construction of engine houses. It will be remembered that Mr. Thomas Tompkins was the witness who gave evidence to a man of practical experience that the fortunate gentlemen who, under the peculiar system of the commission, got the building of these engine houses, out of a total cost of $203,911.78, had been able to pocket in profit $115,209.19. They had secured over 50 per cent, or more than half of the whole cost as profit. That was the finding of Mr. Tompkins. My hon. friend said that Mr. Tompkins was not a good authority on the subject. He said that he was an old friend of his down in Brockville, that he had known him quite well some fifteen or twenty years ago when he did know something about building engine houses, but that he had forgotten all about it, just as my hon. friend has forgotten how to set type. I am afraid the hon. gentleman has not followed the career of this gentleman very closely. I took occasion to make inquiries with reference to this matter further, and ascertained that Mr. Tompkins was the man who built the engine houses for the Canadian Pacific railway at Chapleau and at Westmount in 1906, and that he was the man who had been the most recent constructor of engine houses in Canada, and who had built them actually about the time that the engine houses were built on the Grand Trunk Pacific. Mr. Gutelius having known his friend (he having built engines under him), and knowing that he was actually engaged in the same work at approximately the very same time, I think my hon. friend will have to admit that no better witness could have been secured. The hon. gentleman has now to defend the process of letting contracts that gave the contractors $115,000 of profit out of a $203,000 job.

There is another phase of the subject that I want to speak of now, namely, the subject of trestles and, in connection with that, the subject of over-break. The hon. gentleman has a very poor opinion of wooden trestles. He thinks that they are going to rot, and consequently they never should be put up. We all know that wooden trestles, or wooden anything else, will not last forever. We all know that in their nature they are more or less temporary. No one has ever disputed that, but the question that is before us is this: Was it in the interest of good business, in the interest of ths railway and in the interest of the country that wooden trestles be put there for the same purpose that wooden trestles are put on every other road? That is the question before us. Wooden trestles are used for two purposes. Where they require, or desire, to have a train fill over a valley, wooden trestles of a very temporary character are used, in order that the small donkey engines of the contractor may go over them and in that way dump the loads of earth into the fill. That is only one purpose. They are not used very much for that purpose, but there is another. Wooden trestles are used on all roads in order that a temporary structure may be used for such valleys as I have mentioned, where a train fill, or cement or steel structures are ultimately intended, in order that we may provide more cheaply in the end for the ultimate character of the construction intended and in order that the trains may carry the filling over the line and that the filling may be dumped into these structures as time goes on. The hon. gentleman says that that is a very poor system because there is danger of fire

and no doubt there is some little danger of fire. He says that on account of that danger a little will be added to the cost of operation, but he has made no calculation to show that the danger of fire and the consequent cost of guarding against it bear any relation whatever to the saving that would have accrued if this system had been adopted. He simply tells us that we cannot adopt it, no matter what the saving may be. The privileges that ordinary railway companies have are denied to this Government in the building of a railway. It may be that the Grand Trunk Pacific would use this system in their western line. He assumed that they did use it. He admitted that they built wooden trestles wherever it would pay them to do so, and when they had no barrier to prevent them doing so. He knows that the Grand Trunk Pacific railway in western Canada, ever since their line has been constructed, and that is many years ago, has used wooden trestles and are using wooden trestles still. There are large and long structures of wooden trestles right in Manitoba, and that road has been operated over them for years, and doubtless will be operated over them for some time to come. Why should not the same system of building have been adopted here, inasmuch as it is in the interest of economy, and without in any way detracting from the value of the road? Why is it that the Government of Canada was debarred, as the hon. gentleman says they were, from adopting any system of economy that was in the interest of the road and of the country, and that was open to any other railway company to adopt? My hon. friend says, we could not do that, for if we did the Grand Trunk Pacific would not take over the road. We have bound ourselves, he says, to deliver over to them a railway actually completed and ready for operation. Well, Mr. Fielding, his predecessor in charge of this work, did not take that view. He, as shown by the report, very clearly took the view that the same course was open to the then Government as was open to any other builder of a railway, and that they could build a road which would save money to the people of Canada, so long as they did not detract from the value of the road. Mr. Fielding clearly pointed out to the House, that the road would be completed and ready for operation, although at the same time there would be work to be done upon it in the future that would bring it to its ultimate high standard. If that course was open to the commission and it was good railway business, would the commission be justified in shutting themselves out from that right later on? Were they justified in delivering into the hands of the Grand Trunk Pacific Railway Company the keys to the treasury of this country? Surely they were the guardians of the money of the people of Canada. If it was in the interest of good railway businesss to adopt this method of building the Transcontinental railway, why should they have shut themselves out of that right by a bargain with the Grand Trunk Pacific Railway Company? Does the hon. gentleman still adhere to the statement that the Grand Trunk Pacific Railway Company would refuse to take over the road if there were wooden trestles? Is it not a fact that the Grand Trunk Pacific Railway Company not only did not so refuse, but encouraged the use of wooden trestles just for the purpose that I have mentioned, and that the Transcontinental Railway Commission, having an eye to the enhancement of the cost, decided against the Grand Trunk Pacific Railway Company, and built the road without wooden trestles and paid 55 cents a yard for train-haul fills to contractors, thus encouraging the contractors to overbreak and everything else in order to get the 55 cents a yard train-haul fill? I will read the evidence of Mr. Woods, engineer for the Grand Trunk Pacific Railway Company. He was examined by the commission and here is what he said on page 432:

Q. Did the Grand Trunk Pacific have anything to do, so far as you know, with the elimination of wooden trestles on the Transcontinental railway ?—A. They did not.

Q. Your company would not have objected to the construction of wooden bridges, as is the usual practice on other new railways in Canada and the United States ?—A. They would not; they even recommended it in some instances.

Q. There are advantages in the construction of wooden bridges on a new railway through a new country, are there not ?—A. There are, in my judgment.

Q. Will you tell us, in your own language, some of the advantages that occur to you ?

In Mr. Woods' answer he shows the various advantages that accrue from wooden bridges. (Reading):

Q. Permanent wooden trestles ?—A. Yes. I think this is generally done in the construction of lines of any magnitude, aside, possibly from Government work here in Canada.

In the face of that evidence, the hon. gentleman tells us that the company, whose engineer says that they recommended that system of construction to the Transcontinental Railway Commission, who actually tendered themselves and wished to get the contract for filling these wooden trestles at twenty-five cents a yard and

who would thereby have saved millions of dollars to this country, would refuse to take over the road if there were wooden trestles. The hon. gentleman says that the Grand Trunk Pacific Railway Company would not take over the road. Is there a portion of the National Transcontinental railway system that is going to be used more than the line between Winnipeg and Fort William, which runs from Winnipeg to Graham, and then by the Grand Trunk Pacific from Superior junction down to Fort William? I think not. Does he tell us that there are no wooden trestles on the line from Graham to Fort William? Why, it is dotted with them. That is the system the Grand Trunk Pacific Railway Company adopted in building that line in that northern country, a line analogous in every respect to the National Transcontinental railway. If the hon. gentleman will go over this line—I speak now on the authority of one who has been over it—he will find that the road from Graham to Fort William is built in accordance with profiles and the plans; he will find that there is not overbreak to the extent of thirty or forty per cent, as Mr. Macfarlane swears there is allowed on the contract from Graham to Winnipeg. He will find that the excavation there is cut out within reasonable proportions of the original design, and that overbreak is kept down to a minimum through that rough country. But if he looks over the McArthur contract from Graham to Winnipeg, he will find that the road is forty per cent wider than it ought to be; and that overbreak has been indulged in to the extreme. What is the reason? It is because Mr. McArthur was encouraged to indulge in overbreak. He was encouraged to put in dynamite here, there, and everywhere, because on whatever he blew out he got fifty-five cents a yard using it for train-haul fill along the line. Where you have wooden trestles, where you use the system that other railways adopt in railroad building, you do not hold out a prize to the contractors to indulge in the luxury of overbreak. That prize was held out in this case. The engineers of the company, under the compulsion that they themselves have referred to, consented to allow the overbreak that was so thrown down, inasmuch as it was used in train fill. As a consequence, the contractors had a certain right on their side when it came to the arbitration and, as a result, the arbitration board, to which my hon. friend referred, was not in a position to judge of this overbreak qeustion on its own merits. His argument on this overbreak is this: It is true there was some overbreak; it is true there was more overbreak than there should have been; twenty per cent is all that you ordinarily are allowed; there was thirty to forty per cent here, but that is all very well, for we provided an arbitration board to look into that. The arbitration board consisting of Mr. Grant, Mr. Kelleher and Mr. Schreiber, looked into this question and decided that a reduction of $500,000 was all that could be made and that settled the question, and Messrs. Gutelius and Lynch-Staunton had no further right to interfere in the matter. Does that settle the question? What situation faced the arbitration board? This thing had been going on for years and years. The engineers of the Transcontinental Commission had been passing on this overbreak. Contractors had been encouraged to throw down this great amount of rock, and to make 40 per cent of overbreak instead of 20 per cent, while the rock and clay and loose rock thrown down had been used in the construction of the road instead of trestles. The consequence was, the contractors had rights at this time, which, if the Transcontinental Commission had done its duty, they never would have had. These rights had to be taken into account by the Arbitration Board. But the duty of the investigating commission was to ascertain whether, if the Transcontinental Commission had done its duty, a greater sum would not have been saved in overbreak. And the investigating commissioners found that if the Transcontinental Commission had done its duty, the cost of the reduction in overbreak would not have been merely $500,000 but would have been $678,000 more. The question is not settled by the award of the Arbitration Board. Their finding, doubtless, on the facts before them and with the arguments which the contractors could advance, was a fair finding, I do not challenge that. But the arguments that the contractors could advance would not have been possible, they could not have been advanced, if the Transcontinental Commission had done its duty and forbidden this overbreak.

Now, the hon. gentleman is very much concerned about the wooden trestles; for, he said, they would no sooner have been built than the Railway Commission of Canada would have compelled them to be filled up, and the Grand Trunk Pacific would have had to fill theirs up before this if they had been under the jurisdiction of the Railway Commission of Canada.

I should like to know what the hon. gentleman's authority is for saying that the Railway Commission of Canada had decided that the wooden trestles had to be filled up. I never heard of such a ruling of the board. If there is a wooden trestle that has had its day and is dangerous to the public, certainly then, as in every other similar case, the Railway Commission would decide that it must be replaced by something safe. But there has been no ruling by the board that wooden trestles are not to be allowed to serve their time on the Transcontinental, the Canadian Pacific, or on any other road. I will read the latest ruling of the commission on the subject, and I will ask the hon. gentleman to point out anything that warrants him in saying that the Railway Commission has set its face against wooden trestles. This was made on the 2nd of August, 1910.

It is ordered and directed:
That every railway company subject to the legislative authority of the Parliament of Canada, operating by steam power any railway or railways, any part or parts of which is or are constructed of, or upon wooden trestles the whole of which cannot be seen from an approaching train for a distance of at least one thousand feet, do, during the months of May, June, July, August, September and October of each year, provide, place, and keep a watchman, trackwalker, fire alarm signals, ballast flooring, zinc covering over caps and intersections or approved fireproof paint, as hereinafter directed, for the purpose of protecting the said trestles from fire; each such company having the option of adopting any of the said foregoing methods of protection.

This shows that the Railway Commission of Canada has not in any way set its face against wooden trestles, but only insists, in this as in every case, that due precautions shall be taken for the public safety.

Mr. BORDEN: It specifically recognizes them.

Mr. MEIGHEN: Not only specifically recognizes them, but directly endorses them. Does the hon. gentleman (Mr. Graham) imagine that the cost of keeping a man or the cost of having fireproof paint bears any comparison to the saving that would have accrued to the people of Canada if this more sensible and economical manner of constructing the road had been adopted—in the end resulting in just the road the hon. gentleman says the country set out to secure? What is the interest on about $5,000,000 that this country has lost because the Transcontinental Commission refused to adopt the methods of the Grand Trunk Pacific, the Canadian Pacific railway, the Canadian Northern railway and other roads in utilizing wooden trestles to secure economical and at the same time thorough construction?

The hon. gentleman tells us that the commissioners' report is entirely wrong also in its conclusion on the Cap Rouge viaduct. The Cap Rouge is a small river, or creek, I understand, that flows into the St. Lawrence between the Quebec bridge and the city of Quebec. In order to cross this they had a steel viaduct which, of course, must have a substructure. In this case the commission saw fit to adopt the character of substructure used in the Quebec bridge, that is, to have the pneumatic caisson instead of the open caisson. As I understand it, in the case of an open caisson, piles are driven until the solid rock is reached, and on the floor formed by the top of these piles, the caisson sits, composed of a wooden structure made up of twelve-by-twelves within which the concrete is built, resulting in a square block of concrete resting securely on the top of the piles. As against this there is the pneumatic caisson, which consists of the concrete being built on the solid rock by means of a pneumatic system of getting air into the enclosure and by keeping out the water, enabling the workmen to work. The hon. gentleman says the commission would never have been justified in using the open caisson on the Cap Rouge viaduct, but had to use the pneumatic caisson such as are used for the substructure of the pillars of the Quebec bridge. He gives as a reason that there was a great depth of mud there, and that the waters of the St. Lawrence come up the Cap Rouge river and reach the viaduct itself, and would have injured the open caisson. I want to tell the hon. member that not only is there no ground for any such fear in this case, but that he himself is the authority who has proven that there is no such ground. He himself, in case of a viaduct over the Sturgeon river between Graham and lake Superior junction, where the depth and the mud is greater, where the danger is greater,—I am speaking on the authority of engineers who have been there and made an examination—authorized and ratified the use of the open caisson. Not only has he done it at Sturgeon river viaduct, but also in the viaduct over the Vermilion river. In both instances, the very reasons he gave for forbidding the use of open caissons in the Cap Rouge viaduct existed and existed in greater degree —if they are reasons at all. The fact is, there is no such reason, and I speak advisedly—I speak on the authority of gentlemen

who know—when I say that he cannot point to any instance of this most expensive class of pneumatic caisson in the case of any similar structure on the face of the earth. What is the use of a structure of this kind in the case of the crossing of a little creek or river like the Cap Rouge? The hon. gentleman did not produce any authority whatever for his assertion that there was any danger from the use of open caissons in connection with the Cap Rouge viaduct, and he has failed to justify the conduct of his commission and failed to justify his own conduct in not saving to the people of this country the enormous sum of a quarter of a million dollars that was lost in that regard alone.

I come now to the question of the Chaudière cut. The hon. gentleman believes that the commission is entirely wrong in this regard also, and that the sum of $351,000, which, it is asserted, might have been saved the country if due regard had been had for economy in connection with that cut would not have been saved. The Chaudière cut is an expensive one, a mile, I believe, from the extremity of the Quebec bridge. At the Quebec bridge, the hon. gentleman himself admits, there is a one per cent grade, and if only a one per cent grade had been insisted upon in the Chaudière cut instead of a four-tenths grade, a saving of $351,000 would have been made. If the train is fully loaded, a pusher engine has to be used wherever there is a one per cent grade, but if the train is not fully loaded, a pusher engine is not used. Is it good common sense, therefore, to throw away $351,000 rather than run a pusher engine a mile from the Quebec bridge? Surely that appeals to hon. gentlemen; why not let a pusher engine run a mile from the Quebec bridge, where a pusher engine has to be used on fully-loaded trains? The engineer himself who reported on this matter, and whose advice the hon. gentleman should have followed, said that the prospects for heavy traffic were not such as to warrant the belief that there would be, within a reasonable number of years at all events, any necessity for a pusher engine over the Quebec bridge or over the Chaudière cut; consequently there was not only a lack of excuse for running a pusher engine out a mile from the bridge, but there was no excuse whatever for throwing away this $351,000 of the public money. It is the same all down the line; it is the same from one end to the other. The pole star set before the Transcontinental Commission seems to have been to put all the money they possibly could into the Transcontinental, and then boast about what a fine road they had. If a business concern that has set about to establish, we will say, a shingle mill, were to insist upon having marble floors, metal roofs, stained glass windows and all other appurtenances which are more fitting in a bank than in a shingle mill, they could justify their course on all fours by the very argument with which hon. gentlemen opposite have attempted to justify the course taken in connection with the Transcontinental railway. The proprietor of the shingle mill could say: We have the best floor in any shingle mill in North America; we have the finest roof to be found in any shingle mill on the continent; we have stained glass windows which are found in no other shingle mill on the continent; we do not need to equate the results so far as profit against capital expenditure is concerned—that is the argument of hon. gentlemen opposite. Even though we are wrong, they say, for goodness' sake do not say so or you will frighten the financiers of the world. The hon. ex-Minister of Railways has been deeply concerned for the financiers of the world and the reputation of the Grand Trunk Pacific for many years. In 1910, when the terrible state of the financial world that he to-day so vividly depicts and so much deplores did not exist, he had the same fear in his soul that he has now. In 1910, when the then member for Simcoe told the House and told the country and told the world that this Transcontinental railway was going to cost $218,000,000, the hon. gentleman pleaded, for goodness' sake do not say a word about it, or we would frighten the financiers of the world and they would turn their backs upon the Grand Trunk Pacific project. He told them that it was doing an injustice to the Grand Trunk Pacific and doing an injustice to Canada for us to dare say to the financiers of the world that this road was actually going to cost $218,000,000. We were not telling the financiers of the world the whole truth at that time; we were telling them only part of the truth. On the same basis we know to-day that it will cost $234,000,000 to build the Transcontinental railway. I do not know why in 1910 we would have been justified in taking the advice of the hon. member for South Renfrew and in refusing to tell the financiers of the world even half the truth. I do

9 p.m.

not know on what principle we in this House are justified in refusing to disclose the truth about any Canadian project. I do not know that in the end truth does much harm to anybody. The hon. gentleman says it is not the truth, but he says we should not say it, even if it be true. It was not the whole truth in 1910; it was only part of the truth; but so far as it went it was absolutely true, and he was afraid of divulging even that part of the truth. In 1914 he does not want any part of the truth divulged. He says we are wrong in doing so because we are criticising not only the management of this thing but the Government of the day that had control of it as well. Are we to sit in this House and refuse to criticise the Government of that day? When we were in opposition did we criticise it; that was our function as members of the Opposition, and if hon. gentlemen opposite are going to follow the injunction of the hon. member for Renfrew and refuse to criticise the Government of the day for fear of frightening the financiers, had they not better start for home at once? There might have been a Government in power not long ago that did not wish the truth to be disclosed about Canadian ventures, either private or public, but that Government went out of power on September 21, 1911. The Gutelius-Staunton report does no injustice to the Grand Trunk Pacific in disclosing the actual facts. The Government of the day does no injustice to them or to anybody else in making known the facts so disclosed, and the Government of the day would be derelict in its duty to the financiers of the world and to Canadian institutions generally if they showed any disposition to withhold in the slightest degree the facts of this or any other case. There is a new ruler in Israel just now, and the facts are going to be disclosed as long as that ruler holds the reins of power.

The hon. gentleman says that the cities of St. John, Halifax and Quebec will be dreadfully alarmed when they hear that there are such things as small momentum grades on the Transcontinental; that they will be fearfully alarmed when they hear that wooden trestles, used on every other railway in the world, are actually used on the Transcontinental, and he calls upon the Prime Minister of the day, the Minister of Marine and Fisheries and the Postmaster General to rise up as three righteous men to save these three cities from the awful catastrophe which will come upon them if the world finds out that momentum grades and wooden trestles are actually used on the Transcontinental. I want to assure the hon. member for South Renfrew—I do not need to assure the cities of St. John, Halifax and Quebec; I do not need to assure this country—that the Government of the day can be entrusted to see to the interests of Canadian ports and to the interests of Canadian lines.

The determination of hon. gentlemen opposite to guard so faithfully the interests of Canadian transportation is a determination of very recent growth. It did not have an abiding place in their hearts two and a half years ago. It is only two and a half years since they professed utter indifference to the interests of Canadian transportation lines and of Canadian ports. If only they could get some further outlet for the products of western Canada and of Canada as a whole, they did not care whether it was over American or over Canadian lines. The Government of to-day will see to it that there is no practical degrading whatever, and no diminution of the operating value of the Transcontinental railway by any system of momentum grades or any other system. But at the same time they will see that money is not extracted from the treasury of this country for purely fanciful results; and the people of St. John, Halifax and Quebec well know that their interests are secure in the hands of the Government that securely guarded them two and a half years ago, as they have been guarded at all times when such a Government has been in power. They well know that no traffic will be lost to them through any action of this Government in respect of the Transcontinental railway.

Now, Sir, I say in conclusion, the Gutelius-Staunton report stands unmolested and undisturbed by the attack of the hon. gentleman. He has used terms of abuse directed against the authors of that report. I do not think the terms he used were justified. He did not apply them to any other man in connection with this whole enterprise. He has turned the vials of his wrath upon them. He has described them in a variety of terms. The same course was followed by the hon. member for Carleton, N.B. (Mr. Carvell). But neither of these gentlemen has taken a single finding of that report on the facts: the ex-Minister of Railways has not taken a single assertion in that report or any of the evidence that backed up that assertion, and shown that any of these items which in the report were stated to be possible savings to the people of this country could not have been saved and saved without depreciating in any degree the operating value of that road.

That is the essential finding of that report, that stands and will stand. The $40,000,000 is made up of savings that could have been made without detracting from the operating value of that road, or its value as an asset to the people of Canada; and in that $40,000,000, the $4,500,000 which, in the opinion of Mr. Staunton, was spent illegally is not included. The $40,000,000 includes only that part of the $4,500,000 which was not expended for the Transcontinental railway at all, but for the Grand Trunk Pacific, and for which there was no justification whatever. There is $40,000,000 beyond that. Then there are the damages that will be assessed against this country in connection with the northern route into the city of Winnipeg, by reason of the failure of the Government then in power, before they finally determined upon the northern entrance, to come to terms with the Canadian Northern railway, to make a fair bargain with them. These damages are attributable to the mismanagement of the hon. gentleman (Mr. Graham), himself, and of the commission who had charge of this work. These damages are still unknown, but they are estimated by the company injured at $10,000,000. This is not included in the $40,000,000 of savings that the commission say might have been made in the laying out of the line itself, if before that line was laid out, hon. gentlemen opposite had not determined on this rigid and unnecessary adherence to strict rules. A line could have been secured, had the rules been fair and reasonable and more in consonance with the rules adopted by other great railways, which, the commissioners say, would have meant a saving of millions of dollars to this country in addition to the millions mentioned in the report itself.

The responsibility of that is on the hon. member for South Renfrew, but it is in a still greater degree on the right hon. the leader of the Opposition. He is the gentleman who, himself, against the advice of his Minister of Railways of that day, fathered this institution and foisted it on the people in the form in which it was foisted on them. He is the one primarily responsible, he has proclaimed it as a monument that is to make his name immortal in this country and throughout the world. I think the Gutelius-Staunton report has had this result if it has had no other; it has shown the right hon. leader of the Opposition and the hon. member for South Renfrew that the National Transcontinental railway is not now such a monument as they would wish to have pressing down upon their remains.

Mr. W. M. GERMAN (Welland): Mr. Speaker, I feel it something of a work of supererogation to discuss this report of Gutelius and Staunton after the very searching and thorough investigation which was made by the ex-Minister of Railways and Canals (Mr. Graham). He made a speech in this House on which I wish to congratulate him and which, in my opinion, ranks with anything ever heard within the walls of this Chamber. It dissects that report from beginning to end and leaves it standing in all its hideous nakedness. I was much interested to hear the Solicitor General (Mr. Meighen). I saw some days ago a photograph of that hon. gentleman in one of the Toronto papers and under it were the words 'the rising hope of the Conservative party,' and I was anxious to hear how high that hope would rise to-night on this great subject. But, Sir, I am free to say that if the Conservative hopes cannot rise higher than that, they will not reach any very great height of political splendour. The hon. gentleman, just before resuming his seat, said that the object of an opposition was to criticise. Well, Sir, it struck me very forcibly that the Solicitor General thought he was still in opposition. He was continually referring to the hon. member for South Renfrew as the Minister of Railways and Canals, and his whole demeanour was similar to that when he occupied the Opposition benches. His speech was, to my mind, a rather narrow special pleading, without that breadth of argument and that wealth of original suggestion which you would have expected from this rising hope of the Conservative party.

This report has been submitted to members of Parliament and the hon. member for South Renfrew has moved an amendment condemning it. Of that amendment I fully approve.

I say that not from the first to the last page of this report, is there a single earmark of a desire on the part of these commissioners for an impartial investigation, or to show that they felt their official responsibility. The honourable the Solicitor General says that we complained that Mr. Staunton took part in politics, and he says that Mr. Staunton had a right to do as he liked. Mr. Staunton was a royal commissioner, appointed by warrant of the Crown to consider of the matters referred to him and to deal impartially and fairly between the parties interested. Is it like

an impartial judge to deliberately step off the bench and announce himself as counsel in the proceedings? That is what Mr. Staunton did. One would have supposed that the royal commissioners investigating a matter of this great importance, touching the honour and integrity of high class business men in this country—the commissioners of the Transcontinental railway—would have said to these gentlemen: 'We are investigating this matter and we are going to take evidence; that evidence may in some measure reflect upon you, and we will give you the opportunity either to be present when the evidence is taken or to be represented there by counsel.' Did they do that? No. They held a star chamber investigation. They called such witnesses as they liked and when they liked; they took such evidence as suited themselves; they embodied in the record such evidence as suited their purpose and having done that, they toss the report into this parliamentary arena and say: 'On that partial evidence we base our report of these great wrong-doings.' I say that it was an absolutely partisan investigation; it was not an inquiry by a Royal Commission, but an inquiry, highly paid for by this Government, to find out, if possible, some way of condemning the Transcontinental Commissioners, and I say deliberately that from the beginning to the end of that report there is not one tittle of evidence to support the findings. It is based on improper evidence and its suggestions and insinuations are insulting to high class business men of this country. What do we find? Take the very first paragraph which has already been dealt with.

> Until the appointment of Major R. W. Leonard in the autumn of 1911, no member of the commission had any experience or knowledge of railway building or operation.

It has been said that it was not necessary that the members of the Transcontinental Commission should be experienced railway men. With that I quite agree. The Minister of Railways and Canals himself is not a railway man, yet he is building railways and canals continually. Major Leonard is a very estimable gentleman whom I know exceeding well and I have not a word against him, but it is not unfair to him to say that he never built or operated a railroad in his life and knows no more about operating and building railroads than I or any other man in this country. Why put him up as a paragon of perfection in the construction and operation of railroads?

What further do they say?. The hon. ex-Minister of Railways and Canals has referred to the last paragraph of the finding in regard to extravagance. Let me refer to another paragraph on page 24. And I submit to this House and to the country that a more slanderous and disgraceful statement never was published by any man, let alone royal commissioners, than is to be found on that page. Every man in this House and every man in the country knows of the late lamented Charles M. Hays. Every man who knew him knows that no more high-minded man, no man of finer character or greater ability in railway building ever lived in Canada. He was the man that was practically instrumental in starting this great Transcontinental railway. We remember the first speech he made in the Railway Committee in support of this great national undertaking, and it was that speech practically that influenced the Railway Committee in support of this project. What do these commissioners say?

> We unhesitatingly find that the Grand Trunk Pacific Railway Company, instead of discount-enancing, has rather encouraged this inexperienced commission in its exravagant expenditure on this railway.
>
> If the railway company really expected to operate this railway when completed according to the terms and at the rental provided in its agreement with the Government, we must attribute its want of proper care to its indifference to the interests of its own shareholders or its desire to so increase the cost of construction of the 353 miles of railway, for which it was contractor, so as to reap the largest present profit possible therefrom.
>
> It was a very credulous commission indeed if it relied on its contractor, the Grand Trunk Pacific Railway Company, interested as such in high classification, to criticise improper classification where other contractors were concerned, or to expect that that contractor would be astute to discourage expenditures where they were the builders of one-seventh of the line.

I say that that statement is a slander against the Grand Tunk Pacific Railway Company presided over in England by Mr. Smithers, a man of the highest class, and managed by a board of directors of the highest class in Great Britain, and presided over in this country by the late C. M. Hays at that time. I want to ask the Prime Minister and the members of his Government if they wish to stand as sponsors for that statement? If they do they have a different feeling in regard to this matter than I believe they have.

I wish to make a few references to the arguments of the hon. Solicitor General in reply to the hon. member for South Renfrew. He spoke of the entrances into Winnipeg and complained that the railway ran

into Winnipeg over a high trestle and on a high embankment. I do not know whether he is in favour of an embankment or not, but I will tell the hon. gentleman this. The embankment is there because the Railway Commissioners of Canada ordered that it should go in on a trestle and that the trestle should be filled. That is the only way you can go in. If the hon. gentleman says you cannot go in on a trestle or an embankment, he might as well say the Grand Trunk railway, the Canadian Northern railway and the Canadian Pacific railway should not go into the city of Toronto on a trestle. The Railway Commissioners ordered them to go in on a railway elevated on a viaduct. In the same way the Transcontinental railway is going into the city of Winnipeg. I have very little to say as to that. My hon. friend from South Renfrew (Mr. Graham) explained the situation fully. He stated that the Transcontinental railway has the best entrance into the city of Winnipeg. The Solicitor General controverts that and says to the contrary. I am willing to let it stand at that without any further word or suggestion from me and I am willing to let these statements go before the people of the country for their verdict. I venture to say they will approve of the statement of my hon. friend from South Renfrew rather than the statement of the hon. Solicitor General.

Then, we come to another matter that touches us, as far as the Transcontinental railway is concerned, a little more nearly; and that is in connection with the Transcona shops. The Solicitor General says that Mr. Staunton may very fairly differ from any other legal authorities in the country. The Solicitor General admits that Mr. Lynch-Staunton is wrong in his law.

Mr. MEIGHEN: I do not say that.

Mr. GERMAN: Silence gives consent. His department says so, the Minister of Justice says so, Mr. Newcombe, the Deputy Minister of Justice, says so and the Law Clerk says so. If the Solicitor General differs from them and joins Mr. Lynch-Staunton, very good for him. At any rate, he says there is no reason why Mr. Lynch-Staunton should not differ from other legal authorities. There is no reason why he should not. Mr. Lynch-Staunton is a very good lawyer and a very estimable gentleman and I have not a word to say against him. He is a most bitter partisan. I do not believe that in the making of this great world the good Lord ever created a greater partisan than Mr. George Lynch-Staunton, and I do not believe he ever tried to. But as I have said, he is an estimable gentleman. It is not the fact that he differs from all the legal authorities that I complain of but it is that he says: in law you should not have built these shops, and because you have built them you have wasted $4,500,000 of the people's money. If he had said: In law I do not think that you should have built them, but all the other legal authorities are against me; the Minister of Justice, the Deputy Minister of Justice, all the great lawyers in Canada, are against me on the law; Sir William Whyte, the arbitrator, is against me as a matter of practice, and although I think they are all wrong, as I have a right to think so, still, you being right, the expenditure of this money was proper. Why did he not say that? Is that not what a royal commissioner should have said and would have said if he had been a fair royal commissioner? But, no, he said: You are all wrong in law, and being all wrong you have wasted $4,500,000 of the people's money. This expenditure is represented throughout the country as being an extravagant and wasteful expenditure. As a commissioner he should have stated: I think you are wrong in law but as you have been held to be right, the money is properly expended.

My hon. friend said something about the cost of the line. We know the cost of the line and we know the cost of other lines. That matter has been fully gone into and it is not necessary for me to weary the House by reiterating these figures. Then he goes on to speak of what we call momentum grades. It would be well to understand just where we are in connection with this matter. There is without doubt much difference of opinion amongst engineers as to whether there should be momentum grades or whether there should be actual grades of 0·4 per cent and 0·6 per cent as provided for. Why has this been done? Why was provision made for a 0·4 per cent grade against eastbound traffic and a 0·6 per cent against westbound traffic and why was it adhered to strictly by the commissioners? Were they right or wrong? It was simply owing to the fact that the Grand Trunk Pacific engineers, the engineers of the Railway Commission and the engineers of the Government got together and devised specifications for the construction of this railway and they prepared such specifications and designs as Mr. Hays and the directors of the railway company desired. The board of English directors, represented

by Mr. Hays in this country, said: We want a railway built from Winnipeg to Moncton with a grade of 0·4 per cent against eastbound traffic and a grade of 0·6 per cent against westbound traffic; that is the road we will take over and pay rental for, that is the kind of road we expect you to build. That is the kind of road that was intended to be built when they started out and they continued building that kind of a road until this Government began to degrade it. There is the whole question. The Grand Trunk Pacific built and are building the same class of road west of Winnipeg. They wanted a road from the Atlantic to the Pacific oceans with that kind of grade and they had sufficient knowledge of the country through which this road was running to know that that class of grade could be easily built and without exorbitant cost. It is folly to say that one engineer favours the momentum grade and that another engineer says it is all wrong. I do not care whether it is right or wrong so long as the agreement for the building of the National Transcontinental railway is maintained. That was the policy of the Government. That policy was submitted to the people of Canada in 1904 and received their strong approval. It was submitted to the people in 1908 and again received their strong approbation. In 1908, after we had heard in this House, ad nauseum, the same class of talk which has been given us to-night by the Solicitor General against this high class railway, the people approved of it and they will approve of it now.

Mr. MEIGHEN: The hon. gentleman is mistaken; it was before the 1911 election that these statements were made.

Mr. GERMAN: It was not an issue in the 1911 elections at all. There was another issue in that election. It really makes no difference in reference to these momentum grades, if one admits that the grades established by the engineers of the Grand Trunk Pacific and the Transcontinental Railway Commission are the grades under which the road was to be built and are the grades which will make it the best railway not only in Canada but in America.

It would take the largest hauls of any transcontinental railway on the American continent. My hon. friend the Solicitor General, speaking of grades, said it was impossible for ninety-seven cars to be hauled in one train. He is wrong. There is a railroad in Canada to-day that hauls not only ninety-seven cars, but one hundred cars or more.

Mr. NESBITT: One hundred and twenty cars.

Mr. GERMAN: Yes, one hundred and twenty cars, and that road is the Michigan Central railroad.

Mr. MEIGHEN: Loaded cars?

Mr. GERMAN: Loaded cars. I have counted them time and again.

Mr. MEIGHEN: How did you know that the cars are loaded?

Mr. GERMAN: They are sealed and I presume they are loaded. In going from Chicago to New York these trains pass the town of Welland in which I live. On the Canada southern division of the Michigan Central there are just the same gradients that there will be on this National Transcontinental railway.

My hon. friend says that the Canadian Pacific railway have momentum grades. I presume they have. I believe that every railroad, in its initial operations, as a rule establishes these momentum grades to some extent in order to cheapen the cost of construction. The grades are taken out later on as time progresses and as circumstances warrant.

Mr. MEIGHEN: These have been put in just lately in the revision of the road.

Mr. GERMAN: I quite appreciate that fact, but it is to get rid of one per cent grades, which are much heavier grades than these momentum grades are.

Mr. GRAHAM: To get over the hump.

Mr. GERMAN: I know pretty well about the Canadian Pacific railway west of Winnipeg, although perhaps not as much as does the Solicitor General. I know that the Canadian Pacific railway west of Winnipeg has been totally rebuilt, at least once and probably more than once. Which would be the cheaper, to build a first-class road in the beginning or to build a second-class road and then in a few years rebuild it? The question really comes down to that. Mr. Hays, the directors and the engineers of the Grand Trunk Pacific railway company thought that it would be better for them, in order to carry the great traffic which they anticipated they would get right from the start, to have a first-class road built immediately and that they would rather undertake to pay the interest on the cost of construction of a first-class road from the start than to have a second-class road from the start which would debar them from hauling the freight which they

expected to get and which they intended to go after. Consequently, they said: Build a first-class road and we will take the responsibility of paying the interest on it. Who will find fault with them for doing so? The hon. member for North Grey (Mr. Middlebro) last night rather insinuated that the Grand Trunk Pacific would never take over this road. They will never take it over if this Government degrades it so that they cannot carry the freight they expect to obtain. If the road is kept up to the standard at which it was maintained until this Government came into power, there is no doubt as to the Grand Trunk Pacific Railway Company taking it over.

My hon. friend (Mr. Meighen) spoke rather derogatorily of the capitalization and of the shareholders of the Grand Trunk Pacific Railway Company. I would like to tell him and this House and the country that, in the Act confirming the agreement with the Grand Trunk Pacific Railway Company we find that the Grand Trunk Railway Company of Canada, one of the wealthiest institutions of America, is behind this project; that it is compelled to take a large percentage of the stock of the Grand Trunk Pacific and hold it during the whole term of this lease, namely, fifty years. This company is bound to guarantee the bonds of the Grand Trunk Pacific Railway Company for the cost of construction over and above the bonds guaranteed by the Government. Therefore the Grand Trunk Railway Company are behind the carrying out of the agreement made by the Grand Trunk Pacific Railway Company. My hon. friend, forsooth, presumes to insinuate that the Grand Trunk Railway Company, composed of men of the highest class men in Great Britain, is endeavouring to keep up expenditure in the construction of this road so as to have an excuse to violate the terms of the contract. That seems to me to be absolutely and utterly absurd. Yet Messrs. Gutelius and Lynch-Staunton say that the Grand Trunk Pacific Railway Company have no idea of economy, and that they are trying to make a few paltry dollars out of their contracts for the construction of this railway. Everyone who knows anything about the matter knows why the Grand Trunk Pacific Railway Company entered into the field as competitors for the work. They made their reason absolutely plain at the time. They said: We will likewise go into the field as competitors so as to keep down the prices on these contracts; we will see what the work is going to cost and will bid ourselves and, if we cannot get the appliances to build the railway, we will sublet the work to other contractors at our prices and will see that the road is built at the proper figure and on economical principles. That is why they went into the construction. I presume they are quite satisfied to make the few dollars they would make just as any other contractor would be, but their primary object was to keep down the cost of construction.

My hon. friend says that momentum grades do not degrade the road. They make it more difficult for locomotives to haul trains over the road, as heavy trains cannot be hauled over a road with momentum grades as can be hauled over a level road. The primary object of every railway company on the American continent is so to reduce the grades of their line that they can haul the heaviest possible trains. The Grand Trunk Railway Company did that; the Canadian Pacific Railway Company is doing it too. Every railroad in the United States is doing it because they are compelled to do it in order to compete with the water routes in the hauling of freight. They are all the time bringing down their gradients to the lowest possible figure. Although a momentum grade may not so seriously degrade the road as to make it unfit for use, of course the company can haul the freight, but they cannot haul the quantity of freight and they cannot haul it at as low a figure.

My hon. friend (Mr. Meighen) says that he has never heard of Mr. Berry. My hon. friend is young yet. He will probably hear of Mr. Berry later on. He has heard of him at any rate in this discussion. I have heard of Mr. Berry and can corroborate what the hon. member for South Renfrew has said, that he is the highest railway authority on the American continent. What he does not know about railroad construction, about gradients and about the classification of a railway for freight haulage, there is very little use of any man in this country endeavouring to find out. What he says I fully and heartily rely on.

My hon. friend also spoke about the curvatures and the trestles. As to the trestles, I might say this. He read the evidence of Mr. Woods that the Grand Trunk Railway Company was willing that wooden trestles should be put in. What is the position?

They were willing they should be put in if the Grand Trunk Pacific were allowed to fill them in after, and thereby delay the operation of the lease for a couple of years and lose to this country 3 per cent a year

on the total cost of construction. They said: We will not take over the road as a going concern if wooden trestles are built, but we will fill them in and hold back the rental for that length of time. What would these hon. gentlemen opposite have said if that had been done? What a howl of indignation we should have heard from the Solicitor General then. He would have said: Why did you not carry out your agreement and build a first-class road?

In regard to curvatures the position is exactly the same. These matters were settled, as I have already said, between the Grand Trunk Pacific railway, through Mr. Hays, representing the English board of directors, the engineers of the Grand Trunk Pacific, the engineers of the Commission and the engineers of the Government. The class of railway then decided upon is the class of railway they set out to build, and that is the class of railway which should have been built without any degradation. To show that that was the intention, to show that that was the object of the Grand Trunk Pacific company, just so soon as this Government attempted to degrade the road by putting in momentum grades, they got a letter from Mr. Chamberlin, President of the Grand Trunk Pacific, saying: You are degrading the road, and we will not take it over. He immediately repudiates the proposition; he calls the attention of the Railway Commissioner, Major Leonard, this great railway builder, to the fact that the road is being degraded and the agreement entered into violated, and declares that if this continues the company will not feel bound to take over the road. And that letter stands there to-day a menace to this Government or to any Government in regard to the taking over of that road by the Grand Trunk Pacific. When you have it finished next year, ready to put trains on it and you say to the Grand Trunk Pacific: There is the road completed—his answer will be: There is my letter written two years ago in which I pointed out that you had degraded the road; and you have admitted through your Solicitor General in the House of Commons that that is the effect of your action, why, then, should we be compelled to take over the road? Has not the hon. gentleman placed in the hands of the Grand Trunk Pacific solicitors the greatest brief that they could hold for the maintenance of their case? The Government have violated the agreement with the Grand Trunk Pacific and will continue violating it unless they cease putting in momentum grades and get back to the situation which existed prior to the time when the former Commissioners were turned out.

Mr. MEIGHEN: While the hon. gentleman is on that point, will he be good enough to read the portion of the agreement that prevents the putting in of wooden trestles or momentum grades?

Mr. GERMAN: The whole thing was approved of—

Mr. MEIGHEN: Read the clause of the agreement.

Mr. GRAHAM: Go on with your argument; I will find it.

Mr. GERMAN: Now, the Solicitor General says that by reason of the ex-Minister of Railways having refused to make these changes, the country has lost $6,200,000. I defy him to find within the four corners of this evidence one iota of testimony to justify his statement.

Mr. MEIGHEN: Why did not the hon. gentleman ask me while I was speaking and had the evidence before me?

Mr. GERMAN: The hon. gentleman has the evidence before him.

Mr. MEIGHEN: No, I have not it now.

Mr. GERMAN: There is nothing to show that the country lost that money by reason of the ex-Minister of Railways refusing to change these grades. And what is more the contention that these grades should have been put in is not sustained by the evidence in this report. We have engineers saying that money would have been saved if momentum grades had been put in. They express themselves sometimes in percentages and sometimes otherwise. There is no evidence to show that any substantial sum of money would have been saved by putting in momentum grades. But they have shown what the whole object of this proposition was—a high-class road built as speedily as possible. We find that provided for in sections 42 and 43 of this agreement. And, Sir, it seems to me that the reading of these sections is sufficient to justify not only the conduct of the old commissioners but also that of the old Government in what they did, and enough to justify this Government in turning at once back to the standard which the old Government had set:

It is hereby declared and agreed between the parties to this agreement that the aid herein provided for is granted by the Government

of Canada for the express purpose of encouraging the development of Canadian trade and the transportation of goods through Canadian channels. The company accepts the aid on these conditions, and agrees that all freight originating on the line of railway, or its branches, not specifically routed otherwise by the shipper, shall, when destined for points in Canada, be carried entirely on Canadian territory, or between Canadian inland ports, and that the through rate on export traffic from the point of origin to the point of destination shall at no time be greater via Canadian ports than via United States ports.

How in the name of all that is sensible could the Grand Trunk Pacific, having a longer haul to carry the products of the Northwest to the Atlantic than the American lines have, secure traffic unless they have a railway of the highest possible standard? I say, that shows in itself the reason why this road was to be of high-class. The Act further says:

The company further agrees that it shall not in any matter within its power directly or indirectly advise or encourage the transportation of such freight by routes other than those above approved and shall in all respects, in good faith, use its utmost endeavours to fulfil the conditions upon which public aid is granted, namely the development of trade through Canadian channels and Canadian ocean ports.

Is that not itself a sufficient answer to the special pleading of the hon. Solicitor General? I submit that it is a plain answer to his suggestion with regard to the construction of this road. In order to haul freight as cheaply as it could be hauled over shorter routes, a high-class road had to be built, and the directors of the Grand Trunk Pacific asserted to the former Government: You build us that class of road; we will take it over and operate it on the rentals which he have suggested, and we will build up a through Canadian traffic which will develop your ocean ports, build up your great northern country and develop the whole of Canada. My hon. friend says that the railway will not get the traffic. I am loath to hear these little Canadians talk in the Canadian House of Commons. Many years ago, when the Canadian Pacific railway was being built, we heard the Conservatives shouting for a greater Canada: the products of the West would come teeming down to the East; the products from the old land would go forth to the West over this great transcontinental railway, and Canada would be built up and become a hive of industry through their magnificent diplomacy and their energetic endeavour. But when a Liberal Government comes along and begins the establishment of a new transcontinental railway, better in construction, running through a far better country, leading directly to Canadian seaports, these little Canadian Tories stand up and say: When you have built the road you will get no traffic; you will be unable to pay interest on the money; the Grand Trunk Pacific railway will not get traffic enough to pay the Government the amount of rental provided in the lease, and the whole thing will be a failure. I regret very much to hear that sentiment expressed at this day in His Majesty's House of Commons. I have greater faith in Canada than that. So far as the northern part of the province of Ontario is concerned, it will not be seven years, it will not be five years, before a profitable local traffic will be developed on that line which will go a long way towards paying the rental provided for in that agreement. Now I will read to the hon. Solicitor General the provisions of clause 7, chapter 21, of the National Transcontinental Railway Act. They are as follows:

In order to ensure for the protection of the company as lessees of the eastern division of the said railway, the economical construction thereof in such manner that it can be operated to the best advantage, it is hereby agreed that the specifications for the construction of the eastern division shall be submitted to, and approved of, by the company before the commencement of the work and that the said work shall be done according to the said specifications and shall be subject to the joint supervision, inspection and acceptance of the chief engineer appointed by the Government and the chief engineer of the company, and, in the event of differences as to the specifications or in the case the said engineers shall differ as to the work, the question in dispute shall be determined by the said engineers and a third arbitrator, to be chosen in the manner provided in paragraph four of this agreement.

Mr. MEIGHEN: I am quite aware that that clause is in the contract, but will the hon. gentleman be good enough to explain how that prevents the use of wooden trestles or momentum grades?

Mr. GERMAN: It would not prevent wooden trestles; it would not prevent momentum grades; it would not prevent saw-logs being used, if they were agreed to by the engineers, but momentum grades and wooden trestles and saw-logs are not agreed to by the engineers.

Mr. MEIGHEN: The hon. gentleman cannot say that momentum grades or wooden trestles are debarred by the specifications.

Mr. GERMAN: Mr. Chamberlin says they are, and he is president of the Grand Trunk Pacific railway. He will take mighty good care that these grades are put back before he takes over the road.

Mr. MEIGHEN: Just read from the specifications where they are debarred.

Mr. GERMAN: I am not reading from the specifications; I am reading from the statute authorizing the making of the specifications.

Mr. MEIGHEN: And the statute says that they are not debarred unless debarred by the specifications, and they are not debarred by the specifications.

Mr. MACDONALD: Are they provided for in the specifications?

Mr. GERMAN: My friend the Solicitor General will have to revise his legal opinions; he had better consult his friend, Mr. Lynch-Staunton.

Mr. MEIGHEN: Show me in the specifications where they are debarred.

Mr. GERMAN: In regard to the traffic, the hon. member for South Renfrew said that according to Mr. Tye, 8·05 10 p.m. trains both ways each day would develop a traffic and an income sufficient not only to pay all the working expenses and the rental provided for in the agreement, but to leave a fair margin of profit as well. I am strong enough Canadian to say that when the seven-year term expires, not 8.05 trains a day only, but 8·05 trains a day both ways—yes, and double 8·05 trains a day both ways will be running on that line.

An hon. MEMBER: You will have to change the Government first.

Mr. GERMAN: I am inclined to think the Government will be changed the very first time the people of the country are given an opportunity to do it, particularly when they thoroughly understand what the Government is doing in regard to this great national undertaking which they approved on two different occasions.

This country is big enough to maintain three transcontinental railways, and the Grand Trunk Pacific, being the best, will get the traffic. I do not wonder that the Canadian Pacific railway take a little umbrage at the high-class construction of the Transcontinental railway. I have heard men say, first-class engineers and leading railway men, that when the Grand Trunk Pacific railway is completed and in operation, the Canadian Pacific railway will have to rebuild their line in order to compete with the Grand Trunk Pacific—and they are doing it now. They will have to rebuild their line and bring down their grades; any man who knows anything about railroad operation—and I know a little about it by reason of having talked to prominent railway men—knows that the railroad which has the low grades gets the business and the railroad that has the high grades does not. My hon. friend dealt with the question of tenders, and in that connection I wish to make a reference or two to this precious document of Gutelius and Staunton, which says:

> The rules adopted by the commission in advertising for tenders, the unlimited security required to be furnished by the contractors, and the proposal to let the work for the most part in unreasonably large sections, resulted in only five contractors tendering for 806 miles of the railway, and eleven contracting firms secured all the work and sub-let it to upwards of 100 sub-contractors, who, had the work been divided into reasonably large sections and the security required in other governmental contracts only been exacted, would have in all probability competed in the bidding. As an indication of the handsome profits derived by these eleven firms, it appears that they were paid $8,800,000 in profits for that part of their work which they let to sub-contractors.

They say that by making smaller sections a greater number of bids would have been put in and there would have been keener competition. I have heard that said in this House. There is no large work undertaken in this day of the world which is let out in small sections; that is a thing of the past, when work was done by horses and scrapers and ploughs and shovels and picks and wheelbarrows and wagons. Then you would let out work in small sections. But now, when the work is done by means of steam shovels, steam drills and steam derricks, big sections have to be advertised. Why? Because the cost of the plant is so enormous that unless a contractor is offered a big section he will not bid, he will not take a small section. A contractor must have a section big enough to allow him to pay for his plant at least. The Welland canal has been referred to. I know something about that. I remember that when the present Welland canal was built, it was let out in small sections and hundreds of contractors were at work up and down the canal, many of them failing continually, and the Government was in trouble all the time with small contractors. What happens now? They are building a new ship canal with thirty-foot draft and enormous

locks, a canal which it is estimated will cost $50,000,000. It is divided into nine sections of an average of a little over $5,000,000 a section. There is one section, it is true, which is a very short one, only a mile in length, in which the work will cost $10,000,000. That had to be let in one section. There will be another section or two which will be short, but will cost a large amount of money. The average is over $5,000,000. What happened? Every small contractor in western Canada, yes, in the whole of Canada, began to inquire how the work was to be let, whether in small or large sections. Many of them came to me, and I inquired from Mr. Weller, chief engineer of the canal, what was going to be done. He said: I am certainly going to let that work in sections large enough to permit the contractor to pay for his plant at least during the course of construction. And so he has done. There was a great howl. The Minister of Railways had considerable trouble with his own party friends, who endeavoured to force him to have Mr. Weller divide this up into smaller sections so that smaller men could get the jobs. Mr. Weller said no, and Mr. Cochrane, the Minister of Railways and Canals, very properly backed him up in that and said it must be let in big sections so as to secure as prompt a construction of that work as possible. That is the only way in which a great work of that kind can be accomplished. That work is being let in nine sections. Only four contracts have been let but the sub-letting is going on now and always will. No large work has been done without sub-contracting. Take the Erie canal from Buffalo to Albany. That was let in enormous sections and there was not a section that was not sub-let, practically throughout its whole length.

Let us see what these tenders are. I intend to place on 'Hansard' the successful tenderers, their prices and how those prices compared with the engineer's estimate and with the next lowest bidder. The commission stated that there were only a few tenderers so that it was divided up among a very few people, that there was no keen competition and that these contracts were given to the friends of the commissioners. The contracts were as follows:

Contract No. 1—
Engineer's estimate, $1,017,051.
Lowest tenderer, Grand Trunk Pacific Railway Company.
Awarded to Grand Trunk Pacific Railway Company at $989,895.
Below engineer's estimate by $28,000.

[Mr. German.]

Below next lowest bidder by $157,020.
Number of bidders, 3.

Contract No. 2—
Engineer's estimate, $326,341.
Lowest tenderer, J. W. McManus Co., Ltd.
Awarded to J. W. McManus Co., Ltd., at $289,190.
Below engineer's estimate, $37,000.
Below next lowest bidder, $35,000.
Number of bidders, 4.

Contract No. 3—
Engineer's estimate, $933,137.
Lowest tenderer, Grand Trunk Pacific Railway Company.
Awarded to Grand Trunk Pacific Railway Company at $767,434.
Below engineer's estimate, $166,000.

Contract No. 4—
Engineer's estimate, $2,356,389.
Lowest tenderer, Grand Trunk Pacific Railway Company.
Awarded to Grand Trunk Pacific Railway Company at $1,898,124.
Below engineer's estimate, $600,000.
Below next lowest bidder, $103,000.
Number of bidders, 2.

Contract No 5—
Engineer's estimate, $2,232,891.
Lowest tenderer, Kitchon Company.
Awarded to Willard Kitchon Company at $1,646,253.
Below engineer's estimate, $600,000.
Below next lowest bidder, $48,372.
Number of bidders, 7.

Contract No. 6—
Engineer's estimate, $1,478,395.
Lowest tenderer, Lyons and White.
Awarded to Lyons and White at $1,385,941.
Below engineer's estimate, $93,000.
Below next lowest bidder, $21,408.
Number of bidders, 6.

Contract No. 7—
Engineer's estimate, $3,139,367.
Lowest tenderer, M. P. and J. T. Davis.
Awarded to M. P. and J. T. Davis at $2,377,409.
Below engineer's estimate, $700,000.
Below next lowest bidder, $135,079.
Number of bidders, 3.

Contract No. 8—
Engineer's estimate, $5,491,974.
Lowest tenderer, M. P. and J. T. Davis.
Awarded to M. P. and J. T. Davis at $5,011,346.
Below engineer's estimate, $480,000.
Below next lowest bidder, $7,208.
Number of bidders, 4.

Contracts 9 and 10—
Awarded as one contract to Hogan & Macdonell.
Engineer's estimate, $6,172,000.
Lowest bidder, Hogan & McDonald, $5,279,000.
Below the engineer's estimate by $800,000.
Below the next lowest bidder by $260,000.
Number of bidders, six.

Contract No. 11—
Awarded to the Grand Tunk Pacific Railway Company.
Engineer's estimate, $1,776,000.
Lowest bidder, Grand Trunk Pacific Railway Company, $1,691,000.
Below the engineer's estimate by $85,000.
Below the next lowest bidder by $260,000.
Number of bidders, 3.

Contract No. 12—
Awarded to Macdonald & O'Brien.
Engineer's estimate, $5,715,000.
Lowest bidder, Macdonell & O'Brien, $4,599,000.
Below the engineer's estimate by about $1,200,000.
Below the next lowest bidder by $324,000.
Number of bidders, 2.

Contract 13—
Awarded to Macdonell & O'Brien.
Engineers estimate, $4,000,000.
Lowest bidder, Macdonell & O'Brien, $3,815,000.
Below the engineer's estimate by $200,000.
Below the next lowest bidder by $61,000.
Number of bidders, 2.

Contract No. 14—
Awarded to the Grand Trunk Pacific Railway Company.
Engineer's estimate, $3,985,000.
Lowest bidder, Grand Trunk Pacific Railway Company, $3,986,000.
Above the engineer's estimate by about $100,000.
Below the next lowest bidder by $436,000.
Number of bidders, 2.

This is the first contract where the lowest bidder was above the engineer's estimate. The next lowest bidder to the Grand Trunk Pacific Railway Company was the Pacific Construction Company, (E. F. Fauquier). Mr. Gutelius said that this contract should not have been awarded to the Grand Trunk Pacific Railway Company but to E. F. Fauquier (the Pacific Construction Company). In that case the country would have lost $436,000.

Contract No. 15—
Awarded to E. F. & G. E. Fauquier.
Engineer's estimate, $4,124,000.
Lowest bidder, E. F. & G. E. Fauquier, $3,936,000.
Below the engineer's estimate by about $200,000.
Below the next lowest bidder by $379,000.
Number of bidders, 2.

We now come to contract Nos. 16 and 17, which have created such a disturbance in the minds of hon. gentlemen opposite. I will state the figures and come back to the suggestions of the Solicitor General in regard to these two contracts afterwards.

Contract No. 16—
Awarded to M. P. & J. T. Davis.
Engineer's estimate, $3,224,000.
Lowest bidder, M. P. & J. T. Davis, $3,308,000.
Above the engineer's estimate by about $60,000.
Below the next lowest bidder by $94,536.
Number of bidders, 2.

Contract No. 17—
Awarded to M. P. & J. T. Davis.
Engineer's estimate, $2,004,000.
Lowest bidder, M. P. & J. T. Davis, $2,019,000.
Above the engineer's estimate by $15,000.
Below the next lowest bidder by $80,000.
Number of bidders, 2.

Mr. J. E. ARMSTRONG: Would the hon. member be good enough to give the actual cost on these contracts, instead of the estimates which are practically a guess?

Mr. GERMAN: If my hon. friend wants the actual cost he will have to go to the Transcontinental Commission as this report does not give it, by any manner of means. The returns sent in to the Transcontinental Commission by the engineers will show the actual cost.

Mr. J. E. ARMSTRONG: The report gives the actual cost up to the date of publication.

Mr. GERMAN: My hon. friend has got the report before him; he can look at it if he wants. I say it does not give the cost of the work up to the present time. You can only ascertain that from the progress estimates sent in from time to time by the engineers on the work.

Mr. ARMSTRONG: It gives the actual cost up to the date of that report.

Mr. GERMAN: My hon. friend can read it if he wants to. I am giving the engineer's estimate in charge of the work, that is, the chief engineer of the Transcontinental Commission. I am giving the amount of the tenders and the number of the tenderers, to show that in every case the lowes bidder got the contract and in every case was far and away below the engineer's estimate.

Contract No. 18—
Awarded to E. F. & G. E. Fauquier.
Engineer's estimate, $2,326,000.
Lowest bidder, E. F. & G. E. Fauquier, $2,101,000.
Below the engineer's estimate by $225,000.
Below the next lowest bidder by $91,000.
Number of bidders, 4.

Contract No. 19—
Awarded to O'Brien & Fowler.
Engineer's estimate, $7,864,000.
Lowest bidder, O'Brien & Fowler, $5,967,000.
Below the engineer's estimate by $1,900,000.
Below the next lowest bidder by $436,000.
Number of bidders, 4.

Contract No. 20a—
Awarded to O'Brien & McDougall.
Engineer's estimate, $1,513,000.
Lowest bidder, O'Brien & McDougall, $1,158,000.
Below the engineer's estimate by $400,000.
Below the next lowest bidder by $126,000.
Number of bidders, 2.

Now we come to contract No. 21, awarded to J. D. McArthur. Hon. gentlemen opposite have been throwing fire bags, I might say, at this contract, for which there were four bidders. I will give the figures:

Contract No. 21—
Awarded to J. D. McArthur.
Engineer's estimate, $13,756,000.
Lowest bidder, J. D. McArthur, $13,010,000.

Below the engineer's estimate by $746,000. Below the next lowest bidder by $18,354. Number of bidders, 4.

That is the last contract. And yet Messrs. Gutelius and Staunton say that there is something unfair and improper in the advertising for tenders and the letting of these contracts; that friends of the commission were given the contract. In every case, with the exception of two, there was keen competition and a large number of bidders and the lowest bidder was far below the engineer's estimate. And in every case the lowest bidder got the contract, and was below the next lowest bidder by several thousand dollars. How in the face of that, can Messrs. Staunton and Gutelius say that there was anything improper in the advertising for tenders and the awarding of contracts. It is just in line with their whole course of procedure. Theirs was not an investigation at all but a Star Chamber hearing. Their whole object was to present, as far as their ability would allow them, a report detrimental to the Liberal party in Canada, and detrimental to the Transcontinental railway.

About $140,000,000 was expended by the former commissioners up to the time that they went out of office. Messrs. Gutelius and Staunton have raked that office from top to bottom for two long years, endeavouring if they could to get their hand on something by which they could impeach that commission for wrong-doing and by which they could show that some money had been wrongfully expended, that some money had filtered through somebody's fingers, and that some information had been given out that should not have been given out, but they have been unable to find that one dollar of the people's money has been improperly expended. It speaks volumes for the honesty, the integrity, the fairness and business acumen of these commissioners to find that in the handling of $140,000,000, extending over a period of ten years, not one dollar, after this tremendous search by these partisan commissioners, has been shown to have been improperly expended.

Let us go back now to the M. P. and J. T. Davis contracts. Contracts Nos. 16 and 17 appear to be the bete noir of hon. gentlemen opposite. The hon. Solicitor General says this was not a sub-letting of a contract, it was the sale of a contract. I do not care whether you call it sale or sub-letting; it was the transfer of a contract from M. P. and J. T. Davis to O'Brien, O'Gorman and Company. I apprehend that there is not a man in this House or in Canada who will deny that M. P. and J. T. Davis had a right to transfer that contract to a reputable firm of contractors if they saw fit. If they had received as a return for the transfer two per cent, I presume there would have been no fault found with it by hon. gentlemen opposite. It is because they obtained ten per cent that these hon. gentlemen find fault with this transaction. Mr. M. J. O'Brien says that Davis wanted fifteen per cent, and, knowing Davis as I do, I am not at all surprised that he wanted 15 per cent.

Was there anything improper in the subletting of the contract? I heard the Solicitor General state that there was, but he says that after they got the contract they did nothing with the work for about nine months, and that the commissioners should have cancelled it and re-let it. I think I should put on 'Hansard' what the former Chairman of the Commission, Mr. S. N. Parent, says about it, because it is an attack on him and not on the Liberal party. This is an attack upon the Chairman and members of the Board of Commissioners. Mr. Charles M. Hays wrote a letter in October, 1909, to Mr. Parent, complaining that the work was not progressing under this contract, and suggesting that it should be cancelled and that new tenders should be asked for. This is what Mr. Parent says to Mr. Hays in reply:

14th October, 1909.

'Dear Mr. Hays:

'The essential point in your letter of August 2 to the hon. the Premier, regarding certain contracts in districts 'D' and 'E' was a request that they should be cancelled. In my answer, I therefore endeavoured to show that, the award having been quite regular in every respect—which you admit—such a step as was suggested would be illegal on the face of it.

'I noticed your contention that the prices were too high, but did not think necessary, for the reason just given, to dwell at very great length on that side of the question. Even granting the propriety of the ground taken, there is little doubt that it would not be sufficient before law to render void actions which were regularly performed.

'For the purpose of discussion, however, I am willing to go into particulars.

'Among other proofs that your company had urged with us that the work referred to should be let at an early date, I shall quote from a letter written by Mr. Morse to the hon. the Minister of Railways, on May 12, 1908, which says:

"In order to give the Grand Trunk Pacific an outlet to the east through northern Ontario, the contracts for the inlet portions of the line between Lake Superior Junction and the Temis-

kaming and Northern Ontario railway to be let without further delay, it being understood that the surveys are sufficient advanced to permit this being done."

'We complied with these wishes and contracts were signed on the 26th December of the same year. At such a late date in the season the contractors were unable to get their supplies, materials and plant in soon enough to begin operations during next season.

'Our forms of contract provide, it is true, that work be started at once and pursued diligently until completion, which, in the present case, is to take place on or before December 31, 1910. Allowance must be made, as you know, for adverse conditions. I need only to point out the fact that we have done so for more than one of your sub-contractors, viz.: the J. H. Reynolds Construction Company, who were so much behind in their work and gave us endless trouble. They were unable to carry out the undertaking, and we had at one time to advance money to pay their men. Yet your company would not withdraw its contracts, although they were practically in default. There is surely much less cause and possibility to do so in the present instance, where the facts are altogether different.

'Now we come to your statement, that tenders were all based on the work having to be taken up at once and completed within a certain time. As supplies had to be taken overland at great expense, the prices would naturally be high. Perhaps the work done on the adjoining section may, but the difference would not be as large as you claim. There will be still a considerable distance to cover by "tote" roads, while haulage by rail through to the point of delivery is no small item, and this remains the same. Labour conditions, which you represented as favourable at the time, must have been taken in account by the tenderers. It is not likely that workingmen can be had to-day as cheaply as could be expected a year ago, during the financial stringency.

'There is no certainty, therefore, that better prices than before could be obtained now if new tenders were to be called for. Any advantage that might be gained on one hand would be more than counterbalanced by the loss of time on the other, not to mention the liability incurred. It would take a year or more before another contractor would get down to work.

'We are told that preparations have been made to proceed actively with the work, and it can be expected that these two sections will be ready in good time.

'In any event, there would be no way of complying with your suggestion, as stated before, unless the contractors would give their consent to the work being let anew which, it seems, would be a most unusual course in business.

'Yours very truly,

'S. N. Parent,

'Chairman.'

The Solicitor General is very anxious to find out what lawyer advised that the contract could not be cancelled. Mr. S. N. Parent is one of the most prominent lawyers in Canada, and he advises that it would be illegal to cancel it. Whether he is right or wrong I do not pretend to argue, but that is his opinion. He is not only one of the best lawyers in Canada, but he has been Prime Minister of the province of Quebec for years, mayor of the city of Quebec for years, one of the most prominent business men in the country, and he knows as much about railway building, if not more, than this wonderful Major Leonard who is the present chairman of the board, and in fact the whole commission. In the face of that letter who can say that an improper thing was done when that contract was sub-let? M. P. and J. T. Davis had a perfect right to transfer that contract to O'Brien or anybody else. With that we have nothing to do. The question is: Was the contract properly obtained by Messrs. Davis, and, if so, had they a right to maintain the contract? If the contract was properly let and if they had a right to maintain it, that ends the matter in so far as they were concerned, because they had the right to make as much profit out of it as they saw fit. Ten per cent is not at all an unreasonable sum for a contractor to receive by handing over the contract to a sub-contractor. I happen to know something about contract work, because for the last thirty years I have been doing business with and for contractors in the highest class of contracts. I have known contractors to get 15 per cent on many occasions. I know how they conduct their business, about sub-letting and about the profit they receive. Ten per cent is a fair, average profit for a contractor who has put up his money and security and has taken all the risks, which would be heavy in work of this kind. Ten per cent is not a large or an exorbitant profit for a contractor to receive. That is the whole story in regard to the matter, and I am willing to leave that, as I am willing to leave the question of the entrance of the Transcontinental into Winnipeg, for the people of this country to say whether the late Board of Railway Commissioners did right or wrong. I am quite certain that the people of this country will say that they did only what was right and fair and proper under the circumstances.

Messrs. Gutelius and Lynch Staunton had rather, I might say, a satanic cunning in the way in which they went into this investigation. They would get just such evidence as they saw fit and nothing else. They went into the question of sub-contractors for a little. It was suggested to them that many of these sub-contractors were not making any money. It

is all very well for Gutelius and Lynch-Staunton to employ in Ottawa a couple of engineers to go over the sub-contracts which they got from the contractor and work out these figures given in the report, but that is not doing the work. There is something else to do besides that. If my hon. friends opposite will look at the evidence of Mr. Arthur Molesworth in the report they will find that the commission took the chance of asking Mr. Molesworth about profits received by sub-contractors, but they stopped there mighty quick.

Mr. GRAHAM: They did not want that.

Mr. GERMAN: Mr. Molesworth told them why the sub-contractors were losing money, and the contractors were actually paying the sub-contractors for their work rather than allow them to lose money. They were not bound to pay them, but they wanted the work to go on.

Mr. MURPHY: Is that mentioned in the report?

Mr. GERMAN: That would not suit the complexion of these royal commissioners. It is not mentioned in the report, but it is in the evidence. Mr. Molesworth said: I knew that these sub-contractors were losing money. Mr. Lynch-Staunton stopped that sort of cross-examination at once; he said nothing about it in the report, and from the beginning to the end of the evidence he never asked another man that question. He never called a sub-contractor to ask him whether or not the sub-contractors were losing money. Some of them probably were losing money. This, however, shows the character of the investigation. It is not an investigation. I would not dignify it by that name. It is an inquiry to find out what kind of evidence could be obtained to build up a mountain of attack against the Liberal party and against the Grand Trunk Pacific Railway Company. I submit that this document will be a disgrace to the public archives of Canada as long as it stays there.

My hon. friend the Solicitor General said that a large amount of money was lost on the Cap Rouge viaduct. If he would read the evidence of Mr. M. P. Davis, he would see the whole cause of the difficulty. Cap Rouge is a neck of the river. There is tidal water there; the water rises from sixteen to eighteen feet. There is a mud bottom. The contractors were to put in that tidal water a concrete foundation. The engineer of the commission and the engineers of the Grand Trunk Pacific decided that piles should be driven and an open caisson built on those piles. Messrs. M. P. and J. P. Davis got the contract and went down there to look over the work. In his evidence, Mr. M. P. Davis said: I will not be responsible for that foundation on an open caisson in that tidal water. I will not build it. You can take the contract and build it yourself. I will do the rest of the work if you wish me to or you can do the whole work yourself. When the engineers discussed the matter with him, he said that they should build the foundation using a pneumatic caisson. Mr. M. P. Davis is an expert on pneumatic caissons, one of the best in America and certainly the best in Canada. After the engineers of the commission and the engineers of the Grand Trunk Pacific had discussed the matter together, they decided that a pneumatic caisson was required. They built the pneumatic caisson and that is what made the extra expense. Yet Messrs. Gutelius and Lynch-Staunton criticised the commission for adopting the suggestions of engineers who knew fully as much as Mr. Gutelius and very much more than Mr. Lynch-Staunton in that regard.

My hon. friend speaks about the overbreak. There was a considerable amount of overbreak on the McArthur section, contract No. 21. My hon. friend said that $500,000 was deducted by the arbitrators under the old Government. I would like the House and the country to understand that long before Gutelius and Lynch-Staunton appeared on the scene, or had anything to do with this matter or knew anything about it, the whole matter had been settled by Mr. Schreiber, Mr. Gordon Grant and Mr. Kelleher. Gutelius and Lynch-Staunton say that there was over classification, great expense, two great returns, overbreak, &c. That whole matter had been settled by the board of arbitration before Gutelius and Lynch-Staunton appeared on the scene. Messrs. Gutelius and Lynch-Staunton asked a lot of questions in regard to matters which were all known to the commission and to the Grand Trunk Pacific Railway Company's engineers who made the complaint. Messrs. Gutelius and Lynch-Staunton report this as though they had discovered it. They say that they are the wonderful discoverers in this particular;

that they were appointed a royal commission to investigate; that they delved into this matter and dug up all this iniquitous transaction. That is not the case. The whole matter was known before the late Government went out of office and not only so, but the board of arbitrators went over the whole work; they settled the whole matter and settlements were made by the late Government, so far as they were made, on the report of that board.

I wonder if this Government could say the same. We will find out. Settlements were made by the late Government on the basis of that arbitration and award. These commissioners say: We find that all this money was paid out. There was money paid out, but it was kept back out of these contractors by the former Government in the final settlement made with them, and kept back under the provisions of that award. Now, how about Mr. McArthur's contract? Mr. McArthur's evidence stated the amount in question at about $600,000. I found out today on positive authority, from men who know all about the transaction, that it was $550,000 that the arbitrators decided should be kept back from J. D. McArthur for overbreak and overclassification under that contract.

Mr. GRAHAM: Under the late Government.

Mr. GERMAN: Yes, under the late Government. McArthur kicked, and his subcontractors kicked, of course, for most of it came out of them and not out of McArthur. Now, let me call the attention of the Solicitor General to what happened. He says it was $660,000, but—

Mr. MEIGHEN: It was that much more.

Mr. GERMAN: After this Government came into office they settled with Mr. McArthur for this overbreak and overclassification, and instead of settling on the basis of the award made by the arbitrators, the Government, or rather this great construction engineer, Major Leonard, settled on the basis of $150,000 where the arbitrators declared that the basis should be $500,000, so that in this way, McArthur was given $400,000 of the people's money.

Mr. MEIGHEN: I suppose the hon. gentleman has the facts there. Will he please put them on 'Hansard?'

Mr. GERMAN: I am putting them on 'Hansard' by my statement. I have not got the documents here. But let the hon. gentleman go to Mr. McArthur. Let him go to Major Leonard.

Mr. MEIGHEN: I am not allowed to seek again; I would like to get the facts on 'Hansard.'

Mr. GERMAN: The hon. gentleman can go to Major Leonard if he doubts what I have said. Or let him get the fact wherever he likes. I have made my statement on my responsibility as a member of this House that this commission and this Government has made a settlement with J. D. McArthur on the basis of keeping out not $550,000, but $150,000, thus going against the award of the arbitrators and making a clean gift of $400,000. I think, in the face of that, the less these gentlemen say about wrongdoing the better.

Now, how about the Davis contract? Why, all the Government have to do is to hold back the money if there is anything wrong. Why do not they do it? These commissioners say that Fauquier Brothers made an immense amount of money by getting a contract because of inside information. And from the first page of this evidence to the last there is not one line, not a tittle, to justify such a statement. If there were, this Government has yet to settle with Fauquier Brothers, and if there is anything wrong, having the money in their own hands, let them keep it. Let me see whether they will do that or not. They did not do it in the case of McArthur. These gentlemen do not say, but they insinuate—and it is a most insulting insinuation—that these men had inside information on the Transcontinental Commissioners which they should not have had. And again there is not a tittle of evidence from first to last of this book to show it. Mr. McArthur denies it, Mr. Davis denies it, Mr. Fauquier denies it and Mr. Parent himself denies it.

Mr. MEIGHEN: Surely, the hon. gentleman knows a little of what he is talking about. Mr. Fauquier admits it.

Mr. GERMAN: I beg the hon. gentleman's pardon, he does not admit it. Mr. Fauquier, in answer to Mr. Lynch-Staunton's question whether he had got information that there was not as much moss as the engineers had estimated, said: I made inquiry as to what moss there was. But it was an inquiry open to everybody. And I challenge the hon. gentleman to contradict that by the evidence.

Mr. MEIGHEN: He got the information from the engineers of the commission, as to the estimates of moss, and it was inside information.

Mr. GERMAN: The hon. gentleman is mistaken. Let him read the evidence; it does not read that way. Mr. McArthur says he got information but it was information that anybody could get. And the engineers say the same thing; there was no secret information about it. Mr. Fauquier says: I knew there was not as much moss as they thought. But whether the quantity was large or small does not matter for he said he would have put in the same price, 13 cents a yard, if there had been 5,000 yards which I think is the quantity the engineers estimated. The evidence shows conclusively that these gentlemen acted in good faith from beginning to end.

And what further insinuations are made against Mr. Parent? In contract 8 with M. P. Davis and Company, there was a question of timber price. Mr. Davis put it in at $80 a thousand feet. And he says: I put that in because I believed that on timber delivered in that country it is a proper price. These commissioners insinuate that Mr. Parent, the chairman of the commission, changed the date of the document from the 8th to the 18th of October to show that the document had been signed subsequent to the putting in of this timber price. And he was asked the question and his reply was: It may have been changed, but if so, it was changed since I gave up the chairmanship of that commission. And that is the class of insinuation that runs throughout the whole length of this so-called report of Royal Commissioners, men appointed to investigate and hold the scales of justice even as between the Transcontinental Commissioners and the people of Canada. Can any man say that a report of that kind is justified by the evidence? I say, no; any man who reads the evidence must come to the conclusion that it is a garbled statement got up for a special purpose of a partisan character, to discredit a political party, and, if possible, to injure one of the greatest industrial enterprises ever established in Canada.

On motion of Mr. Joseph E. Armstrong, the debate was adjourned.

On motion of Mr. Hazen the House adjourned at 10.57 p.m.

Friday, March 27, 1914.

The House met at Three o'clock, the Speaker in the Chair.

REPORT AND PAPERS.

Steamboat Inspection Report—Hon. Geo. H. Perley.

[Mr. Meighen.]

Documents relating to the Constitutional History of Canada, 1791-1818.—Hon. Geo. H. Perley.

PRIVATE BILL

FIRST READING.

Bill No. 124, for the relief of Lenore Power.—Mr. Bradbury.

THE NATIONAL TRANSCONTINENTAL RAILWAY.

Consideration of the proposed motion of Hon. W. T. White (Minister of Finance) for Committee of Supply, and the proposed amendment of Mr. Graham thereto, resumed from March 26.

Mr. J. E. ARMSTRONG (East Lambton): Mr. Speaker, I have listened with a great deal of attention to the numerous speeches delivered on this subject, and I am sure that we cannot help feeling that the Opposition have been doing their utmost to becloud the issue. They have not dealt with many of the important features of the report; in fact, they have dealt with very few of the statements contained in it. The one object of practically every man on the Opposition side of the House who rises to speak on this question is to becloud the issue, and to condemn the men who had charge of bringing forward this evidence. Hon. gentlemen opposite seem to think that the members of the Investigating Commission deserve the severest condemnation, when they know full well that practically every statement in this report is founded on facts gathered through a thorough investigation into the whole matter. They condemn Mr. Gutelius because he is an American citizen. One man will be doing that, and before he sits down, like the hon. member for South Renfrew (Mr. Graham), he will quote page after page of statements made by Mr. Berry, another American citizen. These gentlemen must realize that Mr. Gutelius has been a very great success in the business in which he has been engaged, not only in connection with the Canadian Pacific railway and other railways, but in connection with the business of this Government in respect to the Intercolonial. We find that Mr. Staunton is condemned for being a Conservative, and yet hon. gentlemen opposite must know full well that practically all the prominent positions under the present Government are occupied by appointees of the men who left office a few years ago. The great industrial affairs of Canada under the present Government are largely conducted by men appointed by

the present Opposition when they were in office. I was surprised last night to hear the hon. member for Welland (Mr. German) making the statement he did with regard to Major Leonard, the man at the head of the Transcontinental Commission. These are the words he used:

> Major Leonard is a very estimable gentleman whom I know exceeding well and I have not a word against him, but is it not unfair to him to say that he never built or operated a railroad in his life and knows no more about operating and building railroads than I or any other man in this country. Why put him up as a paragon of perfection in the construction and operation of railroads?

That is certainly a reckless statement for a man to make who, I am satisfied, is thoroughly conversant with the fact that Major Leonard has had much to do with the building of different railways in Canada, and in addition has held important positions in charge of water-powers. Major Leonard is not in town, but I was able to gather the following information: He has been chief engineer and manager of construction on a number of different railways. He was on the original construction of the Canadian Pacific railway north of lake Superior in 1884, as assistant engineer. About 1887 he was assistant engineer of construction on the Canadian Pacific railway between Montreal and Smith's Falls. About 1895 he was chief engineer of construction on the St. Lawrence and Adirondack railway, which joins the Canadian Pacific railway south of the St. Lawrence river, near Lachine. Subsequent to that he was chief engineer of the Rutland railway, and then chief engineer of construction on the Cape Breton railway. In 1896 he was manager of construction and in full charge of the building of the Canadian Pacific railway short line between Montreal and Ottawa. These are only a few of the facts that we might gather in connection with the successful life of Major Leonard. I am surprised that a man knowing Major Leonard as well as the hon. member for Welland must know him, should try to belittle that gentleman, occupying the important position which he does occupy. No matter what this Government may do, or what appointments they may make to positions of emolument under the Crown, hon. gentlemen opposite will take direct issue with their policy and manifest opposition to their appointments. They even go so far as to criticise the actions of their own men who continue to serve under the present Transcontinental Railway Commission. There are men employed upon the construction of this railway, notably those in charge of the Quebec bridge, who were appointed when hon. gentlemen opposite were in office.

The hon. member for South Renfrew (Mr. Graham) who, I am sorry is not in his seat, appealed to the business men of this House to look upon this project as a business proposition and to consider it from a business standpoint. I appeal to the business men of this House to take a general view of this whole undertaking and in this connection I desire to call attention to the fact that the Minister of Finance in the former Government, in 1904, made the statement that the Transcontinental railway would only cost $61,000,000, while to-day it has actually been shown that it will cost at least $234,000,000. Hon. gentlemen opposite, because of the reckless and extravagant manner in which they conducted affairs in connection with the building of this road, have been largely responsible for the difference between these two amounts. Had these hon. gentlemen considered some of the statements that were placed before them by their former Minister of Railways and Canals (Mr. Blair), they would have exercised greater care and more carefully considered their position before launching forth upon this extravagant project. Mr. Blair was for seven years Minister of Railways and Canals under the Government which recently went out of office, and he told the right hon. gentleman who now leads the Opposition (Sir Wilfrid Laurier) that it was not only unsound policy for him to attempt to build this road without satisfactory information and without proper plans and specifications, but it was most unwise for him to attempt such an undertaking involving such an enormous expenditure without a more thorough investigation of the conditions surrounding the project.

The man responsible to the people of Canada to-day for the putting through of this measure in the first place is the right hon. leader of the Opposition. The right hon. gentleman drove the Hon. A. G. Blair out of public life when he brought this Bill down in 1904, forced it through Parliament, and compelled the building of this great railway without sufficient information or data. Do you wonder that the present Government are compelled to take into consideration the enormous expenditures that are necessary in connection with the building of this road? Is it not a proper and a wise thing for us, who are connected with this Government, to ask

them at least to have a general stock-taking in regard to the building of railways and the supplying of transportation facilities in this country? When the late Government came into office in 1896 they found that the money expended on railways in Canada amounted to $700,000,000, in round figures. At the time they left office the amount expended on railways in Canada amounted to over $1,500,000,000, or more than double what it was in 1896. This has become a great burden upon the people of Canada, and the result is that we have not been able to build the Transcontinental railway in such a manner as to justify the expectation that the freight rates will be reasonable or fair to the people who use that road.

Let me call attention to a few of the facts set forth in the report of the commission which investigated the construction of the National Transcontinental railway. There is no dispute with regard to these facts to which I am about to direct the attention of the House. Hon. gentlemen may talk from now until the end of next week but they will not be able to convince the public that the following facts are disputed. The first statement made by this commission is to the effect that:

> The railway was designed, i.e., the standard was decided on, without any knowledge as to whether it was suitable for the country, and on assumptions as to business expected which were unwarranted.

No one will dare to dispute the fact that the road was decided on without any knowledge as to whether it was suitable for the country. What about the business expected by this railway? We are building in Canada to-day three great transcontinental railways. During the past year my hon. friend the Minister of Railways and Canals (Mr. Reid) has been able to move the freight from the great West in such a splendid way that there has been little or no fault found in connection therewith. The Grain Commission gave me a statement only a few days ago which shows that they were able to inspect fifty-three cars every hour, twenty-four hours in the day, seven days in the week for three months. In that time they handled 127,000,000 bushels of grain. Instead of the farmers complaining of the transportation facilities in the West to-day they cannot but feel satisfied that they are given every consideration and that their products will be carried from the West to the East in the most expeditious manner.

What position are we going to be in when this other transcontinental railway is brought to completion? You can readily understand that with another transcontinental railway in operation, unless the country develops and expands to a much greater extent than we can possibly hope it will, no reasonable amount of traffic can be given to this new road. The hon. member for Welland last night made the statement that instead of eight trains passing between Winnipeg and Quebec daily a more reasonable estimate would be twenty. Surely that was a very optimistic view to take of the situation. It is incredible that we should expect that within the next few years any such number of trains will go daily over that road. Look at the agreement with the Grand Trunk Railway Company. Do you expect that the Grand Trunk Railway Company, who have expended $20,000,000 on their Portland terminals, are going to ignore that great national port and allow their traffic to be carried over this road in order to help out the Government in that regard? How can any sensible person expect that this Transcontinental railway can give low freight rates to the consumer and to the producer, when it has cost such a vast amount of money, on which it must pay a reasonable return in the shape of interest? When the officials of the Grand Trunk Pacific are challenged by the Railway Commission to give reasons why they cannot reduce the freight rates, they will be able to plead that the road cost over $100,000 per mile, and that after operating expenses are paid, a fair return must be allowed for the investment. You can depend upon it that instead of there being a material reduction in freight rates, by reason of the building of the Transcontinental railway, there is more likely to be a serious increase in these rates. Hon. gentlemen opposite say that the Government cannot build a railroad as cheaply as can a private corporation, but in answer to that I refer them to the public undertakings that the province of Ontario has carried to a successful issue within the last few years. Only yesterday, within the walls of this building, there was a large and representative delegation, urging on the Government the need for radial railways, and we heard the Hon. Adam Beck make the statement that $20,000,000 had been expended by the Ontario Government in the hydro-electric service and in assisting municipalities, and that in no case did the actual cost of any of these undertakings exceed the estimated cost furnished by the

engineers in charge. The same argument can be used in regard to the Temiskaming and Northern Ontario railway.

Mr. BELAND: In how many instances did the contract exceed the estimates of the chief engineeer of the commission?

Mr. ARMSTRONG: If my hon. friend will turn to the report of the Transcontinental Investigating Commission, he will find that the men who estimated the cost of the Transcontinental railway had no data, plans or specifications on which to base their estimates, nor had they any accurate knowledge of the character of the country through which the railway was to be built. The result is that the road has cost nearly sixty per cent more than the estimated cost prepared by the engineers in the first instance. The hon. gentleman shakes his head, but let me give him one or two specimens of what occurred. In the case of contract No. 1, the amount paid the contractor to December 31, 1911, was $1,224,000 in excess of the estimated cost. On contract No. 2, the engineer's estimate was $376,000, and the gross amount of progress estimates paid to the 31st December on this contract amounted to $587,000, or nearly double the estimate of the engineers. In another contract, the engineer's estimate was $933,000, and the gross amount paid to the contractors was $1,042,000. The hon. gentleman can go through the whole list, and he will find that the engineers made these estimates without having plans or specifications or data, and apparently they simply guessed at it haphazard.

Were it not that the Government is forced to needlessly turn into this sinkhole, on account of original cost and maintenance, tens of millions of dollars, the Government could have undertaken other necessary works for the development of Canada. We had here yesterday, as I said, an influential delegation, urging assistance in the line of subsidies to hydro-radials in Ontario, so that the development of that province might be advanced, but the Prime Minister had to tell these gentlemen that the Government had to face such enormous expenditures in connection with the Transcontinental railway, and other works, that, while he would not say it was practically impossible to assist radial railways, he did not see that the necessary money would be available at the present time. Hon. gentlemen opposite know that there are other projects of great concern to the Dominion that might be undertaken, were it not that this money has been foolishly and extravagantly thrown away on the Transcontinental railway. I, personally, would be very glad to urge on the Government the necessity for build trunk telegraph and telephone lines, but I have not the heart to do so, because the late Government has pledged the present Government to such enormous public works, undertaken far and away in advance of the needs of the country, that heed must be taken to our provincial demands. The hon. member for Edmonton realizes that. He was one of those who urged on the Government the building of the National Transcontinental railway, and he knows as well as he knows anything, that in view of the enormous cost of that road, and the money squandered in its construction, it will be impossible for the farmers of the West to obtain reasonable freight rates. The hon. gentleman knows that while the National Transcontinental railway cost the people of Canada over $100,000 per mile to build, the Canadian Pacific has only cost $38,000 per mile. He knows also that the Intercolonial railway, in which we have $97,000,000 invested, and which we have been improving from year to year, has only cost, up to the present, $66,000 per mile. He knows also that the Prince Edward railway has only cost $31,000 per mile, and the Temiskaming and Northern Ontario $33,000 per mile. These are Government railways, but they were built with due consideration as to the return they would give on the actual investment. No one knows better than the hon. member for Edmonton that the Government of which he was a member were not justified in undertaking the building of a transcontinental railway, without first having furnished themselves with data and information as to its cost, and as to the service it would be able to render to the public, based on that cost

I remember the maps placed before us in 1904. The hon. member for Edmonton (Mr. Oliver) knows, and we were able to show that this railway was compelled to cross the streams and rivers in this north land instead of following them up from Montreal and passing through other places that were proposed. If the proposition laid down by the right hon. the leader of the Government of the present day had been followed out, we would have had from ocean to ocean a national railway of which every foot of ground, every tie, every rail,

every telephone and telegraph pole would be owned and controlled by the Dominion of Canada, and we would have had a successful undertaking which would have been a great benefit to the people of Canada. Hon. gentlemen opposite say the Intercolonial railway is not a paying proposition. How can they expect it to be a paying proposition when they have paralleled it with another line costing $35,000,000, which will take away a large portion of the trade that would otherwise come to it?

What do we find in regard to the railway situation in Canada? I will merely give the round figures in my statement. In 1896 the money invested in railways in Canada amounted to $697,000,000. In 1911, it amounted to $1,528,000,000; in 1913, to $1,531,000,000. From 1896 to 1913, our population has only increased by about 1,500,000. We have under survey, under contract and completed at the present time about 18,600 miles of railway. The details, which I have carefully ascertained, are as follows: Under survey, 6,557 miles; under contract, 8,591 miles; completed, 2,956 miles; in operation, 541 miles; total, 18,600 miles. This mileage is not included in the 29,300 miles already recorded in our books. When it is all completed, we shall have 47,900 miles of railways in Canada. It will be realized that we shall then have a much greater railway system than any other nation on the face of the globe, except the United States.

Let me give the House a few more facts in regard to railway facilities in Canada. Our population is 8,000,000. When the present mileage under survey and under contract is completed, we shall have 47,900 miles of railway. The capitalization will be about $2,000,000,000; passenger revenue, $74,000,000; freight revenue $177,000,000; other revenue, $5,000,000; total revenue, $256,000,000; passengers carried, only 46,000,000; freight tons carried, 106,000,000.

The United States have twelve times our population and only five times our mileage. The United Kingdom has five and a half times our population and only half our mileage. Argentina has the same population and one-third the mileage. The German Empire has eight and a half times the population and will have 10,000 miles less of railway than has the Dominion of Canada. Therefore, I feel that, so far as railway transportation facilities in this country are concerned, it is time that we had a general stocktaking. We ought also to take into consideration transportation facilities on our waters and our great lakes. We have already invested $135,000,000 in our canals. The Welland canal will increase that by $50,000,000 and we shall soon have $200,000,000 invested in our canal system. In addition to that we are compelled to build the Hudson Bay railway and to buoy and light the Hudson Bay strait in order to protect the ships that will go in and out of that great channel. These matters are receiving the attention of the present Government, and the people of Canada should realize that they have in this Government a wise, sane and sensible body of men who are determined to conduct the affairs of Canada in a businesslike manner.

Let me go back to this report for a moment or two. It states that the actual cost or the interest is to be paid by the lessees. That statement has not been refuted. Hon. gentlemen opposite know that statements have been laid before them in regard to advertising for tenders, which statements have not been contradicted or refuted. In regard to the method of awarding contracts, hon. gentlemen opposite say that, as far as M. P. and J. T. Davis were concerned, they were perfectly justified in receiving the amount of money that they did, namely, $740,000. The hon. member for Welland (Mr. German) supported that proposition in the strongest language possible. Yet these gentlemen know full well that, had these contracts been let at the time when operations were commenced, when both ends of the road were carrying the material with which the contractors could construct that portion of the line, the commission would have been perfectly justified in obtaining for the people of Canada a saving of at least $700,000 or $800,000.

Hon. gentlemen opposite do not dispute the over-classification. The only statement I have heard in that regard is by the hon. member for South Renfrew (Mr. Graham), who stated that Mr. Berry would support their contention in this regard, that after a year or two, when the material had been removed, it would be practically impossible for any man to come to a decision as to this over-classification. They did not dispute the fact that solid rock was classed as assembled rock and that large amounts of money were made in that way.

In regard to the ploughable clay, the statement made by the commissioners has not been refuted. The same is true in regard to overbreak and grades. Hon. gentlemen opposite have devoted a great

amount of time to momentum grades, when they know full well that the Canadian Pacific railway has to-day eighty-five momentum grades between Port Arthur and Winnipeg, and that these momentum grades are not causing any serious interference in the traffic on that road. They have devoted a great deal of time to the curvatures, and have said that it was a wise policy to make these great, sweeping curves instead of curves of reasonable size which would have saved so much to the people. They do not dispute the fact that had they used shorter curves no less than $2,400,000 would have been saved. We have heard a great deal also about the wooden trestles. But it has been shown that the Grand Trunk Pacific were ready to fill these trestles at 25 cents a yard after the road was in operation. But, no, this Transcontinental Commission said: Fill them in the most expensive manner; this country has unlimited resources, and we are willing to help the contractors in every way. Then, on the subject of the buildings and stations, these hon. gentlemen do not attempt to refute the arguments used against them. Nor do they attempt to deny that two prices were paid for handling the materials in many of these contracts. These were also the high embankments, the enormous amount of material unnecessarily removed,—the pictures in this report and the pages of evidence simply go to show that the statements made in their own defence by these hon. gentlemen are unjustified and unreasonable. They make no attempt to justify the expenditure of $61,000 for fences in a part of the country where there was not likely to be anything to interfere with the railway. Nor do they begin to refute the statements in regard to the Transcona shops. Those shops were built at the end of the line, where they could not possibly be of as great benefit to that railway as they would have been had they been built at a point to which the stock to be repaired could be brought by a reasonably short haul. The shops cost $4,500,000. There is not a doubt in my mind that the Grand Trunk should be compelled to pay—or at least they should have been compelled to pay—a large portion of that cost, for they will make a great deal of use out of these shops in time to come. Imagine a body of business men spending $4,500,000 on shops for a new railway on which they knew there could not be more than a small amount of business done and providing for this new railway shops so large that the Canadian Pacific railway could have had practically all their repairs done in these shops, with room left for all the repairs likely to be required on the Transcontinental. Then there was the Winnipeg entrance. You have heard how this entrance was built in such a manner that the country is compelled to pay tribute to the Canadian Northern railway in connection with the entrance to Winnipeg for practically all shunting and freight going in or out of that great city.

Now, just a word or two about the New Brunswick section. As these commissioners have said:

> Large sums of money in interest have been lost by the premature construction of the New Brunswick section of the railway. In our opinion this section should not have been constructed at all. If one-third of the money had been expended on the Intercolonial railway it would have provided all the trunk line facilities for the province of New Brunswick which would be required for many years.

Construction was away in advance of the requirements of the people, and on the money thus expended the people of Canada are paying interest, while the rails are rusting and the ties rotting.

Is it not clear that we were justified in taking the position we did in 1904? The leader of this Government (Mr. Borden) when leader of the Opposition, in 1904, urged the Government to extend the Intercolonial to the west and the coast and give us a Government-owned railway, and, in the eastern provinces, to extend the branch lines so as to assist materially in developing the country. This was a wise, sound policy; but instead of adopting that policy hon. gentlemen opposite persisted in a proposition that has saddled upon the people of Canada an enormous expenditure. The leader of this Government has been right on all these great national undertakings. I am proud and glad to be the follower of a man who has shown such business ability, straightforwardness and strength of character. I remember well the seven long months we spent in this House in attempting to show the Government of that day the necessity of investigating this whole question and of securing full information before undertaking it. I remember the position taken by our leader at that time, and the long days he spent in placing before Parliament the figures connected with this undertaking in the effort to prevent the people of Canada from being saddled with this unjustifiable expenditure. And in the years since then we have seen practically

every statement made by our worthy leader justified and established. Look at the statement he made with regard to what this railway would cost. He was ridiculed throughout the length and breadth of Canada as a man who could not look ahead and see what was necessary for the development of our great Dominion. But the outcome is that practically every word he has uttered in support of his position has been justified. We are doubly proud to have as our leader a man of such statesmanlike foresight.

The hon. member for South Renfrew (Mr. Graham) made the statement time and again in the course of his remarks that we should look upon this as a great business undertaking and regard it from the business standpoint. While I condemn the hon. member for reckless expenditure of the people's money in this great undertaking, and believe him to be worthy of special condemnation of the people for what he has done, yet I say that the man on whose shoulders rests the main responsibility for this whole undertaking, the man who committed the greatest blunder, was the man who attempted by this means to create a monument for himself, the right hon. leader of the Opposition, Sir Wilfrid Laurier. Instead of that monument being a work which will win for the hon. gentleman the approval of the people, it will prove to be, in fact it has already proved to be a monument of folly. If hon. members on both sides of this House will carefully examine the pages of this report, they can come to no other conclusion than that the present Government were justified in ordering this investigation, which they had promised before the last general election in the event of their being returned to office. In spite of all the talk that hon. gentlemen opposite have indulged in, there will be found within the pages of this report sufficient to condemn any body of men who will attempt to support it.

Mr. G. W. KYTE (Richmond, N.S.): Mr. Speaker, the hon. the Solicitor General (Mr. Meighen) introduced his speech in the House yesterday afternoon by giving the members a dissertation upon royal commissions. He referred somewhat facetiously to the appointment of commissions by the late Government and the alleged dissatisfaction of that Government with their findings. The hon. gentleman might, however, have found food for his facetiousness and for his philosophical observations very much nearer home if he had confined himself to a review of certain commissions appointed by the present Government. We all remember that it was announced a few months after the present Government came into office that a commission was to be appointed to investigate the various departments of the late Government. A commission was appointed under the name of the Public Service Commission, whose duties it would be to investigate the expenditure of money by the large spending departments of that Government. The members of that commission were Messrs. A. B. Morine, formerly of Newfoundland; Mr. G. N. Ducharme of Montreal, and Mr. R. N. Lake, a former member of the House of Commons. After the commissioners had begun their work, items of news filtered out through the Conservative press, from time to time, intimating that gross mismanagement had been discovered in the various departments of the Government. Newspapers supporting the Conservative party gave information to the public that in the Department of Public Works great extravagance and unjustifiable expenditures had been discovered. Naturally the public mind was being prepared for the report of this commission which was going to result, as was fondly hoped by hon. gentlemen supporting the present Government, in driving certain prominent members of the Liberal party out of public life. The report of this commission was anticipated just as that of Messrs Lynch-Staunton and Gutelius was anticipated by the Conservative press, as information from time to time was given out to the press by the commission appointed to investigate the National Transcontinental railway. But the Public Service Commission has not, so far as I know, up to this hour, presented its report to Parliament and I shall tell the House why. It may be remembered that in the House of Commons, in the month of April, 1912, the hon. member for Carleton, N.B. (Mr. Carvell) brought to the attention of the First Minister certain charges that had been made against Mr. Morine, the leading member of the Public Service Commission. Certain documents were placed on 'Hansard' by the hon. member for Carleton which had the result of speedily terminating the service of Mr. Morine as an investigator of the public service and of the different departments of the late Liberal Government. Mr. Morine, who was described by his former leader in Newfoundland as the 'greatest scoundrel who ever entered the Narrows,' had been appointed by the First

4 p.m.

Minister to investigate the conduct and the expenditure of public money by members of the former Administration. That report has not yet come down because the revelations and the disclosures made by the hon. member for Carleton as to the conduct of Mr. Morine in Newfoundland were such that his services were terminated by this Government, and no one was appointed to carry on the work which he had commenced. If the First Minister of this Government appointed a scoundrel to investigate all the departments of the late Government, is it reasonable to suppose that he would select angels to investigate the Department of the ex-Minister of Railways and Canals? Mr. Morine was a former candidate of the First Minister in the county of Queens-Shelburne, N.S., in the general election of 1904. He took up his residence in Ontario, in the city of Toronto; and if reports be true, after he had completed his work as a commissioner to investigate the conduct of the ex-Minister of Public Works and other members of the late Government, he was to have been selected for high honours carrying with them great emoluments. We no longer hear of the Hon. A. B. Morine and the report for which the taxpayers of this country had already paid many thousands of dollars has not been brought down to this House.

Mr. BORDEN: The hon. gentleman asserted that the report of the Public Service Commission had never been presented to Parliament. The statement surprised me very much and I examined the Votes and Proceedings of last year. If he will look at page 172 he will find that that report was presented on the 9th day of December, 1912. It was ordered to be printed forthwith.

Mr. KYTE: Inasmuch as the primary object of the inquiry was to present a report to Parliament which would reflect upon the conduct of the members of the late Government, and inasmuch as we have heard nothing of that report from hon. gentlemen opposite, we have reason to assume that there was not very much in it.

Mr. BORDEN: I was not discussing what was in it; I merely wanted to correct the hon. gentleman as to a statement of fact. I am sure that he would desire to be corrected in such a statement. It would be most undesirable had no report been presented, and I felt confident that one had been presented.

Mr. KYTE: I think I might be pardoned if I was not aware that such an important document was presented to Parliament; and inasmuch as we never heard of it when it was presented, we are bound to assume that no reflection in the way I suggested could be made on the late Government:

The hon. the acting Minister of Railways and Canals, in opening his remarks to the House on this subject on Tuesday, made an attack upon the former members of the National Transcontinental Railway Commission. He spoke with beautiful scorn and withering sarcasm of the men who had been appointed. He said:

> Let us see who were appointed commissioners to build this great Transcontinental railway. They were Mr. Fletcher B. Wade, the chairman, a lawyer; Robert Reid, a paper box manufacturer; Alfred Brunet, a financier; and Charles Young, a grain dealer. Upon the death of Mr. Wade and the resignation of Mr. Brunet, the Government, on July 31, 1905, appointed S. N. Parent, K.C., another lawyer, to succeed Mr. Wade, and C. F. McIsaac, in place of Mr. Brunet. Afterwards, in 1909, on the death of Mr. Reid, W. S. Calvert, of Middlesex, a former member of this House, was appointed to succeed him. Not a single one of these gentlemen had ever had any experience either in the building, management or the operation of a railway, and that, I firmly believe, accounts for the forty million excessive cost which the people of Canada have had saddled upon them.

That statement was made by the acting Minister of Railways with the full responsibility of his new portfolio weighing down upon him. The late commission consisted of F. B. Wade, who was the first chairman, a gentleman, who as every person in Nova Scotia knows, has been for many years in intimate association and direction of an important railway in the province of Nova Scotia. It is well known I am sure, to the right hon. the First Minister that for years Mr. Wade had the management and control of the Nova Scotia Central railway until it was taken over by the Halifax and Southwestern system. After Mr. Wade's death, S. N. Parent was appointed chairman of the Transcontinental Commission, and in Mr. Parent the country secured the services of a gentleman who had had very considerable experience in railway matters. It is well known that for many years Mr. Parent had been an active director of railways in the province of Quebec. No person who knows his success as a business man, his activity and his energy, could conceive for a moment of his being an inactive member of any railway corporation. The fact that he was a director carries with it the presumption that he was an active director, and therefore when the acting Minister of Railways

makes the statement that no member of the old commission had any railway experience, he is stating what is not within the facts.

When it comes to appointing men to occupy great positions in the railway or industrial world, on this continent at all events, it is not the rule to select those persons from men who have had any extraordinary or intimate association with those particular industries. For instance, it will be remembered that when the United States Steel Corporation lost its president, W. E. Corry, by resignation, they did not confine their choice of his successor to men who had had intimate experience in the business of manufacturing steel and iron, but they selected for the head of that great corporation Judge Carey, an eminent lawyer in the city of Chicago. When E. H. Harriman, who was the head and front of the largest railway system in the United States, died, and it became necessary to appoint a successor, they did not go to the railway operators of the United States, but they selected Judge Lovitt, a lawyer, to carry on Mr. Harriman's work. When the Dominion Iron and Steel Company wanted a president to carry on the work that had been conducted so successfully by the late James Ross they did not seek the services of a man particularly familiar with the manufacture of iron and steel, but they selected a very competent and excellent gentleman who was a banker in the city of Toronto, Mr. J. H. Plummer. When the Nova Scotia Steel and Coal Company required a president some years ago to take charge of the management of that large and important corporation in the province of Nova Scotia, did they confine their choice to men familiar with the steel and coal business? No. It is well known to the right hon. leader of this House that they selected his colleague at the Bar in the city of Halifax, Robert E. Harris, a distinguished lawyer in that city. Therefore, when the acting Minister of Railways criticises the Government because the men whom they appointed as commissioners were not railway builders, surely it is not a criticism that ought to have any weight in view of the practice that is followed by all the great corporations on this continent.

We are sometimes asked to compare the operations of the Canadian Pacific Railway Company with the operations of the Commissioners of the Transcontinental. To hear hon. gentlemen opposite talk, one would imagine that when the Canadian Pacific railway was first conceived its original directors must necessarily and naturally have been men familiar with railway construction and operation. I have under my hand a list of the original directors of the Canadian Pacific railway, the men who carried out the construction of that railway in its earlier stages. The names of these directors are: George Stephen, Montreal, merchant; Duncan McIntyre, Montreal, merchant; John S. Kennedy, New York, banker; R. B. Angus, St. Paul, Esquire; James J. Hill, St. Paul, Esquire; Henry Stafford Northcote, London, Esquire; D. P. Grenfell, London, merchant; Charles Day Rose, London, merchant; Baron J. de Reinach, Paris, banker. Not a single practical railway man or engineer was to be found in the first directorate of the Canadian Pacific Railway Company, so far as I have been able to ascertain from the records in the Library of Parliament. If the construction of that road could be carried on successfully and to the satisfaction of the men who put their money into the road, by men not railway builders or operators, is it not folly to suppose that in this day of our history, business men, bankers and professional men cannot be found to carry on a great and important undertaking.

But, Mr. Speaker, the acting Minister of Railways, in making the criticism that he did against the personnel of the former commission, had not in mind perhaps that certain criticisms more trenchant than he made against the late commissioners, had been made against the person who now occupies the position of commissioner. I have before me criticisms directed against the person occupying that high and important position, Major Leonard, that make the criticisms of the acting Minister of Railways appear by comparison like the recitation of a school girl in the second form of a kindergarten. I have here an editorial from the Winnipeg Telegram. It is not necessary for me to tell the members of this House that the Winnipeg Telegram is the leading Conservative paper in western Canada. It is the personal organ of the hon. Minister of Public Works and any observations that it makes in regard to public matters it makes on behalf of the Conservative party. From the Winnipeg Telegram of January 3, 1914, I read:

> The growing dissatisfaction through the West, over the slow progress being made in

the construction of the National Transcontinental railway is being reflected in the animated newspaper comment of the press, regardless of party affiliation. In the East there is a similar echo of restlessness over the unsatisfactory state of this huge enterprise. This continued delay, inaction of those responsible for the work, and the fact that the project has already cost $55,000,000 more than the most exaggerated estimates called for, has provoked a feeling of uncertainty in the public mind, that is rapidly reaching explosive proportions.

Who is responsible for this extraordinary condition?

After the overthrow of the Laurier régime, the country hoped and expected the work would be prosecuted with vigour and ability. Frankness requires the acknowledgment that all the public has a right to expect in this direction has not been accomplished. The old commission responsible for much of this trouble, was dismissed, and new men appointed, but there was no improvement in action and efficiency. This is too clear, Mr. Borden's Government deserves the support of the people, and they have confidence in him, but there can be no question that a mistake was made in the selection of Major Leonard as Chairman of the Transcontinental Commission. This, Mr. Borden's warmest supporters to-day freely admit. The only virtue the commission can claim is honesty.

There is no dishonesty charged against the ex-members of the Transcontinental Railway Commission even in the biased report of the special commission appointed to investigate the subject.

This is an excellent quality, but it does not tunnel mountains, bridge rivers, and construct railways. In the interests of the people, especially the people of western Canada, and with no desire to damage Major Leonard's reputation, the Telegram desires to affirm that his work, as head of the commission has been a distinct failure. The Telegram believes a mistake was made in choosing Major Leonard for this responsible position. He is not a railway builder, however good he may be in locating mining propositions. It is a pity, therefore, to spoil an excellent 'prospector' at the expense of the National Transcontinental project.

It is not necessary to go into details to indicate Major Leonard's unfitness for the position he occupies. The impression is growing that more progress could be made on the work, if the youngest engineer in the employ of the commission were in charge.

Hon. Frank Cochrane, the Minister of Railways, is a busy man. He is an overworked minister, and he will continue to be overworked as long as he is burdened with incompetents like Major Leonard, in control of great undertakings like the Transcontinental. The suggestion is freely made, that either Mr. Cochrane should take over this important work, or a commissioner be appointed with the ability and skill to expedite the work. The East as well as the West is vitally interested in an immediate improvement and will be satisfied with nothing less.

Then, on the 14th January, 1914, the Winnipeg Telegram returns to the attack:

But the Telegram reiterates its statement that the people are tired of the inaction and incompetence of the Transcontinental Commission. Major Leonard's services have proven distinctly disappointing. The public have confidence in the Minister of Railways, and if Mr. Cochrane will take over the work, it will be handled expeditiously, and with intelligence. He enjoys a reputation for service; but with Major Leonard as the head of the commission, to perfect the work on this huge public utility, he is practically helpless. The West wants to see something done, and the Telegram believes the East has equal wisdom. At the present rate, another private Transcontinental railway system will be completed before the National Transcontinental railway is ready for traffic. Yet the peoples' millions are backing this great enterprise, and all the resources are at hand to employ the genius of the railway world. Under these circumstances, it seems a pity that action is not taken at Ottawa along the line of public demand for more expedition in this undertaking.

I have looked through the report of Messrs. Lynch-Staunton and Gutelius, in which they criticise the conduct of the late Transcontinental Railway Commission, I have read the evidence from one end of the volume to the other, and nowhere do I find a criticism so far-reaching, or so deadly, as that which the newspaper of the hon. Minister of Public Works has directed against Major Leonard, the present commissioner. The excuse given by the Minister of Railways and Canals for disbanding the old commission was, that the members of the old commission were incompetent because there was not a practical railway builder among them. It was said that the expenditure upon the construction of the road would be materially reduced if a change were made. The Minister of Railways and Canals got up in this House and gave a certificate of character to Major Leonard as being the one man in Canada in whom he had confidence to carry out that work in the way it should be carried out. We have had a test of Major Leonard's competence and I do not desire to express any personal opinion as regards that estimable gentleman. It is my duty to put the report of Messrs. Lynch-Staunton and Gutelius as to the capacity of the members of the late commission, and the criticism of the Minister of Railways and Canals of the members of that commission, side by side with the criticism of the Winnipeg Telegram with regard to the compentence, the fitness and the ability of Major Leonard, the present commissioner.

The hon. member for South Renfrew, in the course of his observations the other evening, pointed out that in his opinion the report of the special commission was partisan and biased. Of course, it was open to hon. gentlemen opposite to throw

back the charge in the face of my hon. friend from South Renfrew. I am not going to quote the opinions of members supporting the Liberal party, but I desire to place on record the opinion of a prominent member of the Conservative party in the city of Montreal as to what he thinks of the impartiality of the report presented to this House by these two special commissioners. I am going to put on 'Hansard' a statement made by Mr. C. H. Cahan, K.C., an eminent lawyer of Montreal and who was prominent for many years as leader of the Conservative party in the province of Nova Scotia. Mr. Cahan was for some time editor of the Halifax Herald, a thick and thin supporter of the Conservative party in good and evil report. Mr. Cahan was one of the candidates of the right hon. the First Minister (Mr. Borden) in the province of Nova Scotia in the election of 1904. This is what Mr. Cahan says in regard to the report of this commission:

I expressed my views very clearly at the recent dinner of the Maritime Province Association of McGill. In Canada we are apt to go to the extreme of condemning a whole political party not only for the frauds secretly perpetrated by individuals, but we also represent, as fraudulent and corrupt, alleged mistakes in policy and in details, in regard to which expert advisers may, in good faith, entertain entirely different views.

'No great engineering project was ever carried through to completion, in which large sums of money might not have been saved if the foresight of the engineers directing and controlling the expenditures had been equal to their hindsight. Most valuable knowledge and experience is always gained in carrying through a great undertaking which is utilized by amateur critics to condemn the works of engineers and others who are, in fact, more competent and equally as honest as those who criticise and condemn the completed work.'

In the matter of the Transcontinental railway construction, there were many questions of routes, of grades, of standards of construction, of main lines, sidings, shops, station houses, etc., in regard to which equally competent engineers may and do honestly differ. All expenditures of this nature should be eliminated in considering the charges and counter-charges of fraud and corruption with which the party press is now filled.

An honest opinion either upon general policy or in regard to details of construction does not and should not place a person or a political party in the criminal dock.

It must also be borne in mind that the inquiry which has been held was ex parte. It is similar to a preliminary inquiry and investigation before a magistrate. It should have no more weight than is usually given to the evidence taken at an ex parte inquiry. Individuals should not be condemned by Star Chamber proceedings. If evidence has been obtained by the Gutelius commission, which is sufficient, in the opinion of the Government, to place any contractors or others on trial, they should be tried by and before a tribunal at which they can appear, with their witnesses, and be heard by their counsel. We must play the game of politics fairly, if we are to preserve the whole country from utter discredit. As it is, the press of one party now seeks to overwhelm their political opponents with indiscriminate charges of fraud and corruption, based upon an ex parte report, upon ex parte evidence, even before the persons charged have had opportunity to prepare and present their defence. We prefer to cast odium upon our political opponents, rather than to take effective means to bring individual culprits to the bar of justice.

And with what result? The world at large accepts Canada at Canada's appreciation of herself. The unmerited opinion has been created in England and elsewhere that public affairs in this country are permeated with fraud and corruption. The financial credit of the country is impaired, and our material progress is seriously deterred. It would be far better for this country if we played the game and played it fairly, discriminating clearly between matters of honest difference of opinion, and fraudulent and corrupt dealings, and sparing no reasonable effort to bring those persons guilty of fraudulent acts before the courts of justice which are properly constituted for that purpose.

There is the opinion, not of a Liberal, not of an ex-member of the Government which was defeated in 1911, and not of a partisan of the Liberal party or of my right hon. friend the leader of the Opposition.

That, Sir, is the unbiased statement of a leading Conservative in the city of Montreal, a man who knows whereof he speaks. I stated a moment ago that Mr. Cahan, was an eminent lawyer of the city of Montreal; he is more than an eminent lawyer, he is an eminent financier. Through Mr. Cahan's enterprise and energy he has done much to develop the latent natural resources of the Dominion. In British Columbia, in Ontario, in Nova Scotia, in far distant South America, Mr. Cahan has organized corporations to develop public utilities, and he is obliged, from time to time, to go to the money market of Great Britain to raise capital for his great enterprises. No man, therefore, knew better than Mr. Cahan the deadly blow dealt to the credit of Canadian enterprises by this partisan report presented to Parliament by Messrs. Gutelius and Lynch-Staunton.

One of the important criticisms directed against the wisdom of the late Government in respect to the construction of the National Transcontinental railway, is, as to the building of the line from Quebec East to Moncton. It has been pointed out by the ex-Minister of Railways, and also by the hon. member for Carleton (Mr. Carvell), that when Messrs. Gutelius and Lynch-Staunton undertook to condemn the construction of the railway from Quebec East

to Moncton, they were passing upon a question of policy which had had the approval of the electorate of Canada in two separate and distinct general elections. In 1903, when this project was before the House of Commons, I do not think the present Prime Minister was so convinced of his opinion that another railway ought not to be built through the province of New Brunswick. I quote from 'Hansard,' 1903:

> Mr. Borden: I say that if there is to be found a better and shorter line between Rivière du Loup, or any other point on the Intercolonial, and Moncton, a line the construction of which will give to Halifax and St. John and the Maritime provinces generally a better fighting chance for western traffic than that which they have at present, I will support the construction of that line. But I will not support it with the object for which this Bill provides. I will tell my hon. friend how I will support it. I will support the construction of that line as part of the Intercolonial railway. I do not believe in constructing that better and shorter line for the purpose of handing it over to the Grand Trunk or any other railway company; but I do believe in constructing it and keeping it for the people's railway. That is my position and it is a position which I am ready to discuss in the Maritime provinces or anywhere else, with either the Minister of the Interior or any other hon. gentleman in this House.

The right hon. gentleman would not then approve of the construction of a railway through New Brunswick as a part of the Grand Trunk Pacific system, but with one eye on the province of Ontario and the other eye on the province of Nova Scotia, having in view the general election which would take place a few months later, he would not undertake to say that he was not in favour of a railway through the province of New Brunswick, but he wanted it built as part of the Intercolonial railway. The reason for the criticism of Mr. Gutelius on the building of this railway through New Brunswick is because he says it is an interference with the Intercolonial railway, and he argues that by the expenditure of public money to reduce the grades and curves on the Intercolonial, the full benefit to be obtained from the Transcontinental railway would accrue to the Intercolonial railway. But that is not the stand taken by the right hon. Prime Minister. The right hon. gentleman was not willing to give support to the Transcontinental railway scheme through New Brunswick, and he received his answer in the general elections of 1904. In that election eighteen Liberals were returned in Nova Scotia, to support the scheme to build a railway through New Brunswick, and the right hon. gentleman himself, for the first time in the history of Nova Scotia, a leader of a great party, had to go outside his province to find a constituency, in order that he might continue as leader. In the province of New Brunswick, the result of that election was almost equally decisive, there being nine Liberals elected to four Conservatives.

In 1903, another distinguished member of the Conservative party spoke on the proposal to build a railway through New Brunswick, as part of the National Transcontinental railway; I refer to Mr. Bell, who then represented Pictou. While Mr. Bell was speaking, the Hon. Mr. Ross, then member for Victoria, N.S., asked him this question:

> Is the hon. gentleman opposed to the road running to Moncton?

And Mr. Bell replied:

> Mr. Bell: I am criticising this scheme. I say this, that if the hon. gentleman who has just spoken, wants the road to go to Moncton, it is not because he is very anxious to see grain shipped by Halifax or St. John, but because he wants to have some kind of an excuse to offer his people for supporting such an absurd proposition.
>
> Mr. Johnston (Cape Breton): Then the hon. gentleman is opposed to it?
>
> Mr. Bell: The hon. gentleman is prepared to stand by the declaration made by his leader.

No leading member of the Conservative party in this House at that time had the courage that Mr. Gutelius has, ten years afterwards, to condemn the construction of the railway through the province of New Brunswick; on the contrary, they all left it to be understood that they were in favour of such a project, because they felt that the people of the Maritime provinces would demand its construction.

But the idea of building a railway through the centre of New Brunswick was not first conceived by the members of the late Administration, when they gave birth to the scheme to build the National Transcontinental railway. Away back in 1887, to my own knowledge, Sir Charles Tupper, who at that time was taking an active part in the support of the Conservative party in the federal election, made a public announcement in the city of Halifax in which he stated that the last act he did before he left England was to confer with his friend, Lord Revelstoke, who had agreed to underwrite the bonds for the construction of a railway from Harvey to Salisbury, across the province of New Brunswick. Sir Charles Tupper was always ready to back

up his argument with the inevitable telegram, and the statement was scarcely out of his mouth when a telegraph messenger rushed up to the platform and handed him a telegram which he read, amidst the plaudits of the Tory party, confirming his statement that Lord Revelstoke had undertaken to finance a railway to be built through the heart of the province of New Brunswick. Again, in 1891, the Conservative party reiterated their pledges to build a railway across New Brunswick, and the fact that they had not carried out the pledge made by Sir Charles Tupper in 1887 presented the most awkward situation which they had to face in that campaign. Never was there a time when the leaders of the Conservative party were not willing to pledge their faith and their honour to the construction of a railway across New Brunswick, but they forgot to implement that promise once the elections were over. The difference between the Conservative party and the Liberal party in this regard is, that whereas the Conservative party promised to build a railway through New Brunswick, and failed to do so, the Liberal Government and the Liberal party kept their promise, and built the railway.

I have here speeches made by other members of the Conservative party in 1904, when the amendment to the agreement between the Government and the Grand Trunk Pacific was under the consideration of this House. The present leader of the Government (Mr. Borden) then stated:

> The Government have kindly and generously consented to bear the greater part of the liability necessary to build about 2,000 miles of railway in the Northwest Territories and they have refused during the past session to insert one single stipulation binding the Grand Trunk railway not to carry the traffic of that railway to Portland. We moved amendments for that purpose, they voted them down and when the agreement was opened up they still saw fit to withhold their hand from imposing on the Grand Trunk Railway Company one single syllable which would make it necessary that they should carry that freight to Canadian ports instead of to Portland. Indeed, I understand that those who are interested in the welfare of Portland are not very much disturbed about the outlook. They have had the Grand Trunk railway freight before, and they expect to have it again. They have a sublime and earnest confidence that the building of the Grand Trunk Pacific railway through the Northwest Territories of Canada will in no way interfere with the interests of Portland, but that all the traffic there gathered will go to swell the trade of Portland and that the ports of Halifax and St. John will be relegated to the same position that they have occupied in the past.

[Mr. Kyte.]

You will observe that the right hon. gentleman had no confidence in the good faith of the late Government in their proposal to build a railway across the province of New Brunswick, and that he wanted to make it appear that their lack of good faith in that regard would result in our freight going by way of Portland. The right hon. gentleman goes on to say:

> Why is it that my right hon. friend's utterances now lack the earnestness which so characterized them last year? He possibly may also remember that although the flood-tide was upon us last year, although time would not wait last year, not one single step has been taken by the Government to survey this eastern division. If the flood-tide was then upon us, if there was a crisis, if time would not wait, why has the Government paused during these six or seven months and taken no steps to secure a survey of the country through which the eastern division is to pass? It has been whispered in some parts of the country where the eastern division is not popular, is it because the eastern division is to be dropped?

On that occasion the right hon. gentleman had not only very grave doubts but fears that the right hon. the Prime Minister of that day did not seriously and honestly intend to build a railway which Mr. Gutelius and Mr. Lynch-Staunton now so strenuously endeavour to condemn.

Mr. J. W. Daniel, member for St. John, spoke as follows:

> Ever since that election my opponents have been giving all kinds of reasons for the result. I have heard it spoken of as an accident. I have also heard it stated that there were two gentlemen each of whom wished to be the candidate of the Liberal party, and that the trouble which ensued when one of them was not selected was the cause of the overturning of the great majority which the late Minister of Railways had, and giving me my majority. Well, Mr. Speaker, I am quite willing to give full credit for all the results which these, or any other circumstances which were peculiar at the time, had on the election; but after giving them all due credit, I must make the assertion which is absolutely correct, that all these things put together would never have produced such a result as happened in the city of St. John, unless there had been something of a more close and intimate character with which all the people of the city had to do. There is no doubt in my mind whatever, Sir, that the result of that election was caused by the city of St. John with the policy of the Government, as crystallized more especially in the Grand Trunk Pacific Railway Bill. Because, while they did not believe that it was going to be of any special advantage to the country generally, they certainly came to the conclusion that it was going to be an absolute harm to them instead of a benefit. That feeling was general throughout the city of St. John. As far back as last August the merchants of St. John met together and talked over this matter. They wanted to know what effect it would

have upon them; because this is an immense undertaking for Canada, as it would be for any country; and if there are going to be spent in this country some $139,000,000 or $149,000,000, it is impossible to say how many millions are going to be spent before this scheme is carried into effect. If all this money is to be spent in the whole of Canada where are the Maritime provinces to come in? That is what we were saying in St. John—where were we to come in. We found that we did not come in at all.

There is no doubt, Mr. Speaker—I come to this point with some diffidence because people might think that I was trying to boom my own constituency a little too much—but I must say that so far as this extreme eastern section is concerned, there is no doubt that the business and commercial solution of the matter would be to build from Edmundston, or some practical point near Edmundston, right down the valley of the river St. John to the port of St. John. In that way you would get the shortest line and if there is any possibility of doing business on the line after it is built, you would have an opportunity of doing that business and getting some satisfactory results.

You will observe that Mr. Daniel was very strongly in favour of building the transcontinental from the town of Edmundston, but naturally he preferred that the terminus of the road should be in the city of St. John rather than in the city of Moncton. Mr. Daniel proceeded as follows:

Some of the changes made by this supplementary agreement seemed to be made for the very purpose of facilitating this action of the Grand Trunk railway and helping them to take their freight out of this country entirely to the port of Portland, Maine. If not, why should the Government ask Parliament to release this deposit of $5,000,000 as soon as the western section is completed? If the Government intend to carry on the building of the eastern section pari passu with the western section, why should we be asked to put this clause in? Because, if they really intend to build in that way, the eastern section would be built as rapidly as the western section, and there is no reason whatever for asking Parliament to release that deposit as soon as the western section is built.

Then Mr. Gourlay, Conservative member for Colchester, spoke as follows:

Your mistake is not to have chartered a new company. If you are bound to build this railway, make the interest of the whole line one from the Pacific ocean to Halifax, so that when your company gets a pound of freight in British Columbia, it will be bound to take it to Halifax or St. John. But you did not do that. You have, instead, amalgamated this project with a railway whose interest is to take the freight to Portland.

I have said that the Quebec-Moncton section must be built, and I wish to put myself thoroughly on record on that score. I am for that section from beginning to end. If a mile of this crooked bottled-up railway is to be built, then build the Moncton section, because if Quebec is to be benefited at the expense of the whole Dominion, we should have a little of the overthrow down in the Maritime provinces.

I will not hesitate to say on behalf of the Maritime provinces, that no line that does not go below Quebec, can ever benefit us. Once locate a line below Quebec, and then there is a straight course across the continent to Halifax, or to Country Harbour, or to St John, and once the products of the great west are put upon this line and sent down there, they cannot go to Boston or to Portland, but must go out on the Atlantic from Canadian harbours to the great markets of the old country. That is my ambition, and I believe it is the ambition of some of the gentlemen opposite, if they could only throw away their narrow party trammels and stand up like men, and proclaim what they really believe.

An attempt is made to delude us again, but we know now, that a line making its terminus at Quebec will never benefit the Maritime provinces.

I wonder if Mr. Gutelius and Mr. Lynch-Staunton read the debate in the House of Commons on the subject of this great railway before they penned the report which condemned the policy of the late Government, thinking no doubt that they were condemning the policy of one party alone, whereas they were condemning the policy of both parties at that time.

Mr. R. D. Wilmot, another member for the province of New Brunswick, spoke as follows:

When it reaches the province of New Brunswick—as I suppose it will by some means—I consider that the easiest and most natural route for a railway would be down the valley of the St. John river to Fredericton, and from that point by a branch to Moncton via Shipman. That country has already been surveyed, it is a level country and well suited for a railway. Another branch could be built to the city of St. John. The Prime Minister's proposition to build a straight line through the province of New Brunswick, I do not consider it at all practical. It would be very expensive and, from the knowledge we have of that section of the country, I do not think it could be built without a vast expenditure of money. If you follow the valley of the St. John river, you have a natural road bed and the most direct route to tide waters.

There we have the opinion of the Conservative members of the House of Commons as expressed in that debate, and their opinion is strongly in favour of building the line through the province of New Brunswick.

I have here a resolution passed by the Board of Trade of the town of Truro on the 14th of February, 1890, as follows:

Resolved, that the Truro Board of Trade learns with interest of the proposed extension of the Grand Trunk railway system to the Maritime provinces connecting with the Intercolonial railway at or near Moncton, thus giving a competing line to the west as well as a short

line and one on all British territory, and hereby requests the Dominion Government to afford all possible aid to promote the success of the undertaking; and further

Resolved, that a copy of this resolution be forwarded to our Dominion representative at Ottawa for presentation to the Government.

(Sgd) G. Clish, President.
G. A. Hall, Secretary.

I will now read a resolution passed by the Board of Trade of the city of Halifax on the 23rd of July, 1903, as follows:

Whereas, objection having been taken to that part of the Grand Trunk Pacific railway scheme which provides for the building of the road from Winnipeg to Moncton, N.B., this board desires most emphatically to reaffirm its previous declaration (appended hereto) that no scheme of Government transcontinental transportation will be either adequate or equitable to each province of the Dominion which does not ensure the carriage of Canadian products through Canadian ports in winter as well as in summer, and regards it as imperative that stringent guarantees to carry out that policy should be exacted by the Government.

We further maintain that the construction of the road west of Quebec without ensuring its continuance east through Canadian territory would be manifestly unjust to the Maritime provinces.

This board is also of the opinion that the building of the shortest possible line through Canadian territory from Quebec to Moncton, N.B., would be of immense advantage to the Maritime provinces, as well as to the rest of Canada, and would secure for the road a large share of through freight and passenger business, which at present is done through United States ports.

(Sgd) James Hall,
Vice-president.
Charles M. Creed,
Secretary.

It is no wonder that when the right hon. Prime Minister went to Halifax in 1904, in view of his hesitation as to whether or not he stood in favour of extending the Grand Trunk Pacific to Moncton, he met the reception he did at the hands of the electors of Halifax. I have here a resolution of the Board of Trade of the city of St. John, passed on the 13th of May, 1903:

Resolved, that the city of St. John has heard with regret that the Grand Trunk Pacific Railway Company indicate an intention to build its line from the Pacific to the city of Quebec only and do not propose to construct and extend the same so as to have during the winter season a terminus at the open sea on Canadian soil. Which means that the company will do all its transatlantic business in the winter through United States ports. And further resolved that such a course of procedure would do great injustice to the 'Maritime provinces' and would be applying the money and resources of Canada to the upbuilding of a foreign city and port.

And still further resolved that this city respectfully, earnestly and most strenuously urges the representatives in Parliament from the city and county of St. John and from the province of New Brunswick and the Maritime provinces generally to do all in their power to protect the interests of their provinces in the matter of preventing the injury that would be done if the proposed wrong should be carried out. And further resolved that the necessary protection against this impending injustice should be placed in the Act incorparating the company, should any such be passed.

And still further resolved that this city requests the representatives of Quebec, Ontario and the other more western provinces and territories to so act in securing such protection that the road to be built by the company shall pass from ocean to ocean through Canadian territory in both winter and summer and that such measures may be taken as will ensure the carrying through Canadian ports only of all freight originating or desired for any part of the Dominion of Canada.

I have read these expressions of opinion for the purpose of showing how well justified the Government of the present right hon. leader of the Opposition were in coming to the conclusion in 1903 and 1904 that no transcontinental service would be complete unless it extended from ocean to ocean. We had besides that, as I have said, the unanimous endorsation of the scheme by the province of Nova Scotia in 1904 and the very large endorsation in 1908, as well as the very large endorsation of that scheme in the province of New Brunswick in 1904 and 1908. In the face of that, I think that the question as to the wisdom of the policy of building the road was pretty well laid at rest, and only for partisan purposes could Messrs. Gutelius and Lynch-Staunton have conceived the idea of condemning the proposal which their masters the people had decided should be carried into effect by the federal Government.

About two weeks ago I made a motion in this House requesting the acting Minister of Railways (Mr. Reid) to lay upon the table a return containing certain instructions issued by the Minister of Railways to Mr. Gutelius looking to the reduction of the grades and curves on the Intercolonial, and Mr. Gutelius' report thereon. I regret that the acting minister has been unable to bring down that return while this debate is in progress. Inasmuch as the special commissioners have condemned the action of the Transcontinental Commission in building that road with grades of 0·4 and 0·6, and curves of six degrees, it would be interesting to learn why Mr. Gutelius recommends for the Intercolonial a course of action which he condemns in the Transcontinental. The acting Minister of Railways was unable to bring down the documents because, as he informed the House, he had to send to Moncton for them. I was surprised at that.

For all I asked for was a copy of the instructions given by the minister to Mr. Gutelius, which would surely be in the department here at Ottawa, and also a copy of the report sent by Mr. Gutelius to the minister which report also must be in the department. By the time the minister has these documents brought from Moncton, I presume this debate will be closed, and the people will not be able to judge the good faith of Mr. Gutelius in recommending the grades of 0·4 and 0·6 for the Intercolonial and condemning the same for the Transcontinental.

It was pointed out by the ex-Minister of Railways (Mr. Graham) what a serious effect this report of the investigating commissioners has had upon the standing of Canada in the money markets of Great Britain, to which this Dominion must resort for funds to carry on great enterprises. I have here the following message from London on this subject:

> Word has been received from London that the British people will no longer buy Canadian government bonds. The loan which Finance Minister White offered a few days ago will not sell. Though the twenty-five millions of 4 per cent bonds were offered at a point below par, the public has only taken 22 per cent and has left 78 per cent on the counters of the underwriters.
>
> It has been predicted for some time that the London money markets could not stand the raids which Finance Minister White has been making upon it. In the past five months he has been to London for over seventy millions in loans, some for renewals, and some for fresh obligations. There has been scarcely a month since he took office that has not seen him in the market, selling treasury bills or bonds. The reckless borrowing of the Finance Minister has shaken the confidence of the British investor, and the finishing touch to Canada's credit was the Gutelius-Staunton report.

I am sure the Finance Minister (Mr. White) will understand that it is not to make reflections upon him that I am reading this despatch.

> London does not understand the political methods of the Government of Canada and has an idea that a royal commission cannot lie. When it was cabled that investigation showed there had been forty million dollars improperly spent in building the National Transcontinental railway and that there had been eight million dollars' rakeoff between contractors and subcontractors the British investor believed it.

Therefore, we have already proof of the effect the report has had upon the financial fortunes of this Dominion.

Mr. A. D. FOSTER: Who wrote that?

Mr. KYTE: It is a cable despatch from London; I do not know whether it was the Montreal Star's correspondent or not. And the London Standard of Empire says:

> The publication of the report of the royal commission on the cost of the National Transcontinental railway has been the chief event of the week. Public opinion has been seriously aroused by the finding that about eight millions sterling has been needlessly expended. No specific charge of corruption has been made. It is not denied that the road has been well laid, with a minimum grade of 1 in 250, and without sharp curves; but the question is: Was such a line called for in the circumstances?

The press of this country has been filled from day to day with comments on the report of Mr. Gutelius and Mr. Lynch-Staunton. Partisans of the Government have stated that the report was amply justified by the evidence. It has been stated by the Conservative press that huge sums of graft have been divided up between contractors, engineers and other persons interested in bleeding the country. During the debate so far not a single syllable has been uttered in support of the reckless charges made by the press. The most that can be said in regard to the expenditure of this money is that the road cost more than was estimated. It is well within the knowledge of hon. gentlemen who know anything as to the cost of carrying on large enterprises that there is not one case in a hundred where the actual expenditure is kept down to the original estimate. We know that during the last five or six years the United States Government has been carrying on the construction of the Panama canal. We know that capable and competent engineers undertook to make an estimate of the actual cost of that great undertaking. That work was in the hands of army officers and engineers, and no source of information was left unexplored to enable them to report to the Government how much the work would actually cost. The original estimate of the cost of the Panama canal was $200,000,000, but, so far from carrying out the work and keeping within the amount of the estimate, already $350,000,000 has been expended and it is generally expected that $400,000,000 will have been expended before the work is completed. We have had instances in Canada where public undertakings were carried on by the former Conservative Government but in no case was the expenditure within the estimate. We had the graving dock in Quebec where McGreevy and Langevin figured twenty-five years ago. The estimated cost was to be $2,184,259 but the actual cost to the country was $3,138,234. Therefore, on an expenditure of practically only $2,000,000, an amount was spent over and

above the estimate of nearly $1,000,000. There is the case of the Esquimalt dock. The estimated cost was $374,559 and the amount paid the contractors was $581,841, $200,000 paid to the contractors over the estimate on a work originally estimated to cost only $374,559. There was an expenditure for the work of nearly fifty per cent over the original estimate. We have information with regard to the Curran bridge in the city of Montreal.

5 p.m. The estimated cost of that bridge was $120,000, but the actual cost was $430,000, a loss to the country of $270,000. But there were other elements in connection with the expenditure of that money which are entirely absent, I am happy to say, from the expenditure of the money on the National Transcontinental railway. The Conservative party to-day are but the successors of the Conservative party who ruled this country from 1878 to 1896. They had a record in the expenditure of money which I think will compare very unfavourably with the record of the Transcontinental Commission in respect to the expenditure of money. It is well known, the memory of the youngest of us goes back to what happened in this country from 1891 to 1896, when the expenditure of the late Government was under investigation by committees of this House. Were the charges against the late Government confined to charges of over-expenditure or expenditure in excess of the estimate? Sir, charges of this kind were not thought of for a moment in those days. Unless there was proof that the large expenditure of public money made by the Minister of Public Works of that day was due to the contribution of large sums to party friends and for election purposes, the expenditures were not looked at for a moment. But in every instance where the charges were investigated the total expenditure far exceeded the estimated cost and in nine cases out of ten 75 per cent of the money was graft that found its way into the pockets of supporters of the Government to be doled out at election times to candidates of the Government.

I have read extracts from the British press showing the manner in which they have received and accepted the report of Messrs. Gutelius and Staunton with respect to the expenditures on the National Transcontinental railway. Not a single suggestion has been uttered in the newspapers or otherwise in Great Britain to the effect that a dollar has been dishonestly spent in respect to this great undertaking. The most they can say is that the road will cost a great deal more than it was expected to cost and that it will entail a larger burden on the taxpayers of Canada than was originally expected. I desire to quote the press of Great Britain regarding the expenditure of public money from 1891 to 1896:

The London Times: Here in the mother country there can be only one feeling, that of deep regret for the wrong done to the fair fame of the eldest of her daughters.

The London Graphic: It is no longer possible to doubt that corrupttion in its worst form is rampant in a large portion of the Canadian Civil Service.

The London Telegraph: Enough, unfortunately, is already known in England to make it clear that only the most resolute and drastic purification can redeem public life in Canada from the taint of corruption, the like of which we have not seen in our own country for hundreds of years.

The Birmingham Gazette: Rascals out of office defraud the public in order to bribe rascals in office, and rascals in office prostitute themselves, sacrifice their honour and forsake their trust in order to keep on good terms with the rascals out of office.

The London Echo: No country can prosper where public departments are in league with fraudulent contractors, and where ministers are open to offers.

The St. James Gazette: The existence of an organized system of corruption among public officials in Canada has been conclusively proved, and like everything else on the American continent the bribery has been colossal.

The Graphic Despatch: Even Tammany Hall smells sweet and clean in comparison with the huge stink pot of the Conservative Government.

That is the record of the expenditure of public money by the predecessors of hon. gentlemen now in office, who would endeavour to fasten a criminal charge on the members of the late Government because the Transcontinental railway cost more money than was originally estimated.

If there is one thing that this debate has brought out for the benefit of the whole of Canada and for the welfare of Canada in the eyes of the motherland, it is the fact that, after having a three and a half hours' speech from the Solicitor General and a one and a half hours' speech from the acting Minister of Railways on this subject, there is not a single suggestion that graft or dishonesty characterized the work from beginning to end. It is quite true that for the last twelve months items have appeared in the Conservative press from day to day to the effect that huge graft had been discovered in the construction of the National Transcontinental railway. It is true that some secret source of information was available to the representatives of the Conservative press that was not available to

the members of the Liberal press. The Conservative press from time to time threw out suggestions and insinuations that terrific disclosures that would shock the public conscience of this country would be made when Messrs. Gutelius and Staunton presented their report to Parliament. The report has been presented, they have shot their bolt, and all the report discloses is that in the opinion of the investigating commission as a matter of policy the building of the railway from Quebec to Moncton ought not to have been undertaken. But that was a question of policy which had received the commendation and support of the people of New Brunswick and Nova Scotia in two general elections and had received the support of leading members of the Conservative party who were present here in the sessions of 1903 and 1904; and that in their judgment the road cost too much money. As regards the building of the railway itself, no dishonesty, no graft, nothing that should bring the blush of shame to any Liberal in the Dominion of Canada, has been disclosed by this report.

I wish to quote from the evidence of Mr. Balkam, an engineer who was examined by Mr. Gutelius with regard to the advisability of building wooden trestles instead of steel trestles:

Q. If you had been permitted to use wooden trestles at all of these points that you are filling now, would you have saved a large amount of money in original investment?—A. In some places, not all of them, by any means.

Q. In the net result over the whole division?—A. You could make an immediate saving by putting in wood in place of fill in places.

Q. And a large expenditure might have been deferred for from six to ten years?—A. I would not recommend wooden trestles, if that is what you mean.

Q. You would have saved a large amount of money?—A. By using wooden trestles you could build the road and not pay out so much money at the time.

Q. And your division probably would be finished by now?—A. No, it would not.

Q. It would have shortened the time very much to have constructed wooden bridges rather than waiting for steel and fills and arches; it would have expedited the work?—A. Yes, you could have expedited the work.

Q. And saved a large amount of money at present?—A. Yes.

Q. Take that fill at 1040 that has slid out so, do you think that if a pile foundation trestle had been built there originally, without touching the waterway at all, that there would have been any slide?—A. Excuse me, that is before my time.

Q. This is professional. Do you think there would have been, as an engineer?—A. I have very little faith in a wooden trestle on that kind of material.

Q. Would the pounding of the piles in there loosen it?—A. No, but I do not know whether you could have held piles there.

Q. I thought you would have answered without scrapping?—A. I do not know anything about that. You ask my opinion, whether I would have advocated.

Q. I ask your opinion whether, if a pile foundation wooden structure had been built there originally, you believe there would have been any sliding of that material—no fill at all?—A. I could not answer that.

Q. You are dodging?—A. No.

Q. Suppose the railroad had never been built up there, would there have been any slide there, where that 150,000 went?—A. No, it is not likely it would.

Q. Suppose the engineers walked across there, would there have been any slide?—A. No.

Q. Supposing you drove a string of piles across there, would there have been a slide?—A. We have one case where there was a slide with a string of piles along.

Q. Had you any reason to expect such a thing to happen in this place?—A. That is the trouble; we do not know when to expect these things in this country.

Q. Have you any reason to think so in that case?—A. There was nothing on the surface to indicate that as far as I know.

Q. Would it probably not have slid?—A. I could not say that.

By the Chairman:

Q. How would the piles make it slide?—A. The mere running through might make it slide.

By Mr. Gutelius:

Q. There is no catch in this. All I want you to say is what any engineer will say, that virgin country such as that ought not to slide in your opinion, and you would not expect it to slide if you built a trestle across it?—A. I certainly would not have expected it to slide, from the indications on the surface.

Q. With all your dodging, it would look as if you were not working with me?—A. Oh, no, I am not dodging. I did not understand the fact; I will certainly admit that right off.

That is the climax of Mr. Gutelius' examination of a respectable and responsible engineer who held an important position on the Grand Trunk Pacific. It will be remembered that 75 per cent of the witnesses examined by Messrs. Lynch-Staunton and Gutelius were men then in the employ of the commission. While the hon. the acting Minister of Railways endeavoured to make it appear that the late commission were deficient in judgment in their selection of men to carry out the work under them, let me point out that Major Leonard still retains the same engineers on the work that he found when he became commissioner. When Mr. Gutelius had these men before him he used all the tricks and menaces of the police court lawyer in an endeavour to browbeat them if they would not answer the questions as he wanted them answered. He says to Mr. Balkam, an honest, conscientious engineer, just because he would not say that trestles were better than a

clay fill in a particular place: 'you are dodging; you are not working with me in this.' Working with him, for what purpose? Not working with him to condemn the Transcontinental railway and the late Government, and to slander the Liberal party; but, more than all, he was not working with Mr. Gutelius to assist him in getting a job of $20,000 a year for running the Intercolonial as a result of this report on the Transcontinental. I am willing to let the last quoted evidence go, and leave it to the judgment of the acting Minister of Railways and Canals as to whether or not Mr. Gutelius was an unbiased, impartial judge with whom to entrust the examination of these witnesses, and to make a report of censure on the late commissioners of the Transcontinental railway.

Mr. A. L. DAVIDSON (Annapolis): Mr. Speaker, I desire to tender to the acting Minister of Railways and Canals (Hon. J. D. Reid) my congratulations on the very satisfactory statement and the very progressive programme which he has outlined in respect to the Intercolonial railway. We in the lower provinces entertain the view—and I think we are justified in entertaining it—that only just now is the great experiment of public ownership of railways in Canada receiving a fair and impartial trial. We are not afraid of the result of that test, and we believe that this great experiment, conducted by an honest and efficient Government, will absolutely justify itself, and that the great development which is going on in connection with the Intercolonial railway will have the result of tremendously booming and developing the eastern part of Canada. It is not, however, to discuss the Intercolonial railway that I rise on this occasion. I intend to devote the few moments at my disposal this afternoon more particularly to the discussion of a report the publication of which a few weeks ago threw the people of this country into indignation, and threw hon. gentlemen opposite into panic and alarm.

Before passing, however, to that phase of the question I desire to refer very briefly to the remarks of my hon. friend from Richmond (Mr. G. W. Kyte) who has just resumed his seat. I was somewhat surprised at the complaint of my hon. friend in respect to the non-appearance of a report which was prepared some time ago in reference to the Civil Service. My hon. friend evidently was ignorant that that report had been filed, and of course he has not read its contents. He excused his ignorance in this regard by saying that he had heard no noise about this report, no cry of wrongdoing on the part of the Liberal party, and therefore he thought no report could have been made. I take it for granted that the hon. gentleman ought to have a pretty shrewd idea of what the nature of that report should have been. I am not going to discuss that report; I will merely say if my hon. friend would read it he would find very many things therein contained not at all to the credit of the late Administration which he supported. I think, however, the Opposition have all the reports of commissions on their hands that they need at the present time, and I do not think they need discuss the report of any other commission just now. It seems to me that if they would bring to the discussion of this report their prayerful and repentant consideration, they would be doing all that this country expects of them.

The hon. gentleman also quoted at length a newspaper published in the city of Winnipeg which he claimed was reflecting upon Mr. Leonard in connection with the construction of the Grand Trunk Pacific. The complaint alleged in the report was particularly with reference to the delay that had been caused in the building of this road. The hon. gentleman was good enough to read to this House a section which expressly absolved Mr. Leonard from any dishonesty but accused him of delay. It occurred to me while the hon. gentleman was reading this quotation that this Winnipeg paper must be very unfair if it blamed Mr. Leonard mainly for the delay. It occurred to me that the party to which my hon. friend belongs was in power from 1903 to 1911 and that, therefore, if there was delay, certainly the blame was more with the late Administration than with any person else. I thought when listening to the quotation that the paper must be doing an injustice to the parties concerned and that it should have placed the blame more on the late Government than on the present Government. Imagine my surprise to learn that the hon. gentleman did not read the most vital part of that newspaper article. He read only a section or two sections of it, while in the very article from which he quoted there appears the following:

> Who is responsible for this extraordinary condition? Years have passed since the date mentioned by the Laurier regime on which the system would be completed. The late Govern-

ment for years marked time on the work east of Winnipeg through incompetency or in order to afford greater opportunities for graft; but, whatever the cause, the fact is obvious that up to 1911, years of time and colossal sums were wasted by the Liberal Government on the eastern section of the National Transcontinental railway.

Of course, the hon. gentleman could never have perused the whole or he would not have been unfair enough to make such an omission in quoting it to the House; but it is a curious coincidence that he quoted both ends of the article, but left out this very important middle. If the hon. gentleman's reading has extended to newspapers published in the city of Winnipeg, I would like very much to refer him to the columns of another newspaper published in that city, not a Liberal-Conservative paper but a paper edited by a gentleman who, for a number of years, sat in this House as a Liberal member and who, a little more than a year ago, contested the constituency of Macdonald in the Liberal interest. I just picked up one of these papers casually and ran across this almost by accident. The Winnipeg Tribune, in its issue of March 20, 1914, has this to say in reference to the matter:

> If there is not either colossal bungling or blundering in connection with the enterprise, the public will be surprised. The whole business looks like such a colossal blunder, particularly in view of the fact that we have one or two transcontinental railway lines too many, that the Canadian people will yet be forced in sackcloth and ashes over the blundering railway policy of the former Government.

Is it not surprising that when my hon. friend's vision was scanning the columns of the Winnipeg press, that this article should have escaped his attention altogether?

Mr. Speaker, I am not one of those who would blame or censure the hon. member for South Renfrew (Mr. Graham) for devoting over seven hours of the time of this House to an attempt to excuse and explain away the findings contained in the report of the commission appointed to inquire into the construction of the Grand Trunk Pacific. I think it was very much up to the hon. gentleman to make a defence and to explain away, if it were possible, the very serious charges made by these commissioners. The people of the country would have gladly given him not only seven hours but seven weeks if necessary in order that he might have full opportunity to present an ample defence to these serious charges. But the trouble is not that he took so much time; the trouble is that, notwithstanding the time that he took, notwithstanding the labour that he must have expended upon his defence, notwithstanding his known talents and ability as a debater, he was not able to dispose of the very serious implications cast upon his Administration and that of his Government, in this report.

The contention is put forward by hon. gentlemen opposite that this report should not have been published or circulated at a time when there is a money stringency in the markets of the world. They say that the circulation of this report, showing so much waste and extravagance, is calculated at this critical juncture to prejudicially affect the credit of Canada and credit of the Grand Trunk Railway Company, which is seeking to borrow money in the markets of the world. That is a very extraordinary complaint to make, a very extraordinary theory to advance. It is a strange argument to put forward that we must not have disclosures, that we must not look carefully into the transaction of public business, or the conduct of public institutions at any time when there is financial stringency, for fear of injuring the credit of the people of this country. You might as well say that if you had an acquaintance, whom you were suspicious of having stolen your money, you should not bring the matter into the police court, or you should not institute an investigation for fear of injuring that man's credit. That is a very absurd and extraordinary position to take.

The credit of Canada is too high to be affected by anything of this kind. If this report had not been published, if the evidence of wrong-doing had not been made public, it would have more injuriously affected the credit of Canada than the publication of the facts. It has been very evident for a number of years that there were irregularities in connection with the construction of this road. Business men and railway men all over the world have been advised of it, and if these irregularities had been winked at, it would have much more seriously injured the credit of Canada than bringing to the light this wrong-doing. But if the argument of my hon. friend is correct, if the publication of these facts is damaging to the reputation of Canada, and if we are to be blamed for making this report public, what is to be said of the Administration which made possible the evidence which we have disclosed? Very serious strictures have been

passed upon the personnel of the Commission which has conducted this investigation. Every one of the hon. gentlemen opposite who have spoken has, in some portion of his speech, roundly denounced and criticised the personnel of this commission. My hon. friend from Richmond referred to Mr. Morine, who was appointed by the present Government to investigate the Civil Service, and he informed the House that Mr. Morine was dismissed because a certain charge had been made against him. Well, herein is illustrated the difference between the methods of this Government and the methods of the late Government. Mr. Morine was not proven guilty in this Chamber; the evidence against him was of a very flimsy character but the Prime Minister held that a man appointed to hold an investigation, or to occupy a position of trust under this Government, must, like Cæsar's wife, be above suspicion. And even though Mr. Morine was not proven guilty, our respected leader said that his services were no longer desirable because even the shadow of suspicion against him had been raised. I want to say right here that if Mr. Gutelius had been a Morine, or if Mr. Lynch-Staunton had been a Morine, we would have heard very serious complaints from gentlemen opposite about their past records. There is no doubt at all that hon. gentlemen opposite have been just as anxious to study the records of Mr. Lynch-Staunton and Mr. Gutelius as they were to study the record of Mr. Morine, and the fact that they were not able to place their finger on a single black spot in the records of these gentlemen, proves pretty conclusively that they are of the right kind. And, why should they not be proper persons to conduct such an investigation? I think hon. gentlemen will agree with me that it is very appropriate to have on this Commission a practical railroad man; I do not think there is any doubt about that. That being so, where should the Government look for a practical and efficient railroad man? That he must have had practical experience on some great railway, and a Canadian railway at that, is very evident. Surely, hon. gentlemen opposite would not wish the Government to go to the United States to get a railway expert; the hon. gentleman from Pictou (Mr. Macdonald) would vehemently protest against that. There are, as we know, only three great railway companies in Canada; the Canadian Pacific railway, the Canadian Northern, and the Grand Trunk railway. Manifestly it would be improper to select an officer from the Grand Trunk railway, and manifestly it would also be improper to select an officer from the Canadian Northern railway. Had the Government selected an official of the Canadian Northern to conduct this investigation, what a howl would have gone up from the hon. gentlemen opposite. Why, they would have said; this railway corporation is on its knees before the Government asking for financial aid, and this creature of theirs dare not make an independent report. Therefore, the only railway from which the Government could properly make a selection was the Canadian Pacific railway, the one independent company in Canada which is not begging alms from the Government at the present time. We were told by the hon. member for South Renfrew (Mr. Graham) that the Canadian Pacific railway is the best managed railroad in the world, and where could we get a more competent man than from among the officers of that well managed railroad.

Why these objections from hon. gentlemen opposite to Mr. Lynch-Staunton? Manifestly, it is desirable to have an investigation of this kind, conducted by a barrister of repute, a man who knows how to weigh evidence, who knows how to cross-examine, and who knows how to get at the facts, and make proper deductions therefrom. But the great trouble with Mr. Lynch-Staunton is, not that he is a lawyer, but that he happens to be a Tory lawyer. The members of the legal profession, to which I have the honour to belong, hold, almost without exception, very strong political opinions; it is difficult to meet a lawyer who is not a Grit or a Tory. The Government, therefore, had to select either a Liberal lawyer or a Conservative lawyer. It was, in my opinion, an act of kindness on the part of the Government not to select a Liberal lawyer for this particular work, because the past experience of hon. gentlemen opposite with Liberal commissioners has been so painful that the Government was certainly considerate in securing the services of a Tory in this instance.

The hon. gentleman who is most concerned in this investigation, the late Minister of Railways, devoted a great deal of attention to comparing the relative value of a filled road and trestle road, and the relative value of a trestle bridge and a steel structure. I am quite sure the hon. gentleman did not intend to do the commissioners

an injustice in this respect, but it seems to me that all who listened to his remarks, without having previous knowledge, would conclude that the commissioners laid down the theory that a trestle road was better than a filled road, and that a trestle bridge was better than a steel bridge. But, you can search the report from beginning to end, and you cannot find any such statement. There is no doubt at all that a filled road is better than a trestle road, and there is no doubt that a steel bridge is better than a trestle bridge, but the whole point, according to the commissioners and according to the evidence, and according to the intelligence of any thoughtful person, is that it is much more economical to employ trestles in the first place, and, later on, after the engineering difficulties are understood, and when you have some traffic on your road, when you have idle trains which you can utilize, when you understand the nature of the country through which the road passes, to replace these trestles with permanent structures. The hon. gentleman (Mr. Graham) claims a great deal of credit for this road, because it has been constructed with fillings instead of trestles. Well, if this is something to be proud of, it is not the Liberal Administration who is responsible, because we have the pronouncement of Mr. Fielding in the House of Commons, when the Grand Trunk Bill was introduced, which contradicts that. It was his intention not to build the road as the ex-Minister of Railways says, it has been built, but to build it just as Messrs. Gutelius and Lynch-Staunton have recommended it should have been built. I quote the remarks of Mr. Fielding at page 8574 'Hansard,' 1903:

> Now, we know that in the construction of a road, in the anxiety to get a railroad built, some things are done which may be regarded as almost of a temporary character. In one place you put in a trestle which five or six years later you will fill up, and make a permanent road. In another place you put in a small wooden bridge; in time when it commences to weaken, you put in a steel structure, and so on. The road is not finished when its nominal completion takes place, but it may be finished as time progresses.

Further on he says:

> We will give them a completed road so far as any new road can be made so; but as years roll on, if the Government, being in the same position as the landlord to whom I referred, desired to make improvements on that road, if they desired, having regard to the permanency of the road, to take out a wooden bridge and put in a steel structure; if they desired to fill up a trestle, or do one of the many things which hon. gentlemen opposite who are familiar with railways will understand better than I do, then the Government will have the right to do that in the way of betterment.

So it is very evident that, if this road is so much better than other roads in Canada are when first completed, that result has been attained entirely against the original conception which Mr. Fielding had when he introduced the measure under the terms of which the road was built. Furthermore, the engineers appointed by the commission to construct this road never had any such purpose, because the first tenders called for made no provision whatever for filling of this character. When the first tenders were called for, it was assumed that the road was to be built just as every great railway builds its road—first, by building trestles, and subsequently filling them in. Consequently in the first tenders that were advertised for there was no provision requiring the tenderers to give any figures at all for filling.

I will read now a quotation from a letter of Mr. Lumsden, as recorded at page 76 of the report. This letter was written in reply to some inquiries made to Mr. Lumsden by certain engineers who had been approached by contractors with questions as to the price that would be paid for filling. Mr. Lumsden wrote as follows:

> It was not the intention that the present contractor should be called upon to make very heavy fills, the material for which would have to be hauled by train, but that he should put in standard trestles in such places. Of course, if the contractor prefers to make up a fill by train-hauled filling, rather than put in the standard trestle, he can do so with your approval, and in such cases he must provide the necessary temporary trestle at his own cost.

It was not Mr. Fielding; it was not the late Administration; it was not the engineers orginally employed who were responsible for this great improvement of which the hon. member for South Renfrew (Mr. Graham) boasts. The evidence herein contained shows conclusively that this change was made in deference to the wishes of the contractors; that they found it very profitable to do the filling when they could make use of the overbreak and could make fabulous sums by so doing. If this road is better than our other roads were immediately after construction, it is due to the fact that the contractors insisted upon that work in their own interest and that they benefited by it to the tune of over $3,000,000. The more this whole scheme is considered, the more evident it will appear that the whole railway policy of the late Government in this particular has been a colossal blunder. I do not want

to approach the subject in any partisan spirit or with any unfairness to hon. gentlemen opposite, but I think that any person who seriously reads Canadian history aright is driven to the conclusion that in this country of ours the record of the Liberal-Conservative party has been a record of constructive statesmanship. The great big things in Canada, the great national undertakings to which people of this country look back with pride, are the handiwork entirely of the Liberal-Conservative party. There has been levelled against the work which has recently appeared from the pen of that venerable statesman, Sir Charles Tupper, criticism to the effect that his book attributes all the great things in Canada to the Liberal-Conservative party. That is not the fault of the historian; it is the fault of history. Everything that has been worth while in Canada has been done by the Liberal-Conservative party, and the record of the Liberal party has been—and I say it without any partisan spirit at all—largely the policy of weak imitation of the policy of their opponents. In so far as they have succeeded—and in some respects they have succeeded—they have succeeded by following slavishly the policy of their opponents.

We will take for example the question of trade. For eighteen years they condemned the great fiscal policy of their opponents. When they got into power they followed that policy and by following it they managed for a while to continue to obtain the confidence of the people of this country; but when they departed from that policy, when they struck out for themselves, when they conceived the idea of mixing our fiscal policy with that of a country whose ambition was to make Canada an adjunct to itself, then it was that they discovered that it was very much easier to copy than to construct. Undoubtedly it is a safer policy for a party to imitate than to construct.

Mr. GAUVREAU: Is that in the report?

Mr. DAVIDSON—Evidence of that is in the report in a very conclusive way. It is manifestly easier to imitate than to lead, but there is a very apparent objection to this policy, namely that it usually takes the ability, the acumen, the strength of the originator to carry out that which the originator conceives. None but an Achilles can wield Achilles' sword; you cannot gain the powers of a giant merely by imitating his movements, and you cannot acquire the statesmanship of a great statesman merely by combing your hair in the same fashion in which he combs his. It is a dangerous thing for a country like Canada, with many new works to be constructed, many great things to be done, to commit that work to a party of imitators. You want originators to handle the destinies of Canada. You never had a better illustration of the weakness of the policy of imitation than you have in the experience which the Liberal party have had with railways in this country. That proves conclusively to my mind that a party of imitators is a very dangerous party to which to entrust the administration of affairs. After all, this wretched railway bungle is due almost entirely to the vanity of our opponents, who thought that they could safely gain glory by imitating the tactics and policy of their opponents. There is no doubt that the Liberal-Conservative party in Canada reflected great credit upon itself by the construction of the Canadian Pacific railway. That was a great undertaking. The great statesmen who led the Liberal-Conservative party in those days, despite the misgivings of friends, and the strenuous opposition of opponents, went forward and built that great work and won for themselves great glory and credit. They found themselves at last in the very fortunate position where even their opponents who had condemned them were obliged to grant them reluctant praise. Mr. Fielding himself in introducing this very Bill gave them rare praise, and he also gave away the secret as to the construction of this road. Let me read from his speech as recorded in 'Hansard' of 1903, at page 8591. This is what Mr. Fielding said:

> 'Perhaps there were some mistakes of location, perhaps some mistakes in the land policy, and in the clearer light of to-day we may be able to see that things were done then which had been better left undone. I am disposed to think that perhaps those things may after all have been only incidental to the difficulties of the time and to rapid construction. I do not hesitate to say, in the light of experience, that the Liberal party did entertain alarm and anxiety, which have been proved in the end not to have been fully justified. I for one have no disposition unfairly to criticise to-day. I frankly admit, as one who was then a young man, that I was lead to entertain alarm and anxiety. To-day I say the policy of the Conservative party, subject to these qualifications which I have mentioned, has been justified, and in that respect the Conservative party has made a record which they can look back to with pride.
>
> But while there was some excuse for doubt and hesitation in 1871 and 1887 there is none today. Are these gentlemen to learn nothing? We Liberals have learned something by experience.

What was the experience ?

Mr. SCHAFFNER: The country has had experience.

Mr. DAVIDSON: Yes, since that time the country has obtained experience, an experience which has cost very much more. What was the experience that Mr. Fielding obtained ? His course of reasoning was very simple. He said: The Liberal-Conservative party made itself great by building one transcontinental line; we will make ourselves great by building another. And his party said: The name of Sir John A. Macdonald will go down to posterity as that of a great statesman because he built a national transcontinental line; let our leader have the same honour. And that is the reason this whole scheme was embarked upon, and it was embarked upon altogether contrary to the sanest and best opinions which were offered to the Government of that day. The man in that Government who should have known more about railway construction than any other was its Minister of Railways and Canals, and he opposed this scheme so strongly that he left his party, he left his position in the Government, on this very question. His idea was—and it was a very sensible idea—to acquire the Canada Atlantic, to extend the Intercolonial railway to the West, and, instead of building a line which would be a competitor to the Government's own line—which then had not enough traffic to make it prosperous—to tap with a line the great West, make this line the national highway, and make it a prosperous concern.

At six o'clock, the House took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

THIRD READINGS.

Bill No. 10, respecting Barcelona Traction, Light and Power Company, Limited.—Mr. Macdonell.

Bill No. 22, respecting Brazilian Traction, Light and Power Company, Limited.—Mr. A. K. Maclean.

Bill No. 23, respecting British America Nickel Corporation, Limited.—Mr. Northrup.

THE PREMIER LIFE INSURANCE COMPANY.

The House in Committee on Bill No. 92, respecting the Premier Life Insurance Company.—Mr. R. B. Bennett. Mr. Blondin in the Chair.

Mr. R. B. BENNETT: This insurance company, which was incorporated by Parliament, was given a certain time in which to obtain $250,000 of subscribed capital and $100,000 of paid-up capital. It has raised only $75,000 of paid-up capital, and is asking for an extension of time.

Mr. OLIVER: How long ?

Mr. BENNETT: Until 1916. For the information of my hon. friend, I might say that Colonel Saunders, of Edmonton, is one of the gentlemen interested.

Mr. OLIVER: Was there any objection to the Bill in committee ?

Mr. BENNETT: It passed with amendment.

Bill reported, read the third time, and passed.

SECOND READINGS.

Bill No. 121, for the relief of Eliza Jane McLaughlin.—Mr. McCraney.

Bill No. 123, to incorporate the Atlin Railway Company.—Mr. Michael Clark.

THE NATIONAL TRANSCONTINENTAL RAILWAY.

Mr. DAVIDSON: When the House rose at six o'clock I was stating that this scheme for the construction of the Transcontinental railway owed its inception to the vanity of the Liberal party, who were ambitious to get the credit for constructing a transcontinental railway in this country, just as their opponents had the credit for constructing the Canadian Pacific railway; and, furthermore, that this policy was embarked upon against the avowed wishes of the only man in the Government of that day who was in a position to speak on railway matters, Hon. A. G. Blair, Minister of Railways and Canals. The other evening, the hon. member for Welland (Mr. German) referred to the speech made by the late Mr. Hays, then president of the Grand Trunk Pacific railway before the Railway Commission of this House, in which Mr. Hays pronounced a eulogy on that project. Is the hon. gentleman not aware that when the scheme was first submitted to Mr. Hays he was astounded at the proposal? The policy which was afterwards carried out was not the policy of Mr. Hays at all. What Mr. Hays proposed on behalf of the Grand Trunk railway was that the Government should assist in the construction of a railroad from Port Simpson to North Bay. In consideration of receiving that aid, the Grand Trunk Company were willing to pledge that all the

traffic from all its lines should be turned over to the Intercolonial railway at Montreal. That would have been of immense benefit to this country, especially to the eastern parts of Canada. It would have insured at the very outset the continued prosperity of the people's road. If the money which has been squandered on this scheme had been devoted to the construction of branch lines for the Intercolonial railway; if President Hays' scheme had been carried out, and all the trade of that great system had been diverted to Nova Scotia and New Brunswick ports, utilizing the splendid terminal facilities now being constructed by the Government in those ports, it would have marked a great era in the prosperity of this country. This would not do, because it meant tying up with the Intercolonial Railway Company, which was the work of a Conservative government, and as the hon. gentleman from South Renfrew (Mr. Graham) said the other night, the Liberal Administration did not want to play second fiddle to any one. The hon. member for Richmond (Mr. Kyte) this afternoon claimed that the people of Canada had already endorsed the policy of a transcontinental road—that the people of Nova Scotia particularly had committed themselves to it. It is true that the electors of Nova Scotia in 1904, with only a limited knowledge of the scheme, signified a willingness to give it a chance. It is also true that the people of Nova Scotia, after they had returned a solid support to the late Government of eighteen members expected that those members would have sufficient influence with the Government to ensure that the road should be continued into the province of Nova Scotia, instead of being terminated in another province. The people of Nova Scotia were most keenly disappointed when their members were not able to achieve that for their province.

It is true that, with a limited knowledge of this project, the electors of Nova Scotia did apparently pronounce in favour of it in 1904 and sent to this House no less than eighteen Liberal members; it is true that, with a little more knowledge of the scheme, in the year 1908, they only sent to this House twelve Liberal members; it is true that, in 1911, with more knowledge still, they only sent to this House nine members; and it is abundantly true that at the next opportunity they have, with a full knowledge of the scheme, they will not send a single Liberal representative.

Hon. gentlemen opposite have devoted a great deal of attention to considering technical details in connection with this matter, details of gradients, curves, trestlework and the like. I am not prepared to follow them upon these technical subjects, but the point I see in the matter is this: Explain the thing away as you may, talk about technical matters as you will, the ugly, bold fact remains that, whereas this road was supposed to cost a little over $60,000,000, it has cost no less than $234,000,000. That is the ghost of Banquo that will not down. How are hon. gentlemen going to explain that? Let me give this House an estimate of the cost of the road which was made at the time this scheme was embarked upon. Mr. Fielding took the House into his confidence and made an estimate in such glowing terms, and with such apparent fairness, that every one might have thought that he was making an estimate that was well upon the side of liberality. This is what Mr. Fielding said on that occasion ('Hansard,' 1903, page 8588):

> I have made an estimate of $25,000 per mile for one part and $28,000 a mile for the other part, which estimate is backed by the reputation of an engineer of standing, but, if we are to have the high grade—I should say the low grade—road called for by my hon. friend from North Norfolk, Mr. Charlton, perhaps these estimates are not high enough. I am prepared that the millions of a balance should be devoted to the improvement of that road. I propose to add 25 per cent of the first estimate of the cost of construction of the eastern division, and so add 25 per cent to the present value of the seven years' interest of that portion of the road. That is equivalent to an advance on the cost of from $25,000 per mile to $31,250 per mile for one part and from $28,000 to $35,000 for the other part. That is a pretty liberal estimate and ought to build even the fine road called for by my hon. friend from Norfolk.

Other estimates were also made. The hon. A. G. Blair, a practical railway man himself, who was opposed to the scheme, and whose interest it was to make it appear as expensive to the country as possible, also made an estimate, and this is what Mr. Blair said—'Hansard,' 1903, page 8457:

> Now, 1,825 miles from Moncton to Winnipeg, or to some point north of Winnipeg, wherever the line may be supposed to run, will cost this country $65,000,000, upon the calculation which I have made. That may be somewhat in excess of the actual result.

He said that $65,000,000 might be in excess of the actual result, but, lo, the cost is not $65,000,000, but about four times that amount.

The building of the Canadian Pacific railway was a very much more stupendous task than the building of this road, for the reason that it was an experiment. The promoters of the road were called upon to

build into a perfect wilderness, and it was only reasonable to suppose that financial men would be chary about investing their money in an enterprise of that kind. From the nature of the scheme, from the fact that it was an experiment, from the fact that it was more a national enterprise than a prospective money-maker, the conditions under which that road was built were very much more arduous than the conditions under which this road is being built, and more aid might reasonably be expected from the country. Yet the right hon. leader of the Opposition (Sir Wilfrid Laurier) is authority for the statement that the Canadian Pacific railway only cost the people of this country $60,000,000 in cash. The section of the National Transcontinental railway from Winnipeg to Moncton is costing the country something like $234,000,000, and the country is also called upon to guarantee the bonds of the Grand Trunk Pacific on the remaining part of the road. The country has already suffered by implementing these bonds to the tune of something like $10,000,000. I say, therefore, that, explain this report as they may, hon. gentlemen opposite cannot get over the fact and this is what they will have to do before the people will doubt the reasonableness of the findings of this commission.

There are other suspicious circumstances. This is not the first reference to charges of wrong-doing in connection with the construction of this road. In 1907 there was a gentleman who made charges against the commission very similar to the charges herein contained. He was not a Tory, he was not a lawyer, he was not a Canadian Pacific railway engineer, he was not even an American citizen, but he was a Liberal and he had been employed by a Liberal Commission to work upon the road. He made charges of wrong-doing and the people of the country at that time were very poorly satisfied with the manner in which this Parliament treated those charges. His name was Hodgins. In the year 1910, another gentleman, who was not a Canadian Pacific railway official, who was not a lawyer, who was not an American, but the commissioners own chief engineer, Mr. Lumsden, made similiar charges and at that time the committee appointed to investigate the charges proved to be such a farce that the Conservative members on that committee were compelled to withdraw and the people were very far from being satisfied with the examination and investigation which was made into the charges. The people of the country are in a receptive mood and are in a mood to believe this report. Unless hon. gentlemen opposite can offer some explanation as to the enormous cost, and can give some good and sufficient answers to these charges and findings, the people are going to take the report at its face value.

I do not propose to go into details with reference to the contents of this report, but there is one matter to which I wish to refer very briefly and that is the methods pursued by the late Government in awarding contracts. I am not saying that the commission, in adopting this scheme of awarding contracts, were animated by a desire to shut out competition, I am not saying that their motive was to confine the contracts for this work to a narrow circle of friends in whom they had confidence, I am not saying that their purpose was to shut out ordinary competition, but I am bound to say that if that had been their idea they could not have hit upon a more excellent scheme than the one which they carried out in this particular. Let me give one or two illustrations. Instead of dividing this line into small sections which might have been tendered for by persons of ordinary means, they divided the whole 1,800 miles into twenty-one sections and one of these sections at least amounted to no less than 150 miles. To-day the present Government are undertaking a work of railway construction in the province of Nova Scotia in connection with the terminals at Halifax. They propose to build about six miles there, and that work is cut up into three different contracts.

But this concern allows sections of 150 miles to be allotted to each contractor. More than that, it was provided in many instances that the work should be done in absolutely inaccessible territory. Advertisements were issued calling for tenders for construction in the wilderness, with which there was not railway communication of any kind. The ordinary man, who read these advertisements, would naturally suppose they meant what they said, and that the successful tenderer would be obliged to build 'tote' roads, and to commence construction before the other sections of the road had been built up. As a matter of fact, it would seem that the initiated knew all about it, and consequently a few contractors were able to tender for these remote sections, and to postpone doing any work on them until the adjoining sections were constructed, thus making enormous profits.

But the most original and the most surprising method of discouraging tenderers was the stipulation in reference to the security to be given. The advertisements announced that the tenderer was obliged to make a deposit of a substantial sum when putting in his tender, and it was stipulated further that within ten days of the awarding of the contract, he might be called upon to put up additional security, in default of which his first deposit would be forfeited. When inquiries were made of the commissioners, as to how much the tenderers might be called upon to deposit, in addition to the first deposit, they were told that they might be required to put up one-third of the contract price. I have listened attentively to the speeches made by hon. gentlemen opposite, but I have heard no one explain satisfactorily why that extraordinary procedure was followed. Under the law of this country, where a government contract exceeds $250,000, the tenderer is obliged to make a deposit of five per cent. Why in the name of all that is reasonable should a tenderer on this Transcontinental railway work be required to make a deposit of thirty-three and one-third per cent of the amount of the contract price? When the agreement was made with the Government for the construction of the Canadian Pacific railway the company was obliged to make a deposit with the Government of $1,000,000 as security for the carrying out of the agreement, and when the agreement was made with the Grand Trunk Pacific they were obliged to give—and Mr. Fielding boasted of the enormity of the sum—$5,000,000 security; but I point out that if this extraordinary condition had been enforced by the Commissioners of the National Transcontinental railway, one contractor building only a section of the road would have been obliged to put up no less than $4,336,000. Of course this added security was never asked for, but at the same time the ordinary man who was called upon to tender was not expected to know this.

Mr. R. B. BENNETT: He was sorry afterwards he did not know it.

Mr. DAVIDSON: He was sorry after he did not know. It would look as if the persons who actually did bid on these tenders were fully advised as to what might happen, or at least it would seem that the only men who could prudently enter into an agreement of this kind were the men who had an understanding with the commission that the security would not be asked for. If the intention of the Transcontinental Railway Commissioners had been to discourage competition, they could not have hit upon a better plan, and as a matter of fact the thing worked out in exactly that way. Two-thirds of the whole route, 1,133 miles, were actually given to only three different contractors, and on that vast mileage only four distinct firms tendered. The result was what anybody might suppose. the tenderers formed a circle exceedingly small and exceedingly select. The circle was confined practically to three fortunate tenderers, although there were eight others who were let in to a limited extent. These were the Grand Trunk Pacific, the Davis concern, and the associates of M. J. O'Brien. The Grand Trunk Pacific were awarded contracts for the construction of 353 miles, M. P. and J. T. Davis got 408 miles, and the associates of M. J. O'Brien were allotted 372 miles. It will be observed that one of the largest beneficiaries under this arrangement was Mr. M. J. O'Brien. The hon. member for South Renfrew (Mr. Graham) informed us that before the contracts were finally signed they had to be submitted to him for his sanction. I do not say for a moment that the hon. gentleman (Mr. Graham) used any influence to have so many of these contracts awarded to Mr. M. J. O'Brien and his associates; neither do I say that Mr. M. J. O'Brien considered himself under any obligation to the late Minister of Railways for being so fortunate in this particular. But, the fact remains, that when the great political flood that visited this country in the year 1911 swept the Liberal party from power, and swept the late Minister of Railways out of his former constituency of Brockville, and when he looked out on the waste of waters like Noah's dove for a place whereon to rest, there was no spot in Canada upon which he could safely put the sole of his foot but the constituency of South Renfrew, in which M. J. O'Brien resided, and in which he had very large interests.

As I have said, the result of this whole scheme was to narrow very greatly the number of persons tendering for contracts. They formed a select and small circle, and I am bound to say, furthermore, that in their conduct towards each other they observed the very best of form; they were not rude enough to tender against each other; they were generous enough to see that the mileage was pretty evenly divided. I will give you the figures again: The Grand

Trunk Pacific, 353 miles; the Davis concern, 408 miles; M. J. O'Brien and associates, 372 miles. Very considerate were they, and more than that, they exercised so much Christian charity amongst themselves that they were absolutely willing to work for one another very much cheaper than for the Dominion of Canada. And so we see the spectacle, on contract No. 11, of the Grand Trunk Pacific and Macdonell and O'Brien tendering for the same job, the contract of Macdonell and O'Brien being thirteen per cent lower than that of the Grand Trunk Pacific. That was as cheap as Macdonell and O'Brien were prepared to work for the country, but when the Grand Trunk Pacific landed the contract, they were perfectly willing to take it over and pay the Grand Trunk Pacific five per cent on the bargain. So, they were willing to work for the Grand Trunk Pacific eighteen per cent lower than they would work for the Dominion. And what followed? It followed that the work of constructing this railroad got entirely into the hands of middlemen; middlemen who were not prepared to carry out the work, but were able to sublet it at enormous profits.

Uusually contractors expect sometimes to gain and sometimes to lose, and it is only the fortune of war for a contractor to lose money on some contracts. But the surprising fact occurs in connection with the construction of the National Transcontinental railway, that not one single contract was unprofitable to the contractors, and in almost every instance they made enormous profits.

Mr. R. B. BENNETT: Including the Grand Trunk Pacific, which had no equipment to carry on such work.

Mr. DAVIDSON: These men who tendered for this work did so, not with the intention of performing their contracts themselves, but with the intention of hawking them around and making a good thing out of them.

Let me give you briefly a digest of the results in this respect of the different contracts. Only one contract, I believe, was actually carried out by the firm who tendered for it and who received the contract. Every other contract was sublet in whole or in part. On contract No. 1, which was sublet, a profit was derived by the middlemen of $92,308. On contract No. 3 there was a profit of twenty-three per cent. On contract No. 4, there was a profit of twenty-three per cent. On contract No. 5, there was a profit of twenty-seven and one-half per cent. On contract No. 6, there was a profit of nineteen and three-fourths per cent. On contract No. 7, there was a profit on one item alone of $225,000. On contract No. 8, there was a profit on one item alone of $432,000. On contract No. 9, there was a profit on one item alone of $200,000. On contract No. 10, there was a profit of twenty-one and three-fourths per cent. On contract No. 11, there was a profit of thirty-two per cent. On contract No. 12, there was a profit of twenty-one and three-fourths. On contract No. 13, there was a profit of twenty and one-third. On contracts Nos. 16 and 17, there was a profit of ten per cent.

Mr. R. B. BENNETT: And not one of the middlemen did the work.

Mr. DAVIDSON: And not one of them did the work. The commissioners tell us that this was one of the ways in which a huge sum of the people's money was wasted.

We were told in previous election campaigns, and it was stated in this House, when disquieting rumours were raised in reference to the awful waste and extravagance exhibited in the construction of this road, that the people of Canada need not get excited over it; that, if there were any loss to be sustained, it was a loss to the Grand Trunk Pacific Railway Company; that the Grand Trunk Pacific Railway Company was to take over the road and, no matter what it cost, to pay rental based upon the percentage of the cost, and that therefore they and not the people of Canada were the interested parties. This statement was not correct, because, as a matter of fact, under the agreement the company were to have the road free without any rental for seven years. Futhermore this company was to pay the Government only three per cent, whereas the money cost the Government something like four per cent. The further statement was made that, the Grand Trunk Pacific being thus, so greatly interested in the undertaking and having their engineers on the ground, the people might be assured that they would see that no money would be wasted and that the road would not cost more than it ought. When we read this report, we can understand why so few protests were heard from the Grand Trunk Pacific Railway Company. They themselves received one-fifth of all the contracts and were able to make five per cent on them. That was the reason why there was no murmer from these people. Any one who reads the findings of this report is bound to accept them at their face value. By instances such as this, the commissioners say that no less than $40,000,000

of the people's money was wasted. I wonder if the people of this country realize how large an amount that is. Why, if that sum was devoted to the construction of public buildings in Canada—

Mr. BELAND: Armouries.

Mr. DAVIDSON: —seven public buildings costing $25,000 each could be built in every riding in the Dominion of Canada and there would be money left.

The question of good roads is a very live one in this country at the present time. One of the great grievances the people of Canada have to-day against the Liberal party is that they prevented the Government of this country from giving them good roads. What would this sum mean if it was expended upon the roads of Canada? It would build two macadamized roads across Canada from the Atlantic to the Pacific.

Mr. PROULX: Who made this estimate for the hon. member?

Mr. R. B. BENNETT: It was not Fielding, and it was not Graham.

Mr. DAVIDSON: The estimate, to any one who knows arithmetic, is not a very difficult one to make. It is merely a case of multiplying the mileage of the road by what a mile of it would cost. If the intelligence of my hon. friend can grasp that, he can work out the calculation for himself. If that money were devoted to building roads in the province of Nova Scotia, it would make a macadamized road of every mile of road in that province. Is it any wonder that the Liberal party wince under a report of this kind? Is it any wonder that they tried to prevent the commissioners from completing their task? Is it any wonder that they tried to prevent this report from ever reaching the people? They made those efforts. In the last session of this Parliament this country witnessed the surprising spectacle of an Opposition trampling upon the Constitution, turning this House into a farce in order to prevent the Government from carrying out the programme which the people of this country approved. For week after week, month after month, this House was turned into a perfect fiasco by hon. gentlemen opposite, with the avowed purpose of driving the Government, which was then fresh from the people, again to the country in an election. They said their reason for this conduct was due to the fact that they objected to our naval policy. We pointed out to them that while the policy of the Conservative party in this respect was radically different from that of the Liberal party, it nevertheless was not a permanent one, and that, if it were embarked upon and subsequently the Liberal party were returned to power and their policy approved, our policy would very easily dovetail into theirs and no violence would be done. That did not satisfy them. They kept us here day after day, and exhibited the wretched spectacle to the people of this country of its Constitution being trampled upon and scenes of wild disorder being engaged in in this Parliament. The people of Canada wondered why this was done. They wondered what was back of this movement of the Opposition. Some honest people said: The trouble with those men must be that they are disloyal; they do not want to give assistance to the mother country. I am very glad to absolve hon. gentlemen opposite from the charge of disloyalty. I do not believe it was disloyalty that prevented them. I do not believe that either they or their masters, the Grand Trunk Pacific Railway contractors cared very much about the naval policy. What they cared about was this work of investigation that was going on. That is what they wanted to balk.

Mr. PROULX: How many miles of macadamized road would $35,000,000 construct?

Mr. DAVIDSON: I am afraid it would be a somewhat difficult task to make that calculation plain to my hon. friend. If he will come to me at the close of this session, I shall be glad to assist him in the calculation.

The contractors of the Grand Trunk Pacific and the Liberals in this House considered that it was in their interest to have this investigation stopped. The contractors figured that rather than wait to be called upon to pay the forfeits which under the law they would be obliged to pay because of failure to perform their contract within the specified time, it would be better to take a portion of this money and devote it to election purposes, hoping that in this way the people might be induced to turn out this Government. So they were ready to resort to any methods to drive the present Government to the people. Had they succeeded in defeating the Government, it would have meant that we should have heard no more of this commission's report than we heard

of the Hodgins' charges and the Lumsden charges. But, fortunately, they did not succeed. They were out-generaled; they were out-manouvered; the King's business went on; the work of this commission went on. The result has been that this damning document has been put before the people of this country; and I am very wrong if, after reading this report and the evidence upon which it is based, it is not a very long time before the people of this country repose confidence in the Liberal party again.

But if that were the only consequence, we could view the result with a certain degree of equanimity. But unfortunately it is not. This road passes through a country which, if not to-day, we hope will be peopled to-morrow by a large, good Canadian populace. These people will depend in a very large measure upon the freight and passenger rates charged by this railway. More than that, the whole western country will be affected, for the rate on all lines will be in part determined by this transcontinental line. Hon. members from the West never get so eloquent, never get so tearful, as when they dilate upon the wrongs to which Westerners are subject by the awful freight rates. But when this road is completed and the people living along this line seek to use the road, they will find that in order to make wealthy contractors, in order, perhaps, to fill party coffers, because of wasteful extravagance, a burden has been laid upon their shoulders grievous to be borne. There are many future citizens of Canada not now living in this land, many Canadians not now born, who will suffer because of this transaction. Not only is the Liberal party condemned before this generation, but generations of Canadians will arise to call that party cursed.

Mr. PIUS MICHAUD (Victoria, N.B.): Mr. Speaker, we have been entertained by the hon. member for Annapolis (Mr. Davidson) with a history of the naval policy of the Government and with a history of the Conservative party. I must say the hon. gentleman did his duty well, so well as to win applause from his admirers. He gained their applause so long as he praised the good deeds of his leader and the members of the cabinet. But he spoke also of the Liberal party, and gave us to understand that we could not do anything great, while as for his own party, they could do nothing that was not great. But there was a notable omission in his remarks about scandals and wrong-doing when he failed to mention that during the construction of the Canadian Pacific railway, when his own party was in power—a railway built partly at the expense of the country—there was some little scandal.

9 p.m.

The hon. gentleman spoke about the great public works of this country; but did he not forget to say that there was another little scandal when his party was in power in 1896, the McGreevy-Langevin scandal? How many miles of road have been built with that money? He could not find anything wrong with his own party, but no figures less than millions of dollars will suit when he addresses the House about the wrongs of this side. But I was pleased with the remarks of my hon. friend, because he was fair enough not to say that one cent had been stolen in the construction of the National Transcontinental railway. He made a great deal of the fact that middlemen and sub-contractors were engaged in this work. But take the work now going on under this Government on the Welland canal, where they are spending about $4,000,000; are there not sub-contractors there? I know there are five or six already, and I know that many have been refused sub-contracts on the ground that they do not want to subdivide so small a sum as $4,000,000. I met a man in this room yesterday who told me that he had gone there to try to get a contract, but the engineers said they did not want to subdivide among too many small contractors. Then, take the Hudson Bay railway; there are from ten to twenty sub-contractors on that line, but the hon. member for Annapolis finds no fault with that. But, when he turns his eyes to this side and finds that the same thing is done which he approves under this Government, he finds it to be what we in our church call a mortal sin.

The commissioners chosen by this Government to investigate the National Transcontinental could hardly have been chosen with a view to impartiality. I believe the money put into the construction of the Transcontinental came almost altogether from the mother country. Had the Government chosen an engineer with a commissioner from the mother country and given them the same opportunity and the same power to find out everything about the construction of this road, these two men would have given fair play to members on this side of the House and to the Liberal party.

Why would these two men have been the proper ones? Because they would have given a fair and impartial report of the construction of this work. Public money, British money, has been spent on that road and these men would have submitted a fair and honest report of the manner in which it has been expended. But the Government did not want fair men on this commission they wanted men who were prepared to do the work of the Conservative party. What happened? Before the report of the commission was submitted to this House, a report was sent out by these two commissioners, to the Conservative press of Canada. The Conservative press had the report before the members of this House. Evidently they felt that they had to prepare the Canadian mind to receive the impression that there was a great scandal which was coming out, and for that purpose they used only the Conservative papers. The Government said to themselves: We failed last year and the year before last to mislead the minds of the people of Canada by advertising throughout the country that there was a great emergency in the mother country, we failed to do that because we did not do it properly, but in this case we will do it fairly, we will pay these newspapers to advertise what? A report prepared in what has been called a star chamber but what I call a dark chamber. My hon. friends talk about the ex-Minister of Railways and Canals being obliged to seek another constituency to be re-elected. That is no new thing. The present Prime Minister left the province of Nova Scotia to come to Ontario. The Minister of Trade and Commerce had to leave the province of New Brunswick and come into Ontario, the refuge of all good Conservatives. Where is the sin? It is a terrible thing when an hon. member on this side of the House seeks election in another constituency, but it is certainly all right when an hon. member on that side of the House has to come to the province of Ontario where there are constituencies in which Conservative candidates are always sure of election.

I read on the first page of this report of the National Transcontinental Investigating Commission the following words:

> We have the honour herewith to deliver to you for transmission to His Royal Highness the Governor General of Canada the report of the commission appointed to investigate the construction of the National Transcontinental railway.
>
> Yours respectfully,
> Geo. Lynch-Staunton,
> Chairman.
> F. P. Gutelius,
> Commissioner.

Who is the chaiman of this commission? A lawyer, I am informed, of no experience in railway construction, a strong partisan of our friends opposite and a man always ready to fight the battle of his political allies. These are his qualifications and I am informed that he was better qualified to draw his large monthly salary than to take the trouble to go to the root of this whole matter to arrive at a fair and impartial report. Was he a better man than Mr. Parent, the former chairman of the Transcontinental Railway Commission? According to our friends opposite he was away ahead. Had he built a railway in Canada? No. Was he known to have spent public money on public works? If so, I never heard of it. All I have over heard of Mr. Lynch-Staunton is that he was an employee of a great railway corporation in this country. Who is the other gentleman, Mr. Gutelius? An engineer, I am told, with a little experience in railway construction. But who would compare Mr. Gutelius with Mr. Lumsden or Mr. Grant as far as railway construction is concerned? From my point of view, Mr. Lumsden is a far better man for practical work than my friend Gutelius.

I have spoken of the qualifications of these gentlemen who were appointed to inquire into this great undertaking. Mr. Speaker, if you had a great case to fight would you dare to put that case in the hands of a man who had interests against your own interests? Was Mr. Gutelius disinterested in this report? I say he was not. Why? He is the employee of another great railway company in this country and he could not do justice to both. He must go either one way or the other. On which side do you think he would go? On the side of the bread where there is butter, as we say in French. This gentleman was promised a good salary by this Government, for what? For making a report first, and secondly for assuming the management of the Intercolonial. Why? I know why, and the people of the eastern section of Canada know why. An effort is being made to-day to discredit the construction of this road in order to help out the railway corporations which are friends of the Conservative party. They do not want

to make a success of this road because it will cause too much loss to the other roads, which will have to start and reconstruct their road. They have sharp curves and high gradients, and where this Transcontinental railway will haul thirty cars, the other line alongside cannot haul more than ten or fifteen cars. When a poor road is built in the first instance it is necessary to build a second time within a few years in order to make it a fair road. A road that has to be rebuilt every ten or fifteen years is never a good road. In building the Transcontinental, we started to build a railroad of the first class, one of the highest standard and one of which we could say, with Mr. Leonard the present commissioner, that it is an asset to this country. What happened? A year has gone by, Mr. Speaker, the Maritime provinces have had no opportunity of going ahead, while the West has been booming. We have had no facilities for exporting our products except that one line of railway, and the West could not export their goods through Canadian ports because they had no railway facilities. The products of the West, to reach the market across the ocean, had to go through American seaports, and we could not profitably ship our manufactured goods to the West, as we had only one line of railway and it was charging extraordinary prices for transportation. What happened? In order to prevent our goods going through American ports, we built a railroad of our own to compete with the American lines, and I hope the Transcontinental will carry freight as cheaply to St. John, Quebec, or Halifax as the American roads carry freight to Boston or Portland, Maine.

Hon. gentlemen opposite say that we have spent too much money. We in the East are entitled to our share. Quebec has helped the West, but what have we got in return? We have only had one line of railway built since the construction of the Intercolonial railway: that is the St. John Valley railway, which is still uncompleted. We had to beg the Government for this road, and it was only recently that we got a line of railway running from the north to the south of our province. I am amused at Messrs. Gutelius and Staunton saying that there was no need for a duplicate railway between Moncton and Levis. Are they the people of this country? Mr. Gutelius is one man and Mr. Lynch-Staunton is another. That is the opinion of two men only; but the people of this country have said three times at the polls: We need the road whatever it may cost, and we are going to build it. We in the East want to develop our country and our seaports. We need encouragement, and we want a road to bring the products of the West to the eastern seaports, and to carry goods coming from the old country to western Canada. If we cannot have that, our population will remain stationary. We have built the best possible road we could, and who finds fault with it? Another railway corporation; and why? Because they have started to lower their own grades, which were too high; they are altering their curves, which were too sharp; and are substituting iron bridges for the wooden trestles on their line. I know what I am talking about from my own experience. I have seen what is being done in the province of New Brunswick.

Our Conservative friends who are Conservatives even before Canadians, were not serious in this investigation. They did not even take the trouble of getting a man on the road to hold the investigation, for the simple reason that an honest report was not wanted. The report was made by a Royal Commission and addressed to His Royal Highness. What could we expect from two gentlemen who did not take oath that they would faithfully fulfil their duties in making the report? This Government knew that a report under oath would not be good for them.

Part of the Transcontinental railway in the Maritime provinces is ready for operation. The line from Moncton to Edmundston, a distance of over 200 miles, has been in operation since last year. That road could have been operated with profit, but I am sorry to say that it has not been; and why? Because it hauled a mixed train of twenty or thirty cars. A train would start early in the morning, and take twenty-four hours to make a trip of about 200 miles. The cars stopped here and there in the woods, and the people got disgusted and would not travel on such a line. Lumbermen in my own constituency have approached the manager of this part of the line and offered to give him, every second day, twenty cars of lumber, telegraph poles, ties, and so on, and they offered $20 a car for a haul of about thirty-five miles. But the manager of the railway said, we do not want it. He refused to haul these cars at a good profit. I personally know one man who wanted to do business on that road all last fall. He had twenty-five carloads of lumber to be hauled, but could not get a car.

Then, as to land expropriation. About thirty-five cases in my own county were taken to the Exchequer Court. With my hon. friend from Carleton, N.B., (Mr. Carvell) I defended the electors of my constituency. Out of those thirty-five cases the court upheld only two. In one instance where the tender was for $900, we got $1,800. In another case, where the tender was for $400, we got $1,000, and in another case, where the tender was for $200, we got $1,000.

Mr. Gutelius says that this is an enormous price but on the other hand we have a sworn judge, after hearing witnesses n both sides, in open court, not in a dark chamber, declaring that the land is worth so much. Mr. Gutelius says: I never saw the land, I do not know the conditions surrounding it, I know nothing about it, but it is an enormous price. He says that an enormous amount of money has been spent on curves, gradients, the shops at Transcona, the works at Winnipeg and elsewhere. This, Mr. Speaker, will give you an idea of the fairness of this report.

I read with a great deal of amusement the speeches delivered by the right hon. the Prime Minister (Mr. Borden) in St. John in 1904. My right hon. friend said this railway was going to cost more than people expected, that it was going to cost over $100,000,000. Furthermore, he informed the people of St. John that every car loaded with the products of the West would go to Portland or some other American seaport. Hon. members who come from the West possibly do not understand how freight from the West goes to an American seaport rather than to a Canadian seaport. Portland, Maine, is probably 160 miles from St. John and there is this difference in the length of the haul. But it must be remembered that there is a great disadvantage in hauling over the Grand Trunk railway line on account of its high grades. The desirability of developing our Canadian seaports was not lost sight of when the late Government made arrangements with the Grand Trunk Pacific for the construction of this road. What do we find? In order to ensure that ever carload of farm products and other goods shipped from the West to the East would be routed by a Canadian seaport they inserted the following condition in the contract with that company:

> The company further agrees that it shall not in any matter within its power directly or indirectly advise or encourage the transportation of such freight by routes other than those above approved and shall in all respects, in good faith, use its utmost endeavours to fulfil the conditions upon which public aid is granted, namely, the development of trade through Canadian channels and Canadian ocean ports.

Since last year the city of St. John has changed its mind about the remarks which the Prime Minister made in that city. The Liberal party, when it went out of power, was engaged in the great work of building a road to develop the ports of St. John, Halifax and Quebec. If this railway is not built up to the standard originally designed it will never be able to compete with the American seaports, because you cannot haul as many cars on a road with a 0.6 per cent grade as you can on a road with a 0.4 per cent grade. Our friends in St. John and Halifax were very greatly disappointed when the present Government took hold of the construction of this road. There is no evidence, in anything that has been presented in the report of Messrs. Gutelius and Staunton, to show that the money which has been expended upon this road has not been expended honestly.

There are on the other side of the House hon. members who are greatly disappointed with this report because the commissioners have absolutely failed to prove to the people that there is one cent of expenditure that has not been accounted for. These commissioners spent two years in an effort to find out if one cent has been misspent, but all they can say is not that there has been any wrongful expenditure, but that too much money has been spent. I can only say that we will have the very best road on the American continent and one that the people of Canada may justly be proud of.

Mr. O. TURGEON (Gloucester): Mr. Speaker, ever since the introduction of steam and railway travel in the world, and especially in America, it has been the laudable ambition of the people of the different provinces of Canada under the British flag to utilize the Atlantic ports which were placed there by the hand of Providence awaiting the further development of the western provinces and of our vast resources of soil, forest and sea. While they were waiting, the necessity of bringing together those immense territories from ocean to ocean, which were to form the Dominion of Canada in the near future, and without the union of which no Canadian nation could have existed, impressed itself forcibly upon the minds of the people at that time. Without Atlantic ports, the old provinces of Canada would not have been able to rise to the position of a nation

because they would have been left for five or six months in the year at the whim of a collector of customs in the United States. The people of British and French origin were then all animated with the same desire to see the realization of the hope, which they had long indulged, of building up a united Canada and of shipping their products through a Canadian seaport. But, unfortunately, the Ashburton treaty was passed by the representatives of Great Britain and the United States, and Canada was left only the ports of St. John and Halifax, with their surroundings, which could be equipped as the future development of the country might require. Meanwhile the Intercolonial was constructed, and Halifax and St. John were placed in communication with Quebec and Montreal. Then, with the increase of population, the increase of traffic, and the vast development of the country, and its future being assured, the people of Canada decided, no matter what the cost, that they must endeavour to reduce the distance between the Atlantic and the Pacific, and decrease the cost of freight transportation between East and West, according to the dictates of the best science of the twentieth century. It was felt that no matter what the original cost, a first-class railway line should be constructed, by which, considering the lessened cost of operation, the people of Canada might have a reduction of, we will say, twenty-five per cent in the freight rates. I am not an engineer, nor a railway expert, nor even a lawyer, but I have heard the convincing speech of the ex-Minister of Railways, and I am able, without prejudice, to declare that he has demonstrated that the project formulated by the Liberal party in 1903 for the building of the Transcontinental railway, was a project in the best interests of the country, and a project which required some daring, and, in this age, Canadians must have daring if they are to progress. I am not an engineer, but it does not require engineering skill to see that the report of Messrs. Gutelius and Staunton was not intended for the education, or edification, or enlightenment of railway engineers in Canada or elsewhere, but for the purpose of misleading the public. To-day we advance in a year as much as our forefathers advanced in a century; but Messrs. Gutelius and Staunton do not seem to realize that. The National Transcontinental railway was conceived in a spirit of patriotism, and one of its purposes was to effect a saving of twenty-five per cent on the cost of transportation, and thus to add to the prosperity of the country. Mr. Gutelius, whom I have not yet met, seems endowed with a dual personality. There is Mr. Gutelius, of the National Transcontinental railway, who wants a transcontinental railway with heavy grades, and there is Mr. Gutelius, of the Intercolonial, who wants to strengthen all the bridges and to straighten out the curves on the Intercolonial railway, in order to save twenty-five per cent in the cost of operation, and for this purpose he is willing to spend $2,000,000 on 200 miles of road, an expenditure representing $18,000,000 for the Transcontinental. The Conservative party always want some kind of cry to delude the people; a few years ago, in Drummond-Arthabaska, they proclaimed that the Liberals wanted to send the children of the people as food for bullets in different parts of the empire, and now their cry is that millions of dollars have been wasted in extravagance by the late Government. I hear the hon. member for Peterborough make some remark, but I am sure he will agree with me that this report of Messrs. Gutelius and Staunton was not intended for the intelligent citizens of Peterborough, who know more about railroads than ever this report will teach them, but that its intention is to mislead others, who probably may not be so intelligent. I take a most serious view of this question, and so I wish to put on 'Hansard' some of the more salient paragraphs in this report, to show that the intention was to mislead the electors into believing that there was extravagance in connection with the construction of the Transcontinental railway. It is very annoying for a true Canadian to have to read such campaign literature as is found in this report, and it is sad to think that two men could be found in Canada who would be guilty of such political animosity as the report shows these gentlemen were inspired with. Mr. Gutelius and Mr. Staunton may be all right as private citizens, but in making this report they were undoubtedly carried away by biased judgment and by political prejudice. Let me now read from the report a few extracts which I wish to put before the country and which will be cited to the people of Canada. Take the following paragraph on the constitution of the commission:

Until the appointment of Major R. W. Leonard, in the autumn of 1911, no member of

the commission had any experience or knowledge of railway building or operation.

These words might lead laymen to believe that there was something wrong, because the members of the commission had no engineering knowledge; but that point has been cleared up by the speakers who have preceded me. Those members of the commission had engineers to direct them in matters relating to engineering construction. They had the best engineers the country could produce—Mr. Lumsden, Mr. Gordon Grant and Mr. M. J. Butler, who a year or two afterwards became Deputy Minister of Railways and Canals, whose knowledge of engineering cannot be denied by any one in Canada. He is not surpassed in Canada, in fact, he is not surpassed in America, in regard to the construction and operation of railways. He is well known and admired by everybody for his talent as a railroad constructor and a railroad operator on other lines to which he has been attached. As regards the chairman of the commission, hon. members from Nova Scotia could speak more eloquently of Mr. F. B. Wade than I could myself. Everyone who was in this House in the early years of this century and who knew Mr. Wade, knows that he was an honest man, with great knowledge and experience in the construction and operation of railways in western Nova Scotia.

Hon. gentlemen opposite have referred also to Mr. Parent. He has been connected with great enterprises in Quebec; not only so, but before he was on the commission, he was for several years mayor of Quebec. During his two or three renewed terms of the mayoralty, he aroused the people of Quebec from their centuries of lethargy, and he was the cause of the great prosperity of that city to-day.

In regard to momentum grades, the report reads as follows:

Had momentum grades been adopted, as is the usual practice in high class modern railway construction—

I wish to call attention to these words, which to my mind are deceptive or are altogether wrong.

Had momentum grades been adopted, as is the usual practice in high-class modern railway construction, they would have in no way impaired the usefulness of the railway, or increased the cost of operation, or reduced its hauling capacity, and $6,200,000 might and should have been saved.

In regard to bridges, the report reads as follows:

Had wooden trestles been used instead of train fill and steel structures, as was done by the Grand Trunk Pacific on its portion of the line, and as is allowed in the best modern railway construction, they might have been in course of time replaced by fill and steel structures and $2,947,227 thereby saved without impairing the usefulness or reducing the hauling capacity of the railway or increasing the cost of operation.

In regard to train filling, the report says:

The commission had an offer from the Grand Trunk Pacific to fill wooden trestles at the rate of 25 cents per cubic yard. Had the commission made such an agreement to do the train filling after the road was opened, $3,250,000 would have been saved in addition to that included under the last heading.

In regard to the method of inviting tenders, the report says:

The rules adopted by the commission in advertising for tenders, the unlimited security required to be furnished by the contractors, and the proposal to let the work for the most part in unreasonably large sections, resulted in only five contractors tendering for 806 miles of the railway, and eleven contracting firms secured all the work and sub-let it to upwards of 100 sub-contractors, who, had the work been divided into reasonably large sections and the security required in other Governmental contracts only been exacted, would have in all probability competed in the bidding. As an indication of the handsome profits derived by these eleven firms, it appears that they were paid $8,800,000 in profits for that part of the work which they let to sub-contractors.

I will read the chief paragraph of the report on the New Brunswick section, as follows:

Large sums of money in interest have been lost by the premature construction of the New Brunswick section of the railway. In our opinion this section should not have been constructed at all. If one-third of the money had been expended on the Intercolonial railway it would have provided all the trunk line facilities for the province of New Brunswick which would be required for very many years.

In conclusion, the report says:

We find that the Transcontinental Railway Commission, the Grand Trunk Pacific railway, and those having charge of the construction of the railway, did not consider it desirable or necessary to practise or encourage economy in the construction of this road.

We find that without including the money which was unnecessarily expended in building the railway east of the St. Lawrence river, $40,000,000 at least was needlessly expended in the building of this road.

This is the basis upon which these commissioners have framed their report, not for the education of the engineers of the country but for the purpose of catching the votes of the people of Canada at the next election. I am not an engineer nor a railway expert nor a lawyer; but it must be remembered that the country is not without authority from which the Canadian people can always find the best examples

for any large national undertaking which any government may have constructed or may hereafter construct for the benefit of the people. I have as an authority a gentleman dear to me for many years, a true Canadian and a true Britisher, a man who has lived perhaps fifty years in advance of his time, but who has for many years enjoyed the respect, the admiration and the gratitude of the Canadian people, a man whom I am pleased to describe as a bright illustrious engineering genius, whose authority in the minds of the people of Canada will certainly be accepted in preference to the authority of Mr. Gutelius or Mr. Lynch-Staunton, or both of them, a man who had at heart the future interest of Canada, and of Great Britain as well. I refer to Sir Sandford Fleming. He is a man imbued with the desire for the good of his country, respected throughout Great Britain as well as in Canada whom Providence seems to take pleasure in preserving to an old age to enjoy the admiration and gratitude of the people of Canada.

That gentleman has left a lesson for Canada, a lesson which could have been studied to advantage by the gentlemen who are appointed as inquisitors into the construction of this railway. Sir Sandford Fleming was appointed chief engineer of the first great national railway undertaking of this country. I propose to read from his own writings to show his principles, theories and methods. I am sure that when I bring before hon. members the views of this great engineer none will be able in their heart of hearts to approve the Gutelius-Staunton report. The appointment of Sir Sandford Fleming to the position of chief engineer of the Intercolonial was made by a Conservative government, was made by Sir John Macdonald himself in 1863, an appointment immediately sanctioned by the governments of New Brunswick and Nova Scotia and approved by the Government of Great Britain with praise to Sir John Macdonald for choosing a man of such ability. The commissioners of that day wanted to build the Intercolonial about of the quality of that approved for the Transcontinental by Messrs. Gutelius and Lynch-Staunton. Sir Sandford Fleming had to contend against that. He had to come up from New Brunswick and Nova Scotia and plead before Sir John Macdonald for better conditions of the road; plead with him not to allow the construction of wooden bridges and momentum grades but to have masonry for substructures and iron for superstructures, thus having permanent construction, instead of having to renew every seven or eight years. Sir Sandford Fleming wanted a railway worthy of the Canadian people and worthy of the country's great future. Let me read a few paragraphs from the work of Sir Sandford Fleming entitled, 'The Intercolonial: A Historical Sketch.' It is too bad the American engineer appointed to investigate the Transcontinental had not studied this work for his own edification before he took the job of making his report. First, I will give Sir Sandford Fleming's theory about the bridges:

10 p.m.

> One important point on which a serious difference of opinion arose was in regard to the bridges. In the specification submitted by the chief engineer to the Privy Council the abutments and piers were designed to be constructed of the best description of masonry with iron superstructure. It appeared to the chief engineer that great precautions should be taken with these structures to have them permanent. Iron and stone being the most durable materials, their use would remove risk of accident from fire, and from natural decay. And, although the first cost might be greater, the permanent structures would avoid the constant periodical charge for restoration which wooden work would require.

Then, later he said:

> In January, 1869, the chief engineer made his first appeal in the matter, to the Premier, Sir John A. Macdonald, and he submitted at length the arguments why iron and not wood should be used. This letter was referred to the commissioners in the usual course. It has never been replied to; and the arguments advanced in that communication remain to this day without refutation. But the decision of the commissioners was sustained. Five of the bridges were however, exempted from the principle originally laid down by the commissioners; otherwise, the order was given that all the bridges should be built of wood.

And further on he says:

> He cited two instances of bridges on the Grand Trunk railway, under the management of Mr. Brydges, having been destroyed by fire but a few weeks before the date of Mr. Brydges' statement. Mr. Fleming contended that his estimates were correct, and challenged examination into their accuracy; and he further made a final appeal in favour of iron bridges.
>
> After an examination which established that the estimates of the chief engineer were correct, the commissioners eventually withdrew their objections and recommended that all bridges over 60 feet span should be built of iron. But the chief engineer persisted in his efforts to have every bridge, down to the smallest span —24 feet—made of iron, and at last, by an Order in Council dated May 12, 1871, authority was given to have them so constructed.
>
> With the exception of three structures built of wood by direction of the commissioners, against the protest of the chief engineer, all the bridge spans, of whatever width, throughout the line, have the superstructure of iron.

In another chapter, writing on the engineering character of the line, he speaks

first of the climatic conditions of Canada—which, however, seem to have been forgotten or put aside for the preparation of the Gutelius-Staunton report.

> The climate of Canada has a marked effect on railway works. The frost is very severe; it penetrates the ground, where denuded of snow, to a depth of from three to four feet, occasionally even to a greater depth.

He makes a distinction between a national undertaking and a private undertaking, and gives the reasons why in the latter the work should be of high grade. Here is the opinion of Sir Sandford Fleming on this great question:

> No portion of railway work is more important than its bridges. When a line is carried out by private effort, a circumscribed capital may compel the adoption of cheap structures.

I call the attention of hon. gentlemen opposite to these words:

> When a line is carried out by private effort, a circumscribed capital may compel the adoption of cheap structures. In some cases it is not the character of the structure, or its economy, which commends itself; but it is the necessity of the case, which limits the cost. A railway constructed to meet a national requirement, and situated like the Intercolonial, is controlled by no such limitations.

These words of Sir Sandford Fleming were used in reference to a national construction for Canada forty-five years ago, and to-day, when the necessities of the development of the West, which cannot progress any further without the winter ports of St. John and Halifax, are such that the people of Canada find themselves faced by the necessity of uniting the Pacific coast with the Atlantic coast by the shortest route possible for the great trade of Canada, they are more applicable than ever, much more than they were forty-five or fifty years ago. But Sir Sandford Fleming is a man who has lived fifty years ahead of his time, and his reasoning to-day should command attention, respect and the adoption by the engineers as well as the laymen of Canada.

> A railway constructed to meet a national requirement, and situated like the Intercolonial, is controlled by no such limitations. It requires no argument to establish that in such circumstances all structures should be of the best form suggested by experience, and that the most durable material should be used. They are then permanently built, and require no subsequent renewal. The first expense is the one cost and in the end the durable structure is by far the least costly.

This is the basis of my remarks to you and to this House on this great question, which captivates to-day the attention not only of every hon. member in this House but in the whole Dominion of Canada. I say that to-day, when the Government undertake to build a railroad or a canal, the people of Canada, the people of Ontario—as the Government are undertaking to build a new Welland canal—do not expect that they will again build a nine-foot or ten-foot canal. This Government to-day is engaging in the improvement of the Welland canal at an expense of $60,000,000 or $75,000,000, an improvement which will be as much an advantage to the American people to the south as to the people of Canada or of Ontario, because it will only benefit the people of Ontario, it will not benefit the people of the Maritime provinces by the Atlantic coast. But I, as a Canadian, will never be influenced by sectional considerations, and I, from the north shore of New Brunswick, would vote with pleasure the $60,000,000 or $70,000,000 which may be required to complete the Welland as well as the Georgian bay canal. We will contribute our portion with pleasure, because the prosperity of one part of Canada will be the prosperity of their neighbours, and the wealth of a neighbour does me no harm. It is only by such patriotic and national considerations that we can expect to make Canada what it is destined to be by the end of the twentieth century.

I wish to call the attention of the members of this House to the distinction drawn by Sir Sandford Fleming between a national and a corporation undertaking. I listened with close attention to the address of my hon. and intelligent young friend the Solicitor General (Mr. Meighen), a young man who has no more sincere admirer of his ability and his skill as an orator than the member for Gloucester. At the same time, while he has shown great facility in argument and figures, I am sure that the people of Canada and the farmers of the West who read his speech will be lost in its labyrinth of subtleties. They will require heavenly revelation to guide them through this labyrinth of figures and subtlety of argument, and I am sure that Providence is not prepared to extend to Messrs. Gutelius and Staunton that heavenly revelation, because they do not deserve it. It has been said and repeated in this House that the Canadian Pacific and the other companies, the Grand Trunk Pacific itself on the branches they are building, have used what he calls wooden bridges, wooden trestles, momentum grades. The people of the West know what happened in the case of the construction of the

Canadian Pacific railway. The Canadian Pacific railway was the first railway built through that country and it was built by the money of the people of Canada to as great or even a greater extent than has been the case with the National Transcontinental railway, which will remain the property of Canada. But in the building of the Canadian Pacific railway as in the building of all corporation-owned railways through a new country, the road was built as cheaply as it could be done. Then, as years went on, they rebuilt the road again and again, having the people of the West to draw on in the increase of their freight rates. The people of the West have complained that they were being bled through their freight rates in order that the railway might rebuild its line every seven or eight years. At last they made it a perfect line, which will now afford much cheaper transportation, but the people of the country have paid for it. The people of the West have paid for the improvements from the Great Lakes to the Pacific coast. I say that without prejudice to any company, either the Canadian Pacific railway, the Canadian Northern railway or the Grand Trunk Pacific. They have succeeded through the people of Canada using their roads and paying the rates. Railway experts state that 90 per cent of the reductions in rates that have taken place in the last ten years have been due to the coming of the Canadian Northern railway. These reductions represent a saving in ten years of $17,000,000 to the farmers of Manitoba, Saskatchewan and Alberta, and all that is the result of competition. For fifteen years the people of those provinces have been paying enormous freight rates to enable the Canadian Pacific railway to become the gigantic railroad that it is to-day. It is rich by reason of the money paid by the people of Canada in freight rates. Whenever a company has built a line, whether trunk or branch, and has not had people to draw upon, it has failed in its purpose. If our branch roads in New Brunswick and Nova Scotia, built in the early years of Confederation by small capitalists who could not afford to put their road in a good position, have not been improved, it is because the surplus revenue from passenger and freight traffic has all been used in maintenance, filling up the same holes every spring and keeping the road together. If we had built a road such as Messrs. Gutelius and Staunton suggest in their report, it would have been in the position of those Maritime railroads to-day.

If another authority is needed, I may cite Mr. Gutelius himself. Take the Intercolonial railway Gutelius. He wants to improve the Sydney branch of the Intercolonial, and is asking for authority to carry out a survey in order to improve that section. Let me read a newspaper clipping on this point:

> The Minister of Railways, Hon. Frank Cochrane, has authorized a survey of the Intercolonial from Moncton to Halifax and Sydney, with a view to eliminating the present heavy grades, replacing light bridges with heavier steel structures, and finding out the cost and feasibility of a cut-off at Truro. The authority for carrying out the survey was given to General Manager Gutelius by the minister on February 2 last.
>
> Mr. Gutelius, in his memorandum to the minister on the subject, states that by reducing the grades to a maximum of six-tenths the tonnage on the trains could be doubled, and by increasing the strength of the bridges, heavier motive power could be used on this section of the line. At present the maximum train between Sydney and Point Tupper is 540 tons. If the proposed improvements are carried out, the road could handle a train of 1,600 tons.
>
> Mr. Gutelius says: 'That would enable us to handle the Sydney business at less than half the present cost of transportation, and would reduce the total operation cost by twenty-five per cent.'

So says the Intercolonial railway Gutelius. He wants a couple of million dollars to improve the Intercolonial railway between Sydney and Truro, a distance of about 200 miles. If I am wrong in the distance, my hon. friend from Richmond (Mr. Kyte) will correct me.

Mr. KYTE: 280 miles.

Mr. TURGEON: At that rate $1,000,000 per hundred miles, he would want about $18,000,000 to put the whole of the Transcontinental in the same condition as the branch line between Sydney and Truro; and yet he talks about extravagance. He says money has been spent which need not have been spent for some years; but the farmers of the West need an efficient railroad now. The prosperity of our farmers depends upon a reduction in freight rates. A farmer is wealthy or poor according to the rate he has to pay to get his goods to market. To-day other men, besides Messrs. Gutelius and Lynch-Staunton, are giving their attention to the question of freight rates.

Mr. LEMIEUX: It is a national issue

Mr. TURGEON: It is a great national issue to-day. Men, to-day, in the provinces of Saskatchewan and Alberta, are giving their attention to the best means of securing reduced freight rates and cheaper transportation for grain. They are talking not only of the Georgian Bay canal, not only of the Welland canal, not only of the Hudson Bay railway, but they are talking of connecting the Saskatchewan river by a system of canals with navigation on the Great Lakes so that their grain may be transported by water from the prairies of the far west to its market. You are aware, Mr. Speaker, that the Government of Saskatchewan have taken up this question. The Government of Saskatchewan appointed a commission a year ago to study this important problem and they sent commissioners to England, France and Germany in order that they might consider means for further reducing the cost of the shipment of grain from the farms in the West to the markets of Great Britain, France and other countries. While we hope that they may be able to work out a practicable system of canals we must not forget that our country cannot get along with canal transportation alone owing to our climatic conditions and to the fact that in many parts of Canada we have winter for five or six months in the year. Then our canals are of no use and it is to railway transportation that we must look in order that the grain may be forwarded to its ultimate destination regularly throughout the year. It is not enough that the grain shall be rushed through to the markets during the months of October and November, thus reducing the price to the farmers of the West, but it is necessary that we shall make provision to keep transportation going on the whole year round, winter as well as summer, so as to enable the farmers to take advantage of the market as well as the possible reduction in freight rates.

The hon. gentleman who spoke last (Mr. Davidson) made reference to a suggestion that the road should have been built as far as North Bay only. I would like to have seen the hon. the Postmaster General (Mr. Pelletier) in the House when this pronouncement was made. I would have liked to have seen hon. members from the province of Quebec, and especially from Quebec city and west of that point, as well as hon. members from northern Ontario who are expecting a great development to take place in the districts represented by them, and I would like to have heard their comment upon this proposal. The hon. the Post-

master General, hon. members from Quebec and the Conservative papers of Quebec are to-day extolling the Government for the works and improvements they are carrying on in and around Quebec and the money they are spending in order to promote the prosperity of the people of Canada generally and of that district in particular. I would ask, if, without the energy, activity and patriotism of the right hon. leader of the Liberal party (Sir Wilfrid Laurier), the northern part of Ontario and of Quebec would enjoy the prospect of prosperity which presents itself to their view to-day. I would like to ask you if the right hon. leader of the Opposition had not been seconded, fortified and assisted as he was by men of the highest standing from the province of Quebec and from all over this country, such as Sir Charles Fitzpatrick and others, he would have been able, by the inauguration of this great national project, to ensure the prosperity of Quebec while at the same time benefiting the country at large. While the National Transcontinental railway shortens the distance between Winnipeg, St. John and Halifax, and while it develops the portion of the country through which it passes, it at the same time contributes to the welfare of Canada as a whole. I really cannot understand how people, especially from the province of Quebec, should not be most pleased because, by the exercise of his ingenuity and talent, my right hon. friend the leader of the Opposition has been able, while finding a means of enhancing the prosperity of Canada as a whole, to promote the prosperity of the people of northern Ontario and Quebec in particular. Simultaneously with the progress of other parts of Canada, Quebec is progressing and is becoming a great shipping port, which prosperity it would have lost but for the policy pursued by my right hon. friend. My right hon. friend realized that this great port of the province of Quebec was declining in public opinion, particularly among the commercial and shipping interests of Great Britain, who were insisting that all the trade should pass through the port of Montreal, and he has been able to retrieve the position of the port of Quebec, while at the same time benefiting the country generally. As a result of his policy, he has been able to make the port of Quebec what it is to-day, and our friends on the other side of the House should not have a word to say about fraud or extravagance because, but for the policy which has been

pursued, the stagnation which at one time characterized that port would have still existed.

That great man, Sir George Ross, who has been called away at a time when still greater services were expected from him by his fellow-countrymen, built the Northern Ontario and Temiskaming railway, and this was one of the causes of the defeat of his Government in 1903 or 1904. Yet, nothing has contributed more substantially to the prosperity of the province of Ontario than the construction of that public work. It has proved one of the greatest sources of revenue for the Whitney Government, and without it that Government would not be able to show a surplus at any time. This road was built into a part of the country which the opponents of Sir George Ross at the time declared to be of no value whatever, but which has proved to be of more value than any other part of that province, although it is only at the beginning of its development. Yet the critics of the Government of the day declared that the road should never have been built. Now, it is proposed by hon. gentlemen opposite that the National Transcontinental railway should stop at North Bay or Toronto. I would like to read to the House an extract from an article in the Montreal Gazette which was published a few days before the report of this commission was brought to the attention of the people of Canada. It is worth reminding the people of Canada how a man can speak the truth when he removes himself from political prejudices, and so I quote this article from the Montreal Gazette:

On the line of the Transcontinental there are some 230 bridges, the length of which would be, if all the spans were put together, 11 miles; weighing 61,000 tons; and costing $6,000,000. Among the bridges that span the Winnipeg river is one 300 feet in length. The Salmon river bridge, in the east, took 1,089 tons of structural steel.

The heaviest structure on the eastern division is the Little Salmon river viaduct—4,000 feet long, 200 feet high, and requiring 6,996 tons of structural steel.

The fact that 230 bridges were necessary in connection with the building of the Transcontinental gives a realizing notion of the truth of the saying that Canada is a country of distances.

The line passes over some of the largest and finest waterways in the world.

The bridge building in this connection has been carried out without accident—a record of note, considering the difficult nature of the work, the height in many cases and the rigours under which, in the winter, a considerable amount of the work was carried out.

An official description of the bridges and the difficulties encountered in the erection of them, together with the nature of the country through which the line passes, has been prepared by the engineers engaged on the work and is full of fascination to those who are able to feel the interest and daring and heroism involved in such a vast undertaking—all the work upon which was undertaken and carried out by men who, in risking their lives and suffering of all kinds of hardships, did not think they were doing anything beyond the day's work.

'And the day is not far distant,' said an official of the Grand Trunk Pacific, 'when the most desolate wilderness through which the line passes, will be composed of thriving communities. For that is the history of railways everywhere. And it will be the history of this great Transcontinental line, which, begun with misgiving, is to fill a large place in our life and history. The need will declare itself more and more—all the time. That it is to fill a large space is proved by the energetic manner in which the Canadian Pacific railway is strengthening its position in the country, both east and west. That shows that it recognizes and provides for formidable rivalry.'

The Transcontinental railway will make of this wilderness, in northern Quebec and Ontario, the richest and wealthiest part of Canada, wherein our people will live in happiness in the centuries to come. Our friends opposite have the hardihood to say that money has been wasted on this road, when that money has been spent simply to make the road as perfect as possible. Messrs. Gutelius and Staunton report that the portion of the road between Quebec and Moncton never should have been built, but would they say that the section north of Ontario and Quebec never should have been constructed, and that this fertile country should be left a wilderness? But for the patriotic foresight of Sir Wilfrid Laurier and his supporters, the wilderness in northern Ontario and Quebec would not have been developed, and a wilderness it would remain for possibly another century. I assert, sir, that the time is not far distant when the winter ports of Halifax and St. John will not be sufficient to accommodate the trade of the West. I ask hon. gentlemen opposite who come from the Maritime provinces what they think of that portion of the report which says that the road should not have been constructed through New Brunswick and Nova Scotia. What does my hon. friend from Kings-Albert (Mr. Fowler) think of the suggestion of Messrs. Gutelius and Staunton that we should have nothing but the Intercolonial railway along the north shore of New Brunswick?

Some hon. MEMBERS: Answer.

Mr. TURGEON: My hon. friend was quite ready in answering and asking questions when he was on this side of the House; but to-night he is silent.

Mr. FOWLER: I did not hear the hon. gentleman's question; will he please repeat it?

Mr. TURGEON: I do not think the people of the Maritime provinces would be satisfied if the Transcontinental railway were not extended so as to bring the fertile products of the West to the Maritime ports. Would my hon. friend oppose a road which means prosperity and increased population to New Brunswick, and which will bring the grain of the prairie provinces and the mineral resources of British Columbia to St. John and Halifax and other ports? We have the immense forests of British Columbia, and we have the immeasurable coal fields of that province which the Conservative members from British Columbia do not appreciate as I do, and we want those products carried over the Transcontinental railway to St. John and Halifax. I am from northern New Brunswick, and if there is one man more than another whose selfishness might be aroused by the proposition to have another railroad in the centre of New Brunswick, instead of carrying all the freight over the Intercolonial past the doors of my constituents, I am that man. But the moment the Transcontinental railway was projected, and the moment it was said it would pass through central New Brunswick, then for the sake of my province, and for the development of our resources, and the advancement of the interests of our people, I held up both hands in support of the project. Our population was around the borders of the province, along the Intercolonial from St. John to Fredericton, and from there to Edmundston, and we have there the centre of the province, with thousands of square miles of the best forests and every possible product. We have there immense virgin forests and water-powers of all kinds, which will cause to arise every possible industry all along the railroad. Would we have said to the people of Canada, 'We are losing our population and you must give us more representation because of that? We do not want any improvement if you give us representation without population. I take the ground that we should get population first and then we shall get representation. They say that we should have no railway construction in the Maritime provinces, and they quote the name of the late Mr. Blair. There is not a man in this House who is a more sincere friend of Mr. Blair than I. I admired him not only for his political sagacity, but for the justice he did to the people of my own town in a certain crisis. My town people and my country people still revere the name of Mr. A. G. Blair, as they did twenty years ago, when he sacrificed his political career for the sake of justice in the small town of Bathurst. At the very time of his resignation from the Government, no man in this House was so much devoted to that gentleman as I was, for the reasons I have given. But Mr. Blair, when as Minister of Railways and Canals he first visited British Columbia in 1898 or 1899, told the people of that province, at a banquet, that the time would soon come when Canada would have three transcontinental railways, and that that time could not come any too soon for him. I believe from the bottom of my heart that the only consideration which actuated that great patriot, statesman and politician, was his love for the Intercolonial railway and for St. John, which he represented; and he was afraid that the National Transcontinental railway might interfere with the progress and prosperity of the Intercolonial railway and of the port of St. John, which he had so much at heart. If the railroad, instead of being built to Moncton, had been built straight to St. John, so as to take the whole trade to that port, he would have acceded to its construction.

When the people of Canada have time to consider seriously, to digest, to ponder over the report, the speech of the ex-Minister of Railways and Canals, and other speeches made on this subject; when they look over the conditions of the country which are fast forcing themselves upon the notice of the Government and of the people, they will come to the conclusion that the members of this commission have issued an ex-parte report which does not commend itself to the attention of the best papers of the United States or of Great Britain either. I have not time to give quotations, but I have seen many papers in the United States censuring the report as made ex-parte, in star chamber, because the Liberal party were given no opportunity of proffering evidence of any kind. That kind of inquiry does not meet with the approval of the people of the United States or of a great many people of Great Britain. Although it has been said, and it may be true for a while, that this report may possibly affect the credit

of Canada in Great Britain, I trust in the intelligence of the people of Canada and of the people on the other side of the ocean that, when they consider seriously the vast distance between the two oceans and the political bias which has characterized this report, they will immediately come to the conclusion that, after all, as the report itself says, there has not been one dollar of graft in the construction of this road, which may have cost $181,000,000 or more. The commissioners in their report insist that the exact amount of interest which the company will have to pay will be $5,400,000 a year, and they claim that this will affect the operation of the road. In the beginning of my remarks I stated that if the company does not operate the road, it will only be because the road has not been finished according to the terms of the agreement between the Government of Canada and the company. If the company operates the road, it will be operating a line which will be as advantageous as any other line, because, while the company may have $5,400,000 of interest to pay upon the large capital for the construction of the best road not merely in America but in the world, it will have practically nothing to pay for the maintenance of the road, which is perfect in every respect, and it will save in operation thousands of dollars every day, which will amply make up for that interest. It was with that object in view that Sir Sandford Fleming said that the more perfect a road, the greater the economy in its operation and in its maintenance.

He did not build such a road as Mr. Gutelius would have built. For while Mr. Gutelius might have saved $3,500,000 or $4,000,000 a year in interest on cost of construction, he would have provided a road on which every year millions would have had to be spent in maintenance, besides which there would have been the rebuilding of these bridges and the taking out of these momentum grades, at immense expense to the people. Sir Sandford Fleming believed in saving expense from the beginning. I have given you the principles and theory of this great man who, as I have said, has the respect of the people of Canada, a man who has helped on not only the prosperity of Canada but the unity of the empire.

As against the opinions of this engineering genius, as I may call him, we have the theories of a man who is not a Canadian, who has not a Canadian's ideas and aspirations, a man who may be an honest man in his way and a good engineer, but one who, judging from his report, will not be considered by the people of Canada a great engineer. Had he a reputation as an engineer, a reputation which he wished to preserve, he would not have put his name to such a report as this to go before the people of Canada and the world. If he had a reputation as an engineer, he sacrificed it for a mess of pottage at the hand of the Government in the form of a fee of $26,000, followed by $20,000 a year during the time he is 'loaned' by the Canadian Pacific railway to this Government. Think, Mr. Speaker, of a proposal of momentum grades under the climatic conditions of Canada for the transportation service of the great cities of Canada to-day, which are to be much greater in a few years. Thousands upon thousands of people will use this Transcontinental railway in the winter; many will come from the prairies and the cities of the West to greet their friends in the East at the Christmas and New Year season. We see the Postmaster General making every effort to have the mails which are brought by steamers delivered as rapidly as possible in the great commercial centres. If this is needed to-day, what may we expect in twenty years? In twenty years we shall have a population that will require the best railway that civilization can offer. Who then would propose to have twelve or fifteen passenger trains a day passing over this route and the lives of these thousands of people subject to the peril of momentum grades in the winter season?

Some hon. MEMBERS: Oh, oh.

Mr. TURGEON: Hon. gentlemen may laugh and think this is a joke. But winter is a fact that remains in Canada—we have had it this season, certainly, as severe as any time within the last fifty years. The conditions that exist, and that will continue to exist, must be provided for. And when I find engineers whom I try to respect saying that on the route from Moncton to Winnipeg momentum grades should be a feature of a high-class railway, I cannot but feel that those engineers have sacrificed their reputations.

Let not our friends on the other side believe that I am afraid of public opinion on this question. In the first place, these investigating commissioners have not been able to report a single dollar of graft; and we know very well that had they been able to find a loss of even a thousand dollars in this way it would have been their greatest pleasure. But they were honest enough not to fabricate it when they did

not find it. I believe that the Liberal party has come out of this investigation stronger in public opinion than ever. This report shows that we have given the people the best road in America. The people know that that road, if not too much degraded, —between Quebec and La Tuque— will carry traffic at a rate to defy competition. And should there be that
11 p.m. degradation of the road, it will be Quebec and the Maritime provinces that will suffer, though that road was built to afford protection for Quebec against the rivalry of Montreal and to save the trade of the Maritime provinces through the winter.

The hon. member for Annapolis (Mr. Davidson) ventured the prophecy that not one Liberal member would come back from Nova Scotia after the next election.

Mr. A. K. MACLEAN: Did he say that?

Mr. TURGEON: Yes. Why did he not say that not one Liberal member would come back from the province of New Brunswick either? In 1908 my hon. friend the Minister of Marine and Fisheries, (Mr. Hazen), who, I regret to see is not in his place, spoke at a meeting in Quebec. He was then Prime Minister of our province of New Brunswick, and in his speech he declared that not one Liberal member would come back from that province in the election then pending. A travelling agent who was present heard him and said: What about Gloucester? 'Never mind Gloucester,' the hon. minister replied, 'not one member will come back;' yet nine came back, and only four of the friends of the hon. gentlemen opposite. I for one do not feel the results of this investigation or of this report. Meanwhile it is our duty to lay the whole matter before the mass of the intelligent electors of the whole country. The engineers and great railway experts will not be affected by this report, and when this discussion is over and, after a little time, the people of Canada are able to ponder over that report and its consequences, they will turn against this Administration and its supporters, because they upheld such a report, by men who are biased, and had but two considerations—one a political consideration and the other, an engineer, whose mess of pottage was there before him. That engineer had so little Canadian aspiration that he worked for railway companies in Canada for ten years without taking out naturalization papers, and it was only when he became a servant of the Government of Canada that, rather than sacrifice his position, his $26,000 or $20,000 a year and perquisites, he became a British subject. Hon. gentlemen opposite but two short years ago declared that it was disloyal and unpatriotic to send a bag of potatoes or a bushel of wheat to the United States—no truck or trade with the Yankees; yet they call in American engineers, and a body of men in Toronto who opposed reciprocity brought the stone for an immense building from the other side of the line. The Liberal party have nothing to fear but everything to hope from the result of this report of Messrs. Gutelius and Staunton. Mr. Staunton's political bias is well known; he would not contradict it himself. While he was still engaged in the making of that report as commissioner, he took part in the elections in South Bruce. The hon. the Solicitor General said that he had finished his report before he took part in that election; but it had not yet been made public, so that his interference in the election was quite unjustified.

I feel sure that when the people of Canada have seriously considered the false theories of railway construction advanced in the report and the advantages which the Liberal party has given to the people of the country at large, to northern Ontario, to northern Quebec, and to the Maritime provinces, they will say to Mr. Borden that he should never have made public that report, that he should have studied it more carefully before he allowed it to be circulated. I am prepared to give credit to the two commissioners for being fair enough not to place any findings of graft in their report, although I have no doubt that that was because they could not find any. Meanwhile it is the greater satisfaction to the people of Canada that on that commission there has been such an active political gentleman as Mr. Staunton, because it is well known in Canada and in England, where Mr. Staunton addressed people on the loyalty question and against American trade in 1911, that if there had been a dollar or a million dollars of graft he would have been only too glad to have exposed it to the people of Canada.

On motion of Mr. W. H. Sharpe, the debate was adjourned.

On motion of Mr. Rogers, the House adjourned at 11.13 p.m.

Monday, March 30, 1914.

The House met at Three o'clock, the Speaker in the Chair.

VANCOUVER HARBOUR COMMISSIONERS.

Hon. J. D. HAZEN (Minister of Marine and Fisheries) moved for leave to introduce Bill No. 128, to amend an Act to incorporate the Vancouver Harbour Commissioners.

He said: This Bill is to amend a Bill that was introduced and enacted into legislation at the last session of the House in regard to the harbour of Vancouver. The amendment is being made at the request of the harbour commissioners. Under the provisions of that Bill the rental derived from the leases of the foreshore of the harbour were paid over to the harbour commissioners and authority was given to the harbour commissioners to deal with the foreshore in the future. But their powers were limited to making leases for a period of twenty-one years with renewals for further periods of twenty-one years each. It has been found by the harbour commissioners that this provision is not altogether workable, that there are certain cases in which they feel it is more in the interest of the harbour that, instead of leasing the foreshares, there should be power to make grants of them. Therefore, it is proposed to revest the power of dealing with these foreshores in the Governor in Council under a provision that before the Governor in Council deals with any of them he shall first of all get a report from the harbour commissioners embodying their views and recommendations in regard to the matter. This is in order to make the Act workable and it is done at the suggestion of the harbour commissioners who found that the Act in this respect was not as elastic and workable as they would have liked to have it.

Motion agreed to, and Bill read the first time.

HOURS OF RAILWAY EMPLOYEES.

Mr. CARROLL moved for leave to introduce Bill No. 129, respecting hours of service of railway employees.

He said: The chief provision of this Bill limits the number of hours of service which a railway corporation shall demand of its officials to fourteen a day, and specifies the period that must be allowed the employees for rest betweeen the working hours. Clause 3 of the Bill states the hours of service that cannot be exceeded by order of any railway company and fully sets forth the hours of duty and off duty that shall be required or permitted. It is careful to make exception in cases of accidental obstruction over which the company, or its agents, has no control. It sets these forth in detail. The main purpose of this clause is to provide a law that can be invoked in case the regulations set forth therein are violated in any way, which law must be interpreted by a judicial tribunal, from whose judgment there is this appeal, thus giving thereto that elasticity which the changes of condition from time to time may demand. The fixing of the hours of service by any body, such as the Board of Railway Commissioners for Canada, for example, would mean cast iron rules lacking that elasticity and from which no appeal is obtainable. It is quite obvious that this protection is in the interest not only of the employees affected thereby but also of the railway companies and of the general public. The clause which provides for the offence on the part of the railway company and the penalty attached thereto; it also provides for the prosecution of a suit in civil courts in case of violation. The general intention of the Bill is to protect railway employees, and to protect the companies from accidents and the general public from suffering injury and damage by these accidents which frequently occur.

Motion agreed to, and Bill read the first time.

PRIVATE BILLS.

FIRST READINGS.

Bill No. 125, for the relief of Walter James Liscombe.—Mr. Douglas.

Bill No. 126, for the relief of Ethel Cora Robinson.—Mr. German.

Bill No. 127, for the relief of George Fullerton Forsythe.—Mr. Schaffner.

THE NORTHERN TERRITORIAL RAILWAY COMPANY.

Further consideration in Committee of Bill No. 91, respecting the Northern Territorial Railway Company.—Mr. McKay. Mr. Blondin in the Chair.

On section 1—extension of time.

Mr. OLIVER: Would the hon. member in whose name the Bill stands tell us where this railway is located?

Mr. McKAY: I cannot tell exactly, but I can do so generally. At the time the railway was incorporated, the wording was that it would start from either Fort Churchill

or Port Nelson. As it is now definitely settled that the harbour will be at Port Nelson, I presume that the road will start from there. Then it goes across country to lake Wollaston, crosses the Athabaska river and goes from there on to the Pacific coast.

Mr. OLIVER: Where does it cross the Athabaska river?

Mr. McKAY: I cannot give the exact place. It is not stated in the Act of Incorporation, but it passes on the south side of lake Athabaska on towards what is known as the Peace river block.

Mr. OLIVER: Where does it cross Peace river?

Mr. McKAY: That is not stated either.

Mr. OLIVER: Where does it touch the Pacific coast?

Mr. McKAY: At Port Essington or the Portland canal. From the point where the railway crosses the Athabaska river, a branch line will be built to the city of Edmonton by way of Fort McMurray and lac LaBiche.

Section agreed to.

Bill reported, read the third time and passed.

THIRD READINGS.

Bill No. 27, respecting the South Ontario Pacific Railway Company.—Mr. William Smith.

Bill No. 79, to incorporate the Bruce Peninsula Railway Company.—Mr. Middlebro.

Bill No. 87, to incorporate the Erie and Ontario Railway Company.—Mr. Lalor.

SECOND READING.

Bill No. 124, for the relief of Leonore Power.—Mr. Porter.

QUESTIONS.

(Questions answered orally are indicated by an asterisk.)

INTERCOLONIAL RAILWAY—APPOINTMENT OF ENGINEERS.

*Mr. EMMERSON:

1. Has the Intercolonial railway appointed a man named Cowan as resident engineer in the Maintenance of Way Department at Truro, Nova Scotia? If so, when was he appointed, and at what salary?

2. Where is he from, what is his age, is he a British subject, and had he been until recently or at any period in the employ of the Canadian Pacific Railway Company?

3. Did he displace Mr. J. Jardine, C.E., an engineer trained on the Intercolonial railway, and who held the position of resident engineer at Truro by promotion?

4. Is the said J. Jardine, C.E., now in the employ of the Intercolonial? If so, in what position and where?

5. Is the said W. O. Cowan a friend or relative of C. B. Brown, the chief engineer of the Intercolonial?

6. Was the said C. B. Brown, chief engineer of the Intercolonial, an American citizen at the time of his appointment, and in the employment of the Canadian Pacific Railway Company, and when was he appointed and at what salary?

Mr. REID:

1. Yes. March 15, 1914. $150 per month.

2. Halifax. Age 37. Yes.

3. He succeeded Mr. Jardine, who has been assigned other duties.

4. Yes. Assistant engineer, Moncton.

5. He is no relation to the chief engineer, the friendship that exists is only that of a business associate, and such friendship was not a factor in regard to the employment of Mr. Cowan.

6. C. B. Brown. Appointed July 1, 1913. $6,000 per annum. He was in the employment of the Canadian Pacific railway prior to his appointment as chief engineer. The department has no information as to the date of his naturalization as a British subject.

INTERCOLONIAL RAILWAY—EMPLOYMENT OF FRED. HARRIS.

*Mr. EMMERSON:

1. Has the Intercolonial railway now in its employ, or has it had, a man named Fred. Harris? If so, what was the nature of his employment?

2. Was he inspector of rails, when was he first employed, and previous to his employment was there such an officer on the Intercolonial?

3. What was his age when employed, had he been an employee previously of the Canadian Pacific Railway Company, and was he a retired employee of that company and in receipt of a pension or retiring allowance monthly or annually therefrom? If so, what was the amount thereof?

4. Was he a British subject, and what was the salary paid him by the Intercolonial?

5. Is he still engaged as an employee of the Intercolonial? If not, at what date were his services dispensed with and for what cause?

Mr. REID:

1. Yes, it had. Mr. F. H. Harris was in the employ of the railway as rail inspector.

2. Yes. September 1, 1913. No special officer for such work employed previously.

3. Fifty-eight years. Yes. Yes. The department has no information.

4. The department has no information. $100 per month.

5. No. Resigned January 1, 1914. Poor health.

TRENT VALLEY WOOLLEN MANUFACTURING COMPANY.

*Mr. EMMERSON:

1. Who are the directors, officers, and chief shareholders of the Trent Valley Woollen Manufacturing Company, Limited, mentioned in an Order in Council, dated August 25, 1913, and set forth on page No. 398, of the third volume of the Auditor General's Report for the year 1913?
2. What was the full information furnished by them, as described in said Order in Council?
3. Who were the certain of these parties with whom the Minister of Railways and Canals had the subject-matter of said Order in Council under personal consideration, as mentioned and recited in said Order in Council?

Mr. REID:

1. The department has no information as to who are the directors, officers and chief shareholders of the company.

2. Full information as to their alleged legal position in regard of the water-power; and, later, full statement (vouchers and invoices) as to the expenditure in connection with the change from hydraulic to electric equipment.

3. In the present absence of the minister from Ottawa, the department is unable to give the information.

GIASSON POST OFFICE.

Mr. ERNEST LAPOINTE:

1. Was a new post office opened in the parish of St. Aubert, county of L'Islet, and bearing the name of Giasson?
2. What is the distance from it to the main post office at St. Aubert?
3. Who recommended its opening?
4. Has the head office of the department forbidden the postmaster of St. Aubert to receive postal matter from the residents of the parish who are served through that post office, or to deliver such matter to them? If so, why?
5. Has the Postmaster General received a petition from a great number of electors protesting against that course and asking for the closing of the above mentioned new office?
6. If so, what are the intentions of the Postmaster General in connection with such petition?

Mr. PELLETIER:

1. Yes.
2. 1½ miles.
3. By direction of the Postmaster General.
4. No.
5. A petition bearing nineteen names has been received for the closing of the new office.
6. The subject is under consideration.

NATIONAL TRANSCONTINENTAL RAILWAY—CHAMPLAIN MARKET STATION, QUEBEC.

Mr. BOURASSA:

1. Has any decision been reached by the Government as to when the National Transcontinental passenger station will be erected on Champlain market, at Quebec, and as to the removing of the present offices of the Marine Department, now near Champlain market?
2. If so, is it the intention of the Government to have these offices removed to Lévis, to occupy the building belonging to the Government and known as Carrier & Laine workshops?

Mr. REID:

1. The station will be erected as soon as tenders can be called for after the final approval of the plans. It has not yet been determined that it will be necessary to remove the present offices of the Marine Department to any other site.

2. Answered by No. 1.

SHIPPEGAN DOG-FISH REDUCTION WORKS.

Mr. JAMESON:

1. Did the Government erect a reduction plant at Shippegan, N.B.? If so, when and upon whose recommendation?
2. What was the cost of construction?
3. Was a site purchased upon which to erect the plant? If so, from whom, when and at what cost?
4. Was the plant erected upon such site?
5. If not, upon whose property was it erected?
6. If any title to the land upon which the plant was erected has been acquired, from whom was it obtained, when were proceedings to acquire it begun, and what did it cost?
7. What has the yearly and total cost of operation and maintenance of the plant been since its completion, and in what years was the plant operated?
8. What yearly and total revenue has been derived therefrom since its completion?
9. What is the Government's intention regarding the plant?

Mr. HAZEN:

1. Yes. In 1904. On the recommendation of the then Minister of Marine and Fisheries.
2. $25,298.60.
3. No.
4. Answered by No. 3.
5. That of the W. S. Loggie Company, Limited.
6. The site is being expropriated. Instructions were given to have the site surveyed and a description thereof prepared on November 27 last. The plan and description were registered on the 19th of January, 1914.
7. 1905-6, $3,737.15; 1906-7, $9,941.91; 1907-8, $6,482.86; 1908-9, $9,357.02; 1909-10, $12,154.31; 1910-11, $9,590.26; 1911-12, $4,774.61. From 1905 to 1911, inclusive.
8. 1905-6, nil; 1906-7, nil; 1907-8, $3,164.09; 1908-9, $104.66; 1909-10, $316.69; 1910-11, $9,244.48; 1911-12, $860.55; 1912-13, $383.11.
9. To sell it to the best advantage.

BLACK CAPE EAST POST OFFICE.

Mr. MARCIL:

1. Has an application been received by the Post Office Department to re-open Black Cape East post office, Bonaventure county, Quebec, at the house of Napoléon Cyr?

2. From whom has said application been received, and what decision has been arrived at?

Mr. PELLETIER:

1. Yes.

2. The request was made by James Edward Mill, and the matter is under inquiry.

SMELT FISHING LICENSES.

Mr. MACDONALD:

Was any smelt fishing license issued during the past year to George Mason and A. Arbuckles, by D. L. McDonald, fishery officer at Bailey's Brook, Pictou county, during the last season?

Mr. HAZEN: Yes. Through an error on the part of the departmental officer charged with the work of preparing the return, these names were not included in a return submitted to the House on March 17 last. A revised return is being prepared.

ALLEGED CABLEGRAM TO SIR EDWARD CARSON.

*Mr. PROULX:

1. Does the Minister of Militia and Defence know whether the following cablegram was sent by Captain Tom Wallace, member for Centre York, to Sir Edward Carson, as reported by the Citizen of the 26th March, 1914?

Captain Wallace's Assurance.

Captain Tom Wallace, member for Centre York, sent the following cablegram last night to Sir Edward Carson, Belfast, Ireland:

Thousands of loyal Canadians are with you in your magnificent fight to preserve the best traditions of British citizenship by resisting the coercion of Ulster. We are ready, if necessary, to help you with men and money to the last ditch.

(Sgd) Tom Wallace.

2. Is Captain Tom Wallace an officer of the Canadian militia?

3. If he is, does the Minister of Militia approve of an officer of the Canadian militia sending such a cablegram?

4. If not, what action will the minister take to discipline Captain Tom Wallace?

Mr. HAZEN:

1. No.

2. Yes, on the reserve of officers.

3 and 4. The alleged telegram does not in any way relate to the duties of Mr. Wallace as an officer on the reserve; and the minister is not called upon to express any opinion with regard thereto. Any attempt to discipline Captain Wallace in the case suggested would be not only improper but illegal.

[Mr. Hazen.]

AMOUNTS PAID TO L. J. HEBB.

Mr. MACLEAN (Halifax):

What sum of money was paid to L. J. Hebb, chief fishery officer for Lunenburg county, N.S., during the calendar year 1913, for salary and for travelling and other expenses, respectively?

Mr. HAZEN: Wages, $200; expenses, $715.64.

NEW RICHMOND AND SHIGAWAKE MAIL SERVICES.

Mr. MARCIL:

1. What is the cause of the delay in establishing the rural mail service asked for by the residents of New Richmond, Quebec, and Shigawake, Quebec, respectively?

2. When does the post office department expect to have these services established?

3. Has any other rural mail service been applied for in Bonaventure county besides the two mentioned, and where?

Mr. PELLETIER:

1. The department is at present endeavouring to make satisfactory contract arrangements for the performance of the service on the proposed New Richmond station rural route and as soon as such is made, the service will be inaugurated. In the case of the Shigawake application, a petition was submitted a year ago for the establishment of rural mail delivery in the vicinity of Shigawake post office and on inquiry being made by the inspector as to whether or not a circular route could be arranged, it was ascertained that another petition was in circulation which was intended to include some of the roads on the rear range in Shigawake. This latter petition has not been received at the department and further action has accordingly been suspended. There has been no avoidable delay in either case, in so far as the department is concerned.

2. Answered by No. 1.

3. No.

CARLETON HEAD, P.E.I., BREAKWATER.

Mr. J. J. HUGHES:

Is the contract for the construction of landing slip and breakwater at Carleton Head P.E.I., in connection with the proposed car ferry, what is known as an ordinary or straight contract, or is it on a percentage basis? If the latter, what is the percentage paid to contractors?

Mr. REID: Yes, an ordinary contract.

MILITIA AND CHURCH PARADES.

Mr. EDWARDS:

1. Has the Government seen the following paragraph of a leading editorial in the Canadian Baptist of March 26, 1914:

'We venture to raise the question again as to whether anything is to be done in regard to

the use of our troops at religious processions, where they are regarded as a guard of honour.'

2. Will the Government say whether the allegation implied herein, namely that our troops are used as guards of honour at religious processions, is well founded?

3. Is the use of any part of the Canadian militia or permanent force in, or in company with, religious processions in Canada permissible, according to the military regulations governing the militia and permanent force?

Mr. HUGHES:

1. The attention of the Minister of Militia and Defence has been drawn to the paragraph referred to.

2. The allegation is not 'well founded.'

3. It is the custom in every part of Canada and the British Empire for the militia to attend church parades wearing side arms only, as per the following regulations:

(a) King's Regulations and Orders, Canadian Militia, paragraph 1054.

It having been intimated to the department that the rule was not clearly understood in some quarters, the following were issued:

(b) Letter.

Ottawa, May 31, 1913.

From the Adjutant General Canadian Militia, to Officers Commanding Divisions and Districts.

Carrying of arms, Church parades, etc.

Sir,—I have the honour, by direction, to state that, in different parts of the country certain militia units, cadet organizations and members of civilian rifle associations, to whom government rifles have been issued, have been attending church parades and other religious gatherings carrying rifles.

2. K.R. and O., 1910, authorizes the carrying of side arms on parades for divine service, but there is no authority whatever for the carrying of rifles on parades of this character. The firearm is quite out of place on religious parades and processions.

3. It is desired that instructions be issued to all concerned that, in future, this practice is not to be maintained.

I have the honour to be, sir,
Your obedient servant,
(Sgd) Victor A. S. Williams,
Colonel, Adjutant General.

(c) Militia Order.

Carrying of arms at church parades, &c.

It is notified for the information of all concerned, that the carrying of government rifles by certain militia units, cadet organizations and members of civilian rifle associations, when attending church parades and other religious gatherings, is contrary to regulations and is to be discontinued. (H.Q. 214-14-38).

There is no information in the department that these regulations have not been loyally observed.

SOULANGES CANAL—SALARIES OF WHEELMEN.

Mr. SEGUIN:

1. What is the salary paid to the wheelmen Nos. 4 and 5 on the Soulanges canal?

2. Was such salary changed since the 21st of September, 1911?

3. If so, what is the reason for such change?

4. Is it the intention of the Government to have the former salary restored?

Mr. REID:

1. $60 per month when working.

2. No.

3 and 4. Answered by No. 1.

Mr. J. ARMSTRONG.

Mr. LEMIEUX:

1. Has J. H. Armstrong, post office clerk of Sherbrooke, been dismissed?

2. If so, for what reasons?

3. When was he appointed in the service?

Mr. PELLETIER:

1. There is no person of the name of J. H. Armstrong in the Sherbrooke post office.

2 and 3. Answered by No. 1.

UNOPPOSED AND UNDISCUSSED MOTIONS.

Mr. A. W. Chisholm.—Return showing: The salary of each deputy minister; how many clerks or employees are under each of the deputy ministers, or over whose work the deputy is supposed to exercise supervision; the salary of the Customs Commissioner, and how long is he employed.

Mr. Delisle.—Return showing: The names of the postmasters who have been dismissed from office since 1900, in the county of Portneuf; how many investigations there were; the names of those whose cases were investigated.

Mr. William Chisholm.—For a copy of all letters, telegrams, correspondence, guarantee bonds, and other documents and security relating to the renewal of the contract with George A. Stewart for carrying mail between North Lochaber and West Lochaber, in or about the month of May, 1913, and of the subsequent cancellation of said renewal contract, and of the contract made with Hugh D. Cameron for said service.

Mr. A. K. Maclean.—For a copy of all tenders, correspondence, documents, &c., relative to supplies for Aldershot Camp for the year 1913, from June until October?

Mr. A. K. Maclean.—For a copy of all advertisements, tenders, contracts, documents, papers, &c., relative to the supply of ice to the Aldershot Military Camp, N.S., for the season of 1914.

Mr. Sinclair.—For a copy of all letters and telegrams received since April 1, 1912, by the Minister of Militia and Defence from G. A. R. Rowlings of Sydney, N.S., A. H. McDonald of Sherbrooke, N.S., Jas. L. Hattie of Caledonia, N.S., and A. J. Fulton of Guysborough, N.S., relating to bounties payable to Fenian Raid Veterans, and of the replies to said letters, if any.

Mr. Sinclair.—For a copy of all letters and telegrams addressed by G. A. R. Rowlings and J. S. Wells to the Department of Public Works, or the minister, since October 1, 1911, relating to the construction of a public wharf at Cole Harbour, Guysborough county, N.S., and of all replies thereto.

Mr. Emmerson.—For a copy in duplicate of all leases, agreements, correspondence, Orders

in Council and other documents relating to the water power or privileges connected with the Stevens dam, so called, that had been constructed across the river Trent at the village of Campbellford, together with a copy in duplicate of a license in connection with said dam, granted to the Hon. James Cockburn and others under date December 9, 1869, and of all correspondence with, and opinions of, the Minister of Justice at the time of the granting of said license and since that date; also a duplicate copy of all papers, correspondence, Orders in Council and other documents relating to or connected with the cancellation, termination and revocation of such license on the 12th of August, 1911, and of all correspondence, propositions, agreements or other documents had and made by, to or with the Trent Valley Woollen Manufacturing Company, Limited, and of all correspondence with the Department of Justice and opinions thereof relating thereto; also a duplicate copy of all correspondence, reports, Orders in Council and other documents referred to or mentioned in an Order in Council of date August 25, 1913, set forth on page No. W. 398, in the third volume of the Auditor General's Report, 1913, and of all correspondence with the Auditor General and by and between the Auditor General and any department of government relating thereto or connected therewith.

Mr. Ernest Lapointe.—For a copy of all documents, papers, petitions, correspondence, reports, &c., in connection with the opening of a post office under the name of Giasson in the parish of St. Aubert, county of L'Islet.

Mr. Demers.—For a copy of all correspondence, petitions, lists of shareholders, Orders in Council, licenses, certificates and other papers and documents, and of all renewals thereof, relating to the incorporation and licensing of the Banque St. Jean, the Banque Ville Marie and the Banque Jacques Cartier, all in the province of Quebec.

Mr. Sinclair.—For a copy of all correspondence between Mr. G. E. Torrie, fishery officer for the municipality of Digby, N.S., and the Department of Marine and Fisheries, bearing date between the 1st day of January, 1912, and the 1st day of January, 1914; also a copy of all claims and accounts rendered by the said fishery officer to the said department between said dates relating to services rendered by said officer to the department.

Mr. Sinclair.—For a copy of all correspondence, telegrams, instructions, accounts, vouchers and other papers and documents relating to the purchase of live stock in the Maritime provinces by one Howard Corning of Yarmouth, N.S., during the period of his employment; also a copy of the appointment of the said Howard Corning and of all correspondence, complaints and other documents relating to the dismissal of the said Howard Corning, if he has been dismissed or retired from the service, together with a copy of all recommendations, correspondence and other papers relating to the appointment of the said Howard Corning's successor.

Mr. Boulay.—For a return showing the travelling expenses paid by the Government to the Honourable Rodolphe Roy, judge of the Superior Court at Rimouski, during the years 1912-1913 and 1914, for trips from Quebec to Rimouski and return.

Mr. Graham.—For a return showing: 1. Particulars of the inventories and value of the estate of the late George A. Montgomery, registrar at Regina, whose estate escheated to the Crown.

2. The amount realized at Regina or elsewhere, on the conversion of said estate into money.

3. The cost paid or allowed with names and amounts paid or allowed before the residue was paid over to the Crown.

4. The amount paid over and actually received by the Crown.

5. The disposition of the fund and the names of the persons to whom any sum has been paid, and the respective amounts thereof so paid over or allowed since the Crown received the same.

6. A statement showing the difference between the reports of the present and the late Minister of Justice as to disposition of the fund, and a copy of such correspondence and representations as led up to any change.

7. The actual balance now on hand and the intended disposition thereof.

[Mr. Emmerson.]

THE NATIONAL TRANSCONTINENTAL RAILWAY.

Consideration of the proposed motion of Hon. W. T. White (Minister of Finance) for Committee of Supply, and the proposed amendment of Mr. Graham thereto, resumed from March 27.

Mr. A. C. BOYCE (West Algoma): When the report of the commissioners appointed by this Government to investigate into all questions relating to the construction of the National Transcontinental Railway was brought down in this House, and the details of it published to the country, the outstanding question on everybody's lips was: What is the Liberal party going to do about it? On Tuesday last the hon. member for South Renfrew (Mr. Graham) demonstrated what the Liberal party proposes to do about it in the resolution which he offered to this House, and which, as a preface to what I am about to observe, I will take the liberty of quoting:

> That the report of the commissioners appointed by the Government to inquire into the constructiton of the Transcontinental railway is so wilfully partisan and misleading as to be wholly unreliable; that the manifest object of the said commissioners was to misrepresent for party purposes rather than to investigate in the public interest, without regard to the serious consequences to the country or this great national undertaking; and that for the appointment of such commissioners, and for accepting and endorsing their report the Government deserves the severe censure of this **House.**

That, forsooth, is the attitude which the great Liberal party in Canada have, after mature deliberation, elected to take with regard to a report which vitally affects the history and record of that party, and its future prosperity or otherwise. The resolution is aimed at the personnel of the commission. It complains in a bitter wail

that the commissioners were partisan and that the report is misleading, but there is not a word in that resolution, nor could there be, suggesting that the witnesses who gave evidence before the commission were corrupted or that they committed perjury; or that the documents upon which the specific findings of that report were based and filed were improper or fraudulent; or that the general evidence and facts obtained from the time the inspection of the road began up to the point at which the report was lodged has been interfered with. It was not always so with hon. gentlemen opposite. They have not always objected to reports condemning departments of their Government for extravagance on the ground that partisan commissioners were appointed by the Government. A report was brought down in this House a few years ago of an investigation into the Department of Marine and Fisheries, conducted by a commission appointed by the late Government. One of the most outstanding and memorable phrases of that report was: 'Zeal for economy is absolutely conspicuous by its absence,' or words to that effect. Hon. gentlemen opposite wailed and cried and shrieked against that report and had a reference to Judge Cassels for the investigation of it, but there was not one word from hon. gentlemen opposite then with regard to the personnel of the commission, or to the fact that the commissioners were wilfully partisan and that because they were partisan the report was misleading. With hon. gentlemen opposite it depends largely upon 'whose ox is gored,' and just because the Transcontinental Investigating Commission was appointed not by themselves but by the party on this side of the House, after complaints extending over a period of nearly seven years as to the extravagant and wanton manner in which the public money was being expended on this great undertaking, they allege that the commissioners were wantonly partisan and that for that reason the report cannot be relied on. All I can say with regard to that, is that the report demands a little greater consideration by hon. members of this House than that gentlemen of honour and repute, ability and experience, appointed two years ago to investigate the cost and manner of building this great national undertaking, should be charged, absolutely without reason, absolutely without evidence to support it, with making an evil report because forsooth they were wilful partisans and made their report accordingly. I ask my hon. friends opposite whether, in their judgment, they have done full justice to so serious an occasion by levelling their fulminations against this report and by crystallizing their opinion into a resolution, not concerning the merits of the undertaking itself, nor for the reason that something radically wrong is shown by the report, but condemning the report for the flimsy, miserable excuse that the commissioners were partisans. This country looks for something more tangible than that from hon. gentlemen opposite. The facts are that these commissioners were appointed two years ago; that reference to their appointment has been made in this House for two sessions; that the hon. gentleman who moved this resolution of censure against the commissioners, on the grounds of political partisanship, has sat in this House for two sessions and knew that these gentlemen were investigating the National Transcontinental railway and knew that one of these days a report would be brought down, but that he kept locked up in his bosom what he pretends to know now, namely, that all the time these gentlemen were wilful partisans, and that any report they might make would not be entitled to the respect of this House or of the country. Mr. Speaker, my hon. friend from South Renfrew did more than that: He sat in this House as a prominent member of the great party which occupies the benches to your left, and he voted to place one of these commissioners in a place of great responsibility under this Government, voted to give him a very large salary because of his fitness to fill that position and because of his absolute reliability, experience, and excellence in the matter of railroad building and management. And the same hon. gentleman now says, forsooth, that the report is misleading and unreliable because the commissioner of this excellent and admirable and capable man was wilfully partisan. During the many years that my right hon. friend the leader of the Opposition had the confidence of the country and sat with his party on the Government benches, numerous efforts were made by the Conservative party in this House to extract by means of questions, commissions, inquiries, and in debate, information from the Government of the day as to just what was going on in connection with the letting of contracts and the construction of the National Transcontinental railway. Once or twice there were inquiries—the Hodgins investigation and the Lumsden

4 p.m.

investigation. There were debates in this House. During the whole course of these debates and investigations it was very palpable that the Government of the day was endeavouring to keep from the public throughout Canada the actual facts in regard to the extravagance, recklessness and mismanagement which attended the building of the Transcontinental railway. No wonder that the Government changed. The Government having lost the confidence of the people, the people decided in favour of a change of Government. One of the first steps that the new Government took, in carrying out the pledge which its leader made to the people, was to appoint a royal commission to see whether or not the complaints which that party had made in the past were true, and, if true, whether the party which was responsible for the whole transaction from its inception, and whose recklessness and extravagance are shown in this report, was culpable or deserving of the severe censure of the House and of the country. It has been shown by the result to have been more blameworthy than the two commissioners who have made this report, and who deserve the thanks of a grateful country for giving the facts to the people.

The hon. member for South Renfrew (Mr. Graham), who moved this resolution, sat on these benches for many years as Minister of Railways and Canals, and he was familiar with what was going on. He was repeatedly asked for information. Sometimes he gave it, sometimes he did not give it, and sometimes the hon. gentleman gave information which, I think, from a reading of the speech which he delivered on Tuesday and Wednesday last, he would be very sorry indeed to-day to realize that he had given to the House. The hon. gentleman presented himself to the electors at Brockville for re-election as Minister of Railways and Canals, and went down to defeat upon a policy advocated by his leader, a policy which had for its object the absolute destruction of the utility of the Transcontinental railway, and the diversion of traffic from it to north and south lines.

We, the Conservative party of Canada, complained, and we complained early. My right hon. friend (Sir Wilfrid Laurier) had hardly got his breath after making that memorable speech on the 30th of July, 1903, before the right hon. the Prime Minister (Mr. Borden), then leader of the Opposition, made a speech, for the preparation of which there could be very little time, in which he outlined certain strong features which might appear to be of very great import to my right hon. friend (Sir Wilfrid Laurier), and to the Government of which he was then the leader. The first question, which was of very serious import to the country, but which did not appear to be of very serious import to my right hon. friend or his Government, was what this great undertaking, for the beginning of which even time would not wait, was going to cost, and how great was to be the burden that it would put upon the people of the country. What did my right hon. friend say? Was my right hon. friend serious when he told this House that the railway from Moncton to Winnipeg would cost $13,000,000 and not a cent more? These are his absolute words. Nobody believed it. Nobody took him seriously. He did not take himself seriously. He launched this project upon the people without the slightest consideration what the cost was going to be or what would be the burden which would be imposed upon the ratepayers. Across the floor of this House the then leader of the Opposition, now the leader of the Government, sent the challenge to the ministers of the Crown that they were unable to tell him the cost of this gigantic undertaking within $10,000,000. My right hon. friend gave sufficient opportunity for a reply, but not one of them rose. Not in connection with that, but in connection with another charge that he was confronted with, namely, that there was no information upon which to base an estimate of the cost, my right hon. friend replied: We have 'mountains of information,' abundance of maps, plans by provincial Governments, and reports upon everything, but the fact remains that this project was launched without one single statement from any scientific gentleman having reference to the nature of the territory which was to be traversed by this railway, or showing how much this railway would cost per mile. I confront the leader of the Opposition now with his words—$13,000,000 and no more. I emphasize that with the Liberal pamphlet which was published in the election of 1904 giving the cost of the Transcontinental railway at $13,000,000, and I ask my right hon. friend whether, in his judgment, and having regard to the uncontrovertible and uncontradictable

facts, as they now appear in this report, he was not misleading the people of Canada at that time and was not intending to mislead them to the point that the people would be committed to the railway, and would have to have it carried through.

Another estimate as to the cost of the road was furnished by my right hon. friend's Minister of Finance at that time—a very careful estimate, Mr. Speaker. It created the impression in the House that the estimate which Mr. Fielding gave of $61,415,000 for the construction of the Moncton to Winnipeg section was most liberal. He wrote a letter in connection with that which is shown in the exhibits, and which I must ask the House to listen to because it is distinctly interesting. Under date of May 11, 1904, and after the minister had made a speech upon the subject, he wrote this letter:

Ottawa, May 11, 1914.

Dear Mr. Emmerson,

Last summer, while I was acting Minister of Railways, and when the Grand Trunk Pacific scheme came up, I asked Mr. Schreiber's opinion as to the probable cost of constructing the eastern division (Government portion) of the road. Mr. Schreiber gave me the information, although not in the form of a written report, and I used it in the House, mentioning his name as my authority. His opinion was that a road could be constructed from Quebec to Moncton for $25,000 per mile, and from Quebec to Winnipeg for $28,000 per mile.

These estimates were made for a road of an ordinary character such as is constructed elsewhere. In order to make a sufficiently liberal allowance for a road of better character, I added 25 per cent, making the estimate $31,250 per mile from Quebec to Moncton, and $35,000 per mile from Quebec to Winnipeg. I have not spoken to Mr. Schreiber on the matter of late, but from other experienced railway men I have received assurances that my estimate was a most liberal one and that the road could probably be constructed well within these figures.

As above stated, I did not obtain a written report from Mr. Schreiber. I think it might be convenient to have a report from him. May I suggest that you discuss the matter with him, and, if there is no objection, ask him to make a short memorandum, putting in writing the information which he gave me last summer.

Yours faithfully,
(Sgd) W. S. Fielding.

Honourable H. R. Emmerson,
Minister of Railways and Canals,
Ottawa, Ont.

And $61,415,000 was stated by the Minister of Finance to this House and to this country, as being a most liberal estimate, based upon the information furnished and assurances given by experienced railway men—men, for instance, like M. P. Davis, who undoubtedly would not mislead the minister in regard to any additional amount that would be taken from the people for the construction of this railway.

The right hon. gentleman (Sir Wilfrid Laurier) in a most eloquent speech; a speech more eloquent than convincing to the thoughtful and earnest reader, expressed great concern that no delay should take place in the immediate construction of this much-needed railway. His words have been often quoted, but I ask the indulgence of the House while I extract a few cogent sentences from that most notable speech delivered on July 30, 1903, when he was introducing the Transcontinental railway measure. I quote his words from page 7659, 'Hansard,' 1903:

To those who urge upon us the policy of to-morrow and to-morrow, and to-morrow; to those who tell us wait, wait, wait; to those who advise us to pause, to consider, to reflect, to calculate, and to inquire,—

Mark, Mr. Speaker, he had no time to consider, to calculate, or to inquire.

—our answer is: No, this is not a time for deliberation, this is a time for action. The flood of tide is upon us—

This is the poetical part of it—

The flood of tide is upon us that leads on to fortune; if we let it pass it may never recur again.

I presume he did not want the fortune to pass.

If we let it pass, the voyage of our national life, bright as it is to-day, will be bound in shallows. We cannot wait, because time does not wait; we cannot wait, because in these days of wonderful development, time lost is doubly lost; we cannot wait, because, at this moment there is a transformation going on in the conditions of our national life which it would be folly to ignore and a crime to overlook; we cannot wait, because the prairies of the Northwest, which for countless ages have been roamed over by the wild herds of the bison, or by the scarcely less wild tribes of the red man, are now invaded from all sides by the white race.

These are eloquent, and poetic sentences, but there is not a word of business in the whole speech from beginning to end. He was cheered by his enthusiastic followers, as never before, and yet in the whole of that speech there is not to be found a single word of business sense to demonstrate to the people of Canada the kind of road they were undertaking, the kind of country through which it traversed, and the probable amount of the expenditure to be entailed? When the right hon. gentleman initiated his project, these things were held by him to be trivial, and so the country was launched into an unnecessary expenditure of millions and millions of dollars.

And when the right hon. gentleman was asked in regard to the expenditure, his answer was: 'it will cost $13,000,000, and not one cent more.' As my hon. friend from Calgary (Mr. Bennett) reminds me: it was not a time to calculate, it was not a time to pause, it was not a time to deliberate; it was a time to get through the House a project, calculated to carry the general election with which the right hon. gentleman was face to face, and in which his party had some unenviable records to live down. It was a policy, probably a most useful policy, by which the right hon. gentleman's friends, the Liberal party, could get the sinews of war, upon which to appeal successfully, if not to the people of the country, at any rate to the interests, and to the cupidity of their followers. The right hon. gentleman went on to speak in general terms, and I quote from page 7660, 'Hansard,' 1903:

> We consider that it is the duty of all those who sit within these walls, by the will of the people, to provide immediate means whereby the products of those new settlers may find an exit to the ocean at the least possible loss.

The right hon. gentleman was not always so anxious, when a proposition for the construction of a railroad came before Parliament, to rush into it without hesitating and without deliberating, and without calculating; it makes a great difference in the utterances of the right hon. gentleman and his followers which side of the House they happen to sit on when they enunciate a policy. There was once a railway proposition, submitted to Parliament by a Conservative government—and Conservative governments know how to build railways in Canada—and the right hon. gentleman (Sir Wilfrid Laurier) begged the Government to pause, and to reflect, and to wait. When it was proposed to build a railway from Quebec to St. John, New Brunswick, a very much needed road, and one which would command an abundance of traffic, substantial assistance to that railroad amounting to $170,000 per annum for fifteen years, or a guarantee was announced

In 1895, when the resolution was brought down for this proposition, my right hon. friend moved an amendment which I commend to the House in contrast with the eloquent words which I have just read, and which fell from the lips of my right hon. friend, indicating that time, the great enemy of mankind, would not wait for the proposition he was then placing before the House. The amendment which my right hon. friend moved, and which will be found in 'Hansard' of 1885, on page 3257, is as follows:

> In the opinion of this House additional surveys are requisite in order to a sound decision for a short line of railway, and it would be premature to adopt any line before further surveys have been made.

I commend my right hon. friend's amendment to him now.

Sir WILFRID LAURIER: It was voted down.

Mr. BOYCE: It was voted down, because in that case there happened to be surveys and information before the House at that time. My. hon. friend (Mr. R. B. Bennett) reminds me that the railway was built in fifty-five months.

In 1903 my right hon. friend, when introducing a measure which will cost this country upwards of $200,000,000, would not wait for surveys, for any information in order to ascertain the cost; in 1885 when there was a short line of railway to be built, my right hon friend, being in opposition was very cautious indeed, and wanted the most accurate surveys made and all information requisite to a sound decision upon the question. Almost word for word with the principles contained in that amendment was a resolution moved in this House by the then leader of the Opposition, the present Prime Minister, that details and surveys and calculations and deliberations were fully in order to insure a sound decision upon the question of the Quebec-to-Moncton section. My right hon. friend ignored that appeal entirely and committed this country to the onerous burden now laid upon it, namely, the building of a road, the utility of which at any rate as to one section is in very grave doubt, and in financing which, this country will be saddled with the burden for a great many years to come. Upon my right hon. friend and his party must rest that stigma and that stain. Upon him and his party must rest the blame for plunging into a work so gigantic without any consideration of the immense cost, the immense issues and burdens involved. Upon him and his party must rest the whole blame for the findings contained in that report, and the responsibility cannot be and will not be shifted, in the judgment of this country, by what is contained in the amendment offered by the hon. member for South Renfrew.

With regard to figures, let us see what the various estimates were. Mr. Fielding's estimate of $61,415,000 stood for some considerable time. In 1908 further estimates

were made—and I understand that the hon. member for South Renfrew disclaims any responsibility for any estimates given in this House, or for any attempt to mislead. In fact, he claims that he is not responsible if the actual cost exceeds his estimates. In April, 1908, a question was asked of the then Minister of Railways, the Hon. Geo. P. Graham, as follows:

1. What contracts and what mileage, and the price at which each have been let, upon the eastern and western sections of the Grand Trunk Pacific railway?
2. What is the date of each contract, and the period set for completion?
3. What is the estimated cost of the unlet portions?

His answer was:

Contracts have been let on the eastern division of the Grand Trunk Pacific railway, on schedule rates.

The total amount of the estimate on which the contracts were let, as furnished to this House in 1908, by the then hon. Minister of Railways, now the hon. member for South Renfrew, who offers this amendment, was $44,389,293.01; in addition, he stated, as to the portions not then let, that the estimated total cost was $19,030,173; making a grand total of the estimated cost on which contracts had been let, and on which they were not let, of $63,419,293.01. There was some margin in that estimate, which was supposed to cover the whole cost of construction of the main line from Moncton to Winnipeg, including $5,011,346.50 for the Quebec bridge. In 1911, another estimate was given by Mr. Lumsden, amounting to $108,729,900, not including terminals. On the 18th of April, 1913, another estimate was given by Mr. Gordon Grant, chief engineer of the road, amounting to $161,307,800, made up as follows: Value of the work done to December 1, 1912, $127,219,863; value of the work required to complete, $34,087,937. There is a most astonishing divergence in regard to the amount required to complete, between the estimate given in 1908 by the then Minister of Railways of $19,030,173, and Mr. Gordon Grant's estimate in 1913 of $34,087,937. I will not weary the House with details as to how these estimates were made up. I simply quote what I have, to show that none of these hon. gentlemen were able, at the initiation of this scheme or during the time it was under consideration, to give to this House any definite reliable information with regard to the burden they were imposing upon the country. It became necessary for some inquiry to be made. The commission was issued, the amount has been found out, and that amount, exceeding $200,000,000, is appalling enough to stagger the people, and certainly to paralyse the faith of the people in the right hon. gentleman and his party.

What defence does the right hon. gentleman offer? Does he say, or suggest, that if, in 1903, when he brought this measure down to the House, he had stated that it would cost $100,000,000 of the people's money, he would ever have received the endorsation of the people in 1904? I say, he would not. Had he said that the project would cost $150,000,000, they would have thought he was insane. But had he told the people plainly that the cost might be as high as $200,000,000, I am at a loss to express the view the people of Canada might have taken of his sanity. I do not think for an instant that he would have been returned to power in the election of 1904.

Now, what was the reason this railway project could not wait? The Minister of Railways of that day suggested that it was by reason of a financial gentleman who was deeply interested in the matter—that he could not wait and therefore time could not wait. But there is one outstanding fact —and I see my hon. friend from Red Deer (Mr. Michael Clark) smiling—that the right hon. gentleman—

Mr. MICHAEL CLARK: I always like to hear a Yorkshire man talk.

Mr. BOYCE: I suppose because it is free trade talk.

Mr. CLARK: I mean it.

Mr. BOYCE: The right hon. gentleman (Sir Wilfrid Laurier) would not wait, because, he said, time would not wait. But the evidence furnished from what has followed in the case to all those who read the report and consider the history of the road that it was the exigencies of the Liberal party in Canada that would not wait, that the contractors, or possible contractors, those who were collecting campaign funds, those who realize that elections under hon. gentlemen opposite required to be 'greased' by something in the way of finance, would not wait. There was also urgent necessity for an issue upon which the Liberal party could carry one more general election. I should like to ask my hon. friend from South Renfrew (Mr. Graham), in view of the statement made on the introduction of this measure by the right hon. leader of the Opposition, how the country is going

to be provided, as he said, with cheap freight rates on this line. The Grand Trunk Pacific will have to pay a rental, according to the figures now before the House, of something like $6,000,000 per annum on this line from Winnipeg to Moncton. How are the benefits to be given to the farmers about which my hon. friend from Red Deer and others are always talking, when this charge must rest upon the traffic as a result of the extravagance, wantonness and recklessness which have attended the construction of this road? I should like my right hon. friend also to consider this: suppose he had paused, and deliberated, and calculated, with regard, for instance, to the immediate construction of the Quebec and Moncton section of the road—which construction was objected to in 1903 and has been objected to ever since as being absolutely unnecessary, because it parallelled the Intercolonial railway and would draw traffic from that railway to the injury of the people whose property it is—suppose the construction of the Quebec-Moncton section had been left to the end, what would be the result now? Would the right hon. gentleman, as leader of the Opposition, have stood in his place and advocated the building of that road, now? I say, no, the right hon. gentleman's speech in support of the construction of this part of the road would not be delivered now. One could fancy the eloquent periods of the right hon. gentleman denouncing such a scheme if it were proposed by this Government, as being an extravagant transaction, involving the expenditure of thirty or forty million, and perhaps he might have insinuated that there was a corrupt and insidious design behind it. But what is the position now? The Quebec bridge has fallen down—now. The rails of the Quebec-Moncton section are rusting—now. The track is overgrown with weeds, and trees are growing on it—now. Thirty-five millions of dollars have been spent on that section—now. And yet we were told in 1903 that time would not wait in order that there might be deliberation, that there might be investigation, that there might be calculation, to ascertain whether that project was necessary in the interest of the people. We were committed to it, and $35,000,000 has been wasted on it—now.

Sir, the project of a national transcontinental railway is of vast importance to the people of this country. It is of the utmost moment to the people and to those financially interested who have provided the money for the purpose of the Grand Trunk Pacific scheme as distinguished from the Transcontinental, to know where this money has gone to. In this report the House has been given an indication as to where some of it went. And my right hon. friend the leader of the Opposition knows where some of that money went—and winked at its going in that direction. He knows perfectly well that in connection with the section in my own riding, the section running through Algoma, there was a divergence, an appropriation, or at any rate the 'reception' of the large sum of $740,000, which by holding up his little finger he could have stopped from going into the pockets of a contractor and into the construction of the road, and could have kept in the treasury of this country. My right hon. friend cannot deny that. It is a melancholy truth that my right hon. friend, when confronted with the facts set forth in this report, even if it be made by partisan commissioners, cannot get away from the fact that, as Prime Minister of Canada, he had the opportunity to prevent the sum of $740,000 from going into the pockets of a contractor and being lost to the country, and that he never lifted his finger to do so. On August 2, 1909, the president of the Grand Trunk Pacific Railway Company, a corporation vitally interested in the exercising of economy in the construction of this road, because it had to pay rental upon the capital invested, wrote to my right hon. friend as Prime Minister, pointed out what was going on, and implored him to take such action as would prevent this unnecessary loss. Let me read this letter, and then let my right hon. friend say to this House and to the country what he did to prevent that outrageous transaction which involved the loss of three-quarters of a million dollars: then and not till then will he satisfy this House and the country that as Prime Minister he did his full duty to the Canadian people, at any rate with regard to that particular item of extravagant waste, if not dishonest appropriation, which was actually brought to his attention in writing at that time. This is the letter:

My dear Sir Wilfrid,—On the 29th day of October, 1908, the National Transcontinental Railway Commissioners awarded two contracts for the construction of about 204 miles on sections 'D' and 'E' of the National Transcontinental railway. The first section starting on the west end of Fauquier Brothers' Abitibi contract, in the province of Ontario, about 100 miles west of Cochrane, for a distance of 104.24 miles; the second contract commencing at the terminations of the first and joining Fauquier Brothers' contract north of lake

Nipigon, a distance of 100 miles. By the terms of these contracts the work was to commence immediately after the execution of the agreements to be proceeded with continuously and diligently under the personal supervision of the contractor until completed, the date of completion being 31st December, 1910.

This work is remote from rail transportation, the closest point being 100 miles west of Cochrane. The prices at which the work was awarded were very high and consequently sufficient to allow contractors to build tote roads or some other means of transportation and getting in supplies so as to immediately commence work. To the best of our knowledge no attempt has been made as yet to open this work, and the indications are that while the work, as before stated, was let at very high prices on account of the difficulties of transportation, it is now the intention of the contractors to haul their material over a portion of the Fauquier Brothers' work track, on which will be completed the present season, say about 50 miles, and haul along right of way to their own section 50 miles distant. This delay will add largely to the profits of the contracts with no commensurate advantage so far as the National Transcontinental railway is concerned, and under the circumstances I will ask that the Government arrange for the cancellation of existing contracts and ask for new bids which can undoubtedly be obtained on very much reduced schedule prices,—particularly so if it is known that the contractors will be enabled to haul their material and supplies over such portion of Fauquier Brothers' work as track has been laid upon.

That is the appeal which was made to my right hon. friend in writing by the president of the Grand Trunk Pacific Railway Company, and it was an appeal that ought to have received instant attention at his hands. Does the report say that the right hon. gentleman replied to this letter, or acted upon it? I ask my right hon. friend to tell the House, in justice to himself, and in justice to this country, of the Government of which he was then leader: did he reply to that letter, or do aught to prevent the loss of that money to the country, or did he sit quiescent? Did he do nothing more than turn the letter over to the Hon. S. N. Parent, the chief commissioner, from whom he received a reply which was certainly not logical, certainly not reasonable, and certainly not in accordance with business principles? Nothing was done; the contract was in default, and under its own terms could have been cancelled; the work had not been commenced within the proper time, and it was impossible to finish it within the time fixed for completion. That being the case, outside of the charge of the hon. member for South Renfrew that this commission was a partisan commission, no other conclusion is to be derived from this letter and from my right hon. friend's silence than that he sat quiet and winked at a contractor who was using the leverage he obtained through his friendliness with the Government to make a profit of $740,000 out of that contract without turning a spade or risking a cent himself. This is a part of the responsibility that my right hon. friend as leader of the Opposition has to bear in connection with this matter. I might enunciate other matters which are referred to in the report in detail, but they are based upon evidence which speaks for itself. I am referring to these in particular in order to point out that when the right hon. gentleman stands up to vote for this resolution he will be doing a little bit more than attempting to substantiate the assertion that the commissioners who ascertained those facts, who found that letter and published it to Canada and to the world, did so because of their being political partisans. My right hon. friend will have to explain that transaction; the fact that he stands up and votes for this resolution will not be sufficient, in the eyes of this House and of the people of this country, to justify what may at least be characterized as an omission on his part of very serious moment, which visited a very heavy loss upon the people of this country.

It is stated as one of the findings of this commission that an amount of $40,000,000 has been wasted, and the reasons why this assertion is made, together with the amounts in detail, are included in the report and are supported by the evidence and exhibits which are submitted. $40,000,000 has been wasted, exclusive of the $35,000,000 which it cost to build the Quebec-Moncton section of the road, the rails of which are now rusting and overgrown with weeds and trees: $75,000,000 lost between 1904 and 1914 by political blundering and political mismanagement so great as to shock the conscience of the commercial world. And yet my right hon. friend has nothing to say even when I implore him—as no doubt he has been implored before—to rise in his place and at any rate disclaim any responsibility in connection with the matters so fully and cogently set forth in this letter with regard to the Davis contract.

I want to ask what the Liberal party, the alleged party of progress, is going to do about this matter? They are confronted with this appalling loss to the country of $75,000,000, the loss of which is attributable to misrepresentation of the circumstances from the beginning, to crass ignorance, and to a long course of extravagance and wasteful expenditure, to dishonesty and fraud connived at, concurred in, and concealed by

the late Administration, and now sought to be condoned in the eyes of the House and of the country. But wait till my right hon. friend goes to the people and tries to condone it before them. He will get little real sympathy from the people of Canada on a matter that so vitally concerns their interest. Investigation after investigation was demanded from my right hon. friend across the floor of this House, but was always refused. In the election of 1908, after there had been repeated warnings with regard to the colossal nature of this blunder, after there had been a lifting of the lid to show how unsavory was the condition of things underneath, my right hon. friend went to the country as much upon the issue of the National Transcontinental railway as upon any other policy. And what was his slogan: 'Let Laurier finish his work.' In 1911 when my right hon. friend was promulgating throughout this country his policy of reciprocity with the United States, the unquestioned and immediate result of which would have been to make the rails on every mile of the Government section of the Transcontinental railway grow rusty and become overgrown with weeds, what was his slogan? 'Follow where the white plume leads.' But now, when my right hon. friend is confronted with the actual findings of this commission, supported by the evidence and documents contained in this report, when he is confronted with the appalling results of what he led this country into by his speech in 1903, my right hon. friend, I fancy, will realize that Nemesis has overtaken him at last, and like Richard on Bosworth Field, harrowed by his dreams and haunted by his conscience, his slogan will no

5 p.m.

longer be: 'Let Laurier finish his work,' or 'Follow where the white plume leads,' but his plea will be: 'A horse! a horse! my kingdom for a horse.' Two steel ribbons stretch across this country upon which are written the policies of the two parties; and a study of the conditions under which both were initiated and built, the people of Canada are in a fair position to draw a contrast between these two parties. When the Bill to assist the construction of the Canadian Pacific railway was brought down in this House, hon. gentlemen opposite, then occupying seats to your left, Mr. Speaker, hurled their anathema maranatha at the project. They said it would not pay for its axle grease: that it was reaching out to a wilderness of mountains in British Columbia; that it would not be a profitable undertaking for this country; and they voted against it. But the road was built, and by the building of that road, which to-day is maintained the main artery through which throbs and pulsates the commercial energy of this country, Canada has become a great country and is now in a position to realize all the attributes of its greatness and to throw its vast resources open to the wide world. But take the division of the Transcontinental railway, stretching from Moncton to Winnipeg, built by the late Administration, and what political record is writ along that ribbon of steel to the credit of the party represented by hon. gentlemen opposite? In the one case we have a railway the building of which made Canada a nation. Hon. gentlemen opposite cannot deny that, and they cannot deny that they opposed it. On the other hand we have a railway which was begun in haste, perpetuated in ignorance, recklessness, and wantonness of expenditure, and which results in the loss to Canada, whether by dishonest means or otherwise, of $75,000,000—a road, a portion of which is of very little use to this country if it is not a discredit, and which will entail a loss every year. Canada has to stand the loss that was entailed by my right hon. friend's measure. Canada can stand the strain of a loss of $75,000,000; Canada's credit is of the highest; her resources are boundless, and in the eyes of the world she ranks as the first in the galaxy of nations composing the British empire. But the eyes of the world have been opened, and so long as these facts are before them the people of the world will take knowledge of the two great parties in Canada, of their history, of their failures, and of the worse than failure, of the Liberal party. When the people of Canada have again the opportunity to pass judgment upon the parties and upon the record which is written across the land, if it were only in these two lines of steel, the people will demonstrate that they have had their lesson and that they know now which is the party of progress and which the party of opportunism and exigency. The railway policy of the Conservative party has made Canada great. The railway policy—the only railway policy—instituted by the Liberal party under the Government of my right hon. friend as Prime Minister, has placed upon Canada one of the darkest stains and blots that could possibly be placed upon the fair escutcheon of so fair a country. Never again, I venture to assert, in face of this report, can they be cajoled or persuaded to 'follow where the white plume leads.'

or to allow the right hon. gentleman to finish that kind of work.

Without entering into the details of the matter which has occupied the time of this House so long, and upon which the judgment of the country must be passed whenever the country has an opportunity of deciding as between the records of these two great parties, I can only say that, irrespective of any criticism that has been hurled at this report by the hon. member for South Renfrew, there remains in it the history of a party which sacrifices everything, Canada's credit, the money of the people—everything—to the exigencies of party politics.

Hon. FRANK OLIVER (Edmonton): Mr. Speaker, there are many remarkable features to this debate and to the occasion of it, but the longer the debate continues the more strongly the feature is emphasized that a government and a party are being condemned for having done a work well. I think this is the first time that I have happened to hear criticism advanced from that standpoint. I have heard and read on many occasions charges that a government has completed a work inefficiently and that, as a part of the purpose of that inefficiency, there was an improper appropriation of public money. This debate, based on this report, is almost unique in that every word and line of the report, and every word of the debate, has emphasized the idea that Canada has received at the hands of the late Government a great constructive enterprise of the highest possible standard and that in the construction of that enterprise there is no suggestion that a dollar of the people's money went to private or party interests. It will be within the memory of the members of the House that only a few days ago the hon. member for Carleton, N.B. (Mr. Carvell), brought up the instance of a piece of road —I think it was thirteen miles in length— built by the present Government, in which the country was despoiled of $26,000; and the suggestion was made—and it certainly was not refuted—that this extra expenditure had been made for the distinct purpose of influencing the result of a by-election in the locality. Contrast this record and that—over $100,000,000 of money spent and not one dollar gone to party purposes or private ends, so far as this report, or the debate upon the report, has gone to show; on the other hand, a railway thirteen miles long, and $26,000 gone straight and direct to party purposes and for private benefit.

Mr. J. D. REID: That is not a fact.

Mr. OLIVER: I can only say that the facts were presented to us by the hon. member for Carleton.

Mr. REID: And they did not lead to that conclusion.

Mr. OLIVER: There was no other conclusion to arrive at, and there was no contradiction made of that conclusion.

Mr. REID: Oh, yes, there was.

Mr. OLIVER: It will be the opportunity of the acting Minister of Railways and Canals in due course to take up that question and deal with it.

Mr. REID: The facts stated by the hon. member for Carleton were not borne out. We are going to have an investigation to find out what truth there is in his statement.

Mr. LEMIEUX: The hon. member for York (Mr. McLeod) corroborated the statement of my hon. friend from Carleton.

Mr. OLIVER: I think that the statements of the hon. member for Carleton were substantially corroborated by the hon. member for York. I am willing to leave it at that. It is for the Government to make a proper investigation of the case. When the hon. member for Carleton asked that a royal commission be appointed to investigate the case, no response to his request or reply to his statement was made by the Government.

Mr. REID: I may say, for the information of the hon. gentleman, that a commissioner has been appointed to hold an investigation.

Sir WILFRID LAURIER: When?

Mr. OLIVER: I am very glad to hear it.

Mr. REID: Only a few days ago I signed the Order in Council.

Sir WILFRID LAURIER: Who is he?

Mr. REID: Mr. R. A. Pringle, K.C., has been appointed to hold an investigation. I cannot say whether the Order in Council has gone through, but I think it has. It is several days since I signed the order.

Mr. OLIVER: I am sure the House is very glad to hear that the minister has seen fit to take the action which was suggested, and I wish to congratulate him upon his having done so.

Mr. REID: The only difference between my action and the action of hon. gentlemen opposite is that they did not have an investigation when it was asked for several years ago in this House.

Mr. OLIVER: There was nothing to investigate, and the evidence contained in the report upon which the present Government has spent over $60,000 of the people's money and the hard work of two of the best and most capable men they could get, has resulted in proving that there was nothing to investigate. I am glad that the hon. gentleman has taken the action he has taken; it is undoubtedly to his credit and that of his Government. The facts as brought out in the House were a substantial warrant for such an investigation. I will leave the matter at that. We have these two instances, $100,000,000 expended on the one hand and a paltry twelve or thirteen miles of railway built on the other and the Government could not get out of it without the appointment of a royal commission.

Those of us who were in the House in 1903, and who have the good fortune to be in the House to-day, will recognize that the discussion by hon. gentlemen opposite is an echo of their attitude in 1903, when they were in Opposition. The line of thought which runs through their speeches from beginning to end is, that there should not be effective railway competition with the Canadian Pacific railway. That, and only that, is the burden of their argument. Just as in 1903 they fought the proposal of the Right Hon. Sir Wilfrid Laurier to give competitive railway service and development to the four western provinces —fought it from early summer until the snow flew, in the interests of railway monopoly in these provinces—so, to-day, by the use of the report of a partisan commission and by their arguments in this House, they indicate a determination that the Government now in office is prepared to break the back of the only enterprise in sight that can give these four western provinces effective railway development and competition.

I shall recall the conditions as they existed, and which called imperatively for the inception of this enterprise. We had had railways in those Western provinces from 1886, and it was then 1903. For seventeen years therefore we had railway facilities in the western provinces, but with these railway facilities we had a condition of railway monopoly; and the facts are evidence that there could not be satisfactory progress and development under such monopoly. The belief of the people in the western country at that time was that they were farming on shares with the Canadian Pacific railway; they had one bushel and the railway had the other. It is true that there was plenty of railway accommodation for the people who were there to use it, but so long as there was railway monopoly, so long was there not going to be any more people to use railways. I shall give the House some illuminating figures from the report of the Department of the Interior. In 1878, when the Conservatives came to power, there were 1,788 homestead entries in the three prairie provinces of the West. In 1886 the Canadian Pacific railway was completed, so that we had railway facilities, and in 1890 the railroads to Prince Albert and Edmonton were built. In 1896 the total homestead entries in these prairie provinces was 1,857, an increase from 1878 to 1896 of less than 100, under a condition of railway monopoly, and I must admit also on account of bad administration on the part of the Government then in power in regard to the public lands, and in regard to tariff matters. With the access to power of the Liberal Government; with the change in the land policy, in the immigration policy, and in the tariff policy, there came an increase of settlement, so that in 1901 the homestead entries amounted to 8,167, a substantial increase, although the system of railway monopoly still prevailed. It will be remembered, however, that there was, owing to the action of the then Liberal Government, a substantial decrease in railway rates, as a result of the arrangement made with the Canadian Pacific Railway Company on the construction of the Crowsnest Pass railway. Lower railway rates, better land administration, lighter tariff burdens on the people, general confidence in the good will and in the good faith of the Liberal Government, had induced increased settlement on the prairies. The increase became greater from year to year, until in the year 1903 there were 31,383 homestead entries in the three prairie provinces. The country, which had stood still from 1876 to 1896, had now clearly taken a start in progress. The Government of the day realized the position; they saw that something must be done to take care of that enormous increase of homesteaders; and the enormous continued increase it was reasonable to expect would

take place. It was because of appreciation by the Government of the day of the necessity of meeting that condition of progress, which had arisen because of their policy, that, looking to the right and looking to the left, they saw that there must be railway development in the western country, and they saw that if that railway development was to be effective it must be competitive development. And so the Grand Trunk Pacific arrangement was made. That was the reason for it, and the purpose of it was competitive railway development in the three prairie provinces. As such, it was opposed by the Conservative party of that day, led by the present Prime Minister, and fought in this Parliament, as I have said, on every conceivable ground, from early in the month of July until the snow flew.

So successful was the Opposition in delaying the signing of the agreement that the favourable condition of the money market existing in 1903, upon which the Government and the country depended for carrying the project through on the terms agreed upon, had changed, and in 1904 it became necessary to bring in a new agreement less favourable to the country, absolutely because of the work of the Opposition of that day in fighting in the interest of railway monopoly in the prairie provinces, just as hon. gentlemen opposite are fighting to-day for monopoly in railway transportation in those provinces. Just as soon as the people of the world saw that there was to be railway development and railway competition in the West, they were satisfied to take chances, and they rushed in; and the homestead entries continued to increase year by year until in 1911 they reached a total of 44,479, because of the confidence of the people in the good faith of the Government of the day to ensure and secure railway competition and railway development throughout those three prairie provinces, with access to the Pacific coast. As soon as hon. gentlemen opposite came into power, they at once showed their continued hostility to the Grand Trunk Pacific project. They appointed their investigating commission. They insisted upon the degrading of that part of the road under their control. I am bound to conclude that the administration of the lands has not been as satisfactory under the present Government as under the late Government, and that, generally speaking, there is not on the part of the people that faith in the good will of the present Government towards the settlers that there was in that of the late Government. As a result we find a decrease in the homestead entries. Whereas in 1911 there were 44,479 homestead entries, in 1913 there were only 33,699, a decrease of over 10,000 in two years.

It might be interesting to follow the course of land sales in the prairie provinces. In 1893 the different railway companies who had been given grants of land sold 120,000 acres at $2.93 an acre. In 1895 they sold 114,000 acres at $1.94 an acre. That was what land was worth in those provinces at that time. In 1903, corresponding with the natural increase in homestead entries, there was an enormous increase in land sales, so that 4,229,000 acres of land were sold at $3.46 an acre. In 1911, showing how the confidence of the people in the value of land in the prairie provinces kept up so long as they were assured of competitive railway development, there were sold 1,406,000 acres at $13.59 an acre; in 1912, there were sold 1,329,000 acres at $13.70 an acre; and in 1913, as a result of the second year of the present Administration there were sold 707,000 acres at $13.95 an acre, showing that, while the price of the land has not gone down, the demand for purchased land has decreased just as the demand for homesteads has decreased.

I need not enlarge on the point that in a country of such stupendous distances as Canada, the question of transportation must naturally be a great question. Production is first; transportation is second; but production cannot succeed without transportation on satisfactory terms. Therefore it is not necessary to argue that if we are going to make the prairies of the West produce, we must secure transportation of the products to the markets of the world. On that point let me dwell for a moment as to the amount of production present and prospective, resulting from transportation facilities. In 1901, only about 2,500,000 acres of land were under cultivation in the prairie provinces. In 1911 we had something less than 18,000,000 acres under cultivation, and there has been practically no increase since. At the present time we have something less than 18,000,000 acres of land under cultivation alienated in those provinces. We have of the land of the people of this country not less than 150,000,000 acres. This 150,000,000 acres is all surveyed and largely selected land; so we are bound to assume that we have 150,000,000 acres of land in the prairie provinces capable of development, and of

that amount we have only 18,000,000 acres actually under cultivation. From that acreage we have taken about 450,000,000 bushels of grain. We have furnished traffic for many thousands of miles of railroad, and it has not been unprofitable traffic. If we have such results from 18,000,000 acres, surely the possibility of bringing under production the balance of the 150,000,000 acres should be an inspiration to the members of the Parliament of Canada in regard to projects of transportation. We cannot bring the balance of the 150,000,000 acres under cultivation unless we can market the products of what we have under cultivation under favourable conditions as to transportation facilities.

Besides the 150,000,000 acres we have disposed of, we have at least another 150,000,000 acres capable of being made productive. We are not at the end of our possibilities when we have developed 150,000,000 acres; we are then only half way to our limit of development. I will admit that the bringing under cultivation of the second 150,000,000 acres of which I speak is a much more serious matter than of the 150,000,000 acres of prairies that has been alienated. But still, as to soil, as to climate, as to conditions, it is all capable of reclamation and development. And yet our friends opposite are attempting to alarm Canada because there has been a large expenditure in developing transportation facilities under conditions that are an absolute necessity if that development is even measurably to be achieved.

I am not going to disregard or ignore the necessities of the treasury; I should be sorry to advocate waste in any degree. But if it is true that the Transcontinental railway has cost, or will cost $200,000,000, yet if by that expenditure we are able to do for the development of the Prairie West what could not otherwise be done, then it is a wise and economical expenditure, beyond any question. Hon. gentlemen opposite are spending money for transportation facilities. They are spending $50,000,000 in deepening the Welland canal. Will they count the interest on that from to-day until some time in the distant future for the purpose of alarming the people of Canada as to the cost of that great work? Surely not. Yet, for whom is the Welland canal being deepened? It is being deepened for the glory of Canada, but, in some degree, we hope, for the benefit of Canada. But it is being deepened just as much for the benefit of the transportation and production interests of the United States as for those of Canada. Surely, these hon. gentlemen who glory in the fact that they are spending $50,000,000 in a transportation enterprise which will be at least half for the benefit of that country with whom they do not wish truck or trade, are not the people to complain because there is an expenditure of $50,000,000, or $100,000,000 if you like, in the construction of a line of railway that is located solely within Canada for the benefit of Canada, not only in the production of its wheat fields of the prairies, but just as much for the development of its trade passing through its own ports on the Atlantic seaboard. And without such a road there could not be adequate development either of the prairie wheatfields or of the Atlantic ports.

I have said that the increase of production in the West depends upon the possibilities of production—upon the conditions of soil and climate, the cost of the land, the cost of living of the man who works the land, and the cost of the machinery with which he works the land. But it depends also upon the cost of getting the product to the market. Now, in regard to that question of marketing the crop, before the Grand Trunk Pacific project was instituted, and since that time, there has been almost every year in the West what is called a grain blockade. Our grain, on being harvested, was sent forward to the head of the lakes, and as much of it as could be transported across the lakes during the same summer was so transported. The rest remained on the farmers' hands or dealers' hands or in the terminal elevators until the following spring. That means that under conditions that then prevailed it was the business of every farmer to get his grain out in the fall. By doing so he not only saved interest on money he may have owed, but he saved the carrying charges on that grain until the next spring. The elevator charges are one cent a bushel a month, so upon every bushel of grain that was held in the country there was a loss to the producer of a minimum of five cents. But besides that, in the rush, the attempt of every man to get his grain marketed in order to save that five cents, there ensued year after year a condition of grain blockade which increased the loss, because the buyer, unable to get the grain he had brought forwarded to the lakes because of the shortage of cars, had to discount the possibility, and hammered down the price

accordingly. So that at the least, the farmer who did not get his grain forwarded in the fall lost five cents a bushel for storage charges, and if he were compelled to sell he possibly lost five cents more on account of the condition of blockade which existed before the close of navigation. Suppose a crop of 100,000,000 bushels, of which 50,000,000 could go forward in the fall of its growth, and figuring that 50,000,000 must remain behind, there would be an absolute loss of 5 cents a bushel on the second 50,000,000 bushels, with a possible loss of 10 cents a bushel on the whole or a part, according to the more or less serious character of the blockade. So there would be a minimum loss of $2,500,000, and a possible loss of $5,000,000 or even more—as we certainly had in the year 1911. Now, there is only one cure for that condition, and that is to have railway transportation from the wheat fields to the ocean ports all the year round. But, you may say: This last year you had not any grain blockade, you had the largest crop you ever had, and yet the railways were able to handle the crop, and it went forward without any blockade to the lake ports, in fact three-fourths of the marketable crop found the world's market before the close of navigation. If those conditions were repeated every year there would be no need of talking about a blockade. The conditions were exceptional last year; the crop was early, with light straw, easily threshed, there were favourable weather conditions and the railroads were more fully equipped than they ever had been before. But, it will be said, another year may be just as good; why do you argue that there must be rail communication with the western wheat fields all the year round when by existing facilities you get your grain out without the difficulty and loss of blockade? Here is the condition that we face now. Our production has increased greatly; our export last fall was 90,000,000 bushels, the larger part of which was thrown on the Liverpool market within three months, the result being that the price of Manitoba wheat was hammered down from three to six cents a bushel. So that we now have a new condition; we have overcome a blockade, but we are as badly off as ever, for with our enormous production thrown on the market at one time the price is hammered down and the loss is practically the same as in the case of the grain blockade. There is the condition: we lose by reason of storage if the grain does not go forward; we lose by reason of blockade if the car supply is short, and we lose by reason of the depression of the world's prices if every condition is favourable. Again I say there is only one remedy for this, and that is rail communication from the wheat fields to the Atlantic ports, so that the grain can be sent forward as the market demands, and so that there shall be no grain blockade, no payment for winter storage, and no slackening of the world's prices. Say we shipped 90,000,000 bushels last fall, and that one-third of it went forward without injuring the world's price; I have it on the best of authority that on at least 60,000,000 bushels of our crop of last year the farmers—because it all comes back to them—lost from four to six cents a bushel because of that wheat being thrown on the Liverpool market within a very short space of time. That is to say, the farmers of the West, in this year of hard times, lost $3,000,000 in cold cash because of that condition. It was to overcome that condition that this Grand Trunk Pacific enterprise was placed before the people of Canada as it was, in the year that it was, and with all the needs and the urgent conditions that were set out in the speech of the right hon. the Prime Minister of that day. Every word and every line of that speech has been justified and more than justified by the events since that time.

We had a line of railway between the wheatfields and the Canadian Atlantic ports, but it was a matter of railroad knowledge and it was a matter of business knowledge that that railroad was so constructed that it could not handle the crop at a profit to both the railroad and the producer. The distance was too great, the grades were too heavy, the curves were too short. If that crop of the West is to be handled as it should be handled, by rail carriage all the year round, then it must be by some other railroad built on the shortest line from point to point, with the lowest possible gradients and the slightest possible curves, so that there shall be the least possible distance to cover and the lowest possible cost in covering that distance. It may be that, after all has been done, the purpose still may not be achieved, but it was the business of the Government of that day, or of any day, to use the resources of the Dominion of Canada according to their best judgment, in whatever amount was necessary, in order to achieve that result. My hon. friend who has just spoken, and the same assertion has been made and repeated by other speakers, said that this project was presented to the House before there

was sufficient information with regard to the country that it was to go through. I can only say that the last rail has been laid between Winnipeg and Moncton and it is a fact that the distance of the rails between those cities is the shortest that could be obtained. It is a fact that between Winnipeg and Quebec there is not a gradient over the maximum allowed by the agreement, except where this Government, for the purpose of destroying the object of the road, has deliberately and contrary to the agreement with the Grand Trunk, put in such grades.

I am under the impression that there is a general belief that the late Government set out to do the impossible when they undertook to build a line from the wheatfields to the Atlantic ports that would compete with the lines to United States ports, and that such a line would be impracticable for the economic carriage of grain. Just on that point, allow me to give the figures. From Winnipeg to St. John by way of the National Transcontinental to Chipman, allowing seventy-five miles from there to St. John, which is the actual rail distance, the distance is 1,825 miles. It is eighty miles shorter than the Canadian Pacific railway route from Winnipeg to St. John; sixty miles longer than the Canadian Pacific railway route from Winnipeg by way of Montreal to Boston, one hundred miles longer than the Grand Trunk and Grand Trunk Pacific railway routes by way of Winnipeg, Cochrane and Montreal to Portland, fifteen miles longer than via the Grand Trunk to Montreal and New York. While it is true that there is some disadvantage as far as the route to Portland is concerned, the Transcontinental is still within competitive range; on a distance of 1,800 miles, one hundred miles more is not such a tremendous difference. When in addition to the facts as to mileage you take into consideration that on every mile of the 1,825 miles of the Transcontinental a load can be hauled at an absolutely minimum cost, and that it is the only road of that class that reaches any of these ports. I think it will be admitted that so far as competition is concerned, we have certainly provided an efficiently competitive railway for the carriage of grain from Winnipeg to St. John able to compete with the route to any American port, including Portland.

At six o'clock the House took recess.

The House resumed at eight o'clock.

[Mr. Oliver.]

Mr. OLIVER: When the House rose at six o'clock. Mr. Speaker, I was giving the distances over the eastern section of the National Transcontinental railway from Winnipeg to St. John and comparing them with the distances from Winnipeg to United States ports by way of the Canadian Pacific railway and the Grand Trunk railway. From that statement it was apparent that the distance was somewhat greater to St. John than to Portland, Boston and New York. It is a fact, however, that a moderate difference in distance does not control the direction of freight traffic, as can be seen in the case of the Canadian Pacific railway which hauls wheat from Fort William to St. John although the route is 140 miles farther than the haul would be from Fort William through Montreal to Boston. It shows that railways are not governed absolutely by actual distances. However, leaving that aside, it must be apparent that the distance is greater to St. John than to the United States ports of New York, Boston and Portland. If it were possible to bring Portland, Boston or New York under Canadian jurisdiction, to make these ports a part of the Dominion of Canada, by any means, or at any reasonable expense, that would be one thing that might be done. Another thing that might be done would be to leave matters as they are—leave our Maritime ports and provinces without competitive railway connection with the prairie provinces, practically treating these provinces and ports as though they were not a part of the business life and interest of the Dominion; leave them, as they have been ever since they have been a part of the Dominion, so to speak, on the sidetrack. We may suppose that one of these things might have been done. Failing the possibility of making the United States ports Canadian ports, we take issue with the position of our friends on the other side of the House, as set forth by their statement at the inception of the scheme, and quite as strongly in the debate which has been proceeding in the House during the past few days in support of the specific declaration by their duly appointed commissioners that the section of the National Transcontinental railway east of Quebec should not have been built and that it was a waste of public money to build it. We support and justify the position of the late Government which used the resources of this country to build a line of railway from Winnipeg, by way of Quebec, to St. John

by the shortest possible route and with the best advantages as to grades, curves and improvements in transportation generally. To do that costs money; it costs a great deal of money, but I submit it is worth something to the Dominion of Canada to have our winter ports and our Maritime provinces linked up practicably and profitably by railway connection with the prairie provinces and the Pacific coast. As to the amount of money that has been spent, let it be great or let it be small; if Canada is to be a country all parts must be properly connected so that business can be transacted by one part with the other. By giving railway transportation, as has been done by the construction of the Transcontinental railway, the industries of the Maritime provinces are given access to the markets of the prairies just as the producers of the prairies are given access to the markets of the world through the Martime provinces' ports by the construction of this line on the scale on which it has been constructed, and these provinces, for the first time in the history of the Dominion have become, or will become, part and parcel of the general business of the country.

If it is established, as it is, that we have provided an efficiently competitive route through our own winter ports, as compared with competitive winter ports in the United States, the question arises: can such a route, having been constructed, compete efficiently and satisfactorily with water transportation as it exists at the present time? I know it is taken for granted that it cannot. It is assumed that there is no possibility of rail transportation competing with water transportation as we have it at the present time. This is a matter that will bear some consideration, and first let me disabuse the House of the idea that we get the benefit of the present system of water, or water and rail, transportation as a free gift. Take Winnipeg as the starting point. I find that it costs six cents to take a bushel of wheat from Winnipeg to Fort William. May I say right here, that that is the standard rate upon which all the grain export rates over the whole of the railway systems in the three prairie provinces is based. We get our wheat from Winnipeg for six cents. It costs three-quarters of a cent to clean it, elevate it and store it for fifteen days. It then costs anywhere from two to six cents to take it across the lakes from Fort William to Midland. Six cents, of course, is an abnormal rate. That was the highest point reached in 1912, which was a year of high rates; but let us assume that the rates will range from two to six cents. It may have gone below two cents at some time, but that is rare, and the lower rate need not be considered seriously. At Midland there is another elevator charge of one-half cent, and then there is the rail charge from Midland to Montreal, varying from three to four and one-half cents including the elevator charge at Montreal. It costs us twelve and one-quarter cents to land a bushel of grain from Winnipeg in Montreal. Twelve and one-quarter cents is the minimum charge with the possible maximum of seventeen and three-quarter cents. The recent arrangement in regard to transportation on the upper lakes tends to insure that the purely lake rate will increase rather than diminish.

Mr. J. D. REID: Why?

Mr. OLIVER: Because of the shipping combine. The combine is formed to enable them to raise the rates, and if they do not raise the rates their purpose would fail.

Mr. REID: Another company is being formed.

Mr. OLIVER: This company having raised the rates abnormally, an opening is given for another company to be formed, but the purpose of this shipping combine on the lakes is to raise the rates to the highest posssible limit, and, therefore, we must look, not for a reduction of the lake rates under present conditions, but rather for an increase. We land our wheat at Montreal, from Winnipeg, at from twelve and one-quarter cents to seventeen and one-quarter cents. I am speaking now about the use of the winter ports, and, therefore we must add five months storage, on that part of the crop that does not go forward in the season of its production; that is, the part of the crop that would be available for transportation by the all-rail winter route to St. John. We have a minimum rate therefore of twelve and one-quarter cents carriage and five cents storage, or seventeen and one-quarter cents on all the wheat that does not come forward in the season of its production. As to the all-rail haul to St. John, the standard rate from Winnipeg to Fort William for the 419 miles is six cents a bushel. I have heard some very finely drawn calculations as to the cost of transportation, but I will take this rate of six cents for the 419 miles, which is the standard rate for the wheat transportation in the West.

Mr. J. D. REID: Is six cents the rate paid last season to the Grand Trunk Pacific and to the Canadian Pacific railway and to the Canadian Northern railway?

Mr. OLIVER: Yes, that is the rate that was fixed.

Mr. REID: By the three companies?

Mr. OLIVER: It was fixed by an arrangement between the Government and the Canadian Pacific railway in 1897, and it has prevailed ever since.

Mr. REID: It is a uniform rate?

Mr. OLIVER: Yes, and on that rate the transportation of wheat throughout the West is based. It is not always the same rate per mile, because as the distance increases the rate decreases, but it is the basis. The distance from Winnipeg to St. John is four and one-third times as great as the distance from Winnipeg to Fort William, and, therefore, at the very most, the charge for hauling grain that distance should not be more than four and one-third times more than the rate from Winnipeg to Fort William, or twenty-six cents per bushel. The rate from Winnipeg to Fort William was fixed when the railroad from Winnipeg to Fort William was in its original low-class condition; the Canadian Pacific railway had not then been improved and double-tracked. That was then considered to be a profitable rate for haul over a railroad that was what must be called a low standard road; the original Canadian Pacific line from Fort William to Winnipeg was built on the standard of that day, when a one per cent grade was considered to be a very good grade.

Mr. WRIGHT: In what way was the Grand Trunk Pacific brought into any arrangement to charge a particular rate from Winnipeg? I understood that when the Grand Trunk Pacific was constructed, the rate would be reduced. Is the Grand Trunk Pacific in any way bound to that fixed rate by an arrangement between the late Government and the Canadian Pacific railway?

Mr. OLIVER: Certainly not; but as my hon. friend knows, all the railway companies are now under the control of the Railway Commission, and they, of course, naturally will charge all that the Railway Commission will let them charge. This original arrangement, between the Canadian Pacific railway and the Canadian Government, with regard to the rate from Winnipeg to Fort William, has been approved by the Railway Commission, and therefore the railways competing over that route charge the same rate.

Mr. J. D. REID: Then there is no competition at all.

Mr. OLIVER: There is no competition at all in rates.

Mr. REID: But they could charge a lower rate if they wanted to?

Mr. OLIVER: Certainly they could, but we are not to assume that they want to, or that they ever will want to; that would be expecting too much. The Grand Trunk Pacific will charge whatever the Railway Commission will let them charge. We instituted a Railway Commission for the purpose of placing a control upon rates, so that they may be fixed with due regard for the investment in the enterprise, and the interest of the customers of the road.

Mr. W. H. SHARPE: Does the hon. member say that the Railway Commission had nothing to do with fixing the rate on wheat between Winnipeg and Fort William?

Mr. OLIVER: That rate was fixed long before the Railway Commission came into existence, but the Railway Commission has approved of that rate as it stands to-day. To-morrow, the Railway Commission may reduce it, but they have not seen fit to do so. At all events, it was possible to carry grain for that distance over the kind of low-grade road that existed when the rate was put into effect. There is evidence that a railroad of the standard of the Grand Trunk Pacific, as specified in the contract between the Grand Trunk Pacific and the Government, has a capacity practically double that of a road of the standard of the Canadian Pacific railway between Winnipeg and Fort William, at the time this arrangement was made. The Grand Trunk Pacific could haul wheat 419 miles on their line between Winnipeg and Fort William for one-half the cost the Canadian Pacific railway could haul it over their line from Winnipeg to Fort William, with the Canadian Pacific railway line in the condition it was when the arrangement was made.

Mr. J. D. REID: Why do they not do it and show to the people that they are willing to give low rates?

Mr. OLIVER: I have been pointing out that they will do so only when they are compelled to.

Mr. REID: I understood you had made an arrangement with them that they would be compelled to carry grain at the cheapest rate.

Mr. OLIVER: We made an arrangement with them to build a road for them over which they would be able to carry at the cheapest possible rate, but at the same time we established the Railway Commission with authority to control rates, having due regard to the interests of both parties to the transaction. We do not expect the Grand Trunk Pacific Company, any more than the Canadian Pacific Railway Company, or any other railway company, to carry at any less rate than the Railway Commission will compel them to.

We have built them a railroad that will enable them to carry traffic at half the actual cost of transportation that it would have cost the Canadian Pacific railway for the distance of 419 miles at the time the Canadian Pacific railway agreed to carry at 6 cents a bushel. I maintain that, with the road of the standard that is being constructed, if 6 cents a bushel was a fair rate from Winnipeg to Fort William, over the Canadian Pacific railway as it was then constructed, half that rate for each section of 419 miles would be a fair rate between Winnipeg and St. John. In other words 26 cents would be the same rate; the half of 26 cents or 13 cents would be an equally good grain rate, compared with what the Canadian Pacific railway has been and is receiving. I am not suggesting that the Grand Trunk Pacific should be compelled to carry at that rate. It is a theoretical rate. In my judgment, however, it would be fair that the Railway Commission should compel the Grand Trunk Pacific to carry grain from Winnipeg to St. John over such a line, as we promised to give, and as we gave them as long as we were there to do so, at one-third less than the rate that I have mentioned. That is to say, according to the calculation I have made and the figures I have given, the Grand Trunk Pacific can carry and should be compelled to carry grain from Winnipeg to St. John, if everything be worked out as it should be, for 17⅓ cents a bushel as against a lake-and-rail route, with winter storage, of 17¼ cents a bushel as at present existing. I think I have absolutely proved that, if this railroad be finished as we intended to finish it, we shall have thereby established at any rate a competitive route by which it should not cost more to carry grain in the winter time than the minimum cost to hold grain during the winter and transport it by lake and rail in the summer; but by having that all-rail route at that rate, we have a means of regulating the charges by way of lake and rail as they exist at present. I gave the minimum rate; but the maximum rate without storage by lake and rail is equal to the all-rail rate to St. John that I have given.

Mr. J. D. REID: Do I understand that the 6-cent rate charged by the Canadian Pacific railway is fixed, so that it cannot be changed by the Board of Railway Commissioners?

Mr. OLIVER: No, the commissioners could cut that down. They certainly could do so so far as the Grand Trunk is concerned.

Mr. REID: I mean the Canadian Pacific railway.

Mr. OLIVER: I do not know whether they could do so in the case of the Canadian Pacific railway, because a bargain was made.

Mr. J. D. REID: It is the first time I have heard that point raised.

Mr. OLIVER: But I am sure that, whatever rate the Grand Trunk charges, it is absolutely under the control of the Railway Commission. If we can get that all-the-year-round rate, we are absolutely relieved from the two conditions of grain blockade in the fall and of slump on the Liverpool market by reason of the grain being rushed forward in a very short period. As I have pointed out, that means on the present crop of the Northwest anywhere from $2,500,000 to $7,000,000 or $8,000,000 in the year. Of course, as the crop increases, that benefit will increase correspondingly. The present Government is well aware of the injurious conditions that have existed in past times because of grain blockades. It is because of these grain blockades that they propose to establish interior terminal elevators. They have now under contract three of those elevators at a cost of $4,500,000, hoping thereby to minimize to some extent the injury resulting from the annual recurrent grain blockade. We say that if they will complete the Grand Trunk Pacific as it was intended to be completed, the question of blockade will be solved without the erection of interior terminal elevators, and the still more serious question of the depression of the Liverpool market by

throwing our crop on that market in a month or two will be done away with also. The construction of that railway over the route over which it is being constructed and under the physical conditions under which it was to be constructed, is the solution of the problem of the export of Canada's grain so far as that problem can be solved by the action of this Government. Whatever derogates from those conditions in lengthening the road, in degrading it, in militating against the abilitity of the company to finance, is all a blow at the welfare, progress and prosperity of our western prairie country and of this whole Dominion, because I think it is borne in the mind of every man in Canada to-day that it is upon the next crop in the Northwest and upon the prices that shall be received for that crop that this country depends for help in its present condition.

Mr. MORPHY: Will the hon. gentleman say, whether or not, in his opinion, if that road were constructed for $100,000,000 less than it is costing, that would enable the road to give better freight rates?

Mr. OLIVER: Most undoubtedly. If the road could be built of the same standard as it is now and of the same length for $100,000,000 less, undoubtedly—

Mr. MORPHY: Or for $40,000,000 less?

Mr. OLIVER: Yes, for $10,000,000 less, it would make it possible for the Railway Commission to insist upon a correspondingly lower freight rate. We admit that freely; but, of course, we also maintain that, no matter how cheaply the road is built, unless it has the short mileage and the low grade, it cannot do the business at the price. We have that condition illustrated right alongside the Grand Trunk railway to-day; we have the Canadian Northern railway, built, I am sure the House will agree, cheaply enough, built so as to take advantage of velocity grades wherever they could be put in, and certainly not restricted as to length of line or curves. But I have yet to learn that the problem of transportation of Canada's grain crop is going to be solved by the Canadian Northern railway; nor am I informed that the country is going to have the benefit of the operation of this line without a very serious cost.

Mr. MORPHY: I am informed that the Canadian Northern railway took out nearly 40,000,000 bushels of the Canadian grain crop last year at the current rate. You do not deny that?

Mr. OLIVER: No.

Mr. MORPHY: There was no kick about the rates?

Mr. OLIVER: No.

Mr. MORPHY: Then it is helping.

Mr. OLIVER: It is certainly helping. We are not finding fault with the Canadian Northern railway, nor with what it has done as a western road in bringing grain to the head of the lakes. But I have been trying for an hour and a half to point out to the House that it was very far from being the solution of our problem of grain marketing; that we had to have a better condition than prevails to-day between the head of the lakes and the ocean or we could not get that return on our labour, that profit on our production that would enable us to increase our production and thereby make Canada great and prosperous. I am showing now that in that part of the Canadian Northern railway which is paralleling the Grand Trunk railway you have the very condition that hon. gentlemen opposite have insisted should prevail on the Grand Trunk railway. But they do not find the results that we would like to see on the Grand Trunk railway, nor do they find the financial advantage that they would seem to insist would accrue provided we had a low-class road instead of a high-class road.

Now, I may point out that there is not only the matter of transportation of grain during the winter that is giving us an all-the-year-round outlet, but there is the matter of transportation of grain in the summer. I find that the mileage on the Transcontinental, between Winnipeg and Quebec which is a tide-water port, is only 1,344 miles. Reckoning on the same basis as I gave for the rates from Winnipeg to St. John, I take it that from Winnipeg to Quebec all-rail would be 20 cents a bushel. But if that were reduced by one-third, as I claim it might be, we should have a 13½ all-rail all-the-year-round rate between Winnipeg and Quebec, as against a summer lake-and-rail rate as at present between Fort William and Montreal of a minimum of 12¼ and a maximum of 17 cents. Now, I do not for a moment expect that grain will be hauled from the prairies to Quebec during the season of export in the fall. When the rush of grain is on, it will no doubt be taken to the head of lake Superior, as much of it

as can be sent forward. But we will have an all-rail route to Quebec that will be able to regulate and control and keep within reasonable limits the rates across the lakes; and the experience of the last three or four years is that we need some such means of keeping down these lake-and-rail charges. If there were no means of controlling these lake charges, as I have said, they could be put up as high as 17 cents.

Mr. J. D. REID: I think that was only in the fall of the year.

Mr. OLIVER. Certainly. But we do not want to be up against a proposition like that if it can be avoided. Just as the New York Central railway from Buffalo to New York, running alongside the Erie canal and the Hudson river, has an important effect not only in actually transporting the grain but in keeping the rates at a reasonable figure, so, I maintain, the Transcontinental between Winnipeg and Quebec will have an important and salutary effect in controlling the summer export rates of grain, and just as, I believe, the railroad from Winnipeg to St. John will have a beneficial effect in providing a winter outlet at reasonable rates. Thus, we have the advantage of this road both in summer and in winter. And, as I have said, the project if carried to completion is an important solution of the great problem that has to be faced by the producers of the West, a problem that, unless it can be solved, must certainly prevent the full development of this country. Our competitors in the wheat markets of the world are many, but particularly Argentina and Australia, two great countries where there are vast areas of unoccupied land available to be brought under wheat production. Unless we can land our product at a figure to compete, we shall be put out of business so far as producing wheat for the world's market is concerned. We must realize that we are not the only people producing wheat in the world; we are not the only country that has cheap land and lots of it. There is a life-and-death competition between the Argentine, Australia and Canada, and unless Canada is prepared to get into the market on more favourable terms, utilizing her shorter distance from the market, the other countries will take the market and we shall have to consider ourselves out of it.

I wish to make some allusion to the question of capitalization. Admitting that we have the short distance, admitting that we have a high-class road, it is nevertheless the fact that if we have excessive over-capitalization, we cannot get the full benefit of the character of road that we have built.

It has been the pleasing task of our friends on the other side to declare broadly and persistently and to attempt to prove that the capital charges to be carried by the Transcontinental are such as to preclude competitive carriage of wheat. The fact is this: the Transcontinental from Winnipeg to St. John is to cost, everything paid, interest charges and all, a trifle over $100,000 a mile, upon which interest is to be paid at 3 per cent. That is the only capital charge against the road that has to be considered when the rates are being fixed by the Railway Commission—a charge of $3,000 a mile. The Union Pacific has a capital charge of $150,000 a mile, and they pay on that captial charge an interest of say 4 per cent. In other words, while the Transcontinental from Winnipeg to St. John will carry $3,000 a mile capital charge, the Union Pacific carries $6,000 a mile capital charge. The Southern Pacific, with a capitalization of $140,000 a mile, at 4 per cent will carry $5,600 a mile capital charge. The Canadian Pacific is carrying a capital charge of $46,000 a mile. Canadian Pacific stock is worth over 200; in other words, the Canadian Pacific is paying dividends on a capital charge of over $100,000 a mile at a rate not less than 4 per cent. It may be said that what other roads can do, under less favourable conditions the Grand Trunk Pacific Railway Company, operating the Transcontinental, will not be able to do, and that our country will not progress sufficiently to give the business that will enable the company to make this interest. I am sorry that our friends have so little confidence in the country or in the success of their policy and administration as to believe that there is not to be sufficient increase of business to provide traffic for this road. I have confidence enough in the country to believe that, given a proper administration of the country's business and a proper completion and administration of this road, it will not be a question of getting enough traffic for the road to carry, but it will be a question of the road carrying the traffic that will be there for it. One would imagine from the attitude of our friends on the other side that no further development is to be expected in this country. I remember very well that after the Canadian Pacific railway was completed it was broadly declared that there was no need for any more railroads in Canada—that the development

of the country was completed. In fact, I heard my friend the hon. member for Annapolis (Mr. Davidson) the other night say that it was gross impertinence and mere vanity on the part of the Liberal Government that they undertook to build a transcontinental line at all. I find that there has been some increase in railroad business in Canada. In 1903 the railroads carried 47,000,000 tons of freight and in 1913 they carried 106,000,000 tons of freight. In 1903 they carried 22,000,000 passengers and in 1913 they carried 46,000,000 passengers. I have every confidence in the belief that the limit of the growth of this country has not been reached and that the maximum amount of business to be done by our railroads has not been attained. I think there is every reason to believe that the Grand Trunk Pacific will find the business to handle and will be able to do the business at a profit to the company, and to the benefit of the country.

In looking through the blue-books to-day I ran across some figures in the matter of comparative cost that I am going to intrude into this discussion, merely for the purpose of information. I find that 18,000,000 acres of land were given as a part of the aid to the first great transcontinental railroad built by the Dominion, and that 11,000,000 acres of that land have been sold, bringing a return of $75,000,000. The company still have 7,300,000 acres to sell, and at the rate at which land has sold for the past three years, about $13 an acre, their 7,000,000 acres of selected land ought to be worth to them $91,000,000. So that when it comes to a question of aid to railways, our hon. friends on the other side can, I think, claim the merit of liberality even beyond what they are willing to concede to us in regard to the Grand Trunk Pacific.

I will deal only for a short time with some of the allusions that have been made by our friends on the other side. I wish to speak particularly of this assertion to be found on page 24 of the report of Messrs. Gutelius and Staunton:

> We unhesitatingly find that the Grand Trunk Pacific Railway Company, instead of discountenancing, has rather encouraged this inexperienced commission in its extravagant expenditure on this railway.

That is a very serious charge to make against a responsible business enterprise. Instead of bearing out that assertion, the hon. member for West Algoma (Mr. Boyce) to-day drew the attention of the House to a communication addressed by Mr. Hays, president of the Grand Trunk Pacific, to the then Government, asking that a certain contract be relet, because by the reletting a saving might be effected. In face of that this commission dares to put in the very report which conveyed that information this assertion against the good faith and business ability of the Grand Trunk Pacific Company. I find also that the Grand Trunk Pacific as a construction company took four contracts. In these four contracts they were $958,000 less than the next lowest bidder, so that instead of the road having cost more because of the Grand Trunk Pacific having entered the field as contractors, it cost nearly a million dollars less in the case of these four contracts. The commission itself is evidence of that fact; but notwithstanding that they make this atrocious statement.

Just a word as to the Davis contract, about which Mr. Hays wrote to the commission. The Davis' put up their deposit money; they assigned their contract; and this Government made the final payments upon that contract. This Government had the deposit money and the drawback money, and this Government made the final payments. The contract was not completed at the date specified. My hon. friend the Solicitor General says that the late commission, by resolution, relieved the contractor from payment of the penalty. That is true, but there was nothing to hinder the present commission from rescinding the resolution of their predecessors, and, having the money in their hands as they had, from enforcing the penalty if they thought it should be enforced. The fact that they did not do so must be taken as evidence that they did not believe it was right to do so, and certainly they must take the responsibility for not having done so.

In regard to the broad assertion of the commissioners, that 'without including the money which was unnecessarily expended in building the railway east of the St. Lawrence river, $40,000,000 at least was needlessly expended in the building of this road,' if that is intended as a reflection on the policy under which the road was built, all I have to say is that it was none of the commissioners' business. If it is intended as a reflection on the business methods employed in the construction of the road, then I have this to say: In the first place, under the agreement with the Grand Trunk Pacific, the Grand Trunk Pacific as lessees of the Government, had the right—the obligation was placed upon them—to review every item of expenditure made upon the road. They exercised that right, and every item of expenditure was reviewed and approved by the Grand Trunk Pacific. Hon.

gentlemen opposite may say if they like—in fact, they have said—that the authorities of the Grand Trunk Pacific did not play fair with their principals. That is such a gross libel that I do not intend to argue it; but, assuming that the men responsible for the business of the Grand Trunk Pacific acted fairly by their principals, then their principals were protected, and this Dominion of Canada was equally protected by that provision in the contract, and there is no justification for the suggestion that there was unbusinesslike expenditure. Besides that, of the 21 contracts, not one—or hardly one—was completed and the money paid over until this Government came into power. This Government held the deposit money and the drawback money, and if they paid out money that should not have been paid out, they are responsible for it and not the late Government, and they must answer to the taxpayers of the Dominion of Canada for that payment.

I just wish to allude to a remark made by my hon. friend from Algoma (Mr. Boyce). He mentioned a resolution moved by the present leader of the Opposition on the presentation of a proposal by the Government of 1885 for the construction of the Canadian Pacific railway short line between Montreal and St. John, in which the right hon. gentleman urged delay in order to get further surveys. My hon. friend drew a comparison between his urging delay on that occasion and his urging haste in presenting the Transcontinental railway proposal. Let me point out the difference. In the case of the short line between Montreal and St. John, the question was as to whether a line could or could not be got right through Canada. The right hon. gentleman was striving then for an all-Canadian railway, just as he was in 1903, and it was in the hope that an all-Canadian line could be got that he asked for delay. I think it only right that the House should be informed on that point, because it is one of the strong points that the right hon. gentleman made when he introduced the proposal for the Transcontinental railway, namely, that we wanted an absolutely all-Canadian railway from the Atlantic to the Pacific. If it has cost us money to have that, in the first place it was necessary that we as a country should have it; and, in the next place, if we are a country it is worth the having.

The construction of this line has been challenged because it ran through unknown country. Whether the country was known or unknown is not to the point. The point is that by carrying this road, as it has been carried, from Quebec in

9 p.m.

a direct line through Winnipeg and across the prairies to a port on the North Pacific, there has been created, so far as business interests are concerned, a new Quebec, a new Ontario, and new British Columbia out of areas of country that might as well have been in the centre of Africa so far as their material benefit to Canada was concerned without the construction of such a railway. The only criticism our friends opposite have to offer of this project is that we should have built it cheap whereas we have built it dear, that we should have built a temporary and inefficient road whereas we have built a permanent and efficient road, so far as they have allowed the work to go on.

In conclusion, whatever else may be charged against hon. gentlemen opposite they cannot be charged with inconsistency on the subject of opposition to the Transcontinental. In 1903 they fought it from midsummer until the snow flew. They fought it again in 1904. They have attempted, as best they could, to discredit it from that day to this, but it was only when they achieved power, when the enterprise fell into their hands, that they were able to carry into effect what they had wished to do from the very beginning. At this particular time, at this critical period in the history of the road, when vast sums of money have been sunk in its construction, at the moment when enormous further sums are required to absolutely complete and fully equip it, at a period during which traffic must be built up and development provided for the most critical period in the history of the road, our friends have seen fit to lay on the table of Parliament a report that has already been characterized as false, misleading, and an attempt to discredit in a business way the enterprise as well as to discredit politically this party. Their commissioners exhausted their ingenuity in finding cause to discredit the road and our friends in the House from day to day have repeated and emphasized everything that has been said in their report with that purpose in view. If ever this great enterprise can be wrecked they have chosen a favourable moment to use their influence as a party and as a government to wreck it by discrediting it as a business enterprise in the hope of discrediting their opponents on this side of the House. The report has been characterized as partisan. It is partisan; it is so partisan that it discredits itself.

But what is to be said of the responsibility of a government of Canada who do not hesitate to attempt to bring down in ruin this enterprise in the hope that they may thereby injure their political opponents? Surely they have chosen a fitting time! When money is scarce, when credit is difficult, when more money is needed in order to complete this road, they have chosen the time when they can do the most damage. We do not know whether they will be successful or not, but if this enterprise is successfully carried through our hon. friends can say that it is because they could not prevent it.

Mr. SAM. SHARPE (North Ontario): Mr. Speaker, in the short time at my disposal it is not my intention to follow the hon. the ex-Minister of the Interior (Mr. Oliver) in the remarks that he has made. The hon. ex-Minister of Railways and Canals (Mr. Graham) was associated with the ex-Minister of the Interior during the last session, when they spoke in the loudest tones in condemnation of the closure rules that were about to be enforced; but we find that the ex-Minister of Railways and Canals occupied some seven hours in the defence of himself and his department in connection with this report of the Gutelius-Lynch-Staunton Commission, and we find that pretty free latitude has been allowed the ex-Minister of the Interior because he has occupied over two hours in the discussion of the same report. Consequently, the people of Canada will see that the fears of these hon. gentlemen were not well grounded when they stated that free discussion would be blocked in this House by the enforcement of those rules.

My hon. friend argued as to the necessity of the Grand Trunk Pacific being constructed in order to secure a reduction in freight rates. Every person welcomes the Grand Trunk Pacific or any other road that will procure that very desirable result, but when we take into consideration the immense cost of the construction of the Grand Trunk Pacific, consequent upon the waste, extravagance and maladministration that characterized the management of that road, it precludes all question of reducing freight rates. The ex-Minister of the Interior spent a great deal of time in dealing with the comparative prices of land in the Northwest in various periods of the past history of the country. It is beyond my comprehension what relative bearing that has upon the question of the partisanship of the report which is now be[illegible] the House. He, with great adroitness, manœuvred the debate into a discussion of the grain blockade. That is a subject that the House has heard discussed on many occasions because the hon. ex-Minister of the Interior is never tired of discussing the question of the grain blockade. He, along with the other members of his party, prefers to discuss any other subject under the sun than the merits of this report or to make an attempt to refute the charges therein contained.

I was somewhat surprised at the attempt of the hon. gentleman to justify the construction of the eastern branch of the Grand Trunk Pacific from Moncton to Quebec. I do not think there is another member in this House who has the temerity to stand up and, in view of the criticisms that have been launched against that branch of the National Transcontinental railway, attempt to defend it at this stage. We have every reputable engineer, connected with either the Grand Trunk Pacific or the Government service condemning that branch of the National Transcontinental railway from Moncton to Quebec. Mr. Woods, in his examination, said, at page 439 of the report, that that part of the road had been 'fixed politically,' without any consideration of business principles whatever. He said that he had discussed this matter with the late President Charles M. Hays of the Grand Trunk railway before whom he had laid his views. He was asked:

What were your views?

And he answered:

That the cost of that line was entirely out of proportion to any result to be had by the construction and operation of it. His reply was that it was a point fixed by the Government, and that he never was in favour of it, but he saw no way to change it.

That is the opinion of Mr. Woods, assistant chief engineer of the Grand Trunk Pacific. Mr. Lumsden was chief engineering adviser to the Government when the Grand Trunk Pacific project was initiated, and I read from his evidence, at page 449, with respect to the New Brunswick section:

Q. Did you make a study of the advisability of constructing a new line through New Brunswick paralleling the Intercolonial railway?—A. No, I never had any discussion with the ministers about it.

Q. You would not have recommended it, would you?—A. No, I would not.

Here is the chief engineer of the Government not even consulted as to the advisability and practicability of this line. They never discussed the question with

him, and we have a gentleman of this high standing saying that had he been consulted he would not have recommended it. But we have one, who in my opinion, is a still higher authority than either of these gentlemen. I refer to the Hon. A. G. Blair. He at one time was Prime Minister of the province of New Brunswick; he was the minister representing New Brunswick in the Laurier Government; he was member for a New Brunswick constituency when he made his scathing arraignment of the policy of the Government concerning the construction of this eastern section of the National Trancontinental railway, which was to run through his own province. If any man should have supported the building of the eastern section, it was Mr. Blair, but on the floor of this House in his famous speech he used this language, 'Hansard,' page 8440, 1903.

It is a total and absolute waste of the public money. It is not only a destruction of the Intercolonial railway, but it is a sheer unjustifiable squandering of the public money.

The ex-Minister of the Interior (Mr. Oliver) had the temerity—and in my opinion he is the only man in this House or out of it who would have such temerity at this late date—to attempt to justify the construction of the eastern section of the National Transcontinental railway, and he was bitter in his denunciation of what he called the partisanship which characterized this report. I want to point out to the hon. gentleman that that report is based upon the sworn testimony of expert witnesses. With the exception of Mr. Tye these witnesses were all experts who were employed by the Liberal party in the construction of that railway, so that we have the late Government convicted out of the mouth of its own officials.

Nobody realizes more than does the ex-Minister of Railways (Mr. Graham) that he is on trial to-day. The report contains 41 indictments for serious political offences and misdemeanours against the administration of that hon. gentleman. We have heard the hon. gentleman in his own defence, and those who listened to his impassioned seven hours' speech in defence of his administration must have been moved to admiration for his physical endurance, if not for the logic of his arguments. The hon. gentleman not only spoke long, but he spoke loudly and bitterly, and he manifested his consciousness of the fact that his political future was hanging in the balance. The hon. gentleman, while discussing the question, presented an interesting study, because, with all his experience and all his forensic ability, and all his familiarity with the subject—no man is more qualified than he to know what essentials in the report to ignore and what non-essentials to dilate upon and magnify; so, with all his ability as a parliamentarian, we found him touching lightly on subjects damaging to his department, sidestepping them here and sidestepping them there, but never, during his seven hours' speech, making any serious attempt to refute the gravamen of the charges made against him in that report. The hon. gentleman told us he was something of a 'farmer-lawyer,' and he proceeded forthwith to demonstrate the accuracy of that self-accusation by resorting to a practice that obtains, I am sorry to say, among some members of the legal profession, of abusing their opponents when their case is weak. He attacked Mr. Lynch-Staunton and sneeringly referred to him as a police-court lawyer. Nobody knows better than the hon. member that Mr. Lynch-Staunton is an able and distinguished member of the Ontario Bar. That ill-advised reference was absolutely unworthy of the ex-Minister of Railways. He told us that Mr. Lynch-Staunton is a partisan, and he immediately read a letter from Sir Allen Aylesworth, contradicting an opinion that Mr. Lynch-Staunton gave in respect to the agreement as to the Transcona shops. Mr. Lynch-Staunton a partisan! Is Sir Allen Aylesworth a partisan? Why, I remember that Sir Allen Aylesworth, whilst holding the judicial portfolio of Minister of Justice, actually boasted in this House that he was a partisan, and proclaimed that he was proud of it. But, of course, the only partisans dear to the hearts of the ex-Minister of Railways and the ex-Minister of the Interior are partisans who will bring in reports or give opinions in their favour. The findings in this report must depend absolutely upon the evidence, and whether the gentlemen opposite designate the commissioners as partisan or non-partisan, that is aside from the question. Are the findings in that report justified by the evidence; and, if so, the personnel of the commission is a secondary consideration, because in the last analysis an appeal must be made to the people of this country, and to that supreme tribunal the Liberal-Conservative party of Canada is quite willing to submit the justice of this report.

The ex-Minister of Railways also attacked Mr. Gutelius, whom he termed a 'call loan' from the Canadian Pacific railway,

and he insinuated that the Canadian Pacific railway and all its officials had some sinister design against the Grand Trunk Pacific. But immediately afterwards the hon. gentleman lauded to the skies Sir William Whyte, a very prominent official of the Canadian Pacific railway, because Sir William Whyte, when he acted as arbitrator, on an issue between the Grand Trunk Pacific and the Government, decided in favour of the Grand Trunk Pacific Company.

The hon. gentleman also attacked the commission for not allowing Mr. Parent to revise his evidence before being printed in the report. Mr. Lynch-Staunton told me himself that every witness that was called before that commission had the courtesy extended to him of revising his testimony, if he so wished, and if Mr. Parent did not take advantage of that, it was his own fault. It is remarkable, however, that Mr. Parent does not complain about any inaccuracy either in the facts, as set out in the report, or as to the language he used in giving his testimony, and, consequently, where is the grievance? The only possible reason why the hon. gentleman should have referred to that matter at all was to excite some sympathy for the ex-Chairman of the National Transcontinental Railway Commission.

Then the ex-Minister of Railways attacked the report as designed to discredit the Liberal party and the Grand Trunk Railway Company, just as did the ex-Minister of the Interior to-night. The purpose of the commission was to investigate and pass upon the facts, and if the bare disclosure of the facts in this case discredit the Liberal party, then so much the worse for the Liberal party.

These hon. gentlemen also attack Mr. Lynch-Staunton for his opinion, in interpreting the agreement between the Grand Trunk Pacific and the Government, that it provided for a single-track railway. In defiance of that provision in the agreement, we find the commission building a double track for six miles, which was an unjustifiable expenditure of public money. Mr. Lynch-Staunton gave his opinion to that effect. The ex-Minister of Railways (Mr. Graham) sets up his opinion as against that of Mr. Lynch-Staunton.

Mr. McKENZIE: I shall be glad if the hon. member, who is a distinguished representative of the Ontario bar, will point out to us where in the Act or in the agreement it is stated that this must be a single-track road, because I have not been able to find such a provision. I am aware that the commissioners say so in their report, but I cannot find it in the Act.

Mr. SHARPE: I am glad the hon. member asks that question. He desires me to interpret an agreement which has already been interpreted by the chief engineer of the Government railway system, Mr. Lumsden. As recorded on page 395 of the report, Mr. Lumsden was asked the following question:

> You know that the Act provides for a single track railway?

Mr. Lumsden replied, 'Yes.'

Mr. McKENZIE: That is no answer. Mr. Lumsden is not a lawyer. I am not asking for the opinion of an engineer; I am asking for the opinion of a lawyer.

Mr. SHARPE: The hon. gentleman comes from the Maritime provinces, where some of the most distinguished lawyers in the Dominion of Canada reside. I shall be glad to quote him the opinion of a Maritime province lawyer, as his question is a fair one and is entitled to a fair answer. Mr. McIsaac is a distinguished lawyer of the Nova Scotia bar, a K.C. I am glad to be able to quote such a distinguished authority. On page 611 of the report Mr. McIsaac is asked the following question:

> He recommended the construction of that line and it was built double track. The point is, had you any right, under the Act, to build a double track railroad?

Mr. McIsaac's answer was:

> No. I think the Act says single track, does it not?

Mr. McKENZIE: My hon. friend is evading the question. The word was put into Mr. McIsaac's mouth by Mr. Lynch-Staunton, who professes to be a lawyer. Mr. Lynch-Staunton says: 'That is in the Act?' Mr. McIsaac did not have the Act beside him, and he agreed with Mr. Lynch-Staunton. It is not in the Act.

Mr. SHARPE: Surely it is an extraordinary position to take, to say that a gentleman who is a member of the commission and a K.C., and who is supposed to construct the eastern section of the Grand Trunk Pacific in pursuance of the agreement, does not know the wording of that agreement. He was one of the commissioners appointed by the Liberal Government and asked to construct the road in accordance with the agreement, and he

said that he was carrying out the agreement according to the legal interpretation of it. On page 75 of the report, I find the wording of the contract. I will just read the part bearing on this matter. My hon. friend has displayed such anxiety for the information that I want to satisfy his laudable curiosity.

Mr. McKENZIE: I am not asking you to read the contract.

Mr. SHARPE (reading):

When the bridge superstructures are in place ready for operation, a single track railway with side tracks—

Mr. McKENZIE: That is certainly a quibble of the worst kind.

Mr. PELLETIER: Oh, oh.

Mr. McKENZIE: I asked my hon. friend a straight, honest question.

Mr. SHARPE: If the unruly member still wants his curiosity satisfied, I would like to read this question and the answer by Mr. McIsaac. Mr. McIsaac is a distinguished member of the Nova Scotia Bar, and a King's Counsel; he was on this commission, and should be able to interpret the agreement and carry out its intent in the construction of the road. (Reading):

The point is, had you any authority under the Act to build a double track railroad?—A. No.

Mr. McKENZIE: I wish to put a question.

Some hon. MEMBERS: Order.

Mr. DEPUTY SPEAKER: Order. The hon. gentleman knows that he has no right to interrupt.

Mr. SHARPE: If I have not by my weak efforts been able to satisfy the curiosity of the hon. member for North Cape Breton, it is not my fault. I would refer him to the commissioners' report, and also to his compatriot, Mr. McIsaac, K.C., from Nova Scotia. The Liberals, including the hon. member for North Cape Breton, are apparently not a little exercised over the publication of this report. And well they may be, for every argument and every criticism, and every statement in condemnation of this National Transcontinental road made by the Liberal-Conservative party in the past and by its leaders has been amply justified by this report. Every one who has followed the history of the construction of this line has, and has had for years, a strong suspicion that this construction was marked by plain, every day graft, maladministration and loose methods; and this report amply justifies this suspicion. Consequently, we find the Liberals are in a white heat when discussing this report, as is evident in the case of the hon. member who interrupted me a moment ago. They do not discuss the merits of the report so much as attempt to attack the personnel of the commission. But the publication of the findings of this commission has roused such resentment and indignation throughout this country that should an election be held at any early day, the Liberal party, once great, proud and haughty, but now reduced throughout the country to something of a remnant, would become a mere memory in the minds of the people.

Certain plausible reasons were given to the public why this road should be undertaken. We have heard them rehearsed by the hon. ex-Minister of the Interior. They said the road was necessary in order to open new territory in the West and afford facilities for new settlements. But when the Grand Trunk was built in the West, it duplicated for miles and miles at a stretch the Canadian Pacific railway through the settled portions of the country. They told us that the construction of the road was necessary to reduce the freight rates. But the tremendous cost resulting from incapacity, loose methods and lax administration have prevented the possibility of the reduction of freight rates in the time of this generation or the next. They said they wanted to open up the hinterland of Quebec and the Maritime provinces, and so they duplicated the Intercolonial railway; and no person to-day but the ex-Minister of the Interior has the temerity to justify that portion of the line. I give it as my opinion, after reading the report and the opinions of the engineers and of the late Hon. A. G. Blair, that language cannot be found to adequately characterize the folly, the criminal folly, of the late Government in building this portion of the line.

While certain ostensible reasons were given to the public why this road should be undertaken in the public interest, the people generally had grave suspicions that there were certain secret motives behind this construction. And the subsequent history of the work has justified these suspicions in the public mind. For instance, the people suspect that this road was projected as a monument to the present leader of the Opposition (Sir Wilfrid Laurier). The phenomenal success of the Canadian Pacific railway, which was inaugurated by Sir John A. Macdonald, has vindicated the

wisdom of that old Conservative leader. The present leader of the Opposition may well be pardoned for having ambitions to duplicate the phenomenal success of the Canadian Pacific railway. But the difference between the efforts of the leader of the Opposition and the efforts of the former great Conservative leader, Sir John A. Macdonald, was the difference between failure and success; the difference between promise and fulfilment. And, whereas, as the Canadian Pacific railway, inaugurated by the great Conservative leader in the old day, opened a new country, inspiring people with new hopes and ambitions and inspirations, the Grand Trunk Pacific, inaugurated by the leader of the Opposition, has become more or less a millstone around the neck of the Canadian people, involving us in tremendous responsibilities and obligations which it will tax the energy of the people and the ingenuity of this or any other Government successfully to meet and discharge. The success of the Canadian Pacific railway has vindicated the judgment, foresight and wisdom of Sir John A. Macdonald but the National Transcontinental has demonstrated the lack of these qualities in the present leader of the Opposition. They say, imitation is the sincerest form of flattery; and in attempting to duplicate the enterprise of Sir John A. Macdonald the leader of the Opposition has paid that great statesman, unwittingly and unconsciously the greatest compliment in his power.

The people suspect that this road was projected with a view to allowing a few Liberal favourites to exploit the public resources and enrich themselves at the country's expense. Many a Liberal pauper has become a millionaire, and many a Liberal millionaire has become a multi-millionaire from the profits of this road. However disappointing the Grand Trunk Pacific may be as a competitor of the Canadian Pacific railway and an instrument for reducing the freight rates, it has exceeded the fondest expectations of its promoters in enriching a few party favourites, and political campfollowers of the Liberal party. Who were the original shareholders and what was their investment in this enterprise? Who were the original investors of the Grand Trunk Pacific Townsite Company, the Grand Trunk Pacific Construction Company, the Grand Trunk Pacific Branch Lines Company and other subsidiary concerns? It must seem almost incredible when the figures are given showing the extent to which these men invested their personal resources and the risk they took. In 1909, the present Prime Minister (Mr. Borden) put certain questions upon the Order Paper and the names were given, showing that sixteen leading Reformers had each invested the magnificent sum of $200 of their personal wealth in this enterprise. Mr. C. M. Hays, had twenty shares, valued $2,000—that being his total liability—on which there was paid-up $200. Mr. E. J. Chamberlin, $200; Mr. William Wainwright $200; Mr. George A. Cox, $200; Mr. E. R. Wood, $200; Mr. E. B. Greenshields, $200; Mr. J. R. Booth, $200. Other leading promoters behind this enterprise risked their own money in this enterprise to the extent of $200 each. Sixteen of them put up a total of $3,200; five of them put up $400 each; the total amount of investment of these twenty-one promoters who stood to make so much out of this enterprise was $5,200. Can any one conceive of an enterprise of this magnitude being floated under such auspices, unless the intention was, as undoubtedly it was, to enable a few of the party friends to wax rich while the people took all the risks of the enterprise?

The people also suspect that the road was projected as a red herring drawn across the political trail of the Liberal Government in the elections of 1904 and 1908—a Government that had so much to conceal in its administrative record, a Government that was so loath to submit itself to the calm and unprejudiced judgment of the Canadian people. Another hope entertained by the projectors of this enterprise was that it would be a battle cry to rally the drooping spirits of the better element of the Liberal party, and thus it was used in the elections of 1904 and 1908. For these purposes and from these points of view it may have been considered a success. As a memorial, such as it is, to the leader of the Opposition, as a means of enriching a few party favourites, and as a colossal red herring drawn across the political trail of the late Government in the elections of 1904 and 1908, it has fulfilled the expectations of its friends. But the day has come when the Liberal party must answer for its misdeeds. The day of retribution is here. And the Liberal party, instead of displaying such a rebellious, unrepentant and perverse spirit as it does now that its sins are laid bare

before the public, should display a more repentant spirit for its past conduct. But the gentlemen on your left, Mr. Speaker, members of the Liberal party, are hardened sinners, stiff-necked and unrepentant. It will require many years of penitence, many years of adversity, many years of wandering in the wilderness, before they come to a full realization of their position.

On the occasion of this debate it would be interesting, if not profitable—because I believe that what I am about to discuss is familiar to most of the members of this House—to cast a retrospective eye over the events connected with this enterprise; to pass in review one or two of the utterances of the leader of the Opposition and to compare them with the utterances of the present Prime Minister. Anybody perusing those utterances of the respective leaders of the two parties can come to a mighty quick decision as to which is the more statesmanlike, having in view the lamentable condition of the railway situation in Canada to-day. It is also interesting to examine the position taken by the ex-Minister of Railways no later than March, 1911, when he was delivering the railway budget, wherein he spoke of the necessity of "hooking up" the Intercolonial with the Transcontinental line in order that the Intercolonial might get some of the western traffic, and not be dependent upon local traffic, which was insufficient to maintain the road. The ex-Minister of Railways vindicated the judgment displayed by the present Prime Minister when he opposed the policy of the National Transcontinental and propounded an alternative scheme. For a moment or two, therefore, I desire to quote one or two remarks from the speech of the right hon. leader of the Opposition. Speaking at Hamilton on October 11, 1913, he is reported in one of the newspapers, the Toronto Globe, as having said:

> I am not a man of business. I do not pretend to be a man of business. I have good businessmen around me, Mr. Paterson among others, and when we came to this question I left it to Mr. Paterson and others to solve this. But really, gentlemen, when I hear some talking as men of business I am surprised, I may say, at my own modesty and moderation. (Laughter and cheers).

If that speech were made to-day, would it be greeted with cheers of approbation or cheers of derision? In the light of the subsequent development of this country and of the present railway situation, there is no question that the right hon. gentleman was right when he said that he was not a man of business. He proceeded to say:

> How much shall we be out of pocket? According to my poor estimate, the estimate of a modest man who does not pose as a man of business, it seems to me that we shall not be one cent out of pocket.

Later he went on to say?

> The surplus last year was $14,345,000. If, therefore, the Government should set aside out of this sum $13,833,000, it would provide for the full payment of seven years' interest, which is all the obligation that the Government are to bear with respect to the whole line from ocean to ocean.

That assertion, falling from the lips of the leader of the Government at that time, was a misleading, a startling, and an extraordinary assertion, and I believe that the right hon. gentleman stampeded the electors into supporting that policy, knowing well that he was misleading them and making an extraordinary statement in view of the liabilities of the country in respect of that part of the route. The remarks of the present Prime Minister were in direct contrast to those of the then leader of the Government. He referred to the fact that the rates upon traffic depended upon the cost of construction of the road. In his speech to-night, the hon. ex-Minister of the Interior disregarded the question of fixed charges, and spoke as if the rates upon traffic had nothing whatever to do with the cost of construction. But the right hon. present Prime Minister discussed the question with a full knowledge of the subject when he dealt with the bearing of the cost of the road upon the rates that would be charged upon traffic when the road was completed. He, speaking in this House, as reported in 'Hansard,' 1903, said:

> The present congestion is occasioned, not by lack of railways, but by lack of equipment. It is admitted and stated, not only by men who are concerned in this matter personally in the West, but by newspapers all through the West, that there are plenty of railways, but lack of equipment.

He also spoke about spending $100,000,000 on the Grand Trunk Pacific so that the Intercolonial would not get any of the western traffic, and about extending the Intercolonial railway to the Georgian bay. But I wish particularly to direct the attention of the House to this policy enunciated by the present Prime Minister on that occasion:

> I say it would be a proper thing and a wise thing for the Government to acquire that rail-

way (Canadian Pacific railway) from North Bay to Fort William and make it a national highway of Canada and operate it by means of an independent commission, giving to the Grand Trunk Pacific, the Canadian Northern and the Intercolonial, as well as the Canadian Pacific railway, equal running power over it. I say that for this reason, that to build two railways, or three railways, where one railway, with running rights over it, will answer the same purpose, is economic waste.

These words should burn into the hearts of the Canadian people; because if this policy had been adopted there would be no occasion for the lamentable condition of affairs which exists to-day in connection with railway matters. The hon. ex-Minister of Railways (Mr. Graham) is reported in the Ottawa Free Press of March 17, 1909, as saying:

Regarding the future of the Intercolonial, Mr. Graham frankly expressed the opinion that unless some arrangement were made so that line could 'hook-up' and be made the outlet of a transcontinental line, it would find itself confined to the handling of local traffic, of which there was insufficient to maintain the road.

Seldom does the leader of any party find his arguments so readily endorsed as did the present Prime Minister in the statement made by the ex-Minister of Railways and Canals. In the election of 1904, would the people, if they had been able to brush aside the curtain of doubt and peer into the future, looking at the matter in the light of what has since happened, have endorsed the policy that has been placed before them in the shape of the Grand Trunk Pacific, or would they have accepted the policy laid down by the present Prime Minister? The people realize to-day as they never realized before that they have been deceived by the Liberal party, that they have been grossly robbed by the Liberal contractors, and that the construction of this road, as pointed out in the report of the commissioners, has been characterized by waste, extravagance and incapacity.

Many disasters have followed in the wake of the construction of the Grand Trunk Pacific. The Hon. A. G. Blair was an able, far-seeing and constructive man. This road was built upon the political ruins of Mr. Blair; all that was mortal of this great man disappeared protesting against the tremendous folly of the Liberal party. Mr. Blair, humiliated by the action of his leader in negotiating this matter behind his back, against his wishes and contrary to his better judgment, protested to the bitter end against the policy of constructing the National Transcontinental railway. Mr. Blair was shorn of his honours as Minister of Railways and Canals, yet, standing upon the floor of this House, towering in stature, in mental calibre, and in constructive genius away above other members of his party that surrounded him, he lashed and flayed his political friends in a manner which has had no parallel in this or any other Parliament. Like a prophet of old, in his righteous indignation he poured out the vials of his wrath upon his political friends, who were not only deceiving him, but were deceiving the people of this country as well. No such scathing arraignment of any policy or of any party or of any leader was ever recorded in history of any Parliament as that which was made on the floor of this House on August 11, 1903, when the Hon. A. G. Blair delivered his diatribe against the National Transcontinental railway. He said:

Why with such unusual and such unexampled haste a measure of this magnitude and this character had been pressed upon them. . . . What does the right hon. gentleman mean when he says: 'We cannot wait because time does not wait.' I think, Mr. Speaker, and I may say it with all respect to my right hon. friend that it would have been as correct if not as poetic for him to have said: We cannot wait because Senator Cox cannot wait.

We find this stalwart of the Liberal party, an ex-Prime Minister of the province of New Brunswick, here representing a constituency of that province, condemning the whole eastern branch of the Transcontinental. He talks about the Government destroying its own property. He further says that when the Bill was under discussion in the Railway Committee, he asked Mr. Hays whether if the Government built down to Montreal, they might not arrange for an interchange of traffic and that Mr. Hays answered 'Yes, without any difficulty whatever.' Hon. Mr. Blair says:

The Intercolonial railway has been fully competent to take all the traffic that has been offered up to this date. . . . You will have the Government in the anomalous position of owning both roads, of operating one, and of being pratically interested in the successful operation of the other, going in and destroying its own property, impairing the value of its own property whether it be the one or the other, such a spectacle, I do not think, has ever been presented to the knowledge or observation of any human being since the world began.

I might repeat the sentence I read a moment ago in connection with what the ex-Minister of the Interior (Mr. Oliver) said of the eastern branch from Quebec to Moncton. What does Mr. Blair say:

It is a total and absolute waste of public money. It is not only a destruction of the Intercolonial railway but it is a sheer unjustiable squandering of the public money.

Could language be more severe? Could an argument be more irresistible or logic more deadly? Every paragraph, every sentence, every word that fell from the lips of Hon. A. G. Blair has come true, and the people of this country at last realize the real significance of that great man's opposition and hostility to this absurd, illogical and indefensible branch of the National Transcontinental railway. Disaster came not only to A. G. Blair, but also to Mr. Hodgins for opposing this work. Mr. Hodgins was a man eminent in his profession and a Liberal in politics. Yet he was forced to acknowledge his inability to control the contractors along the line, his engineering staff, and the rapacious horde of Liberal heelers who wanted to make fortunes out of the road. What does he say. I quote from the Manitoba Free Press:

Hodgins charges enormous waste. Dismissed engineer declares millions are being stolen on Government section. Major's side of the story. States trouble first arose over question of classification. Asked for investigation.

Alleging broadly that millions of dollars are being wasted or stolen in the construction of the Government portion of the Grand Trunk Pacific railway Major A. E. Hodgins, C.E., has issued a letter, the object of which is to secure an administrative investigation.

Major Hodgins is now a resident of Victoria. He is a son of Judge Hodgins, of Toronto, a Liberal, who recently demanded an investigation by the Government to inquire into the reason for his son's removal from office.

Mr. MORPHY: Was he a partisan?

Mr. SHARPE: I think we can designate him a partisan according to the standard of the ex-Minister of the Interior. I say that Engineer Hodgins' charges have been substantiated and his reputation vindicated by the publication of the Gutelius-Staunton report, and no man in Canada to-day will welcome this report more than Engineer Hodgins and his friends.

In addition to them, we have Chief Engineer Lumsden, a man prominent in his profession, who by reason of, as he says in his letter of resignation, having lost all confidence in his engineering staff, also resigned from this road. His charges also have been substantiated and his reputation has been vindicated by this report. The Liberals may try to minimize the effect of charges made by Engineer Hodgins and Chief Engineer Lumsden, but there are certain salient and indisputable facts which they cannot ignore. One of them is that these engineers had personal knowledge of what was happening in connection with this road; they made serious charges against the management of the road and the administration of the moneys spent, and in consequence they resigned. The third indisputable fact is that these charges have been substantiated, proved to the hilt, by the publication of this report. Those are the facts, notwithstanding that engineer Hodgins and chief engineer Lumsden were terrorized and intimidated more or less to modify their charges before a certain partisan committee appointed to investigate them. Blair, Hodgins and Lumsden were victims of the ambition and greed of party friends of the Liberal party. They were mere pawns in the game, flies upon the wheel, and they were brushed unceremoniously aside in order that these men might pursue their course in becoming millionaires and multi-millionaires in a short time. With their knowledge, ideals and principles, these men were not wanted in the construction of this road; they were dismissed or their resignation demanded in order that the carnival of mismanagement might proceed unhindered. Hon. Mr. Blair foresaw what was coming and he washed his hands of the whole transaction. Hodgins and Lumsden actually saw what the Hon. Mr. Blair foresaw, and they also washed their hands of the transaction. Engineers Hodgins and Lumsden held a post-mortem investigation, —perhaps I should say ante-mortem, because although the Grand Trunk Pacific is in extremis it has not yet utterly expired,—which verified the predictions of Hon. Mr. Blair in regard to this road and confirmed the experience of Hodgins and Lumsden, who were men actually upon the work. Mr. Blair looked at this enterprise from the point of view of the future and condemned it; engineers Hodgins and Lumsden looked at it from the point of view of the present—men actually on the job—and they condemned it; commissioners Gutelius and Staunton looked at it from the point of view of the past and they condemned it. Hon. Mr. Blair has been reviled and execrated—one might almost say executed—by the Liberal party. Engineers Hodgins and Lumsden were reviled and execrated by the Liberal party, so is it any wonder that they revile and execrate the names of Gutelius and Staunton?

10 p.m.

This investigating commission was ideal for the purpose for which it was appointed.

It was composed of Mr. Gutelius, an expert railway engineer who was appointed to investigate and pass upon the engineering side of the enterprise, and of Mr. Staunton, an able and distinguished member of the Ontario bar whose duty it was to examine and cross-examine witnesses and report on the contracts. In their report, there is not a statement that is not supported to the hilt by the documentary evidence on file or by the sworn testimony of witnesses. All those witnesses with the exception of one or two were the experts employed in the construction of the road. In other words the Liberal party have been convicted out of the mouths of their own employees. Every expression of opinion in that report is verified and amplified by the best expert opinion on the continent of North America. The very completeness of the report dumfounds hon. gentlemen opposite. They cannot successfully attack the merits of that report. The very completeness of it takes the Opposition, so to speak, at a disadvantage because they cannot successfully, either on questions of fact or of expert opinion, attack this report which has been so ably prepared by these commissioners. In this voluminous, exhaustive and unimpeachable report, these commissioners have placed upon the records of this House, and among the archives of this country, a document which not only vindicates the position taken by the Liberal-Conservative party in years past in respect to this enterprise, but which vindicates the judgment in the most flattering manner of the present right hon. Prime Minister in respect to this whole proposition. This report does more than vindicate the position of the Conservative party, it does more than vindicate the position of the Prime Minister; it exposes, in the minutest detail, and by the most incontrovertible evidence, the greatest piece of graft in the history of politics on the North American continent.

This gigantic waste need not surprise the Canadian mind when you consider the thoroughly political complexion of the former National Transcontinental Railway Commission. This commission was selected, not on account of its expert knowledge of railway construction and operation, but purely and simply on account of its knowledge of practical politics. It is most interesting to compare the methods which were employed by the United States Government in appointing a commission with the methods that obtained in Canada in appointing this commission for expending millions and millions of the people's money. At the time that the President of the United States appointed a commission to construct the Panama canal, did he appoint men such as the ex-Minister of Railways and Canals said that the Government had appointed—men of splendid ability but without any expert knowledge? Listen to the personnel of the commission appointed by the President of the United States: John G. Walker, rear-admiral of United States navy, who had been at the head of former canal commissions for purposes of investigation and report; Geo. W. Davis, a major-general of United States army, on the retired list; Wm. B. Parsons, an eminent civil engineer, of New York; Wm. H. Burr, professor of civil engineering in Columbia University of New York; Benj. M. Harrod, formerly city and state civil engineer of New Orleans; Carl E. Grusskey, civil engineer, of San Francisco; and Frank T. Hecker, a civil engineer, of Detroit.

Mr. MACKENZIE: With reference to that Panama canal matter, to what extent did the expenditure go beyond the estimate?

Mr SHARPE: I have not the figures.

An hon. MEMBER: Everybody else has them.

Mr. SHARPE: Perhaps my hon. friend, having the knowledge, will give them to the House?

Mr. McKENZIE: The expenditure was double the estimate.

Mr. SHARPE: That is the kind of commission that the President of the United States appointed to undertake a work of this stupendous character. Contrast that with the personnel of the commission that the Liberal Government appointed when they wanted to spend millions and hundreds of millions of the people's money. Whom did they appoint on that expert commission? First, they appointed Mr. S. N. Parent, the distinguished King's Counsel of the province of Quebec. He had never pleaded a case, they say, but however little he may have known about law, he certainly knew nothing whatever of the construction of railways. The next man was Mr. McIsaac, the distinguished legal light from the province of Nova Scotia, who, according to the hon. member for Cape Breton (Mr. McKenzie), did not know the legal interpretation of the contract or the agree-

ment. Then we had Mr. Young, a farmer from Manitoba, and we had Mr. Reid, a corset manufacturer, from London, Ont.

There was something in the argument of the ex-Minister of Railways and Canals when he stated that a man of good executive ability might well be appointed to administer a department, provided he surrounded himself with good experts and followed their advice. But the distinguished King's counsel from Quebec and the distinguished King's counsel from Nova Scotia, the practical farmer and the eminent corset manufacturer, did not follow the advice of their experts. I have certain instances proven by evidence, and I will give the page and date because time will not permit me to go into the details, where the opinions given by the experts of the Railway Department and of the commission were overruled by either the commissioners or the Minister of Railways and Canals. We begin with the question of the two terminals at Moncton. Here we have the Government owning two terminals, the Intercolonial and the Grand Trunk Pacific. Then we find the question of the eastern division, and I have already pointed out that the eastern division was constructed notwithstanding the fact that the opinion of the chief engineer, Mr. Lumsden, who was against the proposition. The classification was another instance. Engineer Grant, on his classification, was overruled by the commission, and he was ordered to make a higher classification. Then we have Mr. Lumsden overruled on his classification by the commission. These commissioners were political experts, but not railway experts. Then we had the pneumatic caisson on the Cap Rouge viaduct. We find that the bridge engineer says that Chairman Parent himself overruled the engineers and directed them what to do in this case, involving an additional cost of $250,000. We have the case of the Transcona shops, which the chief engineer estimated to cost $1,500,000. We find that the Government accepted plans drawn by the Grand Trunk Pacific costing $4,500,000, designed to serve the purposes of the Grand Trunk Pacific and their political friends in the West. I say advisedly, after reading the documents and reading this report, that this was a palpable fraud on the people of Canada. We find Mr. Calvert and Mr. McIsaac, both members of the commission, saying that in their opinion the understanding with the Grand Trunk was that the Government should only pay $1,500,000 and that the Grand Trunk were to pay the rest. The Grand Trunk has not paid a dollar, and does not intend to. The engineers were overruled in this case by the ex-Minister of Railways and Canals, and the commissioners. The evidence is overwhelmingly against the Government and its political experts in regard to the question of momentum grades. From the chief engineer down, all the engineers were in favour of momentum grades, but by reason of these engineers being overruled the country was put to an extra expense of $6,200,000. Then there was the question of wooden trestles. Every engineer, from the chief engineer down, and every engineer on every reputable railway in Canada is in favour of wooden trestles. Yet this commission, composed of these political experts, overruled these engineers and put the country to an additional expense of $2,947,000. On the question of pusher grades, from Chief Engineer Lumsden down, there was not a man against them; yet these political experts overruled these men and put the country to an expense of $2,750,000. These political experts not only put 80-lb. rails all over the main line, but they insisted, in opposition to the opinion of expert engineers, on putting them in yards and on sidings. Mr. Woods, on behalf of the Grand Trunk Pacific, said that he never insisted upon 80-lb. rails being used for yards and sidings. In regard to the contract calling for a single track, Chief Engineer Lumsden said that under the agreement there was no necessity for anything but a single track. But this political commission overruled the experts' opinion, and a double track was constructed between lake Superior junction and Graham Yard. Mr. Woods said that it was not a necessity but a luxury. Imagine the Government spending the people's money in the wilds of New Ontario on luxuries. Then, there was the entrance to Winnipeg. We have the statement of the ex-Minister of Railways and Canals to the House that he went up personally and inspected the entrance to Winnipeg. Yet the chief engineer, Mr. Lumsden, gave evidence that he was in favour of going into Winnipeg with the Canadian Northern railway. We have the ex-Minister of Railways and Canals saying that his resignation was in the hands of the Government rather than see the advice of the chief engineer of the department followed in connection with this matter.

Then this extraordinary commission fenced the whole right-of-way from Moncton to Winnipeg and Chief Engineer Lumsden swore that he could hardly credit it, that he did not know it was going on, and that in his opinion the right-of-way should only be fenced where there was civilization and settlement, and not in the wilderness.

We have instance after instance where the Government and the National Transcontinental Commissioners totally ignored the opinions of their experts. It is not my intention to deal with the details of the report, but there are one or two startling facts which I shall revert to briefly. I remember that one time the Liberal Government built a wharf at Disraeli in the province of Quebec where there was no water and where there were no boats to tie up to it; also at Newmarket a canal was built where there was no water and no traffic; but here we have this Transcontinental Railway Commission building a highway, at a cost of $40,000, down from Sillery church, at a point away off from the railway altogether. The report sets out that the contractors were paid, on account of over-classification, $3,300,000, and, as an interesting side-line as to the excessive charges in respect to classification, I call attention to the evidence of one, Alfred A. Paradis, who being sworn, deposed:

Q. How old are you?—A. Thirty-nine.
Q. You are a civil engineer?—A. Yes.
Q. Are you a graduate of any college?—A. No.
Q. Educated where?—A. National business college and private tutor, and then I followed the course of the International Correspondence School of Pennsylvania.

I have heard of the International Correspondence School teaching some theoretical subjects, but I can hardly conceive that a man could acquire much knowledge from that school, down in the state of Pennsylvania, on a practical subject such as classification of material. Hon. gentlemen opposite have told us that a man is not qualified to be a commissioner if he comes from the United States, but here is a gentleman who gained his knowledge of classifying common excavation, loose rock and solid rock from the International Correspondence School of Pennsylvania, and who was sent by these precious National Transcontinental Railway Commissioners to do the important work of classification. Here is some more of Mr. Paradis' evidence:

Q. You had not classified before that on any other road?—A. No.

[Mr. S. Sharpe.]

Q. You went in the first morning to make your estimate?—A. Yes.
Q. Did anybody go with you the first time?—A. The first estimate, I believe so.
Q. Did you measure, count, or estimate your boulders?—A. Yes, sir.
Q. Which did you do?—A. I measured a few of the boulders myself; a few others were measured by subordinates; the boulders were measured by contractors' foremen.
Q. By the contractors' foremen?—A. Yes.
Q. Did you take their word for it?—A. No, not always.
Q. Did you ever take their word for it?—A. Sometimes I did and sometimes I did not.
Q. Did you take their word for the measurement in many cases?—A. Yes, I did.

Here is a man, who had acquired his knowledge of the engineering profession from the International Correspondence school of Pennsylvania, and he allows the foremen of the contractors to measure the boulders, and he takes their word for it. Is it any wonder there was over-classification? Then we have the evidence of William B. Robertson, a divisional engineer appointed by these commissioners, and he says:

Q. What percentage of the clay that has been handled on your division have you classified as loose rock?—A. I say about 80 or 85 per cent.

Then we have that extraordinary spectacle in connection with the dispute in reference to classification, where the contractors consulted legal gentlemen in the provinces of Ontario and Quebec, and they got their opinions, of course in favour of their contention, and they handed these opinions to the commissioners, and the commissioners got no legal advice whatever on the matter, except that they wrote to the Deputy Minister of Justice, and he said it was not a matter for legal advice at all; it was a matter for interpretation by the engineers. But instead of accepting their engineers' advice as to classification, these Transcontinental Commissioners accepted the opinions of the lawyers which were paid for by the contractors.

In respect to the wooden trestles, there are ten or twelve expert engineers, who give their opinion in favour of having wooden trestles upon the road. Up in New Ontario, at a certain point, Redditt, they built a station which was quite adequate for the place, but because it did not come up to the expensive station design of the Grand Trunk Pacific, they built another one, and then they built a freight shed also, so that in a territory without inhabitants and without traffic, they have two stations and a freight shed at the one point. Then we have evidence of improper, and illegal,

and dishonest payments, and various other kinds of mis-management.

The evidence with respect to contracts Nos. 16 and 17 has already been placed before the House, and that is perhaps one of the most remarkable things in connection with the whole business. President Hays of the Grand Trunk notified Chairman Parent of the commission, and he notified also Sir Wilfrid Laurier, that contracts Nos. 16 and 17 should be cancelled because they had not been gone on with, and now that the adjoining railroad was built up to them lower prices might be expected, but within two months after that, M. P. and J. T. Davis, who had these contracts, were allowed to transfer them to O'Brien, McDougall and O'Gorman. This fixes the responsibility on the leader of the Opposition of having knowledge of the circumstances, and consequently he must accept all the responsibility for that extraordinary rake-off of $740,000, which the Davises made, without turning a solitary sod on their contract.

Then in reference to contracts generally, there was secret advance information given as to the engineers' estimates, by the commissioners, to their favoured contractors. That is a very significant fact. These men were employed at high salaries to construct the road, and they handed out secret information in advance to their favourites. We find that eminent and distinguished farmer from Manitoba, Mr. Young, protecting and taking care of a Liberal contractor, Mr. J. D. McArthur of Winnipeg. We find Chairman Parent himself handing out information in advance with respect to contract No. 8, and we find that a five million dollar contract was manipulated in order that Parent's friends, M. P. and J. T. Davis, might get it. Of course, Chairman Parent denies knowledge of it, but the fact remains that somebody committed a forgery by striking out certain figures in the document after it was signed by chief engineer Lumsden.

In the Gamey investigation, the paramount question of the time was: where did the money come from? But the burning question in this transaction is: where did the money go to? The ex-Minister of the Interior said there was not a shadow of suspicion that anything was wrong, or that any of this money went in a dishonest way, or for political party purposes. Let me read a few sentences from the evidence of Chairman Parent, and then hon. members can draw their own conclusions:

Q. Did any contractor pay any sum of money to you or to any of your fellow commissioners for personal or political purposes?—A. I do not know that.

Q. You say they did not?—A. Not to my knowledge.

Q. Did they pay any to you for personal or political purposes?—A. No.

Q. Did any of the contractors make any contribution for personal or political reasons after they got the contract?—A. Not that I know of. If they did it must have been elsewhere.

Q. Do you know of their paying any money? —A. I cannot say that. I am speaking from my personal knowledge.

Q. Did they tell you they paid any other money?—A. I won't tell that. I do not know that.

Q. Will you say they did not tell you they paid money?—A. I do not remember that.

He is not very positive about that; is it not significant that he would not remember something or other about it.

Q. Try and remember?—A. If they paid money to somebody it would be their business.

He evades the question.

Q. Did they tell you they paid any money to anybody during the time they had those contracts?—A. To anybody outside?

Q. Yes?—A. A fellow talks that way sometimes. He might say: I contributed to both sides of politics; to both parties, but without giving any name particularly.

Q. Did any of those contractors tell you, during the time they were doing this work, that they contributed any money for political purposes?—A. I do not remember that.

Q. You don't remember?—A. No.

You see, he would not state positively.

Q. Will you try to remember?—A. If I knew, I would tell you. In a thing like that I speak for myself. I cannot speak for any one else, nor will I speak from hearsay.

Q. You do not remember their telling you so? —A. No, I always avoid politics.

Q. You say they never told you they put up any money for personal or political purposes? —A. I do not remember that. You think I know better than I do. We did not touch these matters. I had a duty to perform and I performed it.

Q. And you say now, candidly, you do not know of any case where any contractor put up money while he was contracting with this commission?—A. I do not say they did not put up any money.

Q. But so far as you know?—A. So far as I know, they did not, to me.

Now he is evading the question. (Reading):

Q. Oh, no.—A. If they did, I was not with them.

Q. This is not the point. Did they tell you they did?—A. I do not remember that. They may have said so, I do not know. I do not remember it and I could not swear to it.

Q. Do you remember their telling you they were going to put up money?—A. That is about the same thing. They may have said so, some of them, but I could not point out exactly. They may have said so.

Any person reading that can come to no other conclusion whatever than that a great amount of that money found its way into the political campaign fund of the Liberal party.

In conclusion, Mr. Speaker, I desire to say that the commissioners have thoroughly investigated this whole road; they have examined the contract; they have examined and cross-examined the witnesses and have made their report. They have summarized their findings in this significant paragraph:

> We find that the Transcontinental Railway Commission, the Grand Trunk Pacific railway, and those having charge of the construction of the railway did not consider it desirable or necessary to practise or encourage economy in the construction of this road.
>
> We find that without including the money which was unnecessarily expended in building the railway east of the St. Lawrence river $40,000,000 at least was needlessly expended in the building of this road.

Contrast that with the significant statement of the Hon. Mr. A. G. Blair. Speaking of the eastern branch of the National Transcontinental railroad, he said:

> It is a total and absolute waste of the public money. It is not only a destruction of the Intercolonial railway, but it is a sheer unjustifiable squandering of the public money.

Had time permitted, I would have liked to go more in detail into the findings of the commission, because I never read in my life a more complete report, a report that proves the charges to the hilt out of the mouths of employees and witnesses belonging to the Liberal party. I believe that the people of Canada are at last seized of all the real facts in regard to this gigantic waste of $40,000,000, this Liberal masterpiece of wilful waste and wanton extravagance. When the opportunity is afforded them to register their protest, I venture to express the opinion that they will visit well-merited punishment upon the heads of those responsible for this national disgrace.

Mr. J. J. HUGHES (Kings, P.E.I.): This is certainly the most important question that has been discussed in this House during the present session. It is more than that: it is the most important question to the people of this country and to this Government that has been discussed in this House for many years. The report of the Investigating Commission, Messrs. Lynch-Staunton and Gutelius, is bulky and technical. The discussion that has taken place upon it has been extensive and necessarily to a large extent of a technical character. It would therefore, in my opinion, be difficult for the ordinary man—even if he had the time and inclination and opportunity to read this report and the discussion upon it and to follow them in all their details—to come to a decision on the question. There ought, however, to be some way for the plain citizen, the ordinary man, the ordinary taxpayer of this country, to grasp at least the fundamental features of the case. I will endeavour to find that way and to follow it.

Before I do so, I want to draw the attention of the House to this peculiar feature of the case. So far as we know, before this report was completed, before it was printed and laid on the table of the House, at all events before it was available to the members of the House, advance copies, exaggerated statements, biased statements, were given to the Conservative newspapers of the country, and were published under flaming headlines. The attention of the country was called to the enormous graft that was about to be revealed, to the dishonesty that was about to be exposed. A superhuman effort almost was made to influence, inflame and prejudice the country before the report saw the light of day at all. Was that a proper course to pursue? Were the men who were preparing this report afraid that, when the report was submitted, it would not bear out the interpretation which they were sending out to the country, and was it their intention that the country should be prejudiced first and the report submitted afterwards? It would certainly seem as if that was the case. If these men had confidence in the value of this report, they would have depended upon it to carry its story to the people.

I want to say a word or two with reference to the policy of the late Government, which has been called in question by this report, and which has been seriously called in question to-night by my hon. friend (Mr. Sharpe). In 1903, when the Government of the country decided, in consequence of the development going on in the West and in consequence of the necessity of providing better and cheaper additional transportation facilities, upon building a railway from Winnipeg, Manitoba, to Moncton, New Brunswick, they decided to own it themselves and to connect it with a line of railway that the Grand Trunk Pacific would build from Winnipeg to the Pacific ocean. Every province in the Dominion of Canada was to benefit from the construction and operation of this railway. It was to be truly a national transcontinental railway. We know that the Conservative

party at that time was in favour of this railway stopping at Cochrane, and of sending the traffic and the business that would come over it from the West to Toronto and from there through United States territory to United States ports. Some of them wished the railway to be carried as far as Quebec, but no one wished it to go into the Maritime provinces, and from Quebec the freight was to be diverted to Portland. The Maritime provinces were to be left out of the reckoning altogether. We might pay our share of the cost, but were to receive none of the advantages. That was the policy of the Opposition at that time and it is still the policy of the Conservative party. The Government of that day thought and acted differently. On the question of policy they went to the people in 1904 and again in 1908, and the people endorsed that policy. It is just possible that the late Government and the Liberal party and the majority of the people of Canada were as well qualified to pronounce an opinion upon the proper policy to be pursued in that respect as Mr. Gutelius or Mr. Lynch-Staunton or the Conservative party or even my hon. friend (Mr. Sharpe). When a policy was decided upon, it was also decided, as has been pointed out time and again, that a railway of the best standard in America would be constructed, so that the operating expenses of the road would be as light as possible, and so that it would be a true competing line with the Canadian Pacific railway or any other railway in Canada.

What was the arrangement entered into with the Grand Trunk Pacific? While the Government was to build from Winnipeg to Moncton, the Grand Trunk Pacific was to build from Winnipeg to the Pacific ocean. The Grand Trunk Pacific, with the guarantee of the Grand Trunk railway, a large and wealthy railway corporation, agreed to take over the road when constructed by the Government, under a lease for fifty years, and pay 3 per cent upon the cost of construction, whatever it might be, for forty-three years out of the fifty, to operate the road and provide the betterments, that is, to keep it in proper repair. Therefore, it was to the interest of the Grand Trunk Pacific and the Grand Trunk railway that this road should be built honestly and economically. They had the right and privilege and duty of putting their engineers on the road while it was under construction, to see to it that every dollar was properly expended; and they did that. What better arrangement could be made to insure honesty and economy? I do not think the ingenuity of man could devise a better arrangement. Then the commission was appointed consisting of four men. The Government of to-day is trying to smirch the reputation of these men. But these men are reputable Canadian citizens, and I do not think the efforts of the Government should be directed towards destroying their reputation. That commission had the advantage of being assisted by the best engineers who could be found in Canada. If graft has been carried on, that commission must have been dishonest; the engineers employed by them and paid by the people of this country must have been dishonest; the engineers employed by the Grand Trunk Pacific and the Grand Trunk railway must have been in collusion with the grafters, and they also must have been dishonest; and the contractors must have been dishonest. Mr. Speaker, if all those safeguards have broken down and this dishonesty has taken place, there must be something inherently wrong with the people of Canada, for it would be impossible to devise better safeguards to insure the honesty of a public work.

Now, we come to another feature of this case, and a serious one for this Government. I said a moment ago that it would be difficult for the ordinary man to wade through this mass of evidence prepared by lawyers and engineers, and to discover who was right and who was wrong. But it is easy for the ordinary man to see that if all this graft that is charged has taken place, all these men whom I have mentioned must be guilty. This Government is the guardian and custodian of the public funds. What is the Government going to do about it? Is it going to prosecute any of those who are represented to us as rascals, the parties to this huge graft, all this enormous thieving, when millions of the public money were squandered—forty millions, according to this report, squandered and several millions dishonestly taken? I see a member of the Government present, the Hon. Minister of Marine and Fisheries (Mr. Hazen); does he think this Government has no responsibility in this matter? Not only have they not started any prosecutions against the men who are alleged to have done these things, but they have retained these same men, these engineers, in their service. Now, this Government is not very sensitive in regard to dismissals; their conscience is not tender upon that point; they have dismissed men

for the most trivial reasons. They have dismissed men simply because they were suspected of being Liberals when there was no other charge against them. They have dismissed men from the post office, from the customs, from the lighthouses, from the railways, simply because they were Liberals, though these were honest men, faithfully discharging their public duties. Why, they have dismissed men who were dead because it was believed they were Liberals; they have dismissed men simply because they patted a Liberal dog on the street. But, according to their own statement, here are men in the employ of the Government who have assisted in robbing the people of this country of millions of dollars—and not even one of them dismissed. If that report be true and the statements made by the members who have spoken on the opposite side be true, this Government is aiding, abetting and shielding rascals and is equally guilty with them. That is what the people who pay their taxes want to know, and the Government are not going to get away from that. If what is alleged on the Government side be true, these men should not be at large; the penitentiary is the place for them. Again I say: What is the Government going to do about it?

But there is more than that in it. If one-tenth part of what is charged by the members on the other side has taken place, the contractors themselves are dishonest men. When this Government came into power they found that a deposit had been made by every one of these contractors; they had also in their possession a drawback kept by the late Government. Had this Government been sincere in this matter, they should have retained that money until this business was cleared up. These contractors had solemnly agreed faithfully and honestly to carry out their contracts under forfeit of the money that they had placed in the hands of the Government as a guarantee. But this Government exacts nothing; they have paid out that money in many instances without exacting a dollar. But they have done more than that. During the time the late Government were in power, a dispute arose between the Government engineers and the engineers of the Grand Trunk Pacific, and that dispute was referred to arbitration under the provisions of the statute. The arbitrators were: For the Grand Trunk Pacific, Mr. Kelliher; for the Transcontinental Commission—that is for the Government—Mr. Gordon Grant; and the third arbitrator, Mr. Collingwood Schreiber. The arbitrators decided that they would deduct from the claim of J. D. McArthur the sum of $550,000, and the late Government decided to carry out that award. What did this Government do since they came into power? They set aside the award of the arbitrators and deducted only $150,000 from the account, thus paying this contractor $400,000 more than the arbitrators had said he was entitled to, and more than the late Government had decided to give him. In the face of that, can this Government dare charge the late Administration or the Transcontinental Commission with not doing their duty, or with not guarding the public funds? The taxpayers of this country will have to know why the finding of the arbitration board was overruled, and why $400,000 of the people's money was paid out to this contractor. Yet we are asked to believe that it was the late Government, or the Transcontinental Commission, that was squandering the public money.

I do not know, I cannot conceive, how this Government can tell the people of the country that they knew that certain men had robbed the taxpayers, and yet kept them in their service; that they did not prosecute them, did not take legal proceedings against them, but condoned everything. I do not think that such a record was ever made in the history of Canada or of any other country. When the Liberal party made charges against men for squandering public money—against Connolly and McGreevy, for instance—they took these men into the courts and exposed and punished them. They gave a reason for the faith that was in them; they acted properly and like men, and if there is any truth in this report the present Government should act in the same way. But hon. gentlemen opposite know that the report is not true; they do not believe it themselves; and they have not acted upon a single finding of the report from the time they received it until the present day.

The Government, at enormous expense to the country, employed two men to investigate this matter. These men prepared a report, and, if it be not true—and we are driven to that conclusion—then it is a slanderous report, which is being circulated by the Government throughout the country. I do not profess to know anything about the law, but the hon. member for North Ontario (Mr. Sharpe) said that one of the members of the commission,

Mr. Lynch-Staunton, was one of the most distinguished members of the Ontario bar, Mr. Lynch-Staunton had an opinion, which he published in that report, and the Minister of Justice and the Deputy Minister of Justice, over their own signatures, said that he was all wrong—that his law was no good. Yet the Government is spending tens of thousands of dollars to circulate that false report throughout the country for the purpose of prejudicing the public mind. I have shown you, Mr. Speaker, how hon. gentlemen opposite agree on a point of law; that is the opinion they have of Mr. Lynch-Staunton's knowledge. I think that is the way the taxpayers of this country will look at this question. I repeat that the commissioners employed by this Government have made a report in which they charge that enormous sums of money have been misappropriated. The persons who are alleged to be guilty are all in this country; many of them are in the employ of the Government; yet the Government is taking no action whatever to punish these men for their alleged misdeeds. If this report be true, we have an instance of the greatest miscarriage of justice on the part of the Government that ever took place in this or any other country. Will the people of Canada stand for that kind of thing? If the report be not true, then it is the most slanderous document that has ever been given to the people of Canada—and it has been produced under the auspices of this Government. I would like to ask the ministers who are present to-night what further action they intend to take. This matter should not be allowed to rest here; further investigations should take place for the protection of the people; further examination into the matter should be made if the Government have not enough information to enable them to proceed against the guilty parties. Is that not common sense; is that not ordinary reason? The people of this country will ask for it, they have a right to ask for it, and if they get justice their demands will be satisfied; but they will not get justice. The interests of the people are not considered in this matter; the whole thing appears to have been conspiracy which was entered into for the purpose of discrediting the late Government, for the purpose of discrediting the Liberal party, for the purpose of degrading the Transcontinental railway, regardless of consequences. No amount of special pleading, no amount of finely-spun arguments, no amount of covering up, will keep these patent facts away from the minds of the people. One man perhaps more than all the others is responsible for this condition of affairs, and that man in the last analysis is the right hon. the Prime Minister. On him the responsibility must rest.

One of the points of this commission's report is that if we had built a cheaper road it would not have cost so much. We had to pay $65,000 in order to get that valuable piece of information. Mr. Gutelius says it is unnecessary for the Grand Trunk Pacific to have a level or a straight road, but he would like exceedingly well to induce the Government of this country to give him money to take the lumps out of the Intercolonial and make it reasonably straight. He says he could operate the Intercolonial much more cheaply if that were done; but he reports that it is not necessary for the Transcontinental. Any ordinary man can see some flaw in that reasoning. I say again, the whole thing seems to have been a conspiracy to discredit the Liberal party and to degrade the Transcontinental. Is it possible that that was intentionally done so that the Grand Trunk Pacific should not take over this road when it was completed; so that it should be handed over to some other company, the Canadian Pacific railway for instance and the people of Canada would be deprived of competition in transportation? The President of the Grand Trunk Pacific, Mr. Chamberlin, has already notified the Government that he might not take it over if they went on degrading the road as they were doing—he would not hold himself responsible for the operation of the road. No government in this country ever occupied a more untenable or more unreasonable position—a position more in direct opposition to the best interests of the people—than this one.

On motion of Mr. Sevigny, the debate was adjourned.

On motion of Mr. Hazen, the House adjourned at 11 p.m.

Tuesday, March 31, 1914.

The House met at Three o'clock, the Speaker in the Chair.

PRIVATE BILLS.

FIRST READING.

Bill No. 130, respecting certain Patents of Thomas Leopold Willson.—Mr. Fripp.

Bill No. 131, respecting the Sterling Life Assusrance Company of Canada.—Mr. Buchanan.

Bill No. 132, respecting the W. C. Edwards and Company, Limited.—Mr. Fripp.

Bill No. 133, for the relief of Johann Andreas Horn.—Mr. Schaffner.

THE NATIONAL TRANSCONTINENTAL RAILWAY.

Consideration of the proposed motion of Hon. W. T. White (Minister of Finance) for Committee of Supply, and the proposed amendment of Mr. Graham thereto, resumed from March 30.

Mr. A. SEVIGNY (Dorchester): Mr. Speaker, the commission appointed by the government to inquire into the construction of the Transcontinental, reports that, in this undertaking, a sum of forty millions was spent uselessly. This news has created quite a sensation in the country and has aroused public indignation against the Liberal party, responsible for this unqualifiable abuse.

Since that report was brought down, the honourable members of the opposition have proposed an amendment to the effect that the report should not be adopted, and the main reason alleged therein is that, one of the commissioners, Mr. Gutelius, is a Conservative partisan, and the other, Mr. Staunton, is a friend of the Pacific Railway Company. I have lent an attentive ear to this debate and I have not yet heard a word against the honesty and the integrity of those two commissioners. When they tell us that a sum of forty millions was squandered in this enterprise by the Liberal Government, we involuntarily remember the opinion given on the Liberal Administration not by a Conservative, not by a friend of the Canadian Pacific, but by a good Liberal, by one of the Liberal chieftains in our province, who said that the Liberal party was, one day, all-powerful at Ottawa, but that corruption and graft had involved its ruin. Mr. Joseph Octave Mousseau, ex-member for Soulanges, is the gentleman who gave that opinion last fall. He was supported in the county of Soulanges, at the election of 1912, by the right honourable leader of the Opposition. In the county of Châteauguay he fought, with the right honourable leader of the Opposition, against the Conservative candidate, and in the Quebec Legislature he was chairman of the Private Bills Committee while awaiting his nomination as minister in Sir Lomer Gouin's government. There is another testimony besides this one, and it was given by Mr. R. L. Richardson, a Liberal candidate in the by-election of 1912. Surely, Mr. Richardson is not a Conservative, and the best proof of it is that, when he ran in the county of Macdonald we saw the leading Liberals of the West, of Ontario and Quebec come to his rescue in order to defeat my good friend Mr. Morrison, the member for that division. On the 13th of February, 1914, he published in the 'Winnipeg Tribune' an article in which he sharply critized the liberal administration about this enterprise of the Transcontinental. Here is what he said:

> Just what men like Sir Wilfrid Laurier, Mr. Fielding, Mr. Sifton, Mr. Graham, the then minister of railways, must think of the situation, would be interesting to know. Some of these men are still in public life, and others have retired, but they have certainly bequeathed a legacy to their country, which should stand as a monument to their disgrace for the next century or two, until their names shall have rotted in oblivion.
>
> The appalling corruption and mis-management in connection with this undertaking practically destroys it for all time as an asset to the Dominion. So enormously has the cost been enhanced, and so frightful will be the interest charges, that it will be impossible to pay operating expenses, interest on capital, and wear and tear, and afford to the settlers passenger and freight rates that are not prohibitory and that could afford any relief to the burdened taxpayer. The whole enterprise has been so bungled that it would probably have been better if the Government had taken $100,000,000 of the country's money and thrown it into the furnace for utter destruction.

I do not intend to recite to the House the history of this enterprise, because the facts are very well known. However, I shall quote certain words uttered by Sir Wilfrid Laurier, the then Prime Minister, when proposing this scheme to the House in 1903; they are to be found in volume 4, page 7676, of 'Hansard' for the year 1903:

> Therefore, let our friends on the other side of the House, and let our friends on this side of the House also, take note of this fact that with the exception of a few years of interest, to which I shall allude later on, we shall have this portion of the railway built by the Government from Moncton to Winnipeg without the cost of one dollar to the Canadian people.

In the course of the following year we had a general election in the country and I remember that the Liberal party inaugurated their campaign in the province of Quebec, at Sorel, where Sir Wilfrid Laurier, the then Prime Minister, held the first meeting. On that occasion the Liberal party had organized excursions from almost everywhere, and thousands of people were present. The question of the Transcontinental was the main question discussed at that meeting by Sir Wilfrid Laurier, and he there and then told his thousands of auditors that his government had undertaken to build a railway

of 1,800 miles long, from Winnipeg to Moncton, and he promised that this gigantic enterprise would be carried out by the Liberal party for a sum not to exceed $13,000,000 of Canada's money. This promise made by the then Prime Minister was greeted with enthusiasm and all the speakers of the Liberal party began at once to scour the province and the rest of the country, declaring that the people should support the administration which had pledged itself to build a railway of 1,800 miles long, for a sum of $13,000,000, and the people believed that all those speakers inspired by Sir Wilfrid Laurier were telling the truth.

When delivering his speech in 1903, Sir Wilfrid Laurier alluded to a question of detail with which he was to deal again later on; but to-day all the importance of that detail is realized by the people of Canada, and more particularly so since the recent date when the Minister of Railways submitted to the House the real amount which the country will have to pay for this enterprise, according to a statement prepared by the Department of Railways.

This road, which was to cost us $13,000,000, according to the formal promise made to the people of Canada, will cost us the enormous sum of $224,000,000, and here are the official figures to prove it:

Estimated cost of the road as completed on the 31st of December, 1914: $161,307,800; interest during the construction, at 3 per cent, up to December 31st, 1913, $15,136,289; estimated interest on expenses, up to December 31st, 1914, $5,293,322.67; capital fixed for rental purposes up to January 1st, 1915, $181,737,411.67.

Interest on $181,737,411.67, at 3 per cent, capitalized for 7 years, from January 1st, 1915, to January 1st, 1922, $41,776,681.31

If the railroad does not earn 3 per cent more than its working expenses would amount to during the three years ending on December 31st, 1925, the interest is added to the capital for three more years, which is increasing the capital cost by $20,725,791.30, and making the estimated cost of the road $244,239,884.28.

This is very different from the figure of $13,000,000 which the Liberal party was talking about in 1903 and 1908. Our friends on the other side of the House may deliver some three, four or seven-hour speeches, but they shall never succeed in subverting the fact that this railway shall cost us $244,000,000, which is too large a sum for the present conditions of Canada.

There were men in 1903 who predicted the exact results which we are reaping to-day from this enterprise, and amongst them the right honourable R. L. Borden, the then leader of the Opposition, who denounced in very strong words the decision so blindly arrived at by the Liberal party.

Another man, the honourable Mr. Blair, Minister of Railways in the Liberal government in 1903, denounced, and very strongly so, this enterprise of his party, and rather than make himself responsible for it, he who knew the position better than any, because he was the Minister of Railways, decided to step out of the Laurier cabinet, and in a memorable speech delivered in this House, he predicted exactly that the construction of this railway would drive the country to the edge of an abyss.

The Liberal speakers may deliver speech after speech and their papers may publish numbers of articles, but the people of this country, after hearing those orations or reading those writings will always come back to this subject and ask the Liberal party how and why they have squandered $40,000,000 in this enterprise.

The Liberal party promised the people of Canada that this railway was to be the people's property and since 1903 they never missed one single opportunity to make the people believe that.

We know that the object of such a promise was to deceive the public, for the Grand Trunk Pacific Company, composed of a score of good friends of the Liberal party, will be the absolute owner of that railway according to a fifty year lease which they were granted by the Liberal party. Then, during fifty years from this day on, the Grand Trunk Pacific will have the exclusive right to operate that line, to charge the freight or passenger rates which they may think proper, and they will get the exclusive benefit of the operation of the line if benefit there be. Not only will the people of Canada be precluded from enjoying any right of property on the Transcontinental, but as long as the lease exists, they will be called upon to disburse millions of dollars with no hope of a repayment. In fact, according to the agreement passed between the Liberal government and the Grand Trunk Pacific Company, that company is bound to pay no other rent than 3 per cent on the cost of construction of this line. As I have already stated, the people of Canada have paid for the construction of the whole road, and they are obliged to pay three and a half per cent on the cost of the road, while getting but three per cent, and thereby making a loss of one half per cent, which means this, that

during the fifty year lease of the Grand Trunk Pacific, Canada will lose, every year $617,570.46 if we take as a basis $223,514,092.98 as being the cost of the road up to the 1st January, 1923, when the Grand Trunk Pacific must begin to pay interest. And the total loss to the country, during the whole term of the lease, ensuing from the difference between the interest that we pay and the interest that we get, will be $30,878,523.

If the Grand Trunk Pacific do not earn 3 per cent over and above the working expenses from January 1st, 1923, to December 31st, 1925, they will be under no obligation to pay the government their 3 per cent rent during that same period, and consequently, they will have enjoyed the absolute possession of the road for a period of ten years without disbursing anything. But in this case, the road will cost the country $244,239,884.28 and the difference between the interest to be paid afterwards at the rate of 3 per cent, and the three and a half per cent interest which we pay, will amount to $908,687 per year and represent a total loss to Canada of $45,433,000 for the term of the lease.

This is the way we own this road which was to be ours, according to the reiterated promises of the Liberal politicians.

The present generation has made great sacrifices to build this line, and yet that generation will have vanished away before deriving the least advantage from the enormous expense it has incurred, and during fifty years from now on, it must comply with the desire and the will of the Grand Trunk Pacific Company.

The methods resorted to from beginning to end, by the late Administration, in this enterprise, are somewhat curious to examine.

Since the beginning of this debate, a few Liberal members have alluded to Mr. S. N. Parent, the ex-president of the Transcontinental, as being a great lawyer of the city of Quebec. Evidently, those gentlemen do know but very little about Mr. Parent as a lawyer; otherwise they would not have spoken as they have done. True it is that Mr. Parent is a lawyer, but true it is also that he never pleaded a single case and never was considered as a legal light in his province.

It may be well to recall under what circumstances the Liberal Government had entrusted to Mr. S. N. Parent the presidency of the Transcontinental. It was in 1905, and at Quebec, was being written a page of the history of the Liberal party which will surely not be considered as one of its brightest. In fact, the great majority of the Liberal members of the Quebec Legislature had turned against their Prime Minister, who was the hon. S. N. Parent, and Sir Lomer Gouin and the hon. Adélard Turgeon were leading the movement. Those Liberal members had lost all confidence in the man who, so far, had been their chief. The Liberal party was in full revolt and refused to follow the direction of Mr. S. N. Parent any longer. Shall we ever know the reasons why Mr. Parent's followers had ceased to have confidence in him? However, the public has always been under the impression that the rebels of the time had serious grievances against their chief, and after all, the fact of having lost the confidence of his followers was nothing that could recommend him for such an important position as that of president of the Transcontinental. Setting decorum at defiance, Sir Wilfrid Laurier himself offered to Mr. S. N. Parent, the position of president of the Transcontinental commission, and he then and there declared that he was giving him the most desirable position at the disposal of his Government. Mr. Parent went to work and to understand the methods resorted to in order to build the line from Winnipeg to Moncton, a distance of 1,800 miles, is a real impossibility. That work was divided into twenty-one sections, all of which were very important. It is obvious that the Transcontinental commission, at the time, paid much attention to the big contractors, and in order to make things easier for them, it was decided that the contractors having no fortune, although they might have some talent, should be excluded from the offices of the Transcontinental, and here are the means which were used in order to obtain that result. It was said in the advertisements for tenders which were published in the papers, that those who wished to make a bid should comply with the following conditions:

> And we do hereby declare and agree that in case of refusal or failure to execute the said contract with the commissioners, and also to furnish the approved security required, to an amount not exceeding one-third of the estimated total consideration of the contract, for the faithful performance of the said contract, within ten days after the acceptance of this tender the said cheque shall be forfeited to the said commissionners to liquidate damages for such refusal or failure, and that all contract rights acquired by the acceptance of this tender shall be forfeited.

Those conditions were the surest means of turning out contractors who had no fortune. The commission reserved for itself the right to require from the contractors, as

a deposit, a sum of money equal to the amount of their tender, adding that if the contractor failed to make that deposit, they would have the right to forfeit the cheque representing the deposit, which he would send in with his tender. We shall more readily understand what this meant, when we know that, as to contract No. 1, the Transcontinental commission reserved for itself the right to require a deposit of $327-000, and if the contractor could not make it, the commission had the right to forfeit his $75,000 cheque which he had sent in with his tender, and thus it was with each of the twenty-one contracts. What was the result of such tactics? To have the whole con struction of the Transcontinental let to eleven contractors. And those eleven contractors have become the absolute masters of the former Transcontinental commission and also of the Liberal Government.

What was done by those eleven contractors, the favourites of the former commission? They sold all their contracts and realized profits varying from 10 to 30 per cent, and this, in many a case, before they had touched a shovel or a pick. Owing to the inqualifiable methods used in letting those contracts, these gentlemen have realized profits amounting to millions, and those who sustained losses were the sub-contractors, who got no more protection than the public did get from the commission or from the Government.

I shall take this opportunity to submit to the House what has happened, to my personal knowledge, in the district extending eastward from the Quebec bridge, in the counties of Lévis, Dorchester, Bellechasse and L'Islet. The main contract in this case had been let to Davis, under conditions which were quite irregular, as I shall prove further on. Davis had sold his contract to the Quebec Contracting Company, but it was thought among the public, generally, that the work was being executed directly by Davis, and that is the reason why so many persons supplied goods to the Quebec Contracting Company, to the amount of thousands of dollars; they believed that Davis was responsible for the price of those goods. The Quebec Contracting Company was unable to fill the contract which it had got from Davis, and was wound up. This had a disastrous effect in all those counties; many a tradesman has lost important sums of money and the salaries of hundreds of workmen have remained unpaid. It will be noticed, however, as I shall prove a little further on, that in this enterprise, Mr. M. P. Davis and Mr. J. T. Davis have realized enormous profits.

Another case is that of Messrs. M. Naud and Perreault. These gentlemen did some work on that section of the Transcontinental for which Davis had the contract and which extends westward from the Quebec bridge, a distance of fifty miles. Messrs. Davis had a sub-contract with Roberge and Chagnon, and these latter had let a sub-contract to Naud and Perreault. In filling that sub-contract, Naud and Perreault made an excavation, under water, of 2,886 yards of solid rock, for which they were to get 75 cents per yard, whereas the price paid to Davis was $1.50 per yard. Naud and Perreault have filled their obligations, but Davis made a final settlement with his sub-contractors Roberge and Chagnon, unknown to Naud and Perreault, with the result that Naud and Perreault have not yet been paid the sum of $2,100 which is due to them since 1908. Roberge and Chagnon are now in parts unknown and Davis has received big profits, whereas those who should have been paid first have not received anything so far.

The former commission never cared to protect the public, and in many a case the contractors have committed abuses on the properties crossed by the Transcontinental and have laughed at the farmers, at the tradesmen and at their workmen.

I say again that the Transcontinental commission, of which Mr. Parent was president, has shown exceptional kindness to the eleven big contractors with respect to the twenty-one contracts, and that if some detectives of the Burns agency had been called upon to watch what has been going on at the time, as they have done last winter at the Quebec Legislature, surely the detectaphone would have revealed the true causes of that protection which was bestowed on some all-powerful contractors, and that we would have also an explanation of those fortunes which were amassed in so short a time by certain persons.

I wish to say a few words of what has happened as regards contract No. 8. This contract was for the construction of the Transcontinental on a distance of 150 miles eastward, from the Quebec bridge. As you see, this was a very important contract. The engineers of the Transcontinental say that they have handed to Mr. Parent himself the estimates of the Government for this contract before the tenders had been sent in. Did M. P. and J. T. Davis see those estimates after Mr. Parent had got them, in order to prepare their tenders? Here are the facts and I leave it to the House and to the public to draw their conclusions. The esti-

mate handed to Mr. Parent by the engineers contained no price for the wooden piers. Those estimates were remitted to Mr. Parent on the 23rd of January, 1907. The tenders were to be received on the 14th of February, 1907. After he had remitted to Mr. Parent, on the 23rd of January, 1907, the estimate which did not contain any price for the woodwork, the chief engineer noticed having forgotten something and he prepared a new estimate in which he included the woodwork (trestles, etc.); but he did not remit that estimate to Mr. Parent. The tenders were received on the 14th of February, 1907, and after a calculation of those tenders by the engineers, as was usually done, in order to ascertain who had the lowest, the said engineers reached the following result:

		Difference between tenders.
Grand Trunk Pacific Railway	$5,078,334 77	
M. P. & J. T. Davis.	5,105,389 24	$ 27,044 47
O'Brien & Mullarkey	5,245,586 55	140,197 31
Russell & Chambers Co	5,269,671 22	24,084 67
Difference between highest and lowest tenders		$191,326 45

The bid made by Davis was, consequently, $27,044.47 higher than that of the Grand Trunk Pacific, and the contract should have been awarded to the lowest bidder as the public interest demanded that it should be done.

Mr. Parent was there and then informed that the chief engineer had corrected, as it was his duty so to do, the first estimate given to Mr. Parent on the 23rd of January, 1907, that is, three weeks after the tenders had been sent in. Mr. Parent was not satisfied with that. It was then the 18th of February, 1907, the tenders had been opened and Mr. Parent knew their contents. He knew that Mr. Davis did not have the lowest tender; but the contract must be awarded to Davis. In order that this might be done, Mr. Parent ordered the chief engineer to stick to the estimate which had been handed to him by this latter on the 23rd of January and which was erroneous, and he had that estimate signed by the chief engineer, Mr. Lumsden, and by the assistant chief engineer, Mr. Macpherson, on the 18th of February, 1907.

As I have said, the tenders had been sent in on the 14th of February, 1907, but the figure was taken off the estimate signed on the 18th of February, 1907 by Lumsden and Macpherson, in such a way as to create the belief that the estimate had been prepared on the 8th of February, that is, before the tenders had been received.

Had Mr. Parent shown Mr. Davis the estimate which had been handed to him by the chief engineer on the 23rd of January? He says in his deposition that he does not recollect having done so. One thing is certain and it is this: Davis got the contract by means of this estimate, and he could not have got it had the right estimate such as corrected, been taken as a basis.

This contract was awarded to M. P. and J. T. Davis for the price of $5,011,343.50, and up to the 31st December, only 80 per cent of the work had been done, and however, the work called for by this contract should have been completed by the 1st of September, 1908. On the 21st of December Davis had estimates to the amount of $6,-341,855.99, or $1,330,609.40 more than implied by his contract.

This contract contained 103 items, and with respect to one only, that is, the item of the filling by train, Davis had estimates for 2,700,000 cubic yards. This item gave Davis 45 cents per yard according to his contract with the Transcontinental commission, and he had sold his contract to a sub-contractor who got 29 cents per cubic yard, which left a net profit of 16 cents per yard for M. P. Davis, who realized $432,000 net profit on this one item.

Here are a few of the prices which Davis got from the Government and paid to the sub-contractors:

	Main contractors.	Sub-contractors.
Item 4, solid rock..	$ 1 45	$ 1 26
Item 5, loose rock	65	42
Item 6, common excavation	27	22
Item 59, concrete 1-2-4...	15 00	11 00
Item 62, concrete 1-3-5...	10 50	8 15
Item 63, concrete 1-3-6...	10 00	7 60
Item 74c. train filling....	45	29

As you see, it was important that this contract should be obtained, and it is probably for this reason that such serious irregularities as those above mentioned were indulged in without any hesitation, in order to favour a powerful friend. No doubt that, realizing such profits, Davis must have often repeated the words 'very decent,' 'very decent.'

Contract No. 8 is not the only one by means of which Davis has realized profits extraordinary and altogether unjustifiable. By means of contracts Nos. 16 and 17 he received many hundred thousands of dollars for which he did no work. Those contracts, Nos. 16 and 17, were awarded to M. P. and J. T. Davis on the 29th of

October, 1908, at prices much higher than those generally given by the Transcontinental Commission to the other contractors. The following list compares the prices awarded to Davis for those contracts, Nos. 16 and 17, with the prices awarded to the other contractors for work of the same nature on the Transcontinental:

	Prices paid.	Average price on other contracts.
1. Clearing	$ 60 00	$ 50 00
3. Grubbing	175 00	145 00
4. Solid rock	1 90	1 60
5. Loose rock	85	60
6. Common excavation	43	29
7. Ex. in foundations	1 50	97
8. Ex. in cofferdams	5 00	3 12
10. Piles delivered	40	28½
12. Sheet piling	80 00	57 00
13. Sheet piling, Wakefield type	100 00	74 00
15. Pole drains	75	52
16. French stone drains	2 00	1 52
17. Paving in culverts	7 00	4 01
18. Crib filling	4 00	2 24
19. Riprap, hand laid	5 50	2 98
20. Riprap, randim	4 00	1 90
22. Round logs in cribs	40	26½
23. Cedar mudsills per M	50 00	40 50
24. Framed trestles per M	90 00	52 00
25. Caps, &c., per M.	90 00	51 40
26. Ties and guard rails per M	90 00	50 77
27. Stringers per M	90 00	62 00
28. Cedar in culverts.	50 00	43 50
29. Plank in crossings.	45 00	32 50
30. Timber in culverts.	50 00	43 50
30a. Timber in cofferdams	60 00	44 00
30b. Timber in caissons	100 00	66 43
58. Concrete in 1-2	30 00	16 40
59. " 1-2-4	18 00	14 00
60. " 1-3-5	17 50	13 00
61. " 1-3-6	16 00	12 00
61a. " 1-2-5	18 00	14 60
62. " 1-3-5 in arch culverts	17 50	13 00
63. Concrete in 1-3-6 in arch culverts	16 00	12 42
64. Concrete in 1-3-6 in box culverts	16 00	11 50
65. Concrete in 1-4-8	14 00	10 75
66. " 1-4-8 in walls of buildings	16 00	11 68
67. Masonry, first class	25 00	17 00
68. Masonry, second class	18 00	13 50
69. Masonry, third class	16 00	10 30
70. Masonry, dry	10 00	7 00
71. Masonry, in arch rings	30 00	23 40
76. Ties, first class	70	51
77. Ties, second class	65	46
78. Switch ties, per M	70 00	45 00

The work relating to contract No. 16 should have been completed on the 31st of December, 1910, and the work to be done according to contract No. 17 should have been completed in March, 1911.

Several months after those contracts were signed, Messrs. Davis had not yet begun to work. Of this the president of the Grand Trunk Pacific complained bitterly in a letter addressed to Sir Wilfrid Laurier himself on the 2nd of August, 1909:

My dear Sir Wilfrid,—On the 29th day of October, 1908, the National Transcontinental Railway Commissioners awarded two contracts for the construction of about 204 miles on sections 'D' and 'E' of the National Transcontinental Railway. The first section starting on the west end of Fauquier Brothers' Abitibi contract, in the province of Ontario, about 100 miles west of Cochrane, for a distance of 104.24 miles; the second contract commencing at the termination of the first and joining Fauquier Brothers' contract north of Lake Nipigon, a distance of 100 miles. By the terms of these contracts the work was to commence immediately after the execution of the agreements to be proceeded with continuously and diligently under the personal supervision of the contractor until completed, the date of completion being December 31, 1910.

This work is remote from rail transportation, the closest point being 100 miles west of Cochrane. The prices at which the work was awarded were very high and consequently sufficient to allow contractors to build tote roads or some other means of transportation and getting in supplies so as to immediately commence work. To the best of our knowledge no attempt has been made as yet to open this work, and the indications are that while the work, as before stated, was let at very high prices on account of the difficulties of transportation, it is now the intention of the contractors to haul their material over a portion of the Fauquier Brothers' track work, on which will be completed the present season, say about 50 miles, and haul along right of way to their own section 50 miles distant. This delay will add largely to the profits of the contracts with no commensurate advantage so far as the National Transcontinental railway is concerned, and under the circumstances I will ask that the Government arrange for the cancellation of existing contracts and ask for new bids which can undoubtedly be obtained on very much reduced schedule prices, particularly so if it is known that the contractors will be enabled to haul their material and supplies over such portion of Fauquier Brothers' work as track has been laid up.

Yours very truly,
CHAS. M. HAYS.

Mr. Hays also sent a copy of this letter at a later date to Mr. Parent, asking for the cancellation of the contracts, and that new tenders be called for this work. Mr. Parent refused to take any action, and we do not find that any pressure was brought to bear on the contractors to take steps to ensure the early completion of these two contracts.

The Transcontinental was in duty bound to cancel these two contracts awarded to

Davis, and they had a perfect right to do so under clauses 8 and 20 of the agreements. But Davis was not interefered with and clearly he had elbow room with the commission and more control over the matter than the very men who were bound to protect the public interest. Those contracts awarded to Davis were not cancelled, and on September 16th, 1909, they were sold by Davis to O'Brien, O'Gorman and McDougall. These gentlemen agreeing to pay over to M. P. and J. T. Davis 10 per cent of the total cost of the work which was to be done on those two contracts.

The Transcontinental Commission under the control of its president, Mr. Parent, and the Liberal Government itself, sanctioned those two transfers. This handsome transaction, up to the month of October, 1913, had yielded over to Mr. Davis net profits amounting to $740,000, and Mr. Davis made this profit out of the contract without having to turn a spade or risking a cent himself.

These two instances show how truly solicitous the Transcontinental Commission was for its contractors. and it is on good ground that the investigation commission states in its report that throughout this great national undertaking the late Government sought to encourage extravagance without ever troubling itself about economy.

How are we to account for the Grand Trunk Pacific Company having encouraged such a recklessness and wantonness of expenditure? Simply for this reason, that the Grand Trunk Pacific Company had been awarded five contracts for the construction of 353 miles of the Transcontinental. On the 31st December, 1911, this company had government estimates amounting to $15,365,000.

The former Transcontinental commission, in its dealing with the Grand Trunk Pacific, exhibited the same extravagance with the other contractors, and should that company have advocated economy, it would have suffered from it, in the carrying out of the five contracts it had been awarded.

The Grand Trunk Pacific Company made enormous profits out of its contracts without taking any risk, by sub-letting all its contracts at a profit of 5 per cent, and on the 31st December, 1912, it had already received net profits amounting to $768,250, accruing from that 5 per cent. The contracts awarded to the Grand Trunk Pacific Company by the Transcontinental Commission were as follows and were carried out by the contractors whose names appear opposite each contract:

No. 1—50 miles to Corbett and Floresh.
No. 2—39 miles to Toronto Construction Co.
No. 4—67 miles to Toronto Construction Co.
No. 11—46 miles to Macd and O'Brien.
No. 14—158 miles to J. H. Reynolds, Foley, Welsh and Stuart.

None of the guarantees given by the Liberal Government in connection with this undertaking were adhered to, and there is no better way of proving it than by examining each one of the 21 contracts.

Contract No. 1, engineer's estimate of cost, $1,017,051.43; contract awarded to the Grand Trunk Pacific Railway Company, the latter undertaking to carry out this contract for the sum of $989,895.90.

The date for the completion of the work was September 1st, 1908, and it was not yet finished in 1912, but on 31st December 1911, the contractors had an estimate of $2,214,-311.20.

Contract No. 2, chief engineer's estimate of cost, $326,341; contract awarded to the J. W. McManus Company, for a sum of $289,190.62. The date of completion for this contract was August 1st, 1908, but it was not yet finished in 1912, and the contractors had already estimates for an amount of $587,081.

Contract No. 3, estimate of the cost of construction, $933,137; contract awarded to the Grand Trunk Pacific Company, for $767,435. The date of completion of the work was September 1st, 1910, and it was not yet finished in 1912. The contractors had then estimates amounting to $1,042,618.

Contract No. 4, estimate of cost $3,356,389. Contract awarded to the Grand Trunk Pacific Company for $1,898,124. The date of completion of the work was September 1st, 1910, and it was not yet finished in 1912. The contractors had then estimates amounting to $2,805,000.

Contract No. 5, estimate of cost, $2,232,891. Contract awarded to the Willard, Kirchen Co., for $1,646,253. The date of completion of the work was September 1st, 1910, and it was not yet finished in 1912. The contractors had then estimates amounting to $3,023,784.

Contract No. 6, estimate of cost, $1,478,395. Contract awarded to Lyon and White, for $1,385,941. The date of completion of the work was September 1st, 1908, and it was not yet finished in 1912. The contractors had then estimates amounting to $2,409,112.

It would be superfluous to mention each contract, but let it suffice to say that in each contract the conditions as to time and

prices were not complied with by the contractors who benefited thereby, without any consideration for the public interest.

Let us now come to what the old Government did in connection with certain transactions in the city of Quebec.

We have evidence that in those transactions thousands of dollars were paid by the Transcontinental Railway Commission out of sheer favouritism and the Government had received no consideration whatever for the sums thus paid by them. I am referring to Mr. Bergevin's transactions. One Adolphe Chevalier had a dock-yard in the city of Quebec, which was located on a piece of ground belonging to the Duchess of Bassano. Chevalier occupied that piece of ground under a lease which was to expire on the 30th April, 1912. He had been advised that his lease could not be renewed after that date. Mr. Raoul Bergevin, a close friend of the hon. S. N. Parent, who was well aware that Chevalier would have to remove his graving-dock on the 1st of May, 1912, offered to buy his rights for the balance of his lease for the sum of $4,000. This took place in August, 1911, a few weeks before the general election. Bergevin told Chevalier that he was buyer for the Transcontinental and that he would give him this $4,000 for the balance of his lease provided Chevalier promised him not to work for the Conservative candidate in the division of Quebec West. That Bergevin was aware that the lease was to expire on the 30th April, 1912, is shown by Bergevin's evidence before the Investigating Commission, (page 575) which is as follows:

Q. But his right was over on the 30th April?—A. Yes.
Q. You knew that?—A. Yes, and that was in September.
Q. And he was to keep possession?—A. Until the 1st of May.
Q. Then he would have to get out anyway?—A. Yes.

Being well aware of the fact, Bergevin paid over to Chevalier $4,000, and Chevalier remained in possession of the graving-dock, the plant, etc., and continued to keep possession of it till the lease was over, and on the 1st of May, 1912, he removed everything himself and remained the owner of it.

There is no doubt that Chevalier himself could have got nothing from the Transcontinental Commission, but Bergevin sold to the latter for $4,250, absolutely nothing, and we have the evidence of Mr. Bergevin himself, page 617 of the report, which is as follows.

Q. You did not own the Bassin de Radoub?—A. No, only the right to the 1st of May.
Q. You knew quite well you did not own that Bassin de Radoub?—A. Yes, I did not buy any property.

And yet the deed of sale, dated October 10th, 1911, passed before C. E. Taschereau, notary public of the city of Quebec, says that Bergevin was the owner of the graving dock, as evidenced by the following extract from the deed of sale:

Whereas the said parties of the other part, for the ends of their railway line, require the demolition of a graving dock belonging to the said party of the one part situate upon the lot number two thousand five hundred and twenty-five (2525) on the official plan and book of reference of the cadastre for Champlain Ward, in the city of Quebec, which is the property of the said R. R. Bergevin, he having purchased it from Adolphe Chevalier, by deed of the twenty-sixth day of August, 1911, before Jos. Allaire, N.P.

There is no doubt that this clause was inserted in the deed, in order to have people believe that Bergevin was the actual owner of the graving dock, and yet Mr. Parent who is a lawyer and Mr. Taschereau who is a notary public had before them when they passed that deed, the notarial deed passed between Chevalier and Bergevin, on the 20th August 1911, before notary Allaire.

Mr. BUREAU (translation): Would the hon. gentleman allow me to tell him that what he has just stated shows that Bergevin was the owner of the property?

Mr. SEVIGNY (translation): Mr. Speaker, I have stated that the Duchess of Bassano was the owner of that property.

Mr. BUREAU (translation): What does he sell?

Mr. SEVIGNY (translation): Nothing, absolutely nothing, as will be seen by exhibits 35 and 36 of the report.

But there is another most serious feature to be pointed out in this transaction. Mr. Parent tells us that he resigned his position as president of the Transcontinental Railway Commission on the 6th October, 1911, and yet it was by an authentic deed passed before notary Taschereau, on the 10th October, 1911, (exhibit No. 36) that he undertook, on behalf of the Transcontinental Railway Commission, to give Mr. Raoul Bergevin $4,000 for nothing.

Bergevin states that he really made that transaction with Mr. Parent himself as shown by his evidence, page 576 of the report:

Q. With whom did you make it?—A. Mr. Parent.

Q. He is a lawyer?—A. Yes.
Q. And a very distinguished lawyer?—A. I had to pass that before the notary, Taschereau.
Q And you made the bargain with Mr. Parent himself?—A. Yes.

Let us now review the transaction made by Mr. Parent and Mr. Bergevin in connection with the Martineau ice-house, (exhibits 32 and 33 of the report). Mr. Bergevin tells us again that he made that transaction with Mr. Parent, on the 11th August, 1911. Bergevin bought an ice-house from Martineau for $2,000; and here again he took good care to tell Martineau that he should abstain from working against the Liberal candidate in the division of Quebec West.

On the 30th September, 1911, after the general election was over and a few days before Mr. Parent resigned his position as president of the Transcontinental Railway Commission, Bergevin sold this ice-house to the Commission by a deed signed by Mr. Parent, for $3,700. Within the space of one month, that ice-house had increased $1,700 in value. There is no doubt that Martineau himself could not have got a single cent from the Transcontinental Commission for this ice-house; but it was quite a different case with Mr. Bergevin who was then doing campaign work in the county of Montmorency, as he himself states, for the son of the president of the Transcontinental Commission, who was then running in that constituency as a Liberal candidate. The hon. member for South-Renfrew (Mr. Graham) has denounced in this House the change made by this Government in the site of the Transcontinental shops which the old Administration had decided to build at Cap Rouge, about eight miles from Quebec. A few political friends of the old Administration having heard that the Transcontinental shops were to be built at Cap Rouge had bought a considerable tract of land in that locality, with a view to making a most profitable speculation. But then you should have seen how they raged and fussed when it was decided that the shops were to be built at Saint-Malo, instead of being built at Cap Rouge, and one of those speculators even went to the length of saying that he would spend $25,000 to defeat Napoleon Drouin, the mayor of the city of Quebec, because he had approved of the project of building the shops at Saint-Malo.

Mr. ETHIER: (translation) Would the hon. gentleman allow me to put a question? Could the hon. gentleman name the men who were to derive such enormous benefits from the transactions he has just referred to?

Mr. SEVIGNY (translation): Yes. In answer to my hon. friend, let me tell him that I was referring to Mr. Amyot, a legislative councillor and the owner of a large tract of land at Cap Rouge. When he heard that this gentleman had decided to build the Transcontinental shops at Saint-Malo, and that the mayor of Quebec, Mr. Drouin, had approved of it, he stated that he would spend $25,000 to defeat Mr. Drouin at the next contest for the mayoralty.

Mr. ETHIER: (translation) Who are the men who were to derive such considerable profits from those transactions?

Mr. SEVIGNY: (translation) I named Mr. Amyot.

Mr. ETHIER: (translation) Who are the men who were to make such large profits? You are proceeding by innuendos and insinuations, whereas you should give the names of the people who were to derive such enormous profits from those transactions.

Mr. SPEAKER: Order, Order.

Mr. ETHIER (Translation): I raise a point of order. I ask the hon. gentleman to name those people.

Mr. SPEAKER: I do not see any point of order; it is merely a question that the honourable member is putting to the member for Dorchester.

Mr. SEVIGNY (Translation): Evidently there is no point of order.

The old Government had decided to build the shops at Cap Rouge. I stated that certain speculators had bought land at Cap Rouge with a view to making money thereby, seeing that the Liberal Government had decided to construct the Transcontinental shops there, and when finally it had been desired to buy a site at Saint Malo with a view to building those shops there, these same speculators, when they realized that they could reap the profits they were in hopes of deriving from their property at Cap Rouge, uttered threatening words, among others against Mayor Drouin, as I said a little while ago.

They have also found fault with the Government because they had decided to build the union station on the Champlain market site. Yet, this decision has met with popular approval in the city of Quebec, because the Champlain market site had

been forced upon the city of Quebec and against the will of the citizens in general, with the exception of a few speculators who had bought all the properties in that quarter, for which the Government would have had to pay exorbitant prices, had the station been built on the Champlain market site.

How strange to hear our opponents finding fault with what the Government is doing for the city of Quebec, when everybody knows that, during their long lease of power of fifteen years, they never troubled themselves about the interests of our city.

In the city of Quebec, friends of the old Government have succeeded in making considerable money, and particularly the office of Taschereau, Roy, Cannon and Parent. On the 2nd October, 1911, after the downfall of the Liberal party, Mr. L. A. Cannon applied to the Exchequer Court at Ottawa, for 99 warrants in possession for the Transcontinental Commission on all the properties situated in lower-town between the Champlain market site and Cap Blanc, and yet it was already a matter of public notoriety that this Government would not carry out the project of the Liberal party in that regard. Mr. Cannon succeeded in making a few thousand dollars which were paid to him by the Transcontinental Commission, and this shows that before resigning his position, Mr. Parent had unduly favoured his political friends, without troubling himself in the least about the public interest which he was bound to safeguard.

Mr. Speaker, one could make endless speeches and weary himself out denouncing all the scandals perpetrated by the old Administration in the building of the Transcontinental.

In conclusion, let me tell the House that the Liberal party went to the people in 1908 with the slogan: 'Let Laurier finish his work.' The Transcontinental had been decided upon by the Liberal party in 1903, and Sir Wilfrid Laurier then said that time would not wait, and that there was no opportunity for pausing and deliberating, before taking action.

He then told the people of Canada: 'Let us hurry up and build the Transcontinental, in order to keep the trade from the west for our Canadian ports, and if we neglect to construct that line now, we shall soon see our western traffic diverted to the United States.' A few years later, when the country had spent hundreds of millions of dollars, in defiance of the promises made to the public, for the construction of that railway, the same Liberal party came down and told the people that they must approve of the reciprocity treaty entered into with the United States, and by the very fact they were asking the people of Canada and particularly the western provinces to send their products to the United States and to American ports. There was a gross discrepancy between what the Liberal party had promised us in 1903 and what they proposed to us in 1911, and the people of this country refused to approve of such inconsistency and that is why on the 21st September, 1911, they made up their minds that the Liberals had governed the country long enough. The Liberal party wanted to construct the Transcontinental as a testimonial to their leader, without troubling themselves about the interests of the country, forgetful of the fact that men may come and men may go but the country goes on forever. This Transcontinental undertaking such as carried out by the Liberal party shall stand as a monument to the Liberal party in the future, but the record shall never be a credit to that party.

Mr. ARTHUR LACHANCE (Quebec Centre) (Translation) Mr. Speaker, the House, I presume, does not expect me to follow the hon. gentleman who has just taken his seat, through the field which he has thought fit to cover. My hon. friend from Dorchester has been proceeding by innuendos with regard to men who have been held in the highest esteem and have enjoyed the full confidence of their fellow countrymen. To mention only one name, the Hon. S. N. Parent upon whom my hon. friend has tried to cast suspicion as to his integrity in the administration of the Intercolonial, is so much above those attacks that it would be a needless task to repel those attacks, because public opinion has already undertaken to refute them. For fourteen years, Mr. Parent has enjoyed the confidence of the rate payers of the city of Quebec; moreover, for eight or ten years, he has been a Crown Minister and even Prime Minister of the province of Quebec, and after so many years passed by Mr. Parent in the public life of this country, no one has yet been able to point out a single instance in which he has been guilty of a breach of the laws of honour and integrity in the discharge of his official duties. Such is my answer to the remarks of the hon. member for Dorchester, and to the speech which his frame of mind has inspired him to make.

For my part neither in public life nor in private life have I ever made it a practice to proceed by innuendos. This course I

have ever adhered to during the many years I have practised law and I have always endeavoured to see facts in their true light and to turn them to the best account. Therefore, I have made up my mind to adhere to such course, letting alone any insinuation or innuendo, and strictly confining myself to facts, when addressing this House. In reply to the insinuations of my hon. friend from Dorchester who would fool people into believing that the transaction in question was engineered with a view to getting money for replenishing the exchequer of the Liberal party, although he has refrained from so saying in so many words, I shall take Mr. Bergevin's affidavit and under the circumstances such a solemn declaration should carry more weight than the groundless insinuations resorted to by the hon. gentleman, in his endeavour to cast odium on the Liberal party.

Let me now read Mr. Bergevin's affidavit.

(Mr. Bergevin's affidavit.)

Canada.
Province of Quebec.
Quebec District.

I, the undersigned, Raoul R. Bergevin, of the city of Quebec, merchant, solemnly declare:

That I have taken cognizance of certain parts, reproduced and commented upon by some newspapers, of the investigation held by Staunton and Gutelius in connection with the construction of the Transcontinental Railway the report on which was lately brought down in the House of Commons and in which I am referred to as having received from the Transcontinental Commission the sum of seven thousand nine hundred and fifty dollars ($7,950) for my rights to an ice-house and other buildings coming from Napoleon Martineau, jr., and to a graving dock coming from Adolphe Chevalier, which I possessed in the Champlain ward, and in which it is stated that this transaction, made only with a view to the electoral contest, cannot be justified in law or in morals;

That as I am justified in believing that those unjust attacks are levelled at me, merely with a view to making political capital, I owe it to the public and to myself to give explanations on the various items or charges brought against me;

That on September 30, 1911, I accepted from the Transcontinental Railway Commissioners the sum of three thousand seven hundred dollars ($3,700) as an indemnity for rights which I possessed in the ice-house built on lot No. 2525, of the cadastre for the Champlain Ward for which I had paid $2,000 to Napoleon Martineau, jr., under a deed of sale passed before Couture, Notary Public, on the 19th August of the same year;

That this ice-house had been valued at the sum of $3,703.52 by Messrs. J. G. Scott, Georges, Emile Tanguay and Edmond Giroux, the three valuators named by the commission and who had the duty of making valuations of all the properties which the commission wished to take possession of in the city of Quebec;

That on October 6, 1911, I sold to the said commission the rights which I had to a graving dock situated at the same place for $4,250. I had acquired the rights thus sold from Mr. A. Chevalier under a deed of sale passed in my favour on August 26, 1911, and I paid him the sum of $4,000 as purchase price;

That two valuators, Mr. Tanguay and Mr. Giroux, had valued the graving dock at $3,500, while the third one, Mr. J. G. Scott, had differed in opinion from them and valued the property at $6,000;

That those transactions had been approved of before the execution of the deed by all the officers of the commission appointed for that purpose, and it was only after the required formalities had been complied with that the Transcontinental commissioners signed the deeds, through their president;

That although I am charged with having made those transactions with the commission with a view to procuring funds for the election of September, 1911, I must declare that there has never been between the Hon. S. N. Parent or anybody else and myself any agreement or promise, either directly or indirectly in this connection and that as a matter of fact I never subscribed any money for that election;

That the money which I paid as purchase price for the said ice-house and the graving dock came out of my own funds and was not given me either directly or indirectly by the Hon. S. N. Parent, who has not in any way, any more than myself, benefited by that transaction;

That the purchase made by me from Chevalier had no connection with the election of September, 1911, and the payment of $4,000 which I made to him had nothing to do with the election, and in proof thereof, Mr. Chevalier did work during that election exclusively in the interest of the Conservative party;

That it is not true that the bargain was made with the Hon. S. N. Parent, but with Mr. A. Tremblay, who had been appointed to purchase properties for the commission;

That I never was shown nor did I read the books of the Transcontinental Commission, and that the charge brought against me by some newspapers is untrue;

That, since my rights to the graving dock and the ice-house above referred to have been sold to the Transcontinental Commissioners, the latter have administered the property, since they have taken possession of it. It seems evident, notwithstanding anything to the contrary stated by the newspapers, that I had something to sell and that I have disposed of it in their favour;

That I never exhibited my title-deeds to the Hon. S. N. Parent, but that I merely handed them over to the notary intrusted with their preparation and I have received from the latter the cheques in payment of the above mentioned consideration in the same deeds;

That by a deed dated September 30, 1911, Mr. Jules Grenier who, I believe, is a good Conservative, disposed of his rights to an ice-house which he owned next to mine, in favour of the Government for a sum of $2,500, and as this deed is exactly similar to the one signed by me and as the agreements are absolutely identical, it is evident that the investigating commissioners Staunton and Gutelius did not deem it fit to debate his case, no doubt choosing to level their attacks at me, one of their political opponents;

And I make this solemn statement believing it to be true and knowing that it has the same

force and effect as if it were made under oath and under the Statute of Canada of 1893.

(Signed.) Raoul Bergevin

Made before me, in the city of Quebec, on the 19th February, 1914.

(Signed.) Cyrille F. Délage, N.P., C.C.S.

A true copy of the original

H. L. DeMartigny.

When the Hon. Mr. Parent was examined before the investigating commissioners, Mr. Staunton and Mr. Gutelius, he also denied under oath having, either directly or indirectly, received any money from Mr. Bergevin, and that the contract was a bona fide contract and that he believed that Mr. Bergevin had never subscribed any money for the election.

I need not dwell any further on that affidavit which absolutely sets at naught the laboured argument of the hon. member for Dorchester.

I now come back to the main subject matter and I wish to point out under which conditions and circumstances took place the investigation held by Mr. Gutelius and Mr. Staunton and the report made by them, as also the positions taken by the different political parties in Canada on that matter. In this connection, it may be said that the Transcontinental National Railway is exclusively the work of the Liberal party. From the very outset, when the project was mooted in 1903, the Conservative party opposed it in the House of Commons as outside of this House, and ever since they have never missed any opportunity of showing their hostility.

Upon two different occasions, at the general elections of 1904 and 1908, the people did approve of this undertaking; but our opponents stuck to their guns and maintained their fighting attitude. For a while they entertained the hope of battering in the project, by instigating the Hodgins investigation, but they were disappointed in their hopes and their investigation proved to be a flash in the pan. Such was the frame of mind of the Conservative party when they came into power, after the general election of September 21st, 1911.

From time immemorial the Conservative party have had a political ally in the Canadian Pacific Railway Company. Now this tried and unwearied friend saw in the Transcontinental a work which was indebted for its existence to a strictly Liberal initative, a most formidable competitor, owing to the immense superiority of the latter, resulting from its hauling power and the working facilities of the line, a superiority which has no equal throughout the American continent and gave it the undisputed control over the traffic in the districts accommodated by it.

Then or never was the time for the allies to pledge, acording to an antique and solemn custom, in an unmistakable manner, their friendship, and could there be found a more convincing pledge than handing over to the tender mercies of the unkind mother the young giant, so that she might crush the life out of him? That is why the Conservative Government hastened to give up their property, that is to say, the eastern section of the road from Winnipeg to Moncton to the discretion of Mr. Leonard and Mr. Gutelius the latter having been, up to then, in the service of the Canadian Pacific Company, and the former having been in the employ of the same company for many years. As there was an obstacle in the way, I mean the composition of the Transcontinental Commission, the Government did away with it and as there remained another impediment, I mean the superintendence, inspection and acceptance of the works of the eastern section by the Grand Trunk Pacific Company, the Government ignored that difficulty by dispensing with such superintendence, inspection and acceptance, contrary to clause 7 of the contract passed by Parliament in 1903.

Still, as the Government wished to put public opinion on the wrong scent, and draw a red herring across the track, as they wished to find some kind of pretense for mutilating the Transcontinental, as they intended to do, we have had, consequently, the investigation and the report of Mr. Gutelius and Mr. Staunton, a report adorned with digressions and so exaggerated that from its every page oozes out the constant thought, the deliberate endeavour of finding against the whole world crimes and criminals as also the greediness of salaried commissioners who are anxious to justify the $65 daily remuneration paid to them by the Government for running down and disparaging a national undertaking.

All the same, notwithstanding the warmth displayed by the investigators, what a disappointment this report has proved for the Government! What was to be done? Where there is nothing Cæsar loses his rights, and where there is no evil the devil himself is powerless. I say it again, what a disappointment! For, our public undertakings have always admitted of a special meaning for our political opponents: the Pacific scandal in 1873, the Quebec harbour scandal in 1889, the Curran bridge scandal and how many others were impressed in their memory with glistening

hues. But then, no sooner had they come into power than behold! They took their bearings; in their impatience to discover the trails of some new scandal. Alas! Sad for them to say, nothing has come out of that investigation and, to cap the misfortune, nothing new either. In fact, what does it amount to? A new edition of the charges which were the object of the Hodgins investigation and were disproved by the evidence, a new edition also of all the points raised in this House in 1903 and subsequently and have been threshed out ad nauseum.

Our opponents, further, wanted to put the public under the impression that the former Administration had squandered the public money, and so anxious were they to compass that end that several weeks before the production of the report, they announced in their newspapers that a useless expenditure of $40,000,000 had been undeniably established. Now, when this government countenanced those unjust denunciations, they had before them a report which proved that the public was being deceived. However, theirs was to be a short-lived joy; their report is now before the people and what is it after all, if not a vindication of the Liberal Administration and their uprightness in this undertaking, an attestation that this Government have redeemed the pledges given to the electors of the Dominion?

I do not intend to go into the details of this report, as several hon. gentlemen have already dwelt upon them, and I shall confine myself to a few general remarks.

The whole report is based upon a paradox and its conclusions may thus be summed up: you could have saved $40,000,000 had you constructed the line otherwise. Nonsense! who questions that proposition? why, it is a truism, and really they are paying Mr. Gutelius too high a salary when they give him $65 a day to find that out. I could go still further and say: surely, we could have spent one hundred million dollars less had we built the road differently; all depends on the mode of construction, and, consequently, is not this the only real question: could we save 40 million dollars and at the same time build a road which would be superior to any other road in Canada or in America as to hauling power, speed of trains, security of the passenger and freight traffic, working facilities and cost of management? Such is the only question which Mr. Gutelius takes precious good care not even to touch upon. Now, such was the kind of road which the Liberal Government had undertaken to build in order to keep abreast of the rapid progress of the West; they had so pledged themselves before the House when bringing down the Bill in 1903, and before the electorate at the general elections of 1904 and 1908; they had then given them the assurance that they would organize the line so as to secure to the St. Lawrence route the largest possible volume of traffic from the West and with this end in view, it was necessary to give the road a degree of efficiency unheard of so far in the railway world. Such is the only viewpoint from which one sought and could form a correct estimate of the cost of the undertaking.

But Mr. Gutelius, ignoring all these considerations relegates in the shade this aspect of the problem and taking as a term of comparison the existing railways, he infers therefrom that $40,000,000 has been squandered, without this expenditure of $40,000,000, a road might have been built the equivalent of the Canadian Pacific Railway, so dear to the heart of Mr. Gutelius, but not this Transcontinental railway which the Liberal Government intended giving Canada, and then it is quite true that Mr. Gutelius would not have experienced the sorrow of seeing that dread competition springing up from the Atlantic to the Pacific.

So, Mr. Gutelius, in order to render more plausible his deductions, felt it necessary to resort to a paradox, and to start from a false principle or at least from one diametrically opposed to that laid down by the Liberal Government in the construction of the Transcontinental.

Mr. Gutelius has interspersed his report with digressions which do credit to that amiable American imperturbability of his, and then takes all that into account in his data. I find a delicious sample of it when he finds fault with the construction of the eastern section, from Lévis to Moncton. Still, did not parliament, the Senate and the House of Commons decide upon the organization of that section as upon that of the other section of the road, after the question had been thoroughly threshed out under all its aspects?

But what importance are we to attach to the decisions of that legislative assembly, the highest authority in the Dominion, as compared with the views of Mr. Gutelius who poses as the infallible censor of its decrees? What! useless, you say that part of the road condemned by Mr. Gutelius, although it runs through the counties of Levis, Bellechasse, Montmagny, l'Islet,

Dorchester, Kamouraska and Temiscouata, not to speak of counties situated outside the province of Quebec? The road traverses municipalities, parishes, townships which for the most part have been settled of old, which are in great need of transportation facilities, and which, save Dorchester and Levis, possess no means of communication other than the Intercolonial. In some cases these localities can only be reached by driving over fifteen or eighteen miles of country roads. Let Mr. Gutelius tell the people whom this new road will henceforth accommodate so well that it is useless; and I am pretty sure that the retort will be short and sweet. No doubt hon. gentlemen on the other side who represent those constituencies are going to protest against that report and vote accordingly; I expect that the hon. member for L'Islet, among all others, will protest with the utmost energy, for already he has acknowledged and praised the usefulness and advantages of the Transcontinental as regards his constituency. In La Patrie of March 14, 1914, I find a letter under his signature addressed to Mr. Dupuis, on the subject of agriculture, from which I extract the following:

> I have not run down my county. No, thanks to the enlightened policy of the Conservative leaders, thanks to the improvements carried out in our district, thanks to the development of our national port, thanks to the completion of the Transcontinental, agricultural production will increase materially, and we shall be in a position to deal fairly with the farming class.

So I say these hon. gentlemen should repudiate this report; but if they remain silent, their constituents may rest assured that they will find in the ranks of the Liberals friends who will defend the rights and interests of their counties.

I notice another amusing instance illustrative of Mr. Gutelius' self-assertion, in his criticism of the Government for not appointing engineers on the construction commission, as if that commission had not at its disposal a staff of prominent engineers for advice and guidance. There is no situation more laughable than that.

It is no wonder then that it was not thought advisable to have Mr. Gutelius sworn as investigating commissioner; that would assuredly have been an awkward check on the fanciful excursions of that sovereign arbiter through the affairs of the Transcontinental. This is an ex-parte enquiry, just as if an accused person were to be tried without being granted the privilege of filing a plea and empanelling a jury. This is an ex-parte enquiry followed by pleadings, or rather by a most violent charge against a political party. Mr. Gutelius has made a superhuman effort with a view to fulfilling the expectations which his masters in Ottawa founded on his resourceful mind. True, he has disappointed them, but that was through no fault of his: simply there was nothing for him to work on. Apparently they are giving him credit for the good will he has shown, they have entrusted him with the management of the Intercolonial. Was that the promised regard for his aggresive inroads into the preserves of the Transcontinental? I am not in a position to say, but very likely the public when they are apprised of all these facts, will be of that opinion.

I also have been disappointed with Mr. Gutelius, though not on the same grounds as hon. gentlemen opposite. My disappointment is due to his utter silence as regards the circumstances and prime movers of the mysterious changes effected in connection with the building of the road in the course of the last two years between the lake Superior junction and the city of Quebec. He may have feared making some rather startling discoveries; or else he may have known beforehand how the matter stood having himself taken an active part in the happenings. Whatever the reason, the changes effected are as follows: When, in 1903, Parliament authorized the building of the Transcontinental, the understanding and the pledge was that Quebec would be, during the season of navigation, the main terminal point for shipments of freight, and particularly of grain, from the Canadian West, which this road had for its special object to move. The harbour of the old city of Quebec was at one time the busiest of all; then it was gradually deserted, as sailing ships were being replaced by steam launches, and wooden crafts by iron vessels, the effect being to carry further inland the head of ocean navigation and to make Montreal the great metropolis we all know. We are all aware of those facts. However, our opponents feign to be ignorant of them. For a number of years they have been endeavouring to explain away that desertion by the lack of accommodation, and for that lack of accommodation they hold the Liberal Government responsible, the charge being that the Government have not done anything for the port of Quebec since 1896.

The hon. Postmaster General has made himself the echo of such unjust denunciations before the House in the course of his

remarks in reference to the address in answer to the speech from the Throne: I quote his words:

Now, Sir, about what my hon. friend said for the port of Quebec. Whilst I said let us do what is right for the port of Montreal, I say, at the same time, Providence has given us in Quebec one of the finest ports to be found in the world. But this port has not been equipped so far. Though the city of Quebec has been represented for years by members of the Liberal party in this House, there is not to-day—there was not before we came into power—accommodation of berths for more than three ships in the great port of Quebec.

In other words, once more, the Liberal Government since 1896 has not done anything for the harbour and the city of Quebec. Such a statement presupposes a great deal of audacity and very little truthfulness, and no one will trust its sincerity. Who do you expect will be made to believe that the falling off of ocean shipments within the last fifteen or twenty years is due to lack of accommodation? Hon. gentlemen opposite know as well as we do that the only cause is the insufficiency of ocean freight, whether outgoing or incoming, which Quebec supplies, so much so that steamship companies, rather than have their ships stop to load or unload such freight, find it more to their advantage to ship it direct to Montreal and thence to have whatever is needed in Quebec sent back at their expense. The hon. Postmaster General is well aware of the fact, how many a time has the board of trade, and even the city council, strongly protested against that practice and insisted that the freight destined to Quebec firms should be unloaded on the way up. But all was in vain, the answer was always invariably the same: cargoes outgoing or incoming are not important enough.

Moreover, the hon. Postmaster General has himself given another reason besides the lack of accommodation. In the annual report of the council of the board of trade for the year 1913, at page 50, I find a summary of the meeting of April 16, 1913, where reference is made to two letters of the hon. Mr. Pelletier, one relative to the mail service, which is of no practical interest to us just now, and the other concerning the freight question. The views attributed to him in the latter connection are as follows:

The minister expresses the opinion that it is important to clear up the question of the cost of labour at Quebec, which according to the companies' contention, is from 65 to 70 per cent higher than in Montreal. That accounts for the freight being shipped to Montreal thence to be forwarded back here by rail. The minister thinks it would be a good thing if the Harbour Commission undertook the unloading of the ships having their landing port here at a rate per ton on a par with that exacted from the companies in Montreal.

So that, according to the hon. minister, that wicked Laurier Government is alone responsible. As regards proofs of the zeal of the Liberal Administration for the welfare of the port of Quebec, our opponents have had them constantly under their eyes since 1896 and have been in a position to record day by day its unmistakable manifestations. They surely must have noticed that the breakwater was extended over thousands of feet, at an expenditure of $2,500,000. That extension has rendered possible for the last five or six years the unloading at one time there of three of the largest of the great modern steamships. How is it that only one company practically made use of that wharf by bringing a steamship there every fortnight? There was nothing to prevent any other company from having its ships land at that point; why did they not take advantage of the opportunity if not solely on account of lack of traffic. Thinking people are aware of those facts, and hon. gentlemen opposite are wasting their time trying to have them view things otherwise than in their true light. That which accounts for the lack of traffic at that port, is the isolation of Quebec, especially during the winter season, from all the large railway and trade distributing centres. What would have been the use of the most improved plant and facilities as long as we remained unable to supply sufficient traffic to induce shipping companies to have their boats stop over at our port? That is just the very point in connection with which the Government endeavoured to help us.

The building of the Quebec bridge originally had no other object. That is another undertaking which the hon. Postmaster General apparently knows nothing of, an undertaking the cost of which was estimated originally at five or six millions, put at the disposal of the Quebec harbour. When the bridge company was formed, the building of the Transcontinental was not yet being considered; that bridge had then as its main object to afford an entrance into the city of all the railways along the south shore: the Intercolonial, the Grand Trunk, the Quebec Central, the Delaware and Hudson and several other minor lines running inland and having their terminals at Levis over one or the other of these lines.

I do not wish to provoke reprisals. But,

since our opponents are constantly repeating that the Liberal Government has not done anything for Quebec, I shall answer that we can proudly compare in that respect the action of the Liberal Administration with that of the Conservative Government from 1878 to 1896.

A single contract is found to the credit of the latter, the Louise Basin and pier, at a cost of about two million dollars, out of which from seven to eight hundred thousand dollars were fraudulently taken; and everyone knows that it was not to benefit the friends of the Liberal cause, but in favour of the friends of the Conservative cause.

To all accounts was not the construction of the Transcontinental the work par excellence which was to revolutionize the port of Quebec and make it one of the most active in Canada; and that thanks to the Liberal Government who took the adequate legislative measures to make it the principal terminal of that line? Then, if the Transcontinental is an accomplished fact the citizens of Canada, and particularly those of Quebec, surely owe no gratitude to the Conservative party for it; have not the Tories sufficiently fought against this enterprise in this House as well as on the public platform; have they not denounced it during the general elections of 1904 and 1908; but the electors, better advised and with better intent, marched on, and now congratulate themselves that this road has become an urgent need of this country. Moreover the antithesis is most amusing; it is really pleasant to see our adversaries take so much pains in trying to force upon the Quebec people the belief that the Conservative party is the saviour of our harbour exactly because of the works performed to implement it, and which are a necessary consequence of the Transcontinental. Would anything be said of these stations, these elevators, these warehouses, these docks, etc., were it not for this line?

Nevertheless, one feels that the present Government have a grudge against this Transcontinental; the Hon. the Minister of Finance gave it the cold shoulder last year in a speech in this House—perhaps in the Budget speech—and it was only unwillingly that they accepted the financial obligations deriving from it. He almost blamed it on the Liberal party for having placed this strong enterprise on the shoulders—weak it is true—of the Conservative party; I understand these complaints by comparing the vigorous new performer and the peevish purveyor that the Tory party is towards him. From that state of mind, the hon. the Postmaser General, although a Quebecker, has not escaped, and we had the counterpart of it, in Quebec, in the decisions which he took with the hon. the Minister of Railways and canals and Mr. Leonard.

They evidently chose to destroy the logic of the whole plans of the Transcontinental. Thus it was logical to locate the shops near the road at Cap Rouge, a point where all the rolling stock must pass from Prince Rupert to Moncton, to build the line along the river in order to have an independent and free circulation, to erect the elevators, stations, warehouses, freight yards at the Champlain market and vicinity, up towards Wolf's Cove and Lampson's Cove; all of which would have been bordered by deepwater wharfs which could have been lengthened at will to thousands of feet according to the growth of traffic. Everything harmonizes in this unity; the Transcontinental is at home, in furniture of its own as we say in law, having exclusive control of its line and terminals and being in direct and immediate communication with oceanic navigation through deep water docks. Anybody can appreciate the strong advantages of such an organization without being an engineer. I will incidentally quote Mr. A. Allan's opinion, who said, in connection with the docks owned by his company near Champlain market:

'I deeply regret,' stated Mr. A. Allan, 'to be compelled to leave such a fine site which ought in reality to be the center of oceanic trade of the harbour from the standpoint of navigation.

'This site,' added Mr. Allan, 'offered to steamers facilities that are not for the present met with anywhere else, and which the breakwater will never offer later.'

It is then natural that the construction commission guided by these engineers and the advice of the railroad shipping companies, and representatives of all shipping interests should have accepted this enterprise and that the Liberal Government should also have approved it, with the satisfaction, furthermore, of seeing the Board of Trade and the city council of Quebec then and now concur in these views. In fact, in the annual report of the council of the Quebec Board of Trade for 1913, I find a summary of the meeting held on January 30th, 1914; the chairman, Mr. W. A. Marsh, makes therein a review of the year's customs, and I read the following words on pages 10 and 11:

The change of government at Ottawa some sixteen months ago brought about a change of plans as to the terminals of this railway, and it is now proposed to have a union passenger

station with the Canadian Pacific, at the Palais, instead of at the Champlain market. We had thought the original plan good enough, especially as it would have given the Transcontinental spacious terminals of its own, under its own exclusive control, but as authorities versed in such matters think differently, the Board of Trade has expressed its approval of the change as a union passenger station, which would seem to us to be of minor importance.

But we are still on the more important question of freight of opinion that docks and elevators to handle the traffic for a few years at least should be built at or near the present end of the track at deep water on Champlain street, where it can be quickly done. The Board is not in any way opposed to the extension of the Louise docks. On the contrary, we cordially approve of the enlargement of these splendid shipping docks, which have already proved so beneficial to our city. But we fear it will be several years before these proposed improvements there can be made and connections established so as to be reached by the Transcontinental over its own rails. In the meantime, how is the western traffic to be handled?

I will again quote from Mr. Marsh, page 122, in a letter answering certain statements of a Quebec newspaper on the attitude of the Board of Trade in relation to the Transcontinental business.

Nevertheless we have done our best to draw the attention of the Government and of the public to the urgent necessity of making some immediate provision in the shape of docks and elevators to handle the traffic of the Transcontinental railway, which will be running this year, and of placing those facilities at some points already reached, or about to be reached by the tracks of the railway. It is admitted that the proposed improvements at the Louise docks excellent and necessary for the trade of the port though they are, will not fill these requirements.

Then, even to-day the Board of Trade upholds the terminal adopted by the Liberal Government, in that they only remain consistent with their decision taken in 1906, when the Cap Diamant site was chosen.

On October 2, 1906, the chairman of the Construction Board, the Hon. S. N. Parent, called the following companies to a conference which was held in Quebec on October 12: Canadian Pacific railway, Grand Trunk, Grand Trunk Pacific, Intercolonial, Delaware and Hudson, Great Northern, Quebec Central, Quebec and Lake St. John, the Quebec Electric Company, the Allan Steamship Company, the Dominion and Leland lines, the Harbour Commissioners, the Quebec Transport Company, Lloyd's agent, Mr. E. C. Fry, the Mayor of Quebec City, the Chairman of the Board of Trade, the Chairman of the Maritime Interests of Quebec, Mr. Power, M.P. for Quebec West, Mr. Arthur Lachance, M.P. for Quebec Centre. Most of those invited attended the meeting; a sub-committee was formed which appointed three engineers, Messrs. Hoare, Doucet and Boswell, who were asked to study, and report on, the terminal question. On November 7, the report was handed to the sub-committee and on November 27 the general committee took action in accepting Messrs. Hoare and Doucet's report.

The three engineers were unanimous in recommending the Cap Diamant site for the Transcontinental terminals; as to the station proper, Mr. Boswell preferred a union station at the Palais, with a tunnel reaching to it from Wolfe's Cove. Here is that report:

Quebec, October 21st, 1906.

Mr. R. Audette,
Chairman of the Quebec Terminal Committee.

Sir,—In conformity with a resolution passed on October 12th, 1906 by the Quebec Terminal Committee, containing instructions to Messrs. E. A. Hoare, St-George Boswell and myself to 'prepare a blue print of the plans with estimates of the Quebec terminal,' which plans and estimates were to be addressed to the members of the Committee, after which the chairman was to call the next meeting of the Committee, I have the honour to report that the engineers above mentioned and myself met on the 19th inst. to debate on the choice of an appropriate site of the terminal, from the most advantageous and economical standpoint both for railways and shipping. We have arrived at a unanimous conclusion as to the site of the deep water docks and the large freight yards from Lampson's Cove to Puizeau Point, as shown on the plan already submitted to the different members of the Committee; but there was, after, a strong difference of opinion as to the extension of the terminal tracks to the terminal station, one of the engineers believing that a union terminal station should be built on St-Roch street, and reached by means of a double track tunnel of about 5,000 feet with a 6 degree curve at its south end (Lampson's Cove) and 10 degree curves at its north end (St-Roch street), the two others being decidedly of opinion that the terminal tracks should be pushed along the river from Lampson's Cove to where the Champlain market now stands, where a terminal station would be constructed, it being understood that the city would widen its streets or surrender other avenues in order to insure free communication between the Louise basin and the site of the terminal station, as it is bound, and that the interested railways would lay the required tracks along the water front parallel to Dalhousie street for the handling of their trains between the present terminals and the aforesaid terminal station.

Thus, not being able to agree on a unanimous decision, it was impossible to make a joint report; so we decided between ourselves to submit separate reports to the Committee for further consideration.

As we unanimously agreed on the site of the deep water wharves and the large freight yards shown on the plan between Lampson's Cove and Puizeau Point, the only thing left to debate was to find whether it was better to locate the terminal station where the Champlain market

now stands, or whether it was more convenient for all parties concerned to place that station on St-Roch street, so that it could be used as a union station by all railways entering Quebec. The quantities used as a basis for the calculation of the building costs are taken from figures furnished by Mr. E. A. Hoare, chief engineer of the Quebec Bridge Company, who had some boring done along the shore of the river to ascertain the depth of the water.

In my opinion, a union station on St-Roch street is inconvenient, if not impracticable, for the following reasons:

1. The C .P. R., Quebec & Lake St. John, and the Quebec railway L. & H. already have their own terminals, and without being authorized to speak officially on behalf of the C. P. R. and Q. R. L. & P., I know that the Quebec & Lake St. John are absolutely opposed to any change of their present arrangements, and to all participation in the charges that would be imposed upon them for the use of a union station.

2. It is impossible to build a union station in the vicinity of St-Roch street without expropriating a considerable portion of the present C. P. R. terminal, since it would be necessary to leave these grounds at the disposal of all the roads entering the union station from the north of St. Charles river.

3. So many railways entering the city across St. Charles river would practically block entrance to the Louise docks, the lines running practically at right angles to each other. The C. N. R., the Q. & L. St. J. and the Q. R. L. & P. all enter the city from Limoilou, so that all tracks from St. Roch street to Louise basin must cross the main lines of these railways, which would practically destroy the usefulness of the union terminal station.

4. A tunnel a mile long at the most, with 6 and 10 degree curves at the outlets, is completely unacceptable, and I am sure it would be unanimously condemned by all railroad managers. Apart from the enormous cost of a tunnel wide enough for two tracks, the expense it would incur would not add a dollar to the value of the water front from Lampson's Cove to the Louise docks.

5. Nothing justifies the outlay of such a high amount, because a tunnel of that kind would serve almost exclusively passenger traffic; it is a well known fact that the large traffic from the north to points south of the St. Lawrence, has its way all traced as far as the Quebec bridge through a line from Limoilou passing at Cap Rouge, in so far as the C. N. R., the Q. & L. St. J. and the Q. R. L. & P. are concerned, whereas the C. P. R. would have its own junction with the Quebec bridge at Bélair.

The extension of Lampson's Cove docks to Champlain market is, in my estimation a much better scheme than a union station, should the latter be possible, for the following reasons:

1. All that would be paid for development on the water front would be money well spent, because it would be so much added to the harbour for the reclaiming of land and space.

2. Along the water front can be found space enough for the establishment of a terminal station suitable for the accommodation of all the new railroads that might come into Quebec after the construction of the bridge, because the great westward passenger and freight traffic brought to Quebec by various steamship lines, just as well as the western traffic going eastward, would not have to use that terminal station, as the trains would go along the wharves where the steamships would berth.

3. Along Dalhousie street and parallel to that street, it is easy to establish roads of communication for the accommodation of lines already having their terminals in Quebec, in order to secure for them an access to the terminal station. Those additional passage-ways for railroads and cart roads can be had at a very moderate price, which could be shouldered partly by the city and partly by the railway companies using same.

4. Such an extension would by no means interfere with the local ferry-boats and other local steamboats, because the present wharves are in a quite dilapidated condition and require extension as well as improvement. Nevertheless, those local lines would not have enough traffic to interfere seriously with the traffic between the city and the landings of the steamers.

I annex to this report an approximate estimate of costs for three deep water basins with railway lines built as far as Champlain market where the terminal station would be, as well as the alternative plan of a union station on St. Roch street. The figures are based upon the estimates of Mr. E. A. Hoare.

For the various reasons above mentioned, I am of opinion that it would be a serious mistake to place our terminal station at any distance from the water front, and that the most advantageous and most economical way, and also the only practicable one, is the establishment of terminals and station, as indicated on the plans that have been submitted to you.

I have the honour to be, sir,
Your obedient servant,

A. E. Doucet.

So that all engineers, companies, citizens, acknowledge that the terminal and accommodations must logically lie from Champlain market up to Wolf's and Lampson's Cove. The Government then, only had to follow these decisions, and they did; when they left power in 1911, the plans were prepared, millions were already voted for their execution, the contract for the station was even adjudged, deepening of the St. Charles river was begun, and about $100,000 had been voted to start work on the lock.

The execution of this unity was to occupy two years, so that at the end of 1913, everything would have been ready for the Transcontinental traffic on its way from Prince Rupert to Quebec. In the face of that impartial and true summing up, I wonder that our opponents are taken seriously when they pretend that the Liberal Government did nothing for Quebec. If Quebec saw her hopes revived she owes it to the Liberal party, and you will see that when these hopes are fulfilled it will be through that same party. I want no more evidence of this than what occurred since 1911.

The present Administration had but taken charge of things when they stopped all work, especially between Cap Rouge and

Quebec. Strangely enough, the true reason for this decree is not given. Why this mystery? Modifications to plans are alleged; two years were not needed to change the site of the station and shops; well, that is the only visible result of that slow and equivocal gestation; beyond that there is nothing at all. The last rail between Cochrane and Quebec was laid in November, 1913; this being the case, freight trains could arrive from the West at Quebec when navigation opened. But there is absolutely nothing there to receive them. The national object of this line is above all to give an opening to the western products, and for the present, and for a long time to come the principal product of exploitation will be grain; henceforth the first facilities needed are elevators and docks to store and ship it. Where are the docks and where are the elevators? Absolutely nothing. But, in fact, the Harbour Board have erected an elevator on the Louise pier; but there is no water there at low tide and it will require years of dredging to reach a depth of from thirty to forty feet. Nevertheless the Transcontinental has no line in the city or outside to reach there; such is the real position, which no one can gainsay.

At six o'clock the House took recess.

The House resumed at eight o'clock.

SECOND READINGS.

Bill No. 125, for the Relief of Walter James Liscombe.—Mr. Douglas.

Bill No. 126, for the relief of Ethel Cora Robinson.—Mr. German.

Bill No. 127, for the relief of George Fullerton Forsythe.—Mr. Schaffner.

THE NATIONAL TRANSCONTINENTAL RAILWAY.

After recess Mr. Lachance resumed the debate and said:

Mr. LACHANCE: When you left the chair at six o'clock, I was speaking of the absolute lack of accommodation at Quebec for the traffic of the Transcontinental, of the trains which could come to us at the opening of navigation, towards the end of April or the beginning of May, and I was recalling to memory the campaign waged by the press of the Conservative party before 1911, against the then Liberal Government, who, they claim, jeopardized the interests of the City and port of Quebec by the slowness of the terminal works.

Amongst the newspapers patronized by the present Government which gained distinction in this campaign, I could mention l'Evènement and the Chronicle. Previous to 1911, both dailies denounced the supposed inaction of the then Administration with reference to the terminals; what censure should they not carry against the present Administration, who let two years elapse without a remedy? It must then be that they were not late, if the masters of to-day in Ottawa look placidly on the running out of months and years without raising a finger, even if they claim, however, that they do not jeopardize the interests of Quebec.

How can one explain the somnolence of the present Government in the face of so disastrous a situation obtaining in our city, if it is not that this apathy is voluntary; and then for what object? Is it to make out of Quebec a secondary terminal which will receive but a small share of the western traffic, or even have to be satisfied with local traffic only? Numerous facts authorize us to conclude so; the most serious and the most peremptory is the scamping of the Transcontinental between Cochrane and Quebec, a scamping which, if not remedied at once, will necessarily reduce that part of the line to a purely local railroad between the two cities. Yes, in the face of the change in grades we must conclude that our lot will result in costly and almost useless buildings that will have served to lead us astray and to meduse us during the time required to plot our ruin and destroy our supreme hope.

In 1903, the Laurier Government had the construction of the Transcontinental voted by Parliament; the contracts stipulated that the western division from Winnipeg to Prince Rupert would be built by the Grand Trunk Pacific Company and the eastern section from Winnipeg to Moncton by Canada. This latter section was to be then operated by the company in consideration of a rent of three per cent of the cost of that eastern section, the lease being for fifty years. It was also decided to at once organize a perfect line able to give the greatest hauling capacity and the greatest operating facilities that modern civil engineering could produce. And why? Because the progress of the West was so rapid that it would give to that new line at its very inception the full quantity of freight that it would be able to haul.

It is then evident that the most important point was to secure the greatest possible uniformity of level on the whole line. In order to realize this, the engineers fixed the maximum of eastward grades to four-tenths of one per cent or twenty-one feet per mile of rail, and the westward grades to five-tenths of one per cent, or twenty-six feet per mile; and subsequently they brought the latter to six-tenths of one per cent, or thirty-one feet per mile; but it must be remarked that these grades were only to be used where it would be impossible to avoid them, the constant preoccupation being to build a road of uniform level wherever it was feasible.

Such were the instructions given by the chief engineers to their assistants and upon which the line was organized up to 1911.

Owing to these measures, a locomotive could haul at least double the freight weight that she could have hauled on the other lines then existing in Canada and even in the Americas. The highest authorities have given their opinion on that point. Thus Mr. Elliott Cooper, president of the Civil Engineers Institute, of London, wrote on November 5th, 1912, speaking of these twenty-one feet per mile grades as follows:

> On the Grand Trunk Pacific, the standard 2,000 ton freight train can be hauled without assistance from Winnipeg to Prince Arthur by a locomotive, the hauling power of this locomotive thus being four times above that of the Great Northern, Northern Pacific and Union Pacific locomotives, and five times superior to those of the Sante Fe, and seven times superior to those of the Canadian Pacific.

Mr. Leonard, speaking on the same subject at a banquet tendered to him upon his appointment to the Construction Commission, expressed an opinion similar to that of Cooper:

> It is not easy to say what the completion of that line to Moncton will cost; but most of the works are under construction, apart from 400 or 500 miles between Cochrane and Quebec. The Quebec bridge which, when finished, will be the greatest in the world, will absorb 48,000 tons of steel, and its construction will take five or six years. Eastward, our line has a 0:4 grade, and a locomotive can haul 1,600 tons, whereas on other roads where there is a 1:0 p.c. grade locomotives can only haul 800 tons.

I can quote on the same question the opinion of Mr. Macpherson, to-day Mr. Leonard's assistant, and previously assistant to the chief engineer of the building commission. On June the 2nd, 1909, he spoke before the British Association for the Progress of Science and said:

> The distance of the Transcontinental road will be 1,351 miles from Winnipeg to Quebec and as the maximum of the grade for eastbound trains is 21.12 feet per mile, with allowance for curving, the most powerful engine built to-day, the Mallet Articulated Compound, of which an excellent description is given in the Railway Age Gazette of April 30, 1909, can haul a dead weight of 4,200 tons behind the tender on that grade.
>
> Assuming that the tare is 33½ p. 100 per ton, the net paying load would be 2,860 tons, averaging 95,333 bushels of wheat for each train. Supposing the profits of that train to be $4.40 per mile of train, exactly double that of the profits realized by the Canadian Pacific on every mile of freight train in 1908, it is seen that the cost per bushel for the whole distance of 1,351 miles between Winnipeg and Quebec, is $4.25. The lowest cost prevailing to the knowledge of the writer from Fort William to Montreal, by way of the lakes, canals and St. Lawrence river, on a distance of 1,216 miles, would equalize 4:44 cents for 1,350 miles, so that at $4.40 per mile of train, the locomotives above mentioned could haul grain eastward on the Transcontinental, from Winnipeg to Quebec, for 0:19 cents per bushel less than the cheapest water route could carry on the same distance, and at 10:86 cents a bushel cheaper than the present rail and water route could carry between the two points in question.

Under these conditions, transportation cost for every bushel of wheat was to be reduced by one half of what it has been up to date. Such are the enormous advantages that the Liberal Government wanted to extend to Canada in building this road under the conditions that I have just recalled.

More than any other, the city of Quebec was interested in this uniformity of level. The maximum of those twenty one foot per mile grades had been fixed with the object of assuring the entry of western grain in the harbour. The Liberal government had promised to the people that the road between Winnipeg and Quebec would be built in such a way as to give the St. Lawrence route the greatest possible volume of traffic; this is why it assured, by proper gradients, the greatest hauling power to the locomotives.

But as soon as the present government came to power, they replaced the construction commission by a single man, Mr. R. W. Leonard, one of the first acts of whom was to increase the gradients from twenty one feet to as much as one hundred feet per mile, and he repeated this operation in from fifteen to twenty cases between Cochrane and Quebec; he put in lieu of first grades, some momentum grades that the trains ascend owing to the momentum acquired. This is good if all goes well; but if anything defective occurs in the mechanism when the train reaches the bottom of the grade or when it ascends the slope, the train stops and is moreover in-

capacitated from starting anew, even after the defect has been remedied. But let us suppose everything for the best. It is impossible to admit in the face of mishaps which inevitably occur on all lines that the momentum grade can have the same value as a uniform level; this is elementary common sense. And on that account, Mr. Leonard was nonplussed to victoriously answer the criticism of the G. T. P. engineers on the accentuation of the grades. He could only answer that if these virtual grades, for some unforeseen reasons, did not give satisfaction, it would be easy to come back to the twenty foot per mile grades. There was then a doubt in his hypothesis, an uncertainty, an aléa, why then did he not keep the first grades, if the superiority of the line was exactly due to the fact that they were to avoid as much as possible everything that could give scope for a doubt, an uncertainty or an aléa.

We then have the admission of Mr. Leonard that the government are experimenting; but there is something else under the lid; I have said one word about it and I would come back to it: but was it on such a rule that the government should have made such an experiment. They claim a saving to realize; this reason is not serious; but even if they were to save one or two millions, would they be justified in risking the full efficiency of a line that will cost one hundred and sixty millions?

If then, and this cannot now be denied, the modification of grades decreases the hauling power from Cochrane to Quebec, the result is clear and deplorable; the western trains will not be able to reach our harbour, that section of the road will have been reduced to the role of a second class line having nothing else but local traffic for support. Once more Quebec will have been deceived if not betrayed.

All these facts constitute an enigma that has been undeciphered up to now, a latent hostility that works in the shadow detrimentally to the interests of Quebec.

Who was it who first suggested a change in the maximum of grades? Last year, in the debate on the Transcontinental estimates, a question was put to the hon. the Minister of Railways who at first took refuge in very evasive replies; he admitted, when hard pressed, that Mr. Leonard had authorized these changes; but he remained silent on the question of knowing who had suggested this to Mr. Leonard. The hon. members for South Renfrew (Mr. Graham) and for Carleton, N.B. (Mr. Carvell), declared they were convinced that these modifications had been first inspired by Mr. Gutelius, who then had charge of the Transcontinental investigation, but the hon. minister persevered in his silence. Why this reticence? This is a technical question; why the first and real instigator should fear to endorse the responsibility thereof in public? Are we then in presence of a conspiracy, the first act of which would be the extreme slowness in the completion of the work between Cochrane and Quebec? In February, 1913, the Government answered on that point to a member of the Upper House as follows:

> Q. On the first of November, 1912, how many miles remained to be graded between Cochrane and the city of Quebec?—A. 35 miles.
>
> Q. On how many miles are the rails not yet laid?—A. 88 miles.

Hence, the work to be completed required only a few months; it took more than one year. The second action would be the accentuation of the grades; the third, the change of site of the Quebec terminus and the fourth, the investigation and the report of Messrs. Gutelius and Lynch-Staunton.

The enigma is getting more undecipherable when we know that such changes were authorized by the government without the assent of the Grand Trunk Pacific railway company, rather against their will. The government was bound to secure their consent. According to the act passed by the parliament we find clause 7 which reads as follows:

> In order to insure, for the protection of the company as lessees of the eastern division of the said railway, the economical construction thereof in such a manner that it can be operated to the best advantage, it is hereby agreed that the specifications for the construction of the eastern division shall be submitted to, and approved of by, the company before the commencement of the work, and that the said work shall be done according to the said specifications and shall be subject to the joint supervision, inspection and acceptance of the chief engineer appointed by the government and the chief engineer of the company, and, in the event of differences as to the specifications, or in case the said engineers shall differ as to the work, the questions in dispute shall be determined by the said engineers and a third arbitrator, to be chosen in the manner provided in paragraph four of this agreement.

Hence the work between Winnipeg and Moncton was to be carried under the charge, inspection and acceptance of the government engineer and that of the company, jointly: I said, a minute ago, that alterations had been made without the assent of the company. As an evidence, the president, Mr. E. J. Chamberlin, protested against those changes in the grades, by a letter, dated July the 18th, 1912, in which

he declared that the company would not accept them. Here is the letter:

Ottawa, July 18, 1812.

Major R. W. Leonard,
Chairman,
Transcontinental Railway Commission,
Ottawa, Ont.

Dear Sir,—I learn from our engineers that the standard of work on that portion of the Transcontinental railway between Lake Superior Junction and Cochrane, which was at the outset adopted and has so far been complied with, is being departed from, and that instead of four-tenths grades and permanent structures, you have authorized grades up to one per cent and the erection of temporary wooden structures. In regard to this I would call attention to clause 7 of the agreement of the 29th July, 1903, which provides that the work of construction of the eastern division shall be done according to the specifications approved by the company and shall be subject to the joint supervision, inspection and acceptance of our chief engineer, and the chief engineer of the commission. I beg to say if this work is done in accordance with what I understand to be your recent instructions, it will not be in compliance with the agreement nor satisfactory to this company, and cannot be accepted.

(Signed) E. J. Chamberlin.

So, one of two things the company will either refuse to accept the road between Cochrane to Quebec or will operate it as they please and if we protest, they will say: live up to your own engagements and we will give you what you are entitled to. The result will be that from Cochrane, the traffic we had a right to expect, will be diverted through the North Ontario and Timiskaming Railway, if the company do not direct it to their terminals at Portland or New York.

Another enigma is the conduct of the Government in the decision reached to regarding the terminals at Cap Diamant. Against the opinion of the three engineers and the companies I have already mentioned, they give preference to the opinion of one man. Practically, Mr. Leonard sets aside the line along the river from Cap Rouge and the terminus, to Champlain market, as adopted in 1906, and substitute for it the Louise pier and the site of the Canadian Pacific Railway.

If such is not the case, I would ask what would be the use of the elevator erected by the Harbour Commissioners on that pier; I would ask the meaning of the following utterances of the Postmaster General before this House on the 25th of June, 1913:

The entrance of the Transcontinental into Quebec will be magnificent. The N. T. R. will pass over the Cap Rouge trestle, as I understand, and will enter Quebec through the valley of St. Charles river coming down by the spur line to the Canadian Northern line. Then we will have a central station at the Palais while the Minister of Railways and National Transcontinental Commission are building the lines on the water front, from Sillery to Champlain market. From Champlain market there is a rise on which a line is being built. This shows that the N. T. R. will practically encircle the city of Quebec.

Such are the arrangements and it is no wonder that they meet with the warm approval of all the citizens of Quebec.

For the same reason I quote a statement of the Right Hon. Prime Minister, at a banquet of the citizens of Quebec, in October, 1913, which I find in the report of the Board of Trade, page 181:

There is also a connection with the Canadian Northern railway at Cap Rouge which permits entrance to the St. Charles' side of the city and which can be utilized for this purpose pending the completion of the tunnel that will connect the St. Lawrence waterfront with the new station on the Palais site.

Finally, I find an unchallengeable evidence in the estimates for the new terminus. Out of a total of $5,847,250, there is only a sum of $60,000 for a freight station and accessories at Champlain market.

Why that additional line to be built from Cap Rouge to the line of the Canadian Northern?

This carries the supposition of a right of way over that line and that of the Canadian Pacific Railway, to enter the city and the property of the Harbour Commissioners in order to reach the ocean steamers, hence hundreds of thousands of dollars in rent will be paid annually; would the Government assume such an obligation had they not decided for a long while, though they refuse to confess it, to practically abandon the operation of the Transcontinental over the line along the river, as far as the terminus is concerned.

It is difficult to imagine such a singular position; this Government have the advantage of utilizing their line, of building on the spot, wharves, elevators, storages, stations, everything remaining under their sole control; but ignoring all that, they go begging from their neighbours a right of way in exchange for enormous indemnities, and the whole to the detriment of their own property.

What to think of such a chaos of management? That the Government are reducing to their minimum the accommodation facilities of the Transcontinental; out of a situation that was natural and simple they have intentionally dug for a state of things productive of all kinds of complications and embarrassments. Is there any need of additional evidence? Let us take the change

of the station site. Who will profit by that? Less the Transcontinental than the Canadian Pacific, the political ally of the present Government. The late Government were to organize at Quebec, for the Transcontinental, for a terminus of the highest class; the Canadian Pacific Railway, properly speaking, have there no facilities for handling freight; by the changes made in gradients, the Transcontinental will be nothing more than a line the volume of traffic of which will be almost equivalent to that of the Canadian Pacific Railway from lake Superior to Quebec; there is no more disproportionate competition for the latter, then. Let us add to this that the Government seek in the offices of the Canadian Pacific Railway the authors and the inspirers against which we protest.

Owing to these modifications, the Canadian Pacific railway will build a so-called passenger union station for the use of which this Government will pay a rent above the interest on cost and of which the Canadian Pacific railway will finally be the only beneficiary, passenger traffic on the Transcontinental being necessarily very limited for years to come. Moreover, the Canadian Northern and the Quebec and Lake St. John have their own station and terminal a few hundred feet further off.

The station will be built at the Palais; the Transcontinenta. have no line reaching thereto. It is proposed to build a tunnel, a work of many millions and of many years and that when western trade would come to us at any moment and that when for two years the Government did not even think of building a station of some kind for freight at the Champlain market.

Will that tunnel ever be built? It is doubtful. In fact, in the correspondence between Messrs. Chamberlain and Leonard, I find a letter from the latter to the former in which are the following words. The letter is dated from Ottawa, May the 13th, 1913. The words aforesaid read as follows:

> I agree with you that the immediate construction of a tunnel is not justified by the traffic that we have a right to expect and it might be possible that such a tunnel will not be necessary for two or three years and possibly before the completion of the Quebec bridge so that we do not seek to take that into consideration now.

Do you think that the city council would have agreed to a change in the site of the station if they had known of that letter? I do not believe it. According to the letter, the tunnel would be opened only if the traffic increases sufficiently to justify the undertaking, but in the meantime the Transcontinental will remain without any access to its station. Anyhow, the estimate of the new terminals do not mention a cent for that tunnel and the plans on which these new estimates are based indicate nothing for a tunnel. We are then compelled to conclude that this tunnel is a project the realization of which is most problematical and that at all events it will be constructed only in a very distant future. In order to abandon the site of the Champlain market, the Government pretended that that space was insufficient. We have on that point the opinion of Messrs. Hoare and Doucet, who declare to the contrary, and in relation to this, their judgment must be worth that of Mr. Leonard. It is also alleged that for the unity of the terminals, the ground in the location of Cap Diamant is not large enough; here again the three engineers appointed by the sub-committee of citizens have stated the contrary and Mr. Leonard being alone against them I see no reason why preference should be given to the latter. Nevertheless the working area in platforms from the market going up towards Lampson and Wolfe's Cove is larger than any other in the city.

The hon. the Postmaster General declared in this House that nine-tenths of the population were opposed to the building of the station at Champlain market . I beg to be allowed to contradict him flatly. I live in Quebec, I meet as much and perhaps more than he does, the different classes of the population, and I declare that the majority have accepted the decision of the sub-committee of citizens and acknowledged that the station and the deep water docks were greatly advantageous.

It is said that the city council approve the change of the site of the station. Yes, but if they had known one half of the facts we now have, to-day, I am sure they would have refused to concur; and Mr. Leonard sent this ultimatum to them: accept or else you run the risk of having the same delays you so much deplored, and at the same time, the Canadian Pacific railway said to the same council: give us certain streets of lower St. Roch and St. Sauveur, or else you will not have our grounds to build a station. One must admit that the Government, the Canadian Pacific railway and Mr. Leonard took good means to attain their object.

Nevertheless, this question of a passenger station is secondary; the only important thing for the time being is the freight

station and the terminals; but I wished to question the correctness of certain declarations made on the scarcity of grounds and about the objection of the majority of citizens, and according to the report of the Board of Trade that I read a moment ago, one can see that the opinion of the citizens is still what it was in 1908.

Thus, for two years the Government have taken up this secondary question of the union station and set back the only important one, that of the freight terminals; owing to the glaring of that union station, they succeeded in hiding their inaction, in deceiving us, and perhaps, also in dissimulating the objects that we are justified in believing to be contrary to the interests of Quebec.

As to change in site of shops, many observations, that I just now made, apply. I represent Quebec and it would be far too stupid on my part if I did not look after all that can favour that city; but I deem my fellow-citizens to be too intelligent not to have immediately understood that the shops were destined before long to serve the interests of the road and that the Liberal Government had acted logically in locating them near the line at Cap Rouge, a point where the rolling stock must necessarily pass from one to the other end of the country. However, in my humble opinion, the shops at Cap Rouge, would have, in a better way, promoted Greater Quebec; they were as a rod pinned outside of the limits and in all the immense intermediary highland with limitless horizon, a new residential city would have arisen which, by the natural and inevitable course of things, would have become part of this city before long. To concentrate all in a small ratio is not the best means of promoting expansion.

However, the Liberal Government have a peremptory reason: it is that they intend to immediately utilize the road along the river and establish terminals at Cap Diamant. Their plans did not comprise, for the present at least, any communication via Cap Rouge in the valley of the St. Charles river; it was then impracticable to establish these shops in that valley.

It is now more opportune than ever to recall these facts and to compare the attitude of the parties on the divers questions of the Transcontinental with regard to Quebec. We thus see that at the beginning of the enterprise, and always since, the Liberal government worked with the competent authorities in order to give the greatest efficiency to the road, serving thereby the best interests of Quebec, which were to derive therefrom more benefit inasmuch as the line and facilities would be perfected; all partisanship had been banished in the original plans of the building commission. Very different would be the thought of the Conservative party, if we have to judge by the declamations of their newspapers. Not a single day passes but that they number by thousands and thousands the workmen that will work in that shop, and the millions of dollars that will be derived from it, and as a conclusion they already claim a victory in all the ridings of the city and surroundings. Chance may help them; but this effervescence would justify us in understanding that there was more in this change than a pretence to make political capital.

And, after all, when the public discussed this question, in 1906, it would have been easy for the Liberal party to use it as a partisan exploitation in locating their shops in the city; the government, with reason, refused. It would have been a breach in the adequate plan prepared by the competent authorities as the most advantageous for the unity of the service. And it would be because we have followed this conduct simple, disinterested, patriotic, would I say, that the electors would blame us! Never. The events will give us reason, even before we go to the country.

And there is already a large spot in the picture: the establishments that are erected at St. Malo are by far less important than those that were planned at Cap Rouge; the latter included thirty buildings, those at St. Malo number only fourteen. Moreover, it was intended to build local shops at Wolfe's Cove, covering an area of fifty acres for urgent repairs and to accommodate twelve engines at a time. Furthermore, at a distance of a mile westward of the Champlain station, the road was to be branched and from there twelve parallel lines were to run for one mile forming the freight yards: all that is erased from the new plan.

According to these facts the change in the site of the shops would rather be an appreciable lot to Quebec.

Moreover, a new and essential factor arises to the detriment of our city: the Grand Trunk does not consent to these changes in site of terminal station and shops. Their assent was indispensable under clause 7 of the contract, quoted a moment ago, and that company will be able to rest upon this clause in refusing to take charge of the road with the results aforesaid.

On pages 31 and 32 of the debates of the present session, the Right Hon. the Prime

Minister, in his remarks on the address, in answer to the speech from the Throne, stated on the weight of the word given by the hon. the Minister of Railways, that the Grand Trunk Pacific Company had accepted these changes. I vainly searched to find on what the hon. the Minister of Railways supported his opinion to authorize this statement; I must say that in my opinion, I find the very contrary in the correspondence on that subject between the company and Mr. Leonard. Here is, first of all, the refusal of the company to subscribe to the tunnel and joint terminal scheme, and their intention of following their original plans.

August 29, 1912.

Major R. W. Leonard,
Chairman Transcontinental Railway
Commission, Ottawa, Ont.

Dear Sir,—I have your favour of the 22nd, relative to entrance into Quebec. I have also received a communication from Mr. Woods on the subject, giving somewhat in detail the estimated cost of the proposed tunnel and joint use of Canadian Pacific terminals, which would appear to be in excess of the cost of carrying out original scheme. It therefore seem to this company that it is not desirable to make any change, but that you should go on and complete the original plan which was carefully considered before approval by Mr. Hays and myself. If the land holders are still holding out for an excessive price, they could probably be brought to time by notice of arbitration.

With regard to shops which it was proposed to build near the entrance of the bridge; if difficulty relative to water and sewage is so great, there is no reason so far as the company is concerned why they may not be located at some other convenient point on the line.

Your's truly,

E. J. Chamberlin,
President.

Montreal, May 16th, 1913.

Major R. W. Leonard,
Chairman Transcontinental Railway
Commission, Ottawa, Ont.

We have made careful study of the Quebec situation and feel that there is no possible change of business from Quebec to warrant the outlay of the tunnel scheme and joint terminals with the Canadian Pacific. Therefore recommend erection of respectable terminal at the old market square as originally contemplated.

E. J. Chamberlin.

Here is another letter in the same sense:

Montreal, January 4th, 1913.

Major R. W. Leonard,
Chairman Transcontinental Railway
Commission, Ottawa, Ont.
Re Quebec Terminals.

Dear Sir,—For several months, articles have appeared prominently in the Quebec Local Press, in which a proposition for joint passenger terminals at the Canadian Pacific railway Palais site has been freely discussed.

I might cite among others, the article which

[Mr. Lachance.]

appeared in the Quebec Chronicle, dated May 3rd, 1912, and that in the same paper, published on November 22nd, 1912.

The first article erroneously mentioned the names of several gentlemen as representing the Grand Trunk Pacific railway. The other article stated, that the question of joint passenger terminals had been settled, although subject to certain concessions that were required from the city of Quebec.

Local newspapers later reported that the city council had endorsed the proposed scheme. Reports of subsequent discussions by the said council indicated that important negotiations and decisions had been made, which, if correctly reported in the press, would very seriously concern the Grand Trunk Pacific Railway company, but in regard to which, as far as I know, this company has not been officially advised.

Upon investigating the plan in question, which is on file as a public record in the city engineer's office I find that it is entitled, Canadian Pacific railway Quebec, and shows what appears to be solely a Canadian Pacific railway project, at least it seems too small for a joint scheme and nothing on the plan indicates that it is.

Our company has an agreement with the commission, and the commission has an agreement with the city, covering terminals, at the Champlain market site. The Grand Trunk Pacific Railway company, has no official knowledge of any change in the terminal plans adopted in 1910. This is of course at variance with recent newspaper reports, but we do not believe that any such divergence from previous agreements would be considered without the approval of this company.

Some of the reports infer that the Transcontinental Railway Commission, and the Grand Trunk Pacific railway, jointly favor the proposed union scheme, and that the Champlain market site has been abandoned. This appears also to be an accepted fact by the city council and the general public.

While a possible change of location of terminals has been discussed with president Chamberlin, my understanding was, that nothing definite had been decided, and that further discussion on the subject had been postponed for the time being.

If you can give the president or the writer, some information that will explain just what value to place in the newspaper articles mentioned, it will be highly appreciated.

Very respectfully yours,

H. A. Woods,
Assistant Chief Engineer.

Now, here is the letter in which they refuse their concurrence to a change of the site and the plan.

25th March, 1913.

Major R. W. Leonard,
Chairman Transcontinental Railway
Commission, Ottawa, Ont.

Dear Sir,—I have your favour of the 14th instant, re Quebec shops. The question of shops at Quebec has been very carefully considered, and it is believed that the plans which were prepared by the commission and approved by the Grand Trunk officials are practically what are required at the point.

It is expected that the Grand Trunk Pacific railway, built to the standard to which it is being built and with the Grand Trunk railway back of it, will start with a large amount of

traffic and it will need facilities equal to any of the Transcontinental lines to take care of its rolling stock.

Yours truly,
E. J. Chamberlin,
President.

In short I draw the attention of the House to a letter from Mr. Chamberlin to Mr. Leonard, dated August 9, 1913; it is a statement of the whole situation and of the reasons why the company object to all these changes.

Finally, add to all this the modification of grades heretofore referred to, and the problem which surrounds all this administration of the Transcontinental for the last two years is the more inextricable, but the brutal fact remains: the line is deteriorated to the detriment of the harbour and the city of Quebec.

Perhaps is it not yet too late for Quebec to react if she immediately realizes the difficult position in which she is placed by others. The citizens can yet discount the support of the Liberal party. Their salvation lies in forcing this government to return to the unit of the plans adopted by the construction commission and specially to return to the maximum of grades having twenty-one feet per mile, and to the freight terminals and the Cap Diamant location. If the citizens do not immediately make anew their representations and do not follow them up without respite until they have defeated the unwillingness of the present administration, their cause is in great danger of failure and their legitimate hopes will be frustrated for ever.

Here is my whole thought of the administration of the Transcontinental towards Quebec for the last two years; this administration is incomprehensible as well as unjustified. How and why, I have clearly stated without a desire to injure any one, but with firmness; it was my duty as a representative of the people and as a member for the city. If I am mistaken, so much the better for her. Nevertheless I am afraid it is not so. I have conscientiously examined the facts; why not, why should I have assumed at first a malevolent intention in the alterations of the plans previously adopted? My ardent desire—so natural after all—is that Quebec grows, whatever may be the party that will open for her the gates of a more fruitful future. Also did I investigate the causes, the motives, and try to appreciate in the light of logic and reason the results of administrative action. For me, these results cannot be conciliated with the interests of our city and I cannot find during the last two years, in the authority that prepares them, other causes, motives, than those which I have just outlined. The result: Quebec will be sacrificed; the victim is put to sleep to the sound of that gold with which a few monuments will be erected; they will remain empty; what they needed was the western traffic which they will not get.

However, they would get it if the Government wanted it, if the hon. the Postmaster General exacted it. Will they want it, will they exact it? in all probability, no.

All the same, at this moment, it is less the member of parliament or the Liberal than the citizen of Quebec who now speaks to another Quebec citizen in authority and who has the right, under the circumstances to tell him: exact it, we owe this to the memory of the old city's founder. Yes, in that order of thought, to make of Quebec, effectively, the principal terminal of the Transcontinental, is it not to render homage to him who started from here and traced the road of civilization in northern America.

Annals teach us that his penetrating inlook seized ceaselessly towards that mysterious west to sound its depths and secrets. Does he not now deserve this revelation? From the height of the promontory, where a statue is erected, Champlain—for a soul hovers here—Champlain would contemplate this ceaseless flowing of the golden wheat rushing from the far west to flow at his feet into the holds of ships in order to go out at large to feed the old world; it would be to give him a new testimonial of thought, and the great dead have a right to these remembrances; it would be to give him a new acknowledgment of having been three centuries ago and of yet being to-day the benefactor of two continents, the ancient and the new.

Mr. F. B. McCURDY: (Shelburne-Queens): Mr. Speaker, it is to be regretted that hon. members opposite have not given the country a clear, concise and succinct statement showing why there has been such an appalling over-expenditure in connection with the construction of the National Transcontinental railway.

The Laurier Administration, as a result of the polling on November 3, 1904, received a mandate from the Canadian people to proceed with the construction of the National Transcontinental railway.

Disregarding the warnings and heedless of the admonitions of the responsible head of the Department of Railways and Canals of that day (Hon. A. G. Blair) the members of the House of 1900-1904 supporting the Administration and a majority of the

electors of the country chose rather to listen to the voice of the Premier of that day when he urged unnecessary haste and said: 'We cannot wait because time does not wait.' I quote from 'Hansard,' 30th July, 1903, page 7691:

> The whole of the liability which is incurred by the Government for the building of that section from Moncton to Winnipeg is simply seven years of interest. The sum total of the money to be paid by the Government for the construction of that line of railway from Moncton to the Pacific ocean will be in the neighbourhood of twelve million or thirteen million dollars, and not a cent more. Now, Sir, what is thirteen millions in the year 1903? It is about the surplus of our revenue over the expenditure. The surplus for this year will pay for the construction of this road.

What an estimate!

Mr. Fielding, the then Minister of Finance, and on whom would fall the responsibility of finding the necessary money for the construction of the road, took counsel with a railway expert. Mr. Fielding was also acting Minister of Railways. He consulted Mr. C. Schreiber, who was then, as now, regarded as an engineer of the very highest standing, and who the hon. member for South Renfrew (Mr. Graham) informed the House on Tuesday last, possesses his utmost confidence. He was, I take it, best qualified to give the most intelligent and reliable opinion available as to what the actual cost of such an undertaking would be, for a government would not be justified in undertaking a work of such magnitude without first having secured the advice which in their opinion was the best available. Mr. Schreiber's estimate of July 12, 1903, was as follows:

> I estimate the cost of construction of the Grand Trunk Pacific railway as a road of an ordinary character, such as has been built in Canada with maximum grades of 1 per cent or 52.80 per mile being less than the maximum grades upon the Intercolonial railway, the maximum grades on which road are as follows:
> Bedford grade.. ..1.80%, or 95.00 ft. per mile.
> Folleigh " .. ..1.22%, or 64.42 "
> Metis " .. ..1.22%, or 64.42 "
>
> Estimated cost of the Grand Trunk Pacific Railway.

	Per mile.
Moncton to south approach to Quebec bridge..	$ 25,000
Quebec to Winnipeg..	28,000
Prairie section..	17,500
Mountain section..	67,000
Terminals at Pacific coast	3,000,000

Mr. Fielding wrote to the then Minister of Railways, under date of May 11, 1904, as follows:

> Dear Mr. Emmerson:
>
> Last summer, while I was acting Minister of Railways, and when the Grand Trunk Pacific scheme came up, I asked Mr. Schreiber's opinion as to the probable cost of constructing the eastern division (Government portion) of the road. Mr. Schreiber gave me the information although not in the form of a written report, and I used it in the House, mentioning his name as my authority. His opinion was that a road could be constructed from Quebec to Moncton for $25,000 per mile, and from Quebec to Winnipeg for $28,000 per mile.
>
> These estimates were made for a road of an ordinary character, such as is constructed elsewhere. In order to make a sufficiently liberal allowance for a road of better character, I added 25 per cent, making the estimate $31,250 per mile from Quebec to Moncton, and $35,000 per mile from Quebec to Winnipeg. I have not spoken to Mr. Schreiber on the matter of late, but from other experienced railway men I have received assurances that my estimate was a most liberal one, and that the road could probably be constructed well within these figures.
>
> As above stated, I did not obtain a written report from Mr. Schreiber. I think it might be convenient to have a report from him. May I suggest that you discuss the matter with him and, if there is no objection, ask him to make a short memorandum, putting in writing the information which he gave me last summer.
>
> Yours faithfully,
>
> W. S. Fielding.

It will be observed that Mr. Fielding did not rest his conclusions altogether on the estimates of Mr. Schreiber, but he states that he also consulted, as a careful minister would, other experienced railway men, and received assurances that his estimate was a most liberal one, and that the road could probably be constructed well within those figures. Mr. Fielding informed the House that the total cost of the Transcontinental would be $61,415,000.

The point I wish to make clear is this, that in asking the mandate of the people of Canada, which was obtained on November 3, 1904, the Government of that day represented that the total cost of the road would be $61,415,000, and the present leader of the Opposition (Sir Wilfrid Laurier) in presenting the project to Parliament and to the country, evidently used this estimate of cost as a basis for his statement that the cost to the people of the country would be seven years' interest on this sum, or, as he stated, in the neighbourhood of twelve or thirteen million dollars and not a cent more.

Therefore, I take it, it would be fair to state that on the understanding that the National Transcontinental railway could be built for approximately $61,415,000, the Government was, on November 3, 1904, authorized to go ahead. Add to this amount, interest for seven years at 3 per cent, and we have another $12,897,150, or something less than $75,000,000, beyond which the total cost should not go.

Now, it is clearly apparent that by the end of the year 1921 when the country will if fortunate, begin to receive rental from the Grand Trunk Pacific, the road will have cost the country for principal and interest $234,651,521, made up of:

Cost of construction (per estimate of Gordon Grant)..	$161,300,000
Interest on cost of construction to end of 1914..	18,700,000
	$180,000,000
Interest cost from beginning at 3½ per cent to end of 1921..	54,651,521
Total to Dec. 31, 1921..	$234,651,521

It will therefore be seen that the capital rental cost instead of being $61,415,000, as estimated by Mr. Fielding, in 1903, has risen to $180,000,000, or 300 per cent higher, while the ' $12,000,000 or $13,000,000 and not a cent more ' which the then Premier assured Parliament would be the cost to the country, has proven to be $54,651,521, or 400 per cent higher than the right hon. gentleman's estimate of 1903.

Is it surprising that the country demands an explanation of this unparalled expenditure of Canadian public funds ?

I listened with curiosity for an explanation from the hon. member for South Renfrew (Mr. Graham). The hon. member for South Renfrew and other hon. members less responsible for the shocking over-expenditure in connection with the construction of the road, have expended much time in personal abuse of members of the investigating commission. They say that an ex-employee of the Canadian Pacific railway is not qualified. It must be patent to hon. members that, far from Canadian Pacific exemployees being debarred, a selection is practically forced from the Canadian Pacific railway staff or graduates for the following reason:

Canada has four railway systems, the Grand Trunk, the Intercolonial, the Canadian Northern, and the Canadian Pacific, and necessarily those engineers best qualified to give an intelligent opinion regarding Canadian railways and their operation must come from one or the other of these systems.

Because the Grand Trunk is an interested party through the ownership of all of the common shares of the Grand Trunk Pacific, the leasing company, there are patent objections to going to that road for engineering advice, although I admit that engineers might possibly be secured from the ranks of the employees of that company. The objections which would be urged to the appointment of an employee of the Government on the Intercolonial railway to an investigating commission of this nature are so apparent that I need not detail them. The Canadian Northern is still under construction, and therefore its staff is not so likely to contain experienced engineers with construction and operating experience combined as is the fourth system mentioned, viz., the Canadian Pacific railway. That company, on account of its methods of operation and on account of its great prosperity is, and has been for a long time, in a position to attract the best engineering talent of the country to its ranks, and is the logical field from which to secure expert engineering advice.

The hon. member for Pictou (Mr. Macdonald) was so concerned over the non-essential qualifications of one of the engineers of the investigating commission that he interrupted the hon. Solicitor General (Mr. Meighen) to inquire if Mr. Gutelius was a naturalized Canadian, and if so, when he was naturalized. The fact that Mr. Gutelius has had upwards of 27 years' engineering experience, nineteen years in Canada and eight in the United States, under varying conditions, appears trifling in the eyes of the hon. member in comparison with the present or past nationality of the engineer. The hon. member is a staunch believer in Canada and Canadianism. Rumour has it that when in 1911 the party with whom he is allied was being attracted by trade policies leading away from the National Policy, the hon. member dissented and ineffectively threw his influence to a continued adherence of his party to the existing policy. The hon. member would prefer to have the evidence of an engineer Canadian born, and with international experience. I would therefore like to refer to the evidence of Mr. W. F. Tye. Mr. Tye was born at Haysville, Ontario, in 1861, and is and has been a robust Canadian even if measured by the standard of the hon. member for Pictou. At the age of twenty-two he began his experience as an engineer on the Canadian Pacific. After four years' experience, he went into the Great Northern railway; he has al o had varied experience in different parts of the States, and in Mexico. With this experience, he re-entered the service of the Canadian Pacific and rose to the position of chief engineer of the whole system. In 1906 he retired from the Canadian Pacific, and has since been engaged in consulting practice. Here is an authority rich in experience—a Canadian born

engineer, resident in Canada, who has occupied the highest engineering position attainable in Canada, and it might be interesting to refer to his opinion regarding some of the decisions of the commission on standards for the railway, the abandonment of which was dubbed by the hon. member for South Renfrew as the 'degrading' of the road.

On page 453 of the report, Mr. Tye, in answer to a question, stated:

> There cannot be any doubt that in rough, crooked country, this rule (re maximum degree of curvature) rigidly adhered to, especially in connection with the rule making the minimum length of tangents between the ends of easement curves 300 feet, must have resulted in tremendous expenditures that have absolutely no value whatever.

With regard to the use of momentum grades and other expedients to keep down the first cost of construction, he says (page 466):

> The use of momentum grades, wooden trestles instead of high embankments, sharper curves, shorter tangents, and other expedients to keep down the first cost of construction were surely justified here if on any road. Such expedients do not decrease the haulage capacity of locomotives, do not increase the running time of trains, and only slightly increase the cost of maintenance, but do materially decrease the fixed charges by decreasing the cost of construction, and do permit of an improvement in standard, when required, without extra cost.

So that no more conclusive evidence condemnatory of the Railway Commission's style of construction is given in the whole report than that given by Mr. Tye.

In an effort to belittle the opinions of the commission with regard to the advisability of substituting, in various places, momentum grades and other improvements, the hon. member for South Renfrew, after searching North America, finally produced Mr. J. B. Berry.

As reported on page 2173 of 'Hansard,' the hon. member for South Renfrew states that Mr. Berry took hold of the Union Pacific when it was a bankrupt concern, and, by changing the grades and curves and shortening the line, brought it up to a position in which it pays dividends to shareholders. Mr. Berry may have been responsible for the rejuvenation of the Union Pacific, but the average man on the street, as well as many well-informed railway engineers, thinks that a man by the name of Harriman had something to do with the rehabilitation and consequent prosperity of the Union Pacific road.

The hon. member furthermore tells us that Mr. Berry is at present assistant to the president of the Rock Island railway, and it is stated that he has held that position for some four years past. I know nothing about the engineering qualifications of this gentleman, but if the estimation in which the public hold the value of the securities of the Rock Island Company is any index to the progress of the road under Mr. Berry's operation and of the value of Mr. Berry's services, it will be interesting to the hon. member for South Renfrew and the House to know that whereas four years ago Rock Island railway common shares were selling at $55 per share, they are selling to-day at $3.87 per share. The preferred shares of the same company, which in 1910, sold at $92.50 per share, are now quoted on the market at $5.75 per share. The four per cent bonds sold in 1910 at $83 and this year at $37, and the whole securities of this road are selling at such prices as would appear to justify the belief, held in different financial quarters, that the road is heading straight for insolvency. Surely the progress being made by the Rock Island under Mr. Berry's guidance does not warrant us in assuming that his opinions on engineering questions are final.

However, this is quite beside the point at issue. The hon. member for South Renfrew was, during the expenditure of practically all these moneys, in control of the Department of Railways and Canals, and being the responsible minister, a lucid explanation of the appalling over-expenditure was due the members of this House and the country. I hoped that, for the sake of Canadian credit and the good name of Canadian public business, a lucid and sufficient explanation would have been forthcoming. That the maladministration of this great enterprise has dealt a body-blow at the prestige of the great Liberal party is undoubted. Speaking for myself, I would gladly have seen any and all party advantage sunk in an explanation which would justify the gross over-expenditure. I regretfully have to say, however, that the statement of the hon. member for South Renfrew did not satisfy me, and, speaking in all frankness, I am sure that it will not satisfy the country.

What I wish to emphasize is that the Laurier Administration, on their statement that $61,415,000 was a liberal estimate of cost, and which experienced railway men stated would not be altogether required for the construction of the line, were authorized by the electors in 1904 to go on with the building of the Transcontinental railway.

Make no mistake; what the public to-day want to know is why has it been necessary to spend on construction and interest $180,000,000 instead of $61,415,000, which was originally authorized. The hon. member for South Renfrew laid a great deal of stress on what he termed the 'degrading' of the road. In other words, the burden of his complaint was that a less expensive road was wrongfully authorized by his successors.

This argument advanced by the ex-Minister of Railways, if it leads us anywhere, leads us to the conclusion that the case of over-expenditure is more serious than the report of the investigation commission would indicate. The hon. member censures the Administration for introducing momentum grades, wooden bridges, and other economies which reduced the total cost, whereas, had these changes not been made, the total cost would have been swollen beyond the $180,000,000, and the astonishing and incomprehensible divergence between Mr. Fielding's estimate of $61,415,000 and the actual cost, with interest added, increased away beyond the present difference. As years elapsed and construction continued, it gradually dawned upon the people that the original estimate of $61,415,000 for the total cost of the line was grossly understated.

The efforts of the Conservative Opposition in the last Parliament to secure such an investigation as would give the public the reason for the over-expenditure were treated by Parliament in a manner not reassuring to the ordinary business man, and it has always been my opinion that the failure of the Government of that day to properly deal with the allegations made had not a little to do with the decision of the public that the carrying on of such public works could be placed in better and more efficient hands; and in my opinion the late Administration lost not a little support in the memorable campaign of 1911 owing to this feeling. This lack of confidence is one of the reasons why the country will not be disposed to hurriedly entrust the administration of public affairs to hon. gentlemen opposite.

I wish to refer particularly to only one of the great errors, or worse, made by the Transcontinental Railway Commission. There are many other features of the work carried on by the commission which are open to severe criticism, but it seems to me that no other course could have been followed by the commissioners in the letting of contracts as well calculated to prevent competition and swell construction costs as that which they did adopt.

By reference to page 21, volume 1, of sessional paper 123, will be found a list of the contracts, numbered from 1 to 21, given out in connection with this work. A perusal of the detailed information following this list will disclose the dates on which the different contracts were advertised, when tenders closed, and when contracts were awarded. The members of the House are no doubt familiar with the standard advertisement issued in the call for tenders; these notices calling for tenders contained the following clause:

> Each tender must be signed and sealed by all the parties to the tender, and witnessed, and be accompanied by an accepted cheque on a chartered bank of the Dominion of Canada, payable to the order of the Commissioners of the Transcontinental railway, as follows:
>
> For section No. 1, district 'C'.....$150,000 (or for special set sums in the different contracts).
>
> Any person whose tender is accepted shall within ten days after the acceptance thereof furnish such additional approved security as may be required by the commissioners.

The insertion of this mischievous clause placed tenderers practically at the mercy of the commission. In actual practice, and in accordance with regulations adopted by the commission, calls might be made for security on successful tenderers to the extent of one-third of the estimated amount of their contract.

These conditions were so onerous that it was impossible for any other than the very wealthiest contractors, or those who had an 'understanding' with members of the commission, to undertake to tender on the work. The first work to be put out to tender was that covered by contract 9-10 and 21, amounting to over $18,000,000. On these contracts, the commission would be entitled, should they so desire, to call for deposits of $6,000,000.

It is the usual practice for a contractor to seek financial assistance from his banker. Just imagine the contractor for No. 21, for instance, going to his banker and asking to have his cheque certified for the deposit to accompany the tender, viz., $400,000. The banker might consider such a proposition, if that was all, but should he, as a prudent banker would, refer to the advertisements calling for tenders, he would see that before his customer would be certain to secure the contract, even being the lowest bidder, he might be called upon to

put up not $400,000 with the tender, but the amount of $4,336,000. Manifestly no contractor excepting such as were multi-millionaires could get into that game. The only other contractor who would be safe would be he who had an understanding with members of the commission. I would have liked very much to have heard an explanation or justification from the hon. member for South Renfrew of this extraordinary clause in the contract.

Charity would bid us say that although the power of calling for huge deposits rested with the commission, it would never be used. But what happened? On the first two contracts for which tenders were called, viz., 9 and 10 (joint-contract), and 21, very large sums in addition to the original deposit were called for. On the 9 and 10 contract the sum of $224,000 accompanied the tender, while $794,588 was called for as total security. In the 21 contract, $400,000 accompanied the tender, while $1,301,000 was called for security under the contract. Certainly by their action in the first contracts let, the commissioners, in calling for these tremendous deposits, gave notice to contractors that they should keep at a distance, and the procedure of the commissioners was so effective in this respect that it will be seen from the table on page 21 of the investigation commission's report:

> That for nine contracts covering half the line, only five firms tendered, and in one case there was only one bid, while in all the others only two, with the result that M. P. & J. T. Davis secured 204 miles, M. J. O'Brien and partners 246 miles, and the Grand Trunk Pacific **256 miles. This affords convincing evidence** that the conditions were too onerous for many firms who afterwards undertook the construction of large sections of the road at lower prices, as sub-contractors.
>
> Had the commissioners, instead of dividing the line haphazard into sections of 8 to 247 miles, made them about 50 miles each and prescribed conditions as to security similar to those on any other Government works, there can be no reasonable doubt that many of the more than one hundred sub-contractors to whom the contractors afterwards sublet the work would have been in the field as competitors.
>
> These sub-contractors took the work off the hands of the main contractors at from 10 to 30 per cent less than the contract price. The commissioners in all cases sanctioned the sub-contracting.

In view of the fact that the contracts are not yet completed, and that therefore only partial information regarding the final payments is available, it is difficult to estimate the amount of money paid to each of these large contractors, but a rough calculation shows as follows: Grand Trunk Pacific, $14,609,351; J. T. & M. P. Davis, $17,871,867; O'Brien and partners, $17,812,513. Some of these were also sub-contractors, and in addition to these amounts drew profits on their sub-contracts. The hon. member for Annapolis, in referring to the matter of contracts, showed where the profits as between the contractors and the Government varied from 5 to 32 per cent. The advantage of being a favoured contractor under such conditions is too patent to need further comment. The method of handling the tenders had, I am convinced, much to do with the excessive cost of this work; the system was further open to the very grave objection of placing the contractor in the power of the commission, a most undesirable condition.

The late Administration undertook a more than ordinarily serious responsibility when they adopted a plan for the construction of a huge public work in opposition to the advice of the responsible head of the department concerned; and the action of the Government led to the resignation of this responsible minister of the department. The working out of the plan has more than justified the objections urged against the construction of the road by Mr. Blair in 1903, and so lightly attempted by his colleagues. Some—not many—of these colleagues are at present members of the House. The country has heard the unconvincing statement of the late Minister of Railways. It is still waiting with more than ordinary interest to hear from the colleagues of the late Mr. Blair their explanations of the extraordinary breaking down of the roseate scheme held out to the country in 1903.

Mr. WILLIAM POWER (Quebec West): Mr. Speaker, when the report which forms the subject of the present debate was made public, I was in England, and on every hand I heard expressions of astonishment at the magnitude and the boldness which the newspaper reports said had characterized the grafting operations of the late Government. The British public was surprised, the warmest friends of Canada were dumbfounded, and on all sides there arose a cry of condemnation and displeasure at a country hitherto pointed out as one of the jewels of the empire, for it was believed that its statesmen had sunk to the level of some of the well-known organiza-

tions which are supposed to flourish in the country to the south of us. The credit of this country, which had been high in spite of serious attempts on the part of wildcat mining promoters and bogus townsite agents, received a severe setback, so severe indeed that I doubt very much whether it will recover therefrom within the next decade. At first sight there seemed to be a reason for this dismal state of affairs. The despatches had it that an independent, non-partisan commission had declared that $40,000,000 were wasted, if not stolen, by the members of the late Government. It can be easily understood what a feeling this would produce on the other side where commissions appointed to examine into any question are real commissions who do their work honestly and conscientiously, and whose members, in many cases, are public spirited enough to make special studies of their subject and to act without any remuneration whatever.

As I have already said, these despatches, purporting to be a report of a commission, were really alarming, but when I knew what I have since learned, that a certain number of newspapers only, and these not altogether unfriendly to the hon. gentlemen opposite, just had access to a half-garbled resumé of the famous report and gave it forth to the world before any one had an opportunity of examining the report itself, I began to understand how easily it was to place the matter in the unfavourable light in which it appeared. When I received the report itself, several weeks after, and read it attentively page by page, which I did, I wondered how it was possible for any person, even in the heat of political controversy, to destroy the credit of the country on such grounds and with so little justification.

I say, Mr. Speaker, I am sorry that this has occurred, not for the party to which I belong, for I am sure that the people of Canada will understand the situation, but I am sorry indeed for my country, since in my humble opinion, its reputation and its honour should stand higher even in the minds of politicians than mere party advantage.

However, when I recollect the debates in this House in 1903 and the campaign of 1904, I am not surprised at the report brought in by the star chamber commission appointed by the hon. gentlemen opposite. In those days there were some of us who thought that it would be a good thing for this country if a railroad were built through a hitherto somewhat uninhabited and unsettled country in order to develop for colonization, for empire and for trade the vast areas in the hinterland of Ontario and Quebec. Were I to go through the pages of 'Hansard', recalling to the minds of Quebec members the attacks which were made on the hinterland of Quebec and even Ontario, the morning sun would be shining through the windows of this House ere I finished. Suffice to say that our Tory friends did not want the eastern section of the road built. They, who flew the flag in 1911 and did not want any truck with the Yankees, wanted a road built through the western section of the country and they would have ignored entirely the other provinces. In days gone by the party, of which these hon. gentlemen are the successors, wanted taxation without representation in the old province of Quebec and in this case they proposed to tax my native province without any possible benefit to the people of that province. I was proud as a representative of the city of Quebec to sit in this House in 1903 when the Grand Old Chieftain of the Liberal party unfolded his scheme for the building of the transcontinental line. He told the House and the country that it was necessary to build another transcontinental line and that in so doing he was going to render justice and fair play to all portions of the Dominion, and that he would open the valleys of New Brunswick, and the great hinterlands of Quebec and Ontario wherein would be found in the future homes for hundreds and thousands of people. We in the province of Quebec had lived on the shore of the St. Lawrence for a hundred years and this was the first opportunity which had been offered to avail ourselves of the advantages of a national highway binding the east and the west and which will enable us to open up our great northern country with its enormous resources. A railway traversing a province for a distance of from 900 to 1,000 miles exerts a beneficial influence over a wide area of country. Let us suppose that this influence extends for at least 50 miles on each side of the line; that means that 30,000,000 or 40,000,000 acres of land will come in for agricultural and commercial development. Even if the cost has exceeded the estimate, I ask my fellow members not only from the province of Quebec but from all parts of Canada, if our country is not the gainer by the carrying out of this great enterprise? Is there a man in the province of Quebec who will have the courage to stand up and say that our northern country should not be developed? No man at the present time can estimate

the resources of this hinterland of ours with its enormous water-powers, its great forests, its pulpwood, and its iron deposits, the last named of which will one day, through the process of electricity, be developed to an enormous extent. Indeed, the great St. Maurice valley, through which this road passes, with its valuable iron deposits, will offer formidable competition to the furnaces of Pittsburg. It is not alone our mineral and forest wealth that will be turned to good account in consequence of the construction of this great Transcontinental railway, but in the valley of the Harricanaw we have acres and acres of virgin soil which will in the near future be developed by the younger element of the province of Quebec. The cry to-day is: keep the young men on the farm; grow more products, and thus give the people cheaper food, but to bring about this desirable condition, railway facilities to transport the increased productions must be provided.

At this late hour, I shall not enter into any detailed statement as to the benefits the National Transcontinental railway was intended, when originally designed, to confer on my native city of Quebec, my hon. friend from Quebec Centre (Mr. Lachance) has dwelt at length on that. The hopes of the people of Quebec for a prosperous future were based on the completion of this great railway project with its low grades and high standard, which would enable it to carry cheaply the trade of the West for shipment at our ancient port; but the policy of this Government since it has come to power, in degrading the character of that road and reducing it from the high standard projected by Sir Wilfrid Laurier, has been a great disappointment to our people who, with reason, fear that the National Transcontinental railway will not prove that great boon originally contemplated.

Mr. JOSEPH DEMERS (St. Johns and Iberville): Mr. Speaker, I should state at the outset that the admirable address delivered by the hon. member for South Renfrew is such a thorough vindication of the course followed by the former government, in connection with the building of the Transcontinental, as well as such a victorious assertion of the national honour and credit endangered by an outbreak of prejudice unprecedented in the history of this country, that I may rightly be taken to task for recklessly interfering in this debate. Accordingly I intend limiting myself to a few and very brief considerations.

This Government, rightly or wrongly, has resolved to have judgment passed on a measure initiated by the former administration. What kind of a tribunal has been constituted for that purpose? What was the procedure followed, and what weight should be given to the findings of such a tribunal?

The two essential conditions required by justice and fair play, and without which elementary conditions no tribunal is entitled to respect, are in the first place, impartiality on the part of the judges, and the right of all parties to be represented and heard. Have both these requirements, or even one of them, been satisfied?

I put the question, though convinced beforehand that there will not be a single member of this House to answer in the affirmative. Two commissioners or judges have been appointed; one of them, an American citizen at the time of his appointment, was gotten from an institution whose interests were in direct opposition to the policy advocating the construction of a new transcontinental line; from an institution which has always viewed that scheme unfavourably; from an institution naturally jealous of the high class construction of that road, destined as it is to enter into close competition with it and to prevent it from monopolizing henceforth transportation from east to west and vice versa. And it is from the staff of that institution that a man is selected who will draw over $20,000 a year to make an impartial report. But even that was not enough. A year or even more, previous to the making of that report, the aforesaid commissioner was granted a position which I may call permanent, that of superintendent of the Intercolonial with a salary of $20,000 and then he was instructed to "preach economy." I have not the least doubt, Mr. Speaker, that we will have to show thrift henceforth, after making up our minds to pay such huge salaries.

Let us see if the chairman of that commission is better qualified. A Tory and a recognized partizan, an exponent of his party's policy at elections, in 1908, he made the welkin ring throughout Ontario with his invectives against the building of a national railway, basing his opposition at the time on the same grounds which are alleged to-day in his report; and so imbued with partisan notions, that while exercising his duties as commissioner, he despised the rules of the most elementary decency to the point of descending from his com-

missioner's bench to wage war on the Liberal candidate in South Bruce.

Could the Government in good faith rely on the impartiality of these two men? No one will believe it, and the mere fact of the unfair and ridiculous make-up of this commission detracts largely from the weight of the findings contained in its report, which no one can read without suspicion, a circumstance which facilitates for hon. members on this side the task of answering its charges, as the people throughout the country are not likely to give it greater attention than to any other party machination.

The hon. Solicitor General was wrongly inspired, indeed, when he thought fit to recall the fact that the former administration, as well, had appointed commissions, namely the Civil Service Commission and the Cassels Commission, for, Mr. Speaker, there is a striking contrast between the policy followed by the former Administration and the policy followed by this Government since the hon. Solicitor General himself was forced to admit that both these commissions comprised men whose political views were not even known. It seems to me the hon. Solicitor General, under the circumstances, weakened his case through sheer indiscretion.

I shall now give further proof in support of my contention, that the Government and the commissioners showed bias and unfairness. The report is dated February 11, 1914. We find that, as a matter of fact, the whole enquiry was closed by the middle of March, 1913, with the exception of the evidence of Mr. M. P. Davis, which was delayed until February 5, 1914. What was the object of that delay, if not to excuse the commissioners' tardiness in reporting, whereby they were enabled to fill the columns of yellow papers and to insinuate and charge, and leave the public under the impression that criminal wastefulness had been indulged in, a wastefulness for which the Liberal party should be held responsible, although that party was afforded no opportunty to vindicate itself. I say that such a course is unworthy of an opponent who wishes to be counted fair.

I shall now refer to an incident which occurred during the speech of the hon. member for South Renfrew. The hon. Solicitor General, whose main characteristic is cleverness, thought fit to interrupt the hon. gentleman from South Renfrew while he was dealing with the question of the Transcontinental shops, and insinuated that the $4,500,000 expended on these shops were not comprised in the alleged wasteful expenditure of $40,000,000 pointed out by the commissioners.

Why that? Because the hon. Solicitor General fully felt the force of the argument advanced by the hon. member for South Renfrew and how unassailable was the position of the former Government as regards the Transcona workshops, and he endeavoured to ward off the blow.

Now, either that amount of $4,500,000 is included in the $40,000,000 or it is not. If it is, my hon. friend should not have interposed; if it is not, why does the report devote pages and pages to discussing the matter? Would it be perchance, that it was expected the House would be deceived thereby? But, Sir, I wish to state here that the hon. Solicitor General's interruption has contributed more than anything else to satisfy me that the sum of $40,000,000 represented by the commissioners as being the minimum amount of useless expenditure, was arrived at arbitrarily and on no sound basis. Having taken the hint, I went to the pains of adding up the various amounts included under the head extravagance, and in spite of all my efforts, I have not succeeded in reaching a higher total than $35,000,000, including that amount of $4,500,000 which I have just mentioned.

So I say the position taken by the hon. member for South Renfrew was sound, well taken, when he discussed the matter on the assumption that this $4,500,000 expended on the Transcona shops was included in the estimate of the useless expenditure.

And after listening to the victorious argument presented by the hon. gentleman from South Renfrew on that point, I say there is no fair-minded man but will say that the findings of the commissioners are at variance with the facts, with the law and with common sense and show conclusively the folly of those who have evolved them.

And while I am dealing with the hon. Solicitor General, I may refer briefly to one of his remarks in reference to the entrance into Winnipeg. He stated, if I understood him well, that as a result of the decision of the former Government, the Canadian Northern had filed in court a claim for damages to the extent of $10,000,000. It must be surmised from this fact that the spot so selected was exceptionally advantageous, and I may add, either the Transcontinental had the right to select that entrance, or it had not such right; if the Transcontinental was entitled to make such selection, how can damages be fairly

claimed? If not, why did they not secure a writ of injunction? I think my hon. friend must have had cases which gave him greater concern than this, and I can only express the hope that this famous Canadian Northern case will not trouble his slumbers.

The hon. Solicitor General referred to the Davis contracts numbers 16 and 17. I do not propose dilating on the merits of this question; I am entirely satisfied with the explanation given by my hon. friends on this side who have preceded me, but I cannot forego drawing attention to the fact that the hon. Solicitor General contended that the contractors in the present instance had demanded and obtained prices from 10 per cent to 100 per cent higher than those granted in connection with other contracts, and that, on account of the difficulties met with in the matter of transportation by those desirous of reaching that part of the line. Then the hon. Solicitor General asserts that the work has been delayed, and that when it was later carried through to completion, the difficulties met with at the time tenders were called for no longer existed, owing to the contracts relating to sections adjacent to numbers 16 and 17 being completed. The result was that the district was more easily reached and in consequence the contract price, he thought, should have been materially reduced. I think the above is a fair rendering in substance of the remarks made by the hon. Solicitor General. What would be the conclusion if all those statements were true? That Messrs. Davis are far from being the keen business men which they have been represented to us to be. Just think, here is a contract for possibly eight million dollars, the carrying out of which, according to my hon. friend's contention, should yield exorbitant profits, it may be 40, it may be 50, it may be 60 per cent, and the contractors, who are assumed to be shrewd business men, were willing to hand it over against a payment of 10 per cent, that is less than half the average rate of profits on which contractors figures as a rule.

That strikes one as rather unusual, and leads one to surmise a good many things; for instance, when the hon. Solicitor General states that the contract prices were excessive, there must be some exaggeration; when he contends that the contractors delayed the work, there must have been satisfactory reasons to justify such delays, the commissioners' right to cancel these contracts it is likely was not as clear as the hon. Solicitor General contended, they had no assurance that, by calling for new tenders, much lower prices would have been obtained, and the commissioners may have thought that serious results might ensue through further delays; and one sure thing is that the artfulness so profusely displayed by the hon. Solicitor General did not make a very deep impression on me.

I had not intended to answer the remarks made by the hon, member for Dorchester, and what I am about to say is merely in passing. The member for Dorchester, in referring to the former chairman of the Transcontinental commission, endeavoured to minimize the reputation as a business man which he enjoys not only in the province of Quebec, but throughout the whole of the Dominion. He contended that the Government should not have given him such a high post of honour as that of chairman of the Transcontinental commission, because, he said, while he was Prime Minister of the province of Quebec, a group of his followers bolted. If it were laid down as a rule that a political leader, a Prime Minister for example, is no longer worthy of public confidence because a group of his followers attempt to get rid of him, pray, Sir, where would be to-day our Prime Minister, the Right Hon. Mr. Borden, who, in 1910, if I well remember had to withstand a memorable revolt which came very near ending in his discomfiture? Had the hon. member for Dorchester been here at the time, he would certainly have abstained to-day from alluding to plots and conspiracies. I may remind him of the old French saw: 'Never mention the rope in the house of the hanged man.'

Then, confidence is apt to fluctuate. The hon. member for Dorchester has more experience in this connection than any of us, and I am acquainted with a goodly number of hon. gentlemen in this House who, in 1911, had no confidence whatever in the present Prime Minister and who to-day seem to entertain feelings of a very different sort towards him.

Now, I shall revert once more to the famous Staunton-Gutelius report. There is a feature of that report which strikes me particularly as evidence of the nagging and fault-finding spirit which presided over this enquiry. It will be found that in every case where steel works have been put up, the finding of the commissioners is that wood or concrete should have been used; and whenever concrete has been put in, their finding is that either steel or wood was the proper material. When cast iron pipes were put in, concrete, they say, was the thing to use, and so forth; in other

words, it seems as though they had made up their minds to find fault with every thing, and these gentlemen even went so far as to criticize and condemn the very decision of the Canadian people to build a new transcontinental line, as evidenced by the intrusion of a few words casting a slur on the building of that part of the line which runs from Levis to Moncton. I do not wish to concern myself with that side issue beyond pointing out the lack of judgment and discrimination of the commissioners who have not seen the propriety of keeping within the bounds assigned to them. But we have no time to lose, and I shall leave the responsibility of that report to the government, as regards the advisability of constructing the line eastward from Lévis, though aware that the electors of Lévis, L'Islet, Montmagny, Dorchester and other Quebec and maritime constituencies through which the road runs will at the proper time give vent to their feelings as regards this gross blunder on the part of the commissioners. The people have no longer the right to say what they want before the proposal has been approved by Messrs. Staunton and Gutelius, as a matter of grace on the part of these petty sovereigns.

Reference was made to the original estimates of the line and some made a pretence of being shocked at recalling the estimated cost set down by Mr. Fielding at $61,415,000. But there is no one but knows that this figure is not of Mr. Fielding's own making, and that Mr. Fielding was bound to take the figures given by the government's chief engineer, and that was what he did. The government engineer to prepare that estimate figured on an ordinary railway line, that is having steep grades and temporary works. But the government, supported by the Canadian people, decided to construct a high class road and the result, of course, was to increase the cost of construction.

It was decided, and rightly so, to build a first class road, for there is no sense in carrying through such a gigantic undertaking and be content with the ordinary requirements. As a simple matter of common sense, the building of a first class road was in order. It is objected: Instead of building permanent works, temporary works, such as pile-work, steep grades, sharp curves, &c., in a word all that goes to make up an inferior road, might have served the purpose until it was known what the traffic would amount to. To my mind such a view is mistaken, in connection with a national undertaking of such importance as this. As far as I can see, it is wholly dependent on the question whether the undertaking is necessary or not. But once that point is decided, the proposal to be content with inferior work and to provide temporary facilities, is not admissible; for if the decision is to build a road, it means that the conclusion arrived at is the undertaking will surely be advantageous to the country, that is to say a success, otherwise such a departure would be unjustifiable.

The Government with the approval of the people decided to build the Trancontinental. Of course, that was equivalent to deciding in favour of a superior type of construction, the cheaper operation of which would compensate overwhelmingly the difference in cost between a low-grade or average railway and a first class road, and would ensure economy in transportation by allowing the circulation of much heavier train-loads, economy in the shape of reduced expenditure for repairs and maintenance besides the advantages consisting in greater safety and greater speed and everything that attracts traffic.

What are the main criticisms voiced by the commissioners? Properly speaking they are but two.

1st, the road is too good, in other words, too expensive.

2nd, there has been over-classification.

As regards the first of these criticisms it covers about two thirds of the $40,000,000. I shall not go any further into the discussion of this point than I did a moment ago when referring to the necessity of building a first class road; but I may observe that there was no necessity for calling witnesses to show that it costs more to build a first class road than to build an ordinary one. An effort has been made to show that an ordinary road is worth as much as a high grade road, but in spite of the endeavours of the commissioners, they failed to attain their object, so preposterous was it to contend that 'better' and 'inferior' are synonymous.

There were mistakes, no doubt; it would have been wonderful if none had been committed in connection with such a vast undertaking; but it will be noticed that this ex parte inquiry has not brought to light, directly or indirectly, the slightest particle of evidence of dishonesty, illwill, neglect of duty or inability on the part of the commission or the engineers. Every difficulty which has cropped up has been discussed. Arbitrators were appointed in a good many cases, in a word nothing that

was likely to ensure honest and fair dealing was left undone.

Such is the outcome of the enquiry, though there was no cross-questioning and despite the particularly adverse conditions, as regards the former administration and the former commission, under which the enquiry was carried on. The great majority of the witnesses heard are still in the employ of this Government. The questions put in some cases are leading in the extreme and put in the witnesses' mouths the very answers they are expected to give; some may be construed as imperative in this regard, and whoever reads the evidence given by the various witnesses cannot help saying to himself that many explanations or developments might have been obtained by cross-questioning the witness, though a pretty clear view of the situation may be had by perusing the volume of exhibits, which, by the way, has not yet been translated into French, or at any rate the French version of which has not yet been distributed.

Then, it appears from the discussion that the commission have carefully recorded every thing that was of a nature to further the object for which the commission was appointed, that is to slander the Liberal party. Comparisons have been instituted to show the excessive cost of certain works as against others on the Canadian Pacific or Canadian Northern lines; but in making these comparisons, no allowance has been made for variations in the situation or the time, or even for dissimilarity in the nature of the work performed.

How explain the discrepancy between the actual cost and the original estimates? We might be content with answering: by the greater difficulty of forecasting results as compared with merely recording them. But I think that such a question should be met with an answer or rather an explanation of a more practical nature, and we provide such explanation by pointing out the difference, as acknowledged by the commissioners themselves, between a first-class road and an ordinary road taken as a basis in the working out of the original estimates. Thus the evidence shows that the original surveys had not revealed the presence of solid rock over a great extent of the line. Then there are the great difficulties in the way of construction, which it is impossible to prevent or to foresee. Lastly, the increase in the cost of labour and supplies. That is more than enough to show the enormous difference that should be figured on when comparing estimates of works previous to their carrying out in 1902 and the cost of these works after completion.

But there is this much to be gathered from the inquiry: the work done is first class, and the country has the benefit of all that has been done, save in the matter of classification, wherein, according to the commissioners, $3,300,000 were paid to the contractors over and above what they were entitled to owing to over-classification, that is to say, owing to faulty judgment on the part of the engineers, since their honesty cannot be impugned by any one, that no one suspects their good faith, not even the commissioners, and since the great majority of the engineers who made the classification have been retained in the employ of the Transcontinental Commission and are still with them.

After carefully going over the evidence, I have come to the conclusion that nothing, absolutely nothing, can justify the commissioners' finding as to over-classification, and I unhesitatingly declare, that a careful summing up of the evidence would have unerringly led them to a conclusion quite different from that which they reached, and that they should, on the contrary, have stated outright that the classification had been conscientiously effected, from the local engineer up to the chief engineer who was called upon to approve of it finally. That appears from the evidence of Walter Youngman, William G. Brown, Alfred A. Paradis, N. R. Beaudette, Stanley Hawkins, A. O. Bourbonnais, G. A. Buttler, Robertson, O'Leary, Pardee, Holland, Charlton, Bell, Bucke, Timbrell, Dick, Holiday, Ferguson, Black, Mattice, Longley, Porter, Hervey, Baldam, Molesworth, Foss, Doucet, McFarlane, Grant, and even Lumsden.

All such proof goes to show that any difficulty arising out of the classification was considered and very often submitted to arbitration, and that no classification was settled on before it had been fairly and conscientiously looked into and recognized as being equitable. Everything was transacted above board and decided after due consideration, and the only occasion for differences of opinion (mere differences of opinion) was the unusual character of the material encountered in the building of that road, the original specifications affording necessarily no guidance as to conditions which could not be foreseen previous to the actual carrying out of the work. As a result of the discussions, the classification was altered at times in favour of the

contractors and at times in favour of the road.

And if I am to infer, as the uncontradicted statement goes, that no final settlement has taken place between the Liberal Government and the contractors, there is nothing to mourn over, and it only remains for this Government to set things right and to apply the remedy when the time comes to effect final settlement. Will they do so? What did they do in the case of contractor McArthur? The arbitrators had decided that over-classification in his case amounted to $550,000. Was the settlement effected on that basis? Was the settlement effected at $500,000, or $400,000, or $300,000, or $200,000? No, it was settled at $150,000. That shows, Mr. Speaker, what the zeal of these great preachers of economy amounts to in practice.

Commissioners Staunton and Gutelius personally may in good faith differ from the views of the engineers who are responsible for the classification, but their opinion should not be taken into account, and they should have restricted themselves to the evidence heard; had they done so, it would have been impossible for them to draw such conclusions.

Let us not lose sight of the fact that the construction of that railway was superintended by engineers whom the former commission had reason to believe competent. Let us not lose sight of the fact that the contracts, as stated in the report itself, have always been granted to the lowest bidder; that the Grand Trunk Pacific was in every case at liberty to submit tenders; that the Grand Trunk Pacific whose interest in cheap construction was greater than any other's since they are bound, after seven years operation, to pay 3 per cent interest on the total cost, had the right to supervise the work, and were represented by their most capable engineers, and that the classification, as it is, was accepted by the chief engineer of the commission, by the chief engineer of the Grand Trunk Pacific and by the arbitrators.

Thus we have the best guarantee that the classification must have been carried out as well as it was possible to carry it out, especially in the absence of any proof of dishonesty or improper interference on the part of any one. Besides, there exists no reason whatever for any one to prefer the opinion of people who never worked on the road, who did not visit these districts at the outset, but only five or six years after the work had been done, to that of honest and respectable men who have themselves witnessed the difficulties to be met with in the construction; and I do not think the people who are responsible for that classification could wish for a more conclusive acknowledgment of their ability and of their honesty than the fact of their being retained in the employ of this administration. For, Mr. Speaker, one of two things, either these engineers were capable and honest, or they were not; in the latter case, they should not have been retained, and since they have been so retained we are led to the conclusion that they were deemed honest and capable. It seems to me that this does away with any attempt to find fault with the classification. My conclusion, Mr. Speaker, is that, since no dishonesty can be charged against the commissioners, since the classification was effected with more than ordinary care—even if there had been errors of judgment committed by the engineers in some cases with the result that $3,000,000 had been lost, a gratuitous and unfounded assertion on the part of the commissioners—since it has been demonstrated that the course deemed most advisable was decided upon after due consideration of every aspect of the question, I say, notwithstanding what the commissioners may think, public opinion in Canada as well as abroad will be satisfied that the opprobrium rests entirely with those who endeavoured to show to the world that Canadians are either fools or scoundrels.

I for one, Mr. Speaker, believe that the Government has uselessly thrown away thousands and thousands of dollars on an inquiry the only object of which apparently was to discredit the Liberal party, and the actual outcome of which has been to strike a blow at Canada's credit on foreign money markets.

The said inquiry will also have as a result to satisfy the whole Dominion that the Government's intention is to kill the Transcontinental by departing from the rule of uniformity in the building of the road between Cochrane and Quebec, in such a way that the whole country will be debarred of the advantages to be derived from the operation of a genuine transcontinental line which its present requirements and its future prospects imperatively demand.

The voice of Toronto may kill the proposed Georgian Bay canal scheme; such a powerful influence may even kill the Transcontinental scheme, but luckily for Canada, the powerful voice of the Canadian people will soon make itself heard and deaden the clamourings which personal interest draws forth from a certain group.

Mr. W. S. LOGGIE (Northumberland, N.B.): Mr. Speaker, although it is very late, I feel that I have a certain responsibility and should say a few words on this important subject. First of all, I want to refer to the remarks of the hon. member for North Ontario (Mr. Sharpe) who spoke last evening. He used the following words::

I was somewhat surprised at the attempt of the hon. gentleman to justify the construction of the eastern branch of the Grand Trunk Pacific from Moncton to Quebec. I do not think there is another member in this House who has the temerity to stand up and, in view of the criticisms that have been launched against that branch of the National Transcontinental railway, attempt to defend it at this stage. We have every reputable engineer, connected with either the Grand Trunk Pacific or the Government service condemning that branch of the National Transcontinental railway from Moncton to Quebec.

These are extravagant words, and are not borne out by the facts. So far as I know, no hon. member from New Brunswick or Quebec on the Liberal side of the House has ever uttered one word to show that he has not the utmost faith in the construction of the line between Levis and Moncton. The hon. member for North Ontario went on to read the following question from the evidence of Mr. Lumsden:

Did you make a study of the advisability of constructing a new line through New Brunswick paralleling the Intercolonial railway?

There is an insinuation in that question of something that is not a fact, because it is not true that the National Transcontinental railway parallels the Intercolonial railway. Mr. Lumsden's answer is:

No, I never had any discussion with the ministers about it.

With whom, forsooth, would the bargain be made? Would it be made with the representatives of the Grand Trunk Pacific or with the engineers? I fancy that the owners of the road would be a party to the agreement. I want to draw attention to the unfairness of the next question. Here is a Royal Commissioner who was supposed to learn the facts of the case, to be fair to each side, asking a question and putting the answer in the witness's mouth. The question is as follows:

You would not have recommended it, would you?

Is there a civil court or a criminal court in our land in which a lawyer would be allowed to ask a question in such a manner? The commissioners even went so far that, when they did not get the answer, they suggested—

[Mr. Demers.]

Mr. BELAND: You are not working with us.

Mr. LOGGIE: You are not working with us; you are dodging the question. Is that a Royal Commission? I think it has been well called an inquisition. It is a one-sided, party inquisition for a purpose. The present Premier of Canada in his election platform at Halifax some years ago said that he stood for adequate protection. I fancy that when an election comes on—and it is perhaps not very far away—this document will be considered as adequate protection to keep the majority that my hon. friends opposite now have.

I want to call attention to an action of this same Mr. Lumsden who, at the time to which I have reference, was chief engineer of the Transcontinental railway. Let me refer to a report of the Transcontinental Commission of 1905. I am sorry that it will take up some time to read this, but I think it is very important, in view of the misleading and partisan statements published in the Gutelius-Staunton report and reiterated on the floor of Parliament to be sent broadcast throughout this country, that there should be put on 'Hansard' at the same time and under the same date the facts as they were represented to the people of Canada in 1905 by this same Mr. Lumsden and by his assistant engineer. Page 75 of sessional paper No. 62 C of 1905, reads as follows:

I requested Mr. M. J. Butler, assistant chief engineer, who had recently been over considerable portions of districts 'A' and 'B'—

That is the section east of Levis.

—to make a comparative report on the distances by the Intercolonial railway from St. Jean Chrysostôme to Moncton, and by our preliminary line; what the probable distance would be on final location between these points by the Transcontinental railway line, and what difference would be made in this distance, supposing we used grades of 1 per cent in each direction; and to compare the operating values of the several lines on the basis of ten freight trains per day each way; and what the difference in the capital account would be.

This report I beg to attach:

Mr. Hugh H. Lumsden,
Chief Engineer,
Ottawa, Canada.

Sir,—In reply to your inquiry of the 20th inst., asking me to report on:

1st. The length of the Intercolonial railway with its 1 per cent grades in both directions from Moncton to St. Chrysostôme where it intersects the line of the survey of the Transcontinental railway.

2nd. The length of the preliminary lines as run by districts 'A' and 'B' of the Transcontinental railway, with balance grades of

0.4 per cent (21 1-10 feet per mile) rising eastwardly, and 0.6 per cent (31 68-100 feet per mile) rising westwardly between Moncton and St. Chrysostôme.

3rd. The approximate shortening of the preliminary line likely to be secured by the final location, preserving the gradients which have been secured.

4th. The approximate shortening of the preliminary line likely to be secured, providing the grades were to be increased to 1 per cent.

5th. To compare the operating values of the several lines on the basis of ten daily freight trains each way, on the Intercolonial railway.

6th. To capitalize the yearly cost, so determined on a basis of money at 4 per cent per annum.

With reference thereto I beg to say:

1st. The distance from Moncton to St. Chrysostôme, by way of the Intercolonial railway is 493.5 miles.

2nd. The distance from Moncton to St. Chrysostôme via the preliminary survey lines as run for the Transcontinental railway, is 504 miles.

I think I might omit sections 3 and 4 and come to what he has to say regarding operation. He goes on:

5th. For the purpose of the calculation, I have taken the Intercolonial railway locomotive No. 310, a simple consolidation recently built by the Canadian Locomotive Company at Kingston, Ont., and which I understand is now in use on the Intercolonial railway, the principal dimensions of which are as follows:

After giving these figures of dimensions, he goes on:

I assume that thirty ton capacity cars, which weigh when loaded 46.15 tons will constitute the train. The several trains which the above locomotive can haul at a speed of fifteen miles per hour on the several grades below are as follows:

Intercolonial railway, 1 per cent grades, 22 cars equal to 660 tons net pay load.

Transcontinental railway, east-bound, 4-10ths of 1 per cent grade, 42 cars, giving 1,260 tons net pay load.

It is worth noting here that the same power can haul over the low-grade line practically twice as much tonnage as over the Intercolonial railway.

Transcontinental railway west bound 6-10ths of 1 per cent grade, 33 cars, giving 990 tons net pay load.

The Intercolonial railway, 10 daily freight trains each way, will haul in a year of 313 working days (length of line 493.5 miles), net pay tons 660 x 2, trains 2 x 10 x 313 days=4,131,600 pay tons; and to haul this number of trains will make 493.5 x 2 miles, 2 x 10 trains, 313 days, 3,089,310 train miles per year.

The cost per train mile on the Intercolonial railway for the year 1903, as given in the report of the Department of Railways and Canals is 97.65 cents, which cost will be used for all comparisons. Hence 3,089,310 train miles x 97.65 cents=$3,016,711.21, which gives the annual cost of operating the ten daily trains on the Intercolonial railway.

The Transcontinental railway low grade line will handle the same tonnage, with seven trains east-bound and five west-bound, although they will not be quite loaded to the full limit, the ratio of east-bound to west-bound traffic is taken at about 6 to 4 (length of line 486 miles). Hence we get 486 miles x 12 trains x 313 days=1,825,415 train miles per year, which moneyed out at the same price per train mile of 97.65 cents equal $1,782,518, which gives the annual cost of operating the twelve trains on the Transcontinental railway.

The annual operating cost of the Intercolonial railway being $3,016,711.21.

The annual operating cost of the Transcontinental railway being $1,782,518.72.

Leaves a net annual saving in favour of the Transcontinental railway of $1,234,192.49.

Which sum capitalized at 4 per cent per annum equals $30,854,812.25.

And this amount is the increased value of the Transcontinental low grade line over and above the existing Intercolonial railway on the basis of ten daily trains each way over the Intercolonial railway.

Yet Mr. Gutelius, in his report, has the audacity to tell the people of Canada that he does not think this line east of Quebec should be constructed at all; and here, on the evidence of Mr. Butler, confirmed by Mr. Lumsden, we have the fact that there is an annual advantage in favour of operating the Transcontinental railway over that of the Intercolonial railway of $1,234,192.49.

Mr. EDWARDS: What did Mr. Blair say about it?

Mr. LOGGIE: Mr. Blair is past and gone, and I think, perhaps, we had better leave that alone. Mr. Butler has made his calculation on a certain tonnage, but now he tells us:

With increased business the difference will be much greater.

For instance on the basis of ten fully loaded trains each way per day on the Transcontinental, we get 486 length line x 10 x 2 trains x 313 days=3,042,360 train miles, which will cost per year at 97.65 cents, $2,970,864.54, and will transport 7,042,500 net pay tons.

To do this business on the Intercolonial railway will require 34 daily trains, and we get 493.5 miles x 34 trains x 313 days=5,251,857 train miles, which will cost per year at 97.65 cents, $5,128,409.06. The annual net savings in favour of the Transcontinental railway on this basis being $2,157,544.52, which sum capitalized at 4 per cent per annum gives $53,938,613, and this amount is the increased value of the Transcontinental low grade line over and above the existing Intercolonial railway on the basis of ten daily trains each way on the Transcontinental railway.

And yet the hon. member for North Ontario (Mr. Sharpe), forsooth, asks: Is there a man to-day who would uphold the action of the Government in the construction of this part of the line?

Mr. Butler concludes:

In all the above calculations no account has been taken of reduced operating cost for passenger trains. It is obvious that substantial savings will result from the use of lighter engines to haul the same passenger train. Less fuel, oil, etc., will be required, less wear and tear to track and bridges through lighter engines, better time and more uniform rates of speed may be maintained.

In conclusion, the cost per ton on the several lines based upon the above figures are as follows:

	cents.
Intercolonial railway, Moncton to St. Chrysostôme, per ton	73
Transcontinental railway, 1 per cent grade, Moncton to St. Chrysostôme, per ton	59 7-10
Transcontinental railway, 0.4 and 0.6 grade, Moncton to St. Chrysostôme, per ton	43

I wonder why the commission did not publish that information in its report. That information tells the people of Canada that the Government used every precaution in connection with the design as well as the construction of this road. They had experts go over the work; Mr. Butler himself was on the ground, for he visited districts A and B on the line east of Quebec.

Let me tell you, Mr. Speaker, what in my opinion are the results of this finding of the engineers. Hon. gentlemen have insinuated that the capital cost of the road has been so high that the Grand Trunk Pacific will not be able to pay the rental and that freight rates will not be reduced—and the same statement is made by the commission in their report. Are these assertions borne out by the facts contained in the report of Mr. Lumsden and Mr. Butler? Let us see how this will work out if we apply the calculations which have been given to the distance of 1,800 miles instead of to the mileage between Levis and Moncton. We have it on the authority of Mr. Butler and Mr. Lumsden—the same Mr. Lumsden from whose remarks the hon. member for North Ontario (Mr. Sharpe) quoted when he was speaking yesterday—that if the Transcontinental is operated with an estimated tonnage between Levis and Moncton there will be an annual saving of over $1,000,000 in operating expenses over and above the cost of carrying the same tonnage over the Intercolonial railway. Mr. Butler says that if you operate ten fully loaded trains each day over the road between Moncton and Levis there will be an annual saving of $2,157,544.52 over and above the cost of operating the same tonnage on the Intercolonial railway, yet the commission had the audacity to say that because the Government had the Intercolonial railway it was not necessary to have this low grade railway between Levis and Moncton. Let me point out that if in operating ten fully loaded trains each way on a distance of 485 miles, $2,157,544.52 can be saved in operating expenses, how much can be saved in operating over a distance of 1,800 miles? That is the question that gets at the bottom of the whole matter. I think my figures are accurate; I challenge any hon. gentleman on the floor of this House to prove their inaccuracy. If the Grand Trunk Pacific can save $2,157,544.52 in operating 485 miles of low grade road, they can save $7,990,900 in operating 1,800 miles of low grade road annually.

The commission tells us—and I am willing to accept the statement—that the Transcontinental will cost $180,000,000 for rental value, including interest compounded annually, and that the lessee will have to pay $5,400,000 per annum as rental. I want to make a calculation as to what effect this rental will have on the earnings of the road, based on the calculations of Mr. Butler, confirmed by Mr. Lumsden, and before doing so I want to refer hon. gentlemen to page 16 of the commissioners' report, upon which I find the following words:

Winnipeg to Moncton, 2,000 miles, say it cost $50,000 per mile. Then to shorten this line to 1,800 miles would permit of expending 200 by $184,000 or $36,800,000 on account of this shortening, or $20,000 per mile for 1,800 miles.

In other words, the Royal Commission suggests that by building a one per cent grade road and employing a distance of 2,000 miles you could do the work for $36,800,000 less than a low grade road would cost. We would thus have a railway constructed on a one per cent grade for $36,800,000 less than $180,000,000 for rental value. If the one per cent grade road had been constructed, the cost, let us assume, including terminals, interest, etc., would have been $143,200,000, on which interest for rental would be paid to the amount of $4,296,000 annually at three per cent as against $5,400,000 on $180,000,000 for the low grade road. Thus, for a one per cent road the rental would be $1,104,000 less than for the low grade road. In operating ten freight trains each way on a low grade road an annual saving in operating expenses of $7,990,900 would be effected. Deduct from this the extra interest of $1,104,000 and we get $6,886,000, showing the net annual gain in operation of ten

freight trains daily over the same operation on the Intercolonial railway. Is there an hon. gentleman who, in face of figures like these, will contend that it would have been wisdom on the part of the Government of Canada and of the Grand Trunk Pacific, who are the lessees, to construct a one per cent line and lose an annual sum such as I have named? In addition to that, note that Mr. Butler says that he has not included the saving in operation of passenger trains. I understand the proportion of freight to passenger net earnings on the Intercolonial railway is about as 66⅔ is to 33⅓. Mr. Butler explains that lighter engines can be used, resulting in less consumption of coal, better time is made, etc. Assume that this proportion of advantage on passenger traffic is a fair estimate, then the $6,886,000 saved on freight operations will be augmented by $2,255,333 from the passenger service. Thus we have a total saving annually in operating expenses of $9,181,383, in favour of operating 1,800 miles of low gradient railway as compared with the operation of 1,800 miles of one per cent gradient railway, such as the Intercolonial railway is at present.

Is there any further proof that the Royal Commission, so called, has presented to this country a partial, an incomplete, an unfair report? They were called upon to do a certain duty and they have done it, they have pointed out to the people of Canada where certain sums could have been saved. I think the sum of $6,000,000 is stated as the amount that could have been saved by the use of momentum grades as against a practically level road. What of it? I ask, what of it? I charge that there is not a hint in that report from one cover to the other that any member of the commission, any one of the engineers in the employ of and paid by the Government, dishonestly used for his own benefit, one dollar of public funds; and it is a credit to the Government that $180,000,000 of the public money has been expended and that yet, after an investigation, there is not a hint that one dollar was taken by a servant of the Government unfairly. If that is not creditable I do not know what could be. The report says that so much money could have been saved by degrading the standard of the road, for instance by building the substructure at Quebec partly of wood and partly of cement. Then, it says, so much could have been saved by using wooden trestles instead of solid fill. They say that $40,000,000 have been misspent. They mention these different items but they do not add up to anything like $40,000,000. The $40,000,000 can only be reached by compounding interest on the amounts. The calculation I have shown will prove to you and to every member of this House that the late Government acted wisely in providing for a road of the highest possible standard.

I am sorry to have to say that this is an unfair report. We all know what the agreement was. The commission have very unfairly represented the object of the railway. They say simply that it was a means to secure cheaper transportation. But this road opens up a new country; by its construction we roll back to the northward the map of Canada. It is a colonization road as well as a road for transportation from the East to the West, and there are advantages accruing to Canada from the construction of this road in the way of new population in the Northland. Many thousands of loyal Canadians will be located along this road. Many are now locating there in Quebec and New Brunswick. I said in my opening remarks that it was unfair for the hon. member for North Ontario to say that this road parallels the Intercolonial railway. We might as well say that all roads running east and west parallel each other. In a sense it is true, but if hon. gentlemen will take the map they will find a difference between the Intercolonial railway and this line; they will observe that it opens up an entirely new section through New Brunswick, a section that probably would not have been opened for the next hundred years if it had not been for the fact that this is a part of a through line, because the local trade would not of itself be sufficient to support a railway.

I think I have demonstrated that that report is wilfully partisan, that the commissioners have wilfully omitted things they ought to have put in the report and that they have given an overdrawn picture of other things which they have inserted in their report. They have put answers in the witnesses' mouths, they have been unfair; and if it is wilfully partisan it is misleading, so that the words of the amendment are words that are actually borne out by the facts. Will hon. gentlemen vote against the facts or will they stand up and vote so that it cannot be said to the world at large that the Government of the day have endorsed what hon. gentlemen have said regarding the construction of this railway? Let me put one more thing to you. If there is one thing more than another

that seems to me unfair in this report it is the statement made with regard to the Grand Trunk Pacific on page 24 of the report.

They insinuate that the Grand Trunk Pacific condoned the overbreak, or paying to the contractors more than they had a right to get, because, forsooth, the Grand Trunk Pacific themselves were contractors. Then the report goes on to say that they did not do the work themselves but that they sublet their contracts on the basis of 5 per cent. Thus they insinuate that the Grand Trunk Pacific, for the paltry sum of 5 per cent of any amount alleged to have been paid as overbreak more than should have been allowed by the engineers, acted contrary to the interests of the stockholders of that corporation. Is it worthy, or unworthy, of the Government of the day to say that about a great corporation like the Grand Trunk Pacific? I think it is a slander on the Grand Trunk Pacific and on the Grand Trunk, the pioneer railway organization of Canada. That is another reason why I say that the amendment is in accordance with the facts and ought to be voted for by every member of this House.

The acting Minister of Railways, in addressing this House on the subject, was most unfair in adding to his statement $42,000,000 for seven years' interest, as the amount, on the basis of the rental, which the road will have to pay. That is absolutely unfair because every man in this House knows that the Grand Trunk Pacific are to have the road for seven years rent free and if you add seven years' interest and they have to pay interest on that amount for 43 years, that they are not receiving seven years' rent free. When the attention of the hon. Postmaster General (Mr. Pelletier) was drawn to that he said that the acting Minister of Railways and Canals was right. I am willing to excuse the Postmaster General because, perhaps, he did not know the facts, but there is no excuse for the acting Minister of Railways and Canals in putting that statement before the country. It was unfair on the part of the royal commission not to show the advantages in the way of operation as against the interest charges. It was unfair not to show that the Grand Trunk Pacific entered into that agreement for 0·4 per cent and 0·6 per cent grades. Perhaps I ought not to put it exactly in that way because there is a clause in the report that the Grand Trunk Pacific entered into that agreement for 0.4 per cent and 0.6 per cent grades on the cost of which they have to pay interest for 43 years. Would the Grand Trunk Pacific wish an undue cost to be added to the 1,800 miles of road in order to cover up an alleged overcharge with respect to the 271 miles for which they themselves had the contract? It was unfair of the commissioners to endeavour to have witnesses answer the questions of the commission in a way which would not be allowed by any judge in any civil or criminal court. It was unfair to allege that those in charge of the construction, including the Grand Trunk Pacific, did not consider it desirable or necessary to encourage economy in the construction. The statement of the royal commission in that regard is absolutely without foundation. It is all very well for them to make a statement like that but they have not substantiated it. All they have substantiated is that the railway could have been built for less money by degrading it. In the same way, if you start to build a store, you can lessen the cost by degrading the character of the work. I have read the report through, although I have not read all the evidence, and that is all I can find in it.

I have nothing more to say than that it will give me great pleasure to vote for the amendment. I think the amendment is in accordance with the facts. I am sorry to think that this report has to go broadcast through the country making these unfair insinuations against the Grand Trunk Pacific. It does an injustice to the credit of Canada and to the management of public affairs. I suppose that its object is to do duty before the country. It seems to me that we might place on the title page the words 'adequate protection'. Then, it will do its duty when the election comes on. It will then be said by those who have charge of the election campaign, as the commission say on page 15 that, '$40,000,000 at least was needlessly expended in the building of this road.' Then some paper, or some supporter of the Government, will take up the cry that $40,000,000 of the people's money has been squandered. Then it will be added to and it will be said that something worse than that has been done with $40,000,000 of the people's money. Then there will be the story—the money is gone but there is no money for the navy; they refused $35,000,000 to protect the old land. That would not be true if they did say that. It is not true at all because we were willing to give very much more than $35,000,000; we offered it.

Some hon. MEMBERS: Oh, oh.

Mr. LOGGIE: Hon. gentlemen may laugh, but, nevertheless, they cannot dispute the facts as I place them before the House and the country. I trust that hon. gentlemen will take this matter into their serious consideration and not allow their partisan views to carry them away. Let them rise to the dignity of the occasion and make an amendment of their own if they like. I suppose that, if they accepted our amendment, it would be considered as a vote of want of confidence in the Government, but let them make an amendment of their own which will take away from the Government the responsibility of condoning the report of this Royal Commission drawn up in the words that we find between these covers. I thank you, Mr. Speaker. I am sorry to have taken up so much of the time of the House, but I thought it was a duty which I owed to my constituents and the country to place on record my views with regard to this important question.

On motion of Mr. Douglas the debate was adjourned.

On motion of Mr. Rogers, the House adjourned at 11.28 p.m.

Wednesday, April 1, 1914.

The House met at Three o'clock, the Speaker in the Chair.

FIRST READINGS OF BILLS.

PUBLIC BILLS.

Bill No. 136, to amend the Dominion Lands Act.—Mr. Roche.

Bill No. 137, to amend the Dominion Forests Reserves and Parks Act.—Mr. Roche.

Bill No. 138, to amend the Irrigation Act. —Mr. Roche.

PRIVATE BILLS.

Bill No. 134, to amend the Inspection and Sales Act.—Mr. George E. Foster.

Bill No. 135, respecting a certain Patent of Rudolph Goldschmidt.—Mr. Fripp.

QUESTIONS.

(Questions answered orally are indicated by an asterisk.)

DREDGE W. S. FIELDING.

Mr. CARVELL:

1. How much has it cost for repairs and renewals for the dredge formerly officially known as the W. S. Fielding, at work in the harbour of St. John from October 1, 1911, to the present time?

2. What persons, firms or corporations did the work?

3. Was the work done by tender? If so, who were the tenderers and what was the amount of each tender?

Mr. ROGERS:

1. $23,019.63.

2. Union Foundry and Machine Company, under contract, $284; repairs at different times, $3,317.74; St. John Iron Works, under contract, $2,074.60; repairs at different times, $2,134.84; Wm. Lewis & Son, under contract, $3,250; repairs at different times, $7,403.35; J. F. Williamson, $573.70; Department of Marine and Fisheries, $1,822.49; T. McAvity & Son, $53.71; D. McLachlan & Son, $1,055.26; Schuller Electric Company, $550.30; E. S. Stephenson, $195.59; James Fleming, $56; G. Hevener, $43.60; J. E. Wilson, $164.25. Total, $23,019.63.

3. Tenders were asked for: Bucket repairs: Wm. Lewis & Son bid $3,250; tender accepted. Union Foundry and Machine Company bid $7,000.

Tumbler repairs: Union Foundry and Machine Company bid $284; tender accepted. Wm. Lewis & Son bid $527.

Boiler repairs: St. John Iron Works bid $2,074.60; tender accepted. James Fleming bid $2,300.

INTERCOLONIAL RAILWAY SURVEY STAFF.

*Mr. EMMERSON:

1. Has the Intercolonial railway a staff of engineers employed in surveying near Dorchester and Sackville, New Brunswick, with a view to double tracking and the securing of improved grades and curves? If so, who is the engineer in charge, and is he a former employee of the Canadian Pacific railway?

2. Who are employed as engineers or otherwise assisting in the work, what are their ages and nationality respectively, with what railways were they employed just previous to their engagement by the Government railway, and are any of them American citizens?

Mr. REID:

1. Yes. H. S. Clarke. He is not a former employee of the Canadian Pacific Railway Company.

2.

CANADIAN NORTHERN RAILWAY TERMINALS.

Mr. EMMERSON:

1. Has the Government any knowledge as to the ownership of the so-called Canadian Northern Railway System terminals at Montreal, Winnipeg, Moosejaw, Vancouver, Port Arthur, Port Mann, Quebec and at other points respectively?

2. Is the Government aware as to how and in whom the title of the right of way of the said Canadian Northern railway through Carleton county, Ontario, is vested?

Mr. REID:

1. The terminal property referred to, with the exception of Vancouver and Port Mann, is owned by the Canadian Northern Railway System Terminals, Limited, the capital stock of which terminal company is owned by the Canadian Northern Railway Company. The terminals at Vancouver and Port Mann are owned by the Canadian Northern Pacific Railway Company, the stock of which company is all owned by the Canadian Northern Railway Company.

2. The title of the right-of-way through Carleton county, Ontario, is owned by the Canadian Northern Ontario railway.

INVESTIGATION BY RIMOUSKI ADVOCATES.

*Mr. GAUVREAU:

1. How much have Messrs. Louis Taché and J. N. F. Pouliot, advocates of Rimouski, received for the investigations held by them since 1911?

2. How many investigations have been held by each of them?

Mr. CODERRE:

1. Railways and Canals: Louis Taché, $517.23; Post Office, Louis Taché, $260.15; Post Office: J. N. F. Pouliot, $400.

2. Railways and Canals: eleven investigations by Mr. Taché; Post Office; ten investigations by Mr. Taché; four by Mr. J. N. F. Pouliot.

AID TO CANADIAN NORTHERN RAILWAY.

Mr. BURNHAM:

What aid has been promised, given or otherwise arranged for, directly or indirectly, by the Government of Canada to or with the Canadian Northern Railway Company, or any of its subsidiary lines, or propositions or any part thereof, since the inception of the same?

Mr. REID:

Canadian Northern railway.

Cash Subsidy.	Granted.	Paid to December 31.

No land was granted direct to Canadian Northern railway, but this company has received from the contractors who constructed the Lake Manitoba Railway and Canal Company, the Winnipeg and Hudson Bay railway and the Manitoba and South Eastern railway, 4,002,848 acres.

'SAFETY FIRST' ENGINEER.

Mr. BOURASSA:

1. Who is the Mr. Long who lectures the employees of the Intercolonial on the Safety First?

2. Does that gentleman draw any pay from the Government for such lectures? If so, what is his salary?

3. Is he a British subject?

Mr. REID:

1. Mr. John Edwin Long is an expert

Safety First engineer previously employed with the New York Central and Hudson River railways, and is employed by the Canadian Government railways as such.

2. $175 per month.

3. No.

MR. JUSTICE CLEMENT'S TRAVELLING EXPENSES.

Mr. BOULAY:

What is the amount paid by the Government to the Hon. Justice Clement, of British Columbia, as travelling expenses, and which was declared by the court to have been illegally drawn by him?

Mr. DOHERTY: $4,290.

SOULANGES CANAL OVERSEER.

Mr. SEGUIN:

1. Does the present superintendent of the Soulanges canal, Mr. Adelard St. Armour, perform his duty to the satisfaction of the department?

2. Was his way of fulfilling his official duties as superintendent investigated?

3. If so, at whose request was such investigation held?

4. By whom was it presided over and what conclusions were arrived at?

Mr. REID:

1. Yes.

2. Yes.

3. J. J. Bissonette.

4. W. L. Shurtliff; St. Amour was sustained in his position.

Mr. SEGUIN:

1. What is the name of the present superintendent of Soulanges canal, and who did he succeed?

2. Who was the superintendent on the 21st of September, 1911?

3. What are the reasons for his dismissal?

4. Was there an investigation?

5. How long has his successor acted as superintendent?

6. Was there an investigation held when the latter ceased to act as superintendent of the canal?

Mr. REID:

1. There is no such position as superintendent of the Soulanges canal. The name of the overseer is A. C. St. Amour.

2. L. A. Sauvé held the position of overseer on September 21, 1911.

3. Active political partisanship.

4. Sworn evidence was submitted.

5. Since December, 1911.

6. He has not ceased to act.

L'ASSOMPTION PROPOSED WHARF.

Mr. SEGUIN:

1. Does the Public Works Department intend to include in the Supplementary Estimates this session an amount sufficient to cover the expenses of the construction of a wharf in the town of L'Assomption, on the L'Assomption river?

2. Have petitions or requests been filed towards securing such construction?

3. What are the reasons for delaying the work?

Mr. ROGERS:

1. This information cannot be given until the Supplementary Estimates are laid before Parliament.

2. Yes.

3. Answered by No. 1.

QUEBEC-LEVIS MAIL CONTRACT.

*Mr. LEMIEUX:

Who has the contract for the conveyance of the mail between Quebec and Lévis, and what is the amount of contract?

Mr. PELLETIER: No contract has as yet been executed. The department expects to close the negotiations which have been going on for some time with the La Traverse de Lévis, Limitée.

FRASERVILLE 20th BATTERY.

*Mr. GAUVREAU:

1. What hall has been rented at Fraserville for the accommodation of guns of the 20th Battery C.F.A.?

2. Who is the owner or proprietor?

3. What is the amount paid for rent?

Mr. SAM. HUGHES:

1. No hall has as yet been rented for the accommodation of guns of 20th Battery. There was rented, however, for a period of six weeks last fall, a building known as 'Dubé's Hall' for $100. This was for a provisional school only.

2 and 3. Answered by No. 1.

QUEBEC HARBOUR COMMISSION ATTORNEY.

Mr. GAUVREAU:

1. Is it the intention of the Minister of Marine and Fisheries to inquire from the Quebec Harbour Commission as to who has taken Advocate Stewart's place as its legal adviser and as to his salary?

2. If so, when does he intend to make such inquiry and will he inform the House of the result?

Mr. HAZEN:

1 and 2. On March 12 last, in reply to an inquiry, the Minister of Marine and Fisheries informed the hon. member for Temiscouata (Mr. Gauvreau) that the department had no information as to whether or not Mr. Stewart, attorney for the Quebec Harbour Commission, had been replaced by any one else, or what the salary attached to the position was. Since then

there has been no further inquiry with regard to the matter. If the hon. member desires the Department of Marine and Fisheries to get such information for him, and will so state, the minister will be pleased to communicate with the harbour commissioners with a view to obtaining the same, and will inform the House of the result.

L'ISLE VERTE WHARF.

Mr. GAUVREAU:

1. Was there any complaint laid before the Minister of Public Works or the Minister of Marine and Fisheries, informing them that the earth, etc., taken from the inside of the wharf at L'Isle Verte was being deposited in the channel of the river?

2. If so, was any answer given thereto? If so, by whom and what was its nature?

Mr. CODERRE:

1. Yes, a complaint was sent to the Department of Marine.

2. Yes. The Assistant Deputy Minister of Marine and Fisheries advised the Public Works Department, under whom these dredging operations were being carried out, as to the complaint made. The chief engineer of the Public Works Department reported that the dredged material was placed off the channel of the river, and could not in any way interfere with navigation, and moreover, that all the dumping would be carried away by the ice in the spring. The complainant was so informed by the Assistant Deputy Minister of Marine and Fisheries.

UNOPPOSED AND UNDISCUSSED MOTIONS.

Mr. Sexsmith.—For a return showing what it cost the Government for bottled and distilled water in Ottawa since January 1, 1912, to March 1, 1914; what it is costing the Government per day now for bottled and distilled water.

Mr. Sinclair.—For a return showing total amount paid for pensions by the Department of Militia and Defence for the year ending March 31, 1913; the number of militia officers at present on the pay roll of the permanent corps; the number of private soldiers at present on the pay roll of the permanent force; the number of private soldiers who joined the force during 1913; the number who deserted during 1913; the gross amount expended by the Department of Militia and Defence for the salaries of officers and officials of every kind in the employ of the department at Ottawa or elsewhere during the fiscal year 1912-1913; the gross amount paid out for services to the private soldiers of the permanent corps during the said year 1912-1913.

IMMIGRATION INTO BRITISH COLUMBIA.

On the Orders of the Day being called:

Mr. OLIVER. I desire to ask the Minister of the Interior (Mr. Roche) if he is prepared to make a statement concerning the action of the Government with regard to immigration into British Columbia. The Order in Council which prohibited the immigration of artisans up to the 31st of March has, of course, expired; and I am sure the House and the country will be glad to know what action, if any, the Government intend to take.

Mr. ROCHE: That Order in Council has been continued for another six months.

THE MISSING KARLUK.

On the Orders of the Day being called:

Mr. OLIVER: I wish to ask the Minister of Marine and Fisheries (Mr. Hazen) if any action has been taken by the Government toward sending an expedition in search of the Karluk. I saw a statement to that effect in the newspapers and would like to ask if it is correct.

Mr. HAZEN: The statement which the hon. gentleman saw in the newspapers is entirely incorrect. No such action has been taken.

THE NATIONAL TRANSCONTINENTAL RAILWAY.

Consideration of the proposed motion of Hon. W. T. White (Minister of Finance) for Committee of Supply, and the proposed amendment of Mr. Graham thereto, resumed from March 31.

Mr. L. J. GAUTHIER (St. Hyacinthe): Mr. Speaker, it is with a good deal of reluctance that I have decided to take part in this debate, and when I look into the difficulties connected with my speaking at this stage, I realize that they are two-fold. First of all, coming into the discussion after various hon. gentlemen who from both sides of the House have contributed well-prepared addresses on the question at issue, it may be thought that it will be impossible for me to avoid falling into tedious repetition. Secondly, I may say that I intend to discuss the matter not as a partisan, but from the general standpoint of public and provincial interest. I may assure you, Sir, that I will not worry the House with quotations, and I will not roam through a mass of engineering technicalities, because I am not conversant with that side of the question, and it would not affect the point of view which I take in regard to this matter. As it is necessary for the proper presentation of my views that I should deal with the history of the road, I will, with the permis-

sion of the House, make an analytical sketch of the discussion which took place in the House when the legislation providing for the construction of the National Transcontinental railway was enacted and how the work was executed. And I will then come to the report of the commissioners and endeavour to point out what is the duty of the Government in that regard.

When the legislation creating the National Transcontinental railway was brought down in 1903, the Government met with a very hostile opposition from many quarters. First of all, the Canadian Pacific Railway Company could not view without apprehension the invasion by a competitor of the territory of which they had at the time a practical monopoly, and those who were friendly to this national corporation claimed that it was not fair for the Government of Canada to use public money and to pledge the credit of the country to create a competitor to a private concern. They contended also that the Canadian Pacific railway had done much for the development of our western country and that it was nothing but just that it should be allowed to reap the benefit of its long years of expenditure. To this line of argument the Government of the day answered that it was true that the Canadian Pacific railway had done much for Canada, but that Canada had done its share for the Canadian Pacific railway. It was true that through the campaign of literature carried on by the company, immigrants had been induced to take up the land of our western country; but at the same time the development of that country was such that the Canadian Pacific could not give satisfaction to the western part of Canada, and that the creation of another company would not bring undue competition to bear upon the Canadian Pacific railway, which was unable to face alone the development of our western prairies.

Then, the Government of the day had to face the opposition of the Tory party. It has been said that the duty of the Opposition is to oppose, and the Tory Opposition of that time did their best to oppose the idea of Canada's building a transcontinental railway. The opposition of the Tory party assumed many aspects. Some hon. gentlemen of the Opposition claimed that the construction of the Grand Trunk Pacific railway should terminate on the shores of the Great Lakes. Others thought that if the Grand Trunk Pacific had to be built it would be better to build it from Winnipeg to North Bay and there link it up with the Grand Trunk railway system. Other members of the party, having at their head the late member for the county of Jacques Cartier (Mr. Monk), contended that if it were necessary to build a National Transcontinental railway, it would be better to build, as a substitute for the project of the Government, a line running into our colonization territory so as to connect it with other lines of railway running south to north from the St. Lawrence river. Not only had the Liberal Government of 1903 to meet the opposition of the Canadian Pacific Railway Company and those who were friendly to it; not only had they to meet the opposition of their opponents in this House, but they had to face also the opposition of one of their own friends. The Hon. Mr. Blair, who up to that time had been Minister of Railways and Canals, severed his connection with the then Government because he held the view that it would be unfair to the Intercolonial railway if the Government should build a railway which would parallel the Intercolonial railway, and which would be leased to another company. Mr. Blair was in favour of extending the Intercolonial railway over the Canada Atlantic from Montreal to Parry Sound so as to compete as a Government-owned railway for the traffic of the West.

He claimed that building the road as the Government intended to build it involved an unwarranted expenditure, that it was useless for the Government to enter upon such an undertaking, that the railway would traverse a barren country, that the road would never make expenses. It was said that the Government had not sufficient data to go on with such a huge undertaking. If any hon. member will read the debate that preceded the adoption of the law creating the National Transcontinental railway, he must admit that this is an accurate synopsis of it. The Government of the day claimed that this opposition was not well founded. They had every confidence in the future of this country; they thought that the time was ripe for Canada, in justice to our western farmers, to secure for them an outlet for their produce to the markets of the world. At the same time, they so designed the railroad that it would do justice not only to the West but also to the East; not only to the new country west of lake Superior, but also to the old provinces that at first constituted the Dominion of Canada. You hear very often that there are men in this country who think that Canada begins on the shores of the Atlantic

and ends on the eastern shores of lake Superior. On the other hand, you have some Canadians who are under the impression that Canada begins only west of lake Superior. In my own province, there is a class of politicians who, on the public platform and by every other means, trying to arouse prejudice, claim that the province of Quebec, being one of the oldest and being inhabited by descendants of the French race, should not welcome immigration to our shores because the greater the immigration the sooner we shall see the province of Quebec completely outvoted; for, of course, in this country the majority must rule and must enact the laws. I belong to the province of Quebec; I am proud of my province and of my race; but, thank God, I do not want to stop the development of this country. Canada should do her utmost to develop the western part of our country, and it is only just that she should give to those who have come to throw in their lot with us every opportunity for success; we must not give them any reason to regret that they have come to work hand in hand with us. But at the same time, the older provinces have a right to be heard, to secure at least justice from the central Government of Canada. The National Transcontinental railway was designed to provide an outlet for the produce of the West, to afford that competition with the Canadian Pacific railway for which the farmers had been asking, to open new regions in the provinces of Ontario, Quebec and New Brunswick, and to keep the trade of our great western country for the benefit of the whole of Canada. That was the design of the National Transcontinental railway; but when the Government of that day submitted this measure to the consideration of Parliament, the faith of their Administration was pledged. It was not only the policy of the Liberal party and Government, but it was enacted as the law of this country. It was and is a contract entered into by the Parliament of Canada on one side and the Grand Trunk Pacific on the other side. The Government of Canada represented the provinces. What was the reason that we submitted to the electors of this country in the general election of 1904 for accepting that policy? The reason, Sir, was that every province was having its share of justice. It is true that the money of the country was being spent to create an outlet for the West; but the contract entered into with the Grand Trunk Pacific Company was acknowledged and accepted by the electorate of Canada because every province and every part of the electorate was receiving its share of justice.

I shall not discuss what was to be the cost of the National Transcontinental railway, and the reason is very clear. I claim that in 1904 the principle of the construction of the road was accepted by the electorate. From 1904 to 1908 the Government of the day had begun the expenditure of the money, and everybody in this country realized that the road was going to cost more than the original estimate. But it was an issue in the general election of 1908. We went before the electors and discussed that single question. What was the motto of the campaign ? 'Let Laurier finish his work; let the Government finish their work; let the Government go on with the expenditure; because what this country requires is a railway built according to the conditions of the contract and of the law enacted by the Parliament of 1903.' I do not defend this measure because it is a measure of the late Administration; I defend it as it has been enacted and as the work has been proceeded with, because it is in accordance with the contract agreed to by Parliament. The Minister of Justice, speaking in this Chamber, said that there was a contract in reference to the pension fund, and that it had to be respected. If it was only right that that contract should be respected, as the hon. Minister of Justice said, have I not a right to say that the contract entered into with the Grand Trunk Pacific should also be respected by this Government? The same principle and the same reasoning are involved. But there are other reasons. The road has been paid for partly out of the surplus of the different administrations and partly by the selling of bonds unloaded on British investors. What induced the British investors to buy those bonds? It was because a contract had been entered into by the Parliament of Canada guaranteeing the bonds and the construction of a first-class railroad. Yet this Government of 1914 are degrading the road; and are they not also degrading the value of the securities held by the British bondholders? This is the first time that I have seen an administrator—although the Government of the day claim to be masters of this country, they are only its administrators—appointed to manage the affairs of an estate, doing his utmost to degrade the asset which has been confided to him to administer. What a feeling of security the spreading of this report will engender in the minds of bondholders all over the world! The ministers on

the Treasury benches may claim that they are spreading this report broadcast to show what kind of administrators their predecessors were; they may claim that it is in the public interest; but how can it be in the public interest to create a false impression abroad that the Government of this country have indulged in bribery and wasteful expenditure of the public money? What benefit will that be to the community? None whatever.

There is another phase of the question with which I wish to deal. Not only have the bondholders' securities been degraded by this Government, but the different provinces are not being treated fairly. When the different provinces entered into Confederation they gave to the central Government all their sources of revenue and kept themselves all the departments which involved expenditures. That is why, at different times, provincial governments have come to the central Government and asked for a better repartition of the revenues of the country. They have made their case so clear that the Government at Ottawa had to enact legislation giving a bigger proportion of the taxes to the provinces. The revenues of the provinces are small compared with the revenues of the Dominion, but their expenses are great. When the legislation creating the Northern Transcontinental railway was enacted, the governments of the provinces of Ontario and Quebec, having every confidence that the compact would be kept to the letter, incurred great expenses in surveying land and creating villages, so that they would be in a position to help in the development of this country when the railroad was in operation. Do you think for one minute, Mr. Speaker, that the Government of the province of Quebec would have gone to the expense they have incurred at La Tuque, and all the other villages along the line, if they had believed that with a change of Government the railroad would also be changed, and that instead of these villages being on the main line of the Grand Trunk Pacific, they would be only on a local line carrying practically no through traffic? I say no, not for a moment would they have incurred that expense. Since I have had the honour of occupying a seat in this Chamber, I have seen members from the Maritime provinces stand up to defend the rights of their provinces, and lately I have heard one of the representatives of the province of Prince Edward Island asking that the law be set aside in order that Prince Edward Island should retain its present representation in this House. The members from the Maritime provinces were fighting for the rights and prerogatives of their provinces, and no one denied them that right. When the members from the province of Ontario claimed their rights and pointed out the duty of the Government towards their province, no one denied them that right. Nor was any dissatisfaction expressed when western members claimed certain rights for their provinces. But every time that a member from the province of Quebec stands up to assert the rights of his province, immediately you will hear, or see in the press, that that man is raising a race cry, or is indulging in peanut politics. I claim that the province of Quebec has as much right as any other province in this Dominion to be treated fairly. I do not claim that it should be given favours. No. All we are asking for is justice—justice for every part of this country.

Through this bargain, the people of the West were afforded the outlet for their products which they were demanding. Does any one contend that when this Government decided to degrade the road, justice was done to Ontario, to Quebec, or to the Maritime provinces? Certainly not. This contract was enacted by Parliament, on the understanding that the people of Canada would be treated fairly according to its terms, and the Government in endeavouring to destroy what Parliament did in 1903 is renegade to its duty. That is not what this Government was elected for. In 1903 the Parliament of Canada enacted this legislation; in 1904 the electorate of Canada sustained the Government for passing that legislation, and in 1908 the people of Canada, knowing that the expenditure was larger than at first estimated, imposed on the late Administration the duty of continuing the work. Under these circumstances Mr. Gutelius and Mr. Lynch-Staunton, or Staunton-Lynch, have no right to come here and for a fee of $65,000 to impeach the Parliament of 1903 and the opinion of the electorate of Canada in 1904 and 1908. If the present Government wanted to repeal this legislation, why did they not bring forward a measure to do so in 1912, in 1913, or in 1914? They knew that even their supporters would not sustain them on such a proposition; they knew that under our democratic system such conduct could

lead to nothing but anarchy. Why did not the Government, before degrading the road, consult the electorate and get their approval? They dare not do so, because they knew the people would not sustain them. In spreading broadcast the report of this commission, which was made for the definite purpose of inuring their opponents in the public mind, do not they know that they are creating a precedent which may be bad for them when they leave office? They will not be long in power; they are sowing the wind now, and later they will reap the whirlwind. Since they came to office there are some acts of administration which they have carried out, and which are dear to them, but do they think they will be satisfied, if after having, in their opinion, done the best for the country their successors should cancel the legislation they have enacted? On the whole, the electors of Canada are an honest people; there may be individual exceptions, but on the whole, I assert that the electors of Canada are actuated by good principles. When the Liberals were defeated on the 21st of September, 1911, the people of Canada said to the Tory party, administer the affairs of the country according to your own ideas, but the people gave the Tory party no mandate to destroy what had been in existence. They were charged to develop this country, not with ruining its credit; they were charged to make the country prosperous—prosperity they did not bring to the country, but they should have at least remained within the lines of their mandate. If the Tory party could do nothing for the prosperity of the country, they should at least not have destroyed that which they had been charged to keep intact.

4 p.m.

To the Prime Minister, who has been listening to my remarks, I say: there are in Canada a large number of electors who put their confidence in the Conservative party now in power, because they thought that under the right hon. gentleman they would have a clean, honest, and progressive government. Does the right hon. gentleman think he has respected the confidence of the people by appointing a commission, such as we are now discussing, and becoming responsible for his party's press bureau sending false statements broadcast throughout the country, twelve months before the report was presented to Parliament, so as to create the false impression that the country had been swindled out of $40,000,000, when on the report being presented it is found that it does not corroborate such assertions? It is not fair to the country, it is not fair to Parliament, it is not fair even to the right hon. gentleman himself that such an attempt should have been made to mislead the people. I know that we cannot force certain hon. gentlemen on the Government benches to have confidence in the Opposition, but above party politics, and above the desire to remain in office, there is the public interest which should always be respected.

With these few remarks, I hope that the report as it is now will be the vindication of the late Administration; and let me hope that before it is too late the Government will come back to the old contract and will restore to the road its former degree of efficiency. If they do not do so, we will wait for them at the polls, where they will receive their condemnation, because the contract must be adhered to as is was signed and concurred in by Parliament in 1903, and, approved by the people of this country in 1904, and in 1908.

Mr. E. M. MACDONALD (Pictou, N.S.): Mr. Speaker, eleven years ago the Government of the day came to this Parliament with a proposition that the time had arrived in the history of Canada when we should enter upon the construction of a second transcontinental railway. They submitted to Parliament an agreement made with the Grand Trunk Pacific Railway Company of Canada and containing in its recital a statement of the reasons which had induced the Government to enter upon that enterprise and to ask the Canadian people to provide the funds necessary to carry it into effect.

It is perhaps just as well for us, in the inception of our consideration of this question, to see what was the original idea in regard to this enterprise. I read from the contract made on the 29th day of July, 1903, between the Government of the day and the Grand Trunk Pacific Railway Company:

> Whereas, having regard to the growth of population and the rapid development of the production and trade of Manitoba and the Northwest territories, and to the great area of fertile and productive land in all the provinces and territories as yet without railway facilities, and to the rapidly and expanding trade and commerce of the Dominion, it is in the interest of Canada that a line of railway, designed to secure the most direct and economical interchange of traffic between eastern Canada and the provinces and territories west of the Great Lakes, to open up and develop the northern zone

of the Dominion, to promote the internal and foreign trade of Canada and to develop commerce through Canadian ports, should be constructed and operated as a common railway highway across the Dominion from ocean to ocean, and wholly within Canada.

That is the germ of the proposition put forward at that time by the Liberal party and approved on the repeated occasions on which the electorate were called upon to discuss it.

Although we have this report, ridiculous in its character, mischievous and false in its allegations, put before the Canadian people at this juncture, there never was a time during the last six years when any Conservative of responsibility was prepared to take the position that this transcontinental railway should not be constructed where and when it was proposed to be constructed by the Liberal party. We are told by hon. gentlemen opposite that, when this proposition came before Parliament, the then Premier of Canada told the Canadian people that the railway would cost only $13,000,000, and that the then Minister of Finance said that it would cost only $61,000,000. Let us consider for a moment the truth of these allegations and how far this question of cost entered as an element into the consideration of Parliament when it passed that Act in 1903. Every one knew that the northern part of Canada between Winnipeg and Quebec and between Quebec and Moncton had undeveloped resources of the greatest possible extent. General information was to be had in the various departments of the Government in regard to this, and the statement of Mr. Schreiber is to the effect that there existed in regard to the condition of that part of the country preliminary reports made by surveyors such as Sir Sandford Fleming. From that information Mr. Schreiber gave to the Minister of Finance of that day estimates upon which the latter based his figure of $61,000,000. Every one in Parliament at that time knew the conditions under which the estimate was made. Every one knew that no test pits had been sunk, that no experimental surveys of the land had been made as to the location of the road and so as to arrive at definite figures. Therefore no one would be able to say within $10,000,000 what the road would actually cost. Although the Conservative members in all the intervening years have declared that the present leader of the Opposition stated that the cost of this railway was to be only $13,000,000, every one of them knew that the leader of the Opposition was only speaking of the interest upon the cost as estimated by Mr. Schreiber. But hon. gentlemen opposite did not accept these figures. What did they say? My hon. friend the member for North Toronto (Mr. Foster), a member of the present Cabinet, told the country at that time that the railway would cost $73,000,000. My hon. friend the member for Peel (Mr. Blain) told the country that it would cost $100,000,000. The late Minister of Railways, the Hon. Mr. Haggart, said that it would cost $125,000,000. The hon. member for West Hastings (Mr. Porter) said that it would cost $150,000,000. You, Mr. Speaker, then gave an opinion in regard to its cost. You knew that it would cost more than $13,000,000 or $61,000,000. You said that it would cost $125,000,000. You were not deceived. It was stated by a prominent member of the Opposition of that day, the hon. member for West Toronto (Sir Edmund Osler), that the railway would cost $200,000,000. The right hon. gentleman who leads the Government to-day said that the railway would cost anywhere from $75,000,000 to $100,000,000 and that on account of the four-tenth per cent grade, it was impossible to tell in advance within $10,000,000 of what it would cost. When we went to the people in 1904, my right hon. friend's organization in the province of Nova Scotia declared that this railway would cost $130,000,000. In the election of 1904, every Conservative who asked the support of the electorate, pled with the people that they should oppose the Government because it would put an untold burden upon his constituents, and every Conservative quoted figures in dollars and cents to show just how great a burden was to be placed upon his constituents as the result of the construction of this railway. What occurred? The cost was not the issue; that question was not worrying Parliament at that time, because Parliament had before it the fact that the Intercolonial railway of Canada, running from Quebec to Sydney, had cost the people of this country $78,953 per mile, and was aware of the cost of railways in the United States and other countries. In New South Wales, railways not of this high standard cost $64,000 per mile; in Germany, $107,000; in France, $126,000; in Russia, $83,000; in Austria, $87,000. In Great Britain, with her expensively prepared road beds, the average cost is $272,000 per mile. These data were quoted in Parliament in 1903, and Parliament and the country knew that the cost of this enterprise would be very great, and they accepted that responsibility.

What position did the leader of the Government, then leader of the Opposition, take at that time? Was it cost that he was inveighing against? Not at all. He said this railway should be built from sea to sea, so that our ocean ports on the Atlantic —at the termini of this much-abused Quebec and Moncton section—should be developed, and that the lines should be owned by the Government. The slogan of the Opposition then was not cost, it was: Are we to have a Government-owned railway or a railway-owned Government? That was the question on which they went to the people. So, when these hon. gentlemen complain of being deceived about the cost, there is not a man of them who was here in 1903 but knows that he is drawing a red herring across the trail, that on the discussion of this report he is attempting to bolster up the most ridiculous document ever presented to a free Parliament; and he laughs in his sleeve when he talks of cost and argues that the estimates of 1903 were the important point. Did not the people of Canada know?

Mr. SEXSMITH: No.

Mr. MACDONALD: My hon. friend did not believe his leader if he did not know. In 1904 the people of Canada declared that they wanted a new transcontinental railway built with the object and according to the terms set forth in the contract with the Grand Trunk Pacific railway. And the Government of that day was returned. They initiated the construction of the road. Here and there, in the intervening years, we heard some discussion about the question. In 1908, the hon. member for North Toronto (Mr. Foster), now Minister of Trade and Commerce, gave his estimate of the cost of the Transcontinental. Speaking in this House, he said that the cost would be $155,000,000. The ex-Minister of Railways and Canals (Mr. Graham), speaking in this House in 1908, said that, exclusive of the cost of terminals, the construction of this railway would involve an expenditure of $114,000,000, as estimated by his engineers. The present leader of the Government (Mr. Borden) in 1908 estimated—and this was when very little had been done in the way of construction—that the cost of the road would be $161,724,185, or, adding the cost of terminals estimated at $5,000,000, the cost would be in round numbers $167,000,000. These were the statements made to Parliament by members on either side previous to the general elections of 1908. And the Government that went to the people in that year making these statements as to the cost of the railway was overwhelmingly sustained and returned to carry on the enterprise which they had inaugurated.

I have attempted to deal frankly with this question of cost, for there never was a greater bugaboo than the statements of hon. gentlemen opposite on this question. The party organs discussing the eloquent speech of my hon. friend from South Renfrew (Mr. Graham) cannot but admit its masterly character, but they say he failed to deal with the question of the cost of the enterprise. Now, I wish to meet that question squarely as proposed by my hon. friends on the other side; and I have shown that no Conservative in Parliament was deceived on this question of cost in 1903, 1904 or 1908, that all parties in this House before going to the country for confirmation of their position estimated that the cost of the railway would be from $100,000,000 to $150,000,000. But on the 30th of September, 1910, four years ago, Mr. MacPherson, now assistant to the chairman of this commission, estimated the cost of the road at $143,000,000, or $78,000 a mile. On the 10th of March, 1911, Mr. Gordon Grant, then and now chief engineer of the road, estimated the cost at $145,339,000 or $80,565 a mile, not including the cost of terminals. That is the estimate that was given when the Liberal party went out of power in 1911. When hon. gentlemen opposite came into power that course was entered upon which has led to the bringing down of this report. An estimate was prepared by the Minister of Railways (Mr. Cochrane) in February, 1912, which he submitted to Parliament, declaring that the cost of the road since they had come into power had gone up to $171,000,000, or $95,000 a mile. In other words, while Mr. Gordon Grant, the chief engineer, who has the confidence of this Government, declared under Liberal rule that the cost was going to be $145,000,000, hon. gentlemen opposite to the injury of the country, jumped the estimated cost to $171,000,000. Then after a year of their own Administration, on the 18th of April, 1913, they changed the estimated cost again, bringing it down to $161,307,800. But in that amount is included $16,000,000 for terminals and other expenditures, the amount of which has been determined solely and exclusively by this Government. So, you have the exact result as to the cost of this railway what it was placed at by the Liberal party in March, 1911, $145,000,000; for if you deduct from the $161,000,000 the

amount of money that has been spent or is being provided for by this Government in regard to terminals, $16,000,000, you have an estimate for the road of $145,000,000. The result of all this is that, with the exception of the abnormal estimate in February, 1912, the object of which is now apparent, and with the same engineer responsible for every dollar of the money that has been paid on this Transcontinental for the last six years in office to-day, you have the estimated cost as put forward by the Liberal party four years ago absolutely sustained. So, I assert without fear of contradiction, that at no time since the inception of this road, since there were given to the public estimates made by engineers dealing with this question after full examination had been made, has the expectation and asserion of the Liberal party upon this question been shown to be untrue or false in any particular, nor has it been shown that the country had been misled by one iota in regard to the matter. The Canadian people in 1903-4, in 1908 and in 1911 declared in favour of a second transcontinental railway and declared that that railway was not inaugurated one moment too soon; and I assert that there is not a man of any responsibility on the Government side who holds his seat here to-day who was prepared to go to the people in 1911 and declare that Sir Wilfrid Laurier had done wrong when he asked the people in 1904 to build this railway.

In 1908 we had the scandal election; that was the time when charges of all kinds were hurled against the Government of the day. The aftermath of the activities of that period were statements made upon irresponsible platforms and in the nondescript press throughout the country as to the enormous corruption that was going on in connection with the construction of the Transcontinental railway.

When hon. gentlemen on the other side have nothing else to talk about, they allow their imaginations to run riot, and they make absolutely irresponsible assertions in regard to this question on the platforms and in the press. When by a curious turn of fate they were given the responsibility of dealing with the affairs of this country, they tried, through the Morine commission, to make good the charges that had been hurled against the late Administration; but when Morine made his exit, when the investigation being conducted by the commission of which he was the chairman met with a sudden death, hon. gentlemen found themselves upon the horns of a dilemma. They had to invent something new along the same line; so, they said, here is the Transcontinental railway; we will proceed to appoint two commissioners about whose opinions we have absolutely no doubt. We will pick out men this time who know their business, and we will provide conditions under which they will bring in some kind of a report which we can use as political material. They disregarded altogether the effect of such a report upon the credit of the country. I am sure that many hon. gentlemen who sit opposite know, from the advice which they have received from business men in their constituencies and elsewhere throughout the country, that a great mistake has been made in connection with this report. The hon. Minister of Finance does not sleep on any easy bed these times; by every mail communications from London and elsewhere tell him of the gross error that was made by this Government in sacrificing Canada's credit in order to make good their pre-election assertions. Why did hon. gentlemen not have a parliamentary investigation if they believed that an investigation was necessary? Why did they not appoint a special committee of the House of Commons to deal with the matter, and to deal with it in the clear light of day?

My hon. friends have no confidence in themselves; and, being afraid to trust themselves to do the partisan work, they got two partisans to do it for them. Why was not a Royal Commission of judges appointed? Why did not hon. gentlemen opposite, if they believed that there was any wrongdoing in connection with this matter, select from the bench of Canada men who are absolutely free from any suspicion of partisan taint, and ask them to investigate the whole matter and bring in a report, the statements contained in which would be considered of some value? My hon. friends could not find anybody on the bench who would suit them, and they selected their own commissioners. They were hand-picked men.

At North Bay, in the constituency of my hon. friend the Minister of Railways, lived Mr. Gutelius. Born in the United States, and having been 17 years in this country, Mr. Gutelius, although occupying positions on different railways of this country, did not think enough of Canada or of British institutions to take out his naturalization papers. Well, says the Minister of Railways, I have a proposition to

make to you, Mr. Gutelius. You go on this board and investigate the Transcontinental railway construction; do the thing right, according to my taste, and when you get through I will make you general manager of the Intercolonial railway at a salary of $20,000 a year. All I want you to do is to become a British subject and prepare this report as I would like it prepared. That was a very tempting offer. My hon. friend the Solicitor General said: Why make this imputation with regard to Mr. Gutelius when the hon. ex-Minister of Railways quoted Mr. Berry? I will tell you why. There is a great deal of difference between a witness giving evidence and an alien coming into this or any other British country and working under a commission from the Crown in which he has not sufficient confidence to swear allegiance to. After Mr. Gutelius was appointed, he became naturalized and entered upon this work.

And what about Mr. Staunton? Will any hon. gentleman on the other side say that Mr. Lynch-Staunton was not a partisan? There is not a man in the province of Ontario who does not know that Mr. Lynch-Staunton has been one of the most active and aggressive Conservative partisans in the province for a long period of years. Whenever the Ontario Government wanted to obtain legal services they sent for Mr. Lynch-Staunton.

An hon. MEMBER: That was because of his ability.

Mr. MACDONALD: That may be right; I am not saying anything about Mr. Lynch-Staunton's ability; but I am saying that, the Government having intimated that they were going to have a close and rigid investigation into the circumstances connected with a certain matter, and that they were going to appoint a non-partisan and impartial body to conduct that investigation, the members of it, no matter how able they might be, should not be men who at the same time are in the pay of the Tory party.

Mr. LALOR: He is a good Irishman, too.

Mr. MACDONALD: I do not know whether he is of the same stripe as the Minister of Militia and some other hon. gentlemen opposite; of course, in the estimation of some hon. gentlemen, the question as to whether or not he is a good Irishman would depend on whether he came from the North or from the South. I am afraid a good many other gentlemen on the other side would not think very much of the Irish party of Mr. Lynch-Staunton, so far as I have any knowledge of it. But while he was conducting this alleged investigation he was in the pay of the Ontario Government. He went to Detroit in February of last year and appeared before the International Joint Waterways Commission as counsel for the province of Ontario; so that while drawing his $25,000 from this Government for his services in connection with this commission he was being well paid by the Ontario Government for the specific services which I have mentioned. Is there a man in this House, is there a man anywhere, who knows the ethics of matters of this kind, who thinks that Mr. Lynch-Staunton was an absolutely impartial gentleman who would approach the consideration of this matter with that judicial feeling which ought to be possessed by any man who undertakes to perform such an important duty for the Government of the country? Everybody knows that the suggestion of his being impartial is absurd, in view of the facts which I have stated.

These two gentlemen were selected to save the face of the Conservative party after the failure of Morine, and what they have given to this country is not a judicial finding or determination, but a political pamphlet, nothing more or less. It is no wonder that my friend Mr. Cahan, the former leader of the Conservative party in the province of Nova Scotia, and a close personal friend of the present leader of the Government, not only took the advantage of the occasion of his addressing a body of students in Montreal to denounce this tribunal, its ex parte proceedings, its methods of dealing with important public questions and its utter disregard of the rights of the public, but, being specially interviewed, sent broadcast throughout this country his disapproval, as a Conservative, of the farce that has been enacted before the Canadian people in the appointment of these men and their utilization as commissioners to investigate the construction of the National Transcontinental railway.

Mr. BURNHAM: Whom would you have appointed?

Mr. MACDONALD: I have already intimated to my hon. friend that the proper course would have been to have had at least a parliamentary investigation or, fail-

ing that, to have appointed a royal commission of judges.

Mr. BURNHAM: You admit it should have been done anyhow; that is the great point.

Mr. MACDONALD: That is very clever. I will admit this, Mr. Speaker, that the Conservative party, after the Morine episode, saw that they were in a hole, and as they had talked so much in regard to the question of the Transcontinental expenditure and corruption, it would never have done for them to have appointed judges or to have had a parliamentary investigation in the broad light of day. There was only one thing for them to do and that was to appoint these men whom they especially selected, and especially provided in advance that these men would make the report which they did, and as to that there can be no possible question.

Mr. BORDEN: I desire to say that that statement is absolutely without foundation.

Mr. MACDONALD Which statement?

Mr. BORDEN: The hon. member stated that the Government had provided in advance the character of report which these gentlemen would make.

Mr. MACDONALD: I did not say that.

Mr. BORDEN: I so understood him.

Mr. MACDONALD: I did say that this Government were in a position, that in order to save their faces they picked out two men whom they knew would make a report upon this question that would, as far as it could, save the faces of the Conservative party. That is what I said.

Mr. BORDEN: I desire to say that the Government knew nothing of the kind.

Mr. MACDONALD: My right hon. friend did not know anything of the kind?

Mr. BORDEN: No.

Mr. MACDONALD: Then my hon. friend has the audacity to suggest to this House—

Some hon. MEMBERS: Order, order.

Mr. MACDONALD: Not at all; that is within order. If I cannot say that an hon. member has the audacity, I would like to know what I can say.

Mr. SPEAKER: I have only to say that according to some very well established English rules, the word 'audacity' is hardly parliamentary.

Mr. MACDONALD: I would like to be sure as to that. You have rather developed some new rules in regard to narrowing down the rights of the Opposition to use language in regard to this Government, and I would like to have some authority. If I cannot say that this Government has audacity, I would like to know how I can discuss their acts in regard to any question. If audacity is not a quality that we are permitted to attribute to a Government whose acts we are discussing, what is it that one can say in regard to them? Nerve, temerity, or what other expression can I employ? If the leader of the Government did not know all about Mr. Gutelius and Mr. Staunton beforehand, there were other members of his Government who did know what kind of a report they were going to bring in, and I am sure my right hon. friend, whose denial I am bound to accept, can only speak for himself, because there are some other members of his Government into whose minds he cannot enter. My right hon. friend cannot question the assertion which I make, that there were members of the Government, who when Mr. Gutelius and Mr. Lynch-Staunton were appointed, knew the kind of report they would bring in and what they were going to say.

Mr. BORDEN I desire to say, as my hon. friend has appealed to me, that I do absolutely question that.

Mr. LEMIEUX: You only question it?

Mr. BORDEN: The hon. member said I could not question it.

Mr. MACDONALD: My right hon. friend is not omniscient, and his knowledge in regard to governmental matters is confined, I am sure, to matters that come within his own purview. I think he will be bound to admit that there are members of his Government who have thoughts and conceptions in regard to matters that he cannot fathom.

After all these preliminary investigations, after all these questionings, after all this bartering with the American citizen who transferred his allegiance and provided this report for a permanent salary of $20,000 a year, after all that, when you get the document, the commissioners have not the audacity or nerve to allege that there had been any corruption in regard to the construction of the railway. You can search the report from end to end to find the slightest allegation of corruption in connection

with the construction. Other things they did say. They went beyond the purview of the Order in Council appointing them to declare that my right hon. friend the Prime Minister of this country did not know what he was talking about. Where do they do that? When they declare that this line of railway from Quebec to Moncton should never have been built. My right hon. friend the Prime Minister was a strong supporter of the proposition that the line from Quebec to Moncton should be built. My right hon. friend in his own constituency, in a manifesto which he issued in newspapers throughout the province of Nova Scotia, previous to the election of 1904, declared that he was the best friend of the Maritime provinces, he wanted to build this railway from Quebec to Moncton; but he wanted to build it as a Government work.

Mr. CARVELL: He said so in St. John.

Mr. MACDONALD: So that when these commissioners undertook to say in the report, as they did say, although they were not asked to do so by the Order in Council, that:

In our opinion this section should not have been constructed at all. If one-third of the money had been expended on the Intercolonial railway it would have provided all the trunk line facilities for the province of New Brunswick which would be required for many years

They said they knew more than the Prime Minister about the matter.

Is the province of New Brunswick the only province by the sea? My right hon. friend and I come from a province which has some pride in its place in this Confederation. We have been wont to look forward in after days to a condition under which there shall come to us there, at the entrance of this Dominion—the outgoing place and the incoming place of Canada—the trade of all this country behind. A local road in New Brunswick? Is that what the Premier told the people of our province in 1904? Let me give you what he did say in Halifax on October 28, dealing with the charge that he was not the great friend of Halifax and its port and that he was not actually in favour of this Quebec-Moncton section. He said:

My friend the Minister of Finance spoke of some remarks of mine speaking at the Empire Theatre on the 7th of the month referring to the Quebec-Moncton section of the road.

If Mr. Fielding meant to state that I was opposed to the building of a shorter line between Moncton and Quebec he stated that for which he never had and has not now the slightest warrant.

[Mr. Macdonald.]

That is where my right hon. friend stood in 1904, and that is where he still stands. What was said by Mr. T. E. Kenny, an old member of this House and the first colleague of my right hon. friend. Speaking in Halifax in October, 1904, Mr. Kenny said:

We should vote for Borden and O'Mullin supporters of a party pledged to build a road across the continent as a great work with its termini on the Pacific and on the Atlantic in Canadian ports.

And how was that railway ever going to get down to Canadian ports by a shorter route if it had not been built from Quebec to Moncton? My right hon. friend issued a manifesto which appeared in the Halifax Herald of October 26, in which he said:

The Government, (that is, the Liberal Government) seeks to impose upon the people liabilities amounting to at least $150,000,000.

Just fancy these gentlemen whose souls are vexed over this question of cost.

Their leader knew what he was talking about. In 1904 he told the people of Nova Scotia that the road would cost $150,000,000 under conditions which absolutely failed to safeguard our national interest. My right hon. friend said: I am in favour of the principle of a new transcontinental railway stretching from sea to sea. I am a better friend to you than is my opponent, because I want to have a Government-owned railway, not a railway-owned Government. And yet this commission that he appointed—I do not think he really did appoint it, and I think he is ready to disclaim his responsibility for it—this commission says that that section should never have been built at all, although the reference never asked their opinion on that point. The commissioners further say:

This commission does not think that the National Transcontinental railway should have been constructed east of Lévis which was done at a cost of $35,000,000

While there may be some reason for the construction of a railway through the timber districts in the eastern portion of the province of Quebec, the construction of the railway from Edmundston to Moncton was not justifiable because of the lack of local business along this line which two years of operation has already proved.

That statement shows that the commissioners not only were reckless in their inquiry into facts, but did not know what they were talking about as regards conditions in the eastern part of the Dominion. Mr. Gutelius had nothing to do with railroading in eastern Canada previous to his appointment as commissioner. If Mr. Staunton ever came to the Maritime prov-

inces, and had a glimpse of the line extending eastward and of the seaports, I think he came down there impregnated with the narrow view which has already been expressed by some hon. gentlemen, that there should have been a railroad constructed from Cochrane to Winnipeg so that all the traffic in the winter months might come down through the province of Ontario and go on to Boston and other American ports. That would have been a nice thing for the eastern seaports of this Dominion. Splendid Canadianism that! The commissioners did not care a snap whether the terminals of the Transcontinental were in Canada or not. They were perfectly willing that all the great trade of the West in the winter months should be drained down through the province of Ontario and on to Boston and New York. These gentlemen dealt with something they had no business to deal with. They declared that the present Prime Minister did not know what he was talking about in 1904 when he declared that the eastern section should be built and that it would be a good thing for Canada. The Prime Minister stands for that to-day. He would not dare to go into Nova Scotia and say that for all the days to come we in our little province are not to share in the development of this great Hinterland; that the Transcontinental line shall not bring the trade of the West to the eastern ports of this country. Out in British Columbia to-day guarantees, assistance and subventions are given with a lavish hand, and for what purpose? To get one more transcontinental railway into that province? To get four. The Grand Trunk Pacific is already going to Prince Rupert, but the assistance of this Government and of the provincial Government is given for the purpose of getting the Canadian Northern railway to make its terminus at Port Mann. British Columbia can have four transcontinental terminals, but poor Nova Scotia is told by Messrs. Gutelius and Lynch-Staunton, who are bigger than governments and bigger than the Premier of this country, that the Government and the Prime Minister of this country do not know what they are talking about, and that Nova Scotia cannot have this railway—that the line east of Lévis should not have been constructed.

I am sure that my right hon. friend agrees with me on that phase of the report, and I think he will agree with me on another phase; that he and his Government are responsible for every dollar that was spent in connection with the construction of the Transcontinental since September 30, 1911. There can be no question about that. The exhibits furnished with this report give a statement of the cost of the road up to September 30, 1911—not money, mark you, that has been actually paid out at the time, but the amount of work done and the value of it as estimated by the engineers. Taking all this work, I find that the total amount done up to September 30, 1911, was $108,730,700. A very large proportion of that amount had not been paid out at that time. The payments were made subsequently, and a most conservative estimate would show that no more than $95,000,000 was paid out by the late Government previous to their going out of power. If the estimate made by this Government as to the cost of the road is correct, then this Government is responsible for an expenditure of at least $67,000,000. This commission takes everything that was done down to the date of the report as if the late Government was responsible for it all. Have gentlemen opposite been so very careful in regard to this matter? Take for instance the cost of grading. The amount spent for grading up to September 30, 1911, under the late Government, was $64,706,000; and taking the estimated cost of grading, which is $107,000,000, it will be seen that this Government has spent $42,359,000. This Government, its officials, and its commissioner are responsible for that payment. Not only that, but they are rseponsible for the final settlement with the contractors. They were the men who had to settle with the contractors, and if there was any improper classification, if there was any unususal expenditure in any department, the men that had to O.K. those accounts, whose certificates had to be obtained before a single dollar was paid, were the chief engineer and the present commissioner; so that for every dollar expended after September 30, 1911, this Government is entirely responsible. What was the condition of affairs at that time? Length of road, 1,804 miles; 1,866 miles of grading had been completed and 1,659 miles of track laid down; bridges were completed to the extent of 82.75 per cent.; telegraph lines had been built on 982 miles of the road; cost of the road per mile up to that date, $63,700. All that is included in the expenditure of $108,000,000, and the payment of a large portion of that amount was still held in reserve, That phase of the situation has been entirely ignored by the commission.

Mr. A. DeWITT FOSTER: Who signed the contracts?

Mr. MACDONALD: What contract are you talking about?

Mr. A. DeWITT FOSTER: All the contracts that were let.

Mr. MACDONALD: Do you not know? It does not make any difference who signed the contracts; the question of how much should be paid under the contract was a question to be determined by this Government.

Mr. A. DeWITT FOSTER: They could not determine the terms of a contract already let.

Mr. MACDONALD: Could they not? The amount that was to be spent under the contract could only be determined since 1911 by this Government and its friends.

Mr. A. DeWITT FOSTER: The report has only been in for about two weeks, and the Government could not have known two years ago what was in that report.

Mr. MACDONALD: I knew the hon. member did not know what he is talking about. What I am saying is that since 1911 Mr. Leonard, the appointee of the Government, and he alone, could determine what money was to be received by anybody. The fact is that if this railway has cost $161,000,000, at least $65,000,000 of that will have been spent entirely and solely upon the responsibility of the Conservative Government, who have been in control of that enterprise since September, 1911, and it is just as well the country should know that.

Why have these commissioners dragged in every possible item in order to make the expenditure seem large? The hon. member for St. Hyacinthe (Mr. Gauthier) very ably pointed out the injury which was being done to Canada by these misrepresentations. Why did the acting Minister of Railways want to add the cost of the Quebec bridge to the cost of the Transcontinental railway? Why did he try to make out that the Quebec bridge was part and parcel of that railway project? Why did he try to make it be believed that if it were not for the Transcontinental railway the Quebec bridge would never have been considered? I had the curiosity to look up something about the history of the Quebec bridge, and I find that the Postmaster General (Mr. Pelletier) speaking at a banquet in Quebec in 1907, declared that the Conservative party and not the Liberal party was entitled to credit for the inception of the Quebec bridge. He told his listeners that the Conservative party had promised it, and he said:

> The Quebec bridge has been promised us by important Conservatives. That promise was not kept, and that was an error. The electors should always insist upon the accomplishment of any promise made, and they should prefer that fewer promises should be made and these carried out.

Mr. MURPHY: Who said that?

Mr. MACDONALD: The Hon. Mr. Pelletier said that, speaking at a banquet given to the Prime Minister. Then Mr. Monk, the late Minister of Public Works, speaking in the Transcontinental railway debate said:

> I mention this because I have always been favourable to the Quebec bridge project, and the Conservative party, as members of this House are well aware, were committed to assist in the construction of this bridge before 1896.

Therefore, hon. gentlemen opposite, in discussing this matter, will please remember that on no less authority than the Postmaster General and the former Minister of Public Works, the Conservative party promised the construction of the Quebec bridge long before there was any thought of a transcontinental railway.

5 p.m.

Mr. GRAHAM: Seven years before.

Mr. MACDONALD: Yes. Let us look at one or two other features of this report. For the sake of carrying out the real purpose of this commission, Messrs. Gutelius and Staunton did not confine themselves to an error of half a million dollars here and there. They refer in one place to the money which was 'unnecessarily expended in building the railway east of the St. Lawrence river.' It worried these two great economists and statesmen to think that this national railway should have its termini on Canadian soil. They say that without including the section east of the St. Lawrence river, at least $40,000,000 was needlessly expended in the building of the road. I defy any man to go through this report from beginning to end, and, taking the figures set out by these two gentlemen, to find that they total up more than $28,392,000. In some cases they refer to alleged engineering mistakes, or to wooden trestles having been used instead of steel, and they give specific instances which they repeat after including their cost in the totals; but taking every possible suggestion they make, they are between nine million dollars and ten

million dollars away above anything they have given details for. They speak of $40,000,000 having been needlessly expended, when, on their own figures, it is only a little over $28,000,000; but $10,000,000 is nothing to these gentlemen when the fair name of Canada is to be defamed for party purposes. Let me give another illustration of this. They say in this report that the classification prescribed in the contracts was ignored, and that the contractors were overpaid $3,300,000 on improper classification. But, taking the very figures they themselves give, their computation is $37,082 too much.

Whenever they speak of the Transcona shops they say that they are entirely too big; that only half the money need have been spent on them, and they always refer to them as having cost $4,500,000. But take the estimate of Mr. Grant, the chief engineer, as to the cost of construction, which you will find in these very exhibits, and his last statement shows that the cost of these Transcona shops would be $4,238,000, and not $4,500,000, so that these commissioners are $260,000 wrong there. Then, with regard to the Winnipeg terminals, you find that according to the engineers' statement of the cost up to date, these commissioners are $1,642,000 too high. All through, this report is grossly misleading. Why should these two gentlemen proclaim to the world that $40,000,000 might have been saved, when, after all, their star chamber investigation, after all their ex parte dealing with witnesses, browbeating them and distorting and misrepresenting the facts, the total amount they could gather together by the grossest exaggeration was only $30,000,000. But, when they wanted to carry out their object and to defame the country, $10,000,000 is a bagatelle to them. These gentlemen state that the alleged engineering mistakes on this railway cost the country $9,945,000, and it does seem to me that in regard to this question of engineering mistakes, hon. gentlemen opposite have, wittingly or unwittingly, misled the public mind to a very great degree. The suggestion is made that the commission were the people who decided what ought to be paid to a contractor. As a matter of fact, the commission had nothing to do with the matter, except to pay the amount certified by the chief engineer. This is what the statute says upon the subject. I am reading from chapter 71, section 18:

> No money shall be paid to any contractor until the chief engineer has certified that the work for or on account of which it is claimed has been duly executed and that such money is due and payable, nor until such certificate has been approved by the commissioners.

Therefore, before any contractor on the Transcontinental railway could be paid for assembled rock or for solid rock, he had first to have a valuation made by the resident or district engineer. Their reports would have to go to the chief engineer, who was responsible for the ultimate determination as to how much was to be paid. The chief engineer would send the account to the commissioners, who had nothing whatever to do with the classification except to certify the account. There is not in this House an hon. gentleman of the legal profession who, after reading that section, would dare to assert that, unless the chief engineer of the commission wrongfully and knowingly certified to a wrong amount, it would be possible for the commission to pay a single dollar improperly to any contractor. What were the other conditions? While this railway was being constructed in this northern land, from Cochrane east to Moncton, west to Winnipeg, resident engineers and district engineers were on the ground. These men were all young Canadians, many of them fresh from college, on the threshold of life, ambitious to succeed, knowing that unless honesty and integrity were the qualities they possessed, they could never come to the front in their profession. The district engineers and the resident engineers, who saw every ton of stone blasted and every shovelful of earth removed, were the men who could determine whether an excavation should be classified as loose earth, as common rock, or as solid rock. These were the men who sent the reports to Ottawa. Unless this House is prepared to believe that not merely the district engineers and the resident engineers but every chainman, every rodman, and every transit man, who saw what kind of material was coming out and who knew whether it should be classified as solid rock or as common excavation, were criminals, then there is not the slightest justification for this huge item of $9,000,000. Hon. gentlemen, for party purposes and in the heat of party argument will make suggestions against the Government of the day and hold it responsible for things, for which perhaps on examintion they will find no justification for their assertions. Any hon. gentleman who approaches this question of classification with a fair mind knows that the men who were on the work would know

whether or not there was wrongdoing. If he is prepared to say that these men were criminals, then I am sorry for him because I do not believe they were. Not only would they need to be criminals, but the chief engineer himself would need to be a criminal. He has been in that position for the last five years. Hon. gentlemen opposite must have confidence in him or they would not continue him in this position. He has certified to every dollar that has gone out of the public treasury of this country for the construction of this railway since the autumn of 1909. Hon. gentlemen know that that statement is absolutely true and cannot be controverted. The chief engineer for two years previous to the Liberal party going out of power certified to every dollar paid to any contractor or to any man for work done on the Transcontinental railway. Yet my hon. friends opposite let loose their dogs of war; they assert throughout this country that $9,000,000 were taken wrongfully out of the public treasury by this public servant, whom they recognize as being competent and honest and whom they continue in office until this very day certifying to every dollar that is paid out. Was ever a more grotesque position presented to the people of any country than the one held by hon. gentlemen opposite in regard to this matter?

Who appointed the subordinates? It is on record in the public documents of this country that every man appointed under the regime of Mr. Lumsden was recommended by him. Every man appointed since Mr. Grant became chief engineer was recommended by Mr. Grant. These men had toiled in the northern wilds; they had been engaged in this pioneering and preliminary work and had done their duty. They had received the ratification of the Government of the day previous to 1911 and the ratification of this Government every day and every hour through the chief engineer. Then Mr. Gutelius goes out and inspects the work. He looks at a cut and says: Why, the man that was here when this cut was made does not know anything about it. It is true that the stone that was blasted and the earth that was removed are now lying in an embankment perhaps hundreds of feet away; but I am Mr. Gutelius; I know more about it than the man who was here, or than Mr. Collingwood Schreiber or Mr. Kelliher or Mr. Woods or Mr. Gordon Grant. I know more about it than they do, although they went over all this territory and looked at every bit of excavation where any exception was taken to the classification. They formed their opinions, they certified to every dollar; they paid the money. I know more, says Mr. Gutelius, than all these gentlemen do, although I am only coming here four or five years after the line has been built and when trains are running over it. After the snows of the winter have come and melted away in the spring and after all the changes that come with nature's changes have come and gone, still this great man, Mr. Gutelius, knows more than all these people. Of course Mr. Lynch-Staunton does not know anything about engineering; he does not pretend to do so. Mr. Gutelius, I am told, knows something about engineering. He comes before the Canadian people and says: Although all these men were toiling and working on that railroad, I know more about it than they do, though I never saw the material, and in regard to high classification, ploughable clay and overbreak, he said these men had allowed $3,362,000 too much and a lot of items peculiarly within the knowledge of the engineer constructing the road should be entirely wiped out. Then he totals up all the alleged mistakes of these men who have been working on that railway for seven long years having everything certified to by responsible men and particularly by the chief engineer, whom the Premier of this country continued in office, and whom he proclaimed to the world as an honest man. The people of Canada are asked to believe this Mr. Gutelius who says that he has examined the work and that $9,000,000 might have been saved by these men. After all that, the people of Canada are asked to believe this grotesque proposition —that this man, Gutelius, could blow into this country after all this was over and proceed to tell where $9,000,000 might have been saved. I say this proposition is so ridiculous that all that is necessary is to let the clear light of day shine upon it in order that we may understand it.

Now, Mr. Grant went over this question before. Mr. Grant was the arbitrator to determine these things. And this is what he says as to the value of the examination that could be made of a cut from which material had been taken. I quote from the evidence in the Lumsden investigation—Appendix to the Journals of the House of Commons, volumn xlv, page 535:

Q. You told us, Mr. Grant, that even with very experienced engineers making a very cursory and very superficial examination of cuts, such an examination as Mr. Lumsden has described to us as made by the arbitrators in the first arbitration, would be insufficient to form

any opinion that would be at all reliable?—A. Oh, I don't think any engineer unacquainted with the work can go into those cuts now and they have been done for two or three years and form a judgment without considering very carefully what he is doing, and questioning the engineer who is on the ground, and getting all the information from him that is possible and also examining the material in the fill that came out of that cut, because when you go in a cut you see the sides, you don't see the material that is taken out of it.

The effect of that answer is to show that the men who came along inspecting in after days would have to get back to the engineer who was there when the work was done. So, the question was naturally asked Mr. Grant:

Q. While acting as assistant district engineer or as inspecting engineer or as chief engineer, did you ever acquire any knowledge that would lead you to suspect the good faith of any of the engineers classifying?—A. I did not.

Q. There may have been some errors of judgment, but you are satisfied that there was no bad faith on the part of the engineers classifying?—A. I am perfectly satisfied. The proof of that is that the same men are on the line to-day, and if I suspected them of bad faith they would not be there.

In face of that testimony of the gentleman whom this Government hold out to the people as the responsible man who is to carry on this construction, of what use is it of Mr. Gutelius and Mr. Lynch-Staunton to come here with this party report, this political pamphlet, intended to misrepresent the political history of this country?

Another point in this connection should be noted. We have heard a good deal about classification. Hon. gentlemen have talked a good deal about that and have told us just where this country was losing three or four million dollars. Who ever heard of 'assembled rock'?—they ask. But Mr. Gordon Grant said that there were to be found in the Laurentian range, two particular districts, F and B, in which this material was to be found, which could only be described as 'assembled rock' and must be classified accordingly. I will just give Mr. Grant's evidence. I may say, we have heard a good deal about the McArthur contract. Having had the opportunity to go from Fort William to Winnipeg over this line, it seems to me that if hon. gentlemen opposite had wished to arrive at a fair conclusion in regard of this matter some of them at least would have taken a trip over that part of the road. There they will find conditions which involve railway work of the heaviest kind to be found anywhere in Canada except in the Rocky mountains.

Mr. GRAHAM: Not even excepting the Rocky mountains.

Mr. MACDONALD: Yes, the heaviest kind of work. Here is Mr. Gordon Grant's evidence, page 534:

Now on the McArthur contract—if you do not know of course you will tell us so—can you give us an idea of the proportion of ledge rock and of assembled rock—A. Well, so far as I am concerned, this question of over-classification to me is a tempest in a teapot, and to illustrate that let me take the McArthur contract: there have been 15,200,000 yards of material moved on that contract.

Q. 15,200,000?—A. Somewhere about that. About 6,300,000 yards of solid rock. Now, about 350,000 yards of that is assembled rock and no more. Therefore if the whole mass were disputed, which would be absurd, you would not have much to kick about.

Q. Out of 6,300,000 yards of rock there is only how much of assembled rock?—A. About 350,000 yards.

Q. About 350,000 yards?—A. That is all they can dispute.

Q. And there is no dispute about the rest of the rock? The only dispute is about assembled rock?—A. So if you turned the whole thing into loose rock, which I say would be absurd, on the face of it, you would not have more than 300,000 yards to kick about.

Here is the duly accredited chief engineer of the Transcontinental Commission recognized by this Government and held up to the Canadian people as responsible for every dollar spent on that line—and to be there, I suspect, until it goes into operation—who declares that this whole question of over-classification, which is being made the basis of misrepresentation in this report, is nothing but a tempest in a teapot.

An hon. MEMBER: Oh, oh.

Mr. MACDONALD: Of course, my hon. friend knows more about it than Mr. Grant does. Now, let me quote from page 547, with regard to this question of assembled rock:

Q. Now, where you have found assembled rock, as I understand on district B there were very large quantities of assembled rock, and that assembled rock is taken out would it be feasible to put that with a slope similar to ledge rock when that is removed? A. No, it would not; it would not be safe to do so, because assembled rock as you know consists largely of boulders, and that material won't stand up for any length of time on a slope of ¼ to 1. It will for a certain time, but it is not safe. Therefore for the sake of safety all slopes on assembled rock cuts had to be flattened out to 1, and in many cases to 1½ to 1, which of course increased the quantities to a very much greater amount than was estimated.

Q. I suppose wherever this assembled rock existed, the portion outside the theoretical slope for ledge rock would probably be greater

than that within the slopes, wouldn't it? A. Yes, in the case of 1½ to 1 slope it would practically double the quantity.

Q. Could that have been foreseen in any way, Mr. Grant? A. No, it could not.

Q. Is there any fault to be attributed to anybody in connection with it? A. None whatever.

Now, I referred a short time ago to the fact that $60,000,000 of the cost of this Transcontinental railway lies at the door of hon. gentlemen opposite. If they wanted to economize, if they wanted to reduce this amount of expenditure, the estimate of which they have given to the country, the power is with them. One would think, to hear them talk, that the Liberal party were still in power controlling the construction of the Transcontinental. But it is two years and a half since the Liberal party went out of office and their responsibility ceases. Hon. gentlemen opposite, through their officials, are the men who have to certify the payments for contractors. Not only must Mr. Grant certify, but their specially appointed commissioner, Mr. Leonard, who does not seem to please the Winnipeg Telegram, but who has the confidence of the members of the Government, and who is supposed to be especially the watchdog of the treasury in this matter, must certify to everything. We have heard a great deal of the McArthur contract. I was surprised, on looking over the Auditor General's Report, to find that this Government was paying out money with a liberal hand. In the financial year ending March 31, 1913, they had paid out, largely to contractors, $13,766,000. When they came into office, and so became responsible for this work, they were in this position:

They found that a large measure of security had been provided by the wise forethought of the men who were dealing with the matter when the Liberal party was in power. The final estimates had all been passed, every dollar of security was in the hands of hon. gentlemen opposite. This is the statement of Mr. Grant on page 539 of the report of the special committee:

Q. Well, in the matter of both over-classification and overbreak, I want to come back now to the position of the Transcontinental Commissioners. No final estimates have gone out with respect to any of this work in which there is in your opinion some over-classification and some access of overbreak allowed. There are no final estimates gone out at all?—A. There are no final estimates gone out at all.

Q. It is all subject to revision and correction?—A. Yes.

Q. Now, the Transcontinental commissioners have certain securities and guarantees. What do these guarantees consist of?—A. Practically speaking, about three times as much money as there is in dispute on any contract.

Q. So that taking the extreme view of all the classification, and of all the overbreak that is said to be allowed in excess of what ought to be allowed, the commission to-day has absolute security in cash?—A. For double the amount.

Q. For double the moment anyway?—A. Yes.

Q. And then in addition they have all the plant as security?—A. Yes.

So that when hon. gentlemen came into power they had the whole matter in their own hands. If there was over-classification; if any one of the hon. gentlemen on the other side who talked so loudly in the House and out of the House previous to September 30, 1911, knew that any contractor had obtained money improperly, he and his party could have seen that the country got it back. Have we heard of anything of that kind? No; hon. gentlemen have gone along paying out money to M. P. and J. T. Davis—the gentlemen whose names have been bandied about in this House during the last ten days by hon. gentlemen on the other side. Last year this Government paid to M. P. and J. T. Davis upon contracts 7, 8 and 9 something like $869,000.

Then there was Mr. Fauquier. Our friend the Solicitor General the other night, when the hon. member for Welland (Mr. German) was speaking, referred to what Mr. Fauquier had said about mass. For curiosity—and I may say that I am going to watch the Solicitor General very closely in future when he quotes evidence—I referred to the evidence of Mr. Fauquier, and I found not the slightest suggestion of any kind to warrant the assertion of the Solicitor General in that regard. In fact, Mr. Fauquier told the commission that if they wanted to find out all about this matter, they should subpoena his brother, who had the documents and all the information in his office. But they did not subpoena his brother, and his evidence was not obtained. To Mr. Fauquier hon. gentlemen opposite paid out, down to March, 1913, $529,000; in fact, reference to the Auditor General's Report will show that hon. gentlemen opposite went on paying money to these contractors every day from the time they came into power, without questioning the payments in any way whatever. It was a case of the responsibility of the Administration on the one hand and the exercise of political claptrap on the other; hon. gentlemen went on paying money to these contractors without attempting for one moment to stand by their political claptrap game wherein they

alleged that the country should be protected in regard to this matter.

Mr. SPEAKER: It is not permissible to apply the words 'political claptrap' to hon. members of the House.

Mr. MACDONALD: I have spoken in a general way about the Conservative party throughout the country who are playing a political claptrap game with regard to this matter. I think I can make that assertion.

Mr. SPEAKER: If the words were applied to anything which took place outside this House, they would not be unparliamentary, but it is not permissible to apply them to members of the House.

Mr. MACDONALD: I spoke of the Conservative party applying the claptrap game as a whole on the one hand, and of the responsibility of these gentlemen holding the reins of power, on the other. These gentlemen, who had to see to it that the Administration of this country was carried on, holding in their hands security for double the amount of any sum that is alleged to have been misspent, went on paying these contractors without protest, on the certificate of the chief engineer of the road. Further than that, they paid to one contractor more than the amount provided for by the award of the arbitrators. They do this on the one hand, and on the other hand they carry out this political claptrap business of talking about the country losing $40,000,000 in the construction of this road.

I want to make another citation with regard to the question of grades and the statement made by the chief engineer, Mr. Grant. He was asked the advantage of building the road up to a high standard, to which he replied that it would be a paying proposition, while the adoption of the lower standard would result in a loss, and a failure to earn the expense of running the road. I need not go into this question in detail; the hon. ex-Minister of Railways went into it at great length, and I would be taking up time unnecessarily if I were to make further reference to it.

Let us analyse some of the other assertions made by these gentlemen, in order to see how anxious they were to find some grounds for alleging over-expenditure. They said there was no necessity for building engine houses so permanently; that had cheaper engine houses been built, the country could have saved $800,000. With that divine inspiration which they assume in dealing with this whole question, they say that only four station houses were needed in the whole of that northern country between Moncton and Quebec. This terrible Railway Commission, the report alleges, had the temerity to build sixteen stations, and because they did so, the country lost $204,000. What does Mr. Lynch-Staunton know about freight sheds and station houses? What does he know about how many station houses should be constructed in that northern country, or what kind of freight sheds should be built? Yet he has the unction to sign his name to a report which tells the country that $300,000 would have been saved if cheaper freight sheds had been built. Here is another amusing thing. Eighty-pound rails were used in the construction of the road. There is no reason why our friends opposite, if they were sincere in their desire to be true accountants and wanted to do what they talked about when they had no responsibility, should not have ordered that 65-pound instead of 80-pound rails should be used in the remainder of the road. But they did not do so; they went on laying the 80-pound rails; yet they charge this terrible Railway Commission with being extravagant in using 80-pound rails in the sidings, whereas if they had used only 65-pound rails the country would have been saved $340,000.

And so the game goes on. Then these gentlemen, who were in possession of all the wisdom that ever was heard of in regard to railway construction, said: Why, what was the necessity of double-tracking certain pieces of road up there? This commission appointed by the Liberal party had the temerity actually to double-track six miles; they thought it was in the public interest to do so; but they did not know anything about it; we know all about it, they should not have double-tracked that six miles, and so would have saved the country $679,000. And so they go on along these lines, and after they have strained every possible suggestion, gone into every ridiculous hole and corner, drummed up every suggestion of a fault that could be found, they arrive at the end of their labours without being able to allege that there was any corruption on the part of anybody connected with the road, and they have to misrepresent the total of the alleged errors which they find, to the extent of $10,000,000, in order to have a good round figure to talk about in the country. Who is responsible for this report now that has been laid before Parliament by this Govern-

ment? This Government are responsible for it, they are responsible for the statements made in it, and, notwithstanding the fact that they have retained in office Mr. Gordon Grant for the last two and a half years, and are responsible for everything that has gone on in the meantime, they actually permit the statement to go to the country without any discrimination being made in it between the expenditures made under their regime and under ours; absolutely suppressing the fact that our responsibility ceased two and a half years ago, they allowed the impression to go to the country that $40,000,000 has been over-expended, while they retained Mr. Gordon Grant in office, he being responsible for every dollar spent since 1909. What are the Government going to do about that? They have gone on paying this money, the final estimates to these contractors, who, it is alleged, had their work over-classified. What are they going to do about it? Was this report brought before this House for purely political purposes, or is it a serious public document? It is up to the Premier of this country to assume some responsibility in connection with the matter. If there is any man connected with this enterprise who is guilty of any wrong-doing, it is up to the Prime Minister of this country and the Minister of Railways to see that he is dealt with. Let us have in this country an end of all this bantering and talking about political corruption if, when the time comes and hon. gentlemen have the thing under their own control, they simply sit mute and proceed to hire people to fire mud at their opponents. That is the way that this thing stands to-day before the Canadian people. One will watch with a good deal of interest the way in which this matter will progress. It is true that the Government will, after a while, say: We see that there was no evidence of corruption, therefore it is not necessary that we should proceed against anybody; but we do think there was over-expenditure. Let us take them on either horn of the dilemma. If there was corruption this commission has not found it, so that can be laid aside. If there was over-expenditure, the gentleman who had to certify for every dollar of that expenditure since 1909, a man who I personally believe is an honest, able man, is still in the service of the Government. Do not let my right hon. friend, do not let his supporters, do not let this country forget that practically every contractor on the National Transcontinental railway had his account open when this party came into power. Their security was in the hands of the Government. It lay with the party now in power, its commissioner, its chief engineers, to remedy any wrong that might have been committed. So far they have not done so, and we will watch and see what they will do in the future in this respect.

So much for the merits of the report. I think every hon. gentleman who approaches the consideration of this matter with some degree of fairness will realize that no weaker document ever came before this Parliament. Of course the authors were, to a certain extent, irresponsible. In times gone by, when governments dealt with serious situations which they alleged existed, they at least asked the men to whom they committed the task of investigation to take an oath that they would do so honestly and fairly. In this particular case the Government told Messrs. Gutelius and Lynch-Staunton: We do not want you to take any oath, we do not ask you to do so; you go out, do what you please, you are not bound by any oath, you are not asked to render a verdict according to the facts; you are not sworn as any common juryman is sworn to try the most picayune case in any inferior court in this country would be sworn; you gentlemen are asked perhaps to discredit the fair name of many a man engaged in the engineering profession in this country, who, as a result of your actions, may suffer untold injury, as the fair name of Canada has suffered financially in the markets of the world; we do not ask you to pledge your oath. This irresponsible document of this irresponsible commission is a slander upon Canada's credit and nothing else. Any man in Canada to-day who has knowledge of industrial conditions knows that men who have gone to the English money market lately, whether on behalf of municipalities, provinces or corporations, have met with rebuff from the banking and financial people of the mother country, who had been led to believe, by the specially prepared slanders sent across there, that Canada had squandered $40,000,000 in building a transcontinental railway. Last week I happened to be in New York on some business. I met a German banker who had just returned from the old country. He asked me: What is this transcontinental report? I returned only last

week from London, and while there I found that everybody connected with finance in that country was saying that it was one of the worst things that had happened for Canadian financial affairs for the last twenty years; what does it all mean? I said: It simply means a political document got up by one political party to attempt to injure the other. And I said further: After a while the business men over in London will find that out, and will appreciate how little significance should be attached to it. In the meantime the Finance Minister of this country knows that he has heard of it from every quarter, heard of it from across the ocean and from the business men of Canada. I think he is sorry that this document was ever sent forth. Do you not think it is about time in Canada that we should look to this Government, who came here asserting through its leader that it possessed the highest kind of ideals, for some better tone in public life than is shown by the production of this particular report. My right hon. friend, in 1904 and 1907, asserted that he stood for a Government-owned railway, and protested against a railway-owned Government. What has my right hon. friend done about Government-owned railways since that time? He told us he was going to run the Intercolonial by a non-partisan commission. He has been two years in power; he has destroyed the commission, he has allowed his Minister of Railways to make the arrangement with Mr. Gutelius under which this report was produced, and he has sent Mr. Gutelius down there not as a non-partisan commissioner, but as the manager of this political railway. And what is he doing about the Transcontinental? Speaking at Windsor in 1904, he said that when he came to power his policy would be to take over this railway and run it as a Government enterprise from one ocean to the other. My right hon. friend has not shown much alacrity in regard to that matter. What has this Government done in the last two and a half years—absolutely marked time, initiated nothing, and proposed nothing for the upbuilding of this country. Practically coincident with my right hon. friend's assuming the reins of office there began to be displayed all over this land a lack of confidence in the business and public affairs of this country. That feeling synchronized with the advent to power of my right hon. friend. As a result of Conservative Administration for the last two and a half years, there has been a period of depression in this country which is getting worse every day. As a result of the incompetence of these hon. gentlemen and of their inability to propose anything for the good of Canada, a feeling of gloom has settled down upon this country, and why? Canada has not the right man at the helm. After fifteen years of Liberal rule they found an overflowing treasury when they came to office, and the public credit of Canada at a higher point than it had ever reached before. Hon. gentlemen opposite immediately proceeded to deal with these resources, not in the interest of Canada, not in accomplishing the good that as Canadians we might expect, but prostituted them for petty party purposes.

Some hon. MEMBERS: Oh, oh.

Mr. MACDONALD: My hon. friends do not think that is true. I would like some hon. gentleman on the other side to say what this Government ever did for the good of Canada.

Mr. W. H. BENNETT: They have made you very tired.

Mr. MACDONALD: My hon. friend from Simcoe has been as peaceful as a lamb since he sat on that side of the House. We never hear his sweet voice now, as we used to hear it when he was in opposition.

Mr. W. H. BENNETT: No need to now.

Mr. MACDONALD: I can assure my hon. friend that I find myself in the best of health and am not a bit tired. I repeat, after two and a half years of Conservative rule my right hon. friend is still living in the past. All he can think of is some of the old stories he used to retail in 1908, some figments of the imagination like the yarns about the Transcontinental. He has created commissions to bring in reports which injure Canada at home and defame her abroad. The action of my hon. friend the ex-Minister of Railways (Mr. Graham) in asking this House to declare that this report is one which should be absolutely condemned as untrue and as misrepresenting the facts is one which should receive the honest consideration of every hon. gentleman in this House. There is one consolation about this matter which the people of Canada are beginning to find out and are becoming more certain of day by day, and that is that the report has no basis in fact and is purely the result of partisanship, written by partisans and written for

a party. The one result of this report will be to hurt Canada in other portions of the world where the facts are not understood as they are here. Everybody here will soon know how little weight should be attached to this report, and I hope that every hon. gentleman in this House will do his duty to Canada by supporting the motion of my hon. friend the ex-Minister of Railways.

Mr. GEO. W. FOWLER (Kings and Albert): Mr. Speaker, the hon. gentleman who has just taken his seat (Mr. E. M. Macdonald) has followed the custom of the old-time lawyer who, when he had a really bad case, used to abuse the other side. Almost the whole of the hon. gentleman's speech was made up of abuse. He criticised gentlemen on this side of the House because they appointed a commission to lay before the people of Canada—whose trustee this Government is—the exact condition of affairs with regard to the Transcontinental railway and the tremendous expenditure of money connected therewith. That was a duty which this Government owed to the people of this country, a duty which they have well and nobly performed. My hon. friend from Pictou (Mr. E. M. Macdonald) says that this is a cheap report, that it is no good, and yet the ex-Minister of Railways spent seven hours in attempting to answer this cheap report, made by a partisan lawyer and a Yankee engineer of no account whatever according to the hon. member for Pictou. Let me say that in all the history of Canada there has never been a state paper submitted to Parliament higher in character than the report of Messrs. Staunton and Gutelius. It is clear and concise, moderate in its tone—

Some hon. MEMBERS: Oh, oh.

Mr. FOWLER:—yes, and temperate in every way, showing absolutely no trace whatever of partisanship. It is strong, of course. Why? Because the evidence on which it is based, is strong. Would you expect a watery namby-pamby report with such evidence as the commissioners had before them on which to base their conclusions? No. If they had been commissioners like the late Government would have appointed, then we might have expected a milk-and-water report, but they were not that class of men. They gave a report which is clear and concise, which covers the whole ground and there is not a word or a line of that report that is not based on strong and conclusive evidence. And they published the evidence with the report. My hon. friend who has just taken his seat was not as eloquent in his peroration as he usually is. He had such a bad case that he laboured very hard. I recognize the fact which every man in this House must recognize that we have no more eloquent speaker in this House than the hon. member for Pictou. When he has a good case it is a delight to listen to him, but I felt sorry and pained for the hon. gentleman when I saw him labouring so hard with his case.

I could have understood some other Liberal members of this House talking blue ruin, but I thought the member for Pictou was more up-to-date. I thought he was more patriotic; I thought he had a greater regard for the welfare of Canada than to be guilty of such preaching. Has the gloom of adversity; have the cold shades of opposition, so chilled the heart of the member for Pictou that he imagines the gloom which possesses his soul, pervades the whole of Canada. I can understand that the hon. gentleman feels badly at being in opposition, because he was assured by his leader that were the Liberals returned to power in 1911 he would be one of the elect. The right hon. the leader of the Opposition will not deny, that while my hon. friend from Pictou may not have been so assured in words, he was given good reason to believe that if the elections of September, 1911, had turned out differently, he would have been taken into the Administration and had the word 'honourable' prefixed to his name. And, Sir, my hon. friend from Pictou apparently imagines now that because his own soul is chilled with disappointment, and filled with deep and abiding gloom, his condition is that of all Canadians. The hon. gentleman need not worry about that.

The hon. gentleman speaks of browbeating witnesses, and he tells us that the National Transcontinental Railway Commissioners were brought before these commissioners and browbeaten. Can you imagine Simon Napoleon Parent being browbeaten by anybody? The hon. member (Mr. Macdonald) has a very vivid imagination, but it cannot reach far enough to encompass such an idea as that. Then, there was Michael Patrick Davis, the contractor; do you imagine that a man with the brazen brow of Michael Patrick Davis could be browbeaten by a little chap like Gutelius? Such an idea is absurd. Then Mr. O'Brien was upon the stand, Mr. O'Brien the great contractor; Michael J. O'Brien. I do not know what

the 'J' stands for, but you can call it Jeremiah if you like, and the title Jeremiah would probably fit him, because now he is in the slough of lamentations, without any friends that are any good to him. His friend was the ex-Minister of Railways. There is one thing about Mr. M. J. O'Brien that I admire, and I admire it very greatly —he understands what gratitude means. There were many contractors who reaped fortunes when hon. gentlemen opposite were in power, but they have not all shown their gratitude in the splendid way in which Mr. M. J. O'Brien did, on one occasion, in South Renfrew.

At six o'clock, the House took recess.

The House resumed at eight oclock.

Mr. FOWLER: When the House rose at six o'clock, I was referring to some of the remarks made by the hon. member for Pictou (Mr. Macdonald). One statement made by him was that no one was deceived as to the cost of this railway. I do not know what the hon. member means by that statement, because it contains a serious reflection upon his leader, the ex-Premier of this country, who stated that, not the total cost but the total burden of cost, would be $13,000,000. I had the honour of being a member of this House at the time when the right hon. the present leader of the Opposition introduced the National Transcontinental Bill, and I heard him make that statement. Will the total burden of cost of this railway upon the people of this country be only $13,000,000? It will be many times that sum; yet the hon. member from Pictou says that no one was deceived. Was it because no one believed the right hon. gentleman? Is his reputation for veracity and for business ability such that, when he makes a business statement to this House and to this country, the people do not take it at its face value? I cannot read any other meaning than that into the statement of the hon. member for Pictou. We were told by the hon. the then Minister of Finance that, not the total burden of cost but the total cost of this railway from Winnipeg to Moncton, built up to the standard of 0.4 per cent and 0.6 per cent grades, would be $61,000,000. Did the people believe that statement? According to the views of my hon. friend the member for Pictou, they could not have believed that statement, because he says: No one was deceived. When you add the interest to the cost of construction, which is the cost to the people of this country, you will find that the cost will be more than four times the estimate given by the then Minister of Finance; but my hon. friend the member for Pictou says that no one was deceived with regard to the cost of this railway.

He says that the present Government is responsible for every dollar expended upon this road from that memorable 21st day of September, 1911, a black-letter day in the record of my hon. friends opposite. The hon. gentleman must think he is talking to an unintelligent public. The people of Canada are too intelligent to swallow any such stuff as that presented to them by the hon. member for Pictou. If your honour had not decided that the words 'political claptrap' were not proper in this House, I could find no words more suitable to characterize this statement of my hon. friend's; but as you have already given that decision, I forbear making the statement.

Every contract for the construction of this railway was let before the 21st of September, 1911. Contracts that need not have been let until perhaps even now were let before the election of 1911. In case anything happened my hon. friends opposite wanted their friends to have the pickings. Every contract was let and they were specification contracts and the price was set opposite every item in the specification. There were instances where such things as this occurred. On items for which the contractor was to get $17 per cubic yard for concrete work, he sublet the work for $7 a cubic yard, making a rake-off of $10 without doing a stroke of work. Could the new commissioners do anything in regard to it? They were absolutely powerless; they could not repudiate the contract solemnly entered into by their predecessors in office. That is why the money was expended since the coming in of the present Government and the appointment of the new commissioners. It was not the fault of the contractors that they were receiving these huge sums. There was no fraud so far as the contractors were concerned. The fault and the fraud, if there be fraud—and if there was not fraud there was the grossest ignorance and incompetence and my hon. friends can take whichever horn of the dilemma they choose—and the incompetence and ignorance lie at the door of the commissioners appointed by the late Government.

My hon. friend the member for Pictou, who I regret is not in his seat at present, tried to make out that we were opposed to the building of the Quebec bridge. The Con-

servative party were not at any time opposed to that project, but we were strongly opposed to the manner in which the Quebec bridge was built, and I will have something to say about that a little later on.

With regard to the contract let to Messrs. Fauquier Bros. and the yardage of moss, my hon. friend the member for Pictou was again trying to draw a herring across the trail. The fault there was not with Messrs. Fauquier Bros.; it was perfectly natural that they should try to take any advantage they could from the knowledge that they had gained from an examination of the premises. The fault in the letting of that contract lay with the commissioners, advised by the engineers, who had altogether mistaken the quantity of moss. Messrs. Fauquier Bros. had gone over the ground and saw that the amount of moss was very small, and in consequence of that their tender, though actually the highest, was accepted. The fault lay with the commissioners in not acquainting themselves, as they should have done, with the character of the country through which the railway was to run.

I think I have completely covered every alleged point made by the hon. member for Pictou, although I have not occupied more than twenty minutes in doing so. When we come to consider this question and this report, the first point we should consider is, who are the men who made this report. An attempt has been made by hon. gentlemen opposite to belittle the character of these men, an attempt which must fail ignominiously, particularly wherever these men are known. Mr. George Lynch-Staunton is one of the leading lawyers in the province of Ontario, the premier province of this Confederation. He is a man of high attainments, of high character, and there is nothing in that report which will put a smirch upon the high character of Mr. George Lynch-Staunton. There is not a line in that report that is not backed up to the full by the evidence published with it. Has there been by one hon. gentleman opposite an attack upon the evidence contained in that report? Not one. Have they shown that any conclusions drawn there were not fairly drawn from the evidence submitted? I challenge hon. gentlemen who are to speak after me in this debate to show one solitary instance in which the conclusions drawn in the report is not supported by the evidence.

Who was the other member of this commission? My hon. friend from Pictou (Mr. Macdonald) says they should have been judges. Judges would have known a lot about such a work as the Transcontinental railway! A better choice could not have been made than was made,—a lawyer of high standing, acquainted with large business matters, with great practical experience as a business man as well as a lawyer; and an engineer of long experience, of splendid talents and ability and high character, one who knew what he was talking about and was not afraid to talk about it, either. But,—he was born in the United States! An awful thing! Why, these Liberals boast of the number of people brought from the United States while they were in power. They say their immigration policy brought many settlers to Canada from the United States. But, now according to these gentlemen, it is a crime to be born in the United States. Of course, it is much better for a man to be born in Canada than in the United States; but after all no man can say where he shall be born. He may have something to do with where he shall die, but the place of his birth is not within his option. Therefore, I say, it was only a misfortune, not a fault, in Mr. Gutelius that he was born in the United States. But, Sir, when he had reached years of manhood, years of discretion, he crossed the line and came into Canada. The greater portion of his experience as an engineer was gained in Canada, gained in a country of the same conditions that obtained on the line of the Transcontinental. Who so well fitted to make a report upon that road and the manner in which it was built as the man who was familiar with all the conditions of that country? Mr. Gutelius not only came over to this country, but unlike most of the people connected with the Grand Trunk Pacific he cast in his lot with us and joined our citizenship. Is not he just as good a Canadian, having joined us two or three years ago, as if he had joined us fifteen years ago? And that is the only fault that hon. gentlemen opposite can find with him—that he was naturalized a British subject only a couple of years ago.

What about the composition of the commission that had charge of the building of this road? There was not an engineer among them. One was a paper-box manufacturer, one was a lawyer, one was a financier, and the other was a grain dealer. It is no detriment to any man to follow any of these occupations; no reason why a man following any of these occu-

pations should not be a good business man and a capable member of this commission.. That is the ground I take; there is nothing in their occupation to prevent them from serving on this commission, but there is nothing in their occupation to particularly qualify them for such service. Therefore, what we should look at is results. And what are the results? Did these men show good business ability? Were they efficient for the work they had to perform? I think the results show that they were inefficient, or ignorant, or else guilty of fraud and corruption. The very first thing they did when they opened an office in the city of Ottawa was, in effect, to put up over the doorway this notice: No Tories need apply; the work in connection with this great transcontinental scheme shall be kept for the party pets; no contractor shall have a chance, a look-in, a show, unless he can show the Liberal stripe, unless he can show a Liberal lineage of at least four quarters. They framed their call for tenders in every instance to carry out that idea. Instead of following the custom of all Government calls for tenders, and demanding that five per cent of the estimated cost should accompany the tenders, they fixed an arbitrary sum, and they added to their call this important rider—that the commissioners reserve the right to impose upon the successful tenderer the duty of putting up a deposit of any sum, an unlimited sum. So, at once it became apparent that no one except he who had a political pull had the slightest chance. No other dared make a tender, for they could destroy him. Suppose tenders are called for and some man tenders who is not persona grata to the Administration or the commission. He puts up the arbitrary amount, say $100,000, they demand by their call. But then they call upon him to put up half a million, or a million—any impossible amount. What happens? He has bound himself by his tender to forfeit the money he put up if he does not fulfil the conditions, one of which is the putting up of this larger amount. Sir, I charge that that was intended by these gentlemen from the beginning. And you can see how that limited the scope, you can see how that limited the number of tenderers. So, of the great contracting firms in Canada, numbering a hundred or more, only half a dozen—eight or nine at the outside—ever put in an original tender for any portion of this eighteen hundred miles or more of road. What better evidence could you have that the whole matter was fixed from the beginning? We find the Grand Trunk Pacific tendering to the extent of $17,000,000. And they sublet, without ever doing a bit of the work, on a five per cent basis—the five per cent advance that they took in as a rake-off amounting to $850,000. What equipment had the Grand Trunk Pacific for the contract which they entered into? The only equipment they had was the rake with which they raked in the rake-off. A very effective equipment it was for the purpose for which it was intended, but it would not go very far in building a railway. Another very large portion went to Mr. O'Brien—Mr. O'Brien, the friend of the ex-Minister of Railways, the godfather, if we might say so, the sponsor, of the gentleman who found his way into this House after he had lost his seat in Brockville. But of all the contractors who had contracts on this line of railways—and I do not intend to speak of them all—the chief favourite appears to have been Mr. Michael Patrick Davis. No South American dictator has ever looted the public treasury of this country to the same extent as has this same Michael Patrick Davis, with the assistance of the Liberal party. I intend to pay a little attention to my friend Mr. Michael Patrick Davis. I have made a computation; I have been very careful in making it, and I challenge my friends on the other side to dispute the figures which I give. Michael P. Davis and his partner—if he has a partner, he is a silent one, for we never hear of him—had contract No. 7, upon which he made $625,000. On contract No. 8 he made $1,457,000. On contract No. 9-A, which he got without competition, he made the tidy sum of $60,000; on contract No. 9 he made $640,000; on contracts 16 and 17, in respect of which he did not do a thing himself, he made $740,000, a total of $3,522,000 by which M. P. Davis was the richer by reason of the building of the Transcontinental railway—a tidy sum for one man to earn from June, 1906, to December, 1911.

We have heard of M. P. Davis before in this House; we have heard of Mr. Parent as well, and it was in connection with the Quebec bridge. I should think that every Liberal who knows anything about the history of the Quebec bridge would hang his head in shame whenever it is mentioned. Let me trespass upon the attention of the House while I give a brief resumé of the history of the Quebec bridge. When the

building of the bridge was mooted a number of financiers in the city of Quebec thought it would be an excellent plan to form a company to build the bridge, and they organized themselves into a corporation, the name of which, I think, was the Quebec Bridge Company, of which Mr. Parent was the president. It was a company with large capital, not less than $1,000,000, and as they were going to build this huge bridge, the greatest that had ever been built, it was necessary to have lots of money, and they made a call upon the shareholders of the company by which they produced the magnificent sum of $40,000, 4 per cent on the capital, which amount was put in the treasury. They then elected their directors; any man who had a large amount of money was elected director with a large salary, so that long before the bridge tumbled into the river they had drawn out through the directors the whole of the original capital. They got a subsidy from the city of Quebec; they got a subsidy from the province of Quebec, and they got a subsidy from the Dominion Government, and then they started to build the bridge. The same M. P. Davis who made $3,500,000 out of the Transcontinental railway was the gentleman appointed by the Quebec Bridge Company to build the bridge. Having started the work, they drew the subsidy from the city of Quebec, they drew the whole or a part of the subsidy from the province of Quebec, and they drew a portion of the subsidy from the federal Government. When Davis had his substructure nearly finished, the company did not have enough money to pay him. The federal Government would not pay them any more money under the terms of the subsidy, but they had taken power to issue bonds against this bridge. They owed Mr. Davis $160,000, and they handed over to him $400,000 in bonds to pay that debt of $160,000, which meant that his bonds were worth only forty cents on the dollar. The bridge was going to cost $5,000,000 or $6,000,000; all subsidies did not amount to more than $1,750,000; there was only $40,000 of the original capital in the treasury—it had all been drawn out by the directors—so it looked as if the bonds were not going to be worth much. No superstructure had been provided for, and there was no money to build it; it looked as though that M. P. Davis was an easy mark. But those who thought so did not know their man. What happened? Mr. Parent, who was a very influential man at that time in the province of Quebec, came to Ottawa and induced the late Government to guarantee the bonds of the Quebec Bridge Company for $6,000,000; so, by the stroke of a pen, by the passing of the necessary Act, the bonds which M. P. Davis had taken at 40 cents on the dollar were worth 100 cents on the dollar—the result being that M. P. Davis was in pocket the sum of $240,000—this simple, innocent M. P. Davis who had been fooled into taking $400,000 of the bonds of the Quebec Bridge Company. Is there a man on the other side of the House so innocent as to suppose for one moment that there was not a secret understanding between Mr. Davis, Mr. Parent and the Government at Ottawa when he accepted these bonds at 40 cents on the dollar, that they were to be implemented by an Act to be passed to make the bonds good? That is how M. P. Davis made $240,000 out of the people of this country.

What thoughts the Quebec bridge calls to mind. If there ever was a monument to the incompetency and to the incapacity of a government it is the Quebec bridge. Six million dollars of the public money of this country went tumbling into the river. But that was not the worst part of it. More than seventy men—mechanics, the very pick and flower of Canadian workmen—went down to death and burial in the waters of the St. Lawrence river. Let me say that to-day those unblessed bodies are terrible witnesses of the incapacity of the late Laurier Government. What was the matter? Why did the Quebec bridge fall? It did not fall because heavy trains had crossed upon it; it did not fall from any great earthquake that had taken place or any terrible storm which carried away the Forth bridge. Sir, before it was half way across the river it fell of its own weight. It fell because of blundering, faulty construction—and who was to blame? Oh, they say, the engineer was to blame. But before the bridge fell the late Government, not that wonderful Quebec Bridge Company, had assumed the responsibility for its construction. Whom did they appoint as the supervising engineer? The very man who designed the bridge, Mr. Cooper, the consulting engineer for the Phoenix Bridge Company, contractors for the bridge. By reason of that man's ignorance and unfitness for his job that bridge fell and carried these men to death, and caused the destruction and loss of $6,000,000 of the public money of this country. Was it not possible for that Government to have obtained men competent to super-

vise the erection of the bridge? There were yet living that famous band of engineers who had designed and built the wonderful Forth bridge, that triumph of engineering skill. They could have been obtained. But no, so fond at that time were our friends of the American engineer that they thought they had to go across there and secure the very man who was the consulting engineer for the Phoenix Bridge Company. What was our loss was Mr. M. P. Davis' gain. He gained $240,000 by that Quebec bridge transaction, in addition to whatever sums he may have made on the contract. That is not the only thing. Take contracts 16 and 17. By these two contracts M. P. Davis made $740,000 without ever turning a hair. I thought the defence of the ex-Minister of Railways (Mr. Graham) on that was splendid. It stands out in my memory from his whole speech. Why, he said, if Davis had built the road we would have had to pay that $740,000 just the same. Was not that a splendid argument? Was it not a wonderful answer for a man who had filled the prominent position of Minister of Railways in a federal Government in this country? The only defence he could offer for a straight steal, a straight loss to the people of this country, of $740,000, was that if Mr. Davis had built these two contracts himself it would have cost that much just the same. Those tenders were called for at a time when they should not have been called for, when there was no necessity for calling for them. I say here without fear of successful contradiction, the facts show it and the fair inference to be drawn from the facts shows it irrefutably that that tender was let at the time it was let in order that some pet of the Government might be able to make a large sum of money. There can be no question about that. No man is so innocent as not to realize that. Owing to the inaccessibility of the country tenderers naturally put their figures up. The work was to begin at once and to be completed at once. Davis puts in his tender, gets the two contracts and never goes near the place. He waits for eleven months and then sells the contract to O'Brien, Macdougall and O'Gorman for a rake-off of 10 per cent—and the commissioners agree. Who are the commissioners? Parent, the same gentleman who helped O'Brien to carry off the $240,000, the very same Mr. Simon Napoleon Parent. Ten per cent! And then they waited for months and a little work was done. By the terms of the contract the whole contract was to be completed at a period when only twelve and a half per cent of the work had been done on 16 and nothing had been done on contract No. 17. What were they waiting for? Until Fauquier Bros. got their two contracts at either end of the work completed so that they could get in their supplies cheaply to this work and make this huge rake-off. So the contract was transferred, by the consent of the commissioners, and Mr. M. P. Davis made his nice little rake-off of $740,000. So it is between him and his friend Parent. On the Quebec bridge he got $240,000 which, with this $740,000, makes in round figures $1,000,000 that M. P. Davis got without ever having been up there or done anything. But that is only a trifle, a trifle as light as air. What is a million dollars to a Grit contractor? It only helps him to be in a better position to open up the head of the barrel when elections come around. These were not the only transactions where Davis profited from the late Government. There was the lighting of the Cornwall canal, familiar to all of us who were members of this House in the old days when we were in the cold shades of opposition—but were not half as glum as our friends opposite, we did not cry blue ruin or think the country was going to the dogs because there was a certain obsession in the minds of the people and they allowed themselves to be governed by the party that never had the genius for government, and always made a blunder when unfortunately they got the reins of power, but it will be so long before they get them again that gentlemen sitting on the other side will all be gathered with their fathers long before. It was amusing to hear the hon. member for Pictou this afternoon bewailing the fact that this rascality in connection with the building of the Transcontinental railway had been uncovered, because of the effect it was going to have on the money markets of Europe. Yet my hon. friend from Pictou could stand in his place and say that this country was going to destruction, that the Minister of Finance of Canada could not sleep at night by reason of the awful condition financially of the affairs of this country—that would do no harm of course. I quite agree that it would do no harm, people know too well the reason for this awful wail that is going up from the other side of the House to take any stock in it or to have any confidence in it. I am glad my hon. friend has at length returned to the House. I hope he has had a good

dinner. I was lonesome without him. I wanted to see his smiling face across from me because however he may wail about blue ruin he is always smiling.

There is a small matter—but small matters like straws sometimes show which way the wind blows—the matter of farm crossings. I do not know whether reference has been made to the farm crossings in this debate, but just to give a palpable instance of the magnificently efficient way in which these commissioners handled this business I would point to the farm crossing known as Delisle farm crossing. Delisle had a farm of fifty-five acres, and he offered this farm to the commission for $3,500, little less than $70 an acre. The right-of-way agent reported that that was too much, and so they only bought 5.23 acres, for which they paid $100 an acre, with damages of $277, and a further payment of $500 for damages. That made $1,300 altogether. The railway went across this man's farm, and it was necessary for him to have a crossing to get his cattle to water; so they enlarged the size of the culvert in order that he might drive his cattle through it. What did the enlargement of size of this culvert cost? It only cost $23,635. My hon. friend from Pictou did not observe that. The total cost, therefore, was $24,317, and they could have bought the whole farm for $3,500. There was another case, the Perron farm crossing, but it came a little cheaper. The extra cost was only $21,000. My hon. friend from Pictou is not the only gentleman who has made a speech in this House on this matter. I have in mind now an hon. gentleman opposite, the hon. member for Carleton, N.B. (Mr. Carvell). Has there ever been a subject discussed in this House upon which the hon. member for Carleton, N.B., has not been heard? I sit and listen to the hon. member for Carleton, and am amazed at the vast knowledge he possesses on every subject. I marvel, and I think can it be possible that one mortal mind can hold such vast stores of knowledge? He is a comparatively young man, and if he had devoted to study only those hours usually devoted, it would not be possible for him in the short time he has lived on this earth to have become the walking encyclopedia that he is to-day. Does he ever sleep, or does he spend the still watches of the night prowling about acquiring knowledge and more knowledge? We had a debate last year upon the Naval Bill. Some hon. gentlemen doubtless remember it. You at least, Mr. Speaker, remember it, because you were obliged, by virtue of the high office which you hold, to sit and listen to those long, dreary speeches. It seems to me that the emoluments of that office and the dignity that pertains to it are dearly bought when you have to listen to such speeches as were made on the Naval Bill by our friends on the other side of the House. My hon. friend from Carleton made a speech on that subject, and told us all about the construction of warships, ancient and modern, from the triremes of ancient Rome to the caravels of Columbus, from the flat boats of the Rideau canal to the super-dreadnoughts of Great Britain. All were an open book to him. He not only constructed the hulls of the ships, but filled them with the magnificent machinery that propels them. He launched two units, one for the Atlantic coast and the other for the Pacific coast. He put in engines, and in the debate showed a knowledge of the building of an engine not surpassed by Parsons, the inventor of the turbine, nor by Rudyard Kipling, the writer of McAndrews' Hymn.

Mr. SPEAKER: I think the hon. member is rather getting away from the point.

Mr. CARVELL: Mr. Speaker, I hope you will withdraw your objection, as I am enjoying the hon. gentleman's remarks very much.

Mr. FOWLER: I am sure my hon. friend is the last man to squeak; I know him too well. When it comes to agriculture, the hon. member knows all that pertains to that science. He is familiar with agriculture, from potatoes to peas, from milking a cow to grooming a horse, from the proper rotation of crops to the best soil in which to grow mushrooms. He can tell the Minister of Agriculture what sort of farm to select and where to select it. He has a thorough and complete knowledge of the subject. But the subject on which he is really at home is electricity. When he speaks on that subject you can see the veritable sparks flashing from his eye and the little blue flames playing about his corrugated brow. My hon. friend from Carleton can find nothing wrong with the conduct of the commissioners charged with the construction of the Transcontinental. Could there be any act of a Liberal Government so bad, so heinous, that my hon. friend could find

anything wrong with it? Or could the present Administration do anything, however good, that my hon. friend would not find fault with? So my hon. friend's criticism of the report of this commission is robbed of a weight that it might otherwise have, when we know that he condemned it before he read it, simply because it was the report of a commission appointed by this Government.

I just wish to refer to one other remark that my hon. friend made in his speech the other day. I was a little surprised that you, Mr. Speaker, who are somewhat tender with regard to the rules of debate in this House did not call the hon. gentleman to order. He said:

Any man from the Maritime provinces who will vote to sustain this report is a traitor to this country and has not the best interests of his province at heart. I will watch this vote with interest.

I hope he will watch it with interest and with principle, too. If the hon. gentleman would only vote on principle and watch with interest, I am afraid he would have to leave his party. He further said:

I want to see what attitude the Minister of Marine and Fisheries will take on this question.

I do not think the hon. gentleman really had any question in his mind as to what attitude the Minister of Marine would take, nor indeed as to what attitude every other member from the Maritime provinces, on this side of the House, would take on the question. I was a member of this House in 1903, when this Transcontinental Bill was launched; I was not afraid then to state the position I was going to take with regard to the line from Quebec to Moncton. I am not one of those who votes for a measure simply because it brings a temporary benefit to my province. My interest in this Confederation is not bounded by the limits of the province of New Brunswick; my interest in my country extends from Halifax to Vancouver, and from the boundaries south to the northernmost limits of Canada. I hold that man a traitor to his country, who, for the sake of some temporary advantage to a locality, is willing to vote for a measure which he knows in his heart is not in the best interests of the whole country. The hon. gentleman need have no uneasiness as to how the Minister of Marine and Fisheries will vote; he need have no uneasiness as to how every member from the Maritime provinces on this side of the House will vote on this question. In the debate of September 22, 1903, when I was addressing the House, Mr. Logan, who was then a member, put this question to me:

May I ask the hon. gentleman if he is opposed to the building of the short line between Moncton and Quebec?

I replied, and my answer is to be found in 'Hansard,' 1903, volume 5, page 12046, in these words:

Mr. FOWLER: I am not afraid to answer the question. I come from the Maritime provinces, and I propose to try for re-election in the province to which I belong. I say here and now, that I am opposed to the building of this eastern division, and that I am prepared to defend the position that I have taken upon any platform in my own province. I would be only too happy to have the hon. gentleman come into my county and oppose me on the stump.

That was the position I took in 1903, on the eve of the election of 1904, when I had to go back to my native county to stand for re-election. I have not changed my views; I hold the same opinion to-day. I believe, Sir, the building of that division from Quebec to Moncton was not necessary in the best interests of this country; nor was it necessary in the best interests of the Transcontinental railway itself. I approve of every word in that report when it says that this $35,000,000 was wasted, and worse than wasted, and that opinion is shared, I believe, by every hon. member from the Maritime provinces who supports the Government. And we will not take second place in patriotism, or in devotion to the provinces to which we belong, to any man in this House, not even the hon. member for Carleton (Mr. Carvell).

9 p.m.

A few more words and I am done. I have tried to be moderate, and I have been moderate, in the statements I have made in regard to this very important question. Hon. gentlemen opposite have tried to throw dust in the eyes of the people, in the answer they have attempted to make to the report of Messrs. Gutelius and Staunton, but their attempt will fail. When the smoke of this wordy warfare we are waging here has passed, certain salient facts will stand out clearly and distinctly for the electors of this country to ponder over. These facts briefly are: first, that the people of Canada were told that the railway was to be constructed at a total cost, as a burden upon the people, of $13,000,000; second, that it was declared by the Laurier Government that the entire cost of the line from Moncton to Winnipeg

was to be $61,000,000, when constructed up to the standard of the contract. That was what was promised by the Government of the day, but there are other facts which stand out just as clearly and just as distinctly. These other facts are: that the burden, so far as the country is concerned, must be measured at four times the figure mentioned by Sir Wilfrid Laurier, when he introduced the scheme. It is just as clear and just as distinct also, that instead of the entire cost being $61,000,000, it is over $240,000,000, counting the interest upon which the lessees will not pay rental, and in the face of that enormous excess over the estimated cost, the road is no better than the contract provided for.

Then there is another salient point, and it is, that there has been a wanton waste in the construction, of more than $40,000,000 that has been filched from the pockets of the people, and that friends of the late Government have been improperly allowed to make huge and undue profits on the work. I say, Sir, that not in the history of Canada has such great incapacity and incompetence been shown by men charged with the performance of a great national undertaking, than has been demonstrated by the Laurier Government and its commissioners in the building of this Transcontinental railway.

Mr. D. D. McKENZIE (Cape Breton North): If we were to measure the profundity and the logic of the speech of the hon. member for Kings and Albert (Mr. Fowler) by sound and bluster, it would certainly be no easy task for a comparative youth like myself to reply to it. I was reminded, when he spoke, that after all there is some effect in sound, because it is recorded upon somewhat authentic history that the walls of a certain city called Jericho yielded to rams' horns. Having that incident in mind, I was somewhat interested in the observations of the hon. member, but the sounds have passed away, and the firm walls of the Liberal Jericho, on this side of the House, are as invulnerable and as four-square as when he commenced to speak. As a speaker upon the motion before the Chair, I do not think the hon. member contributed very much. He is like the lecturer who was giving a lecture on the babes in the wood: he talked about everything else in the world without making the slightest reference to the babes in the wood. My hon. friend spoke about the Quebec bridge. I am not aware that there is anything before the Chair in reference to that bridge. We heard a great deal about this man Davis and his operations in regard to the Quebec bridge. The burden of the hon. gentleman's song was in regard to that matter, which is not before the House at all. I do not find fault because your Honour did not think it proper to take the hon. gentleman to task and tell him that he was out of order, when for nearly an hour he blazed away at the Quebec bridge, which, if I read the motion and the amendment before the House aright, has nothing whatever to do with the subject under discussion. But the reason the whip on the other side put up the hon. member for Kings and Albert to follow the masterful address of the hon. member for Pictou (Mr. Macdonald), which was absolutely unanswerable, from facts, figures and logic, was because my hon. friends opposite felt that it was necessary to play some trick; they felt that the cuttlefish trick was necessary to be performed on the other side, and I give the whip great credit for his choice in playing the cuttlefish trick. I cannot congratulate my hon. friend upon the logic of his argument; but, as a contemporary of the leading vaudeville men of to-day, I certainly congratulate him upon his prowess. He need never be afraid of not being able to earn a living while vaudeville is abroad in this country. There are certain matters in the life of this country in which I would perhaps set up my own judgment and experience and opinion against that of the hon. member for Kings and Albert but there are other matters, of course, in which I would absolutely and unreservedly give way to his better judgment and experience. Particularly would I defer to my hon. friend when it comes to discussing the question of a disappointed office-seeker. The hon. member has made a reference to the experience of the hon. member for Pictou in that regard. The hon. member from Pictou has the satisfaction of knowing that the people of the great county of Pictou had sent him here, and, so far as they could, had qualified him for the office. He has the satisfaction of knowing that, so far as the Liberal party is concerned, they would be absolutely satisfied from the top to the bottom to see that hon. gentleman occupying the highest office which the Right Hon. Sir Wilfrid Laurier could tender him and which he could accept. His constituents and himself have the satisfaction of knowing that that is the condition. The fortunes of war, of course, prevented him from enjoying, at the choice of his leader, his

party and the people of Pictou county, that office for the time being. That is the happy position occupied by the hon. member for Pictou. How does his position compare with that of my hon. friend the member for Kings and Albert? The office was there in the gift of his leader, who had the goods to deliver, of exactly the quality that my hon. friend desired. In the hands of his leader was the office that my hon. friend was looking for, that he was praying for. He put himself in the market the moment the door was open; on the first day of the fair he was on the spot. What is the matter? A story is told of an old Irishman whose wife died. Her name was Sarah Jane Hinckley. He wanted to put a tombstone over her grave. The sculptor asked him: what will be the epitaph on your wife's tombstone? 'Oh,' he said, 'I do not know; I would just like to write across the stone there "What is the matter with Sarah Jane Hinckley; she's all right."' I suppose our Sarah Jane Hinckley from Kings and Albert thought that he was all right for the position, for anything that the Prime Minister had to offer. But unfortunately the right hon. gentleman who had the goods to deliver did not think that the hon. member had the capacity or the qualities necessary. Has the hon. member the consolation of saying that his leader did not know him? Has he the satisfaction of saying: Well, if he had known my excellent qualities better, he would have given me the office? He cannot say that. From 1908 to 1911 his leader knew him intimately, and had some knowledge of him when he was not a member of this House. He saw him perform; he knew his points; he knew all about him. He saw his gaits in his various attitudes and positions. Therefore, the excuse cannot be that the hon. gentlemen did not know my hon. friend. The reason is that his leader knew him too well. So much the worse for the feelings and the experience of my hon. friend when he comes to discuss the feelings of a disappointed office-seeker. He is somewhat in the position of the ubiquitous Irishman who was on his trial and was told, 'Pat, do not be frightened; you will get justice.' Pat said, 'That is just what I am afraid of—that I will.' My hon. friend was no doubt afraid that he would get what was coming to him, because of the knowledge his leader had of him, and the unfortunate thing is that he got just what was coming to him. These are my reasons for yielding at once to the vast experience and knowledge of my hon. friend when he comes to deal with the heart-rendings of a disappointed office-seeker.

What did the hon. gentleman tell us about the contracts that were let and the subject which we are particularly discussing upon the motion and the amendment before the House? We were told by the hon. member that there were great irregularities, and he began to point them out by showing that contracts were not properly let and that there was squandering of money and dishonesty from one end of this transaction to the other. I am sorry that the mind of the hon. gentleman is so constructed that he cannot conceive of honesty anywhere except perhaps under his own hat. Does the hon. gentleman know of anything that was irregular, anything that savoured of wrongdoing with regard to this huge undertaking from Winnipeg to Moncton? There are some men in this country who cannot conceive of anything being done honestly or in a straightforward way. They think there must be something wrong about it. I submit that, on account of the latitude allowed the hon. gentleman to discuss the motives of parties and of men, I am quite in order in pointing out to him the history of his party in regard to matters of this kind. The people of Canada have been very kind indeed to the Conservative party. If ever there was a party in Canada or anywhere in the civilized world that has had opportunities of showing what it could do for its country, it is the Conservative party of Canada. They were honoured with the confidence of the people at Confederation and remained in power until 1873 under the leadership of Sir John Macdonald. Why did they lose the confidence of the people in 1873? Simply because when they came to manage a big transaction in which great sums of the people's money could be handled rightly or could be handled wrongly, they handled those moneys wrongly and dishonestly—they squandered and stole the money of the people. And so they were turned out of power. But, as I have said, the people were indulgent to the Conservative party, and called them back to power in 1878. But can the leopard change his spots or the Ethiopian his skin? The Conservative party were but a short time in office when they were back at their old tricks. By reason of the tactics of their great leader, Sir John Macdonald, they remained in power down to his death. And

what was the cause of his death? He died broken-hearted because of the scandals that broke out around him; the tide of corruption ran too strong against him, the conditions were such that he could not face them; he died of a broken heart because of the sins of the party he led. Why did they go out of power again? Because of the Curran bridge scandal, the Soulanges canal scandal, the McGreevy-Connolly scandal, and the thousand and one other scandals that arose in connection with their handling of the public funds. I can understand why the hon. member for Kings-Albert cannot conceive of any political party doing things honestly, for he is a lineal descendant, and fellow-workman of the party whose record I have just related.

And what have they brought home to us in the fifteen years when we were in power under our distinguished leader? We were told year after year, and day after day, by those hon. gentlemen when they were in opposition, that the moment they got into power they would throw light upon the book-keeping, the contracts and all affairs involving money in the public business of this country and they said they would rend the heavens with the disclosures they would make of the doings of our Administration. The change of government came, and every public record which could be used for the purpose of disclosure was within their control. They have been in power for two years and a half; they have had commission after commission, searching-party after searching-party, and down to this day they have not been able to put their finger on one fifty-cent piece of the people's money spent under the Laurier Administration that was not properly used. If there is anything that they know, I, as a humble follower of the great leader of the Liberal party, and as a humble member of this party, defy them to produce it, and to show the people wherein either as a party or as individuals belonging to that party we have done anything unworthy of the cause we represent or the name our party bears. It is an easy matter to slander either an individual or a party, especially here in this House where the cloak of privilege is thrown over the shoulders of the speakers. But I challenge the hon. member for Kings-Albert to say in the open the things concerning Mr. Davis that he has said in this House—that Mr. Davis was stealing money from the treasury of Canada, that he was receiving money improperly and with the assistance of the commission. If he will go outside and say these things concerning Mr. Davis and the commissioners, I promise him, he will get an answer from the Supreme Court of this country that will not be to his liking. It is easy to make general statements without anything to back them up; and I submit to you, Mr. Speaker, that there was not a single statement made by the hon. gentleman with regard to Mr. Davis or the commissioners that he could back up with facts. Now, I can very well leave the record of our party there. We have a leader, we have a record, we have a policy that received the commendation of the people. I think it ill becomes the hon. gentleman who has just addressed the House, or any gentlemen of the party to which he belongs, to throw stones at us in view of the rickety glass house in which they themselves have lived for the last forty years.

The hon. gentleman challenged us to show any statement in this Gutelius-Staunton report that was not backed up by the evidence. Well, Sir, this report contains the statement that money was squandered by the Transcontinental Railway Commission in building a double-track railway, whereas they should have built a single-track railway. I had a controversy with my hon. friend from North Ontario (Mr. Sharpe) the other night on that point. And, with his usual capacity for acrobatic performance and jumping everywhere except where he was asked to jump, the hon. gentleman avoided the point. I asked him to show where in the Act it was provided that this was to be a single-track railway. And what did he do? He produced a contract under which the contractor bound himself to build a single-track railway. And he was cheered to the echo by the 'intelligence' of the hon. gentlemen who sit around him, and they all said, what a masterful lawyer that young chap is. The hon. gentleman endeavoured to prove that Davis had a contract to build a single track railway; of course, he said, that is the law; that is what is in the statute. I submit that that is not the law, and that is not what is in the statute. I do hope that the reputation of the member for North Ontario as a lawyer does not depend upon the assertion which he made in that regard. But this assertion was followed up to-night by another along the same line made by the hon. gentleman who has just addressed the House. What is the law on this point? Chapter 71 of the Acts of 1903 very clearly and specifically

states the power of the commission in this regard. Section 8 says:

> The eastern division of the said Transcontinental railway extending from the city of Moncton to the city of Winnipeg, shall be constructed by or for the Government in the manner hereinafter provided and subject to the terms and provisions of the agreement.

There is not a word in this section about single track railway. Here is section 15 of the same Act:

> The commissioners shall have, in respect to the eastern division, in addition to all the rights and powers conferred by this Act, all the rights, powers, remedies and immunities conferred upon a railway company under the Railway Act and amendments thereto, or such general Railway Act, in so far as they are applicable to the said railway, and in so far as they are not inconsistent with or contrary to the provisions of this Act shall be taken and held to be incorporated in this Act.

My hon. friend appeared very learned the other night and got his friends to laugh because I took the point in law that there was no restriction on this commission as to what kind of railway they should build. Here is the statute from which I was quoting on that occasion, and which I stand by now. I say that the statute does no more than give the amplest power to these commissioners to build any kind of railway they want to build. If I did have any doubt about this matter it was removed long before the hon. member for North Ontario spoke by the observations of the hon member for South Renfrew, who held this book out the other night to the Solicitor General and asked him to find in it or anywhere in the law governing this subject a provision that the road must be a single track road, and the Solicitor General, with all his ingenuity and ability to get rid of a difficulty, had to succumb to the inevitable and acknowledge that there was no such provision. What becomes of the challenge of the hon. member for Kings and Albert, directed to me as the next speaker, to point out in this report anything inconsistent with the facts and the evidence submitted? There is not in this report, from one end to the other, a particle of evidence which in the slightest degree supports the contention that only a single track railway should be built. I submit that even if the law said that a single track railway should be built, which it does not say, what was actually done is incidental to the building of any railway, that is, the making of provisions for double tracks and sidings at the termini of the road. There is, therefore, nothing at all in the point which hon. gentlemen opposite have attempted to make to the effect that hundreds of thousands of dollars were lost in the double tracking of this road.

The hon. member for Kings and Albert challenges us also to name one assertion made in the synopsis of the commissioners' report which is not backed up by the evidence. I want to give one more illustration, and then I am through with that part of my remarks. I wish to point out, not only to the House but to any person who may think it worth while to read my observations, that this report is not reliable because in dozens of instances statements are made which are not borne out by the facts. While I do not propose to go over the whole of these instances, I want to point out that when the evidence of any person is found to be defective in several material points, the value of the whole of his evidence is practically destroyed. Hon. gentlemen in this House who are lawyers and who have to deal with the weight of evidence, know that if a man goes on the stand and is caught in stating what is not the fact on several points, so far as the court is concerned, while he may tell the truth in some instances, the value of the whole of his evidence is practically destroyed because he is found telling what is not true. I simply wish to apply that principle to this report, and to ask my hearers to conclude that the report is entirely unworthy of confidence. On page 6 we are told that the commissioners were wrong in their methods of inviting tenders. The report says:

> The rules adopted by the commission in advertising for tenders, the unlimited security required to be furnished by the contractors, and the proposal to let the work for the most part in unreasonably large sections, resulted in only five contractors tendering for 806 miles of the railway, and eleven contracting firms secured all the work and sublet it to upwards of 100 subcontractors, who, had the work been divided into reasonably large sections and the security required in other governmental contracts only been exacted, would have in all probability competed in the bidding. As an indication of the handsome profits derived by these eleven firms, it appears that they were paid $8,800,000 in profits for that part of their work which they let to subcontractors.

For the proof of that statement we are referred to page 19. It may be tedious to you, Sir, and to the House to listen to the evidence to which we are referred, but a concise statement of facts is made on page 6 of the report, and at the foot of that page we find the words: 'See page 19.' One would therefore expect to find on page 19 of the report evidence to substantiate the charge that tenders were improperly called for. Here is page 19: 'Methods of award-

ing contracts and the consequences.' Permit me to read this evidence, and let me remind hon. gentlemen again that we expect to find on this page evidence of misconduct in respect to the calling for tenders:

As there are several important matters considered under this head, an explanation of some length is necessary to their understanding.

For construction purposes, the 1,806 miles of railway to be built was divided into 21 sections, the length and location of which will be seen on exhibit No. 9.

The commission furnished under forms (see exhibit No. 10), which included a unit price schedule for various items of work and material connected with the intended contract and named everything which the engineers thought might enter into the construction of the railway in all its ramifications. The tenderers were required to fill in the schedule with their prices per yard, per pound, etc., for excavating and furnishing material.

Before advertising for tenders the engineers made an estimate for each section of the quantities and cost of the various materials and works named in schedule expected to be moved or provided, to be in a position when the tenders were received by placing the prices mentioned in the tenders opposite these items to determine who are the lowest tenderers. A glance at the schedule will make the above quite clear.

The contractors were required to tender on a general contract to do everything towards the building of the railway excepting the supplying of the steel for the tracks, the building of steel bridges, depots, shops, warenouses, freight and fuel sheds. For some reason unknown to us although the other buildings were excluded the engine houses and section houses along the whole line were specifically included in the general contract and, for some other reason quite impossible to understand, it is provided in the contract that the prices named should not apply to engine houses and section houses. That this was deliberately done appears from the fact that the secretary drew the attention of the commissioners to the omission. Later (see 'buildings,' page 80) we will have something more to say about this peculiarity of the contract, which practically allowed the contractors to fix their own prices.

It was open to the commission to inform the tenderers of the quantities which the engineers estimated would be included in their contracts for the purpose of letting them know what the engineers thought as to the magnitude of the contract.

After consulting with Mr. Collingwood Schreiber, who strongly advised that estimates be not exhibited to the tenderers the commissioners decided that they would not give to the contractors this information, and would furnish them only with profiles and plans. (Exhibit No. 11.)

The contractors themselves considered that the engineers' estimates were strictly private. (Page 494.)

Where the information is not open to all it is most unfair that any one tenderer should obtain 'inside information' because, if he knew the quantities he might put a very high price against an item on which he knew the engineers had not estimated or had only estimated for a small quantity without any fear of the total under that head bulking so large in the entire price as to imperil his chances, or he might, as was done by Fauquier Bros., put a very low price on an item which the engineers had mistakenly estimated at a very large amount.

In awarding the general contracts the first step was to advertise for tenders. A copy of an advertisement is appended. (See exhibit No. 12.) In submitting their tenders the tenderers were to fill in in the column headed 'rate' their price for each of the 103 items enumerated.

That is the whole of the evidence on page 19. I submit to you and to the hon. gentlemen in this House that there is not one word there to substantiate the charge that tenders were improperly called for and that opportunities were given to some tenderers that were not given to others. These are at least two instances in which there is not the slightest evidence that there had been any wrong-doing as far as the commissioners were concerned.

We have a charge elsewhere in this report of the investigating commission that momentum grades should have been adopted and the statement that if they had been a great saving would have been effected. The investigators report that the commissioners and the Government were to be condemned, forsooth, because they did not follow such a course. We have the evidence furnished by the investigating commission themselves upon that very point, and what is it? Not one syllable from the officers whom the commissioners were obliged to follow and these rulings and decisions they were bound to observe, to support the contention made in this report that momentum grades should have been allowed and that they would have been equally effective and efficient in the construction of the road. Here is the evidence furnished by the commission, and I submit to you that there is no danger of their furnishing anything but what they had to; they would certainly not furnish anything favourable to the commissioners who had the construction in hand. On August 9, 1905, there is a letter to Mr. H. A. Woods, assistant chief engineer of the Grand Trunk Pacific, from Mr. D. MacPherson, the assistant chief engineer of the commission. That letter reads:

August 9, 1905.

H. A. Woods, Esq.,
Assistant Chief Engineer,
Grand Trunk Pacific Railway,
Montreal, P.Q.

Dear Sir,—Would you kindly send me a set of your speed and distance diagrams for cal-

culating momentum grades, giving details of weights of engines used.

Yours very truly,
(Sgd) D. MacPherson.

On August 14, there is a reply to that letter:

Montreal, Que., August 14, 1905.
Mr. D. MacPherson,
Assistant Chief Engineer,
Transcontinental Railway,
Ottawa, Ont.

Dear Sir,—Replying to your letter, of August 9, asking for a set of our speed and distance diagrams for calculating momentum grades. I beg to say that we have not considered momentum grades, in any way, in our located lines, and I question the utility of doing so on grades as low as we are using.

For details of weight and engines used, I have to say that we propose to use the new Government specifications for bridges, using the 'heavy' class of engines. This I understand gives the weight of engine and tender 355,440.

Yours truly,
(Sgd) H. A. Woods,
Assistant Chief Engineer.

Then there is a letter addressed to H. D. Lumsden, Esq., as follows:

November 20, 1905.
H. D. Lumsden, Esq.,
Chief Engineer,
Ottawa.

Dear Sir,—Attached is correspondence I have had with our district engineers and with the assistant chief engineer of the Grand Trunk Pacific railway, on the subject of virtual grades.

You will see that some of our engineers are in favour of using same in certain places, and some are not. Mr. Woods is not in favour of using them.

Here is the point: Mr. Woods is the engineer of the Grand Trunk Pacific, who are to take over this road under a contract when it is finished, and we have here the statement that Mr. Woods is not in favour of using momentum grades:

They are of course only suitable for undulating country and not for long stretches of country on maximum grades.

Engineering has been described as the art of making a dollar earn the most money, and a judicious use of virtual grades at points where the locomotive engineer has a chance to 'take a run at the grade,' would undoubtedly save money in construction and admit of the line being operated with maximum virtual grades of 0.4 and 0.6 though the actual grades would appear on the profile as steeper. Of course, if we have actual grades of 0.4 in locations where the engine can get a run at them, they can be operated as virtual grades or less slope, and the haulage capacity of the engine will be greater than on a virtual grade of 0.4. Will you kindly let me have your ruling early as to whether or not we shall use virtual grades where possible? Please return file.

Yours very truly,
(Sgd) D. MacPherson,
Assistant Chief Engineer.

The reply to this letter is as follows:

D. MacPherson, Esq.,
Assistant Chief Engineer.

Dear Sir,—In reply to your letter of the 20th inst. re actual and virtual grades. I am certainly of the opinion that we must adhere to actual grades so far as our construction is concerned, and all district engineers should be so instructed. Should any exceptional cases arise they should be submitted to this office, but you must bear in mind they must be approved by the Grand Trunk Pacific Railway Company before they can be adopted. I return herewith all correspondence.

Yours truly,
(Sgd) Hugh D. Lumsden.

That seems to be all that passed between the engineers of the Grand Trunk Pacific and the engineers of the commission in connection with this matter. The question was brought up by MacPherson, who submitted it to the chief engineer of the Transcontinental. Mr. Lumsden said that it was not in compliance with the terms of the contract, and therefore there was no use talking any further about it, and he ordered his assistant engineer to instruct the engineers from one end of the line to the other accordingly, and that was the end of it. The commission appointed to construct this road were given under the Act a chief engineer who had general control of the whole work, absolute control over the final estimates, and actual control of what should be regarded as final in connection with the whole work. When such a man gives an opinion to the commission that a certain grade is to be followed, and that there is no use talking about anything else, would it be conceivable for one moment to suppose that the commissioners, who were bound to follow that man's advice, would put up their own opinion against his and say: We will change the grade and change the contracts? Where would this work have been if the commissioners had not followed the advice of the best authority on engineering which this country put at their disposal? They were bound to follow the advice given by the chief engineer, and in following that advice they did what was right. We have heard a great deal about clap-trap this evening. My references have no bearing on the language of anyone in this House, but I submit that, so far as business is concerned, this report is clap-trap of the worst possible kind, and not deserving of the least possible attention of this House or of any respectable portion of the community to which it is supposed to be submitted.

The investigating commissioners also raise the point that the Transcontinental Commission did not follow the advice of the legal authorities of the Government, and that if they had any legal authorities themselves they did not consult them. I submit that that is not fair; it is not what I would call honest. I find here upon the record a question put to Mr. Grant which strikes me as not being a fair and proper question. Mr. Lynch-Staunton asked him the following question:

Q. You were not aware that the commissioners were asked the opinion of a legal adviser in respect to the matter of the construction that they were putting on this assembled rock?

Mr. Grant, with the answer practically put in his mouth, says:

No, I am not aware. So far as I know, they did not.
Q. Don't you think it was poor business for them not to have asked a legal opinion?—A. I suppose it would have been better.

But all this time Mr. Staunton had in his hand the letter and the opinion which appears on page 384 of the report in respect to this very subject of classification. If there is anything wrong about the classification—I do not agree for one moment that there is—that is certainly a matter not brought home to the doors of the commissioners. They accepted the plans and specifications put in their hands by the officers of the Government. By whom were those plans and specifications prepared? They were prepared by Mr. Woods, by Mr. Butler, and by the engineer who was the adviser of the Government of Sir Wilfrid Laurier, Mr. Collingwood Schreiber. These three capable men met and prepared the plans and specifications, approved them so far as they could approve them, and handed them over to the commission as being the plans and specifications on which the road was to be built. What remained to the commissioners was simply to accept those plans and specifications and to carry out the work to the best of their ability. If there was anything wrong with those plans it was certainly not for the commissioners to correct them, but for the experts of the Government.

I wish to bring to the notice of the House a very remarkable state of affairs. At the time this contract was entered into and the plans and specifications were agreed upon, there was in the office of the Railway Department of this country, as Deputy Minister of Railways and Canals and as chief engineer of that department, a gentleman of very high repute as an engineer, a gentleman of learning and ability and a man of affairs in this country—Mr. M. J. Butler. Mr. Butler, of all men had knowledge, from the origin, of those plans and specifications. He had intimate knowledge of how the building of this high-class road was arrived at, he knew what advice he had given to the Government with respect to it, and the responsibility which he took upon himself in connection with preparing the plans and the advice he gave in regard to the grade to be used on the Transcontinental. It would strike you, Mr. Speaker, that a royal commission that was looking for the truth and the truth only, a commission that wanted to get at the foundation of this matter and put the facts before the people, would have called as its first witness Mr. Butler. Mr. Butler knew all about the business better than any other man in this country. But what happened? The commission sat day after day, wandered about from place to place, took photographs and snapshots of themselves on the hillsides whenever it was pleasant and sunny enough for them to be out. From the day they were appointed till they handed in this report they were wandering all over the country taking evidence here and there. Mr. Butler was available to them; he was in the city of Montreal and could have been called at any time. His evidence would certainly have been valuable to the people of this country, and would have been the best evidence, and the kind of testimony the people of this country want; but from the day the commission started until they handed in their report Mr. Butler was not examined and the people of this country and the members of this House are not given the benefit of his opinion. If the commissioners wanted to get at the real facts, why did they not call Mr. Butler, the man of all others who knew all about it and could give an opinion as to why they decided on an 0.4 per cent grade one way, and an 0.6 per cent grade the other? I do not know why they did not call him—I do not want to make any harsh statements—but, judging from the general character of this report, and the aptitude with which the facts are suppressed and the facility with which matters are put forward which are detrimental to the interests of the Liberal party, and which throw a slur on the capacity of the engineers of the National Transcontinental Commission, I have the right to draw the conclusion that the evidence of Mr. Butler was kept in the background because it might throw on this whole business

a light that they could not hide under a bushel, and so the only safe thing to do was not to examine him at all. Mr. C. A. Young was the commissioner in charge of the Winnipeg end of the work, and one would naturally suppose that he would be the first man they would call as a witness. He had to deal with the matter, and he was the best evidence, because he was on the spot and knew all about it, but Mr. Young was never called, and not one word of his testimony is printed in ths blue book. What I have said about the evidence of Mr. Butler I say about the evidence of Mr. Young, namely, that his evidence was the suppressed by these gentlemen because it would not suit the kind of instrument they were preparing, and the contract they undertook.

Mr. CARVELL: Worse than that, they had a discussion with Mr. Butler, and it was never incorporated in the evidence.

Mr. McKENZIE: I am told by the non. member that they had an opportunity of discussing with Mr. Butler what his evidence would be, and when they found it would not suit their purpose they left it out altogether. That is the kind of a report we are called upon to treat seriously.

I wish to point out further, that so far as Mr. Lynch-Staunton put himself in opposition to the opinion of anybody else who had a right to give a definite and considered opinion in connection with this matter, he was found to be wrong. He put himself forward as an authority on the question of what kind of buildings should be erected, and the manner in which the railroad, with all that appertains to it, should be operated. These commissioners put their opinion against the authority of such a man as Sir William Whyte, chosen as arbitrator by the contending parties, and Sir William Whyte turned down that opinion when it was submitted to him, and gave the most emphatic decision against Messrs. Gutelius and Lynch-Staunton as far as concerns the operation of the road and its equipment. One would think that when the award of the arbitrator was against the opinion of the commissioners, they would accept that as being the law, as happens in every other proceeding of this kind. If a judge differs from his brethren on the Bench, and he is overruled, and the majority give a decision settling what the law is for the time being, the dissenting judge does not go out and say: I am right and the others are wrong; he accepts the dictum of the majority. That was what Mr. Lynch-Staunton should have done when the decision of the tribunal was against him, but instead of that we find him reporting to the King, as represented by the Governor General, that he still adheres to his own opinion, as against the decision of Sir William Whyte.

Then Mr. Lynch-Staunton gave his opinion on a law point in connection with the contract, and against Mr. Staunton's opinion we have the opinion of the Minister of Justice, a gentleman of wide practice and experience on the Bench and at the Bar; the opinion of the Deputy Minister of Justice, than whom there is no more capable lawyer in the Dominion; the opinion of a former distinguished Minister of Justice, Sir Allen Aylesworth, agreeing with the present Minister of Justice and the deputy minister; the opinion of Mr. A. J. Brown of Montreal, a lawyer, whose opinion I understand is of considerable weight, and the opinion of the Law Clerk of the National Transcontinental Railway Commission, and yet, when the report comes down to the House, in spite of this array of authority against him, Mr. Lynch-Staunton still adheres to his own legal opinion. Of course, that was done for the purpose of reflecting upon the National Transcontinental Railway Commission, and upon the late Government.

10 p.m.

On the question of classification, I would point out that Messrs. Gutelius and Lynch-Staunton seem to know very little about assembled rock. I rather think that when the people of Canada come to understand the genesis of this report, for which this country had to pay $63,000, they will reach the conclusion that while the commissioners are ignorant on the subject of assembled rock, they are very astute upon the subject of assembled falsehoods.

On exhibit 16 of volume 2 of this report, we have a diagram of what Mr. Lumsden, the chief engineer, handed out to his subordinates. He pointed out in diagram No. 1 a certain kind of rock in ledges; in diagram No. 2, rock in boulders over one cubic yard; in diagram No. 3, conglomerate rock or plum pudding stone; in diagram No. 4, detached ledge rock in mass over one cubic yard; in diagram No. 5, rock in masses of over one cubic yard reassembled rock); in diagram No. 6, shale rock. He summarizes at the foot of the page as follows:

No. 1 is a mere matter of measurement by the engineer.

No. 2 is a mere matter of measurement by rock measurers.

No. 3 is a mere matter of measurement by the engineers.

No. 4 is a mere matter of measurement by rock measurers.

Nos. 5 and 6. To form a judgment as to whether or not it is best removed by blasting, the chief engineer must view the work in progress or leave it to be decided by the engineer in charge, whose duty it is frequently to visit the work during its operation and be governed thereby and act accordingly.

This is signed by Hugh D. Lumsden, chief engineer, and put into the hands of his subordinates; and the commission and everybody else had to follow this report and the law as laid down there by the chief engineer. As I said already, I submit to the House and to the country that there was nothing left to the commissioners but to follow the instructions as laid down by the gentleman given to them as the man above all others who was to direct them as to what was assembled rock, shale rock or common excavation or whatever else they had to deal with in connection with this work. That being the case, I submit that no case of any kind has been made out against the commissioners.

We have a right to suppose that, before such slanderous charges would be made against the personnel of the commission, there would be some evidence to back them up. I have no brief for the hon. gentlemen who composed that commission, and many of them personally I did not know at all. I had slight acquaintance with the commissioner from Winnipeg, Mr. Young. I believe he is a man of excellent standing in his own city; I have never heard anything to the contrary; and we have to assume until the contrary is shown that he is an honest, capable man, and, of course, as far as this commission and this evidence is concerned, there is nothing to the contrary. As far as the former premier of the province of Quebec is concerned, I submit that he can very well afford to laugh at the criticism levelled against him by hon. gentlemen opposite. He is a man of first class standing in his own province. Not only is he known in that province favourably and well, but he is known from one end of this country to the other as a big man. I submit that, when the day came for the distinguished gentlemen who led the Government of the time to find a man to take the place of Mr. Wade, it would be difficult for him to find a more capable gentleman than Mr. Parent, the ex-Premier of the great province of Quebec. The old adage would well apply to him in regard to the speeches made on the other side yesterday and to-day in reference to him. I have heard him say: 'Well, on a beautiful moonlight night, you hear the dogs barking; you hear a lot of noise; but what does the moon do? The moon moves majestically on.' This gentleman, who is and who has always been of high repute in his province, can well afford to hear those barkings and move majestically on in his business and pay no attention to them. If my hon. friends opposite go outside the shelter and protection they may have in their various callings, and say anything about this gentleman, when they are brought to task, they will find that Mr. Parent is the respected gentleman that he always has been, and that his repute and standing in the country are not to be molested or maligned by cheap jack talk, such as we have heard in regard to him yesterday and to-day in this House and elsewhere.

Mr. SPEAKER: I think the expression 'cheap jack talk,' as applied to hon. members, is not proper in this House.

Mr. McKENZIE: Well perhaps not, Sir. I come now to my own province of Nova Scotia, and refer to those hon. gentlemen who had charge of this commission. We had as the first gentleman who was made chairman of this commission the hon. Mr. Wade, who was for many years a member of this House and well known to yourself, Sir, and many other hon. members. I submit that in his day, when he was appointed and for many years before he was appointed to this position, Mr. Wade took second place to no man in any province of the Dominion as a gentleman, a man of affairs and a lawyer. While he was in charge of this work, he did it well, faithfully and with great display of ability. It is a poor tribute to his memory that gentlemen opposite try, at this time, when he is silent in death, to cast reflections upon his memory by stating that he was a party to giving false information and handing out contracts in a false way and doing things for the purpose of carrying on improperly and dishonestly the affairs of the great undertaking of which he was made chairman and as regards which he had great responsibility. I submit that it is slanderous to him and that it is a pity that hon. gentlemen opposite should think it worthy of them to make such charges against a man who is unable to defend himself.

I come to the hon. gentleman from the

county of Antigonish (Mr. McIsaac), who took the position of commissioner at the death of Mr. Wade. He does not require any defence at my hands. He was a member of this House for many years, and I submit, without disrepect or disparagement to any other member, that there was never a man in this House who more correctly and more properly behaved himself and was more respected in this House than Mr. McIsaac. As has been pointed out to me, when it came to the finding of a successor in the great county of Antigonish, which was honoured for many years as having for its representative the distinguished gentleman who was at one time Premier if this country, the right Hon. Sir John Thompson, the mantle of Sir John Thompson fell upon the worthy shoulders of Mr. McIsaac. He was the gentleman selected by the Right Hon. Sir Wilfrid Laurier to fill the position of Commissioner. Before Mr. McIsaac came into this House, he was an honoured representative of the county of Antigonish in the local legislature, a member for many years of the Government of Nova Scotia, a distinguished member of the Bar of his province, a man of means, a man of affairs, and acquainted with the many vicissitudes in the progressive province of Nova Scotia.

He came here to give his time and attention to the building of this railway. And there is not a man living who can put his finger upon one spot in the character of Mr. McIsaac. There are Nova Scotians here who are supposed to know something about Mr. McIsaac and about Mr. Wade, now dead and gone, and I challenge them to put a finger upon one stain upon the character of these men in connection with any business they ever handled. As to the suggestion that lawyers should not be at the head of this business, I submit to you, Mr. Speaker, that there is no class of men in the community who are better fitted for such business than lawyers, if you get the right kind of lawyers. It is all nonsense to say that a lawyer knows nothing but how to read statutes and give opinions upon points of law. If a lawyer has a wide practice—as these lawyers had—he has to deal with every kind of business. In a real estate case, he must know something about land measurements, he must know something of the cost of building, both the price of material and the price of labour. I will not go into all the cases; but if you have a practical, experienced lawyer, you have a man whose training brings him into touch with every kind of work. For that reason, to sneer at lawyers being at the head of the work, is not doing the lawyers justice. The man trained as an engineer may know how to measure a rock cutting or estimate the quantity of material moved, but that is a small matter in comparison with the expending of many millions of dollars and in comparison with the whole work to be done on this road. The man who can deal with prices, men, and matters generally is better equipped for such a work as this than the man who is a specialist in one thing and knows little of others that enter into these projects. So, it is not doing justice either to the Government or to the men who were in charge of the work to sneer at those men because they were lawyers. Nor is it fair to sneer at them because the work cost more than it was supposed to cost at the beginning. An hon. member on the other side told us the other day that the commission appointed by the United States Government to build the Panama canal was composed mainly of engineers. Are we asked to believe that there was no over-expense there and that the work is being carried out within the estimate first made? I believe that the estimate given for the construction of that great work was somewhere in the vicinity of $150,000,000. The expenditure has been $400,000,000, under this great and competent staff of engineers, and the work is not yet finished. If the Government of the United States, with a commission of engineers, naval and military, the best men that could be found, spends over $400,000,000 for a work that was estimated to cost $150,000,000, what have we to say against a commission here, because, forsooth, the work under their charge overran the estimate made in the first place?

The reason why we started this work in 1903 is very well known to you, Mr. Speaker, for you were then in the House at that time and a very active member. Those reasons are set forth in the preamble of the statute, which is as follows:

> Whereas by reason of the growth in population and the rapid development in the productiveness and trade of Canada and especially of the western part thereof, and with a view to the opening up of new territory available for settlement, both in the eastern provinces and in the West, and the affording of transportation facilities for such territory, and for other reasons, the necessity has arisen for the construction of a National Transcontinental railway, to be operated as a common railway highway across the Dominion of Canada, from

ocean to ocean, and wholly within Canadian territory; and whereas an agreement has been entered into, bearing date the 29th day of July, 1903, between His Majesty the King of the first part, and Sir Charles Rivers Wilson, G.C.M.G., C.B., and others, representing therein and acting on behalf of the Grand Trunk Pacific Railway, a company incorporated by an Act of the Parliament of Canada passed at the present session thereof, of the second part, making provision for the construction and operation of such a railway; and whereas it is expedient that Parliament should ratify and confirm the said agreement, and should grant authority for the construction in manner hereinafter provided of the eastern division of the said railway between the city of Moncton, in the province of New Brunswick, and the city of Winnipeg, in the province of Manitoba: Therefore His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

As has been pointed out, this enterprise was fully discussed in this House at that time. I do not know that there ever was a subject before this House that received a more thorough threshing out than this. The people were asked to give their judgment upon it, and by an overwhelming majority they declared in favour of the Government carrying out this enterprise. The work was commenced. Then, in 1908, there was an opportunity again for the people to pass judgment; and again, the right hon. gentleman (Sir Wilfrid Laurier) who was then Premier of Canada, received an indisputable and overwhelming mandate to go forward with this great undertaking to a satisfactory completion. These are the circumstances under which the Government undertook the work and were carrying it on. The hon. member for Kings-Albert told us that he was always opposed to this undertaking. It is possible he was. He says he was elected in 1904, and his opposition was well known. But when the people of Kings-Albert had an opportunity of understanding the subject, when they had the opportunity of knowing what the nature of this enterprise was and what it meant to the Dominion, when the hon. gentleman went back to his constituency in 1908, they defeated him by a sweeping majority. So, his own experience in his own county and in the province of New Brunswick is certainly no proof that the feeling in that great province is against this enterprise. If the hon. gentleman was opposed to it in 1904, I am not surprised that when the Prime Minister came to select his Cabinet he did not take in the hon. gentleman. For the right hon. leader of the Government (Mr. Borden) was in favour of building the road. He proclaimed from the housetops everywhere in the province of Nova Scotia that he was in favour of the building of this road. Remarks to that effect were quoted from his speeches here to-night; what is the use, therefore, of a member coming here and telling us that he was against it? His leader, whom he supported and whom he now supports, was in favour of the building of this road from Quebec down to the Maritime provinces. When the right hon. gentleman was confronted with quotations from his own speeches this afternoon, made by the hon. member for Pictou, he took no exception to them, and we must take it for granted that these quotations were correct, that those were his views at that time and are his views to-day, and that he is in favour of the building of this road into the province of New Brunswick and down to the Maritime ports.

We are told by the hon. gentleman from North Ontario that this road should never have been built east of the Quebec bridge. If this road was not to be built east of the Quebec bridge, why should it be built to the bridge? No good purpose is to be served by building the road to the bridge, and stopping at that point. If the purpose of this road is to bring the grain from the West to navigable waters; if its purpose is to bring the grain to a point where it can get from the cars into the steamers, that purpose is accomplished the moment the road reaches Montreal. Why, then, should the road go to Quebec? For no purpose at all, but, in the face of their supporters from the province of Quebec, hon. gentlemen opposite do not dare to say that the road should not be built to Quebec. But why let the road go to Quebec when its purpose is accomplished when it reaches Montreal? If hon. gentlemen contend that the road is not to go further than Quebec; if the purpose, as has been pointed out, is to create a transportation route via Cochrane to the city of Toronto and to open up a canal system so that the traffic which is now going through Montreal will go through Toronto, the logical conclusion at which we must arrive is that there will be no further necessity for building the road east of Cochrane; that Toronto should be made the central point of the route and that the rest of the road should be dropped. No road has ever been built on this continent on such a high standard as the Transcontinental, and that being the case we cannot compare the cost with that of any other road built in Canada or the United States. It is all very well to

say: you could have saved money by building wooden bridges; you could have saved money by having steeper grades; you could have saved money by having sharper curves. Of course you could. That reminds me of an advertisement of a milk seller which I saw in a newspaper some time ago; 'you can buy milk cheaper here, but it will be cheaper milk.' You could certainly build the road cheaper, but it would be a cheaper road. It would not be the kind of road we want; it would not be the road that would suit the circumstances and necessities of the provinces of New Brunswick Nova Scotia, Prince Edward Island, and, indeed, Canada at large. What is the purpose of the road? I have read from the statutes that the purpose is to connect the West with the East and to develop our seaports. If this road is not built in a way that will make it superior to every other road and, by the completeness of its equipment and the nature of its grades, overcome differences in distance, it will not accomplish the purpose for which we have built it. It has been pointed out that there is a difference of at least one hundred or possibly one hundred and fifty miles in favour of Portland for traffic coming from the West. If we built a road of the same capacity and the same grades as the roads that are now going to Portland, why should we think that men who are routing grain from the West are going to route it to St. John and Halifax when they have the opportunity of routing it by the shorter and cheaper route to Portland? It is out of the question. Our only opportunity of competing for that trade and keeping it within Canadian lines is to have a better road. If we have a better road we can afford to run the trains faster, and we can afford to give cheaper rates. These are the things we are looking for, and these are the things we hope to accomplish by the building of this road. We are told, forsooth, that something which we thought would cost one dollar is going to cost three. Are we going to stop because of that? Is that the capacity of Canadianism, the capacity of the Government of this country? Because we find that a thing that is going to make a great commercial country of this Canada of ours will cost three dollars instead of one, are we going to stop there, throw up our hands, say we cannot do it, and allow this traffic to go through a foreign country? The statement that we should have only one road going into the province of Nova Scotia and into the province of New Brunswick is simply absurd. If it takes three great transcontinental railways to carry the present traffic, how are we to get that traffic to the seaports of the Maritime provinces with one road, badly built, not in the proper place, with bad curves and bad grades? The Intercolonial was never made to pay properly; the fault must be somewhere, and when it cannot handle the present traffic, how can we hope that it will carry the traffic of the West, its grain and other great commodities, to the cities of Halifax, Sydney, North Sydney, Louisburg, and other cities that are waiting for that traffic? If three or four railroads are necessary to carry the traffic across the continent to Montreal or Quebec, it is the greatest possible absurdity to suppose that one poor railroad is going to handle it from Quebec to St. John, Halifax or farther east, where we hope it will come when the greater development takes place. Traffic is something like a river that runs down from the glens and hillsides; it begins small, but as it flows towards the sea it gets bigger and bigger and only reaches its full volume when it enters the larger body of water. The same thing is true of traffic; it begins small, and as it goes on towards the great seaboards it gets bigger and bigger, and it requires better roads and better facilities to handle it. That being the case, if we hope to send to the ports of St. John, Halifax, Sydney, North Sydney, Louisburg and the other great ports of the Atlantic seaboard the great traffic which is being handled by the Canadian Pacific Railway Company, the Grand Trunk Railway Company and the Canadian Northern railway, which is getting bigger as it comes east, we must provide sufficient facilities to handle it.

For that reason I submit that it is no answer to the question to say that we are going to handle the whole trade by the Intercolonial. It cannot be done, and it was to overcome that difficulty that this project was launched and is being carried forward. For that reason it receives the support and sympathy, beyond question, of the Canadian people, and particularly of the people of the Maritime provinces. I watched with interest the speech of the hon. gentleman who preceded me, but he has not once said that he was opposed to the building of this road through New Brunswick and to the port of St. John. He simply said that he stood by the position which he took in 1903 and 1904 when this question was being discussed in the

House. We did not hear what that was, he may have been opposed to certain conditions, but I am not aware that he ever took the broad ground that he was altogether against the building of that road. What does the Prime Minister think of his Solicitor General, in view of the fact that the Prime Minister himself was in favour of the building of this road, not only from the West to Montreal and Quebec but into the Maritime provinces, and particularly to Halifax and St. John. He says he was in favour of its construction, and yet the Solicitor General, who was put forward the other night as the great champion of the Government, says that the whole thing is a pyramid of folly. He pays his leader, who was in favour of the building of this road, the great tribute of saying that his leader was supporting a pyramid of folly.

I would like to hear the Solicitor General or any other man, from the Maritime provinces or from this House, going to tell the people of the provinces of Nova Scotia, New Brunswick, and Prince Edward Island that the building of this road, which is likely to give them the proper connections which they have looked for for years and which is going to bring to these great ports on the Atlantic the influx of trade and business that we have expected, that the stream of trade is to be cut short at the Quebec bridge or at Cochrane, and that we need not hope to receive in the future any of the great advantages which we have hoped for. We must yet enjoy these advantages, as neither this nor any other government would dare to go back on the promises made to the people in the past, and to dash the hopes raised by the building of this road. As I have said, it is no answer to say this is costing too much, if the money is properly spent, if we have value in the road, if the proper bridges are put in. Steel bridges are more expensive than wooden, but when they are built we have steel and not wooden bridges. Low grades are more expensive than higher grades, but when we have them we have the right kind of a road, a road that is going to pay and answer the purpose with which we started out. When the people have value for their money, they have nothing to complain of, and I am sure that they will not complain. We heard a good deal from our friends opposite a few years ago, during the last election particularly, about the trade of this country going north and south and not east and west. We were to keep our trade in our own lines, within our own borders; but what is the legitimate outcome of the theory that is now being put forward? If they degrade the road from Cochrane down to Quebec, smash it up so that it will be of no use, make its curves so sharp, its grades so bad and everything in connection with it of so low a standard that it will be incapable of carrying out the project we have in view, where will the traffic go? It is bound to go where the old Grand Trunk traffic always went, instead of going east and west to the extreme limits of Canada as it ought to go and we hoped it would go, it will be cut off at Cochrane or Quebec, and then this Tory theory and alleged Tory patriotism of bringing the traffic to the extreme end of Canada in the east will be of no more service, for we hear from our friends opposite that there is no intention and never was any intention of putting this road in commission beyond the Quebec bridge and that it is a pyramid of folly, as has been said by the Solicitor General who is, I suppose, voicing to some extent the ideas of the Government of which he is, if not a member, a very close ally. I wish to point out, as a Maritime province man, that the Intercolonial has never answered the purpose for which it is said to have been built. The Intercolonial railway is a part of the terms of Confederation. It was built for the purpose of creating traffic and trade between the Maritime provinces and Canada, as Canada was known at that time It was supposed that the Intercolonial railway would carry our fish, our agricultural products, and our coal to the markets of Montreal, Toronto and other western points. That was the purpose the Intercolonial railway was supposed to serve, but it was built in such a way, with such poor gradients, that that purpose was never accomplished, that trade was never created, and for that reason we were never satisfied that the terms of Confederation were fully carried out in that connection. Now, after a wait of forty-five years, we thought that this new road, would fulfil the conditions under which the provinces down by the sea had entered Confederation. But it appears that if hon. gentlemen opposite have their way that hope will also be blasted and we will not have our expectations in that regard fulfilled. At present there is no great traffic from the west going further east than St. John and Halifax, but we are only at the commencement of the development of our

trade, we have not reached even ten or twenty per cent of the great development of this country. We have magnificent harbours on our Atlantic coast, such as Halifax, St. John, Sydney and Louisburg. Right in the island of Cape Breton we have six magnificent harbours. We expect that when the full fruition of this undertaking is obtained, when the traffic of the West is in full blast, these ports, the ancient port of Louisburg and the magnificent harbours of Sydney and North Sydney, will receive their share of this traffic. We have the right to expect that our magnificent fish and our other products such as iron and steel will go to the West on this road that will carry cheaper and better than any facilities we have had up to this time. That being the case we have always looked forward to the completion of this road up to the high standard which was set at the beginning and which I am sure will be carried forward to the end.

The Government and hon. gentlemen here representing the Government to-day may think that the appointment of this commission is a mere trifle, that they can appoint any kind of a commission they want and can put in their mouths any kind of a report. How is this commission appointed? It is not a haphazard affair, its appointment is based upon a statute of this country. Is it appointed by any one of the ministers? I do not think so. The commission is appointed as the representative of the Crown according to chapter 104 of the Revised Statutes of Canada:

> The Governor in Council may, whenever he deems it expedient, cause inquiry to be made into and concerning any matter connected with the good government of Canada, of the conduct of any part of the public business therof.

The Crown is called in. The Governor General appoints a commission but of course he has no responsibility. He takes the names of the men submitted to him and the responsibility rests directly on the Government. In 1912 that chapter was amended by the Government of to-day as can be seen by chapter 28 of the Acts of that year. I submit that the report that the commissioners sent here is absolutely illegal, absolutely improper, and absolutely in violation of the law put upon the statute books by this Government. The hon. member for North Ontario (Mr. S. Sharpe) specifically stated last night that there was a question of forgery in connection with this matter. It is very plainly hinted by the commissioners who committed that forgery. They hint that there was wrongdoing by some persons. When they find that somebody is guilty of wrongdoing or suspected of wrongdoing, what are they called on to do? Chapter 28 of the Acts of 1912 says that if anything is discovered in the course of the inquiry which requires further investigation or which brings a charge home to somebody,

> the commissioners may allow any person whose conduct is being investigated under this Act, and shall allow any person against whom any charge is made in the course of such investigation, to be represented by counsel.

Then follows the important part:

> No report shall be made against any person until reasonable notice shall have been given to him of the charge of misconduct alleged against him and he shall have been allowed full opportunity to be heard in person or by counsel.

That is the law placed upon the statute books by the Government of to-day. The report before us simply bristles with charges of this kind, charges of theft, of squandering and fraud of every kind. Who could listen to the speech of the hon. gentleman from Kings and Albert (Mr. Fowler) to-night and not believe that hundreds of cases of wrongdoing had been discovered by this commission. The very chapter under which these commissioners were acting says that if charges were discovered the persons charged must be brought before the tribunal to answer the charges. The chapter says further:

> No report shall be made against anybody until the law is complied with fully.

I submit that this commission did not follow the terms of the Act under which they were appointed, and that they have made slanderous reports and charges against citizens of this country without giving them any opportunity of answering the charges made against them. I spoke of Mr. Cahan a moment ago. He describes himself as a Tory of the Tories, a strong follower of the leader of the Government and an associate of his in politics. He surely would not raise the hand of rebellion against the Government unless he had the strongest provocation. He evidently knew of this statute and of the power under which the commissioners were acting. Speaking in the city of Montreal a few days ago in regard to this matter, he said that the whole thing was ridiculous and absurd, that it was no better than an ex-parte trial before a magistrate. That is the kind of investigation upon which thousands of reputations are to be blasted in this country. That is the kind of report which the Government is spreading broadcast throughout the country. I have

not heard anybody on the opposite side expressing their opinion of Mr. Cahan in connection with this matter. He is a keen lawyer, a man who has practised his profession in Nova Scotia for many years. He was picked out by the leader of the Government and made his candidate in the county of Cumberland. Mr. Cahan was then leader of the Conservative party in the province of Nova Scotia. Hon. gentlemen opposite cannot say that he is a biased witness or that he is in sympathy with the Liberals. They are forced to say that the Tory party are not playing fair, that they are not only slandering their opponents but disgracing the country, and I believe people outside the bounds of Canada will be likely to take Canada at its own value. This report has done more harm to the Dominion of Canada than can ever be remedied by any action the Government might take. If any person belonging to the party to which I belong, if any Liberal in Canada had said what Mr. Cahan has said, I would not have mentioned it, because I should have been told: What else could you expect? But Mr. Cahan is a Tory of the Tories. Outside of members of the Government I do not know any man in Canada who is more closely allied with or more prominent in the counsels of the party in power to-day than the gentleman I am talking about. I say that seriously, this man, without any hesitation, declares that this thing is farcical and entirely unworthy of any party or of any Government. That is the evidence of their own friends, which cannot be contradicted.

I said a moment ago that the Government was responsible for appointing these men. The moment they appoint commissioners of this kind, what happens? They are bringing the Governor General and the Crown into the maelstrom of politics in this country, because the Governor General is supposed to appoint them. He is supposed to receive their report and to act upon it. What should be the attitude of the Government in appointing men of this kind? The Government should have appointed men against whom even the suspicion of bias could not rest. I am pleased to see the Minister of Justice in his place; he is an eminent jurist and a good lawyer; he knows from his past experience at the Bar and on the Bench that no decision could stand if the author of that decision was even suspected of the possibility of bias. It was stated in this House a few days ago that Mr. Lynch-Staunton said about this report, that he was delighted that Providence had put in his way the opportunity, and that it did his Tory heart good to strike a blow at the Liberal party in Canada. His heart was well known to the Government before they appointed him, and yet that is the kind of man they submitted to the Governor General as an unbiased commissioner, to advise him on an important matter. It is rather painful to have to say anything about Mr. Gutelius at all; it is simply a repetition of the old play, Bunty pulls the strings. Bunty Lynch-Staunton pulls the strings and Gutelius jumps every time. If he should happen to lag behind, Lynch-Staunton would immediately tell him: Look at your $20,000 a year; you have got to earn it, if you do not follow me and jump whenever I pull the strings, I am close to the Government, I have a Tory heart, and I will tell them you are not what they thought you were, and you will have to get out of your job. I do not think there is any jump too high for Mr. Gutelius to take.

This was nothing but a hand-picked commission of biased, prejudiced men, with preconceived opinions as to the report they were going to make. And Mr. Lynch-Staunton, given to the Governor-General as an unbiased commissioner, when he heard part of the evidence as a judge, came off the Bench, appeared as counsel, gave an opinion to himself in writing, and I suppose he was paid for the opinion over and above the $63,000. Was such an absurdity ever before heard of?

An hon. MEMBER: And taxed his own Bill.

Mr. McKENZIE: And taxed his own Bill, of course. Imagine two magistrates sitting as a court, and after half the evidence had been heard, one of them jumping off the Bench and pleading before the other for the rest of the day, and cross-examining witnesses, and then jumping on the Bench again and rendering a decision. Lynch-Staunton pulls the string and Gutelius sits on the Bench, and Lynch-Staunton gets off and makes a speech to his colleague, and lays down the law for him, and then jumps on the Bench again and the two of them render a decision, and that decision is handed down to the people of Canada as something that is without the slightest taint, and as an unbiased decision in every way. If there was nothing else to condemn

this report but that absurdity, it would be enough. It is true that the legal opinion given by Mr. Lynch-Staunton was bad, but nevertheless it was given. I point out that an opinion in contradiction of it was given by the present Minister of Justice, by the Deputy Minister of Justice, by the ex-Minister of Justice, and by a score of other able lawyers in Canada, but notwithstanding, Mr. Lynch-Staunton says: I know what I am doing, I have a greater regard for the opinion of Lynch-Staunton than I have for the opinion of all the ministers of justice who ever appeared in Canada, and I will so report to His Royal Highness the Governor General. I submit to the Minister of Justice that when he is paying this man he will at least make some deduction on whatever he charges for the bad legal opinions he has been guilty of.

These two gentlemen, as I have said, wrote this prize essay condemning the Government, and they got their $63,000, and how they divided it between them I do not know. I suppose there was some allowance made for Mr. Lynch-Staunton appearing before the court and advising himself, and possibly there was some allowance made because of part of the time Mr. Gutelius was otherwise drawing $20,000 a year, but I have no doubt these very able gentlemen were able to strike an average. I am a poor man, Mr. Speaker, but I do not begrudge these gentlemen their prize money of $63,000, nor the easily earned money of $20,000 a year which goes to Mr. Gutelius. I would not be surprised if some day we saw them coming back and doing something, like what was done by a gentleman of ancient history. We know about a certain man who took thirty pieces of silver, which, I suppose, was quite a lot of money in those days, and he thought he was doing a good stroke of business, but the results were bad, and he came back and he threw down the thirty pieces of silver and he went off to his proper place. I would not be surprised to see Mr. Lynch-Staunton coming along some day, with Mr. Gutelius behind him on a string, and saying to the Government: here is your cursed $63,000; we earned it with blood, but I never have had a happy day since I took it, and here is the cursed thing for you. I wonder if his masters will give him the same answer as did the masters of the poor miserable fellow who took the thirty pieces of silver. Their answer was: what is that to us; you have served our purpose, you have sold your soul, your manhood, and your credit, take away your money, our hands are clean. I would not say that they are very clean. That is the kind of commission, the kind of court, the kind of outfit with which they are going to blast the credit of Sir Wilfrid Laurier, the great chieftain of the Liberal party and the Liberal party itself. That is the kind of commission, the kind of court, the kind of outfit by which they hope to carry out their old spite against this great enterprise which has defeated them so often and which, if they tamper with it, will defeat them again.

11 p.m.

I submit that the addresses already made by hon. gentlemen in this House have been of such a character that this report is shattered, is smashed beyond recognition. There is not enough of it left and there was not enough of it left after the hon. member for South Renfrew (Mr. Graham) spoke, upon which to hold an inquest, not enough left upon which to hold a post mortem, nothing left to bury; but we have been dealing with it and it is vanishing into thin air. Let me wind up as to what we propose to do with it now and hereafter along the lines of the sea captain who received a telegram stating that his mother-in-law was dead. He was asked: Will we embalm her, or will we bury her or will we cremate her? He sent the word flashing over the wires: Embalm her; bury her; cremate her; take no chances. That is the way in which we are going to deal with Messrs. Gutelius and Staunton. We will take no chances on this thing. We will embalm them; we will bury them; we will cremate them, and we will do everything necessary to put them clean and for ever out of existence. I was speaking a moment ago about the implements which this Government were using in trying to bring disrepute upon their opponents. Those implements remind me that any Government which is capable of using these implements is capable of going back to ancient days and using those implements of the wild Indians, the torch, the tomahawk and the scalping knife.

On motion of Mr. Nesbitt, the debate was adjourned.

On motion of Mr. Rogers, the House adjourned at 11.10 p.m.

Thursday, April 2, 1914.

The House met at Three o'clock, the Speaker in the Chair.

QUESTIONS.

(Questions answered orally are indicated by an asterisk.)

POLITICAL PARTISANSHIP COMMISSIONERS.

Mr. BOURASSA:

1. Have Messrs. L. Omer Beaulieu, Ste. Foye Belleau, J. P. Jolicœur, Chas. Smith, E. H. Cimon and Emile Galley, advocates of the city of Quebec, acted since the 31st of March, 1913, as Government commissioners, to inquire whether public employees had to be dismissed for political partisanship or for any other reason?

2. Who among the above named have acted as commissioners for such purposes?

3. What investigations have been held by them or any of them, where, at what date and regarding what employee?

4. What amounts have been paid since the 31st of March, 1913, to each of them in salary or expenses?

Mr. PELLETIER:

1. No.

2 and 3. Answered by No. 1.

4. Post office: Mr. J. P. Jolicoeur reported on charges of partisanship against the postmaster at Guay, Quebec, under date the 24th March, 1913, but his account for this investigation, amounting to $103, was not paid until the 9th April, 1913. Mr. Ste Foye Belleau reported on charges of partisanship against the postmaster at Blandford, Quebec, under date the 12th February, 1913, but his account for this investigation, amounting to $37, was not paid until the 3rd April, 1913.

Public Works: The sum of $660.98 was paid to Charles Smith, Esq., Quebec, on the 30th April, 1913, but in connection with an investigation held in 1912.

INTERCOLONIAL RAILWAY EARNINGS.

Mr. MACDONALD:

What were the gross earnings during the period from April 1 to December 31, 1913, on the following divisions, respectively, of the Intercolonial railway: Halifax to Moncton; Sydney to Oxford and to Truro; Moncton to Campbellton; Campbellton to Rivière du Loup, and Rivière du Loup to Ste. Rosalie?

Mr. REID:

Division	1913 October Earnings	1913 November Earnings	1913 December Earnings	1914 January Earnings	Total Earnings
	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.
Montreal & Ste. Flavie.....	419,431 82	385,451 50	393,996 03	309,165 95	1,508,045 30
Ste. Flavie & Moncton...	223,891 85	233,406 63	232,559 02	181,228 01	871,085 51
St. John & Halifax.....	290,013 18	282,291 67	313,669 29	259,667 44	1,145,641 58
Sydney & Truro & Oxford Bch.	181,092 22	146,838 14	153,945 71	130,261 40	612,137 47
	1,114,429 07	1,047,987 94	1,094,170 05	880,322 80	4,136,909 86

PURE BRED LIVE STOCK.

Mr. LAW:

1. Is W. H. Corning, Chegoggin, N.S., a representative of the Department of Agriculture, live stock branch, to purchase pure bred animals in Yarmouth county, N.S.?

2. If not, who has been appointed as his successor?

3. What is the maximum price allowed by the department for each of the following animals respectively,—boars, rams, stallions and bulls?

Mr. BURRELL:

1. No. Mr. Corning's connection with the live stock branch was of a temporary nature, he having been authorized to purchase boars and rams for distribution in the Maritime provinces last fall. No boars or rams are being purchased and distributed at the present time.

2. Mr. Corning's appointment having been of a temporary nature only, his connection with the Department of Agriculture terminated with the completion of the work last fall. There can, therefore, be no question regarding the appointment of a successor. No further distribution of boars or rams will be undertaken until the coming fall. A distribution of stallions and bulls will be carried out this spring, but, in point of fact, no instructions have, as yet, been issued regarding the purchase of pure bred sires in the Maritime provinces.

3. The maximum price authorized by the department for boars, rams, stallions and bulls, is as noted below:

	Eastern Canada.	Western Canada.
Stallions	$575	$600
Bulls	140	160
Boars	25	40
Rams	25	35

The prices noted for stallions and bulls are authorized in connection with the purchase during 1914. The prices noted in the case of rams and boars were authorized in connection with the purchase during 1913. The prices to be allowed for rams and boars for distribution during 1914 have not yet been decided upon.

YARMOUTH HARBOUR DREDGING.

Mr. LAW:

1. How many tenders for dredging at Yarmouth harbour were received in 1913?
2. On what dates were the tenders received?
3. Who are the persons or companies tendering and what were the prices asked by each tenderer?
4. Have deposits made by the tenderers been returned?

Mr. ROGERS:

1. Six.
2. September 4, 1913.
3.

4. Yes.

SHERBROOKE-SUNNY BRAE MAIL SERVICE.

Mr. SINCLAIR:

1. When was the latest contract made for carrying the mails between Sherbrooke, N.S., and Sunny Brae?
2. Who is the present contractor?
3. What is the contract rate?
4. Were tenders asked for?
5. If so, what are the names of all parties who tendered, and the amount of each tender?

Mr. PELLETIER:

1. 1st July, 1913.
2. J. S. Cameron.
3. $1,100 per annum.

4 and 5. The previous contract expired on June 30, 1913, and, as the price was reasonable for a tri-weekly service of 90 miles per trip and the inspector having reported the service as being satisfactorily performed, the contract was renewed without inviting tenders.

TADOUSAC WHARF.

*Mr. LEMIEUX:

1. Who was the contractor for the construction of the wharf at Tadousac, Quebec?
2. What was the amount of the contract?
3. Has the contractor been paid in full?
4. Has the Department of Public Works retained a percentage out of the contract price for claims against the contractor? If so, what was the percentage?
5. Have any of the claimants been paid by the department?
6. Is it the intention of the department to pay the respective claims of Charles Grenon and Thomas Louis Villeneuve, who, as alleged, both furnished timber to the contractor and have not yet been paid?

Mr. ROGERS:

1. Napoleon Warren of Chicoutimi.
2. $31,795.
3. Yes, contract earnings paid in full.
4. The department retained $4,737.64 out of the contractor's security deposit, in order to protect the claims filed against him.
5. A number of claims, after having been proved and admitted by the contractor, have been paid. Payment of others is proceeding as they are proved from time to time.
6. The amount remaining in the hands of the department may not be found to be sufficient to pay all claims in full but these claimants will receive payment, proportionately, to the other claimants.

MILITIA EXPENDITURES.

Mr. PARDEE:

What has been the total militia expenditures for each year since the year 1896?

Mr. HUGHES:

1896-97	$2,478,179
1897-98	1,746,731
1898-99	2,561,056
1899-1900	3,684,294
1900-01	3,168,717
1901-02	2,669,038
1902-03	2,587,476
1903-04	3,603,715
1904-05	4,012,742
1905-06	5,664,193
1906-07	4,377,309
1907-08	6,871,397
1908-09	6,578,574
1909-10	6,120,877
1910-11	7,009,822

1911-12.. 7,729,948
1912-13.. 10,272,759

These figures include civil government salaries, &c., and expenditure for aid to civil power, but not pensions.

RIMOUSKI HARBOUR.

*Mr. GAUVREAU:

1. Who were the tenderers for the improvement at the harbour of Rimouski, and what is the amount of each tender?
2. Who designed the plans and specifications?
3. Who gave the approximate cost of the work and prepared the estimates thereof?
4. What is the estimated cost of such work, as submitted to the department by the local engineer?

Mr. ROGERS:

1. Scow measurement: Paul Raymond and Jos. O. Talbot, $334,250; O'Brien and Doherty, $497,801.80. Place measurement: Raymond and Talbot, $355,445.50; O'Brien and Doherty, $501,023.40.

2 and 3. Mr. J. A. Tremblay (then district engineer).

4. $361,144.

THE AURORA MENACE.

Mr. KNOWLES:

1. Has the Aurora Menace, published at Aurora, Missouri, been prohibited from the Canadian mails?
2. If so, when did such prohibition take effect?
3. For what length of time is said prohibition?
4. What were the reasons for same?

Mr. PELLETIER:

1. Yes.
2. February 23, 1914.
3. Indefinitely.
4. The reasons are given in a memorandum from the deputy minister, in which the minister concurs, and which reads as follows:

Ottawa, March 30, 1914.

Memorandum for Postmaster General:

The Postmaster General is informed, in reference to the inquiry made about the prohibition from transmission by post in Canada of The Menace, a weekly paper published at Aurora, Missouri, that this paper has been barred by the department from transmission through the Canadian mails, and that an authorization to establish a similar one in Aurora, Ont., has been refused.

Under the law, as you know, the Postmaster General has power to make regulations for prohibiting the sending by post of anything indecent, obscene, immoral or scurrilous, and this power is set forth in section 178 of the Postal Guide, based on the law, where instructions are given that matter posted contrary to this prohibition is to be stopped and sent to the Dead Letter Office, Ottawa. The practice of the department when matter is submitted to it by the public as coming under the provisions of the Post Office Act is to carefully examine the publication submitted and in the event of it being considered as violating the law, to advise the service generally that such matter is prohibited transmission by post. This was done in the case of The Menace, a United States publication, published weekly at Aurora, Missouri, which was coming to Canada.

An examination of The Menace revealed the fact that most of the contents of this paper was certainly objectionable.

As an illustration, I will quote a few items which are to be found in this paper:

'Resolved that the Roman Catholic priesthood is a lecherous bunch of White Slavers.'

'One-third of the priests are rotten; one-third are bad, and the other third will stand watching.'

'Bishops and priests in Canada are genuine White Slavers.'

'The Catholic religion controlling state, home, church and schools in furtherance of ignorance and superstition in order to continue the power of the Pope and priest and their prostitution-creating system of bachelor priests, nuns and the confessional.'

'Though very religious, their lives are rotten to the core. They seem to be born liars, devoid of character, and knowing no shame; and why should it not be thus when the priests (so-called spiritual leaders) are men of corruption living lives of dissipation and crime.'

'I was quietly informed that one of the prominent lawyers of our town has 23 children from 23 different mothers. The other day I went to see and talk with a neighbour and found there five children. I was told on inquiring as to their father and mother that they all had the same father but each had a different mother. These are only two examples and the country is just full of such. The priests are as bad; they set the example. Who can blame the people.'

'The priests spend a good deal of their time in the parochial schools making love to the pretty young Sisters, whilst the rest of their time is spent in mumbling Latin offices, drinking wine or whisky-punch, and making merry on the fat of the land.'

'There were convents, Burnett tells us, where all the religious were pregnant.'

'If everything is straight inside their wall why this seclusion, the high fences and closed doors and barred windows. Why these persistent reports of oppression, cruelty and immoralities going on inside their walls. Nunneries, as we have heretofore shown, were established originally to house women who had 'consecrated' themselves as sacred prostitutes to the deity they worshipped.'

Some of the headings of articles read as follows:

'Priests, Publicans, Politicians, Prostitutes.'

'Papal abduction of women for nuns.'

To show you how some well meaning people may be led into hatred and contempt of their own fellow-citizens and fellow-countrymen, I beg to quote from a strong letter of protest received by the department in this matter and written by a man, who, having been a reader of the The Menace, gives us an outline of the general tenor of the articles in The Menace, as he understands them. Amongst other things, here is what he says approvingly of the gen-

eral lines of controversy which this paper has adopted:

'The Menace says the Roman Catholic hierarchy, its priests, popes, cardinals and bishops are the most corrupt, cruel, vicious reprobates, without exception, that ever walked the earth. It says they inveigle innocent girlhood and womanhood into the secluded barred convents to become brides of Christ, but when the final vow has been taken which forever shuts these deluded innocents out from the beautiful sunlight of heaven, the kindly protection of the father and mother and sympathic fellowship of friends and neighbours, they find themselves not the brides of Christ but the victims of the lust and embraces of fathers and priests of holy Rome.'

This man adds that he feels confident that all this is true and concludes that consequently The Menace should be allowed transmission through the mails.

However, it seems that the above quotations and many others which could be given, because The Menace does not publish any news as an ordinary newspaper does, but devotes almost its entire space to this sort of stuff, makes it quite plain that this paper comes within the law prohibiting the transmission of indecent, obscene, immoral or scurrilous literature.

Any paper discussing religion in an abstract way is responsible for its own opinions, and we do not in any way interfere with such papers. Men may be Protestant or Catholic in the extreme, and may hold their view in the extreme and give pronounced expression to them in a most extreme way, and the department would not interfere at all, but when personal abuse reflecting on the honour and chastity of women and clergy of any denomination as a whole is indulged in, or when women of a certain faith are reflected on as has been done in The Menace, then this department understands it as its duty not to allow such things to pass through the mails. This is a law which the department has followed in the past and intends to follow in the future. It has been and will be applied impartially to all papers, Protestant or Catholic, which may indulge in such things. If any Catholic paper had indulged or should indulge in such reflections as have been indulged in by The Menace most certainly its privileges of the mails would have been or would be cut off at once, and when this case was brought to the attention of the department and the columns of the paper examined, the statements contained therein were found to be so scurrilous, so abusive and derogatory to a great many of the people of our country that there was nothing for the department to do but to live up to the law and abolish this paper from the privileges of the mails.

Under section 209 of the Criminal Code, any one is guilty of an indictable offence and liable to two years imprisonment who posts anything of an obscene, immoral, indecent or scurrilous character. This, however, is not a matter for the enforcement by this department, and therefore the department has simply contented itself with acting within its powers as regards matter circulating through the mails. I have not the least doubt, however, that did any person choose to make this a personal matter, and take it up under the Criminal Code, the editor of the paper, were it not for the fact that he is a foreigner and a non-resident of Canada, would be subject to the penalties of the Criminal Code.

R. M. Coulter,
Deputy Postmaster General.

Mr. KNOWLES:

1. Has the Aurora Menace, published at Aurora, Ont., been prohibited from the Canadian mails?
2. If so, when did such prohibition take effect?
3. For what length of time is said prohibition?
4. What were the reasons for same?

Mr. PELLETIER:

An authorization to publish in Aurora, Ontario, the same paper referred to in the preceding question has been refused for the same reasons.

HOMESTEAD REGULATIONS.

Mr. KNOWLES:

1. Did the Minister of the Interior announce at Medicine Hat during the month of August, 1913, that he intended to change the homestead regulations so that homesteaders on land not well adapted to grain raising, or on land difficult to cultivate, might have the option of substitution of ownership of a given number of cattle for the required acreage of breaking at present required?
2. If so, has any change yet been effected?
3. If such change has not yet been effected, is it the intention of the minister to make such change? If so, when?

Mr. ROCHE:

1. The Minister of the Interior stated at Medicine Hat on the occasion of his visit to that city in August, 1913, that it was his intention to propose a change in the Dominion Lands Act, so as to substitute stock raising in lieu of grain raising on land not suited for agriculture.

2 and 3. A Bill is now before Parliament for this purpose.

UNOPPOSED AND UNDISCUSSED MOTION.

Mr. Carroll.—For a return showing: how many certificates for promotion have been asked from the Civil Service Commissioners since the 31st March, 1913; how many of such certificates have been refused, and to whom; and the reasons given in each case for such refusal.

EASTER ADJOURNMENT.

Hon. R. L. BORDEN moved:

That when this House adjourns on Wednesday next the 8th April, it do stand adjourned until Tuesday the 14th April.

Mr. MACDONALD: As it is impossible for many members who live at long distances from Ottawa to reach Ottawa on Tuesday by leaving their homes on Monday, I would suggest that the day of re-

assembling should be Wednesday instead of Tuesday.

Mr. BORDEN: If we postpone the resumption of work it means another day or perhaps more at the end of the session. However, if it would be a very great convenience to some hon. gentlemen living at a distance, I personally would have no decided objection and would move to amend the motion accordingly.

Mr. OLIVER: I would support the suggestion of the hon. member for Pictou. When it takes a member two or three days to go or to return from his home, it is not worth while making the journey unless he has a day or two at home.

Motion, so amended, agreed to.

POSTAGE ON ENGLISH MAGAZINES.

On the Orders of the Day being called:

Mr. LEMIEUX: Is there any truth in the statement in the press that the postal regulations as to English magazines and newspapers are to be changed? I see that the statement is attributed to my hon. friend the Postmaster General that the regulations have been done away with, but I read in the Herald of last night a cablegram purporting to give denial of that statement on behalf of Mr. Farnell, secretary of the Post Office Department in England. What truth is there in that statement?

Mr. PELLETIER: During the last three years English magazines have been sent to this country, and the British post office has collected a postage of one penny, or two cents, on each magazine. The time limit fixed in that arrangement expired about twelve months ago. It has been continued since for periods of three months each. The British post office has been asked to make some other arrangement, but they have not yet done so. The period of the last extension has not yet expired and, as Mr. Farnell states, the matter is now being negotiated.

NATURALIZATION ACT AMENDMENT.

On the Orders of the Day being called:

Mr. MACDONALD: From a return relative to the amendment of the Naturalization Act, I find that the Department of Justice of Canada and the home authorities have practically agreed upon the terms of a Bill which will carry into effect imperial naturalization, not only in Canada but throughout the empire. I notice by the press that a Bill embodying this principle has passed the House of Lords and that its passage through the House of Commons will be facilitated. Does the Minister of Justice propose to introduce the Bill referred to in this Parliament during this session?

Mr. DOHERTY: I expect to be able to introduce that Bill in a few days. It is now being prepared. While, of course, our Bill is based upon the Bill passed by the home Parliament, it will be necessary to make certain provisions of our own with regard to the method of granting naturalization in Canada.

THE NATIONAL TRANSCONTINENTAL RAILWAY.

Consideration of the proposed motion of Hon. W. T. White (Minister of Finance) for Committee of Supply, and the proposed amendment of Mr. Graham thereto, resumed from April 1.

Mr. HUGH GUTHRIE (South Wellington): Mr. Speaker, at this stage of the debate one would almost need to apologize for offering any further remarks in regard to the matter which has now been under discussion for one full week in this Chamber. I promise that my remarks shall be rather general than detailed, and that I shall present to the House my own view of the findings of the commission, formed after a very careful perusal of the report and of the exhibits and the evidence which accompany it. I shall do this in as fair and impartial a manner as I can.

I, for one, do not think that the Government made any mistake in appointing a Royal Commission to investigate the affairs of the National Transcontinental railway; nor do I think they made any mistake in giving to that commission the wide powers they gave it; I suppose it was appointed under chapter 104 of the Revised Statutes of Canada. Opinions in Canada since 1903 or 1904 have conflicted a good deal in regard to various matters concerning the construction of the National Transcontinental railway. Charges and counter charges were made in the House, in the press and throughout the country, particularly on the occasion of two heated general elections in Canada, one in 1904 and one in 1908. I do not think that in the general election of 1911 the question of the National Transcontinental railway played much of a part. When the present Administration took office they made no error in deciding that a Royal Commission should be ap-

pointed to investigate the affairs of the National Transcontinental railway. The initial mistake, the overmastering blunder which the Government did make was in its selection of the personnel of that commission. Had two or three individuals been selected in whose ability and non-partisanship the people of Canada had confidence, I doubt whether any discussion would have taken place in this House in regard to this report —at all events, there would have been little discussion. I do not believe that the Government or the Minister of Railways could have selected two men in whom the bulk of the people of Canada would have had less confidence in the matter of presenting an independent non-partisan report on the National Transcontinental railway. It was for the Government to choose the commissioners and in making the choice it did of Mr. George Lynch-Staunton, K.C., and of Mr. Gutelius, they made their initial blunder—a blunder that has shown itself in all the proceedings of that Commission down to the day the report was presented. The report is not the outcome of a judicial, independent, and non-partisan inquiry—exactly the reverse. I know Mr. Lynch-Staunton very well and esteem him very highly. I have met him in many cases and recognize his legal ability. I know that for the last six or seven years the Ontario Government has been his chief client. He has appeared on behalf of the Ontario Government before committees of this House time and again. He is a partisan from the beginning. As a campaigner at general elections, he is one of the most active men in the province of Ontario, never an election passes but Mr. Lynch-Staunton is to the fore in Western Ontario, in every little village where a number of Roman Catholic families happen to be gathered together you will find Mr. George Lynch-Staunton as a speaker.

Some hon. MEMBERS: Oh, oh.

Mr. GUTHRIE: That statement I know to be correct not only with regard to the riding which I have the honour to represent, but as regards the riding of my hon. friend from North Wellington (Mr. W. A. Clarke) and other ridings in western Ontario. Mr. Staunton took an active part in the election of 1904 when the transcontinental proposal was probably the chief question before the electors. It was during that campaign that my right hon. friend the Prime Minister announced that it was better to have a government-owned railway than a railway owned government, and I remember a very fine portrait of my right hon. friend with that quotation underneath. As I said, Mr. Staunton took an active part in that election and I have no doubt followed his leader in every respect. In the election of 1908 the Transcontinental was again the main issue though not the only one, and once more Mr. Staunton was one of the chief speakers of the Conservative party throughout western Ontario.

Mr. BURNHAM: Would my hon. friend allow me to ask a question? Does he consider that because he is a Liberal that fact disqualifies him from giving now, or at any other time, a judicial and impartial opinion on this question?

Mr. GUTHRIE: No, I do not think it does, for the reason that I am going to discuss the case solely upon the material which has been brought down by the commissioners. At the present time I am discussing the personnel of the commission. Following the election of 1908 there was not a great deal of discussion of this particular question. We drifted into trade and other matters until the change of Government in September, 1911. Very shortly after that, this Royal Commission was appointed. Mr. George Lynch-Staunton, fresh from the stump, with his preconceived ideas about the Transcontinental which he had heartily condemned, was appointed chairman of the commission to investigate the construction of that road. I submit that he was not a fit and proper man to place in that position. If he spoke what he believed in 1904 and 1908—I am sure he did—he never believed in the National Transcontinental railway and he never believed that the eastern branch should be built. He was a prejudiced, biased commissioner from the first. I know little or nothing regarding Mr. Gutelius except what I have heard in the course of the debate, but I submit from what has transpired in the debate that we are bound to conclude that Mr. Gutelius was as greatly disqualified as was Mr. Staunton to act upon that commission, considering his preconceived notions and his record as a railroad man. There are some facts which are not controverted: he was an American railroad engineer; after coming to this country he was on the engineering staff of the Canadian Pacific railway for a number of years; later, he was made divisional superintendent somewhere in New Ontario, at North Bay, I think. There he came in contact with the Minister of Railways and Canals, and I have no doubt

that was their first meeting. He was taken under the wing of the Minister of Railways and Canals in regard to local politics in the province of Ontario. He was afterwards employed by the Minister of Railways, then a member of the Ontario Government, in connection with the Temiskaming and Northern Ontario railway. When the Hon. Frank Cochrane became Minister of Railways and Canals in this House he brought Mr. Gutelius along with him, intending to keep with him a man who had been so useful to him in the past and was likely to be as useful again in the future. Mr. Gutelius at present is filling a position worth, I believe, $20,000 a year. This prize has been dangling before his eyes for a long time, and at last he has landed it. A man occupying the position that Mr. Gutelius did should hardly have been appointed to a commission which was to investigate the Transcontinental, unless he was absolutely free from the influence of any minister of the Crown, and of all political parties. I do not take very much exception to the fees which were paid to Messrs. Gutelius and George Lynch-Staunton. If the work was done I do not know that they were overpaid, although I am one of those who believe that the result of their work is practically useless as an independent report of what has transpired with regard to the road. When that commission was appointed, I fancy the Minister of Railways and Canals knew his men pretty well. There are many eminent judges in Canada who might have acted on that commission, there are eminent engineers who might have been chosen on that commission, unbiased and free from partisanship of any kind. There are eminent engineers, eminent lawyers, eminent judges in other countries, in the United States for instance, where conditions are very much the same, who might have been employed. Independent, practical, thorough men could have been found by the Government without difficulty had the Government desired to find them. The Government made the initial blunder of appointing two men who were of the most partisan character, one counsel of the Ontario Government, and who for the last eight or ten years had condemned this railway and its construction; and the other a man who had an office of $20,000 a year dangling before him all the time under the Minister of Railways and Canals.

Under these circumstances, could you expect an independent, unbiased report? I submit you could not, and I submit to my right hon. friend that if, upon any non-political question, he was called on to appoint a commission to arrive at fair and just conclusions, he would not select the men who were selected in regard to the National Transcontinental railway. Had he selected his commissioners from amongst the judges of Canada, we on this side would have had nothing to complain of. Had he acted as the former Government did—and I have heard that criticised during the course of this debate—there would have been no cause of complaint. When a report was brought up in regard to the Civil Service by Mr. Courtenay and two others, and there was a clause referring to some fraudulent dealing by some branch of the Civil Service, what did the late Government do? They appointed Mr. Justice Cassels, judge of the Exchequer Court, to examine into the question. As soon as he was named I think all parties were satisfied that it would be a full, fair and impartial investigation. Why did the Minister of Railways and Canals not pursue such a course in the present instance? I cannot tell. I believe he knew or could assume what kind of a report he was going to get before his commissioners actually took office.

Now, there is a significant fact at the very beginning of the report which one must refer to. It is well known that the powers of the commissioners were very broad, and, as I submit, if the road is to be completed at the end of the present year, they should not have put in their report until it was completed, and this report should merely have been an interim report. While the powers of the commission were very broad, they have, themselves, limited the scope of their operations to the 1st October, 1911. In other words, all that they sought to investigate were the doings of the other fellows. What did the Liberal Government do in regard to the Transcontinental railway when they were in power? Under the Order in Council appointing them their duties were fuller than that, and they should still have been on the inquiry and remained on the inquiry until the end of the present year, when it is said the road will be completed. Who gave them instructions to stop at the end of the regime of the late Liberal Administration? It does not appear from the report. Did they take that upon themselves? I fancy they did;

that they thought they would look after what the Liberals had done and avoid what the succeeding Government has done without taking the advice of anybody on the subject at all, and without receiving any instructions. That thought came to them as the natural way of treating the affair. That showed the bias of their minds, and it is for that reason that I am pointing it out, and for that reason alone. The first clause in the report of the commissioners states that they only examined the work up to the first of October, 1911. What work did they examine? The surveys and preliminary work having been done, tenders were advertised for, but they were not advertised for until 1907. The first contracts were not let until 1907. The late Liberal Government was in power during the construction of that work during 1907, 1908, 1909, 1910 and a little over half of 1911. For the last two and a half years the work has been entirely in the hands of the commission appointed by the present Administration—four years or four and a half years under one Government and two and a half years under the other Government. Why, then, should not this commission have completed its work; why should it not have continued to the end of the present year and shown us what had been done by the Conservative Government, or by the commission appointed by the Conservative Government, after the first of October, 1911? They did not do so, however. They had no directions, as far as I know not to do so. I am not concerned so much with that as I am with the fact that acting upon their own motion, following the prejudice and bent of their own minds, they were only concerned with the other fellows, in order to find out if they could show anything in regard to them, and they were not concerned with the commission appointed by the present Government.

There are certain minor features in regard to the report which I propose to deal with, and deal with rather briefly, because the commissioners in their report have rather epitomized their views in the first few pages. In the first instance, they say that the late commissioners of the Transcontinental railway, who were appointed by the late Government, caused a loss of $8,800,000 in connection with the letting of contracts. The commissioners state that had there been no sub-letting of contracts that money would have been saved to the people of Canada. I ask any one in this House to go over that report as carefully as I have and find the facts and the evidence to support that finding. You can add up all the various amounts that they say represent undue and unnecessary profit and they make only between $6,000,000 and $6,500,000. But then, what they state to be inordinate profits and improper allowances only form what may be called a matter of opinion at the best. The commission finds that a great mistake was made in letting these contracts in too large bulk. Let us see how that figures out. We have covering 1,800 miles, twenty -one contracts, or an average of 85½ miles per contract. What they suggest is that contracts should have been let in blocks of fifty miles, and they say that if that course had been followed a great deal of money would have been saved. Would business men recognize the statement made by the commissioners as something they should act upon? Very often the cheapest way of letting a contract is en bloc, and then allowing the contractor to sub-let. That is the way in which a man will let a contract for his own store, offices, or house. There has to be some man of financial strength at the back of a large portion of the undertaking. If you let a contract in small blocks, you get a lot of small men in who have not the necessary financial strength; they at once go to the bank with the contract and ask the bank to finance them, and generally land in trouble before their contract is completed. What difference would there have been between letting these contracts at 85½ miles on an average, as they were let, and letting them at 50 miles as the commissioners think they should have been let? Not a fraction of a dollar would have been lost or saved to the people of Canada by adopting either method. The usual rule, whether in the building of one's own house, of a canal, of a railway, or of any great public work is that the contract goes to one contractor who sublets it to the various trades. The most homely illustration is the case of your own house. You let a contract for $5,000, to build your house, and immediately the stone and brickwork is sub-let to one man, the woodwork to another, the painting and glazing to another, the plumbing and wiring to another man, and so on all the way down. The principle is that each of these sub-contractors will make a profit, and that the main contractor will make a profit also. That is what the late commissioners did in regard to the Transcontinental railway, and that is precisely what the present Government is doing in regard

to the Welland canal and the Hudson Bay railway. It is also what the present Government will do in regard to the construction of the new departmental buildings. Sub-contractors, I believe, have already taken their sub-contracts in regard to the Welland canal. Was ever a railway, even a small one, built in Canada by a single contractor? I had to do with the building of a railway only sixteen miles long, which now forms a portion of the Canadian Pacific railway, and the contract was let to the firm of Booth and Company, well known contractors at that time, but three or four sub-contractors went in under Booth and Company, and then a second range of subcontractors were taken in to build that road. How would we have saved any money had we shortened the blocks of the Transcontinental railway to 50 miles and let each block to an independent contractor? Would not that contractor have had his profit? Certainly he would; he would have sublet his contract and the men who had the subcontracts would also have had their profits. There would be those two profits and there might be middlemen mixed up in the transaction, because every man who enters into a contract does so with the intention of making a profit out of it.

I have gone carefully over the twenty-one contracts let on the National Transcontinental railway; I have read the evidence in regard to them; and I have seen the commissioners' statement. There is practically no evidence with respect to the letting of these contracts which would justify the bald statement of the commissioners that, if some other plan had been adopted, $8,800,000 would have been saved to the people of this country. Any one with any business judgment or common sense, who examines that statement, will see that the commissioners have only made an estimate of the saving. The commissioners take the case of the Grand Trunk Pacific and say that they took the contract and sublet it on the understanding that they were to receive 5 per cent profit. Then the commissioners say that the subcontractors let the work at a lower figure than that at which the Grand Trunk Pacific had received the contract and still made a profit of from 20 to 25 per cent, and that consequently the country lost that money. Is not one of the very best tests of the genuineness of the tenders and of the contracts to be found in the fact that the Grand Trunk Pacific were by far the largest tenderers? They tendered successfully on contracts Nos. 1, 3, 4, 11 and 14 at a total of $9,333,000, and sublet them all. They tried to force an assignment of contracts Nos. 16 and 17, which were two of the largest, on a basis of 10 per cent over and above actual cost, but they did not get those contracts. They tendered altogether on 17 out of the 21 contracts advertised, and their tenders amounted in all to $38,436,789. Why did they do it? The reason that would suggest itself to the mind of any sensible man is that they desired to protect themselves, by seeing that the work was not being let at too high a figure. They had been building railroads in old Canada, and in new Canada and they knew what railroads cost. They tendered on all the big contracts, first to protect themselves, and secondly, to ensure that there would be no extravagance and no wrong doing. All these contracts which the Grand Trunk Pacific obtained were sublet on a five per cent basis of profit to them, and the subcontractors made whatever profit they could on the prices at which they received the subcontracts. With these facts before us can it be said that there is anything fair and just in the finding of the commission that on these twenty-one contracts, had different methods been purused, $8,800,000 would have been saved to the people? I believe that any judge reading this report, would say without hesitation, that there is not a jot or tittle of evidence to support the finding of the commissioners. The most one can say in regard to the finding is that it is guess work; it might have been or it might not have been.

4 p.m.

What we on this side of the House say is, that the tenders were properly advertised; the contracts properly let, the profits, be they great or be they small, properly earned, and just as they would be earned in any other business organization entirely outside of the Transcontinental Commission. We say also that the Hudson Bay railroad will be built in precisely the same manner by this Conservative Government. The largest contractor on the National Transcontinental railway is the same Mr. J. D. McArthur who has obtained three very large contracts on the Hudson Bay railway, and has already sublet portions of them. He is not bound down in any way in regard to subletting on the Hudson Bay railway; he can sublet every yard of his contract, and on such terms as he sees fit. And the Minister of Railways and the Government have agreed to that, with full knowledge of what Messrs. Gutelius and Staunton have reported on that system in the case of the Transcontinental railway.

Why, the Government, as stated by the hon. member for South Renfrew, will not itself follow the advice of the commission. Summarized in one or two pages of this report is a plain argument that you should let your line in small blocks and thus avoid subletting. Have you done it? No, this Government has rejected that advice. They have let the whole thing, practically to one man who, I am informed, has immediately sublet the whole thing, and sublet at a profit to himself and to his subcontractors. How much will the people of Canada lose on that transaction if the standard set up by the Investigating Commission on the Transcontinental is to be accepted? Why, of course, it is not to be accepted. The Government has taken the correct way of doing business, it has gone about the matter of the Hudson Bay railway construction in a businesslike way. And so with the Welland canal which, while short of mileage, is estimated to cost $50,000,000. Will the Government follow the advice of Messrs. Gutelius and Staunton in carrying out that work? Indeed, they will not. The hon. member for Welland (Mr. German) says that the average contract on the Welland canal is $5,000,000, and the minister will not subdivide it. He says he wants men of responsibility, men of financial ability, men who are able to invest half a million or a million in a plant. These are the men he wants to deal with, and they can sublet to their heart's content if only they build according to contract and specifications. Has the Government done wrong in that transaction? Messrs. Staunton and Gutelius would say they have. Do the Government think that the report of Messrs. Staunton and Gutelius is a businesslike report in that respect? They do not or they would have followed it. As a matter of fact they have completely disregarded it in the case of the Hudson Bay railway and in the case of the Welland canal. And so, Mr. Speaker, this ridiculous point involving $8,000,000 or $9,000,000—forms a big item in this total of $40,000,000 which they say was extravagantly spent. What utter rubbish.

I will not deal at length with the $4,500,000 which these commissioners allege to have been improperly expended in the shops at Transcona. I noticed that in speaking of it the hon. member for South Renfrew puts it at $6,000,000, but the amount given in the report is $4,500,000.

Mr. GRAHAM: They omitted the Quebec shops, intentionally, because their friends are building them.

Mr. GUTHRIE: I wish to point out to the right hon. Prime Minister that this is another instance in which Mr. Lynch-Staunton has shown his bitter partisanship. He must have known that he was bound to follow the rulings of the engineers and the Department of Railways and Canals, as well as the rulings of the Department of Justice, which rulings were to the effect that these Transcona shops formed part and parcel of the construction of the road and should not be set down as part of the operating cost. This was brought to the attention of Mr. Lynch-Staunton time and time again. The law clerk of the commission, Mr. Atkinson, Mr. Newcombe, Sir Allen Aylesworth, the present Minister of Justice, all agreed on this point. And in the face of that Mr. Lynch-Staunton still has the audacity—on his own opinion and after noting the contrary opinions—to find that in this total of $40,000,000 the sum of $4,500,000 on account of the Transcona shops must be included. What was this man doing? What member of this House would do such a thing? What other commissioner would say so? In spite of the plain language of all these opinions and rulings, Mr. Staunton says: I give my opinion and I will put that $4,500,000 down as unwarranted expenditure. Surely, that shows the animus of Mr. Lynch-Staunton in this matter. The Solicitor General (Mr. Meighen) in speaking on this subject, said that it showed the bona fides of Mr. Staunton that he had given in his report the opinions of other people and had given reasons for his own. In my humble judgment his bona fides would have been much better established if he had said: In deference to the opinion of the Justice Department, I will omit to place that $4,500,000 spent on the Transcona shops among the items of wasteful expenditure. Let the Prime Minister take cognizance of another fact with regard to Mr. Lynch-Staunton—and I only mention this to show his animus, to show his frame of mind, to show that he was determined to come to a conclusion against the late Transcontinental Commission. In 1912 the question of the Transcona shops was being discussed by Major Leonard, the commissioner. It was urged that the shops were too large, that the railway would not require such shops for the next quarter or half century, and that too much money altogether was being expended, so that a large part of that expenditure was mere waste. They sent for an expert to the United States, Mr. Hodgins, of New York, a man thoroughly acquainted with

the requirements of railways and the construction of shops to be used in connection with them. No Liberal Government had anything to do with the choice of Mr. Hodgins, no Transcontinental commissioner ever appointed by a Liberal Government had anything to do with it. The present commission sent for Mr. Hodgins and got his opinion with regard to these shops at Transcona. His opinion is on 'Hansard,' and I am not going to read it again. The Prime Minister heard the hon. member for South Renfrew read it, or I suppose he will do this side of the House the justice to read it himself. He will see that Mr. Hodgins complimented the National Transcontinental Railway Commissioners in every way possible with regard to the construction of these shops. He said they were not too large for the trade present and expected on the road; he said they had been economically constructed; he said their floor space was better used and their machinery more modern than almost any other car-shops in the world. Yet, in the face of the report of this expert, Mr. Lynch-Staunton finds that $4,500,000 for these shops is unwarrantable expenditure. Another point I make is that he suppressed that report of Mr. Hodgins in his report as commissioner. It should have been mentioned, or, at the very least, it should have been referred to. This all goes to show that Mr. Lynch-Staunton and Mr. Gutelius were not there to act fairly and squarely, but were prejudiced and biased in the extreme. It shows that they were men who under the circumstances were not able to bring in an entirely independent report. Their prejudice had become a ruling passion.

Then, there is the big question of momentum grades. I have not a great deal to say on that subject. There is a tremendous sum charged as having been unwarrantably expended by the Transcontinental Commission on momentum grades. Well, what is the history of that matter? This was to be a railway of a very high standard, of the highest standard of railway across the continent. The conditions under which it was to be built, the standard to be employed throughout, was a matter of agreement between the Government and the Grand Trunk Pacific, who were to be the lessees of the road for a period of fifty years, and to pay three per cent as rental upon the whole cost after the first seven years for which they used the road. It was directly to the advantage of the Grand Trunk Pacific Railway Company to see that not one dollar was unnecessarily expended in the construction of that road. Their own engineer was on the work the whole time. If he could not agree with the commissioners' engineer upon any point, the matter had to be settled by arbitration. If the two engineers, one for the Grand Trunk Pacific and one for the National Transcontinental Railway Commissioners, could not agree as to who should be appointed third arbitrator, the Chief Justice of Canada was to perform that duty for them. What could be fairer than that? They knew what they wanted; they wanted a road of a higher standard than any that crossed North America, and they were prepared to pay three per cent on what it was to cost. Nothing was said about momentum grades until very recently; in fact the first question in that regard arose during the time that Mr. Lumsden was chief engineer. Mr. Lumsden himself was not in favour of momentum grades. In his evidence, he says that he has not had much experience with them, but he does not say that they would add anything to the usefulness of the railway. The Grand Trunk Pacific Railway Company was not in favour of momentum grades; they refused by letter to permit the commission to put momentum grades on the road between Winnipeg and Moncton. That letter, which was read in the House last night, and appears in yesterday's 'Hansard,' was written by Mr. Woods, assistant engineer of the Grand Trunk Pacific railway, who was on the work, to Mr. Lumsden. His language was quite defiant. He said: We object to your putting in momentum grades; it is not part of our bargain. We want the actual grade of four-tenths against eastbound traffic, and six degree curves—no greater grades and no greater curves. That surely is sufficient notice to the Government and to the Transcontinental Commission as to what the Grand Trunk Pacific Railway Company want, and as to what the commissioners could do and could not do. Nothing more was heard of momentum grades until Mr. Lumsden's retirement in 1909, I think it was, and Mr. Gordon Grant's appointment to the position of chief engineer. It is true that in a letter written by Mr. Gordon Grant the assertion is made that in certain places momentum grades might be used, and the commissioners have stated in their report that according to Mr. Grant's evidence the use of momentum grades was quite proper.

Hon. gentlemen can look over Mr. Grant's evidence from beginning to end without finding a single statement on the subject of momentum grades. To Mr. Grant's letter recommending their use, the company replied that they would not have them. Time has gone on; the commission has changed. Major Leonard, appointed by the present Government, is now sole commissioner. He seems to be a stickler for momentum grades, but he should bear in mind the letter which he received in July, 1912, from E. J. Chamberlin, president of the Grand Trunk Pacific Railway Company, stating that the company would not permit the use of momentum grades. The last clause of that letter is as follows:

I beg to say if this work is done in accordance with what I understand to be your recent instructions it will not be in compliance with the agreement or satisfactory to this company, and cannot be accepted.

Surely that is positive language. But what has been done? Hon. gentlemen, in defiance of the warning of the Grand Trunk Pacific Railway Company, have proceeded to put in from thirty to thirty-five momentum grades—for what purpose I know not, unless it be to give the Grand Trunk company an opportunity to get out of their contract to operate the road under a fifty-year lease. If they make that salutary change; if they degrade the road, and put in something which has not been agreed upon by both sides, when the road is completed and they ask the Grand Trunk Railway Company to execute the lease for fifty years, the company can say: you have not kept your agreement; you have not lived up to your contract. We warned you and your engineers and your proper officers, and you did this in defiance of our warning. The same is the case too, I am informed, with respect to steel bridges. The Grand Trunk Pacific Railway Company is entitled to a first-class road. It does not want wooden trestles, it wants steel structures; it is willing to pay for them, and it is agreed with the Government that they shall be installed. Yet these commissioners assume to find that the late commission did wrong in living up to its agreement and in erecting steel structures on the railway. They state that in their opinion the Government might have saved $6,200,000 if they had adopted momentum grades, which the Grant Trunk Pacific railway say they will not accept. That letter of Mr. Chamberlin's was, no doubt, before the commissioners; why did they suppress it? Why did they not put it in their report? They may offer the excuse that the report covered a period which ended in October, 1911, and that the letter is dated June 12, 1912, but I notice that in many of their calculations of payments the figures are given to December 31, 1912. There is a good deal of dispute about the question of momentum grades, and it would appear to me to be a controverted question. I heard a New York railway man say that his company were spending $20,000,000 this year to establish actual grades and cut out curves. I know that certain western roads in the United States are doing the same thing; I believe the Canadian Pacific and Grand Trunk railways are doing the same thing—the Grand Trunk did it at Guelph, anyway. I believe that the best railway practice to-day is to get rid of wooden structures and momentum grades as rapidly as possible, and to put in actual grades and steel structures. That is evidently what the Grand Trunk Pacific Company want, and that is evidently all the Grand Trunk Pacific Railway Company are going to take when the road is completed. How do the commissioners make up the amount of $6,200,000 which it is alleged we would have saved if these grades had been put in? Their estimate is the wildest kind of a guess; they have arrived at the amount by taking 10 per cent off $62,000,000 worth of fill and excavation. They have no reason for taking ten per cent off that amount; none of their engineers show any reason for doing so, and one engineer, Mr. Berry, of Chicago, whose remarks were quoted by the hon. member for South Renfrew, says it is a wrong practice to go upon. That is an indication of the material of which this report is made up.

I shall not take up the time of the House by going into many other questions, but I am going into the matter of the classification of the work. It is alleged that a large amount has been overpaid by reason of over-classification and in connection with overbreak.

The commissioners say:

The amount charged for excavation of solid rock or assembled rock which is described as 'fragments or rock cemented together by interstitial material' was improperly introduced after the contracts were signed, and though $1,835,051 was paid for 'assembled rock,' there is no material on the line which can possibly be marshalled under that head.

So they have charged as unwarranted expenditure $1,835,051 on that score. Then they have charged that the contractors, on contracts 14, 15 and 16, charged as loose rock many yards of ploughable clay which should have been classified as common excavation. They say there has been a loss of $750,000 on that account. Then for overbreak they say there has been a loss of $677,866, making a total of about $3,300,000 under these three heads.

Now, according to Mr. Gordon Grant—and his evidence is in print and was read in the House yesterday—it is not possible, after a lapse of a year or two, to go over a constructed line of railway and make a classification. That opinion is backed up by Mr. Berry, one of the greatest engineering authorities on the continent. Remember that this work was done in 1907 and 1908 and the inspection was made, I assume, within the last eighteen months, some years after the excavation had been done, and eminent engineers such as Mr. Gordon Grant, who is the head of the National Transcontinental railway, and Mr. Berry say that you cannot make a proper classification after the lapse of a year or two. However, Mr. Lynch-Staunton and Mr. Gutelius have sought to make the classification and I think they have made it on the most meagre evidence, with a great deal of supposition and a great deal of guess work. When it comes down to the final result, as a matter of fact I think they have just made their own estimate of the amount of rock which should be classed as loose rock. And when it comes to overbreak they make nothing more than a wild guess of what it is likely to be. Under these three heads they find that $3,300,000 had been improperly expended, or that the contractors had been paid that amount too much.

I shall mention in this connection the largest contract on the road, the one known as the McArthur contract. It runs from Winnipeg easterly about 264 or 270 miles, and is known as contract No. 21 in district F. It is known that in 1910 objections were put in by the engineers of the Grand Trunk Pacific that there was over-classification. These engineers were on the spot, they were there to watch the work and it was their duty, if any improper classification was being made, to report it at once; and they did report it on the 19th January, 1911, to the commissioners of the National Transcontinental railway. Prompt action was taken in regard to that and an arbitration was had, the Grand Trunk railway appointing for the purpose of the arbitration Mr. Kelliher, the Transcontinental Railway Commission appointing Mr. Gordon Grant, chief engineer, and these two appointing Mr. Collingwood Schreiber to go into this matter and report on overbreak and over-classification. The road has been recently built. That was in January, 1911. The road had been built within a year or fifteen months, the estimates had gone in, the complaints had been made, and promptly these three engineers went upon the work, examined it, measured it, and made their finding which is dated the 19th of January, 1911. They made a heavy finding against Mr. McArthur, they found amongst other things that while his statement showed an excavation of solid rock of 1,415,081 cubic yards, of a value of $2,405,367, that was an over-valuation of $429,921. That award was sent to the commissioners of the Transcontinental railway, to the effect that the work of Mr. J. D. McArthur, on contract 21, had been overclassified to the extent of $429,000. That is to be found in exhibit 18 of the report of Messrs. Gutelius and Staunton. The Government of that day, as well as the present Government, had a large amount of Mr. McArthur's money in their hands, two or three times as much as would be required to give them security on that contract, according to Mr. Grant's evidence. They had a lien on all the plant of Mr. McArthur still on the work, worth probably three-quarters of a million dollars. They knew that his statement was wrong to that amount of $429,000. When Messrs. Staunton and Gutelius went up and examined that work for overbreak, they had before them the finding of the arbitrators of January, 1911. They saw the situation but they seem to have made another calculation quite independent of that of the arbitrators. Messrs. Staunton and Gutelius made the matter appear much worse; they found that J. D. McArthur, on contract 21, had put in an over-statement of $642,876 for this overbreak as against the $429,000 which the arbitrators found. The account of McArthur was not settled until quite recently.

Mr. McArthur was not going to stand for any such treatment, and he let the Government know that very promptly. He consulted eminent counsel, and they let the Government know that McArthur was going to make things hot for them if he was not paid what was fair and just. January, 1913, came, just about a year ago, and the account of McArthur was still unsettled. The chairman of the Transcontinental railway, for some reason best

known to himself, thinking that that account ought to be settled and settled quick, gave instructions to have it settled. Whether the instructions went to the Government or not I cannot say, but certainly negotiations took place, and McArthur said: I will not stand for that deduction of $640,000 which Messrs. Gutelius and Staunton claim I have overcharged. I will allow a deduction of $150,000 and that is all. You would think that the Government, having Mr. Gutelius' report before them in cubic yards and dollars and cents, would have immediately said: No, that will not do. But what did they do—and this is something I cannot account for? They got two of the old arbitrators, Mr. Grant, the present chief engineer, and Mr. Kelliher, who worked for the Grand Trunk Pacific in the arbitration, to sign a document saying that they were all wrong in their first award and that they now found that the overcharge should be only $150,000. That is ex post facto work for you. I understand from my hon. friend from Welland (Mr. German) that they have settled with J. D. McArthur for less than a quarter of what Messrs. Gutelius and Staunton said should be deducted, and they did not do it in a very straightforward way.

Mr. EMMERSON: It was paid before Messrs. Gutelius and Staunton signed the report.

Mr. GUTHRIE: I am aware of that, because the report was not signed until last February. I believe myself that the finding of Messrs. Gutelius and Staunton was wrong, and that they made a pure guess at the amount, and that is apparently what they did on nearly every point of their investigation. I do not believe for a minute that McArthur got anything more than fair treatment. What reliance can we put on this report when the Government say: We will knock 75 per cent off Gutelius and Staunton's estimate, and deduct only the other 25 per cent; whereas our commissioners found a payment of $640,000 unwarranted, we will cut that down to $150,000. Personally I think that was a fair settlement. But what does the Government think of the report?

I cannot go through all the items as I have taken up too much time, already. There is absolutely no foundation for the findings in this report. They are repudiated by the men who, we hope, are going to take this road over. What about their statement as to the $6,200,000 for momentum grades and the $8,800,000 because we let the work out in big contracts, unreasonably large sections? It is the purest kind of buncombe when you come to read it. Then in regard to overbreak; competent men say that you cannot properly examine that, after a lapse of a year or two, and certainly the commissioners could not examine it on contract 21 in the neighbourhood of Winnipeg where the Minister of Public Works (Mr. Rogers) lives, and knows what is going on. The Government would not take the Gutelius-Staunton report on that, and indeed it is uncertain on what points they will endorse it, probably on none. I blame the Government not because they appointed a commission, but because they appointed such commissioners. If they had appointed independent men who were not biased politically they would have done a service to the country, and such commissioners would have found that the road had been well and economically constructed and at the highest standard of any transcontinental railway in America. We have heard about Mr. Fielding's estimate of $61,000,000 and how before the election of 1908, the road had cost $112,000,000, the estimate being almost doubled in four years. But the cost of labour and material had gone up and we were building a better and more expensive road than was perhaps originally anticipated. Under the late commission appointed by the Liberal Government the road was kept up to standard, and there was no attempt to degrade it or to substitute wooden trestles for steel bridges. We tried to carry out the contract with the Grand Trunk Pacific to the letter, and if the company should repudiate the contract it will be the fault of Major Leonard, of Messrs. Gutelius and Staunton, and of the Government which backs them.

Mr. W. H. BENNETT (East Simcoe): The hon. member for South Wellington (Mr. Guthrie) devoted a good deal of his time, particularly at the beginning of his speech, to the standing and reputation of the two gentlemen who have acted as investigators in this matter. He says that Mr. Staunton was prejudiced at the outset and in proof of that he states that from time to time Mr. Staunton has been employed by the Conservative Government of Ontario. If by reason of that fact Mr. Staunton is a partisan, is not my hon. friend a partisan because while the Ross Administration was

in power in Ontario he was in receipt of many thousands of dollars at their hands? Therefore, according to the hon. gentleman's argument he himself is a partisan. I was surprised that the hon. gentleman descended to attack Mr. Staunton. Although I need not come to his relief I am surprised that the hon. gentleman should say that Mr. Staunton was of the class and character that he never showed himself at public meetings unless he could get a Roman Catholic audience. The hon. gentleman knows as he sits there—he cannot deny it—that in the South Bruce election Mr. Staunton addressed a large meeting in the town of Walkerton, which, as the hon. gentleman knows is by no means a Roman Catholic town. What do such accusations mean? They show that hon. gentlemen opposite are driven to desperation, and by every means possible are endeavouring to belittle the gentlemen who have acted as investigators in this matter. As I proceed I will deal with the other matters referred to by my hon. friend so he will not consider it discourteous if I do not refer to them just at the outset.

What are the facts? This railway which was to cost, according to the estimate of hon. gentlemen opposite when they had control of affairs in this country, $61,415,000, will, according to the estimate of the chief engineer, cost $161,300,000 when completed. In answer to that suggestions have been advanced. The hon. member for Pictou (Mr. Macdonald), speaking yesterday afternoon, said that one of the main causes why this railway had cost so much more than it was expected to cost was the fact that the surveys were faulty. One of the criticisms advanced when the hon. gentlemen were undertaking this work was that they had not made a thorough investigation into the conditions, and to-day the hon. member for Pictou comes forward and says that this was one of the prime reasons, and that they did not know what they were talking about when their Finance Minister stated that it would only cost $61,000,000. Then he said, and other hon. gentlemen have said, that it has all been endorsed by the people of Canada in successive elections. I am free to admit that the hon. gentlemen won, and did well in Ontario in 1904 and in 1908, particularly in 1904, on this particular question of the Transcontinental railway. But I am here to say that they did so by misrepresentations made to the people of Canada. Had the people known or anticipated that this railway, apart from the question of interest, would cost $161,000,000, the story and the verdict might have been very different indeed. I have here a copy of the Globe, October 15, 1904, and I am sure that the ex-Prime Minister will not deny that any report made in the Globe must of necessity have been true. Speaking at a huge meeting in the city of Toronto, he said:

> I will give you the figures compiled by the experts of the Finance Department, who calculate that what we would pay in interest for seven years represents a sum in cash which, if it were put in the bank to-day, would amount to a little more than $13,000,000, and a little less than $14,000,000. (Hear, hear.) That is all we would have to pay for the construction of the road if our expectations and contracts prove to be as accurate as we think they are. I ask you, my fellow-citizens, if we can get that tremendous railway for $14,000,000 do you think that will be so very heavy a burden for the Canadian taxpayers, when I tell you that the surplus we had in the year 1902-3 was $14,000,000—(cheers)—and last year, 1903-4, it was $15,000,000. This is the project I have to lay before you, this scheme and plan of the Government.

After the right hon. gentleman had made that speech in Toronto the newspaper was placed in the hands of every Liberal candidate in the province of Ontario. I remember that when, on nomination day, before a thousand people, I pointed out the estimate that had been made as to the cost of this road, my opponent said: There is the statement of Sir Wilfrid Laurier; does he not know what he is talking about? Then the hon. member for Pictou said yesterday: Look at the estimates which were made from time to time about the cost of this railway; nobody anticipated that it was even going to be built for the full figure of $61,000,000. He said: The present right hon. leader of the Government and his most prominent followers agreed from time to time that it would cost from $75,000,000 to $100,000,000, and he quoted estimates to that effect. It is true, but when were those statements made? When this road had been under discussion when there had been Lumsden inquiries, when it was shown by these inquiries that millions of dollars were being stolen—that was the time that the conjecture was hazarded that it would amount to $150,000,000. The disclosures which were being made from time to time were the basis of these statements and conjecture that the road would reach in cost $150,000,000, as it has done.

Let us go back to the whole story in connection with this railway. A great many things had happened before this railway

was launched before the people. The exploiters had had their own sweet will. There could be but one resurrection of the gold mines of the Yukon, they had been resurrected; millionaires had been made out there and there was no chance of any more millionaires being made out of the Yukon. The Saskatchewan Land Company had done its work, as had many other companies, and there was nothing more to be done in that direction. Ministers of the Crown, who had come here poor men, left estates which were probated at $750,000, and envy was in the eye of every hungry camp-follower who thought that he ought to go and do likewise. The Quebec bridge had been dealt with by Mr. M. P. Davis, and so these gentlemen were looking about for some place where they might invest. They said: Here is this railway; if there is any place to invest to advantage it must be here, because fortunes will be made in the construction of this railway, which will cost millions of dollars. So, accordingly, everything was prepared and made ready for the event. First, there was a minister —a most pliant minister—who had played the political game in Ontario, a minister who was close to every scandal that ever attached to the Ross Government, and the hon. member for South Renfrew (Mr. Graham) was the most fitting accompaniment that could be had to a steal of these gigantic proportions. Now, let us come down to some of the others who were attached to it. Hon. gentlemen opposite set up a man of straw in order to knock him down. We heard the hon. member for North Cape Breton (Mr. McKenzie) say that Mr. Wade had been assailed. I never heard Mr. Wade's name mentioned in this connection until the hon. gentleman introduced it himself. What reason was there for introducing the name of Mr. Wade because Mr. Wade never had anything to do with it and, he being dead, nothing could be said against him. When Mr. Wade went out he was replaced by Mr. Parent, and of this precious Mr. Parent I will have something to say. Who is Mr. Parent?—the discard of the Liberal party in the province of Quebec, and I say it with a full knowledge of the facts as they appear upon the records. That gentleman was premier of the province of Quebec and among other ministers in his cabinet were Mr. Turgeon, Mr. Gouin and Mr. Weir. Quoting from the sessional papers of the province of Quebec one may find the resignations of these three gentlemen. What are the reasons they assigned for quitting the Government of which Mr. Parent was the leader? Among other reasons they say this:

> On the other hand, your refusal or your neglect to give effect to the law respecting public lands passed last session, the result of the election in most of the counties in which you directly intervened, your dilatoriness in proceeding with the suits which we asked you to institute to save the honour of the Government and your own, the intention you expressed to not be at your post during the session which opens on Thursday next, the feeling of uneasiness which prevails among the public and for which you are responsible, convince us that you do not possess the confidence of the electors of this province.

I am not going to harrow up hon. gentlemen with what these suits were. I am not going to harrow them up with what these scandals were. We have all heard about the old scandals in Quebec where lumbermen and politicians were looting the public domain and by reason of the fact that Mr. Parent was suspected of being concerned in this, and also because he had risen from being a poor man to a millionaire, these three Liberals would not sit any longer in council with him. Mr. Parent had to walk the plank, but he came up here and slipped into the chairmanship of this commission. It was a fitting place for a fitting man. He was the man who could do anything for the Government. He was the man to go between a contractor and the Government. The hon. member for Montmorency (Sir Rodolphe Forget) made a speech in the House last session in which he said, and his statement has gone uncontradicted, and it never will be contradicted by Mr. Parent, that on the eve of the election of 1911, Mr. Parent's son being a candidate in Montmorency county, this broker on behalf of the late Government went to the hon. member for Montmorency and said to him: If you will withdraw from your candidature in the riding of Montmorency I will guarantee that a charter will be issued for your bank—La Banque Internationale. The right hon. the leader of the Opposition heard that charge made. The bank charter was being suspended and held up by the late Government, and here was this precious Mr. Parent, the huckster and broker on behalf of the Government, offering, if his son were to be permitted to be elected in Montmorency, to see at once that the charter was given for the bank. There was a good reason why Mr. Parent could not deny that charge. The reason assigned by the hon. member for Montmorency (Mr. Forget) at that time was, that Mr. Parent had called on the member for Montmorency between

12 and 1 o'clock at night; that three or four other gentlemen had seen him there; that he could not possibly deny, in the face of three or four witnesses, that he had been there, and that he could not possibly give any explanation as to why he was there. If that had been the day of the detectaphone, Mr. Parent's neck would have gone into the basket the same as Bérard, Bergevin, Mousseau and the rest of the gang.

I will not refer to the Quebec bridge and the part played by Mr. Parent in regard to that, when Mr. M. P. Davis picked up only a mere trifle of a quarter of a million dollars at the expense of the people of Canada. There is a little village called Deloraine in the province of Manitoba, with a population of 400, and there was a Mr. Charles Young living there. No one had ever heard of him as a railway man. He was a farmer and a grain dealer in a small way. He was brought out from his retreat and made a commissioner to oversee the expenditure of over a hundred million dollars. Fancy the feelings of Mr. Charles Young when he landed at Ottawa with a salary of $7,000 a year as a commissioner on this railway. He said: now here is the chance of my life. He knew McGregor of Brandon who had been out in the Yukon and had picked up a fortune; he had heard even of the immortal Sifton, the multimillionaire, and therefore he looked around to see what there would be in it. An inquiry was held in this House a few years ago which showed that under this same Mr. Young—he as the representative in that part of the country on the commission, having to do with the matter, no less a profit than $250,000 accrued to a couple of hotel keepers up there, from certain lands sold to the Grand Trunk Pacific. It is true that Mr. Young said he knew nothing about it; it is true that the hotel keepers said he had nothing to do with it; but was it not wonderful that a couple of hotel keepers, living out in Moosejaw, wandered in and picked up some land, and in a few months sold it at an advance of a quarter of a million dollars to the Grand Trunk Pacific railway? And, more than that, the Grand Trunk Pacific Railway Company protested against the purchase of this land which Mr. Young was forcing through.

Let us take the other commissioners in order, because I think the public should be fully seized of their competency of these gentlemen. There was Mr. McIsaac. I have nothing to say about him. He sat in this House; he was a gentlemanly, kind-hearted man; but it must have been a surprise to him when he was precipitated into the position of commissioner. Mr. McIsaac was, in my opinion, an honest man, but he got into mighty poor company and as a result he became very weak as the proceedings went on. He was examined by this commission; and as reported on page 600, when he was questioned as to the idea of letting contracts in such extensive sections, he said: that his own opinion was that the system was altogether wrong, but that he had to give way. He said further that he thought it was improper to ask contractors to tender under the terms that they should put down a deposit and then be called upon for an indeterminate amount afterwards? There was Mr. McIsaac, innocent and honest, hoping to put the party right in this deal if possible, but above all things hoping to hang on to his salary of $7,000 a year. He meant well; tried a little, and failed much.

Then we have Mr. W. S. Calvert. If you refer to the Parliamentary Guide, you will find that Mr. Calvert lives at Napier. A man told me that there was a blacksmith shop and a hotel at Napier, but the hotel-keeper lost his license and the hotel was turned into a country store. I want to give Mr. Calvert the reputation of being a modest man. Mr. Calvert was examined in this inquiry and his evidence at page 614 reads:

5 p.m.

Q. When you joined this Board, were any particular duties assigned you, in connection with the business of the road?—A. No, nothing in any particular way. I was just appointed a member of the board and we went on in the usual way that a board does. We did rather understand that each one would look more particularly after individual sections: for instance, I was on 'D' and 'E.' . . .

Q. Were you present at La Tuque at the time the contractors and Mr. Lumsden were there?—A. No. I never was on the work with Mr. Lumsden.

Q. Was Mr. Lumsden in the employ of the commission while you were there?—A. No. Mr. Grant had been chief engineer for some time before I came on.

On page 615, to show the thorough grasp Mr. Calvert had of the duties of the commissioners, I read:

Q. What is the difference between actual and virtual grades on a railroad?—A. I do not know that I can just answer that properly.

Q. Did you ever hear that matter discussed?—A. No, not if you put it that way. In fact, I may say I was not very conversant with momentum roads until this question came up.

Q. Do you know anything about curvature in railroads? Did you ever hear it discussed at the time you were on the board?—A. Oh, well, sometimes, I suppose, the question was discussed, but not very much at board meetings.

Q. You never became very familiar with it? —A. I would not like to say so.

Q. You could not form any judgment as to curvature?—A. I would not like to give an opinion on a thing like that.

There is a letter here that will go to show what Mr. Calvert thought primarily was his business. It is signed by Mr. Mattice, the district engineer, and reads as follows:

Mr. Calvert is asking that no appointments be made to the staff in future without his consent, and these instructions must be carried out, except in so far as cooks and building gangs are concerned.

Even the district engineer thought that Mr. Calvert's knowledge was so restricted as to the requirements of a railway that he was not even to have the recommending and selection of a cook.

With such a commission as a starting point; Mr. Parent, a discredited and discarded politician of Quebec, according to the reports of his own friends, Mr. McIsaac, a decent, honest, inoffensive citizen, who had never been in the capacity of commissioner before, and Mr. Calvert, who frankly admits his utter inability to cope with the situation, what a playground it was for the Minister of Railways and Canals and the contractors who loomed up in the gloaming to go after the public treasury! When the Liberal party went out of power, their nightmare was: what will turn up in regard to this railway and all that has been done in the past, and the Liberal press took up the cry. From the outset it was announced: Here was a wonderful railway, and, even if it had cost a great deal of money, it was a first-class railway no matter what it had cost. But the public were becoming a little dubious about that, knowing that even a good thing can cost too much. These gentlemen had to try to square themselves by showing that this was a judiciously built road. So, the hon. member for South Renfrew was to be immortalized, and the proper medium for his immortalizing was found, of course, in the Toronto Globe. They gave him some special advertising, with a view to helping these gentlemen out. It so happened that in the year 1912, Mr. Charles M. Hays died and a vacancy was created in the presidency and general managership of the Grand Trunk railway. Mr. Smithers, the vice-president, was coming on to Canada, and it was announced in the Toronto Globe in its issue of the 15th of May, 1912, in effect: Hon. George P. Graham has been asked to accept the position of president and general manager of the Grand Trunk Railway Company. It said this is a striking tribute to his ability and worth, to his practical knowledge, his powers of initiation and his thorough understanding of the railway problem in Canada. These were given as the reasons the Grand Trunk management sought his businesslike administration. I do not think that surprised Mr. Graham, and if the truth were known, probably it would be found that he was in Toronto on the day when that report was given circulation. But, as with a good many other reports, that was the end of it. However, it served its purpose; it went from one end of the country to the other that Mr. Graham had been offered the presidency and general managership of the Grand Trunk railway, and this gave him a good advertisement before the people. Mr. Smithers arrived on the 24th of May, and the $50,000 per annum salary of the position which they said had been dangled before Mr. Graham faded away, and Mr. Graham, naturally did not get the position. I merely mention that to show that these gentlemen had been anticipating the troubles that were to beset them, and so this cheap advertising in the Globe was given the hon. gentleman.

As to this letting of contracts in large sections I wish to make one point here. There is a vast difference in the letting of these contracts and the letting of an ordinary contract for a public building. Suppose that tenders are called for a public building and one is accepted at $25,000; you have there the total amount involved. But the tenders on this Transcontinental were of a more far-reaching character. As an example, take the tender of McArthur Brothers on section 1. That tender was for about $13,000,000, but when it was moneyed out, they received $20,000,000. The reason is that the work was done by schedule, and the work being so done, it was to the advantage of the contractor to do as much work under his contract as possible. We can understand how, under such contracts, immense sums were obtained by these men in addition to what is was originally intended should be paid to them.

A great deal has been said about the question of the additional deposit which might be called for. I shall not deal with that at length, for to do so would be to trespass on the good nature of the House. But I wish to endorse everything that has been said which went to show that this system was in the interest of the big contractors and of these alone. The contractors

knew, and so did the board when a tender put in at $13,000,000 might ultimately money out at $20,000,000, both contractors and board knew that all tenders were of a very large order. So we find the very unfair proposition laid down that the tenderer should first put up a certain sum as a deposit, and then be subject to the will of the board to increase that amount. This prevented many men from putting in tenders. There was this further: under the terms, the successful tenderer, if not able to comply with the increased demand made upon him, stood the chance of losing what he had put up in the first place, Mr. McIsaac placed himself on record as objecting to that condition. There was another gentleman who objected to it, and the treatment of his objection showed the futility of entrusting men with power which they were not able to use. At page 603 of the evidence contained in this report, we find that the Finance Minister of that day protested to the board against this condition regarding a further deposit. The letters of Mr. Fielding and the evidence of Mr. McIsaac are set forth in the report. What superhuman power, if we may so term it, intervened to balk the wishes of the Minister of Finance, the man who above all others is charged with the custody of the public money? But, in any case, the result of his being overruled was that those who wished to tender were subject to these onerous terms.

I wish to deal for a few moments with some of the gentlemen who tendered. Mr. M. P. Davis tendered for a number of these contracts, and it is needless to say that he secured a large proportion of them. The Quebec bridge, which was referred to last night, netted him a quarter of a million dollars. He had had the Cornwall canal of unhappy memory, from which, it is said, he made so much money that he himself could not estimate it. Then he had that priceless gem, the water-powers on the Soulanges canal, granted him when the present leader of the Opposition, Sir Wilfrid Laurier, was Prime Minister and acting Minister of Railways and Canals, and granted by him in defiance of the report of the chief engineer of that branch. What was the Soulanges canal deal? In 1902 Mr. Davis made application for powers on what is known as the Cedars section of the Soulanges canal. He asked for a twenty-one year lease, at a rental—no, I will deal with the rental in a moment. In due course the matter was referred to

Mr. Thomas Munro, engineer of that system of canals. Mr. Munro reported on the 18th of February, in the course of which he said:

> If trade is to grow it will be advisable to adopt means of electrical traction to facilitate the passage of laden barges. The whole question is of much importance, so much so that it should have the fullest investigation before any action is taken, at least, such is my humble opinion.

That report of Mr. Thomas Munro was before the right hon. gentleman, who in the absence of Mr. Blair was acting Minister of Railways and Canals. On that report an Order in Council was passed in the month of April giving Mr. Davis, for the paltry sum of $3,000, that enormous water-power for sixty-three years from that date, for the term of the lease was twenty-one years with two renewals of twenty-one years each. I have heard eminent contractors and engineers say that the rights given to Mr. Davis were worth not a paltry $3,000 a year, but over $250,000 a year. Is it to be wondered that Mr. Davis was right in the foreground, and that he was able to deal with this Government on very advantageous terms?

Let us examine these twenty-one tenders. Nine contracts embraced half the line, and for these there were only five tenderers. These were secured by Davis, O'Brien and the Grand Trunk Pacific Railway Company, and the return made to Mr. Davis on the section which he sub-let—let it be remembered that Mr. Davis did none of this work himself, as the contracts were handed over to others—amounted to the neat sum of $3,500,000. It is a striking fact that when Mr. McArthur tendered on contract No. 1, he was forced by the board to deposit with the department over $1,000,000, but when Mr. M. P. Davis tendered they asked him for a small payment only, and did not request a second payment at all. The right hon. leader of the Opposition may be in a position to explain how Mr. McArthur was compelled to deposit more than $1,000,000, while Mr. M. P. Davis got off scott free. Another firm, Hogan and Macdonell, who did not seem to be on friendly terms with the commissioners, were compelled to deposit $794,000 when their tender was accepted. If a man could get hold of Mr. M. P. Davis and in solemn and quiet stillness, ask him what he thought of the whole thing, I should think that he would say, like Warren Hastings of old, 'that he was amazed at his forbearance when he considered his opportunities.'

Let us now take contracts 16 and 17, with which Mr. M. P. Davis was most concerned. It is well for the House to bear in mind the dates which I am about to give. The contracts were let on October 29, 1908. The work on contract 16 was to be completed by December 3, 1910, and the work on No. 17 by March 11, 1911. In September, 1909, they had not commenced work on these sections, and on September 16 Mr. Davis assigned the contracts and cleared up $740,000. What was happening in the meantime? Mr. Hays had written a letter to the commissioners on October 8, 1909, protesting against the contract being allowed to stand any longer, and asking, in view of the fact that nothing had been done, that new tenders be called for. There is no doubt that Mr. Hays felt very strongly on this question, and that he had his own opinion of the board. He knew that the man in authority was Mr. Parent, and as he and that gentleman evidently were not on good terms—my own opinion is that Mr. Parent would be more or less closely linked up with M. P. Davis, considering what Mr. Parent's reputation has been in the past—Mr. Hays addressed no less a personage than the then Prime Minister, asking for an explanation, and for an arrangement. He wrote:

My Dear Sir Wilfrid,—

On the 29th day of October, 1908, the National Transcontinental Railway Commissioners awarded two contracts for the construction of about 204 miles on sections 'D' and 'E' of the National Transcontinental railway. The first section starting on the west end of Fauquier Brothers' Abitibi contract, in the province of Ontario, about 100 miles west of Cochrane, for a distance of 104.24 miles; the second contract commencing at the terminations of the first and joining Fauquier Brothers' contract north of lake Nipigon, a distance of 100 miles. By the terms of these contracts the work was to commence immediately after the execution of the agreements to be proceeded with continuously and diligently under the personal supervision of the contractor until completed, the date of completion being 31st December, 1910.

This work is remote from rail transportation, the closest point being 100 miles west of Cochrane. The prices at which the work was awarded were very high and consequently sufficient to allow contractors to build tote roads or some other means of transportation and getting in supplies so as to immediately commence work. To the best of our knowledge no attempt has been made as yet to open this work, and the indications are that while the work, as before stated, was let at very high prices on account of the difficulties of transportation, it is now the intention of the contractors to haul their material over a portion of the Fauquier Brothers' work track, on which will be completed the present season, say about 50 miles, and haul along right of way to their own section 50 miles distant. This delay will add largely to the profits of the contracts with no commensurate advantage so far as the National Transcontinental railway is concerned, and under the circumstances I will ask that the Government arrange for the cancellation of existing contracts and ask for new bids which can undoubtedly be obtained on very much reduced schedule prices,—particularly so if it is known that the contractors will be enabled to haul their material and supplies over such portion of Fauquier Brothers' work as track has been laid upon.

Considering that this was such a large question, one would have expected that the then Prime Minister would have answered Mr. Hay's letter. No answer was made, however; the letter was referred to Mr. Parent, and he was instructed to look into the question whether or not, in the interests of the Government of the country and of the Transcontinental railway, the suggestion of Mr. Hays should be carried out. As a result, what happened? Davis turned around, sold out the contract and made $740,000. In the innocence of his heart the ex-Minister of Railways and Canals the other night asked what difference it made to the country whether or not Davis made a profit of $740,000—the country had to pay it anyway. But had there been honest and straightforward competition, the McDougall firm would have been quite willing to do the work at $740,000 less than the tender that Davis had made. It is computed by the investigators that upwards of $8,000,000 would have been saved to the country had these contracts been let out in smaller sections and had more favourable terms been given. If on that contract $740,000 could have been saved, is it not a fair inference that a large amount could have been saved on the others as well? By applying this percentage of loss to the gross amount that was paid out, it may be seen that the report has proved that a large amount of money might have been saved.

Hon. gentlemen on the other side—and I give them credit for it—have taken up for discussion in connection with this matter points which may be largely questions of judgment. I am free to admit that at a public non-partisan meeting of fair-minded men it would be a fair question to argue whether or not momentum grades are a desirable thing to be used in any railway. I quite admit that hon. gentlemen opposite are sagacious and wise when they bring the question of momentum grades to the foreground with a view of attempting to discredit the report of Messrs. Gutelius and Staunton. I am not going to say that all engineers agree upon this question and,

if they do differ, the first point to be considered is what is the ordinary practice of railway companies. The most important part of the Grand Trunk Pacific road is the part that runs from Graham to Fort William, as that part of the road will carry the greatest amount of traffic. No hon. gentleman opposite can successfully deny the statement made by gentlemen on this side of the House time and again that that section of the road from Graham to Fort William has a large number of momentum grades. I invite any hon. gentleman on that side of the House to show that that is not the case. No part of the Canadian Pacific railway is used more than that part between Winnipeg and Fort William, because the bulk of their traffic is carried between these points. By a statement of the Canadian Pacific railway authorities in the House the other day, it was established that there are no less than eighty-five momentum grades on that section of the Canadian Pacific railway.

Why, then, if it is good railway engineering for the Canadian Pacific railway to have on the best part of their line a large number of these momentum grades, should they not be used on the main line of the Transcontinental?

The opinions of one gentleman have been cited time and again on all things pertaining to engineering. I shall quote the opinion of this gentleman, Mr. Gordon Grant, on this question. He says, at page 615:

> Disregarding ordinary sags in long fills or fills over soft ground, it has been considered inadvisable to bring up to profile grade, at present, and contractors' prices for the unnecessary work. There are, as you will see, only two places where virtual grades have been adopted, and the saving effected with this slight change amounts to $27,797. They are both well within velocity limits, and will not affect the hauling capacity of a locomotive to the extent of a single pound. The introduction of virtual grades in railroad construction, for the purpose of economy in first cost and subsequent economy in operation, by reason of reduced interest charges, cannot be considered other than a good business proposition.

There is the answer of Mr. Grant; and the hon. gentleman will not deny that on this Grand Trunk Pacific road there is a large number of what are called pusher grades. With a pusher grade the alignment is not preserved. One of these so-called momentum grades cannot affect the running of trains more than a pusher grade would. The estimate by the commissioners of the unnecessary expenditures in that respect is $6,200,000.

We now come to a point somewhat analogous to the question of momentum grades. I refer to the grade at La Tuque. Mr. Lumsden submitted to the Transcontinental Railway Commission a proposal in reference to the grade at La Tuque. The proposition of Mr. Doucet will be found at page 100. His proposal was to have a so-called pusher grade instead of preserving the line as was done; and his estimate was that there would thus be a saving of one million dollars. A reference to the evidence of Mr. McIsaac will show that he gives as one reason for the imposition of this second unascertained amount to be paid by the contractors was that they were guided by Mr. Lumsden's advice in that respect. If they were to be guided on purely financial questions by the engineers why should they not have been guided in matters of engineering? Here was the position. The engineer had recommended that a pusher grade should be substituted and had advised that one million dollars would be saved in that way. In defiance of that the commission, at the instigation of the Government—because the evidence shows that they consulted the Government of the day through the then Minister of Railways and Canals—set the engineer's opinion at defiance and at La Tuque alone one million dollars was lost to the country.

One subject on which the hon. member for South Renfrew dwelt with pleasure, was trestles. He quarrelled vigorously with the estimate of the commissioners that $5,500,000 was wasted on bridges, embankments and trestles; and he gave a great many opinions of his own. At page 2179 of 'Hansard,' the hon. member said:

> The reason for not using wooden trestles is that they are not reliable and they are not modern railway construction through a country like ours and everybody knows it. . . . It would have been absolutely wrong, next to criminal, for the Government to have done anything else, and still this Government is distributing a report saying that we could have saved on wooden trestles $2,947,000—and they dare not attempt to save one farthing themselves. I challenge this Government to show me where they have adopted a wooden trestle or a wooden bridge in preference to a steel structure. In modern railway construction, where the Government is taking over a completed road and not where the company itself is going to operate the road and is going to do the filling, it would have been, I say, nearly criminal to put in these wooden bridges. . . . The Grand Trunk Pacific is the company that owns the road west of Winnipeg and it can fill its own line at any time; but it will be compelled by good railway practice to fill it inside of eighteen months.

There can be no doubt that the hon. member for South Renfrew made the point strongly that good railway practice would

necessitate dispensing with wooden trestles, and I suppose he still sticks to that. It has been repeated by other hon. gentlemen on his side. The hon. member had better travel a little through Ontario if he wants to find wooden trestles which have stood, not for eighteen months as he says, but for eighteen years. Between Peterborough and Lindsay, on the Grand Trunk railway, where hundreds of millions of bushels of grain have been hauled, where fast passenger trains pass every day, there are wooden trestles to a height of 75 feet; and yet the hon. gentleman says that good railway practice would have abolished them long ago. I suppose he will admit that the Canadian Pacific railway is a fairly well managed road, perhaps not as well as the hon. member himself would manage it, although I do not think he has been offered the management of the Canadian Pacific railway as they say he was that of the Grand Trunk. I assert that there is no better piece of railway, no higher-priced construction, than the road from Port McNicoll to Bethany, near Peterborough. There the hon. gentleman will see a trestle a quarter of a mile long which was built by the Canadian Pacific railway four years ago, over which they are carrying trains of 60 loaded cars, each containing one thousand bushels of grain. And yet this great expert, this sought-for gentleman who was asked to take the place of the late Mr. Hays, says that good railway management will fill in wooden trestles within eighteen months after construction. The hon. gentleman should travel a little. He will admit that the Pennsylvania is a fairly well run railway. On that line near Washington, I think over Chesapeake bay, there is nearly three-quarters of a mile of trestle work; and yet trestles are condemned by this Solon of railway building, this greatest expert on railways in Canada. The hon. gentleman is publishing a speech, which, although it extended over seven hours, is being sold at the low price of one cent a copy. When people read that speech, in which he says that good railway practice compels the filling of these trestles within eighteen months, the people of this country, especially railway men, who do the hon. member the honour of reading his speech, when they come to his remarks on trestles and see the crass ignorance displayed by him on that question, will say: If that is all the hon. member for South Renfrew knows about trains it was high time that the control of the Railway Department was handed over to some person else. I hope that we shall hear no more about trestles after that. If there was any one scheme that lent itself to the cupidity and greed of contractors under this board, it was the construction of trestles. See how it worked out. In the first place, they were paid by the foot for the trestles used in constructing the road. Then the contractors were to be paid 55 cents a yard for all fill, and they were to be allowed for all over-break. What a prospect that was, under this kindly and benevolent board, for a railway contractor!

In the first place, instead of breaking down on either side to the extent of twenty per cent, which is good railway practice, the contractor was allowed to break to the extent of forty per cent. And what was the result? His train was there, he had to stop and load the overbreak on the cars and as there was a double quantity he was successfully handling it that much cheaper. This overbreak on which there was a large profit was then taken to the dump and used for filling around the trestles. How these contractors must have smiled knowing that they were getting fifty cents a yard for dumping this overbreak in the fill while the Grand Trunk railway were only getting twenty-five cents a yard. Is it any wonder in the face of these facts that the commissioners report that there was a waste of $5,500,000 on trestles and embankments?

Then as regards sidings. Some hon. gentleman opposite laboured the other day to show that the building of six miles of siding was permitted under the Act. Commissioner McIsaac disagreed as he understood that the specifications called for a single track. Was there any sense or reason in parallelling the main line with six miles of siding? I can understand as every man can, the necessity of having a siding long enough to pocket say a couple of trains. But why a siding of six miles? I will ask the hon. member for South Renfrew (Mr. Graham) whether he can give me any reasonable explanation for that six miles of siding and I will be pleased to sit down while he answers.

Mr. GRAHAM: Where was this six miles of siding?

Mr. BENNETT: I think it was at Transcona.

Mr. GRAHAM: That is only four miles.

Mr. BENNETT: Was it not near Graham?

Mr. GRAHAM: There is no place where there was six miles of siding. The six miles is made up of siding at different places.

Mr. BENNETT: My recollection is that at some place there was six miles, but as I cannot lay my hand on it just now I will take the hon. gentleman's statement that it was four miles. Fancy the management of a railway company putting four miles of siding alongside their main track! What did it mean? It meant that it was necessary to pocket four miles of trains there. in order to allow the trains on the main line to go by. The thing is absurd on the face of it and I tell the hon. member for South Renfrew that he cannot find a siding of four miles in the whole system of either the Grand Trunk railway or the Canadian Pacific railway. It is apparent that the reason those sidings were put in was to enable the contractor to make more money. Take the McArthur tender for instance. The tender was for $13,000,000 but when finished out it amounted to $20,000,000. Hon. gentlemen are well within their rights in discussing cases in this report involving a question of judgment, but there are cases of reckless expenditure which they do not attempt and will not attempt to discuss, because they are so palpably absurd that no man would have the temerity to stand up anywhere, much less in this House, and attempt to defend them. Take the case, cited time and again of the farm offered to the board for $3,500. The commission refused to buy the farm and deliberately built a culvert connecting the two parts of the farm. As a result of that, and of the expenditure incurred in connection with the other farm crossing case, the country had to pay $60,000.

Hon. gentlemen opposite also assailed the commissioners for saying that the portion of the line east of Levis should not have been built and that the $35,000,000 spent thereon, was wasted. In answer to that I say that the commissioners' finding is justified by every inference than can be deducted from the situation as it presents itself to-day. There is nothing in the whole contract between the Government and the Grand Trunk Pacific to compel the Grand Trunk to send a single bushel of grain or a single pound of freight over that eastern section. That was shown when the contract was up some years ago. In the meantime what have the Grand Trunk railway been doing? Have they made preparations for traffic at St. John or Halifax by spending a single dollar? Not at all. The very moment the contract was entered into and construction commenced, the Grand Trunk started operations to deflect this trade to Portland; and all the time this railroad was under construction it must have been known to the then Government that such was the case. What was the first step the Grand Trunk took. The town of Midland is their principal port for shipping grain either to Montreal or Portland. Directly the contract was signed, the Grand Trunk spent a large sum of money, probably about $3,000,000, in the construction of docks and elevators at Midland to accommodate the traffic that would come from the Northwest and be carried to Portland in the winter and to Montreal in the summer. A glance at the map shows that that traffic never can go to the ports of St. John or Halifax. In the first place, the Grand Trunk will do what the Canadian Pacific railway are doing; they will have a port on the upper lakes, from which they will ship their grain in the fall of the year to Montreal, and when navigation closes the grain will be taken to Portland, and the Canadian Pacific railway will do as they are doing, and continue to take their traffic to St. John. Moreover the situation is such to-day in the Maritime provinces that after the grain for export has gone by, no grain at all will go to the Maritime provinces in the winter months. The grain will leave the Grand Trunk Pacific at Cochrane and by an arrangement with the Ontario Government will come down to the province of Ontario and be distributed for use in the flour mills, just as is being done to-day. And here will stand this railway, unused in the winter months. There will not be any large trains of immigrants coming in who might travel over that road because it is the shorter route. Passengers will travel either by way of Chicago, or by the Canadian Pacific railway to North Bay, or passing up to Cochrane they can take the Grand Trunk Pacific there if they want to patronize that road. The whole thing stands as a monument of blundering incapacity on the part of the late Government. Worse than that, by reason of the enormous sum the railway has cost, the rates will for all time to come be so abnormal that it will not be a paying road for the Grand Trunk Pacific.

My hon. friend from South Wellington (Mr. Guthrie) said: look at the position of Mr. Chamberlin; Mr. Chamberlin protested against momentum grades. I have no doubt that Mr. Chamberlain protested

against momentum grades, and I think he was a wise man to protest against them. Why? Mr. Chamberlin knew the enormous expenditure that would be incurred in the construction of this road and when the present Government came into office he was seeking for an opportunity to put up some excuse in order to try to evade the bargain of taking over the road as the company are bound under the contract to take it over. I assume that was the reason he wrote that letter. It was good business and good policy on his part as the representative of the Grand Trunk railway.

These hon. gentlemen may go before the public of Canada and discuss this report on its merits. They may assail Messrs. Lynch-Staunton and Gutelius, but the bold fact will stand out that after the late Government had stated that they had complete surveys, that they had employed competent engineers to make these surveys and that it was a fair estimate to say that the road would only cost $61,000,000, it will have cost 300 per cent more than that. That is a fact that cannot be gainsaid, and that they cannot get away from. The report discloses a condition of blundering incapacity—I fear I must almost say of idiocy—that is without precedent in the administration of public affairs. The public will consider the stamp of men who composed the commission and, having regard to their reputations, their special unfitness and incapacity to deal with the construction of this road. The Government were well within their rights when they instituted this inquiry. The gentlemen who conducted the inquiry and made the report bring the facts out so boldly and so strongly that hon. gentlemen opposite, being shy of argument, at every turn have endeavoured to justify themselves by the assertion that the questions dealt with are only questions of ordinary opinion and judgment. I am prepared to vote against the amendment proposed by the hon. member for South Renfrew for the reason that I believe the Government have done right in having the investigation and because I believe that not only have the investigators brought to the task ability and a conscientious regard for the faithful discharge of a public duty, but that they have produced a report which will be of great interest to the people of Canada, one which will be a source of information to them and one which amply justifies the Government in employing them to conduct this inquiry.

Hon. H. R. EMMERSON (Westmorland): Mr. Speaker, if powers of vituperation and a low order of abuse will pass current for argumentative skill, then I think my hon. friend from Simcoe (Mr. Bennett) has earned the congratulations of his friends who gathered so quickly into the House the moment he undertook to speak. My hon. friend's speech has been very much indeed like the report—the alleged report—which is involved in the motion of my hon. friend from South Renfrew (Mr. Graham). There is in it a poverty of argument and of fact, but it is resplendent in assertion. I do not feel that I am called upon to follow my hon. friend in that line of argument. Were I to attempt to do so I know that I must ignominiously fail because I have neither the inclination nor the ability to follow in the trail blazed out by my hon. friend. It seems to me that my hon. friend, in taking that course, has given away entirely the case of hon. gentlemen opposite. I was not very much surprised that my hon. friend did take that course; I rather anticipated it. The gentlemen on the other side who have taken part in the discussion are for the most part rich in such powers, and in the absence of any fact or argument, they have indulged to the full in vituperation.

There has been circulated throughout this country a document called the Federal Press Bulletin, and in the copy which came into my hands, I find a repetition, perhaps the original, of the speech of my hon. friend from East Simcoe, of my hon. friend from North Ontario (Mr. Sharpe) and of my hon. friend from Kings and Albert (Mr. Fowler). I find this document full of headlines, in glaring print, and it goes through the country as a substitute for facts, but entirely impoverished as to argument. It gives us a clue as to the object of the report. This report has been characterized as a partisan and non-judicial report upon a great national undertaking, and as a campaign document to be circulated broadcast throughout the length and breadth of Canada. In the absence of facts, in the absence of argument, these statements and headlines, baseless as they are, are sent throughout the Dominion.

It is very unfortunate that the political life of Canada should be so degraded, that a national undertaking should be treated in such a manner. It is a shame, a disgrace, and a blot upon the fair name of Canada. When we consider the inception of this work, and the object to be attained, the

crime committed by the Government of the day in connection with this undertaking becomes very evident.

It is my purpose and it certainly will be my effort to deal solely with the issue. My very first temptation is to follow my hon. friend, the acting Minister of Railways and Canals (Mr. Reid) in his statement in regard to the Intercolonial railway and the canal system of the Dominion. It is a practice that has been followed for the last quarter of a century that the Minister of Railways should annually present to the House and to the country a statement of the affairs of the Intercolonial railway, and on a more opportune occasion I hope to show how glaringly inaccurate is the statement presented by the acting Minister of Railways. The issue that is presented before this House and the people of this country at the moment, would be clouded if I were to attempt now to deal with matters relating to the Intercolonial railway. The proper consideration of the Gutelius-Staunton report is not a matter of abuse by hon. gentlemen either on the one side or the other. The question is whether there were facts to substantiate that report; whether the gentlemen responsible for it are able and fit to discuss the question, and whether they inquired into this subject honestly and without bias. To that issue I will attempt to devote myself as briefly as I can.

At six o'clock, the House took recess.

The House resumed at eight o'clock.

Mr. EMMERSON: Mr. Speaker, when the House rose, I was stating that it would be my sincere effort to confine myself to the issue. The hon. acting Minister of Railways (Mr. Reid) made his annual budget, in the course of which he referred to the report of the commission appointed to investigate the affairs of the National Transcontinental railway. He was followed by my hon. friend from South Renfrew (Mr. Graham) in a comprehensive and, in my judgment, unanswerable, analysis of that report. That speech was a condemnation of the report and of its authors. The facts and arguments were so magnificently marshalled by my hon. friend that the whole issue of the debate was changed, and the onus was thrown upon the Government, who, through their acting Minister of Railways, had undertaken to uphold that report. My hon. friend (Mr. Graham) tore to shreds and tatters the fabric so carefully prepared by these commissioners in nearly two years of labour. That commission, let it be noted, was issued on the 29th of January, 1912, and the work of the commission was completed early in 1913—certainly before the 1st of May of that year, because, for some weeks before that date, one of the commissioners, Mr. Gutelius, was engaged as general manager of the Intercolonial railway. Thus, after practically a year's work this commission must have been in a position to report. Why is it that that report was delayed for nearly twelve months? In answer to a question asked in this House, it was stated that the report had been signed by Mr. Gutelius on the 12th of February, 1914. That report was evidently a laboured one, certainly it must have been a studied one; for, after the work of the commission was complete, nearly a year was occupied with its preparation. Rumour states that these commissioners were not unaided in their preparation of that report. When we first came here in January last, the rumour in these corridors was that the commissioners were in labour and were aided by the Solicitor General (Mr. Meighen) to bring forth this report.

Mr. J. D. REID: Only rumour, and baseless.

Mr. EMMERSON: I do not vouch for the truth of it.

Mr. REID: There is no truth in it whatever.

Mr. EMMERSON: The Solicitor General is not a member of the Cabinet, but he is a member of the Government, and of all the members of the Government, in the course of a week's discussion of this subject, he is the only one who has attempted to justify this report. It is he who is called upon to act as its godfather. He replied to my hon. friend from South Renfrew. But he did not answer him, and the statements and arguments of that hon. member still stand. I certainly admire the analytical and methodical intellect of the Solicitor General, who commands the admiration of hon. members of both sides of the House. I want to give honour where honour is due, but with all his keenness of intellect, the Solicitor General failed to move the structure which my hon. friend from South Renfrew had erected. The hon. member for South Renfrew had marshalled his facts and his arguments, and as he proceeded step by step the props that supported this

report fell; and in the end he left it sprawling upon the floor of this House with not enough life in it to make it worthy of notice. In the words of Lloyd George applied to an issue presented by the Tory party in England—'it might be compared to a decapitated fowl running headless around the Tory farmyard, and the last cackle was out of it.' Yes, Mr. Speaker, the report was left with merely the echo of a cackle since the hon. member for South Renfrew wielded his weapon against it. This report can be said to be superlatively a nebulous indication of the conditions which the commissioners sought, in the interests of the Tory party, to demonstrate as existing, but the existence of which they ignominiously failed to prove. In all its nakedness and emptiness this report is merely a nebulous indication of what the commissioners would prove if they could. We can only conjecture whence the commission had its origin, and for what purpose? I have no complaint as to the course taken by the Government in issuing a commission. It was their right; perhaps they felt it to be their duty, but the character of the men whom they appointed, and the result of the work they did, condemns the Government in the taking of any action whatever in respect to the matters. The commission and its work is discounted by the most influential member of this Administration—a very distinguished, I might also say a very illustrious member of this Government as compared with those who sit around him. I refer to that veteran of the Conservative party, the hon. Minister of Trade and Commerce (Mr. Foster). The hon. minister seemingly does not on all occasions concur either with the attitude or with the action of his colleagues. It will be recalled that not many months ago there was an election in Lanark, owing to a vacancy caused by the death of the lamented Mr. Haggart, whom we all kindly remember and whose memory we honour. The hon. Minister of Trade and Commerce was speaking of commissions during that election, and he is reported to have used the following language:

> The Lord knows we have plenty of commissions going up and down the country. They are as plentiful as berries in Kazabazua; they waste good ink and paper on reports which are put on the shelves and never read.

I wonder if my hon. friend the Minister of Trade and Commerce had in mind this report when he used those words. He must have had knowledge of it; he knew that it was in course of preparation, and he may have had some inkling as to its contents. Having that knowledge, I wonder if in making these remarks he had any reference to the report which has been tabled and which has been referred to in such strong and unanswerable terms by the hon. member for South Renfrew? There was no action or suggestion of action in this regard by the Government at the time of that election, yet the preparation of the report must have been practically completed. He mentions this report; he mentions these commissions and their general character. Evidently he does not agree with the course pursued by the Government in appointing so many commissions. I am sure that if he were here to-night, and if he were called upon to address himself with regard to this particular report, his language would be much stronger than his language with respect to the results of the work of commissions in general. If all the Government commissions do as badly as this one has done, we should gaze upon the worst lot of bankrupt statesmen the world has ever seen.

Mr. BURNHAM: Grit, or Tory?

Mr. EMMERSON: I care not how you classify them; in the heavens above or on the earth beneath it is quite inconceivable that there should be a parallel to this report. I do not wish in any way to indulge in personal condemnation of the members of the commission. Attention has been given to them individually; my references will be to them collectively in their official capacity and with regard to their work. All I have to say is that they seem to have been square pegs in a round hole. Of all the fundamental tragedies presented in the affairs of this life, none is more lamentable than the attempt of men to do things which they are either incapable of doing or unjustified in doing. I have said that I have no complaint with respect to the Government and their action in issuing a commission. It all becomes a question as to the bona fides and as to the intentions of the Government in creating it. If they were desirous of honest inquiry; if they really felt that some great wrong had been perpetrated by the National Transcontinental Railway Commission and by the Government which was responsible for their appointment, then indeed they were justi-

fied in taking such action. But when one reads this report; when one reads and reflects upon the action of these commissioners, the question arises as to the bona fides of the Government in making the appointment. If they were honest in their desire to have this matter judicially investigated and considered, their manifest duty in the interests of the people of this country would have been to appoint a judicial commission of inquiry that would at once command the confidence of the people of Canada. If such a commission had been created it would have proceeded to inquire into the facts and circumstances connected with the transactions of the commission appointed to supervise the construction of the National Transcontinental railway. It is true that the appointment of the commission of inquiry was, in a way, an accusation against the commissioners responsible for the construction of the road, an accusation against the Government which appointed these commissioners. Would it not have been fair play and British justice to have held that inquiry in the presence of those commissioners and to have permitted them to be present when every witness gave his testimony? It would have been the duty of any such commission of inquiry to permit those in the position of accused to have counsel to represent them and to cross-examine every witness. That would have been a judicial inquiry, and one in accord with the honest desire of any Government that sought, in the interests of the people, to investigate affairs connected with the construction of such a great national undertaking. That course was not taken, and I am sure that no lawyer in this House, reading over that evidence, will say that the method of examination was at all in harmony with the rules relating to evidence that prevail in the meanest courts in the land. Leading questions were put to witnesses. If the witnesses did not answer as they were asked, then the retort was made: You are not with us, you are not with us. With whom? With the commissioners. For what purpose? Evidently they conceived their purpose to be to hunt and nose around and secure evidence and only evidence that would sustain their theory, that would if you will, justify the suspicions and the innuendos of the party which appointed the commission. All other evidence was to be rejected and condemned, and if evidence was suggested that was in any way out of harmony with their preconceived ideas, then the witness was charged with being out of harmony with them and out of harmony with the objects which they had in view.

Some reference has been made to the fact that Mr. Gutelius was an American citizen. It is a suspicious circumstance that he was appointed on January 29, 1912, and that within one month or six weeks he was impelled, by whom inspired I know not, to seek naturalization in the courts of this country. I would not condemn Mr. Gutelius or his evidence because he remained an American citizen; rather I would have had respect for the man who would not sell his birthright for the mess of pottage that was offered him. Why was it? Unfair criticism has been made of the fact that any reference was made to Mr. Gutelius being an American citizen. In 1903, 1904 and 1905 questions arose with respect to the construction of this railway; and the Grand Trunk Railway Company, preliminary to the execution of this great national undertaking, had sent out survey parties to that great northland with a view of securing all possible advance information in connection with a proposed route for a transcontinental railway, and the fact that Americans were employed on those survey parties was made a political issue. Attempts were made to prejudice the people because of the employment of American engineers in making these surveys and the Government of that day appointed a Royal Commission. Did they appoint any party hangers-on?; did they appoint any one interested in sustaining the charge or in refuting it. No, they appointed judge Winchester, one of the judges of the Ontario courts. The Conservative party of that day were so sensitive to the idea that none but British subjects should be engaged in any work in connection with even surveys, that a great hullabaloo was made, the subject was agitated in the newspaper press, the labour men were appealed to, and passions were aroused; and, when these gentlemen opposite, having announced that as their rule of conduct when in Opposition, are found now on the Government Benches appointing an American citizen, they are certainly susceptible to criticism. I care not as to the citizenship of Mr. Gutelius. I believe in reciprocity of brains as I believe in reciprocity in material things between this country and the United States. Canadians in every walk of professional and in-

dustrial and business life are holding eminent positions in the United States, and there should be reciprocity in that regard. But when a man like Mr. Gutelius comes into this country, an American citizen, and lends himself to the perpetration of this work which he apparently was asked to do with an evident purpose and intention, no words can be too severe in condemnation and in criticism of his conduct. The very fact that he ceased to be an American citizen for the mere purpose of enabling him to draw $20,000 or more a year from this Government is something which detracts from his honour, as I am sure all will agree. The report is now before us, and the hon. member for South Renfrew (Mr. Graham) has moved an amendment which clearly states the issue. It contains the kernel of the subject which this Parliament should debate and upon which this Parliament should pronounce judgment; and it reads:

> That the report of the commissioners appointed by the Government to inquire into the construction of the Transcontinental railway is so wilfully partisan and misleading as to be wholly unreliable; that the manifest object of the said commissioners was to misrepresent for party purposes rather than to investigate in the public interest, without regard to the serious consequences to the country or this great national undertaking; and that for the appointment of such commissioners, and for accepting and endorsing their report, the Government deserves the severe censure of this House.

The onus of defence is upon the Government. Before we can properly and satisfactorily deal with this report we must have in memory the inception of this great undertaking. It will be recalled that at the beginning of this century, in 1901-2 there had been brought about a great change in the sentiment of our people with respect to transportation facilities. The great West was filling up and it was necessary that something should be done. We were called upon to meet the conditions of that day, and Sir Wilfrid Laurier, then Prime Minister, took hold of the question. We had, up to this date, been expending hundreds of millions f dollars in subsidizing railways in which the people of this country had no ownership. The leader of the Liberal party conceived it to be his duty in the interest of the people, and to solve the transportation problem, to build a great railway to take care of the transportation of the products of the West. It was to be a railway from ocean to ocean, passing entirely over Canadian soil, and ensuring, if possible, the shipment of Canadian products through Canadian seaports, in summer and in winter. The idea conceived by the right hon. gentleman was presented to Parliament and discussed. While it was not opposed by the people of the country it met with the strongest opposition of certain railway interests. We all know that the Canadian Pacific railway, which up to that time had held a monopoly of transportation privileges in Canada, were most strenuously opposed to the idea of such a railway as that proposed, because they did not want a high grade road in competition with their own. Another great line of railway, a transcontinental in embryo at least, the Canadian Northern railway, were also opposed to the idea. Whether it was because they thought they should be entrusted with the construction, the maintenance and operation of such a railway I do not know; whether they were jealous of the men who secured the privilege of engaging in this great work, I am not here to state, but I do know that their opposition was strong. The Conservative party, who steeled themselves against interfering in any way with the one transcontinental line then in existence—not all the way through Canadian territory, because a part of it ran through Maine—came to the support of this combined opposition, and they have opposed the road ever since. Has the fact that the Canadian Pacific railway opposed the inception and the construction of this competing line anything to do with the opposition of the present Administration? Is this report born because of opposition on the part of the Canadian Pacific railway? It would almost seem as if the appointment of Mr. Gutelius, an ex-employee of the Canadian Pacific railway who, it is said, was loaned to the Government of Canada, was a connecting link, which lends strength to the suspicion that the Canadian Pacific railway were interested in the condemnation of the construction of the railway and of the Government responsible for its construction.

It is self-evident that to rebut the charge of partisanship against the commissioners the Government must explain what public object is to be served by this report, which has not one redeeming feature. Messrs. Gutelius and Staunton have condemned the National Transcontinental railway in its inception; they have condemned its construction, they have condemned the personnel of the commissioners entrusted with the responsibility of constructing the road, and we are now called upon in the face of a report which is unsupported by evidence,

to lend ourselves to a general condemnation not merely of that work, but of Canada and its people.

When the Government approve of the condemnation in the report of the personnel of the National Transcontinental Railway Commission because the lawyers upon it did not have expert knowledge in the construction of railways, I wonder how it is that when only the other day they appointed a man to inquire into the construction of a railway in the constituency of my hon. friend from York (Mr. McLeod), they appointed Mr. R. A. Pringle, a lawyer —an eminent lawyer, it is true—but he is sent by this Government down to New Brunswick to inquire into the construction of a railway built because of a subsidy given by the Government.

The great principle the Government evidently seek to have established is to degrade this great national railway. They say that this road has cost too much. The Conservative Government appears in a new role when they pose as economists. They are vicarious economists. Their frugal spirits are exercised over the horrible extravagance of their predecessors, but they conveniently forget the great Canadian Pacific railway scandal which is a part of the life history of the Conservative party. They have forgotten the scandal over the St. Charles branch, built in the province of Quebec as a part of the Intercolonial railway; they have forgotten the Southampton railway in York, N.B. They, in assuming this role, are at variance with their latest slogan: 'Dash away and spend the money,' a declaration by an hon. member from an eastern province, which was applauded to the echo by the hon. members who surrounded him. They have forgotten all that, and they claim that the Liberal party were extravagant in the expenditure of public money because they constructed a line of railway of a high standard. I feel constrained to make some reference in respect to the gradients of this railway. I am not going to call in engineers, I am not going to ask you to consider the technical evidence that is given in respect to momentum or velocity grades, or whether low grades are necessary. But I will bring forward the evidence of a man who, I am sure, will command the confidence of every person in Canada.

This report contains one self-evident truth and the only statement of truth, apparently, that I find in it, is where it says that the cost of a railway depends principally upon its design. I am sure that all will unite in concurring in the truth of that statement by the commissioners. It does depend upon the character and design of the road. The Government and the Grand Trunk Pacific railway entered into an agreement for the construction of a great national road over Canadian territory of a certain character and of a certain design, and one whose first cost would be its last cost. Therein lies the difference as between the ideas of the engineers. The question of first cost is a very important one. It is important from many standpoints and it is particularly important with respect to the cost of operation. I will not deal with the differences of opinion and theory among enginers; but I will cite James J. Hill who is a practical railway man, not merely in respect to the creation and construction of railways, but with respect to their operation as a business proposition. In June, 1906, Mr. Hill was invited by the Canadian Club of the city of Ottawa to address them, and the subject of his address was 'Transportation.' His words were deemed to be words of wisdom. It was at a time when the fame of Canada had gone abroad with respect to the construction of this great national undertaking. It was heralded abroad that Canada was to construct a line from ocean to ocean with a grade of 0·4 per cent going east and of 0·6 per cent going west, with very small curvatures and he pointed out that this remarkable fact elicited the attention of the people of every land and particularly of the United States. We took pride in it ourselves. We were going to have at Quebec a bridge with the longest span in the world. We were going to have a transcontinental line of railway from ocean to ocean over our own territory of a character that was unexcelled anywhere on this continent and we took pride in the fact. Naturally, our newspapers were speaking of it. The magazines of the United States contained reports month after month lauding the pople of Canada and advertising to the world her great resources and wonderful development. Mr. Hill just about that time came to Ottawa, and in the course of his remarks before the Canadian Club he said:

> In building a railway the principal objective is to overcome the law of gravitation. The nearer the level you can get your road, the better not only for the builders but for the people who will use the road. Your terminal facilities and your grades are the most important if you are going to get a low rate. Winnipeg is the gateway from the West and always will be. What they need out there is an outlet to the market.

These are the utterances of a great railway constructor and railway operator. I

present his testimony in answer to all the evidence that may be given in theory by those who have been trained as engineers. Here is the practical side. Here is a man who has to do with a transcontinental railway, whose business is transportation from the great fields of the American west to the seaboard. He unquestionably lent the weight of his opinion, at a time when there was no controversial question, at a time when he was tendering advice to the people of Canada in regard to their great work, and his testimony must be convincing and must outweigh the mere theories offered by this or that engineer, however eminent. Remember that this question had been considered; remember that the specification and the design of the road, as contemplated by the agreement and by the Act ratifying it, had been signed by the respective parties to the agreement, by the engineers of the Grand Trunk Pacific, by Mr. Schreiber, the engineer of the Government, and by the engineer of the Transcontinental Commission. That specification and that design was accepted and was brought before Parliament, and Parliament was made cognizant of and approved the character of the road, and the people of Canada endorsed Parliament. The building of this road created in the minds of Canadians everywhere a pride in their country, and in the Government which had the courage to undertake such a great work in the interest of the people and to develop our rich resources.

In regard to the opinion of Mr. Butler, I am sure that he will be considered a very eminent engineer, not merely a theorist, but a practical engineer. His testimony given with respect to grades and curvatures has been already cited, and I will not indulge in tedious repetition with respect to it.

There are many things in the report to which I might refer, but I will simply come to what may be considered the final word of the commissioners as they bid farewell to the Government in their report. They condemn first the construction of the eastern section. They had arrived at the decision that if it should have been built at all it was prematurely built and that there might have been delay. The Government now in power say the line should not have been constructed east of Quebec.

Mr. S. SHARPE: Mr. Blair said that.

Mr. EMMERSON: My hon. friend wants to shield himself behind Mr. Blair. It is true that Mr. Blair, in the interest, as he thought, of the Intercolonial railway, condemned the proposed construction of that line. Mr. Blair and the people of New Brunswick and of Nova Scotia wanted a competing railway that would ensure the transportation of the products of the West, in winter particularly, to the ports in the provinces of New Brunswick and of Nova Scotia. That was the great object they had in view. Mr. Blair thought that the Intercolonial railway could do that work, but Mr. Blair was wrong in that. I took that position at that time, and I stand by it now. The Intercolonial railway, immeasurable though the good is that has been done by it, could not, in competition, furnish to the seaports of the Atlantic provinces the products of the West as against Portland and Boston, which are so much nearer. Mr. Blair knew, as I know, as many eminent engineers know, that in order to make it possible for the Intercolonial railway to convey the products of the wheat fields of western Canada to St. John or Halifax, it would be necessary to reduce the grades on that railway. It is well known that if you attempt to get even a 0.4 per cent or a 0.6

9 p.m.

per cent grade over the Intercolonial you will lengthen the line between Lévis and Moncton by over 100 miles. I have that on the authority of two very eminent engineers, and it is certainly reasonable. Any one who travels over the Intercolonial railway knows that you have to travel up and down hill, and that in order to get over the Metis grade, which is one of the highest grades on the Intercolonial railway, the railway has to climb hills, and even the passenger trains have to be split up. It is not many months ago when, travelling to my home from Ottawa, I was on a passenger train containing twelve cars, and I think an official car, and in seeking to go over that grade it was necessary to break the train. That, it is true, is not a frequent occurrence, but it is not unusual. To improve the grades on this and other sections of the Intercolonial, as proposed by this same Mr. Gutelius, would mean that the route of the railway would have to be lengthened in zig-zag fashion. As you go down along the St. Lawrence, you would have to travel up the tributaries of that great river, up and back, up and back, until you cross the divide between the St.

Lawrence waters and the Baie des Chaleurs waters. That would lengthen the line. The difference between a 0·4 per cent grade through central New Brunswick and a 1 per cent grade has been demonstrated to be about 100 miles. That is not mere conjecture, it is a fact demonstrated by the actual surveys made and the evidence presented to this Parliament. What was the great object of going to St. John and Halifax? In the first place, they wanted to reduce the distance between Winnipeg and Canadian seaports. Compare the Canadian Pacific railway with the Intercolonial railway as part of any system and you find that the distance between Winnipeg and Moncton is about 200 miles shorter than by the Canadian Pacific railway route. That was an immense advantage. It is true that in going through New Brunswick difficulties were found which, perhaps, had not been anticipated. Much has been said with respect to the high bridge built at Chipman in the county of Queens. That bridge, high and expensive though it was, was constructed and as a result of its construction the line was shortened by nearly thirteen miles. In order to have built a road of 0·4 per cent grade, you would have to travel nearly across to Nashwaak and go north to the Intercolonial railway and you would come seventeen miles north of the present line to Chipman, and you would have had a line of the same grade as that which has been obtained by the construction of this bridge, it is true, but a line thirteen miles longer. Did the investigating commissioners mention this? Did they ask the Transcontinental Commissioners why they built this bridge at Chipman? No, they did not even seek evidence with regard to it; that would not have suited their purpose.

Now, there is one other feature with respect to this eastern section. I have here the utterance of a gentleman who should have the confidence of hon. gentlemen opposite. It will be remembered that in 1905, questions were arising in this House every day with reference to delays in the construction of the line between Lévis and Moncton. Mr. Crocket, now a judge of the Supreme Court of New Brunswick, appointed by this Government, then a member of this House representing the county of York, repeatedly called the attention of the Government to the delays. On one occasion—and this was only one of many occasions—he spoke upon this subject. This speech was delivered on the 9th of April, 1906, and is reported at page 1443 of 'Hansard' of that year:

Mr. Butler makes a calculation in which he says that the same motive power that will haul 660 tons on the Intercolonial railway, will, by the line secured haul 1,260 tons going east and 990 tons going west. Now, taking that both ways it would be a saving of 41 per cent in the motive power according to Mr. Butler's figures. The same percentage is derived from the figures which Mr. Butler gives in reference to the cost of hauling a given quantity of pay tons over the Intercolonial railway as compared with the proposed Transcontinental railway.

He goes on:

It will thus be seen that the annual operating cost to the Intercolonial railway for the said quantity of freight is $3,016,711.21, while that of the Transcontinental will only be $1,782-518.72, a saving in favour of the Transcontinental of $1,237,192.47, which capitalized at 4 per cent per annum equals $30,854,812.25.

That as I stated would show a saving of 41 per cent in the cost of the operation of the Transcontinental railway by reason of its superior grades.

And further:

We realize that this can very readily be made a pretext by the Government if they are desirous of acceding to the wishes and yielding to the interests of the Grand Trunk Pacific Railway Company by abandoning this section of the road. I sincerely hope, however, that they will not do so and I believe that the people of the Maritime provinces will insist that the Government implement, in the words of the Prime Minister, the solemn pledge that this Parliament has given in connection with the construction of this line of railway. I think it will be conceded upon all hands that the assent of the representatives and of the people of the Maritime provinces to that measure at all was secured upon the faith of the undertaking that the road would be built not only to Quebec but that it would be carried from that point eastward to Moncton.

Mr. Crocket was then speaking on behalf of the Opposition, and his utterances, I am sure, met with the approval not only of his own friends, but also of those who supported the Government of that day. But to-day, in support of the proposition stated by these commissioners that this eastern section should not have been built, we find arrayed a united band of Government supporters.

Every speech made by hon. gentlemen opposite coming from the province of Ontario has emphasized the fact that that portion of the Transcontinental should not be built. Are hon. gentlemen opposite consistent? Did the Conservative party in 1903 or in 1904 bring forward any amendment to the Government proposition, condemning the construction of the line east of Quebec? No such motion was ever presented. The commission appointed to investigate the build-

ing of the Transcontinental say that that line should not have been built, and one reason which they give is that there would not be any traffic. If I had time I could quote from the remarks of the hon. member for North Ontario (Mr. Sharpe) and of the hon. member for Simcoe (Mr. Bennett) to show that they have repeatedly stated throughout this debate that there would not be traffic and that the construction of that portion of the line was unjustifiable. Does the Government concur in that idea? Does my right hon. friend the leader of the Government approve that sentiment? If so, why is he spending $30,000,000 of the people's money in constructing terminals at Halifax and $20,000,000 for terminals at St. John? If the eastern section is not to participate in the traffic from the West; if the grain and other products of western Canada are not to go to the Canadian seaports in winter or in summer, surely the Government are to be condemned for adding $50,000,000 to the $35,000,000 which their commissioners state should not have been expended in the construction of this railway east of Quebec. It seems to me that the Government do not themselves believe in the conclusions of the commissioners with regard to the construction of that line.

There are many things that I could and would say to justify the action of the Liberal party in constructing a line of railway from ocean to ocean over Canadian territory. This has been done; the people have paid their money, and they own the road. The people of eastern Canada contributed to the construction of the Canadian Pacific railway, a railway in which the Canadian people have not one cent of direct ownership, and they have rendered aid to the Canadian Northern Railway system. They have contributed to the construction of our great canal system; they have been called upon to contribute to the construction of a new Welland canal to cost upwards of $50,000,000; they are called upon to contribute to the Trent Valley canal, and it is proposed that they shall contribute to the construction of the Georgian Bay canal. It is also proposed that they shall aid in the deepening of the St. Lawrence canals in order that Toronto may be made a Canadian seaport. The secret of the obtaining of running rights over the Temiskaming and Northern railway from Cochrane to North Bay was divulged but recently in connection with the great delegation that came here. I will not enter into the details, but this report emanated from an ex-official of the Canadian Pacific railway, a gentleman whom I should fairly suppose to be in close communion with that great railway. That gentleman advocates, as did the Grand Trunk Pacific originally, stopping at North Bay and having the traffic come down through the American seaports because that would be the natural channel. The present Minister of Railways is wrapped up in that proposed railway centre, North Bay. The scheme is openly proposed; true, it is but visionary, but speculators in land around North Bay are trading on the idea that the traffic of the Grand Trunk Pacific will find an outlet through North Bay, that it will come down through Toronto, and that a portion of it which does not seek an outlet through Montreal and Quebec will find its way to the seaboard through American ports. The scheme is against the Maritime provinces seaports; it is against the Canadian seaports, and I make the assertion that every movement of the chessboard since October, 1911, has been carefully planned and is in the direction of the consummation of that scheme. This report is brought forward to bring aid and comfort to those who wish to carry out that idea. Let us not sail under false colours; let it be recognized that if the traffic goes via North Bay we are going to be an adjunct of the United States, in so far as our export business is concerned, in winter at least. My right hon. friend the leader of the Liberal party has certainly received the support and commendation of the people of eastern Canada because they believed that he was determined that the products of the West should find an outlet through Canadian seaports, and every act of his and of his Government gave strength to that idea. Had he continued in power the people of eastern Canada would have had confidence in his carrying out that idea to its fullest fruition. But there is a sense of alarm in eastern Canada with respect not merely to the traffic of the Grand Trunk Pacific going down as I have stated, but with respect to the destiny of the Intercolonial railway. It, too, will be made contributory to the companies that have had the monopoly in this land for too many years. This Government seem to be lending their aid to the idea, and I hope that it is not too late to have the movement arrested.

I would wish, Mr. Speaker, that I could have had more time to deal with this subject, because in its many phases it is a big one. There are many things connected with the matter that can only be explained at some length, but time will not permit me to deal with them.

One word as to the cost. They say that this road has cost over $100,000 a mile. Have the people of Canada forgotten the construction of the St. Charles branch? Do they not know that the Government of that day, under Sir Charles Tupper as Minister of Railways and Canals, constructed a line from St. Charles junction down to Levis, a distance of about fourteen and a half miles, and that the cost per mile of that railway was nearly $125,000 per mile? Yet our friends of the Conservative party to-day stand horrified at the thought that a transcontinental line of railway of an entirely different and much higher standard, has been constructed for an amount per mile of about $100,000. If that road had been completed up to the standard designed for it, it would have been without a peer on this continent.

Mr. Speaker, I think that the amendment of my hon. friend from South Renfrew is sustained by the evidence, by the facts, by the circumstances, by the actions and attitude of the Government of the day, and I shall have a very great deal of pleasure in voting for that amendment.

Rt. Hon. Sir WILFRID LAURIER (Quebec East): Mr. Speaker, although this debate has lasted now for more than a week, everybody will agree that the time which has been spent upon it has been time well spent. It has already cleared the atmosphere, it has already removed and dispelled many misconceptions which were floating in the air and which were darkening the fair name of Canada. But the discussion has taken so wide a range, and so many issues have been brought into it, which, although connected with it are entirely irrelevant to it, that it may not be out of place that I should recall to the attention of the House what is the true question now before it. My hon. friend who sits beside me, (Mr. Graham), in concluding the powerful indictment which he brought against the Government and the commission, asserted that the report which has been laid upon the table by the Government was so wilfully partisan and misleading as to be wholly unreliable. This is the effect of my hon. friend's amendment, and this is the question which is now before us. Is this report reliable or not reliable? Is it true or is it not true? Is it partisan or is it fair? That is the only question with which we have to deal at this moment. The volume in which the commissioners have placed their views as to the construction of the National Transcontinental railway bears upon its first page these pompous words: 'Report of the National Transcontinental Railway Investigating Commission.' It has pleased Messrs. Staunton and Gutelius to place upon the volume which they have placed before us this high sounding title 'Report of the National Transcontinental Railway Investigating Commission.' Of course, as we know, paper is impassive, and has to receive everything that is put upon it; but, Sir, if, according to the fitness of things, there should be some connection between title and text, no title could be worse chosen than that which has been placed upon this book. It would be more in accordance with the fitness of things, looking at the report itself and the evidence connected with it, to call it 'The Comedy of Errors, by Messrs. Lynch-Staunton and Gutelius,' for, Sir, in that so-called report there are so many misstatements of fact and so many mis-statements of law, that the book should certainly be called a comedy, or something worse. The counterfeiter who tries to palm off a spurious coin upon the community places upon it the visage and the inscription of the true coin of the realm, and for some time he may deceive the community; but sooner or later the fraud is detected, and the counterfeit is revealed. So it is already in respect to this report. The fraud is discovered, the counterfeit is fully revealed in all its hideousness; and to that counterfeit the Government have been accessories both after and before the fact. They became accessories after the fact when they circulated that report; they became accessories before the fact, when they appointed commissioners who, it was well known from their antecedents, were notorious partisans and could not give us any other report than the distortion of facts which they have placed before us as their opinion on the construction of that railroad.

When this Government came into office they were besieged by their followers and friends to have an investigation into the construction of the National Transcontinental railway. The press of the party had repeated again and again that in the construction of that railway there had been, to the detriment of the community, not only gross errors but fraud. There were assertions that millions of dollars had been diverted from the purposes for which they should have been employed, and had gone into the pockets of individuals for private gain, or still worse. Under such circumstances I am not at all surprised that the Government should have

come to the conclusion that a commission should be appointed. If they believed all that had been said in the press, then, like the rest of the party, they must have worked themselves into a frenzied conviction that their opponents had been as dishonest as had been represented. But even if they did not believe anything of the kind, for my part I do not blame them for having appointed a commission. A work of that magnitude might well have been the subject of investigation so that the public might know the whole history of the transaction from first to last, but, Sir, while I do not attach any blame whatever to the Government for the appointing of a commission, I blame them—and this is a ground of complaint which they cannot avoid—because in the selection of the commissioners they did not do justice to their opponents, to themselves, or to the community at large. Every consideration would seem to require that the Government should have appointed men who, from their well known character, from their reputation in the land, from their antecedents, would have afforded to the community a guarantee that the investigation would be fair and honest, free from fear and free from favour; that the commissioners would disguise nothing, that they would 'naught extenuate nor aught set down in malice,' and that they would make a true deliverance according to the evidence. Is that the character of the two men who were appointed as commissioners? I do not hesitate to say—and I believe upon this I can appeal to the fairness of every man who sits in this House, whether on this side or on that—that in a court of justice these two men would have been challenged for cause, and would not have been allowed to sit upon the jury. As to Mr. Gutelius, I do not want to say anything of him but what is known to the community. In 1911 he was, I believe, an employee of the Canadian Pacific railway in a minor capacity; he did not hold any high office. It is said of him, and I have heard it on good authority, that he took an active part in the election of 1911. Be that as it may, the fact is that no sooner had the present Government and the Minister of Railways come to office, than Mr. Gutelius became the close adviser of the Minister of Railways. From the humble position which he occupied in the employ of the Canadian Pacific railway, and which, as I am told, commanded but a very modest salary, he was hoisted into the office of general manager of the Intercolonial railway; hoisted, I say, and at a salary of $20,000 a year, which Mr. Gutelius is now receiving. That position had been occupied for more than thirty years by Mr. Pottinger at a salary that at no time exceeded $6,000 a year. Without saying anything derogatory of Mr. Gutelius, I say that it would be a lucky day for him, if, when he leaves the position he is now occupying and which has been occupied by his predecessor, he carries with him one-half of the respect which is now surrounding the white hair of Mr. Pottinger. It has been said that it is not fair to any man to put him in the position to choose between his salt and his duty—not fair to the man who earns the salt and not fair to the man of whom the duty is demanded, because sometimes there will be strong temptation when a man has to make such a choice. After having read the report which I now have before me, it seems to me that I am not doing an injury or an injustice to Mr. Gutelius when I say that, in my opinion, in this investigation he was truer to his salt than he was to his duty.

And what of Mr. Lynch-Staunton? If Mr. Gutelius was not known in 1911, the same cannot be said of Mr. Lynch-Staunton. Mr. Lynch-Staunton was very well known. I have nothing to say against him personally. He is, as I understand, a good lawyer, though in my opinion there are better lawyers than he. He is a partisan, but I do not find fault with him for that. I do not know of a man in this House who would disclaim being a partisan. I would not, for my part, but, partisan as I am, I say there are some offices to which a partisan should not be appointed. My hon. friend the Solicitor General dealt with that question; he anticipated the reproach. I have said before, and I am glad to say again, that I am an admirer of the subtle intellect of my friend the Solicitor General, but on this occasion it was hard for him to defend the appointment of such a partisan as Mr. Lynch-Staunton. This is the way, however, that he attempted the task. Speaking in answer to my hon. friend from South Renfrew (Mr. Graham), the Solicitor General said:

> The hon. member knows that in our selection of judges, whose office doubtless compares in dignity and in consequence with that of a commissioner, we are compelled to resort to party lines on one side or the other for appointees; and so the same objections which the hon. member hurls against Mr. Lynch-Staunton

could be hurled against every man appointed to the bench by the Government of which he himself was a member.

It is not exact to say that we are compelled to resort to party lines on one side or the other in making appointments to the Bench. But we have held on both sides that party affiliation was not a bar to the appointment of any man, I believe that experience has shown that though we have appointed men to the Bench who have been actively engaged in politics, of very few, if any, can it be said that they were political partisans when on the Bench. On the contrary, I have no hesitation in saying that in many instances the experience obtained in political life has been of good service to a judge. We expect that as soon as a man ascends the Bench he shall ignore altogether party lines, and if we thought he would remain a partisan we would not think of appointing him. The moment a man has been called to the high functions of arbiter between man and man, if he is worthy of the office, he ought to forget that he ever belonged to a party, and honour his oath that he will administer justice without fear and without favour. Is that the oath that was taken by Mr. Lynch-Staunton? No, Mr. Lynch-Staunton took no oath at all. But even if he took no oath, at all events according to the tenets of our morality, the moment Mr. Staunton received his appointment, if he was to act in a judicial spirit, it was his duty then and there to cease to be partisan. Can that be said of Mr. Lynch-Staunton? It is known that he remained so much a partisan after his appointment, that he left his duty at Ottawa as commissioner to take part in an election. It is obvious that Mr. Lynch-Staunton remained a partisan to the end, and when he wrote that report he was fresh from the campaign in South Bruce. Such were the commissioners.

Let us see how these commissioners performed their duty. If their object in this investigation had been to have the truth, the whole truth, and nothing but the truth, one would imagine that the investigation would have taken place in the full light of day, and that all the proceedings would have been in open court. It is a maxim of law, it is a maxim of justice and it is a maxim of fair play, that there is no fair trial except free and open and public trial. Is that what was done? No, Sir, the commissioners sat in camera. The public were not admitted to their sittings, the press was excluded. They shunned the light, and no light was allowed to filter through except such light as suited the good-will, or the caprice, or the intent and purpose of the commissioners.

If you want to see the immense distance which separated the Conservative party in 1913 and in 1880, look at the investigation that took place in 1880 upon a very similar matter. If there is one man in the history of Canada whose name stands emblazoned as the very incarnation of righteousness and honesty it is Alexander Mackenzie. Alexander Mackenzie, dead, is a model for all men, but Alexander Mackenzie, living, did not escape the fangs of calumny, and when Mr. Mackenzie left office in 1878 there were some accusations against him as there were accusations against those who lost office in 1911. The accusations had reference to the construction of the Intercolonial railway by Mr. Mackenzie, and a commission was appointed by Sir John Macdonald in 1880. Who was the commissioner? The commissioner was not a partisan of the class of those who were appointed in 1912; the commissioner was Mr. Frank Shanly, an eminent engineer of that day. There is no greater name, I believe, in the engineering history of this country than the name of Frank Shanly, unless it be that of his brother, Walter Shanly. Mr. Frank Shanly was absolutely disconnected with politics. The sittings were open, the public were admitted, the press were there and from day to day the public could follow the history of the construction of the road as it was told by the witnesses. No obvious cross-examination was avoided, and everybody knows that there is no evidence which can be accepted as a final expression of truth until the evidence has been subjected to the supreme test of cross-examination. Nay, more, I believe, and I assert, that if this investigation which we have to-day, and the result of which is set forth in the report of Messrs. Gutelius and Lynch-Staunton, had been in the open, and reported from day to day by the press, the results of the investigation would not have been expressed in the terms in which they are expressed in this report.

As to the manner in which the report, or the result of this investigation, was submitted to the public, I have a word to say. In this the commissioners showed themselves not only to be experts, but to be artists as well. The proceedings were behind closed doors. Nobody was admitted, but by some mysterious process which has

not been explained yet, from time to time statements appeared in the press as to what was going on in this investigation. It was stated in the first paragraphs that were sent sent to the press that these commissioners were making awful discoveries. Later on the insinuation was to the effect that millions of dollars were discovered to have been abstracted from the public treasury in connection with the railway. Then the report was to the effect that $40,000,000 had been taken from the treasury in the construction of the road. At last the report was placed upon the table, in manuscript, or to be exact, in typewritten copy. It could not be taken possession of, it could not be read, it was not printed, but an abstract was placed in the hands of the press which could not have come from any other source than from the commissioners themselves, for they alone knew the contents of their report, and in the press of Canada, on the day following, it was stated that as a result of the investigation, the commissioners had discovered that $40,000,000 had been robbed from the public of Canada in the construction of the Transcontinental railway.

We have the report in our hands to-day; we have been able to study it, and, Sir, what is it? It is an unblushing partisan libel. From every syllable partisanship oozes out in an endless flow of misrepresentation and distortion. But, amid all these insinuations, amidst this mass of suppressed and distorted fact, one feature stands out clear and true, and that is that there has been no graft in the construction of the National Transcontinental railway. You say that it cost $160,000,000, but not one dollar has been diverted from the object for which it was voted by Parliament. If it be a fact that it has cost $160,000,000, every dollar of that amount has gone into the construction of the road. The only fault that they charge against us is that we have built too well, too substantially, with too much hope in the future, and too great faith in Canada. Mistakes there may have been; I am prepared to say that mistakes there were, but there is no cause for any man who supported the late Administration to blush at the construction of that road. Our faith in the country was great, but not greater than it should be. Our expectations were high, but not higher than they should have been, and to-day I say that the railway will realize everything that was hoped from it provided that it be not degraded by the men into whose charge it has passed. The commissioners having sought, and sought in vain, for scandals, determined to establish the theory that there had been extravagance and unlawful and fraudulent expenditure.

This report is divided into two parts. The second part contains a detailed statement of all the cases in which it is asserted that there has been fraudulent or extravagant expenditure. The first part is simply an epitome of the second and this is how the commissioners summarize their findings:

> We find that the Transcontinental Railway Commission, the Grand Trunk Pacific railway, and those having charge of the construction of the railway did not consider it desirable or necessary to practise or encourage economy in the construction of this road.
>
> We find that without including the money which was unnecessarily expended in building the railway east of the St. Lawrence river $40,000,000 at least was needlessly expended in the building of this road.

Some hon. MEMBERS: Hear, hear.

Sir WILFRID LAURIER: How these hon. gentlemen cheer! How happy they would be if that statement were true! But, if that statement is false, is there a term strong enough to characterize the calumny which has been perpetrated by the commissioners against the fair name of Canada? I call upon these gentlemen who pretend that this report is true to show us how the commissioners have been able to make up that sum of $40,000,000. My hon. friend from Pictou (Mr. Macdonald) stated yesterday that, on their own figures, they fall short by at least $10,000,000. Torture the figures as you will, take the detailed statements given by the commissioners themselves, and you cannot make up to $40,000,000 what they charge as losses of Canada. I say more; I say that in that report there are statements as to illegal expenditures made by the commissioners which not only cannot be maintained, but which are untrue and dishonest. As an example of this, I call the attention of hon. gentlemen opposite to the finding of the commissioners in regard to the Transcona shops:

> The country has been committed to the expenditure of $4,500,000 for the erection and equipment of the Transcona shops at Winnipeg, which, in our opinion, are not authorized by law and which are, in any event, twice as large as are required for the purposes of the eastern division.

It is stated that this sum of $4,500,000 spent on the Transcona shops has been spent contrary to law. This is the opinion

of Mr. Lynch-Staunton, given in this report, which has been circulated to the extent, I understand, of a quarter of a million copies. According to Mr. Lynch-Staunton, this $4,500,000 has been illegally spent. When Mr. Lynch-Staunton issued that statement he knew that that money had been spent according to law and not contrary to law. Mr. Lynch-Staunton, later on in his report, at page 121, discusses for some ten pages his legal opinion that this expenditure was not according to law. Before I proceed further, I will show how my hon. friend the Solicitor General (Mr. Meighen) has dealt with that subject. In answer to my hon. friend the member for South Renfrew (Mr. Graham), he made use of this language to which I call the attention of the House:

> The hon. member for South Renfrew says that the Transcona shops are another source of great pride to him; that if he had to build them again he would build them just as they are now; and that Mr. Lynch-Staunton is entirely wrong when he argues that the building of the Transcona shops, as a plant for repairs, was beyond the powers of the commission and should have been done by the Grand Trunk Pacific. I was aware, before the ex-Minister of Railways rose, and I think most of us were aware, that Mr. Staunton in that opinion did not agree with the deputy Minister of Justice who gave the late Government his opinions and who gives this Government his opinions. We knew that Mr. Staunton was running counter to the opinions of eminent lawyers in this country, and we knew it was the duty of the Government to heed the opinion of the Department of Justice, but I was not aware, and I am not yet aware, that it was a crime on the part of Mr. Staunton to give his own opinion even if it did differ from that of the deputy minister.

No, it was not a crime for Mr. Lynch-Staunton to give his opinion and to defend it, but it was a crime for Mr. Lynch-Staunton to give to the public his opinion that this money had been spent contrary to the law, when Mr. Lynch-Staunton knew that the courts and competent authorities had decided against him. Lawyers will differ. That truism is as old as the first day there were two lawyers in the world. But when lawyers differ, there must be competent authority to settle their differences, and there are only two ways in which differences of lawyers can be determined, and that is either by having recourse to the tribunals established by law or by voluntary arbitration. In this case it is quite true that Mr. Lynch-Staunton was of the opinion that the shops at Transcona should have been charged to the Grand Trunk Pacific and not to the Government. But this was a case in which Mr. Lynch-Staunton was of one opinion and all the other lawyers were against him. The Deputy Minister of Justice was against him, Mr. Atkinson, the counsel of the commission was against him, Sir Allen Aylesworth was against him, Mr. Brown, the battonier of the Bar of Montreal, was against him, and I think I may say that the Minister of Justice was also against Mr. Lynch-Staunton on this matter. But this, after all, is of no great consequence. The matter had still to be decided between the Grand Trunk Pacific on the one side and the Government on the other, and what took place? The Minister of Railways himself took pains to have the difference of opinion settled. The Solicitor General said the other day that the Government were bound to abide by the opinion of the Department of Justice. So they were; but on this occasion they did not do so, because, while it is true that Mr. Lynch-Staunton was of one opinion and his opinion had been contradicted by the Department of Justice, the Department of Railways did not follow the advice of the Department of Justice, but the Minister of Railways asked Sir William Whyte to act as arbitrator and to decide the question between the department and the Grand Trunk Pacific railway. On the 4th of December, 1912, the following joint telegram was sent to Sir William Whyte by the Minister of Railways and Mr. Chamberlin. I need not say that if there is a man in Canada who is accepted as an authority on railways, it is Sir William Whyte, former first vice-president of the Canadian Pacific railway. The telegram is in these words:

> Will you act as sole arbitrator between the Government and the Grand Trunk Pacific railway to fix the rental to be paid for use of that portion of the Transcontinental railway line between Winnipeg and lake Superior junction pending completion of the entire line through to Moncton. If so, necessary information will be sent you directly and arrangements made with the Grand Trunk Pacific officials at Winnipeg to furnish train so that you can go over the line and make the necessary examination; also any other information.

Upon the assent of Sir William Whyte, the reference was given to him, stating the point for decision, and that point was:

> Are the shops at Transcona and repair shops at divisional points or any of them to be regarded as a portion of the eastern division, within the intent and meaning of the agreements of July 29, 1903, and of February 18, 1904, and Acts affirming the same?
>
> If not, what is the proper rental for the use of such shops, or any of them by the Grand Trunk Pacific Railway Company for any railway purposes they may desire?

This is the form in which the matter was submitted to Sir William Whyte. And the judgment upon the matter pronounced by Sir William Whyte put an end to all contention upon this point, whatever may have been the previous opinion of Mr. Lynch-Staunton. Sir William Whyte's judgment was:

With respect to the shops at Transcona, considering their location and the circumstances under which they were produced and furnished, and the specifications; and interpreting the said agreements and Acts in the light of modern railway practice, and considering the contemplated use of the said eastern division by other railways, I award, order and determine that the said shops are to be regarded as and are a portion of the said eastern division within the intent and meaning of the said agreements of the 29th of July 1903 and the 18th of February 1904 and Acts confirming the same.

I further award, order and determine that all repair shops at divisional points are to be regarded as and are a portion of said eastern division within the intent and meaning of the said agreements of 29th July, 1903, and of the 18th February, 1904, and of the Acts confirming the same. I consider these are a material part of the railway and necessary convenience for its proper and efficient operation.

In the face of this, I say it was dishonest on the part of Mr. Lynch-Staunton and Mr. Gutelius to say that this was still a matter of legal opinion. It was no longer a matter of legal opinion; the matter had been settled, and it was settled against the opinion of Mr. Lynch-Staunton. If the matter was still a matter of legal opinion, the Government could go before the courts to have it determined, but the Government know that they are precluded from that course, and that the matter is closed forever. Yet, Sir, the report has been sent broadcast throughout the country that in this matter the Transcontinental commissioners illegally spent $4,500,000.

Now, what about classification? The investigating commissioners say that about $3,200,000 has been illegally spent through over-classification. This matter also is no longer in issue; and it is no longer in issue because, so far as the Government and the Grand Trunk Pacific are concerned, it was arbitrated and decided. The arbitrators in this case were men of the highest eminence —Mr. Kelliher, for the Grand Trunk Pacific; Mr. Gordon Grant, for the Government, and the third arbitrator, a man of eminent respectability, one of the best men in his line that we have in this country, Mr. Collingwood Schreiber. So far as the Grand Trunk Pacific, who objected to this classification, are concerned, the matter is at rest. But what about the contractors? Can the opinion of Mr. Lynch-Staunton and Mr. Gutelius be raised against the contractors? My hon. friend from North Cape Breton (Mr. McKenzie) answered that yesterday, when he told us that the Government had actually paid these contractors. The Government have not confidence enough in the opinion of Mr. Lynch-Staunton to follow it in matters of law, but they are quite ready to distribute his opinion for partisan purposes.

Before I leave this part of the subject, there is one thing as to which I feel particularly bound to say a few words, I refer to the contracts on sections 16 and 17 held by Messrs. M. P. and J. T. Davis, and with which my name has been connected. It is quite true, Sir, that in the month of August, 1909, I received a letter from Mr. Hays complaining of the delay of Messrs. Davis in carrying out their contract. I do not know that it is necessary that I should read that letter—the House is familiar with it. Suffice it to say that in that letter Mr. Hays called my attention to the fact, as he alleged, that Messrs. Davis had done nothing at all towards the completion of their contract, that they were in default, and that therefore the contract ought to be cancelled. This afternoon my hon. friend from East Simcoe (Mr. Bennett) rather took me to task for not having answered that letter. How does he know I did not answer it? He could not know from the report, because the commissioners did not ask me. It so happened that at the time this letter was written to me I was not in Ottawa, I was in the country, but the letter was forwarded to me from my office, and I answered it in this way:

Arthabaska, P.Q., August 12, 1909.

Dear Mr. Hays,—I am in receipt of your favour of the 2nd instant. I propose to return to Ottawa before the end of this month and if possible will see you in passing through Montreal.

Some hon. MEMBERS: Oh, oh.

Sir WILFRID LAURIER: And I saw Mr. Hays when passing through Montreal.

Some hon. MEMBERS: Oh, oh.

Sir WILFRID LAURIER: What more could I do than discuss the matter with Mr. Hays? Will any one suggest what else I could have done? I did one other thing, I referred the matter to Mr. Parent, the chairman of the commission. I have to take issue with some of the statements that were made in that letter of Mr. Hays advising me that Messrs. Davis had done nothing at all towards the completion of

their contract. Having been appealed to, I thought it might be my duty to make some inquiry as to how the matter stood and I learned that it was contended on the part of Messrs. Davis that they had taken steps towards proceeding on their contract. Everybody knows that in railway construction in those distant far-north parts of the country which were then without communication, it was the first duty of a contractor, and perhaps the most difficult, to get supplies to the scene of his operations. Generally, this could only be done in the winter. Messrs. Davis had two lines by which they could try to reach their contract; one of which was by the Temiskaming railway, and then taking advantage of the railway westward towards Cochrane which was then under construction. The other course was to take the supplies by the Canadian Pacific railway to Nipigon, then use Nipigon lake, carry supplies to the northern shore of that lake, and then use rivers which flow from the north, or, if the rivers could not be used, build a line across. I was told that Mr. Davis had sent a party of surveyors to Nipigon to survey the country and to ascertain whether or not he could take his supplies over that line; I was told that he was engaged in that work during the entire winter, and that he found that there would be no advantage in using this line in preference to the Temiskaming railway, and there the matter stood. It was represented to me that the summer was lost and that they had to wait for the next winter. It was a question whether Mr. Davis was in default; I came to the conclusion that it would be a very risky thing to attempt a lawsuit under such conditions, and that when the contractor had done what he could it would not be fair to him to take any such course. Messrs. Gutelius and Staunton, however, take a different view. On page 52 of their report they say:

> This letter does not contain one reason—

That is the letter of Mr. Parent in answer to Mr. Hays.

> —which justified the commission in its refusal. The contractors were clearly at that time a whole year in default and could have no legal or moral claim to any consideration from the commission.

The commissioners say that Messrs. Davis were clearly in default. Where did they get that evidence? The commissioners examined Mr. Davis under oath, and examined him upon this very contract. If they believed Mr. Davis to be in default, should they not, in justice to him, have asked him whether or not he was in default and to have asked for his reasons? We have here the evidence of Mr. Davis; every hon. gentleman has it in his hand, and can read it—and not a question was put to him upon this point. I shall read to the House all the questions which were put to Mr. Davis with regard to contracts 16 and 17, and which will be found on pages 658 and 659 of the report:

> Q. In connection with contracts 16 and 17, there were two contractors tendering, M. P. and J. T. Davis and the Grand Trunk Pacific railway. Was there any arrangement between you and the Grand Trunk Pacific railway in connection with these contracts?—A. No, sir.
>
> Q. You sub-let these contracts to Mr. M. J. O'Brien and his associates?—A. Yes.
>
> Q. Was there any arrangement between you and M. J. O'Brien in the tendering for these two contracts?—A. No, sir.
>
> Q. M. J. O'Brien did not know he was going to get that contract if you secured it?—A. No, sir.

These were all the questions asked by Mr. Gutelius on that particular point. But the chairman took a hand in the matter, and proceeded to examine Mr. Davis. These are the questions which were put to the witness by Mr. Lynch-Staunton:

> Q. I want to know whether or not there was ever any pressing by the commission to you to commence the work on contracts 16 and 17?—A. No, we got that contract.
>
> Q. Yes, but I am just asking you that. I inquired from Mr. Ryan and he tells me there was not. I just want to have a confirmation of it on your part.—A. I do not think so.
>
> Q. Do you know whether or not there was ever any pressing or urging by the commission to O'Brien and Company to speed the work after they obtained assignments of the contract?—A. No, sir.

One would have imagined that the chairman would have asked Mr. Davis: you have had that contract since October, 1908; what steps did you take towards the performance of your contract? One would have thought that in this way Mr. Davis would have been given an opportunity to state whether or not he had taken any steps to carry out the contract, and if in the opinion of Mr. Staunton the steps taken had not been sufficient, he could have asked Mr. Davis to give reasons to justify his default. Not a question was asked Mr. Davis along this line; yet the commissioners have the audacity to say that Mr. Davis was in default. I ask every hon. gentleman who sits on the other side of the House: is that the kind of justice they would like to have meted out to them? Is that the kind of treatment they are pleased to call British justice? Is it not a principle of British justice that a man is given an opportunity to state his case and give his reasons before a judge

finds him guilty and passes sentence upon him? I say that the very element of simple, ordinary justice was denied to the man who was reported by the commissioners as being in default. I call this not justice, not fair play, not honesty; I call it partisanship, pure and simple.

But it is in the conclusion of their report especially that the commissioners show their animus and disclose the spirit which has inspired their conduct in this whole matter. In that part of the report they attack the construction of the line from Lévis to Moncton. What was their authority for doing so? The construction of the line was a pure question of policy, within the exclusive jurisdiction of Parliament and of the Canadian people. Can we conceive of the Government asking these two men to report upon a question of policy which had been twice submitted to the Canadian people? No, Sir, the Canadian Government knew better; they did not confide such authority to the commissioners. The Order in Council called for one thing and one thing alone, and that was the investigation into the construction of the road. The Order in Council asked:

> For an investigation in respect to the Transcontinental railway between Moncton and Winnipeg, now being constructed under commissioners in accordance with the National Transcontinental Railway Act of 1903, chapter 71, and such investigation should be of a full and comprehensive character, covering all matters bearing on the actual construction of the railway and expenditure thereon, whether direct or indirect, the system adopted for such construction, and the management of the undertaking generally.

Their mission was to investigate how the money had been expended; whether it had been expended economically or otherwise, fraudulently or otherwise, extravagantly or otherwise, but they had no authority whatever to pass judgment upon a question which was one of policy—whether it was wise or unwise, politic or impolitic, to construct that railway or any part of it. Having no authority, then, to do so, why did they go into that question? Not content with that, they made a comparison between the Transcontinental and the Intercolonial. What was their authority for that? They had none whatever. Where did they get their information? They examined fifty-eight witnesses, and, speaking subject to correction, for I do not pretend to know the depositions of these fifty-eight witnesses with such minuteness as to be able to risk a definite statement, I submit that they did not get their information from anything that was deposed under oath by any one of these witnesses.

But, Sir, the source where they found the condemnation of this part of the railway is not far to seek. That was an echo of the speeches of Mr. Lynch-Staunton in 1904 and 1908. He simply put in condensed form what he had been stating in more extended form on many platforms in the province of Ontario. I say in Ontario because we must remember that, as far as that part of the line is concerned, the Conservative party was not a unit upon it. There were those in the Maritime provinces who were in favour of that extension of the line; but in the province of Ontario, on the contrary, every member of the Conservative party was against the construction of the line not only from the St. Lawrence to Moncton, but from Cochrane to Quebec as well. In this very debate the Minister of Customs, now acting Minister of Railways and Canals (Mr. Reid), gave us the benefit of his opinion. On the day this debate commenced the Minister of Customs said:

> I believe that if the Grand Trunk Pacific had been permitted to carry out the charter as proposed by them when they came to Parliament, namely, to build a line from North Bay through to the Pacific coast, at least $100,000,000 would have been saved to the people of Canada.

Of course, if the Grand Trunk Pacific had been allowed to build only from North Bay westward probably the country would have saved $100,000,000, and if the Grand Trunk Pacific had not been allowed to build at all, the country would have saved $200,000,000. Not very long ago the Minister of Finance condemned the building of the line east of Cochrane. He said:

> If a fraction of the money that has been spent on the National Transcontinental railway between Moncton and Cochrane had been spent for agriculture, I do not believe this question of the high cost of living would have been to the front to-day.

I am sorry that my hon. friend the Finance Minister is not in his seat, if he were, I would recall to him that in these words of his there is a little bit of demagogism. Let that pass to-day, we can meet again at Phillipi. But there is the opinion of my hon. friend the Minister of Customs, reflecting that of the whole Conservative party of Ontario, that the line should have been built from Cochrane westward, and that the whole line from Cochrane eastward should have been set aside. In other words, the opinion of the Conservative party in the province of Ontario was that we should have built the railway from the West to Cochrane, and

then let the Grand Trunk Pacific bring the trade to the old Grand Trunk system with Portland as its terminus. We would have saved $100,000,000, says my hon. friend the Minister of Customs, but how much would we have lost of national honour, national profit and nationhood. I have to say to my hon. friend the Minister of Finance that there were overwhelming reasons why this road should have been built east of Cochrane, reasons of a local nature, and reasons of a national character. When we started the idea in 1903 there were many misgivings as to the character of the country which we would open north of the Laurentian mountains. It was supposed that that section of the country, which had up to that time been uninhabited, was uninhabitable, that it was a desert and could be nothing else. We had information, also, that in that section of the country there was a high plateau equal to any portion of the valley of the St. Lawrence or of the valley of the Great Lakes. We now know, the fact is beyond dispute at the present time, that there is a valley east and west of lake Abitibi, 700 miles long and between 60 and 100 miles in width, of the most fertile soil there is on this continent of America, which will grow everything that is grown in the valley of the St. Lawrence or the valley of the Great Lakes except pears and peaches. We know that there are immense rivers flowing from the mountains towards Hudson bay with immense capacities of water-power development. We know, further, that the resources in pulpwood are incalculable, and that if the Governments of Quebec and Ontario are wise and understand how to husband their wealth, these resources will be inexhaustible for all time. It is not a rash prediction to say at this moment that within the life of men now sitting in this Chamber the greater proportion of the paper manufactured on the continent of America will be manufactured along that line of railway.

Sir, this being the character of the country, and for local reasons alone, setting aside for the moment any reason of a national character, I ask the Minister of Finance would it have been fair that we should have built that railway west of Cochrane and left undeveloped that portion of the territory from the St. Lawrence to Cochrane? Would it have been fair that the province of Ontario should have had the benefit of that development, and that the province of Quebec, which contributes its share to the revenue, should have been left behind? Sir, that would be intolerable to think of; and if the Minister of Finance and the Minister of Customs will reflect upon their language of the past, they will henceforth come to the conclusion that this line is one of the best portions of the Transcontinental railway.

What of the portion of the line from the St. Lawrence to Moncton? I had better first quote at length the conclusion of the commissioners:

> This commission does not think that the National Transcontinental railway should have been constructed east of Lévis, which was done at a cost of $35,000,000 first,—because the Government at that time had a railway in operation between Lévis and Moncton, the Intercolonial; second,—because the National Transcontinental railway would only be 33 miles shorter; third,—because the gradients on the National Transcontinental railway are greater than those on the Intercolonial railway; and fourth,—because the grades on the Intercolonial railway can be reduced to four-tenths per cent eastbound and six-tenths per cent westbound, whereas it is practically impossible, according to the construction of the National Transcontinental railway, to reduce the 1.10 per cent grade at 146 miles west of Moncton and the 1.10 per cent grade at lake Pohenagamook.
>
> The traffic on the Intercolonial railway is such that it will in a short time be a business proposition to reduce its gradients which when completed will make it the low grade line between Lévis and Halifax, rather than by way of the National Transcontinental railway, and it is inconceivable that the grade revisions on the Intercolonial railway above referred to will cost more than half of the amount of money expended in the construction of this portion of the National Transcontinental railway.

This is very positive language; but truth and justice will in the end prevail. Justice did prevail in the end, and the end is not far off. It comes in the next paragraph to which I invite the attention of the House. After the building of that section of the railway has been absolutely condemned by Messrs. Gutelius and Lynch-Staunton, they go on to say:

> While there may be some reason for the construction of a railway through the timber districts in the eastern portion of the province of Quebec, the construction of the railway from Edmundston to Moncton was not justifiable because of the lack of local business along this line which two years of operation has already proved.

After all, there was some local reason for building a railway through the timber districts in the eastern portion of Quebec. While there was some reason for the con-

struction of a railway through that portion of the province of Quebec, the railway should, according to the commissioners, have been left in the fields as the Intercolonial was at Lévis years ago, and should not have been prolonged to a point where it could become a transcontinental railway. What sort of reasoning is that in the mouths of these commissioners? If I were to ask these commissioners what local traffic there is on the Canadian Pacific railway between Sudbury and Port Arthur on the lake Superior line, they would have to tell me that there is not one dollar of local traffic on that section of the road. But is that any reason why the Canadian Pacific railway should not have been built? If I were to ask these commissioners to show me one of the many transcontinental railways on this continent every inch of which is productive of local traffic, they would have to admit that there is not one. Could there be anything more partisan than this condemnation of the Transcontinental railway because 99 miles of it, or something like that, would not be productive of local traffic?

The commissioners have admitted that there might be some reason for the construction of a railway through the eastern portion of Quebec, and so there is. Many years ago a charter was given by this Parliament for the construction of a railway in that very section of country; and many years ago that very road was subsidized by the Parliament of this country. It is well known in Quebec that a respectable and powerful company, the Quebec Central Railway Company, was ready and anxious to build a railway in that district. Was it not better if there was need for a local railway that we should make it a part of the Transcontinental? But all these reasons of a local nature are superfluous in this debate. The day is past for criticising that enterprise. To-day the necessity of a railway from ocean to ocean and on Canadian soil is no longer disputed, it is admitted everywhere. It is not disputed in the city of Halifax, which has never received from the Intercolonial the share of the traffic of this continent to which it is entitled. It is not disputed in the city of St. John, which, to bring to its port the western trade, has made sacrifices of almost heroic proportions. It is not disputed in the city of Quebec, which has built its hopes of a new birth on this transcontinental railway. It is not disputed in Montreal, which is anxious to be connected by branch lines with the trunk lines. It is not disputed in Winnipeg; it is not disputed in the western provinces, whose stupendous production is seeking an outlet in all directions, north, south, east and west. When we remember, as has been stated more than once on the floor of this House by my hon. friend from Edmonton, that this year we have 400,000,000 bushels of grain with only 18,000,000 acres under cultivation, And when it is remembered that we have 150,000,000 acres immediately available for tillage, and another 150,000,000 fit for tillage with but little preparation, it is evident to any man who has a proper conception of Canada that we must have that railway in order to do justice to all parts of Canada. Such were the views which influenced us and such were the views which were not accepted by our opponents. If the Conservative party could not rise to the height of this conception perhaps it was more their misfortune than their fault, but it is their fault to-day if they degrade that road from the original conception of the Transcontinental railway simply to make it from Cochrane a local road; a branch for the Canadian Pacific railway.

Some time after the Conservative party came into office we learnt that the character of the road was degraded, and momentum grades had been substituted for the uniform grade specified in the contract. I do not propose at this moment to enter into technicalities as to the effect of momentum grades, but there is one thing which I am going to state to the Government and upon which I impeach them, and it is that they have made those changes without consulting the Grand Trunk Pacific Company and have thereby given the Grand Trunk Pacific power to repudiate their part of the agreement.

When Major Leonard was appointed as commissioner of this railway we were told that at least we had a man of railway experience capable of dealing with these matters. His, it was said, was an experienced hand. We had a right to expect that when Major Leonard decided to change the grade of the railway and the character of the road, he would take the trouble of getting the consent of the Grand Trunk railway which is to lease that road and have joint supervision of it. But we know from a letter addressed by Mr. Chamberlin to the commission that no such precaution was taken. On the 18th day of July, 1912, the following letter was addressed to Major Leonard by Mr. E. J. Chamberlin:

July 18, 1912.

Major R. W. Leonard,
Chairman, Transcontinental Commission,
Ottawa, Ont.

Dear sir,—I learn from our engineers that the standard of work on that portion of the Transcontinental railway between Lake Superior Junction and Cochrane, which was at the outset adopted and has so far been complied with, is being departed from, and that instead of four-tenths grade and permanent structures, you have authorized grades up to one per cent and the erection of temporary wooden structures. In regard to this I would call attention to clause 7 of this agreement of the 29th July, 1913 which provides that the work of construction of the eastern division shall be done according to the specifications approved by the company and shall be subject to the joint supervision, inspection and acceptance of our chief engineer and the chief engineer of the commission. I beg to say if this work is done in accordance with what I understand to be your recent instructions, it will not be in compliance with the agreement nor satisfactory to this company and cannot be accepted.

Mark the words, and cannot be accepted! So, according to this, the Grand Trunk Pacific is at liberty to refuse that part of the road and the consequence will be that the traffic will go as far as Cochrane, then, instead of going to Quebec, will be turned to the right towards the old Grand Trunk system whose terminus is at Portland in American territory. We have had no reason yet assigned to show why this change should have taken place, except the reason of economy. How much has been economized upon that? We have not yet learned. The commission have told us that if momentum grades had been adopted, $6,000,000 would have been saved, but the commission has not told us, Major Leonard has not told us, the Minister of Railways and Canals has not told us, how much this change of grade has saved to the country. It would be a very small sum after all and for that small sum the future of the road is put in jeopardy.

Nor is that all. Since the commissioners set out to find fault with what has been done by the old commission and to show their extravagances, how is it that they have not set down as one of the extravagances of the commission the purchase of 300 acres of land at Cap Rouge at $350 an acre for the purpose of putting the workshops of the Transcontinental railway at Quebec? This selection was made at Cap Rouge as a site for the workshops. It is no longer an issue now. The Government is bound to build workshops upon that section of the road. That has been settled by the arbitration of Sir William Whyte. The old commission was to build the shops at Cap Rouge, but now Major Leonard has changed the site to St. Malo. Two or three days ago the hon. member for Dorchester (Mr. Sevigny) asked me if I was opposed to the transfer of the shops from Cap Rouge to St. Malo, and I understood the point of that question very well. The point is that St. Malo is in the constituency which it has been my pride to represent in this House for more than thirty years. I could not very well understand the animus of the hon. member but, Sir, my answer to his question is that if this transfer of the site is in the interests of the railway I am for it; if it is against the interests f the railway I am against it. The only guide I have in this matter, the only guide my electors, whom I know well, have in this matter is that we should do everything that can be done to make that railway a success and to give the city of Quebec the opportunity of having the trade which must come from the West over the road. That is the first, last, and only consideration. Whether the change is right or wrong I await the opinion of the engineers, and I want to know what the reasons are which induced the engineers to change the shops from Cap Rouge to St. Malo. Reasons there must be since we have now at the head of the commission an experienced railway man,—Major Leonard. I am sure that Major Leonard will explain to us what advantage there is to this railway in moving the shops, which are projected on the railway at Cap Rouge, a few rods only from the St. Lawrence, and putting them in the valley of the St. Charles at least eight miles from the railway. The shops to-day are not on the railway. Somebody may say: surely you do not mean to tell me that these shops destined for the Transcontinental railway are not upon the line of railway? I say they are at least eight miles from the line of railway and to get access to them a new line has to be built, or, as I am told, a tunnel has to be built. My hon. friend the Postmaster General (Mr. Pelletier) told us one day that he wanted to have a tunnel in order to find the heart of Quebec, and know where it is, and the Prime Minister told us also when he was in Quebec that we were to have a tunnel to communicate with the shops and the station. If this tunnel is built I understand that the distance will be shortened and that the shops will not be eight miles from the railway, but only about half a mile. At all events, that is the condition of things. But we must presume that it is all right, although it sounds very absurd, because it was done by a man of railway experience. If it is all right to take these shops eight

miles away from the line of railway and put them in the valley of the St. Charles instead of in the valley of the St. Lawrence, then, Sir, we must condemn the commission for having spent $100,000 in buying the site for these shops at Cap Rouge.

But that is not all. There is also to be a station somewhere in Quebec. The late commission had selected the Champlain market site for the station, a site at the very point where the line reaches the St. Lawrence, and if the station had been put there, passengers could leave the station and walk directly on the steamer. Now it appears that a new arrangement has been made with the Canadian Pacific Railway Company whereby there shall be no station on Champlain market, but the station shall be at the Palais, in the valley of the St. Charles, a considerable distance from the Champlain market. The site of the Champlain market had not been selected at haphazard; the commission had taken every precaution to select the proper place for the station. In the month of October, 1906, the following circular was issued by Mr. Parent:

Ottawa, October 2, 1906.

Dear Sirs:—

Re Quebec Terminals.

I have the honour by direction of the board to advise you that the commissioners have had under consideration the matter of terminals at the city of Quebec for the National Transcontinental railway, but consider it desirable, before making a recommendation to the Government of Canada on this important question, to obtain an expression of opinion from the accredited representatives of the railway and steamship companies having interests in the city of Quebec, the Quebec Harbour Commissioners, and the Quebec Board of Trade, on the question of joint terminals.

The commissioners have accordingly arranged to be in the city of Quebec on Friday, the 12th instant, and would be pleased if your corporation would have a representative present to discuss the matter. The meeting will take place at the Transcontinental railway offices, 147 Mountain Hill, in the city of Quebec, at 10 a.m., Friday, October 12 instant.

Besides the Quebec Bridge and Railway Company, the following corporations have been invited to send representatives to the meeting: The Canadian Pacific railway, the Grand Trunk Pacific railway, the Grand Trunk railway, the Intercolonial railway, the Delaware and Hudson railway, the Great Northern railway, the Quebec Central railway, the Quebec and Lake St. John railway, the Quebec Railway, Light and Power Company, the Allan Steamship Line, the Dominion Line, the Leland Line, the Quebec Harbour Commissioners, the Quebec Transport Company, Limited, Mr. E. C. Fry, Lloyds agent, etc., the mayor of the city of Quebec, the chairman of the Quebec Board of Trade, the chairman of the Quebec Shipping interests, Mr. Power, M.P., Quebec West, and Arthur Lachance, M.P., Quebec Centre, have also been invited to be present.

149½

All the parties here invited, except the Canadian Pacific Railway Company, were present on the day mentioned, and a motion was passed referring the matter to a large committee, which in turn appointed a sub-committee, which consulted agents, and made a report. On the 20th day of November, a month later, the committee met again, and on that occasion the Canadian Pacific railway was represented by Mr. McNicoll, and the following resolution was then adopted:

Recommended that the Champlain market be made the passenger and freight station for the present, at the same time contemplating that at a future date a passenger station be built on the upper level of the city. Recommended that a terminal company be formed by the different railways using the terminals to take over the bridge and its approaches and all the terminals. That part of the cost be assumed by the Government and part by the railways interested as may be agreed upon hereafter, and that legislation be passed at this session of Parliament to sanction such an agreement.

Acting upon this unanimous resolution of all the interests of the city of Quebec, the Champlain market was determined upon as the station, after numerous and complicated negotiations with the city of Quebec. When we went out of office, plans were ready, tenders had been asked for and the contract was signed for the completion of that station. That contract has been cancelled by the present Government in order to have the station not in the valley of the river St. Lawrence but in the valley of the river St. Charles in conjunction with the Canadian Pacific railway. What reason can be assigned for such a change? I have yet to hear a single valid reason why the Transcontinental railway should be made an adjunct, a branch line, of the Canadian Pacific railway. If there is to be a joint station, I could understand why the joint station should not be in the valley of the St. Charles river, but in the valley of the St. Lawrence river, in the vicinity of the Champlain market; but to carry the station from the St. Lawrence river over the other side of the hill, into the valley of the St. Charles river, is putting a blemish on this great national enterprise.

What has been done since then? Three years or more have elapsed, and to-day, if I am correctly informed, the plans are not yet prepared for the building of a station at the Palais. Two days ago the following paragraph appeared in the Quebec Daily Telegraph:

Quebec may secure the desired union railway station—some time.

The latest intimation in regard to the construction of the proposed station is to the effect that the work of erection will be commenced as soon as the plans are prepared.

This exceptionally interesting piece of information has been conveyed to the council of the Quebec Board of Trade in a letter from Mr. R. W. Leonard, president of the Transcontinental Railway Commission, in reply to a letter sent him by the council of the board of trade.

This is the latest information that the construction of the proposed station is to take place as soon as the plans are prepared. How is it that there is not a word in the report of the investigating as to this? The object is very obvious. The commissioners could not touch upon this matter without showing at the same time that the present Government, the men who had the responsibility of finishing this work, are at this moment degrading and changing that road to make it a local road from Cochrane, and a branch of the Canadian Pacific railway.

During this debate it has been my privilege to be taken to task more than one in regard to this enterprise.

11 p.m. I have been told again and again that I am to be held responsible for the construction of this railway. If this statetment, charge, accusation, whatever it may be, is intended as a reproach or a stigma, I accept it as an honour. I hold myself largely responsible for conceiving and trying to carry out the idea of a transcontinental railway on Canadian soil, the best and the shortest of all railways across the American continent. The reasons which impelled me to this course are as strong in me now as they were then. Our first object was to give to the farmer of the West at all seasons, winter and summer, an open communication to the markets of the world, which would never fail; which would relieve him from the necessity of being forced to market his crop between harvest and the close of navigation, thus glutting the market at a time of low prices.

It was our aim and purpose also to open the northern section of our country. If ever there was a danger to the Canadian Confederation, it arose from the fact that there was and is yet north of lake Superior a long stretch of country uninhabited, and supposed to be uninhabitable. It was said that, if that stretch of country was not filled, if the two branches of the community were not brought more closely together, there was a danger that they might drift apart. The Canadian Pacific railway was built at a time when the northern portion of the continent was not known as we knew it in 1903. If the country had been known in 1881 as we knew it in 1903 it is probable that the line of the Canadian Pacific railway would have been placed north of the Laurentian mountains. The line was made along the shore of the lake, and, in respect of the danger I speak of, the Canadian Pacific railway did no service to the country. Well, Sir, we conceived the idea of opening that section of the country, of filling it with a teeming population, of connecting Quebec and Winnipeg with a continuous chain of settlement—villages, towns and farms—so that we might have a continuous, uniform Canada from sea to sea.

[Sir Wilfrid Laurier.]

But that is not all. At that time we had only one transcontinental railway. It was, in my opinion and in the opinion of many, a blemish on that line that in connecting with our eastern seaports it was not all upon Canadian soil, and that part of it was in American territory. Sir, our relations with our neighbours are friendly—the Lord be thanked for it—but if we wish to have our relations continue friendly we must avoid complications, and one of the ways to avoid complications is to owe them no favours. Therefore, we wanted a line upon Canadian territory, so that happen what might, our transportation would be free from international antagonisms.

Nor is that all. We have heard from the Minister of Trade and Commerce (Mr. Foster), during this very session, of the great possibilities which he sees in the Oriental trade. We looked beyond the shores of our own continent and wished to be in the van with the shortest and best route between the Orient and Europe.

All these considerations impelled us—to what? To construct the best road that science could devise or money could build—I use these words for a far nobler purpose than that for which they were used before—our intent was to build that railroad for the development of the higher civilization. We applied ourselves to the task; we fell before the task was completed. And now we find that the men responsible for the completion of the road are trying to degrade it and to reduce this ideal transcontinental railway to a mere local branch road. Sir, responsibilities there are on this side, as responsibilities there are on that side also. On this side we have the responsibility for building; on that side they have the responsibility for destroying. Our responsibility we accept; theirs they cannot evade.

Rt. Hon. R. L .BORDEN (Prime Minister): Mr. Speaker, we have just been favoured by my right hon. friend (Sir Wilfrid Laurier) with an admirable but somewhat abbreviated summary of the speech of the hon. member for South Renfrew (Mr. Graham), added to which are a few decorative flourishes taken from the celebrated speech delivered by my right hon. friend on the 30th July, 1903, in this House. My right hon. friend has quoted fairly liberally from that speech and in his peroration he has described to us the dreadful consequences which, according to his apprehension, are to be the result of the dealings of this Government with the National Transcontinental railway. I would like to ask my right hon. friend here and now, who was the man that in 1911 sought to deprive this railway of traffic by the pact to which he asked this country to agree? That man is none other than the right hon. gentleman who has delivered the flamboyant address to which we have listened, and who on many an occasion since 1911 has renewed his adhesion to that policy. The whole genesis and meaning of the proposal which he brought down to Parliament in 1911 was that all the traffic which, according to his proposals in 1903, should have gone over the National Transcontinental railway should not, in the future, go over that railway, but should go over the United States railways. Here and now I challenge my right hon. friend to contradict that statement.

My right hon. friend has proceeded to deal with these commissioners very much according to the example given him by many hon. gentlemen on his own side of the House. He has told us that these men, neither by character, by position, by ability, or by reputation were fit for the office to which they were appointed.

An hon. MEMBER: That is right.

Mr. BORDEN: Who says that?

An hon. MEMBER: All of us on this side.

Mr. BORDEN: I wish to tell the hon. gentleman who made that statement, whoever he may be, that Messrs. Gutelius and Lynch-Staunton are equal in character, reputation, and record to any hon. gentleman on the other side of the House, bar none, from the highest to the lowest; and, that their character, their reputation and their record can be compared favourably with those who have assailed them in this House.

Now, just one or two observations with regard to these gentlemen. There are some hon. gentlemen in this House, I do not know whether they knew better or not—my right hon. friend did not go quite that far, but he did carry an insinuation along the same line—who sought to impress the idea upon the people of this country that ordinary usage had been departed from in that these gentlemen had not been sworn to the faithful performance of their duties. The right hon. gentleman avoided saying that directly, though he endeavoured to insinuate it, but he knew better, as did others on that side of the House I desire to say that the statute under which these gentlemen were appointed makes no provision for having them sworn, and my right hon. friend knew that when he made the insinuation. I challenge my right hon. friend to name one Royal Commission appointed during his fifteen years of office the members of which were sworn, and so I hope we shall not hear more of any such suggestion.

The character and record of these gentlemen have been condemned, but the highest tribute that could be paid to the thoroughness of their work is the bitterness of the attack that has been made upon them. We were told by the hon. member for South Renfrew that the report is so contradictory and partisan on its face that it condemns itself and requires no refutation, and yet the hon. gentleman spoke for seven hours in a most unsuccessful and vain attempt to refute it. The character of the two gentlemen is called into question by hon. gentlemen opposite. Mr. Lynch-Staunton is a lawyer in the province of Ontario who, in the eyes of hon. gentlemen on the other side of the House, bears the unspeakable disgrace of being a member of the Conservative party. That, of course, was enough to condemn him in their eyes from the first, but, so far as I am aware, no suspicion of a reproach has ever been levelled against George Lynch-Staunton in respect of his personal or professional career. Mr. Gutelius was in a still more perilous position, for he had to endure the misfortune of having been born in the United States, and, according to the expressed assertion or direct insinuation of many hon. gentlemen opposite, his report is absolutely untrustworthy for that reason. There are in this country many thousands of citizens of Canada —men in the East and men in the West—who were born in the United States

of America, and I do not think we have any better citizens than the hundreds of thousands who have come to Canada from the United States during recent years. But, according to the conception of hon. gentlemen on the Liberal benches, these men are to be regarded with disdain and to be looked upon as objects of abuse; and their statements are to be considered as absolutely untrustworthy because originally they were citizens of the United States, although they have seen fit to become good citizens of Canada, and to participate with us in the abundant opportunities which here reward their industry and intelligence. When hon. gentlemen in this House, whoever they may be, descend to argument or suggestion of that kind, it is very evident to me that their case is overwhelmingly weak.

It has been suggested that these two gentlemen were particularly under the influence of the Minister of Railways and Canals. One hon. gentleman told us that Mr. Gutelius was a personal friend of the Minister of Railways and Canals, and that therefore he would be sure to do whatever the Minister of Railways would desire. As a matter of fact, Mr. Gutelius had never met Mr. Cochrane until he was called to his office for the purpose of inquiring whether he would take up certain duties in connection with the Intercolonial railway, and undertake the investigation which has been carried out by Mr. Lynch-Staunton and himself.

Reference has been made to the supposed partisan character of this report and to the fact that Mr. George Lynch-Staunton, being a member of the Liberal-Conservative party, could not be supposed to be capable of making an impartial and judicial examination of this question. I would like to remind hon. gentlemen on the other side of the House that when certain matters were under discussion in 1908 and again in 1910, and when we moved for a Royal Commission, on both occasions the whole question was relegated to the investigation and consideration and report of a committee, first upon the Hodgins charges, and then upon the Lumsden charges. The majority of the Committee in both cases was of course composed of Liberal members. May I ask those who have put forward this charge whether or not the hon. gentlemen on the other side who constituted the majority of that committee and made the majority report were partisans, and if so, whether their reports were absolutely untrustworthy? Hon. gentlemen are on one of the two horns of the dilemma; either the investigations which they held in 1908 and 1910 were, according to their own statement, a mere mockery, or, on the other hand, their assertion that Mr. George Lynch-Staunton's report is partisan because he is a Conservative, does not stand. I desire to add in this connection that so long as hon. gentlemen opposite remained in power, they deliberately and successfully attempted, from first to last, to burke every investigation demanded by the Conservatives. Investigation was burked in 1908; it was burked again in 1910; and when, after it was burked in 1910 before a Committee of this House, we came solemnly before Parliament and asked that a Royal Commission be appointed to investigate the matter, what was the answer? Hon. gentlemen on the other side of the House stood by and voted it down, and if these gentlemen who are now in the shades of Opposition had remained in power there would never have been any investigation of the Transcontinental railway. No one knows that better than my right hon. friend (Sir Wilfrid Laurier). It is somewhat amusing to hear these hon. gentlemen talk now. All this story of overbreak, of excessive classification, of waste, extravagance and unjustifiable expenditure, was put forward by the officials of the Grand Trunk Pacific railway; put forward over and over again through the letters of Mr. Woods, their chief engineer; put forward over and over again and brought to the attention of the Government, and now, after the work has been almost wholly completed, what answer is given to us by some hon. gentlemen on the other side of the House? The answer is, that the hour is past when any effective investigation can be held. Vote down an investigation when there is an opportunity of doing it in the most effective way, then, when the time is past when it can be done effectively, stand up and say: it is too late now; we voted you down when there was an opportunity of holding an investigation, and now the facts can never be disclosed. If hon. gentlemen on the other side are satisfied with their attitude in that regard, I for one cannot congratulate them upon it.

My right hon. friend has not gone so minutely into this report as did the hon. member for South Renfrew, but he said sufficient to make it clear that he possesses very much less knowledge of the evidence and of the report itself, than even he

possessed in 1903 with regard to the cost of the National Transcontinental railway. My hon. friends on the other side of the House do not agree very well among themselves. Some of them say there should have been no investigation; some of them say there should have been an investigation; some of them say there should have been an investigation by a committee of the House, although in 1908 they burked any such investigation for the alleged reason that it should be carried out by experts, and not by a committee of the House. Some of them say it should be by a Royal Commission, and some of them say the contrary. Thus it will be seen they are not very well agreed among themselves; but I suppose I may accept the statement of my right hon. friend the leader of the Opposition, who told us frankly to-night that in his judgment there ought to have been an investigation, although he finds fault with the personnel of the commission. May I ask him why he did not appoint a commission in 1908 or 1910 when these charges were brought to his attention? To-night he says there should be an investigation, and is it not a fair question to ask him: Why did you not give the investigation when in 1910 we asked you to investigate, and when you had the power to name the personnel of the commission yourself? My right hon. friend is silent. Let me give the answer for him. It is that he never intended, had he been returned to power, to have any investigation.

I think that hon. gentlemen opposite, after all, should be rather grateful to this commission, and I shall tell them why. They ought to be grateful because the commission has shown that if proper care and supervision had been exercised, and if the Transcontinental commissioners had been of the right stamp, the right hon. gentleman and his Minister of Finance would have been out in their estimate of the cost only 200 per cent instead of 300 per cent. The commission have shown that this road might have been built for $120,000,000 instead of $160,000,000, but of course there does come the sting that the commission assert that the remaining $40,000,000 was needlessly spent and represents the waste and extravagance that was practised by their commission; and practised, as it would appear from the record, entirely with their concurrence and approval. The situation reminds me of an incident that once took place in a Nova Scotia court. A solicitor had put in a defence in an action against him upon a promissory note. He declared that he had signed the promissory note as accommodation for another person and under an agreement by which the plaintiff had agreed to give to him all his legal business in consideration of his becoming surety upon the note. The judge who tried the case decided as a matter of fact that no such agreement had ever been made. The case went on appeal before Mr. Justice Thomson, who, in giving judgment, dilated upon the disgraceful character of the defence, and said something like this: The learned judge, in his effort to save the defendant from the disgrace of his defence, found it necessary to disbelieve his evidence on oath. And so, this commission, in its endeavour to show that this road could have been built for only double the estimate of the late Government, found it necessary to show that that Government had been guilty of a great deal of waste and extravagance and negligence, to say the least.

What were the conditions in 1903 when my right hon. friend undertook to build the Transcontinental railway? We had the Canadian Pacific railway, a well established transcontinental road; we had in the West the Canadian Northern railway, recognized as a considerable system with no connections in the East; we had the Grand Trunk railway, a great railway system in the East with no connections in the West; and we had the Intercolonial railway, connecting Quebec, and, to a certain extent Ontario, with the Maritime provinces. The Canadian Pacific railway had experienced many vicissitudes but it had then become firmly established. My right hon. friend has paid himself the compliment of saying that he undertook the project of building another transcontinental railway. I will go a little farther and say that in 1903 or 1904 or thereabouts, he embarked upon the project of building two additional transcontinental railways. I say that, because, in 1903, 1904, 1905, 1906, 1908, 1909, 1910, and last but not least 1911, the Canadian Northern railway. under legislation passed by hon. gentlemen on the other side of the House, had acquired the status of a transcontinental railway, and they expressly and definitely recognized it as such in an Act which they passed in 1911. The Canadian Northern railway had established itself in the western part of Canada,

and had four thousand or five thousand miles of line. The Grand Trunk railway in the east of Canada had many lines of railway, and a great mileage, but it had no connection in the West. Thus the question arose as to another national transcontinental railway, and as to the connection of the Canadian Northern railway with the East, and as to the connection of the Grand Trunk railway with western Canada. My right hon. friend embarked upon his policy, and I then suggested to this House, on more than one occasion, that whatever was done with regard to the development of further transcontinental railways in Canada, the six hundred or eight hundred miles north of lake Superior ought to be eliminated, so far as the cost of carriage was concerned, so that the West would be brought close to the East, in the way of transportation; and the tolls otherwise payable over that six hundred or eight hundred miles of uninhabited territory, affording no local traffic for the present at least, would be absolutely abolished. My right hon. friend has referred to that mileage here to-night. Let me say to him that while it was undoubtedly necessary to have one railway through that country, I would think that any government might very well pause before embarking upon the project of building three railways across eight hundred miles of such territory. When my right hon. friend speaks of binding Canada together by transcontinental railways, no project could have more usefully served that purpose than to have acquired one national transcontinental railway across that area of eight hundred miles, double tracked, if you like, as traffic developed, and to have that line of railway operated free of cost to the producers of Canada, whether in the East or in the West. By such a policy it was entirely open to my right hon. friend to have done infinitely more to build up the national ports of Quebec, St. John, and Hailfax, and to bring the East and West of Canada together, than by the plan he did decide upon.

Let us leave that for a moment and see whether there was any need for an investigation into the proceedings of the National Transcontinental Railway Commission. My right hon. friend, in 1903, and his followers throughout the country, said that Canada was to have a national transcontinental railway for $13,000,000.

My right hon. friend did not mean that the cost of the road would be $13,000,000, but he did intend to say that the actual cash outlay to Canada, for interest during the seven year period of no rental, after the completion of this road, would be no more than $13,000,000. I have in my hands one of the campaign documents, issued in the election of 1904, wherein it is boldly stated that Canada under the policy of the Laurier Government was to have a transcontinental railway for $13,000,000. If at that time my right hon. friend had said $300,000,000 instead of $13,000,000 his followers would not have cheered so lustily. What was their estimate? His Minister of Finance estimated the cost at $61,415,000 for a road with 0.4 per cent grades and 6 degrees of curvature. It has cost $100,000,000 more. Why? I would have thought that the hon. member for South Renfrew, and particularly the right hon. gentleman himself who boasts of being the author of that project, would have taken some portion of their time to-night in explaining to the people of Canada why that road exclusive altogether of interest has cost $100,000,000 more than they said it would cost. Mark you, there was no question about it in the House, and there was no question about it in the country. Let me quote from that campaign document:

> **The feature of the bargain in regard to which most of this is done is the financial arrangement. It is an actual fact, an indisputable fact, that $13,000,000 will cover every cent of the country's expense in connection with the railway.**

An indisputable fact indeed! It has cost in all $300,000,000. It has cost without consideration of interest or rental $100,000,000 more than their estimate. My right hon. friend sat down after a two-hours' speech in which he gave not a single word of explanation as to the increased cost. It is right that the people of Canada at the present time, when this Administration has a certain responsibility for that which has been bequeathed to them as a legacy from their predecessors, should know just what this road is costing Canada, and what it is likely to cost Canada in the future. My hon. friend boasts of the bargain as a monument to his wisdom and foresight. The road from Moncton to Winnipeg, according to the engineers appointed by my right hon. friend, will cost $161,307,800. The construction will cover a period of eleven years and for the purposes of estimating interest I take four and a half years as an average which, at 3¾ per cent amounts to $27,220,670, or a total of $188,528,470. I have taken my estimate of the rate of interest from the permanent officials of the Department of Finance. Everything here that does not appear in the record I have taken from the

report made to me by permanent officials of the Government of Canada who were also permanent officials under the Administration of my right hon. friend. Add to the $188,526,470, seven years' interest during which no rental is payable, which amounts to $47,488,729, and you have a total cost. when the road is taken over and interest begins to be payable, of $238,017,199. This country under the bargain made by my right hon. friend must pay without recourse on the bonds guaranteed on the mountain section ($56,342,000), interest at 3 per cent for seven years, which amounts to $11,831,820. The country must also pay the cost of implementing the bonds under the agreement of 1904, clause 8, which will probably amount to to about $12,000,000, but which I am placing at the lowest estimate, $10,000,080. This gives a total of $259,929,019, which does not include the Quebec bridge, the cost of which has been placed at $17,000,000; it does not include the interest for three years on $188,528,470 at 3¾ per cent in case the net earnings of the eastern division are not sufficient to pay that rental, which would amount to $21,209,343, these two amounts totalling $38,209,343. Thus we have a grand total of $298,138,462 as the actual cost to the country of a road that was to be built at an actual outlay to Canada of $13,000,000. If the seven years' interest during the non-rental period were capitalized at the end of that period, the last item of interest would be $26,766,937, bringing the grand total up to $303,705,976, and that would not be an unfair method of computation.

I have not taken into account the fact that there will be in future a one per cent loss on the rental, because while we receive 3 per cent we must pay 4 per cent, and, that being capitalized, as pointed out by my hon. friend from North Grey (Mr. Middlebro), would amount to $45,000,000.

I have not taken into account the loans, $25,000,000, and the guarantee on the western section, $70,000,000.

So I think under the circumstances my right hon. friend will agree that the estimate which he made in 1903 was very misleading to the people of this country, and that he carried the general election of 1904 upon statements which have been absolutely and wholly falsified by the actual facts.

Under these circumstances, is there any man in this House, or is there any man in Canada, who will say to me that it was not the absolute duty of this Government upon obtaining office to make a thorough and impartial inquiry as to why the cost of this road was so enormously in excess of that which my right hon. friend declared in 1903. And let it be borne in mind that when we suggested in 1903 that no survey had been made, that the country had not been explored, and that my right hon. friend was taking a leap in the dark, his only answer was to point to a number of documents on the table and to inform us on this side of the House that we had mountains of information. The mountains of information were evidently not of a very reliable quality.

I place the situation before the country to-night, as one for which the present Administration is not responsible. We raised our voices against it in speech and by vote; we declared that before this project was undertaken there should be a reasonable businesslike inquiry, and that the highest eloquence and the most glowing periods of my right hon. friend in his speech in 1903 were a poor substitute for the reasonable businesslike inquiry which any reasonable man in this country would have insisted upon in respect of his own affairs.

My hon. friend the member for Pictou (Mr. E. M. Macdonald) has gone into the question of responsibility. He said that for everything but $98,000,000, I think, the present Administration is absolutely responsible. As I understand him, $105,000,000 had been paid out before we came into power, and, further, a great deal of work had been done which was not paid for. But does the hon. member for Pictou or any other hon. gentleman in this House suppose that the mere fact of a change of Administration enables the Government of the country to destroy or nullify contracts which have been solemnly entered into by their predecessors? Let us look at that idea for a moment. Suppose the directors of a bank undertook to erect a very expensive bank building, and made a contract for its erection, and that at the next meeting of the shareholders they were turned out of office as hon. gentlemen opposite went out of office in 1911; and suppose that the new directors said to the persons with whom the former directors had made a binding contract: We will not pay you, we were not the directors at that time. Could any one, whether lawyer or layman, have so little comprehension of the binding effect of a legal contract as to put forward any such argument? Yet that is precisely

the argument that was put forward by my hon. friend from Pictou. Absurdity can go no farther. When these hon. gentlemen, in 1905 and 1906, made contracts and bound this country to these contracts, it would be absolute repudiation if we attempted to get rid of them, and, even if we attempted to repudiate, the courts of the country would not permit us, as the hon. member for Pictou and his friends know perfectly well.

The hon. member for Pictou and other hon. members have referred to the personnel of the old commission. I was going to say a word or two with regard to that, but the hour is late and I shall refrain. All I have to say is this: If Sir Thomas Shaughnessy and Mr. Chamberlin when commencing to build a railway should employ a dry goods merchant, a druggist, and a barber to supervise the work, they would be pursuing very much the same course as was pursued by the late Administration, for the Minister of Railways and Canals stood in the same position in regard to the National Transcontinental railway as Sir Thomas Shaughnessy would stand in regard to the construction of any new line of the Canadian Pacific railway. These hon. gentlemen have attacked Mr. Leonard on the ground, forsooth, that he had had no experience. I have a letter under my hand which shows that Mr. Leonard, for twenty-five years before he undertook this work, was engaged continuously in railway construction and operation, and I doubt if you could find any man in Canada who has had a longer experience in that work than the man whom my hon. friend the Minister of Railways and Canals (Mr. Cochrane) selected as chairman of the National Transcontinental Railway Commission.

I did intend to go into this report to some extent had time permitted, but my hon. friend from North Grey (Mr. Middlebro), my hon. friend the Solicitor General (Mr. Meighen) and other hon. gentlemen on this side of the House have dealt with it very fully indeed. I have read this report carefully, and I have listened patiently to the criticisms that have been made on it. It may be that here and there you may be able to put your finger on some trifling error or inadvertence, and it would be singular indeed if such were not the case, as these commissioners, like all the rest of us, are merely human. But in the face of everything that has been stated to the contrary by hon. gentlemen on the other side of the House, and after listening most carefully to what they have had to say, I assert most confidently, and I am prepared to back this assertion by argument wherever necessary, that the report from begining to end, is substantially correct in every important particular. I am not now referring to questions of law or questions of policy, into which the commissioners have gone to some extent, but to the findings of fact. In so far as questions of law in regard to the Transcona shops are concerned, the commissioners have stated frankly the opinion of the Minister of Justice, and Mr. Lynch-Staunton has disagreed with it. My right hon. friend and the hon. member for South Renfrew seem to think that if Mr. George Lynch-Staunton entertained a conscientious opinion in regard to that he should have suppressed it, but I say that it was his duty to state it. In regard to the line from Quebec to Moncton, Mr. Lynch-Staunton has differed from views which I have publicly expressed in this House and on the platform but, I do not hold Mr. Lynch-Staunton in fault for that, in so far as he has felt himself called upon to make any statement in regard to the matter. I point out, that this very fact shows that these gentlemen were not under the control or influence of the Government, and that they were free to express their own thought and belief.

My right hon. friend and the hon. member for South Renfrew reproached us for circulating and publishing this report. What were we to do with the report when it came in? Were we to hide it? It might have been very consoling to them if we had adopted that course, but was it, or was it not, our duty to bring it down and lay it on the table of the House? What is behind this cry about our circulating the report and publishing it? These hon. gentlemen are very much concerned about the report because it justly reflects upon their administration of public affairs, and they can be excused for being a little insistent and a little angry. But I would like to say that if there was in the report, from first to last, as glaring a mis-statement as I heard from my right hon. friend to-night, I would send that report back for correction, or I would suppress it. He has stated that 250,000 copies of the report have been printed by the Government and circulated throughout the country. The actual facts are that

10,000 copies in English and 4,000 copies in French have been printed and my right hon. friend is only about 2,000 per cent out of the way in his statement.

Some reference has been made to the McArthur payment. While I had intended to go over some other mattters, I will not detain the House farther than to deal with that. It has been stated that the commissioners should be condemned because the Government have made a certain settlement with Mr. McArthur, who had contract No. 21. I am very glad that, first, the hon. member for Welland (Mr. German), secondly, the hon. member for Pictou (Mr. Macdonald) and, lastly, the right hon. leader of the Opposition have made some allusion to this, because it enables me to give a certain object lesson to the country and to the House, as to the actual results of the policy carried out by the late Administration. After certain questions had been raised as to over-classification and overbreak, an arbitration took place between the Grand Trunk Pacific Railway Company and the Government. If I remember correctly, that arbitration was carried out by Mr. Kelliher, Mr. Collingwood Schreiber, and Mr. Gordon Grant.

As a result of that arbitration deductions were made in the contractor's estimate of February, 1911, amounting to $512,821.16. It appears from some figures given by my right hon. friend that the deduction in respect to the work done up to the arbitration was only some $429,000, and I suppose the increased amount of $512,821.16 was due to some further estimates made afterwards in respect to which a like deduction was made. Mr. Gordon Grant, on January 23, 1913, submitted to the commissioners Mr. J. D. McArthur's final estimates on that part of the contract extending from mile 2.8 to mile 242. On the same date the board passed a resolution, which I have here, and as it is a matter of some importance, I think I had better place it upon 'Hansard.'

Extract from the Minutes of the Commission, January 23, 1913.

Letter from the chief engineer, dated 23rd instant, submitting for approval final estimate in favour of J. D. McArthur, for work done between the east end of the Transcona yard and the east end of his contract, known as No. 21, being from mile 2.8 to mile 242, district 'F,' under the contract between the commission and J. D. McArthur, dated May 15, 1906, was read, and the said final estimate approved by the commissioner on the condition that contractor McArthur shall accept the same in full settlement of all claims for work done on that portion of the line covered by the said estimate; and the secretary was directed to write to Mr. McArthur furnishing him with a copy of the said final estimate for his information; and if there are any items in it which he disputes, he will bring it to the attention of the chief engineer for further consideration; in the event of a satisfactory settlement with this final estimate, including all such large questions as classification, overbreak, excavations under water, etc., being arrived at with the contractor, then the unpaid estimates for work done on the portion of the contract between the east end of the Transcona yard and the Red river may be paid, less the usual ten per cent hold-back.

Then there is the following letter from Mr. McArthur under date of January 28, 1913, giving the reasons why he could not accept the final estimate. I think it is fair to the present commission, to Mr. McArthur, and to the Government that I should place these reasons before the House, and state distinctly what was done in regard to the payments of this claim.

Ottawa, January 28, 1913.

Mr. P. E. Ryan,
Secretary, the Commissioners of
The Transcontinental Railway,
Ottawa.

Dear Sir,—I beg to acknowledge receipt of yours of the 24th instant, which enclosed an estimate designated as being final for that portion of my contract with your commission, from mile 2.8 to mile 242, being part of contract No. 21.

This final estimate I cannot accept for the following reasons: It is not in accord with the progress estimates that were made by the ex-commissioners' engineers, while the work was in progress, estimates made by them in good faith with the full knowledge and consent of the ex-commissioners and the chief engineer, and on which they were perfectly well aware I was paying my sub-contractors, and they in the same good faith were paying their stationmen.

I understand large deductions have been made in this final estimate by reason of an award made on my work by a board of arbitrators, appointed by the ex-commission and the Grand Trunk Pacific Railway Company, to settle certain disputes that existed between themselves, but which disputes the ex-commission knew perfectly well were no concern of mine, and for that reason I was not a party to this arbitration and was not represented thereon.

Such being the case I herewith decline to accept any deductions on my work that were made by this board of arbitrators. My contract was made with the commissioners and I must protest and strongly object to any deduction being made on the work by an arbitration board to which I was not a party, or on which I was not represented.

Soon after the work was commenced the question of overbreak in rock cuttings came up and finally a meeting was called by the chief engineer under instructions from the commissioners to discuss and decide the matter. This meeting took place at Kenora and was presided over by the commissioners' representative, C. A. Young. The chief engineer, the district engineer and division engineers took part in the

meeting. As a result of this conference the commissioners' engineers allowed all overbreak in the progress estimates until the grading was completed, with the consent and knowledge of the commissioners and their chief engineer, Mr. Lumsden.

The actual amount of rock moved by me was more than double that indicated in approximate estimate under which the work was let. Owing to the limited time allowed me to do this work and the extreme difficulty of obtaining men, and the fact that both the Grand Trunk Pacific and Canadian Pacific railways were also grading in that vicinity, I was compelled to use every means in my power to overcome these obstacles. It was an absolute necessity to blast heavily in order to make satisfactory progress, as the Grand Trunk Pacific were representing to the commissioners that they would suffer pecuniary loss if the work was not finished on time.

I might say that during the season of 1910 I allowed the Grand Trunk Pacific, at the request of the commission, to operate over my contract, giving them possession of tracks, round houses, etc., although not in a finished condition, and the late commission held me responsible for these buildings, etc., in fact I was held responsible to the Grand Trunk Pacific for any derailment of their trains or wrecks that occurred while they were endeavouring to pull wheat over my work, and the pecuniary loss I was put to owing to being compelled to work my ballast train in conjunction with their traffic, cannot be estimated.

It can be readily seen that I suffered a great loss by thus agreeing to the request of the commission and assisting them to carry out their obligations to the country. For this I am asking no compensation.

I will venture to say that no work of this magnitude has ever been undertaken and completed in so short a time in Canada or in America, considering the position of the work, and we have an object lesson to-day in comparison with the dilatory manner the Grand Trunk Pacific are pushing their mountain work.

In conclusion, I claim that the work embraced in my contract will stand comparison with any work of its kind on the continent. I claim that under the provisions of the contract and the directions of the engineers, the returns made at the time are correct and, furthermore, were acted upon to the knowledge of the commission and by the directions of their engineers, settlements were made upon the faith of them.

Yours very truly,
(Sgd) J. D. McArthur.

Then, there is a letter stating the terms which Mr. McArthur is prepared to accept. I will explain how that came about 12 m. In consequence of negotiations between Mr. Grant and Mr. McArthur, on the 31st of January, 1913, Mr. McArthur wrote the following letter to Mr. Leonard:

Ottawa, January 31, 1913.

R. W. Leonard, Esq.,
Chairman,
Commissioners Transcontinental Railway,
Ottawa, Ont.

Dear Sir,—I herewith agree to accept in full settlement of all claims I have against your commission, for work done by me on that part of my contract between mile 2.8 and mile 242, known as contract No. 21.

The final estimate as made by district engineer A. G. Macfarlane, and of which I now have a copy in my possession, provided that any money that has been deducted from this estimate by reason of the arbitration of Messrs. Schreiber, Kelliher and Grant, be added thereto, less the sum of $150,000 (one hundred and fifty thousand dollars), which sum I herewith agree is to be finally deducted from the estimate for reason of over-classification in excavation, and for the waste of solid rock from cuttings by reason of excessive blasting.

Should my claim for the payment of solid rock in foundations at the price of three times item four be allowed by Order in Council, I agree to accept for this item such returns as may be made by the district engineer.

It is also agreed that when this final estimate is checked over should any clerical errors be discovered in the returns as made, the necessary additions or deductions will be made to or from the progress estimate yet to be returned for the work still being done on the incompleted portion of my contract west of Transcona.

Yours truly,
(Sgd) J. D. McArthur.

Then a letter from Mr. Grant, an engineer appointed by these gentlemen themselves:

Inspecting Engineer, F-21.

Ottawa, February 3, 1913.

The Commissioners of the Transcontinental Railway,
Ottawa, Ont.

Sirs:

Re contractor J. D. McArthur's final estimate.

In accordance with the resolution of the board, dated January 23, and the contractor's letter protesting the final estimate, addressed to the secretary, dated January 28, I may say that, after several days negotiation, I effected a settlement with the contractor, as regards all claims he has against the commission on that part of his contract between mile 2.8 and mile 242 (contract 21.)

The terms of settlement are contained in his letter, addressed to the chairman, dated January 31, copy attached.

These terms are, in my opinion, fair and just both to the commission and to the contractor.

I recommend that they be accepted and that you now release all progress estimates now due to Mr. McArthur, less than the usual 10 per cent holdback.

Your obedient servant,
(Sgd) Gordon Grant,
Chief Engineer.

Then a letter from the district engineer:

St. Boniface, Man., February 10, 1913.

Gordon Grant, Esq.
Chief Engineer,
Ottawa.

Dear Sir,

I herewith acknowledge receipt of a copy of the letter written by Mr. McArthur to the chairman, Mr. R. W. Leonard, dated January 31, last, in which he agrees to accept the final estimate prepared by me for the portion of his contract from mile 2.8 to mile 242, with a reduction of $150,000 from the amount that was

previously returned by the engineers on the work, this amount being less than that deducted by yourself in conjunction with Messrs. Schreiber and Kelliher, as arbitrators on questions in dispute between the commissioners' engineers and the engineers of the Grand Trunk Pacific Railway Company.

I note in Mr. McArthur's letter of protest addressed to the secretary of the commission, dated January 28, he states as follows:

> 'This final estimate I cannot accept, for the following reasons: It is not in accord with the progress estimates that were made by the ex-commissioners' engineers while the work was in progress, estimates made by them in good faith with the full knowledge and consent of the ex-commissioners and of the chief engineer, and on which they were perfectly well aware I was paying my sub-contractors, and they in the same good faith were paying their stationmen.'

The above and other statements contained in the contractor's letter are, to the best of my knowledge, correct, and for that reason I am of opinion that the sum above mentioned is sufficient to deduct from the original returns for any errors in judgment the engineers on the ground may have made in the matter of classification, and for rock wasted by reason of excessive blasting in rock cuttings.

That is to say, I consider the settlement you have made with the contractor is fair and just both to the commissioners and to the contractor.

My division engineers are also of the same opinion.

In fact, we are all glad to see this long drawn out dispute which has caused us all so much worry and trouble finally and amicably settled.

Your truly,
(Sgd) A. G. Macfarlane,
District engineer.
(Sgd) Geo. F. Richan,
Division engineer,
Divisions 5 and 6.
(Sgd) M. C. Macfarlane,
Division engineer,
Divisions 7 and 8.
(Sgd) N. B. MacTaggart,
Division engineer,
Division 9.

We, Gordon Grant and B. B. Kelliher, for the purpose of putting an end to all disputes and differences between the commissioners of the National Transcontinental railway and J. D. McArthur under the contract entered into between the commissioners and the said McArthur, covering work upon district 'F', hereby fix the sum of $150,000 as the total amount of the deductions to be made in respect of the said work in substitution for and in lieu of the deductions set forth in those schedules attached to the annexed declaration, signed by us and dated January 19, 1911, which have reference to the work done under said contract.

April 21st 1913.
(Sgd) Gordon Grant,
Chief engineer,
Transcontinental Ry.
(Sgd) B. B. Kelliher,
Chief engineer,
Grand Trunk Pacific Railway.

And so a settlement was made upon that basis. And I have obtained information from Mr. Gordon Grant, who is perfectly familiar with this matter, and who points out to me that Mr. Lumsden, in his circular, sent out with the concurrence and approval of the ex-commissioners said:

> The division and resident engineers in the ground should be the best judges of what is or is not so-called overbreak for which the contractor should be entitled to payment.

Now, it must be borne in mind that during the years 1907-8-9, while the work was being carried on, and during which time this rock was removed, the protests respecting overbreak and over-classification were being regularly received. No action was taken by the commission in regard to them, and the engineers were given to understand that their returns made out in accordance with the commissioners' circular were satisfactory to the commission and would be upheld by them. Therefore Mr. Grant considers, as any man would consider, that the contractor and his sub-contractors were justified in taking the same view, and they did take that view and paid their stationmen and sub-contractors on that basis regularly as the monthly returns went in. Consequently, Mr. Grant considered, as any lawyer in this House would consider, that the commission would not have a leg to stand on in court against Mr. McArthur. But for what reason? For the reason that the commission at that time were not carrying out their duties as the duties of the commission are being carried out to-day. And so I desire to point out this to hon. members of this House and to this country. It is perfectly true that $512,000 worth of work was done for which, according to reasonable business methods, this country ought not to pay on that contract; but it is equally true, that, owing to the acquiescence and approval and general conduct of the commission appointed by the late Administration, this country had to pay that sum, except $150,000 which Mr. Grant succeeded in having deducted in the settlement. But the net result is that the difference between these sums, $362,000, has been absolutely lost to this country—and it is only one instance out of hundreds—due to the fault of the late Government and the commissioners appointed by them.

And more than that, when we come to make a settlement with the Grand Trunk Pacific, no doubt we shall be confronted with the contention that in respect of that $362,000, and in respect of a great many other hundreds of thousands and millions of dollars, they ought not to pay

interest upon it because it was unnecessarily and unjustifiably incurred. And if my hon. friends on the other side can find any consolation or comfort in the result that is brought about by their default and the default of the commission appointed by them, I venture to say they are not doing justice to their own intelligence.

That, Sir, is a full, complete statement of the claim made by Mr. McArthur. I venture to say that the present Government made the best settlement they could make under circumstances and conditions brought about by the late Administration and their commission. The unfortunate part of the whole situation at the present time, is, that in respect of a great many other sums which ought not to have been incurred or paid out, the Government of this country will find itself confronted with the same legal difficulty which confronted it when Mr. McArthur refused to abide by the arbitration to which he was not a party, and threatened to take the Government of this country into court to enforce his claim.

I will not go into the report. I had intended to do so, but the hour is late. Let me say in conclusion: The Government finds itself confronted with the problem of seeing to the completion of two transcontinental railways which were initiated, supported, subsidized and guaranteed by our predecessors in office. We are confronted with the question of seeing them completed or of leaving them uncompleted. The responsibility for initiating the policy which has brought about that condition and for imposing this problem upon the country rests upon those who were then in office and are now in Opposition. But the responsibility for dealing with the situation which they created rests, as it presents itself to-day, upon the Administration. We are not afraid of that responsibility, and we shall deal with it as best we may. In dealing with it, especially in so far as it involves contractual or semi-contractual obligations affecting the public interest, we have to take into account the fact that as 'the King never dies,' so the King's Government never ceases though one party may go out of power and another party may come in. We shall give to the situation, which we did not create and which was brought about against our vote and our protest, the best of our energy and the best of our efforts with a full and abiding sense of the responsibility that rests upon us as trustees for the people of Canada.

[Mr. Borden.]

The House divided on the proposed amendment of Mr. Graham.

That the report of the commissioners appointed by the Government to inquire into the construction of the Transcontinental railway is so wilfully partisan and misleading as to be wholly unreliable; that the manifest object of the said commissioners was to misrepresent for party purposes rather than to investigate in the public interest, without regard to the serious consequences to the country or this great national undertaking; and that for the appointment of such commissioners, and for accepting and endorsing their report, the Government deserves the severe censure of this House.

Mr. GRAHAM: Had I not been paired with the Minister of Railways, I should, of course, have voted for the amendment I proposed in regard to the National Transcontinental Railway report.

Mr. PARDEE: I am paired with the Secretary of State. Had I voted I should certainly have voted for the amendment.

Mr. ROSS: I was paired with the hon. member for East Middlesex. Had I voted I should have voted for the amendment.

Mr. KAY: I was paired with the hon. member for Brome. Had I voted I should have voted for the amendment.

Mr. STEVENS: I was paired with the hon. member for Red Deer. Had I voted I should have voted against the amendment.

Mr. GUTHRIE: I was paired with the hon. member for Lincoln; If I had voted I would have voted for the amendment.

Amendment negatived, and main motion agreed to.

SUPPLY.

The House in Committee of Supply, Mr. Blondin in the Chair.

Department of Militia and Defence—Contingencies, $8,500.

Mr. LEMIEUX: What is the meaning of the item 'sundries, further amount required, $2,500'?

Mr. SAM. HUGHES: It is for Bell telephone, telegrams, travelling expenses of Fenian Raid Board, expenses of washing towels, transporting mails, postage, subscriptions and petty cash.

Department of the Interior—Contingencies, $35,000.

Mr. BUREAU: Would the minister explain the part of this item which relates to clerical assistance?

Mr. ROCHE: A large number of persons have to be temporarily employed during the summer months, and this is to pay their salaries.

Mr. PARDEE: What is that temporary help required for? $35,000 is a large amount.

Mr. ROCHE: We have had during the summer months as many as 120 temporary clerks. There are over 800 employees in the department, and there are times when the permanent staff are not able to cope with the work.

Mr. BUREAU: Are these temporary employees in the outside service?

Mr. ROCHE: No, they are in various branches of the inside service of the Department of the Interior.

Department of Customs—Contingencies, $5,000.

Mr. BUREAU: What are the sundries in this item?

Mr. REID: That is for minor repairs, etc., to the custom houses throughout the Dominion. Small amounts are paid out from time to time for this purpose, and we are short about $1,600.

Mr. BUREAU: Does not the Public Works Department attend to repairs to custom houses?

Mr. REID: There are some small things we have to attend to.

Department of Inland Revenue—To provide for the promotion of one clerk from the first division, subdivision B, to first division, subdivision A, with the rank of secretary, from October 1, 1913, $250.

Mr. BUREAU: Who is the clerk to be promoted to the first division?

Mr. NANTEL: Mr. Taylor, who is replacing Mr. Himsworth.

Mr. BUREAU: What are the sundries?

Mr. NANTEL: Extra employees during the session, and travelling expenses, etc.

Mr. BUREAU: How many extra employees are there during the session?

Mr. NANTEL: Four.

Post Office Department—Contingencies—Clerical and other assistance, $15,133.32.

Mr. MACDONALD: Before the minister takes up his main Estimates, he ought to respond to the Orders of the House and bring down the returns that have been ordered. The returns that are brought down from his department are different from those of the other departments. Every one of his returns is carefully edited; somebody goes over them carefully and abstracts letters which are frequently necessary in order to carry on the sense of the correspondence. Where the Postmaster General is shown by the file to have written a letter, the letter in reply to which it is written is frequently not on the file. Often these missing letters contain the essence of the whole matter, and the file becomes absolutely unintelligible owing to their absence.

Mr. PELLETIER: Of course, the standing instructions are that private correspondence should remain on the private file, and public correspondence on the public file.

Mr. MACDONALD: You did not observe that rule in the Department of Labour; you did not observe it in regard to me, but brought down letters marked private when it suited you to do so.

[Mr. Bureau.]

Mr. PELLETIER: I cannot follow what my hon. friend says as regards the Department of Labour. I am informed by my friend the Prime Minister that the right hon. leader of the Opposition has made a general complaint about that. Hon. gentlemen behind my hon. friend will bear me out that if they write about any return which is incomplete we try to supply the information required. In a large department like the post office, a document may be easily overlooked, but we are always glad to supply any information that may have been omitted by the officers preparing the files. If my hon. friend will let me know what returns he particularly wishes, I shall take special trouble to press the matter and have the returns prepared. A member of the Opposition has a right to receive returns containing information desired before the Estimates are discussed. Owing to the large number of returns ordered from my department, we have not yet taken up my Estimates. We are well under way in that respect, and hope to take them up before very long. If there are any special files not yet brought down and especially needed, I shall do my level best to meet the wishes of hon. gentlemen.

Mr. MACDONALD: I quite agree that it it not expedient, when an Order of the House is issued, that private correspondence and communications from representatives in Parliament should be brought down. I merely wish to observe that when the hon. gentleman's colleague the Minister of Labour produced to this House certain private letters I wrote to a previous minister, that exemplary rule was broken. I made no complaint at the time because I had no objection to the correspondence being made public, but several hon. members in this House regarded it as a very peculiar circumstance. When my hon. friend brings down a return in answer to an order of this House and produces a letter written by himself, or an official of his department referring to another document which he has received from somebody, when that latter document is not brought down the whole thing becomes unintelligible. Whoever in the hon. gentleman's department is responsible for this matter should comply with the order of the House in making the return.

Mr. LEMIEUX: Since the Postmaster General is willing to revise some of the incomplete returns brought down, might I ask him to add to the return brought down the other day about the purchase of a parcel post and rural mail boxes a list of the

members of the House who were canvassed by the department in regard to the choice of boxes. I understand that about seven boxes were inspected in the office of the superintendent, Mr. Bolduc. Mr. Bolduc says that he took a canvas of ninety-two members of the House and the majority reported in favour of a certain box. I would like to know the names of the members consulted. I have asked several members on this side of the House but they have not been asked to pass judgment upon the boxes. I think Mr. Bolduc should give a list of the names.

Mr. PELLETIER: I understand my hon. friend to say that Mr. Bolduc said so many members were canvassed, but that he did not give the names.

Mr. LEMIEUX: Yes. He said that over ninety members had been consulted. I do not object to that, it is only fair that the members should see the boxes. Some years ago we had the boxes in room 96, where all the members could see them. Mr. Bolduc says in this case that of the ninety odd members canvassed, seventy-five were in favour of a certain box.

Mr. STANFIELD: Regarding these boxes I may say that I was not invited to go in to see them, but I happened to be in there one day and Mr. Bolduc asked my opinion.

Mr. LEMIEUX: Perhaps 'canvas' was not the proper word for me to use. I meant that the opinion of the members was invited.

Mr. PELLETIER: I told Mr. Bolduc, who is the head of the rural mail branch, that as the boxes were for the benefit of the farmers of the country he might show them to members coming into his office in order to get their opinions as to the best box. I did not ask him to keep a list of the members who saw the boxes. I simply asked him to take their opinions so as to find out which box suited them best.

Mr. MARCIL: Will the hon. gentleman take the opinion of members as to the establishment of rural mail routes, or does he confine himself merely to our opinion as to the value of the boxes?

Mr. PELLETIER: I am always glad to hear opinions on both matters. What is the complaint about the routes?

Mr. MARCIL: Rural mail routes are in the interest of the whole community, Liberal and Conservative alike, and I want to know why members are not consulted as to the establishment of these routes, since you are willing they should be consulted as to the kind of boxes. In my constituency the member was not consulted, but a man not even a candidate, was consulted. I would not like to give my opinion on the rural mail boxes at least, if I am not to be consulted as to routes.

Mr. PELLETIER: The choice of a route is left with the inspector or one of his officers. He is supposed to consult the gentlemen who have signed the petition to have the route. I have not had any complaint, so far, that the members have not been consulted.

1 a.m. Mr. MARCIL: If you do not want the members to take any interest in the adoption of these routes, you are going the right way about it.

Mr. EDWARDS: Might I be permitted to say that previous to 1911 the Liberal Government did not consult the member of a constituency as to mail routes, if he happened to be a Conservative.

Mr. MARCIL: You have now the opportunity to improve on that.

Mr. EDWARDS: I am glad that my hon. friend thinks that method could be improved on. I am just giving my hon. friend the facts.

Administration of Justice—Further amount required, $3,000.

Mr. DOHERTY: This is required on account of the expenses incurred in connection with the penitentiary investigation.

Mr. BUREAU: I understand that an investigation was conducted into the fire at St. Vincent de Paul penitentiary, and that there was also an investigation at Kingston. To which does my hon. friend refer?

Mr. DOHERTY: This bears on the investigation at Kingston.

Mr. EDWARDS: I think the minister might leave this item over if it is to do with the commission appointed to investigate conditions in our various penitentiaries. The hon. minister said he would leave one item over until the report came down. I do not feel like voting an amount to pay the expenses of this commission before I see that report. I think I am taking a reasonable ground in making that objection. I am very doubtful if the commission will be entitled to any pay. Of course, that is not an opinion in which a great many would concur. If this item fixes the amount that these men are to be

paid for their work I do not think it should go through. I would like to know what amount these commissioners are to receive?

Mr. GRAHAM: Does my hon. friend want it struck out?

Mr. EDWARDS: No, I do not feel that it should be struck out but I think that I am perfectly entitled to ask that the item which goes to pay the expenses of this commission should not be passed until the commission has completed its work and presented its report.

Mr. EMMERSON: Unless the report is satisfactory to you, you are not satisfied that the commissioners should be paid?

Mr. EDWARDS: The hon. gentleman need not put words into my mouth that I do not utter. I will say all that I have to say without his assistance.

Mr. EMMERSON: I put that question in the tone of inquiry.

Mr. DOHERTY: There can be no possible objection to affording ever opportunity for discussing any question in connection with the penitentiary investigation. There are items in the main Estimates that are yet to be dealt with and they will afford that opportunity. This particular $3,000 is asked for as an addition to the sum voted for miscellaneous expenditures. The reason why our $10,000 vote for miscellaneous expenditure proved insufficient was that the expenses of the commission had to be met and they were not expected. The expenses of the commission have been incurred and have, in large measure, been paid in the course of the past year and we are dealing with the Supplementary Estimates for the year which has just expired. That is the only reason why there is any desire to pass this item now.

Mr. EDWARDS: The passing of this item would have nothing to do with fixing the amount they will be paid?

Mr. DOHERTY: The amount that they were to be paid was fixed at a certain rate per day together with a certain allowance for travelling expenses.

Mr. EDWARDS: What was the per diem allowance of the commissioners?

Mr. DOHERTY: $15 a day and $5 a day for living allowance in addition to actual travelling expenses.

Mr. EDWARDS: I do not think that is an exorbitant amount to pay commissioners if they are any good, but in this particular case I do not think these men are worth 15 cents a day.

Mr. LEMIEUX: What are the names of the commissioners?

Mr. DOHERTY: Mr. G. M. Macdonnell, K.C., Dr. Etherington, Kingston, and Mr. J. P. Downey, Orillia.

Mr. LEMIEUX: And they are not worth 15 cents a day?

Mr. DOHERTY: I can say that I am not willing to concur in that suggestion.

Mr. GRAHAM: Mr. Downey is the superintendent of the Orillia asylum?

Mr. DOHERTY: Yes.

Mr. GRAHAM: How much has the commission cost? There is some reason for the request of the hon. member for Frontenac (Mr. Edwards) although I would not be prepared to say that these commissioners were not worth 15 cents a day when the Government paid these other two gentlemen $65 a day. You are closing up the arrangement with these commissioners as I understand it?

Mr. DOHERTY: The report of the commissioners has not come in, so that their work is not absolutely completed. This is to cover the expenses incurred in the year that has expired.

Mr. GRAHAM: How much have they received?

Mr. DOHERTY: $4,288.90.

Mr. EDWARDS: When will this report be brought down? Will there be an item in the minister's Estimates under which we can discuss the report and the remuneration of the commission?

Mr. DOHERTY: I have not actually received the report yet. As soon as I have received it and have had time to take communication of it it will be brought down. I am expecting it every day. I was told that I might expect it about the middle of the month of March but it has not reached me yet. I understand that it is actually in process of being typewritten. As to there being an item, I have no doubt there will be some balance to be paid to them which will, of course, be in the Estimates for the coming year. In any event there are Estimates dealing with the expenditure on penitentiaries and I can assure the hon. gentleman that there will be no objection to his discussing this matter fully on any item.

Mr. BUREAU: Do I understand from the Minister of Justice that the investigation is now closed, and that all the expense in connection therewith has been incurred and paid, less the $3,000 that he is asking for now?

Mr. DOHERTY: The report of the commission has not come in, and therefore they cannot have been paid for their services because they are not completed. This is to provide an additional amount to what was voted, for miscellaneous expenditure for the year that has just passed, and which sum was $10,000. We are asking for an additional $3,000. The reason why the $10,000 did not meet the miscellaneous expenditure is that we had this unexpected expenditure upon this commission, which amounted to $4,228. We only require $3,000 additional to cover the amount expended in the past year.

Mr. BUREAU: These gentlemen are through with their work of examining witnesses? Are they to be paid $15 per diem while they are working on their report?

Mr. DOHERTY: I anticipate that they will be expected to be paid for the time that they actually devote to the preparation of their report. I have not yet seen the report.

Mr. BUREAU: I wanted to know whether this $3,000 would cover the per diem of these gentlemen while they were preparing their report.

Mr. DOHERTY: It covers simply what has already been paid to them in the past fiscal year.

Mr. BUREAU: Paid?

Mr. DOHERTY: Yes.

Mr. CARVELL: When the minister was speaking of the expense per diem, he said 'the per diem allowance.' Did he mean the per diem allowance as well as the $5 a day? He said that $4,228 had been paid as expenses. Does that mean per diem allowance as well as the expenses?

Mr. DOHERTY: That means the amount paid against the appropriation for the expenses of the commission, that is to say for their per diem allowance.

Mr. CARVELL: What further amounts will be required to meet the expenses of this commission? It seems to be a pretty large amount for so unimportant an item as it appears to be.

Mr. DOHERTY: I cannot give any amounts that would be accurate enough to be worth while. When the hon. member speaks of this as an unimportant item, he does not realize that the work of this commission was not merely an investigation of the conduct of the officials in one penitentiary, although that was an important feature of it. The commissioners were charged with making a general study and investigation of penitentiary systems in addition to that, and to make a general report of possible improvements to penitentiary systems.

Mr. EMMERSON: Have the commissioners been to the Dorchester penitentiary? If not, is it their intention to go there?

Mr. DOHERTY: They have not been to the Dorchester penitentiary, and there is no intention that they should go there. They are investigating the conduct of officials in the Kingston penitentiary.

Mr. McCREA: What was the cost to the country in connection with the Harry Thaw case at Sherbrooke?

Mr. DOHERTY: I have not the information. It would not come within the business of the Department of Justice to deal with that cost.

Exchequer Court of Canada—Contingencies, $8,100.

Mr. BOULAY (Translation): Mr. Chairman, yesterday I inquired as to what had been the amount paid by the Government to the hon. Judge Clement of British Columbia, for travelling expenses,—a payment which has been declared illegal by the court. I was told that the amount was $4,290. I would like to know if Judge Clement has been asked to refund the money?

Mr. DOHERTY (Translation): A lawsuit was taken against Judge Clement and we were given judgment for the amount.

Mr. BOULAY (Translation): Does the fact of having had a judgment against Judge Clement free him from criminal proceedings being taken against any individual under the same circumstances?

Mr. DOHERTY (Translation): The fact that he is a judge does not free him from his responsibility; but whilst the case was being tried, before the Supreme Court, it has been shown that it was by some kind of a mistake that the amount had been drawn by Judge Clement.

Dominion Police—Retiring gratuity to constable E. Spenard, $1,764.17.

Mr. MURPHY: Does that item indicate a new principle?

Mr. DOHERTY: No, the law does not provide a gratuity for the Dominion police, but it is the established custom to pay one. This particular man has served for almost thirty years and is now pronounced physically unfit for duty.

Penitentiaries, $120,000.

Mr. BUREAU: I think we are entitled to some explanation on the various amounts.

Mr. DOHERTY: The supplementaries are larger than usual, because the requirements for the last fiscal year have been considerably under-estimated.

Mr. BUREAU: In what particular branch? I just want to know if it is salaries, repairs, etc.

Mr. DOHERTY: In connection with the estimates of the cost of living, providing food, fuel, etc. The estimates last year were made by a gentleman who is not now an inspector, who, although he has been an inspector for a number of years, has not usually prepared these estimates and who apparently under-estimated the expense of providing for the food of the prisoners, for the heating of the premises, etc.

Mr. PARDEE: Is there not for each of these institutions a fixed annual cost to which the minister must adhere?

Mr. DOHERTY: Our population is sometimes larger one year than another year and sometimes we get certain articles cheaper one year than another year. It is quite impossible to say it is going to cost so much a year to feed the inhabitants of a penitentiary.

Mr. PARDEE: That does not explain the whole of the $120,000.

Mr. DOHERTY: I pointed that out as one reason. At Kingston penitentiary very considerable works have been carried on. At St. Vincent de Paul there were paid for retiring gratuities some $8,000, and the renewal of the electric plant and increased cost of supplies account for the balance.

Mr. BUREAU: That hardly covers the first explanation of the minister that the amount is supposed to be for the increased cost of living and fuel. So far as the feeding of the prisoners is concerned, it is hard to get that to a cent because of the varying population. I do not think an increase in the population would account for the increase in the cost of fuel.

Mr. DOHERTY: I did not say that the whole of this was caused by those things. I have pointed out another thing at Kingston and another very particular thing at St. Vincent de Paul. I mentioned food and fuel, the prices of which are not identical every year, and you may have one winter that calls for a greater consumption of fuel than another.

My hon. friend has misunderstood me or else I did not make myself plain. As I pointed out, at St. Vincent de Paul there were gratuities of $8,000 and expenditure for renewal of part of the electric plant, while increased cost of supplies accounts for the balance. In Dorchester there was increased cost of supplies. An hon. member asks explanation with regard to Saskatchewan. When the institution was taken over by Inspector Hughes the conditions necessitated an exceptional expenditure. A new building containing 106 cells had to be constructed, also new quarters for the deputy warden, a cement and concrete granary and storehouse, stables and pumphouse, and a new water system to replace the one provided by the Public Works Department in 1910.

Mr. EMMERSON: Is there any special reason why we should remain here all night? The hon. minister has mentioned the purchase of additional land at Dorchester. I reside there, and I have not heard of any transfers. I see an additional amount of $5,000 for that penitentiary. I would like to get some information with respect to the additional offices created in connection with this institution during the past year and consequent additions to the salary list. Cannot this stand until to-morrow? If there is no special reason, I do not see why we should be asked to remain here all night.

Mr. W. T. WHITE: These supplementary Estimates are for the year which ended the 31st of March.

Mr. EMMERSON: They should have been taken up sooner.

Mr. WHITE: Possibly, but the debate on the Transcontinental has taken up the time. I postponed my Budget because of that. I think there should be accommodation on both sides. It would oblige us very much if we could get these Estimates through together with one-sixth of the main Estimates. In connection with these supplementaries, the expenditure has all been

incurred, the parties are entitled to their money and they are waiting for it.

Mr. EMMERSON: I do not wish to be obstructive, but there is one item in these Estimates relating to railways which will certainly take some time if it is what I think it is.

Mr. WHITE: The Senate adjourns to-morrow.

Mr. CARVELL: Why should we be kept all night for the Senate?

Mr. WHITE: There is something to be said for that—

An hon. MEMBER: A good deal.

Mr. WHITE: We wish to get the Supply Bill to-night if possible, and get the Senate to pass it to-morrow, and have the assent of the Governor General.

Mr. CARVELL: There are some items in these Estimates concerning which I should like to ask some questions and have some discussion. It seems hardly reasonable to place before us $3,000,000 of Estimates relating to every department of Government, and ask us to put them through without discussion, besides voting one-sixth of the main Estimates. This last, perhaps, is not so serious because we shall have further opportunity to discuss each item. So far as our friends of the Senate are concerned, I should be sorry to see them discommoded, but I do not know that their work is so onerous or the time they give to it so great that they should not stay here as long as is reasonably necessary to do the work for which they were sent here.

Mr. PARDEE: The understanding was that one-sixth of the Estimates was to go through to-night, that the items already passed in Supply should be concurred in, and also that any of these Supplementary Estimates that were non-contentious should go through. I take it that these supplementaries can be gone over, but that any item that any hon. member asks to stand should be allowed to stand. There are several items in these supplementaries that will have to stand over. They cannot go through to-night unless we are to stay here until daylight.

Mr. WHITE: That position seems perfectly fair. The Government is not asking that any item in these Supplementary Estimates about which information is asked should be passed. But I would ask that items that are non-contentious should be passed that we make the Supply Bill accordingly and proceed in accordance with the understanding outlined by my hon. friend from West Lambton (Mr. Pardee).

Mr. GERMAN: To cure the matter, I think I would say that they are all contentious.

Mr. EMMERSON: Penitentiaries will stand.

Mr. WHITE: Yes, penitentiaries stands.

Mr. DOHERTY: Perhaps the hon. gentleman would be willing to discuss on the main Estimates any matters which he wishes to bring forward, and allow these items to pass.

Mr. EMMERSON: The only item I mentioned was Dorchester, and as to that I wish information which, of course, I do not insist upon having to-night, if my hon. friend will be prepared to give it later on.

Mr. DOHERTY: Certainly, I shall be glad to.

Mr. CARVELL: No doubt, it is the wish of members on both sides to be as courteous as possible; but the hon. Minister of Justice (Mr. Doherty) will understand that we have had experience with hon. gentlemen opposite on this point of allowing things to go through reserving discussion for some other time. I have a distinct recollection that last year we passed something like $150,000,000 in two nights after twelve o'clock. I see the hon. Minister of Militia (Mr. Hughes) smiles. He gave us two hours of his time last year, and then we had to put through about $10,000,000 of his Estimates and he did not even do us the courtesy of being present. Along between four and five in the morning we had to put these items through without even having opportunity to ask a question.

Mr. HUGHES: Hon. gentlemen knew that these Estimates were all right.

Mr. CARVELL: I would suggest to the Minister of Justice that he ought not to ask us to put ourselves in that position. But I would like to say, that if it were only the Minister of Justice, then, personally, I would favour letting them go through. But it will hardly do to make fish of one and flesh of another, and so I think we must stand upon our legal rights.

Mr. WHITE: We will try to carry out the arrangement outlined by the hon. member for West Lambton. Any item that any hon. gentleman asks to stand after considering it, I think might stand. But it is very

desirable that these Supplementary Estimates as far as possible should pass.

Arts, Agriculture and Statistics—Experimental Farms—Further amount required to defray expenses arising out of losses sustained by fire at the Central Experimental Farm—Governor General's warrant, $25,000.

Mr. MURPHY: This comes within the category of items with reference to which I sent to the Minister of Finance a note this evening saying that I expected this would come up this afternoon and asking him to bring down certain reports. The items to which I refer are covered by Governor General's warrants.

Mr. WHITE: I have not received that note.

Mr. BURRELL: We had to get the Governor General's warrant, because we had absolutely no funds. The main barn at the Central Experimental Farm was burned last October, and we lost all the machinery and equipment, all the feed produced on the farm, and all the material which was to be used to feed 175 head of cattle, as well as sheep and swine.

Mr. MURPHY: For what was the amount expended?

Mr. BURRELL: $16,000 worth of feed was destroyed, and a portion of the appliances and machinery. We had to make immediate provision for that, as the stock was there and had to be attended to.

Mr. PARDEE: Was there any insurance?

Mr. BURRELL: I think not; the Government usually carry their own insurance.

Mr. MURPHY: I do not wish to start a discussion on this item, but a rather important principle is involved in connection with these Governor General's warrants. I have no objection to this item going through if another be allowed to stand.

Mr. WHITE: As a matter of fact, it has not been usual in the past to insert in the Estimates amounts in respect of which Governor General's warrants have been issued, but I think it is a proper practice, and we have adopted it this year. There is no objection to this item being allowed to stand if the hon. gentleman so desires.

Mr. ROSS: What principle does the Government follow in regard to the insurance of its buildings?

Mr. WHITE: They carry their own insurance.

[Mr. W. T. White.]

Mr. ROSS: I know for a fact that the Federal Government carried insurance on certain buildings in my riding. For instance, there is insurance on a school building on the Munsel Indian reserve. Perhaps the Minister of the Interior can tell me something about it?

Mr. ROCHE: I will inquire about the matter, and give my hon. friend the information.

Mr. ROSS: I know the facts, but I should like to know the principle followed by the Government.

For the administration and enforcement of the Meat and Canned Food Acts—further amount required, $30,000.

Mr. BURRELL: After the Estimates had been prepared early in the year it was found that the expansion of the work necessitated about twenty-two extra inspectors in connection with the abattoirs throughout the country, and this is to pay their salaries and expenses.

Mr. PARDEE: How many of these inspectors are there?

Mr. BURRELL: We cannot tell the exact number; that will depend on the expansion of the whole business.

Mr. DEVLIN: Does the hon. minister insist upon the inspectors being veterinary surgeons?

Mr. BURRELL: Yes, all inspectors have to be veterinary surgeons, and in addition have to pass the departmental examination, which is a pretty stiff one. If my hon. friends will allow this item to pass I will give them all the information they desire when my main Estimates come up for consideration.

Militia and Defence—Dominion arsenal, further amount required, $60,000.

Mr. SAM. HUGHES: In the investigation of the Dominion arsenal, it was found that a great deal of material had been over-run, and on the 1st of November there was a shortage.

Mr. GERMAN: What does over-run mean?

Mr. HUGHES: I do not want to go into the details of the matter to-night, but the $60,000 is for wages and material.

Mr. POWER: Is any part of this amount to be used for the purchase of property?

Mr. HUGHES: None whatever.

Mr. CARVELL: Surely the minister can give some information as to the necessity for this vote. We might as well let the minister understand that if there has been something wrong in his department there are no secrets in Parliament, and we might as well have the whole of it.

Mr. HUGHES: The hon. gentleman will have everything; he will get all the details that are asked for. It is to my advantage that everything should be brought into the open. On November 1, it was found that the $300,000 vote for the arsenal was practically exhausted, there being only $54,000 of it left with which to carry on work until April 1. I do not want to go into the details as I have not all the papers here. It concerns the investigation into the arsenal. A great deal of material had to be destroyed and quantity of material had been purchased in excess of requirements.

Mr. CARVELL: Improperly used.

Mr. HUGHES: Overproduction, purchasing raw material that was required. I do not wish to say anything against the former manager of the factory, who has since retired; but he has expended more in purchasing material than he had calculated upon. It left the factory in this position that we would require $80,000 for the salaries and wages of employees and $30,000 for material, leaving a balance of $60,000 to be provided. There is $14,000 revote out of the $60,000.

Mr. CARVELL: These figures stagger one. How much is the minister spending on that factory ?

Mr. HUGHES: $300,000 a year.

Mr. CARVELL: $300,000 thrown away, worse than wasted; and now the minister wants $60,000 more in order to make good the blunders of some of his officers. It is a wonderful record.

Mr. HUGHES: This is the same vote as for years past.

Mr. CARVELL: Why not close the whole thing down anyway, what is the good of it?

Mr. HUGHES: I think it is a very good institution and that it serves a useful purpose.

Mr. CARVELL: Why not turn it into a fertilizer factory and make something that would be of service to the country ?

National Transcontinental Railway—Refund of security deposited by George Goodwin on tender, station building between Cochrane and Superior Junction, $27,500.

Mr. REID: This is a refund to Mr. Goodwin of $27,500. He tendered for some work on the National Transcontinental and that was the amount which he put up. He was the lowest tenderer, but was so low that he could not go on with the work and we are giving him back the money.

Mr. GERMAN: I do not remember seeing a vote of this kind for a refund.

Mr. BORDEN: It would not have been necessary if the refund had been made within a year. I know something about this personally, and I really think that Mr. Goodwin is entitled to get his money back. I think they were too sharp, they gave him notice within the time in which he might accept. I believe he stated orally that he would not accept, but his formal notification was too late and he was notified that his deposit would be forfeited. I think he is within his legal right. In view of this, I think he is entitled to have the money back.

Mr. KYTE: Is it the practice to make refunds to tenderers who for any reason refuse to enter into a contract ?

Mr. BORDEN: It depends altogether on the reason. Sometimes they are forfeited, sometimes they are not. The circumstances in this case appealed to me very strongly on behalf of Mr. Goodwin and I therefore spoke to the minister about it.

Mr. KYTE: I have in mind the case of gentlemen in Halifax who put in a tender in connection with the Prince Edward Island car ferry, whose deposit, a very considerable sum, is at present in the hands of the Railway Department. An application has been made for a refund. Has any action been taken ?

Mr. BORDEN: I have had that under consideration also. I discussed it with the Minister of Railways. The minister holds a rather strong opinion on it, but I think there is something to be said for the other side of the case. I hope to take it up with the acting minister.

Mr. GERMAN: It seems to me a pretty dangerous precedent to establish, to give back the deposit put up by a contractor because he is supposed to be too low. It is a question how far that should go.

Mr. BORDEN: I think cases of that kind should always be submitted to Parliament.

Board of Railway Commissioners—To pay expenses in connection with cases before the—Further amount required, $35,000.

Mr. REID: This is a vote for the Railway Commission. Much of the expenditure will be made in connection with cases coming before the board in which the public are interested, such as the western freight rates and the telephone inquiry.

Mr. DEVLIN: It includes travelling expenses ?

Mr. REID: Oh, yes, everything.

Experimental Farms—Tobacco curing stations, $12,091.65.

Mr. DEVLIN: Where are the tobacco curing stations?

Mr. ROGERS: At Indian Head.

Port Credit, purchase of property for harbour, $344.20.

Mr. GERMAN: Has the Government purchased Port Credit Harbour?

Mr. ROGERS: I think we did, but I am not quite sure.

Mr. GERMAN: How much was paid for it?

Mr. ROGERS: I can get my hon. friend the information, and let him know tomorrow.

To pay claim of Hinton & Company, $500.

Mr. PARDEE: What is that?

Mr. ROGERS: This is to pay a balance due Hinton & Company on a contract.

Mr. CARVELL: Do I understand that the Department was to furnish the wire and cable, and that they did not arrive there in time? Is that the reason for this extra vote? The item is small, but it seems a most remarkable thing to make a contractor a present of $500.

Mr. ROGERS: We are not making him a present. $500 is the amount required to settle the whole account between the contractors and the department.

2 a.m.

Mr. CARVELL: Does the minister know whether the department furnishes the wire and cable?

Mr. ROGERS: That was in the contract.

Investigating claims in regard to Pelagic Sealing Treaty, $7,000.

Mr. PARDEE: What is that for?

Mr. HAZEN: My hon. friend is aware that under the treaty entered into with the United States, with Russia and Japan pelagic sealing is done away with. Canada is paid 15 per cent of the sealskins thrown upon the shore by the United States, 15 per cent by Russia, and 10 per cent by Japan. The United States has paid us $200,000 as an advance payment. Pelagic sealing is now abolished.

That has been received. Claims were made by those who were engaged in the sealing business and in order to arrive at the amount which would be paid to those whose living and occupation have been interfered with, Judge Audette of the Exchequer Court was appointed a commissioner to investigate. Some 1,500 claims have been submitted. We had a sum placed in the Estimates for the year ended March 31, of $10,000. Judge Audette has been proceeding with the work and it was found that the $10,000 was insufficient. Only a comparatively small amount will have to be voted in the Supplementary Estimates for the year commencing April 1, in order to finish the work which is now well under way and which will be finished during the summer. It is to make provision for this work that this amount is required.

Dominion Lands and Parks—To pay expenses connected with water power investigations and reports in Manitoba, Saskatchewan, Alberta and Railway Belt in British Columbia, $20,100.

Mr. CARVELL: Is this a new item, or a further amount required?

Mr. ROCHE: This is a further amount required.

Mr. PARDEE: What is this water-power investigation?

Mr. ROCHE: We had a vote of $114,000 and we require $20,000 to complete the service.

Mr. PARDEE: Who compose this commission?

Mr. ROCHE: It is not a commission. We have a water-power branch in connection with the Interior Department of which Mr. Challies is the head. Mr. Hendry is one of the water-power engineers.

Miscellaneous—British Columbia Better Terms Commission, $3,500.

Mr. MURPHY: What is that?

Mr. BORDEN: A commissioner was nominated on behalf of the province of British Columbia and one on behalf of the Dominion. The two men were appointed by Order in Council. The British Columbia case has been filed. The case for the Dominion has not yet been filed but it is in course of preparation. In the meantime a third commissioner has not been appointed as it is undesirable to bring him

from England before he is actually needed here.

Mr. EMMERSON: Who are the commissioners on behalf of British Columbia and of the Dominion?

Mr. BORDEN: The commissioner for British Columbia is Mr. Bodwell, K.C., and for the Dominion, Mr. Lash, K.C.

Expenses under the Canada Temperance Act —Further amount required, $20,000.

Mr. GERMAN: What is this for?

Mr. PELLETIER: The expenses are very much increased. This is to cover the expenses already incurred in the recent elections under the Act in the counties of Huron, Peel and Welland, and the cost of preparing the voters lists in the unorganized districts of Ontario. There was very little interest shown in the Canada Temperance Act for many years, and elections under it had become comparatively infrequent, but it has been the custom to place in the Estimates $500 or $1,000 to meet the expenditure. This year the expenditure has been much greater on account of a kind of revival of the Act.

To provide for the purchase of 600 copies of the Parliamentary Guide—Further amount required, $600.

Mr. BOIVIN: What is this $600 for?

Mr. PELLETIER: For many years the Government have bought 600 copies of this guide, but through a clerical error only $600 was provided for in the Estimates, and this is to correct the mistake.

Mr. BOIVIN: What becomes of the 600 copies?

Mr. BORDEN: They are distributed to members and senators.

Mr. CARVELL: Is that annual?

Mr. PELLETIER: Annual.

Mr. BORDEN: Formerly, I think, it was only every other year. But I think it is now carried on every year, in accordance with the practice of other parliaments.

Mr. BOIVIN: It is a very good work, and I did not intend to criticise it, but I merely wanted to know what becomes of the extra copies. There are about 210 members and 80 senators, and that would leave about 300 copies unaccounted for.

Mr. BORDEN: I could not give my hon. friend the correct information as to that. I imagine that some are sent to provincial authorities and exchanged for documents of a similar character.

To provide for the expenses of commission to prepare plans relating to the cities of Ottawa and Hull, $8,000.

Mr. DEVLIN: Can we have some information about this?

Mr. W. T. WHITE: The Government during the year appointed an honorary commission consisting of Mr. H. S. Holt, of Montreal, who is chairman, the other members being Sir Alexander Lacoste, Mr. Home Smith, and Mr. Frank Darling, of Toronto, the Mayor of Ottawa, and the Mayor of Hull. The Government took the matter up in co-operation with the two corporations, the city of Ottawa and the city of Hull, on the basis that plans should be prepared of Ottawa and Hull and their environments, including the laying of boulevards and squares, the location of public buildings, and generally to deal with the town-planning in the two cities upon the understanding that the Government would pay one-half the expense, the remaining half to be defrayed in proportion of population by the two cities. Both corporations agreed through their municipal authorities to that arrangement. This commission is now engaged in the work of town planning. Engineers and a staff have been engaged. This amount of $8,000 represents substantially the expenditure made up to the 31st day of March.

Mr. MURPHY: This commission is separate from the Ottawa Improvement Commission?

Mr. WHITE: Yes.

Mr. MURPHY: Is the work of this commission to cease as soon as these plans are made and a general scheme outlined, or does their work continue?

Mr. WHITE: This commission is appointed only for the purpose of making the plans; it does not interfere in any way with the work of the Ottawa Improvement Commission.

Mr. DEVLIN: Will either of the cities be called upon to contribute to the preparation of plans anything further than the amount they have already contributed?

Mr. WHITE: Not in respect of this particular commission. The joint arrangement between the Dominion Government and the two cities was that this commission should cause plans to be prepared, and the expenses of the commission and the preparation of the plans to be borne half by the Government and half by the two cities.

Nothing further is in contemplation so far as this commission is concerned. After the plans are prepared and the work done, what we have in mind is that all parties concerned, the Dominion, the two cities of Ottawa and Hull, the railways and other interested parties will all work together in the carrying out of those plans.

Mr. DEVLIN: Have any plans been prepared yet?

Mr. WHITE: They are in process of preparation.

Mr. MURPHY: It is a matter of mutual agreement whether these plans will be carried out or not?

Mr. WHITE: The commission is charged solely with the duty of preparing the plans.

To provide for cost of liquidation and inquiry into the affairs of the Union Life Insurance Company, $20,000.

Mr. GERMAN: This is a large sum with so far varying unsatisfactory results. It seems that warrants have been issued for the arrest of certain people. I understand that Mr. Harry Symons is awaiting trial, and I venture to say that he was the most innocent man in connection with the matter and that the really guilty man, Mr. H. Pollman Evans, is still at large.

Mr. WHITE: I am entirely willing that the item should stand, because it is an item of an unusual character. So far as expenditure is concerned, I think I can satisfy my hon. friend, although not to-night, that it has been well spent in the interest of the public. The Dominion Government has had nothing whatever to do with the prosecution of the parties in question.

Mr. GERMAN: Who has?

Mr. WHITE: The Ontario Government, which is charged with the administration of justice. The liquidation was for the purpose of enabling about 160,000 policy holders throughout the Dominion, for the most part poor people, paying five, ten, or fifteen cents a week, to obtain reinsurance. Otherwise they would have lost all that they had in this company. The inquiry was further prosecuted in Toronto under the Winding Up Act, with the view of ascertaining how the funds of the company were lodged. The inquiry was widened to take in some of the companies whose affairs were connected with the affairs of this company. So far as the matter to which my hon. friend has referred is concerned, the Dominion Government has nothing whatever to do with the prosecution of any one in connection with the company. The liquidation was carried on in the city of Toronto before a referee, and he being an officer of the court and the inquiry being public, the Dominion did not consider it to be any of its duty to consider the mattter, of laying an information.

Mr. GERMAN: How much did Mr. Masson get?

Mr. WHITE: I think about $7,000. My hon. friend as a lawyer, I think, will be entirely satisfied with the account of the liquidator here presented and the expenses of liquidation.

Mr. GERMAN: It is a pretty stiff price to the liquidation.

Item stands.

Grant towards relieving distress caused by storm on Great Lakes—Governor General's warrant, $25,000.

Mr. MURPHY: That comes within the category of the items to which I referred my hon. friend earlier in the evening; but, on the understanding that we can discuss this on some other item dealing with Governor General's warrants, it may go through.

Mr. J. D. REID: All right.

Mr. W. T. WHITE: My hon. friend will make me repent of putting these items in the Estimates. It is a new departure.

Mr. MURPHY: It is not that, but it is the Governor General's warrants.

To provide for the settlement in full of the claim of Government of New Brunswick, for loss sustained owing to the leasing by the federal government of angling privileges in non-tidal waters of the province from 1875 to 1882, the province having disputed the right of the Dominion to issue such leases in 1875, $66,382.

Mr. CARVELL: Is this a final settlement of the fishery claims?

Mr. HAZEN: This settles both claims.

Customs—Expenses of inspectors of ports, etc., $35,000.

Mr. GRAHAM: Does this include Mr. Carstair?

Mr. J. D. REID: He was not an extra officer.

Mr. PARDEE: Is he a permanent officer?

Mr. J. D. REID: Yes. He is an inspector. We had one or two deaths on the inspection staff and we put him on.

Mr. GRAHAM: Does he do any political work?

Mr. REID: No.

Customs—Miscellaneous—Printing and stationery, subscriptions to commercial papers, flags, dating stamps, locks, instruments, etc., for various ports of entry, express charges on samples, stationery and forms, legal expenses, premiums on guarantee bonds and uniforms for customs officers, $40,000.

Mr. GRAHAM: Are the customs officers put in uniform now?

Mr. REID: I insisted that more of them at the different ports should have nice uniforms. I thought it better in the case of the officers who have to meet the public. We pay $5 extra on each suit, and it makes a considerable item.

Railways and Canals—Chargeable to collection of revenue—Railways—Prince Edward Island railway—Working expenses—Further amount required, $65,000.

Mr. PARDEE: Did you lose that last year?

Mr. REID: They lost $150,000 altogether.

Public Works—Chargeable to collection of revenue—Telegraph lines—British Columbia—Further amount required, $30,000.

Mr. CARVELL: Why is the Dominion building telegraph lines in British Columbia? I can understand it in the Yukon.

Mr. ROGERS: We build them not only in British Columbia but in the Maritime provinces.

Mr. CARVELL: I know there is a little Dominion line running along the Miramichi river.

Mr. BORDEN: And some in Cape Breton.

Mr. REID: And in Quebec too.

Mr. CARVELL: I should have thought that arrangements could be made with the telephone companies. Thirty thousand dollars is a pretty large amount, and naturally raises the question whether the Government is not launching out in a general scheme of telegraph lines. I could understand some lines having been built in the Maritime provinces or on the lower St. Lawrence for some reason or other and now we have to keep them up. But so large an amount as this would seem to indicate a general scheme. I should think that a fairly good line in British Columbia could be built at $100 a mile. This is a 'further amount required.' How much is being spent altogether?

Mr. ROGERS: Last year through some mistake a sufficient vote was not taken to cover the operation and repairs of the telegraph lines. At that time I took much the same ground as the hon. gentleman takes, thinking that the Dominion had no business to go into telegraph lines. I was trying to bring about a settlement between the different provinces that they should take care of these lines themselves. This sum is required for the repairs and working expenses of the British Columbia system.

Land and Cable telegraph lines—Lower St. Lawrence including working expenses of vessels required for cable service—Further amount required, $44,000.

Mr. CARVELL: It does seem to me that the minister is branching out to a very considerable extent when an expenditure of $44,000 is only a 'further amount required.' I know that this includes working expenses of vessels. But surely the Public Works Department does not need to go into the telegraph lines in the Maritime provinces and Lower St. Lawrence generally. We have telegraph and telephone lines everywhere; I do not think you could find any place in New Brunswick ten miles away from a telephone. If there is any good reason for these government telegraph lines I should like to hear it.

Mr. BORDEN: This matter has been up for discussion many times. As I understand it the telegraph system was first extended into the thinly settled portions of the seacoast largely as a means of getting prompt news concerning marine disasters. For instance there is such a line through the thinly populated portions of Cape Breton and also on the north shore of the St. Lawrence. Then there is a cable somewhere in the Maritime provinces. Extensions have been made to these lines, I believe, for the convenience of the people in places where the telegraph companies would not establish stations. I do not know that it has been upon any distinct principle, but rather as a matter of expediency and for the convenience of the people.

Mr. CARVELL: It must have been a large sum before when your 'further amount required' would build about four hundred miles of new line.

Mr. ROGERS: The statement supplied by the department shows that this $44,000 is required to complete payments for the fiscal year on the working expenses of the land and cable telegraph lines in the Lower St. Lawrence and the Maritime provinces and the working expenses of vessels employed in the service. The amount includes such items as $7,800 for the steamship Tyrian, $6,000 for the Cape Breton and special amounts for the various telegraph lines.

Mr. CARVELL: It is not for extensions then according to that?

Mr. ROGERS: No.

Mr. CLEMENTS: I desire to put my hon. friend from Carleton (Mr. Carvell) right on his statement that a telegraph line should be built in British Columbia for $100 a mile. It is evident he does not know the conditions in British Columbia. There are many hundreds of miles of telegraph lines in that province that could not be built for less than $225 a mile. If there is one thing more than another that this Government, or any government can do to benefit the public of British Columbia it is in providing these telegraph lines.

Mr. EMMERSON: That has all been done.

Mr. CLEMENTS: Not yet.

Trade and Commerce—salaries of commissioners and officers and other employees; rents, day wages and contingencies under the Inspection and Sale and Canada Grain Acts, further amount required, $75,000.

Mr. PARDEE: Certain officers are appointed to carry out certain duties; is it not known at the time of their appointment what salaries they are going to receive? Have additional officers been appointed since the main Estimates came down, requiring a further sum of $75,000?

Mr. WHITE: I think the explanation desired by the hon. member may be found in the concluding paragraph of a statement which the hon. Minister of Trade and Commerce sent me this evening, and which is as follows:

For the ten months of the current year to January 31, 1914, there was an increase in the cars inspected over the same period during the fiscal year of 25,385 cars, and all previous records were broken.

A rather complete summary follows, showing just why this amount is required.

Mr. PARDEE: The sum of $75,000 is required for salaries of commissioners and officers and other employees, rents, and so on, not heretofore provided for. As I understand it, under the Civil Service Act these men are appointed by the year, and their salaries are known to the department. Are these officers men who have been appointed since the main Estimates came down? I do not understand why there should be any extra amount, because the department should know just what their officers are going to cost year by year.

[Mr. Rogers.]

Mr. WHITE: There is a permanent staff and they should, and usually do, know what the salaries will be, subject to reasonable increase if business develops in the course of the ensuing year. I think the more important items, those of day wages and contingencies, are due to increase of business at the ports, and the extra permanent staff would tend to increase the amount to $75,000. I would suggest that, with the unanimous consent of the House, we might take concurrence for all the items in the main Estimates en bloc.

Mr. SPEAKER: The suggestion is made to the House that these resolutions be concurred in en bloc without naming the items. These are the items already passed at previous sittings of the committee.

Mr. WHITE: And one-sixth of the remaining items.

Mr. SPEAKER: As the resolutions are of different dates they could not, in my judgment, be put through on one motion; but by putting through the resolutions without calling the items afterwards much time will be saved and I understood it was agreed that the items should not be called.

Progress reported.

SUPPLY—CONCURRENCE.

The House proceeded to consider resolutions reported from Committee of Supply.

Resolutions concurred in.

THE ROYAL ASSENT.

Mr. SPEAKER read a communication from the Governor General's Secretary, announcing that the honourable Mr. Justice Idington, acting as Deputy of His Royal Highness would proceed to the Senate Chamber on the 3rd instant at four o'clock for the purpose of giving the Royal Assent in certain Bills.

On motion of Mr. Borden, the House adjourned at 3.05 a.m. Friday.

Friday, April 3, 1914.

The House met at Three o'clock, the Speaker in the Chair.

PRIVATE BILLS.

FIRST READINGS.

Bill No. 139, to amend The Railway Act with respect to the deposit of plans.—Mr. McKay.

Bill No. 140, to incorporate the National Council of Women of Canada.—Sir Edmund Osler.

Bill No. 141, respecting The Rainy River Radial Railway Company.—Mr. Boyce.

Bill No. 142, respecting The Pacific Trans-Canada and Hudson Bay Railway Company.—Mr. Douglas.

Bill No. 143, respecting a patent of John Roger Arnoldi.—Mr. Macdonell.

Bill No. 144, for the relief of Henry Elmer Bicknell.—Mr. McCraney.

ALLEGED INACCURATE RETURN.

On the Orders of the Day being called:

Mr. WILLIAM CHISHOLM: I wish to call the attention of the Minister of Public Works to a return which was ordered by the House on March 23, 1914, and laid on the table yesterday, which purported to show the amount expended in public works in Antigonish county since October 11, 1911. That return is grossly inaccurate. It states that the amount expended since October, 1911, was $75,797.50. When I looked at that first, I thought a mistake had been made in the copying, and that the correct amount was $7,597, which would be more nearly correct than $75,000. I observe that places are mentioned in this return that are not in Antigonish county at all—Battery Point, for instance, and other places. I observe also that the return states that amounts of $21,094.97 and $1,315.93 were expended since 1911 for Antigonish public buildings. No question was asked about public buildings; the question was with regard to public works. That statement, however, is grossly inaccurate, because that money was expended, not since 1911, but six or seven years ago, and why it was put in the return I do not know. I observe also that the return states that an amount of $13,130 for Breen's Pond was expended since 1911, whereas that work was performed before 1911. All through the return is inaccurate, and I draw the attention of the Minister of Public Works to this fact so that the matter may be corrected before his Estimates are brought up for consideration. The Minister of Public Works may remember that on December 28, 1912, just on the eve of an election in Antigonish county, a promise of $205,000 for public works in that county was made in a letter addressed to Senator Girroir.

Mr. SPEAKER: Order. I do not think it is in order for the hon. member to go into these matters at this stage.

Mr. CHISHOLM: I am simply explaining to the minister that possibly the error crept in through some of the officials of his department having had in mind the letter in which the promise of the expenditure of $205,000 upon public works in Antigonish county was made. Of course, the money was not expended, as promised. The Minister of Public Works gold-bricked the people on that occasion.

Mr. SPEAKER: Order. The hon. member is certainly exceeding his rights.

Mr. CHISHOLM: I wish to ask the Minister of Public Works if he intends to try to make the Antigonish people believe that $75,000 was given them during the past year, when as a matter of fact only a fractional part of it was expended.

Mr. ROGERS: I did not take the trouble to read the report, but simply brought down what was given me by the officers of the department. I shall be glad to draw their attention to the statements which my hon. friend has made in regard to inaccuracies, and if such inaccuracies have crept in, I will endeavour to see that they are corrected.

MINES ROAD STATION.

On the Orders of the Day being called:

Mr. KYTE: Information has come to me that it is in contemplation by the Managing Board of the Intercolonial railway to close Mines Road station, in my constituency. The people interested are anxious to know if any such move is intended.

Mr. REID: This is the first I have heard of it. I shall make inquiries and let the hon. member know to-morrow.

HERON ISLAND DAM.

On the Orders of the Day being called:

Mr. LEMIEUX: Without reading to the House what has been published in the Montreal papers, I would ask the Minister of Public Works if it is true that a dam is to be built a little above Montreal at a place called Heron Island. I understand that the Waterways Commission, appointed to inspect and report upon the water situation above the harbour of Montreal, has not yet filed its final report. But

for the last few days it has been stated in the press that a certain company has obtained power from the Government to build a dam near Lachine rapids and a power house on Heron Island. It is said that a contract has been given amounting to $2,500,000. Is that item correct and has the Waterways Commission approved of this project?

Mr. ROGERS: There is no truth in the statement, as far as I am aware. That item was called to my attention yesterday, but I have no knowledge of the matter. I am satisfied it is absolutely incorrect, because I have had several applications in connection with dams and the development of water-powers there, but have invariably given the same answer that nothing could be done until we had the report of the Waterways Commission.

Mr. LEMIEUX: I do not wish to contradict the statement of the minister, but for his information I would say that, in an interview, Mr. W. D. Powell, a director of the company, stated that a company had been incorporated, and that their first expenses in connection with their development would amount to over $6,000,000, and he seems to take it for granted that the company will do the work. Of course, if the hon. minister says no, I presume that is an end to the matter.

WAYS AND MEANS—SUPPLY BILL.

On motion of Hon. W. T. White (Minister of Finance), the House went into Committee of Ways and Means, to consider the following proposed resolutions. Mr. Blondin in the Chair.

1. Resolved, that towards making good the supply granted to His Majesty, on account of certain expenses of the public service for the financial year ending the 31st March, 1914, the sum of $1,891,661.05 be granted out of the Consolidated Revenue Fund of Canada.

2. Resolved, that towards making good the supply granted to His Majesty, on account of certain expenses of the public service for the financial year ending the 31st March, 1915, the sum of $50,361,346.66 be granted out of the Consolidated Revenue Fund of Canada.

Resolutions reported, and concurred in.

Mr. WHITE thereupon moved for leave to introduce Bill No. 145, for granting to His Majesty certain sums of money for the public service for the financial years ending respectively the 31st March, 1914, and the 31st March, 1915.

[Mr. Lemieux.]

Motion agreed to, Bill read the first and the second time, considered in committee, reported, read the third time, and passed.

CIVIL SERVICE ACT AMENDMENT.

On motion of Hon. L. P. Pelletier (Postmaster General) the House went into Committee to consider the following proposed resolution, Mr. Blondin in the Chair:

Resolved, That it is expedient to amend the Civil Service Act and the amendments thereto so as to provide that the minimum salary of clerks in city post offices, the offices of post office inspectors, the offices of superintendents of railway mail service, and the money order exchange office, shall be $600 on appointment; and that the annual increase for any such clerk shall be increased to $100 a year; and that if the salary of any temporary or permanent clerk in the said offices is on the 1st April, 1914, less than $600 it shall forthwith be increased to that amount; and that the salary of any person who may be employed temporarily in any of the said offices for a period of not more than one year, who has not passed the required examination, shall be at the rate of $600 a year.

Mr. PELLETIER: Two important changes are proposed. First, it is proposed to raise the initial salary, which is now $500, to $600. The other important feature is in regard to the annual increase in salaries. At present a clerk starting at $500 gets an annual increase of $100 a year up to $800, but after reaching that figure the increase is only $50 a year.

Sir WILFRID LAURIER: Up to what point?

Mr. PELLETIER: From $800 to $1,000 in the one case, and from $1,000 to $1,800 in the other.

Sir WILFRID LAURIER: Are these clerks under the Civil Service?

Mr. PELLETIER: All are under the Civil Service—applying to the outside service.

Sir WILFRID LAURIER: As I understand it, the only change proposed is that instead of starting at $500 a year and increasing by $50 annually, a clerk starts at $600, with a yearly increase of $100 until he reaches the maximum of $1,800.

Mr. PELLETIER: Yes. I see no reason why the salaries should not increase by $100 a year after the $800 point is reached.

Mr. SINCLAIR: Has the minister any temporary clerks who have been in his employ for more than one year without passing an examination? This resolution says that the salary shall be raised to $600 in the case of those employed temporarily

for a period of not more than one year, and it occurred to me that the minister might have some temporary clerks employed for more than one year .

Mr. PELLETIER: Temporary clerks cannot be employed for more than one year; the Auditor General would not pay them. The temporary clerks now in the service at $500 a year will receive $600, the same as the permanent clerks. It is intended to raise the salary on appointment of both permanent and temporary clerks from $500 to $600 per annum.

Mr. NESBITT: From the commencement of their service, or from the time the Act comes into force?

Mr. PELLETIER: From the 1st April, 1914. All these matters will be better understood when the Bill is before the House.

Mr. LEMIEUX: I do not rise to offer any objection. On the contrary, I think the minister is to be commended in view of the high cost of living, high rents, and so on, for increasing the modest salaries of postal employees. Some years ago I took upon myself to give them an increase according to circumstances. I think the hon. gentleman is justified in giving to these faithful employees the same benefits that other classes of employees are receiving. I do not think the country would begrudge the postal employees even a little bigger raise. One point to which I would like to call attention is the fact that the Government has not yet decided whether the outside service is to be put on the same footing as the inside service. It is true that a certain class of employees in the outside service have to pass an examination, but it is not the same kind of examination as is provided by the Civil Service Commission for the inside service. I think the time has come for the Government and Parliament to take a bold stand on this question, and in saying that I think I voice the feelings of all the members of this House, particularly members who sit on your right, Mr. Chairman, as they are most called upon to find positions for their constituents in the Civil Service. Unquestionably the law which was passed some years ago on the inspiration of the Hon. Mr. Fisher, instituting a system of competitive examinations for the inside service, was an excellent law. To-day, members of Parliament and ministers of the Crown can say to all applicants that they have to submit to the law and pass the examination set by the Civil Service Commission before they can be appointed to the Civil Service. In that way you secure a better service than has hitherto existed. We all know that if in Great Britain they have an excellent civil service, it is due to their system of competitive examination. I believe that the Hon. Mr. Fisher has no greater title to fame than that he secured such a system for the inside service. In England, no minister of the Crown is hunted by applicants, as we are hunted in this country, because it is a matter of course that all applicants must go before the board of Civil Service commissioners and pass an examination. That is the reason why England has the best civil service in existence. We have adopted that system for the inside service at Ottawa. Why not extend the principle and bring the outside service under that law? I am quite sure that my hon. friends on the other side of the House, as well as my hon. friends on this side, would favour that. I quite agree that it is not necessary to subject a postmaster who receives $50, $100, or $200 a year to an examination. But for the postal employees in the large cities like Ottawa, Montreal, Winnipeg, Toronto, Quebec, Halifax and St. John, and for the customs and inland revenue officers in the large centres, why would it not be a good thing to establish a system of competitive examination? That sentiment exists in the country to-day. The result of the present system is that you do not get the best men. Since the establishment of the competitive system in the inside service we do not hear of any criticism about the Civil Service.

Mr. W. H. BENNETT: Suppose a person is to be appointed as assistant in the post office in the town where I live, and I happen to know a man who is a cripple and who can efficiently do the work of the post office, but who is not able to do hard work, would my hon. friend propose to have taken away from me the right of recommending him for the position and have the matter sent to Ottawa for decision? He might have passed the examination, but the fact that he was a cripple and unable to do hard work would not prevail, while the community in which he lived would know that he was admirably qualified for the position.

Mr. LEMIEUX: Of course, my hon. friend gives a special instance which is only an appeal ad misericordiam. Besides I do not know the population of the place mentioned by my hon. friend.

Mr. W. H. BENNETT: Let it happen anywhere.

Mr. LEMIEUX: That would, of course, depend upon the population and the business of the post office. I would classify these post offices. But if we had a competitive system, say, for the Toronto, Montreal, Ottawa, Calgary and Winnipeg post offices, would it not be better for the service? The Postmaster General and the Minister of Customs know that all the difficulties and weaknesses in the service proceed from the fact that under the present system they are imposed upon by political friends in these different cities. This system of competitive examination exists in other countries. It exists in the United States. No congressman to-day has the right, as he had some years ago, to impose his choice on the Postmaster General of the United States. They have extended the system from the inside to the outside service, and what some years ago was the shame of the public service in that country, has now become, I am pleased to say, its pride. The United States have reformed completely their civil service, both inside and outside, and we could well afford to imitate them in that regard. I shall reserve to myself the right to add some remarks upon the subject when the Bill of my hon. friend the Postmaster General is before the House. The sentiment for this reform is ripe in the country. The public think that the time has come when all public servants of a certain class—I am not speaking of the extreme lower grades—ought to pass a competitive examination.

Mr. PELLETIER: You mean clerks?

Mr. LEMIEUX: Yes.

Mr. A. A. McLEAN: Will this resolution or Bill affect the salaries of officials entering the Post Office Department in Ottawa?

Mr. PELLETIER: This is a Bill for the outside service.

Mr. McLEAN: Will the salary of a man entering the Post Office Department in Ottawa still remain at $500?

Mr. PELLETIER: Yes.

Mr. NESBITT: Will the minister, when he brings down his Bill, give us some idea of the number of people who are affected by it?

Mr. PELLETIER: Yes, my officers will be here when the Bill is before the House.

Mr. LEMIEUX: And the amount involved?

[Mr. W. H. Bennett.]

Mr. PELLETIER: And the amount involved.

Resolution reported and concurred in.

Mr. PELLETIER thereupon moved for leave to introduce Bill No. 146, to amend the Civil Service Act.

Motion agreed to, and Bill read the first time.

POST OFFICE ACT AMENDMENT.

On motion of Hon. L. P. Pelletier (Postmaster General), the House went into Committee to consider the following proposed resolution. Mr. Blondin in the Chair:

Resolved, that it is expedient to amend the Post Office Act, and to provide (a) that the minimum salary of railway mail clerks appointed on probation shall be at the rate of $600 a year, and on confirmation shall be at the rate of $700 a year, with annual increases of $100 thereafter until the maximum of $1,400 is reached; (b) for the temporary employment of railway mail clerks for a period of not more than one year at a salary of $600 and mileage allowance; (c) for the appointment of temporary railway mail clerks as permanent clerks with a salary not exceeding that which they received as such temporary clerks, and eligible for the usual annual increases for the period from the date of their appointment until their salaries amount to $1,000, but not eligible for an increase above $1,000 until they pass the qualifying examination; (d) that if the salary of any railway mail clerk, temporary or permanent, is on the 1st April, 1914, less than $600, it shall forthwith be increased to that amount.

Mr. MURPHY: Would my hon. friend the minister explain the procedure by which he proposes to turn temporary clerks into permanent ones?

Mr. PELLETIER: We are not turning temporary clerks into permanent ones We are simply dealing with their salaries.

Mr. MURPHY: What does subsection C mean?

Mr. PELLETIER: This resolution is simply doing for the railway mail clerks what the preceding resolution has done for the employees in the city post offices in the railway mail service, and in the money order exchange offices. We are increasing their initial salaries from $500 to $600, and are providing for an annual increase of $100 instead of $50 when the salary reaches $800, rising to $1,400. That is the sole object of the resolution. We have no right to employ railway mail clerks for more than one year in a temporary capacity. If at the end of the year they have

not passed the examination, we cannot employ them any longer.

Mr. CARVELL: Cannot you employ them over again in a temporary capacity?

Mr. PELLETIER: We cannot do that under the law. The Auditor General would not sign the salary cheques.

Mr. CARVELL: Could you not dismiss them, and then next day reappoint them in a temporary capacity?

Mr. PELLETIER: No.

Mr. LEMIEUX: The trouble is that the examinations for railway mail clerks are far too severe. What is required from a railway mail clerk is common sense, good education, sobriety and honesty. In certain provinces my hon. friend must experience very great difficulty in securing railway mail clerks. In the provinces west of the Great Lakes, it is true that they receive 15 per cent above the salaries paid elsewhere. In my day I had great difficulty in getting proper service in that respect, because the salary is not high enough and the examinations required from railway mail clerks are equal to the examinations required from university students. You cannot get a young university student to devote his life to the work of a railway mail clerk. It is very tedious work, it is not always very healthy, and it is at times very risky. I would suggest that my hon. friend amend the regulations so as to make the examinations required from railway mail clerks less difficult than at present. He is quite right in taking on permanently a temporary railway mail clerk who has done good service during one year and has shown himself fully qualified for the position. These temporary clerks are called railway mail clerks, but, as a matter of fact, they are only labourers. They are employed as labourers for a year, and the Auditor General will not pay beyond a year for one who assumes the name of railway mail clerk but is really only a labourer.

Mr. CARVELL: Has the hon. member (Mr. Lemieux) read subsection C? I understand by that section that if a railway mail clerk stays there long enough, his salary will rise to $1,000 a year.

Mr. PELLETIER: He does not stay there more than a year if he does not pass the examination.

Mr. MURPHY: This examination applies to the increase, not to the permanency.

Mr. PELLETIER: The rule is this: The young man may remain in the service for a year.

Mr. CARVELL: Will my hon. friend get away from what the rules and regulations may be, and realize that we are passing a statute, and it is a question what is the interpretation of that statute? My hon. friend should devote his attention to that branch of the question, and not to rules and regulations of the past. He says that the Auditor General will not sign the cheques. That may have been the case in the past. Does not my hon. friend think that subsection C, if passed, will be a statute which the Auditor General will be bound to obey?

Mr. PELLETIER: There is no question about that. Perhaps I employed a word which did not carry the meaning I had in my mind. Possibly I should have used the word 'law' when I used the word 'rule.' The law now is that we cannot continue in office for more than twelve months a railway mail clerk who is on probation. After the twelve months have expired, if he has not passed the necessary examination, he has to leave the service. I used the word 'rule.' That is the 'law.'

Mr. CARVELL: What is the new law?

Mr. PELLETIER: The new law is to increase the salaries and to keep in the service those temporary clerks who have made good.

Mr. CARVELL: For four years more?

Mr. PELLETIER: Yes.

Mr. CARVELL: What is the yearly increase?

Mr. PELLETIER: From $600 to $800 under the new law by increases of $100 a year. From $800 to $1,400; as the law now is, the rate of increase is $50 a year, we are making it $100 a year.

Mr. CARVELL: Any mail clerk can remain for four years without passing an examination?

Mr. PELLETIER: He must take the examination if he wants to be kept on for the second year.

Mr. SINCLAIR: This subsection does not say so.

Mr. PELLETIER: We are providing by this resolution to keep in the service men

who are there now and with whose work we are satisfied. This does not say that in future we shall have the right to keep for more than one year railway mail clerks who will be engaged later.

Mr. CARVELL: In other words, those who are employed as temporary clerks will never reach the maximum of the salary given to a regular railway mail clerk?

Mr. PELLETIER: No. There are two examinations. This explanation will also answer partly my hon. friend from Rouville (Mr. Lemieux). In the first place, the man goes in without examination. He cannot be kept for more than a year. In order to be appointed he must pass the preliminary examination. This is very easy, calling for only elementary qualifications, such as ability to read and write and a knowledge of the four elementary rules of arithmetic. But the employee cannot have a salary of over $1,000 unless he passes the qualifying examination.

Mr. MURPHY: What machinery is it by which the man, at the end of the year's probation, is changed from a temporary clerk into a permanent clerk? Is it at the discretion of the minister to make the selection, or is the passing of the examination sufficient?

Mr. PELLETIER: Both. He must pass the examination, but, even though he may pass the examination, if his services have not been found satisfactory, the minister is not obliged to appoint him.

Mr. SINCLAIR: The minister has said that section C applies only to clerks now in the employ of the department and that it is not intended to apply to those hereafter appointed. In that case this section should be amended by some such qualifying words as 'now in the service of the department' after the expression 'temporary railway mail clerks.' Otherwise it would be open to the minister to appoint temporary clerks, keep them for four years, and raise them to $1,000; and in this way he could saddle on the department a large number not qualified.

Mr. PELLETIER: I think there is a good deal in what the hon. gentleman says. This resolution does not exactly express the idea. But I have the proposed Bill before me, and I think it is much clearer.

Mr. CARVELL: We have not the Bill before us. Would the minister read it?

[Mr. Pelletier.]

Mr. PELLETIER: It says:

A person who has not passed the required Civil Service examination may be employed as a temporary railway mail clerk for a period of not more than one year.

That makes it clear.

Mr. CARVELL: Yes, but then section C qualifies this broad statement that he cannot be employed for more than a year. Under this section the minister has power to advance him by $100 a year and keep him for four years.

Mr. PELLETIER: I admit that that construction is possible when you read the resolution. But when you read the Bill—

Mr. CARVELL: Will the hon. minister send the Bill over? We have not a copy.

Mr. LEMIEUX: The change is automatic—

Mr. PELLETIER: He is not appointed until after one year's probation. After that probation, if he passes the preliminary examination, an Order in Council is passed putting him on. Then he advances automatically by $100 a year until he reaches $1,000 a year.

Mr. LEMIEUX: Then, if he passes the qualifying examination he is put on a par with the other railway mail clerks?

Mr. PELLETIER: Yes.

Mr. CARVELL: What is the number of the Bill?

Mr. PELLETIER: It has no number; it has not yet been introduced. We are still on the resolution, and that is why I suggest that we should leave the discussion until we are in Committee on the Bill. We can go into the matter fully at that stage. In the meantime I will call the attention of the officers of the department to the remarks that have been made. I wish to have this matter made clear myself.

Mr. CARVELL: I beg pardon; I thought we were in Committee on the Bill.

Mr. LEMIEUX: I wished to satisfy my hon. friend (Mr. Carvell) that I
4 p.m. was right. In view of the very difficult examination to which the railway mail clerks are subjected, the Postmaster General is obliged at times to take temporary mail clerks. They are purely and simply labourers, and have a labourer's stipend and cannot advance unless they show that they have the necessary qualifications. According to this pro-

posed plan, they will be appointed at $600 a year and will advance by $100 a year until they reach $1,000. Then, if they pass the qualifying examination, they will be on a par with the regular mail clerks and can reach a maximum of $1,400 a year.

Mr. CARVELL: I quite agree with my hon. friend from Rouville. But I have seen some of these examinations and they are the greatest farce ever known. What difference does it make in the appointment of a railway mail clerk whether he can tell what the capital is of some state in China or Siam?

Mr. PELLETIER: The hon. gentleman is mistaken; the railway mail clerks are not subjected to these ridiculous questions.

Mr. CARVELL: I have seen the questions and some of them seem to me ridiculous. The proper course for the Postmaster General is to change the examination, and not to take power to himself to drive a coach-and-four through the Civil Service Act. If the examination were put upon a reasonable basis, I do not think there would be much difficulty in getting the proper number of qualified men. The qualifications a man should possess in order to be an efficient railway mail clerk include a knowledge of English, ability to read writing of almost any kind, and an intimate knowledge of the geography of his own country and of many other countries in the world. It may take a year for a man to study up what he needs to know. But I would suggest that the minister should simplify the examination, boil it down to the necessities, and not take too much power to himself.

THE ROYAL ASSENT.

A message was delivered by Ernest John Chambers, Gentleman Usher of the Black Rod, as follows:

Mr. Speaker, His Honour the Deputy of His Royal Highness, the Governor General, desires the immediate presence of this honourable body in the Chamber of the honourable the Senate.

Accordingly the House went up to the Senate.

And the House being returned,

Mr. SPEAKER informed the House that His Honour the Deputy of His Royal Highness the Governor General, had been pleased to give, in His Majesty's name, the Royal assent to the following Bills:

An Act respecting the National Transcontinental Railway.

An Act respecting the Grand Trunk Pacific Railway Company.

An Act respecting the West Ontario Pacific Railway Company.

An Act respecting the Tillsonburg, Lake Erie and Pacific Railway Company.

An Act respecting the Ottawa, Northern and Western Railway Company.

An Act respecting the Lachine, Jacques Cartier and Maisonneuve Railway Company.

An Act respecting the Grand Trunk Railway Company of Canada.

An Act to incorporate the Central Western Canada Railway Company.

An Act respecting the Canadian Pacific Railway Company.

An Act to incorporate Pacific, Peace River and Athabaska Railway Company.

An Act respecting the Dominion Atlantic Railway Company.

An Act respecting the Joliette and Lake Manuan Colonization Railway Company.

An Act respecting the Ottawa and Ungava Railway Company.

An Act respecting the Thessalon and Northern Railway Company.

An Act respecting the Esquimalt and Nanaimo Railway Company.

An Act respecting the Central Railway Company of Canada.

An Act respecting the Quinzé and Blanche River Railway Company.

An Act respecting the Lake Erie and Northern Railway Company.

An Act respecting the Canadian Railway Accident Insurance Company, and to change its name to 'The Globe Indemnity Company of Canada.'

An Act respecting the Vancouver Life Insurance Company of Vancouver, B.C., and to change its name to 'The Vancouver Life Insurance Company.'

An Act respecting the Burrard Inlet Tunnel and Bridge Company.

An Act respecting the Acadia Loan Corporation, and to change its name to 'The Mortgage Corporation of Nova Scotia.'

An Act to incorporate the Bank of Alberta.

An Act respecting the Sterling Trusts Corporation.

An Act to amend an Act relating to the establishment and expenses of the International Joint Commission under the Waterways Treaty of January 11, 1909.

An Act respecting Queen's University at Kingston.

An Act respecting the McClary Manufacturing Company.

An Act respecting British Trust Company.

An Act to incorporate the Norfolk and Elgin Railway Company.

An Act respecting the Calgary and Fernie Railway Company.

An Act respecting the Canadian Northern Railway Company.

An Act to amend the Weights and Measures Act.

An Act for granting to His Majesty certain sums of money for the public service of the financial year ending respectively the 31st March, 1914, and the 31st March, 1915.

POST OFFICE ACT AMENDMENT.

The House again in Committee, Mr. Blondin in the Chair.

Mr. NESBITT: Does the mileage allowance apply to temporary clerks?

Mr. PELLETIER: Yes. While en route they have to get their meals and pay hotel bills, and the allowance is made for that purpose. The temporary man is just as much entitled to that as the permanent man.

Mr. NESBITT: I cannot quite agree with the hon. member for Carleton, N.B., as to making the examinations easier. I have not the examination before me and do not know the exact nature of it, but it seems to me that after those officers have served a number of years they ought to be able to pass an examination if they have any sense at all. I would like the minister when he brings in his Bill to give the information asked for with regard to the other Bill, namely, how many officers will be affected and what the amount of the increase will be.

Mr. PELLETIER: I will have that information.

Mr. BOIVIN: Perhaps the minister could give us also a general idea of the nature of the examination.

Resolution reported and concurred in.

Mr. PELLETIER thereupon moved for leave to introduce Bill No. 147, to amend the Post Office Act.

Motion agreed to, and Bill read the first time.

FISHERIES ACT AMENDMENT.

THIRD READING.

Bill No. 71, to consolidate and amend the Act respecting fisheries and fishing.—Mr. Hazen.

DAIRY PRODUCTS.

Hon. MARTIN BURRELL (Minister of Agriculture) moved the second reading of Bill No. 112, to regulate the manufacture and sale of dairy products and to prohibit the manufacture and sale of butter substitutes.

Mr. CARVELL: Subsection b of section 5 of this Bill absolutely prohibits the re-melting, re-clarifying or re-churning of any kind of butter. It is a very common practice to have butter brought from the dairy and taken to the factories and re-churned. A better article is turned out, and the butter is put up in more attractive packages. Will the minister tell us why the change is being made?

Mr. BURRELL: This Bill is, to a large extent, a revision of part 8 of the Inspection and Sales Act, which was a consolidation of the various dairy Acts passed between 1886 and 1896. Some of the provisions of the Bill are taken out of the Inspection and Sales Act as it was thought to be much better to have a separate Bill dealing entirely with dairy products. In the interpretation clause of the Bill, section 3, are certain provisions which are necessary for clearness, and which have covered new products which have come into existence in connection with the dairy business since the passing of the first Act. Section 4 corresponds with sections 284, 285 and 287 of the old Acts, and covers in addition, milk powder or casein manufactories, milk or cream shipping stations, and milk-bottling establishments. As the law stands at present no prosecution can be made for supplying adulterated milk to these establishments, as they are not mentioned in the Act. Section 5, to which my hon. friend particularly refers, is a re-drafting of sections 298 and 299 of the Inspection and Sales Act. The word 'oleomargarine' is put in paragraph a, and paragraphs b and c replace section 299 of the Inspection and Sales Act. Section 298 of the original Act is as follows:

> No person shall manufacture, import into Canada, or offer, sell, or have in his possession for sale any oleomargarine, butterine, or other substitutes for butter, manufactured wholly or in part from any fat other than that of milk or cream.

Section 299 is as follows:

> No person shall mix with butter any acid, alkali, or chemical or any substance whatever, which is introduced or used for the purpose or with the effect of causing the butter to absorb water or any part of milk or cream; or manufacture, or import into Canada, or offer, sell, expose or have in his possession for sale any such mixed butter, any renovated butter or process butter.

That is the butter referred to by my hon. friend which is made over again by churning. With the old section on the statute book, many dishonest dealers throughout the country learned how to add water to butter without the use of any acid, alkali or other chemical substance; and the courts held that, although we might prove that there was 25 per cent or 30 per cent of water in the butter in excess of the legal limit of 16 per cent, we must also prove that an acid, alkali or other chemical substance was used. The result was that, especially in Montreal, a lot of butter was re-

churned and water added without the use of chemicals or acids, and the courts practically refused to convict because there was no proof of these substances having been added. In many cases thousands of dollars have been made by men who rechurned butter and renovated it so that it contained 40 per cent or 45 per cent of water. This was not only a manifest injustice to the producers, but a glaring fraud on the consumers, and it added to the high cost of living. We have therefore put in subsection c, which is as follows:

Melt, clarify, refine, rechurn, or otherwise treat butter to produce what is generally known as 'process' or 'renovated' butter, nor add any milk or cream to butter.

There may be something in what my hon. friend says about not allowing people to rechurn butter; but if my hon. friend knew what a business is made of the manufacture of this process butter, he would see that this is the only way of reaching the abuse.

Mr. CARVELL: I am afraid my hon. friend has not paid due regard to the condition of affairs in the drafting of the Bill, because subsection c makes it a criminal offence for any person to—

—melt, clarify, refine, rechurn, or otherwise treat butter to produce what is generally known as 'process' or 'renovated' butter, nor add any milk or cream to butter.

Subsection k of the interpretation clause defines renovated butter as follows:

'renovated butter' or 'process butter' means any butter which has been melted, clarified, refined or rechurned;

If a man rechurns butter without adding water to it, this would make it a crime; it is a crime if he attempts to remodel it in any way. I quite understand that if renovated butter were defined to mean butter with more than 16 per cent of water, it would be all right; but unfortunately subsection k does not say that renovated butter has any specified quantity of water in it.

Mr. BURRELL: I think my hon. friend will find that commercially there will not be much difficulty of the kind he suggests, because the amount of butter that would be so treated would be infinitesimal. There is probably something in what my hon. friend says, but the matter can be threshed out in the committee. The main provisions of the Bill have been gone over carefully by the parliamentary counsel and the commissioner of dairying. It is my wish to refer the Bill to the Agricultural Committee, so that the sections may be thoroughly discussed there.

Mr. BOYER (Vaudreuil): Mr. Chairman, this revision of part 8 of the Inspection and Sales Act, such as amended by chapter 35 of the statutes of 1908, is quite timely, and the more so at a moment when all efforts are being directed towards the improvement of our dairy industry, and as the old law had proved inadequate, I congratulate the hon. the Minister of Agriculture upon having remodeled it to suit the time and present needs. Therefore I heartily approve of this Bill, and let me say that it is not in a carping spirit and as a fault-finder that I have taken the floor; on the contrary, I should like to still more improve the Bill by affording the provincial authorities the advantage of operating under this Act. As the law stands, the officers of the Dominion Department of Agriculture are the only ones who have jurisdiction and can exercise the powers conferred by this Act, while the provincial departments of agricure which also possess a thorough organization such as schools for inspectors, lecturers, etc., with a view to the constant development of dairying, have no legal means enabling them to validate their legal proceedings.

True, they have their local regulations, but those regulations are only worth what they are worth and before the law they have no value, as all matters coming within the subject-matter of trade and commerce are exclusively assigned to the Dominion.

Formerly, the Dominion Government had in their employ district analysts who are sent around here and there. Their services were seldom required in those days.

The dairy industry was then in its initial stage; but when it was given a strong impetus and the farmers realized that they would benefit by carrying on dairying on a larger scale, the provincial governments did not wait for the Government officers of the Dominion Department of Agriculture; they set out on organizing themselves with a view to improving and developing the dairying business as rapidly as possible, and various branches were created in the provincial Departments of Agriculture, the officers of which exclusively aimed at making their work a success in the dairying line. The Government of Ontario and Quebec delegated powers to associations, the object of which was identical to theirs. It was under those circumstances that the western and the eastern dairy associations

of Ontario originated, as also the Dairy Association of the province of Quebec.

Those various provincial associations, the organization and operations of which have proved such a success, have their respective laws and regulations recognized by their own governments under which they carry out their admirable work among the dairymen and they have an immediate control over all the dairy products in their respective provinces.

These societies have inspectors whose duty it is to test milk as to value, quality, cleanliness, manufacturing process handling in the manufactures, in short, anything coming within the province of butter and cheese manufacturing as also any other article manufactured from milk.

Now, in order to make this Act effective, it should empower the inspectors appointed by provincial governments as also the dairy associations having inspectors under their control, to testify before provincial courts, under this Dominion Act, so that the evidence given by them before these courts may be valid and effective in law.

There exists an anomaly which should necessarily be done away with if we wish to avoid dealing the dairy industry a stunning blow. We all know how apathetic the dairymen are in complying with the rules of hygiene and probity. The duty of the inspectors is to force the refractory milkmen to obey the laws and to show those who are willing to improve their methods the way to progress.

Unfortunately, nowadays, the courts of both provinces have declared to be ultra vires any prosecution brought by one of the provincial inspectors against milkmen in default. I am informed that no such prosecution may be brought without leave of the Minister of Agriculture at Ottawa, and moreover not only must the action be entered by the Dominion department, but the evidence must also be brought before the court by the same department.

Similar proceedings entered against individuals who were discrediting our dairying by their reprehensible operations have been dismissed by the court of justice in Montreal, in the city of Quebec and elsewhere, and among others, by judge Lavergne, at the Montreal Appellate Court.

Now, section 14 of the Bill which this House is preparing to pass into law and the various provisions of which I approve of, enacts: 'The Minister of Agriculture may make appointments of inspectors and other persons for the enforcement of this Act'; but it does not provide that provincial inspectors and others may be included among them.

I do not know the Government's mind. It may be that they intend to appoint a large enough number of inspectors to perform the duties of those who already exist in the several provinces. In the province of Quebec they number from 75 to 80, and Ontario has a still larger staff. In such a case, would the services of those inspectors be at the disposal of the provincial Deparments of Agriculture or the provincial dairy associations?

However, would it not be wise to insert into this Bill an amendment empowering all the inspectors holding diplomas or licenses in the several provinces and directly or indirectly employed by them for the purposes of dairying to act and avail themselves of this Bill in the discharge of their duties?

It goes without saying that those inspectors who are already officially recognized shall be authorized not only to make tests of milk, etc., and any other operation in connection with that, but also to test the precision of the scales of the lacto-densimeter, lacto-butyrometer, pipettes and other instruments in use in the dairy industry. In short, they will be authorized to enforce this Act in all its provisions. In so far as the province of Quebec is concerned, there are a number of inspectors appointed by the provincial Government for inspecting manufactures who are not under the control of any syndicate organized by the Dairy Association, but the larger number of inspectors are under the immediate control of the Dairy Association. Now, under what conditions do these inspectors exist and what are their prerogatives? Let me quote clause 1963 of 'The Revised Statutes of the Province of Quebec,' section XI, concerning the Dairy Association:

1963. The association, in order to obtain a more prompt and complete diffusion of the best methods to be followed for the production of milk, the manufacture of dairy products and, in general, the advancement of the dairy industry, may subdivide the province into regions, in which syndicates, consisting of proprietors of butter and cheese factories and other like industries, may be established.

The formation and working of such syndicates shall be governed by the regulations made by the said association and approved by the Lieutenant Governor in Council, and such syndicates shall be under the direction and supervision of the association.

To such syndicates the Lieutenant Governor in Council may grant, out of the Consolidated Revenue Fund, a subsidy equal to one-half of the expenses incurred for the service of inspec-

tion and instruction organized therein, including the salary of inspectors, their travelling and other expenses directly connected therewith, but not to exceed three hundred dollars for each syndicate. Such subsidy may be paid to the inspector of the syndicate.

The Minister of Agriculture may allow, in addition, to each syndicate inspector, a bonus varying from twenty-five dollars to one hundred dollars. R.S.Q., 75a; 54 V., c. 20, s. 1; 63 V., c. 16, s. 1; 6 Ed. VII., c. 22, s. 3; 7 Ed. VII., c. 20, s. 1.

1964. The inspectors, including inspectors-general and their assistants, shall be appointed by the Lieutenant Governor in council and shall be experts who hold certificates of competency from the board of examiners mentioned in article 1966.

Their duties shall be to superintend the production and supply of milk, as well as the manufacture of butter and cheese in the establishments so organized into such syndicates, the whole in conformity with the regulations made by the said association and approved by the Lieutenant Governor in Council.

The Lieutenant Governor in Council may, at any time, repeal or amend such regulations. R.S.Q., 1753b; 6 Ed VII., c. 62, s. 4.

As we see by those two clauses, the parties who are entrusted with those duties must have been through examinations and have followed the rank and file required for their appointment. It shows the qualifications of the inspectors for whom I ask the right of operating under this law.

I will probably apprise the hon. minister of nothing new of the important reform in the inspection system to be enforced during the coming season, because the hon. Mr. Caron must have mentioned it at the conference of the provincial Ministers of Agriculture.

So far, the greatest part of the inspection work has been carried by 68 inspectors of the Dairy Association. Those inspectors are paid one half by the Government and the other half by the owners of factories visited. In order to keep his position, an inspector must have at least sixteen factories under his inspectorate; in no way are the proprietors compelled to have that inspection, it is optional with them, but the great majority have understood the benefits of that inspection and its teachings. But the abnormal situation of the inspectors is liable to place them between their duty and their interests. The Government will wipe out that uneasiness. The province will be divided into fifty districts and the inspectors will be paid in full by the Government so that they may enjoy the fullest freedom in the discharge of their duties.

That reform will necessitate an expenditure of $65,000: $50,000 in salaries and $15,000 in contingencies, but the Government can afford to spend only $50,000. We hope that this Government will fill the gap and I dare say, Mr. the minister, that I trust your department to place in their contract a sum of at least $15,000 for the help of that inspection.

To make such an inspection efficient, it should be good to insert in this Bill a clause giving to provincial or other inspectors the same authority as that of federal officers under this law.

Motion agreed to, and Bill read the second time.

Mr. BURRELL: I would move that the Bill be referred to the Select Standing Committee on Agriculture and Colonization. It has not been the custom in the past, with I think one exception, that is, the Seed Control Act, to refer Bills of this kind to the Agricultural Committee, but I cannot quite see why that has not been done. That committee has the same powers and authority as the Railway Committee or the Committee on Banking and Commerce. It has power to call witnesses and get evidence if desired. I think it would save the time of the Committee of the Whole House and give a better opportunity to thresh out the details of this Bill if it were sent to the Agricultural Committee.

Mr. SPEAKER: Similar Bills in the past have been referred to the Agricultural Committee.

Mr. NESBITT: Before the motion passes, I would draw attention to clause 5, which reads:

> No person shall—
> manufacture, import into Canada, or offer, sell or have in his possession for sale, any oleomargarine, margarine, butterine, or other substitute for butter, manufactured wholly or in part from any fat other than that of milk or cream.

Some oleomargarine manufactured from beef suet will keep just as well as butter, and I would recommend that the minister change that section so that it shall read that no one shall manufacture and sell it as butter. If it is sold for what it really is, no harm will be done, because oleomargarine manufactured from beef suet is said by the best authorities to be as pure and wholesome as butter.

It is said to be by the best authorities that I know of; and if poor people are willing to eat margarine, knowing what they are eating, I do not see why they should not. I can understand the minister not wanting to have it sold as butter; that

would be fraud. I have seen margarine that was very hard to distinguish from good butter and that would keep excellently.

Mr. BURRELL: If I may be allowed to answer the remarks of my hon. friend, I would say that he has raised a very big subject indeed and one which is extremely debatable. I may call his attention to the fact that the Act passed by the late Administration does exactly what we are doing. It reads:

> No person shall manufacture, import into Canada, or offer, sell or have in his possession for sale, any oleomargarine, butterine, or other substitute for butter, manufactured wholly or in part from any fat other than that of milk or cream.

I am not saying that oleomargarine is not a wholesome product to eat, but if you allowed the sale of a substitute looking exactly like butter although not made of the same ingredients, you would require a tremendously large staff of inspectors to prevent men from selling it as butter. They have had a great difficulty in the United States over that, and I believe the general opinion of this country would be against it.

Mr. OLIVER: I would just like to say a word or two.

Mr. SPEAKER: At this stage of the Bill it would not be in order, unless the hon. member wishes to discuss the propriety of sending the Bill to a committee.

Motion agreed to, and Bill read the second time.

ADULTERATION ACT AMENDMENT.

On motion of Hon. W. B. Nantel (Minister of Inland Revenue) Bill No. 99, to amend the Adulteration Act, was read the second time.

Mr. NANTEL: As this Bill deals with maple sugar, syrup, and other products in which farmers are interested, I move that it be referred to the Standing Committee on Agriculture and Colonization.

Motion agreed to.

VANCOUVER HARBOUR COMMISSIONERS.

On motion of Hon. J. D. Hazen (Minister of Marine and Fisheries) Bill No. 128, to amend an Act to incorporate the Vancouver Harbour Commissioners, was read the second time, and the House went into Committee thereon, Mr. Blondin in Chair.

[Mr. Nesbitt.]

On section 1—land vested in Crown:

Mr. HAZEN: At the last session of Parliament an Act was passed constituting a harbour commission in Vancouver. The commission consisted of three men, in whom was vested the management of the harbour. Section 14 of the Act vested all Crown lands in the harbour commissioners, who had full control over foreshores and other property. Section 15 provided that all the revenue derived from water lots leased or otherwise disposed of to any persons by the Governor in Council should be retained by the corporation and form part of its general revenue. Last session I estimated that the Government of Canada received from these leases about $12,000 for the year. That was paid to the commissioners for the purpose of carrying on the business in connection with the harbour. Clause 14, which vested these foreshores and the Crown property in the harbour commissioners, provided that they should only have the power to lease these properties for a period of twenty-one years subject to renewals for subsequent periods of twenty-one years. The harbour commissioners have asked us to amend that. They have found that there are cases where, in the public interest, they think it desirable that they should not be so limited. They also think it desirable in some instances to make actual grants instead of leasing the property. I have the statement of one case under my hand now. The statement made to me by the commissioners is that the original Act was found to be unworkable in so far as grants of these lots were concerned. They saw that it is impossible to issue any grant whatever, and a case or two has been before the Government for some time where the commissioners think it is in the public interest to issue grants. For instance, there is one case where a party, acting in good faith and through years of dumping, moved the high tide mark seventy-five feet out, and on the land thus created, erected a building costing $125,000. After the land had been extended by dumping seventy-five feet out in the harbour, other people bought this property thinking that they would be securing not only the ripa and the foreshore but this expensive building, but they found that they had no title to the land upon which half of the building stood. The line of the original high tide mark passed through the centre of their building, and under the Act passed last

year neither the Government nor the harbour commissioners could give them any relief. We had no authority or power under this Act to give a grant of this piece of property to which they were fairly entitled on proper terms. The harbour commissioners have asked that this section should be repealed so that the power of leasing and disposing of these foreshores should remain, as it had been before, in the hands of the Governor in Council, with a provision that before the Governor in Council shall exercise that power he shall ask the harbour commissioners, when any application is made, for a report upon the question, and thus get their advice in regard to the matter before taking action. The Bill repeals the sections of last year's Bill, revests this power in the Governor in Council and enacts that:

> 14. The Governor in Council may authorize the Minister of Marine and Fisheries to grant any portion of the lands included in the harbour as defined by section 4 of this Act, by deed or otherwise, or lease the same for any term or terms of years but the application therefor shall be referred to the corporation for its report in the premises.
>
> 15. The revenue derived from water lots within the limits of the harbour heretofore leased by the Governor in Council or the corporation; the revenue received by the Governor in Council or the corporation after the sixteenth day of May, 1913, from any such water lots otherwise disposed of; and the revenue derived from all grants and leases made under the provisions of this Act, shall be paid to and be retained by the corporation and form part of the general revenue of the corporation.

It in no way interferes with the revenue which is derived by the corporation from these harbour lots, but it is thought better that the power of granting these lots should remain with the Crown and that the Governor in Council should exercise it after obtaining a report from the commissioners as to the propriety of disposing of the lots.

Mr. CARVELL: As I understand it, power is taken by the minister to dispose of these lots without advertising for tenders or inviting competition, but purely according to the ideas of the Government and of the commission.

Mr. HAZEN: That is right; that is being done every day, and has been done every day for many years. All the foreshores belonging to the Crown in harbours all over Canada have been disposed of for years past in that way. The procedure is this: Application is made for a grant or lease of a foreshore. The matter is referred to the chief engineer of the Department of Marine and Fisheries, who makes a report as to the rental value, or, in a case where a grant is being made, as to what amount should be paid for the title in fee simple of the property. That is submitted to the Minister of Marine and Fisheries and the Minister of Public Works, and any grant that is made is upon the joint report to Council of the Minister of Marine and Fisheries and the Minister of Public Works. The chief engineer of the Department of Marine and Fisheries has to certify that the proposed grant will not in any way interfere with the harbour or cause any obstruction, and the Minister of Public Works has to report that the property will not be required for the purpose of erecting public works upon it. That goes to Council, and it is for Council to say whether the grant or lease shall be given or not as recommended by the two ministers who have investigated the application. There has never been any sale by public auction, and I will tell my hon. friend why. Under the laws governing it, the man who owns the ripa, or bank, has an equity in the foreshore. He has not an absolute right to it, and we could not make a grant giving it to him, but if we grant the foreshore to any person other than the owner of the ripa, the owner of the ripa has the right to prevent any one else from blocking his access by water to the land which he owns and which adjoins this foreshore. You would have to have regard to the rights that the riparian owner has in the foreshores abutting his property, and it would be an improper thing, under the common law, to sell the foreshore to some one other than the owner of the ripa, thereby cutting him off from the privilege which the law gives him respecting the property which is abutting his property.

Mr. CARVELL: If it were sold, you would have to sell it subject to his legal rights.

Mr. HAZEN: The result of that would be that you would get very little for it. You would have to buy out the riparian proprietor before the foreshore would be any good to the person to whom it was granted. Supposing that certain parties were buying a piece of foreshore, they would have to buy the rights of the owner of the ripa in order to get over the bank and get to their own property. At the same time you could not block his right

of way either, because that is a right which he has over the foreshore. But for that reason it is not sold without knowing that a fair and proper price is paid for it. In some harbours there has been a somewhat hard and fast rule as to what shall be charged for leaseholds. Three years ago, in the harbour of Vancouver, the foreshore was valued at $10 per foot front, and the rental was fixed at 5 per cent of that amount. Two years ago in that harbour we increased the amount to $40, and the rental was 5 per cent on that amount. If there were fifty feet the value would be fixed at $2,000 and 5 per cent of that would represent a rental of $100 a year. There are other cases where it is most difficult to arrive at what the amount should be. All one can do is to use one's best judgment in regard to the matter, and have regard to reports from different officials of the department. I thought, when the Bill was passed last year, that it would be better to have this power vested in the harbour commissioners, because it seemed to me that they, living in the city and making a special study of harbour conditions, would be better able to come to a conclusion as to what amount should be charged.

Mr. MURPHY: That is in regard to the powers of granting and leasing?

Mr. HAZEN: Yes, and in fixing the rental, etc. But it has not worked out in practice.

Mr. MURPHY: You are reverting to the original position?

Mr. HAZEN: Yes, with the exception that, before we grant any lease, we shall get the report of the harbour commissioners, as to the value of the property and as to whether it is in the interest of the harbour to grant the lease.

Mr. SINCLAIR: There is also the very important question of policy involved in this Bill, as to whether the harbour should be kept free, and not pass into the hands of private owners. The idea, in the first place, of giving the land to the harbour commissioners of Vancouver was that they might control the harbour foreshore, and in that way make it public to a large extent, because the chief difficulty in such harbours is that, when the foreshore passes into the hands of private owners, it becomes so expensive that it is difficult to carry on trade in those harbours. In some of the harbours on the other side of the Atlantic, such as Glasgow, very large sums of money are being paid to acquire the rights of private owners; and when a merchant wants to use the harbour, he pays a small rental to the Glasgow Trust, and has the use of the hoisting gear and other appliances of the trust. That, I think, is the ideal system. I do not know whether the minister has considered the question of policy or not. It is a question largely for the harbour commissioners of Vancouver themselves. It strikes me, however, that this is a step backward in providing for the absolute sale of the property. The idea is that the property will pass into the hands of private owners and not be under the control of the harbour commissioners at all. Once the deed is given and a wharf is erected on the property, the property passes into the possession of a private owner, and the harbour commissioners have no longer any control over it except some control over the rates to be charged. The question of policy is the most important one for the minister to consider. When we pass a law granting the whole of the foreshore of a harbour to a corporation, should we allow them to dispose of it, and put the money into the public treasury?

5 p.m.

Mr, HAZEN: That is what we prevented in the Bill of last year. We did not give them any power to sell.

Mr. SINCLAIR: You are giving them that power now.

Mr. HAZEN: The policy of the Government in all these harbours is against selling, but simply to lease for a period of twenty-one years. I have changed the conditions of the lease in the last eighteen months or two years. The old lease provided for a lease of twenty-one years and then for two further periods of twenty-one years at the same rental, making it practically a lease for 63 years.

Mr. SINCLAIR: Is not that long enough?

Mr. HAZEN: It is quite long enough. I am telling my hon. friend of the change in that system that I have introduced. We provide now that, at the end of each twenty-one year period the amount of rental shall be subject to reconsideration. The property may be much more valuable. The condition of the law is that if the lessee and the Government cannot agree as to

what the rental should be, then the rental shall be fixed by application to the Exchequer Court of Canada.

Mr. SINCLAIR: Does not this Bill authorize a direct grant?

Mr. HAZEN: I am just going to explain that. The policy of the department and the Government is against giving grants in any of these harbours; but, like all questions of policy, there may be exceptional circumstances. An exceptional circumstance arises here and there where people have, before that was the policy, occupied parts of the foreshore, have established manufacturing industries and have erected extensive buildings. In such cases, as in the case of Vancouver harbour, we have to consider whether grants shall be given or not. There are other cases where people apply for sites on which to build elevators. In order to build elevators, they have to float large amounts of bonds upon the property If they have only the lease for the site, they cannot float those bonds as easily and as successfully as if they had title in fee simple, and it may be in the public interest that grants should be made. In every case the interest of the public is safeguarded. Before the Government would grant a lease or issue a patent or do anything in the way of disposing of the property, they should get the opinion of the harbour commissioners as to whether it was in the interest of the public that this should be done —what lease should be given and what rental should be charged. As far as the harbour of Vancouver is concerned, for my own part I would have preferred to leave the matter in the hands of the harbour commissioners; but after a year's experience, they have asked us to take it out of their hands.

There are exceptions to every rule and every policy; but the policy of the Government is to give leases and not to grant titles in fee simple to the foreshore privileges in the different harbours. There are a number of harbours where very grave doubts exist as to who owns the foreshore and as to whether the Crown is represented by the federal or by the local Government. The decision of the Privy Council has left the matter somewhat obscure. Their decision is that in those harbours which were public harbours at the time of Confederation, the foreshore belongs to the Crown as represented by the federal Government, but in those harbours that were not public harbours at the time of Confederation, the foreshore is vested in the Crown as represented by the provincial governments. It leaves us in a doubtful state as to what the meaning of the words 'public harbour' is—as to whether they mean a place actually used as a public harbour before Confederation, a place where goods were discharged and taken aboard ships, and a place resorted to by ships for anchorage and harbour purposes, or whether they mean a place that has the natural and physical characteristics of a harbour. One case is the harbour of Port Arthur, where people have been receiving patents from the local Government. They have started erecting buildings on the property and have borrowed money on them. Then they have found that the title is called in question, and they apply for grants from this Government for titles which they have obtained from the Ontario Government by paying for them. The matter will have to go before the Privy Council again; although the Privy Council, while laying down the rule I have mentioned, have practically said that the question whether a place is a public harbour or not will depend upon the circumstances of each case, and that it will be very hard to lay down a general rule. While the law is in a most unsatisfactory state, the only thing we can do is to administer it according to common sense and reasonable discretion.

Mr. SINCLAIR: Will the minister ask the Privy Council to clear up this question?

Mr. HAZEN: There is bound to come some day a friendly suit between the Government of British Columbia and the Government of the Dominion. In the harbour of Prince Rupert and in other harbours along the coast this question is bound to arise. It does not arise in the case of Vancouver harbour, because I think that harbour was resorted to by ships and was considered a public harbour at the time of Confederation. I think the same can be said of Victoria harbour and Halifax harbour. But as to some places on the lakes it is doubtful if they were harbours before Confederation; and there are places that are harbours to-day only by having been made harbours by the construction of breakwaters, not even having the physical characteristics of harbours naturally. Some day, no doubt, and I think it will be an early day, steps will have to be taken to settle these matters.

Mr. SINCLAIR: The kind of harbour that Halifax will be—with a breakwater.

Mr. HAZEN: Halifax is a pretty good harbour even without the breakwater.

Mr. McKENZIE: I am not surprised that this statute comes back for patching up. I have a very distinct recollection of this measure when it was before the House and in Committee last year. I protested against its provisions at that time, pointing out that it was a most extraordinary piece of legislation. But my observations at that time received very little consideration at the hands of the minister; he thought, and the House with him, that this was a first-class piece of legislation. I confess, I never heard of a case like it. There may be cases where valuable property absolutely vested in the Crown was launched into the hands of private individuals, but I have never heard of such a thing. On the other hand, there may be some difficulty in passing a title from the Crown to a private citizen or corporation. But it is certainly the safest and the best way that the title should remain in the Crown, either in the right of the province or in the right of the Dominion, until that title is finally and absolutely transferred. It strikes me as a most unsatisfactory way that the rights of the Crown should be transferred to some private corporation and that corporation empowered to exercise the rights of the Crown in respect of that land. I cannot conceive of such a method working out satisfactorily. But that is what was done last year. I am not surprised that the minister comes back and tells us that it is not working out satisfactorily and should be remedied. I cannot conceive of a better remedy than to let the old common-law have sway. When it comes to the question of erecting something on that land, of course, that is another matter. If a private wharf is built on that property, of course, it must not interfere with navigation. An Act was passed by this Parliament a few years ago under which the power to deal with matters of that kind is vested in the Public Works Department. The Department of Marine and fisheries having controlling rights to navigation, would have some rights of supervision of a work of that kind. But if an interference with navigation can be controlled absolutely by the department governing the matter, what reason is there for vesting these rights in a private body such as a harbour commission? That is what struck me as so extraordinary last year, and I am not surprised that amendment is necessary. Briefly, what I say is that the title to the Crown property should remain in the Crown, and if it is to go to the individual either by fee simple or lease, the control of that fee simple or that lease should remain in the Crown either in the right of the Dominion or the right of the province as the case may require.

Bill reported, read the third time, and passed.

GOVERNMENT RAILWAYS CLAIMS.

On motion of Hon. J. D. Reid (acting Minister of Railways and Canals), Bill No. 122, to amend the Government Railways Small Claims Act, was read the second time, and the House went into committee thereon, Mr. Blondin in the Chair.

On section 1—procedure:

Mr. CARVELL: I have to confess, in the first place, that I do not know much about the Government Railways Small Claims Act, never having lived along the line of a Government railway. But I know that an Act was passed in 1910 providing that a Government railway could be sued like an ordinary railway. I think it was brought practically under the general Railway Act so far as a suit is concerned—a policy which, I think, was along proper lines. I notice that the minister does not propose changing the general policy, but he proposes that the action shall be against the general manager. That is all right; it does not matter who the defendant is in such cases so long as he is defined. But the Bill provides not only that process shall be issued against the general manager, but that 'such process may be served upon him or upon any other person duly authorized by him to accept service or to be served with process in such cases.' It seems to me the minister is placing quite a burden on the plaintiff. For of course he will remember that this refers to small matters—I have forgotten what is the limit.

Mr. McKENZIE: Five hundred dollars.

Mr. CARVELL: Suppose that a man at Glace Bay wishes to bring an action against a Government railway, say for $5 for killing a sheep. If he has to go to Moncton to serve his process on the general manager or some person designated by him, it will cost more to serve the process than the amount of the claim.

I do not think the general manager of the railway is going to make it easier for plaintiffs by appointing some person in each town or county upon whom service could be effected. I think the minister should consider the advisability of permitting every agent of the railway to be a person upon whom service can be made. In that way the general manager will get his notice in due course, and things will be made a great deal easier for the plaintiff.

Mr. REID: It is true that in 1910 a Bill was passed providing that suit might be entered against the Government through the Managing Board of Government Railways. In this legislation the amount was limited to $200, and in 1912 it was increased to $500. The only change which is now made is the elimination of the words 'Government railways managing board' —the board, of course, being not now in existence—and the substitution therefor of the words 'general manager.' I do not think there is any objection to this Bill other than that raised by the hon. member for Carleton. I must confess that I do not know much about the law, but it strikes me that if the agent were to be served as suggested by the hon. member for Carleton there might be a possibility of the agent's not forwarding the service, with the result that judgment might be obtained before the general manager or his assistant would know anything about it. The hon. member states that service upon the general manager is expensive. Is it not customary for the claimant to mail the service to another solicitor, say at Moncton, who serves the writ upon the proper person?

Mr. CARVELL: Yes, but the claimant has to pay that solicitor. I have not a copy of the statutes here, but if the hon. gentleman will refer to the general statutes of any of the provinces he will find that provisions are made for service of process upon any corporation by service upon its agents at its local office or place of business. It strikes me that when you bring the Government railways under the general law of the land with regard to suits of this kind, there is no reason why the service of process should not be made to conform with the general laws in the different provinces. I am sure that the hon. minister would meet with no difficulty whatever if he provided for service upon the recognized agent or person in charge of the local office of the company or government sued. That would not be nearly as broad as is the general law in every province of Canada with regard to the service of process, but it would be broad enough to meet the requirements of any person having occasion to make a claim under this Act. I do not think there would be any delay on the part of the agents so far as sending in the notice is concerned; they usually look after those things promptly.

Mr. MURPHY: The amendment which the minister has introduced is probably due to something which has arisen in practice. If he could tell the committee what has arisen to make this amendment necessary, perhaps we would appreciate better the point raised by the hon. member for Carleton.

Mr. REID: The board of management was abolished a year or two ago, and the change is absolutely necessary in order to provide that there shall be a person upon whom the service of writs may be effected.

Mr. MURPHY: What about the general question of service raised by the hon. member for Carleton?

Mr. REID: There is no reason why, under this Act, the general manager should not issue general instructions to the various officers in that regard.

Mr. CARVELL: Why not provide in the Act that he shall do so?

Mr. REID: I should think that the Department of Railways and Canals would obtain the opinion of the Justice Department as to whether it would be advisable to have an order of that kind issued. I agree with the hon. member for Carleton that any person having a small claim against the road should be given every facility of service at the least possible expense. If this Bill is passed and these instructions issued, the plan might be tried for a time, and, if it works satisfactorily, be allowed to continue. I think it is better to leave it in the hands of the Government to issue an order and to allow the matter to be tried out in that way than to make absolute provisions for service upon agents.

Mr. CARVELL: I can assure my hon. friend that I am not offering this criticism in any captious spirit. If things go well, in the course of a year I hope that we will have the Intercolonial in the western portion of the province of New Brunswick, and as I make a living through the practice

of law, I expect to be called upon to act on behalf of claimants against the railway. I know that when a man loses a cow on the Canadian Pacific railway he has the habit of coming to me for redress, and I assume that he will do the same thing when the road becomes a government railway. I live 240 miles from Moncton.

It means quite an additional cost to the plaintiff to have to make the service at Moncton when he might just as well make it at his own home. In the Judicature Acts of the different provinces it is generally provided how processes shall be served on any person who represents a corporation. I think the suggestion my hon. friend is making will work out all right; the difficulty is that if the Government instructed the general manager to appoint certain persons who might accept service, then, if the Crown or the general manager did not appear in answer to the process, the burden would be upon the plaintiff to prove that the person upon whom service had been made had been authorized by the general manager to accept service, and there might be some difficulty in doing that. I think that unless the minister puts a special clause in the statute the service will have to be made upon the general manager.

Mr. REID: How has it worked in the last three years?

Mr. CARVELL: I have no idea. I have had no occasion to deal with it personally.

Mr. REID: If the Bill is allowed to go to its third reading, I shall ascertain all about the present system and shall also have the opinion of the Minister of Justice.

Mr. CARVELL: I would suggest that possibly service might be effected upon any agent in charge of any station.

Mr. SINCLAIR: The district superintendent, I think, might accept service. There is a district superintendent for each division of the road, service upon him could be regarded as service upon the general manager of the line. Could the minister explain section 4, which provides for a set-off or counter claim which His Majesty may have against any plaintiff in any action? I can understand how Mrs. Murphy, if her cow is run over on the railway, has a claim against the Government for the value of the cow; but how can the King have a claim against Mrs. Murphy?

[Mr. Carvell.]

Mr. REID: The amendment which is now being made to the section is of course really only a verbal change to suit the change of management. Its effect is that if a suit is entered against the Government railway and the Government have some claim against the party making the suit, against Mrs. Murphy, the Crown could file its claim against the plaintiff as an offset against the suit entered against the Crown.

Mr. CARVELL: Suppose Mrs. Murphy had torn down the gate or fence, then of course she could not win, as she would have been guilty of contributory negligence; but His Majesty would have the right to recover from her in the same action the value of the gate by filing the counter claim.

Mr. J. J. HUGHES: It would be a great hardship in Prince Edward Island if the superintendent on the island could not be served. For a small claim it might not be worth while sending to Moncton to effect service.

Mr. McKENZIE: In Nova Scotia there has been a doubt as to how service can be made. The courts are circumscribed by geographical limits and a writ issuing out of a court in Nova Scotia does not run beyond the limits of that province, except under very exceptional conditions. A writ out of the province of Nova Scotia does not run in the province of New Brunswick, where the manager resides. There should be a provision that a writ could be served upon him where he resides in New Brunswick by a proper officer of that place. The arrangement suggested by the hon. member for Carleton (Mr. Carvell) would be more convenient. We cannot get authority to issue a writ which runs as a binding obligation upon anybody outside of the province from which the writ issues.

Bill reported.

INDIAN ACT AMENDMENT.

On motion of Hon. W. J. Roche (Superintendent of Indian Affairs) Bill No. 124, to amend the Indian Act, was read the second time, and the House went into Committee thereon, Mr. Blondin in the Chair.

Mr. LEMIEUX: I have received from an old friend of mine, a letter in regard to this Bill, and in order that the minister may be in a position to answer the complaint, which comes from the Caughnawaga reserve, I will read it. He writes:

The earnest desire of the Caughnawaga Indians is that some good may result from our humble request.

The extraordinary piece of legislation (amendment to the Indian Act passed its first reading March 19, 1914), introduced by the Hon. Dr. Roche is too far-reaching and too injurious to Indians to be dealt with fully in a short letter. I propose only to touch upon one of the amendments, 49a of tne said Indian Act, to show how utterly the natural rights of man are disregarded in special Indian legislation, at the prompting of our official guardian.

Evidently the House does not understand the effect of this Act, and its effect is not understood by the introducer, who, as trustee for Indians, should safeguard our interests.

In former days, the Indians were consulted in the matter of a release or surrender of a reserve before it became valid. (Chapter 81, R.S., 1906, sec. 49, Indian Act.)

Recently a large and intelligent Indian deputation called upon the hon. Minister of the Interior, in regard to the Bill to be introduced to amend the Indian Act.

Our petition contained nearly four hundred names asking the Hon. Dr. Roche to 'exclude Caughnawaga,' for a great many valid reasons. First of all, we are Indians in name only; we are self-supporting, industrious, etc. Our people of Caughnawaga are well known practically in every part of the civilized world, and still we are not recognized as citizens.

The basis and scope of our Indian Act is wrong, and injurious to us, because it interferes with our enjoyments of natural and inherent rights.

We have no voice whatever in legislation. We are often opposed to it and suffer from its effect, as in the present amendment now before your honourable House.

I am convinced that the House of Commons will not pass the proposed amendment (49a) or, at all events, make it general, because there is not a man in or out of the House that knows our desires and needs better than ourselves.

I am sure that the Hon. Dr. Roche would not have introduced it had he been frankly and properly informed. It remains then to expunge it. It is due to your honour and right feeling that this be done immediately.

If you do not take any interest in the cause of the Indian, the forces of injustice will prevail, then you will say: Why have we not done so. If it should happen to pass (Bill 114) I hope that you will not think me unfair if suspicion takes root.

Justice is intended to provide for every man in this country whether his skin be white, red or any other colour.

I do not desire to exhaust the reader and I think I have said enough. My main desire is to excite humane and fair-minded gentlemen to go further and examine the subject entirely or to insist upon its being examined in a full and impartial manner.

F. McD. Jacobs,
Chief.

I hope my hon. friend will give Mr. Jacobs and the Caughnawaga tribe the opinion of the department in regard to this matter.

On section 1—to establish industrial schools:

Mr. OLIVER: Would the minister explain?

Mr. ROCHE: A foot-note is appended to the section which practically explains it. In some portions of Canada there are no schools to which we can commit Indian children. Under the present Act we are allowed to commit Indian children only to those schools in receipt of Government aid. We wish to broaden the Act so as to create any school, a school to which we can commit Indian children. We are seeking to declare any school an industrial school under the meaning of this Act.

Mr. CARVELL: Does my hon. friend contend that he has power to declare an ordinary country school, say in the county of Carleton, N.B., a school to which he can send three or four Indian children? Surely the British North America Act would step in there. If there is one thing which is pretty well settled in Canada to-day, it is that schools are under the control of the provinces. I am afraid that my hon. friend is opening up a question that may lead to trouble in the future. I refer to my own province because I see by the foot-note that some difficulty has arisen over a couple of children in the city of St. John. As I understand the law in New Brunswick, those children have the right to attend any public school in that province because the Act states that all children between the ages of five and twenty years have a right to attend the schools. I do not think, however, that this Parliament has the right to give the minister power to say that those children shall go to this school and shall not go to that school. That would be interfering with our provincial rights. My hon. friend can hardly be referring to the ordinary schools of the country, and yet the section says so.

Mr. ROCHE: It was not intended to.

Mr. CARVELL: I would think not. We have in the province of New Brunswick a number of schools that are Indian schools in a way, and there are schools to which the department makes an allowance of money. These schools are not under the jurisdiction of the school authorities of our province. There is no doubt the minister would have power to send children to these schools under the conditions that he might suggest, but I do not see how he would have any jurisdiction over the ordinary school district, or a school within that district, in the province of New Brunswick; and what would be true of that

province would be true of any other province under the British North America Act.

Mr. CARROLL: Are these industrial schools supposed to be places of discipline for wayward Indian children?

Mr. ROCHE: Not entirely; but there are industrial schools where children are sent to learn a trade and to be made more fitted for the various occupations of life. They are different from what we call the ordinary residential or day school. This is not intended to refer to the ordinary common school or to trespass upon provincial rights. But there are some institutions, like convents, which are willing to take Indian children, and we wish to take authority to commit Indian children to these schools when mutually satisfactory arrangements have been arrived at. It is not intended to force Indian children on any school, no matter what the character of the school may be. When a satisfactory arrangement is arrived at between the Indian Department and the convent, or residential school, in order to maintain these Indian children, they are committed to these schools, which are not the ordinary Indian, industrial, or residential schools.

Mr. KYTE: Is it not desirable to make this section a little more definite? The explanatory note says:

> This amendment enables the Governor in Council to declare schools, other than Indian schools, to be industrial or boarding schools and opens the way for the committal of the said Indian children and other children of the province of New Brunswick and other provinces so situated.

It would appear that this section is sufficiently broad to be applicable to the public schools of New Brunswick and Nova Scotia, and before the section passes I think it would be necessary to make an amendment restricting its application to industrial schools.

Mr. NESBITT: It says, 'any school or institution.'

Mr. ROCHE: Before coming to the House this point struck me, and I asked a question about it. I thought that it might create a difficulty. It is not intended that the Act shall apply to the common schools.

Mr. CARVELL: Is there any provision in the Act that, when you once declare a school to be an Indian school, that gives you the power to grant money to it? Section 10 reads as follows:

> The Governor in Council may establish an industrial school or a boarding school for Indians, or may declare any school or institution to be an industrial school or boarding school for the purposes of this and the next following section.

Is there anything in the Act which provides that if you declare any school to be an industrial school you have the right to make a grant and have control over it? There may be something in the Act which would make that section harmonize with the rest of the Act.

Mr. ROCHE: When we send a child to one of these schools, the school is in receipt of a per capita grant, and it is declared to be an industrial school within the meaning of this Act.

Mr. CARVELL: If I had read the whole chapter through I might have found something that would explain the section, but as the section reads now it appears to me to be very broad.

Mr. ROCHE: The particular regulation referring to this clause is the following:

> Under the provisions of section 10 of chapter 81 of the said Act all industrial boarding schools receiving a per capita or other grant from the Government for the education of Indian children are declared to be industrial and boarding schools for the purposes of sections 10 and 11 of the said Act.

Mr. CARVELL: That may be so under the regulations which the department may have made, but it is not the real question which we are discussing now. We are discussing the powers conferred upon you by the statute. Any regulations that you might make would not affect the statute itself.

Mr. SINCLAIR: If the minister wishes to avoid the difficulty that has been suggested by my hon. friend from Carleton (Mr. Carvell), it might be done by adding these words after the word 'institution':

> Under the control of the Department of Indian Affairs.

Then it would read:

> The Governor in Council may establish an industrial school for a boarding school for Indians, or may declare any such school or institution, under the control of the Department of Indian Affairs, to be an industrial school or boarding school for the purposes of this and the next following section.

Mr. ROCHE: That is not what we are seeking to accomplish. We could do that under the Act now.

Mr. SINCLAIR: But is not the objection that is raised the fact that we are giving to the Governor in Council power to declare any school in a province an industrial school? We do not wish to give him that power, but if you limit the Act so as to apply to any school that is under the control of the department, I see no reason why it should not pass.

Mr. CARVELL: You might interline it in this way:

May declare any school to be an institution with which the department has made an arrangement or an agreement.

Mr. ROCHE: That would be more in accordance with our practice. I will allow this section to stand with a view to amending it in that way.

Mr. OLIVER: I wish to say, in regard to the principle contained in this section as it stands, that there is every objection to the Government taking authority to control the liberty of the individual under an authority other than that of the Government itself. As the Act is at present, the liberty of a neglected Indian child can be restrained and the child can be placed in an institution that is under the control and supervision of the Government. That is clearly a restraint of personal liberty, but to restrict the liberty of an individual and place him under the restraint of an institution which is not under the control of the Government, involves a principle that I would object to very strongly. Without drawing the line too tightly, certainly the suggestion made by my hon. friend from Guysborough (Mr. Sinclair) and my hon. friend from Carleton (Mr. Carvell), would be very necessary, so that even if the Government did not absolutely control the educational institution it would have such authority that the Government would be responsible for the character of the institution and the care and attention that would be given to the child placed under restraint.

Section 1 allowed to stand.

On section 2—taking lands for schools:

Mr. CARVELL: What is the object of section 2?

Mr. ROCHE: At some places where it has been necessary to get certain lands for schools, we have been unable to acquire them, where they have been held under what are called location tickets. It has been impossible to get the persons occupying such lands to surrender them for the purpose of building schools or making additions to schools. This section is for the purpose of laying down the mode of procedure by which we can get control of the land for the purpose of erecting such schools.

Mr. CARVELL: What do the words 'location tickets' in the Act mean?

Mr. ROCHE: In some of the reserves the occupation of the land is held by individual Indians under what is called location tickets.

Mr. CARVELL: It is not intended to give power to take land other than land belonging in some way to the band or the reserve?

Mr. ROCHE: No, not at all.

Mr. OLIVER: When will this Bill be taken up again?

Mr. ROCHE: Does my hon. friend desire that it be not taken up to-night?

Mr. OLIVER: I would rather desire that. I shall not be back just as soon as the House convenes after the Easter recess; and as a favour I would ask that the Bill be not taken up in my absence.

Mr. ROCHE: I will arrange that.

Progress reported.

At six o'clock, the House resumed, and then took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

ATLIN RAILWAY COMPANY.

The House in Committee on Bill No. 123, to incorporate the Atlin Railway Company.—Mr. Michael Clark. Mr. Blondin in the Chair.

Mr. OLIVER: Is this a new incorporation?

Mr. REID: Yes.

Mr. OLIVER: What does it propose to do? If some member of the committee will make a statement that can go on record giving information as to the nature of the Bill and its purposes, that will, I presume, be satisfactory.

Mr. HAZEN: There does not seem to be anybody here who knows anything about it.

Mr. REID: Better let it stand.

Progress reported.

UNIVERSITY OF EMMANUEL COLLEGE.

The House in Committee on Bill No. 89, respecting the University of Saskatche-

wan.—Mr. McKay. Mr. Blondin in the Chair.

Mr. OLIVER: What is the nature of this Bill?

Mr. McKAY: Chapter 47 of the Dominion Statutes of 1883 incorporated the University of Saskatchewan, to be located in the then diocese of Saskatchewan. Hon. gentlemen will remember that in 1883 there were no provinces of Saskatchewan and Alberta, but the territory within those provinces was then part of the Northwest territories, consequently the Dominion Parliament had jurisdiction to pass that Act and incorporate that university. In 1905 part of the territory within which this university was located was formed into the province of Saskatchewan. The Legislature of the province of Saskatchewan, whether rightly or wrongly—I am not taking any objection to that part of it—passed an Act creating a provincial university under the name of the University of Saskatchewan, exactly the same name that had been granted to the university which is the subject of the present measure. This provincial Act went further and declared in effect that no other university having power to confer degrees should bear or adopt the name 'University of Saskatchewan.' Now, those who are interested in the first University of Saskatchewan are quite willing, in order that there should be no conflict of names, to give up the name to which they were entitled by priority and to assume the name mentioned in the present Bill, namely, 'University of Emmanuel College.' I do not know whether this is the proper time to mention it, but I would suggest an amendment to make it explicit that we are dealing with the University of Saskatchewan incorporated by the Dominion Act.

Mr. CARVELL: That is referred to in the recital, and the statute is mentioned.

Mr. SAMUEL SHARPE: The hon. member (Mr. McKay) might make the motion now. The amendment makes no material change, but merely identifies the university and makes more definite the intention of the Bill.

Mr. McKAY moved that the words 'being the university incorporated by chapter 47 of the statutes of Canada of 1883' be inserted between the words 'Saskatchewan' and 'herein.'

[Mr. J. D. Reid.]

Amendment agreed to.

Bill reported.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill No. 115, for the relief of Gertrude Carmen Birks.—Mr. Baker.

Bill No. 116, for the relief of Rose Ethel Freedman.—Mr. Fripp.

Bill No. 118, for the relief of Ella Rose Morris.—Mr. Douglas.

Bill No. 119, for the relief of Alicia Hill.—Mr. Douglas.

Bill No. 121, for the relief of Eliza Jane McLaughlin.—Mr. McCraney.

Bill No. 124, for the relief of Lenore Power.—Mr. Porter.

Bill No. 125, for the relief of Walter James Liscombe.—Mr. Douglas.

Bill No. 127, for the relief of George Fullerton Forsythe.—Mr. Schaffner.

SECOND READINGS.

Bill No. 130, respecting certain Patents of Thomas Leopold Willson.—Mr. Fripp.

Bill No. 131, respecting the Sterling Life Assurance Company of Canada.—Mr. Buchanan.

Bill No. 132, respecting the W. C. Edwards and Company, Limited.—Mr. Fripp.

Bill No. 133, for the relief of Johann Andreas Horn.—Mr. Schaffner.

Bill No. 135, respecting a certain Patent of Rudolf Goldschmidt.—Mr. Fripp.

SUPPLY.

The House in Committee of Supply.

Fisheries—Salaries and disbursements of Fishery Officers, including the expenses of the Fisheries Advisory Board, and an allowance of $300 to W. J. E. Casey, secretary thereof, $250,000.

Mr. SINCLAIR: Will the minister explain the increase of $20,000?

Hon. J. D. HAZEN (Minister of Marine and Fisheries): There is an increase of $20,000 which may be in excess of the amount really needed although it is pretty hard to say. The expenses of the Fisheries Advisory Board are paid out of this appropriation and during this year it is estimated that they will be in the neighbourhood of $6,000. Last year there was only one meeting of the Atlantic Committee, one of the British Columbia Committee and none of the Prairie Committee. Hereafter there will be two meetings per year of each committee. It is also proposed to give a small increase to the fishery officers in British Columbia and the western provinces, and

this increase, with those which will have to be made throughout the country, with the $6,000 which it is estimated the Fishery Advisory Board will cost and with a certain amount of increased printing, which it is estimated will be required, will probably bring the amount up to pretty nearly this increased estimate.

Mr. SINCLAIR: What has the Advisory Board cost up to date?

Mr. HAZEN: I gave the figure in answer to a question in the House the other day. I do not remember what it was, but my recollection is that it was in the neighbourhood of $2,000 for the year.

Mr. SINCLAIR: That is what I recollect myself. It is a very small amount. It does not compose any substantial part of this very large sum.

Mr. HAZEN: It is expected this year that it will be about $6,000, because last year no meeting of the prairie section was held, and only one meeting of the Maritime provinces and British Columbia sections.

Mr. SINCLAIR: At the time that the Advisory Board was appointed, about a year ago or more, the minister was expecting very important results from its work. I have not been able to learn that he has adopted any of the suggestions made by the board. I would like to know from him of what use the board is to the department or if it is making any useful suggestions and doing anything to help the department in its work.

Mr. HAZEN: The opinion of the permanent officials of the department is that the board has been of very considerable value. We have adopted a number of recommendations that the board has made. I have not a list of these recommendations to give to my hon. friend, but a number have been adopted from time to time, and I believe that the board is a very valuable aid to the permanent officials in discussing fishery matters and in arriving at proper conclusions.

Mr. SINCLAIR: The board made a number of suggestions regarding the fishery regulations, and if the minister has adopted these suggestions it would be well for him to show them to the House, because they are of very great interest to the people engaged in the fisheries.

Mr. HAZEN: Practically all the suggestions regarding the lobster regulations were adopted and have been published in the Canada Gazette.

Mr. SINCLAIR: How are the fishermen to be informed as to what those regulations are?

Mr. HAZEN: By notice through the Gazette and by notice being sent to the inspectors. Printed copies are sent to the inspectors to be circulated amongst the fishermen. These regulations were published in the Gazette last week and printed copies are now being obtained.

Mr. SINCLAIR: I think it would be well for the minister to lay before the House a copy of the regulations that have been adopted. There has always been a great deal of difficulty about the fishermen getting information on these questions. As far as publication in the Gazette is concerned, everybody knows that the Gazette is not read by anybody in the country except a few lawyers It never reaches the fishermen at all. These regulations are not very often published in the newspapers. At the time that the Fisheries Act was before the committee, I made a suggestion, which I trust the minister will work out, that the regulations made here should be published in the yearly statutes.

Mr. HAZEN: That was put into the Act.

Mr. SINCLAIR: That will help. But if those new regulations relating to lobster fisheries have been adopted and are now in force, it is important that the minister should give the information in the House so that it will be made known to the country.

Mr. HAZEN: We have had some 5,000 copies of the regulations published, and we are sending them to the different inspectors throughout the country, asking them to circulate them amongst the fishermen, so that they will be familiar with the regulations. On Monday I shall be very glad to lay a copy of the regulations on the table of the House. What the hon. gentleman says is true. It has been almost an annual subject of discussion for many years in this House, to discover the best way to circulate knowledge of these regulations; and the officials of the department, who are naturally desirous of meeting the wishes of Parliament and are doing their best in the matter, have decided that they are doing the best they can by publishing these regulations in the Gazette. They have them printed and send copies of these printed

regulations to the different inspectors, instructing them as far as possible to make their contents known to the fishermen throughout their districts. If any hon. gentleman will suggest a better way, the department will be glad to act upon it. For my own part, after talking with the superintendent of fisheries and the deputy minister after the discussion which took place on the revision of the Fishery Act, I can conceive of no better way of doing it than the way in which it is being done at present.

Mr. SINCLAIR: Does this item include the salaries of officers engaged in the publication of the fishery bulletin or in collecting information to be published in that bulletin?

Mr. HAZEN: Yes.

Mr. SINCLAIR: In my judgment the bulletin is very inaccurate. It is of no service at all in so far as giving useful and correct information in regard to our fisheries is concerned. I took the opportunity some weeks ago of asking the minister how he obtained the information that appears from time to time in the fishery bulletin. He informed me that it was sent to the department by the fishery officers throughout the Maritime provinces; that those fishery officers did not receive any remuneration for the work, and that it was part of their duty as fishery officers to collect this information and to forward it to the department. We could not expect them to get accurate information under such circumstances, because there would be a good deal of expense involved in collecting anything like correct information on the coast of the Maritime provinces in regard to the quantity of fish caught. For example, in my own constituency there are 150 miles of seacoast line dotted all along the shore with small harbours, in each of which a number of fishermen work. In my constituency there are two fishery officers, one having jurisdiction over about 100 miles of coast and the other over about 50 miles. It would be mere guesswork on their part to state to the department that so many haddock or codfish had been caught in a certain month. They do not know nearly so much about it as I do, because they are not in touch with the fishermen on the coast. One of them lives in the town of Guysborough.

9 p.m.

Mr. HAZEN: Would he not be in touch with the dealers from whom he could get information?

Mr. SINCLAIR: I do not think so, because, if so, he could get correct information. Some of the dealers have sent me statistics as to the quantity of fish caught, and their figures are so much greater than those given in the bulletin that the bulletin would be laughed at by any dealer along the coast. The fact must be that the inspector in my constituency who furnishes this information for the bulletin is not endeavouring the get information at all, but is arriving at it by mere guesswork. You cannot expect this man to travel along this coast every month for a hundred miles and see the dealers and send anything like correct information to the department, when he is not paid anything for doing the work. He would get a good deal of information by using the telephone or the telegraph line if instructed to do so.

Mr. HAZEN: He is.

Mr. SINCLAIR: As long as no allowance is made to him for his services, I do not suppose he is very much interested in the matter. The bulletin is a most absurd looking document. It starts out by professing to give statements by counties. The minister can take up any copy of the bulletin he chooses. It does not give statements by counties at all. Take, for example, the bulletin for December, 1913. The heading is:

> Returns showing by counties the quantity and value of all sea fish caught and landed in a green state, and the estimated proportion of the catch marketed or intended to be marketed in a fresh, dried, pickled, canned, etc., state during the month of December, 1913.

Then, when we come to look at the counties, the bulletin referred to gives the counties of Richmond, Cape Breton, Victoria, Guysborough, Halifax, Queens, Shelburne, Yarmouth, Digby and Annapolis, but a number of counties are left out altogether and there is no return for them. That is the case in nearly every one of these bulletins.

Mr. HAZEN: In that month would there be any fishing in the counties left out?

Mr. SINCLAIR: There would no doubt be some fishing. There might be some counties in which there would be no fishing. Take the bulletin for January, 1913. The same heading appears in all these bulletins, professing that the work is done by counties.

Mr. HAZEN: We have there the counties of Richmond, Cape Breton, Victoria, Guysborough, Halifax, Lunenburg, Queens,

Shelburne, Yarmouth, Digby and Annapolis.

Mr. SINCLAIR: And you have the counties of Inverness, Hants, Kings, Colchester and Antigonish all omitted. That is the season in which smelts are caught in the province of Nova Scotia, and no doubt in the other provinces. The same is true of the province of New Brunswick; you will find that counties that produce the most smelts in certain months of the year are not mentioned at all. Charlotte is the only county mentioned in January, 1913. The counties of New Brunswick where most fishing is done in January are the counties of Gloucester, Kent, Northumberland and Restigouche; and yet no mention is made of these counties. Now, take the cod and haddock fisheries of January. This return shows that there were only 1,100 cwt. of codfish and 8,800 cwts. of haddock caught during that month in the county of Guysborough, the value being placed at $14,575. We happen to know something about the quantity caught in that month. Last year the question was up in this House regarding branch railways, and Mr. Whitman, of Canso, collected some information and forwarded it here, and I placed it on 'Hansard.' Mr. Whitman telegraphed under date of 24th of January, 1913:

> Another week of stormy weather has made it difficult for the boats to fish. Landings for the week, 150,000 lbs. of haddock.

Mr. Whitman sent the following telegram to the Prime Minister:

> Canso, January 24, 1914.
>
> Hon. R. L. Borden, Ottawa:
>
> Your kind reference to the present need of railway conection to fishing centres encourages us. Eastern Nova Scotia will show surprising progress if shipping facilities provided for fisheries. We know you have always recognized this and hope you can arrange to have the matter carefully considered now. Canso's shipment of fresh fish over Intercolonial railway this month will approach hundred carloads. What we could ship with better facilities can be inferred.
>
> E. C. Whitman.

Mr. HAZEN: That would include frozen fish?

Mr. SINCLAIR: I do not think they freeze the fish, but ship them packed in ice in a refrigerator car. But, whether frozen or not, this is the amount caught and landed in January, 1913. Now, if you compare the bulletin with the statement of Mr. Whitman, the bulletin becomes merely ridiculous. And the same is true for 1914. I happened to get similar information regarding Canso for the month of January, 1914, and I find that the bulletin was just as far out in that year as in the year before. And Canso is only one point in Guysborough, though the most important one; but there are others at which considerable fish is landed. The value placed on fish by the bulletin for the whole county of Guysborough was $14,978. Deduct the value of the hake and smelts and you have $14,575. This means that Canso alone, according to Mr. Whitman's statement, sent out fish to the value of $60,000, estimating it at 1½ cents per lb., which is the current price in Canso. Now, take the product for the year. I have figured up the returns in the bulletin for my own constituency for the year 1913, and I find that the total amounts to only $449,740. But we have the shipments from Canso to Mulgrave to guide us, and these are correct, because we get the figures from the Intercolonial railway at Mulgrave. From Canso alone and by this route alone the fish shipped represented the value of $417,680, estimating it at the market price. This is only the port of Canso. But there are coasting steamers from various other ports along that coast that carry fish to Halifax. Then a great deal of fish is salted or disposed of in other ways. Yet we find that Canso alone shipped out about as much fish as is credited to the whole county of Guysborough in the bulletin. And besides this we have 150 miles of coast with a large number of places where fish are caught. So that there can be no doubt at all that this is incorrect. The fish from such places as Drum Head, New Harbour, Bickerton, Liscomb and Marie Joseph and not reach Canso. They are quite a distance west of Canso and the shipments would reach Halifax or some other market. I have no doubt, from these facts, that the information found in the bulletin is so incorrect that it would be far better not to have it at all. I am not sure whether the minister compiled his return for the year from these bulletins, but if he does his return will be very misleading indeed. I had been under the impression that the returns were compiled largely from the statements made by claimants for bounties, but that is not correct either. The matter was largely one of guess work. All the fisherman cares for is to prove that he has caught enough fish to qualify for the bounty, and as a rule he does not keep any definite record that would enable the

officials to compile correct statistics from the bounty returns. When Mr. Cowie was appointed and a new branch of the department established to do this work, we all thought that there would be a reform. It appears to me, however, that if the work is carried on as it is carried on now, it will be worse than nothing, and it would be better to pension Mr. Cowie, disband his officers and leave the matter alone. I am certain that I am correct in this matter, and I would like the minister to give it his serious attention. I am not speaking in any party spirit; the minister can see how very important it is that the fishery statistics which we send abroad as to the catch in the provinces of Nova Scotia, New Brunswick and Prince Edward Island should be absolutely reliable.

Mr. TURGEON: The reports for December and January certainly struck me very forcibly, although I am not in a position to say that they were not correct. In Gloucester county the conditions may change and be more or less favourable at different times, but in the Tracadie, Pokemouche, and Caraquet rivers and in Bathurst harbour, even in the month of December, when the waters are frozen over, fishing may be done with hook and line. Although I am not in a position to criticise, I must say that my attention was drawn to the showing of the return, and, with the hon. member who has just taken his seat, I would ask the hon. minister to call the attention of his officers to this matter.

Mr. KYTE: I should like to call the minister's attention to what is a very apparent inaccuracy in the bulletin of fishery statistics for the month of February last. It is stated in this bulletin that the quantity of smelts caught in the county of Richmond, Nova Scotia, was 6,000 lb., valued at $120, or 2c. a pound; in Cape Breton county, 4,200 lb., valued at $1,260, or 3c. a pound; in Antigonish county, 5,600 lb., valued at $280, or 5c. a pound; in Guysborough, 1,000 lb. valued at $50, or 5c. a pound; in Lunenburg, 800 lb., valued at $80, or 10c. a pound. I am not going to challenge the correctness of the quantities that are set out here as having been caught in the different counties, because I am in no position to verify the figures, but it does seem to be extraordinary that there should be such a difference in the value of the smelts caught in the same month in adjoining counties. I do not know who the fishery officers are, or who are the functionaries who furnish the information for the county of Richmond, but it is apparent upon the face of it that these figures are absolutely inaccurate. Smelts caught in the county of Richmond should certainly be worth as much as smelts caught in Antigonish, and the same is true with regard to all the other counties of the eastern part of the province of Nova Scotia. The smelt fishermen of Richmond county ship smelts direct to the United States market, and the smelts caught in Antigonish, Guysborough and Cape Breton counties are sold in the same market. If those smelts bring seven cents a pound in the county of Inverness and ten cents a pound in the county of Lunenburg, surely the value of the smelts caught in the county of Richmond would be pretty nearly the same. I merely point this out for the purpose of showing the hon. minister how absolutely unreliable and inaccurate this information is, and unless some officials can be found who can furnish information that is reliable to some extent at least, it would be very much better that these statistics should not be given at all.

Mr. SINCLAIR: The bulletin for the month of January gives the following as the catch: Cod, 8,979 cwt.; haddock, 964 cwt.; hake, 48 cwt. That is the catch, as I understand it, in the whole of Guysborough county for January, 1914. I happen to have the correct information as to the catch for the week ending January 3, 1913, and the amount caught at Canso alone during that week was 912,000 lbs.; for the week ending January 10, 1914, the amount is estimated at 700,000 lb., making a total of 1,612,000 lb. in two weeks. Deducting 153,000 lbs. for the three days in December, we have a total catch of 1,459,000 lb. landed at Canso alone during the first ten days in January. If you give the Canso fishermen three weeks fishing in January —and they will have more than that this year—the catch will average 700,000 lb. a week, that is, 2,100,000 lb. That would be the catch of Canso alone, whereas the bulletin reports only 1,000,000 lb. for the whole county. The names of some of the men who caught this fish, for the week ending January 3, 1914, were: H. Kavanagh, 27,000 lbs.; Pat Ryan, 15,000; Jake Manuel, 24,000; W. Power, 23,000; W. Ryan, 12,000; K. Meagher, 12,000; Sam Hurst, 11,000; J. Lumsden, 26,000; F. Lohnes, 33,000; G. Little, 20,000; J. Kennedy, 20,000; R. Mosher, 16,000; C. Mosher, 20,000; L. Feltmate, 18,000; Ed. Kavanagh, 25,000; J. Hearn, 14,000; Ed. Hearn, 18,000; Thos. Fanning, 16,000; J. Grady, 8,000; J. J. Berrigan, 14,000; John

Hurst, 14,000; George Ryan, 22,000; Matthew Munroe, 18,000; Frank Hawes, 22,000; John Boudrot, 26,000; Frank Goodwin, 15,000; D. Walsh, 8,000; W. Shrider, 17,000; Fred. Rhynolds, 15,000; Thomas Carter, 11,000; Sandy Meagher, 17,000; Samuel Snow, 17,000; Levi Ehler, 10,000; S. Munroe, 9,000; S. Hurst, 8,000; John Carter, 11,000; dories and other boats (estimated), 300,000; total, 912,000 pounds.

That is a total of 912,000 pounds in one week, very nearly as much as is given by the bulletin for the whole month. According to the statement, the following week there were one or two stormy days and only 700,000 lb. was caught; but the information I have is that the average at Canso alone during January 1914 was about 700,000 lb. for each week. The bulletin gives a little less than a million lbs. for the whole month. It would appear that the officer who has charge of this branch in that district did not ask anybody, but simply sat at home in his office in Guysborough, thirty miles away, and made an estimate in his own mind and sent a guess to the department. That is the way the work must be done, because if he had gone to Canso or had written to the merchants he would have got this information that I have received. I have no doubt about the correctness of this information, and as I have gone into it in detail I hope I have convinced the minister of the importance of looking into this matter and trying to have it adjusted.

Mr. LAW: How are these statistics prepared? Does the inspector or the overseer of the district prepare them? From whom does he get the information. As far as Yarmouth is concerned, the fishermen take very little stock in this bulletin; but I am not in a position to point out where there are any inaccuracies or where the bulletin is correct, as my hon. friend has done. It has always been a mystery to me where the overseers got the information.

Mr. HAZEN: The system that I believe was in force up to early in 1911 was that the statistics were gathered together once a year by the fishery officers from the best sources available and they were largely dependent on the returns that were made at the time the bounty checks were being paid. The department determined to get better statistics, and about 1909 Mr. Cowie was employed. In the spring of 1911 the system of getting these monthly returns and issuing a monthly bulletin was adopted by the department. It is the duty of the overseer in each district to get the returns from the best source he can, from the officials under him at the different places in the district in which he is overseer, or if necessary from local dealers or others. Blank forms for the purpose are furnished. Instructions are given to the inspector to keep an oversight on the matter, to try and inform himself as well as he can and to see that the statistics are correct. In addition to that, a circular letter was sent out by the department to all the different fish dealers who would be in close touch with the fishing operations, and they were asked to write to the department from time to time if they saw inaccuracies in the bulletin and to let the department know if they thought mistakes were being made, so that the department might be in a position to correct them. I am told by the superintendent of fisheries that, up to the present, practically not a single complaint has been received at the Fisheries Department from any of these dealers. It therefore comes as a surprise to the superintendent of fisheries, who is with me, that the complaint of the hon. member for Guysborough is so sweeping in its character. It would have occurred to the superintendent, as it would to almost any one else—and I say this without reflecting on the statement of the hon. member—that if such glaring inaccuracies had occurred, even if they had not been especially requested to do so, the dealers to whom these bulletins are sent would have informed the department of the error. But when we consider that they were especially requested to inform the department of any error, the statement comes as a greater surprise. I entirely agree with the hon. member for Guysborough that it is useless to publish statistics unless they can be relied upon; they are worse than useless if they do not give an approximately correct idea of the fishing operations carried on and the quantity of fish caught. I say approximately, because it cannot be expected they will be absolutely correct. There must be some variation, although, of course, it should be impossible that there could be such a discrepancy as exists between the statement of the hon. member for Guysborough and the bulletin. I am not prepared, I would not be expected to be prepared to say that the bulletins are grossly inaccurate. All I can say is that I will most certainly ask the officers charged with the duty of looking after the

gathering of these statistics to thoroughly investigate the matter at once, and if it is found that they are nearly as inaccurate as would appear, I think we should take prompt steps to have them made more accurate so that they can be relied upon, and instructions to that effect will be given to the officers. It seems to me as if the statement made by the hon. member for Guysborough is made after careful inquiry, and it looks as if he might be pretty near the mark. I, of course, say that subject to correction, as I do not pretend to give an opinion one way or the other at the moment.

The hon. member for Richmond (Mr. Kyte) has referred to the discrepancy in the price of smelt. That might be accounted for by the quantity caught and the nature of the market at the time they were caught. If only a small quantity, practically used for home consumption in the markets near at hand, were caught, I presume that a larger price would be charged than if a large quantity were caught for shipment outside of the province. Those who collect the statistics are instructed to give the market value of the fish at the port to which the fish are brought. Those are their instructions. It is hard to understand why anybody making these returns would think it worth his while to give anything but the correct market value at the port to which the fish, are brought. I fully appreciate the trouble my hon. friend from Guysborough has gone to, and I will certainly see that the matter is made the subject of most careful inquiry with a view to remedying in future any fault in the system of collecting these statistics.

Mr. KYTE: The fishermen in my county are their own shippers. They ship the fish to the United States markets direct. I say that the statement as to price is a mere guess on the part of the person who furnishes this information. Perhaps the hon. minister has the names of those persons for the county of Richmond.

Mr. HAZEN: I can give my hon. friend the names of the overseers in his county.

Mr. KYTE: I know the overseers myself. They live many miles from the sections of the county of Richmond where these smelts are caught. Inasmuch as the fishery officers are not paid for collecting these statistics, they can scarcely be expected to visit the districts where the fishery operations are carried on, and for that reason I say that any information forwarded by them to the department is a mere guess. I am absolutely certain that the fishery officers, with perhaps one or two exceptions, do not get the information from the men who catch the smelts. The discrepancy is so absolutely manifest upon the face of this bulletin that some explanation is certainly in order as to why the information as to price is not more accurate. There is no considerable quantity consumed in the local market and the fishermen of the county of Richmond receive practically the same price as the smelt fishermen in other parts of eastern Nova Scotia.

Mr. HAZEN: The fact that these officers do not live where the fishing operations are carried on is no excuse for their giving incorrect information. Most of them live, I presume, near a telephone or a telegraph line and they are instructed to use the telephone and the telegraph at the department's expense.

Mr. KYTE: Would it not be worth while to institute some inquiry as to the sources of information upon which these officers draw?

Mr. LOGGIE: The county I have the honour to represent shipped to local and foreign markets 382 tons of smelts during the month of February, and you will see by the bulletin that the average price was over five cents a pound. Never in the experience of the smelt fishermen of New Brunswick have they received such a good price for their smelts as this year. I wonder if the hon. minister could give me the reason for that? Their only markets are Canada and the United States. I will tell the minister why the price is so much better this year. It is because the United States took the duty off. The Canadian consumer of course has to pay that much more for what he uses. That has increased the cost of living in Canada and I leave it to the Minister Finance to get us out of that difficulty. Could not the Minister of Marine and Fisheries check these quantities each month with the entry outwards which is made at every port through which the fish are exported to the United States? That would be very useful information to the public.

Mr. HAZEN: I think the customs returns show that.

Mr. LOGGIE: I suppose we could pick out the information from the customs returns, but the Customs Department does not issue a monthly bulletin as the Department of Marine and Fisheries does. It

seems to me that it would not be very difficult for the minister to publish each month the quantities exported and to what country. That would be a check on the values and on the quantities. The price of smelts as given for the county of Richmond is absolutely inaccurate, as the smelts were worth practically 200 per cent more than that on the fishing grounds.

Mr. CARVELL: What about Lunenburg?

Mr. LOGGIE: I understand that the price there is very high, probably the local trade accounts for that. In Northumberland county, in Gloucester and Kent the quantities are very large. Three hundred and eighty-two tons for one month from Northumberland county gives you some idea as to the value of the American market to the fishermen of that county, especially when it is not a taxed market. By the taking off of the American tax the fishermen of Northumberland county have reaped the benefit to the extent of $15 per ton on 382 tons in one month.

Mr. SINCLAIR: I think the hon. member for Richmond (Mr. Kyte) gave the correct explanation when he said that the minister did not get accurate information because he did not pay anything for the work of collecting these statistics. I asked a question during the present session as to what it cost to get up this bulletin and the answer was: for 1912-13, $1,251.78, and for 1913-14, $1,222.15. How can we expect to get important work like this done along the coast of the Maritime provinces and of British Columbia for the paltry sum of $1,200?

If you want the officers to take any interest in this work you must pay them something. If the minister is going to deal with this question in a proper way he must put some amount in the Estimates for the present year to pay for the collection of the information with which to get up these bulletins.

Mr. LAW: To whom are these bulletins sent each month?

Mr. HAZEN: To all members of Parliament, to the different fishing concerns, to the newspapers and practically to everybody who sends in his name and asks that they shall be sent to him.

Mr. LAW: Can any fisherman, or any person, have them sent regularly if he forwards his name to the department?

Mr. HAZEN: Yes, write to the department and I shall be glad to give instructions to have them sent.

Mr. McKENZIE: Can the minister give me the name of the fishery overseers for the county of Queens?

Mr. HAZEN: The overseers for the county of Queens are Charles Young and W. E. Fraser.

Mr. McKENZIE: Is Mr. Fraser an overseer?

Mr. HAZEN: Yes.

Mr. McKENZIE: I wish to call the attention of the minister to something more or less interesting about W. E. Fraser.

Mr. HAZEN: When I say Mr. Fraser is an overseer I should say that I am under the impression that he has resigned.

Mr. McKENZIE: When did he resign?

Mr. HAZEN: Some time early in February.

Mr. McKENZIE: Was he ever loaned by the minister's department to the Department of Militia for any purpose?

Mr. HAZEN: No, I have never heard of such a thing. I do not know what he would be doing there.

Mr. McKENZIE: Hon. members opposite take a great deal of pleasure, and have a good deal of pride, in talking about the local election that took place in Nova Scotia in February last. The result was satisfactory to them. I had the pleasure of experiencing the presence of this man Fraser in the county of Victoria. This distinguished officer of the minister, on election day, furnished by somebody with moneys which he lavishly expended, maintained an open public house within a few hundred yards of a polling place in a certain district in Victoria county where he dispensed rum, cigars and all other luxuries that science could devise and money could buy. He represented himself as not only an officer of the Marine and Fisheries Department, but as an officer who was selected by the Minister of Militia and sent to the county of Victoria for the purpose of settling the Fenian Raid claims. He told the electors who were looking for their Fenian Raid bounties that he was selected by the Department of Militia and Defence and sent down to Victoria with plenary powers to settle every claim that was outstanding. He went to the extent of offering to pay seventy-five per cent of the $100 claims of some of the electors in the district where he held the public house on election day, provided, of course, that they delivered

the goods or voted for his man. I do not know how much money he paid out in that way but he was well armed, according to the reports, with the necessaries. He assured the people that he was the accredited representative of the Militia Department. I was informed by the hon. Minister of Militia and Defence (Mr. Hughes) that no man was authorized to do such a thing, and that he had not given Fraser, or anybody else, any authority to speak for him in that connection. What I say to the minister I can prove to the hilt if necessary. If Fraser is an officer of the minister I think it would be reflecting a little more credit on his department if this gentleman would at least tell the truth when he went on missions of this kind. I do not think he should have gone at all. I think he should have respected his office more than to go outside of his own county and try to debauch the electorate as he did in the county of Victoria. I do not think he should have gone, but if he did go he should have been paid sufficiently to tell the truth and, if he had to lie about any department, let him lie about his own department. He transgressed every rule of decent lying by lying for a department that he had nothing whatever to do with. I complain of this conduct on the part of any officer of the Government. I bring the matter before the minister so that in future he may perhaps know that all his officers are not saints when he hears complaints about them and will have reason to believe that there may be some truth in these complaints. I make these statements upon my responsibility as a member of the House, and I am well able to back them up in this particular instance when occasion requires.

Mr. TURGEON: While we are on the subject of active partisanship, I am sorry that I have to trouble the minister again, but I would ask him if, according to the promise that he made on the 27th of February last, he has written to the fishery overseers in the county of Gloucester?

Mr. HAZEN: I gave instructions to the department that they should be written to.

Mr. TURGEON: May I ask the minister if he has written to James Doucett of Petit Rocher?

Mr. HAZEN: I do not recollect the name, but my deputy minister was here, and I told him to take down the three names which were mentioned by the hon. gentleman, and have the overseers communicated with.

[Mr. McKenzie.]

Mr. TURGEON: Have they been written to?

Mr. HAZEN: I presume they have been.

Mr. TURGEON: If they have been written to I wish to inform the minister that the officer at Petit Rocher has paid no attention to the orders of the minister, as this James Doucett has not only been active, but most offensive, in his conduct towards other Liberal officers along the Intercolonial railway. This man was canvassing for several days on or about the 11th of March and insulting every respectable citizen that he met on the road. I have already said to the minister something to the effect that if he had known this gentleman as I know him, and as I have known him since he was a boy, he would never have appointed him to any responsible position in his department. The man is by nature offensive, and I have not only letters but even telegrams from the most respectable citizens of the parish complaining to me of him on that very day. I have a telegram here dated the 19th March, signed by one of the most respected citizens. It reads as follows:

> James Doucett, head man in running around soliciting witnesses against Stevens and interfering in general and I cannot meet Doucett at any time without being insulted for being a Liberal.

I understand that the minister wrote with the intention of bringing that man to respect at least the authority of the minister of his department, but he has continued day after day to show even greater ambition in his offensiveness. Under the circumstances, and knowing the feelings that have arisen, I would ask the minister to have that man dismissed and replaced by one of his friends. I have no recommendation to make. If I were asked by the minister to recommend any one from among the Conservatives entitled to remuneration by the Conservative party, I would recommend a man who would not have to be complained against. The hon. minister knows that I do not make complaints against any individual in my county without being compelled from a sense of duty to do so. This man, who has been put in this position by reason of the dismissal of another officer, who was dismissed because he was a Liberal, should certainly be dismissed.

Mr. HAZEN: I will look into the matter.

Mr. TURGEON: I hope the minister will look into it seriously. It is a grievous matter. I do not complain of the others. I believe they listened with respect to the

advice of the minister, but Mr. Doucett should never have been appointed.

Mr. HAZEN: I will look seriously into the matter.

Mr. WILLIAM CHISHOLM: The House and the country will be interested to know the policy of the Government with respect to their officials interfering in elections. Two concrete cases have been pointed out, one by the hon. member for North Cape Breton (Mr. McKenzie), who on his responsibility as a member makes a serious charge against this man Fraser, who clearly is a partisan of the worst type. Mr. Fraser left his own county and went to the eastern end of the province of Nova Scotia in order to engage in a by-election. He indulged there in misrepresentations that showed him to be a partisan of the most pronounced type. In view of the charges made by the hon. member for North Cape Breton against this man, and if, on investigation—should the minister deem a further investigation to be necessary—it is proven that the charges are well founded, will the minister dismiss this man or will he continue him in office? Liberals have been dismissed for holding views at variance with the views of the present Government. Liberals have been dismissed because, when asked their views, they have given expression to them in a mild, private and inoffensive manner. That did not save them; they were dismissed. Here are two concrete cases of extreme partisanship, one by the hon. member for North Cape Breton; the other by the hon. member for Gloucester (Mr. Turgeon). What is to be the policy of the minister in this regard? Is there any regulation in the department which should prevent fishery officers from engaging in municipal contests? I have in mind the case of a fishery officer who was recently a candidate in a municipal contest. He ran as a Conservative candidate. The party machine introduced politics into the municipal contest and the election was run on party lines. The candidate to whom I refer was a fishery officer appointed by the present Government. I think that fishery officers should be prevented from taking part in municipal contests because a fishery officer has a power and an influence which, if he is so disposed, he can use in a very unfair way and to the prejudice of fair elections.

Mr. HAZEN: I am informed that there is not and never has been any such regulation in the department. The hon. gentleman is aware that in the city of Ottawa there are gentlemen occupying seats in the city council, one I believe a controller of the city, who are government officials. In the city of Moncton there have been gentlemen occupying positions in the council who, not only for the last three years but for years before, have been officials of the Intercolonial railway. If the hon. gentleman had been here a few nights ago he would have heard me state that I do not approve of officials of the department taking an active part in politics. I feel it is a practice that ought to be discouraged. It was a practice that was very general under the Government which the hon. gentlemen has supported for so many years. I know a great many instances of it. It has existed under both Governments.

10 p.m.

My experience has been that, when a man has a position which is his main source of living, as a rule he abstains from taking part in political contests; but when he occupies a position which is subsidiary to his other calling, for example, when he is a postmaster and has a post office in connection with his store, or when he is a lightkeeper but does other work for his support, I find that as a rule he takes part in political contests in support of the Government that has appointed him. It may not be a very desirable condition of affairs, but it is a condition which has existed for a great many years. I think on both sides of the House we shall be talking a good deal that is not very sincere if we shut our eyes to that state of affairs and say that it did not exist in the past and that it does not exist now.

Mr. WILLIAM CHISHOLM: The House must be gratified indeed to hear such a candid admission from the hon. Minister of Marine and Fisheries when he says there has been a lack of sincerity on the part of hon. gentlemen opposite when they were in Opposition. They, in season and out of season, declaimed against the appointment of men to offices because they belonged to the particular type of politics of the party in power. They also declaimed very strongly against the appointment of these officials because they dared to entertain views of their own in matters of politics, and therefore they dismissed them. Now we have a candid admission on the part of the Minister of Marine and Fisheries that, in laying down this rule that Grit officials should not be allowed to exercise the franchise as they

think proper, should not be allowed to exercise the God-given gifts or the right of entertaining opinions for themselves, they were not sincere. The minister admits that now.

Mr. HAZEN: I admit nothing of the sort. If the hon. gentleman thinks that he can construe into my words an admission that a man cannot think for himself, I do not think any other hon. member will agree with him.

Mr. CHISHOLM: I did not say that, but I say that the hon. gentleman has dismissed men who held office under the late Administration for no greater reason than that they were Liberals, and exercised their rights as freemen in a free country.

Mr. HAZEN: Yes, but there was more against them than that they were Liberals.

Mr. CHISHOLM: I can produce an instance in the county I have the honour to represent—that of Mr. A. R. McAdam, fishery overseer of the county of Antigonish—who was dismissed for no reason except that perhaps he was suspected of Liberal leanings. The charge made against him by the gentleman who controls the patronage in the county was set forth in a letter written to the minister on the 1st of February, 1912, as follows:

While in Ottawa a few days ago I endeavoured to obtain an interview with you with respect to matters in this county, but you were always occupied when I called, and as I could only remain a few days, I was obliged to come away without seeing you. What I wanted particularly was to know what evidence you require for the dismissal of Alexander R. McAdam, of Malignant Cove, fisheries inspector for this county. You will remember that I wrote you some time ago asking that McAdam be dismissed and MacDougall be appointed in his place. This Alexander McAdam has been for the last fifteen years at least an active partisan. He has done everything that any person taking part in behalf of a candidate usually does. During the last year and immediately previous to the election, this man was chairman of the Liberal organization meetings, was active in calling those meetings together from time to time and was present at most of them. His house was a rendezvous of Liberals and a great many of the meetings were held there. I don't think that you could find a more active politician in the whole county than Mr. McAdam. I should like to have him dismissed at once and Mr. Hugh MacDougall appointed in his stead. I am willing to take full responsibility for this dismissal and can give my reasons at any time. I have charge of the patronage of this county and am looking after its interests.

Please give this matter your immediate attention.

Yours truly,

E. Lavin Girroir.

[Mr. W. Chisholm.]

When the minister read this letter, he saw that it went too far, that the charges were too sweeping and the accusations exaggerated. So he very properly wrote to Senator Girroir—he was not a senator then—as follows:

February 8, 1912.

I beg to acknowledge your letter of the 1st inst. requesting that the services of Mr. Alexander R. McAdam, of Malignant Cove, as fishery overseer for the county of Antigonish, be dispensed with, and one Mr. Hugh MacDougall be appointed in his stead, and I note fully what you say in regard thereto.

While you explain that Overseer McAdam has been an offensive partisan, you do not say that you have personal knowledge that he has been such.

If you will give me an assurance that you of your personal knowledge know that Mr. McAdam has been a political partisan since holding the said office of fishery overseer, with reasonable specific details of such partisanship, or that from inquiries made by you of responsible persons for whom you could vouch that he has been guilty of undue interference in politics since he has been appointed to office, with sufficient details to establish his guilt of the charge beyond a reasonable doubt, I shall be prepared to further consider the matter. Meantime I shall await a full report from you in the premises.

The hon. minister then was disposed to be eminently fair. He discounted the statements made in Mr. Girrior's letter and insisted that specific charges should be presented. For that he is to be commended. What happened? Charges were preferred—the usual, stereotyped charges,—not specific. These charges came up for investigation before Commissioner Duchemin. Mr. Duchemin, notwithstanding the express provision of the statute, refused to allow counsel. One witness only was examined, Mr. John Macdonald. The commissioner adjourned the court feeling that there was not sufficient evidence adduced to justify any of the charges against Mr. McAdam. As a matter of fact at that hearing there was not a particle of evidence to justify the statements made by Senator Girroir in his letter. It is true—I wish to be fair—one of the witnesses who was asked to be present did not put in an appearance, and the court was adjourned for the purpose of securing the evidence of that witness. Now, I direct the attention of the minister to the fact that the commissioner himself felt that it was necessary to get further evidence before condemning Mr. McAdam. The adjourned hearing took place some time afterwards, and the witness required was brought before Mr. Duchemin, who examined him in private, according to his own report, but found that the witness had no evidence to give. The only thing the commissioner

could say so far as the evidence it was alleged Mahoney could give, was that the information was unfounded. He so reported, and a copy of his report to the minister I have here. Well, how did they proceed to have Mr. McAdam dismissed? In this way: another letter was written to the minister under date of October 14, 1912. You see, they were all summer scouring the county looking for witnesses to say that Mr. McAdam was a partisan.

And if ever there was a case in which evidence would be easy to obtain it was in that case, for the fishery overseer had gone in the performance of his duty through every section of the county. With the treasury of Canada behind them, evidence could be got to substantiate the charge, if the accused was a partisan. But no such evidence was obtained. So, in this extremity, Mr. Girroir writes this letter:

October 14, 1912.

I wish to draw your attention to some facts in connection with the investigation into the charges against A. R. McAdam. As I anticipated there is the greatest difficulty in obtaining the attendance of witnesses. I subpoenaed several and they did not appear.

I was not aware that Mr. Girroir subpoenaed them or that he had the right to subpoena them.

I asked Mr. Duchemin to ascertain from the Justice Department what action should be taken to compel their appearance, and his reply was to the effect that they could not be compelled to appear.

Just fancy a statement of that kind by a responsible senator, having charge of the patronage of the county. The Inquiries Act is as plain as can be on that subject. Mr. Duchemin, whose attention must have been drawn to the Inquiries Act when he was appointed, must have known that, for it is expressly provided in the Act as follows:

Section 4 gives the commissioner the power of summoning of witnesses, and section 5 adds that the commissioners have the same power to enforce the attendance of witnesses . . . as is vested in any court of record in civil cases.

What the senator referred to in his letter from which I have been reading was the non-appearance of Mr. Mahoney. Mr. Mahoney did not appear; he was not subpoenaed in the regular way. Mr. Duchemin in his report says that he had to adjourn the hearing from Malignant Cove, and said that I stated that Mr. Mahoney was not subpoenaed. So I did. I advised Mr. Mahoney that he did not have to appear until he was subpoenaed and paid his witness fee. Mr. Duchemin was going up and down the country in the early part of his operaions in the county I have the honour to represent calling witnesses before him, but he did not pay witness fees, and some of those fees are still outstanding. It was only when Mr. Mahoney refused to attend without being subpoenaed in the regular way and paid his fees that Mr. Duchemin carried on his proceedings, so far as witnesses were concerned, in a proper and legal manner and concluded that thereafter the witnesses would have to receive these fees or conduct money.

To quote again from the senator's letter:

This only goes to show the inadequacy of the present machinery for trying these cases.

It only goes to show, I think, either that Mr. Girroir did not know what he was writing about or else that he presumed that the minister knew very little about the Act under which his commissioner was carrying on the investigations.

A Grit with the shrewdness of McAdam usually does his work through others, and in order to prove some of the charges against McAdam it was necessary to subpoena Liberals.

Yes, and they had the whole treasury behind them to subpoena witnesses if they wanted them.

Not one of the Liberals subpoenaed appeared against him.

That is something of which I have a personal knowledge. I happened to be at the investigation, although I was not permitted to appear as counsel. That statement I can meet right here and now. The only man who was asked to attend but failed to put in an appearance, so far as I know—and he was not subpœnaed—was Mahoney.

With the result that we were only able to establish what is contained in the evidence of John McDonald. I think that this evidence should be sufficient to cause his dismissal. If an official can be proven to have canvassed even one voter, there can be no disputing his partisanship. He, McAdam, did not care to go on the stand and give us an opportunity of examining him. This, I think, should, especially where we cannot compel witnesses to appear, be a strong circumstance against him. I firmly trust that you will find your way clear to dismiss McAdam at once. It will be a great relief to me, I can assure you, when this is done.

The sympathetic minister could not resist such a pathetic appeal. The law must be disregarded; the proceedings held before Commissioner Duchemin must be ignored, and the minister must step in and do this

act in order that relief should be afforded to the gentleman who wanted to have McAdam dismissed. What was the result? As I have said, the whole summer had passed before the dismissal of Mr. McAdam was effected. Mr. Duchemin adjourned the court from day to day because the evidence that he had obtained in the first instance was not sufficient and he was unable to supplement that evidence. If he considered there was anything in McDonald's evidence he would there and then say: here is a prima facie case against you, which, unless contradicted or explained by you, I shall hold sufficient to justify a report against you. But he turned around at the last moment and said that in view of the fact that McAdam did not go on the stand and disprove—what? disprove nothing, because nothing was proved against him—he ought to be dismissed. Why did he adjourn the case for further evidence if he thought McDonald's evidence sufficient?

Mr. McKENZIE: How did he come to be dismissed?

Mr. CHISHOLM: He was dismissed upon the order of the Minister of Marine and Fisheries.

Mr. McKENZIE: Upon what evidence?

Mr. CHISHOLM: On the evidence of John McDonald alone. In the report which Mr. Duchemin made on October 14, 1912, he said:

> Before the close of the inquiry, I told Mr. D. C. Chisholm, who was acting as counsel for Mr. McAdam, that I would be pleased to receive any statement from Mr. McAdam under oath, in rebuttal of the testimony of Mr. John McDonald, particulars whereof are given above. Mr. Chisholm advised me, however, that Mr. McAdam would not go on the stand, or make any statement under oath.

Then he goes on to state the reasons why the accused should be dismissed. The commissioner found that the evidence obtained when the hearing took place in August was not sufficient to justify the dismissal of McAdam; he adjourned the court two or three times in order to get the evidence of Mahoney, and when he finally did get Mahoney's evidence he had to fall back on the testimony of John McDonald. If McDonald's testimony had been sufficient in the first instance, would Duchemin not have said: I find on this evidence a prima facie case against you, and unless you go on the stand and contradict or explain the evidence given here, I will have to report against you. The fact of his not having called upon McAdam at the first hearing goes to show that Mr. Duchemin himself believed that there was nothing in the evidence of John McDonald to justify the dismissal of McAdam. I am not going to say anything about the appointment of the successor to the dismissed official. Mr. McDougall was a strong and active partisan in that part of the country—a man whose partisanship could be proved. According to Senator Girroir, Mr. McAdam was so careful and apparently unoffensive in his partisanship that you could not catch him; but if a man goes from section to section of the country amongst fishermen at various seasons of the year it is impossible for him to avoid dropping something from time to time which will indicate his partisanship. They had the revenue of the country at their disposal to get witnesses along the shores to give evidence of partisanship against McAdam. They could not get it, for it did not exist. However, Mr. McDougall was appointed—a strong active partisan, who was a Conservative candidate in several elections in Antigonish county. I am bound to say that he is a respectable man; against him I have nothing whatsoever to say, but as a fishery officer I submit in all sincerity that the minister might have made a better selection. An application for the position was made by L. J. McEachern, a man who had been engaged in the fishery business for years, and who, if I mistake not, had charge of a lobster factory in that part of the country. At any rate, he knew the fishery business. He wrote the minister on October 12, 1911, as follows:

> My object in writing is to inform you that I intend to apply for the position of fishery officer for the county of Antigonish. The position has always been held in this section of the county. My first ballot was cast for the late Sir John S. D. Thompson, and I have been fighting the battles ever since. I have been holding this polling district as municipal councillor for nineteen years, and still hold that position. But now that we have won, I will retire when my term is up. All this could not be done without some sacrifice, as I am doing business and my business has to suffer. The above position would help me out in my business, and I could be of more service to my party; and, again, I have been in the fish business for twenty-five years, and should know something about the above office. I trust that I am not making myself too forward in writing this letter to one of the ministers of the Liberal-Conservative Government, and trust and hope that they may long hold the reins of power.

Mr. McEachern is a first-class man; nothing can be said against him, and I should have thought that the minister would have

selected him, in view of the very many qualifications which he has for the position. He has been a strong and active partisan all his life, and deserved consideration at the hands of his party. He knew the sort of appeal to make to the Minister of Fisheries and to the Government. The minister made a very courteous reply to Mr. McEachern's letter, in response to which the latter wrote in November 20, 1911, as follows:

If you can't see your way clear to appoint me as fishery officer as applied for, you might find some job for me in connection with the freezers, as I find after my many year's experience in the fishery business that I should be able to fill any position in the above. I feel that I am entitled to some consideration after my hard fighting for the party the past twenty-five years, and, as I stated before, being in business, I had to make many sacrifices for the sake of the party and feel the weight of it now. Thanking you for your kind and courteous letter, and hoping you may have a pleasant session.

I remain,
Yours truly,
L. J. McEachern.

I hold no brief on behalf of McEachern, but I do say in all sincerity that McEachern would have been an excellent man for the position. I do think the minister was not as kind, as sympathetic and as generous as he generally appears to be towards his political friends. He has on every occasion, so far as I can judge, yielded to the party appeal, and the appeal which was made to him on this occasion was a very strong one. Inasmuch as he had to break away from the rules which he himself established in the first part of the correspondence with Senator Girroir, namely that it was necessary to specify and prove charges of partisanship before dismissal could be made, I submit, with all respect to Mr. McDougall, that when Mr. McAdam was dismissed, the minister should have appointed Mr. McEachern to the position.

Mr. A. W. CHISHOLM: Could the minister give the names of the members of the advisory board ?

Mr. HAZEN: There are four from Nova Scotia—Mr. Hermain from Shelburne, Mr. Smith from Lunenburg, Mr. Short from Pictou, and Mr. King from Halifax. Mr. King was appointed on the recommendation of the fisheries committee of the Halifax Board of Trade. From New Brunswick the members are: Mr. Russell from Passamaquoddy Bay, Mr. Young from Gloucester county, and Mr. Carson from Kent county. There is a gentleman from the Magdalen islands, Mr. Arsenault. There are no members from Ontario, because Ontario administers its own fisheries. There is a gentleman from Charlottetown, Mr. Longwell; one from Alberta, one from Saskatchewan, and two from British Columbia. The British Columbia representatives are Mr. McIntyre and Mr. Cunningham. Thus there are four from Nova Scotia, three from New Brunswick, one from Magdalen islands, none from Ontario, one from Alberta, one from Saskatchewan, and two from British Columbia.

Mr. A. W. CHISHOLM: How many of them are fishermen ?

Mr. HAZEN: They are all fishermen or dealers in fish, or people with knowledge of the fish industry. Mr. Hermain, from Shelburne, is a practical fisherman who makes his living by fishing. Mr. Short, from Pictou, is a fish merchant. Mr. Smith is a gentleman greatly interested in fishing, from Lunenburg. He owns schooners that go off to the banks and he is the representative on this commission of the deep-sea fishing interests, the bank fishermen. Mr. King, from Halifax, is there as the representative of the cured fish industry, which, as my hon. friend knows, centers largely in Halifax. He is the representative of the fish merchants. Originally there were only three members on the board from Nova Scotia, but the fisheries committee of the Halifax Board of Trade recommended that there should be a member of the board representing Halifax, and, that being considered a reasonable request, Mr. King was appointed. Mr. Smith is a representative of the deep-sea fishermen. He has been a practical fisherman, he has fished on the banks himself, he has been the captain of fishing schooners on the banks, and to-day he is engaged in the fishing business, although he does not fish himself. Mr. Young lives at Caraquet, and is familiar with the fishing industry there. Mr. Russell represents the Passamaquoddy Bay district. He is a man who has been a practical fisherman. I believe the gentleman from Prince Edward Island has been a practical fisherman. He has been a fishery officer, and the department have a very high appreciation of his fishery knowledge. The representatives from British Columbia are fishery officers. The members of the House of Commons from British Columbia thought at the start that we had better have two men who had been fishery officers, and that is the reason that Mr. Cunningham, who is a

principal fishery official of the Dominion Government in British Columbia, and Mr. McIntyre, the assistant commissioner of fisheries for British Columbia, were appointed. Of course the fisheries in the prairie provinces are different from those on the east coast or in British Columbia.

Mr. A. W. CHISHOLM: There is only one of these gentlemen really dependent upon fishing.

Mr. HAZEN: One is now engaged in fishing but two are dependent on fishing. Mr. Smith makes his living out of fishing.

Mr. A. W. CHISHOLM: His interest in the calling is different now to what it was when he was a fisherman. He is a fish buyer.

Mr. HAZEN: He is a man who has worked up from the lowest rank. He went off on a fishing vessel originally, he became a captain and he is now an owner and sends vessels off to the banks to fish.

Mr. A. W. CHISHOLM: That is what I mean. Would the minister be kind enough to inform me what are the duties of this board, and are they supposed to remain at their homes or to travel around gathering information, giving instructions, etc.?

Mr. HAZEN: The board is purely advisory. The provisional arrangement is that they meet in Ottawa two or three times a year. The Maritime section, the Pacific section and the Prairie section meet here and discuss fishery matters with the permanent officials. The object of appointing the board was that it was felt that all the knowledge about fisheries was not confined to the department by any means; and it was thought that it would be an advantage if the officials of the department, many of whom are very learned and scientific men, could have the advantage, several times a year, of consulting with men who, while not perhaps having the same scientific knowledge, had a greater practical knowledge of fishing than the officials of the department could be expected to have. It was thought by having an advisory board some good results would be attained. We believe these good results have been attained. We had one meeting in Lunenburg last year and other meetings will be held in other parts. We have in Nova Scotia one gentleman who understands thoroughly the dried and cured fish business, another the bank fishing and another the shore fishing; then Mr. Short, from Digby, understands the general conditions. It is thought that these gentlemen, consulting with the scientific men here, can give advice that will be of great value regarding close seasons, the propagation of fish and the best method of placing fish on the market in such attractive shape as to command the best prices. The result, our officers believe, has been very satisfactory.

Mr. A. W. CHISHOLM: I desire to enter my protest against the personnel of that commission. There is just one man on it whom I would call a fisherman in the sense that I understand the word, a man who devotes his entire time to fishing, a toiler of the deep.

That is the man that I regard as a fisherman. We have one of that kind, I understand, on the commission, but instead of one at least one-half of the commission should be fishermen. The next protest I wish to make is against appointing all the men from the western part of the province of Nova Scotia. There is no reason why we should stop at the boundary line between Halifax and Guysborough and go no further east. The counties of Guysborough, Pictou, Antigonish, Inverness and the two counties of Cape Breton are without a representative on the board. If there was a particle of sincerity in the organization of this board, surely it would seem that that section of country should be represented, because if my hon. friend looks at the statistics he will see that a great deal of fish is caught in that eastern part of the province. I spoke to the hon. minister, and wrote to him, suggesting a particular friend of his own in the county of Inverness as a fit man for this board. I regarded him as well qualified for the position. He was a fisherman from away back, and made his living at it. I knew that a man of a different political stripe to the minister might not meet with his approval, but this man was a good man, and if he had been appointed he would have been able to give proper attention to the wishes of the fishermen of the eastern counties. I will not take up any more time further than to place myself on record as disapproving of two features of this commission: first of all, the personnel, inasmuch as there is only one fisherman on the board, for I do not regard a man who devotes his time to outfitting vessels as a fisherman; and secondly, the counties of eastern Nova Scotia are left without a representative on the board. I trust the minister will see that these defects are remedied. It can be easily done. He has friends of his own

in all these counties and can easily get men to act on the board. I may point out that last year $5,562.68 was spent on this commission. A commission of that magnitude, so far as expenditure is concerned, should produce some good results.

Mr. LOGGIE: Might I ask the minister if the members of this commission meet in Ottawa all together, or individually.

Mr. HAZEN: The members of the Maritime provinces' section meet here together, but not the board for the whole of Canada.

Mr. LOGGIE: I am not going to take any issue with what the minister has said except in this regard: he said that Mr. Young had been engaged in the fishing industry all his life; that is perfectly true, but when he came to the other member from New Brunswick he led the House to believe that he had as wide an experience of fishing as Mr. Young. I do not wish to be understood as saying one word against the gentleman who has been appointed. He is a very estimable gentleman, but I am quite sure he cannot be put in the same class, so far as experience in the fishing industry is concerned, with Mr. Young. So far as I am aware he has never had any interest in the fishing business, either as a shipper, buyer or fisherman. I suppose I should congratulate my hon. friend from Kent, N.B. (Mr. Robidoux) because his county is represented on the board, as well as having a very important member on the Shellfish Commission. Kent county is recognized, I suppose, because of its good work in 1911, while counties that perhaps have larger fishing industries have been altogether overlooked. I thought it was only fair to draw the minister's attention to the fact that his remarks on the gentleman from Kent county, besides Mr. Young, were hardly accurate. I happen to know both gentlemen very well, and I esteem them highly all the same.

Mr. ROBIDOUX: I wish to inform the hon. member for Northumberland, N.B. (Mr. Loggie), that while Mr. Carson is not a fisherman and has not been directly interested in the fish business, nevertheless he is thoroughly acquainted with it. The county of Kent is one of the best fishing counties in the Maritime provinces, and the hon. member for Northumberland is well aware of that, because he does a large business in that part of the country. When I urged the appointment of Mr. Carson to that commission, I did it in the interests of the fishermen. My hon. friend will not deny that Mr. Carson is a public-spirited citizen who is prepared to stand by the interests of the fishermen. That is why I recommended his appointment. It may be that his appointment is not to the liking of the hon. member for Northumberland, but I was not particularly concerned about that when I made the recommendation. It would be a pretty difficult matter to suit the hon. gentleman. In order to do that we should have to give him practically a monopoly of all the fishing. He had his innings when the late Government was in power. If we were to appoint an advisory board to suit him, we should have to appoint men who are prepared to issue salmon licenses to the hon. member for Northumberland only. We all know that previous to 1911 it was impossible for an ordinary fisherman in the county of Kent, with whom the hon. member for Inverness has so much sympathy, to secure a salmon license. From the northern boundary line of Kent county down to Richibucto about 20 salmon licenses were issued, and the company of which the hon. member for Northumberland is president held 17 of the 20. As a matter of fact he did not fish more than three or four sets, and held the others just to prevent other people from fishing. If the fishermen of Kent county had been given the selection of a man for that advisory board, I am sure they would have selected Mr. Carson.

Mr. A. W. CHISHOLM: Does my hon. friend from Northumberland still enjoy the same privilege as to taking out licenses?

Mr. ROBIDOUX: Yes, he has those licenses to-day. I will tell my hon. friend this. Any fisherman to-day who applies for a license to fish salmon gets it.

Mr. A. K. MACLEAN: I am inclined to doubt very much the value of this Fisheries Advisory Board. I hardly think the department will get much benefit from the services of a board who are called together practically only once a year.

The members constituting the board as a rule are busy men engaged in other duties and the amount of time devoted to fishery matters is after all very intermittent indeed. A resolution was passed by the Halifax Board of Trade within the past year, I think, and that was a repetition of similar resolutions passed before, urging the ap-

pointment of a departmental officer for each province. I assume they intended that such an officer would be located in a central place in each province and he would have direct control of the departmental affairs in that province. He would always be the real executor of the policy or regulations of the department and would see that they were carried out? He would also be in a position to accumulate, after years of experience, a great deal of information which might be utilized by the department. I suppose there is some good in the Fisheries Board. I suppose it would hardly be possible for a dozen men to meet together here once a year and not afford the department some information.

Mr. HAZEN: They meet twice a year and in future it is intended that they shall meet oftener.

Mr. A. K. McLEAN: I suppose it would be rather an extreme statement to say that this board could afford no intelligence to the department, but I do not think its assistance is very substantial. I believe that the suggestion emanating from the Halifax Board of Trade, namely, the appointment of a departmental head in each province, is a more businesslike suggestion, and one which would be more in the interest of the fisheries in each province and of greater advantage to the department than any other proposition which has been placed before the minister on this subject. I do not think that the Department of Marine and Fisheries was ever properly organized for the effective and scientific regulation and administration of the fisheries. I am not finding any particular fault with the present head of the department. What I say would be applicable to any person who has hitherto been at the head of the department, I do not know whether the department is undermanned or not, I think possibly it is in the way of scientific men, or men who are or will specialize, but I do not think the department is well organized or that it ever was. I believe that the suggestion of the appointment of a departmental head in each province is a good suggestion and one worthy of consideration. I would like to hear if the minister has given consideration to the suggestion which has come from the Halifax Board of Trade.

Mr. HAZEN: That suggestion, of course, has been made on several occasions. We have now in every province inspectors for the different districts and the general opinion of the head officials of the department is that there is very little to be gained by appointing another official in each province which would be, as it were, simply adding to our inspectors. It is felt that it is quite as easy for these inspectors to report at Ottawa as it would be, in New Brunswick, for instance, for them to report in St. John, or, in Nova Scotia, for them to report in Halifax. But up to the present time it has not been thought desirable to adopt that suggestion which has been made from time to time for the last ten years.

Mr. LOGGIE: I think that some hon. members have misunderstood the situation as put before the committee by the hon. member for Kent (Mr. Robidoux). The licenses that he referred to were held thirty years ago and about twenty years ago the corporation of which I am president and manager was organized and these salmon licenses were taken over by that company. The corporation that I represent received no favours from the Liberal Government any more than they have from the present Conservative Government. They held these licenses many years ago and still hold them, and they are endeavouring to make an honest dollar out of these fisheries. I realize, as much as any man in this House, the importance of taking care of the fisheries and not allowing them to be overburdened. I think that especially applies to the lobster fishery.

Mr. A. K. MACLEAN: What are the goods like that this company put up?

Mr. LOGGIE: Write to Fraser, Viger and Company, of Montreal, and they will tell you the kind of goods that certain people put up. The licenses that my hon. friend referred to are practically licenses that the company have held for thirty years or thereabouts. Some of the territory that the company are fishing in front of cost them a large sum of money. I fancy that there are some shore rights given with these licenses, although the department as a rule refuse to recognize shore rights. But after all they give a preference to the owners of the land in fishing in front of their own land. That is the recognized rule along the shore. I do not think it is always carried out, and I do not say that it is always necessary to carry it out, as long as the parties holding the licenses have a landing privilege. But if they do not have a landing privilege the owner of the land can prevent them from landing. It is important to have some shore rights. All I got on my feet for was to explain to the committee that the corporation I repre-

sent received no favours from the Liberal Government that they would not be perfectly justified in asking of the Conservative Government. I think that the minister knows enough of my career to say that I could come to Ottawa and ask justice from any Government. While I have always been a Liberal in federal politics I was not a very active partisan until I took hold of my hon. friend himself and worked shoulder to shoulder with him. But when it came to the federal question, even although we were working together, we had to agree to differ and we did differ.

Mr. TURGEON: While I admire the devotion of my hon. friend from Kent (Mr. Robidoux) to his fishermen, he will admit that I have some fishermen also in Gloucester county who are dear to my heart. I speak not so much of the shore fishermen, the lobster and salmon fishermen, who are more numerous in my county than in any other county in New Brunswick, but I wish to speak more particularly this evening of the deep sea fishermen whose pursuit is very arduous and who last year were treated in a way that has not been heard of since Confederation in the county of Gloucester or along the north shore of New Brunswick. The deep sea fisherman has to pass with his schooner once or twice through the harbour of Shippigan, and he has been charged harbour dues by the new harbour master there. Whether the conduct of the harbour-master has been according to the rules of the department, I will not say positively, but I wish to remind the minister that it is quite an innovation in the county of Gloucester; that the schooners have never been charged harbour dues or wharf dues since Confederation, and I do not believe they have been charged harbour dues or wharf dues anywhere on the north shore of New Brunswick. In the county of Gloucester the matter is more important, because 200 schooners leave the ports of Caraquet and Shippigan, every Monday morning, going to the Prince Edward Island banks and taking every summer nearly a million dollars' worth of fish from the bottom of the sea. I would ask the minister to rectify this matter, if possible, and not to impose any taxation on these fishermen. We exempt them from wharfage dues, and I do not see why they should be charged harbour dues.

Mr. HAZEN: What harbour?

Mr. TURGEON: Shippigan. As the hon. minister knows, all the schooners from Caraquet, Lameque, Miscou and Shippigan island go out to sea by this harbour.

Mr. HAZEN: Does my hon. friend say that fishing vessels are charged harbour dues?

Mr. TURGEON: Yes. They were charged last summer, I am informed.

Mr. HAZEN: What have they been charged harbour dues for?

Mr. TURGEON: As fishermen.

Mr. HAZEN: My understanding was that no harbour dues were charged against the fishermen. There must be some misunderstanding.

Mr. TURGEON: There must be some mistake in the instruction given to the harbour-master.

Mr. HAZEN: I wish the hon. gentleman would write me a letter stating the facts.

Mr. TURGEON: I will.

Mr. HAZEN: Then I will investigate the matter.

Mr. SINCLAIR: I think the difficulty about the Advisory Board is that the minister has made it political. I am sorry that the minister did not carry out the promise made to the House last year, when authority was given to appoint that board, that he would select the members of the board himself; that he would endeavour to represent all the various interests in regard to the fish industry and that he would select good men. These answers were given in the House on the 27th of November, 1913. The minister stated most positively that he would make the selection himself, that the selection would not be political.

Mr. HAZEN: Yes, I did.

Mr. SINCLAIR: We are told by the hon. member for Kent, N.B. (Mr. Robidoux), that he recommended one of the members of the board.

Mr. HAZEN: Certainly.

Mr. SINCLAIR: And I have no doubt the same is true in regard to the other members of the board, that they were recommended as suitable by some of the friends of the minister.

Mr. HAZEN: Hundreds of people were recommended.

Mr. SINCLAIR: I am sorry that the minister should have taken that method of making up the board. It would be quite possible for the minister and the officers of the department, who know the men along the coast really capable of doing this kind of work, to make a good selection that would be of great service to the country. On the coasts of Scotland, England and Ireland, the fishery boards are doing splendid work, just the kind of work our fishermen require. They are collecting information of value to the fishermen. For example, they can tell the places where the fish spawn. In connection with the trawling agitation on the coast of Nova Scotia, many of the fishermen think that the gulf of St. Lawrence is the spawning ground for cod and haddock. Some dispute that. There is no certainty in regard to the matter. It is merely a theory that the people have. That is a matter upon which definite information might be found, and we might possibly exclude trawlers from the spawning grounds when we know where they are. The advisory board could do some important scientific work in order to get such information which would be of very great service to the fishermen. At the time the board was authorized, I asked the minister if the fishermen's unions would be represented on the board and he assured me that that matter would be considered. I have not heard that anything has been done in that regard. The fishermen's unions are not political institutions; they are composed of men of both shades of politics. I suppose in that way they would not be in a position to make political recommendations. I regret that the minister has not carried out the pledge he made to the House and to the country, at the time this board was organized, that he would himself undertake the matter of selecting the personnel of the board. That is where the great mistake lies.

11 p.m.

I would like to get a little more definite answer from the minister in regard to this officer, Mr. Fraser. The statement of my hon. friend from North Cape Breton (Mr. McKenzie) discloses a very bad state of affairs. He stated that Fraser left his home; that he went 300 miles to the county of Victoria; that he made the statement to the people that he was authorized by the Department of Militia and Defence to deal with the question of Fenian Raid bounties in order to be in a position to canvass voters; that he deceived people in that respect; that he was not authorized at all; that he did not represent the Militia Department. It appears to me that this man, if he acted in that way in the county of Victoria, is a disreputable scoundrel, and should not be kept in the service of the department. The minister has not given any assurance to the House that he will deal with that matter. My hon. friend from North Cape Breton has made a statement very positively, and I feel that the least that the minister should do is to assure the committee that he will take the matter up and investigate it, and that, if this man is guilty of the charge made against him, he will be dismissed.

Mr. McKENZIE: Before the minister makes any reply to the observations of the hon. member of Guysborough (Mr. Sinclair) with respect to the case of this man Fraser, I wish to refresh his memory as to the law of Parliament and of his department as laid down by the present Prime Minister on this very point. This subject was under discussion in this House on the 6th day of December, 1911, as appears on page 889 of 'Hansard'. These are the words of the Prime Minister:

> So far as the inside service is concerned, the statutory provision to which I desire to call attention is to be found in the Act of 1908 introduced and passed by the late Administration. Section 43 of that statute is as follows:
>
> 'No officer, clerk or employee in the Civil Service shall be debarred from voting at any Dominion or provincial election if under the laws governing the said election he has the right to vote; but no such officer, clerk or employee shall engage in partisan work in connection with said election.'
>
> The words of that section do not seem to restrict it to the inside service. My impression of the interpretation of the Act is that the language is restricted to the inside service. However, that is a matter to which we can very easily determine upon an examination of the earlier part of the statute. Sufficient it is to say for the present that it does lay down a definite and specific rule so far as the inside service is concerned.
>
> Now, so far as the outside service is concerned, the rule was embodied in a resolution of the House of Commons moved by Mr. Lake on the 17th of July, 1905, and accepted by my right hon. friend (Sir Wilfrid Laurier) who was then leading the Government, and that rule is in these words:
>
> 'That whilst it is desirable that every official in the employ of the Government of Canada, should enjoy perfect freedom of political opinion, and the untrammelled exercise of his franchise in accord therewith, no official should be engaged or permitted to engage, in partisan work of any description in the election of a representative to the provincial or Dominion Legislature.'

So there appeared to be no latitude for any minister if that law is to be observed. The Prime Minister pointed out that, so far as the inside service is concerned, the statute settled the case, and so far as the outside service is concerned, the late resolution settled it, that resolution being:

No person who is in the pay of the Government shall take any part whatever in partisan work in a Dominion or provincial election.

Any minister who has regard to that as the law has strong reason to make it clear to officials that they cannot be permitted to take part in elections. I wish to point out that not only was Mr. Fraser busily engaged in bribing the electors, but an overseer by the name of William Phelan, who resides in the county of Victoria, was engaged in the same business. He was hand in hand and shoulder to shoulder with this man Fraser in this business, going from house to house offering bribes and bribing the electors to vote for McLeod, who was the candidate of the party. It is only fair that these officials should know that the present Prime Minister of Canada, in a speech in this House on the 6th of December, 1911, laid down the law on this subject, as I have given it. Any man taking office under this Government, particularly since the Prime Minister's statement was made, is forbidden to take any part in a campaign as has been done by these gentlemen.

Mr. LAW: Has the minister the list of fishery inspectors of Nova Scotia?

Mr. HAZEN: Yes. A. G. McLeod, Whitney Pier, salary, $1,300; Robert Hockin, Pictou, $1,300; Mr. Ward Fisher, Shelburne, $1,300.

Mr. LAW: The minister raised Mr. Ward Fisher $100 last year.

Mr. HAZEN: Each of these officers was raised $100.

Mr. LAW: He turned out a fishery overseer for no other reason than that he was a Liberal, I presume, and getting along in years, who was in receipt of $700 a year, and appointed Mr. Fisher to the position at $1,200 a year and has raised him $100 this year. Is that the way the minister looks after the money of the people that is entrusted to him? I would like to know if he thinks that Mr. Fisher is doing any better than the late inspector of fisheries did. I doubt very much that he is. I think he was given the salary simply because he was a friend of the Administration, and that is not in the interest of the country.

Mr. HAZEN: As to Mr. Robertson being an efficient officer, he was most inefficient. The hon. gentleman will recognize the authority on which I make that statement when I say that the records of the department show that Mr. Robertson was suspended by the Government which preceded the present Government, and he was regarded in the department as a most inefficient officer. On the contrary, the present officer is most efficient and is regarded as one who is discharging his duties admirably. And I think that a fishery inspector who faithfully discharges his duty is not overpaid when he receives $1,300 a year.

Mr. LAW: I do not agree with the minister as to Mr. Robertson. But Mr. Robertson was not inspector of fisheries, as I understand. In any case, the man I referred to was Captain Hatfield.

Mr. HAZEN: He was not inspector, but fishery overseer. The hon. gentleman will understand that there are the fishery inspectors and under these the fishery overseers, and under these the fishery guardians.

Mr. KYTE: In Committee of Supply a few weeks ago I asked for an explanation concerning an expenditure of $33.90 made on account of J. A. Gillies to William Forgeson.

Mr. HAZEN: The explanation is as follows:

On reference to the original account and to the departmental copy of that included in the return sent to the House of Commons, it is found that the account is made out as follows:

Department of Marine and Fisheries, Ottawa.

(Per J. Gillies, K.C., Sydney.)

To William Forgeson, Port Royal, C.B.

It may be explained that the account originated in the following manner: On the 26th April, 1912, the deputy minister wrote to Mr. J. A. Gillies, explaining that a captain, engineer and cook would be required for the patrol-boat Davies and requesting him to furnish the names of suitable persons for the positions in question. Mr. Gillies, on the 4th May, nominated Mr. William Forgeson as engineer on the Davies, and on the same date Mr. Forgeson was instructed to report to Inspector of Fisheries Hockin at Pictou where the boat was located. Mr. Forgeson reported to the inspector: but on his arrival he explained that he was not a steam-engineer, and that his experience was limited to gasoline engines. It was therefore not feasible to employ him on the Davies and he had to return to his home at Port Royal.

Mr. KYTE: Will the hon. minister bring down the correspondence between the deputy minister and Mr. Gillies?

Mr. HAZEN: I shall be glad to lay it on the table.

Mr. A. W. CHISHOLM: I want to point out what I consider to be the ridiculous conduct of the Shellfish Commission when it went around the province of Nova Scotia last year. They visited Orangedale in the county of Inverness, where there are practically no fish except oysters, and they left unvisited the whole of the rest of the county of Inverness, embracing a district 100 miles in length, where there are fifteen or twenty lobster factories. I do not know what instructions the commission received from the department, but it seems to me that if they had any regard to the proper performance of their duties, they should have visited the district to which I have referred. It would appear as if they did not want to trouble themselves; as if they did not want to get too far away from the Intercolonial railway. They reported to the department that they had examined a gentleman at Orangedale, and they left the whole of the county of Inverness unvisited. The Department of Marine and Fisheries seems to have something—I do not know what to call it—against the county of Inverness.

Mr. McKENZIE: The right hon. Prime Minister has laid down a specific statement of law, namely, that no man who is an officer of this Government can take part in a local or a Dominion election. What position does the Minister of Marine and Fisheries take with regard to that law? Does it mean anything? If it does, then the two gentlemen who have transgressed that law ought to be dealt with. If the minister contends that the law does not apply to them, then we must arrive at some other interpretation of what the Prime Minister said when he laid down that clear and explicit rule, quoting a section of the statute in respect of the inside service and a resolution passed by the House in respect of the outside service. The gentlemen of whom I speak are in the outside service, and the terms of the late resolution should apply to them. Does the minister say that the late resolution does apply to them, and if it does, what course does he intend to take in the matter?

Mr. DAVIDSON: I would very much like to hear the minister give his opinion on this point, because I think it affects very materially some of the close political friends of the hon. gentleman who has just taken his seat. I had the pleasure of following in the trail of my illustrious friend in a recent election campaign and of observing at short range the methods adopted by certain individuals in that county. I found that in the district of which I speak no less than twelve officials appointed by the late Administration were actively making use of every method known to the human mind to defeat the Conservative candidate in that election. I did not intend to say anything about this matter, but since the hon. member has brought it up I think that we should have the opinion of the minister with regard to the actions of those persons on whom my hon. friend called, and with whom he had consultations during that campaign. If they have contravened this resolution, they should be made to walk the plank. My hon. friend has made some very sweeping and damaging assertions against Mr. Fraser; I presume he has very good authority for them, because I am sure that my hon. friend would not be so reckless as to make sweeping assertions unless he had something on which to base them. As a matter of fact, hon. gentlemen will remember that my hon. friend descended from the dizzy heights of a county court judgeship to enter politics and to run for the constituency of North Cape Breton, and he must have or should have acquired a judicial spirit. I trust that the ex parte statement of his enthusiastic and hot-headed friends in the locality was not the only ground for making the very serious assertions which he has made to-night. The hon. gentleman has asked the minister for his views on this question; would he be good enough to tell the committee whether he thinks that a postmaster should actively engage in politics?

Mr. McKENZIE: There is no necessity for the expressing of views; we have the law laid down by the Prime Minister.

Mr. DAVIDSON: Then I would like to ask my hon. friend why it was that when he was in the North Shore district, he consulted, schemed with and planned with Mr. McLeod, postmaster at that place, and regarded him as his principal worker? My hon. friend knew—although perhaps Mr. McLeod did not know—about the resolution; does he not think that it was very unfair for him to induce that poor man to do such a thing?

Mr. McKENZIE: My hon. friend knows that Mr. McLeod has been kicking that post-office into the teeth of hon. gentlemen oppo-

site ever since they came into power. So far as Mr. McLeod is concerned, hon. gentlemen opposite can take the office, if they wish; he does not care a thing about it.

Mr. DAVIDSON. My hon. friend admits, then, that my allusion to what Mr. McLeod has done is substantially correct. Whether or not the office is something to be sought for does not alter the case one bit, nor does it justify Mr. McLeod's conduct in violating that regulation. If Mr. McLeod loses the post office—and I shall make it my business to see that the Postmaster General is advised of these facts—he will know whom to blame for losing it. Knowing of the resolution which was passed by this House, my hon. friend openly encouraged Mr. McLeod to break it—and this is the gentleman who has occupied the dizzy heights of a county court judgeship. Is this not a serious matter, Mr. Chairman?

Mr. McKENZIE: I thought that the hon. member for Annapolis would have the good grace and discretion to keep out of this discussion. The hon. gentleman brought this creature Fraser with him to North Shore. I did not want to drag the hon. gentleman's name into the discussion; as a member of this House, I wanted to respect his feelings. But he brought it up himself; you could not keep him out of anything that was dirty.

Mr. CHAIRMAN: I do not think that such a statement is permissible, and I think the hon. gentleman ought to take it back.

Mr. McKENZIE: Take that back? Well, he may say that his conduct was clean and that he simply broke into an explanation.

Mr. DAVIDSON: It really does not make much difference what the hon. gentleman said.

Mr. McKENZIE: I never knew that it was a matter of disrepute or disrespect for anybody in this country to have occupied the position of judge. I did not think so. I rather thought that men who occupied the position of judges and did credit to that position to the best of their ability had nothing to be ashamed of because they had occupied that position. I had the greatest regard for that office. I still revere and respect any person who holds and occupies one of those high positions as long as he does credit to the office. I do not for a moment claim that I brought any particular adornation to the office, but I laid it down just as unsullied as I found it. The position was occupied by a very distinguished gentleman in district No. 7 of the province of Nova Scotia, a man who was at one time a member of this House, the Hon. Mr. Justice Dodd, a descendant of a long line of judges, an educated gentleman and a great lawyer. He did great honour to the position of county court judge. I succeeded him in that office. My hon. friend will search the Tory press of Nova Scotia in vain to find any adverse comment into my appointment to the Bench in succession to Mr. Justice Dodd. The appointment was accepted by both Grits and Tories as being a fairly good appointment. I did not forget that, because I was pleased that my opponents in the press, although they were always after me when I was in politics, recognized the fact that it was not a bad appointment. When the time came that I laid down that office, I handed it to a distinguished gentleman, Judge Finlayson. I have heard no aspersions cast upon the office because I held it or because of anything I did while I was there. It is repeatedly referred to by hon. gentlemen opposite that I am an ex-judge, as if I should sit down and blush because the Government of this country thought proper to appoint me to that position. What happened so far as the hon. member for Annapolis is concerned? He appeared at a public meeting at French River, in the district of North Shore, and made a speech there. He invited all and sundry who had made claims to the Fenian raid bounty to go to him, that he would stir things—

Mr. DAVIDSON: The hon. gentleman is stating what is absolutely not a fact.

Mr. McKENZIE: I am stating what took place at the meeting.

Mr. DAVIDSON: I ask the hon. gentleman to withdraw absolutely what he has said. There is not a vestige—

Mr. McKENZIE: We are not talking about what took place in this House.

The CHAIRMAN: I have already ruled that it is only when it is a question of speeches made by a member that one is bound to take the word of that member. As to questions of fact, I never understood that anybody had to believe what another man said.

Mr. McKENZIE: I can supply the affidavits of fifty people who were present in the school house where my hon. friend was making his speech at French River in February.

Mr. DAVIDSON: I really must insist that the hon. gentleman obey the rules in this regard. I say emphatically that I never said that or anything like it, and I call upon the hon. gentleman to withdraw.

Mr. McKENZIE: Withdraw what?

Mr. DAVIDSON: The remark about calling upon applicants for the Fenian raid bounty to call upon me or to consult me about it. It is absolutely a creation; there is not the first vestige of foundation for it.

Mr. McKENZIE: The hon. gentleman said to those people: I have here with me an official agent—

Mr. DAVIDSON: I ask the hon. gentleman to withdraw that. He is stating what is absolutely—

Mr. McKENZIE: I am obliged to make my statement.

The CHAIRMAN: When I first made my ruling I understood the hon. member had been stating questions of fact. Now he is citing some words which he attributes to the other hon. member. His remarks have now come under the ruling that as to words supposed to be pronounced by one member that one member is the only person who knows. That is why we are asked to accept his denial.

Mr. McKENZIE: I think that rule has reference to statements made in the House.

The CHAIRMAN: No, the hon. member is not right.

Mr. McKENZIE: I must insist upon the rule being produced. I do not know the rule.

The CHAIRMAN: The only way that the hon. gentleman can dispute my ruling is to appeal.

Mr. McKENZIE: I have sufficient experience with rulings in this House with a good strong Tory majority not to waste time; I shall not appeal. The difference that is between myself and the hon. member for Annapolis is that he says I am not putting it in the exact language he used.

Mr. DAVIDSON: I ask the hon. gentleman to withdraw absolutely the statement in reference to remarks made by me.

[The Chairman.]

Mr. McKENZIE: Will the hon. member state to the House what he did say?

Mr. DAVIDSON: If I proceeded to state everything I said on that occasion I would take up some time and would make what I regard as a very effective campaign speech; and I would say certain things in reference to the campaign work of my hon. friend which perhaps would not be complimentary to him. But so far as this matter is concerned, so far as referring to Fenians or anything of the kind is concerned. I made no remarks whatever at that meeting. The only reference I made to the matter at all was in reply to my hon. friend's personal friend the postmaster of that locality, who interrupted me to ask some question about the Fenian raid bounty, which I tried to answer to the best of my ability. But, as a matter of fact, to say that I said anything of the kind mentioned is absolutely untrue and I imagine that what the hon. gentleman has stated relative to Mr. Fraser is just about as correct as what he has said concerning me.

Mr. McKENZIE: I have already made the statement that Mr. Fraser represented himself as an officer of the Militia Department. I dare Mr. Fraser or the hon. member for Annapolis to deny it. He was put forth as the exhibit by the hon. member for Annapolis. This is the man that was given to me—

Mr. DAVIDSON: That is not true.

Mr. McKENZIE:—this is the man given to me by the department; he will come to you and pay the money.

Mr. DAVIDSON: I am very much surprised that my hon. friend should be unfair enough to make statements of that kind. I tell this House in the most absolute way that the hon. gentleman would find out himself if he investigated that there is not a particle of truth in what he says, that it is absolutely false from beginning to end. He has not the first vestige of authority; it is the purest creation, and I ask him to withdraw it.

Mr. McKENZIE: My hon. friend cannot deny the circumstance that he went to North Shore with this man Fraser. What did he take him there for?

Mr. DAVIDSON: As a matter of fact, I did not go to North Shore with that man Fraser. I ask the hon. gentleman to withdraw.

Mr. McKENZIE: I will certainly not withdraw one word. I say that the hon. member can take any position he likes, and I say that because it is true, absolutely and conclusively true. That is the position I take in respect to it, because there are fifty or one hundred people who heard him make the speech, and they can be brought before any committee of investigation.

Mr. DAVIDSON: The hon. gentleman is lying, absolutely.

Some hon. MEMBERS: Take it back.

Mr. McKENZIE: I certainly will not ask him to take it back. I would not—

The CHAIRMAN: Order.

Mr. McKENZIE: I certainly will not ask him to take it back, because it is absolutely satisfactory to the Chair.

The CHAIRMAN: The debate has gone so far from the item under discussion that I feel like calling every hon. member to order and calling the item. I am sure that words have been uttered that should never be uttered in this House. Every member knows that to say that a statement of another hon. member is not true is not parliamentary, and that such words should not be uttered in this House. When a member is called to order by the Chair, I do not care personally, but I think he should accept the ruling of the Chair.

Mr. McKENZIE: All the wrong-doings are of course on this side of the House, but a gentleman sitting to the right of the Chair can call another hon. member a liar and it is accepted as perfectly fair. I do not ask that it should be taken back. I have some rights in this House, and the hon. member for Annapolis is not going to wipe me off the face of the earth. Far from it. I am not reflecting on the Chair, but I have a right to point out the fact that if a very slight transgression of a rule is made by me, I am called to order, and asked to bring myself into compliance with certain rules. The hon. member for Annapolis calls me, a member of this House, a liar because I state a fact, and he is not asked by the Chair to take it back. How can a chairman of that calibre expect to maintain order or respect in this House?

The CHAIRMAN: I have already said that the word used by the hon. member for Annapolis is not permissible, and I have also asked him to withdraw it, as I have also asked the hon. member for North Cape Breton to withdraw his statement. I cannot do more than that.

Mr. McKENZIE: I submit that there cannot be a possibility of order being maintained in this House when it is lopsided. I make that statement boldly and squarely to the Chair and to every man in this House. There must be fairness and integrity in the application of the rules if they are to be observed in this House.

The CHAIRMAN: I do not think that I can do anything more for the satisfaction of the hon. gentleman. He can, of course, appeal from my judgment. I must state that I cannot manage any hon. gentleman in this House. If my rulings are not complied with, I can do nothing more.

Mr. DAVIDSON: I beg leave to withdraw the remark which I made a moment ago.

Mr. FOWLER: I rise to a point of order. The hon. member for North Cape Breton (Mr. McKenzie) has made a statement regarding alleged statements made by the hon. member for Annapolis, which the hon. member for Annapolis has absolutely denied. The hon. member for Annapolis in the course of an argument between himself and the member for North Cape Breton made use of an expression which was unparliamentary, and has withdrawn that expression. But the hon. member for North Cape Breton has not withdrawn the statement he made with regard to the hon. member for Annapolis, and which the hon. member for Annapolis has denied in the most positive manner. I think that before we proceed any farther with the business of this House the hon. member for Cape Breton should be called upon to withdraw the statement he made with regard to the hon. member for Annapolis.

The CHAIRMAN: The committee knows that I have called on the hon. member to withdraw the words he used.

Mr. FOWLER: If a man who has been called upon to withdraw refuses to do so, can nothing be done? Under certain circumstances the Sergeant-at-Arms of this House has a duty to perform, and I think it would be an opportune time now to allow him to earn his pay.

Mr. McKENZIE: I would not encourage the hon. member for Kings and Albert to join the Sergeant-at-Arms.

Mr. FOWLER: If it were a duty devolving upon the member for Kings and Albert,

he would not need the help of the Sergeant-at-Arms. He is a much better man than the hon. member for North Cape Breton.

Mr. McKENZIE: The hon. member is reckoning without his host.

Mr. EDWARDS: I rise to a point of order. I have always understood that when an hon. member accused of using certain words has positively denied using those words, the rules specifically state that the hon. member making the accusation shall be compelled to accept the word of the hon. member accused. I ask you, Mr. Chairman, if, under the circumstances, the hon. member for North Cape Breton is not obliged to accept the word of the hon. member for Annapolis?

The CHAIRMAN: I have already stated that the rule is plain. The word of any hon. member of this House must be taken as to any statement he is alleged to have made. I have called upon the hon. member for North Cape Breton to accept the statement of the hon. member for Annapolis. I can do nothing now but await the decision of the committee.

Mr. McKENZIE: I certainly would be the last man in this House to defy the rulings of any authority in this House. The personnel in the present Chair is absolutely satisfactory to me. I do not look to the personnel. Respect is due to the office of Speaker of this House and to the office of Chairman; but for those offices to be honoured and respected, they must themselves maintain honour and respect. I hope that will always be done in this House. There is a rule of this House which is pretty hard sometimes for a man of conscientious and strong beliefs to observe. I have conscientious and strong beliefs and positive knowledge about certain things that took place. If certain rules of honour are to be observed on one side of this House they must be observed on the other. A conscientious knowledge cannot be removed by parliamentary conventionalities. If parliamentary conventionalities call upon me to bury my knowledge and the facts that are branded deeply upon my mind, I suppose it is necessary to comply with parliamentary conventionalities. Rather than that it should be said that I would bring any discredit or disrespect upon the honour of the Chair or of the House, I would be willing to comply with any parliamentary conventionality if it is necessary to maintain the rule.

[Mr. Fowler.]

Mr. EDWARDS: I ask if parliamentary conventionality does not require the hon. gentleman to accept the statement made by the hon. member for Annapolis. In that case the hon. gentleman should signify compliance with the rule.

Mr. McKENZIE: I have gone as far as I will go, and I think I have gone far enough.

The CHAIRMAN: I understand the hon. member intends to say that he complies with the ruling of the Chair when he is asked to take back what he said, and I suppose the hon. member for Annapolis will take it for granted that that was the meaning of the remarks of the hon. member for North Cape Breton.

Mr. CARVELL: Now, Mr. Chairman—

Mr. FOWLER: Just a moment.

Mr. CARVELL: I claim that I have the floor.

Mr. FOWLER: Will you allow me?

Mr. CARVELL: I have the floor.

Mr. EDWARDS: No, you have not.

Mr. CARVELL: I want the Chairman to say whether I have or not.

The CHAIRMAN: I have not decided that the hon. member for Carleton has the floor.

Mr. CARVELL: I am going to decide that I have the floor until I am called to order.

The CHAIRMAN: The hon. gentleman (Mr. Fowler) is speaking to a point of order.

Mr. CARVELL: Then I object, Mr. Chairman. The Chairman has decided that my hon. friend from North Cape Breton had complied with the requirements of the rule.

Mr. CHAIRMAN: I asked if it was satisfactory to the hon. member for Annapolis and I thought he was getting up to answer me.

Mr. DAVIDSON: Mr. Chairman—

Mr. CARVELL: What is your ruling, Mr. Chairman, as to the remark of the hon. member for North Cape Breton?

The CHAIRMAN: I asked the hon. member for North Cape Breton if he would take back the expression that he had used, and I asked the hon. member for Annapolis

if he was satisfied with the statement of the hon. member for North Cape Breton. Then some other hon. member got up and made some observations.

Mr. CARVELL: I think you are shifting a little, Mr. Chairman.

The CHAIRMAN: I am trying my best to close the question.

Mr. CARVELL: I know you are, but I understood you to say that the hon. member for North Cape Breton had complied with parliamentary conventionality. If the Chairman now says that he has not, and that he did not say that—

The CHAIRMAN: No, I did not say that.

Mr. DAVIDSON: Mr. Chairman, you were good enough to ask if the explanation was satisfactory to me. I regret that I cannot regard it as satisfactory. I understood the hon. member for North Cape Breton to express some qualified and hypothetical compliance with the rules of the House. What the hon. gentleman should do is to accept the statement, not in general terms but particularly. He should accept my statement and withdraw the remarks which he made denying the truthfulness of my former utterances.

The CHAIRMAN: The hon. member (Mr. McKenzie) must understand that the rule says that if an hon. member is called to order, and if he is asked to take back some statement that he has made, he is simply to take it back without comment. Everybody will understand that I had some good reason in asking the question if the statement made by the hon. member for North Cape Breton was acceptable to the hon. member for Annapolis. Certainly the hon. member did not comply with the rule that says that an hon. member should be called to order for any language such as that which he used and which is objected to.

Mr. McKENZIE: What does the Chairman mean? I said that whatever the conventionality of Parliament required, so as to respect the rulings of the Chair and maintain the dignity of this House, I was prepared to comply with and did comply with. If that is not understood, it is not my fault.

The CHAIRMAN: Twice I arose, the first time to call the hon. gentleman to order for the use of an objectionable expression, and afterwards for the statement attributing a falsehood to the hon. member for Annapolis. The hon. member for Annapolis, having denied that he had made the statement attributed to him, I asked the hon. member for North Cape Breton to accept the denial. If he says that what he has just stated means that he takes back the word 'dirty' and that he accepts the statement of the hon. member for Annapolis, he has complied with the ruling of the Chair.

Mr. McKENZIE: I certainly say in the parliamentary sense the hon. member for Annapolis is not 'dirty'.

Mr. HAZEN: It seems to me that my hon. friend from North Sydney has simply made the matter worse by the remarks that he has just made. No one could have heard that remark without feeling that it was the intention of the hon. member for North Cape Breton to insult the hon. member for Annapolis. The hon. member for North Cape Breton is an old parliamentarian and knows that time after time leaders in this House have got up and said that they withdrew statements that were made and that he is bound to accept the statement made by the hon. member for Annapolis here to-night that the statement attributed to him was not true. I am sure that the hon. member for North Cape Breton will come to the conclusion that, in view of the fact that the hon. member for Annapolis has withdrawn the statement unequivocally that he made in regard to him, he should withdraw his statement in regard to the hon. member for Annapolis. I think if that were done it would be far better from the standpoint of the dignity of this House and from the standpoint of the hon. member's standing as a parliamentarian who has been a member of the House for many years. I would ask my hon. friend to respect the rule of the Chair and in good faith to withdraw the statement which he has made.

Mr. McKENZIE: The greatest trouble I find is that I have been misunderstood from the beginning and that a construction has been put upon my words which they will not bear. If the hon. member for Annapolis does not understand what I said, if he twists it into something worse than it was and if he then asks me to take back that which I never said it explains how this trouble arose. When I brought this question to the attention of the House about this man, Fraser, although at the beginning I had the same reason for mentioning

the name of the hon. member for Annapolis as I had at the last, I took pains to keep clear of mentioning his name at all because I respected him as a member of this House and I did not want to bring his name into it. When the whole thing was about over he broke in himself evidently to defend the unclean work of this man, Fraser. I did not say that he was unclean; I said that the hon. member could not see a dirty thing without breaking into it.

Mr. HAZEN: That is unparliamentary.

Mr. McKENZIE: It may be but it is not a personal reference to the hon. member. It may be that I should not have said that, that I should have used some language that would have sounded a little better. But, when I brought the conduct of this man, Fraser, who went into that county, lied and represented himself as something that he was not, to the attention of the House, and when an hon. member wanted to break into it and to defend this man I did not think it was conduct that was very commendable. Possibly some language could be used in putting it forward better than the language that I used, but the idea is the same. If the words I used are objectionable, I certainly would regret to have used them, bcause I want to be parliamentary in this House and to speak with dignity and respect—

Mr. HAZEN: Then why not withdraw that language ?

Mr. McKENZIE:—and with as much respect to the hon. gentleman who leads the House as with respect to any other hon. member, because I realize that there is a great dignity in this House and that we can never keep it too high. I hope it shall never be said I ever did anything to lower the dignity of this House; and if the expression I have used has a tendency to lessen the dignity of the hon. member in any respect, I should certainly wish to have it regarded as having never been used.

Mr. HAZEN: Withdraw it.

Mr. McKENZIE: Is not that good enough?

Some hon. MEMBERS: No.

Mr. McKENZIE: Does the hon. minister think he is going to shove me into a humiliating position ? Is that what he is at ?

Mr. HAZEN: I am doing the very reverse. I have no desire to shove my hon. friend into a humiliating position. I think his position will be much less humiliating if, in compliance with the ruling of the Chair, he withdraws that expression, than if he adheres to his position and refuses to withdraw it. It is the very reverse of humilitating to bow to the ruling of the Chair and to withdraw expressions. It has been done by the leaders of this House and by the most prominent members, time and time again.

Mr. McKENZIE: If my hon. friend will look at 'Hansard' to-morrow morning, he will find that the expression was taken back at the very moment it was made.

Mr. HAZEN: Will the hon. member say that he took it back ?

Mr. McKENZIE: I changed it and said—

Some hon. MEMBERS: Oh, oh.

Mr. McKENZIE: Hon. members may laugh. Exception was taken to the word 'dirty.' At once I said I will take that back, and will say that the hon. member broke into a thing that was not clean.

Mr. HAZEN: No.

Mr. McKENZIE: That is what I said at the time and it was forgotten and I thought there was nothing further about it.

Mr. HAZEN: What occurred was, the hon. gentleman made some assertions with respect to a speech which the hon. member from Annapolis (Mr. Davidson) was alleged to have made somewhere in the
12 m. county of Victoria. The hon. member from Annapolis denied having made those statements. It was then the duty of my hon. friend to say that he was bound to accept the statements made by the hon. member for Annapolis from his place in this House. My hon. friend would not do that. The hon. member for Annapolis, getting a little incensed, made use of a most improper expression and almost immediately afterwards withdrew it. My hon. friend is bound to accept the statement made by the hon. member for Annapolis in answer to the statement as to the remarks alleged to have been made by him at a meeting held at Victoria.

Mr. McKENZIE: I have already stated to the Chair that any conventionalities required to maintain the dignity of Parliament, I have complied with. That is as far as I shall go or can be expected to go.

Mr. DAVIDSON: I understand my hon. friend to say that he accepts my statement.

Mr. McKENZIE: What I have written I have written.

Mr. DAVIDSON: I do not think I am unreasonable in insisting that the gentleman do that in language we can all understand.

The CHAIRMAN: Am I to understand that the hon. gentleman accepts the statement of the hon. member for Annapolis when he says that he has not used such words?

Mr. McKENZIE: I am sorry that it is so extremely difficult for me to make myself understood. I understand the rule of the House to require that, if a certain hon. member makes a statement to another and that other hon. member denies it, that denial must be accepted. It has been said a thousand times by hon. members on both sides during my years of occupancy of a seat in this House. I accept the statement in a parliamentary sense. That has never been questioned. Whatever is necessary to be done in a parliamentary sense to satisfy the dignity of the hon. member for Annapolis has already been done by me in a parliamentary sense. Why should not the same language be accepted from me as has been over and over again accepted by the Speaker and by the Chair that compliance in a parliamentary sense with the conventionalities of debate in this House should be satisfied? I have endeavoured to satisfy them and that should be the end of it.

Mr. DAVIDSON: That is absolutely satisfactory.

Mr. CARVELL: I want to refer to the dismissal of Lloyd Charles Dakin, former lighthouse keeper at Grand Harbour in the province of New Brunswick. On the 17th of July, 1912, Mr. Dakin received a letter from Mr. Hallett, acting deputy minister as follows:

Sir,—I have to inform you that by Order in Council of the 17th March, 1912, your services as keeper of the light and hand fog-horn at Grand Harbour, N.B., have been dispensed with, owing to offensive political partisanship, and Mr. Fred. J. Martin has been directed to take temporary charge of the light, to whom you will give up possession of all Government property under your care when required.

I am, sir,
Your obedient servant,
J. Hallett.

That was followed up by a letter of the 23rd of July from Mr. Flood who was acting as the agent of the department. Shortly after that a telegram was sent to Mr. Hartt, the member for the constituency as follows:

T. Mr. Hartt, M.P.,
Member for Charlotte county.

We as citizens of Grand Harbour do, to our knowledge, know that Lloyd Dakin has never taken any part, aside from casting his personal vote, in any provincial election.

(Sgd) D. H. Daggett.
Isaac Newton.
Owen Green.
Wesley Newton.
C. A. Newton.

And three other names were added by telephone, Edward Russell, Chester Russell and Arnold Russell. All of these purport to be strong Conservatives. The next thing was a letter of the 31st of July from Mr. Flood expressing surprise that Mr. Dakin had refused to give up the position and a letter of the 7th of August acknowledging that Mr. Dakin had complied with the requirement of the department and given up the position. But Mr. Dakin did not seem satisfied to accept the decision of the department, feeling that he had not done any wrong. So, he wrote the following letter:

Grand Harbour, August 17, 1912.

Deputy Minister of Marine and Fisheries.

Dear Sir—Yours of the 7th received informing me that my case would be investigated. Would you please let me know when the investigation will take place.

Mr. Hartt, the member for the county, is now at home.

The charge is false, and I can easily prove it, and the whole thing is the work of two or three persons.

Respectfully yours,
Lloyd C. Dakin.

On the 11th of September there is the acknowledgment of the Deputy Minister, stating that in the great rush of departmental work it is impossible to give it immediate consideration, but that later on consideration will be given. On the 24th of September he received an official letter signed by C. Stanton, assistant Deputy Minister, which is as follows:

Referring to your letter of the 17th ultimo, in reply to departmental letter of the 7th August, 1912, respecting your request for an investigation in the case of your dismissal from the position of the light and hand fog horn at Grand Harbour, New Brunswick, I have to state that in the departmental letter referred to you were merely informed that your request for an investigation would receive the consideration of the department.

The charge for which your services were dispensed with was the statement in writing of Mr. T. A. Hartt, M.P., that you attended one of his meetings and tried to annoy him; that you remained after the meeting closed and endeavoured to impress your views in his presence on the people before they left the hall.

I am, sir,
Yours obedient servant,
C. Stanton,
Assistant Deputy Minister.

Mr. Lloyd C. Dakin,
Grand Harbour, New Brunswick.

On this Mr. Dakin answers as follows:

27th September.

Deputy Minister of Marine and Fisheries,
Ottawa.

Dear Sir,—Replying to your letter of September 24, in regard to the charge for which my services were dispensed with as keeper of Grand Harbour light, that I had tried to annoy Mr. T. A. Hartt, M.P., at his meetings and at the close tried to impress my views in his presence on the people before they left the hall—I would like to say that since receiving my dismissal I have talked with Mr. Hartt personally, and he acknowledged to me that he had made a mistake—that I was not the man—and he had been wrongly impressed and also promised to do what he could to rectify it.

While in the service, I did not attend any political meetings, and more than that never took part in politics in my life, and upon my dismissal sent Mr. Hartt a statement to that effect, signed by prominent Conservatives, among whom was Mr. Issac Newton, whom Mr. Hazen, Minister of Marine and Fisheries, knows to be one of the oldest and most respected Conservatives of Grand Manan.

Trusting that you will make further investigation.

I remain,
Yours respectfully,
Lloyd C. Dakin.

Does the Minister of Marine and Fisheries recollect the man?

Mr. HAZEN: Yes, I know Mr. Newton very well.

Mr. CARVELL: On the 1st of October there is an official acknowledgment to that letter. On the 20th of October there is another letter written by Mr. Dakin to the department which simply refers to some conversation he had with Mr. Hartt. I have next a letter from Mr. Hartt himself. I am glad the hon. gentleman is here; I did not wish to make any reference to this matter until he was in his place:

St. Andrews, N.B., October 16, 1912.

Lloyd C. Dakin,
Grand Harbour, Grand Manan.

Dear Sir,—I have written the department at Ottawa telling my mistake and clearing you of the charge.

I will have to let the appointment go as it is for the present. I tried to explain my position to you when I saw you here, and I hope you will understand me and that we may be friends. We cannot see into the future. I may be able to do something for you some time.

Yours truly,
T. A. Hartt.

I should say that was a very diplomatic letter. It holds out the olive branch, it expresses the belief that there will be other positions at their disposal—altogether I do not know that I find very much fault with it. The hon. gentleman was in a rather unpleasant position, and he tried to let the man down as easily as he could. However, that did not suit this official, and on the 19th of October he again addressed the deputy minister:

I have just received a letter from Mr. T. A. Hartt, M.P., saying he had written the department at Ottawa, telling his mistake, and clearing me of the charge, but he has not seemed to make an effort towards getting back my former position, which was taken from me on account of this false accusation. Now being cleared, would you please let me know definitely whether I am to be reinstated or not.

Yours respectfully,
Lloyd C. Dakin.

There is a letter of Mr. Hartt, but as it is practically along the same lines it is not necessary to read it, unless the hon. gentleman himself thinks it should be read.

Mr. HARTT: I think there has been quite enough.

Mr. CARVELL: I have only two or three more. There was an official acknowledgment of Mr. Dakins' letter:

I beg to acknowledge receipt of yours of the 19th inst. with further reference to your removal from the position of keeper of the Grand Harbour light. The department will, at the very earliest opportunity, give every possible consideration to the representations that you have made from time to time, and as soon as a definite decision has been reached you will be advised.

On the 16th of November, Mr. Dakin addressed himself again to the deputy minister as follows:

Would you please let me know the decision of the department in regard to whether I am to be reinstated or not at Grand Harbour light? I cannot understand why I am not reinstated, since I have been cleared of the charge, for Mr. T. A. Hartt, M.P., wrote me he had written the department clearing me. I would like, if possible, to have an answer before the last of next week, as I am very unsettled for winter.

Yours respectfully,
Lloyd C. Dakin.

In reply to this he received the following:

Dear Sir,—Replying to your letter of the 16th ultimo, I am to observe that I have but little to add to my letter to you of the 29th of October. It is represented to the department that there was sufficient warrant for your removal from office, and consequently the proposal to reinstate you is not being entertained.

Yours very truly,
A. Johnston,
Deputy Minister.

The man naturally feels very much aggrieved at the treatment he has received, and in order to put the matter in as fair a manner as possible, he has furnished me

with an affidavit. I will not read it all, because he practically recites the burden of the correspondence I have read. This affidavit was sworn to on the 26th of March—last week—and it is in part as follows:

> That the charges made against me were false; that I have never taken a part in politics in my life other than to cast my vote; that I was not present at any political meeting addressed by Mr. Hartt, M.P., or by any other person; that I have never attended a political meeting of any kind either in connection with Dominion or provincial politics since the date of my appointment as keeper of said light and hand foghorn and up to the time of my dismissal from said position, except once.

That is the whole case so far as I know. I do not know this gentleman personally at all. But I bring the facts before the committee. I have read nothing but official documents and letters which Mr. Dakin swears are true copies of those he sent to the department. It would seem from these that there is no doubt the man was dismissed from office under misapprehension on the part of the hon. member for the county (Mr. Hartt).

I have read the letter of the hon. member for Charlotte in which he says that he is mistaken, expresses regret for what has happened and holds out the olive branch of the possibility that he may at some time in the future be able to rectify the wrong that has been done. But what the discharged official cannot understand is why the minister, when it was found that this man was not guilty of the offence with which he was originally charged, said sometime afterwards: it is true that you are innocent of that charge, but there are other charges against you. I have a right to request the minister to tell the committee what were the other charges upon which he felt that he was justified in dismissing this man—because the man was dismissed on some charge other than that made by the member for the county. I feel that this case is an exemplification of the fact that hon. gentlemen opposite are carrying to the extreme the doctrine of 'to the victors belong the spoils.'

Mr. HAZEN: My recollection of the matter is that this man was dismissed at the request and upon the responsibility of the member for the county. During the last two sessions it has been stated time and again in this House by the right hon. gentleman who was formerly Prime Minister that when a member supporting the Government takes the responsibility of asking for the dismissal of an official it is quite right and proper that the department should dismiss him. The right hon. gentleman laid down a different rule to apply to cases where the man was dismissed upon the recommendation of some person who was not a member of this House. I do not remember the other facts in connection with the matter, and as it comes under the Marine Department and we are discussing to-night the fisheries branch, I have not before me the information which my hon. friend asks for. I shall be glad to show my hon. friend all the papers in regard to the matter.

Mr. HARTT: The facts in connection with this matter are quite fresh in my memory. When a person makes a mistake I suppose the best thing for him to do is to acknowledge it as soon as possible. I was interrupted at a meeting at Grand Harbour, and I was quite sure, from what was said by persons who were present, that the man who interrupted me was the lighthouse keeper. I had some correspondence with the young man, and he came up to see me—a very decent young fellow, too. He told me that he had never taken part in an election and that he had not interrupted me at the meeting. When I saw him I knew that he was right, and that he was not the man. Finding that I had made an error, I said that I would try to rectify it, and that I would look into the matter carefully. He assured me at the time that he was quite in sympathy with me politically; in fact, I was led to believe that he was a good Conservative, and I was probably the more easily led to this belief because I found that he was a particular friend of my son-in-law, who came with him to see me and to say a word on his behalf. They had been friends for years; I thought it was quite possible that the young man might be entirely in sympathy with me, and that I had made a big mistake. But it is always well to look around before you acknowledge that you are entirely in the wrong. I looked into the matter and endeavoured to find out whether or not he had been an active political partisan, and it was some little time before I got on the right track. Finally, I found out on good authority that he bet money against me in the election—and of course he lost his money. When a man bets money against a candidate at an election, it is a

pretty sure indication of political partisanship. Having recommended his dismissal, and having named another man for his position, I had gone so far that I found myself in a difficult position. I could not turn around and reinstate him on the spot, but, in any case, in view of the facts that I had ascertained, I said: Here is proof positive that this man took active part in an election; he could not do more than bet money against one of the candidates. Accordingly, I recommended to the department that his dismissal be sustained, and that the man who had been appointed should continue to occupy his position. The matter has stood that way ever since, and I think it will stand that way. Of course, I did feel at the time somewhat sorry that the young man had been ill-used, but when I came to look into the matter, when I found that his professions were not exactly up to the mark; that he had taken part in elections and was not as friendly towards me as he professed to be, I came to the conclusion that no harm had been done in disimissing him. With regard to the papers which have been read, no mention was made in them of the circumstance which I have mentioned with regard to the betting. I am somewhat surprised that the gentleman has brought the matter up at all, because when I wrote him and explained that I had obtained this evidence of his having taken part in the election, the correspondence stopped at once, and I heard nothing more about the matter until these papers were handed to me and I was asked to look them over.

Mr. CARVELL: The statement which has been made by the hon. member for Charlotte goes to show the extent to which the present Government are determined to go in order to get a man's political scalp on every possible occasion. We have heard a confession the like of which is very seldom made in this House. I respect the hon. member for Charlotte for the frank confession which he has made, but it only proves that this man had to go, and, once he was out, no matter whether or not there was evidence against him, he had to stay out.

One thing that must strike every member is the manner in which my friends opposite break every law of the political decalogue when it is necessary to get a man's position, if they want it. The minister says that it is the well recognized rule that the departments take the word of a member of this House but do not take the word of a man who is not a member. I have spoken to the Minister of Customs about one official in my constituency, but that is the only occasion that I have interfered in any way in reference to retaining or dismissing any official; but they have been fired right and left, fired on investigations in which evidence was not forthcoming, but they have been fired just the same; and fired without investigation simply on the letter of the gentleman who opposed me in the campaign. Our friends may as well admit that when they want a man's position they take it, and not try to get behind a rule which is more honoured in the breach than in the observance.

Mr. SINCLAIR: The minister has not yet answered the inquiry of the hon. member for North Cape Breton. If Fraser is an employee of the department and did what he is charged with doing, what position is the minister going to take in regard to it?

Mr. HAZEN: I shall look into the matter and see what action I think the circumstances of the case would justify.

Mr. SINCLAIR: That is very indefinite. The minister should investigate this clear and definite charge against this man of doing a disreputable thing. The practice has been when a charge of disreputable conduct has been made against any official, that the minister of the department concerned would at once frankly say that he would have the matter investigated and do what was right.

Mr. LAW: What are the regulations of the department in regard to building fishways and dams?

Mr. HAZEN: The hon. gentleman was not in the House when we discussed the Bill consolidating the Fisheries Act. I explained then that we are making certain changes, so that in cases where fishways are placed in old dams the department pay one-half the cost. If the department orders a fishway put in a dam and it is done at the expense of the owner, the plans being approved by the department, and it turns out that the fishway is not effective and another style is ordered, under the present law the owner has to pay the whole expense; we have changed that so that the department pays the cost of the new fishway ordered.

Mr. LAW: In case a fishway is washed out after the owner has paid one-half its

cost, does the department pay one-half the cost of replacing?

Mr. HAZEN: Where the fishway is being constructed at the same time as the dam is built, the extra cost is trifling, and that, of course, would apply in the case where a dam was completely washed away. It would, of course, depend on the circumstances of the case. I think a case occurred in the hon. gentleman's county last year where we paid one-half the cost.

Mr. LAW: The new Act will not change that?

Mr. HAZEN: The changes make it better in the interest of the owners of the property.

Canadian Fisheries Museum, $16,000.

Mr. LAW: I had the pleasure of visiting this exhibit last week, and I think it is a credit to the department and to the gentlemen instrumental in having it established. It is a great improvement on the old exhibit.

Fisheries patrol service, $160,000.

Mr. LAW: I wish to refer to the steamer Niobe's visit to Yarmouth.

Mr. HAZEN: That has really nothing to do with this. It should be taken up when the Naval Estimates are before the House which will be in the course of a few days.

Mr. KYTE: Do these boats include those employed in connection with the lobster hatcheries.

Mr. HAZEN: The boats my hon. friend refers to are, as a rule, small boats rented from private individuals. Perhaps I had better explain the difference between the fisheries protection boats and the fisheries patrol boats. The fisheries protection boats are used for the purpose of protecting Canadian waters from people who have no business to come in there to fish—such boats as the Canada and the Curlew, for instance. They are supposed to keep our waters within the three-mile limit for our own fishermen. Those boats are under the control of the Naval Service Department. The fisheries patrol boats are the boats that my hon. friend refers to and the small boats that enforce the regulations within the three-mile limit.

Mr. KYTE: I have in mind the small steamer Davis employed around the county of Richmond collecting lobster seed from the different hatcheries to be deposited at the hatchery at Arichat.
