Mr. HAZEN: She is one of the patrol boats. She was used for that purpose before the patrol season opened. The Curlew belongs to the Fisheries Protection Service.

Mr. SINCLAIR: There is a large increase in this item.

Mr. HAZEN: The increase is accounted for in this way: Seven new patrol boats have been placed in commission in British Columbia, the cost of maintaining which is estimated to be $25,000. A more expensive boat is to be commissioned for the enforcement of the regulations among the islands and along the coast of Charlotte county, N.B. The cost of maintenance of that boat will probably be $1,000 more than the previous boat. Then in order to prevent illegal lobster fishing off the coast of New Brunswick it will be necessary to build some boats. That makes up the extra money.

Mr. SINCLAIR: What is the size of these boats?

Mr. HAZEN: They are small gasoline boats.

Fishery patrol boats for the Atlantic coast, $40,000.

Mr. McKENZIE: What provision is made for protecting the coast from the encroachment of American fishermen?

Mr. HAZEN: That is done by the fisheries protection fleet which is under the control of the Naval Department. The boats in the fisheries protection fleet are such boats as the Canadian—that is the best one—and the Curlew, the Constance, and boats of that character. There are a number of them in British Columbia.

Mr. McKENZIE: In the spring of the year when the cod and haddock fishing is on, we look for protection all along the coast of New Brunswick, especially in the northern part of the province. In the season of mackerel fishing it is exceedingly difficult to keep American vessels outside the limit. A trip by one of our Government steamers once in two weeks is absolutely inadequate. American poachers should realize that protection is close at hand and that they cannot poach with impunity.

Mr. HAZEN: We are not particularly well supplied with suitable boats, but we are fairly well supplied. Last year when the American fleet started out we kept one of our boats along with them all the time to watch the American fishermen. If they came within the three-mile limit they

would either be driven out or arrested. Very few complaints reached the department last year in regard to poaching within the limits. The Canada is the best of our boats on the Atlantic coast, but hardly one of them can be trusted in a heavy gale. There are times when those boats ought to go out to sea, but it is not safe for them to do so. The conditions on the British Columbia coast were far worse, but this year we have had two new boats built, with the money voted two years ago for use there. We will not be put to the expense of chartering boats as we were before and we will have a very much better service there. It may be necessary next session to ask Parliament for an appropriation for getting some better boats on the Atlantic.

Mr. SINCLAIR: How are these boats built?

Mr. HAZEN: By tender and contract.

Mr. SINCLAIR: I would like to ask the minister if the tenders will be the same as the tenders that my hon. friend referred to in a former discussion. He assured the House on a former occasion that tenders were asked for in the case of Fred. S. Heans of St. John for some work that was done for his department. I was told by the minister that tenders were asked for and that the contract was let in the usual way. When I put the question on the Order Paper I found that tenders were not asked for from the public by advertising in the newspapers but that a number of letters were sent to some of the friends of my hon. friend inviting them to put in tenders and that in that way the selection was made. I put the five cases of Fred. S. Heans, St. John; Burns and Kellehar, Halifax; Union Foundry Works, St. John; Geo. T. Davie and Son, Levis and the Canadian Import Company on the Order Paper and in every case I got the same answer from the minister that there had been no tender in the newspapers but that the usual practice of the department was observed of asking these people to tender. We all know what that means—that the minister only asks his political friends to tender. I trust that in the case of this boat everybody will be given an opportunity and that tenders will be asked for in public. There does not seem to be any advertising in these cases. I was very much surprised, upon taking these five cases, to get the same answer from the minister that there had been no advertisements published calling upon the public to put in tenders.

Mr. HAZEN: The cost would be a great deal higher if we were to do in every case as my hon. friend suggests. I told my hon. friend that everything is done on the boats themselves and so it is. The people who do this work are known in the community, notices are sent to them from the agencies, they put in their tenders and in some cases a tender is not half as much as the highest tender put in, showing the nature of the competition that takes place. In the case of boats of this sort, where the work can be done at one place as well as another, at Quebec as well as at Halifax or St. John, advertisements are put in the public newspapers, but in cases where the work has to be done at a certain place, such as repairs to a ship, it is a waste of time and of money to advertise in the newspapers for tenders. We always get competition. For these boats, tenders will be asked by advertisement in the public press all over the country. That was done at the time the last boats were purchased and the lowest tenderer was a firm at Dartmouth, F. E. Williams & Company, to whom the contract was awarded.

To provide for an exhibit of fresh and cured food fish at the Toronto annual exhibition, $15,000.

Mr. SINCLAIR: Did the minister carry out the idea that we talked of last year at the Toronto exhibition about having a restaurant?

Mr. HAZEN: We tried to do it but we could not get room in the exhibition buildings. The directors could not give us a place to have the kitchen and restaurant. But the exhibition, in spite of that, was a very great success. The directors awarded us a gold medal and the newspapers spoke in very high terms of the exhibit. This year we are asking for $15,000, an extra $5,000, and we are going to try and carry out the idea of having a restaurant even if we have to have it outside of the main building.

Mr. LAW: Where does the department purchase the fish for the Toronto exhibition?

Mr. HAZEN: From all parts of Canada, British Columbia, the Atlantic and the lakes.

Salaries, building and maintenance of fish-breeding establishments, $400,000.

Mr. SINCLAIR: May I suggest that this item be held and the rest may all pass?

Mr. LAW: Has application been made by the Guides Association in Yarmouth for the establishment of a fish hatchery at that place?

Mr. HAZEN: The superintendent of fisheries tells me that he had some recollection of a request received a month or two ago asking that a fish hatchery be established at Yarmouth. The matter is in the department. We have had a number of applications from all parts of Canada for these hatcheries, a great many more than our vote will enable us to establish. We have been proceeding in the last few years, however, and no doubt in the future further ones will be established.

Mr. LAW: I gather from the remarks of the minister that there is not very much chance of the Guides Association getting a hatchery.

Mr. HAZEN: You should never get discouraged about these things.

Mr. LAW: Has the minister considered the establishment of a lobster pond at Lower West Pubnico? An official of the department has made three visits down there and I understand he has reported in favour of the proposition.

Mr. HAZEN: We have come to the conclusion not to establish any more ponds anywhere until more thorough experiments have been carried on with the ponds that we have at the present time.

Mr. LAW: There is a natural pond at Lower West Pubnico and an official of the department has reported favourably upon it on three different occasions. That property can be bought for $1,000; yet, the hon. gentleman went to Long Beach, St. Mary's, Digby, and established a lobster pond that was a failure.

Mr. HAZEN: It has not proved a failure. We have just finished it.

Mr. LAW: And for which he paid a good Conservative the sum of $10,000. I have no fault to find with that. That property, I am informed on the best authority, has been assessed in the county of Digby for $300 or $350, for the last ten years before the purchase by the department. Since the purchase of this property by the Department of Marine and Fisheries, they have spent the sum of $10,400, making a total cost of this pond of $20,400. I do not know whether this will be all the expenditure or not. In answer to a question which I put on the Order Paper, the hon. minister said that 169 lobsters had been placed in this wonderful $20,400 pond, which figures up that each lobster would cost $118. These lobsters have been distributed at various points in St. Mary's bay. Whalecove got four of these lobsters; East Ferry, three; Church point, two; Meteghan, three; Mink Cove, six; Tommie's Beach, four; White's Cove, seven; Little river, three. These $118 lobsters, with, I presume, a red ribbon around each of their necks, are stalking around crowing over the cheap lobsters that have cost nothing. I think this is a fraud and a swindle on the country. While I am prepared to support anything of advantage to the fishermen, I claim that the purchase of this pond for $10,000 was unjustifiable. Professor Prince himself, in a report made on November 10, 1911, says that this pond is wholly unfitted for the purpose of rearing young fish, such as cod or haddock. Mr. Harris, the owner of the pond, wished the department to take it from him for lobster breeding. For years he tried to sell this pond to the previous Government, but they were never taken in for any such price as the present minister has paid for it. Professor Prince says further:

> It is not suitable for that purpose. Several small springs or streams of fresh water find their way into it, from the lofty grounds and cliffs adjacent to the pond. It is very much exposed to the sun and I found lobsters retained in it were dying. I found in it many small predaceous shore fish, which destroy small lobster fry.

I will not deal with the other items; but in reference to the price, I would say that the minister asked one of his officials, Mr. W. H. Brunel, as to the value of the pond. Mr. Brunel gave his opinion that the value of this pond was $5,000. I consider that even $5,000 is ten times what the pond is worth. In spite of all these things, the Minister of Marine and Fisheries advised the purchase of this pond from a good Conservative friend, and placed the sum at $10,000. They have placed in the pond 169 lobsters which have been distributed at various points on St. Mary's bay. I do not know whether the Minister of Marine and Fisheries will pay a large bounty to fishermen who happen to catch any of these lobsters with a red ribbon around its neck. The lobster pond at Lower West Pubnico would have done good service to the fishermen of Yarmouth as well as of Shelburne.

That property could have been purchased for $1,000; and with an expenditure of one or two thousand dollars more, it could have been fitted up and been a great accommodation to the fishermen in that whole section of the county of Yarmouth. Instead of the minister wasting the money of the people of this country in paying $20,400 for property assessed for $350, he should have looked into the matter a little more closely and purchased the pond in Yarmouth county at Lower West Pubnico. The lobster fishermen on the coast of Yarmouth as well as on the northern part of the coast of Shelburne are entitled to a proper lobster pond especially when it can be purchased at so much lower a price than has been paid to this friend of the present Administration.

Mr. HAZEN: Perhaps there is not time enough to-night to discuss this matter fully. My hon. friend has referred, however, to a few of the papers on the file I laid before the House. The hon. gentleman quotes from a report of Professor Prince with regard to this pond and its suitability for lobsters, in which he states, that because of certain fresh water catch he does not think it suitable for that purpose. If my hon. friend had looked a little longer, he would have found a second memorandum of Professor Prince saying that the water had been diverted from the pond and, that being the case, it was well suited for the
1 a.m. purpose of a lobster pond. My hon. friend, if he had wanted to be fair, would have stated that to the House. He did not do so. Either he had not read the whole file through or else he had no desire to state the facts fairly to this committee.

In regard to the price, my hon. friend will find in the return the statement from Mr. Brunel to the effect that we could not have duplicated that pond and the work that was there for the sum of $10,000, the amount we paid for it. It will also appear from the record of the proceedings, which, I think, are on the file, that while Mr. Brunel on one page spoke of $5,000, he did it at the time that we were dickering for the property and he thought, by making that statement, it would be possible for us to buy the property at a cheaper price. But he stated that that pond and the work there could not be duplicated for $10,000. That is the statement of a responsible officer of my department.

Mr. LAW: It cost $20,400.

[Mr. Law.]

Mr. HAZEN: Certainly. There has been work done on the pond afterwards. The pond is worth every dollar of the money that has been spent on it. The money has been economically spent under the direction of the engineers of the department in whom I have confidence and who have spent the money to good advantage.

My hon. friend has made merry about the number of lobsters. The pond was not ready for the lobsters last year. A great many more lobsters will be put in the pond during this and coming years. The pond has been purchased for the purpose of experimenting with lobsters in order to see whether something cannot be done towards replenishing the lobster fisheries along the coast of Nova Scotia.

There is not a single transaction in connection with it that we are not prepared to justify or that we do not believe have been in the public interest. Nothing has been done by me except after careful investigation and report by the permanent officers of the department, who were there long before I became minister. Having confidence in their reports and in the integrity of these officers, I believe that everything has been done honestly and properly, and that the result will be to develop the lobster fishery along the shores of Nova Scotia to the great advantage of the people.

Mr. KYTE: I would ask the minister if he thinks this statement of Mr. Brunel's conduct in this matter is calculated to elevate him in the estimation of the public as a conscientious officer. Will he admit that Mr. Brunel was right if he made his report merely with the idea of beating down the owner of this property? I do not know if the minister quite appreciates the statement he made; but it appears to me that if the officers of his department go out to estimate the value of property it should be to give an honest opinion of the value and to direct the minister as to the course he should take. But if these officers base their estimate of value of property to be purchased on the ground which the minister indicates, then I think these reports are very much less valuable than they ought to be. I trust that Mr. Brunel did not estimate the value of the property at $5,000 solely for the purpose of representing to the owner that it was less valuable to the department than it really was. If the statement given by the minister is to be accepted as given, then I think every criticism directed by the hon. member for Yarmouth (Mr. Law), is very

amply borne out. Here was the property assessed at $350 before it was purchased. Here is the report of Mr. Brunel, that it was only worth $5,000. Here also is the report of Professor Prince that the property was not suitable for the purposes of a lobster pond. The minister states that subsequently streams of fresh water were diverted from the pond, making it suitable for the purposes for which it was purchased, and I doubt not that this diversion was accomplished by the expenditure of $10,400 after the Government had paid $10,000 for the property. Professor Prince also stated that it was too much exposed to the rays of the sun to be suitable for breeding lobsters. It has not been stated that they diverted the rays of the sun by means of this expenditure, but the amount would seem to indicate that that also had been attempted. Of course, the whole value of the property for a lobster pond would depend upon it being a sheltered place and protected from the rays of the sun, for there is nothing more fatal to young lobsters than high temperature of the water in which they dwell. If this pond were open to the direct rays of the sun, it would make it unsuitable for this purpose. As I stated, I trust the minister will remove from the committee the impression he gave as to Mr. Brunel's conscientiousness when he made his report.

Mr. HAZEN: Is it desired that this item should stand ?

Mr. SINCLAIR: I think it would be better to let that stand.

Mr. KYTE: The next item is 'inspection of canned fish.' I think that ought to stand.

Mr. HAZEN: That matter has been under the administration of the Department of Agriculture, but the inspection of canned fish has never been actually carried out. It was considered this year that the Department of Marine and Fisheries had better deal with that subject, and so the administration of that portion of the Act was placed under the Fisheries Department. Details are now being considered.

Mr. KYTE: I think a good deal of discussion will develop on that.

Mr. HAZEN: Then, let the item for fish breeding establishments go through.

Mr. McKENZIE: As it is going through, I desire to ask, is the department doing anything about stocking fresh water lakes, say in Nova Scotia?

Mr. HAZEN: I suppose the hon. gentleman has in mind the sporting fish, such as trout. There is a fish hatchery at Bedford where such fry can be obtained, and one at Middleton in the county of Annapolis. Of course, at the salmon hatcheries other fish can be hatched. As a rule people make application for the fry of these sporting fish, paying so much a thousand, and it is distributed in this way as far as it will go.

Mr. McKENZIE: There is a lake at the back of the town in which I live and—

Mr. HAZEN: Is it private property?

Mr. McKENZIE: No, it is a lake about three miles long and a mile wide. The only ownership is that the town of Sydney Mines gets its water from the lake. There is a desire on the part of the people that this lake should be stocked, and I think it would be well worth the experiment to put fry in it. There is a fish that flourishes abundantly in the lakes of Newfoundland, called the rainbow trout, a beautiful fish and very game. I would request that the minister consider putting some fry into that lake.

Mr. HAZEN: There will be some fry available from the Margaree hatchery and some of it might be put in the lake mentioned. I will ask the superintendent to make a note of it.

Mr. A. W. CHISHOLM: Can the hon. minister give the committee an idea of the number of trout put in that Margaree hatchery?

Mr. HAZEN: I cannot tell the number this year. Arrangements are being made to catch and impound trout, so that in future years we shall have a large supply of eggs for the hatcheries.

Mr. A. W. CHISHOLM: Where does the minister expect to get this trout?

Mr. HAZEN: In the Margaree river.

Mr. CHISHOLM: At what season?

Mr. HAZEN: They will have to be got and impounded in the early part of the summer, and the spawn taken from them during the spawning season.

Mr. LOGGIE: What has been the result of the work of the Shad Commission, which was appointed two or three years ago?

Mr. HAZEN: That commission was appointed before this Government took office, but I shall be glad to get a copy of the report and send it to my hon. friend.

Mr. LOGGIE: What is the Government doing now along that line?

Mr. HAZEN: We have a shad hatchery at St. John, which is at yet largely in the experimental stage. Shad is a curious fish. It is not difficult to get salmon and impound them; under favourable conditions you can strip them late in the summer or late in the fall, and take the spawn to the hatcheries. This cannot be done with shad; if you impound them they are almost sure to die, so you have to have a shad hatchery. The hatchery which is conducted by Professor Prince is in the nature of a scow which can be placed right over where the shad are, and when the shad are ripe they are stripped and the fry hatched out. We hoped to get several million eggs the first year, and we got only 500,000, but perhaps it is a little too soon to judge as to the success of the hatchery. The trouble with shad is that they are most difficult fish to handle, and often die upon being stripped.

Marine Biological Board of Canada—To provide for the construction and maintenance of marine biological stations for investigations, $21,000.

Mr. HAZEN: When fishery items were before the committee the hon. member for Carleton made some remarks about certain fishery overseers in his county, and he gave the name of one official who, he thought, was violating the law. The hon. gentleman stated that Mr. Parker and another guardian whose name he did not mention were noted poachers, and obtained their employment merely to enable them to carry on salmon fishing in the St. John river. I have a memorandum here in regard to the matter, which is as follows:

The inspector of fisheries was immediately asked for a report, and he replied that not only had he given strict instructions to the guardians to prevent illegal fishing, but that their diaries did not indicate that such had been going on. Moreover, at his request, none of them had applied for salmon fishery licenses to enable them to fish during the legal season.

He has procured declarations from each one who was employed last year, Mr. Parker inclusive, from which it will be observed that they each state that they did not fish illegally since they were appointed, nor did they knowingly let any one else do so illegally.

Mr. Harrison, the inspector, has reported that he cannot find any evidence whatever of illegal fishing having been carried on by any of these officials. Mr. Newcombe Parker made a declaration in the matter as follows:

I, Newcombe Parker, a former special guardian of fisheries, appointed by the hon. the Minister of Marine and Fisheries for Canada, on duty for the protection of the fisheries in the county of Carleton, N.B., from the 15th day of May, to the 15th day of September, 1913, do solemnly make oath and say that I did not fish with a net, nor by any other method, illegally, since my first appointment as fishery officer in 1912, and up to the present date, neither have I knowingly permitted illegal fishing, by any method, in any of the waters in the district for which I was appointed, covering the time of my appointments, and which times I was a fishery officer, viz: May 15, 1912, and May 15 to September 15, 1913. So help me God.

Here is a letter from Frank O. Parker to Mr. Harrison:

I wish to state outside of this enclosed declaration that I have never caught a salmon in the St. John river in my life. I have never owned a net nor fished with one in the St. John river or anywhere else.

There are similar statements from Russell Boyer, Robert Squires and John C. Arnold. These I believe are all the guardians employed there, and, as I say, Mr. Harrison says we told him to make the strictest possible inquiry into the whole matter. I shall show the instructions to my hon. friend if he desires to see them. Harrison says he can find no evidence of anything of the sort and Parker makes his affidavit denying it. If my hon. friend can give me the names of his informants so that we can send Harrison to them we would regard it as a confidential communication. We would tell the inspector to see these people and find out if he could get any evidence to show that my hon. friend was correct and not misled by incorrect information in the charge he made before the House. We have done all we can to ferret the matter out. So far as I know Harrison is a competent official, he has been there for many years and he says he can get no evidence and that his belief is the law is pretty well enforced.

Mr. CARVELL: I need not say that I did not myself see Mr. Parker poaching; but I would not have made such a statement if I had not had pretty good grounds for doing so. I have it on the evidence of men living at Bristol where he lives that it is a common thing, in season and out of season. I do not know that I have information of men who have seen Parker himself fishing but they have seen his relatives, and it is well known that poaching is going on continually. I shall try to get the information for the minister. Probably what has been said here will make Mr. Parker and his relatives more careful.

Mr. HAZEN: If Parker has done this or has winked at it, he should not be allowed to continue in office.

Progress reported.

On motion of Mr. Hazen, the House adjourned at 1.30 a.m., Saturday.

Monday, April 6, 1914.

The House met at Three o'clock, the Speaker in the Chair.

PRIVATE BILLS.

FIRST READINGS.

Bill No. 148, for the relief of George Gracie Smith.—Mr. McKay.

Bill No. 149, for the relief of Harry Cracroft Pugh.—Mr. Douglas.

THIRD READING.

Bill No. 89, respecting the University of Saskatchewan, and to change its name to The University of Emmanuel College.—Mr. McKay.

SECOND READINGS.

Bill No. 140, to incorporate the National Council of Women of Canada.—Sir E. Osler.

Bill No. 141, respecting The Rainy River Radial Railway Company.—Mr. Carrick.

Bill No. 142, respecting The Pacific Trans-Canada and Hudson Bay Railway Company.—Mr. Douglas.

Bill No. 143, respecting a patent of John Roger Arnoldi.—Mr. Macdonell.

Bill No. 144, for the relief of Henry Elmer Bicknell.—Mr. McCraney.

QUESTIONS.

(Questions answered orally are indicated by an asterisk.)

FEDERAL LIFE ASSURANCE COMPANY.

Mr. HENDERSON:

1. What is the number of half-yearly renewal term policies of certificates of insurance issued by the Federal Life Assurance Company of Canada and now in force?

2. What are the names and present post office addresses of the holders of the said policies or certificates of insurance?

Mr. WHITE: The Insurance Department has no information concerning the matters referred to.

TRADE COMMISSIONER GRIGG.

Mr. A. W. CHISHOLM:

1. What is the salary of Mr. Grigg, Trade Commissioner of Canada?

2. When was he engaged, and for what period of time?

3. What are his duties and responsibilities?

4. Where was he employed previous to his appointment as Trade Commissioner of Canada, and what salary was he then paid?

5. Has he any agents or commissioners under him? If so, how many and where are they located?

Mr. G. E. FOSTER:

1. $6,000 per year.

2. About two and a half years ago, on the same condition as to time of service as other civil servants.

3. His duties and responsibilities are to advise the minister on trade and commercial matters, and he has charge of the trade commissioners and performs such other services as naturally falls under his division.

4. He was British Trade Commissioner for Canada at the same salary as he is now paid.

5. All trade agents and commissioners as set forth in the weekly report.

COASTING PRIVILEGES.

Mr. SINCLAIR:

1. Has the Government received a protest from Ship Masters' Association of Canada No. 1 in the following language:

'We, the Ship Masters' Association No. 1 of Canada, protest against the renewing of the Order in Council granting coasting privileges to foreign steamers in our coasting or home trade, this privilege being a serious detriment to Canadian master mariners, marine engineers and seamen.

'We also request you to use your influence to have the Government appoint a royal commission to look thoroughly into this coasting trade, and would appreciate having Alex. G. Baillie, of Port Hastings, on said commission. Why? Because Canada has been reduced from the fourth shipping maritime nation in the world to eleventh place.'

2. If so, what action does the Government intend to take in the premises?

3. Has the Government by an Order in Council, extended the time for granting coasting privileges to foreign steamers?

4. If so, what is the date of such Order in Council?

5. To what foreign countries is this privilege given?

6. How many foreign ships took advantage of this concession during the year 1913?

Mr. HAZEN:

1. Yes.

2. No action in the matter has been taken since the receipt of the protest of 27th February, 1914.

3, 4 and 5. By Order in Council of December 8, 1911, the privilege of the coasting trade between ports in Nova Scotia and ports in Quebec was given until the 31st day of December, 1913, to steamers of not less than 1,500 tons gross to each of the following countries: Italy, Germany, the Netherlands, Sweden, Norway, Austro-Hungary, Denmark, Belgium, the Argentine Republic and Japan. By Order in

Council the 16th December, 1913, the same privilege was granted until the 31st day of December, 1914, to steamships of not less than 2,000 tons gross tonnage each of the following countries: Norway, Sweden, Austro-Hungary and Japan.

6. There has not been any record compiled showing the number of these ships.

COST OF LIVING COMMISSION.

Mr. SINCLAIR:

1. Is it true that the royal commission at present investigating the high cost of living has been taking evidence behind closed doors? If so, why?

2. Were the commissioners so instructed by the Government?

Mr. BORDEN:

1. The Board of Inquiry investigating the high cost of living have been taking evidence both in public and private, as best it can be secured.

2. The Government instructed that investigation should be most thorough and did not advise as to or limit procedure.

BLUE BOOKS IN FRENCH.

Mr. FORTIER:

1. What date will the French version of the following departmental blue books be distributed to Parliament:—Auditor General, 3 vols.; Postmaster General; Inland Revenue; Trade and Commerce, 7 parts; Railways and Canals; Public Works; Marine and Fisheries; Interior; Secretary of State, Mines, Printing and Stationery; Penitentiaries; Labour; Public Accounts, and Trade and Navigation?

2. Will these blue books, or any of them, be published before the present Session is prorogued?

3. Who is responsible for delaying the publication of these important blue books?

4. Is the translation branch or the Printing Bureau equipped to do the work within a reasonable period? If not, why not?

Mr. BORDEN:

The Auditor General's Report is being translated at the Printing Bureau.

The Inland Revenue Report, Part 1, Excise, was published in French, 8th January, 1914. Part II, Weights and Measures, was published in French, February 7, 1914. Part III, Adulteration of Food, was sent to the Bureau, October 24, 1913.

Railways and Canals translation sent to the Bureau on January 8.

Interior translation completed March 17 and sent to Bureau; Secretary of State, ditto, January 27; Mines, ditto, August 29, 1913; Penitentiaries, ditto, February 10; Labour, ditto, December 6, 1913; Public Accounts, ditto, November 27, 1913; Postmaster General, ditto, March 26.

The following blue books are being translated in the departments: Trade and Commerce, Public Works, Marine and Fisheries.

Printing and Stationery is in course of translation.

2. Probably all the blue books referred to will be published before the end of the present session.

3. There has been no unnecessary delay. The extensive nature of the work has necessitated the time taken in translation and printing.

4. The matter of the proper equipment of the translation branch and of the Printing Bureau for doing the work with reasonable promptitude is under consideration.

THE CARSLAKE PROPERTY.

*Mr. LEMIEUX:

1. What amount was offered by the Government to the Carslake Hotel Company for the purchase of its property near Bonaventure Station, Montreal, before the expropriation proceedings were entered into in the Exchequer Court?

2. What were the terms of said offer?

3. What was the date of said offer?

Mr. ROGERS: No offer made.

CAPTAIN N. T. TOWNSEND.

Mr. CARROLL:

1. Has Mr. Vincent Mullins, of Sydney, Nova Scotia, received authority from the Marine and Fisheries Department or any person in connection therewith, to ask for the resignation of one Captain N. T. Townsend, the Port Warden of Sydney?

2. Has the department asked for the resignation of Captain Townsend?

Mr. HAZEN:

1 and 2. In view of the fact that Captain Townsend was reported as being unable to satisfactorily perform his official duties, owing to advanced age and infirmities, Mr. Vincent Mullins, agent of the department at Sydney, was instructed to call upon Captain Townsend, explain the situation to him, and obtain from him his resignation. Mr. Mullins reported that Captain Townsend claimed to be competent to perform his duties as port warden for the present, and no further action was taken.

MONTREAL MILITARY GROUNDS.

Mr. CARVELL:

1. Who did the Minister of Militia or department appoint to purchase the Bonnie Bel Air or other property for military grounds in the vicinity of Montreal in the year 1911 or 1912?

2. Was the appointment verbal or in writing?

3. Was Colonel Cantlie one of those appointed?

Mr. SAM. HUGHES:

1. Colonel Wilson and Colonel Labelle conducted all negotiations. Nearly all the leading officers of Montreal were consulted, and practically unanimously reported favourably upon the Dorval site.

2. There was no official appointment.

3. Answered by No. 1.

SS. CANADA.

Mr. MARCIL:

1. Has the steamer 'Canada,' under contract for the service between Campbellton, N.B., and Gaspé, Quebec, undergone an inspection by the Government inspectors during the present season and been overhauled in dry-dock?

2. If so, what has been the result of such inspection?

Mr. HAZEN: The SS. Canada was inspected by the Government inspectors and granted a certificate on the 5th May, 1913; this certificate expired on the 1st December, 1913. No further report of official inspection has yet been made to the department, and no certificate for 1914 has been issued.

Mr. MARCIL:

1. Is the Department of Trade and Commerce aware as to whether the steamer Canada is to perform the service between Campbellton, N.B. and Gaspé, Quebec, this season?

2. In case the Canada does not perform this service, has the department received any offer to substitute any other steamer?

3. If so, what is the steamer, and has any agreement been entered into to that effect, or is any under consideration?

Mr. G. E. FOSTER:

1. The department understands that the steamer Canada will not be available for a service exclusively over the Campbellton-Gaspé route.

2. There is a proposal under consideration by which a service will be given over the Campbellton-Gaspé route.

3. No arrangement has as yet been concluded.

NEW RICHMOND FREIGHT SHED.

Mr. MARCIL:

1. Is a freight shed being erected on New Richmond wharf, Quebec?

2. What is to be the cost of this building and who is doing the work?

3. Were tenders called for, who secured the contract, and at what price?

4. Who is overseeing the work, and who recommended the appointment?

Mr. ROGERS:

1. Yes.

2. $173.03.

3. No; work done by day labour.

4. Under the supervision of the district engineer, foreman Mr. James Lynd, recommended by Mr. David Champoux.

MEETINGS OF RAILWAY COMMISSION.

Mr. BOULAY:

How many meetings did each of the Railway Commissioners attend from the 1st of April, 1913, to the 31st of March, 1914?

Mr. J. D. REID:

1. There were fifty-four meetings of the board which the commissioners attended as follows: chief commissioner, 48; assistant chief commissioner, 31; deputy chief commissioner, none; Commissioner Mills, 28; Commissioner McLean, 32; Commissioner Goodeve, 35.

At the above meetings 814 formal applications were heard.

This return does not include the chamber attendance of the members or unlisted meetings, both of which have resulted in 4,160 matters being dealt with during this period. All the commissioners with the exception of the deputy chief commissioner, whose health has prevented his attendance, have been regularly in attendance at the board's offices.

HARVEY JUNCTION-COCHRANE TRAIN SERVICE.

*Mr. LEMIEUX:

Who besides the settlers of the Abitibi and the Quebec Board of Trade have petitioned the Minister of Railways and Canals to run trains on the Transcontinental railway between Harvey Junction and Cochrane?

Mr. J. D. REID: The Department of Railways and Canals has received no petition to run trains on the Transcontinental railway between Harvey Junction and Cochrane except the one from the settlers of Abitibi mentioned in reply to a question asked by Mr. Lemieux dated March 12, 1914.

HERRING FISHING.

Mr. EMMERSON:

Is it the intention of the Minister of Marine and Fisheries to publish in the Canada, Gazette during the present spring months a notice excepting herring from the operation of the 43rd section, or any part of the same section, of the Fisheries Act, 1914, for the present season?

Mr. HAZEN: The matter is under consideration.

INTOXICANTS AT TRAINING CAMPS.

Mr. PROULX:

1. Is it a fact that the canteens where beer may be purchased by non-commissioned officers

and men, has been abolished at the annual training camps?

2. Is it a fact that the officers attending the above camps still have the privilege of whisky, beer and other intoxicating liquors in their messes?

3. If the above are answerable in the affirmative, why is there an apparent discrimination against the non-commissioned officers and men?

Mr. SAM. HUGHES:

1. Beer may not be purchased in any annual training camps of the Canadian militia by any officer, non-commissioned officer, man or civilian.

2. No.

3. This question is improper.

HERON ISLAND POWER HOUSE.

*Mr. LEMIEUX:

1. Has the Government given permission to a company to build a power house on Heron island, near Lachine rapids, and to construct a dam on the St. Lawrence river at that place?

2. What is the name of the company?

3. Have said works been authorized by the Government engineer?

Mr. ROGERS: No.

GOVERNMENT NEWSPAPER ADVERTISING.

Mr. SINCLAIR:

Referring to an item of $6,000 found on page W. 52, Vol. 3, Auditor General's Report, paid to James Battle and N W. Gowan for manufacturing 20 steel castings, what are the names of the newspapers in which the advertisement calling for tenders for this work appeared and the dates of such advertisements?

Mr. J. D. REID: There were no tenders called for by newspaper advertisement for the above. Messrs. James Battle and N. W. Cowan are the patentees for the Cowan safety appliance. This device consists of two heavy steel castings on each leaf of the upper gates, four castings to a lock, weighing over 1,600 pounds each. The device is intended to prevent the forcing downstream of one gate leaf when the other has been accidentally pushed back by a vessel in the lock. Two years ago the head gates of one of the locks of this canal were equipped with this device, and in May, 1912, an upbound vessel surging forward struck into the mitre and opened it; a similar accident occurred in the same lock in the month of August, 1912. The superintending engineer advised, he is satisfied, that in both cases the device avoided a very serious accident. An offer had been sought from Messrs. James Battle and N. W. Cowan, the owners of the patent, for the supply of twenty steel castings forming the Cowan safety appliance. An offer was received from them approved by the superintending engineer, and accepted by Order in Council, dated the 26th of August, 1912, for the bulk sum of $6,000.

Mr. SINCLAIR:

Referring to an item of $6,705.51 found on page W. 48, Vol. 3 Auditor General's Report, paid to John and Wm. Burns for two dumping scows, what are the names of the newspapers in which the advertisements calling for tenders for this work appeared and the dates of such advertisements?

Mr. J. D. REID: There was no newspaper advertisement calling tenders for the above, but a circular letter was sent to each of the following firms, dated the 22nd of May, 1912: Alexander McKay, Montreal; Gilbert Motor Boat Company, Brockville; Kingston Shipbuilding Company, Kingston; Ottawa Boat Works, Ottawa; William Watters, Hull; Napoleon Tessier, Hull; J. & R. Weir, Montreal; N. Beatty & Sons, Limited, Welland; John Burns, Ottawa.

Mr. SINCLAIR:

Referring to an item of $6,300 found on page W. 49 Vol. 3 Auditor General's Report, paid to W. H. Kelly Lumber Company, for wooden tug, what are the names of the newspapers in which the advertisement calling for tenders for this work appeared and the dates of such advertisement?

Mr. J. D. REID: There was no newspaper advertisement calling tenders for the above, but a circular letter, dated the 4th of May, 1912, was sent to the following firms: Davis and Sons, Kingston; Ottawa Forwarding Company, Limited, Ottawa; La Cie Pontbriand Ltee, Sorel; Canadian General and Shoe Machinery Company Limited, Levis; J. G. Gridley and Son, Midland; Georgian Bay Shipbuilding and Wrecking Company, Midland; Hamilton Motor Works, Hamilton; W. Watts and Sons, Collingwood; Doty Engine Works Company, Goderich; Polson Iron Works Limited, Toronto; W. H. Kelly Lumber Company, Buckingham; J. and R. Weir, Montreal; Sincennes McNaughton Line, Limited, Montreal; St. Lawrence Engine Company, Limited, Brockville; A. R. Williams Machinery Company, Limited, Toronto; Robertson Brothers, Hamilton; Ottawa Boat Works, Ottawa.

Mr. SINCLAIR:

Referring to an item of $2,089.24 found on page W., Vol. 3, Auditor General's Report, paid to Rhodes, Curry Company, Halifax, for repairs to freight cars, what are the names of the newspapers in which the advertisement calling for tenders for this work appeared and the dates of such advertisements?

Mr. J. D. REID: There was no contract for repairs to freight cars, and no newspaper advertisement calling for tenders for the same. The item referred to in page 'W' volume III, Auditor General's Report of $2,089,24, was in connection with a contract with Messrs. Rhodes Curry and Company, sublet to Mr. E. A. Wallberg, for balance in settlement of a claim in connection with the building of the freight car repair shop and planing mill.

OTTAWA BUILDING LEASES.

Mr. CARVELL:

1. Has the Government leased a part of a building in Ottawa belonging to the Journal Publishing Company or to Mr. P. D. Ross?
2. If so, for what term and at what price?

Mr. ROGERS:

1. Yes, from the Journal Printing Company.
2. For 5 years at 70 cents a superficial foot.

Mr. KYTE:

1. Has the Government leased any part of the Rea building, Ottawa?
2. If so, how much of it has been leased, for how long and at what price per square foot?

Mr. ROGERS:

1. Yes.
2. The three upper floors, at 70 cents a superficial foot, for 5 years from date of occupation; not yet occupied.

EMPLOYMENT OF H. H. LOUCKS.

Mr. KYTE:

1. How long was H. H. Loucks employed on the staff of the House of Commons?
2. When did such employment cease?
3. What is the amount of his superannuation?
4. Has he been employed by the House of Commons, or any department of the Government, since the date of his superannuation?
5. If so, what is the nature of such employment, where is the work performed and what is the rate of remuneration given to him?
6. How much has he drawn as salary or remuneration for such work since the date of his superannuation?

Mr. BORDEN:

1. He was so employed for twenty-two years and two months.
2. July 1, 1913.
3. $704.
4. He has been temporarily employed.
5. Proof-reading in the House of Commons at $3.50 per diem.
6. He has drawn pay at the above rate since the 2nd of September, 1913; total amount to April 1, $738.50.

INTERNATIONAL HORSE SHOW.

Mr. CARVELL:

1. Have any horses belonging to Hon. Adam Beck been sent to England by the Department of Militia and Defence?
2. If so, how many and what is the total cost to the department to date?
3. Are any of the said horses still there? If so, is the department defraying the whole or any portion of the expenses thereof?

Mr. S. HUGHES:

1. The following officers of the Canadian Militia composed the Canadian team sent to England last year to compete at the International Horse Show, and supplied their own horses: Major C. T. Van Straubenzie, Royal Canadian Dragoons; Lieut. H. N. Bate, 5th Princess Louise Dragoon Guards; Lieut. R. Gordon Myles, 9th Mississauga Horse. Hon. Adam Beck was in charge of the Canadian team.
2. $1,451.46.
3. No.

DISMISSALS.

Mr. VERVILLE:

1. Has Mr. Parent, assistant engineer in the Public Works Department in Montreal, been dismissed or suspended? If so, when?
2. What were the reasons for such dismissal or suspension?
3. Was there a report made against him? If so, of what nature and by whom?
4. Has there been an investigation held in that matter, or is it the intention of the Government to grant Mr. Parent such investigation?
5. Was Mr. Parent on the permanent staff, and is he supposed to receive notice? If so, of how many days?
6. Is a Government employee on the permanent staff supposed to receive any pay after notice is given? If so, for how long?

Mr. ROGERS:

1. (a) Yes; (b) March 11, 1914.
2. Services no longer required.
3. No.
4. (a) No; (b) not considered necessary.

5 and 6. No.

Mr. MARCIL:

1. On what ground has William Campbell, lightkeeper of the lights on New Richmond wharf Quebec, been dismissed?
2. Was Campbell given an opportunity of meeting the charges made, if any, and by whom were such charges made?
3. Was an investigation held? If so, by whom, and what witnesses were heard?
4. Who recommended the appointment of James Robertson to succeed William Campbell?

Mr. HAZEN:

1. Political partisanship.
2. (a) Yes. The department is informed that he was advised, by registered letter, of the time and place of the inquiry; (b) Messrs. H. W.. Doddridge, J. H. Robert-

son, J. A. Mousseau, J. E. Mill, D. Champoux.

3. (a) Yes; (b) Mr. W. A. E. Flynn; (c) Messrs. W. Doddridge, C. A. Brunelle and J. H. Robertson.

4 Mr. D. Champoux.

UNOPPOSED AND UNDISCUSSED MOTIONS.

Mr. C. Marcil.—For a copy of all documents bearing on the dismissal of Thomas Le Blanc, as postmaster of Allard, Bonaventure county, and the appointment of his successor.

Mr. A. W. Chisholm.—For a copy of all letters, telegrams, correspondence, complaints, bills, accounts, vouchers, receipts and any documents in any way connected with the expenditure of money at Friar's Head boat harbour by Simon P. Doucet, during the years 1912-13, 1913-14.

Mr. A. W. Chisholm.—For a copy of all letters, telegrams, correspondence, complaints and documents of all kinds in any way connected with the asking for tenders for the mail route between Low Point and Creignish Station during the years 1913-14.

Mr. Gauvreau.—For a copy of all correspondence, accounts, indemnities, travelling expenses, etc., from Fraserville to Quebec, and of all other documents relating to the amount of money received each year by His Honour Mr. Justice Ernest Cimon, from 1890 to 1913, as judge of the Superior Court sitting at Quebec, during the time he was connected with the district of Kamouraska.

Mr. Lemieux.—For a copy of all papers, letters, telegrams, reports, Orders in Council, etc., in connection with the proposed purchase of the property known as the Carslake Hotel near Bonaventure Station, Montreal.

Mr. Knowles.—For a copy of all letters, telegrams, documents, papers, etc., in connection with the purchase by the Government of Lots 1 and 2, Block 125, Plan 96, in the city of Moosejaw, for an examining warehouse site.

Mr. Law.—For a copy of all letters, telegrams and correspondence received since April 1, 1912, by the Minister of Militia, or the officials of his department, from any person or persons of Yarmouth, N.S., or vicinity, relating to bounties payable to Fenian Raid veterans or applicants for same.

Mr. Law.—For a copy of all letters, telegrams and correspondence received by the Postmaster General in connection with complaints made that the postmaster at Yarmouth North, N.S., had been or is selling postage stamps outside his jurisdiction.

Mr. Macdonald.—For a return showing whether the Government has purchased any coal, freight or passenger cars during the past six months for the Intercolonial railway; if so, from whom and in what quantity; what price was paid in each case; whether any tenders were called for the same; who the tenderers were and the amount of each tender.

Mr. Marcil.—For a copy of all documents, investigation reports and letters, concerning the dismissal of William Campbell, lightkeeper on the wharf at New Richmond, Quebec, and the appointment of James Robertson as his successor; together with a copy of recommendations and the letters respecting the appointment, if any.

Mr. Sinclair.—For a copy of all petitions, letters, complaints and other documents relating to the dismissal of Charles McPherson, postmaster at North Riverside, county of Guysborough, N.S., and of all recommendations and correspondence relating to the appointment of his successor; also a copy of all evidence and of the report of the investigation, if any, and a statement of the expenses of said investigation.

Mr. Law.—For a copy of all letters, telegrams and correspondence, as well as of tenders for dredging, received by the Minister of Public Works, or officials of his department, relating to dredging and improvements of the harbour of Yarmouth, N.S., from October 1, 1911, to date.

Mr. A. W. Chisholm.—For a copy of all correspondence, letters, telegrams, complaints and documents of all kinds received by the Department of Trade and Commerce during the years 1913-14, with respect to the Pictou-Mulgrave-Cheticamp steamship route.

Mr. Sinclair.—For a copy of all petitions, correspondence, telegrams and other papers and documents received by the Department of Marine and Fisheries since January 1, 1914, relating to the transportation of fish from the Maritime provinces to the United States, and of all replies thereto.

Mr. Macdonald.—For a copy of all letters, petitions and documents relative to the establishment of a rural mail delivery route from New Glasgow through Mount William, Granton and Abercrombie, county of Pictou?

Mr. Macdonald.—For a copy of the new rules and regulations in regard to employees of the Intercolonial railway and Prince Edward Island railway.

Mr. Macdonald.—For a copy of all letters, telegrams and other documents relative to the purchase of land for a public building at Stellarton, Nova Scotia.

Mr. Macdonald.—For a copy of all letters, telegrams and other documents relative to the mail contract between New Ross and Vaughan's post office, Waterville, province of Nova Scotia.

Mr. W. Chisholm.—For a copy of all accounts and vouchers covering the expenditure during the calendar year 1913 at South Lake, Lakevale, Antigonish county, and showing in detail, the persons to whom such payments were made, what such payments were for, the number of days labourers employed, and the rate of wages, the quantity of material used and the price paid therefor, the quantity of material hauled to the work and not used, and the persons supplying such material.

Mr. Kyte.—For a copy of all correspondence letters, telegrams, petitions and recommendations relating to the wharf at Arichat, N.S., to be used by SS. Magdalin.

THE BUDGET.

Hon. W. T. WHITE (Minister of Finance) moved that the House go into Committee of Ways and Means. He said:

Mr. Speaker, the Budget Speech of last year was delivered on May 12. Upon that occasion I indicated my views as to the outcome of the fiscal year ended on March 31 previously. The books when finally closed showed the actual results as somewhat better than the estimate which I had made. The main features were, however, substantially as predicted.

Fiscal Year, 1912-13.

The fiscal year 1912-13 was characterized throughout by the greatest expansion the Dominion has yet known. The extraordinary activity in every department of effort, agricultural, industrial, commercial and financial, combined to produce a result strikingly in excess of anything of the kind in our previous fiscal experience. The revenue of the year exceeded that of the preceding year by no less a sum than $32,581,686.09.

The various sources from which this revenue was derived with comparative figures of the two years may be found in the table which I shall now read and place upon 'Hansard' for the information of members of the House, who may be interested in the statistical details:

Consolidated Revenue Fund.

	1911-12.	1912-13.	Increase.
Customs	$ 85,051,872.18	$111,764,698.73	$26,712,826.55
Excise	19,261,661.97	21,447,444.94	2,185,782.97
Post Office	10,492,394.18	12,051,728.86	1,559,334.68
Railways	11,034,165.83	12,442,203.46	1,408,037.63
Miscellaneous	10,268,123.20	10,983,827.46	715,704.26
	$136,108,217.36	$168,689,903.45	$32,581,686.09

It will be observed that the principal increase arose, as was to be expected, from customs although the revenues from other sources showed also a marked expansion. The remarkable and, so to speak, abnormal activity which characterized the year is reflected in the general increase of the revenue under every heading.

Consolidated Fund: Expenditure, 1912-13.

The consolidated fund expenditure for the year 1912-13 amounted to $112,059,537.41, a sum considerably less than my estimate. The increase in expenditure upon current or ordinary account over that of the previous year amounted to $13,898,096.64. This increase was due to larger appropriations made for the public service generally, to the readjustment of certain provincial subsidies and to enlarged expenditure in the Post Office and Railway Departments, the increase being partially offset by increases in earnings upon the other side of the accounts.

The consolidated fund revenue, amounting, as I have stated, to $168,689,903.45, and the expenditure to $112,059,537.41, the surplus on consolidated fund account for the fiscal year 1912-13 was $56,630,366.04 available for meeting capital and special expenditures, which, in the absence of any surplus, would have to be wholly met by borrowing.

Capital and Special Outlays, 1912-13.

These capital and special outlays were as follows:

National Transcontinental railway	$13,767,011 44
Quebec bridge	1,512,825 96
Hudson Bay railway	1,099,063 15
Other railways	2,509,988 51
Canals	2,259,257 45
Public works	6,057,514 57
Railway subsidies	4,935,507 35
Other special charges	255,647 89
	$32,396,816 37
On the one hand, then, we had a surplus of	$56,630,366 04
On the other, a capital and special outlay of	32,396,816 37
Or a difference of	$24,233,549 67
If to this we add	1,384,285 36
Representing Consolidated Fund expenditure for investment in Sinking Funds, it will be found that the net debt of the country at the close of the year 1912-13 was reduced by the sum of	$25,617,835 03

This is a reduction without parallel in the fiscal history of the Dominion.

The reduction in net debt does not mean that we paid off to that extent the funded debt of Canada by the purchase or redemption of our sterling or currency securities. Out of the surplus which we had over and above all expenditure we invested under legislative authority over $11,000,000 in Grand Trunk Pacific bonds guaranteed by the Dominion, and $2,200,000 in Montreal harbour debentures.

I think I should say here, in connection with this statement, that we have taken into our account, at par, the Grand Trunk Pacific bonds guaranteed by the Govern-

ment, which we have purchased to the amount I have mentioned for the fiscal year 1912-13. The value of these bonds is about 75, and, if the statute had permitted, I should have been disposed to write them down to their true value and enter them at that figure upon the books of the Dominion. But there is no statutory authority for so writing them down. The reason I mention the matter here is because the $11,000,000, which we have on our books as the investment for the year 1912-13 in Grand Trunk Pacific bonds, guaranteed as to principal and interest by the Dominion, would be reduced by about twenty-five per cent of that amount, and to that extent the reduction in net debt I have mentioned would be diminished. I think it only fair that I should make that statement. Notwithstanding that, the reduction in the net debt, even if so diminished, would still be without parallel in the previous history of the Dominion.

Fiscal Year 1913-14.

Turning to the fiscal year 1913-14, which ended on March 31, we find an important factor which has exercised a marked influence upon our finances. I refer to the severe, prolonged and world-wide financial stringency, which, becoming marked in the autumn of 1912 when the Bank of England rate was raised to five per cent, has continued uninterruptedly almost to the present time. This stringency was accompanied, as was to be expected, by a restriction of commercial credits and by a serious limitation of the supply of capital hitherto available in the international money markets for the enterprise of borrowing nations such as Canada. The result has been a sharp check upon expansion and a trade slackening, which appears to be not confined to any particular country, but to be general throughout the world. Later in my speech I shall deal with this condition at greater length. I refer to it now because of its bearing upon the financial result of the year.

The fiscal year 1913-14 ended on March 31, but, under the provisions of the law which authorizes an extension of time for the closing of the accounts of the year, it will be some weeks later before the books are closed and all the items brought to account. It is possible, however, to make a fairly close estimate of what the ultimate result will be shown to be.

It is estimated that the revenue for the year 1913-14 will reach $163,000,000. This estimated revenue will fall short of the revenue for the previous fiscal year 1912-13 by nearly six million dollars. In connection with this falling-off in revenue caused by the financial stringency and consequent trade slackening to which I have alluded, it is instructive to recall the years 1907 and 1908, when somewhat similar conditions were attended by similar results. The money stringency of 1907, while more acute while it lasted, was neither so prolonged nor widespread as the stringency of the past two years. It was followed, as was to be expected, by a trade depression of many months' duration, which exercised a similar influence upon the revenues of the Dominion. To particularize: the revenues of the Dominion, which for the fiscal year 1907 had reached a total of $96,000,000, showed in the following year a diminution of about eleven million dollars, a reduction of over eleven per cent.

The expansion which characterized the revenues of 1912-13 continued, although in diminishing degree of increase, until the end of September last. At the expiration of that period the revenue for the six months from April 1 to September 30, exceeded that for the corresponding six months of the previous fiscal year by $5,499,065.40. From October to the end of March this increase had been turned into a decrease of $5,039,598.54. In other words, during the six months' period from October 1 to March 31 the decrease in the revenue amounted to $10,538,663.94. I place upon 'Hansard' a tabular statement showing the gross revenues for the corresponding months of the two fiscal years:

	1912-13.	1913-14
April	$11,019,445.77	$12,145,445.78
May	13,636,718.10	14,818,918.33
June	13,181,946.75	14,304,316.25
July	14,619,207.22	15,811,914.26
August	14,445,849.42	14,547,853.20
September	14,475,483.52	15,249,258.36
October	14,758,946.72	14,225,598.16
November	14,297,778.28	13,536,981.32
December	14,142,180.59	12,931,466.77
January	13,442,378.80	11,529,753.30
February	13,135,870.58	9,698,120.91
March	14,372,331.40	11,688,901.97

The decline has been experienced chiefly in the customs revenue. The receipts from other sources of revenue have held fairly well, and the set-back in customs, while substantial, cannot be regarded as serious when the volume of the revenue is taken

into consideration. The causes of the shrinkage are undoubtedly those which I have indicated, viz: the financial stringency and its concomitants, restriction of credit and contraction of business enterprise.

The revenue for the present year will, then, approximate $163,000,000.

Let us now consider the expenditure. First of all, the ordinary Consolidated Fund expenditure will probably reach $126,500,000, or about $14,500,000 in excess of last year. At the last session of Parliament fairly generous appropriations were made for all divisions of the ordinary services of the country. The main increases will be found in Public Works (expenditure chargeable to income) and in the expenditure on account of post office, railways, agriculture, and militia. With the growth of the country the other services have required additional outlays, with the result that for the current fiscal year as I have stated, there will be an increase in the expenditure on account of Consolidated Fund of about $14,500,000. A revenue of $163,000,000 and an expenditure of $126,500,000 leaves a surplus of revenue over and above the amount required for expenditure upon current account of $36,500,000.

The surplus for the year, then, will be thirty-six million five hundred thousand dollars as compared with fifty-six million dollars last year.

In connection with this matter of surpluses, it may not be out of place for me to point out that from the year 1902 forward there have been substantial surpluses of revenue over current expenditure, running from $14,000,000 in 1902-3 to $22,000,000 in 1909-10, to $30,000,000 in 1910-11. For the year 1911-12 our surplus was $37,000,000, for 1912-13, as I have stated, $56,000,000, and for last year, 1913-14, the figure which I have just given, $36,500,000. So we have had during the last three years the largest surpluses in the financial history of the Dominion.

In addition to the ordinary or running expenditure, we have further the capital outlays upon our larger public works and national undertakings, such as the Transcontinental railway, the Intercolonial railway, Hudson Bay railway, Quebec bridge and other works involving heavy expenditures, which have always been regarded as being properly the subject of borrowing. It must be obvious to all that the taxpayer of the day is not to be expected to defray each year the entire capital cost of works such as railways, canals, harbour improvements, dry docks, and other expensive undertakings which once constructed become national assets of great productive value to the Dominion for generations to come. The propriety of constructing these works, partially at least, with funds raised upon the credit of the country does not appear to me to be open to challenge or controversy.

Special Subsidies to Railways.

The House will recall that last year it was considered advisable to render material assistance to railways in order that their work of construction might not be interrupted by reason of the prevailing adverse monetary conditions and the consequent stoppage of funds which previously had been obtainable in the London money market by the railway companies themselves through sales of securities. For this reason and because it was thought proper that, having regard to the cost, magnitude and national importance of the enterprise, further government aid might fairly be granted them, subsidies to a large amount were granted to the companies embraced in the Canadian Northern railway systems. On account of these and other railway subsidies the sum of $19,000,000 has been expended during the fiscal year 1913-14. A loan of $15,000,000 was also authorized to the Grand Trunk Pacific Railway Company, secured by the guarantee of the Grand Trunk Railway Company.

My estimate of the expenditure upon capital account, upon railway subsidies and other special accounts, is the sum of $57,000,000. To meet this we have on revenue account a surplus of $36,500,000, leaving a debit balance of $20,500,000, from which we must deduct $1,500,000, representing investments made in sinking funds. The result then will be that in respect of capital and special accounts aggregating, as I have stated, the sum of $57,000,000, the net debt of Canada will be increased by the sum of $19,000,000. Putting the matter another way, our revenues will have been found sufficient to meet all current and capital expenditures including railways, canals, harbour and public buildings expenditure, and we have been obliged to increase the debt only by reason of the unusual and abnormal expenditures upon railway subsidies. I believe I am fully justified in making the statement that in the trying financial conditions which pre-

vailed last year the action of the Government in coming to the assistance of the railways alone rendered the continuation of their enterprises possible, at all events for the year in question. The consequences of the interruption of the work of construction would, I need scarcely say, have been of the most serious character to the Dominion as a whole.

Under all the circumstances of the year, an increase in the net debt in the sum of $19,000,000 must be regarded as eminently satisfactory, especially when it is borne in mind that in the fiscal year 1908-09, following a much less trying period of financial stringency in 1907-08, the net debt of the Dominion was increased by no less a sum than $46,000,000. It is also to be noted that, nothwithstanding this increase, the net debt of Canada when the books for 1913-14 are closed will be less by several million dollars in amount than it was in 1911 when the present Government assumed office. The explanation of this lies in the fact that during the year 1912-13, when the revenues amounting to upwards of $168,000,000 were abnormal, and due in considerable measure to commercial inflation, the Government was able to achieve a reduction in the net debt which more than offsets the increase rendered necessary by the abnormal conditions of the year just closed.

Maturities and Borrowings, 1913-14.

In my Budget of last year I made mention of the fact that only two loans remained to be provided for until the year 1930. One of these for £1,700,000, being portion of a 4 per cent loan guaranteed by the Imperial Government and issued in 1878, matured on October 1 last, and was duly paid off, as was also a small currency loan originally issued in Canada in 1883 at 4 per cent, but subsequently extended at the rate of 3½ per cent and amounting to $1,446,565. The other loan to which I referred was originally issued for £6,000,000, of which £5,487,080 is now outstanding, the difference representing a cancelled sinking fund investment. This loan was issued in the form of bonds and is redeemable on July 1, 1919, with the option to the Government to redeem the whole or any part by drawings at par on or after July 1, 1914, on giving three months' notice. With the money market in its present condition, and our borowings in consequence being upon a 4 per cent basis, it is not our intention to redeem this loan on July 1 next. Unless indeed there is a marked change in monetary conditions in the early future it is probable that this loan will run its full length to July 1, 1919. So much for our maturities, as to which the situation must be regarded as entirely satisfactory, there being no funded loans becoming payable for five years to come.

I have stated that notwithstanding that our estimates last year were exceptionally large, we have paid our way out of revenue so far as current and capital outlay are concerned. I have also stated that the net debt of the Dominion would be increased by practically the amount of our special outlays upon subsidies and other special accounts.

But while this is the case, our borrowings for the year were considerably greater than the amount by which the net debt of the Dominion has been increased. This was occasioned by the additional large expenditure which we were obliged to make upon investments which constitute a set-off to the increase in the gross debt which they render necessary. Let me recapitulate the special outlays and investments for which it was necessary to borrow during the past fiscal year:

Railway subsidies and other charges, $20,000,000; investment in Grand Trunk Pacific bonds, guaranteed by the Dominion, $12,872,333.27; Grand Trunk Pacific loan, $8,500,000; advances to Montreal and Quebec Harbour Commissioners, $5,312,000; total, say $46,684,333.27. Add loans matured $9,719,898; total $56,404,231.27.

In June, July and August last the London money market was most unfavourable for the issue of new permanent loans. The Balkan war, greatly disturbing in itself to all the money centres of the world and much more so by its menace to the peace of Europe, was still being waged, with the intermission of a futile truce, with the most relentless ferocity on the part of the combatants. While it held the stage there could be no settled financial conditions and no promise of amelioration of the worldwide stringency. In further aggravation, anarchy in Mexico became an additional and potent factor to trouble the exchanges and bourses of Great Britain and the continent. Many important issues of governments, states, provinces and municipalities, which had been obliged, owing to the adverse conditions, to resort to temporary borrowings to be met by funding operations, were overhanging the market awaiting a favourable opportunity for emission. In these circumstances, the Bank of England rate being 5

per cent, it was not considered expedient, during the months mentioned, to attempt to make a permanent issue, and resort was had to treasury bills, of which £1,000,000 were discounted on August 25, 1913, due February 16, 1914, at the rate of 4 15/16 per cent per annum.

In September further treasury bills were issued to the amount of £1,000,000 maturing March 16, half at 4½ per cent and the remainder at 4¾. On November 19, £1,700,000 of bills were discounted at 4⅝. These fall due on November 19, 1914. In all £3,700,000 of treasury bills were discounted during the year.

To meet the maturities I have previously referred to, amounting to about ten million dollars, and to provide additional funds for the special outlays of the Dominion, £3,000,000 of 4 per cent stock redeemable October 1, 1960, with the option of the Government to redeem the whole or any portion thereof in 1940 on giving three months' notice, was issued on September 25 at the price of 99 and on December 3 a further amount of £4,000,000 similar stock was issued at 97, making a total of £7,000,000 of permanent stock issued before the close of the calendar year 1913. Of the last mentioned loan £1,000,000 was used to redeem treasury bills due February 16, 1914.

To meet £1,000,000 treasury bills maturing March 16, to provide for the balance of the Grand Trunk Pacific loan amounting to $7,500,000 and to complete the purchases of Grand Trunk Pacific bonds guaranteed by the Government of Canada to the amount of about $10,000,000, it became necessary to issue a further loan of £5,000,000, of the same character as previous loans, which we were able to accomplish in the recent improved condition of the market at 99, two points in advance of the previous issue.

The purchase of Grand Trunk Pacific bonds has not only enabled the Dominion to make a substantial saving upon the amount it would otherwise have been obliged to pay in implementing to par the price which would be realized for these securities if sold as they would have been from time to time, but also has served to protect the credit of the country from the consequence of the issue of such low interest-bearing debentures upon the London market. There is the further fact that so far as the public are concerned our outstanding guarantees are less than they would have been by the amount of our purchases. From the London financial community I have heard nothing but commendation of the action of the Government in this regard. It should therefore be borne in mind in connection with our borrowing that no less a sum than $24,005,806 has been required so far to take up these bonds which are, of course, an asset in the treasury of the Dominion.

I think I may fairly set forth to the credit of the Government the fact that notwithstanding our heavy borrowings the net debt of Canada is less than it was when we took office and that guarantees of securities have been reduced so far as the outside world is concerned by over $24,000,000.

The House has long known that the Dominion, in common with all other Dominions of the empire, has been obliged to go upon a four per cent basis in the sale of its securities. The causes for the increase in the price that has to be paid for money have been frequently discussed and it is not necessary that I should go over the ground again. So far as I can see it will be some considerable time before there is likely to be even the prospect of a return to the lesser rates. However, no one's opinion upon a question such as this is of much value because rates of interest are dependent upon causes and conditions infinitely varied, complex and fortuitous, and not at all susceptible of forecast.

The rates of interest which we were obliged to pay on treasury bills and the permanent issues we have made were such as the stringent conditions of the year demanded. I am glad to be able to say that they were on the whole relatively low and that the Dominion still retains the premier place among the self-governing dominions so far as the price of her securities in the London market is concerned.

There has been a good deal of comment of a critical and sometimes of an adverse character upon the fact that the public has subscribed for only a small percentage of Dominion loans offered upon the London money market. The House is no doubt familiar with the mode of raising money by loan in that financial centre. The first step is to get our loan underwritten through our fiscal agent in London, and when it is underwritten it is a success so far as we are concerned, because our money is certain. The only object of underwriting and paying a commission to the underwriters is to ensure that if the public do not respond when the issue is made the underwriters will, to the extent that the public do not respond, take up the instalments as they mature. As I have said, when the loan is

4 p.m.

underwritten the money is secured. There has grown up in London of recent years a habit on the part of the public, particularly in connection with large government loans, of waiting until the lists are closed in the hope that the underwriters, being saddled with a large proportion of the loan, will be willing to sell at a small discount. For the information of the House and as illustrating that custom, to which I have referred as growing up in connection with government loans, I desire to place upon 'Hansard' the record of the past two years as to Dominion of Canada issues and issues made by other dominions of the empire.

Dominion of Canada loans:		
£5,000,000, Feb., 1912,	underwriters got	65 p.c.
£3,000,000, Oct., 1913	"	50 "
£4,000,000, Dec., 1913,	underwriters got	82 p.c.
£5,000,000, Feb., 1914	"	78 "
West Australia:		
£1,000,000, Feb., 1912	"	74 "
£1,000,000, Dec., 1912	"	44 "
£2,000,000, Apr., 1913	"	54 "
£1,000,000, Nov., 1913	"	70 "
Queensland:		
£2,000,000, July, 1912	"	89 "
£2,000,000, Jan., 1913	"	80 "
New Zealand:		
£4,500,000, June, 1912	"	85 "
£3,500,000, Oct., 1913	"	92 "
New South Wales:		
£1,500,000, Oct., 1912	"	52 "
£3,000,000, Mar., 1913	"	84 "
£3,000,000, Jan., 1914	"	90 "
Government of India:		
£3,000,000, Apr., 1912	"	87 "
Union of South Africa:		
£4,000,000, July, 1912	"	94 "
Tasmania:		
£1,300,000, Jan., 1913	"	85 "
Government of Victoria:		
£3,000,000, June, 1913	"	40 "
£2,000,000, Sept., 1913	"	53 "

On the other hand, I should point out that there were several issues made in January of this calendar year which were almost immediately over-subscribed, there being at that time a certain amount of speculation in connection with these gilt-edged securities due to the loosening up of money and the expectation that monetary conditions would be materially easier in the comparatively near future. After a sudden outbreak of speculative activity in gilt-edged securities, which resulted in a number of issues being over-subscribed in a day or two, the market has resumed its accustomed condition, and we have found the underwriters taking a large percentage of loans recently issued to the public.

The Debt of Canada.

In connection with the subject of our loans, a word as to the debt of Canada may not be out of place, especially as our borrowings have been made the subject of criticism for the most part entirely uninformed in certain of the British and Canadian press.

The Public Accounts for 1913 show the following figures relating to the debt of Canada:

	Total Debt.	Total Assets.	Net Debt.
1911..	$474,941,487	$134,899,435	$340,042,052
1912..	508,338,591	168,419,131	339,919,460
1913..	483,232,555	168,930,929	314,301,625

The year 1911-12 showed, therefore, a reduction in the net debt of $122,591.32, and last year a reduction of $25,617,835.03. This year we shall show an increase of $19,000,000, but notwithstanding this, the net debt of the Dominion will be over six million less than it was two years ago. Since Confederation there are shown in the Public Accounts only eight reductions in the net debt of Canada, of which two belong to the present regime.

Of the total debt the amount of the funded debt payable in London on March 31 of last year was $258,679,819. This amount has since been increased by about fifty-eight million dollars for the purposes I have mentioned. The balance of the total debt is represented by small funded currency debts payable in Canada amounting to $2,190,767; Dominion notes to the amount of $112,101,885 for which, save as to the amount of $22,500,000, the Dominion holds dollar for dollar in gold; savings banks deposits of $57,140,483 for which ten per cent in gold is held; provincial notes $39,220; compensation to seigniors, $38,091; trust funds, $15,167,803; province accounts, $11,920,481, and miscellaneous accounts, $25,954,002. The assets of the Dominon which are deducted from the gross to ascertain the net debt, were at the end of last fiscal year as follows:

Sinking funds..	$ 13,737,567
Investments..	43,885,324
Province accounts	2,296,327
Miscellaneous accounts ..	109,011,709

In the last named account is included specie amounting to $98,725,822.

Financial Conditions.

Looking back upon the year 1913, it is apparent that the whole world passed through one of those severe financial crises with which the student of economics is familiar as regularly recurring phenomena in the financial world. The Balkan war, while immediately responsible for the critical conditions which developed, probably disclosed rather than caused the situ-

ation. World-wide expansion in trade, unprecedented demand from all parts of the world upon the loanable capital in the international financial centres, the constantly increasing expenditures upon militarism and armaments, the exhausting wars of the past few years, personal and public extravagance, speculation and price inflation, all co-operated to bring about the financial conditions under review. The banking community, always first to sense approaching money-scarcity, took precautions well in advance, curtailing credits and limiting the commitments of their customers. Liquidation was forced throughout the world, with the result that at length, about the end of last year, the money supply was more nearly equalized to demand. Since the turn of the year the Bank of England rate has fallen to three per cent, and the outlook for easier money conditions appears much more favourable than at any time during the past two years.

Our own financial institutions stood the strain well. As evidencing their ability to cope with unusual emergency, I need only refer to the ease and celerity with which the financing of the western harvest was accomplished under the arduous monetary conditions of last fall. So far as the financial stringency is concerned, we may consider that the worst is over. From this time forward until the culmination of the next economic cycle, we are, on the experience of the past, justified in looking for much more normal monetary conditions. For the immediate future it must not be forgotten that vast refunding operations must still be carried out in London, Paris, and other centres, making heavy demands upon the money supply available. During the past year there was much criticism of Canadian borrowing. Some of this criticism was just, most of it unjust, but perhaps not blame-worthy under the trying conditions which beset the London market. The criticism which I describe as unjust regarded not at all the question of the security offered nor the price at which the company, municipality, province or Dominion offered its securities, but only the fact that money was being sought. On the other hand, it was realized by all sensible financial men and journals that a borrowing country such as Canada, in the midst of a vast constructive epoch in her history, could not suddenly discontinue her borrowings without the most serious risk of loss to British and other investors who have so freely furnished the capital for railway and industrial undertakings which must be finished to be productive. On the whole, Canada received generous treatment at the hands of British capital last year. More money was borrowed than in any previous year, but it is probable that a very substantial part of the total was devoted to the liquidation of floating indebtedness or Treasury bills negotiated at an earlier date.

When we consider, apart altogether from its physical resources and its economic strength as a community, the great public works owned and paid for by the Dominion —its canals, railways, including the Intercolonial and the now almost completed National Transcontinental—it can be affirmed with certainty that the national debt of Canada has been kept within very moderate bounds indeed.

Trade.

The trade of Canada, as measured by the aggregate of the total imports and total exports, reached in 1913 the record figure of over one thousand million dollars. In the Budget of last year I called attention to the fact that during the last three years the total imports had increased at a very much greater ratio than the exports, and that the marked difference between the amount of the imports and the amount of the exports in 1913 had evoked criticism on the part of some who put forward the view that we might expect to be drained of our gold if the condition continued. I pointed out at the time that Canada was a large borrower of capital required for the construction of our transcontinental railways, of great public works, for industrial and commercial enterprise, and for the municipal services of our rapidly growing communities. Expenditure of this kind is of a capital nature, and money borrowed for the purpose of making it is loaned, not upon terms of immediate repayment, but for investment. As a great part of our imports represented our borrowings, and found their way into works and undertakings of the character mentioned, it is obvious that the situation was very different from what it would have been had all our imports been for immediate consumption, in which case the adverse balance of trade would have been fraught with serious consequences, if indeed it would have been possible for it to exist at all. The question then was whether Canada would be in a position to pay with her exports not for all her imports, but such only as did not represent capital bor-

rowed abroad for productive undertakings and interest upon her borrowings, past and present. Keeping this distinction in view, and the further fact of the vast amount of capital and effects reaching the Dominion by immigration, it became apparent that the adverse balance of trade gave rise to no cause for alarm. But, while this was so, it is a gratifying feature of the trade of 1913-14 that the exports have increased in a marked ratio, and that the excess of imports over exports, which characterized the previous year, has been materially cut down. While in 1912-13 the percentage of the value of imports to the aggregate trade was nearly 64 per cent up to the end of February, 1913, the percentage of imports to the aggregate trade for the eleven months ended February 28 last was over 57½ per cent, or about the same proportion as in the year 1908. The increase in exports, as shown in the following table, while chiefly in agricultural products, will be found to apply to the products of mines, fisheries, forests, animals and their products and manufactures.

Value of Goods Exported (by classes) from the Dominion—Merchandise only (Canadian Produce).

Fiscal Year.	The Mine.	The Fisheries.	The Forest.	Animals and their Produce.
	$	$	$	$
1908	39,177,133	13,867,368	44,170,470	55,101,260
1909	37,257,699	13,319,604	39,667,387	51,349,646
1910	40,087,017	15,663,162	47,517,033	53,926,515
1911	42,787,561	15,675,544	45,439,057	52,244,174
1912	41,324,516	16,704,678	40,892,674	48,210,654
1913	57,442,546	16,336,721	43,255,060	44,784,379
11 months ended Feb. 28, 1914	52,469,690	19,153,286	40,097,151	50,147,059

Fiscal Year.	Agricultural Products.	Manufactures.	Miscellaneous.	Total.
	$	$	$	$
1908	66,069,939	28,507,124	67,674	246,960,968
1909	71,997,207	28,957,050	54,931	242,603,584
1910	90,433,747	31,494,916	125,161	279,247,551
1911	82,601,284	35,283,118	285,815	274,316,553

1913	150,145,661	43,692,708	97,311	355,754,386
11 months ended Feb. 28, 1914	191,707,483	51,204,162	108,617	404,887,448

Notwithstanding the fact that during the current fiscal year Canada has been experiencing with the rest of the world a severe strain upon commercial credits, owing to the financial stringency to which I have previously adverted, I am pleased to be able to announce that the trade statistics for the year will exceed those of last year, when they reached the record figure of over one billion dollars. For the eleven months ended 28th February, 1914, the total imports amounted to $597,420,545, and the total exports to $440,631,104, or a total of $1,038,051,649. With the figures for March added, the record of last year will be substantially exceeded. I place upon 'Hansard' in tabular form the comparative figures since 1908:

Total Trade of Canada with all countries (including coin and bullion).

Fiscal Year.	Total imports.	Total exports Canadian and foreign produce.	Aggregate trade.	Percentage of value of imports with aggregate trade.
	$	$	$	%
1908	370,786,525	280,006,606	650,793,131	56·97
1909	309,756,608	261,512,159	571,268,767	54·22
1910	391,852,692	301,358,529	693,211,221	56·52
1911	472,247,540	297,196,365	769,443,905	61·37
1912	559,320,544	315,317,250	874,637,794	63·94
1913	692,032,392	393,232,057	1,085,264,449	63·76
11 mos. ended Feb. 28, 1914	597,420,545	440,631,104	1,038,051,649	57·55

It will be of interest to the House if I show the percentage of value of imports with aggregate trade, because the question of balance of trade has been so much discussed in Canada and Great Britain. In 1908 the percentage of value of imports with aggregate trade was 56.97 per cent; in 1909, 54.32 per cent; in 1910, 56.52 per cent; in 1911, 61.37 per cent; in 1912, 63.94 per cent; and I have shown that this year the percentage has fallen to 57 per cent, which was about the rate in 1908.

I also present for the information of the House a table showing the aggregate of our imports and exports from and to the United Kingdom and the United States:

Trade with United Kingdom—Merchandise only.

Fiscal Year.	Imports for Consumption from the United States.	Exports to the United States, Canadian and Foreign Produce.	Aggregate Trade.
	$	$	$
1908	204,648,885	96,920,138	301,569,023
1909	170,056,178	91,022,387	261,078,565
1910	217,502,415	110,614,327	328,116,742
1911	274,844,858	112,208,676	387,053,534
1912	330,428,502	112,956,295	443,384,797
1913	435,783,343	150,961,675	586,745,018
11 mos. ended Feb. 28, 1914	361,948,599	161,203,378	523,151,977

Indicating that there will be a falling off in the imports to Canada from the United Kingdom.

There has been a very large increase of exports to the United Kingdom from Canada during the past fiscal year.

Now, I have some figures showing the trade between Canada and the United States of America. I may say for the information of the House that Canada is the second customer of the United States to-day. The largest part of the export trade of the United States is with Great Britain and the second is with Canada. On the other hand, Canada is fifth in her sales to the United States, coming, I believe, even after Cuba as far as the figures of the United States disclose. The following table shows the imports from and exports to the United States:

Trade with United States—Merchandise only.

Fiscal Year.	Imports for Consumption from the United Kingdom.	Exports to the United Kingdom Canadian and Foreign Produce.	Aggregate Trade.
	$	$	$
1908	94,417,314	134,477,124	228,894,438
1909	70,682,101	133,745,123	204,427,224
1910	95,336,427	149,630,488	244,966,915

There was a falling off in our imports from the United States in the past year, as there was in our imports from Great Britain. On the other hand, as in the case of Great Britain, our exports to the United States substantially increased. I think the increase is due, in large measure, to the Underwood tariff, which has placed live stock, dairy and certain other farm products, fish, manufactures of lumber, and other natural and manufactured products of Canada, upon the free list.

An hon. MEMBER: What is the aggregate trade with the United States?

Mr. WHITE: The aggregate trade with the United States in the year 1912 was $443,384,797, in 1913 it was $586,745,018, and for the eleven months ended February 28, 1914, it was $523,151,977.

Mr. A. K. MACLEAN: Will the minister give the increased exports to Great Britain this year over last year?

Mr. WHITE: In 1913 the exports to Great Britain were $177,982,002, and, for the eleven months ended February 28, 1914, our exports were $214,632,520. I am of the view that a large contributing cause to the result was the export of our wheat. It will be recalled by the House that the western harvest was exceptionally early last year and, as I have stated before, it was moved to market with great celerity and despatch.

Immigration.

I turn now to the statistics of our immigration. It is gratifying to know not only that the stream of new settlers continues to flow into the Dominion, but that there is also apparent from year to year a marked improvement in the class arriving due to restrictive regulations. The arrivals for the past five fiscal years and eleven months of the present fiscal year have been as follows:

Fiscal Year.	Great Britain and Ireland.	Other Countries except United States.	United States.	Totals.
1908-09	52,901	34,175	59,832	146,908
1909-10	59,790	45,206	103,798	208,794
1910-11	123,013	66,620	121,451	311,084
1911-12	138,121	82,406	133,710	354,237
1912-13	150,542	112,881	139,009	402,432
1913-14 (11 mos.)	136,699	128,933	97,406	363,038

For the whole fiscal year 1913-14 the total immigration will likely reach 390,000; that is four times the population of our smallest province or enough persons if settled in a community to make thirteen constituencies according to the present unit of representation.

For the calendar year 1913 the total immigration to Canada was 418,909, divided into 156,984 from the British Isles, 115,751 from the United States and 146,174 from other countries. According to official estimate the value of effects together with the capital brought in by these immigrants would exceed the sum of $100,000,000. This is, however, the least important part of their contribution, the most valuable as a national asset being the energy, intelligence and character which they bring to the upbuilding of the nation.

Fiscal Year 1914-15.

I now approach consideration of the fiscal year which commenced on April 1. Preliminary to such consideration it may not be out of place to make some brief observations as to prevailing business conditions in Canada and elsewhere. There is no doubt that the severe and prolonged financial stringency through which the business world has passed and from which it is only now emerging marked the culmination of one of those so-called trade cycles well known to economists. The phenomena of these cycles are well known. First a surplus of loanable capital attended with easy money conditions and low interest rates, next commercial activity promoted and sustained by abundant supplies of such capital resulting in profitable trade and rapid extension of enterprise, next, in consequence of such rapid extension, an undue proportion of the money supply of the world finding its way into fixed capital, then shortage of liquid resources among financial institutions, followed, as a matter of necessity in order to rectify conditions, by advancing rate of interest with curtailment of credit and consequent restriction of trade. When this last condition is reached and has prevailed for such time as is necessary to permit of the accumulation of loanable capital in sufficient surplus to bring about easy interest rates another cycle, such as I have described, after a more or less prolonged commercial pause during which confidence is being gradually regained, is entered upon at its beginning. Viewing world-wide conditions during the past few years it is apparent that such a period has been passed through. We have seen normal money conditions, good times throughout the world, the expansion of enterprise, vast increase in capital expenditure upon railway and other construction in Asia, India, Egypt, and in North and South America. Last year there was experienced a shortage of capital in all the financial centres with constantly increasing interest rates until, after a period of prolonged and severe liquidation and the elimination of vast amounts of inflated values, something like normal money conditions again prevail. The world is now in a period of general but it is to be hoped

temporary trade slackening. Without such slackening the financial stringency must have continued. The trade slackening alone could bring it to its appointed end.

The conditions I have referred to are world-wide. We are particularly interested in those of Canada. Our production has shown a most gratifying increase in all the great departments of our national activity. As I have previously shown, in foreign trade this has been our greatest year. What is the present outlook? Bankers and business men unite in the opinion that while it is a time for prudence and caution it is also a time for confidence and courage. The strength of Canada lies in her vast natural resources. That is the rock upon which our prosperity is soundly based and founded. Any depression, generally speaking, can be but temporary in character until such time as normal money conditions, joined with business confidence, again restores the wonted activity of the nation. While this is so we must not close our eyes to the fact that we have been passing through a period of considerable inflation. Our railway policy has resulted in the construction of two vast new systems within the past dozen years. Construction upon the main lines of these systems is nearing completion. It must, however be borne in mind that railways are never completed, are always building and rebuilding, always extending their branches and feeders. I do not therefore look for any abrupt cessation in connection with our railway construction. There has been in real estate throughout Canada a long-expected set-back in values of speculative suburban properties. On the other hand the values of farm and central business and residential city properties are generally speaking not only being maintained but will undoubtedly with the growth of the Dominion tend to appreciation. On the whole the readjustment which is going on in real estate conditions throughout Canada is recognized as inevitable and salutary. Commercial prospects for the immediate future seem to me to be encouraging. Conditions will, I think, gradually improve with returning confidence and easier money. By reason of the autumn conditions of last year which permitted soil preparation on an unusual scale in all parts of the Dominion, the outlook for agricultural production this year is most favourable and we may look forward to increased production in those other great departments, our fisheries, forests and mines.

Dealing now with the Budget aspects of the year, the main estimates for the fiscal year 1914-15 have been before the House since January. For the outlays on account of Consolidated Fund there is a total appropriation of $146,786,126, and for capital $43,949,050. There will be Supplementary Estimates presented later during the present session, but it is not expected that they will be of large amount. In view of decreasing revenues, which were to be apprehended in a year such as this on the analogy of 1908, which followed the financial stringency of 1907, it has been considered advisable that the Estimates should be kept within as reasonable bounds as possible, having regard to the needed requirements of the country as to public services and national undertakings in progress or necessary to be begun forthwith.

In considering the matter of Estimates as compared with revenue it must be kept in mind that appropriations do not always mean expenditure, partial or complete, and that on the experience of the past it may be confidently predicted that a considerable portion will be unexpended and lapse.

The revenue for the present fiscal year will reach about $163,000,000. The amount of revenue we shall receive during the coming year will depend very much upon the trend of business throughout Canada. We have experienced a considerable falling off during the past few months but it is my expectation that these declines will with the coming of spring be relatively smaller and my hope that next fall we may regain the losses, if any, of the earlier part of the year. In any event I think I may say with confidence that the revenues of the coming year will provide fully for Consolidated Fund expenditure and in large measure for all capital and special outlays.

Tariff.

I now proceed to the consideration of certain matters relating to the tariff. In my Budget of last year I enunciated the general principle that alterations in the schedules of the tariff should be sparingly made if at all until the period has arrived for a general revision. I said also that to give this principle rigid and inflexible application would lead to occasional public detriment and inconvenience. I further stated that having regard to the then prevailing conditions of the Dominion and the fact that there is always a delicate adaptation of business to the rates of the tariff

there was a general consensus of opinion that any thing in the nature of an extensive revision of the tariff was not called for by existing conditions and would be contrary to public interest. This general statement holds good to-day as it did a year ago but on account of changing conditions affecting certain industries it has become necessary to make a number of changes, modifications and adjustments, some of a rather important character.

Before taking these up in detail I desire to affirm the adherence of the Government to a fiscal policy of reasonable protection to Canadian industries including of course the great basic industry of agriculture. That policy is the historic National Policy of Sir John Macdonald, inaugurated by him and continued by his successors in office down to the present time. We believe it is the best, indeed the only and in a sense the inevitable policy for Canada, situated as it is geographically and in the existing fiscal conditions of the world to-day. Under that policy Canada has prospered in the past and will continue to prosper in the future. We believe it to be the true policy for Canada and for every part of it if we are to regard as desirable stable business conditions and a deversified national life throughout the Dominion. It means the development of our natural resources, the maintenance and extension of our industries, a fair wage standard for our artisans and a stable and profitable home-market for our farmers, thus justifying its name as a national policy—a policy in the interests of the nation as a whole. The evils of a high protective tariff are too well known to make it necessary that I should discuss them here. The tariff of Canada has not been a high tariff but one affording a moderate degree of protection only. The best evidence of this is to be found in the fact that our tariff of to-day imposes an average rate of duty upon dutiable goods of about twenty-six per cent whereas the Underwood Tariff of the United States which was designed to substantially cut down the protective duties of the Payne-Aldrich Tariff has been authoritatively represented as imposing an average duty upon dutiable goods of about the same percentage as ours of to-day.

While making this declaration of reaffirmation of fiscal policy I do not wish to be understood nor do I wish the National Policy to be understood as laying down the proposition that individual duties may not with changing conditions be lowered or abolished when circumstances warrant or the public interest so requires.

Duty upon Wheat and Flour.

A matter which has engaged during the year the careful attention of the Government has been the so-called question of 'free wheat,' which has been so much discussed in the West and throughout Canada. The Underwood Tariff of the United States which came into effect on October 3, 1913, provides by item 644 that wheat, wheat flour, and semolina and other wheat products shall be entered free of duty from countries which do not impose a duty on wheat or wheat flour or semolina imported from United States; otherwise the duty upon wheat is fixed at 10 cents per bushel and upon wheat flour at 45 cents per barrel and upon semolina and other products of wheat 10 per cent ad valorem.

It is clear, therefore, that if Canada should place wheat, wheat flour and semolina upon the free list our wheat and wheat products would gain free entry to the markets of the United States.

The Government has heard influential deputations and received many representations upon both sides of the question. On the one hand, it is contended that the price of wheat at the great milling centre of Minneapolis is frequently or rather usually higher by several cents per bushel than it is at Winnipeg and that the western wheat-grower would, in the event of wheat having free entry into United States, get the advantage of the higher price. Particularly is it pointed out that the 'spread' in price prevails at certain seasons of the year when the farmer needs to sell his grain and that it is most marked in the case of wheat of poorer quality for which the demand for export to Great Britain is comparatively limited. It is also put forward that with 'free wheat' the western agriculturist would be benefited by the development of further competitive shipping facilities.

As against these contentions it is represented that the higher price at certain seasons at Minneapolis is due to local demand on the part of the milling industry there for hard wheat to mix with the softer varities for the manufacture of flour; that such demand is limited and that consequently in the event of free entry of our wheat to the American market the tide of our hard wheat descending upon Minneapolis would at once equalize prices on both sides of the line. It is further argued that as both Canada and the United States are wheat-exporting countries the export price at Liverpool governs and would continue to govern, subject to freights and other charges, the price of wheat in Canada and the United States.

The opinion has also been expressed that free entry of wheat to United States would be a detriment rather than an advantage to the grain-growers of western Canada on the ground that by reason of mixing in United States his wheat would lose its identity and consequently its higher value in the world market.

Representatives of the milling interests of Canada have protested strongly against the abolition of the present duty of sixty cents per barrel upon flour. They point out that the materials entering into the construction of their buildings, their plant and machinery are all subject to duty, and that with the abolition of duties upon flour they would be in a worse position than under a system of national free trade. They contend that by reason of the geographical situation of the United States wheat fields and the climatic conditions which give the American miller the benefit of both early and late wheat, he enjoys an advantage over them which would speedily give control of Canadian markets to the milling interests of the United States. They claim also that placing flour on the free list would have the effect of limiting or preventing the extension of the milling industry into the Northwest. They urge as a further important consideration that there is no such guarantee of permanence of the Underwood tariff provisions to which I have referred as to justify them in making the costly attempt to create a market for their higher grade flour in the United States in competition with the highly specialized and powerful milling industries which now control the field. Representatives of the mixed farming agricultural community have put forward the view that bran and shorts, the by-products of flour milling, are essential to the live stock industry, upon which all successful agriculture must ultimately depend, and they counsel against any step which might close or limit the output of our mills upon whose operation mixed farming so much depends. They point out further that offal is dearer in United States than in Canada, and that the removal of the duty would equalize prices on both sides of the line to their disadvantage.

So much for these opposing arguments and contentions. Speaking generally it is not advisable that a nation's tariff should be so arranged as to fit into the particular features of that of another nation. This, however, would not be a conclusive reason for not making a change clearly in the national interest. In addition to the weight of the arguments which have been presented against the proposed tariff change, and to which I have alluded, it must be borne in mind that Canada has at present nearing completion two transcontinental lines of railway in addition to the Canadian Pacific, which have cost hundreds of millions to construct, and whose purpose and object is to carry the grain of the West to the markets of the world and the products of the East to the consumers of the West. The Government of Canada is also building a railway to Hudson Bay, with the object of gaining a shorter route to Great Britain and consequently lower freights to the western grain-grower. On the Pacific coast we are spending vast sums to be prepared for the opening of the Panama canal.

Having regard to all these considerations, we have been unable, after having given the question most painstaking attention, to bring ourselves to the view that so great a change, involving by possibility such serious consequence, should be favourably considered until at least we are more certain as to the outcome of our vast railway development and the result to the western grain-grower of the opening of the competitive routes which will be afforded by the Hudson Bay railway and the Panama canal. It is surely the part of wisdom to await the outcome of these developments rather than to take a step now which might involve the risk of grave and irreparable injury to our milling industry and by consequence to our live stock industry and to our transportation systems through the diversion of traffic to routes other than Canadian. In the meantime, realizing the economic conditions surrounding grain production in the West and the supreme and vital necessity that the net price of his grain to the farmer should be as high as the circumstances of storage facilities and rail, lake and ocean transportation will by possibility permit, the Government will continue to devote itself to the solution in the interests of the grain-grower of the question of rates of elevator companies, railway and steamship companies and other agencies whose aggregate of charges take, under present conditions, such a formidable toll from the price at which the product of western grain fields sells on the world-market at Liverpool.

Iron and Steel Industry.

During the past two years the condition of the iron and steel industry of Canada

has from time to time been brought to the attention of the Government, and it has been suggested that further aid or additional protection should be granted to it by a continuance of bounties or an increase in the tariff upon its products. Before dealing with the subject further I might be permitted to make some general observations as to the industry itself and the matter of bounties and duties upon iron and steel products. Great efforts have been made in the past by bounties and protective duties to develop and promote this industry. From 1896 to 1910 alone sums aggregating at least fifteen million dollars were paid out by way of bounties upon the production of pig-iron, steel billets and other steel manufactures. In 1910 the legislation providing for bounties came to an end and was not renewed by the late Government, who were evidently of the view that the iron and steel enterprises at Sydney and elsewhere, which had been called into being or had been promoted by such liberal outpouring of public moneys, should with the protection afforded by the tariff be able to continue and prosper without further direct aid from the public treasury. Since the date in question the bounties have not been renewed although the matter on more than one occasion has been brought to the attention of the Government. There is no doubt that among a large portion of the public there is a decided objection to the principle of bounties. My own view is that bounties are justifiable to call into being new industries where capital which is always timid as to experimental ventures requires special inducement to enter upon their development, but after such enterprises have been called into being and firmly established it is difficult to justify further aid of a direct character.

Speaking generally with regard to the iron and steel schedule of the tariff, it is my view and I believe it has been the view of most at least of my predecessors in office that the tariff upon pig-iron and billet steel, which are the raw materials to such a wide variety of industries, should be of moderate amount only. To raise the existing duties on these products would necessitate an increase of duty upon nearly all the products into which they enter as material. These would embrace all agricultural implements, all foundry and machine manufacturers' products, stoves and a multitude of other articles in general use whose price would be raised to the consumer. The difficulties in the way of increasing the duties upon pig-iron and billet steel will be apparent to all and requires no further demonstration. So far as the more finished articles of production are concerned, with the exception of wire rods, about which I shall speak later, the range of protection extends from 25 per cent to 35 per cent, and it must be borne in mind that the larger plants use the whole or the greater part of their pig-iron and billet steel in the production of these more finished articles. During the past two years, 1912 and 1913, the steel companies, speaking generally, enjoyed a prosperous trade. The enormous amount of construction and especially railway construction going on throughout Canada afforded a wide market for their products of all varieties. Particularly was there activity in steel rail production at good prices, two of the larger plants devoting almost their entire efforts to this line of manufacture. Following the financial stringency of last year there has come somewhat of a check, but as railroad building and rebuilding must always continue the outlook for the coming year and for the future in this regard must still be considered as good. It is a fact, however, that conditions have changed to this extent that the demand for steel rails is not likely to be as great in the near future as in the recent past, and the steel plants must now consider a variation in output to meet the changing conditions.

Now, I have certain proposals to make with reference to the items in the iron and steel schedules of the tariff. Item 379 of the tariff provides that rolled iron or steel beams, channels, angles and other rolled shapes weighing not less than thirty-five pounds per lineal yard have a tariff duty of $2 British preferential, $2.75 intermediate and $3 general, per ton. The House will observe that these rates are confined to what are called merchant mill products, weighing not less than 35 lb. per lineal yard. By item 377, in which the same products are included, n.o.p., the tariff is $4.25 preferential, $6 intermediate, and $7 general. That is to say, upon the smaller merchant mill products up to 35 lb. per lineal yard, the duty is $4.25 British preferential, $6 intermediate and $7 general, whereas upon the heavier products weighing over 35 lb. per lineal yard, the tariff rate is $2 British preferential, $2.75 intermediate and $3 general. That distinction was made at the time the present tariff was enacted, because the larger merchant mill products were not manufactured in Canada. They are not made in Canada in large tonnage to-day, but representation has been made to the Government by the Algoma Steel Company and by other com-

panies that if the tariff rates which now prevail in respect of the less heavy products be extended to the heavy structural merchant mill products, they will be able to obtain capital for the erection of larger merchant mills capable of producing products of a weight of 120 lb. per lineal yard. They do not ask that a rate of that kind should become immediately effectual, they ask that authority be taken by the Governor in Council to put into effect and operation those higher rates as soon as the Governor in Council is satisfied that the heavier merchant mill products of 120 lb. per lineal yard can be manufactured in Canada. The House will remember that that course was followed in connection with the tariff on steel rails; it was tentatively put on at the rate of $7 a ton until the Government was satisfied that steel rails could be manufactured in substantial quantities in Canada. We propose, therefore, to take authority to bring the tariff in respect of merchant mill products up to 120 lb. per lineal yard at the rate that I have mentioned into effect when the Government is satisfied that those products can be manufactured here in substantial quantities.

Sir WILFRID LAURIER: What are the rates?

Mr. WHITE: The rates will be those which now prevail in respect of lighter products, namely, $4 25, $6 and $7 per ton.

The Government has been requested upon many occasions during the past two years to impose a duty upon wire rods. Wire rods, which are the raw material for the production of wire nails, drawn wire and other products, are at present on the free list. There are two mills in Canada to-day manufacturing wire rods, one at Sydney, and one at Hamilton. The Dominion Iron and Steel Company has invested about $1,000,000 in a wire rod mill, which, I believe, is not fully devoted to wire rod production. The Steel Company of Canada has a wire rod mill at Hamilton which has cost them, I believe, in the neighbourhood of $750,000. The capacity of the Sydney mill—that is to say, the mill of the Dominion Iron and Steel Company—is 100,000 tons a year, and the capacity of the Hamilton mill—that is, the mill of the Steel Company of Canada—is 75,000 tons a year. Both these mills are at the present time, and have been for some time past, only in partial operation; indeed, the mill of the Dominion Iron and Steel Company has, I believe, always been in only partial operation. The importations of wire rods for the year 1913 were 92,000 tons. The demand in Canada is from 150,000 to 200,000 tons. Wire rods are imported chiefly from the United States and Germany. The price in Pittsburg to-day is about $25 per long ton. As the House is aware, depressed conditions exist to-day in the iron and steel industry of the United States, and this accounts, no doubt, for the comparatively low price at which wire rods are selling in Pittsburg. The price of wire rods at Pittsburg, plus freight to, let us say, Hamilton, is less than the average factory cost of production in Canada. As I have stated to the House, I have been approached on many occasions during the past year by the two large steel companies, who have made representations that they are ready to supply wire rods to meet the entire demand of the people of the Dominion of Canada, and that their mills are only in partial operation because of the very large tonnage which is being imported at prices which, as I have said, are lower than the average cost of production in Canada. They have asked the Government for a moderate degree of protection, setting forth that theirs is an important industry; that their product is on the free list and that they are entitled, on a fiscal policy of reasonable protection to Canadian industries, to such a tariff as will enable them to compete in fair terms for the market of Canada with the steel manufacturers of the United States, Germany and other countries. It is only fair to the House that I should say that this request upon the part of the large steel companies, the Dominion Iron and Steel Company and the Steel Company of Canada, has been opposed by the nail makers other than those two companies.

5 p.m.

I should explain to the House that these two companies of which I have spoken manufacture not only wire rods but also wire nails, which are a product of wire rods. The wire nail makers, whom I shall call in the course of my remarks the smaller nail makers, because their combined output is much less than the combined output of the two large companies, urged that the two steel companies which manufacture wire rods and also nails are in competition with them in respect of their nail product. The smaller nail makers to whom I have referred have factories in Montreal, Toronto, Collingwood, Hamilton, Owen Sound, Winnipeg, Vancouver, St. John and other places. They expressed the fear, in connection with the

application of the two large companies for a productive tariff on wire rods, that the price of their raw material might be enhanced to them, and that the larger companies, under such circumstances, might be able to undersell them in their finished product, that is wire nails. I may say that the two large steel companies are the largest producers of nails in Canada. The capacity of Canadian production is 1,500,000 kegs per annum. The Dominion Iron and Steel Company and its allied company, the Pender Company of St. John, produce 17 per cent of that output, and the Steel Company of Canada about 52 per cent, leaving about 30 per cent as the annual production of the smaller nail makers of Canada, the other firms to which I have alluded. I have said that the Dominion Iron and Steel Company and the Steel Company of Canada have urged that they are entitled to a moderate degree of protection upon their finished product, wire rods. At this stage it is proper for me to say that the tariff upon wire nails is 60 cents per keg, an average duty of about 30 per cent; so that the nail manufacturers are protected by a duty averaging about 30 per cent, whereas wire rods are upon the free list and enjoy no protection whatever. The two large companies, the Dominion Iron and Steel Company and the Steel Company of Canada, allege that it is their object to sell rods and build up their Canadian business, and that the granting of a duty would not injure any interest in Canada and by no means injure those engaged in nail making. The Government have given full consideration to the opposing views. We have reached the conclusion that the apprehension on the part of the nail making firms who have opposed the granting of a duty is not well founded. We believe it is in the interest of the nail making industry as well as the wire rod industry that a duty should be imposed. I do not believe for a moment that any attempt will be made to take any unfair advantage of the smaller nail manufacturers, but if any unfair advantage should be taken or any oppressive course of conduct exercised towards the purchasers of wire rods, the Government have, of course, the right and the power under the Customs Act, at any time they think it expedient, to lower the duty upon wire rods. We believe that it is most desirable that the important industry of wire rod manufacturing should be firmly established in the Dominion of Canada. This can only be done by a protective tariff on wire rods. To refuse the duty asked for would be to determine that from this time forward Canada should be dependent for wire rods upon foreign manufacturers. This alternative the Government does not feel that it should assume the responsibility for accepting. I have to propose, then, a duty of $2.25 British preference; $3.50 intermediate tariff and $3.50 general tariff, upon wire rods I may add that in connection with this imposition of duty no adjustment will be required; there will be no increase of duty on wire or on nails which are the product of wire rods.

There is another matter to which I wish to draw the attention of the House. At present wire rods are on the free list. Wire rods enter into the production of wire used in wire fencing. Wire fencing is used by the farmers of Canada. I propose to recommend to the House that a drawback shall be granted in respect of the duties which I shall propose upon wire rods used in the manufacture of wire of 9, 12 and 13 gauges for wire fencing.

I desire to call the attention of the House to section 288 of the Customs Act. That section relates to drawbacks of duty paid on goods exported. The House is no doubt aware that if a Canadian manufacturer exports a product from Canada he is entitled to a drawback in respect of duty paid upon the imported raw material entering into the manufacture of such exported product. Regulations have been established by Order in Council under authority of section 288 of the Customs Act to which I have referred. But a curious anomaly exists in connection with the administration of the drawback regulations, which has been a very serious detriment to the iron industry of Canada. The amendment which I have to propose has as its object the enabling of a drawback to be paid on pig-iron used in articles exported, but not exceeding the quantity imported and entered for duty. The explanation of the necessity for the amendment is as follows:

When manufacturing the same article for export and for home consumption it is found impracticable to keep the melts of foreign and domestic iron separate, so that only foreign pig iron will be used in the article exported and domestic pig iron in the like article for home consumption; so that a mixture of pig iron occurs in the course of the manufacture of other articles

made from pig iron. The proposed amendment is designed to enable drawback to be paid to the extent of the weight of pig iron used in the exported article, but not in excess of the quantity imported and on which duty has been paid. Let me illustrate by a concrete example. A manufacturer of agricultural implements requires, let us say, 30,000 tons of pig iron in respect of his entire business, both home and foreign, during the year. Let us say that his export business is 10,000 tons of product. Now, it was the intention of the section of the Customs Act which I have read, and the regulations made thereunder, that that manufacturer should be able to obtain a drawback in respect of the duties upon the foreign pig iron entering into the 10,000 tons of product exported. Let us further suppose that of the 30,000 tons of pig iron purchased our manufacturer buys 10,000 tons from the United States and 20,000 tons in Canada. They are melted up together, and when he claims his drawback in respect of the 10,000 tons of exported product, the customs officers, under the authority of this statute, are only able to give him a drawback of one-third the duty upon the 10,000 tons of imported foreign pig iron. The reason for that is that the 20,000 tons of domestic pig iron which he had purchased are melted together with the foreign pig iron. The customs officers say that it cannot be demonstrated that the 10,000 tons of American pig iron went into the 10,000 tons of manufactured product. Therefore, they say, we will not allow you a drawback in respect of the 10,000 tons of pig iron which you have imported from the United States; we must assume that only one-third of that went into the 10,000 tons of exported product; and we shall allow you, therefore, one-third of the duty which you paid on the 10,000 tons. The result is that Canadian manufacturers who manufacture for export have a special inducement to buy all their pig iron from abroad. If the manufacturer whose case I have taken had bought the whole 30,000 tons of pig iron from the United States, no question would have arisen with the customs officials. He would have been entitled to a drawback in respect of the amount exported. The pig iron industry of Canada has suffered by reason of the inducement which is held out to manufacturers under the drawback regulations to purchase all their requirements in the way of pig iron in the United States. We propose to remedy that, and on behalf of my hon. friend the Minister of Customs (Mr. Reid) I beg to give the following notice of motion:

Resolved, that it is expedient to provide that the Governor in Council may, under regulations made for the purpose, allow, on the exportation of goods manufactured in Canada and into the manufacture of which pig iron imported into Canada mixed with pig iron made in Canada has entered, a drawback, equal to the duty paid, less such deductions therefrom as is provided in such regulations, on all the pig iron imported and used by the manufacturer of such goods in manufacturing the goods exported and other goods, and the drawback may be computed on the total quantity of pig iron, including pig iron made as aforesaid, entering into such exported goods.

Mr. GERMAN: That will cover all imported pig iron?

Mr. WHITE: If 10,000 tons of pig iron come in and are purchased by a manufacturer who exports 10,000 tons of pig iron in his exported product, he will get a drawback in respect of the duty paid upon the entire 10,000 tons imported.

Sir WILFRID LAURIER: Will my hon. friend give us the text of the present clause which he proposes to amend?

Mr. WHITE: Section 288 of the Customs Act reads as follows:

The Governor in Council may, under regulations made for that purpose, allow, on the exportation of goods which have been imported into Canada, and on which a duty of Customs has been paid, a drawback equal to the duty so paid with such deductions therefrom as is provided in such regulations.

2. In cases mentioned in such regulations, and subject to such provisions as are therein made, such drawback, or a specific sum in lieu thereof, may be allowed on duty-paid goods manufactured or wrought in Canada into goods exported therefrom.

3. The period within which such drawback may be allowed, after the time when the duty was paid, shall be limited in such regulations.

I have read the resolution, and the effect of the change will be as I have already indicated to the House.

At the present time in Canada the fuel used for the production of pig iron is coke and charcoal. Coke is already on the free list; charcoal is among the unenumerated items of the tariff and subject to the duties in respect of unenumerated items. There are two furnaces in Canada engaged in the manufacture of charcoal pig iron, one at Deseronto and the other at Parry Sound. I believe both are closed at the present time on account of the depressed condition of the iron industry. We propose to put

charcoal pig iron upon the same basis as the pig iron produced from coke, and I shall therefore propose that charcoal, when imported for purposes of pig iron production shall receive a drawback of 99 per cent of the duty paid. That will be somewhat of an assistance to the charcoal pig iron industry.

I wish now to deal with a cognate subject. At present coke is free for all purposes, that is to say, an American manufacturer located at Buffalo and having his bituminous coal free of duty, can manufacture coke and supply the needs say, of Hamilton or other parts of Canada. Bituminous coal is dutiable under the present tariff at 53 cents per ton. Bituminous coal is free under drawback provision when imported by proprietors of smelting works and converted into coke at the works for the smelting of metals from ores. The drawback section in the tariff is No. 1,019. That means that the proprietors of smelting works may bring in bituminous coal and when the coal is converted into coke at their works for the smelting of metals from ores a drawback of 99 per cent is allowed in respect to the duties paid upon that coal. It is reported to us that large works would be erected in Canada, at Hamilton for one place, and possibly in other places, if proprietors of coke ovens were allowed the same privilege for the same purpose, that is to say, for the smelting of metals from ores and for foundry purposes.

Let me illustrate. A manufacturer of coke at Buffalo to-day can send his coke free to Canada for use in the smelting of metal or for foundry or other purposes. It is only open to the coke manufacturer in Canada to-day to get a drawback in respect of the duty paid upon bituminous coal or coal from which coke is produced if such coke is used at the works in the smelting of metals from ores. We propose to amend that section 1,019 so as to provide that there shall be a drawback in respect to all duties paid upon bituminous coal when imported by proprietors of coke ovens for the smelting of metals from ores and for foundry purposes. We have made careful inquiry into this matter and we have not been unmindful of the coal interests of Canada, especially those of the Maritime provinces, and we are satisfied that there will be no injurious effect to the great coal mining industries of Canada by reason of the extension of the drawback so as to enable coke manufacturers who desire to supply the Canadian market to locate in the city of Hamilton, say, instead of being obliged, under the present law, to locate in the city of Buffalo.

Mr. MACDONALD: Will the minister tell me what that limitation is exactly under the change he proposes?

Mr. WHITE: When I read the resolutions I will give my hon. friend the wording.

Mr. EMMERSON: I would like to ask the hon. minister whether there are coke ovens at Buffalo or whether the coke ovens are not located at the mines in the United States.

Mr. WHITE: I understand that there is a question at the present time as to whether a large industry will be located at Buffalo for the purpose of supplying the Canadian market, or whether it will be located in Hamilton.

Mr. EMMERSON: There are none in Buffalo now?

Mr. WHITE: I would not say that there is any. I am not aware as to whether there is or is not. I would like to meet the question of my hon. friend from Pictou (Mr. Macdonald). The wording is:

> When imported by proprietors of coke ovens and converted at their coke ovens into coke for use in the smelting of metals from ores and in the melting of metals.

They must convert the coal at their works into coke and its use is limited to the smelting of metals from ores and the melting of metals. The latter will be for foundry purposes.

Dealing further with the iron and steel industry, I would call the attention of the House to item 398 of the tariff. That item is as follows:

> Wrought or seamless iron or steel tubing, plain or galvanized, threaded and coupled or not, over 4 inches in diameter n.o.p., British preferential tariff, 10 per cent; intermediate tariff, 12½ per cent; general tariff, 15 per cent.

The House will observe that there is a limitation to 'wrought and seamless iron or steel tubing over 4 inches in diameter,' whereas tariff item 399 is as follows:

> Wrought or seamless iron or steel tubing, plain or galvanized, threaded and coupled or not, 4 inches or less in diameter, n.o.p. British preferential tariff, 20 per cent; intermediate tariff, 30 per cent; general tariff, 35 per cent.

At the time the customs tariff of 1907 was enacted this tubing over 4 inches in diameter was not being manufactured in

Canada. It is being now, and has been for some time, manufactured by the Page, Hersey Company of Welland. We intend therefore to give an increase up to 10 inches so as to meet the changed conditions regarding the manufacture of this article in Canada. In that connection we shall amend drawback clause 1,017, making it uniform and granting a drawback of 50 per cent instead of 99 per cent in respect of one of its parts.

Mr. MACDONALD: What will be the exact position of item 398? Will it be amended or is it only the drawback?

Mr. WHITE: That will drop out and will be re-enacted under two items.

Mr. NESBITT: What is the reason of the dropping of seamless tubing?

Mr. WHITE: I will explain the matter in committee. It will take considerable time to explain it. I hope that will be satisfactory to my hon. friend. I can assure him that this drawback is a comparatively unimportant matter. That concludes the tariff changes that I have to propose in connection with the iron and steel industry.

I come now to deal with the important subject of agricultural implements, and with the consent of the House I shall treat of it somewhat at length, especially in view of the debate which took place recently upon the resolution of my hon. friend from Moosejaw (Mr. Knowles), asking for the abolition of all duties upon agricultural implements.

At six o'clock the House took recess.

The House resumed at eight o'clock.

Mr. WHITE (resuming): Mr. Speaker, when the House rose at six o'clock, I was entering upon a consideration of the question of duties upon agricultural implements. I stated that it was my intention to deal with the matter somewhat at length on account of the resolution which was moved by my hon. friend from Moosejaw (Mr. Knowles) in this House recently and the debate thereon which ensued. I did not take part in that debate, because, although the resolution was entirely in order, I felt that a discussion upon a matter relating to duties could more properly take place upon the occasion of the Budget Speech. Now, Mr. Speaker, it has been recognized, I think, by all governments that it is most important that duties upon agricultural implements should be fixed at rates as reasonable as possible having regard to fiscal policy. Agriculture is recognized as the great basic industry, and it is important that the implements which the farmer uses—his plant, so to speak—should cost him as little as possible. This principle, Sir, is recognized in the tariff of to-day. The average rate of duty upon dutiable goods under the present tariff, the tariff of 1907—the tariff of the late Government as well as of the Government of to-day—is 26 per cent. The duties upon agricultural implements are chiefly 17½ per cent and 20 per cent.

Now, there is one point to which I desire to refer in this discussion. The tariff of this or of any other country—and especially of a protective country— is a structure; one part is dependent upon another part; the rates of the tariff are related one to another; the rates on finished products are related to and largely dependent on the rates on raw materials which are usually the finished product of other manufactures, and dutiable. This solidarity, so to speak, of the tariff cannot be lost sight of. Usually it is impossible to deal with a single item without at the same time dealing also with other related or dependent items. To arbitrarily single out special products and lower or abolish the duties upon them without dealing also with necessarily related duties would not only result in the grossest injustice to those affected thereby but would exercise a most harmful effect upon the entire industry of the nation by the ensuing loss of confidence on the part of the business community. On account of this consideration, it is unusual to make many tariff changes except upon occasions of general revision when the tariff can be dealt with as a whole after due inquiry and consideration as to the scope and bearing of all changes proposed. If modifications are then regarded as necessary, upon a range of products or commodities any other modifications dependent thereon or necessary thereto may also be made, to the end that injustice and disturbance of business may, as far as possible, be avoided.

Now, Mr. Speaker, this is by way of preface to the remarks which I propose to offer in respect of the resolution which was supported, I believe, unanimously by the Liberal members of this House to the effect that:

In the opinion of this House the time has arrived when, in the interests of the farmers, and consequently in the interests of the whole of Canada, the duties on agricultural implements should be forthwith removed.

Sir, there is no reservation or exception about that resolution; it is a drastic resolution calling for the abolition of all duties upon all agricultural implements of every kind and nature whatsoever. Upon the occasion of the debate on the Address, I referred to the declaration at Hamilton and at Montreal by my right hon. friend the leader of the Opposition (Sir Wilfrid Laurier), in favour of a policy of free food, and I said on that occasion, and I say now, that free food means free trade. I say further now, that free agricultural implements means free trade.

Mr. TURRIFF: Free trade in implements.

Mr. WHITE: Free trade. Having gone so far, my right hon. friend must inevitably go farther. The logical and inevitable outcome and conclusion of his declaration respecting free food and of the policy respecting free agricultural implements is the fiscal policy of free trade. Sir, I have no exception to take to my right hon. friend espousing a policy of free trade. I simply desire to say this—that we on this side of the House are ready to accept that gage of battle, whenever he chooses to throw it down.

Now, I am going to ask this House to consider the position of the manufacturer of agricultural implements with all his duties abolished. But first, what is his position under the tariff of to-day? The manufacturer of agricultural implements, as the manufacturer of other commodities in Canada, buys subject to duty, his stone, his brick and all other building materials that enter into the composition of his establishment. He buys subject to duties his engines, his machinery and his plant generally. He pays fifty-three cents a ton upon the coal that he consumes in his furnaces. He buys subject to duty his iron, his steel, his bars, his shapes, sheets, wire, forgings, plates, nuts, washers, tubing, chains, castings and practically all other articles entering into his product. The range of duties upon the articles I have mentioned is for the most part from twenty per cent to thirty per cent. With practically everything he uses dutiable, on what principle can we sweep away the duties upon the product of the manufacturer of agricultural implements? I ask this House, upon what principle can it be done? Now, is my right hon. friend prepared to take the further logical step and to vote for the abolition of all duties upon the raw and finished products entering into the manufacturing of agricultural implements? To do so would work the most serious damage to all industries concerned: to the coal industry, to our great basic iron and steel industry, to our machine and foundry industry, to say nothing of a multitude of others of minor importance. A large part of their tonnage would be lost to foreign manufacturers, and many establishments would undoubtedly close their doors. Let us assume for a moment that my right hon. friend was ready to go so far as that; would he then accomplish the end that he had in view? Could the manufacturer of agricultural implements—and by agricultural implements I mean all agricultural implements, because that is what the resolution had in contemplation—could he, if he had all the products constituting his material upon the free list, hold his own in competition with the implement makers of the United States? The cost of production is necessarily higher in Canada, even under those conditions, for this reason: it is a well-known fact that cost of production is in inverse ratio to the tonnage: the greater the tonnage, the greater the number of implements manufactured, the less the cost of production, and until this country has developed its industry to the extent to which it has been developed in the United States, it will not be possible for us to compete on even terms with the highly specialized and powerful industries of that republic.

One of the greatest markets for agricultural implements in Canada is the Northwest. I have been looking into the question of freight rates and I find that the freight rates between Chicago and Winnipeg upon agricultural implements are lower than they are between Hamilton and Winnipeg. Therefore, even if the duties upon raw materials were abolished, the Canadian manufacturer of agricultural implements would be at a disadvantage with his American competitors. That being so, what would be the inevitable result of the policy, advocated by hon. gentlemen opposite, of the abolition of duties on all agricultural implements of every kind and nature whatsoever? The effect would be this: it would transfer the entire agricultural implement business of Canada to the United States; it would depopulate some of our most thriving towns, and for what? That an American trust ultimately might gain control of the Canadian market from east to west and dictate prices at its own sweet will.

I propose to examine this agricultural implement industry; to see where are the manufactories engaged in the production of agricultural implements, and to see how important is this industry to Canada. According to the census of 1911 there are in Canada seventy-seven of these establishments, with a capital of $45,000,000. The number of employees at factories and head offices, nearly all men, is 9,560, and the amount of salaries and wages paid is $5,550,000, materials used amount to $10,400,000, and the value of products is $20,700,000. There are fifty-four of these establishments in Ontario, located at forty-three different places and in 35 electoral districts. The capital invested in Ontario alone is $44,000,000. The other establishments are located in the province of Quebec, and at Winnipeg and Brandon in the province of Manitoba. I have a complete list of the places in which there are manufactories of agricultural implements. I shall not go through it in detail, but for the information of the House—because it was a surprise to me—I propose to mention to-night the names of the places in Canada in which agricultural implements of one kind or another are manufactured. This is the list: Hamilton, Brockville, Toronto, Peterborough, Preston, St. Mary's, Smith-Falls, Teeswater, Welland, Terrebonne, Guelph, Ingersoll, St. George, Woodstock, Brantford, Cowansville, Aurora, Ayr, Bolton, Goderich, Merrickville, Orillia, Paris, La Prairie, Montmagny, Tillsonburg, Brandon, Chatham, Waterloo, New Hamburg, St. Hyacinthe, Winnipeg, Ottawa, Ridgetown, St. André, Warwick, Summerside, P.E.I., Calgary, St. Thomas, St. Catharines, Stratford, Iberville, Joliette, Halifax, New Glasgow, Waterloo, Walkerville, Sorel, Waterville. So far as the record goes, there are agricultural implement establishments in every province except British Columbia. In these places there is invested $45,000,000 of capital, the manufactories supporting directly, in operatives and their families, probably 50,000 people—the mainstay industrially of many of the towns that I have mentioned, which afford a market for the surrounding country; these are the establishments that the policy of hon. gentlemen opposite, the policy of the abolition, root and branch, of duties on agricultural implements, would destroy.

What is the condition to-day of those engaged in the manufacture of agricultural implements ? I have looked into this matter with a view of ascertaining the facts and dealing with them, I trust, fairly and judicially. Those engaged in the manufacture of agricultural implements have felt, in common with those engaged in all other enterprises, and are feeling to-day the financial conditions which have prevailed in Canada during the past two years. Those conditions have been aggravated by a credit system under which the manufacturers of agricultural implements become virtually the bankers for many of those to whom they sell their products. Last year their expectations were disappointed as to the demand there would be for their productions, and to-day the agricultural implement manufacturers of Canada are carrying large inventories because of the over-production of last year. They are confronted this year with the condition that prevailed to a large extent last year. Money is becoming easier, but they do not expect that their output of this year will at all reach the output of the last and preceding years. Having regard to the fact that the tariff rates upon one commodity are fixed with regard to the rates upon the raw material entering into its production; and having regard to the financial conditions which prevail to-day and affect that industry in common with all others, I say that any extreme, high-handed or arbitrary action could only result most disastrously to that industry. Sir, we are not here to destroy but to encourage and promote Canadian industry. I say that that is our mandate as a Government from the people of Canada. Now we have not been unmindful of the interests of the farmer. We have been desirous that the tariff upon his implements, his plant should be as reasonable as possible, consistent with our fiscal policy and conditions as they exist in Canada to-day. But, Sir, we have approached the subject in a rational way. We have made inquiries. For considerably over a year past we have been making inquiries and investigations into the question of agricultural implements. We have made an investigation into the prices of agricultural implements on both sides of the line, in Canada and in the United States. We have made an inquiry as to the factory cost of production of the principal agricultural implements in Canada and in the United States. We have examined the balance sheets of manufacturers with the idea of ascertaining what their position is and whether or not they are making undue profit upon their business.

Mr. TURRIFF: Would the hon. gentleman state whether, in making that examination, he also examined as to what amount

of cash was in the stock and what amount of water?

Mr. WHITE: The examination as to selling price was made by a trusted official of the Customs Department, Mr. Thomas Costello. We examined into the cost of production. I examined the balance sheets myself and I think, without paying myself too much of a compliment, that I know something about a balance sheet. After having given this matter the most careful and painstaking consideration, we are satisfied that on only one range of implements can the duty be lowered without violation of the fiscal policy of reasonable protection which is designed to encourage and promote the establishment of industries in Canada. There is in the tariff an item respecting a range of implements which are much used in the northwestern provinces; I refer to harvesters, reapers, binders and mowers. I think I should point out to the House, because it is pertinent to the observations I made a short time ago with reference to the duties upon raw material entering into products, that there exists a drawback upon iron and steel, the principal commodities used in the production of these implements, harvesters, reapers, binders and mowers. We have been asked upon more than one occasion to repeal that drawback and to give the steel manufacturers the benefit of the market. There is much to be said for that course. It is a course which would commend itself to one seeking to follow a policy of protection. But, in the interests of the farming community and having regard to the tariff as it exists to-day, we have said: We will allow that drawback item to stand. That drawback upon iron and steel is equivalent to about two or two and a half per cent upon the value of a binder, reaper, mower or harvester. I differentiate the industry engaged in the manufacture of harvesters, reapers, binders and mowers from the others.

Mr. McCOIG: Would the minister state what he means by harvesters, reapers and binders?

Mr. WHITE: I am quoting the words used in the tariff.

Mr. McCOIG: A harvester and a binder are the same thing, it is one machine.

Mr. GERMAN: Does the minister refer to two classes of machine or to one?

Mr. WHITE: We will call them one, anything for peace. We will say harvesters, reapers and mowers. The binder does not count, because it means the same thing as a harvester. When I was a boy we used to call them binders. There are three firms in Canada engaged to-day in the manufacture of harvesters, reapers and mowers, the Massey-Harris Company, of Toronto, the International Harvester Company, of Hamilton, and the Frost & Wood Company, of Smith Falls.

Mr. NESBITT: And the Noxon Company, of Ingersoll.

Mr. WHITE: I had overlooked that firm; I shall be glad to learn of any others. I would make this distinction between the cases of harvesters, reapers and mowers and all other agricultural implements, that for home consumption there is a drawback upon iron and steel products entering into the manufacture of those three implements. That is one point of distinction between the industries engaged in the manufacture of those implements and industries engaged in the manufacture of all other agricultural implements. Another point of distinction is this. Those are among the most highly developed industries in the world. The manufacture of harvesters, reapers and mowers has been brought to an extraordinary point of perfection both in Canada and in the United States, and it is a matter of pride to me that the Canadian manufacturer of harvesters, reapers and mowers is not only able to hold his own but to do exceptionally well and sometimes to best his competitors in the markets of the world.

Mr. McCOIG: Will that include corn harvesters as well as grain harvesters?

Mr. WHITE: I am unable to answer that question immediately, it is a more or less technical question, and I have not the information at the moment.

Mr. McCOIG: They are both harvesters.

Mr. WHITE: I am covering, or intending to cover the item in respect of which a drawback is given on pig iron and steel and their products entering into the manufacture of the implements. I think it does include corn harvesters, but I am unable to say definitely to my hon. friend, because the matter has not been called to my attention. What is, then, the position of these manufacturers of harvesters, reapers and mowers? The Massey-Harris Company has an export business equal to sixty-five per cent of its output. The International Harvester Company of Chicago has, of course, a large export

business, but I understand that its export business in Canada is not large. Having regard to the highly developed condition of this industry, and to the fact that it enjoys a drawback in respect of iron and steel, which are the principal products entering into the manufacture of agricultural implements, we have, after the most careful consideration, reached the conclusion that the duty upon harvesters, reapers, binders and mowers, which now stands at 17½ per cent in the customs tariff of 1907, can be reduced to 12½ per cent.

Mr. SCHAFFNER: Why do not gentlemen opposite cheer now?

Mr. WHITE: that is 2½ per cent lower than the rates upon harvesters, reapers, binders and mowers proposed in the celebrated reciprocity agreement. Having regard to the cost of production of these implements in the United States and in Canada to-day, and having regard to the greater tonnage of the United States output, and to the difference in freight rates in favour of the United States manufacturers of those implements, I say that that is as low a rate as we are able to obtain if we are to retain these great industries in the Dominion of Canada. Statistics of the Customs Department show that in respect of export of harvesters, reapers, binders and mowers, the drawback, which means all the duty that has been paid upon foreign material entering into their manufacture, is about equivalent to 5 per cent. If, therefore, we take into consideration the 2½ per cent which we are still allowing them, and, further, the 2½ per cent representing the balance of that 5 per cent, harvesters, reapers, binders and mowers are really, so far as protection is concerned, on a 10 per cent basis. I have dealt, I am afraid, somewhat at length, but I hope fairly and justly, with the question of agricultural implements.

There is just one other matter that I have to deal with. Last year we placed upon the free list ditching machines, but inadvertently omitted parts of ditching machines. This year we shall put parts of ditching machines upon the free list.

I now come to another topic—the question of building stone. By item 306 of the tariff, there is a duty of 20 per cent on building stone dressed, and on rough stone a duty of 15 per cent. That is a difference of 5 per cent, but that margin is more than nullified by the freight rates, and for this reason: When a block of stone is dressed it loses a certain amount of its weight; dressed stone comes in at a 20 per cent duty, but in the dressing, which adds value to it, sufficient weight has been taken off the stone to more than counterbalance, having regard to freights, the margin between the duty upon rough stone and the duty on the finished product. This has been a very great disadvantage to the Canadian stonecutters. Notwithstanding the building activity of the past few years, there have been frequent periods of unemployment among the stonecutters of Canada. The stone comes from Ohio and Indiana, where, for the most part, the work is done. We have been repeatedly petitioned by the stonecutters throughout Canada for a modification of this tariff item, which will permit the rough stone to come in at precisely the same rate of duty existing to-day, and give the work upon that rough stone, the sawing, the dressing and the planing to the stonecutters of Canada. We propose, therefore, that stone sawn on two sides shall continue to come in at the present rate of duty but that on stone sawn on four sides the rate shall be fifteen cents per 100 pounds. There is very great difficulty in administering the tariff to-day on account of the difficulty in ascertaining the value of finished, dressed stone coming in as an import. The average ad valorem of the specific rate which I have quoted is 30 per cent. Upon turned, planed, cut or further finished stone I propose a rate of 45 cents per 100 pounds, which is equal to 30 per cent ad valorem. The reason why that higher rate is about the equivalent ad valorem rate to the lower specific rate on stone sawn on four sides is because of the greater value of the stone which has been planed, turned, cut or further finished. These are the proposals which the Government has to offer in regard to building stone, and I believe that the increase in the tariff rate will enure directly to the benefit of the stonecutters of Canada and indirectly to the country.

One further item—caustic soda and hypochlorite of lime. At present these two items are on the free list. The Canadian Salt Company at Windsor, which employs many men and has a large capital invested in its plant, has for three years been manufacturing these products made from salt. The manufacture of caustic soda and hypochlorite of lime—which is a by-product of

caustic soda—is a natural industry in connection with salt production. The users of caustic soda and chloride of lime are the soap and paper manufacturers, but they use a very small proportion indeed having regard to their production. Therefore, it is not necessary that there should be any readjustment or increase of the tariff by reason of the rates which I shall have the honour to propose to the House. The Canadian Salt Company at Windsor produce now one-third of Canada's requirements in caustic soda. They hope, with the aid of this duty, to produce all. Later, I shall give, in the resolutions which I shall propose, the rates of duties which I have to offer with respect to these two commodities.

I come now to another matter which has been brought to our attention; that is, the tariff with respect to brass. In the tariff of 1907 brass in sheets, bars and rods was dutiable at 10 per cent. It was not manufactured in Canada, and, under a provision of the Customs Act, on August 11, 1908, the Governor in Council abolished the duty of 10 per cent on brass bars and rods, and it consequently was placed upon the free list. I have stated that it was not then manufactured in Canada. However, I am now glad to say that it is manufactured in Canada. A new plant, involving a capital of about $250,000, modern, up to date, and well equipped, has been established at West Toronto for the manufacture of copper and brass. I propose now, and it also will involve no tariff adjustment, to restore the item of brass in sheets, bars and rods to the tariff, fixing the same duty as was fixed with respect to it in the tariff of 1907.

Now, I approach the end of what I fear has been a somewhat long-drawn-out and tedious Budget. There are a number of minor changes, some of consequence, but chiefly for administrative purposes. Before reaching the resolutions which we have to propose, in order to give notice of them, there is a matter to which I desire briefly to advert and it is the question of a bounty upon iron ore. This matter has been brought to the attention of the Government by the hon. member for Thunder Bay and Rainy River (Mr. Carrick) who, in a very able speech, introduced the subject to the House. The matter has been discussed in the press, and I notice that it has been made the subject of a debate in the Legislature of the province of Ontario. Without dilating further upon the subject, because the debate which ensued was of a very illuminating and informing character, I desire to say that the Government feels that at the present time it has not sufficient information before it as a basis for intelligent legislative action. Speaking this afternoon with regard to the question of bounties generally, I said that, personally, I saw no objection to bounties granted for the purpose of calling an industry into being, but that there was a strong objection to continuing bounties to industries that had been firmly established. We propose, in respect to this important matter, which has been brought to our attention by the hon. member for Thunder Bay and Rainy River to cause an inquiry to be instituted by the Mines Department during the coming summer for the purpose of ascertaining the extent and availability of Canada's ore deposits and the character of the ore, and securing information as complete as possible as to improved methods of treatment. We desire to ascertain, as a result of that inquiry, whether a bounty will induce development and place the Canadian iron ore industry in a reasonable time upon a secure basis, enabling it to compete with foreign ore without the adventitious aid of further bounties.

There is another matter also involving the question of bounties which I desire to call to the attention of the House. There has been placed before us recently, in fact since the beginning of the year, the question of the development in Canada of flax fibre production. I think that the development of the industry of flax fibre production would be of great advantage to certain parts of Canada provided it could be carried on successfully here. But the success of manufacturing flax fibre will depend upon the efficiency of the flax pulling machines and the flax fibre manufacturing machines. I am unable at present to express any opinion as to whether the flax fibre industry is one which, having regard to the labour conditions that prevail in this country, and the stage of invention of the machinery required, should be regarded as a possible industry, but during the summer it is our intention to look fully into the matter and see whether such an industry is possible of development in Canada, and whether a reasonable bounty

would have the effect of contributing to its institution and development.

Mr. MURPHY: By whom will the inquiry be made?

Mr. WHITE: The first inquiry will be made by the Mines Department, and I am now communicating with Mr. Brock. The second inquiry will be conducted by the officers of the Finance Department, tariff branch. That is what I have in my mind at the present time. If it is necessary, we can easily obtain outside expert assistance in the matter.

I propose to offer an amendment to section 7 of the Customs Tariff Act of 1907. That section is as follows:

Articles which are the produce or manufacture of any foreign country which treats imports from Canada less favourably than those from other countries may be subject to a surtax over and above the duties specified in schedule 'A' to this Act, such surtax in every case to be one-third of the duty specified in the general tariff in the said schedule.

I would call the attention of the House to the fact that the provision of one-third is inflexible; that is to say, it must be one-third, no more and no less. In similar legislation in other countries—Germany, Japan and Italy—there is a provision that the surtax may be a rate not exceeding 50 per cent or 30 per cent; that is to say, it is in the discretion of the Government whether it will be 2 per cent, or 15 per cent, or more.

I purpose, Sir, offering an amendment to section 7 of the customs tariff, which will provide that imports from countries which discriminate against the imports of Canada or against Canadian shipping may be subject to a surtax over and above the duty specified in the Customs Tariff Act, to an amount not exceeding twenty per cent ad valorem. That is to say, it may be two per cent, or five per cent, or ten per cent, or fifteen per cent, but it must not, under any circumstances, exceed twenty per cent, ad valorem. I desire to give notice that upon the House resolving itself into Committee I shall move the following resolutions—

Mr. SINCLAIR: Would the minister tell the House whether he has considered the application made last year and the year before for a reduction of the tariff on fishing twine, known as marlin. This duty discriminates against the lobster fisheries, all other fishing twine being free. The Minister of Customs told the House last year that when the tariff was dealt with this matter would be considered.

Mr. WHITE: The matter is not dealt with in the changes which I have to propose to the House. I understand that there would be difficulty in the administration of an item such as, I think, the hon. gentleman (Mr. Sinclair) has in mind,

9 p.m.

but the matter has not been drawn to my attention, so far as I recall, since the House was in Committee upon the Budget of last year. I now beg to give notice that, upon the House resolving itself into Committee, I shall move the following resolutions:

1. Resolved, that it is expedient to provide, in substitution for section 7 of the Customs tariff, 1907:—

(a) that goods the product or manufacture of any foreign country which treats imports from Canada less favourably than those from other countries may be made subject by Order in Council in the case of goods already dutiable to a surtax not exceeding twenty per centum ad valorem, and in the case of goods not dutiable to a rate of duty not exceeding twenty per centum ad valorem;

(b) that goods the product or manufacture of any foreign country imported into Canada in vessels registered in such foreign country may, if such foreign country imposes higher duties of customs upon goods imported into such country in vessels registered in Canada than upon the like goods when imported in vessels of such country, be made subject by Order in Council in the case of goods already dutiable to a surtax not exceeding twenty per centum ad valorem, and in the case of goods not dutiable to a rate of duty not exceeding twenty per centum ad valorem.

2. Resolved, that the customs tariff, 1907, be amended by authorizing the Governor in Council when satisfied that rolled iron or steel angles, beams, channel and other rolled shapes or sections, or iron or steel weighing one hundred and twenty pounds and less per lineal yard, are manufactured in substantial quantities in Canada from steel made in Canada to direct that there be substituted for tariff item 379 in schedule A to the customs tariff, 1907, the following:

Tariff Items.	—	British Preferential Tariff.	Intermediate Tariff.	General Tariff.
		$ cts.	$ cts.	$ cts.
379	Rolled iron or steel angles, beams, channels, and other rolled shapes or sections, of iron or steel, not punched, drilled or further manufactured than rolled, weighing over one hundred and twenty pounds per lineal yard, n.o.p. not being square, flat, oval or round shapes, and not being railway bars or rails per ton	2 00	3 00	3 00

3. Resolved that schedule A to the Customs tariff, 1907, as amended by chapter 15 of the Acts of 1913, and by Orders in Council be further amended by striking thereout tariff items: 113, 184, 208, 210a, 296, 306, 315, 361, 375, 398, 404, 410, 411, 445, 446a, 460, 471, 486, 542, 543, 545, 546, 575, 577, sections (a) and (d) of the Orders in Council dated 11th August, 1908, designated as items 717 and 720 of the customs tariff, the several enumerations of goods respectively, and the several rates of duties of customs, if any, set opposite each of said items, and to provide that the following items, enumerations and rates of duties be inserted in said schedule A:—

Tariff Items.	—	British Preferential Tariff.	Intermediate Tariff.	General Tariff.
39c	Cassava flour, when imported by manufacturers of explosives, for use exclusively in the manufacture of such articles in their own factories	Free.	Free.	Free.
79a	Rooted carnation cuttings in their first year of introduction	Free.	Free.	Free.
99a	Dried or evaporated bananas.....per pound	Free.	½ cent.	½ cent.
113	Cocoanut, desiccated, sweetened or not per pound	3 cents.	4 cents.	4 cents.
157a	Amyl alcohol or refined fusel oil, when imported by the Department of Inland Revenue or by a person licensed by the Minister of Inland Revenue, to be denatured for use in the manufacture of metal varnishes or lacquers, to be entered at ports prescribed by regulations of the Ministers of Customs and Inland Revenue, subject to the Inland Revenue Act and to the regulations of the Department of Inland Revenue	Free.	Free.	Free.
178a	Provided that on the goods specified in item 178 and imported by mail on and after first day of July, 1914, duties may be paid by Customs Revenue stamps, under regulations by the Minister of Customs, at the rates specified in said item, except that on each separate package weighing not more than one ounce the duty shall be..... each	1 cent.	1 cent.	1 cent.
184	Newspapers, and quarterly, monthly, and semi-monthly magazines, and weekly literary papers, unbound; tailors', milliners' and mantle-makers' fashion plates when imported in single copies in sheet from with magazines or periodical trade journals	Free.	Free.	Free.
188a	Decalcomania paper not printed when imported by manufacturers of decalcomania transfers to be used in their own factories in the manufacture of decalcomania transfers	Free.	Free.	Free.

Tariff Items.	—	British Preferential Tariff.	Intermediate Tariff.	General Tariff.
208	Boracic acid and borax in packages of not less than twenty-five pounds weight; hydro-fluosilicic acid; oxalic acid; tannic acid; ammonia, sulphate of; sal ammoniac and nitrate of ammonia; cyanide of potassium; cyanide of sodium and cyanogen bromide for reducing metals in mining operations; antimony salts, viz.:—tartar emetic, cholrine and lactate (antimonine); arsenous oxide; oxide of cobalt: oxide of tin; bichloride of tin; tin crystals; oxide of copper; precipitate of copper, crude; sulphate of copper (blue vitriol); verdigris or subacetate of copper, dry; sulphate of iron (copperas); sulphate of zinc; chloride of zinc; sulphur and brimstone, crude or in roll or flour; cream of tartar, in crystals or argols; tartaric acid crystals; iodine, crude; bromine; phosphorus; sulphide of arsenic; carbon bisulphide.....	Free.	Free.	Free.
208a	Chloride of lime and hypochlorite of lime:—			
	1. When in packages of not less than twenty-five pounds weight each.....per one hundred pounds.....	10 cents.	15 cents.	15 cents.
	2. When in packages of less than twenty-five pounds weight each.....	17½ p.c.	25 p.c.	25 p.c.
210a	Caustic soda:—			
	1. When in packages of not less than twenty-five pounds weight each.....per pound	1-5cent.	3-10 cent.	3-10 cent.
	2. When in packages of less than twenty-five pounds weight each.....	17½ p.c.	25 p.c.	25 p.c.
278a	Peanut oil for manufacturing soap or for canning fish; soya bean oil for manufacturing soap...	Free.	Free.	Free.
296	Flint, ground flint stones; felspar, fluorspar, magnesite; mica schist; cliff, chalk, china or Cornwall stone, ground or unground, refuse stone, not sawn, hammered or chiselled nor fit for flagstone, building stone or paving....	Free.	Free.	Free.
306	Marble, sawn or sand rubbed, not polished; granite, sawn; paving blocks of stone; flagstone and building stone, other than marble or granite, sawn or not more than two sides....	15 p.c.	20 p.c.	20 p.c.
306a	Building stone, other than marble or granite, sawn on more than two sides but not sawn on more than four sides, per hundred pounds....	10 cents.	15 cents.	15 cents.
306b	Building stone, other than marble or granite, planed, turned, cut or further manufactured than sawn on four sides, per one hundred pounds	30 cents.	45 cents.	45 cents.
315	Carbons over six inches in circumference or outside measurement and not exceeding thirty-five inches in circumference or outside measurement.....	Free.	Free.	Free.
315a	Carbon electrodes exceeding thirty-five inches in circumference or outside measurement..... ..	12½ p.c.	20 p.c.	20 p.c.
327a	Silvered lenses for automobile lamps.....	10 p.c.	15 p.c.	15 p.c.
353a	Aluminum leaf or foil.....	Free.	Free.	Free.
361	Gold and silver leaf; Dutch or schlag metal leaf; brocade and bronze powders.....	15 p.c.	27½ p.c.	27½ p.c.
375	Iron in pigs, iron kentledge, and cast scrap iron; ferrosilicon containing not more than fifteen per cent silicon; ferromanganese and spiegeleisen, containing not more than fifteen per cent manganese, per ton.....	$1 50	$2 50	$2 50

Tariff Items.	——	British Preferential Tariff.	Intermediate Tariff.	General Tariff.
375a	Ferrosilicon containing more than fifteen per cent silicon, per ton	$3 00	$4 50	$4 50
375b	Ferromanganese and speigeleisen, containing more than fifteen per cent manganese	Free.	Free.	Free.
378a	Galvanized rolled hoop iron or hoop steel, numbers twelve and thirteen gauge....per ton.	$4.25	$7.00	$7.00
398	Wrought or seamless iron or steel tubing, plain or galvanized, threaded and coupled or not, over four inches in diameter but not exceeding ten inches in diameter, n.o.p	20 p.c.	30 p.c.	30 p.c.
398a	Wrought or seamless iron or steel tubing, plain or galvanized, threaded and coupled or not, over ten inches in diameter, n.o.p	10 p.c.	15 p.c.	15 p.c.
404	Galvanized iron or steel wire, curved or not, numbers nine, twelve and thirteen gauge with variations from such gauges not exceeding four one-thousands of an inch, and not for use in telegraph or telephone lines	Free.	Free.	Free.
410	Coil chain, coil chain links including repair links, and chain shackles, of iron or steel, one and one-eighth of an inch in diameter and over	Free.	5 p.c.	5 p.c.
410a	Coil chain, coil chain links including repair links, and chain shackles, of iron or steel, n.o.p	15 p.c.	20 p.c.	20 p.c.
411	Malleable sprocket chain, and link belting chain of steel, when imported by manufacturers of agricultural implements for use in the manufacture of such implements in their own factories	Free.	Free.	Free.
445	Mowing machines, harvesters, self binding or without binders, binding attachments, reapers, and complete parts thereof, not including shafting or malleable iron castings, also finished parts for repairs of the machines specified in this item	12½ p.c.	12½ p.c.	12½ p.c.
445a	Malleable iron castings when imported by manufacturers for use exclusively in their own factories in the manufacture of mowing machines, harvesters, binding attachments and reapers	15 p.c.	17½ p.c.	17½ p.c.
446a	Traction ditching machines (not being ploughs) adapted for tile drainage on farms, valued by retail at not more than three thousand dollars each, and complete parts thereof for repairs	Free.	Free.	Free.
453a	Electrical dental engines	15 p.c.	27½ p.c.	27½
460	Sundry articles of metal as follows, when for use exclusively in mining or metallurgical operations, viz.:—Diamond drills, not including the motive power; coal cutting machines, except percussion coal cutters, coal augers and rotary coal drills; coal heading machines; core drills; miners' safety lamps and parts thereof, also accessories for cleaning, filling and testing such lamps, electric or magnetic machines for separating or concentrating iron ores; furnaces for the smelting of copper, zinc and nickel ores; converting apparatus for metallurgical processes in metals, copper plates, plated or not; machinery for extraction of precious metals by the chlorination or cyanide processes; amalgam safes; automatic ore samplers; automatic feeders; retorts; mercury pumps; pyrometers; bullion furnaces amalgam cleaners; blast furnaces blowing engines; and integral parts of all machinery mentioned in this item	Free.	Free.	Free.

Tariff Items.	—	British Preferential Tariff.	Intermediate Tariff.	General Tariff.
471	Rolled round wire rods in the coil, of iron or steel not over three-eighths of an inch in diameter, when imported by wire manufacturers for use in making wire in the coil in their own factories ..... per ton.	$2 25	$3 50	$3 50
471a	Rolled round rods in the coil, of iron or steel, whether annealed or cleaned, or not when imported by manufacturers of chain for use only in their own factories in the manufacture of chain..... per ton.	$2 25	$3 50	$3 50
478a	Iron or steel bands, strips or sheets, number fourteen gauge or thinner, coated, polished, or not, and rolled iron or steel sections, not being ordinary square, flat or round bars, when imported by manufacturers of saddlery hardware and hames for use exclusively in the manufacture of such articles in their own factories.....	Free.	Free.	Free.
486	Iron tubing, brass covered, not over three inches in diameter, and brass trimmings, not polished, lacquered or otherwise manufactured, when imported by manufacturers of iron or brass bedsteads for use exclusively in the manufacture of such articles in their own factories..	Free.	Free.	Free.
494a	Cork slabs, boards, planks and tiles produced from cork waste or granulated or ground cork	20 p.c	30 p.c	30 p.c
533a	Garnetted wool waste in the white when imported by manufacturers of woolen goods for use exclusively in their own factories.....	Free.	Free.	Free.
542	Jute or hemp yarn, plain, dyed or coloured, when imported by manufacturers for use exclusively in their own factories for weaving purposes, or for insulating wire, or for the manufacture of hammocks and twines.....	Free.	Free.	Free.
543	Linen yarn when imported by manufacturers of towels, damask, or seamless linen fire hose duck, for use exclusively in the manufacture of such articles in their own factories.....	Free.	Free.	Free.
545	Jute and jute butts; jute cloth or jute canvas, as taken from the loom, not coloured, cropped mangled, pressed, calendered, nor finished in any way.....	Free.	Free.	Free.
546	Jute cloth or jute canvas, uncoloured, not further finished than cropped, bleached, mangled, or calendered.....	7½ p.c.	10 p. c.	10 p.c.
548a	Twine or yarn of paper when imported by manufacturers of furniture for use only in their own factories in the manufacture of furniture.....	Free.	Free.	Free.
575	Embroideries, n.o.p., lace, n.o.p., braids n.o.p., tapes of cotton or linen not over one and one-quarter inches in width, not including measuring tape lines; fringes, n.o.p.; cords; elastic, round or flat; garter elastic; tassels; handkerchiefs of all kinds; lace collars and all manufactures of lace; nets and nettings of cotton, linen, silk or other material n.o.p.; shams and curtains, when made up, trimmed or untrimmed; corsets of all kinds, linen or cotton clothing, n.o.p.....	25 p.c.	32½ p.c.	35 p.c.
577	Silk in the gum or spun silk, when imported by manufacturers of silk thread, silk underwear or of woven labels, for use exclusively in the manufacture of such articles in their own factories.....	Free.	Free.	Free.

Tariff Items.	—	British Preferential Tariff.	Intermediate Tariff.	General Tariff.
651a	Buttons of vegetable ivory.....per gross.... and.....	5 cents. 20 p. c.	5 cents. 30 p.c.	5 cents. 30 p.c.
671a	Metal tips, studs and eyes adapted for the manufacture of corset clasps and corset wires.....	Free.	Free.	Free.
692a	Articles presented from abroad in recognition of the saving of human life, under regulations by the Minister of Customs.....	Free.	Free.	Free.

4. Resolved, that Schedule B to The Customs Tariff, 1907 be amended by striking thereout tariff items 1017 and 1019, the several enumerations of goods respectively, and the several rates of drawback of customs duties set opposite each of the said items, and to provide that the following items, enumerations, and rates of drawback of customs duties be inserted in said Schedule B:

Item No.	Goods.	When subject to Drawback.	Portion of duty (not including special duty or dumping duty) payable as Drawback.
1,017	Lapwelded tubing of iron or steel, not less than four inches in diameter, threaded and coupled or not.	When used in casing water, oil and natural gas wells, or for the transmission of natural gas under high pressure from gas wells to points of distribution..:	50 per cent.
1,019	Bituminous coal.....	When imported by proprietors of coke ovens and converted at their coke ovens into coke for use in the smelting of metals from ores and in the melting of metals.....	99 per cent.
1,021	Rolled round wire rods in the coil, of iron or steel, not over three-eights of an inch in diameter...	When used in the manufacture of galvanized iron or steel wire, curved or not, numbers nine, twelve and thirteen gauge, with variations from such gauges not exceeding four one-thousands of an inch.....	99 per cent.
1,022	Charcoal.....	When used for the smelting of metals from ores.....	99 per cent.
1,023	Rolled hexagon iron or steel bars...	When used in the manufacture of cold drawn or cold rolled iron or steel bars, or turned and polished shafting	99 per cent.
1,024	Yarns composed in chief value of wool, single, numbers thirty and finer, on mule cops, tubes or cones, or in hanks, dry spun on the French or Belgium systems, in white only, not doubled or twisted.	When used in the manufacture of socks and stockings.....	99 per cent.

5. Resolved, that Schedule C (prohibited goods) to the Customs Tariff, 1907, shall be amended by adding the following:

1212. Aigrettes, egret plumes, or so called osprey plumes, and the feathers, quills, heads, wings, tails, skins, or parts of skins of wild birds either raw or manufactured; but this provision shall not come into effect until 1st January, 1915, and shall not apply to:

(a) the feathers or plumes of ostriches;

(b) the plumage of the English pheasant and the Indian peacock;

(c) the plumage of wild birds ordinarily used as articles of diet;

(d) the plumage of birds imported alive; nor to—

(e) Specimens imported under regulations of the Minister of Customs for any natural history or other museum or for educational purposes.

6. Resolved, that the foregoing provisions shall be held to have come into force on the seventh day of April, 1914, and to have applied to all goods imported or taken out of

warehouse for consumption on and after that day, and to have also applied to goods previously imported for which no entry for consumption was made before that day, except as otherwise provided in the foregoing resolutions: Provided, nothwithstanding any increase in customs under the said resolution, that all goods actually purchased on or before the sixth day of April, 1914, for importation into Canada, on evidence satisfactory to the Minister of Customs of the purchase having been so made, and all goods in warehouse in Canada on such day, if entered for duty after importation prior to the first day of July, 1914, may be entered at the rate of duty in force on the said sixth day of April, 1914.

Mr. Speaker, this is the third occasion upon which I have had the honour of presenting the Budget to the House, and I have again to express my most grateful thanks for the courtesy, attention and patience with which you have heard me.

Mr. A. K. MACLEAN (Halifax): Mr. Speaker, during the day the Prime Minister and the Minister of Finance were good enough to agree to the adjournment of the debate this evening until to-morrow, if we upon this side of the House so desired, and I wish to acknowledge their courtesy in that regard. It has come to my attention, however, that a great number of hon. gentlemen upon this side of the House desire that the debate shall be resumed, not to-morrow, but after the Easter holidays, upon a date to be fixed by the Government. In any event, the debate cannot be concluded before the adjournment on Wednesday of this week, and I think it would be just as well if the debate were adjourned at this stage, as to-morrow or the following day. Further, a great number of the members of the House who live at a distance from Ottawa, will be leaving to-morrow, and I imagine that there will be a very small attendance in the House. I trust, therefore, the Prime Minister will agree that the debate be adjourned this evening, to be resumed on, say, Thursday of next week.

It was suggested to me by the hon. member for St. Antoine (Mr. Ames) that, in the event of an adjournment this evening until next week, it would be but fair that the Prime Minister should be advised by the Opposition of any amendment contemplated to the resolution just moved by the Minister of Finance. I have conferred with the leader of the Opposition upon this point, and I am in a position to say that, in the event of such an adjournment being granted, he will be pleased to communicate the substance of any amendment which may be contemplated by the Opposition. I trust that my suggestion that the debate be adjourned till Thursday of next week will be favourably received by the Government.

Mr. SPEAKER: I think it would not be quite regular to move that the debate be adjourned to any specific date.

Mr. A. K. MACLEAN: I would move the adjournment of the debate.

Mr. BORDEN: I understand that it would not be very convenient for some hon. gentlemen on this side of the House who intend to speak immediately after my hon. friend (Mr. A. K. Maclean), to have the debate resumed upon the day which he suggests. The most we can do for the present is to agree to the motion for the adjournment of the debate. We will not ask my hon. friend to go on to-night, and we can discuss the other matter later.

Motion agreed to, and debate adjourned.

SUPPLY.

The House in Committee of Supply, Mr. Blondin in the Chair.

Indians—Relief, medical attendance and medicines, Quebec, $10,200.

Mr. BELAND: Has the minister special physicians to attend the Indians in Quebec, and, if so, who are they and what are their salaries?

Hon. W. J. ROCHE (Superintendent General of Indian Affairs): The men on salary are Dr. Constantine, Pointe Bleue, $500; Dr. Claveau, Chicoutimi, $200; Dr. Allard, Urbain, $100; Dr. Wilson, Oka, $100; Dr. McDuff, Galops River, $200; Dr. McDougall, Seven Islands, $450; Dr. Boucher, Lorette, $700; Dr. Bossé, Bersimis, $1,000; Dr. McCartney, Gaspé, $80. Other physicians are paid for attendance given to Indians, authorized by the agent according to a specified scale.

Mr. MARCIL: Is there a permanent physician for the Restigouche reserve?

Mr. ROCHE: No.

Mr. MARCIL: What arrangement is there at that place? It is a very large reserve.

Mr. ROCHE: No arrangement has yet been made for a permanent physician. Whenever a physician is required he is called in.

Mr. MARCIL: I understand that Dr. Pinault, the former physician, was summarily dismissed. He is one of the most

distinguished physicians in the province of Quebec, a former house surgeon of the hospital at Quebec. He was physician in charge of these Indians, but was summarily dismissed without investigation or a chance to say a word in his behalf, and a new medical man was appointed but refused to accept the position. Dr. Price, I think, was the man who refused. It was then passed over to Dr. Martin. I do not know who the physician is now, but I understand that the position is very unsatisfactory and may cost the department more than under the old system.

Mr. ROCHE: This is the first time this has been brought to my attention; it must have been before my time. However, I shall make inquiries. I have not had any personal complaint in regard to medical attendance there; but I understand that no appointment has been made.

Mr. BELAND: Has the minister before him the total number of Indians in Quebec?

Mr. ROCHE: The number is 14,842.

Indians—Relief, medical attendance and medicines, Ontario, $6,975.

Mr. BELAND: What is the number of Indians in Ontario.

Mr. ROCHE: 26,077.

Mr. BELAND: A good many more than in Quebec.

Mr. NESBITT: Does the Department supply medicines for the Indians around Brantford?

Mr. ROCHE: No, they pay for their own medicines.

Mr. NESBITT: These are the backwoods' fellows?

Mr. ROCHE: Yes, who are not able to pay for themselves.

Indians, Ontario and Quebec—general legal expenses, $5,500.

Mr. NESBITT: What do you do with legal expenses for the Indians; do they go to law?

Mr. ROCHE: Sometimes they are very fond of it.

Sir WILFRID LAURIER: I know that the department sometimes adjudicates on very important matters. Could the minister inform me of the present situation of the lawsuit between the Oka Indians and the Seminary with regard to the title to their land?

Mr. ROCHE: It will be noticed that there is a decrease of $8,000 in this vote. That decrease is owing to the lawsuit to which the hon. gentleman referred. The case was carried to the Privy Council, and judgment given for the Seminary and against the Indians.

Sir WILFRID LAURIER: Has any action been taken since, or have the Indians accepted the decision and will they abide peaceably by it?

Mr. ROCHE: They have shown no disposition to abide peaceably by it. A deputation of Oka Indians was up to interview me, and we are now carrying on negotiations through the solicitor, Mr. Geoffrion, with a view to an amicable arrangement with the Seminary regarding certain land which the Indians are desirous of obtaining.

Mr. MARCIL: Will the minister give a list of the lawyers to whom money was paid last year?

Mr. ROCHE: G. C. Judd, $401; Mr. Geoffrion et al, $5,173; Chas. Russel & Company, London, England, $1,675; Smith, Markay et al, $3,142; G. Gaudet, $90; Morgan, Price & Company, $66.25; L. Cousineau, $410; J. C. Langlois, $118; John S. Fraser, $274; R. V. Lesueur, $1,278; Joseph G. Bayliss, $18.63; H. Williams, $55; F. W. Wilson, $442; Louis Boyer, K.C., $17.50.

Mr. MARCIL: Were there no legal expenses in the district of Gaspé at all?

Mr. ROCHE: No.

Mr. MARCIL: The rumour is revived every year that owing to the proximity of the Restigouche reserve to the town of Campbellton it would be in the interest of the Indians to have the reserve removed to some other locality.

Mr. ROCHE: I understand that a saw-mill firm wanted to secure a portion of the reserve for a planing mill, but the Indians have expressed their unwillingness to surrender.

Mr. MARCIL: A portion of the reserve is now held by the Baie des Chaleurs mill, and I understand that a proposal was made by another saw-mill firm to take the rest of the reserve. The department has refused I understand.

Mr. ROCHE: It has, because the Indians refused.

Mr. LEMIEUX: If the department decides to transfer a part of the reserve the minister will, of course, get the consent of the tribe. I read a letter in the House a few days ago from the chief of the Caughnawaga tribe and I think it would be well if the minister would make some reassuring statement in regard to that.

Mr. ROCHE: The department have no authority to take away any property of the Indians without their consent. My hon. friend is referring to the letter the chief of the Caughnawaga tribe wrote in connection with amendment to the Act made in 1911 by my predecessor. Where land is required for public purposes it is secured, if not provided for by the expropriation provisions of the Indian Act, through the agency of the Exchequer Court which holds an inquiry as to the expediency of the sale. It allots a counsel to the Indians, hears evidence and then refers the matter to the Governor in Council who in turn refers it to Parliament. Parliament has to pass upon the sale before the lands are disposed of.

Mr. MARCIL: Was the application for the Restigouche reserve made by an American or a Canadian company.

Mr. ROCHE: So far as we know, it was made by a Canadian company.

Mr. MARCIL: There is no intention on the part of the minister to change the law with regard to getting the consent of these Indians?

Mr. ROCHE: No.

Sir WILFRID LAURIER: What is the object of the amendment to the Indian Act?

Mr. ROCHE: The Act at present provides that when an Indian reserve or part of a reserve is required adjacent to a city or town of 8,000 population or over the land can be secured by reference to the Exchequer Court. The amendment widens that, giving us power to secure lands whether adjacent to a city of 8,000 population or under.

Mr. MARCIL: Under that amendment this reserve can be secured.

Mr. ROCHE: Not until the Exchequer Court and Parliament pass upon it.

Mr. MARCIL: There is no procedure of that kind under way in this case?

Mr. ROCHE: No.

Indians, Ontario and Quebec—Repairs to roads and drainage, $2,600.

Sir WILFRID LAURIER: This sum is for the usual drainage and road making, I suppose? There are some reserves in the province of Quebec in which it is a constant complaint that the roads passing through the reserve are not kept in repair. In the Caughnawaga reserve, for instance, the roads are in a very bad condition and are a serious impediment to traffic. I do not know whether that matter has been called to the attention of my hon. friend.

Mr. ROCHE: One thousand dollars of this vote will be spent on the road through the Caughnawaga reserve.

Mr. MARCIL: Is anything to be spent on the Maria reserve?

Mr. ROCHE: No. We have that reserve under consideration and may have something for it in the Supplementaries.

Mr. MARCIL: Is part of this money to be spent on the main highway in Restigouche or is it for a new road?

Mr. ROCHE: It is to improve the existing road.

Mr. MARCIL: The presence of that sawmill on the Restigouche reserve has been a constant source of trouble between the proprietor of the mill and the Indians. During the time I had something to say in the matter I used to get a letter or two every week. The Indians were constantly complaining to the department on questions between the proprietors of the mill and themselves.

Mr. ROCHE: There are no complaints now.

Mr. LEMIEUX: My hon. friend was speaking of the Caughnawaga Indians reserve. I wish to thank him for what he did towards maintaining the little hospital down there. The ladies who devote themselves to the Indians hope that the amount will be increased a little next year.

Mr. MARCIL: Has the minister the total amount spent for medical attendance on the Restigouche reserve?

Mr. ROCHE: Drs. F. J. Desmond, $10; A. Martin, $208.50; L. G. Pinault, $37.25; J. Price, $13.

Mr. MARCIL: Does the minister not think that the department and the Indians

would be better served if one doctor was appointed for each reserve, rather than having three or four doctors runing around from place to place.

Mr. ROCHE: Generally speaking I think it would be better, and I will make inquiries with a view to adopting that suggestion.

Mr. MARCIL: I hope the minister will see his way to reappointing Dr. Pinault, who is recognized as one of the best men, and he has certainly given satisfaction to the department in the past.

Indians, Ontario and Quebec—General expenses, $46,075.

Mr. NESBITT: What is that item for?

Mr. ROCHE: From this vote the whole cost of the administration in Ontario and Quebec is paid in the various Indian agencies. The Indian reserve population is about 26,000.

Mr. NESBITT: This is for officials?

Mr. ROCHE: Officials, office rent, travelling expenses and the general expenses in connection with the running of the various agencies.

Mr. MARCIL: Is any increase contemplated in the salaries of the Indian agents, school teachers, etc.?

Mr. ROCHE: Not in the main Estimates.

Indians, Nova Scotia—Salaries, $1,600.

Mr. A. W. CHISHOLM: What are these salaries for?

Mr. ROCHE: These salaries are for the agents in the various counties.

Mr. A. W. CHISHOLM: Would the minister give the names of the agents?

Mr. ROCHE: The list is as follows:

	1914-1915.
Geo. Hoyt, Annapolis	$ 50
R. A. Harris, Digby	100
C. E. Beckwith, Kings	100
C. Harlow, Queens	100
N. P. Freeman, Lunenburg	100
D. Chisholm, Halifax	100
A. Wallace, Hants	50
Joseph Stephens, Windsor, Hants	50
R. H. Smith, Colchester	50
J. A. Johnson, Cumberland	100
Rev. J. D. McLeod, Pictou	100
John Cameron, Antigonish and Guysborough	100
R. L. McDonald, Richmond	100
Rev. D. McPherson, Inverness	100
C. J. Sparrow, North Sydney and Sydney	100
Rev. D. J. McIntosh, Victoria	100
W. H. Whelan, Yarmouth	50
John Hipson, Shelburne	$ 50
A. R. McDonald, Eskasoni reserve, Cape Breton county	100

Mr. CARROLL: What are the duties of these agents?

Mr. ROCHE: They assist destitute Indians, see that they are supplied with provisions and look after the general administration of the Indian agencies.

Mr. STANFIELD: How is it that in some counties they get $50 and in others $100?

Mr. ROCHE: In some agencies there are far more Indians than in others and considerable more work to do.

Mr. W. CHISHOLM: Is that $100 a month?

Mr. ROCHE: No, a year.

Mr. W. CHISHOLM: When was Dr. J. J. Cameron appointed for Antigonish and Guysborough and whom did he succeed?

Mr. ROCHE: He succeeded Mr. W. C. Chisholm, who resigned a few months ago.

Mr. SINCLAIR: How many Indians are there is Nova Scotia and is the number increasing or diminishing?

Mr. ROCHE: They are just about holding their own. There are 2,018 in the province.

Mr. CARROLL: Is Dr. Sparrow, Sydney, medical doctor for the Indians there?

Mr. ROCHE: Yes.

Mr. CARROLL: Is he also Indian agent?

Mr. ROCHE: Yes.

Mr. CARROLL: Is that customary?

Mr. ROCHE: Yes, his predecessor was just the same.

Mr. W. CHISHOLM: Who is the medical attendant for Antigonish and Guysborough, and when was he appointed?

Mr. ROCHE: W. F. McKinnon, salary $250.

Mr. CHISHOLM: Who was the medical attendant appointed in the fall of 1911 and why were his services dispensed with?

Mr. ROCHE: I have not the information here regarding that, but I will let the hon. gentleman know later on.

Mr. CHISHOLM: Will the minister bring down the information as to why the first appointee was Dr. J. J. Cameron, and why his services were dispensed with, and when?

Mr. ROSS: I understand that the medical attendant on the Muncey agency has been changed since September 1911, and I would like to ask why that medical attendant was changed, and what rate the former medical attendant was paid, and what rate the present medical attendant is receiving.

Mr. ROCHE: I believe the medical man previously on that reserve was Dr. Mitchell. I think his salary was $500. He has been succeeded by Dr. Wood, and I think his salary has been somewhat increased.

Mr. ROSS: Is that the same Dr. Wood who was in charge of the patronage in West Middlesex?

Mr. ROCHE: No, I understand that Dr. Wood resigned any patronage that he may have had.

Mr. ROSS: Can the minister inform me on that point?

Mr. ROCHE: No, I cannot.

Mr. ROSS: I think it would be well for the Minister to look into that matter.

Mr. ROCHE: I know that he was informed by me that he would have to drop that part of the business.

Mr. ROSS: If the minister will make inquiries he will find that Dr. Wood has been dispensing the patronage in that district in violation of the rule laid down by the Government that a public official shall not take part in politics. It will be found that he has been guilty, while being a servant of this Government, of being an active participant in political matters, and that therefore, according to the rule which has been laid down, he merits dismissal from his position. I do not think that the information the minister has given me is quite correct in regard to the doctor whom Dr. Wood succeeded. I would like to know why Dr. Dewar was dismissed and why Dr. Wood succeeded him and whether there is any difference in their remuneration?

Mr. ROCHE: I understand that there were two medical men previously—Dr. Mitchell and Dr. Dewar. There were a great many complaints in as to the unsatisfactory service they were rendering.

Mr. ROSS: In writing?

Mr. ROCHE: I am not sure whether they were in writing or not, but I am inclined to think that some complaints were made to me personally in regard to them.

Mr. ROSS: If they were in writing will the minister lay them on the table?

Mr. ROCHE: Yes. They were succeeded by Dr. Wood.

Mr. ROSS: What is the difference in remuneration?

Mr. ROCHE: Dr. Wood is getting $150 more than his predecessors.

Mr. ROSS: Will the minister kindly verify that for me?

Mr. ROCHE: Yes.

Mr. W. CHISHOLM: Is there any regulation which prevents an Indian agent himself supplying goods to the Indians and then charging them up to the Government?

Mr. ROCHE: The regulations of the department do not permit an Indian agent to sell direct to the Indians himself, and to then be paid by the Government.

Mr. W. CHISHOLM: Either directly or indirectly?

Mr. ROCHE: Yes.

Mr. ROSS: What was the complaint against Dr. Dewar and Dr. Mitchell?

Mr. ROCHE: I think the change took place when I was not in the country, but I remember there was a Dr. Mitchell in western Ontario against whom complaints were made of inattention to his duty, and that he seldom responded to a call when he was sent for. Unless there are two doctor Mitchells there, this is the one.

Mr. ROSS: What about Dr. Dewar?

Mr. ROCHE: I have no recollection at all about his case.

Mr. ROSS: Was it because Dr. Dewar was just charged with being a Liberal?

Mr. ROCHE: I do not know anything about that case at all.

Mr. CARROLL: How many superintendents of Indian agencies are there in Nova Scotia?

Mr. ROCHE: Mr. Boyd is the only one.

Mr. CARROLL: Are all the Indian agents practically under his jurisdiction?

Mr. ROCHE: He has general supervision over all the agencies.

Mr. CARROLL: What repairs were done to the Indian council-house at Chapel Island in Richmond county, and what is the council-house used for?

Mr. ROCHE: The Indians for many years past had a general council-house there, at which they met at least once a

10 p.m.

year to hold a mission and conduct their business. It was destroyed by fire, and they having no financial resources sufficient to build, we agreed, if they furnished the material, to supply them with skilled labour, etc.

Mr. ROSS: Are the medical attendants of the Indians paid a fixed salary, and is there something extra allowed them in case of epidemics?

Mr. ROCHE: The medical attendant is paid a fixed salary for normal attendance, but if there is an epidemic, or if he has heavy operations to perform, which cause abnormal conditions, an extra allowance is sometimes made.

Mr. ROSS: How much has Dr. Woods been paid since he was appointed by this Government as medical attendant to the Indians in Middlesex county?

Mr. ROCHE: I have not the information at hand.

Indians, N.S.—Relief and seed grain, $6,000.

Mr. A. W. CHISHOLM: What is this money used for?

Mr. ROCHE: The greater part of this expenditure is for the relief of aged Indians, repairs to houses, and so on. Very little of it is used for seed grain.

Mr. SINCLAIR: How is the seed grain distributed?

Mr. ROCHE: By the Indian agent, who recommends the distribution.

Indians, N.S.—To provide for the encouragement of agriculture, $1,000.

Mr. A. W. CHISHOLM: How much is paid the teacher at Whycocomagh to teach the Indians how to cultivate the land?

Mr. ROCHE: I cannot find from the Auditor-General's Report that we paid him anything for that service last year.

Mr. WILLIAM CHISHOLM: There is $1,000 for encouragement to agriculture and $1,500 for Indian agents, so that it would look as if the agents were the wards of the nation and not the Indians. If you are going to do anything serious towards encouraging the Indians to take an interest in farming, you will have to make a larger appropriation for the purpose than $1,000; you will have to give them implements in the first place. If you divide $1,000 between the different agencies, it will amount to a very small sum for each. I think that vote should be increased.

Mr. ROCHE: Probably the Indians are so thrifty they do not require very much Government assistance in that line.

Mr. W. CHISHOLM: Perhaps the minister thinks that the reduction in agricultural implements promised in the Budget speech to-day will enable them to get along without an increased grant.

Mr. ROCHE: I have here a list of their increased crops—5,510 bushels of potatoes, 178 bushels turnips, 620 bushels oats, 40 bushels barley, 12½ bushels corn, 35 bushels beans, 53 bushels apples. So they are doing very well.

Indians, Nova Scotia—Medical attendance and medicines, $5,000.

Mr. SINCLAIR: Will the minister please give the names of the doctors and their salaries?

Mr. ROCHE: Drs. J. A. McDonald, Richmond, $250; Geo. McNally, King's West, $200; A. M. Hebb, Lunenburg East, $50; C. S. Marshall, Lunenburg West, $60; H. N. McDonald, Whycocomagh Reserve, Inverness, $175; J. G. Macauley, Malagawatch Reserve, Inverness, $100; Hector A. Grant, Victoria, $325; C. J. Sparrow, Cape Breton, $350; W. F. McKinnon, Antigonish, $250; C. H. Morris, Martook, Hants Co., $75; J. McKenzie, Pictou, $200; R. Withers, Lequille, Annapolis, $50; J. A. Sponagle, Middleton, $50; H. V. Kent, Colchester, $150; E. O. Hallett, Weymouth, Digby county, $100; C. C. Archibald, Bear River, $250; T. R. Ford, Milton, Queens county, $100; W. H. Cole, Bridgewater, Lunenburg, $50; —. ——, Parrsborough, Cumberland, $200; A. Culton, Shubenacadie, Hants, $150; W. B. Moore, Kings East, $200.

Mr. LAW: Has any appointment been made in place of Dr. Millar, at Tusket in Yarmouth county? He resigned and went away?

Mr. ROCHE: I think Dr. Bethune was appointed in his place.

Mr. MACDONALD: Is there any proposal to purchase any additional land in connection with the reserve at Pictou Landing?

Mr. ROCHE: No. I do not remember any such application.

Mr. W. CHISHOLM: In some places, particularly in Antigonish county, there

are Indian reserves on which the hay is let year after year. I had a question on the Order Paper earlier in the session whether it was proposed to let the Indian reserve at Heatherton. I think the answer was that the matter was under consideration. I desire to know whether the minister will call for tenders or whether the agent will have the privilege of farming it out as he has done before?

Mr. ROCHE: I understand this is a small affair, but it is proposed to ask for tenders.

Indians, Nova Scotia—Repairs to roads and dyking, $600.

Mr. A. W. CHISHOLM: Will the hon. minister please state what amount is spent at the Indian reservation in Inverness county?

Mr. ROCHE: Malagawatch reserve, $204.38; Middle River reserve, $1,999.93; Whycocomagh reserve, $101.61.

Mr. A. W. CHISHOLM: Can the minister give me the names of those who supervised the work?

Mr. ROCHE: The Auditor General's Report does not contain the names, but I can get them if the hon. gentleman desires it.

Mr. ROSS: At what date was Mr. Woods informed that he would have to 'drop his connection with patronage?'

Mr. ROCHE: I cannot remember the date. But I remember that he wrote me that he was occupying a position with respect to party politics and asked my opinion as to his retaining it. I informed him that he must drop it, that no person occupying a position under the Government should have to do with party politics. And I understand he has followed that direction.

Mr. ROSS: On the 8th of November, 1913, he wrote a letter asking that a certain postmaster be dismissed. So that in November last, Dr. Woods, while Indian medical attendant, was interested actively in politics, so actively that he was controlling the patronage in the district. If the minister wrote him to observe the rule against political partisanship and he did not observe that rule, I think that the minister should take means to enforce the law on the subject. Surely, the minister will see the propriety and necessity of such action.

Mr. ROCHE: That was nearly five months ago, and I am sure that it was since that date that I first learned of the position he held. Of course, as soon as it was brought to my attention—and I could not act any sooner—I gave him his instructions, and I am confident he has lived up to those instructions since that time.

Mr. ROSS: The minister will let me know if it was really before that date?

Mr. ROCHE: Yes.

Mr. A. W. CHISHOLM: What provision has the minister made for the roads on the Whycocomagh reserve?

Mr. ROCHE: It is expected to spend $300 there.

Mr. CHISHOLM: There are two miles of road through this reservation and it is in very bad condition.

Indians, Nova Scotia—Rebuilding Indian council house, Chapel island, $2,500.

Mr. CARROLL: Will the minister advertise for tenders for this?

Mr. ROCHE: We frequently put up these buildings by means of Indian labour and do not find it necessary to call for tenders when only a small amount is involved. We will consider what particular form this should take, but perhaps the most economical way will be to use Indian labour.

Mr. SINCLAIR: Is this the first time that the department has built a council house for the Indians in Nova Scotia?

Mr. ROCHE: Probably it is the first time, but the council house was burned down and inasmuch as the Indians have no funds of their own they cannot rebuild for themselves.

Mr. CARROLL: The only building that was burned down there, to my knowledge, was an old church.

Mr. ROCHE: I understand that there is a church at the same place; it is called Burnt church. I do not know whether or not it is utilized for church purposes.

Mr. CARROLL: If this vote is for the purpose of rebuilding the Indian chapel on Chapel island, the amount is not too large, but if it is for the building of an ordinary council house I think $2,500 is a rather large amount. You can build a magnificent residence in that part of the country for $2,500.

Mr. ROCHE: The whole of this amount may not necessarily be expended.

Indians, New Brunswick—Repairs to roads, $450.

Mr. MICHAUD: A piece of road called the main road runs along the Indian reser-

vation in the county in which I live, for a distance of a mile or a mile and a half. I would call the attention of the minister to the fact that the money which is voted comes along in the month of July or August when it is practically too late to be of any real benefit. If we could get it in May or early in June so that it could be spent in the early part of the season it would be of much greater benefit.

Mr. ROCHE: Of what reserve is the hon. gentleman speaking?

Mr. MICHAUD: The Edmonton reserve. We get money from the department every second year, as a rule; we should have it every year. The municipalities spend a certain amount of money on this road, but we can get no assistance from the province, and early in the spring and well into the summer the road is usually in a very bad condition.

Indians, Manitoba, Saskatchewan, Alberta and Northwest Territories—Live stock, $9,480.

Mr. WARNOCK: What is this item for?

Mr. ROCHE: Pure bred livestock.

Mr. WARNOCK: On the Peigan reserve during the last two or three years a large number of the mares and stallions belonging to the Indians have been destroyed because of their having contagious diseases, and compensation has been paid by the Government. Does that money pass into the hands of the Indians, or into the hands of the Indian agent in trust?

Mr. ROCHE: It is paid to the Indians through the agent.

Mr. WARNOCK: Some of these animals are owned by the Indians, and others are owned by the department. In the case of their being owned by the department, I presume the money compensation made in such instances is reinvested in stallions for the use of the Indian reserve?

Mr. ROCHE: The Indians have the privilege of utilizing this money in any way they choose, and they can utilize it by reinvesting it, if they so desire, in the purchase of other animals.

Mr. WARNOCK: But not necessarily?

Mr. ROCHE: No.

Indians, Manitoba, Saskatchewan, Alberta and Northwest Territories.—Supplies for destitute Indians, $142,148.

Mr. DOUGLAS: This is a large item; will the minister give the committee some explanation?

[Mr. Michaud.]

Mr. ROCHE: The amount for Manitoba is $33,062; for Saskatchewan $109,086 and for Alberta $104,000.

Mr. DOUGLAS: What is a destitute Indian?

Mr. ROCHE: One, who, by reason of physical disability or other cause, is unable to provide for himself and must be cared for by the department.

Indians, Manitoba, Saskatchewan, Alberta, and Northwest Territories—Hospitals, medical attendance, etc., $104,042.

Mr. DOUGLAS: Are these hospitals on the Indian reserves?

Mr. ROCHE: Where there are Indian hospitals they are located on reserves, but some Indians are committed to other hospitals and we have to pay for attendance.

Mr. DOUGLAS: I see by the Auditor's Report items of six hundred pounds of tea supplied by H. N. Bate and Sons of Ottawa for the Duck Lake agency in Saskatchewan and blankets supplied by G. M. Garland and Son of Ottawa. Then Greenshields of Montreal supply goods there. Is there not some mistake or why are these goods purchased at such a distance from the reserve?

Mr. ROCHE: These are all purchased by tender and these are the lowest tenderers. When they are purchased in the East they are delivered in Winnipeg where we have a warehouse, and we pay the freight from there to the reserves.

Indians, British Columbia—Travelling expenses, $16,000.

Mr. SINCLAIR: Would the minister explain this?

Mr. ROCHE: We have a number of agents in British Columbia who travel a good deal inspecting. Then there is a good deal of travelling in connection with the maintenance of law and order, the prevention of intoxicants, etc. The distances in British Columbia are greater than in the other provinces and the travelling expenses are heavier.

Mr. DOUGLAS: I understand that the agent at the Hobbema reserve, Mr. Mann, was relieved of his office. He had been in the service thirty-five years, his health had broken down and I understood the department intended to show some special consideration to him.

Mr. ROCHE: Mr. Mann is a very old official and has been retained in an advisory capacity at a salary of some $600.

Mr. DOUGLAS: That is all right.

Indians, British Columbia—Surveys, $10,000.

Mr. DOUGLAS: What is meant by surveys?

Mr. ROCHE: The surveying of Indian reserves.

Indian education, $948,115.

Mr. A. W. CHISHOLM: Who is the Indian teacher at Malagawatch reserve, Nova Scotia?

Mr. ROCHE: I am not able to give the information just at the moment. I understand the school is closed at the present time.

Mr. A. W. CHISHOLM: Was there a teacher there last season?

Mr. ROCHE: I can get the information for my hon. friend later on.

Mr. A. W. CHISHOLM: I will come to the rescue of the minister. My information is that a young Indian teaches there and I would like to know whether he has the necessary qualications.

Mr. ROCHE: I will get the information.

Mr. CARROLL: I would like to refer to a matter that has been brought up in this House before. I refer to the teacher at St. Peter's. Provincial inspector of schools, Mr. T. J. McNeil, refused to visit or have anything to do with the school on the ground that the teacher was not qualified. This young man was appointed after Miss Devereaux's dismissal and I would like to know whether he has the necessary qualifications now.

Mr. ROCHE: I cannot tell the hon. member.

Mr. CARROLL: It is a rather peculiar state of affairs if we are to pass estimates for Indian education all over the country without being in a position to know whether the teachers are qualified. I think the minister should be in a position to tell me whether licensed teachers or backwoodsmen are teaching the children in the province of Nova Scotia in which I am interested.

Mr. ROCHE: I understand that no teacher is employed in any school unless he is properly qualified.

Mr. CARROLL: Last year it was proved to the hilt in this House that the young man succeeding Miss Devereaux was not qualified under the Provincial Education Act of Nova Scotia.

Mr. ROCHE: I have a hazy recollection of having read the papers in connection with that and of the discussion that took place. I understand that Miss Devereaux was dismissed for very strong reasons, opening school after ten o'clock in the morning—

Mr. CARROLL: I am not finding fault with her dismissal, but with the fact that the person appointed in her stead was not qualified. The provincial inspector of schools refused to visit the school on that account. Has the department seen to it that that school has now a qualified teacher?

Mr. A. W. CHISHOLM: I think the minister will find he has something to attend to with respect to the qualification of teachers for Indian schools. It is all very well to say that a teacher is qualified because somebody else says so, but there are certain qualifications required by the Provincial Education Acts, and the minister cannot hope to have Indian schools in their proper condition unless he sees that every teacher possesses the recognized qualifications. I cannot understand how this Malagawatch teacher can have the qualifications. I had the opportunity of recommending a couple of men myself as teachers at Indian schools, but I took very great care that the persons I recommended were qualified under the provincial law.

Mr. ROCHE: I understand that teachers are appointed on the recommendation of the Indian agents and inspectors. Personally, I am not aware of any complaints having been made to the department with regard to the qualifications of those teachers, except the case that came up last year, and I am not sure whether that particular teacher is still employed. Perhaps he is better qualified by this time. It is not so very unusual a thing to have an Indian teacher.

Mr. A. W. CHISHOLM: I quite recognize that. I am not reflecting on his appointment because he is an Indian, but I know this man very well, and I can hardly see how he could possess the qualifications. That is just the point. Men are sent out to teach without the necessary license. It is quite possible that that may be done successfully in some cases, but it is opening the door to a very dangerous practice. It is quite possible that politics may enter into this thing and that an inspector may

be induced to recommend a person who has not the necessary qualifications, but if that practice is to be followed there will be a great deal of trouble.

Mr. ROCHE: We have adopted a rule to have qualified teachers wherever possible, but in some cases we are not able to get qualified teachers for Indian schools, then we get the best qualified person we can.

Mr. DOUGLAS: How is this money distributed between the provinces?

Mr. ROCHE: Ontario, $126,825; Quebec, $12,040; Nova Scotia, $5,125; New Brunswick, $6,525; Prince Edward Island, $400; Manitoba, $249,280; Saskatchewan, $157,095; Alberta, $138,175; Northwest Territories, $18,100; British Columbia, $216,800; Yukon, $9,750; generally, $8,000.

Mr. SINCLAIR: How many teachers are employed on the staff, and what grades do they teach?

Mr. ROCHE: There are 249 day schools, 58 boarding schools, and 19 industrial schools, or a total of 326.

Mr. DOUGLAS: Has industrial school education proved satisfactory?

Mr. ROCHE: In some places very satisfactory.

Mr. DOUGLAS: It is a most expensive system of education, is it not?

Mr. ROCHE: It is a somewhat expensive method, but it is very useful in teaching the Indians to better their position and to fit them for various occupations.

Mr. DOUGLAS: The school at Elkhorn appears to be doing good work. If more of that type of school were established, you could probably do away with some of these day schools. The industrial schools might require more highly paid teachers because they have to be specialists in their way. The boys are fitted for work that will bring them good wages if they wish to follow any particular occupation, and the girls are taught sewing and house work.

Mr. ROCHE: Elkhorn is the model of all the industrial schools.

Mr. CARROLL: Would the minister get me the information I asked for in reference to the teacher at St. Peter's? Personally, I have no interest in the matter, but I have been asked to mention it to the minister.

Mr. ROCHE: I have made a note of it.

[Mr. A. W. Chisholm.]

Indians—A. J. Boyd, inspector of Maritime provinces, $1,600; timber inspector and valuator, $1,200.

Mr. CARROLL: What are the duties of the timber inspector?

Mr. ROCHE: A. J. Boyd is the name of the inspector, and he is the superintendent for New Brunswick and the other Maritime provinces. He has charge of all the agencies. The timber inspector and valuator is Mr. George Shaw, of Thessalon, and he receives $1,200. There are about 400 lots unsurrendered and unsold in the Indian lands on the north shore of Lake Huron, and Mr. Shaw's duty is to value the timber on the lots disposed of.

Payment to Indians surrendering their lands, under provisions of section 70, of the Indian Act, which will afterwards be repaid from the avails of the land, $50,000.

Mr. SINCLAIR: What lands are referred to there?

Mr. ROCHE: When we ask the surrender of any land under the Indian Act, the Indians are entitled to fifty per cent of the proceeds of the sale, and this is the appropriation out of which that amount is paid.

Mr. DOUGLAS: Could the minister tell me whether any lands will be sold in Alberta this coming year?

Mr. ROCHE: There have been some surrenders near Calgary, on the Sarcee, but we have not decided as to when the sale shall take place.

Mr. SINCLAIR: What is the estimate by which the minister arrives at $50,000.

Mr. ROCHE: This is the item which has been voted year after year.

Mr. SINCLAIR: Do I understand that this is a fund to be at hand when it is wanted for the purpose of paying for Indian lands that are sold.

Mr. ROCHE: It is for the purpose of advancing cash payments to the Indians at the time of surrender.

Relief to destitute Indians in remote districts, $35,000.

Mr. LEMIEUX: What do you call remote districts?

Mr. ROCHE: In the northern territories, such as Ungava and the Mackenzie Basin.

Indians—To prevent spread of tuberculosis, $10,000.

Mr. A. W. CHISHOLM: What is being done to prevent the spread of tuberculosis?

Mr. ROCHE: This vote is to provide hospital treatment for those who can avail themselves of it, methods of sanitation, the destruction of infected houses and the re-building of others to combat the spread of the disease. We intend to give rather more attention to this phase of the work in future than we have in the past. We have had a number of complaints that tuberculosis is very prevalent on some of the reserves, and we are endeavouring to teach the Indians the necessity for sanitation with a view of stamping out this disease.

Mr. CHISHOLM: Is tuberculosis supposed to be decreasing among the Indians? We are told that the Indians are peculiarly the victims of this disease.

Mr. ROCHE: It has not decreased, I am sorry to say.

Mr. LEMIEUX: While the population is increasing.

Mr. ROCHE: Very little.

Grant to assist Indian Trust Fund Account $310—Suppression of liquor, $6,000.

Mr. CARROLL: What is this for?

Mr. ROCHE: This is intended to assist the Indian Trust Fund, which receives credit of a moiety of the fines imposed and bears the expenditure of preventive, detective and police service in carrying out the law and in preventing the illegal sale of liquor to the Indians.

Mr. CARROLL: Is anything done by the department to prevent the sale of liquor to Indians in the Maritime provinces?

Mr. ROCHE: The officials of the reserves attend to that.

Mr. CARROLL: Who looks after that in the city of Sydney?

Mr. ROCHE: The agent resides close to the reserve there.

Mr. CARROLL: I would not blame the agent for not spending very much of his time endeavouring to detect those who sell liquor to the Indians. The situation in Sydney is peculiar. We are supposed to have prohibition, but, as a matter of fact, liquor is sold very openly, and unfortunately it is sold quite freely to the Indians. It is not a rare occurrence to see an Indian woman going around our streets drunk. Of course, the medical officer of the reserve cannot attend to that, but in a place like Sydney with a population of 20,000 and a large Indian reservation nearby, I should think the department ought to pay some small salary to, say a police officer, to take a special interest in that particular phase of the Indian question. The Indians, unfortunately, become very fond of intoxicating liquor and are seriously injured in every way through its use. On the Malagawatch and Whycocomagh reserves the danger is not so great because there is not such opportunity for the Indians on these reserves to obtain whisky. Those who sell liquor to Indians at Sydney are occasionally prosecuted, but the trouble is to find any officers who will take a special interest in enforcing the law.

Progress reported.

On motion of Mr. Rogers, the House adjourned at 11 p.m.

Tuesday, April 7, 1914.

The House met at Three o'clock, the Speaker in the Chair.

REPORTS AND PAPERS.

Reports of Experimental Farms for the year ended March 31, 1913.—Hon. Martin Burrell.

Papers relating to the Lobster Fishery Regulations established by Order in Council, 25th March, 1914.—Hon. J. D. Hazen.

PRIVATE BILLS.

FIRST READINGS.

Bill No. 150, to incorporate The Prudential Life of Canada.—Mr. Nickle.

Bill No. 151, for the relief of Charles Low Hutcheon.—Mr. Fripp.

Bill No. 152, for the relief of Jessie Eleanor Grassett Parkhurst.—Mr. W. H. Bennett.

Bill No. 153, for the relief of William Godfrey Thorp.—Mr. Carvell.

HOUSE OF COMMONS.

SALARY INCREASES.

Rt. Hon. R. L. BORDEN moved:

That it be resolved, that the recommendation of the hon. the Speaker, laid on the table of the House on the 2nd April instant, relative to the yearly increase in salary to certain officers and clerks and employees of the House, including a clerk in the Joint Distribution Office of the House of Commons and Senate, pursuant to section 37 of the Civil Service Amendment Act, 1908, be approved.

Motion agreed to.

Mr. BORDEN moved:

That a message be sent to the Senate to acquaint their Honours that this House has ap-

proved the recommendation of the hon. the Speaker of the House of Commons for the payment to a clerk of the Joint Distribution Office of the House of Commons and Senate, of the yearly increase in salary, pursuant to section 37 of the Civil Service Amendment Act, 1908.

Motion agreed to.

THE BUDGET.

Consideration of the motion of Hon. W. T. White (Minister of Finance) for the House to go into Committee of Ways and Means, resumed from Monday, April 6.

Mr. A. K. MACLEAN (Halifax): Mr. Speaker, in resuming the debate upon the Budget it is not my desire to detain the House at too great a length, although I confess that I probably shall require a considerable time to traverse some of the ground covered by the Minister of Finance yesterday. While we listened with a great deal of pleasure to the statement upon the affairs of the nation made by the Minister of Finance yesterday—and the statement is always important—it was quite obvious, I think, that he spoke with a great deal of restraint and with more or less trepidation. It contrasted greatly with similar utterances in years past when, relatively speaking, he appeared to be sailing on summer seas and under summer skies. Yesterday I thought the minister was rather apologetic for present conditions and rather fearful of conditions for the future. The hon. gentleman had much to apologize for and much to explain. The sins of omission and commission of the present Government are many and require a great deal of explanation. There are many promises unredeemed and many hopes unfulfilled in connection with the affairs of our country. While there is much in connection with the financial affairs of this country that we on this side of the House may severely criticise, and it is our duty as an Opposition to do so as fully but with as much fairness as we can; we nevertheless desire as much as do hon. gentlemen opposite, a speedy restoration to our former prosperity, a continuance of the splendid development that has marked us in the recent past. We are moved by the same pride in the future of our country as are hon. gentlemen opposite.

I now ask the consideration of the House while I briefly refer to the financial operations of the Government during the past year. The Government in this respect is justly subject to severe criticism. It is particularly censurable for its failure to anticipate eventualities which did not require much foresight and a lack of preparation to meet the financial conditions now prevailing. They had ample warning of the approach of a falling trade and revenue; in fact they were upon us when the Minister of Finance delivered his Budget last year. He knew the maturities to be refunded or redeemed and he knew exactly the extent of Government obligations assumed for the financial year just ended. Yet how inaccurate his estimate of the year's financial operations, or to put it in another form how impressive his failure to live up to his anticipations of a year ago. When delivering his Budget last year and in speaking of the estimates of revenue and expenditure for the past financial year, he said: 'Without attempting to forecast with any degree of accuracy, I feel confident that the revenues of the year will prove adequate to meet possibly the whole and certainly the greater portion of capital and special expenditure of the year.'

According to the statement submitted by the Minister of Finance yesterday afternoon the whole revenues of 1914 will be $163,000,000, whereas in 1913 they were $168,689,000. Consequently there was a decrease in revenue of over $5,000,000. He was not able to meet capital expenditure, which is the highest since the Confederation, being about $56,500,000, out of revenue, but only to the extent of $34,000,000, and was obliged to add to the net debt over $21,000,000. He was not able to meet any part of the special capital expenditures out of surplus, but was obliged to meet the same out of borrowings. For instance to pay the loan of $15,000,000 to the Grand Trunk Pacific and to purchase the so-called Grand Trunk Pacific Implementing bonds he was obliged to borrow, and the payments so made are called an investment, and do not appear as additions to the debt, but in reality they constitute additions to the gross public debt.

On the whole, it would appear that the year was quite a serious one for the Government so far as finance is concerned. We find that during the year three heavy permanent loans were effected abroad, by far the largest in our history. Temporary loans made by way of discount of treasury bills were made. During the year the following treasury bills were discounted:

August 25, 1913, £1,000,000, rate 4⅝ p.c.
September 17, 1913, £500,000, rate 4½ p.c.
September 17, 1913, £500,000, rate 4¾ p.c.
November 17 1913, £1,700,000, rate 4⅝ p.c. due November 9, 1914.

In addition to this there were at times

bank overdrafts reaching substantial amounts, and as well a temporary loan for four days of $1,250,000 at the interest rate of five per cent. The member for St. Antoine, I am sure, will tell us this was not good business, the discounting of treasury bills and the making of temporary loans in a year of financial stringency, because it curtailed the borrowing limits of Canadian bank customers. Then the Government were obliged to negotiate three permanent loans aggregating £12,000,000. They were as follows:

September 25, 1913, £3,000,000.
December 3, 1913, £4,000,000.
March, 1914, £5,000,000.

The first loan was issued at 99, the second at 97, and the third at 99. The total cost to the country of these three loans, including discount, was over $2,250,000. The effective rate of interest of the first loan is 4.200 per cent, the second 3.352 per cent, the third and last well over 4 per cent. Loans aggregating nearly $60,000,000 at over 4 per cent in one year is not an unenviable record.

Let us institute a comparison of the financial operations of the fiscal year just closed with the preceding year. It will appear interesting and more or less astounding.

The Consolidated Fund expenditure for 1914 exceeds that of 1913 by over $17,000,000, and is the highest increase of one year over the preceding year since Confederation.

In the fiscal year ending 1913 he had a surplus of fifty-six and one-half millions over Consolidated Fund expenditure, while in 1914, it will be $34,000,000. In the former year he had a surplus of nearly $24,000,000 over both capital and consolidated expenditure, this year he has a deficit of over $21,000,000. The member for St. Antoine said last year that unless revenue paid for both ordinary and capital expenditures there was a deficit, which we have, of $21,000,000.

In 1913 he liquidated debt maturities out of surplus to the extent of nearly $24,000,000, while in 1914 he paid maturities by reborrowing to the full amount, $9,720,000. In 1913 we had $25,617,000 to apply to the reduction of the net debt, this year there will be additions of $21,000,000 to the net debt. In 1914 we have the greatest increase to the gross debt since Confederation and the net debt of the largest additions in our history.

The Finance Minister will reply that the borrowings of the year were unavoidable, that we upon this side of the House when on the Treasury Benches were responsible for the initiation of special and capital expenditures which the present Government had to carry to a conclusion. My answer is that the Government should have anticipated a falling trade and revenue, and should have curtailed ordinary expenditures, thus providing a greater surplus over consolidated expenditure available for capital and special expenditures, and which would have lessened our borrowings for the year.

Consolidated Fund expenditure instead of exceeding by seventeen million dollars that of 1913, might well have been much lower.

We urged this last year. Instead, however of reducing ordinary expenditures, he asked Parliament for appropriations for 1913-14 on account of Consolidated Fund expenditure amounting to $143,212,184, and $59,443,000 for capital expenditures, not inclusive of special expenditures such as the purchase of the Grand Trunk Pacific implementing bonds, the loan to the Grand Trunk Pacific and the special subsidies to the Canadian Northern railway. It was a time for reduction in ordinary expenditure, and I say that policy should have been pursued. Instead we were obliged to make heavy borrowings aggregating £12,000,000. This could not but affect our credit and the credit of all classes of Canadian borrowers in a year of money stringency. In financial circles abroad and at home these frequent borrowings met with severe criticism, and this criticism doubtless affected our trade, our immigration and business generally. The maintenance of a high standard of our credit is of extreme importance. We are, and will continue to be for many years, a borrowing country. The largest item in our export trade is that of securities, and last year it amounted to nearly $375,000,000. A few years ago the member for St. Antoine quoted from Mr. E. R. Wood, of Toronto, a statement particularly applicable to-day in connection with the reputation of our securities and credit abroad. The statement made by Mr. Wood was as follows:

> In this crucial stage of our development I venture to say that the reputation of our securities is of greater moment than the reputation of our material products important as that always must be.

Undoubtedly Mr. Wood was correct in that statement. The greatest export which

Canada has to-day is the export of securities, and which amounted last year, to the United Kingdom alone, to $277,000,000. That is far greater in amount than the value of our exports of agricultural products, and there is no distinction between one and the other, except as to physical form. Wheat is a product we sell abroad, and for which we receive in return goods or credit. We export our securities, and we did so last year to the extent of $277,000,000, and we got back exactly what we get back when we export wheat, goods or credit power. Therefore it is extremely important that we maintain the reputation of the export of securities abroad, because it is our greatest export. It is by the export of securities alone that we adjust the great difference between our exports and our imports, what is ordinarily called the unfavourable balance of trade. The securities sold abroad are an export; the coupons attached to them are an import and you must take both into consideration when dealing with the national trade of this country. It was important that our borrowings last year be the minimum amount; and they might have been lower than they were, namely, £12,000,000, if there had been a lessened expenditure, which well might have been, and many of the capital and special expenditures, which had to be paid for out of borrowed money during the past year should have been provided for out of ordinary revenue.

There can be no doubt but that the credit of Canada was adversely affected by Government borrowings last year. That is the opinion abroad and at home, and the results will be felt even this year. It might have been largely avoided. Economies should have been practised. We remember how honourable gentlemen opposite, some of whom are now members of Government, protested against Government financial operations in 1909, when actual conditions were extremely favourable as compared with to-day. I wonder if their keen sense of the proprieties of Government finance were shocked last year? I wonder if we shall hear their protests, or shall we be obliged to be satisfied to observe their calm acquiescence.

And is the Government to pursue a sounder and safer course, economically, during the present year? There is little evidence of it. According to the main Estimates the Minister of Finance proposes for 1914-15 an increase of $3,573,000 in expenditure on consolidated fund account, which will doubtless be increased by supplementary Estimates to at least $10,000,000. It is true he proposes a reduction in capital expenditures of $11,920,000, but on the other hand we are likely to assume heavy special capital expenditures, as well as heavy bond guarantees, which will restrict the limit of Canadian borrowings for the year for other purposes, and thus affect our credit. I submit that there should be greater evidences of retrenchment in ordinary expenditures, especially those of an unproductive nature. I say the proposed estimates of expenditure for 1914-15 are, in all the circumstances, open to severe criticism, criticism that cannot be answered.

In 1909 we were suffering from a money stringency. Mr. Fielding reduced his Estimates for the fiscal year 1909-10 over the preceding year by $22,581,000, of which nearly $9,500,000 was for ordinary expenditure and not capital, and Mr. Fielding did actually reduce that year ordinary and capital expenditures by substantial sums. For this year the total reduction for consolidated and capital expenditure, exclusive of special expenditures, will probably be but little less than $10,000,000, while the proposed consolidated fund expenditures show an increase of over 3½ millions, exclusive of what may be shewn in the supplementary expenditures. In this respect the Minister of Finance does not show the caution his predecessor did, and at a time when the financial and material future does not by any means look as hopeful as it did in 1909, because the causes producing the conditions now prevailing are, in my opinion, of a much more serious nature. He is not paying much attention to the advice generally urged upon us by all competent financial advisers in the way of reductions in expenditure. The Minister of Finance is making a strong bid for a deficit this year, and of no small dimensions, and I think he will have little difficulty in achieving that end.

Yesterday the Minister of Finance stated several times that the net debt at the end of last fiscal year was $6,000,000 less than when the present ministry came upon the treasury benches. It was stated so often that I thought the minister expected that some credit should be extended to the Government on that account by hon. gentlemen on this side of the House and by the

country generally. I think the fairer way to put that is this, that in spite of themselves the net debt is $6,000,000 less than when they came into power. They have done everything they could to increase public expenditure and thus increase the gross debt and the net debt. Another view may be taken of this reduction of $6,000,000. The Minister of Finance stated yesterday that if he had the statutory authority, he would write the Grand Trunk Pacific investment bonds for which he paid par, down to 75, because that is their market value although in the assets of this country they are figured at their face value and notwithstanding the fact that when we had to borrow money to make these investments we pay over four per cent for the money while we receive but three per cent upon the investment. Therefore, if we may reduce by twenty-five per cent the $24,000,000 invested in Grand Trunk Pacific investment bonds, the amount mentioned yesterday by the minister, that reduction would amount to $6,000,000 exactly and would completely wipe out the $6,000,000 by which he claims the net debt has been reduced. Consequently, on the statement of the Minister of Finance given to us yesterday, I think I am safe to conclude, and with the feeling that hon. gentlemen opposite will agree with me, that the contention that the net debt of this country is $6,000,000 less than when they came into power, is as a matter of fact not correct.

Let me discuss briefly some matters in relation to the trade of the country. The total trade of Canada for the fiscal year just closed, notwithstanding the trade conditions prevailing during the past year, show a slight increase. I am sure we are all gratified to know that there was not a net loss on the total trade, as might legitimately have been expected. However, the figures of the total trade of Canada during the year hardly disclose a fair indication of actual trade conditions; at least, it is worth our while to analyse these figures and study them a little more closely than did the Minister of Finance yesterday. It is true, as I have already said, that our total trade increased during the year. I think that increase is about $60,000,000; I may be a little in error as to the amount, but that figure, I believe, is nearly correct. Our imports show a decrease, a very substantial decrease of about $30,000,000, and I think that for many months yet to come our imports will continue to fall. For the eleven months ending February last, our imports, dutiable and free, fell by over $35,000,000, and our imports for consumption declined $37,168,000. For the month of February alone, our total imports fell from $35,111,000 to $25,579,000, while our free imports fell from $17,000,000 to $13,000,000. Now, in view of trade conditions during the year, what has been the cause of the fact that our total trade, imports and exports, shows an increase, small though it be? It is due to our abnormal exports. For the eleven months ending the 28th of February, our exports of domestic merchandise were $404,887,000, as against $320,879,000 during the whole fiscal year of 1913, an increase of about $84,000,000 for the eleven months of last fiscal year as ompared with the whole preceding fiscal year. Of the increase in domestic exports, $68,000,000 is attributable to increased exports of animals and agricultural products. I say that the removal of duty by the United States upon live animals was the cause of the great increase in our exports of live stock, and it was fortunate for us that the United States market was available to us. Let me give a few figures indicating the great exports in live cattle which occurred by reason of the removal of duties by the United States:

October .. .. ..1912—	5,142	1913	58,671
November .. .. "	6,622	"	76,671
December. .. .. "	4,126	"	22,233
January .. .. ..1913—	4,211	1914—	5,500
	20,101		162,491

That is, during these four months of the fiscal year 1912-13, the total export was 21,101 head, while during the same four months of the fiscal year 1913-14, the total was 162,491 head.

I cannot give the values of the trade in live stock for these four months, as I have not the figures. However, for the eight months ending November, 1913, the value of these exports was $7,140,000; while for the same period in the previous year, the value was $2,246,000. And these exports were made to a market to which hon. gentlemen opposite said we could not export in the event of the removal of duties by the United States upon our live stock. So, I say, this increase in our exports is due to the action of the United States in removing their tariff upon imports of live stock and not in any respect due to ordinary market conditions.

Now, take our wheat exports. For the eight months ending November, 1913, we exported wheat to the value of $87,444,495, as against $57,236,000 for the corresponding eight months of the previous year. The

wheat exports from September to November last were extremely heavy. There was a tremendous pressure on account of financial conditions to sell Canadian wheat. Our wheat was available for export earlier than was usual, and our railways were able to comfortably take care of that export, but financial conditions actually compelled heavy sales of our export wheat in those months of last year, with the result that Canadian wheat declined relatively more than any other wheat of the world which went upon the British market. And while this of course explains a great deal of the abnormal rise in values of our exports of last year, it does not necessarily follow that it was a profitable export trade.

I might say the same thing in connection with the export of oats. I have not the figures, but I understand that our western provinces exported to the United States—that export being made possible by the reduction of duty on oats to six cents a bushel in the United States tariff—24,000,000 bushels of oats which would not ordinarily have gone to the United States, this being a further explanation of the abnormal exports of last year. These figures indicate that the export figures of the present fiscal year will not, upon reflection, appear so favourable by reason of the fact that a great deal of our exports which usually would be credited to the present fiscal year are credited to last year, thus accounting for the abnormal increase in our figures.

This is the appropriate occasion for a discussion of the expenditures of the Government. I ask the attention of the House while I discuss this matter generally and with some degree of detail. A very prominent economist has said: 'The question of expenditure is just as much a financial problem as that of revenue,
4 p.m. neither in theory nor in practice is it advisable to separate them so completely.' Mr. Gladstone once very justly remarked: 'Good finance consists more in the spending than in the collection of revenue.' I submit that these two views should be accepted as axiomatic in the matter of public expenditure. Particularly is this true of a large country, rich in undeveloped natural resources, and where a system of popular government prevails. It is fast becoming evident to all reflecting citizens of our country that we are extravagant in the disposition of our national wealth and income for purposes that frequently are both unnecessary and unproductive, and devoid of sound business principles. I am not ascribing all the blame to hon. gentlemen opposite. Both political parties must assume responsibility in this respect. It is time, however, for a fundamental change in the character of public expenditure. All public expenditure should answer some substantial purposes or it should not be tolerated.

When out of power the Government party were emphatic and insistent that the late Government were grossly extravagant in expenditure. In the opinion of hon. gentlemen opposite the annual expenditure was so large as to constitute, in the judgment of the Prime Minister, prima facie evidence of corrupt expenditure. It was said that controllable expenditure was so excessive as to be criminally wasteful. To-day it is very much higher, yet we hear no apology or admission of extravagance, criminal or otherwise. They promised much in the way of establishing sounder principles for public expenditure, but so far, their record for reckless expenditure, and expenditure without principle, is without a parallel in our financial history. Their high sounding promises in respect to public expenditure is but as a tale that is told. Never for a moment since their entrance to office, have they disclosed or professed a desire for sound business expenditure.

'Dash away and spend the money' was the openly expressed injunction of an hon. gentleman opposite this session to the Government. There was no need on the part of the member from Prince Edward Island to inculcate this principle for the guidance of the present Government. They have given ample evidence of their gifts in this direction, although it required the frankness of a private member supporting the Ministry to acknowledge publicly what we all believed to be true, namely, that the Government are more interested and concerned in devising means for the expenditure of the revenue than for providing the requisite revenue for necessary and legitimate expenditure. I remarked last year that it ordinarily was the function of Government first to fix its budget of expenditures, and then provide the revenue by taxation, but it is obviously the practice of the Government to obtain all the revenue possible, and then provide means of expending it. As I said last year, the Committee of Supply has become merely the committee of ways and means to spend the revenue. Yes, 'dash away and spend the money' is the open and avowed programme of the Government. I trust this policy will not receive the support of the people of Canada who are providing the money.

But the Government reply: The Opposition party do not object to the items of Supply voted from time to time. This is a weak and fatuous defence. No opposition has the opportunity of discussing in detail the items of the Expropriation Bill. Protest availeth nothing when it is possible even. The Government must take the full responsibility of its own supply and expenditure. They alone are responsible, and I charge that they are needlessly prodigal in this respect, and are not in any degree, it would appear, guided by principle or policy. Witness the utter lack of principle in the increase of subsidies to one province in the first session of Parliament. What more reprehensible than the arbitration reference provided for aiding British Columbia in its mad policy of expenditure, as if there was anything to arbitrate? Conceding that the province was justly entitled to an increase of provincial subsidies, I say nevertheless that the submission of such a matter to arbitration, when there was no issue to arbitrate, was a piece of administrative folly that should wreck immediately the strongest Administration that ever held office. That one act alone should be regarded by reflecting people as a sufficient ground for a vote of want of confidence in the Government at the first opportunity.

Take the expenses incurred to-day in connection with Fenian Raid bounties. Speaking for myself, I say that the administration of that Act is nothing more or less to-day than a public scandal, and I say that although the people of my province will probably benefit more by the bounties than the people of any other province. Not the slightest business-like attention is given to the administration of the Fenian Raid Bounties Act. In fact, in a by-election in the province of Nova Scotia recently promises were made by prominent supporters of this Government that improper applications for the bounty would be condoned through the influence of prominent Conservatives in that county with the Government administration. It is quite proper to give the Fenian Raid bounty to those who are entitled to it. But I want to tell the Minister of Finance that it would be worth his while to see that the Fenian Raid bounties are paid promptly and in business-like way and it would certainly be worth his while to inquire how much of the public money of this country is being improperly expended in that connection. To illustrate the peculiar methods adopted by hon. gentlemen opposite in making expenditures, let me refer to another matter. We are promised legislation this year to provide moneys wherewith to reimburse the depositors of the Farmers' Bank. If that legislation is introduced, if the money is voted and subsequently paid to the losing depositors of that defunct banking institution, it will not be because of any sympathy on the part of the Government with those who lost their money in the failure of that bank, it will not be because of any principle, but it will be because this Government want to pay the election expenses of their own friends in the last Dominion election. That is a pretty strong statement and perhaps requiring some little explanation, but I have no doubt hon. gentlemen opposite can understand my meaning very well indeed. Many hon. gentlemen now occupying seats on the other side of the House, in the election of 1911, promised that if their party was returned to power, the depositors, at least, of the Farmers' Bank would be refunded their losses by the Government of this country. That was a corrupt bargain to make as between a candidate and the electorate to which he was appealing. If he were using his own money it would be a corrupt bargain; but there would not perhaps be so much objection to it, as to those hon. gentlemen who have secured seats in Parliament coming to the Government and saying: I cannot liquidate the promises I made to the depositors of the Farmers' Bank, myself, as I have not the money, will the Minister of Finance be good enough to do it for me. I repeat that if that expenditure is made it will be absolutely devoid of principle as are many of the other expenditures made by the present Administration.

Now let us investigate briefly the actual expenditures of the present Government. In the year ending March 31, 1912,—and the Government was not responsible for the Appropriation Act of that year,—the expenditure chargeable against revenue, amounted to $98,161,440.77, in 1913 it had grown to $112,059,537.41; for 1914 the estimate is $129,000,000, and for 1914-15 it doubtless will reach $150,000,000. The Expropriation Act for this year will provide for expenditures on consolidated fund account in excess of $146,000,000, and the Supplementaries will contain a substantial amount also. The following figures may be of interest:

Expenditure.

Year ending March 31.	Consolidated Fund.	Capital Account.
1911..	$ 87,774,198 32	$30,813,766 75
1912..	98,161,440 77	30,939,575 35
1913..	112,059,537 41	27,205,661 13
1914 (estimated)	126,500,000 00	57,000,000 00
1915 (main ests.)	146,786,126 42	43,949,176 42

What has become of the oft-repeated assurances of hon. gentlemen to reduce expenditures ? What has become of their public pledges for retrenchment ? The expenditures proposed against revenue for the year ending March 31, 1915, will be 25% greater than in the year ending March 31, 1912. Is this sound public policy in a year of falling trade and revenue ? Let us look at consolidated fund expenditures in connection with public works for the past few years and the proposed expenditures for the present fiscal year—each year ending March 31:

1911..	$10,818,834 15
1912..	11,651,947 27
1913..	13,158,077 91
1914 (estimated)..	18,000,000 00
1915 (to be voted, exclusive of supplementary estimates)..	28,330,048 89

Let us see what this means. It means that for ordinary public works in the year just closed we spent about one-eighth of our total revenue from customs and excise. The Estimates for expenditures for the year 1914-15 for public buildings alone is over $16,000,000, and will be more than one-eighth of our revenue to be derived from taxation. The total estimated consolidated fund expenditure for this year for public works is $28,330,048.89 exclusive of railway expenditure, and over $43,000,000 is to be voted for public works on capital account, and together this I believe will be a little less than one-quarter of our total revenue for 1914-15 for customs and excise.

Again, take militia expenditures for the past two years and as estimated for the present year they are as follows:

1911	$ 6,868,651 29
1912	7,580,600 29
1913	9,114,533 09
1914 (estimated)..	10,200,000 00
1915 (main estimates)..	10,867,000 00

This is a notable increase, and still the Minister of Militia is not satisfied. He says he is entitled to one-tenth of our revenue for militia expenditures. He is doing well. The Government does not seem to throw any obstacles in the way of our ambitious war lord obtaining for his departmental expenditures one-tenth of our total revenue for our civil welfare which is the exact proportion of our income we are enjoined to surrender for the peace of our affairs external. Is it not time to apply the brakes to the demands and expenditures of the Minister of Militia? Are his colleagues afraid to protest? It looks like it.

While discussing the expenditure on militia, I might avail myself of the opportunity to protest against the efforts which are being made by the present Minister of Militia to introduce, into this country the military spirit of Europe. The Minister of Militia went to Europe last year with a large and distinguished entourage, to study military operations, and to get in touch with the spirit of militarism prevailing there, in the hope that he could infuse that spirit into the people of Canada. The hon. gentleman is desirous, not only of inflaming the youth and the women of our land with this spirit of militarism, but he is endeavouring to enlist, as well, the sympathy of the older men. Max O'Rell in his book, 'Brother Jonathan,' wrote as the first sentence, 'The population of the United States is 65,000,000—mostly colonels'; and if things progress in the future with us as they have recently, it may well be said: The population of Canada is 8,000,000—mostly colonels. I believe it to be in the best interests of Canada, that once in a while we should take opportunity to protest against the strenuous efforts of the Minister of Militia to develop unduly militarism and military expenditures in this country.

In a year when we have a falling trade and revenue one would expect to see substantial reduction in proposed expenditure for 1914-15. The main Estimates ask for a total supply for Consolidated Fund and capital expenditure the sum of $190,735,176.42, which is but a total decrease of $11,927,000, but the reduction all relates to capital expenditures. There is an increase of $3,573,311.50 for Consolidated Funds expenditure over last year, notwithstanding the unfavourable symptoms of a falling revenue for some months. This I anticipate will leave the minister with a considerable deficit next year, which will tend to injure our credit and prestige greatly in the money markets, to which Canadians must resort during the year. Therefore, I say the proposed expenditures of the coming fiscal year are not prudent or based on sound public policy. They are opened to grave censure, and tend to seriously affect our credit, particularly in a year in which Canada needs so much credit abroad, more,

probably, than ever in her history. Is the minister steering in the proper direction in all the circumstances? I say no. I say there should have been a very substantial reduction in his Consolidated Fund expenditure. Many millions of dollars might have been eliminated from his Estimates, and economics practised. 'A government's strength was to be measured by its power of resistance to the demands for expenditure by camp followers and partisans,' said the Prime Minister some years ago. Judged by this standard, this Government is without strength and is plainly at the mercy of camp followers and partisans.

During the last election campaign, if there was anything which the Conservative party promised more than another, it was, that if returned to power they would obtain for Canadian exporters fresh and wider markets. They were then combating the idea that we required the markets of the United States for our surplus products. The Minister of Trade and Commerce said, in my own city, at a public meeting, that the true aim of Nova Scotia in trade development was not with the United States but with the West Indies, Mexico, South America, and even with the whole world, so long as it was not with the neighbouring republic. It was further said by hon. gentlemen opposite, that the trade agreement with the United States, if entered into, would destroy our bargaining powers with other countries, and that we never in the world would be able to negotiate any trade convention or arrangement with any other country, on account of this so-called reciprocity agreement with the United States.

What have these gentlemen done since they came to power, what have they to show in fulfilment of their promises and professions; where are the wider and the better markets they said they would give us? Last year, they made a trade agreement with the West Indies, and it was hailed with much acclaim as a great triumph for the Government. The results of the West Indian treaty have not been intensely gratifying so far, although perhaps it is a little too early to judge what may be the true effect of it. Personally I never expect to see very great benefit accruing from the West Indian treaty. I have no objection to the treaty, whatever, although I think it might have been very much improved.

In 1911, we were told that the British market was the market for Canada and Canadians to aim at. We were told that it was large; that it was not capricious; that it was constant; that the Unionist or Conservative party of Great Britain favoured preferential tariff rates upon Canadian produce, and that, if the Conservative party came into power in this country and the Unionist party in Great Britain, we would doubtless secure the advantage of preferential treatment in the British market for our exportable surplus. The people of this country were asked to denounce and vote against the trade arrangement with the United States, because it would forever destroy any hope of preferential treatment by the United Kingdom of Canadian surplus products.

The handbook issued by the Conservative party in 1911 puts in a very concrete form the views of hon. gentlemen opposite; it is simply a repetition in condensed form of the statements made by every one of hon. gentlemen opposite. Let me for their benefit read just a word or two from this pamphlet:

> The Conservative party in Great Britain now advocates protection and the giving of a preference to the empire. If it came into power and found the Fielding-Knox brand of reciprocity in force it would be unable to grant Canada a preference. In the case of wheat, there would be the insuperable difficulty of maintaining the identity of Canadian wheat. The British Government would object to granting a preference on American wheat simply because it was shipped through Canadian channels; but with American wheat crossing the Canadian border at will, and with Canadian wheat flowing down to Minneapolis and seeking the ocean through American routes the Canadian wheat could not be kept separate.

It is worth while pursuing this just a little further to see if there is any possibility of the consummation with the United Kingdom of such an arrangement as indicated by hon. gentlemen opposite in 1911. It is worth while doing so just to ascertain if hon. gentlemen were honest when they made these statements in 1911, or if they were simply fooling the people of Canada. I think they were doing the latter. What is the policy of the Unionist party to-day? We have a pronouncement from the leader of the Unionist party upon the fiscal policy of that party, or what would be their policy if they came into power in respect to preferential tariff treatment to the dominions of the empire. Let me give it to the House as announced by Mr. Bonar Law some time last year. This is a statement respecting their policy upon food:

If as a result of the next elections the Unionists are returned to power, we shall impose no new duties on the food of the people, but on the contrary we hope to take off some of the food duties which they have now to pay.

I do not think that the people of this country can longer entertain any hope of preferential treatment from the United Kingdom upon our exportable natural products, even if the Unionist party receive from the people of the United Kingdom their confidence, which they are not likely to do for many years to come. Hon. gentlemen in 1911 had no justification whatever for holding out to the people of this country the hope of preferential treatment upon foodstuffs exported from the overseas dominions of the empire to the United Kingdom; and it was but one of many efforts made by hon. gentlemen opposite to fool the people of this country and to withdraw their attention from a careful, honest, intelligent and frank consideration of the trade convention or agreement at that time before the electorate for consideration. We were promised a profitable trade arrangement with Australia. That was the hobby of my hon. friend the member for St. Antoine (Mr. Ames). He made a great hue and cry about the effect of bargaining with the United States. He urged that it would destroy all hope of any trade arrangement with the sister colony of Australia. He said that our bargaining powers were absolutely gone by reason of the Fielding-Knox arrangement, and that the future was absolutely dark respecting trade arrangements with that Commonwealth. He said:

There is no use now in bringing up the question of Canadian-Australian reciprocal trade arrangements. The whole hand of the Government is on the table, the game is played.

These words were uttered in a very doleful and dismal fashion. One would have imagined that both Canada and Australia were being wiped absolutely off the face of the earth. (Reading):

All those items which we want, all those items which we could fairly send to them, we cannot now send without the intermixture of American goods. We are henceforth handicapped both in giving them and in taking from them, because we have no longer a basis or means of negotiation.

He ends by saying:

Consequently the whole game is played.

I want to say to hon. gentlemen opposite that although the Canadian arrangement with the United States was defeated, the basis for negotiation between Canada and Australia still remained. A distinguished member of the present Government went to Australia some few months ago for the purpose of negotiating a trade arrangement with that colony. He was not burdened or impeded in his negotiations by the trade arrangement made with the United States in 1911. He had a free hand. The bargaining powers of Canada and himself were free, unimpaired by that former trade convention. What is the result of his visit to Australia? Where is the wider market which that hon. member said we might have for a great many of the things which we produce and export from this country?

The only comfort we have from hon. gentlemen opposite respecting wider markets is this and it came from the Minister of Trade and Commerce during last August, namely, that there were tremendous possibilities for Canadian trade in China and Japan. That hon. gentleman visited China and Japan, and I assume that it was one of his official functions, as a minister of the Government of this country, particularly charged with the responsibility of administering our affairs relating to Trade and Commerce, to endeavour to make some trade arrangement, and I ask: Did he make any effort to negotiate any arrangement with China and Japan whereby we might have some preferential treatment in the way of tariff for our products in those countries?

I have always had the idea that the Minister of Trade and Commerce had some talent for negotiation with the man in authority in the Celestial Kingdom, where the people are said to possess 'ways that are dark and tricks that are vain.' I have always thought that—intellectually at least, I do not mean physically—there was something of the Oriental in the Minister of Trade and Commerce; and I do not know that I could wish for any greater pleasure than to witness the Minister of Trade and Commerce sitting at a table negotiating a trade treaty with the representatives of the Chinese Empire or the representatives of Japan. And, until I learned to the contrary, I should be inclined to think that the Minister of Trade and Commerce would be able to hold his own very well in that company. However, for the moment, in the matter of other markets and places to which we might export our Canadian produce, we have, from hon. gentlemen opposite, only the statement that in China and Japan there are tremendous possibilities.

Now, I wish to deal with some matters re-

lating to tariff questions; and the greater portion of my remarks will not relate to the observations of the Minister of Finance on such matters. The many amendments of the tariff which he proposed yesterday involve so many considerations that, so far as I am concerned, I hardly feel competent to discuss them intelligently this afternoon, not having had an opportunity to give them any study. Therefore, I must reserve my remarks on this subject, should I decide to make any, until the House is in Committee of Ways and Means. However, I desire to say just a word or two on this point. The Minister of Finance was rather confounding to me yesterday. He reaffirmed the faith of the Conservative party in the policy of protection, and yet he admitted that there were undoubted evils in the protective system. In some cases the tariff was increased and in some cases it was decreased. A decrease of duties, apparently, met with greater favour from hon. gentlemen opposite than an increase. I really do not know what fiscal principle moves and animates hon. gentlemen opposite. I doubt, after all, that it is a principle; I think it is more a matter of party strength and solidarity that they have in mind than an assertion of any tariff or fiscal principle.

Now, with respect to the duty on agricultural implements, I wish to say a word or two, but I do not propose discussing the matter in detail. The Minister of Finance laid down the proposition that free food meant free trade, and that free implements also meant free trade. I fail to understand that proposition, and I doubt both its soundness and its aptness. I do not think history, experience or fact will support the position taken by the hon. minister. If free agricultural implements means free trade, I cannot understand why the hon. minister wishes to approximate free trade even to a small degree by reducing the tariff on some articles from 17½ per cent to to 12½ per cent. I assume that there is in his mind justification for that reduction. But if justification is possible for a partial reduction, surely it is possible to imagine that at some time, under some circumstances, there might be a combination of circumstances which would justify a further reduction or possible total elimination of the duty. And there is this strange fact, Sir, the loudest, the most lusty cheer which the Minister of Finance received yesterday from his supporters throughout all his lengthy statement, was when he announced the reduction in the duty on agricultural implements from 17½ per cent to 12½ per cent. I wonder what they would have done if he had announced a reduction from 17½ per sent to, say, 1 per cent? The Minister of Finance knows that his followers would have cheered him to the echo. I would like to ask hon. gentlemen opposite, or the Minister of Finance—though I hardly expect them to answer—why he made that reduction. He did not do it because the manufacturers of agricultural implements asked it. I am sure the hon. member for Brantford (Mr. Cockshutt) never asked it. I do not know yet whether that hon. gentleman was pleased or displeased yesterday; his face was a perfect study to me, and I have not had an opportunity to inquire from his friends on the other side how he really felt. I am sure the minister did not make the reduction as a concession to the farmers. I am of opinion, and wish to state it frankly, that the minister made that reduction because his supporters behind him suggested that it would be advisable politically to do so. And I think that is the explanation of their cheering the minister yesterday when he made the announcement of the reduction. There is another possible explanation. That reduction may have been made at the request of the Canadian miller. It may be but a draft made by the Canadian miller upon the Canadian agricultural implement manufacturer payable to the Canadian farmer. The Minister of Finance told us that free implements meant free trade. Why? Surely the hon. gentleman knows that practically every Conservative candidate in a western constituency last election favoured free agricultural implements. An hon. member speaking here a few weeks ago told us that he was at a meeting where upon the wall was a huge hanger with the words 'Vote for Lake and free agricultural implements.' I do not know, but I should be tremendously surprised if in some parts of the constituency of Souris, Manitoba, there was not also seen the sign 'Vote for Schaffner and free agricultural implements.'

Mr. SCHAFFNER: Never, never.

Mr. MACLEAN: I just wish that a detectaphone had been within range of the hon. gentleman in that election, and that it were here to-day, so that we could hear its record. I will accept the hon. gentleman's statement that he never used the exact words which I have suggested; but if he will give to me and to the House the exact words he used in discussing privately and publicly the tax upon agricultural

implements, I will merely ask that he allow me to interpret the meaning.

I know that my hon. friend the Solicitor General (Mr. Meighen) would not place himself in such a compromising position as to display the banner: 'Vote for Meighen and free agricultural implements.' He is a very skilful dialectician, and he knows how to make a statement that is open to many constructions. I know that my hon. friend never promised free agricultural implements in the last campaign, but he will not deny that many people in his constituency thought he did promise it.

Mr. MEIGHEN: I have never met one.

Mr. MACLEAN: I see my hon. friend from Annapolis (Mr. Davidson) in the Chamber. He was in favour of free agricultural implements, and yet he voted against it the other night. I have in my possession a card which he circulated amongst his very intelligent electors, and it was a strange one. His slogan was: 'One King, one flag, one fleet—and free agricultural implements.' This is rather an anti-climax to a trinity of election platitudes which did not mean much and which my hon. friend did not intend to mean much, but he gave the cry of free agricultural implements a royal and imperial importance by ranking his policy for free agricultural implements with: one King, one flag and one fleet.

The Minister of Finance advised us yesterday that he had had the advantage of special information respecting agricultural implements. He said:

> We have made inquiries. For considerably over a year past we have been making inquiries and investigations into the question of agricultural implements. We have made an investigation into the prices of agricultural implements on both sides of the line, in Canada and in the United States. We have made an inquiry as to the factory cost of production of the principal agricultural implements in Canada and in the United States. We have examined the balance sheets of manufacturers with the idea of ascertaining what their position is and whether or not they are making undue profit upon their business.

I think it is only fair that when the House goes into Committee of Ways and Means we should have the advantage of the researches of the Department of Finance into the agricultural implement industry and that we should have all the knowledge which the hon. minister has respecting the balance sheets of the respective manufacturers of implements on this continent. I trust it is the intention of the minister to give us this information. When we have that I am sure that we on this side of the House will be pleased to engage in a fair and businesslike discussion of the tariff upon agricultural implements—and there I must leave the subject.

I wish to discuss at some little length the question of removal of duty upon wheat in this country in order to secure from the United States admission into that country of our wheat and flour. I also wish to discuss the policy enunciated by my distinguished leader (Sir Wilfrid Laurier) in favour of the principle of the elimination of the duty upon staple foodstuffs in order to secure for the people of this country the vital necessaries of life, foodstuffs, at the lowest possible price, which is a pressing, serious human problem for us who are the representatives of the people to discuss and legislate upon in this Parliament. Dealing first with the question of wheat, the United States Government in effect say to the Government of this country: If you place wheat upon the free list you can have entry into our market for wheat and wheat products, inclusive of wheat flour. Members upon this side of the House say it should be done. We proposed a resolution to that effect only a few weeks ago. Hon. gentlemen opposite say it should not be done and that Canada should maintain the duty as it now stands. The issue is clear, clean-cut and well defined. It is an interesting issue to debate It is one of great interest and importance to this country. I believe that the position that we upon this side take upon this question is the correct one. I believe that the position which the hon. gentlemen opposite take, is wrong and cannot be supported, and I do not think that they have up to this moment given us, or that they will be able in the future to give us, reasons which will sustain and justify the position which they assume in respect to this question. There are many people in this country who will sustain the Liberal party in the position which they take respecting the wheat duty. I think that the people of the Prairie provinces almost unanimously will do so. The Legislature of the province of Manitoba passed a resolution on this subject and, as hon. gentlemen know, the dominant party in that Legislature is one in sympathy with hon. gentlemen opposite. In fact, it is this Legislature which gave this Government its present Minister of Public Works, and I have no doubt that that hon. gentleman is

5 p.m.

still strong and influential in the councils of the government party in the province of Manitoba. That resolution reads:

Whereas the Congress of the United States of America have by recent legislation reduced the duty on wheat and wheat products entering the said United States of America.

And whereas provision has been made in the said legislation for the total removal of such duty on wheat entering the United States of America from any foreign country who would likewise remove such duty.

And whereas it is the opinion of this House that the removal of such duty by the Government of the Dominion of Canada from the United States of America would be beneficial to the agriculturalists of Manitoba.

Therefore let it be resolved that in the opinion of this House the Parliament of Canada should enact such legislation as would give the farmers of Manitoba the benefit of the countervailing duty on wheat and wheat products as provided in the Underwood tariff.

This is an important question. I do not wish to say, even though I may think so, that there is nothing in the contention of hon. gentlemen opposite.

Let us take the wheat industry in our northwest and ascertain, if we can, the present condition of that industry, and what its future prospects, so far as we may safely venture. And I refer to the prairie provinces, because it is the seat of the major portion of our wheat production. Let me first call attention to the relative importance of this industry in Canada.

The total value of our exports of agricultural produce to all countries in 1913 was $150,000,000 of which wheat and wheat flour comprised over $107,000,000. Wheat and its flour comprised in 1913 in value nearly 75 per cent of our exports of agricultural produce to the United Kingdom, and over 30 per cent of our total exports of Canadian productions of all kinds. Those figures alone will sufficiently impress one with the importance of the wheat industry alone; while there is much to say about other natural productions in that part of Canada.

Now, what are some of the outstanding facts regarding the actual condition of the industry at the present moment, and what I am about to say is applicable to the grain industry as a whole, and agricultural conditions generally in the prairie provinces. The acreage under cultivation has not shewn any increase during the past three years. For the year ending March 31, 1913, there were 10,000 less homestead entries than in 1911. In 1911 the land sales were 19,000,000 acres, while in 1913 it had fallen to 9,000,000 acres. In 1914 the figures to these matters will, I fear, be less favourable. Further, let me say the number of immigrants settling on western lands, has been declining, and we are now face to face with the problem how to procure for the future a substantial quantity of land immigration. It is from Eastern Canada and the United States that furnishes land settlers for the West, the major portion of immigration from Europe including the United Kingdom have for some time past been settling in our towns and cities. Our free lands are pretty well disposed of, and European immigrants, as a rule, are not possessed of sufficient capital to purchase. To-day we find ourselves with an immigration policy that has passed its usefulness and it is unsuitable to our needs because it lacks selection methods. Consequently, I say that without the adoption of some new land immigration policy we cannot look for any substantial increase in land settlement in the West.

Further, we have the following facts particularly relevant to the wheat industry. It is barely remunerative, if at all, to the producer, the average cost being at least 55 cents per bushel, and the cost of production is apparently increasing, it is said 12½ per cent since 1909, while marketing and exporting charges have as well increased. These facts are important because a large section of the prairie provinces it is conceded must remain grain producing areas, and not easily convertible into mixed farming lands. Important also because the production costs are important to Canada, whose exportable surplus is large and must consequently meet export prices.

It is to be remembered also that we have tremendous areas not yet devoted to grain growing, which must, if utilized, and if we are to make the desired progress, double and quadruple our production, and that is only possible if the costs of producing are reasonable and the markets available. The production costs and the markets for our western wheat is therefore of vital importance, and always worthy of the most careful consideration. It is true that we usually proceed upon the assumption that our wheat production is to continue to increase greatly, and many at least, presume that markets are awaiting not only our present productions, but any anticipated increases as well. Now, are we reasonably sure of such markets and under what conditions are any of the world's markets open to us? Let me present to the House some considerations respecting markets.

Our important wheat market to-day is the United Kingdom. In 1913 the value of our total wheat exports was $88,608,000,

of which the United Kingdom took $74,978,000 or over 88 per cent. In the event of an increased production is it sufficiently capacious to consume any considerable proportion of the same?

The United Kingdom imports about 200,000,000 bushels of wheat, of which to-day Canada supplies about one-fifth, British India one-fifth, Australia one-tenth, the United States one-fifth, and the Argentine one-seventh. While the volume of our exports have grown in the last 15 years, so has that of foreign countries. Two facts should be here noted, namely, that the domestic consumption of the United Kingdom is an almost constant quantity, and that she will continue to buy from all exporting countries of the world which offer the most favourable prices, and particularly those with whom she has an export trade and of which she is creditor nation. It is therefore clear that our only hope of increasing our exports of wheat and wheat flour substantially to the United Kingdom, is by displacing foreign wheat by advantages in quality and price. It is a fact that at present prices the growing of wheat is not very remunerative when in competition with other export wheat, consequently, the price at which we can produce and sell is of manifest importance to Canada.

Now, let us consider the United Kingdom as a market for wheat exported in the form of flour. In 1913 our total exports of flour was 4,478,061 barrels of which 2,880,167 barrels were taken by the United Kingdom, or nearly sixty-five per cent, and the total consumption of flour of the United Kingdom is about 35,000,000 barrels. Will our exports of flour to the United Kingdom increase substantially? I do not think so, because her millers are to-day our strongest competitors. The British miller buys the export wheat of the world and consequently it is cheap. Britain will continue to buy foreign wheat to employ her ships and in payment of interest upon her foreign investments. Again the British miller mixes his wheat, and the British consumer likes the resultant of the mixed product, and consequently the British miller has an advantage over the Canadian miller in buying the variety of raw material.

It is true that Canadian wheat is well regarded for flour purposes because of its strength in gluten, but the United States, Russia and Argentina grow a wheat also strong in gluten, which the British miller buys, consequently in quality of flour required for the United Kingdom we meet strong competition from the British miller. Again the most modern mills of the world are now found on the docks in Great Britain, and they probably produce flour as cheaply, if not more cheaply, than any country of the world. Newspapers recently reported that a Scotch mill recently exported flour to the United States.

Mr. SCHAFFNER: Has the hon. gentleman the figures showing the amount of wheat the United States exports to Great Britain?

Mr. MACLEAN: No, I have not these figures. Let me continue. I saw in a Canadian paper last week, the statement that soon Canada will supply the United Kingdom with flour. The conditions rather indicate the fact that we will be sorely pressed to hold what we have, unless we can undersell the British miller. The United States miller doubtless thought the same at one time. In 1906 the United States sold to the United Kingdom 10,152,770 cwt. of flour, in 1913 it was 6,157,644 cwts., and it is said that so keenly do American millers find British competition that they are largely withdrawing their selling organizations. And why? There are, I suppose, many contributing causes, but chiefly the high cost of producing wheat there, and I believe it is even greater than in Canada, unremunerative prices obtained, whether in the form of wheat or wheat flour, in competition with other wheat growing countries and the British miller. To-day we have a milling capacity of over 30,000,000 barrels per year, with an actual production of 15,000,000 barrels, and a domestic consumption of say 10,000,000 barrels, and I ask you, while we talk glibly of increasing our wheat and flour production, where are we going to obtain the market, the consumers?

We have the opportunity, if we want to accept it, of free entry into the markets of the United States, of wheat and flour. Is it worth accepting? The man who produces the wheat is apparently anxious to accept the offer. The Canadian miller objects and the Government objects also or at least it sustains the objection of the Canadian millers. Is his objection just or sound? Our millers are labouring under the mistake that Great Britain will largely absorb our flour exports no matter to what dimensions it grows. Facts rather prove this is an hallucination of the Canadian miller. If it is expected that our exportable surplus of flour is to grow, and it should, our millers should be more alarmed over the competition of the British miller than that of the United States miller, I understand that our miller has requested an ocean steamship service

specially subsidized for flour exports. This would be a discrimination that is unnecessary, and would, I think, prove futile, as it has whenever tried. I think if our millers devoted the same energy in utilizing the advantages they possess and in fighting for markets close by, that would consume even the milling capacity we now have, thus reducing the cost of production per unit, it would be found more profitable to themselves and advantageous to their country than persistent solicitations for Government favours which I venture to believe would not be helpful. Surely it is clear that we do need other markets for wheat and flour, and it is equally as reasonable a proposition that to ensure this we must do everything to make it possible to produce more cheaply

We can have an additional market. The United States market is open to us. The decision rests with the Government of Canada. The sooner we accept this market the sooner will we there establish ourselves and displace American grown wheat and flour. There would be another set of mills grinding our wheat. It would enable our millers to grind more steadily and thus more cheaply because our milling capacity would be in use. The problem of the Canadian miller is the lack of stomachs to consume flour and cattle to consume offal. The British market is not the panacea nor are ocean freight rates the cause. We want a readjustment of tariff taxation to enable cheaper production. This can be done without any injury to Canadian interests, and it should be done. This matter should have had the sympathetic consideration of the Government at this session. Wheat should have been placed upon the free list to afford an additional market and other tariff adjustments should have been enacted to encourage all productions in order to render more effective our position with competitors, and particularly for the producers of the prairie provinces where conditions are not too healthy.

Yesterday the Minister of Finance urged as a reason why it was not advisable to put wheat upon the free list, that it would withdraw traffic from our transcontinental railway lines, which were specially constructed with the view, and in the hope, that our exports would travel east and west thus affording these railways profitable long haul traffic. I wonder if the Minister of Finance was in earnest in propounding that idea? During the campaign of 1911, I often wondered if any man in the Conservative party was really sincere when he said that free wheat between Canada and the United States would be inadvisable, because it would destroy the east and west-bound railway traffic, and consequently injure our railways. That, in my opinion, is the most absurd proposition ever propounded. If it be true that the Canadian railways are at the mercy of the United States Government, then the United States Government can withdraw the tariff upon wheat any day and destroy our railway systems. Hon. gentlemen opposite say: why do you want the American market; Canadian wheat will not go there? If that be true, then Canadian wheat will continue to go over the Canadian railways, and the Canadian railways will not be hurt. Hon. gentlemen opposite further say: the price of wheat to Canadian producers will not be increased by its free admission to the American market. I do not think it is important either to deny or to affirm that contention, but if American wheat is not higher in price than Canadian wheat, then Canadian wheat will not go to the United States in great quantities and again railway interests will not be hurt. But I go father, and I take the position that there is no reason for imagining that we cannot export to other foreign countries the amount of wheat we are now exporting, and ship it over Canadian railways, while at the same time sell wheat to the United States. Surely the export of our wheat to the United States is not going to destroy our export wheat trade with the other countries of the world. Carry it to the most absurd conclusion the human mind can imagine, and suppose that all our wheat went to the United States and none went abroad over the Canadian railway systems, would that hurt the Canadian railways?

I doubt it very much, and I challenge the hon. member for St. Antoine to make good his position, if I understand him to controvert the position which I am now taking. The purchasing power of the people of the Canadian West would be all the greater if they were selling their wheat in the United States alone and not anywhere else in the world, and they would only do it if they were doing it to a greater advantage than by selling their wheat elsewhere. Consequently, the purchasing power of the producer would be increased, and the imports of the West would be much greater. It would mean a higher grade of railway traffic, and the net

result would be that the Canadian railways would be better off than in hauling low grade traffic such as wheat. But I am taking an impossible and absurd position, one that cannot happen for many years. Whether we have free trade with the United States on wheat and wheat flour or not, will not in the slightest degree affect our present export trade with other countries. In fact, there is no reason why we might not have a trade with the United States in wheat to a greater or less extent, while our export trade with other countries would go on increasing, thus giving more business to the Canadian railways than they have now; and even when the Hudson Bay railway, that doubtful project, is completed, there is no reason why any shipments of wheat which can be shipped through Hudson bay should affect the railways of this country, because in a few years we should have such an export of grain from this country that it would tax every system of transportation we have to handle it.

But I want to urge upon hon. gentlemen opposite that peculiar conditions prevail in the West, and I feel that the Government are not properly seized of the actual facts. I believe that at this moment it will be in the interest of Canada, east and west, of the Canadian producer of wheat, of the Canadian miller, and of the Canadian consumer, to place wheat upon the free list, and consequently we upon this side of the House regret that the Government has seen fit not to place wheat upon the free list.

I would go further, because in the Budget debate it is not necessary that we should confine our discussion merely to matters of finance and of tariffs. We should discuss generally the condition of our country. I would not limit the efforts of Government policy and Government action in dealing with problems of the West to the question of tariff alone. I believe we have reached the time when we should extend more direct and practical aid to agriculture, with special adaptation to the peculiar problems confronting the pioneer farmers of the three prairie provinces. They should be helped in other and more direct and practical ways which would produce immediate, permanent and profitable results. I am sure that hon. gentlemen on this side of the House are in favour of any policy which will extend some aid of a practical nature to the people of the West, who are endeavouring under difficult circumstances to produce from the soil wealth which this country needs. From the West for many years in the future must come the exports of natural products which alone will pay for the imports of this country.

Hon. gentlemen opposite speak a great deal about the new agricultural policy, which means an expenditure of a million dollars a year. I congratulate the Government upon doing that much, but after all it is not very much. I do not know that it justifies a great volume of boasting, or that it indicates a great deal of careful study or reflection upon the actual agricultural conditions of this country. We have reached a stage in this country when we should do more for agricultural interests, and we would do so if we realized more clearly and accurately the tremendous part agriculture plays in the business and prosperity of this country. Hon. gentlemen opposite speak about the so-called National Policy being beneficial to agriculture. The policy of the present Government in respect to agriculture generally, but in reference particularly to the question which I have just been debating, namely, the wheat tariff, is not designed in the interest of the agricultural producer.

At six o'clock, the House took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

SECOND READINGS.

Bill No. 148, for the relief of George Gracie Smith.—Mr. McKay.

Bill No. 149, for the relief of Harry Cracroft Pugh.—Mr. Douglas.

THE BUDGET.

Mr. A. K. MACLEAN (resuming): At six o'clock I was urging that, in view of the prevailing conditions in the Northwest provinces, in addition to encouragement in the way of possible tariff revision, we should not hesitate to afford them aid that would apply directly and practically to the needs of that country and to the peculiar difficulties confronting the farmers of that section. I have been informed since six o'clock, that a decision has been made by the Board of Railway Commissioners in the way of reduction of railway freight rates which will mean a great deal to those provinces, particularly to Saskatchewan and Alberta. I am sure this will be received with much gratification by all citizens of Canada, and particularly by those most directly affected. The Railway Board is a

creation of the late Administration, and the measure which created them was one of the acts of that Government to which hon. members on this side of the House always point with a great deal of pride and satisfaction. The Railway Board is a body which has rendered very important service to Canada, and if in the determination of the issue of railway freights which has been before them, they have succeeded in effecting such reduction as will prove an important factor in the interest of the people of the western provinces, then the Act establishing that commission has been still further justified.

There is just one more matter I propose discussing before concluding my remarks, and that is the question of tariff policy respecting food products. We had very little from the Minister of Finance on that subject yesterday; in fact, nothing. I was somewhat surprised by this omission, because the question of the cost of living is of extraordinary importance and is receiving very serious consideration on the part of all classes of people. I think, further, that it is a condition of affairs that calls for practical, serious consideration on the part of the Government. I do not propose to engage in a detailed discussion of the high cost of living, or of what remedy should be applied by way of tariff amendments. I rather purpose asserting some general principles in respect of this question. The high cost of living, the phenomenal increase in the prices of the actual necessities of life, requires no proof or evidence from me. The prices of articles which are the actual necessities of life, particularly of foodstuffs, have been constantly rising for years, until to-day the wage-earners and the small salaried classes are facing the lowering of the living standard, or they are obliged to forego many of the actual necessities of life and cease to enjoy many of the advantages which hitherto they have enjoyed. In this respect, phenomenal conditions prevail throughout the world, conditions intensely interesting, and deemed of sufficient importance by all countries to receive the most thorough and careful consideration by their best-trained economists. Now, I am not going to assert that the Government is entirely responsible for the prevailing high cost of living so called. For this phenomenon many causes are assigned, but I do not propose to enumerate or discuss them. Some probably are beyond our control, while the effects of some may be at least minimized if not removed. I do not propose either to give any comparative statement of prices. This is too well known. Neither do I propose discussing any lengthy list of articles, the prices of which are considered high. However, I wish to discuss very briefly the matter of the prices of foodstuffs, and to suggest what we should do in the circumstances.

To-day most foodstuffs are taxed or subject to duty, and this undoubtedly contributes to the cost. The tariff duties must affect the prices of foodstuffs, else no one would object to their removal, and they would never have been established. Is this not right? Does there exist any real justification for the continuance of the imposition of duties upon staple foodstuffs, in view of the existing prices, and in view of the fact that it apparently carries no real advantage to the producer? Let us consider a few articles. Take the matter of meats, so essential a foodstuff. What is the world-wide condition? The world is hardly producing sufficient for its needs. That is true of Canada to-day. Our production of live-stock is declining, and, this being an important consideration, I desire to give the House some figures bearing upon this point, as helping to an intelligent consideration of the question. Canadian head of live-stock:

	1908	1912.
Swine,	3,369,858	2,655,400
Sheep	2,831,404	2,360,600
Milk cows,	2,911,746	2,890,100
Other cattle,	4,629,836	4,093,600

Total cattle receipts at Winnipeg stockyard: 1906—130,426 1912—101,044

The export of cattle from the port of Montreal in 1909—I am not sure whether it was 1909 or 1906—was 94,294; while in 1912 it was but 6,184 head. The export of sheep was 1,616 in 1909, and only 178 in 1912. It is quite obvious, therefore, that our production of live stock available for meat supply is decreasing, and that affects very seriously the whole question of meat prices. An idea of our decline in live stock exports can be adequately gathered from the fact that in 1902 the value was $10,480,000, while in 1913 it was $2,183,000.

It might be of interest to give the House some statistics respecting the live stock productions and export in the United States, which is of importance in considering this subject from the Canadian view point. Let me first give some figures regarding exports from the United States:

Exports of cattle:

1909 . . . . . 397,286 head
1913 (June) . . . . 105,506 head

Exports of beef:

1909 . . . . . 674,284,723 lb.
1913 . . . . . 123,000,000 lb.

Exports of pork and its products:

1909 . . . . . 1,538,024,466 lb.
1913 . . . . . 965,000,000 lb.

In the United States the number of live stock of all kinds have fallen as in Canada, only in greater proportions, and, I think, everything points to that country becoming a very large importer. Now, under such conditions, is a tariff in this country upon live animals and meats either just or necessary? The removal of United States tariff upon meats will lessen materially our limited supply for domestic consumption. Why should not the tariff upon foodstuff of this character be removed? I cannot detain the House further upon this point.

Let me now give the House some statistics showing our imports and exports of important articles of foodstuffs for the year 1913, with the duty paid thereon:

	Imports.	Duty paid.	Exports.
Pork	$1,043,916	$210,990.00	$ 57,960
Poultry	407,815	80,201.00	72,477
Meat, canned.	388,566	97,627.19	26,718
Eggs	2,828,607	97,123.48	35,519
Butter	2,123,688	252,311.76	223,578
Potatoes . . .	538,106	114,353.67	749,363
Mutton	554,758	169,339.45	6,742
Bacon	1,938,726	270,893.06	5,350,845

Mr. EDWARDS: If the duty were removed, does the hon. gentleman think that more butter and eggs and bacon would be imported than formerly?

Mr. MACLEAN: Probably. In this country to-day, particularly at certain seasons of the year, many of our people are compelled to abstain from purchasing some of these articles by reason of the cost. If we have to import these articles why not let those who require them have free of duty taxation if possible. I am simply asserting that policy as a general principle. There may be exceptions to it which I shall discuss later.

Mr. MORPHY: Does the hon. gentleman argue that the list of foodstuffs last mentioned should be admitted to this country free of duty?

Mr. MACLEAN: I am going to argue that in a moment.

Mr. MORPHY: Will the hon. gentleman not answer me now?

Mr. MACLEAN: Yes. My position is this: Staple food products, as a general rule, should be admitted into this country free of duty unless for very good and substantial reasons. In formulating and readjusting a tariff upon foodstuffs the guiding principle should be to make foodstuffs free of duty. The necessities of revenue would of course be a natural exception to that view.

To-day we are in receipt of ample revenue, but one can easily conceive that almost at any time the Government might require further revenue. I do not mean to assert that I would carry this principle so far as to say that such imports should not be taxable for purposes of revenue.

I go a little farther and perhaps this is what my hon. friend wishes me to discuss. I think the maintenance of a tariff in this country upon foodstuffs was more defensible for the purposes of retaliation against our neighbour than upon other grounds. I do not accept it as a fact that tariff imposts upon agricultural produce imports into this country have been beneficial to the producers. I assert that, as a general principle. I would think it only fair that any government, in taking into consideration the readjustment of the tariff upon foodstuffs, while guided mainly by the principle of giving the consumers untaxed foodstuffs, should take into consideration the question of how such articles, when imported into a foreign country from Canada, are treated in the way of tariff duties. I am willing to concede that that is a fair matter for consideration, but as a general principle I say that staple food products might well be admitted into this country free of duty.

To-day we are trying to drive Canadian trade across a continent 3,000 miles with a dead section intervening between the West and the East. It is an ambitious scheme on the part of Canadians. It is perhaps in many respects deserving of commendation. We have all done our part to develop trade between the eastern and western parts of Canada, as well as interprovincial trade, but in a country extending from ocean to ocean it is not sound, economically, and I deny its justice, to be endeavouring to force traffic and trade in foodstuffs particularly across a continent some 2,500 or 3,000 miles in extent. It is unnatural, and economically wasteful. If the Canadian Northwest develops its agricultural productions in the next few years, as it should, it will become the strong competitor of the farmer of Ontario, Quebec, and the Maritime provinces. It will not be the competitor of the farmer in the United States.

We will have the same condition of affairs that prevailed in the United States some years ago. When the western states were heavy exporters they were able to dispose heavily of their products in the eastern states with the result that the eastern farmer felt the competition. That will be the result in this country if the West develops in the production of agricultural commodities as I believe and hope it will. It will be to the advantage of the eastern farmer, therefore, if the farmer of the West has an outlet in the western or middle western states so that there he may find a consuming market for his surplus products. It apparently will happen in this country that while we are exporters of certain products, such as bacon, for instance, where our exports are much larger than the quantity imported, we can still have an import trade to the advantage of the consumer.

It is not wise to say that we should consider only the interests of the producer of agricultural commodities, for we must remember that we have a large number of consumers, in fact, numerically greater than the producers to-day in Canada. It is not fair or just to the consumer to say that in all cases in respect to foodstuffs he must accept and purchase from the Canadian producer regardless of circumstances, or pay the import duty.

Peculiar economic conditions prevail to-day respecting the price of the real necessities of life throughout the country and we must take them into consideration else we cannot deal logically or in a business-like way with the problem that I am now attempting to discuss. The situation to-day is altogether different from what it was some years ago. A new set of facts and conditions confronts us and it is our duty, in providing a remedy and in seeking some alleviation of present conditions on behalf of the consumer, to study the actual facts and conditions so that we may discuss the remedy in an intelligent manner. The effect of a tariff to-day is not what it was a few years ago. The same is true of the United States and of all the world. Trade has become internationalized, and many duties exist upon imports which do not affect the quantity of the imports or the price of the article or articles imported. I believe that if the duty were removed from some articles it would not vary in one iota the quantity of imports of such articles, nor perhaps would it affect the price. There are combinations of trade between some producers, between transportation systems, and between middlemen that absolutely nullify the effect and intention of a tariff. For that reason I say that the question of tariffs to-day must be considered in the light of new conditions. This, I think, was well expressed in the following annual crop report of the Department of Agriculture of the United States issued January, 1914:

> The long line of distributors and middlemen between the farmer and consumer are in a position to take advantage of the market and to a certain extent control the market in both directions, because they are better organized to keep informed of crop and market conditions and to act more promptly than either farmers or consumers, who are not organized and as individuals are helpless.
>
> The high prices paid by consumers, ranging from 5 to nearly 500 per cent in some cases more than the farmer received, indicate that there is plenty of room for lowering the cost of farm products to consumers and at the same time largely increase the cash income per farm without increasing farm production.

This, Sir, is, I believe, an actual fact in the working out of things to-day. When one discusses the removal or reduction of tariffs upon agricultural products, it does not follow that the producer will be affected in the least, although it may operate to the disadvantage of the middleman or possibly some transportation system. I do not think it is the opinion of many farmers or producers of foodstuffs, that the tariff now existing is in their interest. I do not say that statement is not subject to some exception, because I dare say there are some producers of certain agricultural foodstuffs, who would contend, and perhaps with some measure of success, that a tariff was of some advantage to them. But generally speaking, the producer does not get the advantage of any substantial proportion of the price paid to-day by the consumers of staple foodstuffs, as has been proven time and again in many instances in Canada and the United States. There are some producers of foodstuffs in this country, who are now asserting that the removal or reduction of duties upon foodstuffs will operate as an injury to him. A memorial from the Dominion Council of Agriculture was presented to this Government in December last, and in that memorial I find these words:

> We ask that all foodstuffs be placed on the free list, as we believe that the taxing of foodstuffs is a crime against humanity.

Mr. EDWARDS: Who said that?

Mr. MACLEAN: The Dominion Council of Agriculture represents a very large body

of the producers of agricultural products in the province of Ontario, and of the West. I believe that very shortly after this memorial was presented to the Government, a counter-memorial was presented by another delegation from the province of Ontario. Am I right in that?

Mr. BEST: The members of the first delegation were agriculturists; the members of the second delegation were farmers.

Mr. MACLEAN: I think the truth is that the first delegation was composed of farmers and the second was composed of polticians. It appeared that way to me at least. The second delegation appear to me to hav- been staged to counteract the representations of the former delegation or memorial. I do not know whether the first one was or not; at all events, they were quite frank.

Mr. ROGERS: If my hon. friend will excuse me, I would like to say that that statement is not in accordance with fact.

Mr. MACLEAN: Which statement?

Mr. ROGERS: The statement that the delegation was engineered and brought down here for a purpose.

Mr. MACLEAN: Though I am always glad to accept the word of the Minister of Public Works, I must say that it had to me that appearance.

Mr. BEST: The farmers of Ontario, who came here on the 21st of December, 1911, did not say they wanted free wheat.

Mr. MACLEAN: I do not know that the hon. gentlemen opposite would be glad to submit that issue once again to the farmers of Ontario.

Mr. BELAND: South Bruce.

Mr. MACLEAN: The question of the high cost of living and of placing foodstuffs on the free list, subject to the possible exceptions and considerations I have mentioned, deserves a more complete argument than I intend to make to-night. When I commenced to speak upon this point, it was my intention merely to assert some general facts and principles in connection with the question.

The Minister of Finance stated yesterday that free food means free trade. Surely that is an untenable proposition. Where does the Minister of Finance get authority for that view? He did not endeavour to substantiate it, and I doubt his ability, or that of any other hon. gentleman, to do so. You may resort to history, to experience, or to facts, but you will fail to find anything which would support the proposition of the Minister of Finance, that free food means free trade. The theory that free food means free trade is a protectionist doctrine. It is the idea merely of those who try to make the farmer believe he is a beneficary of the protection given to others. This idea I thought was long ago discarded.

Mr. ROGERS: We do not want to discard it.

Mr. MACLEAN: I suppose the Minister of Public Works is right in saying that he and his friends do not want to discard protective duties, and therefore they take refuge in the absurd doctrine that free food means free trade. He wants food to support his protective tariff duties. When protection was first established in Canada and in the United States, it was said to be for the aid of infant industries; but it is obvious that argument could not last forever, and it has been abandoned. The old established industry seems to want protection as much as the industry started but yesterday. In the United States they abandoned that thirty years ago; and when they did so, what did they take up? They said it increased the wages of labour. That argument was urged for a period, but it has also been abandoned. Nobody urges that to-day. Experience has proved that it cannot be established as a fact. Up to the year of 1890 or thereabouts there was no such thing as protection for the farmer in the United States tariff. It was the McKinley tariff Bill which imposed upon agricultural products a tariff for protection purposes. It was in the time of McKinley that we first heard the campaign of protection for the farmers. He was placing the responsibility of the continuance of the high protective tariff upon the farmer, but he really intended it for other classes. Even the protectionist, I thought, had abandoned the justification of the tariff upon the ground that it is necessary for the farmer's interest. He has resorted to another argument, namely, that there should be a tariff to equalize the difference in the cost of production in the home country and in the importing country. That is the doctrine put forward today in the United States in support of the policy of protection. That was the doctrine held by the Minister of Finance last session or the session before when he introduced his Tariff Commission Bill. That was his justification for it. He never then

urged that, if you have free foodstuffs, you will have free trade. He did not then mean to suggest that it costs more to produce foodstuff in this country than it does in the United States, and that it was necessary to determine the precise difference by a tariff commission. Therefore, I say that the proposition that the placing of foodstuffs upon the free list necessarily means the adoption of free trade, is untenable and absurd. I do not propose pursuing my argument further upon this point.

In conclusion, considering the peculiar economic conditions prevailing to-day, considering the high cost of living which presses sorely upon many classes of our people, considering the extremely high prices of the actual necessities of life, particularly foodstuffs, considering the fact that the producer of foodstuffs apparently receives little if any advantage from the Canadian tariff to-day imposed upon foodstuffs, I ask: have we not reached that stage when we might, for the benefit of the consumer, place foodstuffs upon the free list? That is the position which we upon this side of the House take, and I think the position is sound as a general principle. I believe we have the human side at least of the issue. Hon. gentlemen opposite say we must continue it upon foodstuffs or the whole fabric of our tariff will fall. That position is unsound; and the Min-

9 p.m. ister of Finance, in making his tariff changes yesterday, demonstrated to some degree at least that that doctrine was unsound, because he made decreases as well as increases, in the tariff rates, and in some instances he placed articles upon the free list.

Economically our position upon this question is sound. I believe it is in the interest of both the producer and consumer, I submit that the Government should immediately take into consideration the matter of taxation upon foodstuffs in this country. If the Minister of Finance desires to adhere to the position that he asserted yesterday, that he will not consider the demand of the Canadian consumer for the remission of taxation upon foodstuffs, if he will continue to adhere to the position that he will not consider the revision of the tariff upon foodstuffs, we are satisfied to meet hon. gentlemen opposite before the people of this country upon the issue. We are ready to meet them at Philippi upon that policy.

Mr. H. B. AMES (St. Antoine): Mr. Speaker, it has fallen upon me to endeavour to deal with some of the arguments laid before this House by the junior member for Halifax (Mr. A. K. Maclean). It is not my intention to occupy the time of the House for a period of four hours, but I shall endeavour in a few moments, as speedily as I can—for I am a man of rather few words—to deal with some points at least which the junior member for Halifax has made, and which I think should not pass unchallenged.

In his opening remarks he made two observations, one of which I can re-echo, the other of which I would take issue with him upon. He expressed the hope that the present depression was only temporary, and that full prosperity would very speedily arrive. While hardly admitting that Canada to-day is not fully prosperous, I shall still be quite prepared to join with him in hoping that greater prosperity may come to her in the near future.

When the junior member for Halifax characterizes the remarks made in this House yesterday by the hon. Minister of Finance as being apologetic and fearful, I confess that I cannot share his views. As near as we could judge from this side of the House—and the hon. Minister of Finance must have presented an altogether different appearance from the other side, if the remarks of the junior member for Halifax hold good—the Minister of Finance seemed full of optimism, vigour and determination—and, I trust, of good health—to carry to a successful issue those projects which he brought forward. The junior member for Halifax laboured long and arduously all afternoon in an endeavour to convict the hon. Minister of Finance of some wrongdoing. I feel very much like letting the verdict go as 'not proven.' I do not think the hon. gentleman has brought home in his criticism anything very serious with reference to the policy of the Government or of the Minister of Finance. And yet, I am hardly willing to even let him have the benefit of such a verdict, because I believe that the feeling of this House is that the Minister of Finance, in dealing with this question and with his own record, has been, if anything, over modest, as is his wont, and has not taken to himself the full meed of praise to which he is certainly entitled. After three years of successful administration there begin to emerge a sufficient number of facts and figures to make comparison with previous

administrations possible; and I propose to take a few moments to emphasize some of the points which seem to me worthy of being spoken of and being again emphasized in the remarks of the Minister of Finance.

The Minister of Finance is no pessimist; he is a conservative optimist. He sees things as they are, and he does not see shadows where shadows do not lie; and I think he is prepared to fearlessly face the future in the belief that Canada will be able to continue her forward and prosperous career. We all admit that there are periods of temporary depression; we all admit that a new country goes ahead very much like the kangaroo, by long leaps with occasional rests between. We all admit that progress cannot be measured in absolute equality year after year, that there are years when we recuperate, and years when we expand with such rapidity that we hardly know ourselves as we grow. One has only to look out upon the spectacle which nature gives us here, and will give us in the next few weeks. There are days when the buds open rapidly, when we can almost see things grow; there are other days when the winds are cold and the sun is hidden, when for several days it does not seem as if there was any progress made in growing vegetation. But we all know that spring and summer will come, that the bud will appear and the leaf and flower and fruit. And so do we believe it will be with Canada, that, though there may be days, though there may be years, when progress is not quite so rapid as in others, yet we are certain that the growth and expansion which we now note is but begun.

Now, the year 1912-13 has already been referred to and was referred to by the Minister of Finance one year ago. It may almost be termed ancient history. And yet the figures were not fully before us a year ago, but are now recorded in a blue book. This being always the state of affairs, it is customary, when the Budget Speech is made, to deal with two years instead of one. That the year was wisely administered, we all admit, that was the year when the Finance Minister, looking out upon the world—and the Finance Minister of Canada must consider conditions in every part of the world—anr seeing dark clouds gathering, with war threatening in certain quarters, made preparations, as he wisely should, to meet this storm when it should gather, to offset a depression which might come. For, as we all know, Canada and the rest of the world are so intimately linked together that no part of the world can suffer in non-productiveness without all the world suffering in consequence; and when war breaks out in one part of the world we, like all other parts of the world, feel the results of it even in this peaceful and prosperous country of ours. So the Finance Minister exercised caution to such an extent that out of the revenues of that year 1912-13 after meeting all the running expenses, everything that could be properly charged to consolidated revenue account, he had no less than $56,630,000 to the good. And he took that sum, as he wisely should, and invested it—invested it in permanent public works, to the extent of over $32,400,000, works which are, for the most part productive, and he invested the balance in the reduction of the debt. So, in that year, our public debt was decreased by $25,617,000. In other words, having a revenue of $3, he spent $2 in current expenses and laid $1 away partly in supplying revenue producing works and partly in liquidating our indebtedness to the world. Could anything be more wise or more conservative than that? Can any year in the history of Canada show a better record than that?

And what had been foreseen with wise foresight by the Finance Minister came to pass. The year from which we have just emerged 1913-14 was not a year of the greatest prosperity such as Canada sometimes sees; it has been a year in which there were trying conditions, and we were able to meet those conditions and overcome them very largely because of the wise foresight exercised in the administration of our affairs for the previous year.

We have before us, the approximate figures for the year 1913-14. They are not complete, but they will serve for the purposes for which we wish to use them. We find that we have had a revenue on consolidated fund account of $163,000,000. The diminution was due mainly to a falling off in customs duties, which is no cause for special alarm, for it means that importations have not been quite as great as usual, and that means that there has been a general reduction of stocks held by our leading firms and that their renewals of these stocks have been more or less cautious owing to the falling off in the demand of the country. But we are perfectly sure, since the quantity of goods that must

be consumed in Canada does not greatly vary year by year except as it expands with our increasing population, we may be sure that in a very short time our customs revenue will again expand, because stocks throughout Canada are low and must be increased. So, there is no reason to expect a serious falling off in revenue within the next few years.

Now, the year 1913-14 which by the junior member for Halifax has been subjected to much criticism, will, I think, bear most minute scrutiny and careful examination. In that year our revenue was $163,000,000. We expended on current expenses chargeable to consolidated fund $126,500,000. In other words, the balance to the good after paying running expenses, was $36,500,000 That was not enough, says the junior member for Halifax, to pay all capital demands. That I admit. Nor do I lay it down as a rule that enough should annually be collected to pay all capital demands. It has always been the custom in new countries—dominions, provinces, cities—when a great public work was undertaken which would be for the benefit of generations yet to come, that a portion at least of that expense should be borne by those who eventually will profit by it. And so when a great capital expenditure is made it is customary that a portion of the required amount shall be paid for by money borrowed and the carrying of sinking fund and interest shall not be merely upon the shoulders of the present generation, but upon the shoulders of those who may come alter and are likely to enjoy the benefits. So, I would not lay it down as a rule, to be deviated from never that all the money spent on capital account must be taken from the annual taxation of the people, and must be paid for year by year. A reasonable amount may each year be borrowed, and, provided it is invested carefully so that we get one hundred cents on the dollar in productive enterprises, there can be no criticism of this course as being bad finance. But there are a good many of the accounts that had to be paid in the last year for which this Government is not at all responsible. We heard more than once, to quote the classical phrase of the Minister of Finance, that it is the hereditas damnosa which has taken away our apparently surplus revenue. Let us see just what are the reasons why this year also we did not reduce the public debt. In the first place, we had to provide for a certain number of public works. We could not bring them suddenly to an end. There is construction in various parts of Canada—work on the Intercolonial, the canals, the public buildings, harbour improvements— all had to go on, and upwards of $19,000,000 was spent in that way which it would have been difficult if not dangerous to have curtailed. Then, let us also remember that during the last year we had to meet $12,600,000 for the National Transcontinental railway; we had to meet $2,800,000 for the Quebec bridge, and between one and a half and two million dollars for the Hudson Bay railway. Let me in all fairness ask members of this House which of these three projects are the ministers now in power responsible for; and if that $17,000,000 has to be provided for this year, can it be said that it is due to the extravagance of this Administration, when all these projects were originated before this party came into power?

But the feature of the expenditure last year which strikes one most forcibly, although it was passed over very lightly indeed by the junior member for Halifax, was the great sum that was required to be paid out in railway subsidies. Railway subsidies have been paid in this country for the last thirty or forty years. If you look back over the list of expenditures you will see that in the twenty-nine years which end with 1913 there has been paid out for railway subsidies $48,430,187. It is to be presumed that this resulted in the construction of many lines of railway. That is an average of a little over one and a half millions a year, and never before in a single year has the amount exceeded $5,000,000. How much was it last year? I wonder if the members of this House, I wonder if you, Mr. Speaker, have any idea of the sums that were expended during the year 1913-14 in railway subsidies? They reached the enormous sum of $19,036,236, almost enough to account for the entire addition to the debt that has taken place during the last year. Now, we admit that the present Government is to some extent responsible for expenditures on capital account, which I have totalled at $19,000,000. We admit that they may be held responsible because they would not allow great works to cease in connection with the National Transcontinental railway, the Quebec bridge and the Hudson Bay railway. But for these railway subsidies you have only to look back at the legislation to find that, with one exception, I think, they are not primarily chargeable to the present Government. Some of

these railway subsidies have run away with very large sums of money. If, for example, you total what was paid last year to the Canadian Northern Pacific, the Canadian Northern Alberta, the Canadian Northern Ontario, you will find that they took $14,301,000, and every one of the original Acts was passed in 1910 or 1911 and were part of the hereditas damnosa which has fallen upon this Government. And recent events demonstrate, I think clearly, that the stand which the present Prime Minister took when in 1911 the former Government brought into this House a measure for the building of the Canadian Northern Ontario railroad, has been more than justified by the events. He asked at that time some very pertinent questions as to whether there was room for a third transcontinental railway at the present time, and he expressed a good deal of doubt in that respect. I am sure that the doubt he then expressed has become firmly fixed in the minds of many people to-day. How do you get railway competition? Not always by building railroads. It is possible to build so many railroads that you cannot get railroad competition. When you have two railroads serving a district where there is not quite enough traffic for both but pretty nearly, you get competition and a reduction of rates. Where you have three railroads serving a district where there is not enough traffic for two, you get a combine and a general keeping up of rates, or one or two of the railways go under the hammer. So this country, I think, has frequently been led away with the idea that it was always justifiable to build a railway, always justifiable to subsidize a railway, always justifiable to give a bond guarantee to a railway, and yet it may happen that we in Canada are considerably anticipating our railroad needs and that it becomes necessary for us often times to take money, that we need for other things far more, to carry out the promises of a previous Administration.

But to come back to our financial discussion for a moment, I want to congratulate the Finance Minister on his foresight, as I have already said, in preparing for this year 1913-14. Many demands were made upon him and yet the year has a showing of which he need not in any way be ashamed. True, he had the disagreeable task of frequently refusing to lend the aid of the Government to propositions supported by many a member, propositions which were unquestionably valuable but which will have to stand over because of other needs that must be met. Well the clouds are clearing and the time will come, I trust, when we shall be free from the inheritance that has been left us and be able once again, on our own initiative, to decide what shall be done with the money which the taxpayers contribute. I said that the Finance Minister, seeing that hard times were coming, made preparation by laying aside one dollar out of every three that came into his hands in 1912-13. His predecessor, the Finance Minister of some years ago, has been referred to to-night and has been held up as a shining example, yet I hardly think if our present Finance Minister had followed his example, he would have found himself in the enviable position in which he is to-day. Five years ago there was one of these cycles of depression. 1907-8 had been a bumper year. The revenues had reached nearly $100,000,000. Hon. members used to brag about that. The actual figures were $96,000,000, and yet in that year, with $96,000,000 of revenue there was an over expenditure of $11,000,000, all kinds added together. In that year there were ominous signs of troubles to come. Did the Finance Minister of that day put on the brakes? No, there were threatenings of stringency, and yet full steam ahead was the watchword of the Government at that time. In 1908-09 the revenues fell, as they were expected to fall, by $11,000,000, to $85,000,000. The total expenditure of that year was $131,000,000, and the net result was that we added $46,000,000 to the net debt of Canada in a single year. Oh, yes, the former Finance Minister did put on the brakes, but he did it one year too late. He could not do it in 1908, for obvious reasons.

The junior member for Halifax indulged in a comparison of records. We are quite willing to submit to such comparisons. We have only three years that we can point to as having held the reins of power, while our predecessors had between fifteen and sixteen years, but we are quite willing to compare our three with their fifteen or sixteen. Turn, for example, to the net debt. In 1896, when the Conservatives went out of power, the net debt of Canada was $258,497,000. In 1911, when the Conservatives came into power, it stood at $340,042,000; it had increased in the sixteen years of Liberal rule by $81,500,000, or at the steady rate of about $5,000,000 a year. I am not seriously objecting to a moderate increase of debt, because, as I previously explained, it is sometimes necessary that capital expenditure should be distributed over a term of years

but I do not like to hear people bragging about what they really have not accomplished, and consequently it becomes necessary to make a comparison of this character. The net debt in 1911 was $340,000,000 odd. The net debt on the 31st of March, 1914, was $333,300,000. In other words, the previous Government added $81,500,000 to the debt in sixteen years while the present Government in three years have not only not added a dollar, but they have reduced the debt by $6,750,000—and that although they have put $125,000,000 into enterprises that are usually chargeable to capital account— at least, not chargeable to consolidated fund.

If you take the three years before and the three years after that great event of the 21st of September, 1911—the years 1909, 1910 and 1911 showed an increase in the public debt of $62,000,000, while the years 1912, 1913 and 1914 showed a decrease in the public debt of $6,750,000. It will therefore be seen that we are in a better position by nearly $69,000,000 when you compare the three years previous to September, 1911, and the three years that followed.

We all remember how the changes used to be rung in this Chamber on the annual surpluses Somehow or other, however much might be added to the public debt it was always stated that there was a surplus at the end of the year and the previous Administration prided themselves on that. We used to criticise the method by which it was calculated, and perhaps we should criticse it even now, but at least we will call it by its right name and only use it for purposes of comparison. What do we find in this matter of so-called surpluses; because what used to be regarded as a surplus was the amount of money you had left after you took the total revenue and deducted therefrom the current expenses or what was chargeable to consolidated fund. That is what was called a surplus even although it might be wiped out two or three times over in a year by capital account. Taking the fifteen years from 1896 to 1911 we find that these much vaunted surpluses aggregate $167,000,000. Although the debt had grown $81,500,000 in that time, the claim was always made in this House that there was an annual surplus. Using the same method of comparison we find that the first year after this Administration came into power there was a surplus of $37,946,000; in the second year a surplus of $56,630,000, and in the third year, which has just passed, a surplus of $35,000,000, or somewhere around that figure—the figures are not yet complete. In other words, the surpluses during the last three years have totalled $130,000,000, and if we have good luck for one year more, the total surpluses in the lifetime of the present Parliament will be equal to the surpluses of the four Parliaments of the 16 years that preceded it.

Some of our liabilities have been referred to by the hon. gentleman who preceded me, and perhaps it might be well just here to say a word regarding some of the maturing liabilities that have been dealt with in the last two years. It is always a pleasant thing to pay your debts, and when they are paid promptly it is worth while taking credit for it. On the 1st of May, 1912, there were liabilities falling due to the extent of $22,785,000 odd. Of that we were able to redeem 80 per cent in cash and we had only to continue a loan of some $5,440,000. On the 1st of October, 1912, we had $6,010,000 falling due, every dollar of which was paid in cash. On the 1st of October, 1913, we had $8,273,000 falling due, every dollar of which was redeemed in cash; and on the 1st of November, 1913, we had $1,446,500 falling due, all successfully met, and now we are happy to say that for the first five years with the exception of temporary loans there is no more of our funded indebtedness to be dealt with. The Government has come to the end of the woods.

In connection with this indebtedness, an interesting feature came to my notice which perhaps is not really pertinent to this discussion, but which, nevertheless, from an historical point of view at least will be interesting to the House. We paid off last year the last of the old Imperial guaranteed loan. On the 1st of October, 1913, we paid off $8,273,333, the last loan that had the underwriting of the British Government as guaranteeing it in the markets of the world. There was a day when Canada had not the credit she has to-day, and when she could not undertake any great work without first having made very careful preparations as to where the money was coming from. In those days the lenders of the world were not so ready to give us money on our own face value as they are to-day, and it is interesting to look back and see how the Imperial Government stood behind Canada in those early days and made it possible for this country to carry on some of her great works. In 1869 there was $7,300,000 outstanding of imperial guarantee loan at four per cent. In 1874 that had reached $16,000,000; by

1877 it was up to $23,300,000; and in 1885 it stood at $31,633,333. In other words $31,600,000 of the debt of this country was at one time underwritten by the British Parliament. Why was that done? In the first place we find the objects for which the money was used. It was used for the purchase of Rupert's Land, for Canadian defence loans, for the Canadian Pacific railway, for canal construction, and for other public works which in those earlier days were more than this country could carry upon its own credit. It was not after all, though, a matter so much of credit as it was a matter of saving of interest that really led the British Government to come to our assistance in that respect. That is brought out very clearly by Sir Francis Hincks who in 1872, spoke in the House of Commons as follows:

> But if we went into the market for $40,000,000, one half our own, and the other half guaranteed by England, and, with the prestige that England sanctioned our great public improvements, the advantages would be very great, so much so that I am persuaded that under those circumstances we should get our 5 per cent bonds floated at par, and therefore we should be able to float half at 4 per cent and the other half at 5 per cent, or equal to 4½ per cent on the whole amount. This would, therefore, make a difference of 1½ per cent on the whole amount of $40,000,000, equal to $600,000 a year.

In other words, when Canada found it necessary to borrow $40,000,000 in order to undertake the necessary public works, canals, railroads, and so on, the British Government undertook to guarantee half of that amount in order that half that loan should be floated at four per cent and the other half at five per cent, instead of all being floated at six per cent, bringing about a saving of interest of $600,000 a year. If that had been persisted in, it would have amounted in forty years to upwards of $24,000,000. In other words—and this is the interesting part of it—when our credit was not what it is to-day, the motherland was prepared to help us out and guarantee our loans, even though the money was to be spent in Canada. The mother country was prepared to make it possible for us to borrow in the markets of the world at a rate of interest otherwise impossible, and now the time has come when we have paid off all those loans and we can to-day go into the markets of the world and borrow what we like without the imperial guarantee. Now that that time has come, there has come with it certain responsibilities and duties which this part of the empire, which regards itself as no longer needing a guarantee, should take upon itself.

[Mr. Ames.]

I regret that as yet it has not shown that it appreciates this fact.

We have been told by the hon. junior member for Halifax that no less than $60,000,000 was borrowed last year. This is held up as a huge sum, as a sum entirely unwarranted, and yet I think if we examine what was done with it we will see, in the first place, that we could not help borrowing and, in the second place, that we used the money well. It was used to meet maturing liabilities to the extent of $10,000,000 that were unavoidable. We have to meet our debts when they come due. We had to buy Grand Trunk Pacific bonds at par; we bought $11,133,473 worth in 1912-1913, and we bought $12,872,233 worth in 1913-14. We did that to save Canada's credit in the money markets of the world. We thought it better to do so than to have bonds with Canada's guarantee upon them sold over the auction counter at a job lot price.

I was much amused when my hon. friend undertook to point out that an investment of money in Grand Trunk Pacific bonds should not be regarded as an asset. He said: You should at least take them at 75 cents on the dollar. That does not sound very much like the debate we listened to a little while ago. We certainly believe that the day will come when these bonds will be worth par. We look upon these bonds as securities upon which the full three per cent will be paid; and we hope the day will come when we can dispose of these bonds at par. We have apparently more faith in the Grand Trunk Pacific project than have our hon. friends opposite when they say to us: You have taken $23,000,000 of Grand Trunk Pacific bonds that should not count at all as assets because we consider them of very doubtful value. That is the hardest knock that the Grand Trunk and the Grand Trunk Pacific have had in this House, and they have had some hard knocks. Then we had to loan the Grand Trunk Pacific last year $8,500,000. So you see that in these three items that I have mentioned $31,000,000, or more than half of the total of the amount is at once taken up. These items go to increase the gross debt, but they are investments bearing interest, and one of the very interesting matters which hon. gentlemen can verify for themselves is to see how the percentage that we are getting upon our investments is increasing while the percentage that we

are paying for our money is decreasing, showing a very satisfactory state of affairs.

My hon. friend entertained us for some time with a denunciation of the high rate of interest that had been paid on certain temporay loans by the Minister of Finance within the last few months. There are times when it is not desirable to go upon the money markets of the world and attempt to float a large loan. If you happen to have liabilities maturing it may be better to finance them as best you can for a new months. Under those circumstances you negotiate a short loan, sometimes for six months and sometimes for a year. The Minister of Finance, just like all other Ministers of Finance in this country, had at times to raise certain temporary loans. We were told that the discounting of treasury bills at 4½ per cent was something that could under no circumstances be justified. Well, you only have to turn back to the Budget speech of Mr. Fielding in 1909, where he gives a table of the loans which up to that time had been issued, and you will find that a 4 per cent loan issued in December, 1908, and good for four years, carried a rate of interest, or what we speak of as the annual effective rate of interest per unit, of .04796 per cent, or 4⅘ per cent, although the loan just preceding carried an effective rate of interest of .0288 per cent. This proves the fact that the amount of interest that must be paid upon a loan varies very considerably, and it oftentimes happens that for a short loan the Government have to pay rather a high price for the money they get.

These outstanding temporary loans were criticised severely this afternoon, but they are nothing new. It is not as if the making of temporary loans was a crime that had been committed for the first time. Let the hon. gentleman turn up the public accounts and he will see that temporary loans were quite customary under the previous Administration, and I do not blame them for it. In 1908, when the figures of the year were cast on the 31st March, there were found to be temporary loans outstanding of $9,300,000; in 1909, $13,600,000, and in 1910, $17,033,000. Therefore, the fact that the Minister of Finance of the present day has a loan of $8,500,000 to-day outstanding is nothing for which, I think, he should be blamed to any extent.

I have also been very much interested in the remarks of my hon. friend (Mr. A. K. Maclean) with reference to retrenchment. It seems to me that the subject is out of place at this time. If the speech of my hon. friend had been delivered during the National Transcontinental railway debate a few years earlier, or when the National Transcontinental railway was discussed in the House here a short time ago, it would have been extremely pertinent. I would like to take quotations from that speech and insert them in some of the speeches that were made some years ago in reference to the National Transcontinental railway and the Grand Trunk Pacific, or some of the speeches that were made only a few weeks ago in reference to that extravagant expenditure. But I should like to ask my hon. friend this question. He declared that we should have brought some of these great expenditures to an absolute standstill. He did not realize, or, if he did realize it, he would not have made these observations to the House, that at the beginning of last year very large enterprises in all parts of Canada employing large numbers of men were being rapidly pushed to completion. He did not realize apparently, that it would have been a suicidal act to have brought these great enterprises to a standstill while they were still uncompleted and unproductive. It had become necessary, and the Government realized that it was necessary, that these productive enterprises should be pushed to a conclusion. It reminds me very much of a story of a man who had fallen from a high building and who was asked if the fall had hurt him. No, he said, the fall did not hurt me, but it was stopping so quickly. The fall is not what would hurt us in this particular case, but it would be stopping so quickly that would injure the credit of Canada throughout the world. So that the Minister of Finance, in putting on the brakes gradually in order to bring about a slowing up during the past year, has pursued a course which should be commended by this House.

My hon. friend also endeavoured to gain some consolation from a quotation he made from a statement by the present Prime Minister in the days when he was in Opposition, to the effect that an enormous expenditure was prima facie evidence of corruption. If my hon. friend desired to urge that there is prima facie evidence of corruption in the expenditure of the past year, or the expenditure of the year preceding that, let me say to him that

the Public Accounts Committee is open to him. He will find no blockers' brigade to-day in the Public Accounts Committee. He will have an opportunity to investigate the expenditure to the full if he desires to do so. If this expenditure is prima facie evidence of corruption, he will find that no hindrance has been thrown in his that no hindrance has been thrown in his House. When he makes that allegation he should be prepared to back it up.

We have also been asked what was being done by this Government to bring about wider markets. To those who have asked this question, I say: I believe the greatest work is now under way that has ever been undertaken in the British Empire, to bring about a better understanding between the various portions of that empire for the opening up of extended markets. You are all aware of the work the Minister of Trade and Commerce is doing as a member of the Royal Commission on the natural resources, trade and legislation of certain portions of His Majesty's Dominions; you are aware that a select body of representatives from the overseas dominions, and from the mother country, is visiting each part of the British possessions, and is making the most careful study ever made as to how the trade relationships between the various parts of the empire may be stimulated, directed and improved. I have here on my desk some of the preliminary reports of that commission, so I have some idea of the great care which is being taken by that commission, and the great value of the results they are obtaining. When the work of that commission is completed, I think we may rest assured that there will be in its report that which will enable the various British Dominions to get together and to do very much towards making our trade relations better.

Before closing I want to say a word about the tariff policy, which has been referred to at such great length by my hon. friend (Mr. A. K. Maclean). I do not pretend to deal with all the arguments he has adduced, but I would like to say, and I think in saying it I voice the sentiments, at least, of every member on this side of the House, that we were more than pleased with what the Minister of Finance said the other day upon the tariff. We felt that it had a true ring about it; that it placed the question squarely where it belonged, and that there was no intention of pretending one thing in one place and another thing in another place, but that we want it to be plainly understood, from the Atlantic to the Pacific, just where we stand. We were asked why it was that there was applause on this side of the House when the reduction in the duty on certain agricultural implements was announced. I will tell hon. gentlemen opposite why. There was applause on this side of the House from ardent protectionists, and why? It was because we felt that notwithstanding the reduction there was still all the protection that the industry in question needs at the present time; because we felt that that great industry had become so firmly established and had reached out and captured the markets throughout the world to such an extent, that it was able to stand a reduction from seventeen and a half per cent to twelve and a half per cent on certain agricultural implements, and could still afford employment for Canadian workmen, and could still be able to thrive even under that reduced protection. If we had imagined that under that reduction of tariff it would have meant the closing of this industry, I feel quite confident that no such proposition would ever have emanated from this side of the House. Let me point out one thing which perhaps has escaped the notice of some of the hon. gentlemen opposite, and it is, that had the reciprocity pact gone into effect in September, 1911, we could not have made that reduction; we could only have gone down to fifteen per cent; we would have been tied up and dependant on permission from Washington to have reduced our own tariff to twelve and a half per cent. So, I say, in all sincerity, I am proud that a great Canadian industry, such as that which manufactures harvesters, reapers, and binders, has attained such a position that it is able to compete on equal terms in all parts of the world with others which are engaged in similar work. When I was in Australia several years ago, both with amazement and with pleasure I noticed the magnificent organization of the Massey-Harris Company for the distribution of their goods, and I saw with pride their advertisement in which they said: Buy harvesters and reapers made under the flag; and, the Australians responded to that appeal.

On this matter of the tariff, this party has always stood for reasonable protection, and this party must keep faith with itself; it must not destroy the work of its own hands; it cannot, at the same time, walk forward and walk backward.

I do not know that I need to deal with the question of free food; there are others to discuss that who may not feel called upon to speak on the question of the country's finances. Free food means free trade—yes, I quite agree with that. If we are to have protection at all, we must have protection generally throughout the whole community; if one man is not entitled to protection, neither is another. If the farmer of this country can have no protection, he has a perfect right to demand that nobody else shall have protection. So long as the farmers of this country, as I believe they do in large numbers, need and desire protection, they are entitled to it.

I might apply almost the same reasoning to the matter of free wheat. A good many different arguments have been adduced by the Minister of Finance, and there are other arguments which might be adduced, but the argument which pleases me is simple, and it is this: that the proposition which was made by the United States is not merely a proposition of wheat for wheat; you have only to read it to see that. I do not know that the junior member for Halifax (Mr. A. K. Maclean) put it in such a way that the House understood it, but clause 644 of the American Tariff reads, and I shall put it on 'Hansard' in its entirety:

> Wheat, wheat flour, semolina, and other wheat products, not specially provided for in this section: Provided, that wheat shall be subject to a duty of 10 cents per bushel, that wheat flour shall be subject to a duty of 45 cents per barrel of 196 pounds, and semolina and other products of wheat, not specially provided for in this section, 10 per centum ad valorem, when imported directly or indirectly from a country, dependency, or other subdivision of government which imposes a duty on wheat or wheat flour or semolina imported from the United States.

In other words, they will let in those three—wheat, wheat flour, and semolina—if we allow in wheat, wheat flour, semolina, and the other products; they would be glad to see our bran and all our other by-products, which we would like to sell to our farmers for their cattle, sold in the United States.

But the main point is, that our worthy American friends have hung out a bait in the hope that Canadians would snap at it. They hung out a very big bait in the matter of reciprocity. It reminds me that when I am salmon fishing and use a very large fly the fish will not rise, but sometimes, taking a tiny fly, particularly in clear weather, I can bring the wariest salmon to the surface; and so, our friends in the United States tried a big fly, and they threw it back and forth over the placid surface of the pool, and no salmon from the Canadian side rose. Now they are trying a small fly; they are suggesting reciprocity in instalments; they expect to bring down our wall a brick at a time; and this is one of their moves in that direction. It is not that they want our wheat, but they want to get into our market and capture our market for flour. What they want is to strangle our Canadian millers, and get not only our home market, but be an export competitor in the business, and capture that business. What did they do with the Standard Oil Company? All over the world you will find that they have strangled competition, and so they want us to take the bars down, that they can step into Canada and similarly strangle competition and become practically the controllers of the flour business of the world. Well, we don't propose to be caught that way. Protection stands four-square. You cannot say, for the benefit of getting one thing, that you will consent to sacrifice another perfectly legitimate industry; they cannot pick out of our manufactures one item after another and expect us to cut our own throats for their benefit. If they could succeed in this particular case, it would be very easy for them to try it again in some other line. In other words, in this particular instance they are trying to give us reciprocity by instalments, and if by these instalments they can induce the Canadian Government of to-day to throw one great industry overboard, they would probably continue in the endeavour and in the hope that the sacrifice of other industries might follow.

Another reason why it seems to me that this offer of the United States should not be accepted, is because of the great investments we have, both public and private, in transportation. It was a matter of interest to me the other day to look up the fact that we had expended on the St. Lawrence waterway upwards of $90,000,000; on the channel to Montreal, $16,000,000; that we are expending on the National Transcontinental railway and the Quebec bridge $180,000,000; on the Canadian Northern Ontario railway $15,000,000; on our national ports $40,000,000; and on the Hudson Bay railway $8,000,000 or $10,000,000. In other words, we have spent and are spending a sum equal to the national debt of Canada as it stands to-day to make transportation east and west possible to achieve. Furthermore, there is much to be said in favor of

maintaining for the investment that has been made the traffic which will make it possible for the railways to earn a legitimate return.

I have reached the end of what I desire to say, because I do not wish to deal at any considerable length with this tariff question to-night. The hon. Minister of Finance stated that we were about to enter upon a year when we would all have to be content to make certain sacrifies; that it would be a year of retrenchment. I am sure we are all willing to make those sacrifices. We are all of us desirous that certain public expenditures, more particularly those in our own locality, should be successfully carried through; but we are all broadminded enough to say that for the present economy should be exercised. We can, I think, assure the Minister of Finance that in his efforts in the coming year he will meet with full support from those who generally vote with him in this House. So, in conclusion, it seems to me we have every reason to congratulate the Minister of Finance and the country upon the Budget speech which was delivered yesterday.

Mr. J. G. TURRIFF (Assiniboia): Mr. Speaker, I am sure that the speech delivered by my hon. friend the Minister of Finance yesterday was looked forward to by the people of Canada with more interest than any Budget speech that has been delivered in this House for many years past. The reason for that is that Canada now is unfortunately experiencing a period of very great depression, a depression that is revealed in the great falling off in the revenues of the country, in the trade of the country, in the revenues of the railway companies, in the returns of the clearing houses of the banks, and in the immigration to this country. But my hon. friend the Minister of Finance told us that the depression was practically over, and that, with the opening up of Spring, Canada would go and prosper. There must have fallen upon my hon. friend the Minister of Finance at least a much better mantle of prophecy than he has been carrying on his shoulders for the last six months. I remember him saying in Montreal six months ago that there had been a depression, but that the depression at that time was all over. He was backed by his leader the right hon. the Prime Minister who also stated that the depression was over and that Canada had entered on an era of prosperity such as she had never had in the past. When the House opened in January, my hon. friend the Minister of Finance acknowledged that there was a depression, but stated that it would soon pass over. Therefore I think the people of Canada will be justified in taking with a very large grain of salt the statement of my hon. friend that the depression is now over.

My hon. friend the Minister of Finance stated that this depression existed throughout the world. I do not know where he got that information. He certainly did not get it from the trade returns of Great Britain, the greatest trading nation on the face of the globe. There is no depression in Great Britain. During last year and the year before there has been one of the greatest periods of prosperity ever experienced in Great Britain, which is a free trade country so that the prosperity there has not been due to protection. Therefore the depression has not existed throughout the world, and my hon. friend will have to revise his opinion if he still thinks that the depression in Canada is only a part of what exists throughout the whole world. My hon. friend for Thunder Bay and Rainy River (Mr. Carrick) did not consider that there was no depression when he was speaking in the House a few weeks ago. He pointed out that conditions were in a very grave state of depression, especially as regards the iron and steel industries. The depression existing to-day is much greater than it was six months ago or even three months ago, and there has not been a time since the Conservative party went out of power in 1896 when there has been such a great depression existing throughout the Dominion of Canada as exists to-day. There are more men idle to-day than ever before in the history of Canada. While speaking to one of the greatest financiers in Canada a month or two ago, I mentioned that the orders from the West to the manufacturers of the East had been cut in two. 'Why,' he said, 'to my knowledge they have been cut in four or five.' I heard a manufacturer in Montreal stating within the past month that from one end of Canada to the other he questioned whether the factories were running more than half the time: I do not know whether that statement is correct or not, but this gentleman is a manufacturer and he ought to know. Does that look as if the depression was over? What has caused the depression? What steps have been taken by my hon. friend the Minister of Finance to remedy the depression?

10 p.m.

What is the basic industry of this country? Agriculture. What probably is the next greatest industry? Manufacturing—that is one of the great industries at all events. How do you benefit the farmers who form half the people of Canada—what is it that makes them prosperous? They have the land, the climate affords favourable conditions; all you need to make the farmer prosperous is a market for his product. And on whom do the manufacturers depend chiefly for their success? I leave it to the Minister of Finance himself if it is not the money that is produced out of the soil of Canada that is at the root of all prosperity in this country. If the farmers are not prosperous, how can the manufacturers be prosperous? What does the farmer do with the money he gets? He does not bury it in the ground; he spends it chiefly in manufactured goods after all. That money goes into the villages, then to the cities, and then to pay the men who have made the goods that he has consumed. But the Minister of Finance refuses to give the farmer a market and increases the very cause that has led to the depression—over-production of manufacturing. Instead of remedying matters he increases the load that the farmers have to bear.

The hon. member for St. Antoine (Mr. Ames) has made a few statements to which I wish to refer briefly. I notice that he, very truthfully, gives credit to the late Government for having inaugurated the Hudson Bay railway. But let me tell my hon. friend that all his colleagues from the West, and the press there supporting hon. gentlemen opposite, give all the credit to this Government for initiating that enterprise. They never say that the late Government had decided to build the road and had let the contract for a part of it; they take all the credit to this Government for having undertaken the construction of that railway. However, the hon. member for St. Antoine was right in that matter. He also referred to the fact that during the last year or two the Government had to pay out a considerable amount of money for railway subsidies under laws that were passed at the instance of the late Government. He forgot to tell the House that last year this Government made a gift of some sixteen and a half or fifteen and a half millions to the Canadian Northern Railway Company, and a great deal of that was paid out during last year. And, if the late Government expended too much in railway subsidies, what about this gift to Mackenzie and Mann?—for it was simply a gift. It is no use for anybody to say: We got $7,000,000 of the common stock of the company. I say, the Government did not get $7,000,000 in the common stock of the company. The common stock that had been issued was not affected; they simply printed $7,000,000 more for this Government, and $7,000,000 to put in their own safe. But the hon. member for St. Antoine forgot to mention that. Then, if all reports are true, the gift of sixteen and a half millions to Mackenzie and Mann that would enable about $12,000,000 to go into the Canadian Northern railway and about four millions into the pockets of Bill and Dan, is to be supplemented this year by a much larger gift in the way of guarantees.

Mr. AMES: If the hon. member will allow me: I may have inadvertently made a statement not strictly accurate in connection with the subsidy for the Canadian Northern Ontario railway. What I wanted to say was that the Canadian Northern Ontario railway subsidy of $12,800,000 paid this year largely was made necessary on account of legislation which was passed in 1911—not that it was authorized by legislation passed in 1911, but that it was made necessary by that legislation.

Mr. TURRIFF: That is a different statement—

Mr. AMES: I did not intend to make a misstatement; I desire only that the hon. gentleman clearly understand what I meant.

Mr. TURRIFF: Of course, the hon. gentleman would not deliberately make a mistake, but the fact remains that if he criticises the late Government for giving subsidies to the Canadian Northern railway and other railways how does he better the position of this Government by going away beyond and giving an additional sixteen and one-half millions? It was not rendered necessary by any previous legislation, in my judgment, for the simple reason that the owners of the Canadian Northern railway could very easily have put back sixteen and one-half millions of funds that they have taken out of the unfortunate British bond-holders and out of the people of this country in subsidies and guarantees from the different provinces and this Government and the previous Government. They did not have to come to this House; they could have put up the money out of their own pockets. But do you think they would do that? Oh, no; they have not

come to that; they are not built that way. And my hon. friend, while criticising the previous Government 'raises' them with this fifteen and one-half or sixteen and one-half million.

The hon. gentleman took a good deal of credit for the present Government for surpluses, and gave the total of the surpluses for the fifteen or sixteen years of Liberal rule at $167,000,000, and the total of the surpluses for the three years of the present Administration at $130,000,000. But when hon. gentlemen opposite came into office they found a surplus of $38,000,000 in the treasury, and they surely cannot take credit for that. Had the hon. gentleman (Mr. Ames) been exactly fair he would have given the figures for Liberal rule not at $167,000,000 but at $205,000,000, and for the present Government not at $130,000,000, but $92,000,000. Hon. gentlemen opposite, I know, do not always consider it necessary to be exact. But my hon. friend from St. Antoine rather prides himself on being pretty handy at figures, and I should have thought that he could have come a good deal nearer to being right than he managed to do.

Mr. AMES: My authority is the public accounts.

Mr. TURRIFF: That is a good excuse. But the hon. gentleman knows as well as any man in this House that that is not a fair statement—although the public accounts are all right. He knows that his friends found a surplus of $38,000,000 in the treasury when they came into power.

My hon. friend had a good deal to say about the junior member for Halifax having made reference to the fact that the bonds of the Grand Trunk Pacific railway which were purchased were at present worth only about seventy-five cents on the dollar. It was not the junior member for Halifax who made that statement; it was the Minister of Finance who made that statement yesterday and the junior member for Halifax was only quoting the words of the hon. Finance Minister in his Budget Speech. My hon. friend also gave great credit to the Finance Minister—and I am not going to say anything against that—for his good judgment in going slow in granting subsidies to railways. I only hope that my hon. friend will follow that up and that when the Finance Minister comes to deal with the tremendous demands which are now being made on this country by the Canadian Northern railway he will be able to induce the Finance Minister to go slow. That is a matter that we can discuss better when it comes up in the regular way.

My hon. friend from St. Antoine division took up the question of new markets, and in that he was rather more vague than he usually is. I shall not blame him for being vague on that question. How can he help being vague on that question? We have had the Minister of Trade and Commerce travelling all over creation during the past two years trying to find new markets for Canada. He made a deal with the West Indies, a twopenny-halfpenny deal in connection with which we will spend far more in subsidizing steamers to carry what little trade can be got than the trade is worth. He spent months in Australia and New Zealand trying to make a deal but he could not do it. He went over to China and Japan and now he tells us that the Chinaman and the Jap are going to commence to eat flour and that there will be a market for Canadian wheat and flour in far-off Asia. I think it is an acknowledged fact that the home market is the best market, and also that the nearer you get your market to home the better for the producers of the articles you have to sell. The Minister of Trade and Commerce is going to do such great things in the future, according to my hon. friend from St. Antoine; he is going to put a blue book on the table, a report that is going to change the whole face of nature and provide a market for the Canadian farmers. Unless his success in the future is a great deal better than it has been in the past two or three years it will not amount to very much, although my hon. friend from St. Antoine says: Wait a little. But if hon. members on the Government benches want us to get a market for the producers of Canada, is it necessary to run to Australia and New Zealand and China and Japan? There is a market right at their own door, a market awaiting them, a market in the country of the richest people on earth, people who want our goods, people who have got the money to pay for our goods. That market is there, open at our door, open for acceptance by the people of Canada. Yet my hon. friends on the Treasury Benches, like the dog in the manager, will not allow the people of Canada to have that market, they will not allow the Canadian farmer to get the best out of his own product; but they say, we will send our Minister of Trade and Commerce to try and educate the Japanese and Chinamen to eat flour and then we will

be able to send a few shiploads of wheat to China and Japan. And the hon. member for St. Antoine says wait a little while, you will get your market there.

Mr. WRIGHT: Would the hon. member consider a country a good market for Canadian produce that has more of the same kind of produce at home than they can use, for which they have to find a market abroad?

Mr. TURRIFF: I consider a country a good market for Canadian wheat that will buy the wheat and pay the money, and I do not care if they send ten times as much out. I would ask my hon. friend where the western farmer is going to sell his wheat five years from now.

Mr. WRIGHT: He will have to sell it to some country that needs it. I consider the United States as good a market for our wheat as Wales is for our coal.

Mr. TURRIFF: My hon. friend says that you have to sell your wheat in some country that needs it. How many countries are we selling to now? One country, and that country never takes more than one-fifth of what she wants from Canada, and what is more, it is doubtful if she ever will. Why? Because there is a crop of wheat ripening in every month of the year in some quarter of the globe. She sends her ships with British goods to those countries. Do you think she is going to bring those ships home empty and then send them over to Canada for Canadian wheat when she can buy it there, and buy it cheaper in many cases? Not at all. You have got to get another market for the western farmer in wheat or only one thing can follow, and that is that the western farmer has got to go out of growing wheat. You cannot dump all the wheat that we will have to export in a few years on England, even if England took her whole wheat supply from Canada. But, as I said, she will never take more than one-fifth to one-quarter of her wheat from Canada. My hon. friend asks: How can you sell wheat to the United States when they export wheat themselves? We can sell wheat to the United States when they want to buy it, and conditions are becoming such in the United States that there is a great deal of land now growing wheat that is growing wheat at a loss, and that they will have to take out of wheat growing. You must have one of two conditions to produce wheat, either cheap land or cheap labour. In the United States they have neither cheap land nor cheap labour, and on land that is worth $100 an acre there is not a man on earth can grow wheat and get interest on his money at the present prices of wheat.

Mr. WRIGHT: Notwithstanding that, they have 80,000,000 bushels of wheat annually to export.

Mr. TURRIFF: My hon friend is astray if he says they export 80,000,000 bushels of wheat.

Mr. WRIGHT: I have the United States statistics from the Agricultural Department at Washington direct.

Mr. TURRIFF: At all events, the American people offer to buy our wheat, they offer to pay higher prices for it than we can get at home, and is that not enough for our farmers? Why do our farmers need to go beyond that? Why does each individual farmer need to bother his head whether the United States buy that wheat from him and then export a bushel of their soft wheat. The reason the American people want our wheat is because it is a hard wheat. Only a small portion of the United States can grow wheat of the quality we raise in Manitoba. The state of North Dakota and part of Minnesota grow the hard wheat, but all the other states produce the soft wheat, which does not make the class of flour that the people of the United States want. They have to mix one bushel of hard wheat with every four bushels of soft wheat in order to get the desired quality of flour. That is why the Canadian farmer can get more for his wheat in the United States than anywhere else, and that is why the farmer in North Dakota gets more for his wheat than the farmer 500 miles south of him. That is quite plain. But yet hon. gentlemen opposite, including members on the Government benches, have argued time and again that wheat is not dearer in the United States than in Canada, and they very dishonestly quote No. 1 and 2 Manitoba Northern as against No. 1 and No. 2 Minneapolis. My hon. friend the Minister of Public Works knows perfectly well that No. 1 Manitoba Northern is a different wheat altogether from No. 1 Minneapolis Northern. He knows that No. 2 Manitoba Northern is much better wheat than No. 1 Minneapolis Northern, and that No. 3 Manitoba Northern is in many cases a great deal better than No. 1 Minneapolis Northern.

Mr. WRIGHT: Does not my hon. friend know that they have no fixed grade for wheat in the United States?

Mr. TURRIFF: My hon. friend shows how little he knows about the subject. I propose to give my hon. friend some information on the subject of grades in Minneapolis. He says they have no stated grade. Here is what the Act says:

No. 1 Northern spring wheat shall be dry, sound, sweet and clean, may consist of the hard and soft varieties of spring wheat and weigh not less than 57 pounds to the measured bushel.

No. 2 Northern spring wheat shall be dry, spring wheat, not clean enough or sound enough for No. 1, but of good milling quality and must not weigh less than 56 pounds to the measured bushel.

No. 3 Northern spring wheat shall be composed of inferior, shrunken spring wheat and weigh not less than 54 pounds to the measured bushel.

Mr. WRIGHT: What I stated was that there was no general grade for wheat in the United States. Every state has its own grade, and in several places the wheat is graded by the different boards of trade.

Mr. TURRIFF: Let us contrast No. 1 Manitoba Northern against the Minneapolis grades:

No. 1 Manitoba Northern wheat shall be sound and well cleaned, weighing not less than 60 pounds to the bushel, and shall be composed of at least 60 per cent of hard red Fife wheat.

No. 2 Manitoba Northern wheat shall be soound and reasonably clean, of good milling qualities and fit for warehousing, weighing not less than 58 pounds to the bushel, and shall be composed of at least 45 per cent of hard red Fife wheat.

Any wheat not good enough to be graded as No. 2 Manitoba Northern shall be graded No. 3 Manitoba Northern in the discretion of the inspector.

So that if there was only 40 per cent of hard Red Fife wheat it would not be classed as No. 2 Manitoba Northern, but would be graded No. 3, and we would have a wheat weighing 58 lbs. to the bushel graded as No. 3 Manitoba Northern that had 40 per cent Red Fife wheat in it; whereas No. 1 Minneapolis Northern only has to weigh the same, and does not need to have one grain of Red Fife wheat in it; It will also be seen that there is a difference of 3 lbs. to the bushel between No. 1 Manitoba Northern and No. 1 Minneapolis Northern, and that No. 1 Manitoba Northern has to have at least 60 per cent of hard Red Fife wheat, whereas No. 1 Minnesota does not need to have any hard Red Fife wheat at all. Any one can see how absolutely unfair it is to quote No. 1 Manitoba Northern against No. 1 Minneapolis Northern, but that is just exactly what hon. gentlemen opposite and the Conservative press throughout the country are doing and have been doing right along. I have heard the Minister of Finance himself doing the same thing, but I do not think he will do it again, as he knows better now.

As I said before, only two states on the other side of the line can grow anything like the quality of wheat we grow in the West, so you can understand, Mr. Speaker, why hard wheat grown in Manitoba, Alberta and Saskatchewan commands a much higher price in the United States than the softer wheat that is grown in most of their states. It has been the custom of hon. gentlemen opposite and their press to take the quotations for the month of July or August. For a week or so in those months wheat is quoted at a lower price in Winnipeg than in Minneapolis, but even then, considering that No. 3 Manitoba Northern is about equal to No. 1 Minneapolis Northern, the Winnipeg price is really better. Hon. gentlemen opposite quote the figures just at that time of the year to show that Canada has lost nothing by not having free trade in wheat. There are times in the months of July and August, when no wheat practically is coming into the Winnipeg market, and when any wheat that has been carried over the winter has been marketed, that shippers who have engaged space in the steamers carrying wheat across the lakes and the ocean find that they are short of wheat and they have to get an extra 10,000, or 20,000, or 50,000 bushels to make good their contracts and occupy their space and then perhaps for a week or two wheat may jump two or three cents. The farmers are not bringing in any wheat and it is just a matter of speculation. The farmers of the West are losing millions of dollars a year on account of the refusal of this Government to take advantage of the offer that was made under the tariff of the United States in October last. Millions and millions of dollar are being lost by the farmers, and at whose instigation?—the millers and the railways. The Minister of Public Works knows that free wheat would be to the advantage of the farmer. When my hon. friend was in the province of Manitoba not many months ago, participating in the Macdonald election, he made a very ingenious promise to the farmers he was talking to there as a result of which every one of them believed that he had promised them free wheat. Other speakers went

through the country promising them free wheat. One of his particular friends introduced a resolution into the Manitoba Legislature recommending free wheat. Yet we find that hon. members opposite representing Manitoba constituencies all voted against free wheat. Do they think that all the local members are wrong? Do they think that they have made a mistake? Does my hon. friend the Minister of Public Works believe that free wheat would not be to the advantage of the farmers of Manitoba and that the members of the Manitoba Legislature were wrong?

Mr. LEMIEUX: Was there a vote in the legislature?

Mr. TURRIFF: There was a vote in the legislature and every member of the legislature, Conservative and Liberal alike, recommended this Government to accept the offer of the Government of the United States and put wheat on the free list. The hon. member for Souris (Mr. Schaffner) who, I am sorry is not in his seat just now, stated not long ago in the House that he represented eighty-five per cent of the voters in his constituency and that he brought their thanks to the Government for what they had done for the western farmers. I would like to ask my hon. friend if he thinks that in voting against free wheat he represented eighty-five per cent of his constituents? My hon. friend in 1908 had a majority of 650 and in 1911, because he was against reciprocity, his majority was cut down to 62.

But the argument that was put up then that we were giving a great deal for reciprocity cannot be put up against free wheat. The American people have offered us free wheat and hon. members from the province of Manitoba will have something to explain to their people when they go back. I would venture the statement, Mr. Speaker, that no hon. member of this House can go to the farmers of Manitoba, Saskatchewan, or Alberta and get any farmers' organization to pass a resolution endorsing the action of the Government in refusing free wheat. You can get individual farmers; that is easily done. That can be accomplished, that can be staged, that can be organized exactly as the delegation that was brought down here to oppose free wheat was organized, but you cannot get any one farmers' organization in the West, and I doubt very much if you can get a farmers' organization in the East, to endorse the action of the Government in refusing free wheat.

The Minister of Finance said that you have to protect the farmer. I would like to ask the Minister of Finance, if he were here, who are the best judges as to whether they want protection or not? I would like to ask the Minister of Finance, and in his absence, I will ask the hon. Minister of Public Works, who is leading the House, if any industry in Canada would have protection imposed upon it if it did not desire it. Take the woollen industry or the cotton industry; supposing a delegation elected to represent these industries came to this Government and said: We have had protection a good while, we are in such shape now that if protection were wiped out and our product put on the free list it would enable us to hold our own market at home and increase our exports very materially, to make more money and do more business—would not my hon. friend think that he would be absolutely justified in saying that these manufacturers of woollen and cotton goods were the people who ought to know best and that if they did not want protection, protection should not be forced down their throats? Yet that is exactly what the Government are doing with the farmer. The farmer says that he does not want protection. The farmer says that protection on wheat is no good to him, that it does not give him anything but the Government say: You do not know what you are talking about; protection is good for you, and you must have it whether you like it or not.

I would like to read an article by a farmer dealing with this very question, and I may say that I happen to know this farmer very well. He lives in my constituency. I have been through some seven or eight elections and this gentleman was one of the most able, sturdy and dangerous opponents that I had for many years, and one who did more against me in several of my elections than any other man in that part of the country. He had the ability. He was a Conservative of the Conservatives, an Orangeman among the Orangemen, a real, genuine Orange Conservative in the old days and a good one. He is a high-class man, but he was so bitter in his politics that he could not see anything but: vote Conservative. That man happens to be living close to the boundary line, and he has for a good many years sold a great deal of his farm products in the United States. He is the manager of, or helps to manage, an elevator at the town of Sherwood, in Dakota, owned almost altogether by Canadian farmers living in this vicinity. I would like to give you his views on the wheat question. These are the views of an actual farmer, a man

who grows thousands of bushels of grain every year himself, and who raises a good deal of stock. These remarks were made at a meeting of the municipal officers held in the city of Regina about a month ago. This article is published in the Regina Leader of March 5:

Free wheat must come to farmers' aid—Municipality of Argyle is striking example of need of American market—Paying duty to States—Farmers do better in United States market even when handicapped by tariff.

J. G. Burke, reeve of the municipality of Argyle, and a delegate at the Rural Municipalities' Convention in session at the city hall, is a strong advocate of reciprocity. Mr. Burke at one time was a Conservative but is now devoting both time and energy in the interests of reciprocity as the one solution to the marketing of western grain.

'Why should I not support reciprocity,' asked Mr. Burke.

'When you consider that in the southern part of the municipality of Argyle, including Mount Pleasant, in the past several years the sum of $50,000 has been lost to the farmers by reason of the duty on grain, the injustice of the present duty is at once apparent. If all the grain in that district had been shipped to the States the amount would have been three times as great.'

'While the construction of the proposed Georgian Bay canal and the deepening of the St. Lawrence river and Great Lakes waterways would no doubt be a great help in the marketing of the western grain,' said Mr. Burke, 'the quickest, the best and the only solution is reciprocity. Millions have already been spent in the deepening of these waterways, and the result has been that the freight rates have increased. We have no assurance that the freight rates would be reduced with the completion of these proposed works. What we want is reciprocity.'

Ninety per cent of the grain grown in southern Argyle was already being shipped to the States, Mr. Burke pointed out. Forty per cent of the grain produced in the whole municipality from the fall of 1912 to November 21, 1913, 350,000 bushels of grain from southern Argyle, had been shipped through the two outlets, Antler and Sherwood, North Dakota. Duty was paid on one-third of that amount, or a little more than 100,000 bushels. The rest went through in bond. If the American market remained high enough all the time, the farmers of the district would prefer to ship all their grain by way of the south and pay the duty.

Continuing, Mr. Burke said: 'The duty on wheat is 10 cents, on barley 15, and on flax 20 cents. In November last, for flax grown on my own farm and shipped south, I paid a duty amounting to $187. From the middle of September up until a week ago, the average American flax has been from 20 to 21 cents per bushel higher than Canadian flax of similar grades. In November, I received from $1.01 to $1.09 per bushel for all the flax I sold in the States. I realized anywhere from one to ten cents more per bushel by shipping my flax to the States, even after the duty was paid. Why should I not be in favour of reciprocity and with the doing away of the duty?'

Mr. Burke quoted the instance of a man who had a car of potatoes for sale last fall. From inquiries at Winnipeg in October, he found that the best he could get was thirty-five cents per bushel for his potatoes, bagged and all, while in Iowa he could get $1 per bushel. After paying 22 cents per bushel for freight and six cents for duty he realized 73 or 74 cents per bushel by selling them in the States. Mr. Burke believed the States would always be in a position to draw heavily on the resources of Canada, especially in wheat products, because of the inferior quality of wheat grown in the States. They would always require a large quantity of good hard wheat, while in Canada there was no market for barley at all.

These are the views of a farmer who knows what he is talking about; a man who grows the grain and pays the duty and sells his product in the United States, and gets a considerably higher price for it than he would in Canada. And, when the proposition was made by the United States to put wheat on the free list, this Canadian Government turned it down. At whose instigation? At the instigation of the millers and of the railways. For every dollar that the millers have invested in Canada, the farmers of Canada have one thousand invested; for every dollar the Canadian millers pay out in wages, the Canadian farmers pay out one thousand dollars. The farmers of Canada have more money invested than have the railways, while in the case of the farmers it is their own money, and in the case of the railways one-half of it is practically the money of the farmers. But still this Government listens to the railways, and they have turned the farmers down cold, absolutely cold. What did the farmers get out of the Budget of yesterday?

An hon. MEMBER: Five per cent on agricultural implements.

Mr. TURRIFF: No Sir, they did not, and the statement of my hon. friend shows just how much he knows about it. The hon. gentleman cannot be a farmer; he is probably a gentleman who farms the farmer. What the farmer got was a reduction of five per cent on binders and mowers, but the tariff on the other implements is kept up. My hon. friend from North Ontario (Mr. Sharpe) as usual is flip, and he is wrong. The proposition under the reciprocity agreement was a reduction of two and a half per cent on these items, and five per cent off everything else, and yet my hon. friend says that five per cent on two items is more than the Liberals offered to the farmers. Who stopped them

from getting the benefits of the reciprocity treaty? Hon. gentlemen opposite did.

Mr. ROGERS: My hon. friend has made a mistake, and I am sure he does not wish to misstate the case. He used the words: 'five per cent on everything else.' In the reciprocity pact there was no reduction provided for in the case of threshers.

Mr. TURRIFF: If I made a mistake I am very glad to be corrected, but I can very soon state what the five per cent was proposed to be given on. It was on, hay-rakes, manure-spreaders, drills, seeders of all kinds, disc-harrows, double-discs, shoe-drills, grass-seed attachment for drills, cultivators, ploughs, scufflers, and wagons. I notice that the Minister of Finance did not announce any reduction in the duty on ploughs. The hon. member for Brantford (Mr. Cockshutt) evidently was able to step in and prevent that. The hon. gentleman could sell a Cockshutt plough in the United States, years ago, and pay a fifteen per cent duty, and 45 per cent duty on the repairs, and undersell, or compete to the extent of selling trainloads in the United States. But the Cockshutt Plough Company does not want any reduction of the duty in Canada. The hon. gentleman would not even be satisfied with the five per cent reduction, bringing the tariff down from twenty to fifteen per cent; he must have the full pound of flesh. There are farmers in my constituency who came from the United States and who brought over Cockshutt steam-gang or gasoline gang-ploughs which they bought in the United States, after a duty of fifteen per cent had been paid on them. These ploughs have gone as far west from the factory as 400 miles west from Winnipeg, and these settlers bought them in the United States and brought them into Canada, and when they went to the Cockshutt office in Weyburn to get another plough of the same sort, they found they had to pay from $100 to $110 more for that same plough that they brought into Canada without paying duty. There is no reduction to the farmer on anything but binders and mowers, and when they reduced protection by five per cent on these items, the Government immediately put on far more in the duties on iron and steel. A farmer will buy a binder every eight or ten years, and the Government take off five per cent, which means a reduction of about $5 in the duty. But every time he buys a keg or a pound of nails, a paper of tacks or anything made of iron or steel, something which he does every day in the year, under the tariff as announced yesterday, for the reduction of $5 on his binder and $2.50 on his mower, or a total of $7.50, he will pay $35 or $40 in the increased cost of the articles on which the duty was put yesterday by placing iron and steel in the dutiable list. It was a cold deal handed out to the farmers yesterday, the coldest deal ever handed out to them.

Mr. WM. SMITH: Poor farmers!

Mr. TURRIFF: Yes, poor farmers.

Mr. SMITH: We can stand it.

Mr. TURRIFF: Yes, you can stand it, no doubt. Political farmers can, but the farmers who have sent you here may have something to say about the matter. A good deal of explanation will be required, and my genial friend the Minister of Public Works will have something to do to get away from the promises the farmers thought he made. I acknowledge that my hon. friend has left a loophole to escape through. Oh, yes, and he will crawl through it all right; but this refusal to give free wheat will cost the party a good many votes, and this cold deal of taking off $5 and adding on $20 to material made of iron and steel bought by the farmers, will require a great deal of explanation in the West. I do not believe even my hon. friend from St. Antoine (Mr. Ames), with his magic lantern, will be able to explain that away in the West.

On motion of Mr. Turriff the debate was adjourned.

On motion of Mr. Rogers, the House adjourned at 11 p.m.

Wednesday, April 8, 1914.

The House met at Three o'clock, the Speaker in the Chair.

PRIVATE BILL.

FIRST READING.

Bill No. 154, respecting The Grand Trunk Railway Company of Canada and The Canada Atlantic Railway Company.—Mr. Fripp.

NEWFOUNDLAND SHIPPING DISASTER.

PROPOSED AID FOR SUFFERERS.

Right Hon. R. L. BORDEN (Prime Minister): Mr. Speaker, I would like,

with the consent of the House, to mention the recent appalling disaster that has overtaken a great many persons engaged in the sealing industry of Newfoundland. The latest reports seem to indicate that the disaster is even greater than was at first apprehended, as nothing has been heard of one of the ships, the Southern Cross, although two steamers are, I believe, still engaged in endeavouring to find some trace of that vessel. Some days ago I sent a telegram to the acting Prime Minister, the Hon. John R. Bennett—Sir Edward Morris, the Prime Minister, being absent. The telegram was in these words:

Ottawa, Ont., April 4, 1914.

The Acting Prime Minister,
St. John's, Newfoundland.

On behalf of the Government and people of Canada my colleagues and I desire to express our profound sympathy with the people of Newfoundland in the terrible disaster to the seal hunters, tidings of which we have just received.

(Sgd) R. L. Borden.

To which the following reply was received on the same day:

St. John's, Nfld., 4th April, 1914.

Rt. Hon. R. L. Borden,
Prime Minister,
Ottawa, Ont.

Sincere thanks for kind expressions of sympathy from yourself, Government and people of Canada, which I am sure will be greatly appreciated by the people of this colony.

(Sgd) J. R. Bennett,
Acting Prime Minister.

Yesterday I addressed a further telegram to the acting Prime Minister in these words:

Ottawa, Ont., 7th April, 1914.

Hon. J. R. Bennett,
Acting Prime Minister,
St. John's, Newfoundland.

With consent of your Government I propose submitting to Parliament an appropriation in aid of families of those lost in recent calamity and of survivors. Kindly let me know whether your Government will approve. I hope you have news of Southern Cross.

(Sgd) R. L. Borden.

To which, this morning, I received the following reply:

St. John's, Nfld., April 8, 1914.

The Rt. Hon. R. L. Borden,
Ottawa, Ont.

Have submitted your message to ministers who greatly appreciate the practical expression of sympathy from the Government of your great Dominion. Government and people here will gratefully accept such contribution as you may offer in behalf of the sufferers by the sealing disaster. Regret that up to the present no tidings have been received of Southern Cross, but search is still being prosecuted by two steamers.

(Sgd) John R. Bennett,
Acting Prime Minister.

The calamity which has befallen those engaged in this arduous pursuit is a very great one, as I have a private telegram that seems to indicate that nearly 250 lives will have been lost, assuming that the Southern Cross will not be heard from again. It seemed to the Government appropriate that, under the circumstances, the sympathy, which is undoubtedly felt by all the members of this House, by all the people of Canada, towards the Government and people of Newfoundland, and particularly towards those who have suffered by this calamity, should be expressed also in a practical form, as I suggested in the telegram sent yesterday. I wish to announce that the Government purposes submitting to Parliament an appropriation of $10,000 for this purpose.

Right Hon. Sir WILFRID LAURIER: The action of the Prime Minister in communicating with the Newfoundland Government, under the sad circumstances, is worthy of all commendation. On this side of the House we shall be happy to join with my right hon. friend in extending the sympathy of the Dominion in the practical manner he has suggested. While I have no doubt that the Government of Newfoundland is quite capable of extending what relief may be needed, still, being so closely related as we are to our sister colony, the proposal of the Prime Minister meets with hearty support on this side of the House.

QUESTIONS.

(Questions to be answered orally are indicated by an asterisk.)

CANADIAN NORTHERN RAILWAY CONDUCTORS.

Mr. CRUISE:

1. Has the Government received a demand for a conciliation board from certain conductors of the Canadian Northern railway in Manitoba and Saskatchewan?

2. If so, what are the names of the applicants and what was the nature of such demands?

3. Is it the intention of the Government to grant such request? If not, why not?

Mr. CROTHERS:

1. Yes.

2. (a) Henry Edward Barker, George Morden Anderson. (b) Reinstatement by company of five conductors dismissed

on charges of alleged violation of the Secret Commission Act.

3. The application is under consideration.

OTTAWA LEASED BUILDINGS.

Mr. MACDONALD:

1. Has the Government leased any part of the Temple building, Ottawa?
2. If so, how much of it, for what term and at what price?

Mr. ROGERS:

1. Yes.

2. Part of ground and first floors for 5 years from 15th November, 1913, at 75 cents a superficial foot, or $6,141 per annum.

Mr. CARVELL:

1. Has the Government leased a part of a building in Ottawa belonging to the Journal Publishing Company or to Mr. P. D. Ross?
2. If so, for what term and at what price?

Mr. ROGERS:

1. Yes, from the Journal Printing Company.

2. For 5 years at 70 cents a superficial foot.

KINGSTON PENITENTIARY INQUIRY.

Mr. EDWARDS:

1. How many days were occupied at Kingston by each of the Penitentiary Commissioners in investigating conditions at Kingston penitentiary?
2. How much was paid to each commissioner for the above service?
3. How many days were occupied by each of the penitentiary commissioners outside of Kingston in connection with their investigations?
4. How much was paid to each commissioner for the above service?
5. How much has been paid to date to each commissioner for his services, his living allowance and his travelling expenses respectively, and how much is still due each commissioner on each of these?
6. How much has been paid to each of the counsel employed to assist the commissioners and how much is still due to them?
7. How much has been paid to cover expenses of witnesses testifying before the commission?

Mr. DOHERTY:

1, 2, 3, 4. The accounts have not yet been submitted.

5. The only payment as yet made to the commissioners are sundry advances on account of incidental and travelling expenses, amounting to $2,250.

6. To H. A. Stewart, $731.95; to C. R. Webster, $322.61. Nothing is still due them.

7. Final accounts not yet submitted. Inspector Hughes has been paid travelling expenses, amounting to $262.66.

PORT DANIEL LOBSTER HATCHERY.

Mr. MARCIL:

1. Does the Department of Marine and Fisheries intend to make any improvements at the Port Daniel West hatchery this season for the purpose of securing a better result than that obtained last year, and what are these improvements?
2. At what distance from the hatchery did the officer in charge reside during the past season, and did the staff employed there have any previous experience at all in their work?

Mr. HAZEN:

1. An extra strainer is being attached to the intake pipe, and a different kind of faucets and tubes will be used and the fry tanks rearranged.

2. His house is at Port Daniel Centre, about six miles from the hatchery. He spent twelve hours daily at the hatchery throughout the season. Four of the staff had previous experience.

LAKE ERIE BUOY SERVICE.

On the Orders of the Day being called:

Mr. PARDEE: I desire to call the attention of the Minister of Marine to the following telegram which has been received:

Marine Department accepted bid of Kenneth Frazier for Lake Erie and Detroit river buoy service. Frazier's tug John Monk, not registered Canadian vessel as required by specifications, my tender lowest complying with specifications in every respect, enter protest against awarding contract to Frazier; obtain explanation why department's action.

Is the statement in this telegram true, that the tug which has been awarded this service is an American bottom?

Mr. HAZEN: This is a question that might properly, I think, be given the ordinary notice of. I may say, however, that the Department of Marine asked for tenders for the buoy service on the Detroit river and lake Erie, and the lowest tenderer was Mr. Kenneth Frazier, who stated that he would perform the service with a tug called the Monk, and he would have it Canadian registered. I was informed at the department this morning that steps were being taken to have that tug registered in Canada. In order to be registered in Canada, it will have to be brought into Canada and the duty upon it would have to be paid. Then it would have to be examined by the technical officers of the department to see if it is such a tug as could be registered in Canada. These are the facts, so far as I know, at the present moment.

THE BUDGET.

Consideration of the motion of Hon. W. T. White (Minister of Finance) for the House to go into Committee of Ways and Means, resumed from Tuesday, April 7.

Mr. J. G. TURRIFF (Assiniboia), resuming: Mr. Speaker, I wish to express my thanks to the Minister of Public Works (Mr. Rogers) for allowing me to adjourn the debate last night at eleven o'clock. I was then dealing with the duty on agricultural implements, and I was pointing out that the Budget Speech delivered on Monday last was a raw, cold deal for the farmers; that the farmer had got practically nothing, and that the manufacturers got practically everything that was given by that Budget. I pointed out that the reduction of five per cent on the duty on binders and mowers would mean $5 on a binder and $2.50 on a mower, and as these implements would ordinarily last from eight to ten years, that therefore each farmer was getting a reduction of about ninety cents per annum. While the Minister of Finance (Mr. W. T. White) did that with one hand, on the other hand he enabled the manufacturers to take ten or twenty dollars a year out of the pockets of the farmers, by the increase in the price of materials, in giving the manufacturers increased duties on iron and steel. The Minister of Finance stated that the reason he was able to put these two items on the free list was because the Canadian manufacturers of binders and mowers had been so successful that they were able to compete with the whole world. But the hon. gentleman might as well have said, in so many words, that the manufacturers of all other Canadian implements were behind the times, that they were not able to compete, and that they were not able to make as good an article as could be imported into Canada. I take issue with the Finance Minister. I sold Massey-Harris implements for a good many years, and I would not say the Canadian manufacturers could not make as good a wagon, or as good a plough, or as good a seeder, or as good a disc, or as good a disc-harrow, or as good a rake, or as good a manure-spreader, or as good any other kind of implement, as could any other manufacturer. The reason given by the Minister of Finance is, therefore, not a good reason for making the reduction on these two specific items. If my argument is right, it means that while the farmer has an advantage of $5 on a binder and $2.50 on a mower, yet the Canadian farmer is to be salted because in the opinion of the Minister of Finance the Canadian manufacturer cannot make other implements as good as those we import. That is the logical conclusion of my hon. friend's argument. If I am misrepresenting him, I shall be very glad to be corrected; but I do not think I am misrepresenting his argument, and that would be the last thing I would think of doing.

Mr. W. T. WHITE: I do not assent to the view that my hon. friend is not misrepresenting my argument, but of course I do him the justice of saying that he is not wilfully misrepresenting me.

Mr. TURRIFF: All right; we will leave it at that—difference of opinion. My hon. friend the Minister of Finance, during the course of his speech, told us that he himself made an investigation of the books of the different manufacturers of agricultural implements in Canada as to whether or not they were making undue profits. When he came to that part of his speech, I asked him a question. My hon. friends opposite seemed to resent my doing so. I do not think my hon. friend the Minister of Finance resented it at all. He had no reason to complain of the number of questions asked or the manner in which they were asked. I was simply seeking for information; but my hon. friend the Minister of Finance certainly satisfied the members behind him, because he absolutely refused to answer my question. He did some very fancy sidestepping and also took considerable credit to himself for being an expert auditor. I believe the hon. minister is fully entitled to take credit to himself for being an expert auditor. If I had to make a choice of hon. members for that class of work, I would choose my hon. friend the Minister of Finance. He has youth, ability, brains and experience; and when he made an audit of those books, he knew something about them. The question I asked was a very mild, modest one. I will read it to the House. My hon. friend had just spoken as follows:

> We have made an inquiry as to the factory cost of production of the principal agricultural implements in Canada and the United States. We have examined the balance sheets of manufacturers with the idea of ascertaining what their position is and whether or not they are making undue profit upon their business.
>
> MR. TURRIFF: Would the hon. gentleman state whether, in making that examination, he also examined as to what amount of cash was in the stock and what amount of water?

Of what use is an examination as to the profits of any manufacturing concern unless one knows how much money they have in their business and how much their paid-up stock represents in cash and in water. This is the reply of my hon. friend:

MR. WHITE: The examination as to selling price was made by a trusted official of the Customs Department, Mr. Thomas Costello. He examined into the cost of production. I examined the balance sheets myself and I think, without paying myself too much of a compliment, that I know something about a balance sheet. After having given this matter the most careful and painstaking consideration, we are satisfied that on only one range of implements can the duty be lowered without violation of the fiscal policy of reasonable protection which is designed to encourage and promote the establishment of industries in Canada.

I venture to say that, when my hon. friend was through with that examination, he had a very good idea of the financial conditions as shown on the books of the companies; but if he did not make an investigation as to the amount of water and of cash put originally into what is represented to-day by paid-up stock, he knew absolutely nothing about what profits the companies were making. Will my hon. friend say now whether or not in that examination he looked into the question as to how much water and how much cash were represented in the paid-up stock of the company.

Mr. WHITE: I am not called upon to answer my hon. friend, but I shall be very glad to do so as a matter of courtesy. The financial position of any company, the amount that is owed to its banks, the financial obligations that confront it are shown in its balance sheet, quite apart from any question of stock; that is to say, whether an institution owes $5,000,000 or $20,000,000 is shown by its statement. Where I regarded it as necessary, I inquired into the matter to which my hon. friend has drawn our attention, and I made the necessary inquiries to satisfy myself. In connection with some of the companies, that question as to watered stock did not arise for the reason that no dividends whatever were paid on the stock that in any degree represented water.

Mr. WILLIAM SMITH: Try it again.

Mr. TURRIFF: My hon. friend across the way says, 'Try it again.' I do not have to try it again. My hon. friend has acknowledged that only an occasional investigation was made in that respect. Was evidence taken under oath on that investigation? No, it was not. Will my hon. friend put that information before the House? No, he will not do that. I did not expect that he would. I want to tell my hon. friend and the House and the country that the answer he has given may apply to some manufacturers of agricultural implements that are not paying dividends, but it does not apply to the main manufacturers of agricultural implements. The Massey-Harris combine was effected many years ago. A few years afterwards I was told by one of the original holders of the stock that went into the combine that that stock did not represent fifty cents on the dollar in cash, although it was made to look as if it did. One of the holders of stock told me how it was done. Any hon. member who has had anything to do with agricultural implements or who is a farmer knows that a company like the Massey-Harris company, with hundreds and hundreds of agencies from the Atlantic to the Pacific, must keep at every agency hundreds of dollars' worth of repairs. Every year certain of their implements are changed. New patents are got out and the old repairs become junk, worth from $10 to $14 a ton for scrap iron; but those repairs were put into this merger at their retail list price, representing thousands of dollars a ton. I have sold too many repairs for binders and other machinery not to know. Repairs that would not weigh half a pound or a quarter of a pound retailed at 25 cents and some of them at $1 or $1.50. In that way the companies were able to put in value as it were, but were really putting in water to the extent of over 50 per cent. For years after that, the Massey-Harris company paid 14 per cent on their watered stock. Then when profits became too great, I understand that a stock dividend was made, so that the company would not show too great profits. Let us see what the prices of agricultural implements in Canada are compared with the prices in the United States.

Mr. MEIGHEN: What year was that when my hon. friend got that information from the manufacturers?

Mr. TURRIFF: It was many years ago, and the information was given me in the ordinary way of conversation by one of the members of one of the original companies.

Mr. ARTHURS: Was it given under oath?

Mr. TURRIFF: It was just as much under oath as was the investigation of my hon. friend the Minister of Finance. The gentleman who was telling me this did not think there was any necessity of

making a statement under oath; he was quite satisfied.

Mr. WHITE: Was the conversation to which my hon. friend refers had prior to 1911?

Mr. TURRIFF: Yes.

Mr. MEIGHEN: Did you communicate it to the Government?

Mr. TURRIFF: My hon. friend need not worry; I will be as busy as he desires before I am through. My hon. friend the Minister of Finance says that the duty cannot be taken off these implements because that would hurt the manufacturers. Let us see for a moment how the prices that the Canadian manufacturer gets for his goods compare with the prices quoted in the United States. I will read from the Grain Growers' Guide of April 1, only a week ago.

Mr. SAM. SHARPE: A good authority.

Mr. TURRIFF: My hon. friend says that in a sneering manner, but my hon. friend's brother, who sits beside him, would not dare to say that. There is not a Conservative member in this House who would dare make that assertion, because outside of the cities in the three prairie provinces there is an average of over 1,000 members of the Grain Growers' Association in each constituency, and the majority of them are Conservatives. My hon. friends opposite, therefore, need not make any sneering references to the Grain Growers' Guide, the official organ of the Grain Growers' Association of these three provinces. So far as I am concerned, I have always found it to be a fair and reasonable publication. Let us see how the prices quoted in Winnipeg compare with the prices quoted in Minneapolis. This is the statement:

	Winnipeg.	Minneapolis.
Grain binders.		
6 ft. cut with sheaf carrier, 3 horse hitch	$144 00	$125 00
6 ft. cut with sheaf carrier, forecarriage, 4 horse hitch	157 00	137 00
7 ft. cut with sheaf carrier, forecarriage, 4 horse hitch	159 00	140 00
8 ft. cut with sheaf carrier, forecarriage, 4 horse hitch	164 00	150 00
Forecarriage with 4 horse attachment	20 50	18 00
Forecarriage, less 4 horse attachment	15 50	12 50
Sheaf carrier for corn binder	10 00	5 00
Transport truck, short axle	10 00	7 00
Flax attachment	9 50	7 00
Corn binder.		
Corn binder, 3 horse hitch, less sheaf carrier	157 00	120 00
Sheaf carrier, with corn binder	10 00	5 00
Reaper.		
Reaper, 5½ ft. cut, 2 horse, for flax cutting	92 50	72 00
Mower.		
14 section, 1 horse, with shafts	49 00	41 00
18 section	53 00	45 00
20 "	54 00	45 00
20 "	59 00	47 00
24 "	61 00	50 00
20 "	59 00	49 00
24 "	61 00	50 00
Hay tedder, 2 horse, less trees and yoke	50 50	38 00
Side rake and tedder, with 2 horse trees and yoke	66 00	57 50
Hay loader, with forecarriage.	75 00	63 00
Hay rakes—Dump (all steel).		
24 tooth, 8 ft., 1 horse	31 00	23 00
30 tooth, 10 ft., 2 horse trees with yoke	34 00	24 00
36 tooth, 12 ft., 2 horse trees and yoke	38 50	28 00
Manure spreaders.		
3 horse, capacity 50 bushels	147 00	115 00
4 " 65 "	157 00	120 00
Drills. (All without seed attachments.)		
Single disc drills.		
14 disc, 1 pole, 2 horse hitch	94 00	72 00
16 " 2 " 3 "	107 50	80 00
20 " 2 " 4 "	125 50	98 00
22 " 2 " 4 "	135 50	106 00
24 " 2 " 4 "	145 50	115 00
Double disc drills.		
14 disc, 1 pole, 2 horse hitch	107 00	76 00
16 " 2 " 3 "	120 00	82 00
20 " 2 " 4 "	141 00	107 00
22 " 2 " 4 "	151 00	115 00
24 " 2 " 4 "	161 00	125 00
Shoe drills.		
14 shoe, 1 pole, 2 horse hitch	80 00	69 00
16 " 2 " 3 "	92 50	78 00
20 " 2 " 4 "	110 50	95 00
22 " 2 " 4 "	120 50	101 00
24 " 2 " 4 "	130 50	112 00
Grass seed attachments for drills.		
For 14 run drill	10 00	6 50
" 16 "	11 00	7 00
" 20 "	13 00	8 00
" 22 "	14 50	8 50
" 25 "	16 00	9 00
Cultivators.		
Corn cultivator, 2 rows	58 00	50 00
Disc harrow.		
(Out-throw. All without weight boxes.)		
12 discs, 16 in. dia., 3 horse hitch	35 00	21 00
14 discs, 16 in. dia., 4 horse hitch	38 00	23 00

	Winnipeg.	Minneapolis.
16 discs., 16 in. dia., 4 horse hitch	41 00	25 00
Forecarriage for disch harrow.	8 25	5 00
Ploughs.		
Gang, 12 in., 3 or 4 horse trees.	80 50	62 00
Gang, 14 in., 3 or 4 horse trees.	82 50	63 00
Breaker bottom for above gangs with extra shares	26 00	21 00
Sulky, 14 in., with 3 horse trees	51 00	42 00
Breaker bottom, 14 in., with extra shares for sulky	15 00	11 00
Sulky, 16 in., with 3 horse trees	52 00	43 00
Breaker bottom, 16 in. wide, with extra shares for sulky.	16 00	11 50
12 in. Cross plough, steel beam. long board, no coulter or extra shares	17 00	13 00
14 in. Cross plough, steel beam, long or short board, no coulter or extra shares	18 50	14 00
16 in. Cross plough, steel beam, long or short board, no coulter or extra shares	20 50	16 00
18 in. Cross plough, steel beam, long or short board, no coulter or extra shares	22 50	17 50
Light brush breaker, 14 in., imp. brush coulter, no extra shares, soft centre board	25 00	19 00
Heavy brush breaker, 14 in., imp. brush coulter, no extra shares, soft centre board	27 50	22 00
Scufflers.		
Horse hoe and cultivator	9 75	7 25
Wagons—(Complete).		
3½ in. arm, 2½ x 7-16 in. tire, with 10 ft. box, 26 in., plain.	86 00	72 50
3½ in. arm, 2½ x 7-16 in. tire, complete Standard wagon or farm truck, new pattern box	92 00	75 00
3½ in. arm, 3 x 7-16 in. tire, complete Standard wagon or farm truck, new pattern box	95 00	77 00
1-horse wagon, with double box, seat and shafts	73 00	47 00
1-horse wagon, with double box, seat, pole, trees and yoke	76 00	49 00

Mr. W. T. WHITE: Can my hon. friend tell me from his statement the difference between the Winnipeg and the Minneapolis price of an 8-foot binder?

Mr. TURRIFF: Eight-foot-cut binder with sheaf carrier, 4-carriage and 4-horse hitch, $164 in Winnipeg and $150 in Minneapolis.

Mr. WHITE: What is the difference between the freight rates from Toronto or Hamilton to Winnipeg and from Chicago to Minneapolis?

Mr. TURRIFF: I could not give my hon. friend an answer just off-hand, but if the freight rates in Canada are too high, my hon. friend, as Minister of Finance, should take the necessary steps to have them lowered.

Mr. MEIGHEN: What about the distance?

Mr. TURRIFF: The distance is not too great to prevent train-loads of Cockshutt ploughs being sent a thousand miles west of Minneapolis to compete with American-made ploughs after duty has been paid—and the same may be said of other makes.

The list I have read is the list given by the Grain Growers' Guide. I have taken the trouble to figure out the difference in percentage of cost. On binders, the main item that my hon. friend the Minister of Finance selected for a reduction of duties there is the least difference of all. On binders there is a difference of only fifteen per cent on the average between Winnipeg and Minneapolis. On the other item on which he has made a reduction, mowers, there is a greater difference, twenty-nine per cent. But these are the two items on which there is the least difference and on these two he made a cut in duty. But the implements that sell for a much greater percentage higher in western Canada than in the United States are the ones on which he has refused to make any reduction whatever in the interests of the farmers. Let me give the percentages:

Grain binders, 15 per cent; corn binders, 30 per cent; reapers, 29 per cent; mowers, 29 per cent; hay rakes—dump (all steel), 37 per cent; manure spreaders, 29 per cent; single disc drills, 8 per cent; double disc drills, 35 per cent; grass seed attachments for drills, 65 per cent; disc harrows, 65 per cent; ploughs, 28 per cent; wagons, 32½ per cent.

My hon. friend has reduced the duty on mowers, but a farmer must have a rake as well as a mower. Why could he not have given the farmer the benefit of a reduced price for his rake? The duty on rakes is not reduced.

Mr. MEIGHEN: How does the hon. member account for these differences of sixty-five per cent, thirty-nine per cent and forty-two per cent when the duty is only twenty per cent? What is his method of accounting for the difference?

Mr. TURRIFF: The Solicitor General is a very clever hair-splitting lawyer in an argument and I will just leave that for him to explain when he comes to speak, as I know nobody that can do it any better, to his own satisfaction, than the Solicitor General.

Mr. MEIGHEN: I cannot give your view, that is what I want.

Mr. TURRIFF: I was about to ask how it came that after the general expectation, after the general statement by many members opposite that there was going to be a great and general reduction in the duties on implements that in the end it simmered down to about ninety cents a year to the average farmer who runs a 320 acre farm, a reduction of 5 per cent on binders and mowers and absolutely nothing else. I wonder if the refusal of the Government to go any further than that synchronizes with the flop-over of Senator Jones from the Liberal party to the Conservative party. It looks very much as if it did. It seems to me that if there was any man in Canada who had good reason to stand by his party it was Senator Jones, the president of the Massey Harris Company. When, years ago, this party was on the other side of the House and made some reduction in the duties on agricultural implements, a drawback was given on the duty paid on the material that went into their manufacture, and I am told that, according to the Auditor General's Report, last year the Massey-Harris Company drew $165,000 in drawbacks. But because the Liberal party came to the conclusion that the time had come when free implements should be given to the farmers, this man, who had got every consideration, who was made a senator and who was knighted, who had 'Sir' put before his name by the kindly offices of this party—I do not know whether the leader of the Opposition at that time put the hyphen in his name or whether that was put in by himself—at all events he is the last man who could say that he was not well treated by this party. But because this party favoured helping the farmers, he apparently went to my hon. friends opposite and made a deal by which, if they would only cut the duties to ninety cents a year for each farmer, he would transfer his allegiance from the Liberal party to the Conservative party. Hon. gentlemen on the Government benches are getting the benefit of this deal but they are not paying for it, it is the farmers of Canada who are paying for the support of my hon. friend, Senator Jones, to the Conservative party. Every farmer in every province in Canada must pay an extra price for his agricultural implements in order that hon. gentlemen now on the Treasury benches may have the support of Senator Jones in the future.

Mr. BEST: You can have him back if you want to.

Mr. TURRIFF: I have no doubt; and judging by the remarks made by the Conservative press throughout the West they consider that the Government here has made a bad bargain, that they paid too much for Senator Jones.

Mr. BRODER: Put him up at auction.

Mr. TURRIFF: Oh, you have him now.

Mr. ROGERS: Does that include his title?

Mr. TURRIFF: Yes, the Minister of Public Works gets the title as well and possibly, since my hon. friend the senator would transfer his allegiance he might, for a consideration, transfer his title to the Minister of Public Works on whom it would sit so nicely. However, from all accounts Senator Jones had nothing to complain of as to what the manufacture of implements was doing for him in Canada. I am told on the very best authority that last year he drew as his share of the spoils from the Massey-Harris and other companies with which he is identified, the sum of $186,000. Fifty thousand dollars of that in salary and the balance in dividends; and I understand that in consideration of his making this grand deal for the implement manufacturers he is to receive in addition a percentage of the profits. That is the report. As I said before, the farmers of Canada have to pay for that, and hon. gentlemen from Manitoba and other parts of the West will have to explain to their followers. Yes, the Government has reduced duties on implements only to the extent of about a dollar apiece for you; iron and steel are to cost more, but to counterbalance that you will have the pleasure of knowing that the Hon. Senator Jones is supporting the Government of Right Hon. R. L. Borden; that ought to be compensation enough for you, surely.

The Minister of Finance told us that the Massey-Harris Company exported 65 per cent of their output. Might I ask the Minister of Finance if the Massey-Harris Company gets any consideration in any other market of the world besides Canada? No, they compete against the manufacturers of the world in every country except Canada. The Minister of Finance also stated that the Canadian factory of the International Harvester Company does not export to any great extent. I happened to visit their

factory in Hamilton some years ago and was told that they did quite a large export business from that city, but of course it may be different now. If our manufacturers of agricultural implements can compete with other manufacturers all over the world, why cannot they do it in Canada? The Massey-Harris Company have taken $3,000,000 out of the pockets of the farmers of Canada in excessive prices, and with that $3,000,000 have built a plant in the State of New York to compete in the American market, and they are competing there to-day. An altogether different condition exists to-day as compared with two or three years ago. At that time there was a duty on agricultural implements going into the United States. That duty has now been wiped out and Canadian manufacturers of agricultural implements have the whole United States as their market. If the Cockshutt Plow Company, years ago, could send train-loads of ploughs a thousand miles west of Minneapolis and undersell the American manufacturers, even after paying a duty of 15 per cent on the ploughs and 45 per cent on repair parts, why cannot they do so now, when there is no duty to pay either on ploughs or repair parts? I have no doubt that they can compete in every part of the United States, so that the time has come, Mr. Speaker, when, in the interests of our farmers, the duty should be taken off agricultural implements entering this country; and I am perfectly satisfied that if that were done you would not see a single manufacturer of agricultural implements in Canada having to close up his shops—in spite of the investigation made by the Minister of Finance.

The Minister of Finance said that free implements meant free trade. 4 p.m. If that is so, how does he account for the fact that in spite of the reductions made under the Wilson tariff, the United States is still a highly protected country? They have free implements in the United States, but have they not free trade? My hon. friend knows perfectly well that they have not, and that free implements have not the slightest tendency to bring about free trade in the United States. Any one can see that the reducing of the duty on one particular item does not mean free trade in all articles or anything like it.

The Minister of Finance also stated that our implement manufacturers had to pay a duty on the stone and brick used in their factories. In my opinion, not a single implement manufacturer in this country pays a cent duty on the brick or stone used in his factory, because he uses the ordinary brick or stone near at hand. My hon. friend has increased the duty on cut stone in the interests of the stone cutters and the quarry owners of Canada —another concession to the manufacturers. I do not know very much about the stone business, except that about three years ago I was interested in a building that was being put up in the city of Regina. The directors of the company wished to have a good looking building, and decided to have the front trimmed with cut stone. They instructed their architect to invite tenders, and to give the preference to Canadian stone that was quarried at Selkirk or at Stonewall, two places near Winnipeg. The tenders called for the stone f.o.b. Regina, freight and duty paid. The lowest tender was for the sum of $5,000, and came from a stone-cutting firm in the centre of the United States, several hundred miles south of Winnipeg. Their tender was $1,600 cheaper than the lowest Canadian tender, and although we wanted to give the preference to Winnipeg stone, we were not going to throw away $1,600, and we took the American stone, which proved to be first-class in every way. The Minister of Finance by his Budget has made it possible for these Canadian stone-cutters to extort that extra $1,600 on every $5,000 worth of stone that a man requires for his building. The people have to pay and the manufacturer gets the benefit. This is a manufacturers' budget from beginning to end, and the farmers and the common people get practically nothing at all. However, I am not blaming my hon. friend so much; it is about what we might have expected. My hon. friend was not elected under false colours; it was known that he was a protectionist; and the Government has quite openly declared that they are protectionists, but the people are getting a lesson on what protection means. The Minister of Finance had a splendid opportunity to give some relief to the people, now that conditions are so bad, but he did not take it. The minister stated that trade was good last fall, and he very fairly said that that was partly due to the fine weather. That is quite true. Last year by the end of December over 90 per cent of the wheat of Saskatchewan had been shipped east, whereas usually by the end of December only about

one-half of the wheat is shipped. But he might have added that it was the entry of cattle into the United States during the last three months of the last calendar year that helped to swell the exports. The Wilson Tariff came into force on the 6th of October and up to the 31st of December, 150,000 head of cattle had been exported from Canada to the United States and only 1,000 to Great Britain during those three months. I am speaking in round numbers. One hundred and fifty times as many cattle were exported to the United States, and why?—simply because the American people offered a bigger price than the Canadian farmer could get at home. Does the fact that the American people are shipping cattle to Great Britain cut any figure in that respect? What does it matter to the Canadian farmer who has ten head of steers to sell if he can get $10 or $20 more in the United States than he can get from a Canadian buyer to ship to Liverpool? What difference does it make to him if the United States ship out some hundreds of thousands of catttle to Great Britain? That shows the Minister of Finance what the taking off of duties will do.

If he would only take the duties off other farm products he would have no trouble with delegations coming from the manufacturers, because, by putting the farmer in a position to get value for his products, he would keep the manufacturers busy. As long as you hamper the farmer, as long as you keep him from getting value for his products, just so long will you keep him a poor man and just so long will you keep the manufacturers working half time and coming here and asking for more protection in the hope that it will do away with the depression. You cannot do away with the depression by increasing the burdens of the people. You cannot do away with the depression by taking the money that the farmer earns and preventing him from putting it in his own pocket.

Mr. SAM. SHARPE: Are you advocating free trade?

Mr. TURRIFF: My hon. friend is a worthy disciple of the Finance Minister. Free trade, in my hon. friend's mind is free trade in everything; free trade in food means free trade in everything. There is no man in Canada less anxious to hurt the manufacturers than I am. If you want to help the manufacturer make a market for him at home; put money into the pockets of the farmers so that they can buy and pay for the goods of the manufacturer.

Why are the manufacturers working half time to-day? Is it because of a falling off in the exports of manufactures? No, but it is because the Canadian farmer, the worker, the artisan and the labourer are not able to buy the products of the manufacturer If you want to remedy that condition, put the farmer in a better position and do it in such a way as not to hurt the manufacturer. How is it going to hurt the manufacturer if you give the farmer free wheat? How is it going to hurt the manufacturer if you secure a free market in the United States for the farmer's oats, barley and flax? Hon. gentlemen opposite have a habit of saying that because we have free cattle and a few other items such as free hogs and sheep—

An hon. MEMBER: How many hogs went over to the United States last year?

Mr. TURRIFF: My hon. friend can give that information to the House if he sees fit. He is probably a great deal better posted in that respect than I am. I do not happen to know very much about hogs. We do not export many from the West and I am not familiar with the figures. But my hon. friends opposite, for some months past, have been heard saying to the people of the West: You do not need reciprocity now, you have practically got it because you can send your cattle over to the United States. Let me tell the Minister of Finance and every hon. gentleman opposite that this is very far from the truth. We have a free market for our cattle, and see what it means—a dollar a hundred at least on the price for every farmer in the West for his steers, but the artisans and the consumers in the cities are suffering on account of that. Under reciprocity corresponding advantages should occur, but under the present arrangement, while the farmer gets more for his cattle, the artisans in the cities who are working on half time are paying more for their beef, and they are not getting the fruit, vegetables or anything else that would have come in free under reciprocity to counteract the increased price they are paying for their beef. Under reciprocity a certain quantity of eggs, butter and other farm products would have come in. Why should we not get those things? We cannot get those things now from our neighbours without paying duty. They are coming in, as a matter of fact, and we are paying the duty. They always come in and they always will come in. Why not take off the duties and give the people a chance to get cheaper food?

Let me draw your attention, Mr. Speaker, to the question of oats; and this will be interesting, I am sure, to my hon. friends from the West who sit upon the other side of the House. The duty on oats going into the United States prior to the 6th October last was 12 cents a bushel. Practically no oats were then going into the United States. On the 6th October the duty was cut down to 6 cents a bushel. Shortly after that time I was up on the Manitoba and Northwestern line, at Saltcoats, Yorkton and other places, and while there I met several grain dealers and they told me that immediately the duty was lowered in the United States they had an influx of American buyers. Prior to the 6th October the price of oats at Saltcoats, Yorkton, and different points in that vicinity, was 22 cents a bushel at the elevator. The moment American buyers came in they advanced the price to 28 cents a bushel and then paid 6 cents duty. From the 6th October to the 31st December over 20,000,000 bushels of Canadian oats went into the United States and paid 6 cents a bushel duty. Thus $1,200,000 was taken out of the pockets of the western farmers that might have been left there if we had had reciprocity. With reference to flax and barley the condition is much worse. What we have now is not reciprocity. I heard one hon. gentleman on the other side of the House saying yesterday that they would be delighted to contest another election on the question of reciprocity. I want to say that he would not be half as delighted as we would be to contest an election on reciprocity.

Some hon. MEMBERS: Oh, oh.

Mr. TURRIFF: I would say: Welcome the day, welcome the hour, when the question is submitted again as it was last time, because then Laurier will return to power.

Mr. SCHAFFNER: Never.

Mr. TURRIFF: The hon. member for Souris (Mr. Schaffner) had better cinch that senatorship, because he had better not risk an election again in Souris.

Mr. SCHAFFNER: I will take my chance.

An hon. MEMBER: It will be a long one.

Mr. TURRIFF: My hon. friend will take his chance. Of course, he says he represents eighty-five per cent of the voters. I do not see how he does that on sixty-two of a majority, but that is his affair and not mine. My advice to the hon. gentleman is to get a sure grip on that senatorship, because then he will be in a much better position to explain to the farmers of the West why he voted against free wheat and against free implements. The hon. gentleman would be more comfortable with a seat in the red chamber than in an attempt to secure the votes of the farmers of Souris another time. Therefore, my advice to the hon. gentleman is to get a good, firm grip on that senatorship.

Mr. SCHAFFNER: I vote for a Government that has done ninety-five per cent of the things the farmers of the West have asked for since they came into power, when the late Government did absolutely nothing along that line.

Mr. TURRIFF: I may tell my hon. friend that every local Tory member in the province of Manitoba voted for free wheat, and I will also tell him that he cannot go into his constituency and get any farmers' organization to endorse what he says. Now, enough of free implements—

Mr. HENDERSON: I thought the hon. gentleman was getting sick of it.

Mr. TURRIFF: I have undertaken not to be too long, or I could give you a good deal more. I have it lying all around here. I want now to say a word upon the question of immigration. The Minister of Finance referred to it, but he did not tell you that during the year 1912-13, the first time for many years back, there was a greater emigration from Canada to the United States than there was immigration from the United States to Canada. More people went from Canada to the United States in the year 1912-13 than came into Canada from the United States. I can give my hon. friend the figures for the last five years:

Year.	From Canada to United States.	From United States to Canada.
1907-8	58,000	58,000
1908-9	84,000	59,000
1909-10	94,000	103,000
1910-11	105,000	121,000
1911-12	107,000	133,000
1912-13	143,000	139,000

In the year 1912-13 our hon. friends on the other side of the House were mismanaging things in Canada, and we very soon had a return to the old condition of affairs that existed when they went out of power in 1896. The result was that 143,000 people left Canada for the United States, while only 139,000 people came from the

United States to Canada. The results for the years 1913-14, for which we have not yet the figures, will be much worse, and for the year 1914-15, upon which we have just entered, they will be worse still. There is no question about that; you only have to keep your eyes open to see that.

The class of immigration coming into the country has changed also. In 1911-12 the immigrants from continental Europe represented 23.2 per cent of the total immigration, while in 1913-14 (11 months) the proportion was 35.2 per cent, or an increase of 12 per cent from continental Europe. In 1912-13 American immigration was 34.5 per cent, and in 1913-14 (11 months) it was 25.7 per cent, a reduction of between 8 and 9 per cent in the volume of American immigration.

So, you see that the defeat of reciprocity by hon. gentlemen opposite is bringing about these results, and it is going to be bad for the West. That is a matter that the Minister of Finance did not explain.

My hon. friend the Minister of Finance threw out as a sort of sop to the farmers the statement that this Government were going to devote their efforts to getting better rates to compensate them for not getting a greater reduction in duties on agricultural implements. At the same time the Minister of Finance knows that, since he came into power less than three years ago, it costs the western farmer from six to eight cents a bushel more to send his wheat from the West to the Liverpool market. If his efforts during the next three years are productive to the same extent as his efforts have been in the past three years, I do not think the western farmer will have very much to thank the Government for.

There is another thing that I would like to point out to my hon. friend the Minister of Finance. Suppose, Mr. Speaker, that the cotton manufacturers, we will say, came to my hon. friend the Minister of Finance and made this statement to him. Suppose the cotton manufacturers, or any other manufacturers, were to say to the Minister of Finance: We have been enjoying protection for a long time, but it is now more or less circumscribing our markets and we have come to the conclusion that the duty, which was put on in our favour, should be taken off forthwith, would not the Minister of Finance at once take off the duty on such articles ? Would he not reply: All right, surely the man who makes the goods ought to know whether he wants protection or not; I will put that article at once on the free list.

[Mr. Turriff.]

But now the wheat growers of Canada have come to the Finance Minister and to the Government, and they have said: We do not want the duty on wheat; we do not want protection on what we grow; we are satisfied to meet the world in open competition. And the reply of the Minister of Finance to the farmers is: You cannot be trusted to know what is good for you; we cannot give you what you ask; we will have first to consult the millers and the railways. So the Minister of Finance turns a deaf ear to the farmers, but he turns a mighty quick-hearing ear to the voice of the railway manager, and the voice of the manufacturer. Does the Minister of Finance think that the Canadian farmer cannot size up what is going on just as well as can the Canadian manufacturer ? If the hon. gentleman has any belief of that kind, he is entirely mistaken. I have dozens and scores of farmers in my constituency who can argue out public questions in a systematic and forcible and sensible manner; men who are the equals of any in this House, men who are much more competent to treat of public questions than I am, and such men the Minister of Finance cannot hoodwink. Make no mistake about it; the farmers of to-day are not what they were fifty years ago, and if their demands are not paid attention to by the Government in power, they will make it uncomfortable for those who deliberately set their requests aside, while at the same time they hasten to comply with the requests of the manufacturers and the railway companies.

The Minister of Finance told us that Canada was the second best customer the United States had, and that Canada only ranked fifth in selling goods to the United States. Why not equalize that; why not let us pay for in kind what we are now paying for in cash? Surely that would be to the advantage of everybody.

In connection with the cheapening of freight rates, to which my hon. friend has referred, I wish to say that in my judgment this present Government has deliberately and with malice aforethought degraded the Grand Trunk Pacific, at the instigation, or at least in the interests, of the Canadian Pacific railway.

Mr. SPEAKER: The hon. gentleman is out of order in imputing motives.

Mr. TURRIFF: If you say I am out of order, Mr. Speaker, I shall not question your ruling just now, but I certainly fail to see wherein I am out of order. However, I accept your view.

Mr. SPEAKER: The rule says it is not permissible to attribute improper motives to the Government or to members of the House. To say that a thing was done out of malice aforethought is not a proper expression.

Mr. TURRIFF: All right, Mr. Speaker; I withdraw those words. I would not like to say anything that is not in accordance with the rules of the House, but I will say this: that the Grand Trunk Pacific has been deliberately degraded by the Government, and that the only other company that can benefit by it is the Canadian Pacific railway, and the men who are to suffer by it are the western farmers, because the Grand Trunk Pacific, degraded as it is, cannot carry the products of the farmers as cheaply as if the road had been completed up to the standard originally intended.

There are other things I should have liked to refer to, such as lumber and cement, but the time at my disposal having expired, I hope to deal with them on another occasion. I trust that the next time the farmers of Canada come to see the Minister of Finance, they will get more consideration than they have obtained up to the present time, judging by the Budget speech delivered on Monday last by the Minister of Finance.

Mr. W. F. COCKSHUTT (Brantford): Mr. Speaker, I shall have occasion to refer to a few of the remarks of my hon. friend (Mr. Turriff) later on. The hon. gentleman assigned me an hour and a half to dispose of him, but I hope to be able to deal with his remarks in much less time than that. The Budget speech of the Minister of Finance (Hon. W. T. White) this year has been looked forward to with more than ordinary interest, and I think I may say, without flattery to the hon. minister, that he has more than fulfilled the expectations the people of Canada have of him. The air has been materially cleared by the pronouncement made by the hon. gentleman on financial matters, and in masterly style he has dealt with every phase of the commercial and financial life of our country. The question of our national finances has been ably dealt with by the Finance Minister and by the hon. member for St. Antoine (Mr. Ames), so that, in the time at my disposal, I shall endeavour to treat of other features of our financial and commercial life.

The clean-cut and well defined line which the Minister of Finance has drawn between the political parties in Canada, in reference to the protective tariff, will carry assurance to the minds of all Canadians, and in declaring that the Conservative party shall stand by Canadian industries, whether agricultural industries or manufacturing industries, the hon. gentleman has enunciated a policy in the best interests of the Dominion. When the policy announced by the Minister of Finance in his speech is fully understood, and when his speech has been read, as I believe it will be from end to end of the Dominion, his utterances will bring reassurance to the minds of those who may have been panic-stricken by the vagaries of hon. gentlemen opposite. The immediate outlook, as foreshadowed by the Minister of Finance, though not as good as it has been in some years, is still very encouraging. The country as a whole is sound; but we have, I am sorry to say, several legacies left over by the late Government that have imposed tremendous responsibility upon the people of Canada, and very onerous duties on the Minister of Finance to provide for them. I am safe in saying that no Government ever existed in the Dominion which left a greater legacy of debt and encumbrances than did the late Laurier Administration.

I regret that the hon. member for Pictou (Mr. Macdonald) is not in the House at the moment. He bewailed that a settled gloom was spreading over the Dominion of Canada. I think those were his words. Where are the good times gone, he bemoaned, that were in vogue during the Laurier regime? How is it that depression is spreading over the land and you cannot see a ray of sunshine anywhere? This, if it were true, would be a very great reflection upon the gentleman whom he supported in power for the past sixteen years. Let us ask for a moment what constitutes good times; what is the sum and substance of good times. Is it to pick up on the streets money that you have not earned? Is it to get a contract at twice as much as should be paid for it? Is it to have a cinch in supplying some Government department with goods that are not worth 50 cents on the dollar for what should be supplied? If such be the case, then certainly we have had good times during the past sixteen years, because at no other time has money been scattered about in the Dominion of Canada without

receiving returns for it in the way that it has been by the late Government. I am sorry to make so severe a statement as that, but I am speaking exactly what I believe as a business man when I say that there have been millions—it would almost startle me if I were to mention the figures, after hearing that $40,000,000 had been squandered in one enterprise—of the money of the country paid out, for what? For nothing that is a tangible asset to-day, and for nothing that can ever hope to earn a dividend for the people of Canada.

Take the railway that I have just mentioned, conceived, as I believe, in political jobbery and carried on with extravagance and political iniquity, so that to-day we are face to face with a report that says that upwards of $40,000,000 of the public money has been spent in that extravagant way. My right hon. friend the leader of the Opposition (Sir Wilfrid Laurier), a gentleman whom I respect very highly, stated that he admitted that mistakes might have been made, but that anything that had been misspent had been the result of a mistake. I only wish I could accept those words at their face value; but I am sorry to say, after looking into the report and after reviewing very carefully the course of my hon. friends opposite for the sixteen years they were in power, I cannot accept that statement at all. That railway, which was built as a monument to my right hon. friend and to the Dominion of Canada, was not a mistake according to his own judgment, in the first place. He went into it with his eyes open. Why do I say it was not a mistake? Let my right hon. friend refer for a moment to the speech of his then Minister of Railways, the Hon. A. G. Blair. Let him read that speech from beginning to end, and tell me whether or not he was warned that he was embarking upon an enterprise that was of the very worst character in every way, both political and national. What did the Hon. A. G. Blair say? He told these gentlemen that their figures were all false; that their $13,000,000 and their $61,000,000 were false. He said: I cannot support a proposition like that before my fellow members. I will resign my seat in the Government and step out rather than tell the people of Canada that a railway can be built for $13,000,000, or $61,000,000, that I know is going to cost $120,000,000. All credit to the Hon. A. G. Blair, who stepped out of the Government and said: I refuse to be a party to a Government that launches a scheme on the Dominion of Canada, knowing that it is going to cost five to ten times more than it was said it would, and that, in the building of it, takes none of the ordinary business precautions to see that a dollar's worth is got for a dollar. The whole thing from start to finish was carried on with the idea that, no matter how much money we put into it, the Grand Trunk Pacific has to pay 3 per cent on the cost and the country cannot lose. Thus they went on and spent that vast sum of money in an enterprise, a large part of which to-day hangs in the balance as to whether it will pay in the next fifteen to twenty-five years—in an enterprise vastly in advance of its time, vastly in advance of all the requirements of the eastern section of the country through which it runs, and according to the best information we have in railway circles, entirely unnecessary in so far as the section from Levis to Moncton is concerned, because it parallels a road that is already short of traffic. No wonder that good times, according to their measure, prevailed in the estimation of hon. gentlemen opposite. Can good times consist simply in making money rapidly, regardless of how it is made? Can good times consist in a party throwing money around to its friends without receiving value back in the interest of the country? If such can be done, certainly they had good times; but, as I understand good times, they are a very different matter.

Let hon. gentlemen opposite look back over their career and see some of the deeds they committed during those so-called good times. I think my hon. friends, if they review their whole course, will say: We did something more than make mistakes; we condoned offences that never should have been condoned. If there is one fault I have to lay to my right hon. friend the leader of the Opposition—and I am sorry to have to lay this charge against him—it is that he was too fond of power to punish the wrongdoer in his own party, and, on account of that, he was led into committing many offences against the public interest. That is a strong statement to make, but let me recall two or three of those mistakes. Let me refer to the North Atlantic Trading Company, a creation of my hon. friends opposite, which got from $300,000 to $500,000 from the people of this country with no value received. Let me refer to the cruise of the Neptune, which went up among the Esquimaux and converted some of the

heathen to the ways of the Laurier Government and spent some thousands of dollars of Government money in visiting the wilds of the North and brought back a tale of rascality the like of which was never before unravelled in the history of this country. Let me recall a similar matter, which shows a spirit that should never have entered this House—which took place only in the last Parliament, when Mr. Lanctot, the former member for Richelieu, painted his house at Sorel and fixed it up in good shape at the Government's expense. Small matter, you say; but often small matters show which way the wind blows. That was proved up to the hilt and admitted by himself, and his cheque was sent to cover it after he was caught, and not before. Good times for the hon. member for Richelieu; very good times. The lamentable part of it was that, instead of meting out to that hon. gentleman the punishment that was due, the Liberal party, headed by the right hon. gentleman opposite and supported by every man behind him, whitewashed this gentleman from head to foot and gave him a character to go free. Does that constitute a high ideal, either commercial or political, to set up before the people of Canada? I do not call that good times; I call that evil days. If there is one charge against my right hon. friend that stands out and that will stand out in the history of Canada, it is that, under the Laurier Government, political morality and commercial morality sank to the lowest ebb at which it has ever been since Confederation. If hon. gentlemen on this side will take warning by what has happened on the other, we shall be glad; but if we should harden our hearts and run astray, as hon. gentlemen opposite did, for my part I hope I shall be lashed rather than sit in this House and vote through such rascalities as those I have mentioned in order that we may stay in power.

Mr. PROULX: Did you vote for the Prince Albert deal?

Mr. COCKSHUTT: I never heard of any Prince Albert deal.

Mr. PROULX: The Prince Albert land deal.

Mr. COCKSHUTT: No Prince Albert land deal has ever come before the House so far as I know. With regard to land deals, I may say that mighty little land was left to deal in after my hon. friends went out of power. If my hon. friend had applied to the hon. member for Assiniboia (Mr. Turriff) the remark which he has made, he might have obtained some information on the point; the hon. member for Assiniboia could tell him a thing or two about land deals. The Saskatchewan Valley Land Company and other such matters are still fresh in the public memory. Although I have mentioned a few scandals, I have touched only the fringe of them, as the hon. member for Assiniboia knows full well, though he was so busy with implements that he did not have time to touch upon the land deals of the late Government. I should think that my hon. friend, in talking so much about implements and advocating their free importation into this country, should have had in mind the one implement that his party imported in connection with the deal of which I have spoken. Our Finance Minister has had to pay $12,000,000 for that implement already. Land deals certainly came on thick and fast during the time the late Administration held office.

I have mentioned this in order to draw to the attention of the people to the difference between the two parties in this respect. So far as the practical work of the country is concerned, this Government has been in power about three years. We are nearing the end of the third session of Parliament. We have the financial statements; we know what the Government has done in the matter of expenditure. Have any hon. gentlemen opposite charged that even $100 has been wrongfully taken from the treasury since 1911 by the powers that be? If they have, I have not heard anything about it. This is the great difference between the two parties of the day, and I trust that the Finance Minister, in whose honour I have the highest confidence, will continue the same straight course that has been pursued in the two and a half years during which this Government has been in power.

Let me give our friends opposite a piece of history. It is not always pleasing to Conservatives to remember this, but I think it will help to bring out the point I am making. Between the years 1872 and 1874 we had what was called the Pacific scandal, in which Sir John A. Macdonald, probably the greatest statesman Canada has ever seen, was the central figure. It was charged that he received a subscription of $25,000 from Sir Hugh Allan in order that he might hand the contract for this railway over to him. In the year 1874 the Sir John A. Macdonald Government was condemned and punished by the people of Canada—turned out of office and relegated

to opposition—on account of one small scandal; but during the sixteen years that followed, from 1896 to 1911, we had not one but over one hundred scandals, the amounts expended in connection with which would run into millions of dollars. In spite of all those scandals, that Government remained in power for sixteen years, handing out the people's money, as I contend, wrongfully, and without receiving one hundred cents on the dollar for it. That is the difference that has existed up to the present time between the powers that were and the powers that be. May this Government continue to run just as straight a course as it has run in the past. I have the privilege of knowing something about the expenditures that have been made. I am glad to say that in the city from which I come we are getting a public building. It was a long-felt want; we could not get the building under the old regime. That building is now nearing completion, and I venture to say that so far as outlay on that structure is concerned—and it is costing a quarter of a million dollars—close investigation would not reveal the misappropriation of even a ten-dollar bill. I have had to come to the department in connection with the matter, and the whole procedure has been as straight as a string. As I have said, I hope this will continue, because as a humble member of this House I do not want to get up and vote that black is white in order to save the Government from defeat. In the early years of the Administration of hon. gentlemen opposite they had a good record, but, as soon as they thought it became necessary, they departed from the paths of political truth and commercial honour, and they went out of power rather than give the people one hundred cents on the dollar for the money they were expending.

I have dealt very briefly—perhaps my hon. friends may think somewhat harshly, but I have done it in all kindness—with the administration of affairs under the late Government. If my hon. friends opposite ever get in power again I trust that if another transcontinental railway is to be built, the contracts will be let in a more business-like manner and that one hundred cents on the dollar will be obtained for the people's money. If my hon. friend lives one hundred years—and I think he will have to live that long before he gets into power again—I trust that what he calls mistakes, but what I am afraid were committed with open eyes, will not be repeated. I think that I would not be forgiven if I did not deal with some matters pertaining to the great question that appears to be agitating the hon. member for Assiniboia and others of his kind, with regard to protection and free trade and tariff changes. My most estimable friend the hon. member for Red Deer (Mr. Michael Clark) is not in his place. I dearly love to have the hon. member for Red Deer present when I am giving my views with regard to protection, because we agree so beautifully on theory that his absence takes the edge off my remarks to a certain extent. Personally we are the very best of friends, and I admire him as a good parliamentary debater and a man who presents his case with great skill. But if he could only present protection with the same skill that he presents free trade, he would be making a better hit with the House and the country. Recently the hon. member for Red Deer delivered an address before the Canadian Club in the city of Ottawa—an address worthy of passing attention. I read it over—not, I admit, with as much care as I might have done, because I am very familiar with his arguments—and I must say that he made a very rosy presentation of his case. Unfortunately, however, for him, and unfortunately for any gentleman who holds similar views, the principles expounded by my hon. friend do not seem to pan out when the facts are closely examined. I am very much averse to reading the remarks of others, and I do not often do so; I would rather at any time speak than read. But I have here an address delivered, not by the hon. member for Red Deer but by an English member of Parliament, one of the brightest young men in the British House of Commons, with whom I have the pleasure of a personal acquaintance, Mr. H. Page Croft, and published in no less a paper than the Manchester Weekly Times, of February 21 last. It is a peculiar thing that it should be published in the centre of the free trade school. This speech was delivered in the House of Commons in Great Britain about the time that my hon. friend from Red Deer made his brilliant speech before the Canadian Club. I want some of you to listen, and observe how far the hon. member for Red Deer, who does not know, and Mr. Page Croft, who does know, are from agreeing upon the question of free trade or protection so far as Great Britain is concerned. Mr. Page Croft says:

> The president of the Board of Trade last session gave me figures showing that our exports during the previous year were actually beaten by the United States, and that Ger-

many was very near behind us. It is admitted by the Attorney General that we cannot for all time hope to keep ahead of our two principal protected rivals because their population is so great, and he says the only real test is the test of exports per head of population.

I have taken the trouble to inquire into the actual facts with regard to exports per head of population, and I should like to give the leading countries. Holland, I find, heads the list with £34 10s., Belgium comes next with £18 2s., New Zealand £17 15s., Australia £15 2s., Switzerland £12 16s., and then comes the United Kingdom with £9 9s. I think that proves pretty conclusively that if you are going to take that test, at least it has helped protected countries to a greater extent than it has helped this country.

But what is of far more importance than foreign trade is the internal trade of our country, and I think, from the business point of view, I can put a case before the hon. members opposite which will even satisfy the hon. gentleman (Sir A. Mond) to prove how very much more serious is our position in this connection. I think it will be generally admitted that coal consumption is a very good test of industrial activity, and I find in the last completed year, for which returns are to be found, that Germany consumed thirty-two million more tons of coal than this country, and the United States, three hundred million tons more. If we go on from coal to the production of pig-iron, we find that Germany in 1912 produced twice as much as this country, and the United States nearly three times as much, and if you take the consumption of pig-iron, Germany consumes twice as much, and the United States three times as much.

If you take crude steel, Germany produces two and a half times as much, and the United States five times as much as this country; and if I might be permitted even to mention the word 'cotton,' the United States now consumes two hundred and ten million more bales of raw cotton than are consumed in the great industry of this country under free trade. Therefore, I think it can be accepted that in foreign trade and in internal trade combined, we are defeated by our principal protected rivals.

Then I come to the second point, with regard to the suggestion that tariffs restrict trade. In exports and in imports our protected rivals are increasing their trade more rapidly than we are in this country, and if I might take the most important test, I will take manufactured exports for the last thirty years, and we find that we in this country have not doubled our export of manufactures within something like thirty years, but Germany has multiplied hers by three times, and the United States by seven times, which, I think, proves pretty conclusively that as far as foreign trade exports of manufactured goods are concerned, we are not holding our own, and far from restricting trade our protected rivals have gone ahead very much more rapidly than we have.

If I might take the same test with regard to the increase of internal trade, the facts are still more remarkable. In coal consumed, taking the period commencing with the average for the five years from 1880-85 up to the last completed year 1912, we find that Germany has increased twice as quickly as ourselves, and the United States eight times as much. In pig-iron production, Germany has increased nine times as rapidly as ourselves, and the United States thirteen times as rapidly.

In the consumption of pig-iron, Germany's increase is six times, and the United States twelve times as great as ourselves. In crude steel Germany's increase is three and a half times as great, and the United States six and a half times as great, and in the consumption of raw cotton, the continent has increased three times, and the United States two and a half times as rapidly as this country.

I maintain that these are facts which we cannot get away from, and that if there is any fairness in the test of exports per head of population as the test of a country's prosperity, I ask the Attorney General whether it is not an equally fair test to take production per head of population in a comparison of this kind, if you are going to decide the merits of the respective systems. If that test is taken, I think the Attorney General will discover, if I may use an Americanism, that we have been beaten to a frazzle by our principal protected rivals in these great index trades. I am not satisfied, and I think none of my friends are satisfied, with the present condition of the trade of this country compared with other countries under the circumstances.

Our opponents tell us that we are having a boom in world trade, as if this country, and their own particular efforts, were responsible for this boom. I would remind them that we got the results of that world boom last, after the great protected nations, and, in addition to that, we have not shared in that boom to so great an extent as Germany and the United States of America. But, apart from that, dare any one, in any quarter of the House, say that the conditions of the working classes in this country at present are satisfactory even under the world boom of trade?

What are the actual facts? Last year, at a moderate estimate, half a million were permanently out of employment, a million people in our country were in receipt of relief, in this, the boom-time of trade, and the Labour Exchanges last year, as we were informed to-day, had no fewer than 2,973,000 applications for work.

Perhaps hon. members may suggest that one or two of these applicants went two or three times to the Labour Exchanges, and, though I did not ask the question, the president of the Board of Trade informed me that there were 1,800,000 individual applications at Labour Exchanges during this last year on the crest of the world boom. Simultaneously in the same year our emigration reached the record figure of 302,000, all of whom went to protected countries to improve their condition, and simultaneously we find that there was greater industrial unrest last year and the year before than has ever been known in this country.

If I might summarize the effect of the sunshine that the Chancellor of the Exchequer and his colleagues have brought into the cottage homes of this country, one in every twenty-five of our inhabitants have been forced to emigrate to other countries since 1906, when the Government came into power. Our answer to this is that tariff reformers are deliberately out for higher wages. We are not satisfied with the condition of this country, and we say that all the policies of the party opposite put together cannot do so much as a reasonable scientific

tariff can for the creation of labour in this country.

Our opponents tell us that we cannot provide wages and at the same time provide the revenue under our tariff scheme, but we cannot have it both ways. I say we can have it both ways. We have been told by eminent free traders that under the tariff reform system, with a 10 per cent tariff, something like one-half of the manufactured goods which at present come from abroad would be excluded. The total at present is £160,000,000 of foreign manufactured goods coming into this country, and according to eminent free traders, we shall only exclude £80,000,000.

5 p.m.

That is not my figure. I am taking the worst case that can be made against us. That would mean £8,000,000 of revenue on manufactured goods alone, apart from the duties on luxuries, such as diamonds and pearls, and the other £80,000,000 of goods which are now imported would be manufactured in this country. If these manufactured goods which come from abroad are going to be kept out, obviously they are going to be manufactured at home. Under that system you are still going to have 10 per cent for local and imperial taxation on the production of goods in this country, so that you get £8,000,000 in that way too.

I put it to the House that we would raise £16,000,000 in revenue for the relief of local and imperial taxation, while also keeping out the goods of foreign competitors. That would mean £80,000,000 worth more production in this country than before. I do not think that any free trader will deny that we will get £8,000,000 of revenue on imports. (An hon. member indicated dissent.) I must give the hon. member for East Northamptonshire (Mr. Chiozza Money) credit for greater knowledge on this subject than the hon. member who interrupts me. In the South Wales News for December 12 he is reported to have said that it is no answer to the tariff reform argument to say that we cannot get revenue from protective duties. The hon. member added that we can easily find £13,000,000. I think that will prove that I have been exceptionally modest in accepting the lower estimate of our opponents in saying that a revenue of £8,000,000 is what we would get. You would manufacture £80,000,000 worth more than you do at present, and £40,000,000 would be spent in wages for the workers in this country. We shall have £40,000,000 more circulating among traders, agriculturists, and all the various industries and professions of this country.

My final point is with regard to labour. I am sorry that there are not more members of the labour party present. They do not seem to take a very real interest in this question—at any rate, so great an interest as it would seem to deserve. I would ask the members of the labour party how can wages advance? They can only advance if you create greater demands for labour, and make labour more valuable. I venture to think that if more of the manufactured goods which are consumed in this country were manufactured here, you would immediately create these demands. There would be more jobs to apply for, and the value of labour would go up in this country. The point we have to consider is the wages in this country.

If anybody had taken the trouble to say that the single tax was no longer an issue, I think the hon. member for Hanley would have great cause for complaint. I think people have no right to carry that argument any further in the constituencies. What we do ask for is what Mr. Deakin and Dr. Jameson asked for at the last Imperial Conference. We ask an immediate preference on all existing food taxes to be allowed in their favour. We ask that you should establish the same principle for imperial tea, coffee and sugar as you wisely apply to the beet-sugar industry.

It may be suggested that under the preference you may not be giving a great advantage, but if the advantage be small, it is the great sentiment we want to see established in reciprocating the action of the dominions overseas. Let us show that the spirit is willing, and that we desire to deal with the dominions overseas as they are dealing with us. We are told from time to time that our policy is a sordid one. Is it sordid to try to create greater industrial activity for the people at home?

Is it sordid to encourage 400 millions of subjects to trade together and to develop British trade under our own flag? That is no sordid policy. It is an extraordinary thing that already all the self-governing dominions have established the sordid policy, and that the present Government have taken good care to see that we should be enslaved in the same sordid bonds with the West Indies as to any advantage they may give to the other dominions.

What is the result? The dominions have come to us and made a tremendous sacrifice of revenue, the result is that we have seen an enormous expansion of trade with the dominions in the last two years. We are always told that we may make Germany angry, or that we may upset the Chinaman.

Our best customers are the dominions overseas. Australia has bought more manufactures from us than the people of Germany. Canada has bought more than France. New Zealand has bought more than Belgium. South Africa has bought more than Russia and Switzerland put together. I venture to think that when we realize these facts, and that even in boom times we should have been having great distress for the reason I have indicated, we shall see that it is time to reciprocate their great gifts and try to do something for the dominions overseas.

We should try to create a greater demand for labour at home. We should try to see that all the work is given to our own workers in this country which they can properly undertake. We should try to give to our own kith and kin who are emigrating from this country the advantages which we are giving to foreigners who are competing against us.

We should trade with those who build dreadnoughts for us, and not give a preference to those who build dreadnoughts against us. That is no sordid policy. No one can deny that they are patriotic principles. If they are patriotic, then I say that distortion and abuse should not be cast against our policy. Is it not time that these questions should be considered as greater than party, and that those who really love their country should show their love of it by organizing trade in the way other countries have done.

I have read enough to show that, while the hon. member for Red Deer holds up to

[Mr. Cockshutt.]

the Dominion of Canada this great free trade country as an ideal to follow, a gentleman who is better posted than the hon. member for Red Deer delivers a speech in the British House in which he says: they are going to have tariff reform. And I venture to say to the hon. member for Red Deer that there is a great deal more chance of protection being introduced into Great Britain than there is of free trade being introduced into the Dominion of Canada. Let him look at the wage list over in England. Even on the railways, the highest paid class in the whole of Great Britain to-day, with their engineers and other highly skilled men, the average wage barely reaches $7 a week on an employment of half a million men. In Canada the average wage upon the railways is $10.50 to $10.75 a week, a difference of nearly fifty per cent in favour of Canada. Take the conditions all along the line. My hon. friend talks glibly about the high cost of living and the reduction of cost to the consumers. Who are the consumers? We are all consumers in this country.

Sir WILFRID LAURIER: Hear, hear.

Mr. COCKSHUTT: And if hon. gentlemen opposite would consume a little more sense and give it to the people it would be a good thing.

Sir WILFRID LAURIER: Give us the food and we will consume it.

Mr. CARROLL: Has the hon. gentleman gone into the matter of the relative cost of living in Canada and Great Britain?

Mr. COCKSHUTT: I can tell my hon. friend that a British commission was sent out to this side to study conditions, particularly in the United States—and conditions are better in Canada to-day than they are in the United States. This commission reported that there was a very large margin in favour of the American working-man as compared with the British working-man, not only as regards wages, but with regard to the cost of living. Does my hon. friend know that meat rarely appears on the table of the British workingmen? On the continent it is almost an unknown article. Horseflesh occasionally gets on the tables, but never a good piece of beef. My hon. friend must know that we in Canada to-day are living in clover as compared with other countries, and that our working-men are paid as well, if not better, than any other working-men in the world, and they would be contented if such agitators as appear occasionally on the other side of the House would only leave them alone.

My hon. friend from Assiniboia (Mr. Turriff) was so anxious to prove his case that he quoted an article on one side and then killed it on the other side before he got through. Let me point out what he said—and I will deal with this a little more fully later on. He says the Cockshutt Plow Company pays the duty when they ship ploughs into the United States, and that they sell their goods cheaper there than they do in Canada. Who pays the duty on ploughs coming into Canada? My hon. friend blows hot and cold. When the manufacturer ships goods from this country he pays the duty, but when the American manufacturer ships implements here the Canadian farmer pays the duty.

Mr. TURRIFF: If my hon. friend understood me to say that—

Mr. COCKSHUTT: You certainly did.

Mr. TURRIFF: If I said that, I did not express what I had in mind. What I meant to say was that the Cockshutt Plow Company could sell their goods so cheaply in the United States that the consumer in the United States purchased them even although he had to pay a duty of 15 per cent on the implements and 45 per cent on repairs. I did not intend to say that the Cockshutt Plow Company paid the duty.

Mr. COCKSHUTT: Did the American farmers pay the duty?

Mr. TURRIFF: Yes. That is what I intended to say.

Mr. COCKSHUTT: My hon. friend knows to what place good intentions pave the way. If my hon. friend had only carried out his intentions he would have omitted a lot of stuff that he has put on 'Hansard,' which will rise in judgment and condemn him in this generation. That is only one illustration, and I could quote several more. He did the very same thing in regard to wheat. It is not a mistake on his part; he goes into it with his eyes open. He says the western farmer pays the duty on the wheat that he sends to the United States, and then he turns round and tells us that it is the consumer in this country who pays the duty. My hon. friend had better decide where he is at before he speaks on these questions. He cannot make the consumer on the one hand and the exporter on the other pay the duty just as it suits his case.

Mr. TURRIFF: The farmer understands it.

Mr. COCKSHUTT: The farmers will never be caught with such claptrap as that. The trouble with my hon. friend—he has quite a number of troubles—is that he cannot see beyond Weyburn. They have a bank there, he told us a good many times last year. No doubt it is a very respectable place, but if my hon. friend is ever going to be a statesman—of which I have my doubts—he should take a little wider view than the immediate surroundings of Weyburn. He has given us a policy very much in line with that of my hon. friend from Moosejaw (Mr. Knowles), who I regret is not in the House, because I wanted to pay him a similar compliment. The hon. member for Moosejaw led our friends opposite into one of the worst holes they have ever been in, and which they would be glad to be extricated from to-day. My hon. friend from South Wellington (Mr. Guthrie)—I do not see him now; soon after I got up he retired to a back seat, and now he has disappeared altogether—

Mr. CARROLL: We are all afraid of you.

Mr. COCKSHUTT: I would not say that; as he is a very brave man. But I may tell my hon. friend this: The member for St. Antoine (Mr. Ames) at Brantford the other evening gave a lecture on the navy, which I may say was quite a brilliant affair. And in order that the crowd might not all go to hear the hon. member for St. Antoine, the hon. member for South Wellington (Mr. Guthrie) was billed to address a Liberal meeting the same night. It so happened that between the time the Liberal meeting was advertised and the time of meeting hon. gentlemen opposite brought out their 7-by-9 policy with regard to agricultural implements, upon which the hon. member for South Wellington made a speech. Knowing that he dare not appear after that speech in the city of Brantford, even to address a Liberal meeting, the hon. member for South Wellington did not turn up, and he dare not go there to-day. One of the leading Liberals in the city of Brantford told me that if the hon. member had come to Brantford that night things would have been pretty hot for him. I guess the hon. member for South Wellington knew what was coming to him, and thought that discretion was the better part of valour.

Hon. gentlemen opposite certainly have put themselves in a position from which they cannot very easily extricate themselves. It is very easy to attack a protective tariff, but it is not so easy to design a substitute for it, and hon. gentlemen opposite have entirely failed to propose anything which would take its place. The hon. member for Assiniboia (Mr. Turriff) cannot see beyond Weyburn, and in his speech of an hour and a half or two hours' duration, he did not give one single moment of consideration to the position of the farmers of Ontario, or the farmers of Quebec, or the farmers of the Maritime provinces, though they are greater in numbers than are the farmers of the West. Let me tell my hon. friend that the farmers of eastern Canada do some farming and grow some wheat, and I assure him that if he goes among the wheat-growing farmers of Ontario and preaches such heterodoxy as he has preached in this House, he will get the same kind of reception as the hon. member for South Wellington would get in Brantford. Let me tell the hon. member a thing or two: the farmers of Ontario grow yearly twenty million bushels of wheat, and they were in the business long before the hon. member for Assiniboia was. They have been growing wheat in Ontario for a hundred years, and they think they know how to grow wheat, and I venture to say the Ontario farmers will not subscribe to the request of the hon. member to have free wheat. The Ontario farmers know they have a mighty good market for their wheat at home, and they want to keep that home market. They know that they will have their bran and their shorts and the other by-products of the flour mills to feed all the stock they can raise, instead of sending it over to the United States. In these times when meat is getting dearer and dearer, the secret of a reduction in the high cost of living is to bring up all the young stock the farmers can, and instead of killing calves and young animals when only a few weeks old, raising them to be heavy animals. If the policy of the hon. member were carried out, our wheat and its by-products would go to the other side of the line, and the farmers of Canada would have no feed left for their live stock. But the United States is overburdened with wheat now; they produced millions and millions of bushels for export last year. They do not want our wheat; they have got far more than they want for themselves. The hon. gentleman has not a word to say for the 175,000 or 200,000 farmers of Ontario, many of whom are growing wheat

every year, on an average throughout the province of from twenty to twenty-five bushels to the acre. That wheat is all used at home, being mixed with the hard wheat of the prairie provinces, and the result is that there are 350 millers in the province of Ontario, 270 of whom are upon the shipping or export list. The hon. member (Mr. Turriff) with one fell swoop would wipe all these out of business, and he would deprive the Ontario farmers of the opportunity to get their wheat ground at these mills and to bring the bran and the shorts back to feed the animals on the farm. The hon. member should remember that the farmers of Ontario, Quebec and the Maritime provinces are doing some farming, and indeed I venture to say that the farming organization of which he boasts so much does not represent twenty per cent. of the farmers of Canada. I do not believe the hon. gentleman himself believes they do; if he does, he has not conveyed that impression by his remarks. I say that the farmers of Ontario, Quebec, and the Maritime provinces are well satisfied, and that there are no people in Canada to-day better off than the farmers of Canada, taken as a whole. In the county of Brant, from which I am proud to come, I never knew our farmers to be in a better position than they are at the present moment. I can assure the hon. member that they are well content with all the conditions that now prevail. When the hon. member comes here and talks about the grievances of the farmer, I can tell him that the farmer has not nearly as many grievances as he would lead us to suppose. I have sympathy with the farmers; I have a large number of them in my own riding; I frequently address them, and I do not have to talk any differently to the farmer than to any other Canadian. The farmer knows the value of the home market; he knows that his eggs are fetching three times the price they used to; he knows that his butter, his potatoes, his vegetables, everything he grows are bringing good prices in the markets of Brantford and the surrounding cities where manufacturing is carried on. The farmer knows he never got better prices for his products than he does to-day, and he is very well content.

My hon. friend (Mr. Turriff) had a good deal to say about the high cost of living; but I do not think he is very sincere when he wants to send the wheat out of the country that the people of Canada have to live on. I should judge from his remarks that he thinks the export of wheat to the United States would raise the price in Canada, or else the hon. gentleman would not want it. If he has the sympathy he says he has for the consumers of Canada, why does he not let the wheat remain at home to feed our own people, a little cheaper. The working-men of Canada have a big problem before them to-day, and I sympathize with the working-men, and I would be only too glad if we could raise their wages still higher. But I tell hon. gentlemen opposite that if they pursue the course in which they have set out, and pull down our industries instead of building them up, it will not be long before they have reason to regret their conduct. To say, that because a manufacturing concern is fairly progressive and is producing goods creditable in price and quality, the protection afforded it should be removed, is simply absurd. Surely hon. gentlemen opposite cannot advocate such a policy, and yet that is what their words mean. I entirely dissent from the view, that when an industry gets to a position in which it can export to foreign countries, that is a sure sign that it has got protection which it does not need. If that doctrine were sound, then almost every item of food products and manufactures would be put upon the free list, because there are comparatively few of our agricultural products and of our manufactured articles in which there is not a little export. It is a strange doctrine that because a business has built up an export trade to a foreign country, it should have the duties upon its products cut down.

My hon. friend (Mr. Turriff) returned three times to the attack upon implements; he got wound up; and he ran down, and he took a little rest, and he came back again three times to attack agricultural implements. As one who knows a little about implements, let me tell him that there are no manufacturers in the Dominion who have shown greater enterprise, and who have got their manufacturing up to so high a standard, as have the agricultural implement manufacturers. I am not saying this because I have an interest in the business; I am, as is well known, of the same name as a firm which is interested in the manufacture of implements, but I have no connection with that firm further than that I am an humble shareholder. I have some knowledge of what is done in the implement trade, more knowledge I think than the hon. member for Assiniboia has, and I challenge his figures right here and now as to the cost of implements. He

indulged in the old game of quoting the wholesale price on one side, and the highest retail price on the other; and the cash price of one side and the credit price on the other, and so he got all astray in his figures. I understood him to say—he can correct me if I am wrong—that in some cases fifty per cent or sixty per cent was demanded in the Dominion of Canada over the prices which prevailed in the United States. Did the hon. member say that?

Mr. TURRIFF: And some of the grass seed attachments.

Mr. COCKSHUTT: I have never known any political economists to contend that the price of an article could be raised above the amount of tariff exacted, that is, the whole duty, which is twenty per cent on some articles and fifteen per cent or seventeen and one-half per cent on others. Prices could not posssibly be more than the duty in advance of the prices in the United States, because the manufacturers there would immediately send their implements over the border. I have here an immense list of articles that have been imported into Canada. This list, which is from the Department of Customs, is entirely authentic. The imports of agricultural implements under the existing duties, which are, as I say, from seventeen and one-half per cent to twenty per cent, are as follows: in 1911, $4,510,000; in 1912, $4,221,000; in 1913, $4,440,000; for nine months in 1913, $2,658,000. If you take the whole line of articles which I understood were included in the argument of the hon. member for Moosejaw (Mr. Knowles) in his resolution the other day, and which embrace engines and threshing machines and all the larger items, then we have the following, which is very much more: in 1911, $4,887,000; in 1912, $8,237,000; in 1913, $10,104,000, under the tariff of from fifteen per cent to twenty per cent. If $10,000,000 worth could come in in 1913, under the tariff of from fifteen to twenty per cent what would be the result if they were put on the free list, and all that vast amount of agricultural implements brought into Canada free of duty? It would mean that all the capital invested in that business in Canada would be wiped out; that over fifty manufacturing concerns employing from $45,000,000 to $50,000,000 of capital, 10,000 hands and supporting 45,000 to 50,000 dependents, would be wiped out at the behest of my hon. friend. He says he is a strong friend of the manufacturers. Well, if he will trust the manufacturers to look after themselves and not take them under his wing, we will feel a little more comfortable.

Mr. CARROLL: Has the hon. member figures to contradict those supplied by the hon. member for Assiniboia as to the prices in Winnipeg and Minneapolis?

Mr. COCKSHUTT: I am only making the bald statement that, on the face of it, his information is false, for the reason that the prices could not be advanced by more than the amount of the duty. No tariff could advance the prices of goods beyond the amount of the duty that is exacted. When my hon. friend quotes a sixty per cent advance, he must know that he is not speaking by the book. I think my hon. friend must realize that, and I do not think he will get any farmer to believe that the price of implements is fifty to sixty per cent higher in Canada than in the United States.

Mr. TURRIFF: I was quoting the figures given by the Grain Growers' Guide. The Grain Growers' Guide will prove to my hon. friend that they are right and he is wrong.

Mr. COCKSHUTT: If my hon. friend's contention is true, supposing he knocked off 20 per cent from his 50 to 60 per cent, he would still be getting 30 to 40 per cent more in Canada than in the United States. In other words, if you remove the amount of duty, you have a vast difference of 30 to 40 per cent, according to my hon. friend. Anybody can see at a glance that those figures cannot be correct, and that wholesale prices must have been taken as against retail.

My hon. friend has made an accusation against the firm carrying my own name. Although I dislike to refer to a matter that is so personal, I feel that I cannot allow his statement to go unchallenged. According to 'Hansard' of last night, he makes the following statement, referring to myself:

The hon. gentleman could sell a Cockshutt plough in the United States, years ago, and pay a 15 per cent duty—

You notice that he says we pay the duty.

—and 45 per cent duty on the repairs, and undersell, or compete to the extent of selling trainloads in the United States.

That sounds very fine. I wonder if my hon. friend thinks that is correct. The United States duties on agricultural implements during the last few months have been entirely removed. I have yet to learn of one plough having gone across the line, either our own or any other make. Just the other day I asked a leading implement

dealer, who knows more about such matters than I do, and he stated that, even with the removal of the duty, he does not think that an agricultural implement has gone from Canada into the United States. My hon. friend has rather tantalized me to give him a little bit of history with regard to a shipment of ploughs once to the United States. Let me tell him how his friends the Americans will treat him if he ever gets into their hands, because we know with regret that when we deal with Uncle Sam we have to go in with a coat of mail and with shining armour if we are to come out again with a whole skin. What happened to the train-load of Cockshutt ploughs to which my hon. friend referred? They were seized at the border, condemned for under-valuation, dragged through the courts and fined thousands of dollars, although those ploughs were entered at a higher price in the United States than American concerns were entering their ploughs at in the city of Winnipeg. My hon. friends want to place the farmers in the same position. What has happened with regard to potatoes? We send the potatoes across the border. As soon as we begin to get a market the Americans say that our potatoes are diseased, not fit to mix with American potatoes of high standard. They are condemned because they are diseased. Ship your cattle over the border and, as soon as you begin to get a market established, quarantine and the tuberculosis test will do the trick. My hon. friend would not be sending his wheat into the United States for more than a month or two before the Americans would find smut in it, or that it was not properly classified, and I will defy my hon. friend to go into the United States and get a clean deal on his wheat. The whole history of trade with the United States from start to finish is that, when it comes to carrying out their side of a commercial bargain, they do not do it aright. They have not learned the principle of British fair play and honesty. I am sorry to have to say that, but I can speak feelingly. If my hon. friend tries it with his wheat, he will fare the same as others have done with potatoes and agricultural implements and fish in cans. The fish go in free, but they catch you on the cans.

When my hon. friend the Minister of Finance said that he did not believe in interlocking legislation, he struck a true chord that will find a responsive ring throughout the Dominion of Canada from every business man. These hon. gentlemen would hand us over, body and soul, to the United States; they would interlock our tariff with that of the United States; they would let Washington dictate the interpretation of the tariff, and we would be hunted in the United States and dragged from court to court for interpretations on this, that and the other thing. My hon. friend knows that that has been the history of trading with the American people from away back. Even when it comes to carrying out financial obligations, we find that they are very slow to do so. We hope to have a fair settlement in regard to the Panama canal tolls, but it is taking a great deal of backbone on the part of Mr. Woodrow Wilson, the President of the United States; and if he succeeds in that, he will put a plume into the American flag that has not been there for some years.

Mr. TURRIFF: How does it happen, if the Americans treat the Canadians so badly in all commercial deals, that Canada does about sixty per cent of her whole trade with those same Americans?

Mr. COCKSHUTT: I can tell my hon. friend that very easily. They are always very ready to sell to you, but they are never ready to buy from you. If my hon. friend knows anything about the returns, he knows that for every dollar we sell to the United States they sell from three to four dollars to us. It is an easy thing to buy; and my hon. friend and some of his friends opposite have the idea that the more you buy the better off you are; the more you buy abroad, the better the country is. I have heard several hon. gentlemen opposite preach that doctrine; they do not take any stock in the balance of trade. A man that buys more than he sells will soon go into bankruptcy; but my hon. friend would let us go on buying four or five times as much from the United States as we sell to them, and say: What a trade we have with the United States! My hon. friend knows that his best market is in Great Britain. The people of Great Britain can yet take his wheat; they are the only people in the world who are taking more from us than they are sending to us.

Mr. LEMIEUX: What about our cattle?

Mr. COCKSHUTT: I do not think we have many cattle to send over there at this time. Our meat would probably bring a

very good price in Great Britain, but judging from the prices now prevailing in the home market, I think every one will agree that we should keep most of our cattle at home to feed our own people. The home market which our hon. friends opposite so often pooh-pooh is really the only good market in which to make money. If my hon. friends would remember that about 80 per cent, of the farm products of Canada are bought at high prices by the citizens of Canada and consumed in the home market, they would realize that the home market is well worth preserving. To those who think that the United States is such a fine market for implements, I may say that they can have that 90,000,000 market for ten cents, so far as I am concerned.

An hon. MEMBER: What about cheese?

Mr. COCKSHUTT: If I remember correctly, from 80 to 90 per cent of our cheese product goes to Great Britain—and they know good cheese when they see it. Canada is producing good cheese, and the result is that it goes over the water. If my hon. friend will think over this matter before he comes down next year I think he will come to the conclusion that the policy which he enunciated to-day is not the right one. The right hon. the leader of the Opposition has said: 'the policy that I give you at this moment is free implements and free food'—and you can change it the next moment if you do not like it. I would advise my hon. friend to change it the next moment, because he can get a better policy. A policy for the moment is no good, no matter what it embraces. We want a policy that will remain for years; we want a policy in which capital will have faith—a policy in which capital will embark itself. If hon. gentlemen opposite are going to put down an industry as soon as it commences to grow, then they are going to ruin all confidence in Canada and in Canadian enterprise. The attitude taken by the hon. member for Assiniboia, the hon. member for Humboldt, and the hon. member for Moosejaw, is like the Irishman who was asked to help a policeman disperse a gang of lawbreakers. The Irishman said: What shall I do? The policeman gave him a shillalah and these instructions: Wherever you see a head, whack it. That is what my hon. friend proposes to do; whenever he sees an industry thrusting its head above water, he says: Whack it; down with it. The hon. member for Moosejaw said that if an industry were hanging on by the skin of its teeth—whatever that meant—he would not mind letting it stay. Is that not a fine policy? My hon. friends let a few industries hang on by the skin of their teeth, but whenever they changed the National Policy, they did the wrong thing. Let me refer them to binder twine. They put it on the free list and killed almost every factory in Canada. I have a small extract here from a western paper, which the hon. member for Assiniboia would probably like to hear. It is entitled: 'Fighting the Trust in Binder Twine.' This refers not to the dark ages, when there was protection on binder twine, but to the present time, when binder twine is on the free list. This paper, which, as luck would have it, is from the constituency of the hon. member for Red Deer, says that the article is copied from the Grain Growers' Guide. I think the hon. member for Assiniboia will recognize the authority of that publication. The article says:

> Dissatisfied with the high price of twine the Grain Growers' Association for a year past has been investigating the cause, and as a result has come to the conclusion that the American binder twine manufacturers have created a corner in the raw materials, and established a monopoly.

Under free trade, established a monopoly—and the Grain Growers' Guide is the authority. That is certainly refreshing. The article goes on:

> This, says The Guide, is a serious situation for the western farmer, who has to have the twine at any cost, as there is nothing to take its place.
>
> 'The secretary of the Grain Growers' Association,' so we are told, 'has had the problem under consideration for a long time, and last fall he took the matter up with some British capitalists and manufacturers with the object in view of starting a British binder twine industry in competition with the American trust. It was then that the investigation of the real conditions started, but the project had to be dropped, because it was demonstrated to the satisfaction of the investigators that the United States binder twine trust had such an absolute monopoly on the necessary raw material that effective competition was out of the question.'
>
> The Guide adds: 'There is reason to hope, however, that the western farmer soon will be independent of the American binder twine trust. The investigation by the Grain Growers' Association and the British manufacturers resulted in an attempt now being made to introduce machinery using flax straw instead of the present material. If this experiment is successful it will mean the establishment of a new industry in the western Canadian provinces, a big saving for the farmer, and, besides, let him out of the twine trust's clutches.' So far so good! But while struggling to free the farmer from one American combine, the Guide advocates a fiscal policy which would enable

two or three score United States trusts to drive competing Canadian industries out of business and then advance the prices of many necessaries of life at their own will all over the Dominion.

Hon. gentlemen opposite put binder twine on the free list, and killed fifteen factories which mostly employed farmers' capital. There is about one factory left; the price of twine has been higher since those factories were killed than ever before, and, according to the Grain Growers' Guide, a monopoly exists. My panacea would be to put on the duty again, and let the Ontario and other factories as far west as Brandon get back into business. Hon. gentlemen opposite killed binder twine; in the same way they killed barbed wire, and in the same way they propose now to take the industries piecemeal and kill them one by one. Wherever a head shows up, hit it; if a head is thrust above water, down with it. That is the policy of my hon. friends opposite. If a thing is doing any good, kill it; if it is going to die, let it. In 1878 there were thirty different makes of mowers and reapers made in the province of Ontario; to-day there are three. They have been brought down from thirty to three by the fierce competition at home, which has more than cut the price in two in that time. Yet my hon. friend is not satisfied. I understand that the hon. member for Humboldt (Mr. Neely) is a medical man; if his pills are as valuable and efficient as the implements of Canada, he is a good deal better physician than I took him for. It is easy to denounce a business that has had a success; it is easy to attack, but it is hard to build up. I would advise my hon. friend to bring down a policy of construction rather than of reduction or degradation, as he said, referring to a railway. Let him begin to build up and to mould a policy that is for the whole of Canada. Has he ever heard any of us in the East taking any exception whatever to the building of railways, to the construction of canals, elevators or similar works? No matter whether we thought the country was going too fast or not, the East has stood nobly by the West all the way through, and we intend to do so in the future; but we ask the West to remember us, that we are mortals, too, that we have our ups and downs. This is no time to begin to pull down; it is a time to plant and to build, not to pull down and destroy that which, by great thrift, the investment of capital and the employment of great brains and skill has brought Canada to the proud position of being able in some items to cope with the world. But we cannot do that unless we stand together. We want a united policy for a united people; we want to hold together, the East and the West, the West and the East; one policy for all and the greatest good for the whole Dominion of Canada. If we will stand for that we may yet weather what I consider a condition of financial stress at the present time. I have not gone into the financial aspect of the Budget as I had hoped to, but I see that my time has almost passed. It is a time for caution. It is largely the legacy that hon. gentlemen opposite left that is responsible for the need of caution. It is like receiving a bequest on which the death duty is larger than the amount of the bequest. I refer to the railway legacy which our hon. friends opposite left. It was a tremendous legacy, enough to crush any smaller man than the present Minister of Finance. The Finance Minister seems to be able to bear almost any kind of burden on his shoulders, but a smaller man would have gone down under the crushing weight our friends have left. For what? In order that we may bring down the products of the West to the East and the seaboard over our own railways.

Only the other day the right hon. leader of the Opposition became eloquent in rehearsing a speech which he made in 1903 in which he said: May Heaven grant that we are not too late in building this great transcontinental railway up by Hudson bay so that our American cousins cannot get at it, far remote from the boundary, to carry our products over our own territory, every inch, to the eastern seaboard. And yet it was but a short time ago that hon. gentlemen opposite proposed a policy that would have been death to the railway interests of the Dominion of Canada, absolute death. Policy for the moment, you say? Policy for the moment is not good enough; we want a policy that is going to live, a policy that is going to stay and a policy that is going to get the confidence of people so that they will invest their money in our enterprises. You cannot build railways for to day and, before they are quite finished, say: It is good policy to divert all this traffic to the south. What are these railways for? For what have these hundreds of millions of dollars we have squandered on these railways been spent if not to carry

the products of the western farmer down over our own routes to our own ports, St. John, Halifax, Quebec and Montreal? That is the policy we presumed hon. gentlemen were going to support; but in a moment of weakness they have gone away to other things and would divert this traffic and send it south of the line and leave these railways to trundle along with empty cars. How in the name of all that is practical could you hope that freight rates would be reduced on roads that cost an enormous amount and from which most of the traffic was afterwards to be diverted to foreign countries? The whole thing is too silly, it is not worthy of the serious attention of commercial men or men who want to build up the Dominion of Canada. I ask my hon. friends to think over a policy, now that Easter is coming. Easter is at hand, they will have time to spar for wind. Let me advise them to devise a policy. Do not get one that is just for the moment, but get one that you are going to stay by, not for this session only but for next session. Go to the people and if you can devise a policy that is better than ours we may adopt it; but let it be a policy for more than a moment, because a moment is not long enough to test a policy. My hon. friends opposite have had a good many trade policies in their time that have not lasted very long, and I suppose that, unless Heaven gives them more wisdom than they have had in the past, we are going to have a repetition of that course. But I do beseech of them as patriotic citizens—and we know they are that—to devise a policy in the Easter holidays and then to come down and tell the Finance Minister what they are going to do. If they will tell him that they have got something better than he has he, as a man of shrewdness and brains, will probably adopt it next time; but I doubt if they will be able to find any flaw in the programme laid down or show how it can be improved upon. I think the junior member for Halifax was well advised in not moving or putting on 'Hansard' those two or three resolutions which he was supposed to have up his sleeve yesterday, but which never came down. I do not think they had been sufficiently thought over, and I hope that the Easter holidays, with the attendant religious services which it is to be hoped my hon. friends will attend, will put them in a better frame of mind to bring down a policy that will command the respect of the people of Canada.

There are several other questions which I wished to discuss, but the time of adjournment has almost arrived. There is, however, one subject to which I must briefly refer. I regret the attitude of our own side in regard to a great question that it now seems probable will not be dealt with this session, that is the matter that engaged so much of our attention last year, a contribution for the British navy and the upkeep of the empire's defence. I regret that the Finance Minister and his colleagues have not been able to bring down in the Estimates at least one-third of the amount we had proposed last year to contribute. Hon. gentlemen opposite, I think, will admit that we should have acted last year, that it was an unfortunate thing that their Senate majority should have turned down a policy which commended itself, I believe, to the large majority of the people of Canada, a policy that the people of Canada favoured and would have been only too glad to have seen immediately put in force by both parties. I would like to see my right hon. friend the leader of the Opposition join us for once in a great empire contribution. That would be very much valued by Great Britain and all the other overseas dominions and it is something which is long past due. We could have afforded to send the money over last session when the Bill came up and that would have let Great Britain know that we were willing to take up at least a little of the white man's burden in that part of the empire. Unfortunately the Bill was killed in the Senate. Our good friend the Hon. G. W. Ross, lately passed away—a great man from the province of Ontario who, during his time did many very valuable deeds and great acts, and was considered to be an imperialist of the imperialists in many respects—unfortunately in this particular case got side-tracked by some influence that has not yet been fully explained. Whether it was the influence of the leader of the Opposition or others of his party I do not know, but I consider that the Senate of the Dominion of Canada in their own interests and in the interests of this country never made a greater mistake than they did under the leadership of the Hon. G. W. Ross when they turned down last session the proposal to give $35,000,000 towards the British navy. We all know what we owe the mother country and whether we are going to be independent—as my right hon. friend opposite hopes—or a self-respecting part of the overseas dominions, I believe the people of Canada from one end of the country to the other, feel that we should do at least a

little towards bearing the great burden of our overseas mother. I regret that we have not been able to grapple with that question this session. With the overflowing treasuries of the past few years, we could easily have sent that amount where it will be sent in the near future. As a humble Canadian who occasionally goes to the mother country, I feel almost ashamed to step on the wharf at Liverpool while we are doing all the talking and none of the acting—while we are making promises of loyalty, promises of support, and giving everything in the way of encouragement by word, but in deeds not a cent. I say I regret that, but I cannot see that the Government are responsible for this condition. They probably felt that the Senate would again throw out the measure, and therefore it was not proposed. I hope that in the near future—I say this in all sincerity—the people of Canada will unite in contributing either men, money, or ships, or in some other way help the mother country who has for years been staggering, and is still staggering, under an almost more than human load of taxation. We as men are well off. We have a good many of this world's goods and could well afford to pay our share in relieving Britain of this weary load and I hope that we shall not long continue to occupy our present position. For my part I could wish that $15,000,000 or $20,000,000 of our surplus this year had been put in the Estimates in order that we might catch up a little on the payments long overdue. I know, Mr. Speaker, you wish to call it six o'clock and as I have about concluded my remarks I will not weary the House any further.

On motion of Mr. Carroll, the debate was adjourned.

On motion of Mr. Rogers, the House adjourned to Wednesday the 15th of April, at three o'clock.

Wednesday, April 15, 1914.

The House met at Three o'clock, the Speaker in the Chair.

REPORT.

Report of the Department of Trade and Commerce for the year ended March 31, 1913; Parts I and II.—Hon. Geo. E. Foster.

QUESTIONS.

(Questions answered orally are indicated by an asterisk.)

RANCHING AND GRAZING COMMISSION.

Mr. KNOWLES:

1. When did the Ranching and Grazing Investigation Commission meet in Moosejaw?
2. What witnesses were heard?
3. Where in Moosejaw did the commission hold its session or sessions?
4. What rent was paid for use of the premises where the commission met in Moosejaw, and to whom was such payment made?

Mr. ROCHE:

1. November 25, 1912.
2. O. B. Fysh, Major Simpson, J. A. Kennedy, Donald Morrison, John McFady, H. Howe, F. A. Benton, F. Foley, W. Howes, H. Fitzhugh, J. Clothier, Alex. McGregor, P. Doyle, R. Martin, W. K. Cross, W. Hagle and many others.
3. Swaighers Hall.
4. No charge.

PRINCE EDWARD ISLAND BANKS.

Mr. J. J. HUGHES:

1. Did any of the banks doing business in Prince Edward Island at the time of Confederation, subsequently fail? If so, what did the shareholders, depositors and note holders lose?
2. Under what arrangement or regulations did the banks of the province of Prince Edward Island continue to do business after Confederation, when the paid up capital of each of them was much below the amount the law required?

Mr. W. T. WHITE:

1. At the time of Confederation there were five banks doing business in Prince Edward Island. Two of these—the Farmers Bank of Rustico and the Bank of Prince Edward Island—failed. The legislation of the Dominion in regard to banking did not apply to these banks either before or after their failure.

In regard to the Farmers Bank of Rustico, there is no information available as to losses sustained by shareholders, depositors or note holders.

The depositors and note holders of the Bank of Prince Edward Island, which suspended payment in 1881, received 59½ per cent each. The shareholders received nothing.

2. After Prince Edward Island was admitted to the Union, the banks then carrying on business there continued to be subject to the provisions of the banking legislation in force in the island prior to the union. (See sections 146 and 129, British North America Act, 1867, and the third last paragraph of the schedule to the Imperial Order in Council of date June 26, 1873, admitting Prince Edward Island to the Union.)

When in 1890 (Chapter 31) the provisions of the Bank Act were made applicable to

certain Prince Edward Island banks incorporated before 1873, these banks were then (1890) going concerns, and the provisions of said Chapter 31, with regard to the amount of paid-up capital necessary for the organization of a bank, only applied to banks which were afterwards incorporated.

OTTAWA LEASED BUILDING.

Mr. BUCHANAN:

1. Has the Government leased any part of the Blackburn building, Ottawa?
2. If so, for what term and at what price?

Mr. ROGERS:

1. Yes.
2. Metcalfe street building, 6 floors, for 5 years from 6th January, 1912, at $13,000 a year. Sparks street building, part of 2nd, 3rd, 4th, 5th, 6th, 7th, 8th and 9th floors for 5 years from 16th July, at $28,986 a year.

INTERCOLONIAL RAILWAY STATIONS.

Mr. MARCIL:

Are any improvements contemplated this season at the Intercolonial railway stations at Millstream and Assametquaghan, and what are they?

Mr. J. D. REID: Yes. Improvements in the agent's dwelling at Millstream, and in the station premises at Assametquaghan, by way of sheathing, painting and ordinary repairs, are intended to be made this season.

INTERCOLONIAL RAILWAY—WATER SERVICE.

Mr. MARCIL.

1. Has a water system been installed in the Intercolonial railway at St. Alexis?
2. If not, how is the water for the agent and the public secured there?
3. Is it intended to improve upon the service, and when?

Mr. J. D. REID:

1. Water system has not been installed by the railway.
2. The agent secures water for his own use and provides water for the public for which he receives payment by the railway.
3. The railway has no demand for improved service.

Mr. MARCIL:

1. Is a new water service being installed at the Intercolonial railway station at Matapedia, and on what system?
2. What is to be the cost of the work, and when is it to be completed?
3. Has there been any delay in the work, and what was the cause?
4. Has any provision been made for a supply of water in case of fire in the Intercolonial railway promises or the surrounding village? If not, why not?
5. Is the work being done by contract, and who is the contractor?

Mr. J. D. REID:

1. Yes, gravity supply.
2. Estimated cost, $16,200. It is expected to be completed by April 15, 1914.
3. Work has been somewhat delayed by the excessive cold weather this winter.
4. Yes, hydrant to be placed at rear of station.
5. Yes. K. A. Morrison, of Ottawa, Ont., contractor.

BONAVENTURE INDIAN RESERVES.

Mr. MARCIL:

1. Has an application been made for the removal of the Indian reserves of Restigouche and Maria in Bonaventure county, and by whom?
2. What answer was given to such requests, if any were received?
3. Is any action contemplated in this connection?

Mr. ROCHE:

1. No.

2 and 3. Answered by No. 1.

NORTHWEST MOUNTED POLICE CLOTHING CONTRACT.

Mr. SINCLAIR:

Referring to the payment of $3,937.50, as found on page R-5, Vol. 11, Auditor General's Report, made to Ames, Holden, McCready, Montreal, for boots for Northwest Mounted Police, what are the names of the newspapers in which the advertisement calling for tenders for this purchase appeared, and the dates of insertion of such advertisements, if any?

Mr. PERLEY: The advertisement calling for tenders for clothing for the Royal Northwest Mounted Police, as referred to above, appeared in the following newspapers:

Place and newspaper:
Toronto, the Globe.
" Monetary Times.
" Truth.
" Toronto Daily Star.
" Canadian Congregationalist.
" Weekly Sun.
London, London Advertiser.
Hamilton, Hamilton Times.
Kingston, the British Whig.
" Canadian Freeman.
Brockville, Brockville Recorder.
Ottawa, the Free Press.
" Le Temps.
" the Danebrog.
Guelph, the Mercury.
Berlin, the Telegraph.
Arnprior, the Watchman.
Peterborough, the Times.
Brantford, the Expositor.
Galt, the Reformer.
Prescott, the Journal.
Stratford, the Stratford Beacon.

Chatham, Le Canadien.
Montreal, the Herald.
" La Patrie.
" the Witness.
" the Canadian Journal of Commerce.
" the Shareholder.
Quebec, Le Soleil.
" the Daily Telegraph.
" Le Semaine Commerciale.
Hull, the Hull City Advance and Gatineau Beacon.
" La Spectateur.
Halifax, the Morning Chronicle.
" the Evening Echo.
" the Acadian Recorder.
North Sydney, North Sydney Herald.
St. John, N.B., the Telegram.
Charlottetown, the Patriot.
" Prince Edward Islander.
Brandon, the Brandon Sun.
Portage la Prairie, the Manitoba Liberal.
Winnipeg, the Manitoba Free Press.
Regina, the Leader.
Calgary, the Albertan.
Medicine Hat, the News.
Edmonton, the Bulletin.
" the Alberta Herald.

Tenders for clothing called for by the advertisement were for a period of three years from April, 1910, to April, 1913, and the advertisement was inserted twice in the foregoing newspapers during the month of April, 1910.

EGANVILLE POST OFFICE BUILDING.

Mr. GRAHAM:

1. What is the name of the inspector or clerk of works on the new post office building at Eganville?
2. When was he appointed?
3. What is his salary?
4. How much has he been paid up to date?

Mr. ROGERS:

1. R. G. Reinke.
2. June 25, 1913.

4. $744.75.

BEDFORD PUBLIC BUILDING.

Mr. KAY:

1. Did the Hon. G. H. Perley, at a meeting in Bedford, Quebec, on Thursday, the 2nd of April, promise the inhabitants of Bedford that he would use his best endeavours to have included in the Estimates for next year a sum of money for the purpose of building a post office in Bedford?
2. If so, was he authorized by the Government to make this promise?
3. Is it the intention of the Government to include in the Estimates for next year a sum for building a post office in Bedford, Quebec?

Mr. PERLEY:

1. Mr. Perley stated at the meeting referred to that he would recommend to the favourable consideration of his colleagues the request of the people of Bedford for a public building, but that he could not say whether anything would be done about it this year.

2 and 3. The question has not yet been considered by the Government.

UNOPPOSED AND UNDISCUSSED MOTIONS.

Mr. Murphy.—Return showing: The total bond issue of the Canadian Northern Railway Company and its affiliated companies; the total cost to date of the construction of the lines of railway comprising the Canadian Northern railway system, including terminals, sidings, etc.

Mr. Macdonald.—Return showing: What kind of coaling plants have been provided on the National Transcontinental railway; how many have been provided; where they have been constructed; whether any tenders were called for them; the name and address of the lowest tenderer; from whom they were obtained and at what price.

Mr. Michaud.—Return showing how many commissions were appointed by the Government since the year 1911; the name of each commission; how much money was paid to each of said commissions to date; how many more commissions are to be appointed during the present fiscal year.

Mr. Sinclair.—Return showing: How much money has been paid by the Government, or any department thereof, since October 10, 1911, to the Herald Publishing Company of Halifax, N.S., for advertising, printing and lithographing.

Mr. Pugsley.—Return showing: How many passengers have been carried over the Intercolonial railway from St. John to Halifax, and from Halifax to St. John, respectively, under the agreement made on the 30th September, 1913, between the Canadian Government Railways by F. P. Gutelius, general manager and the Canadian Pacific Railway Company, by G. M. Bosworth, general traffic manager, from the 15th November, 1913, when the said agreement went into effect, to the 31st March last; how many tons of freight of each of the classes mentioned in said agreement have been carried each way over the Intercolonial railway between St. John and Halifax, under said agreement during said period; what have been the total earnings by the Intercolonial railway under said agreement up to the 31st March last, for passengers and freight carried, respectively; what amount has been paid to or earned by the Canadian Pacific railway for car hire under said agreement; what number of empty cars of the Canadian Pacific Railway Company have been hauled by the Intercolonial railway free under said agreement, and what has been the cost of such haulage; what would have been the total amount paid by the Canadian Pacific Railway Company to the Intercolonial railway, under the tariff prevailing at the time of the making of said agreement, for the passengers and the freight so carried, respectively; whether the said agreement has been submitted, as promised by the Government, to the Board of Railway Commissioners by the Minister of Railways for the purpose of having the board determine as to whether or not said agreement is discriminatory against the port of St. John; if not, why it was not so submitted; whether it is the intention of the Minister of Railways to renew the said agreement, or to put in force a similar agreement, during the next winter port season; what

agreement the Government intends to make as to the Atlantic termini of the fast Atlantic Mail steamers for the winter of 1914-15.

RANCH FOR CAVALRY REMOUNTS.

On the Orders of the Day being called:

Sir WILFRID LAURIER: A statement has been made in the press to the effect that the Government have granted a lease to a certain company for the purpose of establishing a ranch for cavalry remounts. Are the Government prepared to put that lease and the correspondence connected therewith on the table, without my making a formal motion?

Hon. SAM. HUGHES: As soon as the lease and the Order in Council are passed, we will do so.

Sir WILFRID LAURIER: The Order in Council has not been passed yet?

Mr. HUGHES: The lease has not been signed and the matter is not in proper shape.

Sir WILFRID LAURIER: The Order in Council has been passed?

Mr. HUGHES: The Order in Council is being amended.

MONTREAL BERTHING ACCOMMODATION.

On the Orders of the Day being called:

Hon. R. LEMIEUX: I would like to call the attention of the hon. Minister of Marine and Fisheries to the fact that the Montreal press reports that no berthing accommodation will be found this spring for the Royal George, one of the steamers of the Royal line, and great indignation is expressed on the part of the Montreal shipping federation owing to the fact that there is no one in Montreal to see what accommodation can be given to the various shipping interests. My hon. friend will notice that at the present time the Harbour Commission is practically non-existent, two of its members and the assistant secretary being in Europe and the secretary being ill. Has my hon. friend considered these facts and does he intend to remedy the situation?

Hon. J. D. HAZEN: The matter is really one for the Harbour Commissioners of Montreal to deal with. This Parliament has seen fit to place certain matters in the hands of the Harbour Commissioners, subject to certain control by the Department of Marine and Fisheries and the Governor in Council. The allotment of berths is one of those matters which are in the hands of the Harbour Commissioners. I do not understand that the Harbour Commission is disorganized at the present time. The chairman, Mr. Ross, has been in Europe inspecting harbours there, following the example of his predecessor in office, Major Stephens. Mr. Roberston is acting chairman, and is, I believe, attending to his duties. I do not know whether there is truth in the report or not; but I doubt it very much. I believe that the work of the harbour is proceeding very satisfactorily and that everything will be ready for the opening of navigation. The business of the harbour is perhaps increasing more rapidly than are the facilities, although I think the Harbour Commission, backed up by the Governor in Council, are working earnestly to bring the facilities up to date. I believe that berths will be found for the Royal Line and all other steamship lines during the present season.

RIVER VALLEY RAILWAY.

On the Orders of the Day being called:

Hon. H. R. EMMERSON: A rumour or announcement has appeared in the eastern press to the effect that the federal government is giving some additional assistance for bridges in connection with the River Valley railway, and that an Order in Council has been passed for that purpose. Has an Order in Council been passed in any way relating to that subject or to the construction of bridges across the St. John river?

Hon. GEORGE E. FOSTER: There has been a proposition before the Government, and it has been considered and is still being considered, but no Order in Council has yet been passed.

QUESTION OF PRIVILEGE.

On the Orders of the Day being called:

Mr. TURRIFF: As a matter of privilege, I wish to say that in the debate on the Budget the other day I stated that under the reciprocity pact the duty on mowers and binders had been reduced by 2½ per cent and on other machinery by 5 per cent. My hon. friend the Minister of Public Works interrupted me to say that I was mistaken—that nothing had been taken off threshers. I wish just to point out to my hon. friend that in 'Hansard' of 1910-11, vol. 2, page 2489, he will find the following: Threshing machines, the then duty, 20 per cent; proposed duty, 15 per cent; reduction by Canada, 5 per cent; windstackers, baggers, weighers and self-feeders

therefor and finished parts of the foregoing for repairs, the same duty. So that there was a reduction on threshers of 5 per cent.

Mr. WARNOCK: How about engines?

Mr. TURRIFF: This refers to threshers, just what my hon. friend the Minister of Public Works said were not changed. Probably my hon. friend had in mind that no change was made on engines used on the farms.

THE BUDGET.

Consideration of the motion of Hon. W. T. White (Minister of Finance) for the House to go into Committee on Ways and Means, resumed from Wednesday, April 8.

Mr. W. F. CARROLL (South Cape Breton): Mr. Speaker, I am sorry that the hon. member for Brantford (Mr. Cockshutt), who closed the debate before the Easter recess, is not in the House at the present time. We on this side of the House always like to hear utterances from the hon. member for Brantford, especially on matters of tariff. We feel that he has been somewhat bridled and curbed this session, from the fact that he did not speak when the resolution was before the House as to the advisability of free agricultural implements. We feel also that, when he makes utterances regarding matters of tariff and customs, the farmers sit up and listen, and that for some time after he speaks on such subjects a very considerable number of farmers throughout the length and breadth of this country join the ranks of the Liberal party.

The hon. member for Brantford, as is his usual custom, opened his speech with an attack upon the right hon. leader of the Opposition (Sir Wilfrid Laurier), and closed his speech with a little flag-waving. Between these he sandwiched in prayers for the protection of the Minister of Finance (Mr. White) in that he had not seen fit to lower the duties on Cockshutt ploughs, or on ploughs coming into this country. It has been said of the hon. member that he was never known to smile. I wish to give that broad statement an absolute contradiction. When the Minister of Finance had finished his narration so far as it concerned the reduction of duties on farm implements, the hon. member for Brantford arose in his seat, heaved a sigh of relief that was heard throughout this Chamber, and actually did smile. But that smile, to be sure, put such a strain upon his countenance that it did not stay there very long.

In the course of his speech the hon. member for Brantford made the astounding statement to me, that under the Laurier Government political and commercial morality sank to the lowest ebb it has known in this country since Confederation. He gave us no evidence to prove his statement. He did tell us something—and I presume he gave that as his whole evidence in the case—concerning the cruise of the Neptune. I thought that subject was dead and that it had been buried in the election campaign of 1908. But the hon. gentleman has resurrected it. Let me tell him that on every public platform during that campaign, the cruise of the Neptune was flaunted as a great scandal, with the result that, after the Canadian people had carefully weighed it, after they had given it due consideration, they returned to power the Government of the present leader of the Opposition with a magnificent majority. So, evidently they did not believe the statements made throughout this country regarding the cruise of the Neptune; and I do not think the hon. gentleman is going to bring to his party or to himself any particular strength by revamping that old scandal. Let me tell the hon. gentleman that when future generations of Canadians shall be sounding the praises of the right hon. the leader of the Opposition as a great statesman, a great Canadian, and when Parliament Hill shall be crowned with monuments to the revered memory of that right hon. gentleman, giving silent but strong testimony to the belief of all Canadians that he was the greatest Canadian of his time and did more to foster sentiments of friendship and good feeling among all classes and creeds in this country than any other man before or since, the hon. member for Brantford himself will be resting in a secluded grave in a secluded cemetry in the city of Brantford, the Canadian people will have entirely forgotten that he ever existed, and there will not be even a ploughshare to mark his resting place.

The hon. gentleman talked of political morality and political scandals. Perhaps this is not the time to go into a discussion along that line. But let me remind the hon. gentleman that his party has a history in relation to scandals. Let me ask the hon. member, has he forgotten all the things that transpired previous to 1896? Does he remember the Curran bridge scandal? Does

he remember—has he any faint recollection of—the McGreevy scandal? Has he any recollection of the public buildings scandals in the city of Ottawa and the hundred and other scandals that becloud the memory of some of the public men of that time and the record of the Conservative party? And as to political morality, does he remember the nest of traitors that had its rookery on Parliament Hill from 1893 to 1896? In these things he has food for reflection; and if he wishes to launch a debate on scandals in this House, let me assure him that the Liberal party will give him a Roland for his Oliver on every occasion.

He spoke too at some length on certain legacies that the late Administration had left to the present Government. Well, Sir, the present Government was left certain legacies by their predecessors. The present Government came into the legacy of a well-filled treasury. They came into the legacy of a great and ever-expanding trade. They came into the legacy of a happy and contented Canadian people. They found the labouring population unstinted by hard times and poverty. Such were not the legacies that the Government that came into power in 1896 received from their predecessors; and if the present Government goes on long along the lines it has followed for the two and a half years of its history, such will not be the legacy it will leave to its successors. For never has such a change for the worse come over this country in such a brief period of time as has come over it in the two and a half years during which the present Government has ruled its destinies. I shall perhaps have something to say on that point in another part of my address.

The hon. gentleman spoke somewhat of good times, and asked the House what was meant by good times. Well, I presume that if the hon. gentleman himself had answered the question, which he did not do, he would have said that good times meant a very high tariff wall against the importation of ploughs and a very handsome profit on Cockshutt ploughs. That would be good times to the hon. member, and I have no doubt that he would think that that constituted good times throughout the length and breadth of Canada. But I am rather surprised that the hon. gentleman should discuss at this particular juncture the question of good times. For if there ever was any period in the history of Canada when we did not have good times it is certainly within the last year, and particularly within the last eight months. For two years hard times and poverty have hovered over this country, for two years the money stringency has been felt by all our commercial classes.

The hon. gentleman, as I said, closed his speech with a little flag-flapping, and with some censure of the present Government for not having brought down this year a budget of $35,000,000—or $15,000,000 for the year, as he put it,—to go to the support of the British navy. He told us, too, that that policy was what the Canadian people wanted, and that when they got the opportunity they would so record their decision. Well, Sir, the Liberal party in this House last year courted an election on the naval question, and I think the Liberal party court an election on that very issue now. Let me tell my hon. friend that so far as I know the Liberal party they will go on courting an election on that question until the present Government shall have gone out of office through the flux of time—because that is about the only time they will go to the country. The matter of a Canadian-built navy as distinguished from a cash contribution to the navy of the Old Country has been so thoroughly discussed in this House that there is not very much to be said about it at the present time. But, looking across to Australia, we find that Australian statesmen who were cited in this House during the debate last year as supporting contribution are now very much opposed to that policy. Senator Miller, Minister of Defence in the Commonwealth of Australia, has issued a statement in which he says that Australia is irrevocably committed to an Australian navy and policy and needs her own ships. He says that Mr. Churchill suggests a reversion to the discarded policy of contribution. There is upon our statute books, in the Naval Act of the late Administration, what constitutes the naval policy of this country, and the present Government dare not repeal it. They are against a Canadian navy, but they are allowing to remain on the statute book the legislation which brought that navy into being; they are keeping up the naval college at Halifax and they are expending thousands of dollars this very year for the upkeep of the two training ships which are in our own waters. These ships are not being used as training ships, but are tied up in the harbours of Halifax and Esquimalt. Apparently the Government has no policy on this question of naval defence or of assistance to the empire; apparently they are afraid to bring down a policy at

this time. I can only say that when they do launch forth a naval policy, the hon. member for Brantford will find the Liberal party, as he has always found it, favourable to giving assistance to the motherland, yet true to the Canadian people and to Canadian interests.

The hon. gentleman has re-hashed this same old speech in the House so often that he has almost put it out of existence. His attitude in this respect reminds me of a story which I have heard concerning a schoolmaster and one of his pupils. The schoolmaster was giving a lesson in fractions, and he was asking his pupil: If I divide a piece of meat into four parts, what will one of those parts be called? The pupil answered, one-fourth. The schoolmaster kept on dividing until he had divided it into sixty-four parts, at which stage the pupil told him that each separate part would be one sixty-fourth. Now, said the schoolmaster, if I divide it again, what will you have? Hash, said the pupil. Before the schoolmaster had a chance of disciplining or interrupting him, the pupil said: If you keep on re-hashing it, you will have nothing left. And that is what has happened to the speech of the hon. member for Brantford; he has re-hashed it so often in this House that he has almost destroyed it.

We were assured by the hon. Minister of Finance that, so far as the financial stringency in this country was concerned, the worst was over. These remarks have a familiar sound to me; I think the hon. Minister of Finance made use of them about three months ago either in the city of Montreal or in the city of Quebec. Yet the clouds are gathering, and things do not look very bright. While we on this side of the House trust that the sentiments of the Minister of Finance as expressed in that phrase are correct, I myself feel that he has some distance to go before he becomes a very great prophet, because if his prophecy of five or six months ago had been fulfilled, hard times would now be over.

With regard to the question of immigration, the hon. Minister of Finance told the House that while the number of immigrants coming into the country at the present time was not increasing, it was gratifying to know that there was a marked improvement in the quality of our immigration. I think the very figures the Finance Minister gave to the House prove not that his assertion is correct, but that it is absolutely wrong. I presume that if I were to ask the hon. Finance Minister from what countries we get the best class of immigrants, he would tell me that they come from the British Isles and from the United States, and I dare say in that regard he would be right. What are the figures that he gave the House? During the fiscal year 1912-13 there came from the British Islands 150,542 immigrants, from the United States 139,009, and from other countries 112,881. If it be true that we are getting the best class of immigrants, we would naturally expect a greater number of immigrants from the United States and from the old land during the following year. What are the facts? During the eleven months of the year 1913-14 there came from the British Islands 136,699 immigrants, a decrease of some 12,000. From other countries during that period there came 128,933, an increase for the eleven months over the twelve months of the preceding year of some 16,000 immigrants. From the United States during that period there came only 97,406 immigrants, as against 139,000 for the preceding year. These figures do not go to show that the immigration we are getting is of a better quality; as a matter of fact, we find that from the year 1911 to the year 1913 the increase in the number of immigrants coming from the British Islands has only been 3 per cent; that the increase of those coming from continental Europe has been 100 per cent, and that in the number of immigrants coming from the United States during that period there has been a decrease of about 20,000. But the most disquieting feature of the situation is disclosed by the figures as to homesteading. Homestead entries have been gradually falling off. The number of homestead entries made in the three prairie provinces in 1911 was 38,585, in 1912, 35,226, and in 1913, 29,640. The number of pre-emptions in 1911 was 10,583; in 1912, 8,947, and in 1913 only 6,483. That shows that this Government, instead of inducing the immigrants to take up farms, where they could do some good not only for themselves but for the community at large, is encouraging the newcomers to go into the large centres of trade. I am glad to see that we are not to have so many artisans and workmen from Great Britain this year as during the past. That is what the Superintendent of Immigration says, and he gave a very peculiar reason for it: he said that times were so good in Great Britain—free trade Great Britain—that the artisans and workmen were not

emigrating from that country, and that therefore there was little fear of their overcrowding our cities this year. I am afraid that this Government, and perhaps all previous governments, have not tackled the immigration question along the right lines. They have encouraged immigration without letting the immigrants know the exact condition of affairs in this country. Who in this House will say that we need workmen and artisans in this country at the present time? Why, during the last year thousands and thousands of artisans and workmen were walking the streets looking for employment. The action of the Vancouver Trades and Labour Council in passing and forwarding to the members of this House a resolution regarding immigration was very timely. The resolution reads as follows:

Whereas, continuous efforts are being made by transportation companies, emigration agencies and other societies to induce employers in Canada to import labour from outside the Dominion, and

Whereas, these companies and societies have received and are now receiving Government guarantees and grants of public money, and

Whereas, the arrival of immigrants on these shores during a time of severe depression such as now exists not only intensifies the serious unemployment question, but tends to deteriorate the already too low standard of the workers' living, consequently retarding industrial and national progress, therefore be it

Resolved, that the federal and provincial governments of Canada discontinue assisting financially or otherwise such corporations and societies and further take steps to ensure that correct information be given to prospective immigrants in their own homes, and be it further

Resolved, that copies of this resolution be sent to Premier Borden, the federal members of the House of Commons, and the press.

I hope that the present Government will encourage immigration from such countries as Great Britain, the United States and France and at the present juncture retard immigration from continental Europe.

Mr. BURNHAM: If thousands of artisans are walking the streets of Canada, why does the hon. member want additional immigration?

Mr. CARROLL: To go on the farms. I thought I had made myself clear on that. I pointed out that there has been an actual decrease in the number of homestead entries during the last two and a half years. I did not make that statement on my own authority, but gave the actual figures.

I do not pretend to know very much about the tariff, but I have given the subject some consideration and irrespective of party affiliation, my own opinion upon the question of protection is this. The infant industries of this country which have not yet reached that stage where they are able to capture the home market should be given a reasonable measure of protection by whatever Government happens to be in power in this country.

Some hon. MEMBERS: Hear, hear.

Mr. CARROLL: Further, when an industry in this country has not only captured the Canadian market but has shown itself able to compete in the markets of the world, that industry should no longer receive protection from the Government of this country.

Mr. LALOR: Do the hon. gentleman's remarks apply to such a concern as the Dominion Steel Company?

Mr. CARROLL: The hon. gentleman need not worry. I am going to discuss that. I never run away from discussing any phase of a situation. I take the further ground that when the manufacturers of this country feel that they are able not only to capture the Canadian market but also to compete successfully in the markets of the world, they should be given their own way of thinking and their products should be put on the free list. They are the best judges of the situation. I make those general remarks to show where I stand on this question. We are told by the Minister of Finance that his Government is a government of adequate protection. Adequate protection—that is the most indefinite thing in the world. Does he say that it is adequate protection to give between twelve and thirty-five per cent on the farming implements of this country, the manufacturers of which are able to compete successfully all over the world, and to give only the same protection to an industry just as important, if not more, that is unable to compete successfully even within Canada. Is that adequate protection? That indefinite phrase reminds me of something I read when a boy. In Anthony and Cleopatra Septimus asks his friend Anthony, who had just returned from Africa, the following question:

Septimus: What manner of thing is your crocodile?

Anthony: It is shaped, Sir, like itself; and it is as broad as it has breadth; it is just as high as it is and moves with its own organs; it lives by that which nourisheth it, and the elements once out of it, it transmigrates.

That is about as indefinite an answer as could possibly be given, and it fits in very well with the very indefinite phrase 'adequate protection.'

In regard to the changes made by the present Budget I wish to say that anything

this Government or any other government does to help the steel industry of this country has my hearty and unqualified support. The bald statement that the present Government are doing something for the Dominion Steel Company looks very well. In a few moments I am going to analyse that statement and show what this Government has actually done for the steel industry of this country. Previous to 1896 the then Government gave a bounty to pig iron which was produced from Canadian native ore. That was the situation when the late Government came into power. In 1897 Mr. Fielding, in his Budget, extended that bounty to pig iron which was not produced from native ore, and I believe he did this substantially with the purpose in view of rendering assistance to the Dominion Steel Company at Sydney which uses altogether foreign ore in the manufacture of its pig iron. But he did make a distinction. He said that, whereas we shall give a bounty of $2 a ton on pig iron produced from foreign ore, we shall give a bounty of $3 a ton on pig iron produced from native ore, thus giving $1 of an advantage to the native ore. I believe that was a proper step to take. He reduced the tariff duties at that time also and in reducing those tariff duties he gave as his reason that the products of steel were so extensively used in all the manufactures of this country that it would be in the interest of Canada as a whole that iron should be reasonably cheap. While he recognized the fact that putting a duty on iron or steel would increase the cost of iron or steel, he took the position that by giving a bounty the manufacturers of steel would have protection and the users of steel would have cheap steel besides. That was the ground he took and I think that was a reasonable ground. These changes were on a sliding scale and the bounties went practically out of existence in 1907 and were renewed to the extent of about 55 per cent of their original proportions in 1907 and continued until the year 1910.

In 1907 Mr. Fielding gave a bounty of $3 a ton on wire rods and he gave as his reason for doing that instead of putting a protective duty on, that if he put a protective duty on wire rods it would necessitate changing the whole basis of the tariff on the products of these rods. In that his argument was unanswerable. He gave, as I say, a bounty of $3 a ton. It was proposed to encourage the steel industry in this country, and as a result of the bounty the Dominion Steel Company put up a rolling mill at Sydney at a cost of $1,000,000, and the Dominion Steel Corporation—I think they call it—at Hamilton, put up a rolling mill costing in the vicinity of $800,000. While this steel company and this steel corporation received a large amount of money from the public treasury of Canada in the form of bounties and bonuses, I believe that the Dominion of Canada got a return for every dollar of it. I am going to tell you why. In 1897, when the steel industry at Sydney was in its infancy, we had a population of 3,000 or 4,000, while in 1911, with the expansion of the steel industry owing to the great encouragement which had been given to it by Mr. Fielding and the late Administration, Sydney had grown from a hamlet of 4,000 to a very magnificent city of 20,000. The customs duties on articles imported not only at Sydney but at other steel centres more than made up for every dollar paid by this Government through bounties upon the production of steel and iron.

4 p.m.

There was at that time a bounty of $3 on angles and plates and these articles also carried a duty of ten per cent. This was done away with because they were completely manufactured articles and on those completely manufactured articles duties were imposed up to $7 a ton. I want to reiterate that on its face $3.50 a ton duty on wire rods means a good thing for the industries manufacturing wire rods. The present tariff does not mean that and I am going to prove it. But before going on with that, I want to say that in 1903 the right hon. the Prime Minister (Mr. Borden), while there were large bounties paid on iron and steel, rose in his place in this House and condemned the Government of the day for not doing enough. He wanted a high protective duty on iron and steel and he wanted that duty, he said himself, so that our own industries might capture the Canadian market. Notwithstanding that fact, while the steel industry of this country was going through the crisis of its life in the last three years, the present Government sat motionless and mute without giving any assistance to the steel companies either by bounties or duties. What does this $3.50 a ton amount to on steel rods? Taking it on its face, I must admit it is a good thing for the steel industry of this country, but let us investigate. There was a demand in 1913 for 175,000 tons of steel rods. During that year there were 92,000 tons of steel rods imported into the country. I think I am fair in saying that what was not imported, and what was manufactured in this country,

went mostly into the production of nails at the steel mills at Sydney and Hamilton and that the 92,000 tons which were imported went into the manufacture of wire fence and nails by the smaller manufacturers of Canada. The Dominion Steel Company, or the Hamilton Company, do not need very much assistance on the wire rods that they manufacture into nails because they get a protection on the nails. What I thought they would be looking for would be a protection on the iron rods that they themselves do not manufacture but would be in a position to manufacture if they could compete successfully in the Canadian market. But the Minister of Finance says to the fence men who used perhaps half of the steel rods that were imported into this country last year: We shall give you a drawback on the iron rods you import and put into steel fences. As far as the fence manufacturers are concerned, they are having free wire rods today

But what about the small manufacturers of nails, outside of the Dominion Steel Company and the company at Hamilton? The Minister of Finance holds a bludgeon over the Dominion Steel Company at Sydney and over the steel corporations of Ontario, and he says to them in effect: if you do not sell your wire rods to the small manufacturers of nails at a reasonable price, or at the price they were getting them at heretofore, we shall cut you out and remove the duty.

Some hon. MEMBERS: Hear, hear.

Mr. CARROLL: I am glad to hear hon. gentlemen cheer that, because it shows they recognize my argument is correct. When the Conservative papers of the East call out: Hurrah for the Minister of Finance, he has done great things for the steel industry of the country, hon. gentlemen opposite by their cheering show that either they do not believe these newspapers or they do not believe the Minister of Finance. I can give proof for this. The statement of the Minister of Finance appears in 'Hansard' as if he said: we shall reduce the duty. But, what the Minister of Finance really said was: we will remove the duty if you do not be good to the small manufacturers of nails in Ontario. Not only that, but before the steel men got anything, I understand—and now I am only speaking from hearsay and am not so sure of my ground—I understand that before the steel manufacturers of this country got any satisfaction or encouragement from the present Government they had to go to Toronto and meet the smaller manufacturers of nails and tell them—and I understand that it was at the behest of the Minister of Customs they went to Toronto—and tell them: do not make too much of a howl; you know we have got to be good to you; the Minister of Finance is holding this bludgeon over our heads and we have got to give you cheap wire rods for the manufacture of your nails. You can see that while this thing appears on its face to be very plausible, it does not mean that the steel manufacturers of this country who produce steel rods are getting a duty of $3.50 per ton on their output.

Mr. W. CHISHOLM: It transmigrates.

Mr CARROLL: It does. Let me draw to the attention of the House to another rather peculiar thing that attaches to this piece of legislation so far as the duty on wire rods is concerned. I find in the Votes and Proceedings, No. 56, of Monday, April 6, 1914, the following proposed resolution with regard to this change:

> Resolved, that the foregoing provisions shall be held to have come into force on the seventh day of April, 1914, and to have applied to all goods imported or taken out of warehouse for consumption on and after that day, and to have also applied the goods previously imported for which no entry for consumption was made before that day, except as otherwise provided in the foregoing resolution.

That is the usual resolution, but there is a proviso attached to it. I am not in a position to say whether this appears before or after the announcement made by the Minister of Finance, but I should think from its date that it appeared previous to his pronouncement on the iron and steel situation. There is this proviso attached to the resolution.

> Provided, notwithstanding any increase in customs under the said resolutions, that all goods actually purchased on or before the sixth day of April, 1914, for importation into Canada, on evidence satisfactory to the Minister of Customs of the purchase having been so made, and all goods in warehouse in Canada on such day, if entered for duty after importation prior to the first day of July, 1914, may be entered at the rate of duty in force on the said sixth day of April, 1914.

That is to say, steel producers in the United States were given this notice: Rush your orders of wire rods into Canada; you can get them all in free by getting your orders taken before the 7th day of April, 1914. I am informed on creditable authority that there were thousands upon thousands

of tons of wire rods sold in Canada under contract between the 6th of April and the 7th of April, 1914. I say that string was attached for the purpose, a very laudable purpose no doubt, of giving the small manufacturers of nails in this country a chance to take time by the forelock and have their importations come in without duty.

There are some other phases of this iron and steel question that are worthy of comment.

Mr. W. T. WHITE: I would ask my hon. friend if he suggests that any notice of that resolution was given except in the ordinary way. Does he say there is anything exceptional about that proviso?

Mr. CARROLL: I think so. I do not pretend to have very much knowledge about the matter myself, but I am informed that that is not the usual string attached to such resolutions regarding tariff matters. I find also in the Votes and Proceedings notice of this resolution respecting the iron and steel industry of this country:

> Resolved, that it is expedient to provide that the Governor in Council, may under regulations made for the purpose, allow, on the exportation of goods manufactured in Canada and into the manufacture of which pig iron imported into Canada mixed with pig iron made in Canada has entered, a drawback, equal to the duty paid, less such deductions therefrom as is provided in such regulations, of all the pig iron imported and used by the manufacturer of such goods in manufacturing the goods exported and other goods, and the drawback may be computed on the total quantity of pig iron, including pig iron made as aforesaid, entering into such exported goods.

That is, as I understand it, that if the manufacturer of any article in this country imports pig iron which goes into the manufacture of that article which is subsequently exported, he gets a drawback on the duty, and consequently he has practically free pig iron. That is not only a blow to the iron and steel industy, but it is a blow also to the Canadian consumer who has to buy these articles, because it gives an advantage to the United States farmer over the Canadian farmer, in the fact that the manufacturer gets a drawback on the imported iron which entered into the manufacture of the article he exports to the United States.

The manufacture of structural iron and steel in Canada is not even in its infancy yet, and there is a chance to develop it into a very great industry in this country.

If the hon. Minister of Finance had encouraged this manufacture, which does not exist in Canada to-day, by a system of bounties, he would see the manufacture of structural steel in this country developing by leaps and bounds, as it will not under his method of a protective tariff. That, however, goes for what it is worth; it is a mere prophecy. I point that out to the minister, because he said that bounties were useful to encourage an industry, but that once it got upon its feet it should be protected in another way. Once industries get on their feet and are able to hold the Canadian market and compete successfully with similar industries throughout the world, they want neither bounty nor protective tariff. I think I have shown that, while the hon. Minister of Finance held out one hand to the steel industries of this country and said: Here is a $3.50 per ton duty on your wire rods, he destroyed that in toto by holding out in the other hand to the manufacturers of fences a drawback, and by having some of his satellities behind him wield the cudgel over the steel companies to compel them to be good to his friends the nail manufacturers of the province of Ontario.

I come to the question of coal. I think it has been said by Conservative protectionists that if we reduce the duty on coal or any other article of commerce, it will be the entering of the thin edge of the wedge, and will be liable to cause the downfall of the whole structure of protection. Apparently the hon. Minister of Finance is not such an ardent protectionist as some of those who sit around him, because he has inserted the thin edge of the wedge in so far as the coal producers of Nova Scotia especially are concerned, because in that part of the country we produce only bituminous coal. My hon. friend the Minister of Trade and Commerce, in the old days, in his replies to the Budget speeches, used to taunt Mr. Fielding, then Minister of Finance, with sitting tight upon his coal scuttle. Mr. Fielding sat tight upon his coal scuttle, and, by the protection which he gave to the industry in Nova Scotia, that industry has developed. It developed between 1896 and 1911 from 1,000,000 tons to about 5,000,000 tons. We in Nova Scotia thank Mr. Fielding for sitting tight upon his coal scuttle, but we do not thank the present Minister of Finance for getting off that coal scuttle and allowing a few of his manufacturing friends in Ontario to put in the thin edge of the wedge in so far as the duty on coal is concerned.

Coke is allowed to come into this country free of duty. Before the Budget speech was

delivered, bituminous coal was allowed in free when it went into the manufacture of coke and was used for smelting purposes. I think that is a fair statement. The Minister of Finance comes along and disturbs the coal industry of this country by removing the duty from all bituminous coal used in the manufacture of coke, and it does not matter now whether it is manufactured into coke by the people running blast furnaces or not. If I start a coke oven in Nova Scotia, New Brunswick, or any other province, and sell the product of that coke oven to the manufacturers of steel in Ontario, I get my bituminous coal in free. It is a serious thing for the Minister of Finance to interfere with the coal tariff in the province of Nova Scotia. In proof of that, I may say that almost before he made the announcement, a cry went up from the Canadian Manufacturers' Association for free bituminous coal from one end of the line to the other. Mr. Rowley, who was I think at one time president of that association, says that he considers this a fine thing—why? Because, he thinks, if a delegation headed by himself come to the Minister of Finance next year and say they are using bituminous coal in the manufacture of matches in Hull, they are as much entitled to free coal as are the coke manufacturers; and I think he is right in that contention. The Minister of Finance, perhaps unintentionally, has hit a blow at the bituminous coal industry of this country. I may be told by whoever follows me that, in the election of 1911, as a candidate on behalf of the Liberal party in the province of Nova Scotia, I favoured a reduction of 7 cents a ton on coal. I did so, but we were getting a quid pro quo under the contention. The Minister of Finance, perfectly free market in the United States for our slack coal, which constitutes between 30 and 35 per cent of the output of the Dominion Coal Company, and, I believe, as large a percentage of the output of the other coal companies of Nova Scotia, and that would much more than make up for any hurt that the reduction of 7 cents a ton might do to that province. The people apparently believed so, because there was not in the province of Nova Scotia a coal county, with the exception of Cumberland, that did not return a Liberal to this Parliament. That in effect meant that they were all satisfied with our policy in regard to the coal industry.

There is one item of particular interest to the people of this country with which the hon. Minister of Finance, if he approached it, stayed only a very short time. I refer to the question of the high cost of living. If we are to believe the Minister of Labour, that we must have hard times before the price of food goes down, we should be getting foodstuffs dirt cheap in this country to-day, because we have had a very hard time financially for the last eight months or a year. Various causes have been given for this high cost of living. In a speech which my hon. friend the Minister of Finance made on the Address, he said that it is often caused by the exhaustion of natural resources. Surely no one will say that holds good in Canada. Instead of our natural resources being exhausted, they have barely been touched so far. We have been told by hon. gentlemen opposite that this high cost of living is a world-wide tendency, and that you cannot legislate against a tendency.

That may be good economics; but if you cannot legislate against a world-wide tendency, at least you can change the trend of that tendency within your own jurisdiction in various ways. Now, the high cost of living is a world-wide tendency—to a certain extent; but let me give you first some figures for the last twelve years and then figures for the last five years. In the last twelve years the increase in the cost of living has been as follows in the various countries named: Belgium, 32 per cent; France, 28 per cent; Germany, 28 per cent; Japan, 28 per cent; United States, 43 per cent; Canada, 51 per cent; Great Britain, 15 per cent. Then, from figures which I have taken from an article by Professor Stephen Leacock, whom I consider an authority on this question, it appears that in the last five years, whereas the high cost of living has increased throughout the world at from 10 to 12 per cent, it has increased in Canada by 35 per cent. Why should this be? How is it that in a young country, with its natural resources practically undeveloped, the high cost of living is going ahead in ratio compared with other countries as 35 to 10? 'You cannot legislate against a tendency,' but I contend that this Parliament can pass legislation which will bring down the high cost of living. And I am going to show you how.

In the calendar year 1913 we paid $7,000,000 taxes on foodstuffs entering this country. That is practically $1 for every man, woman and child throughout the length and breadth of Canada, perhaps between $20 and $25 or more for every head of a family. And I believe that the poor man pays more in proportion than his rich

neighbour. When our crops come in in the fall, a man who has spare cash can go to a wholesaler and put in a store which will tide him over until the next fall. But the poor man who is living from hand to mouth has not this amount of ready cash, small though it be, and so he has to pay the high prices that rule when the articles become scarce. The poor man is the one who pays the most of that $7,000,000 of taxes on foodstuffs. We imported foodstuffs from fifty countries, our greatest import being from the United States. From that country last year we imported foodstuffs to the value of $23,072,-160, and paid duties on those imports of $4,860,782.82, the duties on goods from other countries making the total over $7,000,000. But hon. gentlemen opposite may say: Oh, well, the consumer does not pay that. Then, might I ask, who does pay it? Does the Minister of Finance throw $7,000,000 into the treasury and say: Here is the taxes on the foodstuffs for the year? Does the wholesale importer pay it,—a generous man to be sure, but not generous enough, I think, to pay $7,000,000 out of his own pocket into the treasury of this country. Of course, he passes on that $7,000,000 to the retailer with his own profit, to which he is entitled. And are the retailers of foodstuffs so generous that they are going to put $7,000,000 into the treasury? I think not. On the contrary, they are entitled to a profit on the duty and on the wholesaler's profit on that duty, and this they duly collect. Who, then, pays this duty? The man who buys from the retailer pays it in the last analysis, and in the last of the last analysis it is the poor man who pays it.

But some hon gentlemen opposite may say: But even if you reduce the tariff, that will not make foodstuffs cheaper in this country. Well, let me point out to you a very anomalous state of affairs with regard to flour—and no food is more largely or more commonly consumed than flour, and Canada is a great flour-producing country. I think I am within the mark when I say that the producers of flour in this country have absolute control of their markets at this time, and not only that but they have successfully competed in the markets of Great Britain. Great Britain is not a flour-producing country, and one would naturally expect that flour would be dearer there than in Canada. But take the grade of flour which costs $5 a barrel in Winnipeg, $5.10 in Montreal, $6.50 in Halifax, $5.50 in St. Johns', Newfoundland, and you find that it sells for $4.18 in the London market. Is there any hon. gentleman on the other side of the House who can tell how that is accounted for? I will give my version of it and I do not think it can be successfully contradicted. My version is this: The foodstuffs of all countries enter the market of Great Britain free. Consequently, when the flour merchant of Canada goes there he must compete with the world, and so he must bring down his prices to 'synchronize' with those of the old country.

Mr. LALOR: Is the hon. member speaking of retail prices in Canada and wholesale prices in Great Britain?

Mr. CARROLL: Wholesale, I presume.

Mr. LALOR: Retail here, as against wholesale in England?

Mr. CARROLL: No, I do not fall into errors of that kind.

Mr. LALOR: I merely asked if they were the same.

Mr. GEO. E. FOSTER: The hon. member is certain, is he, that his basis is the wholesale price?

Mr. CARROLL: I think so.

Mr. FOSTER: That is very important.

Mr. CARROLL: I do not see what difference it makes. If you pay $6.50 retail in Halifax for an article that you can buy for $4.18 retail in London, what difference is it going to make? It simply shows that the millers of this country have a monopoly here; and that shows that the duty on flour should be taken off. The Government is not doing its duty to the people of Canada when it allows such a state of affairs to go on, when it maintains a high protective tariff which enables the Canadian producer to monopolize the Canadian market and make the Canadian consumer pay twenty-five to thirty-five per cent more for the same brand of flour than is charged the consumer in Great Britain. When such a state of affairs exists there is something wrong, absolutely wrong; and it is a serious matter that this Government should take into its immediate consideration—provided they have at heart the benefit of the majority of the people of Canada, as I have no doubt they have.

But let me hope that they are not so wedded to a policy of high protection as to allow such a state of affairs to continue. I am told that the millers informed the Minister

of Finance that they were making no profits on this flour. I am not in a position personally to say what profits these millers are making, but I am going to give the House the statement, based, I presume, on ripe experience, of a gentleman who wrote some days ago in the Montreal Standard, which I look upon as a very reliable paper. He says that the Canadian people would not eat the inferior grades of flour that they send over to England. That assertion bears its denial on its face, because any one who is familiar with the conditions knows that the very best of everything must be used for export, especially to England where we have to compete with the exports of the whole world. It is pointed out by this gentleman that the very best brands go over to Great Britain—and that is just what I would expect. He points out that several milling industries in this country—the Ogilvy, the Lake of the Woods and the International Milling Company—according to their own published record, made last year a profit of from thirty to sixty per cent upon their capital. What their capital is, no one knows but themselves. It may be half water; two-thirds of it may be water, and the other third actual cash. I do not make the assertion that this is the case, but it may be so; at any rate they made a profit on their actual capital of from thirty to sixty per cent.

Mr. BURNHAM: They did not pay their shareholders that.

Mr. CARROLL: This statement was sent broadcast throughout the country.

Mr. BURNHAM: I know it is not true.

Mr. CARROLL: Surely the big milling industries are not foolish enough to send broadcast throughout the country a statement which is not in their own interests if it be not true. This gentleman gives citations to show that the very best Canadian flour is sent to the old land. I am really sincere when I appeal to the Minister of Finance and ask him if the conditions which exist should be allowed to continue? Is it a fair deal to the Canadian consumer —and we are all consumers of flour—is it a fair deal to the people of Canada as a whole that through the machinations of the flour interests of this country they should be forced to pay from $1 to $2 more on a barrel of flour than is paid by consumers across the Atlantic? This is something which should commend itself to the serious consideration of my hon. friend the Minister of Finance.

[Mr. Carroll.]

I think I have made a sufficiently strong case to show that the high duty on flour coming into this country makes the price of that flour higher. The same thing applies to boots and shoes and everything else we wear. If we want to buy a pound of soap we have to pay a tax on it; if we want to buy a pair of shoes, we must pay a tax on them; if we buy wearing apparel, we must pay a tax on it; if we buy a hat, a cap or a collar, we must pay a tax on it. But if we want to import unset diamonds from the United States or from some other country, we get them free of duty. Is that a fair deal?

Mr. BURNHAM: No.

Mr. CARROLL: I am glad the hon. member for West Peterborough agrees with me on one point at least. Unquestionably this is a raw deal to the consumer. The price of foodstuffs is going up, but wages are not going up in the same ratio. The reason is not far to seek. The present financial stringency in this country—due to what I do not know—keeps the wages down and makes for unemployment. In a paper dated Ottawa, January 29, 1914, I observe that Controller McNeill on that day recommended to the Board of Control that the city should make an effort to provide work for the large number of unemployed persons in Ottawa. He said that in Dalhousie ward alone 700 families—not 700 people, Mr. Speaker, but 700 families—were in a state of poverty. If the hon. member for Brantford were in the House I would ask him whether that is an indication of good times. Certainly it is not.

Mr. WILCOX: Is it true?

Mr. CARROLL: Does my hon. friend say it is not true? I presume that a controller elected by the citizens of Ottawa would not give the public press such a statement if it were not true. Does the hon. gentleman who interrupted me think that he would?

Mr. WILCOX: An announcement was made in the Liberal press of Windsor that a large number of persons were out of employment. The city council appointed a committee to inquire into the conditions, and they found that only two families in the whole city were in want.

Mr. CARROLL: That may be absolutely true, but it has no reference to the case which I put before the House. A controller of the city of Ottawa made the

assertion that in one ward alone 700 families were in want. I wish to assure the hon. member for North Essex that I am not one of those who would attempt to show that there was anything rotten in the state of Denmark if the rottenness did not exist. I congratulate the hon. gentleman upon the fact that there are only two families in the city of Windsor who are in want; even that is bad enough. It is difficult to say just to what that may be attributed—probably to the high cost of living. My hon. friend sits there and does not plead with the Minister of Finance to take this cumbersome duty off and give the two poor families in the city of Windsor the same chance as the British poor.

Mr. WILCOX: How does my hon. friend know what I do with the Minister of Finance?

Mr. CARROLL: You certainly do not do it in the light of day, where it would be more effective. If my hon. friend is doing anything, his efforts are apparently not meeting with success.

Mr. LALOR: Take the duty off flour and put it on steel.

Mr. CARROLL: I explained my position on that point to the satisfaction of any reasonable gentleman. People may disagree as to our present system of cold storage, which enhances the cost of living. When cold storage was introduced in this country we thought it was a godsend, but I fear it has not developed on the line we expected. Further, the cost of living is enhanced by a protective tariff. I would like to hear some hon. gentleman on the other side disprove that statement.

Mr. LALOR: Certainly, in the interests of farmers.

Mr. CARROLL: If we give the farmers free agricultural implements—and I understand the Liberal party will when we return to power—they can do without protection on their food stuffs.

Mr. LALOR: For fifteen years you failed to do it.

Mr. CARROLL: We must not forget that neither the farmers, the steel men nor the coal men are the only people in this country.

Mr. SCHAFFNER: Did not Mr. Sifton, in 1896, as he travelled up and down the country, promise that if the Liberals came to power they would give free agricultural implements?

Mr. CARROLL: Did not my hon. friend travel up and down the West two or three years ago and promise the same thing?

Mr. SCHAFFNER: I never did.

Mr. CARROLL: I do not know what Mr. Sifton did.

Mr. SCHAFFNER: I do.

Mr. CARROLL: He is a man against whom I have nothing much to say, except that he was so inconsistent that he eventually found himself in the fold of the Conservative party. To return to the high cost of living; it is enhanced by monopoly and is increased still further by the mother of monopolies, a high protective tariff. There are other phases of this question with which I would like to deal, but I have already taken up too much time.

Mr. O. J. WILCOX (North Essex): I understand the Budget debate upon which we are now launched, to present one of the few opportunities on which hon. members on both sides of the House can express their views in regard to the national, international, and party issues that are before Parliament and this country. Under the rules of the House applying to this debate, it is within the rights of hon. members to give expression to their political opinions, and to the faith they hold in the political party with which they have become identified. It is also within their rights to give expression to what they believe to be the weaknesses, if any, the fallacies, if any, and the inconsistencies of their opponents. Therefore, we may conclude that the Budget debate is more political in its character than possibly any other debate that obtains in this Parliament. Under our constitutional form of government we have a party system, and I do not believe that human ingenuity has yet devised a system of government, having due regard to all its weaknesses, that is the equal of the party system.

Sir WILFRID LAURIER: Hear, hear.

Mr. WILCOX: I believe that a party system, having due regard to the interests of the masses of the people, is the best; and I am sure that my right hon. friend who leads the Opposition will agree with me at least in the statement—

Sir WILFRID LAURIER: Hear, hear.

Mr. WILCOX—that when we have a party system of government as we have in this country, the principles of common equity demand that each political party in

its turn shall have the right to govern the destinies of this great country. As a young member of this House who does not take up very much of its time in offering my opinions, rather giving way to men of older years and greater political experience—viewing the actions of my hon. friends opposite during the last two sessions I cannot help coming to the conclusion that they conceived the idea that they had a divine right to rule the destinies of this country; and now that we of the Liberal Conservative party have served our due course of time in opposition, they are not willing to give to us the right to which we are entitled. I believe my right hon. friend, whom I confess I admire in many respects, will agree that that must be and will always be the principle upon which this country will be governed. I confess, Mr. Speaker, that when I first came to this House I was not a partisan in politics. I do not think I am a partisan to-day.

Some hon. MEMBERS: Oh, oh.

Mr. WILCOX: That is in the broader sense of the term. If I would place the construction upon that term 'partisan' which my right hon. friend the leader of the Opposition placed upon it in 1896, 1897 and 1898, when he was dismissing Liberal-Conservative office-holders, I might be considered a partisan, because the construction that he placed upon the term was that any man was a partisan who took a part in politics other than voting. But, in the broader sense of the term, I do not think I am a partisan. I must confess that there are times in this House when it seems to me that party feeling and party strife and party bias are carried altogether to extremes if we have regard to the best interests of the people and of the country in which we live.

I think that hon. gentlemen on both sides of this House will agree with me in the statement that my hon. friend the Minister of Finance (Mr. White) made a very able and clever presentation of his Budget the other day setting forth the conditions that exist in the Dominion. I desire to incorporate in the few remarks which I propose to make this afternoon, the statement of the Minister of Finance with regard to the finances of the Dominion. He said:

> A revenue of $163,000,000 and an expenditure of $126,500,000 leaves a surplus of revenue over and above the amount required for expenditure upon current account of $36,500,000.
>
> The surplus for the year, then, will be thirty-six million five hundred thousand dollars as compared with fifty-five million dollars last year.
>
> In connection with this matter of surpluses, it may not be out of place for me to point out that from the year 1902 forward there have been substantial surpluses of revenue over current expenditure, running from $14,000,000 in 1902-3 to $22,000,000 in 1909-10, to $30,000,000 in 1910-11. For the year 1911-12 our surplus was $37,000,000, for 1912-13, as I have stated, $56,000,000, and for last year, 1913-14, the figure which I have just given, $36,500,000. So we have had during the last three years the largest surpluses in the financial history of the Dominion.

The point I desire to make is this: We boast of the surplus in this country. I think we have a right to boast of it under present conditions. Notwithstanding the fact that this country has passed through what my hon. friend termed a trade cycle, a time of commercial depression, in the last few years, we have this remarkably gratifying financial condition which was so well set forth by my hon. friend the Minister of Finance. I know that my right hon. friend, the leader of the Opposition, will agree with me when I make the statement that in all countries there are times of commercial expansion and of commercial depression. It has been so in Canada ever since this country has had a Parliament. It will be so as long as this country is a country and the same condition prevails through the whole civilized world. When the Finance Minister is able to bring down to this House, in this year of grace, 1914, a surplus of $36,500,000, which is a greater surplus than was ever brought down by a Minister of Finance under the Government of our hon. friends opposite in the last fifteen years, the people will accept that as a condition which is satisfactory.

As a Liberal-Conservative, there have been times in the history of this country, with its gratifying advancement and development, when I have regretted the position taken by the Liberal party upon great national issues. My hon. friend (Mr. Carroll)—I shall have something to say in connection with his remarks in a moment or two—has added to the belief that I already had and that is that our hon. friends opposite from a political point of view have proven themselves to be past grand masters in the art of putting up a false case before the people of Canada. What an exhibition of economic fallacies we have had this afternoon! They can put up a bogus man of straw and knock him down again just like Punch and Judy. You have all been present at a Punch and Judy show; Punch will get up and Judy will fall down and the first thing you know Judy comes to the top

and there is nothing left of Punch. They can profess one thing in opposition, do another thing in power and succeed in gaining the approval of a very great percentage of the people of the country to a degree that has not been exceeded by any political party in any civilized or uncivilized country that I have ever read of. Now, I am not speaking harshly.

5 p.m. Some hon. MEMBERS: Oh, oh.

Mr. WILCOX: I am just expressing my view in the plainest, commonest language I can find because I want my hon. friends to understand just exactly what I mean. My hon. friend from Cape Breton, to my mind, made a remarkable speech. I know that he will not consider me discourteous when I say it was more remarkable for what he did not say than it was remarkable for what he did say. He started out by parading the advantages of a protective policy. I had a notion to say to my hon. friend: You should be on this side of the House. Down around Sydney there is an industry which receives protection at the hands of this Government, and in 1897, he says, there were four thousand people in Sydney and now there are twenty thousand. That is an industry which has received what I would call double-dyed Tory protection. The bounties ran out a few years ago it is true, but they had received $4 a ton and a bounty besides on the manufacture of steel rails. And, we are told, that under this principle of protection this industry has grown in Sydney until Sydney can now boast of having twenty thousand people where there were only four thousand people a few years ago. So much for the protective principle. But, where I blame my hon. friend (Mr. Carroll) is, that when he gets out of his own local sphere he is not willing to allow to others in this country the same principle that he wants applied to Sydney. He entered into a tirade against my hon. friend from Brantford (Mr. Cockshutt); he entered into a tirade against me in the business in which I am engaged, namely, the farming industry of this country. He said to me: You as a farmer shall have no protection. Am I not a producer as much as any of those engaged in any other industry in this country? Then, why am I not entitled as a producer to have the benefits which flow to industries that have been established under the fiscal system we have in Canada?

It was interesting to me to hear my hon. friend (Mr. Carroll) pleading for protection for the steel industry, and I think he did the right thing, and I congratulate him. That is the principle to which I adhere, and, whoever the hon. member may charge with belonging to the trusts and the mergers, he cannot charge me with that, for I never was engaged in any other business than that of farming, and I never in my life have owned five cents worth of stock in any company. If any man is free to give an unbiased opinion upon the question of tariff, I think, so far as my ability enables me, I am able to express my opinion free from any bias on one side or the other. It was most interesting to me to hear my hon. friend from Cape Breton (Mr. Carroll) take that inconsistent position. He said: I am in favour of a moderate protective policy for the steel industry, but agricultural implements must be free, and notwithstanding that the farmers of this country produce five hundred million dollars of wealth from the land, they must have no protection; all the protection must be given down around Sydney, N.S. Does not the leader of the Opposition think that that is a pretty narrow view for his supporter from Cape Breton to take? I hope my right hon. friend will take the hon. member into his inner counsel and give him a little talking to for being so inconsistent.

There are, in my opinion, two or three epochal periods in the history of the Dominion of Canada. At the opening of my remarks this afternoon I made an announcement as to the part I should take in this debate, and I stated that in my view the Liberal party have been wrong on every side of every question upon which depended the future growth and development of Canada. We have heard to-day about the opening of the West; and hardly a debate takes place in this Parliament that reference is not made to that subject. I trust the House will forbear with me while I refer to that question briefly, because I desire to have incorporated in my address the words of a few leading men of the Liberal party with respect to the great undertaking of the Canadian Pacific railway, which really did develop the West. I remember sitting here some little time ago, giving strict attention to an address that was delivered here by my hon. friend from South Renfrew (Mr. Graham), and in approaching the question of our great pioneer Transcontinental railway, he said, and he told the truth, and I know the right hon. the leader of the Opposition will agree

that he did: 'It would have put back the development of Canada for a generation had not the Canadian Pacific railway been the success it has been.'

I believe that view as to the Canadian Pacific railway prevails not only on this side of the House, but on the other side as well, and that it is entertained by the people of Canada generally. I have here a clipping from a supplement of the Windsor Record. That newspaper was always a great admirer of Sir Wilfrid Laurier, and I do not blame it for that. The Windsor Record always put my right hon. friend's policy very plainly, sometimes I think a little too plainly, before the people. The right hon. the leader of the Opposition was in Chatham, and he delivered a speech there before five thousand people when he announced his Grand Trunk Pacific railway scheme. The hon. Wm. Paterson, who, we regret, is not with us, addressed that audience, and he made a statement which I shall quote, because it has been argued in that part of the country that the Liberal party was in favour of the construction of the Canadian Pacific railway, but here is what the late Hon. Wm. Paterson said:

> We have at present a transcontinental road in the Canadian Pacific railway, a railway which we once opposed and fought against, but which we now rejoice was constructed when it was.

That is a plain, unvarnished statement of a leading light of the Liberal party, showing the attitude taken by the party in regard to this great national work. Therefore, those who may read what I have to say upon this occasion will not pay much attention to what the lesser lights of the Liberal party have said when a leading light, before 5,000 people, will say: Once we opposed that road, but to-day we are glad that it was constructed when it was. Is there any other authority upon this point? Without preface, I desire to quote the Hon. Mr. Fielding. There are not within the confines of the Dominion of Canada many Liberals who will not believe what the ex-Minister of Finance says, for I do not think I am exaggerating when I say that if in the Liberal party there is one man more than another who has been looked up to during the past fifteen years, it is the Hon. W. S. Fielding. In 'Hansard' of 1903, page 8591, Mr. Fielding spoke as follows:

> Perhaps there were some mistakes of location, perhaps some mistakes in the land policy,

> and in the clearer light of to-day we may be able to see that things were done then which had better been left undone. I am disposed to think that perhaps those things may after all have been only incidental to the difficulties of the time and to rapid construction. I for one do not hesitate to say, in the light of experience, that the Liberal party did entertain alarm and anxiety, which have been proved in the end not to have been fully justified. I for one have no disposition unfairly to criticise to-day. I frankly admit, as one who was then a young man, that I was led to entertain alarm and anxiety. Today I say that the policy of the Conservative party, subject to these qualifications which I have mentioned, has been justified, and in that respect the Conservative party has made a record which they can look back to with pride.

That, I think, is quite sufficient to show that the attitude taken by the Liberal party in those early days was not friendly to this great work. What would have been the consequence if that road had not been constructed when it was? If it had not been for that great railway, which has opened up the West, it would not have been the case when my hon. friends came into power in 1896 that in the southern part of Manitoba a new settler could step in anywhere and be within sixteen miles of a railway. A few days ago I was reading in 'Hansard' a statement made by my hon. friend the member for Edmonton (Mr. Oliver), who if he had been sitting beside my hon. friend who has just spoken (Mr. Carroll), would have pulled his coat when he was talking about the steel industry. The hon. member for Edmonton said:

> I looked over this country, in 1896, and I failed to find anything upon which could be based the growth and development and prosperity of this country.

I say, as a Canadian, as a young member of this House, shame on the man who will take the credit for what has been done by the pioneers in this country, the men who have laboured with plough and with horse, who have laid the foundation upon which this land rests and who have given us this great country as we have it to-day. Upon that great undertaking, which meant so much for the development of this country, our hon. friends opposite were entirely wrong; and if the people of Canada had taken their advice, conditions would not be as they are to-day.

We come to another great issue in the politics of Canada. In 1891, the battle of unrestricted reciprocity was fought in Canada. I was then a young man, only a boy. I did not have a vote, but night after night in my county I attended the meetings of

my right hon. friend's friend, Sir William McGregor. He spoke to large gatherings of people, and the policy which he advocated was the policy of absolute free trade with the United States. Look, he said, at those rascals, the custom houses; put the rascals out; put me in, and the rascals will be put out. It caught. He was put in, but the rascals were not put out. It was a matter of note, however, in many parts of Canada that a number of friends of my right hon. friend and his candidate upon that occasion were so convinced as to the sincerity of my right hon. friend that they loaded up the stuff that they had manufactured before the election and went across to Detroit and refused to pay the duty. We have the evidence of succeeding events. The Hon. Edward Blake, one of the greatest constitutional lawyers Canada has ever seen, gave his opinion that if the policy of my right hon. friend on that occasion had succeeded, this country would not be as it is, with each heart pulsating with loyalty to His Majesty the King, but would be part and parcel of the United States of America. Thank fortune, however, my right hon. friend upon that occasion did not have his way, and Canada has gone on rejoicing and has remained up to the present time, and will we hope forever remain, a part and parcel of the great British Empire.

Now, just on this point of—well, I do not want to be discourteous; but I don't think I would be taken as discourteous if I were to say—this slander of the manufacturers of this country. If there is anything that I abhor it is seeing my hon. friends opposite ballyragging the manufacturers of this country from one end of it to the other with hot air,—and shaking hands with them under the seat. But the people of this country are getting onto it. It worked in 1896, but I do not believe it will work again. The people want something tangible now. This sending of commissioners to Montreal to meet the manufacturers and tell them that they will not be hurt, and my right hon. friend's candidates hollering and proclaiming the gospel of free trade, will not work any more. There is an old adage that a burnt child dreads the fire,—and under this policy of my right hon. friend the farmers got the hot air and the manufacturers got the dough. When Mr. Fielding came back from Washington after the celebrated pact had been negotiated, he went down to Montreal to speak and he told the truth; if I had been there I would have patted him on the back. He was speaking of the manufacturers being able to compete with the older-organized industries of the United States and this is what he had to say:

> It is not so with the manufacturers. The Americans, with their greater power of capital and organization, can beat us as a rule. And if we have free trade, manufacturers would undoubtedly have to close up their factories in Canada. We want manufacturers here. You manufacturers were told in 1897 that if you returned the Liberal Government, dreadful things would happen.

My hon. friend, the Minister of Finance, declares for a policy of moderate protection. And what were the words of Sir John Macdonald when his famous fiscal system was introduced in this House on the 8th of March, 1879? He said: If we had a moderate protective system in this country we could develop our capital and could occupy a higher position amongst the nations of the earth. It follows that as time passes and our industries become developed they will not need as great protection as at the beginning. The Liberal-Conservative party has followed that policy consistently for forty-seven years, and upon it we stand to-day.

I want to make another remark before I touch the main kernel of my address. The third epoch or period in the development of our country, I think, was when the battle of our fiscal independence was fought and won on the 21st September, 1911. You know, there is an old saying—I think it is a poet who says it—that everything comes to those who wait. My right hon. friend undertook to do something for the farmers of western Canada; I think his policy was framed for that purpose. And I want to say here, as a farmer from the province of Ontario, that the farmers of the West have my sincere sympathy.

Sir WILFRID LAURIER: And that is all.

Mr. WILCOX: More than that; but my right hon. friend did not even give them that. I recognize their pioneer conditions. But I recognize also what Canada has done. And I do not think hon. gentlemen opposite are doing their cause justice—I speak of my hon. friend from Assiniboia (Mr. Turriff), my hon. friend from Humboldt (Mr. Neely) and others—when we all know, and the right hon. leader of the Opposition knows it as well as anybody, that they are only hollering 'wolf! wolf!' when there is not any wolf. We all recognize the conditions in the West, and every one of us,

Liberal or Conservative, is willing to put his shoulder to the wheel to do what is necessary in the interests of the farmers of the West, and not only of the farmers but of western manufacturing industries as well. But I am not so sure that there is a common ground upon which we can reach a conclusion that there is this terrible condition that is pictured day by day by hon. members opposite. I do not want to take any credit from the West to which the West is entitled. But is it not a fact that if they are frosted out we are only too glad to buy them more seed; if they are hailed out we are willing to help them? We have built transcontinental railways to traverse the West including the Winnipeg-Moncton line proposed by the right hon. leader of the Opposition which will cost this country $296,000,000. We are building them elevators; we are doing everything that a Government can do, in reason, to help that western country to obviate as far as possible anything that militates against their development. But I was born and raised in the woods of Ontario. My grandfather crossed the briny deep of the Atlantic and settled in the woods of Essex seventy-eight years ago, in the virgin forest, where he had to master the mighty oak and elm; and not only that but had to drain the soil as all the rest had to do it. And I submit that pioneer conditions prevailing in western Canada are not to be compared for difficulty with the pioneer conditions which had to be faced in Ontario and in Quebec too.

Now, the right hon. leader of the Opposition had a large delegation down here in which he became intensely interested—altogether too much so. It appeared here on the 16th December, 1910. A Mr. Green read one of the leading papers on that occasion. I am inclined to the view that my right hon. friend was frightened when these farmers came here by the thousands from the wild and woolly West, where the gophers roam by day and the coyotes howl by night, and here is one thing that scared him. I find this on page 18 of the report:

> What can this Parliament do for this delegation?

It was not a question of what this Parliament could do for this delegation. He went on to say:

> What can this delegation do for this Parliament?

I wish to quote further from the same paper, and I ask hon. gentlemen of this House to give what I read their careful, earnest and serious consideration. After they have meditated upon it by day and by night they will, I am sure, come to the conclusion, as I do, that conditions cannot be quite so bad in the West as hon. gentlemen opposite, who bewail the great gloom that exists in that part of the country, seem to think they are: One would almost think that after September 21, 1911, a great fog had settled upon western Canada. But the sun still shines in the West, as it does in Ontario; the gloom is concentrated, so far as I know, only in the benches of hon. gentlemen opposite. I ask the attention of the House to Mr. Green's words:

> Let me in closing refer to the vast aggregate wealth represented by this delegation, each member of the western part of it, we estimate, has a half section of land valued with its equipment at at least $10,000. There are 30,000 in our western organizations, which means an investment of $300,000,000.

The members of that delegation which came from the great western country where, as our friends opposite say, there is so much gloom and depression, made the assertion that they are worth $300,000,000. Reading:

> If, as our friendly rivals declare, we are only 25 per cent of the western farmers, we would represent the enormous aggregate of $1,200,000,000, and I think we may fairly claim to be the articulate mouthpiece of the whole.

I would point out to our friends from the West, upon whichever side of the House they may sit, that when we recognize that only a few years ago, when, the bison, the buffalo and the red man roamed over the western prairies, the Liberal Conservative party sent through that country a double line of steel rails, with all its branches and affluents; when we realize that twenty years afterwards a delegation comes from that western country and claims to represent directly $300,000,000 of wealth and an aggregation of wealth of $1,200,000,000, surely we must come to the conclusion that conditions cannot be as bad as our friends opposite wish to make us think they are.

Not only has that development taken place, but there has been a splendid advance in the industrial growth of western Canada. I have examined the census statistics of 1911 with a view to ascertaining whether the provinces of the West are enjoying any measure of the benefits of our industrial system which are being realized in the East, and I wish to present the following summary to the House:

Summary showing Industrial Growth of Prairie Provinces, as per Census, 1911.
For year 1910.

Province.	Capital Invested.	Earnings.	Products.
Alberta.. ..	$21,508,664	$ 3,506,057	$15,684,717
Manitoba. ..	38,125,027	9,481,545	44,744,347
Saskatchewan.	4,958,358	1,494,160	4,557,198
	$64,592,049	$14,481,762	$64,986,262
British Columbia.. ..	46,386,682	7,341,948	27,641,036
	$110,978,731	$21,823,710	$92,627,298

Not only are Ontario and the other provinces devoloping very rapidly under our present fiscal system, but these figures seem to me to show conclusively that the western provinces as well are beginning to take on a new life in the development of their industries, and I am of the opinion that they will rank fairly with other portions of the country in beccming great industrial as well as agricultural provinces.

I have quoted the words of Sir John A. Macdonald, and I wish to speak for a moment or two of the development which has taken place under the National Policy, particularly in that part of the country from which I come, and in doing that I do not wish to be considered too local. The Hon. Edward Blake said that it was the duty of every representative to voice the opinions of the particular district he represented. On the 8th of March, 1878, Sir John A. Macdonald (page 857 of 'Hansard') said:

If we had a protective system in this country, if we had a developed capital, we could, by giving our manufacturers a reasonable hold on our home trade, attain a higher position among the nations.

In the same speech he said:

I do not mean that we should adopt a tariff like that of the United States, but one such as the necessities of Canada demand.

And still further on:

It can well be understood that a judicious tariff might on the whole be a moderate tariff.

On page 194 of 'Hansard', 1894, the Hon. George E. Foster is reported as follows:

If there is to be a protective system at all, everybody knows that it must be higher in its inception than as the years gradually pass, when industries have become established and when the industrial development of the country grows apace.

I take the following from the Census report of 1911, which gives a resume of the expansion which has taken place under the National Policy. As these figures are all taken from the census report, I would like to put the memorandum on 'Hansard' without reading it, if the House consents:

The urban population of the Dominion increased during the last decade from 1,771,435 to 2,845,073 for cities, towns and villages of 1,500 and over, and the rural and urban population from 5,371,315 to 7,206,643. The urban capital of manufactures increased during the same period by $581,501,241, and the rural and urban by $800,667,122. The urban earnings of wages and salaries increased by $103,008,306, and the rural and urban by $127,759,066. The urban products increased by $540,415,384, and the rural and urban by $684,922,264. The increase in the urban products of the manufactures of Alberta in the decade was $14.634,281, of British Columbia $16,776,854, of Manitoba $34,786,482, of New Brunswick $10,131,853, of Nova Scotia $25,882,919, of Ontario $275,513,965, of Quebec $158,512,912, and of Saskatchewan $4,298,558. In urban places of Prince Edward Island there was a decrease in the manufactures of $122,440.

A summary of table XIII for cities, towns and villages of 1,500 and over is given herewith for capital, earnings and products in 1910, by provinces, together with their rural and urban totals for Canada, viz.:

Provinces.	1910.		
	Capital.	Earnings.	Products.
	$	$	$
Alberta.....	21,508,664	3,506,057	15,684,717
British Columbia.....	46,386,682	7,341,948	27,641,036
Manitoba.....	38,125,027	9,481,545	44,747,347
New Brunswick.....	22,125,518	5,531,212	23,084,334
Nova Scotia..	67,162,011	7,743,529	40,165,263
Ontario.....	478,035,563	100,662,393	459,576,759
P. E. Island..	742,184	209,081	946,055
Quebec.....	249,892,475	57,385,448	255,367,508
Saskatchewan.	4,958,358	1,494,160	4,557,198
Canada—urban.....	928,936,482	193,355,373	901,770,217
Canada—rural and urban.....	1,247,583,609	241,008,416	1,165,975,639

Also a list of the industries in the Windsor, Sandwich and Walkerville district:

Advance Machine Co.
Agnew Electrical Welding Co.
American Auto Trimming Co.
American Standard Jewelry Co.
Anthony Fence Co.
Bentrovato Co., toilet preparations.
Berry Bros., varnishes.
Bishop Fur Co.
British American Brewery.

Burlington-Windsor Blanket Co.
Canadian Bridge Co.
Canadian-Detroit Lubricator Co.
Canadian Commercial Car Co.
Canadian Moloney Electric Co.
Canadian Alkali Co.
Canadian Postum Cereal Co.
Canadian Salt Co.
Canadian Winkley Co., brass goods.
Canadian Sirocco Co., fans and blowers.
Canadian Roofing Mfg. Co.
Dale Iron Works.
DePree Chemical Co.
Dominion Malleable Range Co.
Dominion Motors, Limited.
Dominion Stamping Co.
DeVilbiss Mfg. Co., automizers.
Detroit Graphite Co.
Detroit Steel Products Co.
Eansor & Co., carriages and auto bodies.
E-M-F Co., of Canada.
Eaton & Co., dye stuffs.
Essex Launch Co.
Ensign Remedy Co.
Excelsior Granite and Marble Works.
Eisenberg & Co., cigars.
D. M. Ferry & Co., seeds.
Fisher Body Co.
Ford Motor Co., of Canada.
Fox Bros. & Co., wood mantels.
Gignac Bros., cigars.
Gramm Motor Truck Co.
Girardot Wine Co.
Grinnell Bros., pianos.
Heinz Electrical Co.
Heinn Co., loose-leaf ledgers.
Heller-Aller Co., windmills.
Horton & Meedel, soda water works.
Hupp Motor Car Co.
Hoover Suction Sweeper Co.
Ideal Mfg. Co.
Ideal Mat Co.
Imperial Silverware Co.
Ideal Packless Valve Co.
Interstate Remedy Co.
F. F. Ingram & Co., perfumes.
E. W. Jeffress Co., extracts.
Joseph Jines, soda water.
Kent Canning Co.
Kelsey Wheel Co.
Kerr Engine Co.
Leather Label Overhaul Co.
Lufkin Rule Co.
Leggett-Platt Spring Bed & Mfg. Co.
La Cottel Mfg. Co.
Leach Chemical Co.
L. J. LaFontaine, furs.
LaForge, A., concrete machines.
McCord Mfg. Co.
McGregor Banwell Fence Co.
John McNee & Sons, cigars.
McKee Lumber Co.
McLean Lumber Co.
Masse Industrial Co., inks, cements, etc.
Meisner Soda Water Works.
Motor Street Cleaning Co.
Murray Brass Co.
Mantello Cigar Co.
Mothersill Remedy Co.
Miller Lighting Co., acetylene machines.
National Cable & Mfg. Co.
National Spring Bed & Mfg. Co.
Nickel Plate Stove Polish Co.
Ontario Asphalt Block Co.
Orleans Vacuum Cleaner Co.
Page Wire Fence Co.
Palmer Medicine Co.
C. Pangborn & Son, welding.
Parke, Davis & Co., drugs.
Peabody Co., Limited, overalls.
Penberthy Injector Co.
Perforated Hone Co.
John Piggott & Sons, lumber.
Power Specialty Co.
Remington Arms—Union Metallic and Cartridge Co.
C. H. Rundle & Son Co., liniments.
R-C-H Motor Co.
W. E. Seagrave, fire apparatus.
Seely Mfg. Co., perfumes.
Shoop Family Medicine Co.
Standard Paint & Varnish Co.
Frederick Stearns & Co., drugs.
Schrieves Medicine Co.
Sparks Washington Co., automobile fans.
Swedish Crucible Stele Co.
C. W. Schimmel, Mfg. chemist.
Frederic B. Stevens, foundry facings.
Toledo Computing Scale Co.
Tudhope Motor Co.
Trussed Concrete Steel Co.
Tate Electrics, Limited.
O. & W. Thum Co., fly paper.
Tiger Mfg. Co.
United States Steel Corporation.
Vanderhoof & Co. medicine.
Victor Steel & Wood Products Co.
Vincent Steel Process Co.
Hiram Walker & Sons distillery.
Walker Pant & Shirt Co.
Walkerville Brewing Co.
Walsh Bros., brooms and brushes.
Wilt Twist Drill Co.
Windsor Machine & Tool Works.
Windsor Carriage Works, M. L. Menard.
Windsor Sash & Weight Foundry.
Windsor Awning & Tent Works.
Waterman-Waterbury Co., furnaces.
A. E. White Machine Works.
Whittaker Stove Works.
Windsor Boiler Works.
Windsor Mfg. Co., auto chains.
Windsor Paper Box Co.
Windsor Pearl Button Co.
Windsor Overhaul Co.
Windsor Turned Goods Co.
J. T. Wing & Co., mill supplies.
Zenner Disinfectant Co.

The census report shows that $1,247,583,609 is invested; 515,203 persons are employed, whose net earnings amount to $241,008,416; and the value of the output is $1,165,975,639. A comparison of the values of products in twenty years is shown in the following table for municipal cities and towns of 10,000 persons and over for the years 1890, 1900 and 1910, as taken for the censuses of the succeeding years:

[Mr. Wilcox.]

Municipal Cities and Towns.	Population in 1911	Value of Products in			Increase per cent of values in		
		1890	1900.	1910.	1890 to 1900.	1900 to 1910.	1890 to 1910.
		$	$	$	p.c.	p.c.	p.c.
Montreal	470,480	67,654,060	71,099,750	166,296,972	5·09	133·83	145·81
Toronto	376,538	44,963,922	58,415,498	154,306,948	29·92	164·15	243·18
Winnipeg	136,035	5,611,240	8,616,248	32,694,349	53·55	279·45	482·65
Vancouver	100,401	1,895,216	4,990,152	15,070,105	163·30	202·20	695·16

Ten cities only in Canada show greater percentage in increase in industrial products than Windsor. These are Winnipeg, Vancouver, Calgary, Maisonneuve, Peterborough, Hull, Sydney, Berlin, St. Mary's, Sault Ste. Marie, and Lachine. Windsor's percentage of increase in products is 150 per cent greater than Montreal, 52 per cent greater than Toronto, 3 per cent greater than Hamilton, 227 per cent greater than Halifax, 25 per cent greater than Brantford, 51 per cent greater than Stratford, 49 per cent greater than St. Catharines, 48 per cent greater than Port Arthur, 58 per cent greater than Chatham; and its industrial expansion has been brought about by the fiscal system which has been the work and progeny of the Conservative statesmen.

I do not wish to take issue with what my hon. friend from Cape Breton (Mr. Carroll) has said in regard to the steel industry, because he has come out as a strong supporter of the principle of a moderate protection for that industry. I presume that it is known to the House that the United States Steel Corporation has bought 1,650 acres in the riding which I have the honour to represent, and that they have announced their intention of putting up a $20,000,000 plant. On the day this announcement was made the Detroit Journal of January 4, 1913, said:

> The Canadian tariff has forced this decision. The protective policy has brought this vast industry to the town of Windsor.

When the announcement was made last week of the Government's intention to place a tax on wire rods the Windsor Record, a Liberal paper in the county of Essex which always advocates the policy of my right hon. friend opposite, said:

Seek to hasten construction of new steel plant, Canada tax of $3.50 a ton on imported steel rods may have that effect.

New York, April 13.—There is every reason to believe that one effect of the action of the Canadian Government in putting a tariff of $3.50 a ton on wire rods, will be to cause the management of the United States Steel Corporation to hasten the construction of the company's proposed new plant at Ojibway, Canada.

Mr. Speaker, can you estimate the value of such a plant to the southwestern portion of the province of Ontario? It means that $20,000,000 is to be invested in this country through the action of this Government. We have every hope that the new tariff will have that result, and it cannot come too quickly for the people in that particular district.

At six o'clock the House took recess.

The House resumed at eight o'clock.

Mr. WILCOX (resuming): When the House rose at six o'clock, I was alluding to the benefits that had resulted from the protective system, and to the number of industries which have been established in the county which I have the honour to represent. In connection with the very great development that has taken place in that portion of the country, let me say that this district is shown by the census returns of 1911 to stand tenth upon the list from the point of view of percentage of increase of industrial products.

With reference to the principle involved in the fiscal system of this country, I desire to place a few quotations on 'Hansard' from the Windsor Record, which is the recognized organ of the Liberal party, and we are always desirous of quoting from a paper which is a recognized opponent, especially when it expresses a view favourable to that which we believe in ourselves. It seems to me that it would be recognized or accepted, not only by Liberals but by Liberal-Conservatives, because the view is in accordance with the belief which they have in regard to the fiscal system. On March 28, 1913, the following appeared in the editorial columns of the Windsor Record:

Business confidence prevails throughout Canada.

In contrast to the unsettled business conditions that prevail in many parts of the United States there is a tone of optimism in commercial circles in Canada.

Across the boundary there is apprehension with respect to the results of the Underwood tariff and its effect on business. There is more or less uncertainty over the state of the money market. The sob squad is particularly prominent along Wall street.

On this side the manufacturers show no signs of nervousness. They recognize the fact that Canada is assured of tariff stability. The whole country is making tremendous progress. Many factories are behind with orders. There is no evidence of slackening up in any line of manufacture.

Mr. ROGERS: Do you mean to say that is a Liberal paper?

Mr. WILCOX: It is the recognized organ of the Liberal party. I have no doubt that there is a reason for the view which that recognized Liberal organ expresses in that particular editorial. It is the guarantee of the permanence that was instilled into the fiscal system of this country by the declaration of the Canadian people on the 21st September, 1911. It was recognized with us on the border that if we were to have a great industrial development we must have a stable tariff, and that what had militated against the industrial growth and development of the city of Windsor in later years to an extent greater than anything else was the uncertainty of the tariff policy of the Liberal party.

It is easy to understand that. Suppose you were a financial man in the city of Detroit, suppose that you had $100,000, or $200,000 or $500,000, and that you were prepared to invest that in Canada; if a policy of free trade was to prevail it would mean a loss for you to invest that money in Canada. Therefore, you can at once recognize the importance of a stable tariff, and the fact that the Canadian people, through the medium of the Conservative party, on the 21st September, 1911, declared for a moderate, protective policy is why we have never seen such industrial growth and development in the part of the province from which I come as that which we have seen since the 21st September, 1911. In the same paper, there is another editorial as follows:

Our Natural Resources.

When we get up at banquets we boast of our great natural resources in Canada, but they aren't much good to us if we allow unlimited export of raw material to help build up industries in the United States or some place else. The Record heartily agrees with the Hamilton Spectator's declaration that the Dominion Government cannot too soon adopt the principle that there should be an export duty on everything in which Canada has a natural monopoly.

I ask the House if that is the Liberal doctrine, if that is the doctrine to which our hon. friends opposite adhere, or is that the doctrine to which the Liberal-Conservative party has plainly adhered since

the fiscal policy of Sir John Macdonald was proclaimed and established in this country in 1878.

Reference was made this afternoon by my hon. friend from Cape Breton to the unemployed. I desire to place upon 'Hansard' a quotation from the same journal, the Windsor Record, dated January 21, 1914:

> Unemployed do not need city's help—thirty dollars instead of one thousand sufficient to take care of the needy—only four families in need of help.

So that I am convinced that this wail that goes up from my hon. friends opposite, who are trying to put a bogey before the people, that there is stress, that prosperity does not prevail throughout Canada, is simply an attempt to advance an argument based upon politics and politics alone.

Forty-seven years ago, in this House of Commons, speaking on the question of protection and the proper fiscal system for Canada, Sir John Macdonald said:

> There is another thing in which I believe. I believe in the protection of Canadian labour. The hand that holds Aladdin's lamp must be the hand of toil. The nation rests upon the shoulders of its workers, and I want the Canadian labouring man to have enough to wear; I want him to have enough to eat; I want him to have something for the ordinary misfortunes of life. I want him to have the pleasure of seeing his wife well dressed. I want him to see a few blue ribbons fluttering about his children. I want him to see the flag of health floating in their beautiful cheeks. I want him to feel that this is his country and the system of protection is above his labour.
>
> And I will tell you why I am for protection too. If we were all farmers we would be stupid. If we were all shoemakers we would be stupid. If we all followed one business no matter what it was we would become stupid. Protection of Canadian labour diversifies Canadian industry, and to have it diversified touches and develops every part of the human brain.

Our country, by reason of the system of protection, by reason of the diversity of industries, which have developed the high brain power of our people, has risen to a higher destiny.

There is a distinct issue between the two political parties in Canada upon the question of free trade and protection; and as to free trade I desire to quote from a work entitled, 'Great and Greater Britain,' by J. Ellis Barker, at page 126, what has happened under free trade in old England. Mr Barker says:

> Unfortunately, our free traders look at our economic problem chiefly from the point of view of the trader and of the moneyed private purchaser. They take a greater interest in our foreign trade, which is carried on by the few, than in our domestic production, which is carried on by the million. They take a greater interest in the cheapness of commodities than in the welfare of those men who produce them . . . Free trade means cheapness especially cheap labour, cheap men. Our record emigration has been caused by record unemployment. Most of our 10,000,000 emigrants have passed through the ranks of the unemployed. Free trade has meant widespread, acute, and permanent unemployment for our workers.

Thus writes a very eminent authority upon the question of free trade in England, and yet my right hon. friend (Sir Wilfrid Laurier) will tell us he adheres to that principle, which has brought about such results there, and which I fear, if put into practice, would bring about like results in this country. It is a well-known fact, I do not think my right hon. friend, Sir Wilfrid Laurier will dispute it, that he did preach consistently a policy of free trade, and his predecessor, Mr. Alexander Mackenzie, preached the same doctrine. The right hon. gentleman justified it on the ground that we have great natural resources in Canada; that these natural resources could be transported to and manufactured in the United States, that they could be retransported back into Canada; and in fact I have read speeches in this strain by Mr. Mackenzie and by Sir Richard Cartwright, when these gentlemen were speaking of the great undertakings of Canada. Until a very few years ago, the Liberal party entirely ignored the industrial life of this country, as being a great factor in our development. Sir Wilfrid Laurier, speaking on the attitude of the Liberal party towards our industries in 1906, at Winnipeg, said:

> We stand for freedom. I denounce the policy of protection as bondage; yea, bondage. I refer to bondage in the same manner in which the American slave was bonded, in the same manner the people of Canada, inhabitants of the city of Winnipeg especially, are toiling for a master who takes away a large percentage of your earnings, for which you sweat and toil.

Sir Wilfrid Laurier again said:

> From this moment we have a distinct issue with the party in power. Their idea is protection, our idea is free trade.

Free trade was the policy of the Liberal party for a great number of years. Sir Wilfrid Laurier in 1896 said:

> I call upon you one and all to pronounce at once and give your emphatic support to the proposition that we shall never rest until we have wiped from our system that fraud and robbery, (protection) under which Canadians suffer. Our policy should be the policy of free trade such as they have in England.

And yet my right hon. friend, when he took hold of the reins of power in 1896, adopted a policy of protection. He and his friends took a right-about-face on the question, and during the fifteen years they were in power they were protectionists. But to-day, when relegated again to opposition, they go back to the old theory of free trade. My right hon. friend's motto seems to be: A Cobdenite I was born; a Cobdenite I will die; but while I am in power I will be a loyal protectionist. Upon this very question, Mr. German, the member for Welland, had something to say. Here is what he said:

> In 1896 the Liberal party did succeed, but happily in that year the Minister of Finance, Mr. Fielding, the Minister of Customs, Mr. Paterson, and the Minister of Trade and Commerce, Sir Richard Cartwright, went throughout the length and breadth of the country gathering information and ascertaining the ideas of the business people and of the farmers as to what should be the correct policy to adopt as the fiscal policy of Canada. Having gathered that information intelligently, thoroughly and exhaustively, the Minister of Finance made his Budget speech in 1897, and in that speech declared for moderate protection and a stable tariff. After having listened to all the delegations and deputations that desired to be heard, the Government came to Parliament and said: We will stand by, if not the National policy as then existing, at any rate a moderate form of the National Policy, and very little modified at that.

To what extent was it modified? It is a very easy matter to compare the last Conservative tariff of 1894 with the tariff which my right hon. friend contends is the Fielding tariff, and see what these changes were. I desire to place those changes upon 'Hansard.' Under the old Conservative tariff, the first group of items was ales, beers, wines and liquors—ten items. These were left severely alone, save that one was changed—and increased. Can my hon. friends opposite reasonably contend that any advantage came to the development and growth of this country because they changed and increased ten items of whiskies and ales?

Sir WILFRID LAURIER: It abbreviated the use of liquor.

Mr. WILCOX: Free use of it in many of your elections. Agriculture, animals and dairy products covered 93 items under the tariff of 1894. Of these 93 items, 81 were left unchanged, 5 were decreased, and 6 increased. One was changed from specific to ad valorem. Is this the principle of free trade about which we heard so much in 1896, and which was going to put these rascals of customs houses out of business? The next item is fish and products of the fisheries, 19 items. The duties on these 19 items were all heavy, and all were left unchanged under the tariff of 1897. Books and papers—18 items, all left unchanged. Chemicals and drugs —14 items, 9 unchanged, 4 increased and one lowered. Opium—3 items, all unchanged. Colours, paints, oils, varnishes —21 items, 14 unchanged, 3 increased and 4 decreased. Leather, rubber and manufactures thereof—11 items, 8 unchanged and 3 increased. Jewellery and materials therefor—8 items, 6 changed, 1 increased and 1 decreased. Textiles, furs, &c.—51 items, 22 unchanged, 17 increased, 6 decreased and 6 readjusted as between specific and ad valorem. Sundries—26 items, 21 unchanged, 3 decreased, 1 increased, 1 new. Sugar, syrups and molasses—7 items, 1 unchanged, 6 increased. Excluding the items of iron and iron manufactures, there were 348 items in the tariff, of which 244 were unchanged, 54 increased, 34 decreased and 16 readjusted as between specific and ad valorem. That was the tariff of my right hon. friend and his party, after promising to the people of this country that, if his party were returned to power, they would have free trade. My right hon. friend must admit that in the adoption of such a system, which he claims is a curse, he is in the position of having advocated a policy in which he had no real belief and of having obtained power by false pretences. But my right hon. friend was pretty wise in his day and generation. He advocated free trade. He came into power and, as I have pointed out from the changes which have taken place in the tariff, he adopted a protective policy. His supporters in this House and in the country, especially in the farming districts, proclaimed free trade, while, as I pointed out this afternoon, they were shaking hands with the manufacturers on the hustings. My right hon. friend, however, is in opposition again. Free trade again! I desire to quote a little parody that I cut from a paper. It has been made over to suit a particular purpose. It goes:

> I'm sitting on the stile, Borden,
> Where I spent many an hour,
> Before the days of ninety-six,
> And blessed reign of power:
>
> It's just the same old stile, Borden,
> (So useful in a pinch)
> The dear old-fashioned tariff stile,
> I builded, inch by inch.
>
> Do you remember ninety-three?
> (Ah, no, before your time)
> When we declared for trade, all free,
> (Then I was in my prime):

Right in the fight through thick and thin,
My Cobden medal shone,
(But just as soon as we got in
We kept the duties on).

I gloried in a surplus then:
For years I kept it up,
I let the trusts and middlemen
Drink from the tariff cup:

"The people" seldom crossed my mind,
(I'm sorry for that now),
They never had a chance to find
Or milk my fiscal cow.

So I'm sitting on the stile, Borden,
I'm sure you'll understand,
I'm in a quandary again,
I don't know where to land:

But now of power and prestige shorn,
I'll raise my voice on high,
A Cobdenite, sirs, I was born,
A Cobdenite I'll die.

I believe I am putting this in a courteous way; but I want to point out to my right hon. friend that he has been insincere in his policy. And I am inclined to the view that the farmers of Canada, to whom he appeals, will not respond to that appeal to the degree to which they responded on former occasions. For, as a class, we farmers of Canada are beginning to recognize the benefits that flow from the home market that has been developed by the policy of protection. The policy of free trade worked better years ago, before there was an industrial development. But that industrial development was the very object of the protective system, with the view to affording to the farmers of Canada a home market. They could not expect to have that home market until our industrial system had been built up. But my right hon. friend in years gone by said that that never could be accomplished; he said we were taxing ourselves for that which would yield us no results. But to-day, when the farmers of Canada are receiving prices for their products equal to the prices paid to any farmers of the known world, he jumps to the other side of the fence and says: You farmers are getting too much. Duties must be abolished.

The Minister of Finance, as reported at page 2543 of Hansard, said:

> There is no doubt that the severe and prolonged financial stringency through which the business world has passed and from which it is only now emerging marked the culmination of one of those so-called trade cycles well known to economists. The phenomena of these cycles are well known. First a surplus of loanable capital attended with easy money conditions and low interest rates, next commercial activity promoted and sustained by abundant supplies of such capital resulting in profitable trade and rapid extension of enterprise, next, in consequence of such rapid extension, an undue proportion of the money supply of the world finding its way into fixed capital, then shortage of liquid resources among financial institutions, followed, as a matter of necessity in order to rectify conditions, by advancing rate of interest with curtailment of credit and consequent restriction of trade.

Then he goes on to say:

> Conditions will, I think, gradually improve with returning confidence and easier money. By reason of the autumn conditions of last year which permitted soil preparation on an unsual scale in all parts of the Dominion, the outlook for agricultural production this year is most favourable and we may look forward to increased production in those other great departments, our fisheries, forests and mines.

Now, in 1908 there was a world-wide financial stringency. My hon. friend from South Cape Breton (Mr. Carroll) pointed out that there was a reduction in the number of immigrants to Canada last year, and this he held as an indication of the existence of hard times, for which he sought to make the Government responsible. But what happened in the financial stringency of 1908? Here are the figures:

	British.	Foreign.	United States.	Total.
1907-8. ..	120,182	83,975	58,312	262,469
1908-9.. ..	52,901	34,175	59,832	146,908
Reduction in year of financial stringency..				115,561

Now, if my hon. friend from South Cape Breton could base upon a falling off in immigration an argument to prove the existence of hard times attributable to this Government, how can he deny that the reduction in immigration in the last financial stringency was due to the late Government? In 1908-9 our trade was reduced by $11,000,000; our debt was increased by $46,000,000. But there was no evidence then that hon. members opposite held that hard times were due to the action of the Liberal party then in power. The Finance Minister of this country to-day is a man of breadth of view. I confess that when I first heard his name announced as Finance Minister I was not acquainted with the man; the only thing I knew of him was that he was forty-seven years of age. But now I know that the wisest choice has been made by the Prime Minister that could be made in the Dominion of Canada. I spoke a moment ago of the increase in the debt of Canada in 1909. What was it that was paramount in its effect in sending this country on its prosperous way? In the year 1910 the farmers of Canada, in the East and in the West, put their shoulders to the wheel and the reports will show that they produced $4,000,000 of wealth more

than they had produced the year before. When the products embodying that extra wealth were sent out across the ocean to the distant markets of the world they brought back millions of wealth to Canada. These millions were infused into the business wealth of the country and Canada went again into the ways of prosperity. My hon. friend the Finance Minister refers to the very same thing in his Budget Speech. He says that the conditions were good last fall; that the soil was in a good condition, and that if the farmers reap a good crop, which we have every reason to think they they will do, the present commercial depression will be a thing of the past. This shows the important position which the agriculturists of this country occupy. When commercial depression prevails throughout the land it is to them that Parliament looks to put their shoulders to the wheel, to go down to mother earth and to bring out that wealth, which when infused into the business of this country will place it on the road of progress and development.

I desire to place on 'Hansard' a synopsis of a report of the Department of Trade and Commerce as to the output of the farms of Canada. It is as follows:

> Upon a total area under field crops of 32,449,000 acres a harvest has been reaped the value of which, calculated at average local market prices, makes a total of $511,951,000. The area under wheat last year was 9,758,400 acres, of which 781,000 acres represent the harvested area of fall wheat grown principally in Ontario and Alberta, but also to a limited extent in Manitoba, Saskatchewan and British Columbia. The total production of wheat was 199,236,000 bushels of the value of $123,522,000. Fall wheat produced 16,396,000 bushels of the value of $13,735,000. Oats upon 9,216,900 acres yielded 361,733,000 bushels of the value of $116,996,000, barley upon 1,415,200 acres yielded 44,014,000 bushels of the value of $20,405,000 and flax upon 1,677,800 acres yielded 21,681,500 bushels of the value of $19,626,000.

The point I am coming to is this: From 292,850 acres, yielding 56.58 bushels of husking corn an acre, there was obtained a total of 24,569,800 bushels valued at $10,325,040, and from 278,740 acres, yielding 10.74 tons of corn for fodder or ensilage per acre, there were obtained 2,858,900 tons valued at $13,557,500, the whole crop being worth to the country the sum of $25,972,900. If you examine the agricultural conditions in the great province of Ontario, you will observe that each particular district is suited to the production of a particular crop. The southern portion of the county of Essex is a fruit district. You can go farther east into the districts of Ridgetown and Highgate, where there are thousands of acres particularly adapted to the production of beans. You can go farther east into the splendid county of Wentworth and there you will find a district which is particularly suited for the production of apples. If you go into the Niagara district, you will find a part of the province which is specially adapted to the production of fruit. In the Wellington and Guelph districts you will find many acres particularly suited to the production of stock. The point I am coming to is this; in that part of the province where fruit, for instance, is produced, the farmer is entitled to a moderate protection upon that which he produces. The tariff of 20 or 30 cents a bushel on beans, which are produced as a specialty in the Ridgetown district, gives the Canadian producer of that particular product of the soil the advantage of his own market through protection. Going farther east to the fruit district, you will find farmers engaged in a profitable business. Why? Because they have the advantage of a tariff that protects their output. A few days ago, when I was unavoidably absent from the House, the question of tobacco was brought up by the hon. member for West Kent (Mr. McCoig). I congratulate him for bringing it up; he did the proper thing, and I am not criticising him for so doing—I praise even a Liberal when he does his duty. But here is the point: There is a section in the southern part of Kent and Essex which is particularly adapted to the production of tobacco. In order to stimulate that industry the federal Government has imposed a duty of 28 cents a pound. When the Minister of Inland Revenue was getting his Estimates through the hon. member for West Kent (Mr. McCoig) asked him if he was going to put a farmer's tariff on raw tobacco. The Windsor Record reports the incident as follows:

> 'I'll give consideration to the question raised by the hon. member for West Kent,' replied Mr. Nantel.
>
> 'That is hardly a fair or sufficient answer,' persisted Mr. McCoig. 'Is he prepared, if he finds conditions as the farmers allege, to take tariff action on the matter? Will he give a farmer's tariff at once?'

I respectfully submit that my hon. friend should come across to this side of the House because that is the doctrine to which we adhere. If free trade is the thing, why not free trade in tobacco, and if we are going to have a protective system in this country let it apply to all the interests in this country with equality.

What does the hon. member say as to the product which is the king of all crops in the north riding of Essex and Kent—corn? In Canada we produce $10,325,400 worth of corn. As I said, the tobacco grower in Essex is entitled to 28 cents a pound protection on his product; the fruit grower within ten miles of him is entitled to 30 cents a bushel protection on peaches; the men who till the soil in the neighbourhood of Ridgetown and Highgate have 25 cents a bushel on their product, and the stockmen in the vicinity of Wellington also receive protection. I ask this Government upon what grounds they can justify giving all these neighbours of mine protection in their products and not giving protection to the corn grower in the county where I live? Hon. gentlemen opposite talk about free wheat, but it is votes they are after, not free wheat. We have had experience of free corn. If free corn is not a good thing for the farmers in our part of the country, I do not believe free wheat will be a good thing. As a result of low freight rates from Chicago the farmers of the States can sell in our home market on much more favourable terms than we can. I desire to place these railway rates on 'Hansard.' This schedule shows the disadvantage under which the farmers of my county labour in regard to freight rates:

9 p.m.

Grand Trunk Railway—Corn Lake Tariff, C. K. 102—Effective February 1, 1909.

From Detroit Elevators to Eastern Points in Canada. Still in force.

		Windsor, Ont., rate.	
	Bush.	100 lb.	100 lb.
To Niagara Falls, Hamilton, Stratford, and Lucan	4½c.	8c.	8c.
Stations north of Guelph, Stratford and Lucan	4½c.	8c.	10c.
Stations north-east Georgetown and Hamilton; to Peterborough, Madock and Belleville inclusive, including branches	5½c.	10c.	14 to 15c.
Stations east of Belleville to Lyn inclusive	6½c.	11c.	16c.
Stations east of Lyn, Ottawa, Hawkesbury and Rockland	8¼c.	14½c.	
Stations on Vermont Central Ry. in Canada to Waterloo, Que.	7½c.	13c.	17c.
Stations on Intercolonial Ry. east of St. Rosalie Jct. to Lévis and St. Henry Jct., inclusive	8¼c.	14½c.	20 to 22½c.

Stations from Windsor Jct., Nova Scotia, to Pictou	9c.	16c.	25½c.
Stations east of Lévis and intermediate to Halifax and New Glasgow	10c.	17¾c.	22½ to 28c
Stations to Point Tupper, Sydney, North Sydney and Mulgrave, inclusive	12c.	21½c.	27 to 28c.
Fredericton, N.B.	10c.	17¾c.	22½c.

There is a shipping bill of the Canadian Pacific railway under which a car of corn was consigned from Gilbert's Bend, Indiana, 300 miles beyond Chicago, that corn was brought right across our own border over the Canadian Pacific railway, through our own corn district—

Mr. A. W. CHISHOLM: Your own railway.

Mr. WILCOX: Yes, sir—and delivered in the eastern portion of Ontario at a rate equal to what we have to pay.

Mr. CHISHOLM: What road did that come over?

Mr. WILCOX: It came over the Canadian Pacific railway.

An hon. MEMBER: What is the date of the bill?

Mr. WILCOX: January 28, 1913. I contend that that is not fair. I contend that, if we are to have a protective system in this country, it ought to be fair and equitable to all interests and there is no just ground why the farmers should have to grow and sell their corn in the open market, when the United States produce seven-eighths of the corn crop of the world, and when every other product which the farmer raises, is entitled to, and does receive, the advantage of tariff protection.

In looking over the political history of this country during the last fifteen years, I would say that the greatest weakness in the Government has been that it has practically been one man government. I understand party government to be organized public opinion and that members are elected to this House because they represent the majority of public opinion in the particular district from which they come. Upon this point the Hon. Edward Blake said:

I understand it is the duty of the leader to be, as far as possible, the leader of the whole party, and not of any section. It is a part of

his duty to collect the common sense, and to ascertain what I may call the average condition of party opinion upon the public questions of the day; so far as consists with individual freedom of thought to guide, while he is himself acted on by that opinion; to take care that that average opinion so settled is effectually represented. * * * It has been well said that no leader could succeed who should be called on at all times to formulate opinions on all possible questions.

I am inclined to believe that the leader of the Liberal party in the last fifteen years has not based his policy upon the well considered judgment of his supporters. I believe there is evidence to show that that is the fact. We remember what happened in 1897 why my right hon. friend, behind closed doors and not when the session was on, entered into a hard and fast bargain with Mackenzie and Mann, to construct a railway into the Yukon. When that Bill was brought down to the House it was fought and it was killed in the Senate. The road was subsequently built and this Government had no subsidy to pay but Parliament had to vote Mackenzie and Mann $282,000 for damages for breach of contract. That is not in accordance with the principles upon which our constitutional government should be carried on. Of course I know that the caucus brought men into line. There were judgeships, commissionerships, &c., but yet it is a fact that Mr. Tarte, Mr. Sifton and Mr. Emmerson were squeezed out. Mr. Bourassa, a man of some independence, had to get out; Mr. Richardson from the wild and sturdy West who expressed some independent views of the Liberal party had to get out, and Mr. A. G. Blair, the Minister of Railways and Canals, had to get out when there was introduced into this House a momentous question upon which, I think, he should have had something to say. The following has been taken from a speech delivered by the present Prime Minister on the floor of this House in 1904:

In committee in June, 1903, some members from the vicinity of Quebec city asked the president and the manager of the Grand Trunk to consent to the extension of the proposed line to the city of Quebec. This was followed by another request for an extension from Quebec to Moncton, N.B., and both extensions were agreed to by the Grand Trunk representatives.

Thereupon negotiations privately took place, behind the back of the Minister of Railways—Hon. Mr. Blair—between Sir Wilfrid Laurier and Mr. Hays of the Grand Trunk, the result of which was that the Government undertook the construction of those two extensions, and of a section (about 900 miles) from a point above North bay to Winnipeg, which the Grand Trunk had proposed to build.

There we see my right hon. friend the leader of the Opposition, behind closed doors, with representatives of the Grand Trunk Pacific, undertaking and agreeing to proceed with the construction of this line east of Quebec, which is recognized to-day to be a waste of $35,000,000. By that agreement, which was effected by my right hon. friend behind closed doors and in the absence of the Minister of Railways, he, in my judgment, put a chain around the necks of the people which they will not loosen for generations to come.

My right hon. friend exercised a good deal of control over the hon. member for South Renfrew (Mr. Graham) because that hon. gentleman, in his speech in defence of his Government, said, 'Hansard,' March 24, 1914, page 2056, in connection with the proposed terminal at Winnipeg:

I walked the proposed route, afterwards taken for the straight entrance into the city of Winnipeg, and I came back to the city of Ottawa and told the Prime Minister of the day that I was unalterable in my view that that was the proper entrance for the Transcontinental, and I would not change my decision. I want to repeat that I am as proud of that as of anything I ever did in my public life. When pressure was brought to bear on me to induce me to change my decision I went further; and I am not telling tales out of school when I say that I went to the extent of telling my leader that he could have my resignation as Minister of Railways if he sought to change that entrance into the city of Winnipeg.

The hon. gentleman from South Renfrew (Mr. Graham) practically said: I had my way, and because I had my way there stands out pre-eminent in my public life the grandest thing I have ever done.

The Government now in power is to be congratulated for the progressive policy it has adopted in connection with the rural mail delivery. The ex-Postmaster General (Mr. Lemieux), who is to follow me, I understand, did not make the first announcement as to the rural mail delivery service, and if I am wrong in that I stand to be corrected. The first announcement that was made in the Dominion, with regard to rural free mail delivery, was made by the Right Hon. Robert Laird Borden in his Halifax manifesto, and subsequently the ex-Postmaster General at St. Catharines made an announcement that he would establish rural mail delivery, but only on established mail routes, meaning these points where there was a contract let for carrying the mails from the stations to the post offices. Rule 1 of the Post Office Regulations of 1909, with respect to rural mail delivery, reads:

The Post Office Department has decided to undertake the delivery and collection of mail matter to and from persons residing in rural districts along and contiguous to the line of travel of all existing stage routes of one mile and upwards in length upon receipt of a properly signed petition for such service from the residents of each of the rural districts traversed by such stage routes.

That was the extent of the rural mail delivery under the late Government, but when the Conservative Government came into power a new policy was adopted, old things had passed away and all things had become new. The following communication was sent out as a declaration of the policy of the Conservative Government with regard to rural mail delivery:

Re the inaugration of rural delivery and the department's policy in regard thereto, permit me to say that the department has decided, on the recommendation of the majority of the members, and in order that satisfaction may be given generally throughout the country, to adopt a policy for the establishment of rural delivery throughout the Dominion by installing a system of routes in the districts where the demand for rural delivery is such as to warrant it.

Mark my words: ' On the recommendation of a majority of the members.' That is the way to arrive at a policy; that is constitutional government; that is establishing rural mail delivery, not behind closed doors and back doors with representatives of the Grand Trunk Pacific and other railways, but on the recommendation of the majority of the members of Parliament. And as a result of that progressive declaration of policy, I have been able to have established in the north riding of Essex, 420 miles of rural mail delivery which is giving 2,000 farmers of my county mail every day. Be assured they appreciate it. I very much regret that the ex-Postmaster General (Mr. Lemieux) did not show himself progressive enough to reach out, so that we might have had this beneficial system established years ago.

Speaking of what has been accomplished by the present Government, I think that under the conditions under which this Government has worked and laboured, having regard at times to the unreasonableness and stringent opposition that has been offered to the measures which they pledged the people of Canada they would put into force if returned to power, this Government has proven itself the most progressive government that the Dominion of Canada has seen in a generation. What has this Conservative Government accomplished in the short space of two and a half years, and it only seems like a dream since the general elections, but I know it seems like years to our hon. friends opposite. In the short space of two and a half years this Government has undertaken the following great projects:

The extension of the boundaries of Ontario, Quebec and Manitoba.

The Aid to Agriculture Bill appropriating ten million dollars over a period of ten years for agriculture instruction throughout Canada.

The West Indies agreement with improved steamship service.

The reduction of cable rates to the West Indies and the British Isles.

The inauguration of a greatly improved tri-weekly mail service between Canada and Great Britain.

The new arrangements in regard to marine insurance on the St. Lawrence and reduction of rates to Halifax.

The magnificent dry dock under construction at Quebec, with similar dry docks proposed at Halifax and Esquimalt.

The bill to provide for pensions to the Fenian Raid veterans.

The Naval Aid Bill. (Defeated by the Senate.)

The Highways Bill appropriating $2,500,000 for road construction in two years. (Defeated by the Senate.)

The Branch Railway Bill, providing for the acquisition of branch lines in Quebec and the Maritime provinces to build up the Intercolonial railway. (Also defeated by the Senate.)

The Bill to establish parcel post system recently inaugurated.

The development of national harbours at Halifax, St. John, Quebec, Montreal, Toronto, Hamilton, Port Arthur, Fort William, Vancouver and Victoria.

The completion in such a short space of time of the National Transcontinental railway.

The construction of the Hudson Bay railway so far advanced that 150 miles have been graded and one-half of the work finished in 1914.

The contracts awarded for two out of three sections of the Welland canal, with two more sections to be called for shortly.

The construction of a government-owned terminal elevator at Port Arthur to handle 2,500,000 bushels of wheat.

The establishment of a policy of interior terminal elevators owned by the Government for which two contracts have already been let at Saskatchewan and Moosejaw.

It is very much to be regretted that the Government has been hampered in its measures for the benefit of the whole country by the opposition of the Senate of Canada. I regret that the Senate has seen fit to defeat the Highways Bill, but I remember the words of Edward Blake:

> You might as well ask a wolf to select a sheep dog to protect the sheep from the ravages of the wolf, as to ask the Senate of Canada as it is now constituted to do their duty to this great country, or the Empire, if they thought such a course would militate, against the polisuch a course would militate against the polimons.

That is a reasonably good showing for any Government to make in the short period of two years. It is no exaggeration to say that the present Administration is endeavouring to the best of its ability to carry into effect the will of the people of this country. The Premier of this country, the Right Hon. R. L. Borden, issued a manifesto in which he set forth his policy. Upon that policy he was elected, and he has consistently, honestly, conscientiously, intelligently and to the best of his ability endeavoured to carry into effect that which he promised the people before the election of 1911. I believe the people will accept what he has done as in their best interest, and will agree that he is giving an honest and conscientious administration.

Hon. RODOLPHE LEMIEUX (Rouville): Mr. Speaker, I hope not to delay this House too long by the remarks which I intend to offer on the questions of to-day. I have listened with great attention to the speech delivered by my hon. friend from North Essex (Mr. Wilcox). I noticed that in one portion of his speech he was very fond of quoting what he considered a very high authority against free trade, which nobody preaches in this chamber. He quoted Mr. Ellis Barker in order to prove that free trade brought poverty and destitution in England, which of all countries to-day is the most prosperous, and which has been able to fare best during the cycle of commercial depression and financial stringency through which the whole world has passed of late; but I suppose that my hon. friend, when quoting Mr. Ellis Barker, had in mind that under a high protective tariff there is no poverty and no destitution. This is not the place nor the time for an academic debate, but I shall only answer my hon. friend's argument by quoting just a few lines from the Montreal Gazette of yesterday, showing the conditions under a protective Government which boasts of its high protective principles—and we are supposed to fare well even during the financial stringency and the hard times which exist in all parts of the world. The Gazette does not report what happens in the county of Essex or in the beautiful town of Windsor, but it reports for the small town of Montreal and for the poor people of Montreal. Here is what I read:

> More destitution than in winter—Free refuges find demands for shelter greater and work scarcer—Unemployed fill city, while immigrants seeking work are adding to the down-and-out class, say charity workers.

Let me quote a few lines:

> That conditions of unemployment and destitution in the city following an unusually severe winter, have not improved at all with the advent of spring, and are if anything worse here than in the middle of the winter, is the consensus of opinion of the superintendents of the various free and cheap refuges in Montreal, who come into more intimate contact perhaps with the down-and-outs than any others.

And there is a whole column quoting facts and figures as regards the hard times in the city of Montreal.

My hon. friend stated that he was a strong party man, and I have no objection to his being a party man. I also am a party man. I believe in a system of government by party, and he and I are in excellent company, because the greatest parliamentarian of the eighteenth century, Edmund Burke himself, declared that party government was the best measure ever devised by man to govern men. My hon. friend belongs to the Conservative party. I take pride in belonging to the Liberal party. His party, in my judgment, represents reaction; the Liberal party represents progress. When I read the Budget speech of my hon. friend the Minister of Finance, I am obliged to say that the characteristics of his Budget are as reactionary as the party to which he now belongs. It is a most reactionary Budget; it is a complete surrender to the interests and the manufacturers of Canada. The country was awaiting anxiously a downward revision of the tariff, and it is now committed to an upward revision. Minus a five per cent reduction on some agricultural implements, which is a mere sop to the farming community of Canada, the tariff this year completely ignores the great farming community, while it disregards all the real grievances of the West. It bangs, bars and bolts the door to the consumers clamouring for a reduction of taxation. I am not surprised at that; nobody is surprised. The interests are predominating in this country

under this benign Government. We all know that the big interests won the election of the 21st of September, 1911. Now they receive their reward at the hands of the Government. The farmers on the other hand receive the cold shoulder, while to the consumer is thrown a polished stone which will come under the form of a blue-book when the Commission on the High Cost of Living finds time to report. Considering the consequences of that reactionary Budget, with its tendency towards an upward revision of the tariff, I would be inclined to say, repeating an old historical saying, 'It is worse than a crime: it is a blunder.'

My hon. friend the Minister of Finance prefaced his remarks with a declaration of principles. He stated that from now on he, his Government and his party stood for the National Policy; he reiterated the statement that the Government was committed to a policy of protection. Nor did he fail to intersperse his speech—a very able speech—with sneers at those of us who still believe that reciprocity was not such a bad thing for Canada after all. Since he has thought it proper to make this declaration of principle in favour of high protection, may I not be permitted to make a little historical survey to show him what protection was meant to be from its inception in this country? Perhaps it may be the fashion for some months to come to sneer at reciprocity and to say that the Liberal party blundered in 1910-11 in advocating that policy. Well, I think I can easily demonstrate, and I think you yourself, Mr. Speaker, being one of the fathers of the House, could teach the hon. gentlemen sitting at your right, that when they sneer at reciprocity they, by that very act, defame their own party, deride their own policy and denounce their old chieftain, Sir John A. Macdonald. Sir John A. Macdonald was himself an ardent advocate of reciprocity, as you well know. The National Policy which he was instrumental in introducing was meant, in his judgment, to pave the way to reciprocity; it was to be—to use his own language—the key to unlock the gates of wider markets; it was to be the lever to remove the fiscal barriers standing between this country and the United States of America.

Now, what happened in 1877, when Sir John Macdonald occupied the seat now occupied by the right hon. leader of the Opposition (Sir Wilfrid Laurier)? We had at that time a low tariff. Hon. Alexander Mackenzie was the Prime Minister of Canada. We were passing through an economic crisis which hovered not only over Canada but over the United States and the world at large. Sir John A. Macdonald was watching his opportunity to impress the people of Canada with the belief that the time had come for a change. On the 7th of March, 1877, he moved the following amendment in this House:

> This House is of the opinion that the welfare of Canada requires the adoption of a National Policy which, inter alia, will restore prosperity to our struggling industries now so sadly depressed; will prevent Canada from being made a sacrifice market; will encourage and develop an active interprovincial trade; and moving, as it ought to do, in the direction of reciprocity of tariffs with our neighbours so far as the varied interests of Canada may demand, will greatly tend to procure for this country eventually a reciprocity of trade.

Now, when my hon. friends opposite sneer at reciprocity, they sneer at protection which in its inception was designed, according to the very language of Sir John A. Macdonald, the great Conservative chieftain, to bring about a reciprocity of trade between Canada and the United States. What followed? Sir John Macdonald took office in 1878, and in 1879 his Minister of Finance, Sir Leonard Tilley, introduced into this House a new customs tariff. I am only repeating what has already been repeated on many occasions, but it is well that the younger generation of Tories should know what their ancestors did in this House of Commons. When Sir Leonard Tilley introduced this Tariff Act of 1879, it contained the following as section 6:

> Any or all of the following articles, that is to say: animals of all kinds, green fruit, hay, straw, bran, seeds of all kinds, vegetables, including potatoes and other roots, plants, trees and shrubs, coal and coke, hay, hops, wheat, peas and beans, barley, rye, oats, Indian corn—
>
> Et cetera, et cetera.
>
> —may be imported into Canada free of duty, or at a less rate of duty than is provided by this Act, upon proclamation of the Governor in Council which may be issued whenever it appears to his satisfaction that similar articles from Canada may be imported into the United States free of duty, or at a rate of duty not exceeding that payable on the same under such proclamation when imported into Canada.

You have in that section practically the same list which was included in the famous reciprocity pact, known as the Knox-Fielding pact of 1910-11. This was the Conservative policy for many years. This section 6 remained in our Customs Act until very lately. But there was this

difference between the political parties: for many years the Conservative party when in office tried in vain to obtain concessions from the Washington authorities; they sent pilgrim after pilgrim to the White House, but without avail. On the contrary, the Liberal party, after taking office, having received one rebuff declared that we would never return to Washington. We awaited our opportunity; and it came in 1910-11, when the President of the United States sent commissioners to Canada in order to ascertain if she would be willing to enter into a reciprocity pact. That is the difference between the two parties. Both parties in this country for half a century at least have advocated reciprocity. The difference between the Conservative party and the Liberal party is that the Conservatives sent delegates to Washington, whereas under the Liberal regime the officials at Washington came to Ottawa.

I listened with a great deal of attention to the speech of my hon. friend the member for St. Antoine (Mr. Ames). He is a highly educated gentleman, who knows the politics of this country very well indeed, and his remarks are always interesting. In order to blacken as much as possible—I will not say the reputation, but the history of the Liberal party during their tenure of office of sixteen years—the hon. gentleman was obliged to use Latin words. He could not find in the English or in the French language any words sufficient to describe the regime of the right hon. the leader of the Opposition, and he went to his Roman law to find that the only term he could use was hereditas damnosa. On many occasions during the course of his speech the other day he characterized the Administration of the right hon. gentleman as hereditas damnosa. He gave a few comparative figures to justify his support of the present Administration and to condemn the late Government. My hon. friend, in using a few comparative figures to justify his support of the present Government, reminded me of a little story which was once told by Sir Richard Cartwright at a public meeting in Toronto. A meeting had been held the day before at the Albany Club, and my hon. friend the Minister of Trade and Commerce (Mr. Foster), even in the dark days of 1893, had been ingenious enough to find, by his comparative figures and tables, that this country was extraordinarily prosperous. Addressing the meeting the next day, and speaking of two hon. gentlemen whom I shall not name, Sir Richard Cartwright said: 'A man can prove almost anything by the law of averages. I could prove by the law of averages that the hon. gentleman, Mr. So-and-So, is an honest man. I could even prove that he is a truthful one.' So with my friend the honourable member for St. Antoine. By the law of averages, one reading his speech and knowing nothing of Canadian politics to-day, would come to the conclusion that all is well with the present Administration. Before I proceed to explain what the present Administration has done during the last two and a half years, I may be permitted to recall some facts and figures in order to answer the rather contemptuous remarks made by the hon. member for St. Antoine about the Liberal regime. In 1897 Mr. Fielding, the late Minister of Finance, introduced in this House a policy which, I believe, gave Canada 15 years of unbounded prosperity. I need not repeat to the House what were the changes brought about by his new tariff. The last speaker repeated the old story that Mr. Fielding changed practically nothing in the old tariff; but I have only to name the British preference, which reduced by 33⅓ per cent the taxation of the people of this country, to prove that an immense change was made with the introduction of the fiscal policy of 1897. At all events, we judge a fiscal policy by its results. If I were to judge of that policy by the words spoken by the then leader of the Opposition (Sir Charles Tupper), of course I might be inclined to say that this great country of ours was very badly governed for fifteen years. Indeed, when Sir Charles Tupper received the news that the British preference would be introduced that the specific duties would be wiped out, and that some of the ad valorem duties would be reduced, he used the following language:

> The result is that this tariff goes into operation, and the hon. gentleman knows that the industries of this country are already paralysed in consequence, while hon. members gloat over the destruction of Canadian industries. I was reading the wail, the sorrowful wail, of these industries in the Montreal Gazette, where one manufacturer after another declared that their industries were ruined; that their mills must close, and that they saw staring them in the face a return to the deplorable state of things that existed when the hon. gentleman who last addressed the House was in charge of the fiscal affairs of this country. I say that a deeper wrong was never inflicted on Canada. I feel that so far from rejoicing at it from a party standpoint, I deplore from my heart the ruin that is going to be inflicted upon the best interests of Canada and upon its great industries.

That was the prediction made by Sir Charles Tupper in 1897.

Mr. HENDERSON: This statement has been read time and again in the House during the present session. Will the hon. gentleman permit me to ask him whether Sir Charles Tupper, when he delivered that speech, had reference to the first tariff that the hon. Mr. Fielding brought down, or to the tariff that was put in force by Mr. Fielding?

Mr. LEMIEUX: I do not see the distinction my hon. friend wishes to make.

Mr. HENDERSON: The hon. gentleman must remember that a great number of changes were made before the tariff was put into operation, and what Sir Charles Tupper had reference to was the tariff as brought down in the first instance, which was afterwards modified to a very great extent.

Mr. LEMIEUX: I sat in the House in those days, and I have a fair remembrance of what happened. The Fielding tariff stands to-day on the statute book, and it was that tariff which was assailed by the then Opposition and its leader. The policy especially assailed in that statement of Sir Charles Tupper was the British preference given by Mr. Fielding. What were the results of that policy? The revenue of 1896 was $36,618,000, in round figures. In 1911, fifteen years afterwards, it had rolled up to 117,000,000; that is to say, in fifteen years it had trebled. The hon. gentleman in 1896 closed the fiscal year with a deficit of $519,000, in round figures; we closed the fiscal year 1911 with a surplus of $30,500,000.

Their average deficit in twelve years was $415,508; our average surplus in fourteen years was $10,471,371. Then, as to trade figures. In 1896 the total trade was $239,-025,360; in 1911, $728,000,000; or, from 1868 to 1896, barring of course the five years of the Mackenzie regime which was only an accident, the increase in twenty-eight years was $123,000,000. The increase from 1896 to 1911 was $410,000,000—three times more revenue and three times more trade. As regards our trade with Great Britain, in 1896-97 it amounted to $106,000,000 in round figures; in 1910-11 it amounted to $246,-573,720. My hon. friend from St. Antoine (Mr. Ames) is supposed to be an Imperialist of the Imperialists. Who gave the British preference to the mother country? And who opposed the motion moved in this House in 1900 by my friend the member for Halifax, now Mr. Justice Russell? The whole Conservative party opposed it. My hon. friend from St. Antoine is interested in manufactures and is also a Montrealer. Montreal is the great industrial centre of the country. In 1896 the population of Montreal was 249,000, and in 1910, 550,000, or an increase in fourteen years of 301,000. In 1896 the value of property in Montreal was $170,731,000, and in 1910 $426,550,000, or an increase in fourteen years of $255,818,000. Briefly, this is the hereditas damnosa referred to by my hon. friend from St. Antoine. As a matter of fact, the revenue of this country was never so buoyant, trade was never so brisk and the industries of Canada were never so prosperous as during the Liberal period from 1896 to 1911. For Canada, it was a period not only of commercial but of national expansion. Hon. gentlemen opposite may say: But you maintained the same National Policy. If we maintained the same old National Policy we used the same instrument which hon. gentlemen were using before 1896 to govern this country and with what results? Let us take the fourteen years before and after 1896. In the last fourteen years of the Conservative regime ending in 1896 imports decreased by $14,000,000. In the last fourteen years of the Liberal regime imports increased by $300,000,000. In the last fourteen years of the Conservative regime exports increased by $22,000,000; in the last fourteen years of the Liberal regime exports increased by $171,000,000. The total trade of Canada during the last fourteen years of the Conservative regime increased by $8,500,000. During the last fourteen years of Liberal regime the total trade increased by $471,-000,000. Therefore we look back with pride to the Liberal Administration. Our per capita increase of trade was the largest of all the trading nations of the world. Besides, the West was settled whereas before it was only a solitude. We solved the problem of transportation, we carved new provinces in the West, we organized the Railway Commission which in latter days has so greatly alleviated the burdens of the taxpayers of the West. From a national point of view Canada never loomed so large as during the Liberal Administration, not only in the British Empire, but in the whole world. My hon. friend from St. Antoine is a great imperialist in words. I said a moment ago that we gave the British preference and that he himself denounced it. To-day the western farmers are clamouring for an increase in the British preference My hon. friend from

10 p.m.

St. Antoine is a great friend of the mother country, a better friend than we are on this side of the House. Will he ask his associates in power to increase the British preference? That would be practical Imperialism, not Imperialism of the dreamy sort. We all know that for years a scheme of Imperial federation was very much to the fore amongst British statesmen. It was discussed in the press. The Imperial Federation League was founded. It was composed of men of great ability and all true patriots. But we all know that it failed. Lord Rosebery, himself, in 1899, when he was president of the league, said:

> You may be perfectly certain that, whatever your views and whatever your exertions, Imperial federation in any form is an impossible dream.

If Imperial federation was declared an impossible dream, at all events we on the Liberal side made Imperial co-operation a reality. The present leader of the Opposition and his Minister of Finance, Mr. Fielding, realized the Imperial co-operation by establishing a system of British preference. We are often told by our friends on the other side that we received nothing in return. That is true, but Canada emerged the greater from the various Imperial Conferences and from the granting of the British preference. For the benefit of those who are inclined to doubt the excellence of that preference let me quote a few lines from a speech delivered not very long ago by Mr. Lloyd George, the present Chancellor of the Exchequer, in Great Britain. He said:

> The Canadian preferential tariff has produced marked effect on our export trade to Canada. The South African and the New Zealand preferential tariffs have not yet been put to the test by much actual experience; but I cannot for a moment doubt that in some measure the happy results which have ensued from Canadian preference will be repeated in these cases. The same observation of course applies to Australia; and Great Britain feels, and ought to feel, grateful, not merely for the actual concessions which have been proposed, but even more for the spirit of comradeship—and I think I may even say of affection—which has inspired this new policy.

I said that Canada emerged the greater through granting the British preference. I should add that Canada emerged the greater also from her participation in the various Imperial Conferences which were held from the time of the Jubilee in 1897 up to 1911 inclusive. Let me enumerate some, and some only, of the gains which Canada obtained from her participation in the Imperial Conference. First, we secured equality of status with the mother country herself. Theretofore the Conferences were called Colonial Conferences. They are now called Imperial Conferences and they are summoned as such. Heretofore the Colonial Secretary was the president of these conferences. Now the Prime Minister of Great Britain is, ex officio, the president of these conferences. In 1907 the following resolution was unanimously adopted:

> That it will be to the advantage of the empire if a conference, to be called the Imperial Conference, is held every four years, at which questions of common interest may be discussed and considered as between His Majesty's Government and His Governments of the self-governing Dominions beyond the seas.

The relations have changed between the mother country and the great overseas dominions. The colonial office is no more the guardian of Canada. The Prime Minister of Canada can discuss all great questions on a footing of equality with the Prime Minister of Great Britain and with the other Prime Ministers of the overseas dominions. So radical is the change that it was expressed in the following language by Sir Henry Campbell Bannerman in 1907 when he said:

> We found ourselves, gentlemen, upon freedom and independence—That is the essence of the imperial connection. Freedom of action on the part of the individual states, freedom in their relations with one another and with the mother country.

Heretofore we were not free agents as regards our commercial relations with foreign countries because treaties had been and were negotiated without our consent. They were binding upon us and we found the position most acute when, in 1897, we granted a preference to the mother country. We discovered that the treaties passed between Great Britain and the Empire of Germany and between Great Britain and the Kingdom of Belgium were binding upon Canada, and the preference which we were giving to the mother country had also to be given to Germany and Belgium. During the conference which followed, the former Minister of Marine and Fisheries, Sir Louis Davies, the Minister of Finance, Mr. Fielding, and the Minister of Customs, the late Hon. Wm. Paterson, a good patriot and a great Canadian who just passed away a few days ago, appealed to the authorities in England, argued the case for Canada, and the treaties were denounced. It was an epoch-making conference in 1897 when the British-German and British-Belgian treaties were denounced at the request of Canada. In 1911, we found some fifteen other

treaties in the way when the reciprocity pact was being discussed before this House, and the present right hon. leader of the Opposition requested His Majesty's Government that negotiations should be opened with a view to restoring liberty for any of the dominions to withdraw from the operation of a treaty without impairing the treaty with respect to the rest of the empire. That wise principle was accepted. So to-day we can say safely that Canada can negotiate commercial treaties, and the same may be said of Australia and New Zealand. Who won that privilege for the overseas dominions? It was the Liberal Prime Minister of Canada. From that very fact alone the fifteen years of Liberal Government was a boon to our country, and if it emerged greater, not only in the eyes of the empire but also in the eyes of the world, the Liberal Government must be given the credit.

As a result of these conferences Canada obtained the recognition of the right to establish a local navy—not separatist—but a separate navy. In 1911, at the conference between the Admiralty and representatives of Canada, it was very properly declared that in future Canada, as well as Australia, could fly her own flag on His Majesty's ships, that Canada as well as Australia, could defend her own zones on both the Pacific and the Atlantic oceans. The conference declared further that the naval services and forces of the Dominion of Canada and the Commonwealth of Australia could be exclusively under the control of their respective Governments. I do not intend at this hour of the evening to discuss the naval question, but let me say that the, position of the Liberal party, and that of the Liberal Prime Minister at the Naval Conference in 1911, is vindicated by the action taken by the Australian Government during the last few months. The right hon. leader of the Opposition, who is re ponsible for the hereditas damnosa, to use the Latin language my hon. friend the member for St. Antoine (Mr. Ames), was justified in saying during the elections of 1911 that as a result of the various conferences:

> Canada now is a nation, a sister nation in the galaxy of the overseas dominions.

Some of my hon. friends on the other side of the House, and some of the writers in the Conservative press, object to the term 'Canada a nation'; they say that it is treasonable to use such language. Well, Mr. Speaker, listen to Mr. Balfour, one of the great British statesmen of our century, possibly the greatest parliamentarian of the day. As reported by the Times of February 1, 1911, Mr. Arthur Balfour used the following language:

> I believe from a legal point of view, the British Parliament is supreme over the Parliament of Canada, or Australasia, or the Cape or South Africa, but in fact, they are independent parliaments, absolutely independent (cheers) and it is our business to recognize that and to frame the British Empire upon the co-operation of absolutely independent parliaments.

In the House of Commons on the 21st of July, 1910, Mr. Balfour said:

> It is a matter of common knowledge, and, I add, not a matter of regret, but a matter of pride and rejoicing, that the great Dominions beyond the seas are becoming great nations by themselves.

It is refreshing to quote from such a distinguished parliamentarian, such a great statesman, such a true Briton, as Mr. Balfour, and to compare his words with the ignominious language used by those who deprecate saying that Canada is a nation, because, forsooth, they think it treasonable.

Having referred to the national aspirations of Canada and its commercial expansion during the Liberal regime, the hereditas damnosa, let me come now to what my hon. friend from St. Antoine (Mr. Ames) would, I suppose, call the hereditas sacra, because I must also use Latin to characterize the administration of hon. gentlemen now in office. They have not been three years in office yet; they will celebrate the third anniversary of their accession to power on the 21st of September next, if not on the 12th of July. Then they will be able to point to the fact that their three years of office have been marked by hard times, high cost of living, money stringency, falling revenue, large borrowings, and increased expenditures. The Minister of Finance is smiling now; he is in good humour; but let us take a look at the chapter of expenditure he is responsible for. The increased total expenditure during the past year has been nearly $40,000,000, or about $5.00 per head of the population of Canada—I am using the same law of averages which was used by the hon. member for St. Antoine—while the decrease in revenue has been approximately $6,000,000. For the first two complete fiscal years of this Government the increase for the ordinary expenses of government has been $28,000,000 or nearly $4 additional for every man, woman, and child in the Dominion. How does that compare with the Liberal Administration? In the last year of the Laurier Government, the total

expenditure on consolidated fund account was $87,774,000, and in the second fiscal year of this Government, the total expenditure on consolidated fund account was $126,500,000. For the last fiscal year of the Laurier Government, the expenditure on both consolidated fund account and capital account was $122,861,000, and for the second fiscal year of the Government now in office, the expenditure on the same account amounted to $183,500,000. In the three years, the consolidated fund expenditure will have increased by nearly $39,000,000, and the total expenditure by about $60,639,000. And yet, hon. gentlemen opposite when they were in Opposition, said that the Liberal Government was extravagant, and that the ministers were spendthrifts. The Prime Minister, then leading the Opposition, declared that the expenditure of the Liberal Government meant nothing less than corruption. The right hon. gentleman promised solemnly, were he returned to power, to reduce the expenditure by at least $10,000,000, as regards the administration of affairs.

It is fortunate for you and for me, Mr. Speaker, that we live in the twentieth century. Had we lived in the middle ages, had we lived even in the eighteenth century, we would have seen the present ministers not only branded as impostors, but subjected also to the block and to the hatchet. I read a few days ago that the Minister of Public Works (Mr. Rogers) was very anxious to go to Great Britain to represent Canada there, and he would be a very creditable representative of, at least, the present Government. I am told that the hon. gentleman has never crossed the seas. If he goes to London I advise him to do what all young Canadians do on their first visit. They go first to Westminster Abbey, and it is worth crossing the Atlantic just for that; and then they go to the Tower of London, where they see the instruments of torture. Years ago, on my first visit to the Tower, I was very much impressed when I saw the block where fell the head of the fair Lady Jane Grey, and when I saw the iron rods—they were not protected in those days—that used to pierce the tongues of the perjurers and imposters. I would advise the Minister of Public Works and the Minister of Militia to visit the Tower of London, and there they will see what instruments of torture were used in the old days against perjurers and imposters. Far be it from me to say they are perjurers and imposters, but it is well that they should look for the worst.

[Mr. Lemieux.]

The Minister of Finance had to boast of something, and so he boasted of a surplus of $36,000,000, but that is poor consolation for the thousands who feel the bite of the hard times and of the high cost of living. The cost of living is abnormally high, as may be seen from the fact that in 1911 the average wholesale index price in Canada of 255 articles of general consumption was 128.9, of the average price level during the decade from 1890 to 1899. A year later it was 133.1, and in October last the average price was 136. The March statement of the Labour Department, giving the index number of wholesale prices, shows that there has been another increase in the cost of living during the month, and the index number now stands at 136.7, as compared with 136.1 in February and 136 in October of last year. The more important increases have occurred in grain, fodder, animals, meats, canned salmon, vegetables, flour and oatmeal; the increases took place in the products of the canners and the millers, about whom the Minister of Finance is so solicitous that they should have protection, while at the same time he takes no heed of the consumer.

The Minister of Finance and the gentlemen who surround him may ask: Can you reduce the cost of living? Yes, Mr. Speaker, we can reduce the cost of living, slightly at least, and a little always helps. We could reduce the cost of living, first by reducing taxation. What has this Government done to reduce taxation? Nothing. On the contrary, last year the Government levied a toll of over $11,000,000 on foodstuffs, valued at $50,000,000. I give facts and figures to show this:

Dutiable food stuffs imported into Canada during the fiscal year 1912-1913, with the amount of duty collected in each case:

	Value of Imports.	Duty Collected.
Sugars	$17,392,146	$ 4,162,672
Fruits and nuts	8,782,395	1,821,422
Vegetables (canned and fresh)	3,242,284	896,262
Meats and poultry	5,338,673	1,040,547
Eggs	2,783,665	327,123
Fish	1,608,663	361,115
Butter	2,081,987	252,311
Prepared cereal foods in packages	3,650,101	42,069
Breadstuffs, etc	1,260,357	261,403
Grain, flour and meal, etc	3,638,121	482,163
Lard	1354,442	242,897
Cocoa and preparations of cocoa	1,057,306	179,818
Mustard	216,434	44,707
Coffee (when prepared or roasted, etc.)	268,100	35,365

	Value of Imports.	Duty Collected.
Pickles..	456,546	1,166,651
Spices..	378,568	50,643
Total..	$53,679,793	$11,367,172

Mr. W. T. WHITE: And for 1910 and 1911, how much?

Mr. LEMIEUX: I have not got that.

Mr. WHITE: Any less?

Mr. LEMIEUX: I am sure my hon. friend will issue a list of some of these.

Mr. WHITE: It would not be difficult.

Mr. LEMIEUX: That is no excuse. My hon. friend has passed the age of saying: You did it; you are another. He is a statesman, and has promised to give this country prosperity, good times, cheap living, for all consumers. Besides, in 1910 and 1911 there was no question of high cost of living.

Mr. WHITE: Oh, was there not?

Mr. LEMIEUX: There was money all around, there was prosperity and general contentment, whereas, as I have stated, the refuges and the hospitals in Montreal are now filled every day and every night, with the bread-liners and the bread-rioters. These articles were imported into Canada because they could not be obtained here, either at all or in sufficient quantities to meet a real need. One-fifth per cent has been added to the cost of living on these foodstuffs before they are permitted to pass from the importer to the consumer. The Government has completely ignored the consumers in the present Budget. The favoured ones are the food monopolies —the canners' combine, the cold storage men, the packers, and the big commission houses. The farmer, the Government say, is also entitled to protection. It is always very clever to argue the farmer into the protective system. It is always with flowery words that you put the collar of serfdom around the neck of the farmer. Of course, the farmer is entitled to protection, and I will show in a few moments how you can protect him; but have you forgotten that the farmer is also a consumer? He pays duty on sugar, on rice, and on several other commodities which he does not produce, and he would be quite happy if that article which our country cannot produce should come free into Canada. I listen to the voice of the farmer when I want to know his desires, his inclinations, and what does he say? I was very much impressed when last fall the farmers of the West and of Ontario invaded the council chamber of this Dominion; I was impressed by the memorial which they presented to my hon. friend the Minister of Finance. Here were the tillers of the soil, the men who represent more than half the population of Canada; what language did they speak on that occasion:

> We submit that the wider market afforded us by accepting the offer of the United States for free interchange of natural products would have the same effect in stimulating the raising of wheat, oats, barley and flax as free access to the United States market for cattle has already done for that line of farming enterprise, not only because it would provide another market for grain, but also it would provide a competitive route for transporting grain to Europe. We ask that all foodstuffs be placed on the free list, as we believe that the taxing of food is a crime against humanity.

These words have been jeered at by some hon. members, but who can deny that they were the honest statement of the great farming community of Canada?

Let me quote here the words of Pierce on tariff, one of the great authorities on fiscal questions. He deprecates the lack of public spirit in those high tariff countries where the writers have words of praise only for the wealthy and the few. He says:

> You would think from the current discussion of economic subjects that the only matter of interest to the American people was the wealth and prosperity of the great corporations, and that the welfare of the consumers, the great body of the people, was a matter of little importance. It seems to me that it is about time for a full review of the question from the standpoint of the consumer. Government cannot at one and the same time be a fountain of generosity to the manufacturer and of justice to the consumer.

Let me engrave this crisp sentence in the noble head of my hon. friend the Minister of Finance:

> Government cannot at one and the same time be a fountain of generosity to the manufacturer and of justice to the consumer. Privilege in any country is not for the many but for the few, for the simple reason that when privilege is expanded to the consumers, who are the entire body of the people, it is no longer privilege. The richness of the soil and of mineral deposits and the natural advantages in our country have made the lot of man so fortunate, and the absolute freedom of trade between our states and territories has tended to mitigate the burdens of protection so greatly, that the ordinary man, absorbed in his work, heeds but little the extortions which protective tariffs impose upon him until, perchance, hard times come and he feels the sting of want.

He adds:

> The result is to rate low the rights of the whole people and to rate high the interests of a class.

I would say, reading the last changes in the customs tariff, that my hon. friend has rated low the rights of the consumers and has rated high the interests of the manufacturers.

I said that the present Government was responsible partly but, since the new tariff, chiefly for the high cost of living. I have explained how, in my humble judgment, you can reduce the high cost of living by reducing taxation. Now, how can we face the hard times? I will not say that the Government is wholly responsible for the hard times. I must be a Christian and honest, but surely the Government cannot face the hard times by increasing expenditures, or it then is guilty prima facie. It can face the hard times by decreasing expenditures. That is what you, Mr. Speaker, preached honestly, when you sat on this side of the House, and your silence at present is very eloquent.

Let us take the Departments of Public Works, Interior and Militia. Here is a list of expenditures for these departments for the last two years and for the present year. I am not going into past history; I am giving my hon. friend what happened in 1911. In 1911 the expenditure on public works was $10,818,834. In 1912, when the brilliant Minister of Finance—forty-seven years old—emerged from that meeting of the 'noble eighteen' in Toronto and became the new leader of fiscal opinion, the expenditure on public works jumped to $11,651,947. In 1913, it went on to $13,158,677; in 1914, estimated $18,000,000; and in 1915, to be voted $20,330,048.

It is worse in the Militia Department, and to this I call the attention to my pacifist and peaceful friends from the counties of Ontario, where militarism is no more popular than in the counties of the province of Quebec, at least among the farmers. For, when I speak of Ontario, I must be careful: Toronto is not Ontario; there are thousands and hundreds of thousands of farmers in the province of Ontario who deprecate this enormous expenditure through our Militia Department to-day. In the last year of Liberal rule, the expenditure on militia was $6,868,651. And poor Sir Frederic Borden, then Minister of Militia, was branded a spendthrift and was roasted to death in this House of Commons here by your associates, Mr. Speaker, (Mr. Blain)—you were generous, humane and christian, you avoided all such bitter criticism; but your associates declared that he was a spendthrift because he asked $6,868,000 for militia purposes. But what would the good farmers of Peel, of Grey, of Grenville—not to speak of Terrebonne—say if they knew that under the present Minister of Militia (Colonel Hughes), the expenditure increased to more than $9,000,000 in 1913. But not satisfied with this the minister jumped it higher in 1913-14 and spent almost $11,000,000 on militia, exclusive of what was spent on drill halls and armouries. Not to speak of the bonnie Bel-air scandal, I say that this expenditure as it runs now under the direction of our Minister of Militia, is simply pure madness. The farmers of this country do not approve of it. We all stand for moderate militia expenditure. We are not against a reasonable expenditure for militia purposes; but I say that in the face of the hard times through which we are passing and with the peaceful spirit existing in this country, to spend lavishly as the Minister of Militia is pending for militia purposes is pure folly. An expenditure of $11,000,000 is almost scandalous, but he will reach more than that next year. The minister's own trips to Europe are to say the least Quixotic. The list of his honorary colonels—by the way—I do not know whether the Minister of Finance wears the plume and the gold-braided uniform—this list as published in 'Hansard' the other day—is simply a farce. If I were a soldier or an officer in His Majesty's army in Canada, I should be ashamed to think that every Tom, Dick and Harry, every wire-puller or ward politician, can become an honorary colonel under the benign rule of the Minister of Militia. Sir, this expenditure on militia has reached the breaking point, and you know it, Mr. Speaker, and the good farmers in Peel county know it. Militarism is not condemned only by pacifists or by Norman Angell's disciples—and they are many—but by the statesmen of the whole world. I was reading the other day the Contemporary Review of London, and there I read that Count de Witte, who established Russian finance on the solid basis which enabled that country to bear the strain of the war with Japan, with the ensuing general strike and the so-called revolution, used the following language:

> When I try to realize what is meant by the 'peace' of to-day, I feel tempted to call it economic war. Certainly it is little better than war. Speaking without exact figures, I should say that some 40 per cent of the outlay of the various States is absorbed by the armies and navies which are to carry on the great campaign of the future, and by the debts left by the campaigns of the past.
>
> Sketch a picture in your mind's eye of all that these sums, 'if propertly spent', could

effect for the nations who now waste them on heavy guns, rifles, dreadnoughts, fortresses, and barracks. If this money were laid out on improving the material lot of the people in housing them hygienically, in procuring for them healthier air, medical aid, and needful periodical rest, they would live longer and work to better purpose, and enjoy some of the happiness or contentment which at present is the prerogative of the few.

In this I have quoted a statesman who belongs to a nation which hardly knows parliamentary government and liberty, the great nation of Russia. Now, let us come to the nation of all nations, Great Britain, the Mother of Liberty, and the Mother of Parliaments, and let me quote the language of the Chancellor of the Exchequer of that country, the right hon. David Lloyd George. Speaking on the 1st of January last, he sent the following message to Europe at large:

Pointing to the enormous burden which armaments impose on the taxpayer, and to the fact that the growth of armaments still leaves the nations in the same relative strength, Mr. Lloyd George thinks that the present is the most favourable moment in twenty years for a policy of retrenchment.

He cites three reasons:

First, Great Britain's relations with Germany are more friendly than for many years, both realizing that there is nothing to gain and everything to lose by a quarrel.

Second, all the continental nations are now directing their attention to strengthening their land forces, Germany having realized that her exhaustive attempts to develop her naval power must give place to improving the army, which is vital to the existence of the Empire.

Third, the spread of revolt against military oppression throughout Christendom, certainly throughout western Europe.

The third reason Mr. Lloyd George considers the weightiest of all, and he believes that this is the right moment for a bold step towards the restriction of the growth of armaments, and thinks it imperative that in the highest interests of civilization he should seize it.

There, you have opinion from the two poles of parliamentary government, you have it from Russia and you have it from Great Britain. And, while in Russia and in Great Britain they are deprecating increased expenditure for military purposes, in Canada, a young nation, at peace with its only neighbour, at peace with the whole world, a nation striving for peace and seeking only the prizes of peace, we are increasing wantonly and shamelessly the expenditure on armaments. I say it is a scandal, and the Government should put a stop to such ridiculous expenditure as that now proposed by the Minister of Militia.

Mr. BURNHAM: Does my hon. friend prefer to go by what the Czar of Russia and Mr. Lloyd-George say, or by what they do? The Czar of Russia is increasing vastly his military forces and is aspiring now to have an immense navy; Lloyd-George is consenting with the rest of the ministers to a large increase in the naval Budget of the old country.

Mr. LEMIEUX: Which proves, indeed, that in both countries there is madness amongst the scaremongers. Sir, the best minds in England and in Russia are trying to stop that expenditure. If my hon. friend wants to know the opinion of Canadians on this subject, let him go before the farmers of Peterborough, and they will tell him whether they approve of that expenditure or not. We are told that free food deprives the farmer of protection. Well, can you not recoup him by reducing the cost of production and by giving him free implements? I can only repeat here briefly the arguments which have already been adduced by some of my colleagues from the West. I said a moment ago that between 55 and 65 per cent of the population of Canada was engaged directly or indirectly in agriculture. From the soil is extracted the produce which provides the purchasing power for manufactured goods and leads to diversified industry. Canada is the greatest farm in the world to-day. It has the largest consecutive wheatfield in the world, 900 by 300 miles. Her western fields form an empire, and a world granary. Her far-flung West is a melting-pot of the nations. Winnipeg, to use the language of Sir William Van Horne, is the spout of the thousand-mile hopper between the Rockies and the prairie capital. The eyes of the world are on this nation in the making; her prosperity depends largely upon the farmers' welfare.

Let me give the House a few figures, which I take from the speech delivered the other day by the hon. member for Edmonton (Mr. Oliver). I am bound to say that the members from the West, generally speaking, are exceedingly very well informed on the tariff question. One hundred and fifty-four million acres have been selected by the Government in the West on account of their suitability for cultivation. In 1901 only 2,500,000 acres were under cultivation; in 1911 there were 17,500,000. That, in a large degree, caused the great prosperity of Canada—during the fifteen years the right hon. leader of the Opposition held the reins of power. The crop of last year yielded 466,000,000 bushels, worth $180,000,000, so that with twelve per cent only of the area suitable for cultivation, the great Canadian West produced $180,000,000 worth of crop. What will it be when the 154,000,-

000 acres are occupied and tilled by Canadian farmers? We can then supply the whole world. But the production must be profitable. We have our competitors; I saw the figures in the excellent report of the Grain Markets Commission of the province of Saskatchewan—a most lucid and able report on the wheat and transportation question, which I commend to every member of the House. We have competitors in India, Russia, Argentine, Italy and Australia.

Mr. EDWARDS: And the United States.

Mr. **LEMIEUX**: The United States too. We must make the production as profitable as possible so as to enable our Canadian farmers to meet their competitors on the other side of the water. The Government can reduce the cost of production, and how? By reducing the cost of agricultural implements. High tariffs will always bring stagnation where there was prosperity in a farming community. The homestead entries have gone down; there were 10,000 less homestead entries for the year ending March 31, 1913, than there were for the year ending March 31, 1911. Land sales have also gone down; they were only 9,000,000 acres in 1913, as against 19,000,000 acres in 1911. I say these are facts and data which go to prove that unless this Government will reduce the cost of production by reducing the duties on implements, the West is doomed—the West is sacrificed. But we are told—of course it is small politics always to revert to the past to explain present circumstances—we are told: your reciprocity agreement gave less than the present reduction of 5 per cent. This is no argument. We are in 1914, not in 1911. For our shortcomings we are here and you are there. Conditions have changed, and besides, we must take the reciprocity agreement as a whole. It covered a vast field of interest. The farmers of the West were well satisfied with even a small reduction of 2½ per cent on agricultural implements, considering the boon that they were receiving by the whole of the reciprocity pact—the long free list, the benefits of which were to accrue to the farmers and the consumers of this country. To-day they have no market—we offered them the greatest market in the world. My hon. friend knows that Mr. Underwood in his tariff has removed entirely the duty on farm implements going into the United States, thus giving the American farmer an advantage over the farmer on this side of the boundary line. I am not surprised that the American settlers are leaving the Canadian West and returning to the United States. What are the figures? I was astounded the other day, when the hon. member for Assiniboia (Mr. Turriff) gave these figures to the House, to learn that there were more farmers leaving the West for the United States than there were farmers coming from the United States into Canada. Let me repeat the figures: In 1907-8 there went from Canada to the United States 58,000 farmers and there came from the United States into Canada 58,000 farmers. In 1908-9, 84,000 went from Canada to the United States and 59,000 came from the United States into Canada. In 1909-10, 94,000 went from Canada to the United States and 103,000 came from the United States into Canada. In 1910-11, 105,000 went from Canada to the United States and 121,000 came from the United States to Canada; in 1911-12, 107,000 went from Canada to the United States and 133,000 came from the United States to Canada; in 1912-13, 143,000 went from Canada to the United States and 139,000 came from the United States to Canada. I am not surprised that the American farmers are leaving the Canadian fields for the greener fields of the United States, in view of the fact that the Underwood tariff gives them this preference.

Mr. LALOR: The figures are those of farmers?

Mr. LEMIEUX: Yes. I took them from the Grain Growers' Guide, a most reliable authority. I am not against the manufacturers of agricultural implements. Why should I be? They are very industrious Canadians. They have done well for the country and the country has done well by them in the past. They have built up a splendid industry. I am not against them but I say that at the present time they can hold their own very well. First of all they are masters of the Canadian market, secondly they compete successfully in the world's markets. They compete and hold their own with the United States in Great Britain, in Australia, in France, and even in Russia. Canadian mowers, threshers, cultivators and ploughs hold their own against similar American implements in all those countries. It was a source of great pride to me when travelling through South Africa, Japan, France and England to see Canadian agricultural implements being used by the peasantry of those countries. If our implement manufacturers can compete in the world's markets surely they can stand a little reduction in the tariff which would

give our Canadian farmer a chance to produce at less cost, thereby increasing his purchasing powers. Taking manufactured goods as a whole we import ten times as much as we export. In 1913 we exported manufactured goods to the value of $43,692,700 and we imported goods to the value of $462,461,000 in round figures. The contrary is the case in regard to agricultural implements. In 1913 we imported to the value of $4,445,000, and we exported to the value of $6,152,000, which shows conclusively that this industry is no longer in the infant stage, that it stands on a different basis altogether from other industries. I quite understand that in 1879 and for some years afterwards the implement manufacturers were entitled to some measure of protection, but my hon. friend knows that their business grew and that they gradually became masters of the Canadian market and can now compete in the world's market. As that took place we made reductions, in 1897 for instance, and I think the present Minister of Trade and Commerce made a little reduction when he revised the tariff in 1893, but I am not positive as to that. My hon. friend finds some consolation in saying: Oh well, the United States tariff and the Canadian tariff compare very well. The Minister of Finance the other day, said we were not overburdened with a high tariff as the United States tariff worked out at an average of 26 per cent, which is about the Canadian average. He said that, to convey the impression that the Canadian workingman has to pay just as much in duty as the American workingman. With all due respect to my hon. friend, that is a very false impression to convey to the poor ignorant workingmen of this country. But even the poor ignorant workingmen and the poor ignorant farmers will see through that argument. The hon. minister takes no account of the free list in the United States. That is the crux of the whole question. The average duty in the United States may be about the same as the Canadian duty for those things on which the American has to pay duty. In Canada the duties apply to everything, while in the United States the tariff is taken off the necessaries of life. The people of the United States have free food, free agricultural implements; many important building materials, including cement, are free, and a vast variety of miscellaneous commodities. Everything in our neighbour's free list has to pay a heavy duty coming into Canada. Bread, meat, fish, milk, cream, eggs, potatoes, fruit, coal—the principal things that enter into the high cost of living—are all on the free list in the United States, but every one of them has to pay a heavy duty coming into Canada. That is the difference. If my hon. friend wishes to compare the Canadian and American tariffs, he must first of all exclude the United States free list, and then compare the duties on both sides of the line.

What has been the effect of the Underwood tariff in the United States? Our friends opposite, and especially the Conservative press, boast that the Underwood tariff has had no effect whatever on the cost of living in the United States, and they even gloat over its so-called failure. It is a little early to judge of the effects of that tariff, but we know one thing, the days of high protection in the United States are past, and past for ever. If you wish to know what are the effects of the Underwood tariff—and it is very well to consider that point—read the article in Bradstreet's, March 14, 1914, headed: 'Another Fall in Commodity Prices.' It reads in part as follows:

For the third time this year—

Mind you, the tariff has been in force just about six months.

—Bradstreet's index number of commodity prices has followed a downward course. The fall is very slight, only three-tenths of one per cent for the interval between February 1 and March 1. . . . Though the changes in each division are comparatively light, weakness has acted to a greater extent than firmness, but an analysis of the diverse movements within the groups will be more apropos when we come to consider the individual factors. In any case the present index number is the lowest reported since October of 1911.

That is the effect of the Underwood tariff in this year of grace, 1914.

11 p.m.

and it is lower than the numbers reported on March 1, 1913, 1912, 1910 and 1907, on which date in the last-named year prices touched a high point for the period 1892-1907.

Let me give a list of the commodities which have decreased in price since the Underwood tariff came into force:

Wheat, rye, flour, sheep, live, mutton carcasses, beef, butter, lard, coffee, sugar, peas, lemons, raisins, currants, hides, wool O. and Pa. wool, Australian, hemp, flax, print cloths, pig iron, eastern, pig iron, southern, pig iron Bess., steel billets, tinplates, steel beams, silver, copper, lead, tin, quicksilver, anthracite coal, Conville coke, southern coke, castor oil, olive oil, rosin, tar, brick, nails, glass, yellow pine, hemlock timber, carbolic acid, hops, rubber.

I just quote a few; I need not quote any further. Bradstreet is a well-known

authority. The main fact stands out that since the first of the year the price of commodities has materially decreased in the United States. I will also recommend to my hon. friend to read an article published on page 223 of the December World's Work by Mr. Arno Dosch, a well known economic authority in the United States. It says:

> How business is standing tariff reduction. I have just finished interviewing dozens of manufacturers to find out what effect the new tariff is likely to have upon industry.

I have never read anything so interesting as that which has been published here by Mr. Dosch on the effect of the tariff on the industries of the United States.

Mr. LALOR: Does the hon. gentleman think that the reduction of duties on food products has reduced the cost of living?

Mr. LEMIEUX: This is not limited to food products, as the writer speaks of the effect on manufacture. I shall read a few lines further to enlighten my hon. friend:

> I found that there is no indication of even a temporary depression in business. No mills have been forced to close on account of it; on the other hand, some mills that have been operating on half time have advanced to full time. There seems to be so little likelihood of a slump that the coming year, which 95 per cent of the members of the National Association of Manufacturers pessimistically looked forward to as 'the worst year in the history of American industry', is now expected to be normal. It will not surprise some manufacturers with whom I talked if it proves to be a 'banner' year.

Of course, it is always the same old song; when the Government threaten to reduce duties, the manufacturers come, fill the lobbies of this House, button-hole every member, even the hon. member from Haldimand (Mr. Lalor), and predict that the country will go to the dogs. We have evidence that in the United States not only food products but manufactured products have not suffered by reason of the reduction of the tariff.

Mr. LALOR: What is the date of that article?

Mr. LEMIEUX: December last. Has the hon. gentleman heard of any failures?

Mr. LALOR: I know of very great depression in the United States and everybody knows of it.

Mr. LEMIEUX: My hon. friend does not know that it exists at the present time.

[Mr. Lemieux.]

Mr. LALOR: Does the hon. gentleman know that the New York Central has laid off 25,000 men?

Mr. LEMIEUX: No, but I know that the Canada Car Company has laid off 1,100 men. I know that the Eastern Steel Company has closed. I know that the Angus shops have laid off—where is my hon. friend, the Mayor of Montreal?—have laid off over 500 men and have not yet taken them on again. I know less about the Americans—I am such a good Canadian, although I favoured reciprocity.

My hon. friend, the Minister of Finance, said that the increased trade was a matter for congratulation. Well, a further increase must therefore be sought. Nobody objects to our cattle and our oats going to the United States. Wheat is also a staple product and it must be exported because we cannot consume it all. The duty is practically an export duty, and the Government can remove it by a stroke of the pen. The West clamours for it. The Manitoba legislature—a good Tory legislature—unanimously voted for free wheat. We are told that free wheat is free trade and that free trade will destroy all our home industries. Is the Canadian home market destroyed by increased trade with the United States? Has free trade destroyed the industries of the Mother Country? Mr. Speaker, free wheat is refused to please the railway and the milling interests—the railway interests because the wheat would be diverted southward, while it is claimed that the trade should continue eastward and westward. That is an old cry. We heard about it in the eighties, at the time of the discussion of the monopoly clause in the Canadian Pacific railway contract, and of the Manitoba Acts designed to nullify it. Clause 15 of the Canadian Pacific railway contract with this Government read as follows:

> For twenty years from the date hereof no line of railway shall be authorized by the Dominion Parliament to be constructed south of the Canadian Pacific railway from any point at or near the Canadian Pacific railway except such line as shall run southwest or to the eastward of southwest, not to within 15 miles of latitude 49.

That was against north to south trade. There was but little wheat grown then in the West, and population was small and scattered, yet this was a restriction which the Manitoba people rightfully resented. Acts were passed by the Manitoba Legislature the practical effect of which was to defeat the monopoly clause. The various

Acts of the Legislature were disallowed by the Canadian Government, but in 1887 a line was built to the boundary line and the monopoly clause was repealed. Yet the Canadian Pacific railway has prospered as no other railway corporation has prospered since.

Our railway system will thrive with free wheat because the Canadian route is the shortest between Winnipeg and Liverpool. Winnipeg freight will be shipped by way of the United States, but also by way of Canadian ports. The distance between Winnipeg and Liverpool, via Montreal, is 4,174 miles, while the distance via Minneapolis, Chicago and New York is 4,826 miles, or 652 miles in favour of the Canadian line. The Canadian importer will always take the shortest line—the Canadian line—and I think that the American exporters from the West will also ultimately take the Canadian line. Although we send much of our export grain by way of the United States, I have in my hand a report which shows the quantity of American grain that was exported through Canadian ports from the years 1908 to 1912. In 1908 we exported from Montreal 10,908,194 bushels of American grain. In 1912 there was a great reduction, only 7,333,494 bushels of American grain being exported by way of Montreal. Why do the Americans export by way of Montreal? Because it is the shortest and best route between the American continent and Liverpool, the great wheat market of the world. There is no fear that the Canadian railways will ever suffer if free wheat is granted to the Western farmer.

The hon. member for St. Antoine (Mr. Ames) spoke of the wider markets which were ultimately to be given to the Canadian producer, and he said: Wait for the report of the imperial commission. By the way, I might remind him that that imperial royal commission was created at the suggestion of the right hon. Sir Wilfrid Laurier, when he so worthily represented Canada at the Imperial conference in 1911—my imperialistic friend from St. Antoine should have included that in the hereditas damnosa of the Liberal party. I should pay my hon. friend (Mr. Ames) the compliment of saying that there is no keener business intellect on the other side of the House than he possesses, and with his keen business instincts the hon. gentleman knows the limitations of our inter-imperial trade. I do not speak of our trade with Great Britain, I speak of our possible trade with Australia, New Zealand, South Africa and the West Indies. Possibly the hon. member (Mr. Ames) meant our future trade with Great Britain, although already Great Britain is our greatest market, and no doubt he had in mind the possible contingency of a reciprocal trade between Canada and Great Britain. On that point, I wish to remind the hon. member of a very crisp sentence uttered not very along ago by his friend and our friend, the present First Lord of the Admiralty. I read occasionally the reports of the Tariff Reform report in Great Britain, which is published from the Chamberlain point of view, and on page 11, on No. 50 of that docunment I read:

> **And, foremost in this free trade policy, was the determination to refuse preference. Not a farthing preference on a single peppercorn, was Mr. Churchill's concise summary of the Liberal policy.**

Not a farthing preference on a single peppercorn; that was the crisp rebuff of the First Lord of the Admiralty, who last year wanted to launch Canada into a beautiful policy of annual contribution to replenish the coffers of the Admiralty. Not a farthing preference on a single pepercorn, that is Mr. Churchill's answer to my imperialistic friend (Mr. Ames), who is always advocating the possible contingency of reciprocal trade between Canada and Great Britain. I do not claim to know much about British politics, but I read enough to know that in England, first of all the great Liberal party is opposed to food duties which reciprocal trade implies; the Labour party is opposed to it; the Conservative party—not the Carson party, not the 'last ditchers,' but the Conservative party of the great school of Salisbury and Disraeli—are opposed to food duties. We shall have, therefore, to wait a long time before my imperialistic friend from St. Antoine (Mr. Ames) secures for Canada, through the instrumentality of this Government, the benefit of reciprocal trade between the mother country and us. It is safe to say that the British consumer will never tax his bread, even for the sake of the overseas dominions. John Bull—let us give him credit for it—John Bull has a good heart, John Bull is a great ruler, but on business matters John Bull looks after number one; take the embargo on Canadian cattle, for example.

Mr. MORPHY: That is protection in a free trade country.

Mr. LEMIEUX: It is a pretext.

Mr. MORPHY: No, it is protection in a free trade country.

Mr. LEMIEUX: It is a pretext to aid the cattle industry.

Mr. MORPHY: It helps the Irish farmers.

Mr. LEMIEUX: It is, I know, intended to benefit the farmers of the North of Ireland, who want to get volunteers from Canada at the present time, whilst they will prevent Canadian cattle being sold alive on the British market. I have said, Sir, that this policy of reciprocal preference has failed. The policy of Canada on that question was set forth very clearly and in unmistakable terms at the Imperial Conference in 1902 by the Right Hon. Sir Wilfrid Laurier, or Mr. Facing-Both-Ways, as the Tory press called him during the election of 1911. But while the jingoes of Canada were shouting and shrieking about imperialism, the Liberal party in Canada, represented by their leader, were proposing to the British Government a mutual preference in the following language, which I quote from the official report:

> **The Canadian ministers stated that if they could be assured that the Imperial government would accept the principle of preferential trade generally, and particularly grant to the food products of Canada in the United Kingdom exemption from duties now levied, or hereafter imposed, they, the Canadian ministers, would be prepared to go further into the subject and endeavour to give to the British manufacturer some increased advantage over his foreign competitors in the markets of Canada.**

That offer was there during ten years of our tenure of office, and the offer is still on the blue books of the Imperial Conference before the home authorities. And nothing has been done in England, except the answer given by Mr. Churchill: not a farthing of preference on a single peppercorn! Let me add that I suspect that the friends of my hon. friend from St. Antoine, the rich manufacturers of Montreal, the multi-millionaires of Montreal, while they are in words in favour of an Imperial preference are at heart the most strenuous opponents of that policy. And why? It is because the gist of the whole case, in the words of Mr. Chamberlain, is: we will tax our bread, we will tax our food, but you will not manufacture in Canada, and we will supply you with our manufactured goods. That is called the hidden list; my hon. friend (Mr. Ames) knows about it, and if he wants more information let him read one of the latest publications by Mr. Richard Jebb, who is a very ardent imperialist. I remember that during the first session of this Parliament my hon. friend the Minister of Finance avoided speaking about the increased trade between Canada and the United States. He thought he should not mention that in his Budget after the reciprocity campaign. Increased trade with the United States was supposed to mean something very near annexation. Indeed, it was the battlecry in the last campaign, and it carried many constituencies. According to the Budget figures, Canadian exports to the United States increased from $112,000,000 in 1911 to $161,000,000 in 1913-14. In the same period imports from the United States increased from $274,000,000 to $361,000,000. The aggregate trade between the countries was $386,000,000 in 1911, and it reached $523,000,000 in 1913. Canada is the second greatest customer of the United States to-day, Great Britain being first. Canada is fifth in her sales to the United States. This is the crushing answer to the ignominious cry of annexation. The only annexation movement in Canada took place around 1849-50, and that movement, as my hon. friend who reads history, ought to know, was defeated by what? It was defeated by the granting of a reciprocity treaty to Canada and the United States. There is nothing eternal in a trade agreement. It cannot imperil our nationality, and the party which believes that high tariff makes for nationality does not know that high tariff is a sorry substitute indeed for loyalty My hon. friend said that the gage of battle was given; that he was ready to accept it; that he was ready to fight free trade as against protection. I think the wish is father to the thought. This false cry of free trade, which does not exist in this country because, as we have to derive our revenue from indirect taxation, we must have a moderate protection, is meant to be used against the Liberal party. If we were to accept the traditions of good old England, we would accept the gage of battle; we would stand for free trade, because free trade has made England what it is to-day. But we live in America and we have to follow the traditions of the American continent. We cannot have free trade in Canada. We are wedded to a system of moderate protection as long as we raise our revenue by way of indirect taxation; but can we reduce taxation? Yes, we can reduce taxation, as I have shown a moment ago; we can also curb some of the monopolies, and that is the aim of the Liberal party. I speak only for myself of course. I am a moderate protectionist. I say that protection must exist in our country as

long as we have to raise a revenue by way of indirect taxation. We cannot have free trade as they have it in England. It is the ideal; it is the best thing; but we cannot have it. The words of President Woodrow Wilson in his book, The New Freedom, apply exactly to our conditions. Discussing this very question of free trade versus protection, he uses the following language:

But 'Ah!' exclaim those who do not understand what is going on, 'you will ruin the country with your free trade!'

Exactly the language of my hon. friend the Minister of Finance.

Who said free trade? Who proposed free trade? You cannot have free trade in the United States, because the government of the United States is of necessity, with our present division of the field of taxation between the federal and state governments, supported in large part by the duties collected at the ports. I should like to ask some gentlemen if very much is collected in the way of duties at the ports under the particular tariff schedules under which they operate. Some of the duties are practically prohibitive, and there is no tariff to be got from them.

He says a little further on:

Let me repeat: there cannot be free trade in the United States so long as the established fiscal policy of the federal government is maintained. The federal government has chosen throughout all the generations that have preceded us to maintain itself chiefly on indirect instead of direct taxation. I dare say we shall never see a time when it can alter that policy in any substantial degree; and there is no Democrat of thoughtfulness that I have met who contemplates a programme of free trade.

But what we intend to do—

And here is where I find the application for Canadian conditions:

—what the House of Representatives has been attempting to do, and will attempt to do again, and succeed in doing, is to weed this garden that we have been cultivating. Because if we have been laying at the roots of our industrial enterprises this fertilization of protection, if we have been stimulating it by this policy, we have found that the stimulation was not equal in respect of all the growths in the garden, and that there are some growths which every man can distinguish with the naked eye which have so overtopped the rest, which have so thrown the rest into destroying shadow, that it is impossible for the industries of the United States as a whole to prosper under their blighting shade.

Speaking for myself, I say that, applying the words of Woodrow Wilson to Canadian conditions, I find perfect equanimity and satisfaction in them. The battle is not between free trade and protection; it is against the food monopolies, the high tariff interests. It is against the trusts and the combines.

Mr. LALOR: Is the Fielding tariff the platform upon which my hon. friend stands?

Mr. LEMIEUX: The Fielding tariff gave the British preference of 33⅓ per cent less duty upon articles imported from Great Britain. That was reduction; that was a cut, so much so that the manufacturers were deadly opposed to it.

Mr. LALOR: That is not an answer to my question. Is the Fielding tariff the moderate protection my hon. friend proposes should be adopted?

Mr. LEMIEUX: There is nothing eternal in a tariff; it changes according to circumstances. The Fielding tariff was good for the time being and must be judged by its effects. Did it not give prosperity to the country? It made my hon. friend a millionaire.

Mr. LALOR: I wish it had.

Mr. LEMIEUX: I hope he will be a Senator before long and will meet his friend, Sir Lyman Melvin Jones, in the Senate. If you scratch a Russian, you find a Tartar; if you scratch a high protectionist, you find generally a jingo.

Mr. BURNHAM: If you strike a free trader, what then?

Mr. BUREAU: You find an honest man.

Mr. LEMIEUX: With all due respect to the Minister of Finance, I have already said in my opening remarks that this Budget is a most reactionary one, a Budget for privileges and the interests, for the combines and the trusts. It gladdens the hearts of the protectionists; it strongly appeals to the Tories. But, in his bounty to both the interests and the Tories, my hon. friend, the Minister of Finance, has overlooked the claims of the Imperialists—I mean the jingoes—on this Government. My hon. friend from Brantford (Mr. Cockshutt), who I regret is not in his seat, in his concluding remarks the other evening, after having extolled protection and its exponent, the hon. Minister of Finance, expressed his deep sorrow that this Government had not seen fit to tap our treasury in order to replenish by way of contribution the coffers of the Admiralty. That I may do him no injustice, let me quote his words:

As a humble Canadian who occasionally goes to the mother country, I feel almost ashamed to step on the wharf at Liverpool while we are doing all the talking and none of the acting—while we are making promises of loyalty, promises of support, and giving everything in the

way of encouragement by word, but in deeds not a cent.

Sir, I appreciate the feeling of deep humiliation under which my hon. friend is labouring. The shame must not and cannot be his, however. He, no doubt, is sincere though misguided in his policy of contribution. But what must he think of his leaders who first advocated the speedy construction of a Canadian navy, then, for party purposes, receded from that position and allied themselves with a faction unalterably opposed to all naval aids to the mother country? What must he think of the ministers who, having pledged themselves to consult Parliament or the people before promulgating a permanent naval policy, deliberately and without any mandate to that effect, sprung on Parliament under the plea of a sham emergency a contribution of $35,000,000—the first of a series of like nature? What must he think of the moral courage of a Government which dares not appeal to the people from the adverse decision of Parliament in order to secure the mandate it has not on the naval question? No, Mr. Speaker, let not my hon. friend be deceived by his sincere feeling of humiliation; the shame is the Government's, not his. His leaders are primarily responsible for the present impasse. To obtain office they played fast and loose with the naval question. I can only add this: No mercenary contribution will satisfy the ideals of Canadian nationhood; our young and vigorous country will never be reduced to the rank of the Malay states; in naval as well as in military matters, this Dominion claims its absolute autonomy.

Besides, there is a more pressing question which invites our attention; the emergency of the high cost of living must be faced and settled. The real enemy—and my hon. friend the Minister of Militia need not knock about to look for it—is hard times; and we must repel that enemy. The real problem is wider markets for the farmers of Canada. We must grapple with that problem, and we must solve it.

Sir, within a short period the world will witness a spectacle of unique impressiveness. Great Britain, Canada and the American Republic will celebrate their hundredth anniversary of peace. The world will know that here in North America, far from European entanglements, two nations made up of the best races in the world, have been living blessed with the peace of a century along a frontier four thousand miles long. The world will know that over that unlimited boundary line not a shot has been fired in anger, not a sentinel has been mounting guard, not a cannon has frowned across the border from either country. The world will know that the two democracies, issuing from a common origin, professing the same faith, pursuing the same ideals of freedom and justice, have cordially accepted the ennobling principle of arbitration as the settlement of differences.

Would it not be fitting, Sir, that on this memorable occasion, the Canadian Government should so readjust our tariff as to remove such customs taxes as at present overburden the tillers of the soil and the consumers of Canada ?

On motion of Mr. J. A. Macdonald Armstrong, the debate was adjourned.

On motion of Mr. Rogers, the House adjourned at 11.40 p.m.

Thursday, April 16, 1914.

The House met at Three o'clock, the Speaker in the Chair.

QUESTIONS.

(Questions answered orally are indicated by an asterisk.)

TOBIQUE INDIAN RESERVE.

Mr. CARVELL:

1. Has the Department of Indian Affairs settled with B. Frank Smith for the lumber cut or received by him from that portion of the Tobique Indian reserve north of the Tobique river, since March 31, 1913?
2. If so, what amount of lumber was cut and how much is to be paid therefor?
3. Has the said amount actually been paid in cash?
4. Has the said department settled with said Smith for the lumber cut by him on the south side of said Tobique river since March 31, 1913, outside of, and not included in the four lots of land sold to him outright?
5. If so, what amount of lumber was so cut, and how much is to be paid therefor?
6. What amount of lumber so cut consisted respectively of green or partly green lumber, and of dry or dead lumber?
7. What rate of stumpage was charged him for green or partly green lumber?
8. Has said amount actually been paid in cash?

Mr. ROCHE:

1. Yes.
2. 7,500 feet hemlock, 19,400 feet spruce, 77 cords wood, $97.40.
3. Yes.
4. Yes.

5. 27,200 feet B.M. hemlock at $3, $81.60; 56,500 feet B.M. spruce at $3.75, $211.87. Total, $293.47.

6. Green or partly green.

7. Answered by No. 5.

8. Yes.

AID TO CANADIAN NORTHERN RAILWAY

Mr. BURNHAM:

What are the dates of authorization by Parliament of the various grants, subsidies, guarantees, etc., set out in reply dated April 1, 1914, to question submitted on Orders of the Day regarding the Canadian Northern railway, etc.

Mr. REID:

Cash Subsidies.

Canadian Northern railway: Swan River section, 1899, chap. 7; 1900, chap. 8; Ontario and Rainy River railway, 1899, chap. 7; Edmonton, Yukon and Pacific railway, 1899, chap. 7.

Canadian Northern-Alberta railway, 1913, chap. 10.

Canadian Northern Ontario railway: Toronto-Sudbury, 1903, chap. 57; 1904, chap. 33; 1907, chap. 40; 1908, chap. 63; Toronto-Ottawa, 1913, chap. 10; Hawkesbury-Ottawa, 1908, chap. 63; Ottawa-Port Arthur, 1913, chap. 10.

Canadian Northern Quebec railway: Garneau-Quebec, 1908, chap. 63; St. Jerome branch, 1908, chap. 63; Rawdon branch, 1907, chap. 40, S. 1-16.

Canadian Northern Pacific railway, 1912, chap. 9.

Halifax and South Western railway, 1903, chap. 57.

Guarantees.

Canadian Northern railway, 1903, chap. 7; 1908, chap. 11.

Canadian Northern Alberta railway, 1910, chap. 6; 1912, chap. 7.

Canadian Northern Ontario railway, 1911, chap. 6.

Lands.

Winnipeg and Great Northern railway, Dominion Lands Act, 1883, sec. 7; R.S.C., 1886, chap. 54, sec. 90.

Lake Manitoba Railway and Canal company, 1890, chap. 4.

Manitoba and South Eastern railway, 1890, chap. 4.

P. BURNS GRAZING LEASE.

Mr. BUCHANAN:

1. Is the report correct that the Department of the Interior intends to open for homesteading a portion of the lease to P. Burns, in township 18, range 21, West of the 4th Meridian?

2. If so, when will the land be opened?

Mr. ROCHE:

1. No decision has yet been reached.

2. If it should be decided to withdraw any lands from the leasehold for the purpose of making them available for settlement, it would be necessary to give two years' notice to the leaseholder.

TENDERS FOR ANKLE BOOTS.

Mr. SINCLAIR:

Referring to an item of $7,897.50, found on page O-132, Vol. 11, Auditor General's Report, paid to Ames, Holden, McCready, Montreal, for boots, what are the names of the newspapers in which the advertisement calling for tenders for this purchase appeared and the dates of the insertions of such advertisement?

Mr. HUGHES: No newspaper advertisement was made. Tenders were invited by circular letter addressed to: The Slater Shoe Co., Ames, Holden, McCready Co., George A. Slater, Ltd., all of Montreal, and the Hart Boot and Shoe Co., Ltd., of Fredericton. The total quantity required was 4,050 pairs; half by May 20, and the remainder by June 15. The contract was divided between Ames, Holden, McCready, Ltd., at $3.90 per pair, and the Slater Shoe Co., at $4 per pair; the latter company's tender offering earlier deliveries. This was the first time tenders for ankle boots had been obtained for about eight years.

INSPECTION OF WEIGHTS AND MEASURES.

Mr. SINCLAIR:

1. What are the receipts from inspection of weights and measures?

2. What is the expenditure?

Mr. NANTEL:

1. From April 1, 1913, to March 31, 1914, $106,522.47.

2. From April 1, 1913, to March 31, 1914, $144,122.98.

UNOPPOSED AND UNDISCUSSED MOTION.

Mr. Proulx.—Return showing how many appointments have been made in the Customs Department at Montreal since the 1st of October, 1911; the names of the persons so appointed, and the dates of their respective appointments; after what recommendations they have been appointed; the salary of each of these new employees; the increases of salaries granted in the same department since the same date, and to whom, and why.

VANCOUVER ORANGE LODGE RESOLUTION.

On the Orders of the Day being called:

Mr. WILLIAM CHISHOLM: I desire to call attention to the fact that question No.

18 does not appear on the Order Paper in the form in which it was first submitted. It has been emasculated. The resolution referred to was set forth, and the questions were directed to it. A resolution addressed to the Premier of Canada, to the Rt. Hon. Winston Churchill and to Sir Edward Carson is surely proper enough to be printed in the Orders of the Day, and a resolution passed by such a body as the Vancouver County Orange Lodge cannot be of such a character that it should not appear in public print. Therefore, I submit that whoever emasculated the question had no right to do so.

Mr. SPEAKER: I understand that it was somewhat irregular in form, and, following the usual practice in regard to long questions, we reduced it as much as possible. I will, however, look into the matter.

Mr. WILLIAM CHISHOLM: I desire to ask that the question be put on the Order Paper in the original form, because the answer cannot be intelligible without the resolution.

Mr. SPEAKER: Of course, the hon. member will understand that questions and resolutions submitted cannot always be put on the Order Paper in the form in which they are presented to the House; if so, they would frequently be irregular. After conference with the hon. member, it will be decided in what form the question will be put.

THE BUDGET.

Consideration of the motion of Hon. W. T. White (Minister of Finance) for the House to go into Committee on Ways and Means, resumed from Wednesday, April 15.

Mr. J. A. MACDONALD ARMSTRONG (North York): Mr. Speaker; I have no intention of imposing on the good nature of the members of this House for more than a few moments, and I would not have craved their indulgence at all but for the fact that I consider it my duty to those who sent me to this House as their representative to place myself on record at least with regard to the more contentious matters in connection with the tariff. The House listened last night with a great deal of attention to the able address made by the hon. member for Rouville (Mr. Lemieux). I for one always listen to that hon. gentleman with a great deal of pleasure—I believe in giving credit where credit is due; in rendering unto Cæsar the things that are Cæsar's. I congratulate the hon. member on having delivered what, to my mind, was a very capable address. As a work of literary art, I think it would class as a masterpiece. I also congratulate the hon. member on his wonderful command of the English language and his extensive knowledge of the Latin tongue, as evidenced by the several Latin quotations he gave last night. I do not pretend to be a Latin scholar, but I recollect the phrase—'Hereditas damnosa.' I noticed that my hon. friend from Rouville repeated that expression several times, and that he laid stress upon the first syllable of the last word. I presume that he sought to convey to this House what he would like to do with the members of the Conservative party if he had the chance. I will willingly and freely congratulate the hon. member on that speech and on the manner in which it was delivered. But I regret that I cannot congratulate him upon the subject matter of that speech. If the hon. member's political epitaph is to be carved or framed according to the standards of that speech, I am afraid it will be this and nothing more: 'He talked much and said little.'

The hon. gentleman did, in one respect, follow the lead given by other hon. gentlemen since the early days of this session; he began by telling the House that there were many, many unemployed in Canada, and that a very unsatisfactory condition of affairs prevailed. He said it with a gleam of satisfaction in his eye. His political partisanship, his desire for political preferment, no doubt overcame his interest in the welfare of the Canadian people. He said that hundreds and thousands of unemployed were walking the streets of Montreal, and that the same condition prevailed in other cities throughout Canada. Apparently he is not satisfied with that condition, but wants to make it worse. According to his own showing, he wishes to recruit the ranks of the unemployed, to see more destitute homes and more hungry children in his native city of Montreal. For, forsooth, he has asked this House to eliminate the duties on agricultural implements. He is not satisfied with the condition of unrest that prevails in the manufacturing world, but wishes to disturb it to a greater extent, to remove any feeling of confidence that may exist, and to compel the manufacturers to retrench further, and to throw more hands out of employment, showing clearly that the hon. member for Rouville and many other hon.

members behind him are willing, in order to bridge the gulf that separates them from the Treasury Benches in this House, to walk over the half fed and half clothed bodies of the wives and children of the artisans of Canada. Hon. members opposite have at last come out in the broad light of day; at last we know where to place them. They have nailed their colours to the mast and have said: we will make a bid for the votes of the farmers of the plains and for them alone. That is what it looks like. They have no regard for the interests of the workingmen. I trust it will be heralded throughout the length and breadth of Canada just how anxious these hon. members are to help the artisans and labourers at the present time.

The hon. member made some very peculiar statements. He said that the big interests won the last election for the Conservative party. Well, there is one big interest we did not have, and that was the interest of the Honourable Lyman-hyphen-Melvin-hyphen-Jones. We did not have it then, and did not want it, and I do not know that we want it very badly now.

An hon. MEMBER: But you have it.

Mr. ARMSTRONG: We won't keep it long. The hon. member for Rouville knows, and so does every hon. member on that side, that the artisans and workmen, the farmers, fruit growers and market gardeners, throughout Canada, from tide-water on the East to the Pacific ocean, were against them on the reciprocity agreement. And the best evidence of that is that the right hon. the leader of the Opposition (Sir Wilfrid Laurier) himself dare not now stand up in his place in this House and declare that he will make reciprocity one of the planks of his platform when he appeals to the people in the next election. That is evidence of the insincerity of hon. gentlemen opposite. They know it was a gold brick, and they know that the people of Canada know that it was a gold brick. But says the hon. member for Rouville: Sir John Macdonald favoured reciprocity.

The hon. gentleman quoted from 'Hansard' of about twenty-five years ago, and in the next breath, in reply to the twitting that had been tossed across the floor of this House with regard to the peculiar stand taken by hon. gentlemen opposite with respect to the five per cent reduction on the duty on farm implements, while under the reciprocity agreement the duty was to be reduced only two and one-half per cent, the hon. gentleman said: 'Oh, this is 1914, not 1911.' He is prepared to go back into the past ages to prove his contention with regard to reciprocity, but he is not prepared to defend the stand that he and hon. gentlemen opposite are taking now as compared with the stand they took only three short years ago. The hon. gentleman went further, and he said that according to the statement of the late chieftain of the Conservative party, Sir John A. Macdonald, the National Policy would remove barriers to larger markets. Well, I think that subsequent events have proven the truth of that prophecy, and as to that I refer the House to the Wilson-Underwood tariff which went into force a few months ago.

Again, the hon. member for Rouville, comparing the two parties, says that the Conservative party sent many pilgrimages to Washington, and that they returned empty-handed, but that the Liberal party sent only one, which returned empty-handed, and, forsooth, Washington thereafter sent her emissaries to Ottawa. I doubt if I ever heard a greater compliment paid to the Conservative party. I am glad to know that the statesmen south of the line have too much respect for the intellectual and political acumen of the Conservative party and the Conservative leaders to think for one moment that they could palm off upon them such a gold brick as the reciprocity pact.

The hon. gentleman, in the course of his remarks, said he would not touch on the naval question. I do not blame any hon. gentlemen opposite for dodging that question as much as possible. But the time will come when they will be unable to dodge it; the time will come when they will have to stand before the bar of public opinion, and the people of Canada from ocean to ocean will, in no uncertain way, show hon. gentlemen opposite what they think of the party who for political purposes will cast a slur upon the Canadian people, and through the dictation of the right hon. leader of the Opposition force a moribund body known as the Senate to throw out the Naval Bill.

The hon. member for Rouville makes another peculiar statement. He says that this Government promised to reduce expenditure, and then he goes on to invite the hon. Minister of Public Works on his next trip to England, to visit the Tower of London and look at those peculiar instruments that were used in earlier days to mete out punishment to those whom he calls

perjurers and impostors. I ask the hon. member for Rouville to take his mind back over the history of his own party; to look over the list of broken pledges and neglected promises; to look over the record of the public treasury plundered and the public domain squandered for the benefit of a few of the political barnacles which were fastened on the Liberal ship of state. I can only say that if the shortcomings of this Government merit the punishment that the hon. member for Rouville mentions, the only punishment which I think would meet the political sins of hon. gentlemen opposite would be the tortures of the Inquisition.

I was never in my life as proud of the fact that I am a Conservative as I have been since the moment the hon. Minister of Finance took his seat after delivering the Budget speech. I am proud to be a Conservative, because once more we can make the proud boast that so far as tariff matters are concerned this party can claim consistency. From 1878 down to the present day the people of the country have known exactly where to find hon. gentlemen on this side of the House; I wish I could say as much for hon. gentlemen opposite. I am almost constrained to pity when I look across the floor of this chamber. First of all I would see, if he were in his seat, the hon. member for Red Deer (Mr. Clark), a very able man, and a pronounced exponent of the principles of free trade. I would see sitting not far from him the hon. member for South Wellington (Mr. Guthrie) who in his heart is a protectionist, and who not long ago informed this House that reciprocity was dead. I would see sitting near him the smooth-tongued, soft-spoken member for Carleton, N.B. (Mr. Carvell), whose honeyed utterances so often have a tendency to pour oil upon the troubled waters of debate in this House. According to the public press, in the city of Hamilton the other day, that hon. gentleman said that reciprocity was not dead. Not far from him I would see the really genial and popular member for Beauce (Mr. Beland), convicted out of his own mouth the other night as being at heart a Conservative so far as the tariff is concerned. I would see also the smiling countenance of the hon. member for Welland (Mr. German), a pronounced opponent of the principles of reciprocity, a gentleman who was man enough to stand out from his party and declare his principles upon the floor of Parliament. Then, last but not least, we have the right hon. leader of the Opposition himself. I do not want to unlock the door of the cupboard and expose to view the old party skeletons; this House has heard about it ad nauseam in the years gone by. I shall only remind the House of the days when the right hon. gentleman, in sonorous voice, proclaimed himself in the market places of Boston as being the Moses of the Canadian people who was going to lead them out of thraldom, and assured the people of the republic to the south that the ultimate aim of this country was independence; that we would break away from British connections as the ripe fruit would drop from the parent stem. I do not want to follow the right hon. gentleman in his varied career; I am not going to dilate upon the time when he advocated unrestricted reciprocity and continental free trade as they had it in England. The right hon. gentleman has turned more political somersaults as far as tariff matters are concerned than any man in the history of this or any other civilized country.

I wish to say a few words with regard to some of the matters upon which hon. gentlemen opposite and those of us on this side of the House disagree with regard to the tariff. I am going to confine my remarks to the two items of free wheat and free agricultural implements, because personally I am not sufficiently conversant with the steel industry in Canada to make any comments upon it. I may say at the outset that hon. gentlemen opposite, especially those who represent western constituencies, have taken, to my mind, a very peculiar view of this question. I listened to the hon. member for Humboldt (Mr. Neely) when early in the session he introduced an amendment to the Address calling for free wheat. I heard the tale of woe of the hon. member for Moosejaw (Mr. Knowles) when he talked upon the question of free agricultural implements. One would think when listening to the wailings of these hon. gentlemen, that that portion of Canada lying between the western boundaries of Manitoba and the foothills of the Rockies was a plague-stricken country. Listening to their lamentations I could almost hear the little children on the side lines and concession roads crying for their daily bread. I could almost see the heart-broken mother, the tears of agony streaming down her cheeks, lifting up her hands in supplication to the great Architect of the Universe and asking that she and hers might be provided with the ordinary necessaries of life. I could see in my mind's

eye the distracted husband and father pacing up and down outside the little shack upon the homestead, tearing his hair and calling down curses upon the head of the right hon. Prime Minister and the other members of the Government because, forsooth, they had not seen fit to grant him free wheat and free agricultural implements. It is passing strange, Mr. Speaker, that, of the hundreds and thousands of sons and daughters of Ontario who left their native province to settle in western Canada, 999 out of every 1,000, when asked would you like to come back, answer, no. Strange, is it not, that they do not want to leave this plague-stricken land, where destitution and poverty are walking hand in hand if we are to heed the baleful wailings of hon. gentlemen opposite. The hon. member for Moosejaw (Mr. Knowles) went further in speaking of agricultural implements and he said that the farmers of Canada, living along the International boundary, could not bear to look across that imaginary line, and I could almost see the tears coursing down his cheeks as he spoke of these men, who could not bear to see the farmers across the line getting their implements a little bit cheaper. Strange, is it not, that, according to the census returns, every year sees hundreds—yes, thousands—of our neighbours from the western States, leaving their farms and coming into western Canada? Strange is it not, that they wish to leave that country where the fields are always green, where the sun always shines, where the tariff always suits them, where agricultural implements and everything they need are so cheap, strange it is to see them leaving a land flowing with milk and honey and coming to this downtrodden and plague-stricken country? It is high time that members of this House realized more fully their duties and responsibilities. I do not see that any good can be gained or any object attained by members from the West trying, as they have done time and time again, to draw a line of cleavage as between Eastern and Western Canada. It must be realized that this country does not consist only of the East or only of the West, but that it is a great confederacy stretching from ocean to ocean, which can only prosper by all the provinces standing shoulder to shoulder, ready to give and take, and to make sacrifices one for the other. In that way alone can we build up here, on the northern half of this continent, a great, free, happy, united and contented people.

I wish to say a word or two regarding another matter, not in connection entirely with the tariff, but of vital importance to the farmers of the whole country; viz, the question of repairs to farming implements. This may be considered a small matter, but any one interested in farming or representing a farming community knows that it is a big item and amounts to a lot. I have it on the best of authority—and it is on account of the information I have received that I want to sound this note of warning to the manufacturers—that on the heavier classes of farming implements, such as binders, reapers, &c., if a man should buy the implement piece by piece and assemble it, the cost would be enormous. A binder may be purchased complete for $140; but I am informed that by buying it in parts and then assembling it, the cost would be nearly $1,000. I know for a fact, I have it from local managers and agents of the Ford Motor Car Company, that a Ford car can be bought piece by piece and can be put together for about $100 in excess of the price of the finished article assembled at the factory. A car is a luxury, but a binder is an absolute necessity; and if the Ford people can produce that luxury and supply the parts of it at the increase I have named, there is no reason under the sun why the manufacturers of implements cannot do the same. According to the information I have received, this is nothing less than legalized robbery. A farmer may break a piece of machinery in the middle of harvest. It does not matter what that piece costs, he has to have it and will pay the price without squealing. But the fact that he is willing to pay the price is no justification for the charges made by the manufacturers. I draw these facts to the attention of the Government, because I think they are worthy of the attention of this or any other Administration.

I wish to reiterate here what I have said upon the hustings time and time again, although it has no reference to the Budget, that I consider Senate reform one of the most important matters before the people of Canada to-day. I wish it to be distinctly understood that I am speaking of the Senate as a body and not in any individual sense. I have no personal animus against any hon. member of that body. I have the greatest respect for every one of them whom I know. I know there are many able members of that body, but it is the system to which I object. I say the existence of that body as it is now constituted is unjustifiable in Canada. I say that it is absolutely

out of date, and that its very existence is an insult to the intelligence of a free people.

Mr. SPEAKER: Order. I think the hon. member is going too far. The rule is distinctly laid down that it is not permissible to speak disrespectfully of the other Chamber.

Mr. ARMSTRONG: I gracefully withdraw the remark. I regret that the rules of debate do not permit me to convey my idea in the only language I thought applicable to the case. I cannot understand by what process of reasoning any man will argue or can argue that a body of men who are appointed, not chosen, who are responsible to no one but to God and their own consciences, should have the right to veto legislation passed by the chosen representatives of a free people, who are responsible to the people. I regret that the restrictions of debate do not permit me to deal with this matter quite as lucidly as I would like. I want to make myself clear in this. The Senate of Canada, as is well known, is looked upon with levity throughout the length and breadth of the land. Wherever the name is spoken, it is apt to provoke a smile, and I am satisfied that the people of Canada, from ocean to ocean, year after year, are becoming more seized of the fact that some change must be made in the constitution of that body.

Sir WILFRID LAURIER: Hear, hear.

Mr. W. F. MACLEAN: Hear, hear.

Mr. ARMSTRONG: I am very glad indeed to hear the right hon. leader of the Opposition say, Hear, hear. I believe that he is not entirely insincere. I would ask him to carry his mind back in the political history of this country to 1893, to the platform that was enunciated by his party at that time, and he will find as one of the cardinal planks in that platform, on which he went to the country, that he pledged himself to reform the Senate. For fifteen long years he held the reins of power, but no change was made in the constitution of that body except as to its political complexion.

I have stated that I am opposed to free wheat. I am opposed to the principle of free wheat, because, in my opinion, it is just the thin edge of the wedge, and ultimately will lead to free trade. I am opposed to free wheat because I believe it will not be of any lasting benefit to the farmers of the West, while on the other hand it will be a lasting detriment and do lasting harm to the mixed farmers of the rest of Canada. I am opposed to free agricultural implements because it means, in the first place, free trade, and in the second place, more destitute homes, more men out of employment, a bigger army of unemployed, and more hungry children walking the streets of the great cities of Canada. That in my view would be the result if any change such as is contemplated or advocated by hon. gentlemen opposite should be made at the present time.

The member for Moosejaw (Mr. Knowles) dilated upon the hardships that had been endured by the early settlers in western Canada. I appreciate the hardships endured by the early settlers of Western Canada. I do not wish to depreciate or detract from any credit due to them, but I do want to point out that there is another section of this country, a province known as Ontario, whose history will give many instances of just as much self-denial and a great deal more self-denial and privation than the history of the West can ever show. When this province of Ontario was first settled, the settlers did not find hundreds and thousands of acres of arable land waiting but the touch of the ploughshare, the drill, and the harrow to yield thousands and hundreds of thousands of bushels of wheat to the granaries of the world. They found a wooded wilderness and in the heart of that they had to carve out homes for themselves, for their wives and for their children. I have the honour of living on a farm that came into the family in 1837—200 acres of virgin forest. Fifty years of unremitting toil was required before that farm was brought into its present state, and it is only a sample of hundreds and thousands throughout Ontario that to-day bear silent testimony to the hardships and privations endured by the generations that have gone before. In dealing with questions such as free wheat and free agricultural implements, in dealing with any question of great and far-reaching importance, it is not sufficient, to my mind, to argue that just because the western part of Canada or any portion of Canada want a particular law it should be enacted. It is the duty of this House and of every member of this House to realize that in dealing with these questions he must have regard to the interests of the whole of Canada. Canada cannot live by any one industry alone. The farmer must co-operate with the manufacturer; the manufacturer is just as important as any other class. The labourer is just as

important as the manufacturer. The artisan is as important as the labourer, and so on all along the line. They must stand together if they are going to do anything towards the real development of the country, and I say that the members from the West are not fulfilling their duty as representatives of the people of Canada, in drawing, or trying to draw as they have done, a line of cleavage as between eastern and western Canada.

When I commenced speaking I stated that I had no intention of taking up very much of the time of the House and I intend to keep my word. I have endeavoured to make myself clear upon the points that are of most importance in this Budget. I am opposed to free wheat and I have endeavoured to give my reasons why; I am opposed to free agricultural implements and I have endeavoured to give my reasons why. Let me extend to the hon Minister of Finance my hearty congratulations on his having, in my humble judgment, dealt with a very serious question at a very serious time in a very able manner, having due regard to all classes and interests from one end of this Dominion to the other. I am sure that in saying that I voice the sentiments of the majority of the people from ocean to ocean.

Mr. A. B. McCOIG (West Kent): Mr. Speaker, in the first place I wish to congratulate the hon. member for North York (Mr. J. A. M. Armstrong) on the force which he has put into the remarks he has offered this afternoon. After congratulating him on the energy he has displayed, I regret that I cannot extend my congratulations further. I also wish to add my thanks to the Minister of Finance for allowing not only ditching machines but also their repair parts to come into Canada free. That is appreciated by the farmers in our sections of the country and I feel satisfied that it will assist them in working out what they have long wished for, that is, a better system of drainage for the farms in Kent and other counties in southwestern Ontario. In passing, I might also say that I appreciate the assistance that has been given the farmers in our section of the country by the Postmaster General in extending to them the free rural mail system adopted by the previous Government. I trust the present Postmaster General will not forget his solemn promise to me personally that he will continue to extend the routes in sections of West Kent in which there is now no rural mail service. The farmers are very much indebted both to the former Postmaster General (Mr. Lemieux) and to the present Postmaster General (Mr. Pelletier) for the way in which that system has been and is being carried out. The system of free city delivery is also working well in the city of Chatham with possibly one or two exceptions in the business portion of the city to which I am pleased to call the attention of the Postmaster General in the hope that the delivery will be improved in the near future. I do not think it is necessary to reply further to any of the remarks of the hon. member for North York except to say that there may be more in his remarks with regard to repair parts of farm machinery than some men not familiar with farm machinery may be aware of.

Speaking of free agricultural implements, let me go back to the time of the first amalgamation of the Massey-Harris Company, concerning whose president the hon. member for North York says he is not particular whether he joins the Conservative party or not. In 1891 an amalgamation took place of the Massey Company and the Harris Company, then enjoying a protection of 35 per cent—for the express purpose of controlling the entire machine trade of the Dominion of Canada. Some time after the amalgamation, the Patterson Company of Woodstock and the Wisner Company of Brantford also amalgamated. The Massey-Harris Company feared the opposition of this new amalgamation, which received a large portion of the trade of Canada in the short time of its existence. The Massey-Harris Company tried to make some arrangement with them, either to amalgamate or buy them out. They were successful in making one big company of the two concerns, and for a time after they bought the Patterson Company out in 1891 the Massey-Harris Company controlled the machine trade of the Dominion. During that time they were successful in receiving for their agricultural implements just what prices they saw fit to ask from the farmers. I can prove that, and if the hon. member for Brantford (Mr. Cockshutt) were in his seat I would ask him if that is not correct. They received at that time from $125 to $145 for their binders, which at that date were not to be compared with the machines supplied at the present time. Up till 1894 when the Government reduced the tariff from 35 per cent to 20 per cent they practically had a monopoly of the machine business of this country. When the tariff was reduced in that year they

had to compete with the Deering Harvester Company and the McCormick Company. What was the effect of that competition? What was the benefit to the farmers of the Dominion? Sir, the minute that the Deering and McCormick companies began to bring their implements in they made a reduction on repair parts of 25 per cent, and the Massey Harris Company were compelled to do exactly what the hon. member for North York has been complaining of, they were compelled to reduce their price on repair parts 25 per cent. Furthermore, they were compelled to provide an entirely different machine. The binder that they had been manufacturing for years was a heavy, cumbersome machine, and one that necessitated the use of an extra horse to draw it. It was far from being equal to the machines that were brought in from the United States. When the competition started they at once found it necessary to improve their machine. They got out a machine in a few years which was a great improvement on that which they had formerly produced, a machine with roller and ball bearings, a transport truck and a sheaf carrier, and they sold it at exactly the same price to the farmers of this country. The point I wish to make is that when competition was brought in they were compelled to give the people of the country a far superior article at a reduced price as compared with what they were giving them prior to 1894. I believe that what the hon. member for North York has said is true, that the Massey Harris Company controlled the machine business of this country, and that was possibly one of the reasons why we find that not later than this last general election the hon. Minister of Labour (Mr. Crothers), who, we are all sorry to know, has been indisposed, and whose early recovery and return to the House will, I am sure, be a source of gratification to us all, made the following statement in the city of Chatham, as reported in the leading Conservative paper in the southwestern part of Ontario:

> What the farmers of the Dominion want is not free wheat coming into the country, but free farm machinery.

That was the statement of the present Minister of Labour, one of the leading members of the Opposition at that time, and one of the hardest things I had to do in my own constituency was to convince the farmers that the Minister of Labour was only joking, and that if a Conservative Government came into power it would do nothing to carry out the principles which he advocated upon that occasion.

Let me go a little farther. I do not doubt, Mr. Speaker, that you remember that the former Conservative member for Macleod, Mr. John Herron, speaking on the 30th of March, 1910, as reported in 'Hansard,' used the following language:

> I wish to say a few words on the resolution now before the House. I think it would be a much greater benefit to this country to put binders on the free list than feathers or perfumery, and things like that of which we have heard tonight. I think this would have been a grand opportunity for the Government to fulfil some of the pledges they made years ago to the farmers of the Northwest. We know that prior to 1896 the Prime Minister and his followers made pledges that if they were in power they would put farm implements on the free list. I do not know whether the Prime Minister himself made that statement emphatically, but many of his followers who afterwards became ministers did make it. I think this would have been a fitting opportunity to insist upon reciprocity in agricultural implements between the two countries as well as in wheat and other grains.

Mr. SAM. SHARPE: What is the date?

Mr. McCOIG: March 30, 1910, page 6,000. We hear hon. gentlemen opposite talking about the difference of opinion among members on this side of the House and explaining that on the other side of the House they are a united party and all of one opinion. That statement will not be borne out if we read a little further in 'Hansard' and see what the hon. Minister of Customs (Mr. Reid) said, speaking on the same day, and upon the same important matter. As reported upon the next page of 'Hansard,' the Minister of Customs, who, I am sorry to say is not in his seat, said:

> What surprises me is that the Minister of Finance did not try to negotiate a reciprocity in so far as agricultural implements are concerned. Then there is wheat, the great output of the northwest. If we could get wheat into the United States it would be a great help to the farmers of the northwest.

Then he goes on further and states:

> But the Minister of Finance did not take the farmers into consideration at all, in so far as the northwest was concerned, and did not try to get any of these articles on the free list.

4 p.m. Is this not amusing to one who was sitting silent there on the other side and hearing these gentlemen, day after day, appealing to the Government of the day to do just exactly what we are proposing to do at the present time? Yet these hon. gentlemen, holding posi-

tions in the Government now, are not offering to do one of the things which they urged the late Government to do. We heard the hon. member for North York declaring that hon. gentlemen opposite were a great and united party.

In view of the situation which confronts us now what is the conclusion at which we must arrive? It is that they were taking an insincere position at that time and that they were merely saying these things for the purpose of stumping the country. It is reported that Sir Wilfrid or some of the members of his Government promised free wheat and free implements in days gone by. The hon. Minister of Finance (Mr. White) came into my riding, to the old Liberal stronghold of Tilbury, which returned a Liberal majority in the past and will, I have no doubt, do so again. While addressing a meeting in that town, and being asked to give an account of the condition of the country by Mr. John Richardson, an old stalwart, we find the hon. gentleman, as reported in the leading Conservative newspaper, the Chatham Planet, of September 16, 1911, making use of the following language:

> First of all, I would thank Providence.
> Where does the Government come in? followed up Mr. Richardson.
> I am coming to that. I will be perfectly fair to you as a Liberal. I would first thank Providence, then Canadian brains, Canadian pluck, British money, and, lastly, the successful administration of a government which has crowned a constructive policy with this reciprocity folly. If it were not for this reciprocity agreement I would be following Laurier to-day.

Mr. Speaker, we all remember how, on many occasions, you stood up and advocated the opening up of other markets for the natural products of the country, and when you now see your old colleagues going back upon the pledges which they made in days gone by, is it not a matter of regret that you are now, by reason of your position, deprived of the privilege of coming to the assistance of those now fighting in the interests of the farmers?

With reference to the implement proposition, we have had our friends going all over the country and saying that they would not hesitate for a moment to join with us on this great and important question and endeavour to do something more than merely reduce the tariff on binders and mowers. We know that the Minister of Finance smiled when he said to the House the other day that he was going to make a reduction of five per cent and then followed it up by saying that this reduction was to be on binders and mowers. He knows that a small reduction upon binders and mowers does not amount to anything as far as assisting the farmers is concerned, because he is aware of the fact that in the United States there are only three leading manufacturers, the McCormick, Deering, and Massey-Harris concerns, and that a reduction on these implements would only mean that they would send binders and mowers into this country to compete with the machines that they themselves are manufacturing here. They are the only people who are manufacturing binders and mowers in the United States to any great extent. If some hon. gentleman opposite may wish to include also the Plano, Champion, and Milwaukee, I would say that they were all in the big merger which was in existence up to a few months ago in the United States and will, I suppose, be working the same old game that they worked previously. This five per cent reduction on binders and mowers only means that they will be taking the money out of one pocket and putting it into another. If the American manufacturers came over here, because they are all one and the same concern on both sides of the line, they would simply be fighting themselves.

But what does the minister do? He leaves the tariff on the most important implements just as it was before, and tries to make out that he is doing something for the farmers. In my own constituency and in other parts of the country it is a well known fact that one binder and one mower in many cases will be sufficient for the purposes of two or three farmers. I see the hon. member for North Essex (Mr. Wilcox) smiling. He will agree with me that in many sections of the country two or three farmers will use one binder and one mower. In many sections of Ontario binders will last from ten to twelve years, but never more than fifteen or twenty with ordinary use and good care.

Mr. WILCOX: My hon. friend said that the Minister of Finance must have smiled when he announced his reduction of 5 per cent. Did my hon. friend's party laugh out loud when they reduced the duty by 2½ per cent in 1897 ?

Mr. McCOIG: I do not catch the point. The hon. gentleman does not understand what I am trying to get at, and I am sure I do not understand what he is trying to get at. If he is desirous of encouraging the agricultural implement industry, as he

claims he is, he cannot have any objection to reciprocity.

Mr. WILCOX: My hon. friend misunderstood me. He said that the Minister of Finance must have smiled when he was about to announce the reduction of duty of 5 per cent on binders. I ask my hon. friend what effect it had upon his party and his Government under the Fielding tariff when they only reduced the duty by 2½ per cent.

Mr. McCOIG: My hon. friend knows that we did not stop at binders; we made a reduction of 5 per cent on all implements with respect to which the farmers desired the duty removed.

Mr. WILCOX: And you raised the valuation.

Mr. McCOIG: The hon. gentleman was not interrupted last night, and I trust he will not continue to interrupt me. I am sure we enjoyed his address very much, and we listened to it without interrupting him.

The point is this, that as to the important machinery which the farmers at present require, such as manure spreaders, disc drills, hoe drills, dump rakes, side delivery rakes, hay loaders, hay tedders, disc harrows, drag harrows, riding ploughs, gang ploughs and walking ploughs, my hon. friend the member for Brantford (Mr. Cockshutt) saw to it that there was no interference in any shape or form. I might also mention land rollers and other tools such as corn planters, corn cultivators, corn shredders and huskers, and sugar beet tools, which are most important to the counties of Essex and Kent, where we grow so much corn and on which the farmers get no concession in the way of a reduction of duty. My hon. friend (Mr. Wilcox) sat in this House for six years and never agitated for a duty on corn. He is supposed to be very close to the Government, but never before last night did he use the old argument for a duty on corn which Mr. L. Wigle in 1900 used up and down the concessions of South Essex when fighting the former member of this House, Mr. M. K. Cowan. This old argument in regard to free corn which the hon. member for North Essex (Mr. Wilcox) put forth in this House last night, was thrashed out election after election, but never once did Mr. L. Wigle defeat Mr. M. K. Cowan, who fought for free corn. I want to inform the hon. member for North Essex that the county of Kent can grow corn just as well as any other county in the province of Ontario. I am not prepared, as the representative of that county, to ask the Government of the day to put a tariff on corn, and I can tell my hon. friend that not later than last Tuesday I saw Mr. John Sewell of the township of Raleigh, which is in the corn belt of Canada, actually buying corn to feed his stock. There are other counties which are not so fortunate as ours, in being able to grow corn, and the people of Kent are not so selfish as to desire to tax the farmers in these other counties on the corn they use to feed their live stock. I challenge my hon. friend (Mr. Wilcox) to tell me on what occasion, when there was a duty on corn, the farmers of Kent and Essex got as high a price for corn as we have been getting during the last few years. I wait for a reply.

Mr. WILCOX: How can my hon. friend justify arguing for a higher duty than 28 per cent on tobacco, and at the same time advocate free corn? If protection is good for one, why is it not good for the other?

Mr. McCOIG: I knew my hon. friend could not give me a straight answer. I expected the answer he gave. As far as corn is concerned, we want to let the farmers of the province of Ontario in the different counties where they cannot raise it have the advantage of free corn which is a necessity for them as being a raw material of the livestock industry. We want to give free corn to the farmers in your riding of Grey, Mr. Speaker.

On the other hand, tobacco is a luxury, not a necessity. I drew the attention of the hon. Minister of Agriculture to the unfortunate position in which the tobacco growers of Kent were; in that they were held up by buyers, and that there were only two firms that could buy tobacco whereas thousands of men want corn to feed their stock. If the hon. members wishes to be fair, he will join with me in doing everything possible to assist the tobacco growers who are to-day in an unfortunate predicament. If they were not in that position, I would not have appealed to the Minister of Agriculture and the Minister of Labour, to take action under the Combines Act to compel the tobacco buyers to do what was fair and just to the growers who are trying to make a living on their farms. Tobacco is a comparative new industry, encouraged and fostered in its infancy by the late Government of this country who spent thousands of dollars in working out a scheme that was in the best interest of the tobacco growing industries. The Liberal Government, supplied free seed; and

gave lectures and instructed the farmers how to grow the crop. The farmers were encouraged to go into the business, and they did so; they bought tools to work the crop, and they built tobacco barns, which cost a thousand or fifteen hundred dollars each, and which are practically of no use for any purpose except for hanging and curing tobacco. Then the tobacco buyers stated that they were willing to pay a handsome price for the crop, but to-day these buyers, afraid that the Government will take some action, are going down to the county of Welland and telling the farmers there that they can grow tobacco equally as good or better than they can in Essex or Kent, the object being to depress the price of the leaf. For what little tobacco is grown there they pay four cents a pound more than they pay in the county of Kent. And I challenge the hon. member for North Essex, I challenge the combine, to place samples of those tobaccos before the Minister of Agriculture, and I am willing to stand corrected if he does not say that the Kent tobacco is as good as that produced in Welland. The combine are paying four cents a pound more in order to encourage the farmers of Welland to do the same thing as the farmers of Kent have done—to go into this business; and after they have got them into it, they will squeeze them, paying them just such prices as they choose. This tobacco can only be disposed of in the end to the tobacco users, and only through this combine can the farmers reach the consumers. I appealed to the Minister of Labour (Mr. Crothers) to take action under the Combines Act. I appealed to the Minister of Inland Revenue (Mr. Nantel) on this subject. He gave us a ray of hope; he said he would take up the matter with his colleagues. I ask him now has he taken up the matter with his colleagues, or is he allowing the farmers to be held up as before? The hon. minister has nothing to say. I venture to believe that he has not taken the matter up with his colleagues; he has not broken the news to them. He allows the farmers to remain in the hands of the combine, and leaves the combine free to take the farmers' crop at whatever price they choose to give.

So much for tobacco. Now I come back to the question of free corn. My hon. friend is anxious to have a duty on corn. I am not in favour of a duty on corn. But what I am prepared to agitate for—and I hope the Minister of Finance will consider it—is the removal of the duty on the implements which the corn producers must use. Hundreds and hundreds of farmers are growing corn who have to import corn binders, corn huskers, corn shredders and other implements. They must have these implements because of the shortage of labour, yet these machines are practically not manufactured in this country. The Massey-Harris people intended to manufacture, and for a time, I believe, actually did manufacture, corn-binders. But their machines did not work successfully in the corn-belt of Essex and Kent. For the last two years they have been importing the Johnston corn binder, the Deering and McCormick binders are manufactured in Chicago. If it should turn out as the Minister of Finance stated, that corn harvesters would come in on the same basis as grain harvesters, the duty on these implements hereafter will be 12½ per cent. As the price of corn huskers and shredders runs from $250 to $300 and even more, and as the farmer must have them because hand labour cannot be found to do the work as cheaply as it is done by the machine, it is easily seen that even this duty represents a heavy tax upon the producers. If the hon. member for North Essex is so anxious to benefit the corn producers, I would suggest that he join with me in urging upon the Minister of Finance that these machines should be allowed to come in free. That would be a relief to the farmers who are supplying Ontario with corn in competition with the United States. If the hon. gentleman will assist, I will do everything I can to secure for the farmers the benefit of the removal of this duty.

Now, we have the hon. member for North York (Mr. J. A. M. Armstrong), who, I believe, represents a constituency of farmers, saying that he is absolutely opposed to free wheat. As representing a farming constituency in the province of Ontario, I wish to show you and this House why I am in favour of free wheat. Unless we remove this duty of 10 cents a bushel on wheat and 45 cents a barrel on flour, see what we shall be up against. The estimated wheat production of Canada in 1913 is 231,717,000 bushels, while the estimated consumption of Canada is only about 50,000,000 bushels, leaving a balance of 181,717,000 bushels to find a market. What are the farmers of the West going to do with it? They must sell it if they are going to pay the manufacturers of Ontario for the machines they have bought to seed and harvest that wheat; otherwise, the condition will be

worse than that at present, when, we are told, they are able to collect only 25 per cent of farm machinery notes in the western country. And if we do not leave the western farmers free to dispose of their wheat, oats, barley and flax at prices that will enable him to pay for his farm machinery and live, they will be compelled to go into mixed farming. We find the Minister of Agriculture in the province of Manitoba to-day issuing a pamphlet to show how mixed farming can be carried on in that province. And if the Government is going to tie up the western farmers in such shape that they cannot get rid of their wheat, they must turn to the production of something else. So they will go into the raising of cattle and hogs. And I would ask the hon. member for North Essex what is the man who is raising hogs in the East going to say when the western provinces are sending their cheaply-grown hogs down to our markets by the trainloads? This is too serious a matter to monkey with in politics; we have to consider it from a broad national standpoint. If we do not so consider it, the farmers of Ontario will find themselves in the position of having to compete with those carrying on mixed farming in the western provinces, where they can produce as cheaply again as we can in Ontario. It was only the other day that the morning papers announced that seeding is on in Alberta and that large tracts of land are being set aside to plant rape. Rape, as you know, Mr. Speaker, being a practical framer, is one of the best crops you can sow in the spring to feed hogs. Evidently they are preparing to go into the hog industry. If it were not that the United States Government has removed the tariff on hogs and cattle, we should have the hogs from the West competing with our hogs in this market. If my hon. friend from North Essex, who is recognized as a practical and successful farmer, will look at it in a fair and non-partisan light, he will see that it is in the interest not only of Ontario, but of all Canada to give the people of the West a market for their grain and allow us to continue the production of articles that we have produced in the past with such splendid success.

We hear hon. members opposite crying against going into other markets and saying that we want to retain the home market for ourselves. Let me just give you a few illustrative figures on that point:

During the month of November not a single bullock, calf, sheep or lamb was shipped from Canada to Great Britain. To the United States the shipments were 70,746 cattle valued at $2,864,809; 5,297 calves under one year old valued at $64,348; 7,936 lambs valued at $37,592, and 490 sheep valued at $3,201.

If these are the figures for the month of November alone—and they can be proved by the information in possession of the Minister of the Department of Trade and Commerce, who knows more about the figures than I do—is it not important that we should try to do something along the lines suggested by the Opposition? Let me go a little bit further. I should like to know what the hon. member for North Essex would have to say if reciprocity had passed and he were still in Opposition; if, going up and down his concessions, he found the farmers who went into the horse industry a few years ago having to sell their horses at $25 on the hundred less than the price they received for them prior to 1911? Would he not be one of those who would hold up both hands in holy horror and say that reciprocity had ruined the horse industry of this country? No later than last Saturday I bought a team of horses for $400 which would have cost $500 prior to 1911. It says here that the reduction of duty on horses to 10 per cent resulted in a shipment of 400 horses to the United States in November worth $101,496. In the face of the present 10 per cent duty against our horses, we sent 400 of them to the United States in November. What is our esteemed friend the Minister of Militia going to do at this time? No later than yesterday the right hon. leader of the Opposition made an inquiry of the Minister of Militia with regard to certain information which had been sent throughout the country in connection with an arrangement being made by the Minister of Militia with the National Livestock Exchange. The despatch is, in part, as follows:

An important arrangement has been made by the Minister of Militia with the National Live Stock Exchange, Limited, whereby the latter will lease for twenty-one years 65,120 acres of crown lands in Alberta, south of the Red Deer river, and will breed thereon cavalry remounts for the Canadian militia and the British army. The annual rental will be two cents per acre, and the exchange undertakes to raise not less than 1,500 horses per year.

Are you not proud, Mr. Speaker, in the thought that the Minister of Militia will take 65,000 acres of the land belonging to the farmers of Canada, who contribute their share to the revenues of this country, and

rent it to a company at two cents an acre to go into the horse raising business in opposition to the farmers not only of Ontario but of the whole of Canada? What will the hon. member for North Essex say about this? Will he appeal to the ministers from the province of Ontario, the people of which have been doing their duty and maintaining the dignity and prosperity of Canada for a great number of years? The Minister of Finance a few days ago said: we are going to educate the farmers with the money that is being given by the Minister of Agriculture. Is this the way we are going to educate them? Are we going to fight them on the very thing that they are trying to work an existence out of? Or are we going to say that the Minister of Militia is making expenditures which are not condoned by the Minister of Finance and the Minister of Trade and Commerce? I believe that the time will come when the money of the people will not be spent so extravagantly as it has been during the last couple of years Let me read to the House what a Conservative paper in the city of Toronto says. I think that members on the opposite side of the House will agree with me that the Toronto Saturday Night is recognized as a Conservative paper—at least, we may say that it is independent. This writer in Saturday Night, who is recognized as one of the best editorial writers we have in Canada to-day, says:

> Peace-loving Canadians will be tickled almost to death when they view the estimates now being brought down in respect to the construction of drill halls. Here are a few specimens in Ontario: Barrie drill hall, $25,000; Berlin, $50,000; Brantford, $75,000; Fort William, $30,000; Galt, $35,000. And so on by the tens of thousands is the pap distributed throughout the country. A more useless, criminal waste of public moneys has never taken place in Canada than is now being experienced in this fever for drill halls. If some of these funds were put into an insane asylum for the incarceration of those who voted these estimates, something of real service to the country would be accomplished.

I am glad to see, by his smiles, that the hon. Minister of Trade and Commerce (Mr. Foster) enjoys the truth. I hope that he and the Minister of Finance will use their influence, as coming from the province of Ontario, to see that the money of the people of this province in particular, who are contributing a large portion of the revenue of this Dominion, is not squandered in this way.

So far as the people of my section of the country with whom I came in contact during the Easter recess are concerned, among both Liberal and Conservatives I have not found one man who has not asked me to stand up, when the proposal to extend further aid to the Canadian Northern railway comes before Parliament, and vote against it in the interests of the people of Canada. I understand that there are a few independent members on the other side of the House; if the hon. member for North Essex happens to be one of them, I join hands with him and assure him that we will stand together on this important question and endeavour to see that the Canadian Northern railway gets no more money out of the treasury of this great Dominion. The reports show that this railway has received from the different provinces and from the Dominion in guaranteed bonds, cash and lands, over $200,000,000. If this be true—and it will certainly be investigated by the hon. Minister of Finance before he thinks of bringing down any resolution in the matter—and it is found absolutely necessary that we should do something to assist this road, speaking for myself I think the Government would be justified in going into the matter thoroughly with a view to seeing whether or not they could take the road over from McKenzie and Mann and operate it for the benefit of the people of this country, the revenue thereby obtained going into the treasury of Canada—particularly in view of the fact that it has cost the people so much money up to the present and, under these conditions, the people would own what they are now paying for instead of the Canadian Northern Railway Company.

I assure you, Mr. Speaker, that I appreciate the kindness of hon. gentlemen in the courtesy they have extended to me in listening to my remarks, and I again assure the hon. member for North Essex that if he is with me on the proposal to which I have referred, we will vote together against any proposed aid to the Canadian Northern railway when it comes before Parliament.

Mr. J. W. EDWARDS (Frontenac): Mr. Speaker, I desire first of all to add my congratulations to those which have already been tendered to the hon. Finance Minister, not only for the logical and convincing manner in which he delivered his Budget Speech, but as well for the candour and sincerity which he displayed in his statements. The Minister of Finance, according to the representations made by the hon. gentle-

man who has just taken his seat (Mr. McCoig) has, on more than one occasion, given evidence of his candour and fair mindedness. The hon. member was good enough to say of the Minister of Finance that, in making an address in some part of Ontario, he gave credit to Providence, first of all, for the prosperity of the country. I am not surprised that this should have attracted the attention of the member for West Kent, because hon. gentlemen on the other side of the House have not been accustomed to hear their Cabinet ministers giving credit to Providence for any prosperity that may have existed in this country while they held the reins of power. It was their custom to attribute the prosperity to Sir Wilfrid Laurier, and to contend that Providence had very little to do with it. If, however, there was a crop failure, or anything of that kind then Providence took the whole blame, and the Government was exonerated.

I do not intend to occupy much time this afternoon in referring to the finances of the country. I am sure every hon. gentleman in this House, whether he sits on this or on the other side, is pleased with the state in which the finances of the country are, and have been, during the regime of the present Government. In 1896 the net debt of the Dominion of Canada amounted to $258,497,432. In 1911, when the Laurier Administration went out of office, that debt had increased to $340,042,052, or an increase in the net debt of Canada, during the years of the Liberal regime, of $81,544,620. At the end of the fiscal year after this Government took office, the debt was decreased by $122,591. At the end of the next year, there was a further decrease of $25,617,835, a decrease without any parallel in the political history of Canada. At the end of the year just closed, the net debt was increased by $19,000,000, but this increase, when compared with the increase of $46,000,000, which took place in the years 1907 and 1908, under the Liberal Administration, the Conservative party has no reason to be ashamed of. The net result, so far as the debt of Canada is concerned, is that our debt is over $6,000,000 less to-day than when the Borden Government assumed office.

It is also a matter for congratulation that Canada's trade did not stop when the Government changed. We had been led to believe, and the people of this country had been led to believe for many years, that the only Heaven-born statesmen that this country had ever produced were in the Liberal party, and that if there should be a change of Government everything would stagnate, trade would stop, and business would go to the dogs. Well, trade has not stopped. Our trade has continued to increase steadily and enormously since this Government took office, until now it has passed the billion dollar mark. The increase in our aggregate trade last year alone, over the trade of four years ago, exceeds the average total trade of Canada during the last ten years of Liberal Administration. Inasmuch as the hon. member for Rouville (Mr. Lemieux) drew particular attention to the aggregate trade of Canada, I draw his particular attention to that statement. Our greatest trade was with the United States, amounting to over $608,000,000. Our trade with the United Kingdom came next, amounting to over $316,000,000. The next countries in order are France, Germany, and the West Indies, with each about $17,000,000 in aggregate trade. Our aggregate trade is made up of imports of $692,000,000 and exports of $393,000,000, showing an adverse balance of trade of over $298,800,000. Our imports from the United States amount to over $441,000,000 and our exports to the United States to $167,000,000, or a balance of trade against Canada of over $274,000,000. Canada sells to the United Kingdom $177,000,000 worth and buys from the United Kingdom $138,000,000, a balance of trade in favour of Canada of $39,220,000. It may be of interest here to note that of the fourteen larger countries with which Canada does business, all buy less from Canada than they sell to Canada, with the exception of the United Kingdom, Newfoundland, and Belgium. I know tha there are persons who have given considerable thought to trade questions who do not attach any importance to an adverse balance of trade, but I must say that I would prefer to see the balance the other way. It may be noted also that $198,386,000 worth of our exports, that is over one-half, go to the British Empire, and that over ninety per cent. of our exports to the British Empire go to the United Kingdom. It is also worthy of note that over fifty-two per cent of our total exports from Canada are products of the farm.

I represent a farming constituency, so that I may be excused for paying special attention to the products of the farm. Our exports of animals and their products to the British Empire amount to $31,166,000, and to all other countries $14,607,000; or a total of $45,773,000. Our exports of agricultural products to the British Empire amount to $120,163,000, and to all other countries $38,792,000; or a total of $158,955,000. Our total exports of animals and

agricultural products to the British Empire amount to $151,330,000, and to all other countries $53,398,000; or a total of $204,748,000. Allow me to briefly summarize the destination of our exports. Of the products of the mine 22 per cent go to the British Empire and 63 per cent to all other countries; of fisheries 37 per cent to the British Empire and 63 per cent to all other countries; of the forest 25 per cent to the British Empire and 75 per cent to all other countries; of manufactures 29 per cent to the British Empire and 71 per cent to all other countries; of animals and their products 69 per cent to the British Empire and 31 per cent to all other countries; of agricultural products 76 per cent to the British Empire and 24 per cent to all other countries. These figures indicate very briefly the immense interest which the Canadian farmer has in the United Kingdom and the British Empire. They also indicate to my mind very clearly the paramount importance of maintaining Great Britain's supremacy on the sea, as the only safeguard of the integrity of the empire and of the safe conduct of our farm products to the various countries of the world. Canadian exports of grain and the products thereof, amounting to nearly $98,000,000 in 1913, and of cheese $20,697,000, are not offset to any appreciable extent by imports into this country of like commodities. But in regard to live animals, meats and vegetables, our imports for home consumption are about equal to our exports. As to butter and eggs we export none at all. In fact we import butter to-day to the extent of $2,783,000, and eggs to the value of over $2,000,000.

I contend that the best consumer the Canadian farmer has to-day is the citizen of Canada, and that any policy which has a tendency to build up industries here thereby providing a consuming population and home market for Canadian farm products, is the only proper and sane policy for this Dominion. Canada's second best customer is the United Kingdom. If increasing exports of our farm products to the United Kingdom is an indication of an increasing demand in that country for those commodities—and that may be fairly assumed—I maintain that the figures representing our exports to the United States and imports from the United States of products similar to what our farmers produce do not indicate that the United States is the natural market for the Canadian farmers, but just the reverse. During the fiscal year 1913, Canada imported 37,433,745 lbs. of meat for home consumption, valued at $5,000,000. With the exception of 1,617,000 lbs. from Great Britain, and 2,500,000 lbs. from Australia and New Zealand, all of that 37,000,000 lbs. of meat came from the United States, which hon. gentlemen opposite are continually declaring is the natural market for Canadian farm products. At the very time we were importing over $5,000,000 worth of meat, our exports of meat amounted to $6,250,000 worth. I maintain to-day what I have always maintained when in opposition, that a duty of 2c. a pound on meats is not now and has never been a fair, just and reasonable protection to the farmer who is producing meat in this country. There is a far greater difference than 2c. a pound in the advantages which the American farmer has over the Canadian farmer in the production of meat, and I contend that in fairness to our Canadian farmer that duty should be materially increased. Yet, if hon. gentlemen opposite had had their way in 1911, they would have removed or materially reduced that duty, and exposed the Canadian farmer, not only to the competition of the immense surplus of meat of the United States, but also to the immense surplus production of meat, amounting to over two billion pounds per year, which is indicated by the exports of various countries which would have had the right to send their meats to Canada. Five hundred million pounds of that represents the export from the United States; Australia and New Zealand alone export over 363,000,000 lbs. of meat a year; Denmark over 300,000,000 lbs., and the Argentine over 900,000,000 lbs. I contend that the proposed reciprocity agreement was the most unfair deal, so far as the Canadian farmer is concerned, ever suggested in this Parliament since Confederation. Will any man attempt to argue that it is a fair deal to the Canadian farmer, who has to provide against climatic conditions such as we have here, who has to spend thousands of dollars in erecting barns and stables, who for months of the year has no income at all, who has to keep his stock under expense till the summer opens up—will any man argue that it is a fair deal to make the Canadian farmer, under such conditions, compete on equal terms with the farmer, for instance, of the Argentine, who is not put to the expense of housing his stock—it runs out the year round—and where the rate of

wages paid by the farmers is about one-third or one-fourth what the Canadian farmers have to pay? There is only one fair way to look at this question of protection. The only way in which the Government of a country like Canada can deal fairly with the people of this country is to place a duty on certain products which come into competition with like products in this country, endeavouring by that duty to discount the disadvantages of the Canadian farmer in the matter of climatic conditions. If that is not done our tariff is unfair to the producers of farm products in this country.

In regard to butter, our exports have reached the vanishing point. Our imports last year amounted to about 8,000,000 lbs., 6,000,000 lbs. of which came from New Zealand, over 1,000,000 lbs. from the United States, and 767,000 lbs. came from Great Britain. We also received butter from Austria, Holland, Russia, Turkey and India. I mention these latter imports not because of the large amount coming to Canada, but to indicate that if we had no protection for the butter-makers of Canada these countries would avail themselves of our market whenever the price was such as to induce them to do so. When we remember that England alone imports every year upwards of 500,000,000 lbs. of butter, that Denmark exports every year upwards of 200,000,000 lbs. of butter, and that butter can be brought from Denmark or Liverpool and laid down in the city of Montreal for less than one cent a pound for carrying it, I am justified in asking that the farmers of Canada be protected in regard to butter.

In regard to eggs, the same thing holds good. We export no eggs whatever, but we imported last year of eggs 13,240,111 dozen, mostly from the United States; of vegetables, $3,242,214 worth from the United States; of lard, $1,520,450 worth from the United States; of apples, 320,325 barrels mostly from the United States; and of animals, living, $2,519,249 worth. While our exports of animals, living, amounted to $2,949,677 worth.

Hon. gentlemen opposite have been contending that the United States was our natural market. I want to devote a little attention to that argument. I have here an official bulletin issued by the United States Department of Agriculture, and that bulletin says that the domestic farm products of the United States exported in 1911 were equal to 51.2 per cent of the total exports of domestic merchandise of that country, as compared with 50.9 per cent for 1910.

Hon. gentlemen opposite are contending that the United States is our natural market for farm products, and yet we have an official document from the United States Government which declares that over 51 per cent of the domestic merchandise exported from that country in 1911 is merchandise of the farm. The exports of domestic farm produce from the United States in 1910 amounted to $871,158,425, and the imports to $687,509,115. There is a balance on farm produce in favour of the export trade of the United States of $198,118,937. In 1911 the exports of domestic farm produce from the United States amounted to over $1,030,794,402, while the imports of farm produce decreased from $687,509,115 to $680,204,932, showing a balance in favour of United States exports of farm produce of $365,254,018. While Canada's exports of farm products are a little over 52 per cent of her total exports; while we are sending to foreign markets about $200,000,000 worth of farm produce, the United States is sending over $1,000,000,000 worth. The United States has a surplus of farm produce of over $365,000,000 a year, or $160,000,000 more than the total export of farm produce by Canada, and a clear surplus of over double the net surplus Canada has in farm produce. While Canada sends to Great Britain $180,000,000 worth of farm produce, the United States sends to Great Britain $413,000,000 worth. While Canada's export trade with Germany amounts to a little over $3,000,000, of which only a part is farm produce, the United States export of farm produce to Germany in 1911 amounted to $207,000,000, which was $29,000,000 more than that of the preceding year.

5 p.m.

I am giving these figures for the purpose of trying to demonstrate that the United States, in place of being a natural market for Canadian farm products, is Canada's chief competitor in the markets of the world for the farm produce which we have to sell. I want to go a little farther into detail in regard to some of these articles, and in this connection I would submit the following table of figures:

Exports of Domestic Merchandise of United States.

	1911.	1912.	1913.
Butter	6,374,000 lbs.	5,105,000 lbs.	3,114,000 lbs.
Cheese	11,745,880 "	2,726,065 "	2,475,743 "
Eggs	13,276,000 doz.	18,962,000 doz	17,668,000 doz.
Apples	1,436,335 brls	1,813,456 brls.	1,920,221 brls.
Beef, fresh, canned and pickled	82,300,000 lbs.	47,100,000 lbs.	36,000,000 lbs.
Hog products	1,121,000,000 "	1,057,000,000 "	1,083,000,000 "
In which are included:			
Bacon	193,968,000 lbs.	188,048,000 lbs.	210,098,000 lbs.
Hams and shoulders	183,728,000 "	168,687,000 "	167,160,000 "
Pork, fresh and pickled	42,434,000 "	42,497,000 "	45,687,000 "
Lard	529,689,000 "	470,752,000 "	509,786,000 "
Principle meat and dairy products	$136,630,376	$123,244,132	$138,924,092
Principle breadstuffs	$122,837,787	$149,814,877	$191,477,180
Barley	3,555,000 bus.	8,194,000 bus.	12,782,000 bus.
Oats	2,125,000 "	30,374,000 "	5,274,000 "
Oatmeal	$933,843	$525,575	$1,337,599
Corn	59,807,877 bus.	30,185,713 bus.	44,709,954 bus.
Cornmeal	$1,506,025	$1,374,234	$1,240,904
Wheat	31,662,550 bus.	60,426,494 bus.	99,360,278 bus.
Wheat flour	$52,653,960	$49,186,765	$56,568,699

United States Exports of Wheat and Wheat Flour sent to Canada.

Wheat	771,342 bus.	700,368 bus	2,577,337 bus.
Wheat flour	81,295 brls	85,802 brls	116,179 brls

United States exports of domestic food animals dropped from $14,289,508 in 1911 to $895,603 in 1913, and exports of bran and middlings from $3,071,000 in 1911 to $123,316 in 1913.

I want now to direct attention to the United States exports of wheat. I do so for the reason that the hon. member for Assiniboia (Mr. Turriff) a few days ago took exception to the criticism made by the hon. member for Muskoka (Mr. Wright) in regard to the quantity of domestic wheat exported by the United States.

The hon. member for Assiniboia (Mr. Turriff), being a western member, should have a special knowledge in regard to all matters concerning the exportation of wheat; but the hon. member for Muskoka (Mr. Wright) had to correct him, and the hon. member for Muskoka was right, and the hon. member for Assiniboia was wrong. I have in my hand a document issued by the Department of Commerce of the United States dated December, 1913, which gives the exports of domestic merchandise. Under those exports I find that, in 1911, the United States exported of their own wheat 31,662,550 bushels; in 1912, 60,426,494 bushels; in 1913, 99,360,278 bushels. They exported of wheat flour in those years $52,000,000 worth in 1911, $49,000,000 worth in 1912, and $56,568,000 worth in 1913. Those figures show that the United States is not starving for our wheat and farm products at the present time. On the contrary, their official publications indicate that their exportations, and therefore their surplus of these commodities, are on the increase rather than on the decrease, for the last three or four years. I am free to admit that there has been a decline in the United States of exports of beef and of beef cattle, and of several other articles. I am also free to admit that the Wilson-Underwood tariff, which was designed to lower the cost of food in the United States—although I think I can show it has not had that effect—would have a tendency to increase the importations into that country of the articles which have been made free. In regard to the importation of cattle into the United States, several hon. gentlemen opposite have called attention to the increase. It is a fact that, after the Wilson-Underwood tariff came into effect in October last, the

exports of cattle from Canada to the United States for the months of October, November and December of 1913, very much exceeded the exports for the same months in 1912. It is also true that in the month of December, 1913, the exports of cattle from Canada to the United States were only about one-third of the exports for the preceding month, and in the month of January of this year the exports of cattle to the United States were practically the same as in the month of January, 1913. What are the reasons for this? Hon. gentlemen opposite contend that this is all due to the removal of the duty. I do not agree with that statement by any means, but I am willing to admit that the removal of the duty would accelerate the movement of cattle to the United States. There were conditions in the United States independent entirely of the tariff which amply justified the movement of cattle from this country to the other side during those months. The country from which the United States has for years obtained her greatest number of cattle is Mexico, and conditions in that country have been such lately that the exportation of cattle from Mexico has very much decreased. I think I can show conclusively why cattle have been exported from Canada to the United States and why the price of meat has gone so high in that country, and also in this. The United States census of 1910 contains the information that the number of beef cattle in the United States in 1910 was 9,840,239 less than in 1900. The United States Government also furnishes us with the fact that from 1910 to 1913 there was a further reduction in the number of beef cattle in the United States of 10,249,000, a total reduction in thirteen years of over 20,000,000 head. While I think I may fairly estimate the increase of population in that country for the same period at over 10,000,000 people. If there is anything at all in the basic principle of supply and demand, these figures amply justify the movement of cattle from this country into the United States where their herds have been largely depleted. In the United States from 1910 to 1913 there was a loss of 7,734,000 sheep and from 1911 to 1913 a loss of 4,442,000 hogs. Surely these figures are significant; and I think, apart altogether from United States tariff reduction, we have in these figures ample justification for the increase in the price of beef and for the movement of cattle from this country to the other side of the line. The Wilson-Underwood tariff has made some things very clear to my mind, and one is that you cannot reduce prices through the tariff until there are sufficient importations to affect potentially the supply within the country. I think we may accept that as a truism and it has been clearly demonstrated in the United States since the Wilson-Underwood tariff came into operation. Prices in the United States have not as yet been appreciably affected because the imports have been practically negligible as compared with the home production of the articles imported. But the conditions in Canada are vastly different from the conditions in the United States. If we were to remove the duty, as the United States has done by the Wilson-Underwood tariff, and these importations, or even a portion of them, were to come into Canada as they have gone into the United States, the importations into this country would not be a negligible quantity as compared with our production; they would absolutely swamp the Canadian farmer and put him out of business. This is the proposition which hon. gentlemen opposite offered to the farmers of Canada in 1911, and which they are offering to them to-day.

I have said that the prices of food in the United States have not been materially affected since the Wilson-Underwood tariff came into operation. I want to give proof for that statement. I refer hon. gentlemen opposite to Bulletin No. 138 of the United States Department of Labour. This bulletin takes into account the retail prices of some fifteen articles of common consumption, and the prices have been carefully obtained from forty principal cities on the other side of the line. These articles are: potatoes, eggs, round steak, ham, rib-roast, sirloin steak, bacon, poultry porkchops, milk, cornmeal, lard and butter, flour and sugar. The prices of these articles, obtained in the way I have indicated, are given for the months of October, November and December, 1913, and for the same months in 1912. According to this bulletin, in the month of October thirteen out of fifteen articles increased in price, while two diminished; in December twelve out of fifteen articles increased in price, and three diminished as compared with the same month in the preceding year. I give these facts as I get them, and I assume them to be correct. The United States Government took means, as we should naturally expect them to do, to ascertain whether the Underwood-Wilson Tariff was having the effect hoped for in

the reduction of prices. Perhaps I had better put these figures on record for the month of October, 1913, as compared with October, 1912. The increases were: potatoes increased 42·3 per cent; eggs, 14·2 per cent; round steak, 12·9 per cent; ham, 10·6 per cent; rib roast, 8·8 per cent; sirloin steak, 8·3 per cent; bacon, 8·2 per cent; poultry, 7.5 per cent; pork chops, 6.3 per cent; milk, 2·7 per cent; cornmeal, 1·7 per cent; lard, 1 per cent; butter, 3·7 per cent. The decreases were: sugar, 8·8 per cent; flour, 2·6 per cent.

Now, I wish to refer to another matter, to which a good deal of attention was paid by the hon. member for Red Deer (Mr. Clark) in an address delivered in this city of Ottawa. He called this address 'Parallels of history,' and he was moved to make that address because of the passing of the Underwood tariff in the United States, which he looked upon as an indication that the United States was going to follow the example of England and become a free-trade country. The hon. member for Red Deer is not at present in the House to-night. Since he came into this House he has on every possible occasion advanced his views in favour of free trade. In England in 1841, 49 per cent of the population was rural, and in 1861, 45 per cent of the population was rural. I think I am right in assuming that at the time when the Corn Laws were repealed more than half the population of England was urban. At the same time the conditions in continental Europe were very different. In France, 75 per cent of the population was rural; in Prussia, 72 per cent; in Belgium, 75 per cent; in Norway, 87 per cent, and in Sweden 87 per cent. I mention these facts to indicate that there were reasons why England adopted that free trade policy, and there were reasons also why that policy did not appeal to other countries in Europe. There is another point: About the middle of the last century, when England adopted free trade, there was no other country in the world which could be classed with England as a manufacturing country. It has been said that in certain parts of England, standing on the top of a high building, one could look in one direction and see the spot from which they brought the iron, and looking in another direction he could see the spot from which they brought the coal, while past the half-way point flowed the river which would take to market the manufactured product due to bringing together of the iron and the coal. In other words, the giant levers of national progress in England represented by coal and iron lay close together and gave the country an advantage which other countries did not possess. England relied upon her ability to more than compete in manufacturing, and she relied upon the freight rates on goods coming into the country to protect her farmers. Sir, I contend that there is no such condition as that existing in Canada, and never has been, neither is there a similar condition in the United States to-day. It is true that in the United States the urban population has grown very enormously as compared with the rural. In 1890 the urban population of the United States was 36 per cent of that total. Twenty years later, in 1910, the proportion of town dwellers had increased to 46·3. I think we may fairly assume that the population of the United States is now about evenly divided between urban and rural, specially when we allow for the fact that in these figures only those are counted as urban who live in towns with a population of not less than 2,500. In 1910, there were nine states in which between 40 and 45 per cent of the population was urban, and 15 states in which from 50 to 96 per cent of the people dwelt in cities and towns. There were 115 cities of 50,000 population and upwards; and of these 13 cities had a population of from 250,000 to 500,000; 5 cities had a population of from 500,000 to 1,000,000, and 5 had a population of over 1,000,000. If these facts in regard to the enormous increase in the urban population in the United States furnish any indication as to why the Underwood-Wilson Tariff was inaugurated in that country, I submit that there are no similar conditions in Canada and nothing to warrant the people of Canada in moving in the direction of free trade or taking off our protective duties.

The question is often asked why the boy leaves the farm. That has been the subject of a good deal of comment in the newspapers and in this House. Well, Sir, I believe the reason is simply this: The educational advantages, which twenty-five or forty years ago were more or less restricted to the cities and towns, have now become general, and the boy in the country, through education, has come to realize that there are opportunities for him in other walks of life as well as in farming. In other words, the cities and towns have been making a bid against the country for the boy, and the city has outbid the country. The country must

be put in a position to raise the bid if you are going to retain the boy on the farm. Demonstrate to the boy on the farm that with the same amount of capital and the same expenditure of energy, ability, and time, he can realize as good a profit as in other walks of life, and you keep him on the farm. He does not go to the city because there are moving-picture shows there or because of any other similar attractions that the city has to offer. I appeal to every member of this House, if it is not true that when you look over the population of your cities and towns and consider the boys who have come from the country to the city, you will find that those boys have not devoted themselves to frivolity but that they more than held their own with the others. This is proof positive to my mind that the country boys do not go to the cities because of attractions there which do not exist on the farm, but because they believe, and because experience in this country has taught them to believe, that they can make more money with the same amount of capital, energy, time and ability than they can on the farm.

It is up to us to try to change those conditions, but I submit that they cannot be changed by doing as hon. gentlemen opposite want to do: by taking down our tariff walls and forcing the Canadian farmer to compete with the surplus production of all the agricultural countries of the world. You cannot induce the farmer to stay on the farm in that way; you cannot induce him to stay on the farm by decreasing his profits, and an inadequate tariff would undoubtedly decrease his profits. If you expose the Canadian farmer to the competition of the surplus products of all the world, you force him always to accept the lowest possible price for his produce, for just as soon as the prices under those conditions would become attractive, the products of other countries would flow into Canada and bring the prices down. The Canadian farmer is entitled to even more protection than he has at the present time on his produce.

Two matters which were referred to in the Budget speech attracted my attention more than any others. I refer to the pronouncement of the Minister of Finance with regard to wheat and to agricultural implement, and I desire just now to make a few observations with regard to the question of free wheat. Allow me to say that I have the greatest sympathy for the farmers in the West. I lived in the West myself for three years; and I have now a brother and other relatives in the West, all of whom are engaged in farming. When I say that I have the greatest sympathy for the farmers of the West in their present difficulties, I am but expressing what I sincerely feel. The farmers of the West are not getting at the present time the prices and profits on their grain which they think they should get in order to make farming as profitable as they would like it to be. Hon. gentlemen opposite say that the remedy for this is to remove the duty from wheat and flour, because the two must, of course, go together. The United States has offered to admit Canadian wheat and flour free of duty as soon as Canada removes the duties upon wheat and flour coming from the United States. Hon. gentlemen opposite took a very different position in 1911 when they proposed that wheat should be reciprocally free. I quote from Mr. Fielding's speech on January 26, 1911:

> Flour is now to be dutiable at the common rate of 50 cents per barrel. Canada's reduction is 10 cents per barrel.

What reason did the hon. gentleman give for this reduction on flour and this proposal to make wheat free? Allow me to quote further from the speech he delivered in this House on the date I have mentioned:

> In the discussion of tariff items in this House in by-gone years, there were two items which were commonly bracketed together, strange as it may appear. I refer to coal and flour. In the early days of the discussion of the duties on these articles, it was argued with much force that the coal duty was rather a burden on the people of Ontario, and that the flour duty imposed a burden on the people of the lower provinces, and that, on the principle of give and take, the people of the two sections should be willing to have these two duties imposed, each section profiting by that policy. I need not now go into the discussions which took place at that time. We are now proposing to bracket them together. We are making a small reduction in the duty on coal of 8 cents a ton.

Under the reciprocity pact Mr. Fielding and the Liberal party absolutely refused to take the duty off flour, and every hon. gentleman sitting on that side of the House applauded that refusal and said that Mr. Fielding was right in taking that course. It is all right, they said, to take the duty off wheat, but do not take it off flour. They are singing a very different tune now.

Another matter to which I wish to direct attention in connection with the wheat question is that under the Underwood tariff Argentine wheat is now admitted free into the United States. The Argentine Republic is one of the great wheat-pro-

ducing and wheat-exporting countries of the world. Argentine wheat can be landed as cheaply at New York and New Orleans as at Liverpool and Glasgow. After three months' operation of the Underwood tariff, this is what the Modern Miller, a paper published in the United States and devoted entirely to the milling interests, said on January 10, 1914:

> It would not now be safe to predict that Argentina in the course of a few years to come, will not invade our markets with wheat to the extent of making wheat prices on our coast very strong rivals of prices at the most remote interior points. Millers may have some interesting developments from Argentine free wheat that will prove as surprising as the corn importations.

What happened in regard to corn? As everyone knows, the United States is the greatest corn-producing country in the world, producing practically as much corn as all the other countries of the world put together. In the months of October, November and December, 1912, 4,000,000 bushels of Argentine corn were landed in the United States, over 3,000,000 being landed at New York. The Modern Miller, referring to the period which I have mentioned, said:

> 15 vessels were en route to the United States from Argentina either loaded with or loading corn. One large American manufacturing company ordered 5,000,000 bushels of corn for future delivery and some of the present crop is offered at from 8 to 10 cents per bushel below United States prices.

I commend these facts to the consideration of hon. gentlemen of this House. If that happened with regard to corn coming from Argentina, it seems to me that the words of the Modern Miller with regard to the possible effect of these large importations of Argentine wheat into the United States are worthy of the very careful consideration of hon. gentlemen of the House before we throw our markets open to American wheat and American flour. In view of these facts, and in view of the further fact mentioned by the hon. Minister of Finance that two other transcontinental railway lines are nearing completion; that the Hudson Bay railway will soon be completed, and that the possibilities of the Panama canal as another transportation route are yet to be determined, I think the Minister of Finance gave good advice to this House—and hon. gentlemen will do well to heed that advice—when he said that it would be well to wait and see what the completion of these railways and the opening of this canal may do towards relieving the situation in our western country. I understood the member for West Kent (Mr. McCoig) to say that our consumption of wheat in Canada amounted to something like fifty million bushels, but I think it is really a little more than that. The consumption of wheat per head of population in the United States is 5·6 bushels; in the United Kingdom, 6 bushels; in Argentina, 6·5 bushels; in New Zealand, 7·1 bushels; and in France, 7·8 bushels; while the consumption per head of population in Canada is given as 9·4 bushels. Our large consumption is accounted for to a certain extent by the fact that a large amount of wheat of poorer grade is fed to stock, especially in the Northwest. But on that basis, if you take the population as given by the last census for each of the provinces, and multiply that population by 9·4 bushels per head of population, and then deduct from that the amount of wheat produced by each province, you find that in all the provinces of Canada, excepting the prairie provinces, Manitoba, Saskatchewan and Alberta, none produces sufficient wheat to supply its own needs. The province of Ontario uses over 23,000,000 bushels, produces over 18,000,000 bushels, and has to buy over 5,000,000. The province of Quebec uses over 18,000,000 bushels, produces a little over one and a quarter millions, and has to buy over 17,000,000 bushels. Nova Scotia has to buy over 4,000,000 bushels, New Brunswick over 3,000,000, Prince Edward Island over 362,000. British Columbia, I think, buys one and a half million bushels and the Yukon about one quarter of a million. In other words, the provinces which I have named, use or consume 55,292,199 bushels of wheat and produce 22,829,000 bushels, and have to buy, and do buy, for their own use 32,463,199 bushels of wheat. This 32,000,000 bushels the people of Ontario, Quebec, the Maritime provinces and British Columbia must take from farmers in the Northwest. I ask my friends from the Northwest to keep that in mind when they are considering a market for their wheat. Their best market is, of course, the United Kingdom, but the other provinces of Canada cut no small figure as a market for the wheat of the Northwest. And why is this? Why is it that in Ontario and in the eastern provinces they are consuming more wheat than they produce? It is because the National Policy, inaugurated many years ago, has built up a population of consumers in this country, who are taking the products of the

Northwest. I ask hon. gentlemen to give that due consideration when they are considering this very important question.

When we compare conditions in the West with conditions in the East we find that, so far as the rural population is concerned, conditions in the West are better to-day than in the East. I will give some reasons for making that statement. The value of livestock and poultry in Manitoba for the year 1911 amounted to $62,707,000; in Saskatchewan to $155,767,000; and in Alberta $83,231,000. The value of field crops for the same year in the same provinces was $76,500,000 in Alberta, $115,426,000 in Saskatchewan and $48,475,000 in Manitoba, a total for the three provinces mentioned in live stock, poultry and field crops, of over $502,000,000. Let me remind hon. gentlemen that in Ontario the total value of live stock, poultry and field crops amounted to $421,610,000, so that this one province of Ontario cuts no small figure in the production of live stock and field crops. But allow me further to state that the people of Ontario, the farmers in this province, have invested in land at least $758,000,000; in buildings $335,000,000; in implements over $86,000,000 and in live stock $225,000,000, or a total of $1,405,000,000. If you take the rural population as given by the last census of the Prairie provinces, and of Ontario, these being the only ones I have taken for purposes of comparison, you will find that the average value of live stock, poultry and field crops per family in Manitoba, amounted to $2,727; in Saskatchewan, $3,203; and in Alberta, to $2,829; while in Ontario it amounted to $1,772. In all earnestness, I would ask our friends from the West to consider that, and also that in the province of Ontario it has taken a great many years for our farmers to attain even at the present day what wealth they have. They have had ups and downs. There was a time in Ontario and Quebec, and many hon. gentlemen here will remember it perhaps more distinctly than I do, when our farmers were dependent on the production of barley as their staple crop. A prohibitive tariff was placed on barley by the United States. It excluded our barley, and the farmers of Ontario and Quebec were up against it very strongly indeed. They hardly knew what way to turn, and it was a severe blow to them. But the farmers of the eastern provinces met that disaster, because it amounted to a disaster to them at that time, by going into dairying and building up the dairying industry, of which, in Ontario and Quebec to-day, the farmers have every reason to be proud. It may be that under present conditions in the Northwest the farmers are not realizing what they should realize and what they would like to realize from their grain, but I hope they will meet those conditions with the same fortitude that their forefathers did in the eastern provinces, and will fight their way to a better state of things.

The hon. member for Rouville (Mr. Lemieux) drew attention to the report of the Grain Markets Commission, issued by the province of Saskatchewan. He commended that report as one well worthy the attention of members. Through the courtesy of some person in Saskatchewan, a copy of that report was sent to me during the Easter vacation, and I have carefully read it over. There are some things in it to which I wish to direct the attention of the House. On page 103 of that report, I find it stated that the wheat requirements of the principal importing countries for the year ending 1912-13, which were estimated by deducting their exports from their imports, were as follows:

Requirements of importing countries, year ending July 31, 1913, obtained by deducting Exports from Imports.

	Bushels.
United Kingdom	213,054,943
Germany	77,936,246
Belgium	53,358,353
France	45,741,363
Italy	77,110,184
Netherlands	13,468,326
Total	480,669.415

We also learn that of the great wheat producing countries Russia is first with 799,814,000 bushels, the United States comes next with 728,748,000, and then India with 350,229,000; Canada, 199,821,000; Argentina, 198,000,000, and Australia with 91,777,000; so that the United States, which hon. gentlemen opposite say affords a market for our wheat, ranks second amongst the wheat producing countries of the world. How do these countries rank as to exports:

		Bushels.
1st.	Roumania	173,000,000
2nd.	United States	100,000,000
3rd.	Canada	95,000,000
4th.	Russia	94,000,000
5th.	Argentina	93,000,000
6th.	Hungary	53,000,000
7th.	Australia	33,000,000
8th.	India	30,000,000

Mr. SCHAFFNER: Those figures do not include flour?

Mr. EDWARDS: No; I will deal with flour in a few moments.

Where does Canada stand in regard to the imports into the United Kingdom for the year ending May, 1913?

Imports into United Kingdom for year ending May, 1913.

		Bushels.
1st.	United States	49,540,000
2nd.	Argentina	42,647,000
3rd.	India	41,855,000
4th.	Canada	38,229,000

For the year ending August 31, 1913, Canada supplied only 19 per cent of the wheat sent to the United Kingdom. It is made manifest in this report that the United States gets a larger share of continental markets than Canada both in wheat and flour. It may also be noted that this same authority tells us that as regards imports of flour into the United Kingdom, the United States supplies nearly half of the total and over 1,000,000 cwts. more than Canada. In this connection let me say that France imposes a duty of $2.50 a barrel on flour and 37c. a bushel on wheat. Germany imposes a duty of $2.20 a barrel on flour and 36c. on wheat. Belgium 35c. a barrel on flour and nothing on wheat. Canada imposes a duty of 60c. a barrel on flour and 12c. on wheat. France, besides imposing duties on flour and wheat, gives agricultural credit to the farmers of that country, a subject which I hope will engage the attention of this House at an early date. At the present time our Canadian farmer pays more for his credit than any other class of the community. Agriculture is the basic industry of this country, and if it is possible for this House to arrange matters so that the farmers will be able to borrow at a lower rate of interest, anything along that line will receive my very hearty support. If we compare the duties imposed by Canada on wheat and flour coming into this country with the duties imposed by other countries, some of which are large importers of wheat and flour, it cannot be said that we have an exorbitant protection for those industries in this country.

I want to place on 'Hansard' this sentence from the report of the Saskatchewan Grain Commission:

> Canada's principal competitors among the wheat-exporting nations of the world are, Russia, Argentina, India, Australia, and the United States.

Last night the hon. member for Rouville (Mr. Lemieux) referred to all these countries except the United States, until I jogged his memory. I also wish to draw particular attention to the following taken from the same report:

> Whether the Canadian miller could continue to compete successfully with the United States miller were the United States duty taken off Canadian wheat is a question that only the event can prove. The commission sees no reason why, in view of the protected home flour market which he enjoys, he would not still be able to compete successfully.

These are not my own words but are taken from the report of the Saskatchewan Grain Commission. The commissioners very distinctly indicate that they have doubt in their minds as to whether the Canadian miller could if the duty were taken off wheat, compete successfully with the American miller. They say that only the event can prove whether it would be successful or not, but if the duty on flour coming into this country is retained the commissioners think the Canadian miller might be able to compete successfully even if the duty were taken off wheat. But that is not what hon. gentlemen opposite would have us do, although that is precisely what Mr. Fielding proposed to do in the reciprocity pact of 1911 and which hon. gentlemen opposite then applauded and said was the proper thing to do. Mr. Fielding said: 'Let the wheat come in free, but we will not let flour come in free. We can compete in wheat but we will not subject the millers to free competition in the matter of flour.' Every member on the Liberal side approved of that in 1911, and every member on the Liberal side if we may judge by their attitude to-day repudiates it at the present time.

There are many suggestions in this report of the Saskatchewan Grain Markets Commission which are worthy of earnest consideration. For instance:

> 1. The possibility of developing a waterway from Alberta to Fort William.
> 2. Cheaper credit for the agriculturist.
> 3. More equitable ocean freight rates and insurance rates especially out of Montreal.
> 4. A larger measure of mixed farming in the West as an undoubted means of reducing the cost of wheat production.

The commissioners took evidence in regard to that latter suggestion from the farmers of the West and they report that the consensus of opinion is that mixed farming would materially reduce the cost of producing wheat in the West.

> 5. The improvement of country roads to shipping points.

There is mighty little comfort in that suggestion for hon. gentlemen opposite, who by their course in this House have deprived the country of hundreds of thousands of

dollars for the improvement of country roads. I fancy they will be up against it when they meet their constituents in regard to that matter. There is one other quotation to which I wish to direct attention particularly of the hon. the Minister of Public Works. After referring with marked approval to the deepening and improving of the Welland canal which when completed will admit to the waters of lake Ontario any vessel now on the Upper Lakes, the report says:

In readiness for this looked for business, the Dominion Government is constructing an entirely new port in the mouth of the Rideau river at Kingston. At the new quays any lake vessel will be able to berth in safety. Kingston hopes, and the farmers of Saskatchewan should hope and urge that the Dominion Government will erect and operate as part of these new facilities a transfer elevator just as their predecessors did at Port Colborne, only with this exception, that they will take into account the success of the latter elevator and build the new one very much larger at the outset.

I do not represent Kingston, but as my constituency adjoins Kingston my interest in that city is secondary only to that of its member. Whatever benefits that city will undoubtedly benefit the surrounding country. I commend that quotation to the Minister of Public Works and hope the suggestion will receive his consideration.

Now, I come to another matter to which I wish to direct the attention of the House for a while, and that is the question of farm implements.

At six o'clock, the House took recess.

The House resumed at eight o'clock.

Mr. EDWARDS (resuming): Before touching on the matter of agricultural implements, I desire to make one or two brief references to the question of wheat. It has been stated that within the last year or two the ocean freight rates on Canadian wheat have been very materially increased, and that there is a decided discrimination in these rates against Canadian flour. If that assertion be correct, if there be a combine or merger amongst ocean freighters, exacting an unfair and unjust tax for carrying wheat and flour from Canada across the ocean, I for one would favour seeing this Government embark upon a policy of constructing ocean freighters to carry Canadian wheat and flour across the ocean, and thus relieve the producer of these articles from the unjust exactions of any such combination.

The other matter to which I wish to refer is this, that in my judgment free wheat, and therefore free flour, if it has the effect which hon. gentlemen opposite claim it will have of sending our western wheat across the line south to Minneapolis, will have the result of increasing the price of bran and shorts to the farmers of this country by at least $3 a ton. That would be a serious matter for the Ontario farmer, for the Quebec farmer, and also for the farmers of the West. Every encouragement should be given to the western miller to mill the wheat of the West in that country, and to the western farmer to produce stock in the West. The hon. member for West Kent (Mr. McCoig) said that if the western farmer were driven into mixed farming, the result would be disastrous to the farmer of the East. I can imagine the hon. gentleman picturing trainloads of stock coming from the West to the East, and prophesying dire calamity to the eastern farmers if they had to face that competition. I do not think the hon. gentleman need have any fear or that the eastern farmer will have any fear on that ground. I believe the eastern farmer will wish the western farmer every success in the producing of stock, although that stock may compete in the eastern market, with stock raised in the East. The hon. member for West Kent seemed to be trembling with fear for the eastern farmer on account of that competition. I can imagine what cold shivers must have gone up and down his spinal column when his right hon. leader in the city of Hamilton spoke of free food. Free food meant, if it meant anything, the opening of our doors and the introduction into Canada of food from all parts of the world. Let it come in as freely as possible, was the Liberal proposition in 1911. That is what I understand to be meant by free food today, and it does not seem to terrify hon. gentlemen opposite. Yet the prospect of a few car loads of hogs coming from western Canada to Toronto or Montreal sends cold shivers through the hon. member for West Kent. He said that in his part of the country three or four farmers would combine and buy a mower which they would use amongst them. He also very vigorously declared that what the farmers wanted were free hay loaders, and free hay tedders. If three or four farmers can get along with one mower, I fancy their need for hay loaders and hay tedders would not be very great. The hon. member for West Kent wants an increased duty on raw tobacco. I am not finding fault with him for looking after his own part of the coun-

try. It is all right for him in behalf of his constituency to advocate in this House, as he did a short time ago, a bounty of a cent and a half a gallon on crude petroleum, but I submit that the hon. gentleman, in advocating protection for certain things which belong to his particular locality and free everything else is getting down to the narrowest form of localism. That is not an unusual sight, however, to see on the other side of the House. The hon. member for South Cape Breton (Mr. Carroll) travelled all up and down the scale, advocating free food, free implements, but plenty of protection on iron, on steel and on coal. He was echoed in times past by the hon. member for North Cape Breton (Mr. McKenzie). The hon. member for Pictou (Mr. Macdonald) and the junior member for Halifax (Mr. Maclean) will not advocate free coal, they dare not do so. The hon. member for Red Deer (Mr. Clark) advocates free trade in everything. 'Not at all,' says the hon. member for Rouville (Mr. Lemieux), 'that will not do.' 'Reciprocity,' said one hon. gentleman on the other side of the House. 'I will not stand for reciprocity,' says the hon. member for Welland (Mr. German). In January, 1911, the right hon. leader of the Opposition said, 'We are a united party on this side of the House in regard to reciprocity.' The hon. member for Kings and Albert (Mr. Fowler) on November 28, 1912, put this question:

> Mr. FOWLER: Is the hon. member for St. John in favour of reciprocity?
>
> Mr. PUGSLEY: I may say emphatically yes. . . .
>
> Mr. FOWLER: . . . Perhaps the right hon. the leader of the Opposition will be willing to answer now.
>
> Sir WILFRID LAURIER: With great pleasure. We are a united party on this side. We never vary.
>
> Mr. FOWLER: That is a still more clever lawyer's evasion. I ask the right hon. the leader of the Opposition: 'Were you in favour of reciprocity as it was presented to the people of Canada during the elections of 1911?
>
> Sir WILFRID LAURIER: I know of some Liberals who have varied their views upon that. I am not one of them. I stick to my ideas.

It is quite true that the right hon. gentleman knew of some Liberals, quite a number of them, who had changed their views very materially. The election figures of 1911 demonstrate that pretty clearly. The hon. member for Rouville (Mr. Lemieux) in his speech last night was at times advocating protection and again he was talking along free trade lines. The hon. gentleman seems to be troubled with a kind of political ague. At one time his political temperature ran up along free trade lines above 104; the next moment his temperature dropped by crisis to subnormal.

But the hon. gentleman seemed desirous of bringing these two extremes together and reaching a happy average. To use his own words, 'a man can prove almost everything from the law of averages,' and the hon. gentleman endeavoured to strike an average between the high political temperature and the subnormal, and wound up by calling himself a 'moderate protectionist.'

Now, I desire to deal with the question of agricultural implements. But before coming directly to that point, let me say that I was struck very forcibly by the manner in which the hon. member for West Kent rather denounced the Massey-Harris Company, and in fact pretty nearly all agricultural implement companies in this country. He was very strong in his advocacy of free trade in agricultural implements. I understand the hon. gentleman is the agent in his part of the country for the McCormick Manufacturing Company, which has its head office, I believe, on the other side of the line. So, we may see the reason for the hon. gentleman taking the course he did. He naturally would like to see the McCormick implements come in here—it would bring more grist to his mill.

In 1894, the duty on agricultural implements was reduced by the Conservative party from 35 per cent to 20 per cent. The Liberal party denounced protection for eighteen years. The Liberal platform of 1893 declared explicitly against protection. And the present leader of the Opposition (Sir Wilfrid Laurier) was very emphatic in his utterances on that subject. As he is a man of peaceful and mild appearance, one would naturally suppose that strong words from him would have all the more force throughout the country. There are some men who, if they made use of such blood-curdling expressions as those of the right hon. gentleman, would not impress people greatly. But when a peaceable-looking gentleman like the right hon. leader of the Opposition declared that if the Liberals were returned to power 'they would cut off the head of protection and trample on its body,' people would naturally believe that the right hon. gentleman was opposed to protection. Sir Richard Cartwright was equally emphatic. He declared that the policy of the Liberal party was death to

protection; but in 1900 a banquet was tendered in the city of Ottawa by the Ontario members of Parliament and Senators to Sir Richard Cartwright, and at that banquet, of course, the present leader of the Opposition spoke, and he made use of these words as reported in the Toronto Globe of the next day, 10th of May, 1900:

I may give you an instance which has come to me from very reliable sources and it is a thing which goes far to show the character of our guest of the evening. In the days of Mackenzie when the country was much depressed, there were many who believed that if the tariff was increased that policy would be justified by the necessities of the revenue and that it would be a valuable policy for the country at large. I can give you the story without betraying any secrets; these things happened before my day, but if the advice of Sir Richard Cartwright had prevailed at that time—

That is in 1876.

—this policy would have been adopted.

That is the policy of increased protection.

If it was not accepted it was on account of other influences which prevailed with the Government of the day; and for sixteen or twenty years Sir Richard bore the brunt of the obliquy of not having responded to public sentiment, whereas the truth was, he was ready to respond to public sentiment. For eighteen years he bore the brunt of the obloquy and never whispered a word.

Certainly, most wonderful self-restraint on the part of Sir Richard Cartwright. What happened in 1876 was this: As intimated in the words I have just read, there was a very strong sentiment in favour of increasing the protection to twenty-five per cent. Mr. Jones of Halifax and Mr. Church, of Lunenburg I believe, were two gentlemen who came to Ottawa and threatened to bolt from the party if the tariff were increased. Any person who takes the trouble to read the Budget Speech of Sir Richard Cartwright in 1876 will find that speech going along one line deliberately up to a certain point and then suddenly breaking and coming down the other way. The fact is he had prepared it along high protectionist lines, and not caring to go through the turmoil and bother of preparing another speech, he simply began again with a 'but' and started on the down grade. This was because he had received deputations from Nova Scotia. If you look at 'Hansard' of that year, page 324, you will see that Mr. Jones, not only admitted that he had threatened to bolt but that he justified himself for having threatened to bolt. This, however, is just by the way and in order to enable hon. members to appreciate the remark of Sir Richard Cartwright in 1896 that the policy of the Liberal party was 'death to protection.' Then there was Mr. Paterson who said 'We declare for freedom of trade' Sir Louis Davies said 'Protection is a system accursed by God and man.' We have not anything to indicate that the divine wrath has rested upon us by reason of protection, but we have ample evidence of curses from some of the Liberal party—but these curses have been considerably moderated at different times to suit political exigencies.

The Liberal party took office in 1896, and people looked with fear and trembling to the beginning of the reign of terror which had been promised. Some of the bolder ones came down to Ottawa expecting to see the robes of office of the Government bespattered with the blood of beheaded manufacturers and to see the soiled shoes of the leader of the Opposition after he had trampled on the decapitated corpse of protection. But the days ran into weeks, the weeks into months, and the months into years and nothing was done. In 1907, a very few minor changes were made in the tariff. But it is at least certain that the head still remained attached to the body of protection. I think I am safe in saying that much at least. In fact you would have to use a microscope, and use it diligently, to find where even a hair on the head of protection was even ruffled by this party which had declared its intention of cuttting off the head of protection. You will certainly find no marks of violence on the body. In regard to agricultural implements, in 1907 an apparent reduction of duty was made from twenty per cent to seventeen and one-half per cent. I say 'an apparent reduction,' and I use the words advisedly. For instance the duty on a binder was reduced from twenty per cent to seventeen and one-half per cent. But when the duty was twenty per cent ad valorem, the valuation of a binder for duty was $80, so that the duty on a binder amounted to $16 at that time. But afterwards, with the duty of seventeen and one-half per cent, the valuation of a binder for duty purposes was made $100 and consequently the duty collected was $17.50 or $1.50 more than before.

That was in 1907. An election was pending in 1908, so the Liberal orators went out on the stump and said to the farmers: we could not slaughter this terrible monster, protection, all at once, but we have sharpened our swords and taken a slash at

it. We will follow this up; trust us and see what we will do in the future. Then they turned to the manufacturers and said: fear not; we will not hurt you. We will simply increase the valuation for duty purposes and point out to the farmer that we have reduced the duty from 20 to 17½ per cent, and he will think he is getting things cheaper. Of course you know that when we increase the valuation for duty purposes it will not hurt you a particle. That is what they did. In April, 1907, the hon. member for Souris (Mr. Schaffner) moved in this House the following resolution:

That the committee reconsider item 445, and that it be amended by striking out the figures 17½ per cent in the general tariff and inserting in lieu thereof the figures 10 per cent.

This resolution, the vote on which stood twenty-two to fifty-six, was, of course, voted down by the Liberals. Amongst hon. gentlemen in the House at that time was the hon. member for Assiniboia (Mr. Turriff) and the hon. member for Moosejaw (Mr. Knowles), who voted against the reduction in duty proposed by the hon. member for Souris. The hon. member for Assiniboia, who was very earnest the other night in advocating free agricultural implements,' spoke against that reduction. I quote from his remarks at page 5597 of 'Hansard' of that year:

I shall give the Government hearty support, for I believe that the policy of the Government is in the interests of the country.

Contrast that, if you please, with the motion supported by this hon. gentleman a few weeks ago. The Hon. Mr. Paterson also spoke on that occasion. On page 5582 you will find these words:

I do not disguise the fact that we propose to give these people—

That is, the manufacturers.

—nearly the amount of reduction in duty, that has been made. For it must be remembered that 17½ per cent is no more than a revenue tariff.

What are we to infer from that? Every hon. gentleman on the other side of the House agreed that 17½ per cent was no more than a revenue tariff. What do they mean by that? That when a Liberal Government is in power, with their peculiar methods of administration and expenditure, you must have at least a 17½ per cent tariff, but when a Conservative Government attains office, you must look for an entire abolition of the duties. Another very distinguished gentleman, the Hon. Mr. Fielding, then Minister of Finance, spoke on that occasion. On page 5621 may be found the following remarks made by that hon. gentleman:

By a careful calculation we are advised that the drawbacks we allow are somewhat less than the disadvantage under which the manufacturer is placed by the reduction of the tariff. Even suppose for a moment that he got everything free and had a duty of 17½ per cent on the implements, would that be an extravagant duty as things go in this country? I believe this proposal of the hon. member for Souris, if adopted, would do an injustice to an established industry.

My belief is that if this motion were passed we would strike a severe blow at one of the great industries of the country. I believe the International Harvester Company would find it to its interests to close up its business in Hamilton, at least so much of it as is devoted to mowers and binders and have them made at the American branch and bring them from the United States. The factory in Hamilton is an American concern. With a moderate duty we have induced American capital to come into Canada and to establish that great industry and after we have brought it in and established it in Canada I believe that if we were to pass this resolution the company operating that industry would find it profitable to close the Hamilton factory and bring in the goods which they make in the United States.

That is an expression of opinion by no less a person than the Finance Minister of the Laurier Administration in 1907, and that expression of opinion was endorsed by every hon. gentleman on the other side of the House. I find it very difficult indeed to reconcile the position of these hon. gentlemen to-day with the position they took at that time. The hon. member for Assiniboia made use of these words, and they may be found at page 5624 of 'Hansard':

The tariff commission got information all over the country and I do not think the farmers to the West, at all events, asked for a great reduction such as is proposed by this resolution on agricultural implements. They asked that the duties be left alone. I shall give the Government hearty support on this question.

So that according to the hon. member for Assiniboia, in 1907 the farmers of the West, for whom he spoke, were opposed to any reduction in the duty on agricultural implements; they wanted the duty left alone.

Let us follow the history of this matter a little bit further. In the reciprocity pact of 1911 the proposed reduction of duty on agricultural implements was from 17½ to 15 per cent. On that occasion the hon. member for Dundas (Mr. Broder), who is ever alert when the interests of his fellow farmers are at stake, and who was mindful of what took place after 1907, when there was a reduction of duty from 20 to 17½ per

cent, and when the duty for valuation purposes was increased as really to make the actual duty paid greater than it was before, asked this question of Mr. Fielding when he was presenting his pact to the House:

> Is there any change to be made in the valuation for duty?

One can understand exactly why the hon. member for Dundas put this question.

> Mr. Fielding: Our negotiations have not touched the question of valuation: that must be left to the operation of the customs authorities of the two countries.

So that not only did these gentlemen deceive the people in 1907 by giving them that apparent reduction, but they were evidently preparing to do the same thing in the reciprocity pact of 1911.

If we want any further proof of the insincerity of hon. gentlemen opposite in regard to agricultural implements, we have it in the fact that for years there was a standing offer from the United States on the American statute books for free trade in agricultural implements. All hon. gentlemen had to do was to accept that offer and make agricultural implements free at any time they so desired, but they refused to do so. Why did they refuse? Are we not justified in asking these hon. gentlemen whether they are sincere when they contend to-day for free trade in agricultural implements? Do they imagine for one moment that the farmers of this country are going to regard them as sincere in this matter? Speaking for the farmers in my part of the country, I believe that they will not put any dependence in the motion that was proposed by the hon. member for Moosejaw for free agricultural implements.

Following this interesting history a little farther, I may say that on January 13, 1911, a very large deputation came to Ottawa, representing the Manufacturers' Association. This deputation was received by the then Prime Minister (Sir Wilfrid Laurier), the late Sir Richard Cartwright, the Hon. Mr. Fisher, the Hon. Mr. Oliver, the Hon. Mr. Pugsley, the Hon. Mr. Graham, and the Hon. Mr. King. The deputation presented a very carefully prepared memorial to the Government of that day, and in that memorial, among other things, they declared that they represented $1,200,000,000 of invested capital, that they represented $1,000,000,000 of annual output, that they furnished direct employment to 435,000 artisans and work-people, and distributed annually $250,000,000 in wages. They further stated that they were opposed to any reciprocal tariff arrangement with the United States that would necessitate a lowering of the Canadian duty on manufactured products. They said: The United States may be ready for reciprocity, Canada is not. The answer of the then leader of the Government is contained in this document added to this memorial. Answering the deputation, the right hon. leader of the Opposition said:

> We are not oblivious to the fact that the Americans have in manufacturing interests, quite a start of us, that they have been longer in business and have a larger population, and that conditions are not exactly parallel in one country and the other.

That is our belief too, but we have acted as if we believed it, and the hon. gentlemen opposite only acted as if they believed it on special occasions. He promised that Messrs. Fielding and Paterson, who were then, I believe, at Washington conducting negotiations, in these negotiations, to use his own words:

> Will have constantly before their minds the fact that there is no parity between the two nations in their industrial development.

In the course of his remarks, he quoted a sentence which was made use of by Mr. Russell, who read the memorial for the Manufacturers' Association. The sentence quoted by Sir Wilfrid Laurier was this:

> And that is why we say to you, sir, in concluding this expression of our views, that we are opposed at the present juncture to any tariff reductions or treaties of trade that would exercise an unsettling influence upon the prosperous conditions which now obtain.

The right hon. leader of the Opposition quoted that and said:

> These sentiments I can reciprocate altogether.

Vastly different from his previous declaration about cutting off the head of protection and trampling on the corpse.

> There is one thing, I think, in which this Government can take some pride and that is that we have been very, very careful—

You will notice the double use of the adverb 'very' for emphasis.

> —that we have been very, very careful, even when we had to reform, not to disturb the conditions then prevailing in relation to the manufacturing interests of the country. When we came into office, pledged to reform the tariff, in carrying out that reform we were very careful not to disturb the conditions.

These honeyed words and promises of protection and fatherly care to the manufacturers fell from the same lips which in 1891 had expressed themselves as willing to hand over the industries and the honou-

of this country to the United States for dollars; by the same hon. gentleman who, from 1893 to 1896 declared in the most emphatic manner: Death to protection, that they were going to destroy protection root and branch if his party once came into power; the leader of the party who, in 1891, had declared for a policy of commercial union, and who in their campaign literature circulated from one end of the country to the other, had declared that if commercial union resulted in political union with the United States, then God would bless the union. This is the gentleman whose sword was sharpened and whose feet were shod to cut off the head of protection and to trample on the poor decapitated body. This is the same hon. gentleman who in 1911, as reported at page 8459 of 'Hansard' declared that the manufacturer is the best friend of the farmer. At one time he was going to utterly destroy the best friend of the farmer. Now what regard has the hon. gentleman for the farmer when he would deliberately cut off his best friend's head, and not only that but commit indignity to the poor body by trampling it in the dust? The sword which was sharpened to cut off the head has lain so long in the scabbard that it has become rusted and is as useless as a Grit pre-election promise.

Some things have been said on the other side about the high cost of living. A number of those who expressed themselves in regard to that matter did not, so far as I have been able to ascertain, show any great concern when the farmers were selling eggs at twelve cents a dozen and meat at five or six cents a pound. It did not matter to them whether the farmer was getting value for his money or not. Speaking in the village of Athens in 1896, the right hon. leader of the Opposition, who then was talking to an audience of farmers, declared that he hoped to see the day when Canada would be a dear country to live in. As I say, he was talking to the farmers at that time. At the present time, the world is consuming its surplus of agricultural products and the country is losing its producers. Why? Because education has opened the door of opportunity and the city has outbid the country for the boy on the farm. But the right hon. leader of the Opposition said in Hamilton not long ago, that his policy, for the moment, was free food. I am very glad that that little phrase, for the moment, was in there. Free food means a lower price to the farmer for his products, and I want to tell the right hon. gentleman that no government in Canada can hope to reduce the cost of living to any appreciable extent by reducing the profits of the farmer, for the very logical reason that the lower you reduce the profits of the farmer, the more of the people you drive out of producing on the farms. The policy is absolutely illogical from start to finish. Reference has been made at various times, more particularly by the rara avis in this House, the member for Red Deer, to free trade in England. The hon. member for Brantford (Mr. Cockshutt) quoted the other day from a speech of one of the members of the British Parliament. In that speech attention was drawn to the fact that in free trade England, which for purposes of argument hon. gentlemen opposite are desirous of making appear as a very prosperous, happy and contented country, one-half million people are permanently out of employment, one million in receipt of relief. The labour exchanges declare that in one year 2,973,000 applications were made to them for work. There is an emigration from that country of 1,000 a day, on the average, for every week day of the year. When we consider that in that country one out of about every twenty is begging for work, and one out of every 40 or 50 begging for bread, and that 1,000 a day are leaving that country—a free trade country—I think we have a right to take the assertions even of so great an authority as the hon. member for Red Deer (Mr. M. Clark) cum grano salis.

I want to express my gratification at the fact that the Finance Minister in his Budget has promised certain things which I think will be of benefit to the quarrymen of this country and to the iron and steel industries. It was my privilege to visit the great steel works of Sydney during last summer. I am heartily in favour of any policy which will encourage the iron industry in this country, and I have good reasons for saying that. In the northern part of my own county there are unlimited quantities of iron, and that applies to thousands of places in the provinces of Ontario, Quebec and New Brunswick. I would like to see everything possible done to encourage the development of that industry in this country. Hon. gentlemen opposite will preach that we can get manufactured iron and steel more cheaply from Pittsburgh than we can produce it here. Very true. It is only natural to suppose that an industry so well organized as that in Pittsburgh will be able to produce more cheaply than we in this country can for some time to come. But I want to ask hon. gentlemen opposite if they

intend to pursue that policy? What do they suppose the Almighty placed iron in such large quantities in this country for? Was it simply for ballast, or was it to be made use of? I contend that the proper thing for this country to do is to make this country what it was intended to be, a great iron-producing country.

I want to direct attention for a moment to the election returns of 1911. Hon. gentlemen opposite on different occasions have said that they would welcome another election on reciprocity, but I notice that those declarations are getting beautifully less as more light enters the heads of hon. gentlemen opposite as the days go by. In 1911 the Conservative vote increased over 1908 by over 21·2 per cent, and the Liberal vote by 5·2 per cent. Hon. gentlemen opposite are welcome to what comfort they can get out of that. I find that the Conservative increase in Ontario over 1908 was 13½ per cent, whereas the Liberal vote was actually 4·6 per cent less than it was three years before. In the province of Quebec, which is erroneously supposed by many to be almost solidly Liberal, I am pleased to say that the Conservative increase over 1908 was 38 per cent, while the Liberal increase was only 1·2 per cent. In Nova Scotia the Conservative increase was 1·8 per cent, and the Liberal increase 1·7 per cent. In New Brunswick the Conservative increase was 11·6 per cent, and the Liberal vote showed a slight decrease. In Manitoba the Conservative increase over 1908 was 14·3 per cent, and the Liberal vote showed 13·3 per cent. In British Columbia the Conservative increase was 47 per cent, and the Liberal increase 23 per cent. In Prince Edward Island there was a slight increase in the Conservative vote and a decrease in the Liberal vote of 7 per cent. In Saskatchewan the Conservative increase over 1908 was 54½ per cent and the Liberal increase 57½ per cent—not too bad a showing when you consider the total vote polled. In Alberta the Conservative increase was 45 per cent and the Liberal increase 60.8 per cent. The Yukon, with such a candidate as the Conservative party had in the field, very properly heads the poll, the Conservative increase being 279 per cent and the Liberal decrease 6·7 per cent. In every province except Alberta the increase in the Conservative vote polled over that polled in 1908 was greater than the increase in the total vote polled in each province over 1908, whereas the Liberal party notwithstanding the increase in population polled fewer votes in 1911 than in 1908 in Ontario, New Brunswick, Prince Edward Island, and the Yukon, and in Quebec and Nova Scotia the percentage of increase was less than the percentage of increase in the total vote polled. That shows a few things in regard to the election of 1911, but there are one or two other points which I might call to the attention of hon. gentlemen just to disabuse their minds of any notion that the people were not very pronounced in their verdict in regard to reciprocity in 1911. I do this in all kindness because I would like hon. gentlemen opposite to get up a new policy. So many policies have been advanced by the Liberal party that I think it would be an imposition on the people of Canada for them to go to the country again on the same policy. I would like to assure them that if they go to the country on their policy of 1911 there is not a particle of a chance of success for them, nor would there be any possible chance of a good square fight on that policy. Although I am a peaceable man I would prefer that they have a policy which would give us a good scrap. In the election of 1911 it is noteworthy—I do not think it ever occurred before in the history of Canada—that every one of Sir Wilfrid Laurier's Cabinet ministers was either defeated or had his majority reduced. In the case of the right hon. gentleman himself he was elected by acclamation in East Quebec under somewhat doubtful circumstances. We will leave it at that. He also ran in the constituency of Soulanges, which is the smallest constituency in the Dominion, and there he had the handsome majority of 142. In regard to two others of his ministers, the Postmaster General of that time (Mr. Beland) ran in two constituencies and was defeated in one and elected in the other. The hon. member for Rouville (Mr. Lemieux) also took a chance in two constituencies. He met ignominious defeat in one and was elected in the other. That is an interesting little event worthy of putting on 'Hansard.' The hon. member for Rouville was elected for Gaspé in 1896 by 42; in 1900 by 1,362; in 1904 by acclamation; in 1908 by 1,492. In 1911 he ran in the same constituency, but was defeated by 570 votes. He also ran in Rouville, where he was elected by 278. It is interesting to note that the combined vote of those two constituencies is not as large as the ordinary vote in an ordinary constituency. There are twelve constituencies in the province of Quebec which have a larger number of

voters than are on the lists of the two constituencies which the hon. member for Rouville contested in the election of 1911. So that I think I am quite fair in adding the name of the member for Rouville to the list of the Cabinet ministers who went down to defeat in 1911, because in the two constituencies he contested there was a net majority against him of 292.

Mr. PROULX: Gaspé was a deferred election.

Mr. EDWARDS: Well if the hon. member for Rouville was elected in Rouville on the 21st of September, 1911, why in the world did he run in a deferred election in Gaspé?

Mr. PROULX: He was nominated on the 14th of September, like other candidates.

Mr. EDWARDS: At all events the figures are there which indicate that in the two constituencies the vote was in favour of the hon. member for Rouville staying in the province of Quebec and not coming to this House. I have nothing further to add in regard to the last election except that I think the figures indicate very clearly and conclusively that the people expressed themselves most decidedly against the policy of free trade in natural products, which was proposed by the Liberal party at that time, and it is idle for hon. gentlemen opposite to declare that they were stampeded. The Hon. Mr. Fielding introduced that pact into this House in the month of January, 1911, and the elections did not take place until September of the same year. The people of Canada had a splendid opportunity to settle this question, it was thoroughly discussed and I firmly believe that if the election had been two weeks later in the province of Ontario the result would have been even more disastrous than it was to the Liberal party.

The hon. member for Rouville, in the course of his remarks, made some allusions to the naval question. I am not going into that any further than to say that I hope the day is not far distant when—and I am not wishing any of the senators harm when I say that—we will have control of the Senate. I do not know that I can put it any more kindly than to say that I will be delighted to see the Conservative party get control of the Senate and that I do not wish any of the senators harm. But it is a matter of doubt whether the translation of some of them would be a loss to earth or a gain to heaven. This is a matter which only the future can solve and in the meantime I can only reiterate my own strong convictions upon this question. I think that the proposition made by the Conservative party to grant $35,000,000 for the maintenance of the supremacy of the British navy was one which appealed to the people from one end of Canada to the other. I am sorry that the grant was not made. I need not say any more, but if I am permitted I will close my remarks with a quotation from an utterance of one of the greatest Canadians that this country has ever produced. I refer to Sir George Etienne Cartier, who, in a speech delivered in 1869, made use of these words:

9 p.m.

> Canadian people desire to remain faithful to the old monarchical flag of Great Britain, that flag which waves over all seas, that flag which tyranny has never been able to overcome, that flag which symbolizes true liberty.
>
> Canadians know that if they wish to become really great they have only to continue their union with the mother country, so as to share in her power, her prestige and her glory.

These words express my sentiments and those of the great majority of the Canadian people far more eloquently and completely than anything I could myself say. I thank you, Mr. Speaker, and the House for the very patient hearing which you have given me.

Mr. E. B. DEVLIN (Wright) Mr. Speaker, it is not often that I rise to take part in the Budget debate, but, representing a constituency in which the agricultural and labouring interests largely predominate, I deem it my duty to make a few remarks, which remarks, I hope, will reach the ear of the Government. To-night, Sir, I would very much like to see the right hon. the Prime Minister (Mr. Borden) in his seat, because I would like to have a heart to heart talk with him, but in his absence I am going to ask the hon. gentlemen who represent the Cabinet to see if something cannot be done to meet the present commercial stagnation or depression in this country. I am not going to follow in the line of the previous speaker. The hon. member for Frontenac (Mr. Edwards) finished his remarks by dealing with the election returns of 1911. He and his friends opposite take a certain amount of credit out of the fact that the Conservative party did win the election of 1911. I admit that. It is not in contention in this

House. Hon. gentlemen opposite did win the election of 1911 and promised during that election to do certain things which they have failed to do, and which I hope, before the end of my remarks, to call to their attention. They won the election through certain combinations in the province of Ontario and in the province of Quebec.

In Quebec they won the election through a friendly alliance between the Conservative party and the Nationalists. Will they have the same alliance at the next election?

An hon. MEMBER: Time will tell.

Mr. DEVLIN: Time will tell—there is no doubt of it; but the Nationalist members of the House who went before the electors of the province of Quebec with a certain programme and who will go back before them at the next election will find that time will tell how that alliance has worked out between the Conservative and the Liberal party.

Mr. SMITH: Chateauguay.

Mr. DEVLIN: You won Chateauguay—you won it with whisky and money. I know something about Chateauguay. I was in Chateauguay during that election, and I believe that a tale will be told before the courts that will not redound to the honour or the dignity of the Conservative party.

A more inapt, a more hopelessly helpless Government than that now in power I do not think this country has ever seen. In listening to the speeches delivered during the last few days, one would imagine that the Conservative party had absolutely nothing to their credit except the memory of the work of Sir John A. Macdonald upon the tariff and the building of the Canadian Pacific railway. My hon. friend (Mr. Edwards) dwelt, as did the hon. member for North Essex (Mr. Wilcox), at some length upon speeches delivered in this House in 1876. Do they believe that it would be an answer to the people of this country, who are clamouring against the high cost of living, to tell them what the men who in 1876 had seats in this House have said about protection, reciprocity, or free trade? The first one to speak about the policy of Sir John A. Macdonald was the hon. Minister of Finance. Here are his words:

> Before taking these up in detail I desire to affirm the adherence of the Government to a fiscal policy of reasonable protection to Canadian industries including of course the great basic industry of agriculture. That policy is the historic National Policy of Sir John Macdonald, inaugurated by him and continued by his successors in office down to the present time.

That was not the policy of Sir John A. Macdonald. The policy of the present Government is the policy of the manufacturers. To bear out my words, I want to allude to the speech delivered in Halifax by Mr. Robert S. Gourlay president of the Canadian Manufacturers' Association, on the 7th of September, 1913. Speaking upon the tariff, he used the following language:

> Our tariff has undergone very little change since we met a year ago. A few inequalities were corrected by legislation in the regular way, but their application was limited to specific lines with no resulting disturbance to business in general. This has been in keeping with the policy of tariff stability for which our association has so consistently stood and to that extent the policy of the Government as thus far manifested has our sympathy and support.

Mr. Gourlay goes on to say:

> The woollen schedule is not what it should be; otherwise an industry that should be indigenous in an agricultural country like Canada would not have languished as it has. Neither is the iron and steel schedule satisfactory. As at present constituted, it is to some extent encouraging the establishment and expansion of what might be called secondary industries.

When I say that the policy of the present Government is the policy of the manufacturers, I am quoting exactly the words contained in the address of the president of the Canadian Manufacturers' Association. What was the policy of Sir John A. Macdonald? It was not by any means the policy of high protection. I will refer to the life of Sir John A. Macdonald by George R. Parkin, an authority which will not be disputed by hon. gentlemen opposite. At page 219 of The Makers of Canada, here is what I find:

> Macdonald did not place himself at the head of the movement without careful study of the Canadian situation, nor until he was convinced that the time was ripe for change. Some of his supporters were impatient with his deliberation. 'Sir John was timid unto death of protection, had to be bullied into it; led into it; committed to it by others. But when he thought it grown, he used it as a bridge to reach the power he liked to wield,' wrote in after years one of his parliamentary followers.

At page 223, I find the following, citation from Sir John Macdonald's own words:

> The question of the day is that of the protection of our farmers from the unfair competition of foreign producers, and the protection of our manufacturers. I am in favour of reciprocal free trade if it can be obtained, but so

long as the policy of the United States closes the markets to our products, we should have a policy of our own as well, and consult only our own interests. That subject wisely and vigorously dealt with, you will see confidence restored, the present depression dispelled, and the country prosperous and contented.

Then the author says:

While Macdonald and his followers were advocating what was at least a specious remedy for the industrial depression, the Liberals had no alternative to offer save the recommendation to the electorate to practise thrift and to wait for the swing of the economic pendulum.

Listening to the words of the hon. Minister of Finance, when he delivered his Budget Speech, you will note, Mr. Speaker, that he said, 'We will wait; better times are coming.' Sir John A. Macdonald, when he inaugurated his national policy, did so to meet the circumstances of the time. Again, the same historian tells us:

It should be noted that to the extreme protectionists of his party, Sir John A. Macdonald steadily refused to commit himself. In June, 1878, he endeavoured to assuage the anxiety of the Maritime provinces by a telegram stating that he had 'never proposed an increase, but a readjustment of the tariff,' and his motion in the House of Commons earlier in the same year was drawn with characteristic skill.

You, Sir, no doubt were in the House at the time Sir John A. Macdonald presented his motion, and you remember that it ran as follows:

That this House is of opinion that the welfare of Canada requires the adoption of a national policy which, by a judicious readjustment of the tariff, will benefit and foster the agricultural, the mining, the manufacturing and other interests of the Dominion; . . . and, moving (as it ought to do) in the direction of reciprocity of tariff with our neighbours, as far as the varied interests of Canada may demand, will greatly tend to procure for this country, eventually, a reciprocity of trade.

If we are to believe the very letter of his motion, Sir John Macdonald never would have inaugurated a national policy if it were not a lever to obtain reciprocity with the United States of America. Let me quote a last passage from the same historian:

More than one breeze of popular opinion was caught by this resolution. It appealed at once to the deep-seated Canadian suspicion of the United States, and to the strong desire of the farmers for the American market. It was, in fact a blow at the enemy with the ostensible object of forcing him into a more friendly attitude. Equally important was its appeal to the rising national sentiment of the Dominion of which the National Policy was the crystallization.

It is apparent from the very wording of the motion presented by Sir John Macdonald to the House that reciprocity with the United States was what he sought; and what is sought to-day by the Conservative party of Canada is nothing more or less than reciprocity with the manufacturers of Canada, for their votes, for their influence, because we have on the one hand the wording of the motion of Sir John A. Macdonald, and on the other the words of the president of the Canadian Manufacturers' Association. I do not think I am putting it too harshly when I say that the masters of the Administration of the day are not the people of this country, not the farmers and labouring classes, but the manufacturers. And the moment the manufacturers say: 'Raise the duties,' this Government cannot resist, and so the duties are raised regardless of the farmers and labouring classes.

Now, having dealt with that part of ancient history so particularly referred to in this debate by hon. gentlemen opposite, I may be allowed to take up one other remark made by the hon. member for Frontenac. He said that since the Underwood Tariff had come into force the tendency of prices of commodities in the United States had been to increase. I find that he is not borne out by Bradstreet's. Bradstreet's for the 7th of March makes this reference to commodity prices:

Commodity prices have moved irregularly this week, storm interruption to wires and mails dulling trade early. Cereals have made a slight downward swing, wheat leading with a decline of 1½ to 2 cents, largely on good reports from the new crop and bearish reports from Europe, growing out of the large movement from the southeast offsetting reports of shortage in Argentina. Corn is off ¾ to 1 cent on slow cash demand, and oats sympathized to the extent of ½ cent.

And the issue of Bradstreet's for the 14th of March dealing with the index number says:

Bradstreet's price index number as of March 1 shows a slight decline from that of February 1, and marks the third consecutive decline from the level set on December 1, 1913.

In the issue for the 21st of March, we find:

Tariff changes, large crops and springlike weather alike find reflection in the notable declines shown in prices of sugar, butter and eggs this week. Lowered tariff duties, effective March 1, are a partial explanation of the sharp break to the lowest price ever known for refined sugar, but neither this cause nor the sharp competition between refiners, developing since the tariff reduction, would have sufficed to have broken raw sugar to 3.01 cents per pound and refined to 3.77 cents per pound, prices respectively ½ cent and 2-5 cent below a year ago, were it not for the fact that the world's sugar crop the past year was 700,000 tons, or 4 per cent larger than ever before.

And practically a similar condition of affairs exists in the following week, according to the same authority. So, I fail to see where the hon. gentleman has found the prices of commodities increasing since the establishment of the Underwood tariff.

The Minister of Finance, in his Budget speech, announced the surplus of $36,500,000. Up to that moment he had had us all in an aeroplane. He had brought us over to the Balkan states where, he assured us, there was unrest. Then he brought us to Mexico and told us that there was anarchy. In this unrest in the Balkan states and anarchy in Mexico he found the cause for his being obliged to pay a higher rate of interest on money borrowed for the Dominion of Canada; and in these same conditions he found one of the causes for the trade depression in this country. But when he directed his aeroplane back to the city of Ottawa he found that the officials of his department had been busy with their bookkeeping, and, while he was away borrowing money, they had made ready to show him that he had a surplus of $36,500,000. I think all that will be pretty hard for the farmers of this country to understand. In fact, I think it will make a cold shiver run down their backs when they find that they had $36,500,000 in Ottawa and yet our gay young Minister of Finance was jaunting abroad looking for money at high interest. When he goes out before the electors and tries to explain that to them, I think I know some farmers who will be too canny to fully appreciate where this surplus comes in.

Mr. WILLIAM SMITH: Just Grits; they are the only ones who will complain.

Mr. DEVLIN: I did not say they would complain; I said the canny farmers may not thoroughly appreciate just where this surplus comes in. However, they are not the only ones. Those of us who have been in this House for the last few years remember that the present Minister of Trade and Commerce (Mr. Foster) used to speak upon the subject of surpluses. If there ever was a man to whom I loved to listen criticising a Budget speech, it was the Minister of Trade and Commerce. I often read his speeches, because there is so much in them. Here is what he said in the session of 1906-7, as reported at page 405 of 'Hansard' of that year:

> The Minister of Finance has a good time with himself almost every time he makes a budget speech about his surplus. Seventy-seven millions it is now, and every year he adds a little more, and he says, just look at my surplus. And everybody on the Government benches looks at it and admires it and applauds it and says it is good to look upon, even though they cannot have it. Well, it is new doctrine for the Liberal party.

Then he goes on, speaking of the Conservatives:

> They had surpluses as well, but they were modest ones. When they went up to two millions, it was supposed that that was about the limit; and if by any means they happened to go up to four millions, care was taken pretty soon, by the reduction of the taxation or otherwise, that the surplus should not be inordinate. Why, it is the easiest thing in the world to make a surplus. The Minister of Finance and his colleagues can make it even larger than it is if they wish. All they have to do is to take out more taxation—to add on to the taxation million by million, and the more they take out of the people of Canada in taxation, the larger their surplus will become. But is it really economical? Is it really for the peace of mind of the minister himself and the Government? It is well to have a care that the country's finances will always come out on the right side, in order to keep its credit good; but it is uneconomical and dangerous for a government or a party to attempt to have a big surplus every year, because it means an extraction of unwarranted sums from the pockets of the people and from the working capital of the country, and it is an invitation to extravagance which cannot be resisted by most governments, and which certainly has not been resisted by the Government at present in power.

You and I, Mr. Speaker, were in the House in 1906 and 1907, and we heard the ex-Minister of Finance make his speech in answer to the Budget. You remember those words; you remember as well as I do how he pounded his desk and appealed to the Liberal Government of the day not to have a surplus because it meant taking more taxes out of the pockets of the people. The hon. Minister of Trade and Commerce was in his seat during the last few days; he heard the Budget speech; he heard the surplus referred to. Any hon. gentleman on this side of the House who happened to look at the hon. Minister of Trade and Commerce at that moment would have noticed that there was not a smile on his face, while other hon. gentlemen opposite were applauding the Minister of Finance for boasting a surplus of $36,500,000, the hon. Minister of Trade and Commerce sat as dumb as an oyster. Yet the hon. member for Frontenac says that only the Grit organs will object to surpluses. Why, one of his leaders, the Minister of Trade and Commerce, does not believe in these surpluses. Let me tell the House that not all the Conservative organs of the country believe that the Minister of Finance has a surplus. On April 8, 1914, the Ottawa

Citizen, a good Conservative organ, said editorially:

> To describe as a surplus the $36,500,000 which the taxpayers of Canada paid last year into the federal exchequer in excess of ordinary expenditure requirements, and to do so without indicating that he was speaking in a Pickwickian sense, was not the least achievement of the Finance Minister in the Budget speech.

Let us find out something about where this surplus came in. Referring to the financial returns of the Government, I find that in 1911 the net debt of Canada amounted to $340,042,052.03, upon which the Government was paying $12,535,850.81 interest. In 1913, according to the present minister, that debt had been reduced to the sum of $314,301,625.68, and the country was paying $12,605,882.48 interest. In other words, upon a debt $25,740,426 less, the country was paying $70,031.67 more interest. In 1896 the debt per head of population was $50.82; in 1908, 12 years afterwards, under Liberal Government, it was reduced to $40.50. In 1913-14, with a greater population, greater revenues and a smaller debt, according to hon. gentlemen opposite, it has been increased to about $46 or $48 per head. That is a system of bookkeeping with which I am not at all familiar. The increase in the total expenditure during the past fiscal year has been nearly $40,000,000, or some $56 per head of population, and the decrease in revenue has been approximately $6,000,000. It is still falling, but the apportionments for the present fiscal year indicate a still further increase in the expenditure over the $183,500,000 spent for the year just ended. During the past year the national debt has increased by nearly $20,000,000. Last year the increase in consolidated fund expenditure was $14,500,000. For the first two complete fiscal years of the present Administration the increase in the ordinary expenses of the Government totalled over $28,000,000, or nearly $4 for every man, woman and child in Canada. In the last complete fiscal year of the Laurier Government the total expenditure on consolidated fund account was $87,774,198. For the second complete fiscal year of the present Administration the total expenditure on consolidated fund account was $126,500,000. For the last complete fiscal year of the late Government the total expenditure on both consolidated fund and capital account was $122,861,250. For the second complete fiscal year of the present Government this amount was increased to $183,500,000. In the three years the consolidated fund expenditure has been increased by nearly $39,000,000, while the total expenditure has been increased by $60,639,000—and the increased expenditure has all to come out of the pockets of the people of this country. With that statement before the House and before the country, how the minister can get up and say that he really has in the treasury of this country a surplus of $36,000,000 is, to say the least, marvellous. If I were to borrow the language of Shakespeare, Mr. Speaker, I think I would be inclined to use these words in connection with the attitude of the Minister of Finance:

> He swore her fair and thought her bright
> While she was black as hell and dark as night.

I think that sums up pretty well the financial attitude of hon. gentlemen opposite. Where is our money going? That is the next question the people will ask. The militia Estimates alone for 1914-15 amount to $10,867,000, and we have yet the Supplementary Estimates for the coming year. Mark you, I am not including in this amount the summer trips to Switzerland of the hon. Minister of Militia, nor am I including, as he is not in his seat at the present moment, his winter trips with his colonels to the hot springs of Virginia. That is just one item. Some of the money is going to pay agents and steamship companies to bring artisans over to Canada to compete with our artisans. A great deal of it is going over to England to bring English immigrants to this country—and I hope that the best immigrants will come over.

But a great deal is going to bring the people who are to be found around Stepney Green and Pigeon Market—those who are familiar with the city of London will know what locality that is in—over here, to be a charge upon the people and the taxpayers of this country. I do not want to be misunderstood. I say a great deal of it is going over to England to bring a good class of immigrants, and we are getting a very good class of immigrants from England, and also from Ireland and Scotland. But we are also getting some mighty poor immigrants from England, and from Ireland and from Scotland. But if we are getting some poor immigrants from the British Isles, we are getting worse from eastern Europe. I wish to protest as strongly as I am able, in the name of the labouring classes of Canada against the labour market of this country being overcrowded by the bringing in of

labourers without the Government knowing where they are going to place them. I have not the figures under my hand, but I think that last year 122,000 labourers were brought into this country. What have they done during the winter? Would it not have been bettter to leave them in their own country where they would have been taken care of by their friends? They are brought into this country to compete with Canadian labourers and are brought here under misrepresentations. This is a good country for Canadians; it is a good country for any man to come to who has capital to invest; it is a good country to come to for any man who has steady employment before him. But to bring immigrants into this country, without any money, without any prospect of employment when they get here, I say it is a crime on the part of the Government to spend the money of this country in encouraging such immigration. That is one way that the money of the people of this country is going. To substantiate my statements upon this point, it is sufficient to look at any number of the Labour Gazettte, a publication of this present Government, to see that thousands of labourers in the larger cities of this country have nothing to do. I think it is about time for this to cease. A resolution was adopted by the Vancouver Trades and Labour Council and has been placed in my hands. I wish to read it to you:

Whereas—Continuous efforts are being made by transportation companies, emigration agencies and other societies to induce employers in Canada to import labour from outside the Dominion, and

Whereas—These companies and societies have received and are now receiving government guarantees and grants of public money, and

Whereas—The arrival of immigrants on these shores during a time of severe depression such as now exists not only intensifies the serious unemployment question, but tends to deteriorate the already too low standard of the workers' living, consequently retarding industrial and national progress, therefore be it

Resolved—That the federal and provincial governments of Canada discontinue assisting financially or otherwise such corporations and societies and further take steps to ensure that correct information be given to prospective inmigrants in their own homes, and be it further

Resolved—That copies of this resolution be sent to Premier Borden, the federal members of the House of Commons, and the press.

I subscribe to every word contained in this resolution, and I hope the Government will take some action.

Let me now say a word upon the question of the tariff. I said that this Government is led by the manufacturers. Why should they be led by the manufacturers anyway? Why should they always be catering to the manufacturers? I am not against the manufacturers; there are thousands of employees in the constituency which I represent employed by manufacturers. I suppose in the constituency I represent are some of the biggest factories in the Dominion of Canada, but I believe that while it may not always be pleasant to have to do so, it is the duty of representatives in this House, whether on the right or on the left, to tell the manufacturers when it is necessary that all the legislation on tariff matters ought not to be directed in their interest, but that the farmers and the laborers must get their fair share. In 1912-13 the exports of manufactures from this country amounted to $43,692,708. For the eleven months of 1913 they amounted to $51,204,162. There were 389,873 people employed in manufacturing and mechanical institutions out of a total of wage earners of 1,300,000. For the manufacturers the whole of the tariff of this country is made by the present Government. The agriculturist has no show under this Government. We have the farmers coming down from the West turned down by the Government, and I shall have a word to say of their demands in connection with free wheat. What are the farmers of this country doing? If the manufacturers are exporting forty-three and a half millions what are the farmers doing? In 1912-13 they exported goods to the value of $150,145,661 and for the eleven months of 1914 to the value of $191,707,483. So, in other words, they have exported three times as much as the manufacturers have ever done in this country. How many do they employ? 716,937 out of the total of 1,300,000 wage earners, and yet they have not a voice with the present Government. I have referred to industrial Canada and to the address of the president of the Manufacturers' Association, and his demand for increased duties upon iron and steel. The manufacturers got it: they got more, they got free coal for their smelting institutions. They are not exactly satisfied yet, because I find in the Free Press of this city, of April 7, 1914, that Mr. Rowley, who is an ex-president of the Manufacturers' Association, and president of the E. B. Eddy Company, gave his opinion. He says:

In the first place, Mr. Rowley thinks the farmers have already got too much and are going to get still more under the revisions.

Just imagine any hon. gentleman who has listened to the Budget speech of the Finance Minister and to the speeches of hon. gentlemen opposite upon the tariff, being told by

Mr. Rowley that the farmers of this country have already got too much and are going to get still more under the revision!

In the second place, Mr. Rowley believes the changes will bear too heavily on the paper industry.

Of course, the country knows that his is the paper industry.

The farmers get the best of everything They always have, and they are getting it in the present revision. I think (he said) that the Government acted wisely in not adopting free wheat. It would have been a great mistake to have allowed our grain and fodder to go to a foreign country. Our wheat is better than theirs anyway, and we should keep it.

Well, all right, I am in favour of that. Will he buy it? Will the manufacturers buy the wheat? We are told by the manufacturers that the farmers should keep their wheat. The Western farmer asks for a market for his wheat and we simply wish to give him free entry into the United States in order that he may get all the profit that is coming to him, but hon. gentlemen opposite want to take that profit away. The Ottawa Citizen, that good Conservative organ, which I have already referred to this evening, also spoke editorially on the tariff question on April 10, 1914, as follows:

According to the budget figures Canadian exports to the United States increased from $112,000,000 in 1911 to $161,000,000 in 1913-14. In the same period imports from the United States increased from $274,000,000 to $361,000,000. The aggregate trade between the countries was $387,000,000 in 1911, and in 1913 it reached $523,000,000. Canada is the second customer of the United States to-day.

If I heard anything from hon. gentlemen opposite in the election of 1911, it was that we should not trade with the Yankees, that we should trade within the empire, and yet under the present government I find that Canada is the second customer of the United States. I am sure that the loyalty of hon. gentlemen opposite and the loyalty of certain citizens of this country must be sorely affected when they hear that under the benign protection of the present Government Canada is the second customer of the United States. The Citizen continues:

These facts are interesting from a trade standpoint. But what becomes thereby of an argument frequently heard in the 1911 campaign, that increased trade with the United States eventually meant the annexation of Canada to that country?

When we find a newspaper like the Citizen beginning to doubt the political honesty of hon. gentlemen opposite, our friends opposite must not be surprised if we do not place any credence whatever in their arguments during the election of 1911. The Citizen says further:

If as Hon. Mr. White pointed out in his speech, this great aggregate increase in three years is a matter of congratulation, how much more a matter of congratulation would it be if the trade were even greater, as it would be by the abolition of the tariff on wheat, as asked by the western grain growers and the Manitoba legislature?

Here is a good Conservative organ asking for the abolition of the duty on wheat. Hearing Western representatives pointing out to this House the usefulness of abolishing the duty on wheat and hearing also Conservative organs saying that it would be a good thing, no wonder that I myself believe that it would be a good thing, and I will support any measure introduced in this House asking for the removal of the duty on wheat. The Citizen goes on:

'It is not advisable that a nation's tariff should be so arranged as to fit into the tariff policy of another nation,' said Mr. White. Then he advocates a surtax of 25 per cent ad valorem on the imports of countries which discriminate against Canada; in other words, the Finance Minister fits our tariff into the tariff of any other country, and automatically at that, which makes the first move. But, granting that Mr. White's dictum be accepted as a protective principle, it would seem to demolish one of the strong arguments of protectionists, that the advantage of a tariff lies in the fact that while providing a measure of defence it can be modified to meet the hostility or friendliness of another country's tariff, a condition which, protectionists assert, would not obtain in the case of a free trade country competing with tariff nations.

These self-contradictions are evident, but despite their presence, the claim is made that only by a tariff is our national prosperity assured.

I believe that if we had better transportation facilities in this country, including water facilities, we should have cheaper food and therefore I was somewhat interested yesterday in listening to the demands made by a very large delegation from all over Canada asking for the construction of the Georgian Bay canal. I was rather anxious to hear what answer would be given by the minister. When free wheat was asked for I had heard the Minister of Finance say to the farmers of the West: Wait until more railways are completed, and until the Welland canal is deepened. When I heard the people of Canada clamouring against the high cost of living I had heard the Minister of Finance say: Wait until the commission on the high cost of living reports. When I heard the commercial men

of this country complain that money was tight, I had heard the Minister of Finance say: Wait until anarchy ceases in Mexico. So I was somewhat anxious to hear what the Minister of Public Works would say to the delegation upon the Georgian Bay canal. And this is what I heard. The hon. minister in his nice polished manner first of all said: Wait till the Prime Minister comes back from the South and I will tell him all you say. Thinking that might not be a sufficient answer he went on: Wait until the commission which we have appointed reports on the commercial feasibility of the project. I am inclined to call the present Government to-night a waiting Government, but I will not call them an indolent Government. They travel enough but they make us wait a long time for information. We on this side of the House would like to see the Government do something, but they always say: Wait until this commission or that commission reports or until this or that happens. They undertook to build the Hudson's Bay railway and now they are waiting till the ice goes away from the Hudson Bay ports. We want to know, and as representatives of the people of Canada we have a right to know, what they are going to do to reduce the cost of living in this country. But what are we told? Wait till the commission reports. Nobody knows where that commission is. Do you know, Mr. Speaker, where the commission is? At one moment it is in the city of Quebec behind closed doors, and at another moment it is in some other part of the country. The commissioners are all, I believe, deputy ministers. I presume they are in offices now. If they are here why do they not make the report which they must have prepared? Just imagine a commission appointed and sent round the country to find out whether the cost of living in this country is high. We know the cost of living is high and we want the Government to remedy that condition. The farmers of the West are asking for the very same thing but they put their demand in a different way. They say: Our grain is congested, we want to have a fair chance with the manufacturers of this country and we will have a fair chance if you give us free wheat. The Government answers: Wait. No doubt they will be appointing a commission next to find out whether there is a duty upon wheat. I believe that there are two causes for the high cost of living in this country, and that one of them is the tariff. I am borne out in that belief by the manufacturers' own statement that the tariff is a contributing cause, although the manufacturers say it is not the whole cause. The other cause is to be found in the freight rates. The Government ought to grapple with the transportation problem. They ought to wait no longer, they ought not to shillyshally, but to go ahead at once and deal with that important issue. The people in 1911, when they elected these gentlemen to office, at least expected that they would be able to administer the finances of the country, but instead of administering the finances or the affairs of the country, they are handing them over to commissions.

Speaking for the farmers of Canada, I must say that I am not satisfied with what the Government have done in connection with agricultural implements. I do not believe that by a reduction of five per cent upon agricultural implements the Government are helping the farmers. What the Government should have done, and done at once in view of the fact that the taxes bear more heavily upon the farmers than upon any other class, was to give free agricultural implements. I will support any movement in favour of free agricultural implements.

Before I resume my seat, I want to offer to the House some suggestions which I think would be in the interest of the agriculturists and labourers of Canada, and I shall state them in a few words. I believe that the Government ought to establish more experimental farms and to offer bonuses by way of prizes for agricultural competitions. I believe that the Government ought to make agricultural colleges free, that they ought to give the books free, and that the sons of farmers who go to these colleges should receive instruction free; that in every sense these agricultural colleges ought to be free. I believe that the Government ought to assist farm labourers in this country as they assist farm labourers from other countries in migrating from one part of Canada to another. I believe they ought to offer the farmers of the East facilities to take up the lands of the West. They ought to give them financial assistance so that as far as possible we may be able to keep the land of the country amongst Canadians. I would advocate that a fund be set aside by the Government out of which farmers may borrow, say at two per cent, the Government to pay the balance of the interest and to provide a sinking fund, and that the money coming from that fund should be used for providing homes and outbuildings for the farmers.

10 p.m.

Speaking on behalf of the labourers of Canada, I would say that the Government should set aside annually a sum of money to assist in building labourers' modern cottages, the sum to set aside, to be loaned on the same conditions as I have just stated in connection with farmers' homes and outbuildings; that is that it shall be loaned at the rate of two per cent for a certain number of years, the Government to provide for the payment of the balance of the interest and sinking fund. I would say further that the Government ought to establish more employment bureaus throughout Canada, and see to it that before labourers are brought to this country the labourers already in the country have been provided with suitable employment.

I conclude my remarks by saying that instead of money being wasted upon useless drill sheds and armouries, instead of money being expended in bringing certain immigrants from foreign countries to our shores under false representations, instead of money being expended upon useless public works, as it is being expended at the present moment, the Government ought to provide that Canada shall always remain the home of the Canadian, that the one who shall receive the first protection from the Government shall be the Canadian. Therefore, I advocate this policy of aiding farmers in erecting and improving homes and outbuildings, and I advocate the policy of aiding labourers in building homes, as it is done in other countries. It is well known that the labouring classes can not go to the banks like other classes of society and borrow money to improve their homes because they have not the same security to offer to the banks and the banks will not advance them money as they will advance it to other people. If we have a surplus of $36,500,000, and if that surplus is growing every year, it becomes the bounden duty of the Government to see to it that the cost of living bear as lightly as possible upon the consumer, and it is the duty of the Government to see to the happiness, prosperity and welfare of the people in order to carry out the mission of the statesmen who have gone before the present ministers, looking to the upbuilding of Canada in conformity with her position as a member of the great family of nations. Instead of pursuing the policy of expending money upon warships, which are not required by Great Britain, and instead of a policy of lavish expenditure upon soldiers' uniforms, soldiers' clubs, drill halls and armouries, where we simply require sufficient protection, the Government should see to the welfare of every Canadian citizen.

Mr. J. H. BURNHAM (West Peterborough): Mr. Speaker, before referring to what seems to me to be the most important event about to develop in the twentieth century, I should like to make a few remarks in regard to the splendid financial showing of my hon. friend the Minister of Finance (Mr. White) in his Budget Speech, and in regard to his announcement of a substantial surplus. There can be no question that to be able to announce a surplus at the end of the year in the ordinary and well understood way of book-keeping, is an achievement worthy of consideration. If we juggle with the figures so as to confuse capital with income expenditure, we can bring out a deficit in any country in the world. That, however, has not been done here. It seems to me that fair treatment and praise ought to be accorded to the Minister of Finance for his eminently successful handling of the finances of this country. I also wish to compliment him on the firm front he has shown to the attempt recently made by a large railway corporation to make another assault upon the treasury of this country. I think the members of this House are of one mind that anything that is to be done shall be in the nature of salvage, not of coming to the rescue, however, of the men who launched this scheme, who boasted of it, and who manipulated it in every conceivable way to the detriment of the individual and ultimately of the nation itself. The people will not stand for such attacks, and we are thoroughly convinced that the Government has no intention of granting the demands of this corporation.

I also wish to compliment the hon. Minister of Finance on his judicious tempering of the home market. He realizes what protection is. Hon. gentlemen opposite in many cases either are not fair or do not understand the meaning of protection. Protection may in some cases mean free trade. Protection is control; it is doing that which, considering all the interests of the nation together, is best suited to the individual interest which we may be considering. If free wheat, considering the general interest of this country, is best for the farmers and the agricultural interests, let us give it to them; but it is highly improper and wrong to say that that is the proposition before this country. The proposition before this country is to give free wheat, free flour and free semolina, an en-

tirely different matter. The idea is to give free wheat, which they can have at any time, but at the same time to give them control of the manufacturing market; our flour market, and our semolina market. That is an entirely different proposition and ought to be so considered. Yet hon. gentlemen opposite are not fair enough to consider it in that way. Moreover, they ignore the fact, when they say that the western farmers want free wheat, that the western farmers are not the only farmers in this country. The farmers in my district do not demand free wheat. This question must be considered properly; and sending up this everlasting prayer for freedom, for free wheat, free food and free everything else, is not the way in which the affairs of this world are carried on. We are not living in any great earthly Sunday school; we are living in a place in which it takes us all our time to live and some of us do not know very well where we are going afterwards.

I will now endeavour to make a short reply to two of the gentlemen who have preceded me. They have attacked militarism, backed up by all the splendours of the idealistic principle of peace. Every one knows that, if you are simply going to take it for granted that there is peace the world over, you are going to wake up a badly mistaken man; you will have your pockets rifled if no worse fate befalls you. It is not on the principle of peace that we have our police and other systems of protection. The most preposterous thing of all is that a party which proposes to spend an absolutely colossal sum on a navy, is growling about a few millions expended for militia purposes. If the Liberal plan of a navy is carried out, then I say: Heaven help Canada. I grant the militia expenditure is bad enough, but it is a mere bagatelle in comparison with what the Liberal party say they will do. Surely we are entitled to have a little consistency from these hon. gentlemen; we do not ask for much.

As to depression, the hon. gentlemen opposite point the finger of scorn at Canada and particularly at the Conservative party, charging us with being responsible for this depression. The hon. member for Rouville (Mr. Lemieux) was candid enough to say that the depression was world-wide. Surely that is a sufficient answer unless it can be proved that the depression of Canada is extraordinary. How that can be proved in the face of expanding trade and a surplus of $36,000,000 passes my understanding.

Hon. gentlemen opposite speak about the agriculturists, but absolutely ignore all the patent facts arising from day to day. Do not we know that some of the products of the farm are coming from New Zealand and Australia by the shipload? If hon. gentlemen opposite do not know that fact, I can tell them that there are forming in this country to-day companies of Canadians who are shifting their basis of production, of manufacture, to the agency business and are actually preparing to receive large cargoes of farm produce from the Antipodes. One gentleman told me the other day that he had received a wire from Vancouver of the arrival of a large shipment of butter from New Zealand, and that simultaneously the price of butter in Montreal and Toronto had fallen two cents a pound. Is that what hon. gentlemen opposite wish to offer the farmer of this country? If you want to make the price of food cheaper, that is the way to do it; but we want to protect the farmer and therefore we say: Keep on the duty. We want to build up Canada; we do not wish to build up the Antipodes, and therefore we say: Give us the power to do it. The absurdity that frequently arises is the incidence of taxation not the fact of protection. All that hon. gentlemen opposite have to do is to apply the simple geometric principle that, if you add the same thing to the same thing as a constant, the result must be practically and theoretically the same; that is to say, if we add fifty per cent protection to all interests and matters of production in this country, then each in relation to the other will be exactly in the same position as before, yet we shall have all the advantage of protection against other nations. That shows how easy it is to do these things which hon. gentlemen opposite say they do not understand. They point to the inequalities, to the improprieties which exist as if they were the principle, but a simple illustration shows how easy it is to establish the principle. That surely is a vindication of the principle, and I am bold enough to challenge anybody to deny it. It is a simple principle, and certainly cannot be gainsaid. The hon. member for Wright touched upon the alliance with the Nationalists in Quebec. Judging by the votes in this House, the Nationalists are not allied with us; they have voted consistently with the Liberal party here. I do not understand Nationalism myself, but if the Nationalists are people with whom

an alliance should not be made, why do these hon. gentlemen accept that alliance? And they do more than accept it, they profit by it. One strange error was made by the hon. member when he said that the farmers of this country were handicapped in not having the proper or usual securities of others allowed to them upon which to borrow. That is the very thing that was provided for last session in the Bank Act.

Mr. DEVLIN: I did not say that. I was speaking of the labouring classes.

Mr. BURNHAM: Did not the hon. gentleman mention farmers' security ?

Mr. DEVLIN: If I did, it was a slip.

Mr. BURNHAM: Then we agree that it is taken for granted that the farmer has the same facilities as others, and I am satisfied. I will now branch out on at least an equally important part of this great subject, and that is the rise of the new eastern question. We are well aware—to go back for a moment to first principles—that great movements develop slowly but they actually rise very quickly, and it is a wise people who watch and are ready 'to take occasion by the hand' in connection with these movements. It is not necessary to go into this subject very deeply from the earliest up to the present time. But we may perhaps refer to the fact that it was the carelessness of the rich Babylonians that precipitated their overthrow. It was the carelessness of the Assyrians, in turn, which put them into the hands of the Medes and Persians. It was the luxury and carelessness and self-complacency of the Medes and Persians that put them into the hands of Alexander the Great. Through the same cause the Shepherd Kings in the early times were enabled to overcome Egypt and overcome its great civilization. The wreck of that great nation, that most ancient nation, was all that remained of it to adorn Grecian civilization. In the course of time that great nation, the Greek, was overthrown by the Romans. Then came the day of fate for the Romans, when the barbarians—our own ancestors, and particularly the ancestors of the Opposition—overthrew the Romans. And now we have to watch lest a still greater horde overthrow our civilization. You are well aware, Mr. Speaker, that there has been a great awakening in the East, and that great awakening has been due particularly to two things—the importation and assimilation of western ideas involving the change from monarchy to republicanism in China, and the importation of western capital. When did it begin? It began the very moment that the tariff in the United States was sufficiently lowered. Then, of course, it became an easy matter and a great inducement to capture this tremendous American market. And the American capitalist, and the American engineer in his employ, went to China, looked over the land and saw how well it was equipped, with plenty of cheap labour, with plenty of natural resources for them to take advantage of the accumulated wealth and prosperity of the United States, which necessarily will ultimately bring about the absolute breakdown of American labour and American civilization. There is no possible way out of it. The highest paid artisan in China gets 30 cents a day; the ordinary labourer gets 5 cents a day. The Chinese are learning by various means the arts of the western workman, and it will be a long, long time before his ambition or necessities compel him to ask what the western workman gets, namely, all the way from $2 to $5 per day. We find that China contains everything necessary for great economic development. She has coal and iron of the very best quality; she is capable of producing vast quantities of agricultural products; she also has an enormous population. And, since they have a religion which requires them to worship their ancestors, it is necessary for them always to provide the ancestors. As a consequence there are no bachelors and no old maids in China. They must all get married, and they must all have chidren,—and they do. So that source of supply is well provided for. In looking over the China Year-Book, I find that every province of China has plenty of coal and iron of such condition and in such position that it is easily got at and easily worked. In one steel works alone 20,000 men are employed. They also have plenty of copper, lead, antimony, gypsum, gold, and in fact all economic minerals required in manufacturing. And they have a large number of factories. Of cotton spinning and weaving mills they have no less than forty-one; they have also chemical works, cement and brick works, furniture factories, glass works, iron and steel works, leather works, mining companies, oil mills, paper mills, printing works, railway works, rope factories, sawmills, silk mills, smelting works, soap and candle factories, tea factories and sugar refineries. They are well on the way, you

see, to become a great manufacturing nation. All that was necessary was western capital and western management, and these are being given with a lavish hand at the present time. The increase in the export of native Chinese goods to foreign countries has increased wonderfully. For instance in the export of animals, including cattle, sheep, goats, pigs, horses, mules and poultry, the increase has been extremely rapid within a few years. Cotton, especially raw cotton has been exported in vast quantities; it is soon to become a factor in the world. We find that they are also exporting wheat flour, furniture, glassware and matting. Their export of matting, with the low tariff we have and the cheap labour they have, has broken up our matting factories—I happen to have a knowledge of that. One thing is evident about the opposition in this matter, and it is this: When they cry free trade, they do not mean it. I have been amazed to hear hon. gentlemen talk free trade and then get up, one after the other, and say they are for protection. Are we not entitled to some consistency and fair-dealing in this matter? I think we are. There is no use coming here if it is merely for the purpose of engaging in a battle of wits, in contradictions and in inconsistencies. Let us be reasonable in this matter, and we may get away from here before the 1st of July.

The Chinese have shown themselves to be expert financiers, easily adapting themselves to complicated situations, and their budget is a fine type of skill and correct book-keeping. Their shipping is not what it ought to be, but they are shortly to begin the construction of ships. They have the men, they have the skill, they have the ambition, and they will very soon have the ships. When they have the ships and the manufactures, the cattle and the sheep and the poultry and the eggs and all the rest of it, they then will be able to ship them over here at low rates. This world would be all right as a free trade world if the people and various civilizations were all equal, but they are not. Distinctions must be made; those distinctions must be preserved, and they can only be preserved by control. Free circulation of commodities and of capital cannot possibly be permitted if the conditions which naturally follow in their train are to be so vastly different in different communities.

A very singular and instructive thing in connection with the lowering of the tariff in the United States is the fact that Cuba and Chili have suddenly sprung into prominence as sources of supply for iron ore. In Chile there is an immense mountain of iron ore, said to be wondrously rich. They can run the ore by means of a wire rope from that mountain to the ships in the harbour, and the ships convey it round to the American steel works in the United States, which are built near the water's edge. Thus the Chilian people supply iron ore to the Americans, with the result that Chilian prosperity is rapidly rising. I am sure that we wish no harm to Chile, but we do not wish it to expand at the expense of the American people, and certainly not at the expense of our own people. The same thing happened in Cuba. There a great supply of iron ore has been discovered, and, just like the Chilian ores, it has driven back all the western or Lake Superior ores—driven them almost out of the market. The American steel manufacturer wants cheaper ore; the American machinist wants cheaper machinery; the American consumer wants cheaper product, and the labourer has to suffer as a consequence. Capital can go anywhere. Capital wants cheap food, cheap ore, cheap raw material, as soon as it attains an export basis. The manufacturer in the United States has ceased to care about local labour; he is quite willing to let in cheap labour and the products of cheap labour from abroad, to the detriment and ruin of his own people, so long as he himself makes plenty of money. That is the peculiarity of free trade; the rich become richer under free trade, and the poor poorer. The capitalist does not want protection; what he wants is that the whole world should be in competition, each community with the other, and that the people of all nations should come and beg him to partake of their labour. The minute you have free trade in labour, and the minute you have free trade in labour's products, the capitalist can go where the vantage ground is best—in Canada, China, or Africa, or wherever it may be—while poor Chinese or East Indians are doing his work. In the meantime, Coxie's army is marching upon Washington, and the Liberal Opposition here are crying out about stagnation in Canada. These are the facts, and it is necessary for us to look at them carefully, because our doom is impending if we do not rise to the occasion.

India also is very rapidly developing in this particular. India has large steel works, and we find that she is shipping manufactured steel and pig iron to San Francisco, in face of the $2.50 per ton duty—and, of course, when that duty was

wiped off, they made just that much more profit. These products have been shipped in immense and rapidly-increasing quantities; that is just what is happening at the present moment, and that is what will happen. It will not be long before the American people realize that it is better to be a Mexican or a Hindu or a Chinaman than an American, because if you are a Hindu or a Chinaman you will get work from American capital, whereas if you are an American citizen you will not. Either capital must be harnessed, or labour must be protected.

I was glad to hear the hon. member for Wright speaking about immigration as he did. Like all things, immigration should be tempered; it should be kept within bounds—that is protection. The hon. gentleman voiced a loud wail against protection one minute, and demanded it the next. He demanded protection against the labourer and the workingman—that is what he did; and that is nothing more or less than pure protection. It is another of those glaring inconsistencies which are so prevalent in hon. gentlemen of the Opposition, but I shall not say anything about these inconsistencies so long as they come home to those who are concerned with them. I shall not object as long as these gentlemen find out the truth in the end; sometimes they only find it out at election time, but so long as they find it out, I am content.

As I endeavoured to point out, capital does not require protection, neither does the consumer want protection. The consumer as consumer wants the cheapest possible food and raiment, but the two classes that must have protection are labour and agriculture. Because if agriculture is not protected as we have seen, then it, too, must go the way of all flesh and has in addition to cheap labour to struggle against inequalities of climate. We have Gorgas the man who enabled them to build the Panama canal, the greatest sanitary engineer of this or any other age, who has been sent for abroad, who, after making the death rate in Panama and the canal zone less than that of New York, city, has gone to Africa and discovered the causes of plague there. He says he can make Africa as pleasant and healthful to live in as any person would desire, and, as he says, the return in the tropics for toil is four times that to men in the temperate zones, all you need to do is to rescue the tropics from the curse of bad sanitation and you have their cheap products thrown on the market too. The occupants of the temperate zones must either go then into the torrid zone or suffer the consequences.

It may be just as well at this juncture to cite what the editor of the Toronto Globe said at Providence, Rhode Island, on March 27:

> There can be no 'yellow peril' on the Pacific coast threatening one English-speaking interest alone, said Dr. J. A. Macdonald, of Toronto, and a member of the world's Peace Foundation, addressing the New England Manufacturing Jewellers and Silversmiths Association last night.
>
> The scaremongers tell us, Dr. Macdonald said, that a struggle is coming. They say it will be on the Pacific. But if it comes it will be one struggle all the way from San Diego and the Mexican frontier to the snow fastnesses of the Yukon.

He has evidently thought the question fully over and knows what he is speaking of. I would commend his remarks to hon. gentlemen opposite.

In order to make my case as strong as possible, it will be necessary for me, especially as this question has not been introduced in the House before, so far as I am aware, to quote some passages from recent works of prominent and credible men. I quote from an article in Public Opinion, an English magazine that has existed for more than fifty years, and, as every magazine reader knows, ranks with the Nation, the Athenaeum and the Academy:

> Mr. Eddy's opening chapter fills out the glowing picture of 'The Renaissance of Asia.' A more astonishing set of facts surely are not to be found in any other thirty-nine pages of type. They show the ceaseless work of the roaring looms of time.
>
> During seven months of 1912-13, in a journey across Asia, including India, Burma, Ceylon, the Straits Settlements, China, Korea, and Japan, the writer has been impressed with a great awakening that is sweeping over the whole of that vast continent of Asia. The same principles that created our Western civilization are at work to-day in the ancient East, bringing about the same great transformations there that they wrought in the West. So vast and widespread is this awakening that it might well be called 'The Renaissance of Asia.' And yet it is more than this; it is an intellectual renaissance, a religious reformation, and a nineteenth century of scientific and industrial development all combined. Greater in volume, in depth, and in power than the Renaissance in Europe four centuries ago, it may prove to be even greater in significance also. The population in the fifteenth century was less than one hundred millions, while that of Asia to-day is over nine hundred millions. Greater in rapidity than the awakening in the West, this combined renaissance and reformation is crowding into decades in Asia what was the slow growth of centuries in Europe.

Further, he says:

The economic awakening of Asia is as clearly marked as the political and intellectual. During the latter half of the nineteenth century the trade of India increased fourfold and that of China sixfold, while that of Japan has increased sevenfold in twenty years. But the twentieth century will see far greater developments in the East than in the nineteenth.

The chimneys of the great factories of Osaka and Calcutta rower like those of Birmingham. We travelled round the world on Japanese steamship lines, comfortable, highly efficient, and paying dividends, while some of the American lines on the Pacific can scarcely pay expenses.'

China has the greatest coalfields in the world. Shansi province has enough to supply it for a thousand years. American steel magnates say they cannot compete with Chinese iron on the Pacific coast.

I shall further call attention to a remarkable publication headed 'Shall the White Races Dominate the World' by Major Stewart L. Murray. Of this Public Opinion says:

Major Stewart L. Murray calls upon the Anglo-Saxons of the British Empire and the white men of Europe and the United States to stand together so that they may hold dominion in the world.

Major Murray writes in the Nineteenth Century, and his article is extremely lucid and interesting, and many will agree with his arguments and aims who do not accept his God's-white-man point of view.

He calls for 'an Anglo-Saxon policy' because there are 'causes at work to-day which, if adequate counter-precautions are not taken by us, may in the fullness of time result in the expulsion of our race from Australia, New Zeland, and Africa, where we are least firmly established.'

In the event of a great European war he sees 'Europe, including Great Britain, helpless and impotent as regards the Pacific. Then will come the opportunity of the Japanese, with the Chinese behind them.' 'Africa is beginning to stir; Asia is beginning to arm.'

If we can only hold the Anglo-Saxon lands for the next fifty years all may end well,' says Major Murray; 'the Yellow Danger, at least in its acute and menacing phase, may pass away and be succeeded by some working agreement.

And let us note what Napoleon said:

Napoleon at St. Helena foretold that 'the force of circumstances' would eventually drive the European powers into some form of union.

These statements are given great prominence in the English press, and it is not for us, who have already received our warning in a more practical way to ignore them. We have already had to take measures on the Pacific coast to prevent an undue influx of the Orientals. It has given rise to a great deal of trouble and heart-burning, but they are only the skirmishers, they are only the outposts of 900,000,000 of people of which 150,000,000 are working-men, who

are only too eager and too willing to get an opportunity to trade which would enable them to compete with us and to put us out of sight in the great world competition. Then we would know what stagnation meant; then we would know that our working-men who must draw from $2 to $4 to make a decent living, would have to become as Chinese and Orientals or suffer the consequences. We see how the Chinese who are here work. They all live togther in their laundries in a way that we do not consider proper for white people to live, but that does not seem to attract our attention particularly. We do not seem to observe that these men are in direct competition with our own. They are very successful, they have cornered the laundry market, although they charge high prices. The simple reason is that their cheap living enables them to have a margin of profit that prevents white competition. Would any hon. member in this House dare to say that he believes in the free admission of the Oriental or of the products of Oriental labour? Any one who would dare to say that would not be a member of this House after the next election. It is too absurd, it is too plain, it is something that he who runs may read and understand. To temper it is protection; and these gentlemen will employ protection, still howling for free trade, something which the hon. member for Rouville frankly said was a mere fanciful dream—and that is all it is.

I also have something here from the Free Press of Winnipeg, in which the manager of the Ogilvie Milling Company says:

As soon as there is a fair market for high grades, the milling will be done in Japan and China where it can be done cheaper than in Canada or the United States.

The next thing the Ogilvie Milling capitalists will do will be to go to China or India or perhaps to Africa, to employ cheap labour there and then ship the goods back here. There is nothing to prevent it.

It is interesting to note the immigration to the United States of America since 1825. From Austria-Hungary about 3,000,000; Germany about five and a half million; American countries other than the United States, one and a half million; Russia, one and a quarter million; Ireland, nearly 5,000,000; and Canada 1,100,000, mostly French; from England a little over 3,000,000. You see, Mr. Speaker, there has been a vast immigration from those countries, and as pointed out by the hon. member for

Frontenac (Mr. Edwards) a very great immigration from free trade England. Immigration such as that indicates two things, first of all that it is necessary to leave that country to get work, and, secondly, it makes better conditions for those left behind.

I wish to turn for a moment to what I regard as of almost equal importance, what seems to me the foundation of all economic life—I refer to the minimum wage. The whole case of labour unrest is based upon that. The great bulk of labour unrest is absolutely genuine and is caused by the fact that labour has aspired to a higher civilization than labour is able to maintain. Those people who are not prepared to assist labour in maintaining that civilization condemn it to degeneration and to a degradation to which labour will never submit. A standard of life is something that is possible. It is something that can be guaranteed and as long as there is some point to start from variations can be made. The point that is started from at the present day is the reward of capital. If capital is well rewarded it will continue to employ; if it is not, it will cease to employ and labour will consequently suffer. But if the basis of all calculations was the minimum wage that labour can exist upon and develop the civilization of which we were speaking, there would be no further difficulty. The cost of living would be higher, but the ratio would be the same. Whatever else happens there must be a living wage—I emphasize the words 'living wage.' The testimony given before the Old Age Pension Committee, the testimony on this subject before every committee held here or anywhere else, goes to show that there must be a falling off in the standard of life if labour is to be able to live. I am not speaking of well-paid labour; I am speaking of that very large proportion of underpaid labour. A living wage makes no difference to the employer because if he has to pay so much more to labour he can charge so much more, but it makes all the difference in the world to labour, and when a thing can be so easily done—I am sure you will find that this proposition is economically and scientifically sound—why is it not done? Why is it that charges and counter-charges are hurled across the floor of this House which if true show that both sides have plundered this country of millions and millions of dollars. I hope that it is not true, but the gentlemen on this side have said it about the gentlemen there, and the gentlemen there have said it about the gentlemen on this side, either they have all actually plundered the country or the people who made the charges have said what is not true. You can take your choice. It is a very painful alternative. If one half of it is true, labour, agricultural and industrial, could have been endowed and be living in comfort. We have been sustaining more or less a lot of tramps, not necessarily in rags but tramps in fine clothes, and it has got to be stopped. Common sense must be infused into the conduct of the industrial, agricultural and economic affairs of this country. This frightful waste must be stopped. Is it not a remarkable thing that in one day of the week labour could produce all that is required for the maintenance of all the people of this world in comfort, if it were not that people are so greedy and so desirous of laying up wealth in the form of capital for their own aggrandisement and luxury and enjoyment that they will not hand it out because it would lower the market. Yet it is a fact that one day's labour a week would provide all the people of this world with a comfortable living. There must be a screw loose somewhere, when we consider that men have to work long hours every day of the week. I am sorry the hon. member for Red Deer (Mr. M. Clark) is not here to-night. He might believe me when I say that the public reports show what I am unable to believe, namely that 576,000 children under 14 years of age have to work in England for their living, and some of them are no older than three. England has been able to compete in the world's market because when a mechanic or an artisan gets married there his wife goes to the factory and helps him to earn a living and if they have children they also go out and bring in money when they are old enough. In Canada the man is supposed to provide for the home, the wife does the work of the home and is supposed to maintain herself in comfort and perhaps some dignity and her children. She is not supposed to be a domestic and industrial slave. We do not want that kind of thing in this country. Nowhere in the world ought there to be such a high standard of life as in Canada to-day and we must see that it is not lowered by competition from anywhere. Mr. Lloyd-George—I am sure his authority will not be impeached,—has written the preface for the forthcoming volume of Professor Ernst Sieper's series of monographs dealing with the whole range of the culture of England to-day.

Professor Sieper, who occupies the chair of English Philology at the University of Munich, has, in his work of familiarizing

Germany with English conditions and achievements, the support of the German-English Friendship Committee, and this particular volume of the series he edits deals with the new social reforms that have been brought into force in England.

What does Mr. Lloyd George say? He says:

> Not too late, perhaps, but certainly not too soon, we are beginning to apply sound commercial principles to national life and enterprise.

He says there must be higher wages for a vast body of men. He goes on:

> But there was also the national aspect of the question. No nation whose prosperity depends upon its industrial efficiency can afford to tolerate on a large scale deplorable labour conditions of the kind which made the Trade Boards Act necessary.

The Trades Boards Act is the Act just passed in England.

> For of what use is it to level up the condition of the working classes by Factory, Insurance and other Acts while at the same time it is subject all along the line to the downward pull of a mass of underpaid labour, altogether outside the influence of organization.

That is the condition of affairs in England. It is idle to keep on indulging in various forms of recrimination. Let us look at things as they are critically and seriously and endeavour, if possible, to profit by it. We find that the majority report of the Poor Law Commission in England states that:

> No country, however rich, can permanently hold its own in the race of international competition if hampered by an increasing load of this weight, or can successfully perform the role of sovereignty beyond the seas if a portion of its own folk at home are sinking below the civilization and aspirations of its subject races abroad.

That is a very severe indictment, but it is the report of the Poor Law Board of 1909:

> Nearly five years later, the Times makes the melancholy confession that the amount of destitution now existing in London is greater than it was at the end of the last century.

Then the report says that it is utterly useless for the Board of Guardians to attempt to deal with this situation as 'it is impotent to touch the roots of destitution.' That is, of course, the underpayment of labour.

The next thing on the programme, however, is to look at the Bank Report. There we see the rewards of capital and there we see that the average accumulation of profits is at the rate of twenty-one per cent. We can see no suffering on the part of capital.

[Mr. Burnham.]

At no time has capital suffered to any alarming extent. There should be some remedy. If this enormous profit can be obtained for capital, is there no way to obtain a little decent living for these destitute people, who should be rescued, who are willing to work and who cannot find employment? Is there no way of relieving this condition? Is it possible that in this twentieth century we are more concerned about the tariff, about politics and about procedure than

11 p.m. about life? Is there no man who has the intellect, the ability, the influence with the public and who represents the public, who will get up and, as Lloyd George is endeavouring to do in England, try to equalize the conditions of this country so that all men who have no capital but their labour and health, both somewhat uncertain, shall have a chance? I am not speaking in any sentimental strain. I am not discussing it in that way, I am talking about it as a matter of ordinary justice. This condition has continued for a long time and it can be done away with by the adoption of the minimum wage. All those who do not come within the scope of the minimum wage and steady employment will have to be taken care of under any system—it does not matter what. It is not those people that I am considering. I am considering the people who are well, strong and willing to work and yet can not find work, and who, if they do find work, have either to sacrifice their civilization or submit to underpayment. These are the things that concern us and it is for us to accept the burden of endeavouring to provide some solution. We seem to be at the very beginning of our civilization. If we could look upon a fairly contented people without being conscience stricken, if we could say that the people who are not able to enjoy the fruits of their toil are only the people who are not able to toil and who must be provided for by public munificence and perhaps by private charity, well and good, but to condemn so large a number of able and willing men to all the risks and privations of non-employment, is to neglect the most important and fundamental part of our national existence.

I have only now a few words to say about the disagreement between the free traders and the pseudo free traders. We know, for example, that capital thrives particularly upon inventions. We know that it is the patent rights that the great concerns own that are really the foundation of their prosperity and the life of their enterprise. If they had to give up their patents they

would be done for. Inventions are the source of a large proportion of the profits of industrial capital. But every time there is an invention, every time an invention is registered, it is just so much taken away from the workingman. That shows how tremendously in his legitimate sphere the workman is handicapped.

I have some letters here, one from local union No. 78 of the Brotherhood of Operative Potters, at St. Johns, Quebec. I had hoped that the hon. member for St. Johns and Iberville (Mr. Demers) would have been here to-night. I think he is not very well, but I know that he agrees with the request of these people that they shall be afforded protection against the underpaid labour of England, the competition of which has compelled the works at St. Johns which makes white glazed ware far superior to the sort they make in England, to go out of business. There has been a lock-out, not through any spirit of unfairness, but simply because this ware could be made cheaper in Staffordshire. The operation of the British preference has resulted in throwing out of employment these people who are nearly all old countrymen, principally Scotchmen. They say: Why did you not tell us that we would have to go back here to old country conditions and send our wives and daughters out to work? If you had, we would have stayed in the old country; but you told us that you protected your labour here. You do not, because we have had to go out of business. Here are these people who left the old country to avoid the degrading conditions existing there and gradually falling wages and came out here to improve their position, subjected to a lock-out. I have their own statement. It is not necessary to read it unless somebody challenges my statement, but the facts are there. These men paid their own way up here to present their case. They say that they have been out of work for a long time, that they have no prospects, and they do not know what else they can work at. Are we to understand that we prefer the works of Staffordshire and Lancashire to our own works in this country? Are we to tell these men that they must send their wives and daughters out to work, and that they have to produce the same output and accept the same rate of pay as in Staffordshire? Are we to tell them that they have to go back to the old conditions or else remain out of work? That is the alternative. I have here the written statement from these old countrymen in that regard. The writer set it out at great length. It is certainly convincing; it is absolutely and practically true. I also have a communication from the secretary of the Cobalt Miners' Union, in which he says:

> The social unrest is so real, so deep and the workers' economic condition growing worse so rapidly, we are afraid armed revolution will break out in several countries before long. Great Britain, Germany and the United States are drawing very close to the breaking point. Parliamentary action seems too slow, owing to constitutional and state restrictions. International capital has also completed its circle around the world. It will not be long before the cotton, oil and steel industries, etc., in China will, with their exploitation of cheap labour, become a real danger to our home industries.

He speaks of changed conditions even there. Foreign competition has had its effect even in Cobalt, and he says it is impossible for him to maintain, without any waste or extravagance whatever, the ordinary common condition of a respectable workingman, as he has done in the past, although he has constant employment, because the prices have to come down owing to foreign competition.

I suppose that the Conservatives are to a certain extent to blame for the condition of unemployment in the industrial centres, because when they came into power they promised a development of the home market for the agriculturists, and the home market has developed so rapidly that it has over-developed and has thrown the country somewhat out of balance. The farmers found that the home market, the manufacturing centres, had developed so rapidly that they left the farms. The promise of the Conservatives has been carried out in a marvellous manner. It was denied that the home market would ever develop, but it has developed. These conditions must be to a certain extent equalized, and the Minister of Finance has begun that equalization by lowering the tariff on agricultural implements, something that our hon. friends opposite neglected to do.

Under free trade, cheapness is the great consideration. The only way in which the free trader can command the home market, let alone the foreign market, is by superior cheapness. Cheapness is the death of civilization; it is the ruin of the hopes of those people who would rise above the level of the beast. It is a false theory; the standard should be a true and proper level of economic living where not cheapness but having our own market would be the

rule. If we had our own market, and no other market in the world, in a short time, with all our great natural advantages, we would have an ideal country to live in. Every industry would be balanced with every other; we would have plenty. This balance of industry is dislocated by such things as the British preference and the competition from abroad.

Apparently, we began at too high a standard, and we shall have to lower it. It will not be observed, perhaps, for some time, but it will ultimately be observed that if these conditions under the existing circumstances right themselves, it will be at the sacrifice of the life of the people. Something has to give way. If we are going to have the cheapness which will enable us to control the foreign market and the domestic market against general competition, it must be at somebody's expense; it must be at our own expense and it will be felt in the lowering of the life conditions of our people. It amazes me sometimes to hear the hon. member for Red Deer (Mr. Clark) speak about the balance of trade, as if it did not make any difference at all whether or not you spent more money than you had. According to him, under free trade, if you did not get the money back, why, it was your own fault; that is to say, we could buy more abroad than we sold and, once the goods came in, we ought to be perfectly happy. That may satisfy him, but I do not think it will satisfy any one else who has given the subject any thought. You may analyse the matter as deeply as you like, but it is just as simple as the case of an ordinary man who spends more money than he makes and who has to draw on his natural resources or receive assistance from somewhere. The consequences is that all we should be making of our immense natural resources and advantages is going abroad in interest on capital, in the repayment of capital and in the paying for goods which we should manufacture in Canada. It is positively absurd to send money abroad; to borrow money from abroad and send it abroad to pay for goods which we can manufacture in Canada. This condition could all be brought about by imposing a uniform rate of duty on everything and making it sufficiently high to be protective. I am not in favour of what is called high protection and certainly not in favour of unequalized protection, but I am in favour of that protection which will protect and keep us up to a high level and standard of excellence in our life and in our industries whether agricultural or mechanical.

The conditions in the country at the present time are indicative of a slight slump. They are so in the United States, in Mexico and in the various older countries, except perhaps in France, which, as we all know, is the most highly protected country in the world and which is absolutely the richest and most prosperous of all countries. If we must point to examples—and certainly it is only from our experience that we can draw conclusions, unless we follow the everlasting mistake made by the free trade theorist, who insists upon drawing his conclusions from a priori principles, and who believes that he is inspired by the knowledge of the true principles of Government and of economic life. Therefore he begins to draw his conclusions from his inspiration, and, though he runs up against all sorts of absurdities he simply continues to cry 'Freedom! Freedom!' as if every difficulty must be solved by that means. It is time to realize that this ancient theory of inspiration, of dogmatism, is long past and gone. Sensible people, scientific people, now observe and make use of their observations, drawing conclusions from what they see, not from what they have thought beforehand. This it is that justifies us in altering our position from time to time, whether it be with regard to protection or free trade, or living wage, or anything else. And so when conditions demand that we should put up the bars, we put them up, and we put them high enough to keep out a race that threatens our supremacy, or to keep out their goods which would stop our machines from working. We must consider what the conditions are and take our precautions accordingly. But for the recognition of that principle, nothing modern would have been discovered, since it is by the same process of observation and reason, and the adaptation of means to ends, that all discoveries and inventions have been possible. Only in this way have the wonderful improvements been made in the industrial world—the development of such things as the air compressor, also the new gas engines driven by gas from the chimney tops of smelters and reduction works which formerly went to waste. Only by means of observation and effort to meet conditions were such things achievable. Formerly all these things were attributed merely to

freedom, and especially freedom of trade—let that be the rule, it was said, and everything will be lovely. That old policy is played out, and if it is not played out, it is time it was, because its very friends are deserting it. I have here, but shall not read, the Monthly Notes of Tariff Reform in which are many amusing instances of declarations by free traders, that is by the present British Government, that they will provide for all the anomalies that may arise from time to time by the violation of the free-trade principle. And so they will go stumbling along in the good old English way, trusting that things will turn out right in the end, as they did at the time of the Spanish Armada, when they did not know what was going to happen next. But the painful fact about all this is that its free trade triumphs lie in following the line of least resistance, and that line of least resistance is the under-paid labour of those who are compelled to sell their labour to live. This spells ruin for the labouring class, who then must be upheld by factory Acts, insurance Acts, old age pensions, and all sorts of contrivances and palliatives which are substituted for protection. True, in the United States they suffer also, but what they suffer from is not from a great national prosperity they ought to have but do not have, but from the inequalities of protection. We do not deny that causes of complaint arise under protection; protection may be misused, as everything else is likely to be misused if people hold to it long enough—it seems to me that nowadays it is better not to even lay your watch down, for somebody will steal it; there was a time when nobody thought of such a thing. But protection may be the triumph of one class over another as it is the triumph of one industrial system over another. These things must be provided for, they must be controlled by Governments. But do not let us confuse these things with the other issues we are discussing, namely, the inability of the man without capital to protect himself against the man with capital, under free trade.

On motion of Mr. Robb, the debate was adjourned.

On motion of Mr. Rogers, the House adjourned at 11.22 p.m.

Friday, April 17, 1914.

The House met at Three o'clock, the Speaker in the Chair.

IMMIGRATION OF HINDUS.

On the Orders of the Day being called:

Mr. H. H. STEVENS (Vancouver): I desire to ask the Minister of the Interior (Mr. Roche) if he has received information that four hundred Hindus are on their way from Shanghai and Hong Kong on a steamer of the Maru line, under the leadership of one Gurdit Singh, and that the intention is to test the regulations of the Government with regard to Hindus and others; and, if the minister has heard of it, whether the Government are taking any steps in the matter?

Mr. ROCHE: This morning a telegram was received by the deputy minister from our agent in Vancouver to the effect that a number of Hindus were on their way to Vancouver, and instructions were sent to prevent the landing of all those who attempt to gain entrance to this country in violation of the Order in Council recently passed.

THE BUDGET.

Consideration of the motion of Hon. W. T. White (Minister of Finance) for the House to go into Committee of Ways and Means, resumed from Thursday, April 16.

Mr. J. A. ROBB (Huntingdon): Mr. Speaker, I hope the hon. member for West Peterborough (Mr. Burnham) does not expect me to follow him in his interesting trip through the empire of China and the Principalities of India. That non. gentleman is always interesting, and last night he brought forward for the consideration of the House many questions that are of real moment. But we must not forget that the mother country, to which we go to borrow money, has had her markets open for many years to the products of China and India, and that course apparently is helpful to the prosperity of that country.

I have had the privilege of listening to three Budget speeches by the present Minister of Finance (Mr. White). Listening to his Budget speech of this season, it seemed to me that conditions are not improving under this Government. In his Budget speech of 1912, the hon. gentleman was able to present some very rosy statements, by reason of the administration of his predecessor, and the splendid condition of trade at that time. The Budget speech of this year sounded very much like an excuse for continued borrowing and de-

pressed trade. I will not attempt a discussion in detail of the Budget, so carefully presented by the Minister of Finance, and so ably reviewed by the hon. junior member for Halifax (Mr. Maclean). But one feature of the minister's speech encourages me to make a suggestion to the Government. He told us that Canada had reached such a condition under this Government that we could not expect for some time to borrow money in London for less than 4 per cent. Indeed, the hon. gentleman frankly told the House and the country that during the past year he had made loans in London at 4¼, 4½ and 4¾ per cent. I ask the Government: is there any good reason why we should continue to borrow money in London at 4¾ per cent while we pay but 3 per cent to our own Canadian depositors in the Post Office savings banks? I submit in all frankness to the consideration of the Government the suggestion that they take this matter up and give some little attention to the savings of the people. If, as the Finance Minister says, Canada must for some time expect to pay 4 per cent in the London and New York money markets, is there any good reason why we should continue to take the savings of our own people at 3 per cent.

We are apparently all agreed that agriculture is the basis of our prosperity. The Finance Minister told us that during the past seven years the increase in exports had been largely agricultural. We are all agreed that good crops are good for Canada and that poor crops mean stagnation, but we are divided on the question of how to turn those crops into money. Our hon. friends opposite say: Tax everything you produce, everything you consume, everything you buy, everything you sell, and build up the home market. We on this side have a policy of larger and wider markets and reduction of taxation on the food of the people. Apparently that is the difference between the two parties. While we on this side of the House have a policy of larger and wider markets, our hon. friends on the other side, if we can interpret their policy from the speeches of those who spoke yesterday and the day before, have a policy of sympathy for the western farmer. I submit to the consideration of hon. gentlemen opposite that there are times in a man's life when sympathy is very desirable, but sympathy is of little use in buying wagons from the manufacturer in Chatham, engines from the manufacturer in Kingston or cotton from the manufacturer in Valleyfield. Sympathy is not much good for the help on pay day, and so what the western farmer wants is not so much sympathy as a policy of bigger and wider markets for his products. Canada had a fair crop in 1912, and a good crop in 1913. Our western provinces had a big crop but a very narrow market, and as a result the western farmer is without money to pay his store bills. Eventually that condition must back up first on the factory and then on the eastern farmer who feeds the employees of the factory, because if the employees who have been working in a factory are without work and cannot get money, they will be unable to buy the butter and cheese and other products of the eastern farmer. So I say that the farmers of the East are very much interested in the products of the farms of the West.

Recognizing that the growing production of the West demanded larger and wider markets, the Liberal party in 1911 appealed to the country on a policy of larger and wider markets. The subsidized interests throughout this country had grown fat and selfish. Our hon. friends with their allies, the subsidized interests, organized a campaign to defeat the policy of larger and wider markets—not upon economic grounds, but upon a policy of flag waving; in the province of Quebec, a no-naval policy; in the province of Ontario a big navy policy to which was attached a race and religious appeal that was not creditable to the great sister province. That appeal being before the country, the policy which we had sought for forty years was defeated. For forty years the people of Canada, represented by both great parties, the Conservative party and the Liberal party, have looked with longing eyes upon the great markets to the south. We made continual trips to Washington without much success, until in 1911, when the Hon. Mr. Fielding, who was then Minister of Finance, brought home what in my judgment was the best trade offer that Canada ever had. I insist that many years will come and go before Canada receives a better trade offer than that which she received from the great Republic to the south in 1911. Had that policy not been defeated, trade from the Atlantic to the Pacific would have been stimulated; the great producing West would have had more money with which to buy the products of eastern Canada and so, instead of the stagnation and unemployment which we have to-day, this

country would have been in a more flourishing condition.

Mr. SMITH: How?

Mr. ROBB: The farmer of the West would have had more money to buy the products of the East. My district was not stampeded in the campaign of 1911. At Brysons, in the valley of Chateauguay, surrounded by the best farms in Canada, there stands a monument to the brave Canadians who in 1812 drove back the invaders and saved the province of Quebec to Canada and the British Empire. To the sons of such sires, the loyalty appeals of hon. gentlemen opposite were but pure hypocrisy. They knew the value of the American market, with which we have traded in the bright open light of the sun by day, as well as under the protection of the stars by night, for over 100 years.

Mr. SMITH: A little on the quiet.

Mr. ROBB: If our United States friends are ready to stand the chance of coming over here and paying $25 more for a horse and $15 more for a cow, we are not going to ask many questions.

The policy of our hon. friends in 1911 was: build up the home market. Now that they are able to put their principles into practice, their policy is build dreadnoughts and drill-sheds. But I submit to hon. gentlemen opposite that this country will require something more than that policy if they are to sustain the Government at the next election. Having listened to the voice of the jingoes, Canada still has a narrow market, and the price of foodstuffs is going up in this country; our United States neighbours on the other hand have revised their tariff to suit their requirements and apparently with some regard for Canadian prejudices. The Underwood tariff has put the reciprocity issue straight up to this Government. Under the Fielding-Knox policy the products of the farm would have flown freely from the producer to the consumer. But the Underwood tariff, as revised, has very seriously interfered with the wheat industry of this country. The hon. member for West Peterborough (Mr. Burnham), in his interesting discussion of the conditions in China, pointed out that the highest wages paid to the artisan in China is thirty cents a day, and that the average wage paid is five cents a day. I suppose my hon. friend was discussing this from a silver basis, because China is on a silver basis.

Mr. BURNHAM: No, on a sterling basis.

Mr. ROBB: Listening to my hon. friend from Peterborough, I wondered what the hon. Minister of Trade and Commerce (Mr. Foster) would think of the value of the Chinese market for Canadian flour, with wheat selling at ninety cents a bushel, Fort William. I wonder how much flour the people of China, earning five cents a day each, will be able to buy as long as we keep the price of our wheat at about ninety cents, Fort William. The hon. member for Peterborough says we may export flour. But we know that in Manchuria there are some of the largest wheat fields in the world, and that at Harbin there are as good flour mills as in Minneapolis or in Canada.

Mr. BEST: Would you be in favour of free flour?

Mr. ROBB: Do not be too impatient, my friend. The Underwood tariff places the wheat from all the world on the free list on a reciprocity basis, but a clause in that tariff hits Canada. The free list of the United States tariff reads:

That on and after the day following the passage of this Act except otherwise specially provided for in this Act the articles mentioned in the following paragraph shall, when imported into the United States or into any of its possessions (except the Phillipine Islands and the Islands of Guam and Tutuila) be exempt from duty.

Article No. 664 of the Underwood tariff says that the following shall be free:

Wheat, wheat flour, semolina and other wheat products not specially provided for in this section, provided: That wheat shall be subject to a duty of ten cents per bushel, that wheat flour shall be subject to a duty of forty-five cents per barrel of 196 pounds; and semolina and other products of wheat, not specially provided for in this section, 10 per centum ad valorem, when imported directly or indirectly from a country, dependency, or other subdivision of government, which imposes a duty on wheat or wheat flour or semolina imported from the United States.

Now, Sir, how does this affect Canada? Does this article not mean that the Argentine Republic now enjoys what Canada refused in 1911, and does it not mean that there will be a tariff of ten cents against the wheat of Canada unless this Government are prepared to open the Canadian market to the competition, not, as in 1911, of the United States alone, but to the competition of the Argentine Republic and of every country that exports wheat? That is the position in which the hon. gentlemen

have placed this country by their opposition to the pact of 1911. In 1911 the big millers of Canada opposed a proposition that would have given them two markets wherein to buy their wheat without paying duty, and would have given them a protection of fifty cents per barrel in a market that was gaining at the rate of a thousand barrels mill every year. Under the policy of 1911 the millers of Canada could have gone down into Kansas, Michigan or Ohio and bought wheat; and this would have been of special benefit to the Ontario miller right on the direct transit route to the sea at this season. Every year about May, the millers run short of winter wheat. The Ontario miller could have gone into the southern markets and bought wheat, kept his mills continually running exporting flour, and would have had the bran and shorts for the dairy interests of this country. They opposed that policy, and it has taken them less than three years to wake up to the fact that the reciprocity pact was not the worst thing that could have happened to the Canadian milling business.

In the Montreal Gazette, a very good Conservative paper, on Christmas day last, the big millers of Canada sent out what must have been intended as a Christmas card to the Prime Minister of Canada. I shall quote not the whole article, but a few extracts from it. The first extract reads:

> **The present Government were elected on the main issue of reciprocity, the provisions of which were more favourable than those offered under the present United States tariff.**

And, not believing that that was quite strong enough, a little further down in the same column we find from the same big millers this further reminder to the Prime Minister:

> **Those who are agitating for the removal of the duty on American wheat and its products are the same who so strenuously fought for the late Government at the last election when, if anything, the proposals under the reciprocity treaty were more favourable than the present offer.**

Not satisfied with making the statement once, they throw it into the Prime Minister a second time that the policy of 1911 was better than the position in which this Government has placed the farmers of the West and the milling interests of Canada.

There is another feature of the card which the big millers addressed to the Prime Minister that is worthy of some attention—because it will be remembered that the great issue in 1911 was a loyalty issue. Our friends opposite contended, and the big interests contended, that to give the western farmer permission to sell his products to the United States meant disloyalty and possibly annexation, and that we should keep closer to the mother country. Here is what the millers have to say on that proposition:

> **If flour is admitted into Canada free from the United States, Great Britain and other countries in the empire might with reasonable justice ask that the same privilege be extended to them.**

They say further that the millers would have to meet competition from the millers of Great Britain on our eastern coast and of Australia on our western coast. Imagine the men who in 1911 shouted loyalty and closer association with the mother country, on Christmas day, 1913, sending to the Prime Minister a Christmas card, saying: Do not let our western brother sell his wheat to the Americans or we will have to meet the competition of the motherland on the Atlantic coast and of our Australian brethren on the Pacific coast.

I contend once more that if the policy of 1911 had not been defeated the western farmer would have had a better market for his wheat, and not only for his wheat, but for his oats, barley and flax. He would have had more money with which to buy the products of the eastern factories and, instead of stagnation and factories running short time as they are to-day, we would have had greater prosperity. This view is supported by no less an authority than the Montreal Gazette. When I am at home, before I settle down to work in the morning, I generally read the editorials in the Montreal Gazette. On May 29, 1913, at a time when there was no general election, the Montreal Gazette laid down this theory to which we on this side can offer no objection:

> **Much for the future depends on a succession of good harvests because the product of the field is not only the dependence of home industry but is the chief item in the total of the exports which enables the country to pay the interest on its large borrowings.**

If it is good for the country to have a good crop surely it cannot be bad for the country to get good prices for that crop. I think the Montreal Gazette might have gone a little farther and pointed out that as Canada produces more wheat, oats and barley than we can take care of, what we need most is larger and wider markets for the products of our western country so that the people who produce these commodities may be better able to buy the products of the factories in the East.

Mr. SMITH: Would they buy them?

Mr. ROBB: The farmer is generally a pretty good buyer; my hon. friend should know that. I wish to deal briefly with the dairy industry. I am sorry that the right hon. the Prime Minister (Mr. Borden) is not in his seat. Speaking at Winnipeg on the 19th Ju e, 1911, the right hon. Prime Minister, then the leader of the Opposition, is reported in the Conservative papers to have said that the Conservative party opposed the Fielding-Knox trade arrangement because:

It encourages the export of agricultural and animal products, in their lowest and least finished form. Our cream will be converted into butter or cheese not by Canadian labour but by United States labour.

At that time the United States had offered to admit Canada's butter and cheese free into the United States if Canada would in turn admit the butter and cheese of the United States into Canada. It would have been a mutually advantageous arrangement but our Tory friends, unable to deny its economic value to producer and consumer, raised the cry of British connection. The very thing which the Prime Minister wanted to prevent is now reaching enormous proportions in this country. The eastern townships and the counties in the valley of the Chateauguay and the lower St. Lawrence are very large dairy districts. In the eastern townships and along the valley of the Chateauguay the factories are either closing down or burning up because the Underwood tariff has discriminated against the butter and cheese of this country. They admit our cream and milk free into the United States but there is a discrimination of 2½ cents a pound against our butter and of 20 per cent against our cheese. What is the result? The butter and cheese factories are being turned into creaming stations. The cream is being shipped to the United States and our labour is following that cream. The increased labour that we should and would have had in Canada, because, had reciprocity carried we would have had a larger market for butter and cheese, is lost, and the manufacturer is losing the work of making the cheese cloth and butter wrappers and his employees are paying 3 cents a pound duty on New Zealand butter.

Mr. WEBSTER: Will the hon. member be good enough to tell the House what the wholesale price of cheese in northern New York was last week as compared with the price paid in Montreal ?

Mr. ROBB: I have not that price, but I would like to remind my hon. friend of this—he is in the business ?

Mr. WEBSTER: Yes.

Mr. ROBB: And he knows.

Mr. WEBSTER: The price was 1½ cents a pound less.

Mr. ROBB: My hon. friend knows that at the time reciprocity was under consideration, Canada had an offer of 90,000,000 customers at her door, but, listening to the jingo appeal of hon. gentleman opposite, the majority turned down that bargain. The United States have revised their tariff with due regard for Canadian prejudices and they are admitting into the United States markets the products of all the world. The United States manufacturer, as a result of that, is going to be able to feed his employees cheaper than our manufacturers can, and some day it will be up to our hon. friends opposite to face the situation which will arise; there will be such an outcry in the cities and towns of this country that they will be compelled to deal with the tariff in the future. Admitting that the United States market may at times be better than the market in Canada, our farmers in the eastern townships and the counties that I have referred to are not suffering very much so long as they can ship their milk and cream. Situated as they are, these farmers are to-day selling their milk at $1.40 while the farmer up here is only getting $1.10.

Mr. WEBSTER: The hon. gentleman has not heard that the price has gone down 15 cents.

Mr. ROBB: My hon. friend knows why that is. You can ship butter a thousand miles or 3,000 miles, but you cannot ship milk a thousand miles because it will not keep and also because of the freight charges. From Huntingdon and Cowansville you can ship 100 pounds of milk to Boston for $1.50. If you reduce that milk to cream you can ship the cream for 15 cents, which is equal to 3¾ cents per pound of butter. If you reduce the cream to butter you can ship by express for 1½ cents a pound, and if you ship by freight you can ship it for half a cent a pound. To ship 100 pounds of milk from Renfrew to Boston will cost you $1.90, while the cream content of that milk will cost 19 cents, or equal to 4¾ cents per pound for the butter contained in it. If you reduce the cream to butter you can ship the butter for 2 cents a pound, so that my hon. friend will understand that a free market for milk and cream is not of very great advantage to the farmer who lives 200 or 150 miles from the international line.

Mr. SUTHERLAND: How much butter was imported into Canada from the United States during the last fiscal year?

Mr. ROBB: I do not know; but I can tell my hon. friend that the men who opposed the reciprocity pact in 1911, and more especially the men in the cities, are paying for it now every time they butter their bread with New Zealand butter, because they are paying a tax of three cents a pound on New Zealand butter and four cents a pound on butter from the United States. They are paying for their experience to that extent. I think I have established that the tariff question was not settled in 1911. In the campaign of 1911 the policy of the Liberals meant increased trade and greater prosperity, and the policy of the Conservatives was: Let well enough alone. To-day that policy satisfies neither the East nor the West. The western men still send delegations to Ottawa, asking for wider and larger markets, and the friends of the Conservative party in the province of Manitoba unanimously passed a resolution demanding free wheat, which the friends of the Conservative party in the East are not willing to concede. The Minister of Finance comes to Parliament and he asks Parliament to slow down. He tells his friends that this must be a year of retrenchment; that all must make some sacrifices, and the member for St. Antoine repeated that admonition in his address. But it was noticeable that the next day after the Minister of Finance had made that appeal to his friends for retrenchment and sacrifice, his colleague, the Minister of Militia, with an entourage of colonels and majors, started out on a trip of inspection over the battlefields of Virginia. With such an example of self-sacrifice on the part of the Minister of Militia before us, we on this side of the House were not astonished at the feeble applause with which hon. gentlemen opposite greeted the Finance Minister's appeal for economy.

It is sometimes disputed that conditions in the East are as bad as the newspapers say, but judging by the experience in my home city, the newspapers are not exaggerating. We have in the city of Valleyfield the best cotton mills in Canada. In 1907, when the present Prime Minister, then leader of the Opposition, visited these cotton mills, he found them so busy that the local Conservative committee could not prevail upon the management (who were always Conservative and who sometimes threatened their employees if they voted Liberal) to let the boys out to give Mr. Borden a reception on his arrival by train. The management of these cotton mills believed Mr. Borden when in that year and the year following he preached adequate protection, and so they practically compelled their employees to oppose the Liberal Government, although, and let me state it right here, from 1896 to 1911 the mills had doubled and trebled their capacity, until they employed about 2,500 hands. But let the right hon. Mr. Borden visit Valleyfield to-day and what will he find?

Mr. WILLIAM SMITH: What was the policy?

Mr. ROBB: The policy is the policy you have to-day, with this exception: that, recognizing the growing importance of the West and recognizing that in western Canada our eastern industries had many customers, we on this side of the House in 1911 appealed to the country on a policy which would have meant larger and wider markets, and which would have given to the western country more money to buy the products of the eastern cotton factories, so that instead of having orders cancelled—and I know what I am speaking about—as they are being cancelled and have been cancelled all winter, these orders would have been doubled because the men in the West would have had money to buy the goods. And if the Prime Minister visits Valleyfield to-day, he will find hundreds of looms idle, and he will find also that the contents of the pay envelopes are so small that they barely meet the needs of the families of the working people. I submit again that the tariff was not settled in 1911.

I have tried, Mr. Speaker, to present the trade issue as it affects the products of my district. At Ormstown, during the Chateauguay election, the Minister of Agriculture, speaking on the trade issue, used these words as reported in a newspaper:

> All that Laurier promised you farmers by reciprocity in 1911, you have since obtained in just the way we told you it would come.

The Underwood tariff had been brought down six days when the Minister of Agriculture made that speech. He was speaking for the Prime Minister, for the Minister of Customs, for the Minister of Finance, for the Minister of Trade and

Commerce, but apparently these men had been so busy appointing commissions to dismiss honest and faithful public servants, and commissions to hatch scandals, that they had not time to look into the merits of the Underwood tariff, and to learn that that tariff discriminated against the great butter and cheese industries of this country, and that that tariff prevented the western farmer from getting his wheat, his barley and his flax into the market he wanted. The hon. member for Argenteuil (Mr. Perley), who acts as spare man for the Government, in a recent trip in the eastern townships, promised us an election in 1915. I want to know if the policy of the Conservative party in 1915 will be a policy of do nothing and let well enough alone; I want to know if the voters of this country can be humbugged again in 1915. Some may, but I submit to you, Mr. Speaker, that on the farms, in the towns, in the villages, yes, even in the cities, there is growing up a young generation, many of whom will go to the polls for the first time when the next election comes, and register their votes for a policy that offers something more to this country than: let well enough alone.

Mr. J. A. M. AIKINS (Brandon): Mr. Speaker, those who listened to the Budget speech, or who have carefully read it, must come to the conclusion that Canada has a Minister of Finance, painstaking, industrious and capable, ambitious to discharge the duties of his office as well as his predecessor or better, and he is in a fair way to do so, but in the accomplishment of that purpose will find in his path serious obstacles to overcome and difficult problems to solve. Those problems and obstacles arise to some extent by reason of the newness of our country and of its settlement, by reason of the long distances which separate communities, but more particularly by reason of the reckless toying with the credit of our country by the late Administration, the improvident incurring of liabilities and obligations, the careless way in which they undertook enterprises which are not going to be profitable to this country. Those difficulties and those problems are also greatly increased by virtue of this one thing, that the late Administration did not properly appreciate the National Policy, nor apply it to nor work it out in the Prairie province; so that to-day the conditions of the West are to a great extent different from the conditions of the East, and that also accounts largely for the depression now prevailing in the West. The result, however, of the non-application by the late Administration of the national policy to the opening West is that it has created a difference of conditions between the East and the West so that the present tariff does not fall with equal incidence upon the people of the West and the people of the East. They do not share the benefits or bear the burdens equally. If there are any differences existing between the East and the West, if there are any inequalities, if there are any injustices done to the one by the other or by the whole of Canada, or any misunderstandings existing, the sooner those misunderstandings are dissipated, the sooner the differences are arranged, the sooner the inequalities are made level, the sooner any injustice that is practised is removed, the better for the progress and strength of Canada. If those inequalities or injustices or differences are allowed to remain, they can only result in bitterness; bitternesses will degenerate into dislike, dislike into conflict and conflict into a separation in mind and heart, which in the future it will be very difficult for this country to overcome. The right hon. the late Premier has declared time and time again that he proposed the National Transcontinental railway as one means of holding the West and the East together. The bond which will bind the East and the West together is a bond of sympathy, hearts beating in kindliness for each other, common hopes and purposes; and if such prevail, that very kindliness and sympathy will overleap the rocks which separate the East from the West, blot out the wilderness, and make Canada one, even though the rails of the National Transcontinental rust and the ties supporting it rot and the trains on it forever stand still. The thing that should be aimed at by all persons in Canada is the creation of a common sentiment as well as common business relations between the East and the West.

4 p.m.

There are disadvantages existing in the West. That term implies that others have superior means or opportunities or advantages. Some of those are natural disadvantages; but as far as possible the Government of Canada should attempt to remove them. For instance, it was stated by my hon. friend the member for Frontenac (Mr. Edwards) only yesterday that there was a disadvantage in eastern Canada in respect of the United States by reason of our northern climate, which prevented our farmers producing some things as cheaply as they could in the United States.

That was no doubt true; but when you consider the fact that we have a northern climate also in western Canada, you will see a disadvantage in which the farming community in the West is placed. Did the late Administration in any way try to overcome that disadvantage? It could have been overcome; nature has provided against it great forests, great coal areas and magnificent waterfalls. What did the late Administration do with these? We know in respect of our great timber limits that they gave many of them away for the enrichment of private individuals and corporations. They did the same with our splendid coal areas in the southwestern part of Manitoba and in southern Saskatchewan and elsewhere. It will forever gall the people of the West that many of our splendid water-powers have been dealt with in the same way. On the Winnipeg river there are great falls which, turned into water-powers, are able to generate 500,000 horse-power of electric energy, easily transmissible to the centres of our population in the province of Manitoba and in southeast Saskatchewan. With the exception of the power given to the city of Winnipeg, which was properly utilized for public purposes, the late Administration gave away, or rendered ineffective, all of those powers except two, namely, the Slave falls and the McArthur falls, which are two of the minor falls on the Winnipeg river, and requiring for their development a greater expenditure than the other falls. I submit, therefore, that, for the purpose of overcoming the difficulties resulting from our northern climate, the late Administration did not conserve the use of those important natural resources for the benefit of the people. It is no conservation to enrich private persons and corporations and deprive the public of the benefit; but that is what the late Administration did. One of the best things that the present Government can do in respect of the West is to utilize those water-powers and coal areas which remain. Of those water-powers which are not developed now, they should repossess themselves and create and distribute cheap electrical power for the purpose of establishing in Western Canada industries, manufacturing establishments and home markets, so that the farmers of the west of Canada will not require so much markets in the United States, but will find them as the Ontario farmers do in their own country; and I commend to the present Government the consideration of the situation in the West with respect of the inequality of tariff benefits with the hope it will take prompt steps for its removal, and will see that the rights of the farmers of the West are properly guarded.

Another disadvantage to the people of the prairie provinces is the long distance from an available ocean port. To remedy this better rates should be secured; to reduce such rates the late Administration made no effort, nor did they try to secure better ocean freight rates. To the extent to which any inequality in freight rates exists between the East and West inquiry should be made, and this inequality remedied. In order to encourage the export of some products, Germany absorbs some of the freight rates or gives reduced rates.

Again, that distance between the point of production in the West and the ocean port and final market may be shortened by the immediate construction of the Hudson Bay railway. We know that the late Administration, from 1896 onward, tickled the ears of the people of the West with the suggestion: that they were going to give them the Hudson Bay railway. In every election that followed they whispered the same sweet message to the people and decoyed them to their support. Yet during their fifteen years of power the railway remained unconstructed. These hon. gentlemen say: 'But we intended to construct it: did not we make a contract for its construction, and did not we almost immediately afterwards turn the first sod at Le Pas with great eclat? We were going on with it.' Going on with it! It took the late Administration fifteen years to get the idea into practical shape, and it would have taken them twice fifteen years to construct the railway. Why? Because they had no faith in it. Did not the high priest of Opposition finance the hon. junior member for Halifax (Mr. Maclean) declare—and he was supported by those behind him: 'The Hudson Bay railway is a doubtful project.'

Some hon. MEMBERS: Hear, hear.

Mr. AIKINS: That was the conception they had of the project.

Mr. W. H. SHARPE: They say 'Hear, hear' to that now.

Mr. AIKINS: Yes, they support that statement still. Is it to be doubted, when they themselves had no faith in the railway, that they would have continued to

follow the policy which they had pursued and would have dangled this project before the eyes of the people in sœcula sœculorum? That this was what they intended is evidenced by the fact, that they did not select, or even try to select, an ocean port on Hudson bay for that railway. Why did not they do it? I do not know. I can imagine that it may have been within the conception of the right hon. the present leader of the Opposition (Sir Wilfrid Laurier) that somehow or other, when the line reached Split Lake or some other place, he would have diverted it and connected it with his bewitching Transcontinental railway, and so never have continued to the Hudson bay at all.

But that railway is now being energetically pushed. Still, our people in the West say: But we are timid about one thing: that when the road is constructed and the port prepared, the Minister of Marine and Fisheries may not by that time have arranged his aids to navigation, he may not have established his pilot stations, his signal stations, his wireless telegraph stations—so that when we are ready to send our grain to Hudson bay its transport across the ocean may thus be delayed. But the supporters of the Government in the West have told our people of the West that our Minister of Marine and Fisheries (Mr. Hazen) is conscientious and painstaking, and that he will have all these aids to navigation ready by the time the railway is constructed. Again they say, that is, some of the people, mainly Liberals, say: But your Minister of Trade and Commerce is thinking so much about making treaties with the West Indies, with the islands of the ocean and the nations of the world, that he has no time to give consideration to the necessity of having vessels arranged for to carry our products out from Port Nelson and to bear the incoming traffic to the West via the Hudson bay route. But, Sir, the hon. member for Lisgar (Mr. Sharpe) who is immediately before me, and I have told our people in the West that we know our Minister of Trade and Commerce (Mr. Foster), and have confidence in him. We know that he is industrious, that he is a man of astute mind, and that he never leaves anything unfinished which he has undertaken. And so our people of the West are persuaded that when this railway in which they have such absolute faith, is completed, the vessels will be ready to carry their produce by this route which is seven hundred miles or so shorter to Liverpool than the present route by Montreal, St. John or Halifax.

The farmer of the prairie provinces also claims to be at a disadvantage compared with the farmers of the United States in the Dakotas, Minnesota and Montana, his rivals in hard wheat, both in respect of the marketing and of the production of that wheat. The line, the 49th parallel, is invisible. But to the loyal people of the West—and they are loyal to Canada, in so far it means a distinction between two nations; on the one side the Stars and Stripes and soaring eagle, on the other the Union Jack, the Maple Leaf or industrious beaver—so far as that line is necessary to the establishment of a Canadian government independent of the government to the south, at liberty to carry out its own will and to make its own fiscal policy and, free from impediment and entanglements, to work out its own destiny, Canada for Canadians and the British Empire for Canada, to develop its own nationhood as a leading unit and factor in the British Empire—that line, I say, is a fixed and impassable gulf, a wall of adamant, beyond which we cannot pass, across which they cannot come. And our people in the West welcome that distinction and are proud to be called Canadians.

But in so far as that line is not necessary to our development as such a nation or essential to our protection or to the working out of our national policy, it should not be allowed to hamper or prevent trade and commerce or friendly intercourse between the two nations. As to whether or not it is a line of separation necessary to the working out of our national life, essential to our national policy and protection, Canadians may differ, and, true to our democracy, the minority must bow to the will of the majority. But where one section or class, whose existence and success is essential to Canada, suffers loss for the benefit of another section or class or for the benefit of the whole, that essential section or class so suffering for the benefit of others should have compensation in some way.

I intend now, as representing a rural constituency, to take a brief for the farmers of that constituency. The wheat farmers of the prairie provinces contend that they are at a disadvantage compared with the wheat farmers of the west of the United States, with whom they have to compete in the markets of the world, and that that disadvantage is now unnecessary. They say that the majority of the Canadian electorate rejected reciprocity on the ground that it would have hindered our

development as a free nation, as an integer in the British Empire; that it would have subjected us to the fiscal control of the United States and made us an adjunct thereto, and so would have been an injury to the whole of Canada in all its sections and classes. They contend that now, without any fiscal entanglements with our neighbours, without any international agreement, they can at the sweet will of our Government have a free market for their wheat in the United States by a small tariff change, and that the Government can, without consulting any nation, alter again that tariff as it likes, and so have opened to them all the markets that their competitors have, thus removing this present disadvantage. They claim that the United States Government, by its policy, has established in its west large milling industries at Minneapolis and that district; that the United States Government has so developed and controlled its transportation systems, which carry the wheat from Duluth to the seaboard and from its ocean ports to the world wheat markets, that there is a better price to the farmers of the Dakotas and Minnesota for wheat, at their western mills and at Duluth. And I charge that the disadvantage under which our western farmers now labour in having a lower priced wheat market is due to the neglect of the late Administration in not fostering and establishing milling industries in the West during their long fifteen years of power, and in not providing cheaper transportation for wheat to the ocean and across the ocean to Liverpool. The western farmer is now suffering as a result of that neglect. The wheat of Minnesota, the two Dakotas and Montana is marketed at the same time and with the same expedition as the wheat of the prairie provinces. It cannot be controverted that for the former a better price is received. For instance, during the market period of our western wheat, say from the 15th of September to the end of the calendar year 1913, the average price in the western states was: at Minneapolis for the first grade, 87.4, at Duluth for the first grade, 86.6, at Winnipeg or Fort William for the Canadian first grade, 84.6, a difference in favour of Duluth of two cents, and of Minneapolis of nearly three cents. The Winnipeg and Fort William prices are practically the same. I have made up these averages from a statement which I hold in my hand extending over the period which I have mentioned, which shows the prices for the different grades. I will not trouble the House by reading that statement; I will give only the results.

When consideration is given to the fact that Canada's first grade is of a higher quality than the American first grade, and that an allowance of two cents is generally considered fair, the average prices to the Americans for the same quality of wheat during the period stated would be: at Minneapolis, 89.4; at Duluth, 88.6; a difference in favour of Duluth of 4 cents and of Minneapolis of about 5 cents. The spread between the non-contract or commercial grades, of the same class, usually sold on sample, was considerably higher at those points in the States. The western farmer claims that he should have the opportunity of getting that higher price. And why should he not? Are there any sufficient grounds against giving him the opportunity? One reason assigned against it is that if the Canadian wheat had free access to the Minneapolis market, prices would be equalized on both sides of the line. There is considerable force in this argument and any one who reads the debates in the Senate of the United States on this subject when the reciprocity agreement was being considered, particularly the speech of Senator Gronna, and of other senators, can see that there is foundation for that contention. The equalization, however, does not mean that the Minneapolis market price would fall to the level of the Winnipeg price. The probability is that the Winnipeg price would rise some and the Minneapolis price lower; thus they would be on the same level. The prairie farmers claim they would, in any event, get a higher price than they at present receive.

They point out in this connection the important circumstance that it is well known that the three states immediately to the south of the prairie provinces are 'hard wheat' producing states, growing practically the same variety of wheat that is grown in the prairie provinces. A large percentage of the United States spring wheat is marketed in Minneapolis, or in small centres adjacent thereto, but that this milling industry does not consume the entire production is shown from the fact, as it is given to me, that during the crop year 1909, speaking in round figures, 54,000,000 bushels of wheat were shipped from Duluth; for the crop year 1910, 26,000,000 bushels; for the crop year 1911, 25,000,000 bushels; for the crop year 1912, 78,000,000, bushels, and up to the present time, for the crop of

1913, 45,000,000 bushels, proving conclusively that more spring wheat is grown in the United States tributary to those mills than is required by the mills.

It can be readily seen therefore, that the Minneapolis mills do not need our wheat for grinding purposes, even for their home consumption. Nor do they need it for grinding flour for the foreign market. Allow me in this connection to call your attention to the following extract from page O-98 of the tariff of the United States:

> That upon the exportation of articles manufactured or produced in the United States by the use of imported merchandise or materials upon which customs duties have been paid, the full amount of such duties paid upon the quantity of materials used in the manufacture or production of the exported product shall be refunded as drawback, less 1 per centum of such duties.

But that is not all. There is this further proviso:

> Provided. . . if, however, the principal product is exported, then on the exportation thereof there shall be refunded as drawback the whole of the duty paid on the imported material used in the production of both the principal and the by-product, less one per cent, as hereinbefore provided.

Which means this: that if flour manufactured from the imported wheat is exported, the by-products, bran, etc., remain free of duty. Notwithstanding that tariff provision there is no practical demand in Minneapolis for the wheat of the prairie provinces for the purpose of manufacturing for export.

As the Minneapolis miller can select from an abundant supply and leave a surplus to be sent out via Duluth, our farmers contend that any addition to that surplus would not reduce the American price, and that in no event would it be reduced below the Duluth price. Duluth is the point where the grain leaves the West and becomes subject in respect of price to eastern and export market influences. There seems to be no doubt that the Duluth price is higher than the Winnipeg or Fort William price, as I have pointed out, and our farmers claim that if they are allowed to sell their grain on the American market they will receive the American Duluth price. The rate of freight to Duluth corresponds to the freight rate to Fort William. There is a great difference between selling at Duluth and sending through the States in bond. In the one case the American dealers can sell in the eastern states and choose their own time and vessels and quantities for shipping to any point in the United States, or from there to ocean ports, whereas the Canadian dealers cannot do so in the one case at all, or as well in the other.

The cause for the higher price at Duluth may be accounted for at all events partially by the reasons just assigned, the market of the eastern states and somewhat lower ocean rates to final markets. Undoubtedly when the United States ceases to produce more wheat than it cons umes it will become an importer and the prices will rise. It has not yet reached that stage. When it does it will open its doors to world competition. Already Argentina, which is Canada's biggest competitor in the production of wheat, has made its tariff laws conform with the conditions of the United States tariff, and wheat and flour from that country will be admitted free of duty into the United States.

Another argument used against a free United States market for wheat is that it would involve loss to our railway transportation system. Undoubtedly the lines of transportation in Canada are east and west, and if the removal of duty would in a marked degree remove the traffic from those lines it would be an economic loss to Canadian railways and Canadian vessels and to the many people employed on them in Canada, and should be avoided. But would it cause such diminution of traffic over Canadian lines? The western farmers claim that in the three states producing hard wheat adjoining the prairie provinces, the cost to the Dakota, Montana, or Minnesota farmer to move his grain over American routes to the eastern states is substantially the same as the cost to the Prairie farmer over the Canadian routes to the East. If, as pointed out, the Canadian grain is not a necessity to the Minneapolis miller, it can find it way to the eastern states as cheaply over the Canadian as over the American routes and, therefore, the Canadian lines will have no difficulty in retaining the traffic. The average rate on wheat from Central North Dakota to Duluth is 15 cents per 100 lbs. corresponding to a similar distance to Fort William from Canadian grain fields. If shipped by Minneapolis the rate will be 20 cents per 100 lbs. for stopping and transfer, and to unload, 1 cent a bushel more. Thus, the farmers contend, it is clearly impossible for the Minneapolis dealer to bring Canadian wheat to that market unless it is required for milling there. To ship by Duluth does not cheapen transportation to the eastern states market as compared with shipment by Fort William. If that be so, the farmers ask what have the

transportation companies to fear? Indeed, the farmers say if our rates were cheapened as suggested by the Finance Minister why should not Canadian railways carry western American wheat from Minnesota, Montana, and Dakota to the eastern states. Let me call the minister's attention to this that the all-water route for grain during the open season is by the Welland canal. For this water route there are not sufficient boats of canal size to carry the grain that would be offered for the all-water route and large vessels are used for its transportation to Port Colborne where it is transferred to the river boats. Port Colborne lies about twenty miles west of Buffalo. The rate for wheat to Buffalo was at the opening of navigation 1½ cents per bushel. The rate demanded to Port Colborne, which port can only be used by Canadian bottoms, was 2 cents per bushel. And I am informed that the same is also demanded for Georgian Bay ports. It is said that Canadian boats demand more for hauling grain to Canadian ports than do the American boats to American ports, and the same grain can be carried a longer distance in American boats cheaper; but the coastwise laws prevent our using American boats to Port Colborne.

The western farmers also point out that the new market in the eastern states would have a steadying effect upon the price of wheat; and as we produce the best hard wheat the eastern states as well as Europe would compete for it. They also point out that the business in Canadian wheat is largely centralized and controlled by one English firm to the detriment of the Canadian producer, and another market would aid in checking that.

Another argument urged against free wheat is that it would injure Canadian milling interests. I understand from some millers who visited Ottawa that they would not seriously object to free wheat if they could get better ocean freight rates for flour. The farmers say: How will the western millers be injured? Their western home market is small and easily supplied, their trade is mainly export, they can get all the wheat necessary from the adjoining grain fields, the millers have to compete now with the Minneapolis miller who can get Canadian wheat for export flour by paying 1-10th of a cent per bushel advance. They say further that when wheat is free the millers in Toronto or Montreal can get soft wheat as easily as their neighbours across the line; that if mill machinery and structural material are more expensive by reason of duty, such duty should be removed in so far as is necessary to establish a great industry.

The farmers of the West claim that they are not worried about the bran objection. They say that a good price for wheat is more important than a dollar or two a ton increase on bran; that a ton of alfalfa is as good as a ton of bran for fattening cattle and less expensive. If the majority of the people of the country, represented by the present Government, decide that for the benefit of the eastern railways and eastern routes and eastern millers, or of Canada generally, the interest of the prairie provinces must be subordinated or sacrificed to an extent, to that extent they contend those interests or Canada should, in justice, make up the loss to them or raise the price to what they would get if given the American market.

Let me suggest to the Government, as they admit that the Minneapolis price is higher because of its established mills, why should not the Government take steps then to establish such mills in the West? It can be done by establishing such mills in connection with their interior terminal elevators. It can be done by taking off the duty on materials entering into mill construction. It can be done by the Government constructing on their Dominion waterpowers and in their coal areas plants developing electric energy; and they can distribute that to all the cities and towns and places where there are mills, and without loss to the Government—(the people are willing to pay for that power). It can be done by absorbing or reducing some of the freight rates according to distance to the seaboard and by getting suitable ocean rates on flour. The price of wheat can be improved also by a reduction of freight rates to the ocean and across it and, as I have pointed out, by the completion of the Hudson bay route. I press upon the Government these considerations.

Mr. LEMIEUX: I understand that the hon. member's suggestion would be to reduce the duty on materials for the construction of mills, for the exclusive benefit of the West?

Mr. AIKINS: I said in respect of the construction of mills for the purpose of encouraging milling, the duties on those dutiable articles which enter into the construction might be reduced. Do they not do the same thing in eastern

Canada in respect of other structures? And when a great industry is to be established —and it should have been established by the late Administration—then I say it is right, under those circumstances, to take the necessary steps to do it.

Mr. LEMIEUX: Where would my hon. friend put the limit; where would this reduction begin?

Mr. AIKINS: Really it is a question of degree, but where it is necessary for the development of the greatest industry in Canada, our agriculture, that there should be a system by which we could limit the duty or remove it, and thus aid, flour can be carried at a lower cost than our wheat, I do not think that there is any member of this House who would object to a reduction of duty for that purpose. I am glad that the hon Minister of Finance has not closed the door to free wheat against the western farmer but will turn always a willing ear to any reasonable demands and grant them if a greater loss will not result to Canada as a whole.

Another disadvantage to the farmers of the prairie provinces is that the cost of production is higher than that of his wheat-raising competitor across the line, who can purchase his farm implements at a lower price, averaging, I am informed, about 7 per cent. His implements under item 391 of the present American tariff are free, namely:

Agricultural implements: Ploughs, tooth and disc harrows, headers, harvesters, reapers, agricultural drills and planters, mowers, horse-rakes, cultivators, threshing machines, cotton gins, machinery for use in the manufacture of sugar, wagons and carts, and all other agricultural implements of any kind and description, whether specifically mentioned herein or not, whether in whole or in parts, including repair parts.

To the extent of the the lesser price which the American farmer has to pay, he has the advantage of the Canadian producer. The Minister of Finance in his Budget reduced 'binders, reapers, harvesters and mowers' from 17½ per cent to 12½ per cent. To the extent to which this reduction will reduce the price to the farmer, he is correspondingly thankful but if the manufacturers should endeavour to absorb that reduction in duty, the farmer will look to the Minister of Finance to protect him.

The reason assigned why the Canadian farmer of the West is not placed on an equality with his American competitor is that it would cripple the manufacturer of agricultural implements in the East. Why do I say East? Because the small factories in Winnipeg and Brandon can scarcely be said to be general factories of agricultural implements. The factories of any substantial size and output are in the east of Canada and so the farmer of the West claims that for the benefit of the eastern manufacturer he is obliged to pay the charge for long transportation and to that extent he is also at a disadvantage with the farmer in the East who not only gets his machinery at a lower price but has the benefit of the industry and home market created by that industry.

These matters I have mentioned for the consideration of the Government. During the last fifteen years the late Administration did practically nothing to establish manufacturing industries in the West. Had they done so, conditions in the West would have been more prosperous and not so depressed. But as I have said, that Administration had no faith in our National Policy, and consequently they wore it like an unfitting garment, handled it as a tool to which they were unused, and, like a poor workman, complained of it. We know that the right hon. leader of the Opposition (Sir Wilfrid Laurier) was in the Mackenzie Administration, which was a free trade Administration, and that he imbibed and absorbed the principles of free trade. They were in 1878 defeated in the country and the National Policy, a protective policy, was adopted. What then happened? Was there a change of faith in him? During the elections intervening between 1878 and 1896, he went through the country preaching continental free trade, commercial union with the United States, free trade as they have it in England, and every time the people of Canada said: We will have none of it, and they defeated him at the polls. He found it was not well to press that too strongly, and he whispered to the manufacturers that the tariff would not be abolished, and, taking advantage of the Manitoba School question and the Remedial Bill, he managed to slip into power in 1896.

Then, what happened? These hon. gentlemen never had a policy which suited them, and they could not then find one. They found that they had no national garment to cover their political nakedness, so they adopted the National Policy as their garment and protection as their system. They had no love for it, they would like to have escaped from it, and not being accustomed to it, and disliking it, they did

not apply it to developing western Canada. They never established, or encouraged the establishment there of great industries as they should have done under our National Policy. The purpose of the National Policy is the creation of home markets. No home markets, during the whole of their Administration were established in the West save one, and that is mainly in the city of Winnipeg. That was done by the industrious, energetic and enterprising city itself in acquiring cheap power. Who did that? The late Administration? No, the city had to finance to the extent of $6,000,000 in order to provide that cheap power; they did it independently of the Government, which during all the years of its Administration did not have any love for the province of Manitoba. They not only did not establish industries there but to a large extent they sacrificed water powers.

When the late Administration had been in office some time they thought they would tear a hole for the United States in the National Policy garment which they wore, present it to the country and say that it is unfit for the people of Canada. Then they thought they would put a patch on it to cover that tear and the patch which they attempted to put on was the reciprocity agreement. The people saw the garment, they knew that it was not the true policy which was intended for the development of the Dominion and they said: We will have nothing to do with those who would undertake to add to the garment and they thrust them over the crystal battlements of public opinion into the abyss in which they are now seething. When we look at them in the chasm in which they are we find the hon. member for Red Deer (Mr. Clark), who has always carried his little ladder of free trade, leaning it up and trying to scale the wall and get back into public approbation. We find the hon. member for Moosejaw (Mr. Knowles) trying to support him. We see other hon. members equally puzzled as to how they are going to escape from the pit. We find also that the right hon. leader of the Opposition has a free trade ladder which he has never abandoned and that he is trying to splice onto it some protection and thus get back into power. When he makes a speech to the people of the city of Hamilton on a policy for Canada his policy is to have free food. He does not say that in the West where the farmer knows well that free food means the cheapening of the prices of the things which he produces. He may whisper to the manufacturers: Do not worry we will look after you but when he goes West he says: We are going to get a better market for the wheat of the West; we do not want to keep the market of the East for your wheat, we are going to give you the United States market. Let us see what some other hon. members are thinking or saying in respect to that also. The hon. the junior member for Halifax (Mr. A. K. Maclean), their high priest of finance, has also expressed himself on this question. I would like to know why this anxiety on the part of the hon. gentleman that the farmer of the West should have freedom to sell his wheat in the American market. The hon. gentleman has stated it very clearly in his speech, and I desire to call the attention of the farmers of the West to it. At page 2592 of 'Hansard' he says:

> When the western states were heavy exporters they were able to dispose of their products in the eastern states with the result that the eastern farmer felt the competition. That will be the result in this country if the West develops in the production of agricultural commodities as I believe and hope it will. It will be to the advantage of the eastern farmer, therefore, if the farmer of the West has an outlet in the western or middle western states so that there he may find a consuming market for his surplus products.

How generous the hon. gentleman is. He does not want a market for western products in eastern Canada, although the factories and the home markets are established in eastern Canada. He further said:

> I ask, have we not reached a stage when we might, for the benefit of the consumer, place foodstuffs upon the free list.

What is the meaning of that? He says he wants to give good markets to the farmer, and yet he would place foodstuffs on the free list. In other words, the hon. gentleman would give to the Canadian farmers in the markets of Canada the competition of all the world, and so reduce the price of farm products in Canada. He says further:

> The purchasing power of the people of the Canadian West would be all the greater if they were selling their wheat in the United States alone and not anywhere else in the world, and they would only do it, if they were doing it to a greater advantage than by selling their wheat elsewhere. Consequently the purchasing power of the producer would be increased and the imports of the West would be much greater.
>
> It would mean higher grade of railway traffic and the net result would be that the Canadian railways would be better off than in hauling low grade traffic such as wheat.

What he means is, that he wants the western markets for the manufactured products of the East, but he does not want the western farmer and producer to find a market for his products in eastern Can-

ada. Is that fair? And yet that is the policy of the junior member for Halifax. And then, what says the hon. member for Assiniboia (Mr. Turriff)? Thus it stands written:

> If you want to help the manufacturer make a market for him at home; put money into the pockets of the farmers so that they can buy and pay for the goods of the manufacturer.

Thus what the hon. member for Assiniboia says to the farmers of the West is: sell your wheat in some other market than Canada but do not go into any other market for the purchase of your manufactured goods; take them from eastern Canada. The hon. member would remove protection from the farmer but keep up protection for the manufacturer. Is that a reasonable policy? The burden of his argument was at that moment that the farmer should be enriched by getting a good price in the States for his products, so as to pay the protected Canadian manufacturer a high price. But on the very same page of 'Hansard' the hon. member says:

> Why not take off the duty and give the people a chance to get cheaper food?

Does he say that in Assiniboia? Does he tell the farmers of Assiniboia that they should compete with all the other nations of the world even in the markets of Canada, and so lower their prices? Let him say it in Assiniboia; and, perhaps he will be a little discouraged over the result.

I do not think I need go farther into the fact that hon. gentlemen opposite have really no policy, but are at odds and ends among themselves, ill at ease as to what policy should be pursued by them. The proper policy for Canada, I submit, is, in the first instance, to protect and promote the agricultural industry and thus bring the greatest possible profit to the farmers and people of Canada. Canada is an agricultural country, it was made so by nature, and the people should accept it that way. Why, then, endeavour to make other things commercially profitable by artificial means, and not first develop our great national industry of agriculture.

How far did the late Liberal Administration aid agriculture in the West or anywhere in Canada? The contribution of the Liberal Government, during the last year it was in office, 1911-12, to agriculture, amounted to $1,489,973, whereas the present Government, in the year 1912-13, raised that amount to $2,436,103, and in 1913-14 this Government voted $2,635,000 for agriculture. And how did the late Liberal Administration attempt to benefit the agricultural industry through a tariff? The Liberals now say the farmer should get free agricultural implements, but did they say that in 1911, and did they intend to do that in 1912, or 1913, or 1914? How saith the book? We find in the reciprocity agreement that ploughs, tooth and disc harrows, harvesters, reapers, agricultural drills, and planters, mowers, horse-rakes, cultivators, threshing machines, including wind-stackers, baggers, weighers, and self-feeders therefor, and finished parts thereof imported for repair of the foregoing, were to have a duty of fifteen per cent ad valorem, and that portable engines, potato diggers, feed-cutters, grain crushers, fanning-mills and the like, were to bear a duty of twenty per cent ad valorem, and farmers' wagons and finished products thereof, were to be dutiable at twenty-two and a half per cent ad valorem. And was that tariff on these articles to be only temporary? How again saith the writer? We find it stated here in the reciprocity agreement assented to by the Liberal Government of that day:

> If this agreement is confirmed, it is expected to remain in operation for a considerable period. Only this expectation on the part of both Governments would justify the time and labour that have been employed in the maturing of the proposed measures.

And so they were going to fasten that duty on agricultural implements on the farmers of Canada, eternally and subject to the whim of the United States tariff legislation. But now they propose free agricultural implements. The hon. member for Westmorland (Mr. Emmerson) knows the maxim in law: it is not what is said, but what is done, that is to be regarded—non quod dictum, sed quod factum est inspicitur. What did the Liberals do when they were in power? That is the test. The member for Westmorland will remember that when they attempted to introduce Greek culture into ancient Rome they sent to Athens to buy some beautiful marble statues. The Greeks were good business men, and if there was a little break or crack or defect in those marble statues they used some of the finest wax, exactly like the marble, and so covered up the cracks or defects. But it was not long until the Romans discovered this, and they put these statues near the fire; the wax melted in the test, and they were discarded; only these statues which were without wax (sine cera), those which had sincerity, were then accepted by the Romans. Now, Sir, the Liberals have attempted to sear with wax

the defects in their performance, their production, so that the people may not see them, but the people have put those to the test and found them wanting; they have rejected the Liberal works, and the Liberals, for they are not sincere, and the people know it.

Mr. EMMERSON: Is not that unparliamentary?

Hon. GEO. E. FOSTER: Not under the circumstances.

Mr. AIKINS: As they are known to be without sincerity in their promises, when they offer free agricultural implements or free wheat, they are not taken seriously. The farmers of the West know pretty well the source from which those offers come and say: 'Weighed in the balance and found wanting.'

I desire to call the attention of the House to the following figures to show the importance of agriculture:

Agricultural Exports.

	1912	1913
Grain..	$ 68,427,932	$97,941,341
Grain products—flour, etc....	16,956,870	20,833,371
Seeds, including flax..	4,000,023	17357,056
Totals	$107,143,357	$150,145,661

What about manufactures? Our export of manufactured goods in 1912 was only $35,-838,284; in 1913, $43,692,708. That shows that Canada must depend for its prosperity largely upon its agriculture and not upon its manufactures. Therefore, as agriculture is the main industry of this country, instead of the National Policy being interpreted, as it was interpreted by the late Administration to mean simply the protection of manufactures, it should signify a system by which the Government through direct legislation undertakes the development of all its commercial, industrial and natural resources in all parts, for the benefit of the people. It seems to me that instead of magnifying manufacture, we should magnify agriculture, and make manufacture only auxiliary and ancillary to agriculture as the chief industry of Canada. It is the chief means by which Canada is to pay its debts and pay for its imports. Therefore it should be the first care of the Government.

What did the late Administration do in respect of benefiting the West by railway construction? We find that they gave subsidies to the Edmonton, Yukon and Pacific railway of $91,200, and to the Canadian Northern Railway Company, Swan River line, of $374,606, making a total of $465,806. They built about 90 miles of the National Transcontinental railway. Putting that at about $20,000 per mile, the expenditure would be $1,800,000. They expended for the Transcona shops $4,500,000; for the Hudson Bay railway, expenditure towards construction $489,250, making a total of $7,255,056. That was, I believe, all that they did for the Canadian West in direct contribution. They made a loan to the Grand Trunk Pacific of $10,000,000, which will be paid back. They guaranteed bonds for the Canadian Northern railway, the Canadian Northern Alberta railway and the Grand Trunk Pacific to the extent of about $50,000,000; but those guarantees will be redeemed and will never become an obligation on this Government—why? Because the people of the West will provide the money. What did the late Government do in respect to the construction of railways in the three prairie provinces? They left it to those provinces to construct their own railways—with what result? We find that Manitoba gave in subsidies and guarantees $25,076,-399.75; Saskatchewan in guarantees, $33,-735,000, and Alberta in guarantees, $45,489,-000; making a total of $100,300,399.75. They had led the people of eastern

5 p.m. Canada to suppose they were doing great things for western Canada. They were not, but aided the East. I submit that in respect of the development of western Canada, they neglected the West, in which they now pretend to have such great interest, more than any other part of Canada. The people of the West have discovered that the late Administration neglected the West. That Administration gave direct railway aid to those three provinces of about $7,000,000, as I stated, but the whole expenditure on all the Dominion railways was $465,433,458. The right hon. leader of the Opposition says: We built the Transcontinental railway for the benefit of the West of Canada. They built it where? Through the eastern portion of Canada. When one considers the awful debt that will be incurred by the construction of that railway, amounting to over $230,000,000—when one considers the fact that that burden will lie upon the people of the prairie provinces, as well as upon the people of eastern Canada, to work out their share of the debt—one will see that it will be a millstone eternally about the neck of the people of our western provinces. $200,000,000 at 3 per cent means an expenditure of $6,000,000 a year, which will have to be paid for some years, amounting

every working day to almost $20,000. Who is to pay for this? The West, in high freight rates.

Mr. EMMERSON: Is not the Grand Trunk Pacific being paid very largely out of the current revenue account, so that it is not an indebtedness?

Mr. AIKINS: The Grand Trunk Pacific in the prairies has not received any aid from the Government except by guarantee debentures. If my hon. friend refers to the National Transcontinental—

Mr. EMMERSON: The National Transcontinental.

Mr. AIKINS: That is a different matter. My hon. friend suggests that it is out of revenue. Does it make any difference how Canada pays it? Just consider also the duty which has been paid on the material that has gone into the road, which is being charged up to Canada, and which remains a debt upon Canada, to be paid somehow. Think of the liabilities of Canada which might have been wiped out by the money which was put into the National Transcontinental; and if that $200,000,000 had been spent in the West, as it might have been, I think the West would have prospered and the East would have prospered—Canada would have prospered. Now Canadians will have to bear the burden of an unnecessary railway.

For, let me call the attention of the hon. member for Westmorland to this fact: Canada had a line of transcontinental railway constructed and in operation before the National Transcontinental was thought of. That railway was built along the north shore of lake Superior, and all the work that was required to be done in carrying grain out of western Canada that railway did successfully. Never at any time was there a block in the carrying of the grain save once, and that was in the year 1912, when much of the grain was damp, and it was necessary to send it out by rail in order that it might reach the market before summer heat, as there was danger of it being destroyed by warm weather; and so it had to be carried in the winter, when there was snow and ice on the rails. That line, the Canadian Pacific railway, 2,900 miles in length, was constructed at what cost? Like the hon. member for Calgary (Mr. R. B. Bennett) I was once counsel and solicitor for the Canadian Pacific railway. We are entirely separated from it now. I happen to have ascertained some facts, and I do not think it is a breach of confidential communication to state those facts. That railway, constructed partly by a Conservative Administration, including the line north of lake Superior, or the eastern section, and the Onderdonk portion of the Pacific section, was constructed at a cost to this country of $35,000,000. The proceeds of the land grant yielded $13,500,000, and there was a cash subsidy of $25,000,000; some portion of the land grant was subsequently redeemed for about $6,000,000, the total amount being about $31,000,000. They realized, on the sale of their $65,000,000 of stock, about $30,000,000.

Mr. LEMIEUX: And what about the customs duties?

Mr. AIKINS: Yes, and we will take that into consideration too, if it will please the hon. gentleman to wait. They borrowed $44,250,000. This makes a total of about $153,750,000. Add, if you like, the customs duties, and make them high, and let us assume the cost of this 2,900 miles of railway to be $175,000,000. Then contrast that with the 1,804 miles of the National Transcontinental, which will cost about $234,000,000.

Mr. EMMERSON: Which one does Canada own?

Mr. AIKINS: Which railway does Canada own? Does it own the National Transcontinental? It should have, if it was really a benefit to Canada. It has agreed to hand it over to the Grand Trunk corporation. In no event would it be proud of its possession. But there is this further point: Though this one railway, the Canadian Pacific railway, has been sufficient generally for the traffic between the east of Canada and the west of Canada, yet the late Administration guaranteed the bonds of the Canadian Northern railway, I understand, to the extent of $35,000,000 north of Superior. Then although, I am told, it would have been quite possible to have joined the Canadian Northern railway and the Grand Trunk railway to provide a second transcontinental line, the late Administration did not do so; and, knowing that there would be a second line, the Canadian Northern railway, they undertook to build the National Transcontinental, at such tremendous cost to the people of Canada as to make it a profitless undertaking. I venture to say that this National Transcon-

tinental will never, in our time, prove profitable in operation to Canada. It might be better, almost, for the present not to contemplate its operation, rather than continue that which must be a constant obligation on the people.

Mr. LEMIEUX: With the permission of the hon. member, I desire to ask a question. The hon. gentleman has given the figures for the construction of the Canadian Pacific railway in the 'eighties.' Has he had the benefit of consultation with my hon. friend from Calgary as to the amount spent by the Canadian Pacific railway since that time in rebuilding that line? That should be added.

Mr. AIKINS: Let us look at that. Why should we consult about a thing in which we have no concern? The Canadian people were not under obligation to pay for those improvements; and did not, and that line has been so economically administered that, though what hon. gentlemen opposite would call a 'degraded' line in comparison with their National Transcontinental I assume—I do not know—it has earned enough to pay for improvements which have not cost the country one dollar.

Mr. LEMIEUX: But what have they cost the corporation?

Mr. AIKINS: That is a matter for the corporation to say. I am not in their secrets; I am not now connected with that company, and have not been since my election to this House, nor is my hon. friend from Calgary. But I may say, and you know, that whatever improvements have been made on that road have not been paid for out of the public treasury.

What has the present Administration done for railways in the West? They are building the Hudson Bay railway, and on the 24th of March, 1914, there had been paid out on account of construction $5,192,625. Further, they have given a guarantee of the Canadian Northern railway Alberta bonds to the amount of $3,570,000. So, you can see the improved treatment that has been given to the Prairie provinces by the present Administration as contrasted with the neglect and indifference of the late Administration.

What has the late Administration done in respect of the natural resources of the West? I will not speak again of the water-powers of Canada, nor shall I refer to the wasteful administration of public lands, a matter to which I may refer on some other occasion. What do we in the West hope this Government will do in respect to the trade of the West? We hope they will place a duty upon corn. 6,207,698 bushels of corn were imported into Canada during the fiscal year ending March 31 1913, and 12,684,965 bushels during the fiscal year ending March 31, 1912. If the Government wishes to benefit the people of the West they can put a duty on corn. The barley and other grains of the West are just as good for fattening cattle as the corn we get from the United States; why should not eastern Canada help western Canada to the extent of taking their barley and oats instead of American corn?

Another matter which I desire to bring to the attention of the present Administration is that they should encourage the growing of flax and the development of industries for the production of flax fibre. This matter is, I believe, under the consideration of the Government. If the flax fibre industry is supported and encouraged, as I hope it will be by the present Administration, the people of the West will be greatly benefited by their getting a market for their flax, and flax straw and will be able to buy cheap binder twine, which will then be manufactured in the West for the purposes of the farmers of the prairies.

A sentiment which is sometimes expressed in the newspapers as well as upon the floor of this House is set forth in the following newspaper clipping, which has reference to the recent speech of the hon. member for Assiniboia (Mr. Turriff):

> What he means is that they—
>
> The farmers and grain growers of the West—
>
> —are not given an opportunity to add to their already well-filled purses at the expense of the other citizens of the Dominion.

A mischievous suggestion. I attribute very largely the sentiment said to prevail in the East to the fact that the late Administration was telling the people of the East what they had done for the development of the West and for the benefit of western people. Let me mention in this connection a few facts. The following statement shows the revenues received by the Dominion Government in the provinces of Manitoba, Saskatchewan and Alberta, and the amount of expenditures, not including capital expenditures, which the Dominion made in and on account of these provinces during the fiscal year ended March 31, 1913:

Revenues.

Customs revenue, less drawbacks and refunds	$20,689,883 82
Excise revenue	2,351,497 25
Post Office revenue	3,578,997 53
Dominion Lands revenue, deducting expenditures	939,402 71
	$27,559,581 31

Expenditures.

Customs—Salaries, etc	$ 420,369 79
Inland Revenue—Salaries, etc	52,559 09
Post Office	3,156,123 51
Mounted Police	665,725 98
Administration of Justice	220,579 39
Penitentiaries	203,066 80
Public buildings	735,257 93
Harbours and rivers	146,041 53
Dredging	50,139 70
Telegraph lines	53,613 53
Immigration—Expenses in western Canada, in United States, Great Britain and Europe	721,735 00
Indians	856,797 00
Agriculture	467,378 80
Subsidies	6,458,851 65
Proportion of general expenditures, including legislation, civil government, militia, interest on public debt, Naval Service, sinking funds, etc., estimated on basis of population	6,920,867 43
Total receipts	27,559,581 31
Total expenditures	21,119,087 04
Balance to the credit of the West	$ 6,440,494 27

Most of the imports at Fort William and Port Arthur are for consumption in the prairie provinces, and if, to make a liberal allowance, one-third of the goods imported through these ports, mainly coal (the proportion may be less than that), is consumed in these towns and by the population of Ontario west of Fort William and on the railway, we have this result:

Total duties paid.

Fort William	$2,064,383 61
Port Arthur	887,308 91
	$2,951,692 52
One-third allowed as above	983,877 50
Paid by prairie provinces	$1,967,815 02

The total duties paid on imports of sugar through British Columbia ports for the year amounted to $1,015,775.86. Deducting the proportion for British Columbia, estimated on the basis of population, $233,628.25, leaves $782,147.61.

I have spoken to business men, both east and west, and they think that of goods used and consumed in the West, say on manufactured articles imported into the East and then shipped west, on railway material used in the West and on articles entering into manufactures in the East and shipped west, there would be at least one-half as much more duty paid in ports east of Fort William as at ports in the prairie provinces by the people of those provinces, amounting to $10,344,841.41.

Let me summarize:

Receipts.

Receipts collected directly in prairie provinces, as per statement	$27,559.581 31
Approximate proportion of duty paid on sugar entering British Columbia	782,147 61
Approximate proportion of duties paid on imports, Fort William and Port Arthur	1,967,815 02
Approximate proportion of duties paid at eastern ports	10,344,841 41
	$40,654,385 35

Expenditures.

Expended directly from income in prairie provinces as per statement (including proportion for civil government, etc.)		$21,119,087 04
Terminal elevator at Port Arthur		473,578 80
Capital account—		
Hudson Bay railway	$1,099,063 15	
St. Andrew's rapids	36,904 62	
		1,135,967 77
		$22,728,633 61
Receipts		$40,654,385 35
Expenditures		22,728,633 61
Surplus to the credit of the prairie provinces		$17,925,751 74

The per capita share according to population of payments into revenue by those three prairie provinces would, according to the census of 1911, be approximately $33,500,000 for 1913. When one considers the rapid increase of the population during the years which have elapsed since 1911, and when one considers that the people of the West consume more dutiable articles, products, than the people of many of the other provinces, the estimate of $40,000,000 is practically correct.

Let me now come to the years of administration of the late Government. The following is a statement of the receipts and expenditures in the prairie provinces for the fiscal year ended March 31, 1912:

Receipts.

Receipts collected in prairie provinces directly	$19,551,769 58
Approximate proportion of duties paid on imports, Port Arthur and Fort William, two-thirds.	1,643,314 19

Approximate proportion of duties paid at eastern ports, one-half		$7,044,343 71
Approximate proportion of duties paid on sugars entering British Columbia		591,415 80
		$28,830,843 28
Expenditure.		
Ordinary account (including proportion of civil government, etc.)		$16,040,495 51
Capital account—		
St. Andrew's rapids	$ 50,939.49	
Hudson Bay Ry	159,632.00	
		210,571 49
		$16,251,067 00
Receipts		$28,830,843 28
Expenditure		16,251,067 00
Approximate surplus to the credit of the prairie provinces		$12,579,776 28

I will give a similar statement for the fiscal year ended March 31, 1911:

Receipts.		
Receipts collected directly in prairie provinces		$15,781,467.36
Approximate proportion of duties on imports through Fort William and Port Arthur		803,803.60
Approximate proportion of duties paid at eastern ports		5,188,997.02
Approximate proportion of duties paid on sugars imported through British Columbia		505,846.11
		$22,280,114.09
Expenditures.		
Expended directly from income in Prairie provinces (including proportion for civil government, etc.)		$13,999,251.21
Capital account:		
Hudson's Bay railway	$184,149.81	
St. Andrew's rapids	55,174.36	
		239,324.17
		$14,238,575.38
Revenue, approximated		$22,280,114.09
Expenditure		14,238,575.38
Approximate surplus to the credit of the prairie provinces		$8,041,538.71

The amount, it will be observed, expended directly from income in the three prairie provinces was $13,979,000, which, after adding capital expenditure, consisting of Hudson Bay railway, $184,148, and St. Andrews Rapids, $55,174, leaves a surplus of $8,041,538, not used in the Prairie provinces. And yet the hon. members of the Opposition are saying: Oh, how badly the West is treated by the present Government. Let them look at their records!

[Mr. Aikins.]

Mr. MARCIL: Has the hon. gentleman the figures of 1896 to compare with those of 1911? The figures of the progress of Canada during fifteen years would be very interesting.

Mr. AIKINS: I have here the expenditures of the late Government made in the West on capital account in these earlier years, not including expenditures on Dominion lands. The Government of Canada have received from the sale and leasing of Dominion lands over $42,583,162. They have expended something in respect of surveys and necessary expenses of sale and the like of that, which would be paid out of the ordinary receipts from Dominion lands. But I venture to say that the $42,583,162 received from the public domain in those three prairie provinces will not only pay back what was paid to the Hudson Bay Company, $1,460,000, but will also pay for the whole administration of that domain, with interest.

In the year 1897, under the late Government, there were no expenditures in the West on capital account, save for Dominion lands. In 1898 and 1899 the same thing was true. In 1900, there was the magnificent capital expenditure on the St. Andrews rapids of $6,501. In 1901, $15,000 was spent on capital account; in 1902, $9,584.76; in 1903, $62,000; in 1904, $17,000; in 1905, $4,014. In 1906 there was expenditure on Dominion lands and no other expenditure. In 1907 there was an expenditure on the St. Andrews rapids of $97,213, and in 1908 an expenditure on the St. Andrews rapids of $261,000. In 1909, there was an expenditure of $300,000, and in 1910, of $53,000. I have already given the expenditures for 1911 and 1912. What magnificent expenditures made by the recent Government for the benefit of the people of western Canada! In 1911, out of a surplus of over $8,000,000 from the prairie provinces, they spend in them $239,324. In 1912, out of a surplus of $12,700,000, only $201,571 was spent there. In 1913, out of a surplus of $17,925,000, only $1,135,967 was spent there. Are they not proud of their record? How grateful the farmers of western Canada should be for the marvellous consideration given to them by the late Administration.

Mr. MARCIL: Does the hon. member not take into account the large sums expended by Canada to open up western Canada and to bring the tide of population that has flowed into the West?

Mr. AIKINS: What expenditures were made to open up the west of Canada?

Mr. MARCIL: Were not a million people brought into Canada in the last fifteen years ?

Mr. AIKINS: But how brought ? Over the railway and steamships routes.

Mr. MARCIL: Through the action of the Canadian Government and people in voting the money.

Mr. AIKINS: They voted the money out of revenues no doubt received from western resources. Moreover, Canada received millions of dollars out of the western trade. I am glad the hon. gentleman has spoken, it shows that he has the same conception that other people have in respect of what the East is said to have done for western Canada. It has been stated in this House and out of the House that the people living to the east of lake Superior have made great sacrifices for the benefit of the West. How? Well, it is stated, did we not build the Canadian Pacific railway? Think of that, hon. member for Calgary! Did the people of the East not build the Canadian Pacific railway? I have pointed out what was expended on the Canadian Pacific railway and how it was provided for. I say more, the people of western Canada are bearing the burden of the cost of the Canadian Pacific railway just as much as the people of eastern Canada. Look what western Canada is doing for eastern Canada. We know it cost Canada about $8,790,000 to build the railway on Prince Edward Island, and about $97,138,379 to build the Intercolonial. As well might the people to the west of lake Superior say: Look what we are doing for the people of the East; we have put our shoulder under the burden of the people of the East and we pay our proportion of the cost of those railways without the slightest complaint. Look at the enormous debt we have in Canada. We have been paying our way in the West and have been contributing also to all the old debt of Canada. Yet they say: We built for you the National Transcontinental railway. Did they? Where is that National Transcontinental railway built? It is 1,804 miles in length, and for 1,700 of those miles it is in eastern Canada. For what? So that the people of the east of Canada might send their manufactured articles to the west of Canada. Wonderful generosity! I have already pointed out that the National Transcontinental railway was not built alone for the eastern and western traffic. The right hon. gentleman who is leader of the Opposition has told us that one of the great purposes of the National Transcontinental railway was to develop that splendid valley of 700 miles in length and 200 or 300 miles in width that lies in the northern part of the great province of Ontario. Is that for the benefit of the people of western Canada? Let the people of the East bear their own burdens and perform their own duties in respect of them, but do not debit to the people of western Canada a liability which is of no benefit to them but will be a continuous burden there, that National Transcontinental railway. They say we in the East built for you—hon. gentlemen in this House have said this—the Canadian Northern railway, and what have we done in return for that? Let me say that the subsidies given by the Dominion to that system were given to the Canadian Northern Ontario railway and not to the Canadian Northern Western railway. I have given you the details of that. Moreover, some of these gentlemen have the complacency to say: Look, we are building for you an elevator in Calgary—think of that, hon. member for Calgary! We are building an elevator in Moosejaw, and all of this is being done at the expense of the Dominion for the people of the West. All of this has been paid, as I have pointed out, out of the revenue contributed by the West, leaving the immense surplus which I have mentioned used elsewhere in Canada. They say, too: We are building for the people of the West a terminal elevator at Fort William, and, more, a terminal elevator at Montreal. Think of these great sacrifices the people of the East say they are making for the benefit of the poor farmer of the West! God help the poor farmer if that be the conception that some people of the East have in respect of justice to him! The farmers of the West are manly men and free, not bondmen. They come not as suppliants to the East. They say that the late Administration never did perform properly its duty towards the West, that it did not understand the system which was provided for the purpose of establishing industries and developing those western provinces and that they are suffering in consequence of that neglect.

I shall not continue my remarks concerning this matter except to say that the farmers of the West are kindly disposed towards the East and that all the people of those prairie provinces are as real Canadians as those who are living in the East. They possess the Canadian spirit,

the spirit of freemen, the spirit of independence, the spirit that takes alms from nobody but they demand that they shall be freed from all inequality with the people of the East. They know their rights and knowing, dare maintain them. They say: Let no injustice be done, give us a fair chance for a living; place us in conditions where our industry and intelligence can create prosperity and we shall then show to the people of the whole of Canada that we can raise produce enough to pay our way and to help the East to pay off the debt of old Canada, we will quit ourselves as men.

Mr. WILLIAM A. BUCHANAN (Medicine Hat): Mr. Speaker, my hon. friend from Brandon (Mr. Aikins), who has just taken his seat, is a distinguished lawyer, a man who has had a wide experience at the bar in pleading cases with a good foundation and with a bad foundation, and I think today that he has shown himself to possess very much the character of the lawyer who, when he did not have a good case, started in to criticise and attack the other side.

Mr. AIKINS: Does not the hon. gentleman, to some extent, agree with the views that I have expressed concerning wheat and agriculture?

Mr. BUCHANAN: What I want to deal with in regard to the hon. member's remarks concerns his statements with reference to the Government's attitude on wheat and the reduction of the duty on agricultural implements. But before coming to that I would like to point out a few things for the consideration of the hon. member. He has lived in western Canada a good deal longer than I have and he knows something about the history of that country prior to 1896. And he knows something about the history of western Canada from 1896 to the present time. He knows that western Canada was stagnant prior to 1896 and that it did not commence to develop until the Liberal party came into power in 1896 and introduced a progressive immigration policy. The people who have come into western Canada in recent years have come as the result of the immigration policy of the Liberal Government and the development of western Canada is due to the policy of that Government. When that Government saw the hundreds of thousands of farmers whom they had brought into that country were producing more grain than was needed in Canada and the motherland they were wise enough to introduce a trade measure which would have been greatly to the benefit of these people, which would have increased the prosperity of Canada and would have been an inducement in bringing more settlers to the country. When my hon. friend speaks of the record of the late Government and says that they did little or nothing for western Canada, I want to say to him that there was practically no western Canada until the time when the Liberal Government party came into power in 1896.

The hon. gentleman also asserted that the Liberal Government had done nothing to encourage industries to go to western Canada and establish themselves there. Let me tell him that a great many industries have gone into western Canada in recent years, but they have been the industries that were warranted by the conditions existing in that country. They have been the industries which could utilize the raw materials which are at hand in western Canada. The Conservative Government have been in power since 1911, and I would ask the hon. gentleman what this Government have done to encourage industries to go into western Canada. They have done nothing more than the late Government did from 1896 to 1911. Industries will go into western Canada when the people are prosperous, when the land is settled, and when there is a market for their products. This Government, in order to induce people and industries to go into western Canada, must adopt a policy that will bring about contentment and prosperity.

Another thing that I thought was somewhat unfair towards the late Government was the hon. gentleman's statement that they had done nothing to reduce freight rates in western Canada. In the second session after the Liberal party came into power in 1896 they provided for the construction of the Crowsnest railway, and there was some provision in the statute under which freight rates were regulated and under which the rates were reduced as compared with what they had been in the past. That Government also established the Railway Commission, and what other achievement is it necessary for me to refer to on the part of the late Government than the establishment of the Railway Commission, which has done more to regulate the railway rates and to remove the grievances of the people with

respect to the transportation question than anything that was ever done during the entire regime of the Conservative party from 1878 to 1896?

Mr. AIKINS: I would ask the hon. gentleman if the Railway Commission is for the benefit of the whole of Canada and not particularly for that of western Canada.

Mr. BUCHANAN: It certainly is for the benefit of the whole of Canada—I admit that—but at the same time it has done a great deal for western Canada. The hon. gentleman speaks as though the Railway Commission had done nothing whatever for the relief of western Canada. What about the recent decision in the freight rates case before the Railway Commission? That was a victory for the two Liberal Governments of western Canada—the Governments of Saskatchewan and Alberta—who engaged counsel to appear before the Railway Commission and present the case for these provinces. As a result of that there has been a very substantial reduction in rates. The Liberal Governments of these two provinces are entitled to every credit for making the case so strongly before the Railway Commission.

The hon. gentleman has no use for the National Transcontinental railway. But it seems to me that the existence of the National Transcontinental railway has had something to do, and will have something to do in the future, with bringing about a reduction in railway rates and that competition which we so much need in western Canada. The Liberal party looked many years ahead when they decided upon the policy of creating the National Transcontinental railway. They were far-seeing enough to believe that western Canada would have a population of millions of people in a very few years if their immigration policy and their proposed tariff changes were carried out. They saw that this railway was a necessity and they brought it into existence. History will prove that the Liberal party did a wise thing in inaugurating that great railway policy, and history will also prove that the road will be of inestimable benefit to both western and eastern Canada.

Now, I want to deal with some points in reference to matters of vital interest to western Canada. The tariff changes which have been brought down bring no cheer to the people of the West. I do not want to speak in this House from a sectional standpoint. I am a Canadian, I live in western Canada, but I was born in eastern Canada, and I am just as anxious for the development of the East as I am for the development of the West, because I believe that the development of the whole country is the best thing for Canada, for the West and for the East. That is the attitude I want to take in discussing these matters this evening. We in the West have complaints, and complaints which are justified by existing conditions, and I am surprised to find some hon. gentlemen opposite belittling them. From 1896 to the present day, the development of western Canada has been the cause of the prosperity and development of the rest of Canada. If there had been no settlement going into western Canada from 1896, or if there had been only the same amount of settlement that there was between 1878 and 1896, what would that have meant to eastern Canada? It would have meant that in eastern Canada there would have prevailed the same conditions which prevailed between 1878 and 1896, conditions of stagnation. I maintain that the bringing into western Canada of thousands and thousands of people from all over the world to cultivate the fertile lands of that part of the Dominion, has done more to bring about industrial prosperity in Ontario, Quebec and the Maritime provinces than has any protective tariff that ever existed in this country. I believe that the policy of bringing people in to settle on the land was the cause of our prosperity. If we are to have continued prosperity, such a policy must be continued, and more people must be put on the vacant lands of the West. It will be said by people in the East that the West has depopulated eastern Canada, and especially the rural parts, to a very considerable extent. But how much better is it for Canada that the people of the East should inhabit the West, than that Canadians should migrate to the United States, as was the unfortunate condition prior to 1896. I maintain, that the policy of settling the West with people from eastern Canada, and with former Canadians who had gone to the United States, and with people from the old land and from central Europe, has been a great benefit to eastern Canada, as well as to western Canada.

The attitude taken by many of our friends on the other side of the House relative to the tariff changes is, in effect, that we should not interfere with the pro-

tection which is given to the Canadian manufacturers, and also that we should not pay any heed to the demands of the farmers for tariff relief. I think that is the line of cleavage between the Liberal party and the Conservative party in this country to-day. It would seem that the manufacturers can go to this Government, present their case, and convince the Government, without any difficulty, that what they say is right, and what they ask for will be done by the Government. But when the representatives of many thousands of farmers come to Ottawa and present their case, asking for tariff relief, their requests are not granted because the presentation of the case on behalf of the manufacturers has more influence with the Government than the presentation of the farmers' case. We find that in connection with the demand for free wheat. We are told that free wheat will ruin the milling industry of this country, which is proof that the millers have the ear of the Government to a far greater extent, and have far greater influence with the Government, than have the farmers who ask for free wheat. We are told that the farmers in eastern Canada are not asking for free wheat, but I have met a great many farmers in Ontario since I came down to the session of Parliament—I happen to have met a good many more Liberals than Conservatives—and I find they are all in favour of free wheat. I think that probably the sentiment of the farmers of Ontario is just as strongly in favour of free wheat as is the sentiment of the western farmers. The only trouble with the eastern farmer is, that he is tied up pretty tight with his party, and he follows his party wherever it goes, even if he thinks it is wrong, on reciprocity or on free wheat. But the western farmer is not bound up with any political party, and he is going to stand by the party which stands by the farmers, and stands by the things which he considers are to his benefit. The farmers in western Canada want free wheat, because they believe it would be to their advantage to have free wheat. We were told by the Conservatives during the reciprocity campaign of 1911, that if cattle and hogs were admitted free into the United States it would not mean any improvement for the Canadian farmer. That was the argument of Conservative speakers in western Canada, and I presume they used the same argument in the east. But what do we find? The tariff was removed by the United States, and there was free entrance into the United States markets for cattle and other live stock, and the price of these animals in Canada went up at once, and there was a demand for them in the United States markets. The Minister of Trade and Commerce is a strong advocate of mixed farming, and he often tells us we should adopt that system of farming in the West. I agree with the hon. gentleman that it it is a good idea that mixed farming should be adopted wherever it is practicable, and mixed farming has of late years been largely adopted in western Canada. And, with what result? Last year was the first year in the history of the province of Alberta that enough hogs were raised to supply the local demand in that province, and indeed there were hogs raised in excess of the local demand. In one week, from October 6 to October 13, 1913, just subsequent to the Wilson tariff coming into effect, 50,000 hogs were shipped out of that province to the city of Seattle. Prior to the Wilson tariff, the price of hogs in my district had dropped to about five cents per pound, the lowest price ever reached, simply because the province had produced more, under mixed farming methods, than it could consume within its own bounds, and there was no organization by which the surplus could be shipped out to meet the demand in other parts of the country. But just as soon as the Wilson tariff went into effect, the price of hogs went up to over seven cents per pound. You can readily understand why the western farmer believes in the United States market, and believes that it is to his advantage to sell his products in that market, or at least to have the opportunity of selling in that market, and that is all he asks in connection with free wheat. When the Conservatives tell him that the farmer of the west will not benefit from free wheat, he believes that the Conservatives know just as little about it as they did in 1911, when they said the United States market would be of no advantage to the Canadian farmer for his cattle and hogs and the other live stock he raises. I believe that the Canadian manufacturer, in opposing the demands of the western farmer for free wheat and free agricultural implements, is making a vital mistake. I believe he is injuring himself and that he is jeopardizing the continuance of protection in this country, because when the farmers of western Canada find that every attempt they make to get some advantage which they consider will be of great benefit to them, is opposed by the eastern Canadian manufacturer, who is listened to by the Government which obeys him, they are not going to be content under such a system of Government.

In 1911, if the manufacturers of this country had had the right kind of spectacles on, they would have realized that it was to their advantage to support reciprocity, because it would have met the demands of the western farmer and would have appeased him, and the manufacturers would not have been very much injured, if at all. But they opposed the farmer; they were behind the campaign which caused the defeat of reciprocity, and now they are behind the demand that free wheat shall not be given to the farmers, and that free agricultural implements shall not be provided for the relief of the farmers. By taking that attitude they are antagonizing the farmers and are creating a strong sentiment that will continue to grow in favour of a reduction in the tariff.

Mr. BURNHAM: Does the western farmer want free trade?

Mr. BUCHANAN: The western farmer would like to have free trade just as much as the eastern Canadian people want protection, because the latter consider that protection is to their interest. In western Canada the farmer feels that free trade is to his interest and they believe free trade will not be injurious to the rest of Canada. I am candid enough to admit that, as long as there is a sentiment in this country that our industries cannot exist without a certain amount of protection, we should have a certain amount of protection. But you have to study and endeavour to meet the demands of the people who do not want any protection, who ask that all tariff barriers shall be removed from their industries. Why should one class in this country receive practically all it asks for in connection with the tariff and another class be refused what it feels is necessary for the development of its industries?

At six o'clock the House took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE—THIRD READING.

Bill No. 123, to incorporate the Atlin Railway Company.—Mr. Michael Clark.

SECOND READINGS.

Bill No. 151, for the relief of Charles Low Hutcheon.—Mr. Fripp.

Bill No. 152, for the relief of Eleanor Grassett Parkhurst.—Mr. W. H. Bennett.

Bill No. 153, for the relief of William Godfrey Thorp.—Mr. Carvell.

Bill No. 150, to incorporate the Prudential Life of Canada.—Mr. Nickle.

Bill No. 154, respecting the Grand Trunk Railway Company of Canada and The Canada Atlantic Railway Company.—Mr. Fripp.

THE BUDGET.

Mr. BUCHANAN (resuming): When the House rose at six o'clock I was discussing the question of free wheat and I intend to proceed by pointing out some contradictions in the remarks of the hon. member for Brandon (Mr. Aikins) this afternoon—contradictions which have appeared quite prominently in a number of speeches made by members on the Government side. They argue that the free entrance of wheat into the United States markets would not enhance the price in Canada, and they then proceed, as the hon. member for Brandon did, to argue that if we got free access into that market our transportation companies would be injured, and our transcontinental lines practically ruined. The two arguments do not fit in very well, because if the United States market is not worth while, the Canadian farmer can send his grain not to that market but, as usual, eastward to the Atlantic ports. I maintain, however, that the United States is of value to the Canadian farmer; there is no question that the Canadian farmer, especially the western farmer, believes that that market is the most advantageous that is offered for the products of his land. I believe that the transportation companies, if our wheat had free access to the American markets, would thrive just as much, if not more so, than they have in the past, because the more our people get for their grain and for their products the more money they will have to buy the products of the eastern manufacturer and wholesaler. Consequently, if we had free wheat, the trade between the East and the West would increase and the railroads would not suffer. No one is going to argue that all the wheat of western Canada would be sold in the United States markets; a great quantity of it would go eastward as usual. As I have said, I do not see anything in the argument that free wheat would in any way injure the transcontinental railroads, or that the United States market is not of any value to the people of this country.

One thing about the United States market which hon. gentlemen forget is that with the advantage of a market close at hand in which the farmer could sell his wheat if he wanted to, the agricul-

tural and grain-growing industries of western Canada would be stimulated. More markets and wider markets are what the farmer needs, and these would be of great benefit particularly to the farmers of the West. One of the chief points in connection with the free entry of wheat into the United States is that the grades in the United States are unquestionably better than they are in Canada. In that respect there is an advantage to the Canadian western farmer. I have before me a letter addressed to a Canadian newspaper by an American who is largely interested in farm lands in Alberta, and who relates his experience during the past season. In this letter he offers an illustration of the value of the grading in the United States compared with the value of the grading in Canada, and what that grading means so far as increased prices are concerned. Even if there were no difference between the prices in Minneapolis and the prices in Winnipeg, this letter proves—and this has often been proved in the House and throughout the country—that in respect of grading alone the Canadian farmer has the advantage. In his letter this gentleman says:

> The writer was fortunate enough last year to get a bumper crop of wheat on his land in Alberta. He had samples carefully taken from the grain after it was threshed and ready for market and sent to him here in Rochester—

This gentleman, who owns a farm in Alberta, lives in the city of Rochester, N.Y.

> —and submitted it to some of the local millers. They were enthusiastic about the sample and compared it with samples of No. 1 wheat, for which they were paying the highest market price in Duluth and Minneapolis, much to the disadvantage of the United States grain. I asked two or three of them how they would grade the wheat, and they said unquestionably No. 1, with a premium for extra quality; and if there had been no tariff barrier I could have sold several carloads of my wheat direct to Rochester millers, not only getting the premium which they would pay me, but also advertising Alberta wheat in this community as nothing else could do it.
>
> The actual result of my attempt to market this wheat in Alberta, however, was to get No. 2 grade on a large part of it, and a price not exceeding sixty cents for most of it on the track at the nearest shipping station. No wonder American farmers who bought Canadian lands on the basis of productive capacity are discouraged when they are confronted with the handicaps placed on their efforts by the present Canadian Government.

In this letter he makes a reference to oats, and I would like to read this because it is important, as showing the handicap under which the western Canadian farmer labours under our present tariff:

> The wheat story, however, is no less aggravating to the farmer in Alberta than the oat situation. I think I cannot be contradicted when I state that Alberta oats are unsurpassed on this continent, both in quality and weight; and I do not know of any part of the world where oats can be produced in greater quantities at less expense than in Alberta. My own oats this year averaged over eighty-five bushels per acre with a weight of over forty pounds, and should command the highest market both for seed, milling and feed purposes. The natural market for Alberta oats is south of the American border, in the States of Montana, Oregon and Washington, where the farmers cannot begin to compete with Alberta farmers in raising oats.
>
> The tariff on oats, however, as compared with the market price, is so high that the advantage of the Alberta farmer is practically offset, with the result that I am still waiting for a price net to me of twenty-five cents a bushel on the track at the nearest market point for oats that should command at least thirty-five cents.

That is one of the experiences related by a man interested in Alberta land and farming there. It is merely an illustration of many cases that could be quoted, and is one of the outstanding grievances of western Canada farmers. It is amply established there that the better grade in wheat is a sufficient warrant for the farmer wanting to dispose of his grain in the American markets. Speaking of wheat, we are advised time and again that the salvation of the farmer in western Canada is to abandan grain growing and to go into mixed farming. As I said this afternoon, I am in accord with that idea if it can be practised. Those of us who live in western Canada know that in many parts of that country conditions do not warrant the farmer in going into mixed farming. In other parts of the country he is warranted in doing it but those conditions mean that for practically all time, in certain parts of Alberta and Saskatchewan at any rate, grain growing is bound to be the chief side of agriculture. Naturally the farmers will be looking for markets year in and year out; and there is no possibility of an entire change in farming methods coming into effect throughout all of western Canada that would reduce the amount of wheat and other grain raised in that country and turn the farmers' attention entirely to mixed farming. Even if the farmer did go into mixed farming, and feed his grain to live stock, as I said this afternoon, there would be a marked increase in the production of live stock, the market under normal conditions, would be swamped with western live stock. Just now, owing to the exist-

ence of the Wilson-Underwood tariff, our farmers have entrance to the American market for their cattle; but if that market was not open to them this country would certainly be swamped with the production of live stock from western Canada if the ideal mixed farming conditions were established to offset grain growing.

Mr. ROGERS: Is it not a fact that 75 per cent of the cattle from Alberta find their market in British Columbia to-day?

Mr. BUCHANAN: No, I would not say that, not since the Underwood tariff came into effect, because I know that a large number of cattle from my district have recently been sold in the United States. I know that the Alberta hogs have found their market in Seattle and other Pacific coast points in the United States. I believe the same to be the case with cattle in that country. There is one thing to be said: even if the cattle of western Canada are sold in British Columbia, the fact that we have free entrance to the United States market has improved the price, to a very marked extent. I would point out that free wheat affects not only the farmer of western Canada but every man in business in that country. I do not know whether some of the western members who sit on the Government benches will deny this, but if I am to go by the opinion which has been expressed to me by Conservative friends of mine since this matter has been discussed I would say that if the members in this House of both political parties from western Canada were to vote according to what they absolutely thought to be in the best interest of the farmers of western Canada, they would vote for free wheat and we would all stand together on that particular question. If any hon. members opposite deny that statement all well and good; I would like to have them do so, because it would be a valuable thing for us in their particular constituencies if they would go on record against free wheat. Free wheat is of importance not only to the farmers but to the men in the towns and cities of western Canada. During the crop season we in the West are all concerned about how the crop is coming along, what its prospects are. If we are having a dry season we are very much worried. The same thing is true about the price of wheat. Last year we had an exceptionally good crop but the price was exceptionally low, a discouraging feature to every man in business in that country, because he was looking to a profitable business from the farmers and hoped that with a good crop there would be good prices and the farmer would be able to meet his obligations to the merchants and his purchasing power would be increased. But that was not the case. The price was low and the farmer was not able even to meet the debts he had contracted. In the face of that, the great agricultural implement industry of this country made demands upon the farmer that were never made in previous years, compelling him to pay up, and if he would not pay in the ordinary way putting him into court, seizing his property, taking everything from him in order to collect his indebtedness. That is one of the reasons why the agricultural implement industry is not gaining in popularity in western Canada.

The hon. member for Brandon to-day said, if I understood him rightly, that he believed that the Minister of Finance had an open mind on the question of free wheat, that he had not absolutely decided that free wheat would not be a good thing for this country. Then the member for Brandon proceeded to present some reasons to establish that free wheat would possibly not be a good thing for the farmer and he tried to so fix the mind of the Minister of Finance that there would be no possibility of free wheat. The hon. member was trying to close the open mind of the Minister of Finance so that there would be no possibility of free wheat.

I want to deal for a few moments with the very important question of agricultural implements. As I had occasion to say in this House this session, during the campaign of 1911 gentlemen who appeared on the platform in opposition to myself in the constituency of Medicine Hat made the declaration that the chief fault with reciprocity was that it did not go far enough, especially on this item of agricultural implements; and they told the farmers that if the Conservative party were returned to power agricultural implements would be put on the free list. They made this statement throughout my riding. Now we find that they are not able to implement this promise, if I may be pardoned for the use of the word in that sense. They come down here and all they were able to get was a five per cent reduction on a certain agricultural implement. The Liberal provision in the reciprocity agreement covered nearly every implement which the farmer in western Canada uses. I say I believe that the men who spoke at that time were honest and believed that they would be able to convince the Conservative Government, if one came into existence, to provide free imple-

ments, but they have not been able to do so nor have the farmers of western Canada. But, on the other hand, the agricultural implement manufacturers of this country have been able to convince the Government that only a five per cent reduction is warranted.

I would like to read an extract from a western newspaper. It happens to be from my own paper published in the city of Lethbridge. It is not an editorial expression of opinion, but it is simply an interview given to one of the reporters by an agricultural implement man who does not use his own name—I presume he would be afraid of losing his position if he did—but he makes a very important statement. This article says that the agricultural implement men of the place were interviewed in order to get their views on the five per cent reduction in the duty on agricultural implements. The article continues:

> The opinions were all very emphatic. One man said that the reduction could not help the farmer in the slightest degree. His reason was that all the binders sold in the west are manufactured in Canada anyway, with the exception of the John Deere, which sold for the same price as the others after the duty had been paid, namely $175.
>
> The manufacturers in the East will pocket the advantage, said one man. Even if the price was lowered, it would not amount to more than five dollars on a binder. A farmer uses a binder for an average of about five years—

I think that is a very small period of time in western Canada, but that is the length of time that this gentleman mentions as the life of a binder. Then the article continues:

> —and if he saved $5 on his future purchases, that would mean a dollar a year, nothing that any farmer would write home about. What the farmers want, he continued, is free wheat, free food and free implements. If he had implements, the smaller manufactures in the United States would be permitted to invade this country, and they would make the larger concerns come down down to a point that would mean an advantage worth while to the farmer. With this, and free wheat, which would give the agriculturist a wider and better market, he might have financial benefits that would amount to something. The reduction on implements does not amount to the price of a good square meal to the farmer.

That is an expression of opinion from western Canada, and it comes from one of the agricultural implement men. In this connection I would like to draw the attention of the hon. Minister of Finance (Mr. White) to a statement which has been made to me. I cannot guarantee that it is correct because I have been away from the West for some time, but the statement is that within the last three or four months the price of binders and mowers in western Canada has been increased sufficiently to cover any reduction which might be made in the duty on agricultural implements. That statement was made to me by a gentleman in my own city, and if it is correct it is worthy of investigation. I cannot guarantee that it is correct, but I simply make the statement as it was made to me.

Mr. ROGERS: Will the hon. gentleman repeat that statement?

Mr. BUCHANAN: The statement that was made to me was that the price of binders and mowers had been increased about $5 within the last three or four months. This gentleman who wrote to me, since the announcement of the reduction in the duty, intimated that the agricultural implement manufacturers must have been figuring on a reduction in the duty, and so they put up the price. I cannot guarantee the accuracy of that statement, but the statement was made by a responsible business man.

Mr. W. T. WHITE: It would be quite impossible that that could be done, for the reason that—I make the statement, without any equivocation or reserve—nobody could be aware of the action of the Government in the matter, and I do not believe the statement is correct.

Mr. BUCHANAN: I would not want to say that the manufacturers were advised that there was any possibility of a reduction, but I think that from the discussion which had been taking place in this country during the last few months they might have imagined that something was going to happen, and they certainly could have imagined that something was going to happen if the party on this side of the House had anything to do with the changes in the tariff. I do not say that they knew actually that a five per cent reduction, or any reduction, was to be made, but if the statement that they have increased the price over that for which they had been selling these binders in western Canada is correct, it is worthy of investigation at any rate. I had the opportunity of making a speech on this question before in the House, and I do not intend to make any further remarks on this particular subject.

I want, however, to offer some observations on the question of immigration. This is an important question to the people of western Canada. We are all anxious that our country should develop as rapidly as

possible. My own conclusion is that, outside of the people who have been coming in and taking up homesteads, there has been practically no movement to the West of the class of farmers who might be expected to invest in farm lands. A great many people who went into western Canada as homesteaders simply went in to prove up, get the land and then move away. We have in many cases vacant homesteads, and naturally there has been a decrease of population in that regard. I do not know whether that is the case in all districts or not, but I know that is the case in many parts of Alberta. We have not been bringing into western Canada as we should have done men to go on the land and till the soil. Western Canada is out of the stage of sensational development by means of real estate speculation, which has aroused the people to a realization of the possibilities of their respective cities. They have spent a great deal of money in development. I say that population practically will be stationary until there is a very rapid increase in our rural population. I would like to see more people going into that country and settling on the land. They are not coming in to purchase farm lands as they were a few years ago. I do not know whether there is any slackening of the efforts to bring settlers from the United States or not, but there certainly has not been the movement of United States settlers to southern Alberta that there was a few years ago: In that particular part of the country the United States settler is an ideal settler. He comes from states which are very similar in climate and agricultural conditions to Southern Alberta, and he generally makes a success of agriculture. I hope that the efforts to bring farmers in from the United States will continue, and that the class of immigrants that we are bringing from across the sea will be a class of people who will go on the farms. We should now make every effort to get people on the land. That should be the main object of this Government if it wants development to continue in western Canada, population to increase and the resources of the country to yield what it is possible for them to yield.

Mr. W. H. SHARPE: What is the cause of men leaving the land in Alberta ?

Mr. BUCHANAN: Land has been vacated by what are known as professional homesteaders.

Mr. SHARPE: Brought in by the former Government ?

Mr. BUCHANAN: There has also been a movement of actual farmers of western Canada according to the conditions there. I would not say how great that movement is, but I have in my desk a clipping from a newspaper published in my district showing that from that particular district there has been a very large movement of farmers.

Mr. ROCHE: Where did they go ?

Mr. BUCHANAN: The statement was made that some went back to the United States and some to Ontario.

Mr. ROCHE: I think I explained that a couple of weeks ago when I stated that the land laws of the state of Montana had been made very much more generous recently, that the United States Government now are giving homesteads of 320 acres where they used to give them of 160 acres, and that they are allowing people to qualify for patents in three years, while heretofore they demanded five years. Of course, their lands are inferior to ours, but at the same time this has a very great influence in attracting settlement in that direction.

Mr. BUCHANAN: My argument is that we should bend all our efforts to get people into the West who will become permanent settlers on the land. One of the reasons for the movement of population out of certain parts of my constituency is to be found in the fact that railroads have promised that they will build lines within a few years into those districts, but notwithstanding that many settlers have been living on their homesteads for five years there is no sign of a railroad in their neighbourhood yet, and they have become discouraged and have left the country. The Government, in my opinion, should insist upon the more speedy construction of branch lines into districts which are well settled. I cannot understand why railroads will build branch lines into unsettled parts of the country, when there are well settled districts in which railroads are absolutely needed. The Government should get behind these railroad companies with a big stick and make them build these branch lines, according to their promises, so as to keep the people in the country, and thus remove a great deal of discontent. In my own district, the Canadian Northern Railway Company has followed this practice of promising to build branch lines into certain districts, and when the settlers go in they do not build them.

I represent a district where railroads are absolutely needed, and where the farmers, in many cases, are settled from fifty to seventy miles from railroad facilities. I am prepared to stake my political future on the declaration that I would not tender any assistance whatever to the Canadian Northern Railway Company until Sir William Mackenzie and Sir Donald Mann shall get rid of their other interests, their street railways, and their electric power companies, and their coal mines on the Pacific coast, and their other interests throughout Canada and in foreign countries, and save the Canadian Northern railway with their own resources. I may be radical in this respect, but I believe I have my constituents back of me when I say, that if the Canadian Northern railway cannot be saved by Messrs. Mackenzie and Mann themselves then the people of Canada, who up to the present have really built that road, should take it over and operate it themselves. And, while we probably have not made a success of operating the only Government-owned road we have in this country, still I think we might do much worse than to take over the Canadian Northern railway, rather than to hand over a guarantee of bonds or any other assistance to the men who are now at the head of that undertaking. These gentlemen have been assisted by every province in this Confederation; they have been assisted by the Dominion Government, and they would not be so far advanced as they are to-day with their lines were it not that the people of Canada have rendered them liberal assistance. If these gentlemen cannot finish that railroad system and put it in such a position as to operate it successfully, I say the people of Canada should safeguard themselves and take the road into their own possession.

I have devoted my remarks chiefly to questions affecting western Canada, and I conclude by saying that I dislike very much to hear members in this House give expression to the idea that western Canada is always complaining, and always has a grievance. That is not the kind of talk that will make western Canada more friendly to eastern Canada. We in the West have grievances which must be remedied before we are a contented people, and I want to say for the people of western Canada that they are just as anxious for a united Canada, and just as anxious for a prosperous and progressive eastern Canada, as they are for a prosperous and progressive western Canada. But they will continue to insist that their grievances, more especially with respect to tariff matters, shall be remedied, and once these grievances are remedied you would have happy and contended farmers on the prairies of the West.

I appeal to members on both sides of this House to unite in a statesman-like effort to meet the needs of western Canada. If western Canada is to grow and to make progress, it must be looked to with a sympathetic eye by whatever Government may be in power. I repeat what I have often said, that Canada will not be prosperous and progressive unless we place on the lands of western Canada settlers who will till the soil and produce that wealth which will enable them to purchase the output of the industries of eastern Canada.

Mr. JOHN WEBSTER (Brockville): Mr. Speaker, I come from one of the principal dairying centres in the province of Ontario, in which is held the largest weekly market for dairying product that there is to be found in Canada, and I therefore feel it incumbent on me, when we are discussing tariff matters, to speak on behalf of the dairying industry. I shall address the House from the viewpoint of a dairy man and a business man of the province of Ontario. The hon. member for Medicine Hat (Mr. Buchanan) spoke of the policy of the Liberal Government. Having been a close student of the different policies introduced by the late Government, I cannot for the life of me understand which of the Liberal policies the hon. gentleman alluded to, because the Liberal party has had so many policies that I must admit I have not been sufficiently alert to have kept track of them. Perhaps the hon. gentleman referred to the Liberal policy of giving away the resources of this country to their friends, in the shape of water-powers, townsites, timber limits and other things. The right hon. leader of the Opposition has stated on more than one occasion in this House that he is not a business man, and therefore, I presume, he will not be able to appreciate the remarks which I make from a business man's standpoint.

I congratulate the Minister of Finance upon his Budget Speech. He deserves the congratulations of the people of Canada for his business-like attitude on tariff questions, and for the executive ability he displayed in that financial statement. I think I can safely say that during the regime of the Laurier Administration no Minister of

Finance ever delivered such a masterly Budget Speech, or one so calculated to contribute to the development and prosperity of our country.

The hon. Minister of Finance referred to the money stringency of 1907-08, which is not so long ago but we can all distinctly remember it. Yet in the face of that stringency, Sir Wilfrid Laurier appealed to the people to return him at the head of the Government so that he could finish his work. The people did so, and now they are paying the penalty. The money stringency has been world wide. It has affected not only Canada, but the great nation to the south of us, and all European countries. I am proud to say, however, that the people of Canada have felt it as little as any other nation in the world. I live right on the international boundary line; and from my house, I can see what is happening across the line. How de we find conditions there at the present time? How are railway men affected there? The New York Central railway, which is not a transcontinental line by any means, has discharged no less than 25,000 employees since February, 1914. Have we had a similar experience in Canada? No; our railway men say they have no particular complaint to make. Take the situation as it exists in New York today. How many hundred thousand men are there out of employment in that city? Why does that bread-line exist in New York at the corner of 35th street and Fifth avenue, where the hungry people are fed from midnight until two o'clock every night by that great organization known as the Christian Herald Newspaper Company? That is surely sufficient to cause alarm. What would our hon. friends opposite say if the cities of Ottawa and Montreal were running a bread-line at that hour of the night? In New York you can get men furnished by that Christian organization for practically their food and clothes; but when you want a man in Canada to go on a farm, he asks from $45 to $$50 a month. That is sufficient to show the difference between conditions in Canada and conditions in the United States at the present time.

I have listened most earnestly to the arguments brought forward in favour of free food. I would like to ask the right hon. the leader of the Opposition: Where is this free food to be found? Where is it to come from? Is Canada not one of the greatest producing nations in the world? Are we not proud of the position which the agriculturists of this country occupy today? We are, and the farmers of this country, by obtaining high prices, are only coming into their own, and I hope they will continue to get those high prices for the next twenty-five years. They are only now beginning to realize what it is to have a home market at their own door. That is the best market for the products of the farm. The field crops of Canada last year reached the enormous sum of $553,000,000. Where was this great crop consumed? Eighty per cent of the total crop of Canada was consumed in her own markets. The farmer deserves the same amount of protec-

9 p.m. tion as the manufacturer, the artisan, the mechanic and the labourer. Ontario, with its 2,500,000 people, produced no less than 40 per cent of the total agricultural products of Canada during 1913. Ontario had over 9,500,000 acres of field crops in 1911. Ontario has nearly 300,000 acres in orchards, vineyards and small fruits. I would ask the right hon. leader of the Opposition: what did it mean to the producer of those fruits to have free fruit coming into Canada? The people in the United States are about thirty days ahead of us in the production of the berry crop. Would my right hon. friend rob the farmers of the profit of producing those berries for the tables of the artisans and mechanics in the cities? The farmers deserve the greatest consideration that can possibly be afforded them. We are all proud of our farmers, because they are the bone and sinew of the country and they have made Canada what it is to-day.

The farmers of Ontario alone have a working capital invested of $1,216,864,990; but they have received in the legislature the least consideration of any class of people that has any such investment in this country. I am prepared to give to the farmers of Ontario and Quebec their full share of the credit due them for what they have done to make Canada known in the markets of the world. The pioneer farmers who came into this country, possibly a hundred years ago, did as much to roll back the curtain of civilization to the rest of the world and to advertise Canada as any class of people that we have in Canada to-day.

I have listened with great interest to the stories of hardship of the prairie farmers, told by hon. members from the West. If you compare the condition of the prairie farmer with that of the pioneer who came into this country a hundred years ago, as my grandfather did, who went fifty miles to a mill with a bushel of wheat across his horse's back, along a blazed road, and if you think of the advantages possessed by the western farmer, those hardships pale

into a shadow. The pioneers of Canada have done something to which we can all point with the finger of pride. The farmers of Ontario and Quebec have been what we might term the pioneers or the pathfinders of the great West. Going through my constituency, I often hear people regretting that the young men and the young women, the pride of our country, are now going out to the great western provinces to make their homes; but I am pleased to think that there are so many of the best young men and women of Ontario and Quebec in the West, and I am sure they will see that the interests of that country are properly conserved. During a trip I made through the western provinces last autumn, I was told on many occasions that the farmers who came from the older provinces of the Dominion of Canada were the best settlers there. We have heard a great deal about the boys leaving the farm. Well, up to the present time of high prices, the boys on the farm had very little to encourage them to stay there, and the fault in that case, I think, can be laid at the door of the previous Government. The provincial Government in Ontario to-day by the development of its Hydro-Electric scheme, is doing more to keep the young men on the farm than has been done by any other government in this country within the past fifty years. If young men leave the farm because they cannot make ends meet what is the reason of that condition? The shortage of help. Why has Ontario received so little consideration in the past in her immigration policy? Simply because the late Government of this Dominion wanted the settlers to go to the West. But to-day the province of Ontario is getting her full share of farm labour, and I expect to see the results of that immigration showing in the increased products of our farms. There is only one way that I know of to reduce the high cost of living in this country, and that is to populate the rural districts. We have too many consumers and not enough producers. That is the secret of the situation. But if this policy of free food introduced by the leader of the Opposition is to sweep away the protection afforded our farmers, what encouragement, I ask you, Sir, would there be for young men to take up farming in the province of Ontario?

The hon. member for Huntingdon (Mr. Robb) spoke of the dairy industry. I have been engaged in that calling for the past thirty-five years, so when I speak of the dairy industry, I take the liberty of believing that I speak of something which I understand. Our dairying industry has been developed during the past thirty-five years. Our beginnings, as is usual with beginnings, were small, but the product of the dairy industry of Canada for the year 1913 was estimated at the large sum of $121,000,000. Canada's dairy exports last year amounted to $21,714,153, those exports consisting almost entirely of cheese. The hon. member for Huntingdon spoke of the advantages of shipping milk and cream. But let me say to the members of the House—and I know whereof I speak—that the man who ships milk and cream off his farm, and has nothing coming back to feed his hogs and calves, is mining his land. He is like the man who is selling hay—how long can he continue to raise a hay crop? Go into the northern part of the state of New York and find there the farmers who have been supplying New York city with milk, and you will find that these are the people who are coming over to Ontario and buying our young cattle to build up their dairies. Their old cows are milked out, and they must do something to increase their herds. I have farmers in my constituency who last year raised a calf for every cow they milked and sold those calves for $25 apiece. But that was another mistake. Instead of selling that young stock, they should have sold the finished article, the food product, for in that way they would have doubled their income in a short time.

We have heard a good deal about the cattle exported to the United States during October and November after the new Wilson tariff came into effect. What do these cattle consist of? To a large extent of young stock, one-year olds and two-year olds. That is a mistake that our farmers made. They shipped as high as thirty-five or forty in one car, and we saw carload after carload going out of our country. To-day many farmers regret that they sold that stock, for they could sell it in the home market to-day, in Saskatchewan or British Columbia, for more money.

The hon. member for Huntingdon referred to the 'Jingoes of Ontario.' Well, I have lived in Ontario all my life, and I do not know the meaning of his word. But I do know what caused the wonderful upset in the calculations of hon. gentlemen opposite on the 21st of September, 1911. It was not because of jingoes, but because the people of Ontario were too independent ever to become 'an adjunct.' That speech which Hon. Champ Clark made about the Stars and

Stripes floating from ocean to ocean and from the pole to the gulf is what made the 'jingoes,' and when the same question comes up again, you will find the people of Canada just as independent and just as loyal as they were on that 21st day of September.

Speaking further of the cattle export, I have taken some figures from the Monetary Times, which will be regarded as an authority anywhere in Canada. There were sold from Alberta last year, $10,000,000 worth of cattle. Of this $5,000,000 went to British Columbia, $4,500,000 worth to Winnipeg and Calgary for local consumption, and $500,000 worth to the United States. I visited that abattoir in Calgary last summer and observed with great interest the way in which they handled that stock. I saw them load carload after carload for British Columbia and Winnipeg, but while I was there they did not load one carload of cattle, sheep or hogs for the United States. What is the trouble to-day with the United States markets for cattle, when we see the western cattle from Saskatchewan and Alberta being offered on the Toronto and Montreal markets? Western cattle to-day control the Montreal market. It must be that the home market offers the producers and drovers of western Canada more than does the United States market.

Now, I desire to refer briefly to the bacon and hog products of Canada. I would like some hon. gentleman opposite to tell me what it will mean to the dairymen of this country to have free wheat. Our dairymen are depending on the offal, that is, the bran, shorts and low-grade flour to feed hogs for the production of pork and bacon. During the past 25 years this country has built up a reputation second to none in the world for the quality of the bacon and cured meats that it manufactures and exports. When I was in British Columbia last year, I went with a drover from Grand Forks into the state of Washington, and I saw him purchase dressed hogs in that state for $10 a hundredweight, paying upon them 3 cents per lb. duty, and taking them to his customers, the miners and smelt workers of Grand Forks. Yet the right hon. leader of the Opposition wishes to wipe out, with one stroke of the pen, this great industry which has been built up by our farmers. I tell you, Mr. Speaker, that without protection the hog-producers and bacon-curers of this country would be put out of business.

What would free wheat mean to the milling industry? It would simply drive it out of business. It has been our proud boast in the past that the people of Canada control more natural resources than the people of any other country on the continent. We have to-day lumber for the manufacture of barrels, we have our cotton mills for the manufacture of flour bags, and we are employing a large amount of capital in the milling industry. In the face of these considerations, free food and free wheat would simply drive the milling industry out of Canada. The mills in a short time would be built to the south of the line, where the millers could get low-grade wheat to mix with the high standard wheat we produce in Canada. Do you think, Mr. Speaker, for one moment that the people of the United States require our wheat for domestic use? No; they simply need a certain percentage of the No. 1 hard wheat which we produce in Canada to grade up their low standard wheat in order to make a better class of flour to compete with the Canadian millers in the markets across the seas. The great milling concerns of Minneapolis and Buffalo came into the Canadian market last autumn and bought 10,000,000 bushels of wheat, upon which they paid duty. Do you think that if they could have obtained the same high-grade wheat in the south they would have come over here and taken Canadian wheat? No, not for one moment. I do not think any sane man would believe such a thing.

What would it mean to the dwellers in the city, for whom our friends across the floor of this House have so much sympathy, if we were to take any step which would increase the price of bran and shorts say $3 a ton? It would mean that we would have to pay 12½ instead of 8 or 9 cents a quart for milk with which to feed the children of this country. That is another consideration which our friends opposite have apparently overlooked. One thing is certain: the producers of milk must receive some reward for their labour, and if you increase the cost of feed you must expect the producer of milk to increase the price of the product.

I have tried to explain in a fair and reasonable manner just how this great industry would be effected by free wheat. The United States is the third largest exporter of wheat to the British market, and for every bushel of wheat they would take from Canada it is quite natural to suppose that they would have one bushel of American

wheat to export to Great Britain. We are all proud of the position which we occupy as exporters; why should we try to injure the position which we now hold and are so proud of? With free wheat, and with our wheat going to the south instead of to the east and west, we would be advertising the United States as the greatest producer of wheat in the world. If the American miller wishes to secure Canadian wheat in bond for grinding purposes, it costs him only one-tenth of a cent per bushel, and he has the bran, shorts and offal in his own country. With that small increase in cost they claim that they can compete with the Canadian miller in the foreign markets. But I do think the millers of the United States are quite capable of guarding their own interests. It is not in the interests of either the millers or the producers of Canada that the people of the United States are so anxious to have our No. 1 northern hard wheat entered into the United States free of duty. This is not a party question; it is a great national question and I think it is time that our friends across the floor of this House began to realize that fact. If we were to listen to the offers that our friends have been in the habit of making occasionally to catch voters throughout the country, we would be pursuing the same policy that they have been pursuing for a great length of time. The right hon. leader of the Opposition is beginning to realize that the farmers of this country have some cause to doubt the value of these apparently favourable proposals that he is continually making to them. By appealing to the artisan, the mechanic and the labourer and telling them that the high cost of living is depressing them, he may possibly catch their votes and the votes of the western farmers. But I would like hon. gentlemen opposite to explain where they are going to get this cheap food which is to be brought into Canada. What is wanted in Canada is more wheat to be ground in this country, thereby increasing the production of the farmers along dairying lines, along meat lines and in many other ways. By doing this we will be doing our share towards lowering the high cost of living.

The hon. member for Frontenac (Mr. Edwards) said last night that he for one would, if it were necessary for this Government to do so, approve the establishing of a line of ocean vessels that would govern the export rates on flour and wheat. I would do all in my power to further a policy of that kind if it were necessary in the interests of the western farmer. By so doing I think we would be doing more for the western farmer than we would be doing if we were to take the duty off wheat and let it come into this country free.

Another matter in respect of which I wish to congratulate the hon. Minister of Finance is that in his Budget he did better in regard to agricultural implements than hon. gentlemen opposite did in their reciprocity pact. Under the reciprocity proposal the duty on these implements was to be fifteen per cent, but the hon. Minister of Finance has cut the duty on binders, mowers, harvesters and reapers to twelve and one-half per cent. For this he should receive the congratulations of the farming community.

A word about this pact known as reciprocity and larger markets. We were told by the hon. member for South Wellington (Mr. Guthrie) that reciprocity is dead, but judging by the remarks of the hon. member for Huntingdon (Mr. Robb) this afternoon I should have thought that he was repeating in the House one of the reciprocity speeches which were made when that matter was before the country.

I think possibly it may be dead with the hon. member for South Cape Breton, who wants to see the iron industry protected, and the hon. member for South Wellington (Mr. Guthrie), who wants to see the farm implement manufacturers protected. It may not be dead with the hon. member for Huntingdon (Mr. Robb), but he did not say that he stood for free flour. Possibly he has some financial interest in a flour mill, and therefore wants to see flour on the protected list. But that is one of the variations that occur in the different policies for different localities in the camp of our hon. friends opposite.

The hon. member for Rouville (Mr. Lemieux) referred the other night to the expenditure on militia and the cost of armaments. Has the hon. member forgotten that there is on the statute book of Canada such an act as the Laurier Naval Act? If he has not, he knows that if that policy were pursued it would cost this country possibly more than the National Transcontinental railway has cost. We do not know how much it would cost, because the people who introduced the National Transcontinental railway had not the slightest idea of what its cost would be. The hon. member for Rouville referred to this militia expenditure. Why, the greatest advertisement Canada ever got was got by those young men who were

sent to South Africa in that famous contingent when they caused Mr. Kronje to do homage to the old flag. I wonder if the hon. member for Rouville himself did not feel very proud on that memorable morning when that Canadian contingent did their duty to the flag and the empire. I can quite understand why the hon. member for Rouville feels a little bit sore owing to the defeat of the late Government in 1911. If my memory serves me right he had previously come into the position of Minister of Marine and Fisheries for this country, and, who knows, had that regime still continued in power, that he might not have had hopes that some day he might be made an admiral. Can you fancy anything more funny than the hon. member for Rouville pacing up and down the deck of one of those naval battleships, decked in his navy blue suit heavily embroidered with gold lace, with his cocked hat and feathers waving in the breeze? I do not wonder that the hon. member for Rouville is sore. Why, were you to see him in that uniform, I would excuse a member of Parliament, in the early hours of the morning, taking him for Admiral Togo, the man who defeated the Russian fleet.

We are looking forward to a visit from our King in the near future, and when he comes to this country I hope we will be able to show him a nation of people, the most prosperous, progressive, happy and contented that inhabit any colony within the British Empire. And, Sir, I tell you that it is my most earnest belief that when His Majesty has visited this country, he will be quite free to admit that Canada to-day stands head and shoulders over all the other colonies and is still the star and gem of the Empire.

Hon. H. R. EMMERSON (Westmorland): Mr. Speaker, I cannot recall an occasion upon which I did myself the honour to take part in a Budget speech in this House, and I think I can therefore say that this will be my maiden speech on that subject. I would not participate in this discussion were it not for the fact that I think the time has arrived in Canada for those who have convictions to give expression to their views. The time has come, and I think I am not extravagant in stating that the struggle has begun. History tells us that there have been cycles of stress and struggle between the classes in every age and every land. Two thousand years ago there was such a struggle and it was a struggle of the classes against the masses. Down through the history of every age these struggles have been recorded; and while the contestants have had different names the struggle has been the same. We have had it in Canada. They are having a struggle to-day in Great Britain. There it has been a contest between the aristocracy and the democracy. In Canada, in the early days, there was a struggle of the people against the family compact. It was the fight for responsible government, and in every one of the four original provinces of this Dominion that struggle went on. It is upon us to-day in a different form. It is a struggle between the interests and the great mass of the people. It is all very well for us to laugh and say that there is no power that controls in Canada to-day. We know that it is true that even in the matter of legislation, as every hon. member has realized in his experience, there are interests that control and influence in a mighty degree, almost in a paramount degree in Canada, even in this Parliament. We see occasionally immense delegations travelling to Ottawa, interviewing the Government. They are heard with consideration, with courtesy and with respect. But, Sir, these delegations are powerless to influence the currents of legislation and governmental action. We saw here the other day, on the floors of this Parliament, an immense delegation with respect to a great transportation scheme. Were they misled? Did they return to their homes with the thought that they had made an impression upon the Government or even upon Parliament? If they did they deceived themselves because we know that the question is subject to the control and influence—perhaps I should not use the word dictation—of certain interests that are considered rival interests. If it comes to a struggle then I wish in no uncertain way to assert my views, to pronounce myself and to co-operate, as I believe, with the great masses against the classes in Canada.

It is very easy to be placed on the wrong trail and follow it until it leads away from the right one. I think that has happened in Canada. The trouble is that we have not cared to call things by their proper names. Ambition is what we choose to term that insensate lust for material prosperity which is the maggot at the heart of such success. Protection is the soil on which corruption grows. Our whole body politic is menaced, mentally, socially and morally —politically speaking—by corruption. It is the gathered force, the concentrated intensity of all the accumulated greed for power

and pelf. Like the heathen mentioned in the 115th psalm, the idols of the votaries of this system are silver and gold and the work of men's hands. For all these reasons and because of their greed, the manufacturing and industrial interests are the enemies of democracy. The big interests started to gobble everything in sight like the swine, and while they gobble democracy goes to smash. I do not think that democracy is merely an enchantment; nor do I think it should stand still, limp, flaccid and sluggish. Rather should it go forward. This contest is one that is not to be determined suddenly, and the forces that are arrayed against each other are very different in character—the one organized and powerful, the other disorganized and not having at its back the influence, the power and the men to carry on the struggle. But that struggle must be determined by the earnestness of the people, and by the sincerity with which they enter into the struggle. I, as one of the people, realizing the conditions, can honestly say that I shall attempt to take my part in the struggle.

I listened with a great deal of pleasure to the speech of my hon. friend (Mr. W. T. White), and I am sure that I do not intend any discourtesy to the gentlemen who have immediately preceded me if I do not refer to their utterances. I feel that it is my duty, in discussing the Budget, to go to the law-giver in order to give an interpretation, and the Moses, the law-giver, in this instance, is the Minister of Finance. I, at a later stage, may briefly refer to some details of his utterances. His speech was an able one, but I think all must agree with me in the statement that it was delivered tremblingly, falteringly and haltingly. He proceeded apparently as though on thin ice. I did not know, as I followed him closely, just where he purposed to land. He did land eventually. He reminded me of a player indulging in a game of solitaire. Everything depended on each card as it was turned, and every successive move was governed by the card that was first turned; so on until he had reached the end, everything by chance, nothing fixed, nothing determined. But it was a very excellent speech. While there was much about the difficulties that had surrounded him during the past year, he apologized and explained as best he could, the fact that Canada's trade was declining, that Canada's borrowings were increasing, that Canada's credit abroad had suffered, that Canada's rate of interest on English debts was being increased, that Canada's public debt was again growing alarmingly, that Canada's customs revenues have declined, and that Canada's expenditures were increasing. While he attempted to explain and justify these things in some instances, and to apologize for them in others, there were two ideas that stood out prominently. The first was the acknowledgment of the allegiance which he owed to the masters of this Administration. The other was the position of the Government that in attempting to do something they should be commended for they had struck a blow at somebody else. The minister's remark that it is not advisable that a nation's tariff should be so arranged as to fit into the tariff policy of another nation was received with acclaim. The idea that Canada was not to frame a tariff which would fit in with the tariff of any other country, was to be in future the slogan of the Conservative party, and the very next morning, one of the Conservative newspapers in this city, in large glaring letters, reiterated the sentiments that Canada was to be in no way subservient to any other country. But the Minister of Finance had no sooner given utterance to that statement, than he followed it up by declaring that he would put a surtax of not more than twenty per cent against all countries which discriminated against Canadian goods or Canadian shipping. In that particular instance, was not the Minister of Finance fitting our tariff into the tariff of other countries? Partyism is a tradition, and perhaps it would be a happy thing for the Minister of Finance and for the Government if the recording angel could blot out the past history of the Tory party in Canada. When the Minister of Finance repudiated the idea that our tariff should fit into the tariff of another nation, did he have in mind that in 1879, Sir John Macdonald, through his Minister of Finance, Sir Leonard Tilley, incorporated in the so-called National Policy a provision under which the tariff of Canada would be dependent upon the tariff of the United States. Does he remember the statutory offer in that tariff, under which the natural products of the United States were to be admitted free into Canada when the United States admitted certain Canadian natural products free? The Minister of Finance has been lauded, and deservedly so, by every speaker on his own side of the House; he has been commended for his statesmanlike grasp of the situation, and for his endorsation of the old policy, and yet he must have

forgotten that the Conservative tariff of 1879 was phrased in such a way as to enable it to be fitted into the tariff policy of the United States. True, the Finance Minister was a Liberal, and was nurtured in the Liberal ranks, and perhaps he has become the Solon of the Conservative party of to-day, as Sir John was its Solon in his day, but at any rate the hon. gentleman is not, in this respect, true to the traditions of the party with which he is now allied.

In 1879 we had propounded what is known as the National Policy, and during the elections of that year it was heralded throughout the country, that we were to have, not an increase of taxes, but a re-adjustment, and this policy was submitted to the people as a panacea for all the ills that then existed. There was great depression in 1876, 1877 and 1878, and this nostrum was brought forward as a cure-all. The people of Canada, ready to grasp at anything that they thought would ameliorate their condition, took the medicine, and at first it did give a stimulus to Canadian manufacturing and Canadian trade. But there came a day, not long after, when it began to react, and for fifteen years, under Conservative rule, there was practically stagnation and trade paralysis in Canada. We were carrying heavy burdens for the construction of the Canadian Pacific railway, and we were endeavouring in a way to people the western prairies, but without avail. People became depressed, and even the leaders of the Conservative party realized there was something wrong. Sir John Thompson, when Prime Minister, in 1894, admitted that the so-called National Policy had failed, and he used the memorable phrase that 'he proposed to lop off the mouldering branches.' They did it, although I believe very little remedy was applied.

In 1896, a new Administration was charged with the responsibility of governing Canada. A commission was appointed which travelled from one end of Canada to the other, not merely consulting the manufacturers or particular interests, but having open court and inviting everybody to come in and give their views with respect to business conditions and their suggestions as to the remedy that should be applied. We had the present tariff established. We had many items placed upon the free list which previously had been subject to high taxation. We made changes with respect to specific and ad valorem duties. The tariff as it was introduced in Parliament changed the state of things to such an extent that Sir Charles Tupper, the then leader of the Conservative party, bewailed that the industries of Canada would languish; that they would be destroyed and annihilated. My hon. friends opposite are in the habit of saying: Oh, yes, for fifteen years you have supported a party that practised protection; you as Liberals have given adherence to men who put in practice protectionist ideas. That is the charge made against Liberals on this occasion. There is a measure of truth in that statement, but the preferential tariff of 1897 was a very distinct and marked change in the tariffs of Canada. It was very different from the preceding tariff; it reduced taxation; it burst the shackles of many industries and certainly caused exchange of trade between this country and other countries. There was a relaxation, attended with which was a very remarkable prosperity which continued for fifteen years.

Mr. MORPHY: Under a protective tariff all the time.

Mr. EMMERSON: It is very strange that that same protective tariff, as my hon. friend calls it, could not be made to work when controlled by his party and that, when it came under the control of the Liberal party, it was a successful tariff. If it was a protective tariff, let me ask my hon. friend why it was that in 1908 the present right hon. leader of the Government, from his place on this side of the House, moved a resolution in favour of adequate protection? If we had under the Liberal regime in 1908 a protective tariff that was adequate, why was it necessary for my right hon. friend to ask this Parliament to pass a motion in favour of adequate protection?

Mr. MORPHY: Simply a phrase.

Mr. EMMERSON: I find that my hon. friend indulges in too many phrases, meaningless though they may be.

Mr. MORPHY: Simply a pretext.

Mr. EMMERSON: Yes, there have been too many pretexts by my hon. friend's party when in opposition, and there are more pretexts to-day.

Mr. MORPHY: There were more labour disturbances during the regime of my hon. friends opposite in 1906 and 1907 than there have been since. Nobody but the

Opposition is complaining in the country to-day.

Mr. EMMERSON: My hon. friend can console himself with that thought. He will have great difficulty in convincing the people on that point.

Mr. MORPHY: It will be quite easy.

Mr. EMMERSON: My hon. friend in stating to the House that the word 'adequate' was merely a pretext is certainly giving an illustration of the meaning of politics as it has been defined by one very eminent authority. That definition of protection is as follows:

> Politics in practice too often means all for party, nothing for the people; all for policy, nothing for principle; all for office, nothing for honour; all for power, nothing for progress.

Politics is the science of exigencies with this Government. My hon. friend admits on behalf of his party that that was the kind of politics in which he and his friends were indulging on that occasion. I do not wish, however, to travel from the point. If we have had the National Policy during all these years, why is it that my hon. friends opposite took this action to have it changed? Why was it that Sir Charles Tupper, at the very inception of the policy characterized it as a tariff that would do incalculable injury to Canada? It burst in a measure the shackles which bound the trade of Canada. By reason of placing on the free list so many articles which entered into the industrial life of Canada, it enabled manufacturing interests to advance and to prosper. It gave employment to the many thousands who were obliged to be the wage earners of the country, and it gave an impetus to our agricultural interests, to our immigration that has certainly never been paralleled in the history of Canada. My hon. friend knows that taxing is an easy business; but, as Edmund Burke once said: Taxing is an easy business:

10 p.m.

> Any projector can contrive new impositions; any bungler can add to the old; but is it altogether wise to have no other bounds to your impositions than the patience of those who are to bear them?

The idea put forward in the motion relating to adequate protection was one which meant placing additional burdens upon the people of the country. The reason it was not accepted by this House and that it was not favoured by the people of the country at the time was because there was an abounding prosperity. Trade was advancing by leaps and bounds. In every branch of industry in every department of commercial activity, there was action, success and reward. The people did not approve of any suggestion that meant what is so easy of accomplishment under certain circumstances, the imposition of additional taxation. It is not wise to have your imposts up to the limit of the patience of those who bear the burdens. I call attention to the fact that the tariff of 1879 admitted certain articles free upon action to be taken by the Congress of the United States. That clause of the tariff of 1879 is already upon 'Hansard' and I will not repeat it. I merely say that the Finance Minister, while he has been very attentive to the interests of the manufacturers and to certain other interests, had not a word to say in all his splendid address about the burdens of the masses or the increased cost of living. He was silent on that subject—there was not a word with respect to the burdens which the people to-day are bearing. It is all very well for us to try to ignore as of very little importance the fact that the cost of living is increasing month by month, as official figures prove. It is true, this increase in the cost of living has taken place in all countries, but that increase is not so great in Great Britain as in protectionist countries, and nowhere has that increase been so great as in Canada.

Hon. gentlemen opposite say: You were content under the tariff which existed when you were in power, but now because you are in Opposition you want it changed. We all realize that time brings changes, that new conditions arise year by year and month by month. When the tariff was amended in 1907, trusts and combines were not in evidence to the extent they are to-day. I am one of those who at times have felt that the Liberal party has not advanced as it should have advanced with respect to that question. I am free to admit that. But I believe that the Liberal party stands to-day ready to advance, and it is because of that that I am ready to pat them on the back. The trusts and combines have grown in a remarkable degree even since the introduction of the Fielding tariff in 1897. Changes and modifications were made in that tariff, the greatest in 1907, and had the Government of Sir Wilfrid Laurier succeeded at the polls in 1911, still greater

changes would have been made. But these trusts and combines have grown to such enormous proportions that the people realize their existence and power.

Mr. MORPHY: Can the hon. gentleman name some of them?

Mr. EMMERSON: I could name many. I have a list of them somewhere here, but it is hardly worth while to read it. These trusts are growing year by year; there is the coal trust, the steel trust, the millers' trust, the canners' trust—there is a trust in almost every direction. I believe that protective tariffs stimulate the growth of trusts in Canada. The very object of protective tariffs is to protect the industries of the country. And for a time it may succeed, while competition can be maintained. But the time comes when these men are not content merely with an adequate profit; their greed—for they are but human—urges them forward to seek more and more at the expense of the consumer. The time has come in Canada, in my judgment, when some change should be made to prevent the coming together of these interests. If the tariff of to-day helps these trusts and combines to wring undue profits out of the people, then, though as a Liberal I for years supported the tariff, I say, for one, let us eliminate from the tariff every vestige of protection.

Mr. MORPHY: The hon. gentleman is an out-and-out free trader.

Mr. EMMERSON: I am an out-and-out free trader, and I wish circumstances permitted the adoption of free trade. I am to-day where I have always been. This Canadian Confederation was launched on the basis of indirect taxation; I quite understand that, and we have continued that policy. But if you could change the policy of indirect taxation and adopt a direct tax, then indeed you could have free trade. Speaking for myself, if a plan were proposed which would actually bring that about, I would hold up both hands for it.

The Minister of Finance dealt with the steel industry, and took some action with respect to agricultural implements. There is one subject to which I invited his attention a short time ago which he has apparently ignored. The agriculturists of eastern Canada are not interested so much in the question of agricultural implements as presented to this Parliament as they are interested in another phase of the question of free raw materials for their production. I asked the Minister of Finance some few weeks ago to consider the question of fertilizers and basic slag. At that time I brought to his notice and to the notice of the House the conditions in eastern Canada with respect to basic slag and its use as a fertilizer. I believe in the principle of free agricultural implements for the agriculturist because they are the agriculturist's raw material, and fertilizers should be made free because they are the raw material which assists him in producing his products. I do not wish to repeat the argument that I attempted to bring before the House on that occasion, but I want to bring to your notice, Sir, and to the notice of the minister that in contrast with the treatment accorded by the Government to the big interests, the organized farmers have not been treated with that respect which is their due. A single manufacturer can have the duty on a certain article increased; as instance the case of this gentleman from Cape Breton who, in secret, secured by a stroke of the pen an order of the Customs Board imposing a duty upon basic slag, a fertilizer in very general use by the agriculturists and horticulturists of the eastern provinces. I have here a letter from a gentleman whom I do not personally know, but who is, I think, the secretary of the Nova Scotia Fruit Growers' Association. In a letter addressed to me in March of this year, he said, among other things:

> I thought I would write you direct to place before you some facts as to how this ruling of the customs board will effect the fruit growers of the Annapolis valley.
>
> Within recent years basic slag has become one of the most important fertilizers in the growing of apples. The only plant food it contains is phosphoric acid, of which it has from twelve to fourteen per cent available, but in addition to this it contains from forty to sixty per cent of lime, and lime while not a direct fertilizer has a great effect on the dormant plant food in the soil, rendering it more available. On account of this lime slag as a source of phosphoric acid is much superior to and is rapidly taking the place of acid phosphate in orchards, and in growing grain and hay crops. When apple growing on a commercial scale was first started in this valley, the fruit-growers depended chiefly on their stables for fertilizer, and a man was discouraged from raising more orchard than he could manure in that way. Within the last fifteen years, however, mixed farming has declined, and the farmer who found himself with too many irons in the fire, has stood by the orchard and dropped the less profitable and less laborious stock farming, but in doing this he finds he has to look elsewhere for plant food to feed his trees, and thousands of tons of commercial fertilizer

are imported every spring at a cost of hundreds of thousands of dollars.

With the great increase in apple orchards all over America we must expect in a few years a vastly increased production, and optimistic as I would like to feel, it forced upon me, however, in the light of this fact that the country that will survive in this apple-growing competition, is the country that can produce them the cheapest. Now Nova Scotia with her cheap lands, her nearness to the markets of the world, her water transportation, is wonderfully situated in this respect, but anything like unfair prices on fertilizers and spraying materials, places a serious handicap on these advantages.

In the Annapolis valley we virtually manufacture apples and use commercial fertilizers as a raw material. Why should we not be placed on the same basis as other manufacturers and have our raw material free? It is vastly more important to build up the business of fruit-growing in Nova Scotia than it is the business of manufacturing fertilizers. The Cross Fertilizer Company in Sydney have a complete monopoly, as slag for fertilizer is not made anywhere else in Canada. Slag, as every one knows, is a by-product in the manufacture of steel, and until two years ago was thrown into the harbour at Sydney as utterly worthless. The process of grinding is inexpensive, and everything above the cost of grinding is clear profit.

I will leave to any one's common sense the fairness of taxing the fruit growers of this valley to put an extra profit in the pocket of the stockholders of the Cross Fertilizer Company. On account of our wet, cold springs, our orchards are especially susceptible to the disease of apple scab or black spot. To protect them all orchards must be sprayed three or four times every summer with some fungicide. This spraying is now done by large power machines costing from $250 to $300, and if I am not mistaken the duty on them is thirty per cent. Hundreds of these machines are now in use in the valley, one firm last spring selling forty at a cost of $265 a piece.

But I could go on and write pages on what I consider the unfairness of the tariff laws as regards farmers and fruit-growers.

Mr. LALOR: What is it worth a ton?

Mr. EMMERSON: It ranges from $25 to $40 a ton; a good deal depends upon its quality. By reason of the change brought about by the order of the Customs Board, an increased price per ton is now demanded of the farmers, and they are compelled to pay it.

Mr. BLAIN: Does my hon. friend give the writer's name?

Mr. EMMERSON: His name is Mr. Manning Ells, secretary of the Fruit Growers' Association of Nova Scotia, a gentleman who voluntarily wrote to me simply because I brought the matter to the notice of the House.

There are different ways of reducing the cost of living and helping the farmer, and I want to note the difference between the methods adopted by Germany on the one hand and those adopted by Canada on the other. In Germany the government grants a rebate on freight paid on basic slag. In Canada freights are increased to the highest amount the goods can stand; that was done by the Intercolonial only a few months ago. In Germany Professor Wagner, Privy Councillor and Director of the Research Station said:

> It would be exceedingly valuable if we could secure a soluble basic phosphate, which we have seen almost equals superphosphate in its action, for the German market, but I do not believe that we can succeed in obtaining this, for, as far as I am informed, the high value of this slag has been recognized some time in England and the demand for it there must be already greater than the production.
>
> We can, nevertheless, note as interesting to us, that Englishmen produce such an exceptionally quick and sure acting slag, and we must set our chemists and technical men to investigate, as far as possible, if the solubility of the Thomas slag obtained in the German works cannot, by some modification of the process be raised so as to equal that of the soluble basic phosphate.
>
> In Canada, 10 per cent duty is imposed.
>
> In England, the farmers agitate for a regulation to prohibit the exportation of basic slag, and their journal, the Mark Lane Express states:
>
> It is a pity such good fertilizing material should leave the country.
>
> In Canada, the cost is increased by imposing a duty and raising the freight rates.

Which, I ask you, is the more effective? This basic slag is of extreme importance to the people of eastern Canada, particularly to the horticulturists. I know that in Westmorland the farmers are very much agitated by reason of the action of the Government in imposing this duty. They are placed at the mercy of one concern, a concern, taking their own representation, that has only $140,000 invested, and which does not give employment to very many men. That one concern, through its manager, can quietly and slyly approach the Government of Canada and secure, simply by an order of the Customs Board, a change in the tariff which imposes on eastern farmers and horticulturists an additional burden of at least $1.25 or $1.50 a ton.

Mr. MORPHY: Does the hon. gentleman say that the price has advanced that much this season?

Mr. EMMERSON: I am so informed.

Mr. MORPHY. You vouch for that?

Mr. EMMERSON: Yes, it is vouched for to me by very responsible people and by men who would have no object to serve in attempting to mislead me in the information. This manager of one firm can come to

the Government and bring about such results; and yet the farmers, even although they come here by thousands, cannot have their wishes acceded to in the matter of free wheat. It shows a condition of things which should not prevail. That is one feature of the tariff that should have been remedied and I am surprised that the Finance Minister did not take it into consideration. He might have had brought to his notice the conditions which prevail. He was disposed to do something for the western farmers in the matter of a certain class of agricultural implements; but here is the secretary of this horticultural society stating that they have to pay thirty per cent on all the machinery necessary to be used in connection with their orchards. They are obliged, under the tariff as it stands, to pay a high duty imposed upon all the different classes of fertilizers that are brought into this country. These are a necessity for the farmer. Of what use is it for my hon. friend the Minister of Agriculture to send his agents and officials from his Department all over the country to educate the farmer or to give grants to educational institutions and educational purposes in connection with agriculture, if he afterwards places burdens upon those who would wish to put into execution the education which they secured by reason of his assistance? With the one hand he is giving some little assistance in the way of education, and with the other he is imposing barriers and obstacles in the way of those men utilizing successfully and profitably the education they have secured by reason of the grants made by the Government. I think it is a matter which my hon. friend the Minister of Agriculture should bring home to the attention of the Minister of Finance and his colleagues in the Government in order that this injustice may be remedied. I am not bringing this to the attention of the House merely as a political question. It is a business proposition which should have had the consideration of the Government and their supporters from the Maritime provinces at least. I am surprised that the members from the Annapolis valley, the hon. member from Annapolis county, the hon. member from the county of Kings and the hon. members from Digby and Hants, the citizens of all these counties are very largely interested in horticultural and other agricultural interests, have not urged this matter which is of deep import to their constituents.

There is another question which I would like to call particularly to the notice of the Minister of Finance. A change was made in connection with this tariff schedule relating to building stone and it is a change that is very detrimental, in my judgment, to the quarrying interests of eastern, central and indeed of western Canada. It is a change that was made solely in the interests of the contractors on large public buildings throughout Canada, particularly those who are constructing large governmental buildings in this city and other cities——

Mr. BURRELL: Is it no advantage to the stone cutters?

Mr. EMMERSON: —and not particularly, in my judgment, beneficial to the stone cutters, certainly not beneficial to any large percentage of them. My hon. friend must remember that there are thousands of stone cutters engaged in quarrying in Canada. The stone cutters who are employed in certain cities are not of the same number, and while it may benefit some particular men in that business it will not be of such great advantage to them as it will be to the contractors. This Government is condemned as a previous Government was condemned, because it has permitted, by the action of its architect, the use of Ohio and Indiana stone in the construction of public buildings built under the authority of Parliament.

That has been done everywhere. It is being done to a remarkable degree under this Government. It was being done by the Grand Trunk and the Grand Trunk Pacific railway, and there were complaints made to Parliament with respect to it a few years ago. The new station at Ottawa, built by the Grand Trunk, the Chateau Laurier and other buildings of a like character are examples. They were all built of Ohio and Indiana stone to the injury of the stone quarry interests of Canada. Here is a statement that was made on behalf of the Canadian building stone quarries. I will read it so that it may go on 'Hansard':

> The budget speech at Ottawa proposed to protect the stone cutting industry of Canada by increasing the duty on imported manufactured stone, making it fifteen cents per hundred pounds on stone sawn on four sides, and forty-five cents per hundred pounds on further manufactured stone. That will allow stone sawn on two sides (the only way in which it is imported as 'sawn stone') to be brought in at the same rate as 'rough quarry blocks', or practically free, and is evidently worded in the interests of the contractors only, and it will be a great injury to Canadian quarries, as 'stone sawn on two sides' pays a higher duty under the old tariff. Most Canadian quarries are now provided with sawing machinery and can provide stones sawn on

two sides or four sides, but contractors order it either in quarry blocks or sawn on two sides only. To ask for this change shows a very ungenerous disposition on the part of the contractors, as, they want high protection for the stone dressing industry but they want to import stone practically free of duty.

If allowed, this change will place the Canadian quarries completely at the mercy of the contractors. The country generally will be fully as favourable toward a moderate measure of protection to the quarrying industry, and the development of our great natural resources in this line, as to so heavily protecting the stone cutting business, working almost wholly on imported stone.

Canadian quarries should also share in this protection as suggested hereunder.

Rough rubble stone for rip-rap, breakwaters, etc., 5 cents per hundred pounds.

Rough blocks, not sawn or manufactured, 10 cents per hundred pounds.

Sawn on one or two sides, 20 cents per hundred pounds.

Further manufactured, 40 cents per hundred pounds.

Surely all members of Parliament, regardless of party, will favour the development of Canada's great natural wealth in stone. At present nearly all the building stone used in Canada is imported from the United States.

One reason for this preference is low freight rates from the quarries of Ohio and Indiana to the centres of population in Canada; another is that the imported stones are softer and cost less to cut and dress than the Canadian stone, but they are not nearly as strong and durable and give nothing like the warmth and wealth of colouring and texture the native stone offers. Nova Scotia and New Brunswick offer a great variety of sand stones and granites. Quebec has limestone, marble and granite. Ontario has sand stone, limestone and granite. Manitoba offers a particularly beautiful and durable limestone, and the great western provinces have rich sand stones, marbles and granites in great variety. One of our New Brunswick sandstones, tested at the McGill laboratories, was subjected to heat over 1,500 degrees F. for thirty minutes, plunged into cold water and then showed a crushing strength of over 4,000 pounds per square inch, which is stronger than concrete. This stone is similar in colour and texture to that used in the only building that went through the worst of the San Fransisco fire and is standing and occupied to-day, which shows that sand stones are as nearly fire proof as any material used. Canadian sand stones generally weigh more per cubic foot than the United States stones. The Ohio stones weigh 140 pounds per cubic foot and the Canadian sand stones average about 155 pounds, which, of course, makes them more durable but a little harder to cut. Heavy and expensive machinery is necessary to equip a quarry and usually a heavy outlay is necessary for rail connection, and some encouragement is necessary to warrant this expenditure in developing our natural building stone industry in the face of the great developments across the line. The fact that the weekly or monthly outlay at quarries is nearly all for wages should be considered, as it shows that the percentage for wages is larger than usual.

That is one of the difficulties of protective tariffs. Here is a change made in the tariff with respect to building stone. By simply changing a few words and saying that stone sawn on two sides shall come in practically on a free basis you give an advantage to the stone quarrymen of Ohio and to the contractors who are interested in patronizing the Ohio quarries.

Mr. BURRELL: My hon. friend is advocating protection.

Mr. EMMERSON: I am not advocating it, but I say this is one of the difficulties of protection. You had a tariff which protected stone sawn on two sides, and which stone was subject to a certain duty. Now you change that and you place these other parties interested in the business at a very great disadvantage, and you simply favour the Government contractors and the few men whom they may employ in connection with the construction of buildings to the disadvantage of the money invested in the quarries of eastern, central and western Canada and to the detriment of the men engaged as quarrymen and stonecutters at these quarries. I have brought this to the notice of the House because the parties wrote to me in connection with it. I think that by tinkering in this way to suit certain particular interests you are not working to the advantage of the general interests of Canada.

I believe that every tariff should be framed in the open. Let there be light with respect to these matters. In the case of basic slag, the order which resulted in the imposition of taxation on the farmers of eastern Canada was passed in secret and by one man. Every business question comes back sooner or later to the question of the tariff. It cannot be avoided. Under our system we must have a tariff, but it should be framed in the open. I took occasion formerly to call attention to the dangers of Orders in Council and to the dangers incident to the passage of customs orders because it is all done in secret. The action taken by the former Government in consulting the people before framing the tariff of 1897 was commended at the time, and was worthy of commendation. It was an example that ought to have been followed by this Government. But that has not been done. In the case of the building stone question, had the matter been submitted to the quarry interests instead of to the contractors, a different result might have perhaps been secured. They had in the United States in the year 1828 a tariff which was known as a tariff of abomination. It was so called because it had no beginning, no end and no plan. It certainly had no traceable plan.

There was a general scramble, and everyone who had scrambled hard enough had to be taken care of in the schedule. Hence, it was not an equitable system, but it fully exemplified that definition of protection which characterized it as

> at best an endless screw, and you never know when you have done with it. By protecting one industry you directly or indirectly hurt all others and have therefor to protect them too. By so doing you again damage the industry that you first protected and have to compensate it, but this compensation reacts as before on all other trades, and entitles them to redress, and so on ad infinitum.

The effect of protection in every country and upon every class is to weaken its will and narrow its enterprise; it teaches the classes to look outside of themselves. We have as a result the constant applications to the Government and to Parliament for endowments, and bonuses, and subsidies. We need not go outside of Canada for an illustration of this. It is equally evident in other countries, and particularly in high protectionist countries like Germany, where they have all kinds of bonuses, and where the German Government is kept constantly subsidizing and bonusing industries to the great detriment of the general interests of the country, and particularly the labouring classes. The so-called tariff of abominations in the United States had the merit of being a free-for-all, go-as-you-please kind of thing. But not so the course pursued by the Canadian Government, where special interests get their innings, and the great masses of the people are not consulted through their representatives even. The secret arangement system is injurious. It is devised in the interest of what we term the big interests; and I say nothing offensive of these big interests as long as they are made big by reason of their own competition and without stimulus in the nature of protection, or through combinations and trusts. These secret arrangements are generally the result of the influence exercised by the big interests. How many members of this House understand the changes made in the schedules of the tariff? We heard the Minister of Finance speaking of the changes in the steel schedule, and he told us the number of pounds to the yard, and that up to a certain number there would be a certain duty, and beyond a certain limit there would be a certain other duty; but who advised the Minister of Finance as to all this. No doubt the Minister of Finance has had the benefit of the advice of those interested in that business, but the great consuming classes of Canada are not possessed of the technical knowledge which enables them to understand the effect of these changes. It would be against etiquette, I suppose, for the Minister of Finance to state who suggested these changes. Nowadays every expedient and device of secrecy is brought into use to keep the public unaware of the argument of high protectionists, ignorant of the facts which refute them, and uninformed of the intention of the promoters of protection. There is a will-o'-the-wisp known as the cost of production, which is accepted as a basis for tariffs, but it is elusive, changeable, and nowhere exists as a scientific demonstrable fact.

This country and the United States are familiar with the expert lobbyist whose business it is to deal with subjects of this kind, and they have been seen here for many years, but particularly are they in evidence during the present session, in anticipation of securing something in favour of this or that special interest. The Minister of Finance told us he had the benefit of information from the agricultural implement manufacturers, and he cited the cost of production, but he could not explain to the member for Assiniboia as to the watered stock. There has been a very marked change in the old order of things. There has been destruction of domestic competition by a combination of home rivals. The infant industry cry once prevailed, but the demands of to-day have far transcended that, and I shall not take up the time of the House to comment upon how far that idea has been transcended. It is argued by the interests that a young country wants protection in order to establish industries, and that an old country wants protection continued, because to lessen the protection would affect vested interests, and so: Protection once established, always established. Sometimes after the establishment of a protective tariff, there are symptoms of a desire for a change, by even those who created that tariff. That was well illustrated by the Conservative Government in 1894 when Sir John Thompson wanted to lop off the mouldering branches. Those who are the strongest in favour of a protective system realize that in the practical working of it an injustice is done here and there. Protection to be effective, to be what it is designed to be, namely, to shut out competition from other countries, should be widespread, and practically prohibitive. It is not; and the very fact that our tariff

to-day works inequalities and does injury here and there is recognized by everyone, even by those who favour the principle of protection. The hon. Minister of Finance openly avows his adherence to a policy of restriction and monopoly. What is the present tariff policy of the hon. Minister of Finance as announced by himself? It is a doctrine entirely new and different from that propounded by Sir Leonard Tilley in 1879. The new doctrine of the protectionist is that the tariff should represent the difference between the cost of production in Canada and the cost of production in other countries, plus a reasonable profit to those who are engaged in the industry. The new part is 'plus a reasonable profit.' Who is to judge as to what that reasonable profit shall be? That policy openly guarantees profits to the men who come and ask favours of the Government. As a result of this, men, secure from foreign competition, have joined together in great combinations. They have felt the taste of blood and they want more. By reason of these combinations the cost of living has increased and complaints are heard from the mass of the people. Who has not heard of the cement trust? Even this Government heard of it and took action at a certain time to alleviate the damage that resulted. I have mentioned the other combinations. The industries of a certain class form a combination and, of course, each combination must have a compensation which will satisfy it and remove its competitors. The result is that the combination becomes enormous with a very large capitalization upon which dividends must be paid. Somebody must pay for these dividends, and that somebody is the consumer. While I am not in favour of protection, I say frankly and fairly that if you could have a moderate protection without the possibility of combines, many of the evils incident to protection would be eliminated. The great harm that has resulted is by reason of the combinations that have thus been formed. When prices are falling, what do these combinations do? They reduce hours of labour; they reduce production; they reduce wages; they throw men out of employment to do what? To keep the prices up in spite of their lack of efficiency, that has been the operation of trusts and combines in the United States and it is the operation and result of trusts and combines in Canada to-day. The great evil of protection is that it permits; it stimulates this result. We hear much of depression, of men out of employment, of slack-

11 p.m. of trade, of mills being closed down, and they are being closed down. In eastern Canada in the section of the country from which I come, in Nova Scotia during the past winter, the wages have been reduced, the number of employees lessened, and action taken, all in order that production may be lessened and prices kept up.

Mr. BLAIN: Is my hon. friend in favour of taking protection off cement now?

Mr. EMMERSON: My hon. friend asks me if I am in favour of taking the protection off this thing or that thing. I say, you can not favour the one and discriminate against the other. If my hon. friend is in favour of withdrawing protection from everything, in the sense that it must be governed by a revenue tariff, I will heartily join with him in that true sense. There may have been a time when the tariff did not raise prices, but that time is past. That time has been taken advantage of by the great combines, to give them control of prices and wages. As has already been stated by my hon. friend from Rouville (Mr. Lemieux), to those who demand free food, free wheat, and free agricultural implements, the answer is made that that means free trade. I would like to ask the process of reasoning that would bring that about.

Mr. LEMIEUX: For election purposes.

Mr. BLAIN: How does it happen that agricultural implements are sold the cheapest to the farmers in countries that have the highest protection?

Mr. EMMERSON: I am not aware that that is the case.

Mr. BLAIN: It is the case.

Mr. EMMERSON: If that be true, there may be many causes. What is the object of protection? It is to bring the level of prices up so that the manufacturers may be able to manufacture at a profit as against the foreign manufacturers and the importation of foreign goods? It must follow, as the night the day, that if you impose taxation for that purpose or for any other purpose, there must be an increase of the cost of that particular article.

Mr. BLAIN: I say not.

Mr. EMMERSON: When you buy an imported article you pay part of the price into the revenue of the Dominion in the form of customs duty; but as a rule what you buy

is not the imported but the domestic article, the price of which the manufacturer has been able to raise to a point equal to or higher than the price of the foreign article plus the duty. I think that is an axiomatic statement. Who gets the tax then? Not the Government surely, but the manufacturer.

Mr. STEVENS: The wage earner gets the advantage.

Mr. EMMERSON: My hon. friend had better confine himself to the Hindu. The idea to which he gives expression that protection increases wages has become absurd beyond the point of absurdity.

Mr. STEVENS: It can be demonstrated.

Mr. EMMERSON: It can be demonstrated that the hon. gentleman is entirely wrong. However, I will listen to him, when he speaks, with close attention and all patience. It is a confession of the inability of the Canadian manufacturer to compete for him to ask for these privileges. We are asked to pay him a price from 15 per cent to 35 per cent or more higher than we pay the foreign manufacturer. That is how this colossal infant, this bearded infant, treats the people to-day. He started out with the idea that he should be protected in his infancy, but now after many years he is apparently the same infant, feeding from the same nursing-bottle. Such a policy has become the means of fostering the growth of a number of groups of industries at the expense of the economic vitality of the country. This idea was very splendidly expressed by Mr. Woodrow Wilson in his appeals to the American people before the last presidential election.

The Liberal party constitutes practically half the population of Canada, and yet these people are being denounced as disloyal because they advocate a reduction of taxation, because they favour a policy which means free food to the people and free raw material to the agriculturists. I think it might well be said that, being half the population and engaged in all classes of enterprises, they must have the same interest in the prosperity of the country as have those who favour a different policy. One writer, speaking of these people, says that they cannot commit economic murder without committing economic suicide. As a party, we do not propose to destroy the foundation of our own economic structure. One very foolish writer actually said that the policy of free food and the reduction of taxation 'will blast the bedrock of our national prosperity'. Was a more absurd statement than that ever written?

We used to hear a good deal about the slaughter market. When it was proposed to have a heavy duty on boots and shoes, it was said we must have such a duty because unless the Canadian manufacturer has the protection, the country will be invaded by the American manufacturer who will slaughter this market while he enjoys the benefit of protection in his own market by reason of the high tariff of the United States. That cry does not apply to-day. The United States admits free the boots and shoes manufactured in Canada. As a matter of fact, Canadian shoe manufacturers are to-day exploiting the markets of the United States, and doing it successfully, in competition with their American rivals. Upon what principle, I ask, should they claim a monopoly of the Canadian market when the American market is open to them?

How many have allowed themselves for so long to be imposed upon by the claim that the protective tariff is for the benefit of the workingman in the presence of so many facts to the contrary? The audacity, the impudence of the claim is what amazes one in the face of the fact that the workingmen of this country who are in unprotected industries are better paid than those who are in protected industries. I am free to admit that there cannot be free trade—(I wish in all interests there could be)—so long as the indirect instead of the direct method of taxation prevails as arranged at the dawn of Confederation. But we can ameliorate wrongs, remove burdens, restrict special privileges, curb big interests, nourish freedom and liberty and sever the bonds of the masses. We can crush out the processes of favouritism granted at the expense of the masses. We can destroy the weeds to give room and air and light to nourish the plant so essential to the lives of our great consuming population, the toiling masses, that they may grow and thrive to the status of a prosperous, contented and happy people. Lop the mouldering branches? Aye, and cut and dig up the dead root of privilege which bars nutriment from the other the life-giving roots. In the words of a great tariff reformer:

> The policy of freeing the country from a restricted tariff will so variegate and multiply the undertakings in the country that there will be a wider market and a greater competition for labour; it will let the sun shine through the clouds again as once it shone on the free,

independent, unpatronized intelligence of a great people.

Industries have become cowardly and dependent upon Government aid. Apparently a curse is upon them as witness the constant applications to the Government for additional privileges.

'We should make our tariffs not like those who dole out favours, but like those who serve a nation,' were the words of a great man, and I commend them to the consideration of this House and of the people of Canada, whose interests we are called upon to safeguard.

Mr. JAMES MORRIS (Chateauguay): Mr. Speaker, in rising for the first time to ask the attention of this House, it is but natural that I should feel that hesitation and, perhaps, nervousness, that is common to most persons who occupy a position similar to the one which I occupy to-night. However, I do not intend to go into the matters under debate at any great length, as I do not wish to inflict upon the House everything that I would have to say with regard to them. The question that is before the House has been discussed by some of the best minds that our country produces, and I do not think that any remarks which I may add to theirs will educate the members of this House or the people of the country. I will simply content myself with giving a few humble opinions as to the facts and principles laid down by the Minister of Finance in his Budget speech.

In the first place, I wish to convey to the Minister of Finance not only my own congratulations, but also the congratulations of a number of my most intelligent electors who have read his speech and are convinced that we have to-day at the head of affairs men who are willing and anxious to legislate according to the requirements of our country. There are in my county electors as intelligent, perhaps, as there are in the majority of rural districts and I have it direct from them that they have absolute confidence in the future of Canada when its affairs are conducted by such men as we have in the persons of our Prime Minister and the members of his Cabinet.

Mr. Speaker, I represent a rural constituency, and I have heard so much about the farmers since I came here that I have reason to be proud that I represent a rural constituency. The conditions in my county are very different from what they are in the rural constituencies about which we have heard so much in the course of this debate. As you all know, I have the honour to represent the county of Chateauguay, and I do not think I am saying too much when I say that that county ranks among the foremost in the province of Quebec, perhaps in the whole Dominion. There was a time when the people of that county were not in the prosperous condition that they are in to-day. It is within my own recollection, Sir, when the people of that county were selling their produce for less than it cost them to produce it. I have seen the time when the people in the county of Chateauguay were selling their hay for less than it really cost them to harvest it.

Mr. PROULX: That was before 1896.

Mr. MORRIS: Not fifteen years ago, when the late Government was in power, those conditions prevailed in the county which I represent. I am proud to say that the electors of Chateauguay did not go begging to this or to any other Government. They got down to work; they plodded, and to-day they occupy a position that to me and to them is an honourable one. How have they done it? What has brought that about? They simply waited quietly until the policy laid down by the Conservative party would have its due and proper effect. They realized that great bodies move slowly, and that it would take time for that policy to have the effects which we are feeling to-day, and which, as our friends opposite know, do exist at the present time. These effects can be attributed to the beneficial operation of a protective policy. To-day those men realize that they owe their present condition to the policy of the Conservative party, under the exercise of which we have built up a home market. We have near us to-day the great market of Montreal, which is equal if not in advance of any in this great Dominion. We realize that had we not followed the policy that was laid down in 1879 by the Conservative party, that city would not be the city that it is to-day, and the farmers of my county would not have the market at their door which they have at the present time. The farmers of my locality understand that many products cannot be shipped abroad, and they have the market for those products at their very door. I feel satisfied in saying that they give credit to the Conservative party for having brought about those conditions.

From the arguments to which we have listened for the last couple of days, one

would almost be led to think that there was but one class of people in this country worthy of the consideration of this House, that is the farmers of the West. I have a fellow feeling with the farmers, I am a farmer myself; but I am of the impression that there is a number of so-called farmers in our western country, perhaps a large percentage of the wheat growers of the West, who do not merit the title of farmer. It is my impression, although I have never been there and speak only from what I have been told by men of experience, that a large percentage of the wheat growers of the West are not farmers at all but simply men who are exploiting our fertile western land. In due course of time the actual farmer will have to go in and build up, by a proper system of farming, the lands that are today being depleted or exhausted by a continuation of the one crop. For that reason I say that we are perhaps giving too much attention to what are called the farmers of the West. As I have said there are people in this country engaged in the business of farming. They have my sympathy, they should have the support and I am satisfied will have the support of this Government; but I maintain that the agitation that has been made before this House is not on behalf of the actual farmers but is in the interests of men who are exploiting our fertile fields of the Northwest. For that reason I think that it behooves this Government to be careful as to how they deal with this question of free wheat. In the early part of this session an hon. member read a paper on the floor of this House stating that the Canadian producers, or in other words the Canadian flour, was successfully competing in the markets of China with the products of our American neighbours. To my mind that gives a clue to the very great desire that our neighbours to the south have to get our wheat. What will be the result to the farmers of our western country? Our American neighbours are a far-sighted people. We know that from the fact that two years ago they offered us reciprocity. Fortunately the people of Canada were wise enough to see through that offer and were not ready to become an adjunct of the United States.

It appears to me that we would be doing an injury to the farmers of the West if we should allow our No. 1 hard wheat to go into the mills of the United States. The object is plain to me, they wish simply to raise the standard of their flour and eventually drive the Canadian competitor out of the foreign market. For that reason I would strongly urge this Government to be careful in regard to the question of free wheat. We have heard so much about that question and men have entertained such extreme views on it that I shall not pursue it further.

Another question that has not been dealt with to the same extent as I expected it would have been, is the rapid increase in the price of beef on the American side of the line. When I speak along this line I speak from actual knowledge and experience. As you know, the Montreal and Dundee railway runs through my county almost from one end to the other and runs pretty nearly parallel with the provincial boundary. I know for a fact that three years ago the bulk of the beef cattle that were taken to the market of Montreal were smuggled into this country from the state of New York and sent to Montreal by the railroad that I have spoken of. In one year's time what has brought about the changed condition of affairs? That question is more than I can solve, but it certainly was not a natural growth. The rapid increase in the price of beef was due to some cause that does not appear on the surface, certainly not a natural growth. I believe it has its sequel in the movement of troops and warships that has been taking place in the last few days into Mexican waters. It is my conviction that the almost unreasonable demand for beef cattle in this country arose from the demand for naval and military supplies. They were taken up regardless of quality, regardless of condition, regardless of disease. I know for a fact that we had diseased cattle in our community that were taken and we were told they were for canning purposes. I am firmly of the conviction that the movement of troops down into Mexican waters is the cause of the great demand for our beef for export to the United States; it was required to prepare our American neighbours for what will possibly take place within the next few months.

With regard to the high cost of living, I have only to say that I marvel at some of the arguments that have been adduced. I do not think that we have yet had any arguments advanced that prove to us that this or any other Government could solve that problem. In my opinion they will simply have to do as the farmers do in my county; that is they will have to wait until the conditions change, for then only can a satisfactory solution be arrived at.

It cannot be done by this Government. We are told that the tariff is the cause of the high cost of living. Who are the people who are suffering the most? We hear a great many complaints on behalf of the farmers, but in my opinion it is the labouring classes who are suffering the most from the high cost of living. How could we relieve that situation by abolishing the tariff? These labouring men are dependent upon the factories in our land for their living. Reduce or take off the duties imposed by the tariff now in existence and what will be the result? What would the men who are suffering do? We would have those charitable institutions and bread lines which have been spoken of in Montreal, before next spring. I trust that with the wisdom of the men who are to day at the head of affairs, these questions will regulate themselves and will, in due course of time, be solved.

On motion of Mr. Turgeon, the debate was adjourned.

On motion of Mr. W. T. White, the House adjourned at 11.40 p.m.

Monday, April 20, 1914.

The House met at Three o'clock, the Speaker in the Chair.

APPOINTMENT OF MESSENGER.

Mr. SPEAKER informed the House that he had directed the Clerk of the House to lay upon the table his recommendation and the report to the clerk in connection with the proposed appointment of Mr. Herbert D. Throop as a permanent messenger in the Library of Parliament.

PRIVATE BILL.

FIRST READING.

Bill No. 155, for the relief of Bertha Hetu.—Mr. Oliver.

QUESTIONS.

(Questions answered orally are indicated by an asterisk.)

CAMPERVILLE AND WINNIPEGOSIS MAIL SERVICE.

Mr. CRUISE:

1. What is the name of the contractor for carrying the mails between Camperville and Winnipegosis, Manitoba?
2. When was the contract let and at what rate per year?
3. Were tenders called for? If so, what are the names of the tenderers and the amount of each tender?

[Mr. Morris.]

Mr. PELLETIER:

1 and 2. M. Delaronde has been performing the service temporarily since the first of January last at $520 per annum.

3. Tenders were invited for a permanent contract and the lowest tender has been accepted. The names of the tenderers and the amounts will be given when the contract has been signed.

NORTH RIVERSIDE POSTMASTER.

Mr. SINCLAIR:

1. Has any request been made to the Postmaster General asking for the dismissal of Charles McPherson, postmaster at North Riverside, Guysborough county, N.S.?
2. If so, who made the request?
3. Has an investigation been granted?
4. Will an investigation be granted?
5. If any complaint has been made against this postmaster, what is such complaint?

Mr. PELLETIER: It was represented to the department that the postmaster had been appointed by the late Administration, after its defeat at the general election, and another person was recommended for the office. It was found, on inquiry, that the facts were as stated, and the postmaster's appointment was, therefore, cancelled, and a new appointment made to the postmastership.

GRANTON AND ABERCROMBIE RURAL MAIL SERVICE.

Mr. MACDONALD:

1. Has a petition been received for a rural mail delivery route from New Glasgow through Granton and Abercrombie, Pictou county?
2. If so, has it been granted?

Mr. PELLETIER:

1. Yes.

2. The matter is now under inquiry and until such is completed and the inspector's report is received, the department cannot say whether or not the petition will be granted.

HAGERSVILLE POSTMASTER.

*Mr. LEMIEUX.

1. Has the attention of the Postmaster General been called to the fact that the postmaster at Hagersville is said to be carrying on the business of the Regal Gas Company in the same room as the post Office?
2. If so, what action has been taken?

Mr. PELLETIER:

1. Attention was called to the fact that the office of the Regal Natural Gas Company was located in the rear of the Hagersville post office, and the matter having been referred to the post office inspector, it has been ascertained that the business of the Gas Company is carried on, as stated, in the

rear of the post office, but that no postal business is conducted over the counter which is used for the Gas Company's business, nor is the Gas Company's business transacted through the post office wicket or the money order wicket of the post office; that a partition at one time between the postmaster's private office and the post office proper was taken out some years ago in order to make more standing room in the outside lobby of the office. With reference to the postmaster conducting the business of the Regal Gas Company at his office, the inspector cannot find that the business of the post office is in any way interfered with, and the inspector points out that many postmasters are in the habit of conducting private business in their offices and that this is not objected to so long as the post office business is not interfered with.

2. In view of this report the department decided to take no action in the matter.

RAILWAY FREIGHT RATES.

*Mr. LEMIEUX:

1. Has an application been made by the railway companies for each to appeal, before the Governor in Council, the recent decision rendered by the Railway Commission concerning freight rates?

2. Is it the intention of the Government to grant leave for this appeal?

Mr. FOSTER:

1. No.

2. Answered by No. 1.

STE. ANNE DES MONTS WHARF.

*Mr. LEMIEUX:

1. Has a contract been awarded for the construction of a wharf or landing pier at Ste. Anne des Monts county of Gaspé, Quebec?

2. How many tenders were received?

3. What are the names of the tenderers and the amount of the tender in each case?

4. Who obtained the contract?

Mr. ROGERS:

1. Yes.

2. Three tenders, two regular and one irregular.

3. Paul Raymond, Rimouski, Quebec, $99,785.70; John Burns, Ottawa, $112,000; J. B. Gallibois, Montmagny, $139,500.

4. John Burns. The lowest tender was not accompanied with a security cheque and was subsequently withdrawn.

PATROL BOAT HUDSON.

Mr. EMMERSON:

1. Did the Marine and Fisheries Department operate in its service during the past season the SS. Hudson, in what waters was it employed and what was the nature of the services or work of said steamer?

2. Who were employed as crew thereon during said season, and at what wages respectively?

3. When was this vessel laid up for the winter, where and under whose charge, and at what cost for the winter?

4. Were the members of the crew in whole or in part, discharged when the vessel went into winter quarters, or were they, or any of them retained on half pay during the winter months?

5. Is it the intention of the department to place this vessel in commission during the present or coming season? If so, will the crew or any of them be re-engaged or continued?

Mr. HAZEN:

1. Yes, off the east coast of New Brunswick. She was engaged in patrolling these waters to prevent violation of the fishery laws.

2. Captain C. A. Goodwin, $75 per month; Engineer F. H. Rayworth, $75; Cook A. Arseneau, $60; Deckhand A. Sandel, $50; Deckhand L. Trenholm, $50; Deckhand C. Petipas, $50.

3. On October 10, at Baie Verte, under the charge of Fishery Officer Robert Prescott, after she had been blocked up clear from ice danger. Cost of blocking her up, etc., was $42.

4. All but the captain were discharged. His services were retained until a seized boat, which was taken by the Hudson, had been disposed of. He received half pay for December, but nothing since.

5. Yes, after being converted into a gasolene boat. It has not yet been decided who will comprise the crew.

POULSEN WIRELESS SYSTEM.

Mr. LEMIEUX:

When is the Poulsen wireless system expected to be in operation?

Mr. PELLETIER: Shortly.

ACME AND CARBON MAIL SERVICE.

Mr. BUCHANAN:

1. Who has the contract for carrying the mail between Acme and Carbon, Alberta?

2. Did he secure the contract by tender? If so, how many tenders were received, who were the tenderers and what was the amount of each tender?

3. Does the individual who has the contract carry the mail himself, or did he sublet it? If so, to whom and at what figure?

Mr. PELLETIER:

1. Alexander Hay.

2. The department arranged for a daily service over the whole route in July last. The former contractor asked $1,235.30 per annum, but an offer was made by Mr. Hay at $1,184.62. As this price was considered reasonable for a daily service of forty-

four miles, it was accepted without inviting public tenders.

3. The department is not aware what arrangements the contractor has made for the performance of the service. He is allowed to employ competent couriers, but is fully responsible himself, and is being paid for the service.

GIASSON POST OFFICE.

Mr. LEMIEUX:

1. Did the Postmaster General receive the following petition:

'Province of Quebec,

'The undersigned ratepayers of the parish of St. Aubert beg to inform the Honourable the Postmaster General:

'1. That they are residents of the district where a post office has been recently established bearing the name of Giasson.

'2. That they never asked for the establishment of that post office, which is not needed and rather handicaps the service;

'3. That it is much easier for all the residents to have their mail delivered and sent through the office known as the Church post office, because they often go to the village to transact their business;

'4. That on Sundays they, being obliged to call at that office to get their mail instead of getting it at the Church post office, coming from the religious service, are delayed for their return home, and it interferes at the same time with the circulation;

'For the above reasons, the undersigned beg the Honourable the Postmaster General to abolish that office and give them the advantage of getting their mail at the Church post office, as they have always been doing up to now.

'St. Aubert, March 16, 1914.

'Signed: Cyrias Dubé, Joseph Bernier, Joseph Gagnon, Omer Gagnon, Aubert Fournier, Prudent Daigle, Desiré Daigle, François Daigle, Auguste Dubé, Joseph Dubé, Phileas Dubé, Honoré Robichaud, Wilfrid Robichaud, Xavier Robichaud, François Pelletier, J. B. Pelletier, Amable Pelletier, Octave Picard and Joseph Picard.'

2. What decision has been arrived at by the minister?

Mr. PELLETIER:

1. Yes.

2. Under consideration.

THREE RIVERS POST OFFICE.

Mr. BUREAU:

1. Who are the two men appointed in the Three Rivers post office to replace George Frigon and Auguste Cook?

2. What salary are they getting?

Mr. PELLETIER:

1. Arthur Lamy and Elzear Trempe.

2. $500 a year.

PHILLIPE GELINAS AND RAPHAEL LAJOIE.

*Mr. BUREAU:

1. Were Phillipe Gelinas and Raphael Lajoie, employed on the St, Maurice river in connection with the boom service, granted leave of absence from their work by the Minister of Public Works or any of the officers of the department, between the first and the eighteenth days of March, 1914?

2. If so, on what ground was such leave granted?

Mr. ROGERS: No.

GRAND' MERE SITE.

*Mr. BUREAU:

1. (a) Has the balance of the purchase price of the Grand' Mere site for a public building been paid? If so, when? (b) If not, why not?

2. Does this balance bear interest, or did it bear interest? If so, at what rate?

3. (a) Are there any buildings on this site? (b) If so, are they rented, to whom, at what rent per month, and (c) who are the rents collected by?

4. Have any plans been prepared for this public building? If so, when? If not, why not?

Mr. ROGERS:

1. (a) No; (b) title not yet complete.

2. Yes, at 5 per cent.

3. (a) Yes; (b) yes, to N. Javalos, $40 a month; J. A. Carignan, $12; Dr. Collins, $15, and Wm. Catto, $15; (c) rents collected by Mr. J. H. Desroches.

4. Plans are being prepared.

LAPRAIRIE RETAINING WALL.

Mr. LANCTOT:

1. Has the contract for the retaining wall at Laprairie been signed by Messrs. Duranceau and Poupart?

2. If so, what is the price of such contract?

3. Is the contract awarded at so much for the whole, or at the rate of so much per fathom for the stone and so much per cubic yard of macadam?

4. If so, what is the price per fathom and per cubic yard?

Mr. ROGERS:

1. Yes.

2 and 3. Schedule of prices for material, approximately $70,000.

4. Earth filling, 40 cents per cu. yd.; reinforced concrete, $10 per cu. yd.; stone riprap, $1.50 per sq. yd.; bed road, stone foundation, $1 per sq. yd.; roadway,, broken stone and gravel, 25 cents per sq. yd.

STEAM YACHT GUNHILDE.

Mr. SINCLAIR:

1. Has the steam yacht Gunhilde been purchased by the Government at Victoria, B.C.?

2. If so, from whom was she purchased and what sum was paid for her?

3. When was she built, and where?

4. What is her tonnage?

5. In what service is she to be employed?

Mr. ROGERS:

1. Yes.

2. Mr. W. H. Price for $12,000.
3. Built in 1906 at Quartermaster harbour.
4. 18·39 tons.
5. Quarantine service.

ST. JOHN-IBERVILLE BRIDGE.

Mr. DEMERS:

Is it the intention of the Government to have, this year, a sum of $52,000 revoted, which sum has been voted and revoted at every session for several years, being a subsidy towards the construction of a bridge between the towns of St. John and Iberville, county of St. John and Iberville? If not, why?

Mr. REID: It is not usual to indicate the intention of the Government with respect to items of proposed expenditure before the Estimates are presented to Parliament.

GEORGE MENARD.

Mr. DEMERS:

1. Was Mr. George Ménard dismissed as caretaker of dredge No. 2 on Chambly canal? If so, when?
2. Did his dismissal follow an investigation?
3. At whose request was he dismissed, and for what reason?
4. Has he been replaced? If so, by whom and on whose recommendation?

Mr. REID: George Ménard, caretaker of dredge No. 2, has not been dismissed.

UNOPPOSED AND UNDISCUSSED MOTIONS.

Mr. Lemieux.—For a copy of all claims against the contractor of the Tadoussac wharf, sent to the Department of Public Works, and of all correspondence and papers in connection with same.

Mr. Wm. Chisholm.—For a return showing all the post offices in the several counties in the province of Nova Scotia for which a rent allowance, or a rent, fuel and light allowance is made, specifying the amount of such allowance in each case.

Mr. Turriff.—For a copy of all correspondence in connection with the dismissal of A. C. Cameron, of Fairlight, Saskatchewan, from his position as mail contractor.

Mr. Buchanan.—For a copy of all letters, telegrams, documents, correspondence, agreements of sale, and transfers of title, in connection with ranges 21 and 22 in township 30, west of the fourth meridian.

Mr. Buchanan.—For a copy of the agreement between the Government of Canada and the Canadian Pacific Railway Company at the time the special land grant was made whereby the Canadian Pacific Railway Company were enabled to get their land grant in one block for the purpose of establishing their present irrigation system east of Calgary, province of Alberta.

Mr. E. Lapointe.—For a copy of all documents, correspondence, letters, petitions, reports, etc., exchanged between Dr. C. C. James, Mr. J. C. Chapais and each of the provincial Ministers of Agriculture, in connection with the distribution and the administration of the federal subsidy granted to the provinces for agricultural purposes since the granting of the same.

Mr. Macdonald.—For a copy of all letters, telegrams and other documents relating to the refusal of the Railway Department, or any official of the Intercolonial railway to permit employees of the railway at Moncton to attend the militia camp in the last year.

Mr. Graham.—For a copy of all correspondence between the Minister of Public Works, the Minister of Justice, or any other member of the Government, and any person or persons, relating to the location and erection of the new post office in the village of Eganville, county of Renfrew.

Mr. Lemieux.—For a copy of all papers, petitions, letters and telegrams concerning the change of site of the post office at St. Lazare village, county of Bellechasse, Quebec.

Mr. Macdonald.—For a copy of all letters, papers, contracts, memoranda and other documents relative to the mail contract between Pictou post office and railway station, between the Post Office Department and Peter Foley.

Mr. Macdonald.—For a copy of all letters, papers, tenders and other documents in regard to the purchase of any car for the Intercolonial railway during the years 1912 and 1913.

Mr. Buchanan.—For a copy of all documents, letters, telegrams, papers, Orders in Council and agreements of sale, in connection with the sale by the Government of Canada of the following lands in the railway belt in British Columbia, viz.: townships 23 and 24, range 18; townships 23 and 24, range 19; townships 24 and 25, range 20; townships 25, 26 and 27, range 21; townships 26 and 27, range 22, all west of the fifth meridian.

Mr. Neely.—For a copy of all correspondence, letters, documents or other papers relating to the cancellation of the entry of R. Bannatyne for the northwest ¼ of section 24, township 35, range 18, west of the 2nd meridian.

Mr. Sutherland.—For a return showing:

1. The date of the incorporation of the Canadian National Bureau of Breeding, Limited, with the names, addresses and occupations of the charter members of said company.
2. The amount of capital of the company and the number of shares into which it is divided.
3. The number of shares taken from the commencement of the company up to the date of the return.
4. The amount of calls made on each share, the total amount of calls received, the total amount of calls unpaid, and the total number of shares forfeited.
5. The names, addresses and occupations of the persons who have ceased to be members within the twelve months next preceding, and the number of shares held by each of them.
6. The amount of money paid to said company by the Government in each year since incorporation.

Mr. Sutherland.—For a return showing:

1. The date of the incorporation of the National Live Stock Exchange.
2. The names, addresses and occupations of the charter members of said company.
3. The amount of capital of the company and the number of shares into which it is divided.
4. The number of shares taken from the commencement of the company up to the date of the return.

5. The amount of calls made on each share, the total amount of calls received, the total amount of calls unpaid, and the total number of shares forfeited.

6. The names, addresses and occupations of the persons who have ceased to be members within the twelve months next preceding, and the number of shares held by each of them.

Mr. Lachance.—For a return showing:

1. Whether the rural postal delivery service has been started in the county of Quebec; if so, when and in what parishes of said county?

2. Whether public tenders have been advertised for such service; if so, when, how many were received and from whom, the amount of each tender and what tender was accepted?

3. The price of the accepted tender, the name of the tenderer, the conditions of payment and the length of the contract?

THE BUDGET.

Consideration of the motion of Hon. W. T. White (Minister of Finance) for the House to go into Committee on Ways and Means, resumed from Friday, April 17.

Mr. O. TURGEON (Gloucester): Mr. Speaker, before making any criticism of the Budget Speech delivered by the hon. Minister of Finance (Mr. White) on the 6th day of this month, I wish first of all to congratulate the minister on the sincere and honest way in which he made his exposition of the financial affairs of this country. After years of increasing surpluses and expansion of trade in this country the hon. minister was confronted with months of depression which brought about a decrease in trade and an increase in the public debt, and he is to be congratulated upon not resorting to mathematics to cover up the actual state of affairs. He frankly told the country that the public debt had increased by nearly $20,000,000 during the last fiscal year.

He told us that the fiscal year 1912-13 was characterized by the greatest expansion of trade the Dominion had ever known, and that the revenue in that year had been increased by $32,581,686.09—from $136,108,217.36 in 1911-12 to $168,689,903.45—and the minister reminded us that in that year he had a surplus of over $56,000,000 with which to meet capital and special expenditure. In the year 1911-12 he had been favoured with the great surplus of $37,000,000, and in the year 1913-14 he had a surplus of $36,500,000. The hon. minister admits that he has been favoured with the three largest surpluses in the financial history of Canada. The last six months of the year ended on the 31st of last month have not been so favourable, and for those months he has had to show fast decreasing revenues. The hon. minister placed upon 'Hansard' a tabular statement showing the revenue by months. Notwithstanding an increase during the first six months of the year, there was a decrease of $10,538,000 in 1913-14 as compared with the previous year. The hon. minister has shown that the year just ended gave a revenue of $168,000,000, but notwithstanding that there was an increase in the public debt of Canada of $19,000,000.

The hon. Minister of Finance has had in the past thirty-six months surpluses amounting to $129,500,000. That is a very large sum of money. It is enough to build the Georgian Bay canal which our departed friend the ex-Minister of Public Works (Mr. Monk) promised to the people. In the election of 1911 he told his constituents that work on the Georgian Bay canal project would be commenced the day after his party came to power. Three years have passed and the hon. Minister of Finance has had surpluses amounting to over $129,000,000 but the Government have not made a start on that great project, even if they have given it any consideration at all. I am sure that the delegation which interviewed the Minister of Public Works last Wednesday, and which was composed of men representative of the whole Dominion, found that the Georgian Bay canal had not only not been commenced but was very far from being commenced. The Minister of Public Works announced that the canal would be built only on condition that the commission recently appointed reported favourably on the commercial feasibility of the project. I can understand a Government referring the engineering side of a project to an engineer, but I cannot understand why a responsible Government put on the shoulders of a commission the responsibility of deciding as to the commercial value of any project. The hon. Minister of Trade and Commerce (Mr. Foster) told us six or eight months ago that this country was flooded with commissions. I do not know whether he did anything to prevent this new commission being appointed. In my opinion, there is absolutely no reason for its existence. The Government of this country should take the entire responsibility for deciding as to the commercial value of the Georgian Bay canal. I regret that the Minister of Public Works stated that if the commission recommended the construction of the canal, it would be built, and that if they condemned it, it would not be built. I cannot understand how a responsible minister of the Crown

can make such a statement. Speaking for myself, I may say that even if the negative report of that commission is binding on the Government of the day, it will not be binding on the Liberal party. The Welland canal would be to the advantage of the United States as well as of Canada, and of the two countries the United States might perhaps reap the greater benefit. The Georgian Bay canal, however, is purely a Canadian project. It would carry not only the products of the Canadian West but of the western states of America. It would bring a considerable portion of American trade through Canadian channels and in that respect is just the opposite of the other route. As I said, the negative report of the commission will not be binding on the Liberal party.

The Minister of Finance was forced to announce to the House that during the last six months of the past fiscal year our revenue had decreased. It is probably unnecessary for me to point out that had it not been for the action of the United States, in giving us a free market for our lumber, our fish, and our cattle, the Minister of Finance would have had to announce a still greater decrease in revenue. If our prosperity in recent months has been greater in the East than it has been in the West, that is due to the fact that the American tariff has so favoured our fishermen, in giving them free access for their fish to the United States markets, that they have been able to obtain better prices than ever before in their lives, and with their increased prosperity they have been put in a position to enjoy more of the comforts of life, and to buy more imported goods, thus contributing to the revenue of the country. The opening up of the United States market to Canadian lumber has saved the lumber trade in New Brunswick, coming as it did when the British lumber market was stagnant. But this is not due to the Conservative Government or to the Minister of Finance; in fact, it was done in spite of them. Had it not been that the tariff in the United States was reduced on some of our great natural products, the Minister of Finance, instead of having to announce an increase in the net debt of $19,000,000, would have had to announce an increase of probably $24,000,000. And notwithstanding this increase in our net debt, there has been no very remarkable increase in the expenditure on useful public works. When the Conservatives attained office the National Transcontinental railway was almost completed, and only a few million dollars remained to be expended on it.

I call your attention, Mr. Speaker, to the fact that a large portion of our revenue during the two years of the Conservative régime, has gone year after year in expenditure on the militia, the expenditure on which has now reached the enormous sum of $11,000,000 per annum. And this, in spite of the fact that in 1909, when the Right Hon. R. L. Borden was leader of the Opposition, he criticised the expenditure of the then Minister of Militia, in the Liberal Government, because it had reached $6,000,000 a year. I cannot myself see the necessity of this huge expenditure on armament, considering that the only neighbours we have are the most peaceful people in the world, which is proven by the fact that we are now celebrating the end of a century of peace with them, and I hope preparing for the opening of another peaceful century. Personally, I have as great respect for my right hon. friend the Prime Minister as any member on his own side of the House, and for fear I might exaggerate his sentiments I quote his words, as reported in 'Hansard' of March 29, 1909:

> So that if you look at the amount expended on both military and naval defence, you find Canada pretty well up to the standard of all the great self-governing dominions of the empire. But, I would venture to submit that our expenditure has, to some extent, been appropriated to the wrong purpose. What is the object of our military expenditure? I know that my hon. friend the Minister of Militia and Defence (Sir Frederick Borden) has stated in the House that the military expenditure of this country is not larger than is necessary for the aid of the civil power. I would hardly think that an expenditure of $6,000,000 annually would be necessary for that purpose, and, while I am not prepared at the present moment to lay down any figure which would be a proper amount for the people of Canada to set apart for the purpose of defence, I do most unhesitatingly say that of the portion which the people of Canada should set aside for that purpose out of their public revenues, a very substantial portion, and, in my opinion, not less than one-half of the amount appropriated for defence, should be devoted for naval instead of military defence.

A few short years ago, the Prime Minister, when leading the Opposition, thought that $6,000,000 was too much to expend on the militia; he said that one-half of it would be enough and that the other half should be devoted to naval defence. But to-day, under his Government, the militia expenditure which was then $6,000,000 a year, has gone up to $10,000,000, and not one cent of it goes towards naval defence for the

benefit of the empire, about which we heard so much last year.

During the fifteen years of Liberal administration, hundreds of thousands of settlers were brought into the Northwest, and these settlers, consuming the products of the East, contributed to the prosperity of the country as a whole. In 1896 the population of Canada was scarcely 5,000,000 people while in 1911 our population amounted to 7,200,000. In 1896 the net debt of Canada was $258,497,000, and in 1906, ten years after, under the Liberal administration, the net debt was only $267,042,000, an increase of $8,545,000 in ten years, notwithstanding that during that decade there was the greatest prosperity and progress the country had ever seen. From 1906 to 1911 there was a period of great expansion and railway construction. There were subsidies to railways, throughout the length and breadth of the land, and there was the construction of the National Transcontinental railway to be provided for, and although the Liberal Government spent $146,000,000 on the National Transcontinental railway yet all the expense of railway construction generally and one-half the expenditure on the Transcontinental were paid out of the ordinary revenues of the country. Notwithstanding the heavy expenditures by the Liberal Government for great and useful public works, the increase in population had lifted the burden of debt from $52 per head of the population in 1896, to only $45 per head of the population in 1911. Any unbiased man who studies the record of the Liberal party from 1896 to 1911, must admit that no country in the history of the world had ever equalled the progress made by Canada during these years.

It was a prosperity of which we constantly heard, and the people were happy and contented at that time. Great as was that happiness and prosperity, when my right hon. friend the leader of the Opposition, then the leader of the Government, attempted to enhance it, hon. gentlemen who were then in the Opposition rose on their seats and said: We are prosperous enough; leave well enough alone. Not only did they say that in this House, but they prevailed upon their friends to repeat the cry throughout the country. Well enough has been let alone, and one consequence is that the net debt of the country has increased to between $19,000,000 and $20,000,000. The people will not leave well enough alone when next they get an opportunity of pronouncing their opinion, but they will do better for the country, as my right hon. friend the leader of the Opposition intended to do.

I wish to express my views upon the situation which confronts us to-day and upon the future of the country. I will not attempt to make a dissertation upon the principles, theories and doctrines of protection and free trade. There are men better qualified to discuss these important questions in this House and in the country. My learned and scientific friend from Red Deer (Mr. Clark), whom we are all so well pleased to see back in his seat, gave us his views upon the position and aims of democracy at the beginning of this twentieth century in America and in Great Britain. We heard last week from my hon. friend from Rouville (Mr. Lemieux), who expressed his opinions upon these topics. We heard the other night from my hon. friend from Westmorland (Mr. Emmerson), who also gave us his ideas on free trade, democratic institutions and the protection of the people against the privileged interests. Therefore it is not necessary for me to enter into a dissertation of that character.

We all know that the goal and ambition of all nations should be free trade with one another, not only because the principle is sound as a matter of economics, but more particularly because it is the principle which is most conducive to the moral elevation of the people inhabiting the different countries, makes for universal peace, friendly intercourse and brotherly feeling between nation and nation and benefits mankind generally. It must be remembered that free trade in its various forms has always appealed to the most thoughtful men of the great Christian nations, and has found powerful advocacy on the part of those who have been known as the leaders of freedom—freedom for the masses of the people in the exercise of their mentality and religious principles. It is a doctrine which appeals to men and to nations in proportion to their moral standard, brotherly feelings, charitable inclinations and high ideals of civilization. This truth is strikingly exemplified at the beginning of this twentieth century by the fact that the greatest free trade nation today is also the most Christian of the world —the great British nation. If I wished to take man as a standard in order to illustrate the view which I am endeavouring to

put forward upon this subject, I would point to the great Napoleon, who proved himself to be not only an able general but a wise economist, and who devoted his energies in the intervals between his military campaigns to making treaties of commerce which were nothing else than offers of free trade to those powers which he regarded with a friendly eye. If in these efforts to establish free trade relations the great general of the time omitted England, it was because he did not want to make treaties or establish commercial relations with that nation. Napoleon hated England and his selfishness overcame his better feelings. You can judge men as nations and here you have that great conqueror of modern times offering free trade to the nations he loved and erecting a protective wall against the one nation that he abhorred. Free trade is synonymous with generosity, brotherhood, humanity; protection means selfishness and egotism. That is the nature of the one principle and that is the nature of the other.

I admit that with the conditions that prevail in this country, that with the nations around us, either close to us or far away, and because we raise our revenue by indirect taxation, this country cannot have absolute free trade with the nations of the world, but, nevertheless, it remains the duty of every Canadian, every member of the Government and every party in this country to see that free trade in its direct sense be extended more particularly to the masses of the people, whether on the farm or in the city, who devote their time and energies to the production of those natural commodities which are necessary to keep body and soul together.

But we are told by hon. gentlemen opposite, and by some of the Tory papers which I have time to look at once in a while, that we are advocating free trade to-day, whereas, when we were in power, we did not advocate free trade. I say that from the day the Liberal party came into power in 1896 the leader of the late Government and his party showed their inclination to change the condition of things as rapidly as possible. Without spending any time over the individual items in the tariff which were changed, I will merely say in a general way that it was reduced in a great many instances especially on many articles which are the necessities of the mass of the people. The tariff was reduced to a considerable extent and especially with the object of extending to the mass of the people a great privilege which had been denied to them up to that time.

The one great effort of the Liberal party in the direction of free trade was the inauguration of the British preference of 25 per cent and which was increased during the following year to 33⅓ per cent. Although our friends on the other side of the House wished to make little of the British preference, I say that it has increased our commercial relations with the mother country and it has also given to the workingmen of Great Britain millions of dollars every year by way of additions to their income derived from the goods that we have purchased from them. Our friends on the other side of the House have been opposing the principle of the British preference. They claim a monopoly of loyalty but when you want to do something that will help the millions of workingmen of Great Britain, these hon. gentlemen rise up and object. They want to have free trade with Great Britain, but on the one condition that Great Britain shall put a tax on the workingman's food imported from other countries in order to allow our products to enter Great Britain free of duty and thus enjoy a preference in the British market. They want Great Britain to hamper the trade relations which she has established with other nations and to restrict those influences of civilization which must impress themselves on every nation that has the privilege of dealing with her. They tell us that when we were in power we did not do much to bring about the removal of customs duties. But there were obstacles in our way. While the right hon. leader of the Opposition (Sir Wilfrid Laurier) was in power he was willing to extend the principle of free trade as far as possible in the interest of the masses. Yet everybody knows that he was handicapped by the fact that the markets of the republic to the south of us were closed against us. For instance, it would have been unwise to remove the duty on agricultural implements at that time, because the United States maintained prohibitive tariff duties. And so it was with many other things. But the right hon. gentleman looked forward, as had all Canadian statesmen up to that time, to the establishment of reciprocal trade relations between Canada and the

United States. And when the offer of reciprocity came from the United States, the right hon. gentleman accepted it. And I need not take up time to show that for all practical purposes the offer made by the United States to Canada was exactly that which that great leader of the Conservative party, Sir John Macdonald, had made to the United States, placing it upon our statute book as a standing offer of reciprocity. And it is well known that just before his death Sir John Macdonald declared that while he had not been able to secure the opening of American markets for Canada, he hoped the time would soon come when that condition of affairs would be brought about. But before this offer from the United States came, my right hon. friend (Sir Wilfrid Laurier) was justified in not humiliating Canada by taking steps towards reciprocity which our previous experience led us to believe would not be cordially received. Practical experience compelled the statesmen of the United States to see that they could not go on expanding while keeping their markets closed against the goods of other nations. And when the offer of reciprocity came, who will say that the leader of the Government of that day was not justified in accepting it? I ask any man in this House, Liberal or Conservative, if it is not strictly true to say that up to that time there was but one sentiment on that subject in Canada, and that was in favour of reciprocity. So the right hon. gentleman accepted that offer and asked the people of Canada to ratify it. It was not ratified. For one, I greatly regret the result of that appeal to the people. A mistake was made, not by the leader of the Government of that day, but by the majority of the people of Canada. But I am confident that the people of Canada are prepared, at their first opportunity, to undo their mistake and to accept the offer made them of freer trade relations between this great country of ours, which soon should have a population of fifteen millions, and the great nation to the south of us.

4 p.m.

The changes that have been proposed, and that have been made, have brought about a different condition of affairs from that which existed under the late Government, and we cannot see the case in its true light if we do not change our point of view with the change of circumstances. The offer of reciprocity, if accepted, would have meant that our farmers would have had free access to the markets of the United States with wheat, rye, oats, barley, and other grain. They would have had free access to that market for their horses and other live animals, for cheese, butter and other dairy products. There would have been reciprocal free trade also in fish and lumber. We have free fish and free lumber to-day by the action of the United States Congress, but the farmers of the West have not free wheat. Hon. gentlemen opposite may say: Wheat is reduced 10c. a bushel. But that 10c. a bushel is enough to shut the wheat out of that market. Had the farmers of Canada an opportunity to sell free from that duty of 10c. a bushel, the difference would be all the difference between a profit and no profit. And the western farmers especially would be encouraged to carry on his farming with greater enterprise and vigour by reason of the profit which this 10c. a bushel would represent. And so with oats. There is a duty of 6c. a bushel on oats, and the removal of that duty would mean a profit and an encouragement to the Canadian grower. Under the reciprocity pact, the farmers of Ontario and Quebec would have had free access to the markets of the United States with butter and cheese as well as with milk and cream. To-day milk and cream are free, but there is a duty on butter of 2½c. per lb., and the same with cheese. And what is the position for the implement manufacturer? Under the reciprocity pact there would have been a reduction in our duties of 2½ per cent. Hon. members opposite are claiming great credit to this Government for having reduced the duties on certain agricultural implements by 5 per cent. But the Americans have taken off their duties on these goods, thus opening their markets to our manufacturers. Under reciprocity all the benefits secured would have gone to the farmers, but at present the one to benefit is to the manufacturer. The farmer to-day cannot buy agricultural implements free of duty, but the Canadian manufacturer can exploit free of duty the American markets with its hundred million of population. When I speak of the farmers, I include the farmers of the East as well as of the West. Although the farmers of the East do not cultivate their land to as large an extent as the farmers of the West do, they are progressing from year to year, but upon the prosperity of the western farmers largely depends the progress and development of the East. Our friends on the other side claim that they are giving a great

benefit to the farmers of the West by reducing by 5 per cent the duties upon mowers and two or three other implements used by the farmers of the prairies, but I would point out that the duties upon these articles would amount to only one-third of the tariff collected on the various other articles—rakes, spreaders, and so on—used by the western farmers. Intelligent Canadian farmers will not look upon this reduction as a benefit; they will look upon it with shame as coming from a Government which should have more generosity, but which has as its policy the protection of the manufacturer. For the last fifteen years the manufacturers of agricultural implements in this country have had the benefit of a drawback when they have exported their products; under the tariff which has existed in Canada they have been able to compete in the different markets of the world. In spite of a tariff of 15 or 20 per cent they have been able to compete with the United States; they have been able to compete with the manufacturers on the market of Australia and on the market of Great Britain. Yet they say that they cannot exist unless there is a wall between the farmers of western Canada and the people of the United States. I say it is high time that the people of Canada opened their eyes to the situation; it is time that hon. gentlemen of this House realized that the farmers of the West should have free wheat and free agricultural implements as well.

Our friends say that free wheat and free flour must go together and that we should not accept the offers made by the United States. I wish to draw your attention, Mr. Speaker, to the fact that under the patriotic administration of Woodrow Wilson the United States last year put into force a tariff to benefit the masses of the people; to benefit the farmer and the millions of workingmen in the cities. In doing this they left open to the other nations of the world an offer of reciprocity if those other nations would remove the duties. In the matter of wheat and flour they have said not to Canada only but to any nation which has imposed a duty upon these products, that if they take such duties off, the United States will open its markets to them. Argentina, another farming country producing large quantities of wheat, lost no time in accepting that offer of the United States; in taking the duty off wheat and getting the benefit of the large market of the United States. In doing this Argentina has surely shown no lack of loyalty; nor would we show any lack of loyalty in accepting, for the benefit of the western country, this offer which was made to the world at large. We produce 500,000,000 bushels of grain; the time is coming when Canada will produce over a billion bushels of grain and we will need larger markets for that enormous production. Is it not a wonder that there are in this House and in the country gentlemen who are so much concerned with private interests that they say: We should not trade with the United States; we want to preserve our fiscal independence. How would the Canadian lose his fiscal independence by taking advantage of the offer made by the United States? The Englishman is a businessman all over the world; he goes across every ocean and trades on every soil and in doing so he lacks no loyalty to Great Britain, and does not fail to recognize her greatness.

Our friends say: We will have to instruct the farmer and wait until he gets the benefit of our instruction. I am for instruction all the time in every branch of activity. Technical education has no stronger advocate than the modest member for Gloucester. I hope—particularly after having read the report of Dr. Robertson on technical education—that some day Canada will have a realization of the necessity of education in every walk of life. Our friends say they will educate the people with the $1,000,000 a year given by the Minister of Agriculture, and the $12,000,000 given by the Minister of Militia for the purpose of teaching the children of the nation how to kill their neighbours. That is a great education for the farmer. We want education, but we want it in the right way, we want to have it exerted in the proper direction.

Our friends on the other side say: If you do not give protection to the manufacturer we will have destitute homes in our cities. I would like to ask the hon. member for North York (Mr. Armstrong) who made that statement if these agricultural implements are for the use of the workingman in the city? They are for the use of the farmers and the wider market the farmer has the more implements he will use. The way to benefit the manufacturer of agricultural implements is to open the markets of the world to the farmers. The farmer, having a larger market for his products, will then use more implements, and the manufacturer will reap the benefit. The rejection of reciprocity by the people two years ago resulted not only in the farmers of the West losing $20,000,000 upon their crop but in the manufacturer losing the benefit of the larger demand for implements

on the part of the farmer which would have resulted had reciprocity gone into effect. The manufacturers of Toronto, who are demanding a protective tariff and who do not want to see the markets of the United States opened to the western farmer, would have benefited by the increased demand for agricultural implements. And what loss would our country suffer by the free admission of flour? Our home market is, of course, necessary for the farmers; but we must also seek markets in other countries. If our producers were satisfied with the home market they would not have the opportunity for expansion of trade which is essential to their prosperity. It is the right and the duty of farmers and producers to seek an entrance to the markets of the world.

Mr. BURNHAM: Hear, hear.

Mr. TURGEON: I am glad to be supported by the hon. member for Peterborough. He has both producers and manufacturers in his constituency, and he has intelligence and patriotism enough to appreciate and acknowledge the force of what I have said. Flour is used by every man, by the poor workingman just as by the rich man; and if you have any feeling or sympathy for the hard-working man in the cities, in the factories, on the railroads, in the ships which carry the product of farms to the market, the hard-working men of the eastern provinces as well as of the west, you should give them free flour. The farming section of the community must, of course, be looked after, but we must also care for the working men in the large cities. We know that during the year 1912-13 $10,000,000 has gone into the treasury of Canada from taxation upon food entering this country. If that $10,000,000 had been saved to the tax-payers of this country, if it had been left in the pockets of the people, more particularly those in the cities who toil for their daily bread, it would have been a great benefit to the masses of the people. It must be remembered that this tax on food is collected chiefly during the hard season, the winter, when Canada does not produce either eggs or vegetables. It presses hardest on the workingman, because he requires more on his table than the rich man, and it is generally the poor man who has the large family. The loss to the revenue need not stand in the way of this necessary reform. Piling up a large surplus is of no benefit to the country, as is illustrated by the record of the present Government. The Minister of Finance had surpluses for the first two years, but this year he adds $20,000,000 to the public debt, so that we are no better off than if we had not had the surpluses in the other years. Other countries not so great as Canada have seen the necessity of removing the duty from food products. The little colony of Newfoundland last year, moved by the same spirit that animates the Liberal party in this country to-day, in order to help their workingmen, in order to help their fishermen, took the duty off a great many articles of food which were most necessary to the fishermen of Newfoundland. They lost last year a revenue on these articles of $360,000, which is as much for that little colony, with a population about equal to that of the province of New Brunswick as $10,000,000 for the people of Canada. Nevertheless, last year the shortage of revenue has been only half that amount and the colony of Newfoundland has been able to close her fiscal year with a surplus of $115,000, equal, in proportion, to the great surpluses of our Finance Minister in Canada. I wish to read a brief despatch from St. John's, dated February 25:

> In the assembly to-day the Finance Minister presented the colonial Budget, showing that the revenue for the fiscal year ended last June was $3,920,000, giving a surplus of $115,000, while for the current fiscal year duties totalling $380,000, having been removed last session from tea, sugar and salt beef, the customs revenue now shows a shortage of $130,000, or much less than expected.

What has taken place in the little colony of Newfoundland where the people have removed the duties from the necessities of their working men at the expense of a decrease in the general revenue is surely an example to us. The removal of the duty on these foodstuffs has not produced a very serious decrease in the general revenue, and living has been made cheaper for the people of the island.

It has been said that wheat and flour are not in the same position because, in the proposed reciprocity agreement, a duty had been left on flour on account of a corresponding duty on coal in favour of the Maritime provinces; but to-day the same condition does not exist, as bituminous coal is admitted free to the United States market. Therefore it is said there is no necessity for us to consider that arrangement farther and that if the United States is willing to make our wheat and flour free, we should accept their offer in accordance with the

persistent agitation of the farmers of the West. When I ask for free wheat, I, coming from the Maritime provinces, ask it because I know that it will be to the general interest of the country as well as to the particular interest of the provinces of the West. Our prosperity depends upon the prosperity of the West. Our harbours are enriched by the commerce of the West, and the greater the prosperity of the West the greater the prosperity of the eastern people.

Much has been said of the bounties on iron and steel. The Liberal party paid bounties on iron and steel during fifteen years, decreasing the amount on a sliding scale so that the bounties eventually ended in 1911. I admit that it may have been necessary to give such bounties during a certain length of time; and the period of great prosperity which we enjoyed under Liberal rule was probably an opportune time to give assistance to this great industry, particularly in view of our close proximity to the market of the United States.

I ask you, Mr. Speaker, whether this industry, which has been receiving aid from the people for about twenty-five years, is not now able to support itself? Sir John A. Macdonald when he introduced the National Policy said that protection was for the infant industries of this country, and it was his hope that after a certain number of years those industries would grow up and be able to take care of themselves. Suppose I brought a man of the age of thirty years to my scientific friend from Souris (Mr. Schaffner), who is always smiling in his wisdom, and said: This man has been nursed and protected for thirty years, but he cannot live without further protection. I am sure my hon. friend would be apt to class him as an incurable who ought to be sent to the state hospital. Why should our people be called upon to give further bounties and protection to industries that have created so many millionaires? What the producers of to-day want is larger markets rather than protection. Larger markets would enable the farmer to sell more, wear more and buy more. We on this side of the House are not the only ones who have been trying to get reciprocity agreements. My hon. friend the Minister of Trade and Commerce made an agreement with the West Indies. We all like to see trade agreements with British possessions, but the result of that agreement is not to be compared with the increase of trade that we should have had under the reciprocity agreement with the United States.

The Minister of Finance has taken it upon himself to give certain benefits to the importers of stone; he has reduced the duty on rough stone to five per cent. The hon. member for Westmorland (Mr. Emmerson) has already referred to that, and I just wish to corroborate what he has said. In my county, as well as in other parts of New Brunswick, there are large stone quarries having a market in Montreal and other Canadian cities. These quarrymen claim that the reduction of the duty on rough stone will be to the great disadvantage of the stone producers and even the stone cutters of Canada. They say it will benefit large building contractors but that it will not benefit the stone cutters because these contractors use stone cutting machinery doing away with the labour of the stone cutters. I, therefore, enter my protest against changing the duty on stone.

I wish to say a few words about iron ore, which was the subject of debate in this House some time ago. The Minister of Finance in his budget gives no idea of what he intends to do. He says he is referring the matter to a commission under the Department of Mines. I do not think that a high tariff on steel or iron products would benefit to a great extent the iron ore producer in this country. In Bathurst we have a large iron ore deposit, perhaps the most extensive in Canada. It is considered of great value. The owners have spent a large amount of money in developing the property and have already installed a concentrator, to which I would like to direct the attention of the Minister of Finance if he were in his seat. Our importation of iron ore is small as compared with the amount of iron ore in Canada. It is true that the report of the Department of Mines for the year 1913 shows that a large amount of ore was imported, namely 1,942,325 tons valued at $3,877,824. It must be remembered that out of that 1,942,000 tons, 1,605,000 tons came from the Newfoundland mines, and was chiefly used by the Sydney people. It would perhaps benefit Newfoundland if she kept her ore and manufactured it within her own borders, but this ore comes to us from a British colony, which I hope will be part of Canada before many years have past, and so I do not consider it in the same light as foreign ore. Notwithstanding the many difficulties there are to-day in the way of Newfoundland joining Confederation, I firmly believe that not many years will elapse before the ancient colony will find it to her own benefit, as it will be to the benefit of Canada and to the benefit of the British

Empire, to enter the Dominion. The Minister of Finance told us that Canadian ore was supposed to be inferior to ore obtained in the United States, but I call attention to the fact that the Bathurst iron ore is of the very highest quality and is now being sent to the American market in increasing quantities every year, until last year the export to the United States amounted to 86,000 tons. I would point out to the Minister of Finance that the heads of the Mining Department, such as Dr. Haanel and others, are well aware of the quantity and quality of the ore from the Bathurst mine. I trust when the Minister of Finance appoints the commission of mining experts, he will see to it that that commission shall take measures to compare the quality of the Bathurst iron ore with that produced elsewhere. I would remind the Minister of Finance that the Canada Iron Ore Company has established at Bathurst a concentrator which has proved most beneficial, and the ore, after treatment, is now shipped to the Philadelphia market and is used in the manufacture of the most refined steel and iron products. That concentrator has cost the company $130,000, and the Bathurst ore is treated in this concentrator, so that only the pure ore is shipped to the American market, thus greatly lessening the cost of transportation. I would urge on the Finance Minister that if our iron ore industry is to be developed in this country, he should provide railway and shipping facilities, so that the cost of transportation may be reduced as much as possible. I ask permission, Mr. Speaker, to place on 'Hansard' a description of the Bathurst concentrator, which would be of great benefit to the members of this commission, when they are looking into the question of the treatment of Canadian ore.

Mr. SPEAKER: The practice of placing on 'Hansard' extracts which have not been read is usually objected to, and without the unanimous consent of the House it cannot be permitted.

Mr. LEMIEUX: The other day the hon. member for North Essex (Mr. Wilcox) was allowed to print certain statements in 'Hansard' without their being read, and nobody objected.

Mr. SPEAKER: I remember some days ago that a request was made by an hon. member to place a number of tabulated statements on 'Hansard,' and when they were shown to me afterwards it was decided that they should not be printed.

[Mr. Turgeon.]

Mr. TURGEON: Of course, without the unanimous consent of the House I cannot place the description of the concentrator on 'Hansard,' but I would mention that it is to be found in a publication of the Department of Mines entitled, 'Austin Brook Iron-bearing District, New Brunswick,' by Einar Lindemann, M.E.

In conclusion, after having reviewed the condition of Canada from 1896 to 1911, under the Liberal Administration, and having pointed out our position in this year, 1914, I say it is my firm belief that the policy advocated at the present time by the Liberal party is most conducive to the continuance of the prosperity which existed in the country before the Conservatives came into power. I assert with confidence that the policy of the Conservative Government offers no benefit to the masses of the people, to the farmers, or the workingmen, and it cannot, and will not, in my opinion, receive the endorsation of the people. I trust that before long the people of Canada will be given an opportunity to change their verdict of 1911, and if they should do so, I believe that a new era of prosperity will again dawn on this country.

Mr. WILLIAM SMITH (Ontario South): I have listened carefully to the remarks of my hon. friend (Mr. Turgeon) who preceded me, but it appears that the issues he raised have so long since been settled by the people of Canada that it will be unnecessary for me to refer to them. My only excuse for taking part in this discussion is that I have the honour to represent a riding that is perhaps as deeply interested in agriculture of all kinds, in grain-growing, in stock-raising, and in manufactures, as is any constituency in the Dominion. Some phases of the changes which were made touched that riding, and they are already having their effect. But I have to remember that that riding is not all of the province of Ontario, and I have to go a step farther and remember that the East is not the West, neither is it all Canada, and neither is the West all Canada. Canada is a fairly hard country to govern, covering large distances from one ocean to the other, and with a sterile section between the East and the West. I take it that the duty of the Government is to do as much as they can for as many people as possible.

I have taken the trouble to look over some of the 'Hansards,' and I find that some of the gentlemen who have preceded me took the ground that the tariff was

practically the same under the Conservative party from 1879 to 1896 as it was under the Liberals from 1896 to 1911. I think they were correct, but there was such a very great difference between the conduct of the two parties that I must allude to it this afternoon. Some of us can remember the very serious depression previous to 1878, when there was a change of Government. We can remember that the Government elected in 1878 tried as far as possible to carry out the pledges that they had given in Opposition, and that the moment the telegraph wires were able to tell the story of the changes made in the tariff by Sir Leonard Tilley a new life sprang into the breasts of the people of Canada. I came into Parliament in 1887; I had the honour of sitting upon this side of the House then, and I heard the leaders of the Liberal party talking about that tariff during all the years that I was in Parliament previous to coming back in 1911. What was their course, what was their conduct? They decried it in every possible way. They told this House and the country that it was doing the people an injustice. So much did the people believe it that those engaged in manufacturing, and those with a certain amount of wealth, were afraid to invest a dollar.

The Conservative party was defeated in 1896, and practically the same policy was continued from that day until 1911. We have been told that we had prosperous years during the reign of the Liberal party. I agree with the Liberals in saying that never perhaps in the history of Canada was there a greater period of prosperity. Why? It was because the Conservative party were loyal to their principles in Opposition as well as in power, and they stood at the back of the Liberal party when they were in power. Those who had money, those who had wealth, manufacturers principally, invested their money without stint, which accounts to a great extent for the prosperity we had during those years.

I have listened with some interest to the story told about the farmers. I happen to be one myself, and I have some knowledge of what I am talking about. I take the ground that as farmers we have as much right as any other class in Canada to contribute a fair share of the taxes of the country, and when we are told that we should have free trade in agricultural implements and wheat, I say let us be men enough to say that we are prepared to bear our fair share.

In regard to free wheat, it is perhaps generally understood that we cannot have free wheat without free flour. I think we have arrived at a period in the history of Canada when we are likely to grow more wheat in the West in the years to come than we have in the years that are past, and the chances are that the price of wheat will go down. What we want in the West is a levelling up such as we have had in Ontario. I happened to receive a letter the other day from a western gentleman in which he says:

> The crowd on the prairie that are shouting for 'free wheat' are a class of Americans who hardly knew Canada was a country until a few years ago. Constituted principally of men with local ideas, they seem totally unaware that the ultimate goal of Canada's wheat is Britain and that it is there the prices of Chicago and Minneapolis are set. If they were offered free wheat the probability is they would want an annexation rider attached to the agreement. As yet there lies before the leaders of Canadian thought the task of Canadianizing those people and this will not be accomplished by pampering to their local ideas, or fostering their attachment to the country south of us.

The other day the hon. member for Assiniboia (Mr. Turriff) trotted out a star witness. He impressed me with the idea that this man was wise in his day and generation. He stated that he had opposed the hon. member for Assiniboia during all the years they were together. That I could understand. The next point was that he was interested in an elevator, not in Canada, but across the line. Why did he want free wheat? Because he wanted to help the elevator in which he was interested. That was the star witness of the hon. member for Assiniboia.

I would like to refer to a statement made by the hon. Minister of Finance in his Budget Speech which appealed to me, and which appears to be the right position for the Canadian people to take. My hon. friend said:

> We believe it to be the true policy for Canada and for every part of it if we are to regard as desirable stable business conditions and a deversified national life throughout the Dominion. It means the development of our natural resources, the maintenance and extension of our industries, a fair wage standard for our artisans and a stable and profitable home-market for our farmers, thus justifying its name as a national policy.

The hon. the junior member for Halifax (Mr. A. K. Maclean) in criticising the statement of my hon. friend the Minister of Finance, said that the farmers of the North-

west would have a good deal more purchasing power if they could sent their wheat in free to the United States. Grant, for the sake of argument, that that statement was true, where would they buy? Would they buy on the other side or would they buy in the eastern provinces? I have no hesitation in saying that they would form business alliances with the people to the south of us and would trade with them and make their purchases from them instead of from the East. It appears to me that if there is one thing we want more than another, it is not reciprocity with the United States, but it is reciprocity between the different provinces of this country. What the farmers want more than anything else is that they shall control their own home market. If the manufacturers are in a position to pay their help a fair day's wage for a fair day's work and keep them at it all the time, that is very nearly all the protection that the farmer wants. If he controls his own market he has accomplished almost everything he may set out to do. I listened with a great deal of surprise to some of the statements which have been made in regard to agricultural implements. The point to my mind is this: are they to be made in Canada or shall they be made in the United States? I happen to live a short distance from a considerable manufacturing town in my own riding, the town of Oshawa.

After listening to these hon. gentlemen I have tried to reason it out in this way: would my farm and the other farms near that town be worth as much money if the Malleable Iron Works were done away with, if the Piano Works were removed, if the McLaughlin Works were closed, if the gas fitting establishments were taken away? If all this should happen, where would be our home market? It does appear to me that there is the answer to the whole argument in connection with agricultural implements—whether they shall be manufactured in one place or the other. I am bound to confess that my observations in the West leads me to believe that it will not make a great deal of difference whether they have free agricultural implements or not.

In this connection I believe that the hope of the West to-day is in mixed farming and not in growing grain. Why, to-day, it is reported they are sending hogs by thousands of dollars' worth to the East. That could not have been done a few years ago.

[Mr. W. Smith.]

Mr. WARNOCK: They are sending more to the United States.

Mr. SMITH: I was to going to make another statement in connection with the feeding of hogs, and I make that statement on the authority of a farmer who has been living in the West for a number of years and is engaged in hog raising. He says that at 7½ cents per pound live weight for hogs, he can make oats worth 67 cents per bushel. Surely there is an opening for the people of the West, and it might be a means of using a portion of their wheat as well. The hope of the West, at any rate of many sections of it, so far as I can see, is in raising live stock to supply the shortages which at times arise in the East, thus affording a basis of reciprocity between the provinces. I do not look forward with hope to selling a great many horses in the West as we have been doing. But we will turn or twist in some way, striving and hoping to be on top. I have said the hope of the West is in mixed farming; I say also the hope of the West is in better farming. I have always been impressed in visiting the West at harvest time to see the difference in the crops upon the land which is properly cultivated and the crops upon the land which is not properly cultivated. They start with virgin soil and with land, perhaps, better than that of Ontario; but still the time must come, sooner or later, when something must be done to keep up the fertility of their soil, and in order to do this they will find it necessary to go into mixed farming. And with mixed farming they will avoid the mistake of having all their eggs in one basket.

The statement of the Finance Minister, it seems to me, reasonably meets
5 p.m. the wishes of the people of this country and affords as much good as possible to as many as possible. That being the case, I for one am prepared to stand by it. Looking to the future and trying to size up this country, I do not fail to realize that Canada and the United States lie side by side,—and parallel lines we are told, can never meet—and, speaking for myself and only for myself, I hope the day is far, far distant, when any foreign country shall dictate the tariff policy of this Dominion of Canada. During 1911 we discussed all the phases of reciprocity; and it appears to me that the Liberal party now is asking us to do what they themselves did not do during the fifteen years they were in power. The tariff duties were

higher in some cases when they went out of office than when they came in. Had they been honest during these years, it appears to me, they would have followed exactly upon the line they are asking us to follow to-day.

So, Mr. Speaker, I have given my view of the Finance Minister's statement, and especially have I tried to explain my opinion on free wheat and free agricultural implements. Some may say that my position is an unwise one for a farmer to take in the province of Ontario. But I hold that the man who has not an opinion of his own upon questions of this kind is not worthy a place in public life. I would rather go down to-day than be false to what I regard as the best and highest interests of our country.

Mr. DAVID WARNOCK (Macleod): Mr. Speaker, I have listened with a great deal of interest to the speeches made in this debate, and I can assure you it has been a great pleasure to me to observe the active interest taken by hon. members to your right. I do not know whether this is due to the absence of the Prime Minister and the greater leniency of the acting Prime Minister, but I must congratulate hon. members on the Government side upon their emancipiation from the rule of enforced silence so successfully carried out last session.

I am pleased indeed to have the opportunity of following the hon. member for South Ontario (Mr. Smith). I know that he is an excellent judge of stock and a well-known stock-breeder, and I always like to meet a man of that kind. But I think I would rather depend on his judgment in matters of live stock than in questions of the tariff. I have to refer to many remarks made by hon. members who have preceded that hon. gentleman, and I will deal with what he said in connection with the several subjects as I come to them in the course of my address. But I wish, in the beginning, to deal with one remark of the hon. member. He said that the farmers in the West who were calling for free wheat were a class of Americans. I wish to tell him that thousands of those who are calling for free wheat are repatriated Canadians who were driven out of this country under the Conservative Government before 1896, and who have come back to the land of their birth, or they are the sons of such men. The hon. member also spoke about reciprocity between the western provinces. Surely we have reciprocity amongst all the provinces. But what is the good of reciprocity in wheat between Saskatchewan and Alberta ? It is another market that we are looking for.

The hon. Minister of Finance's Budget speech has created a feeling of intense disappointment among the people of the West. I desire to say also that the farmers of the West now realize that the sending of delegations to Ottawa is utterly useless. While mentioning this I should like to give my impressions regarding a large delegation that was here last week in connection with the Georgian Bay canal. I was in the Chamber when one gentleman, Mr. White, of Pembroke, I think, was speaking on that question, and I heard him say, in substance, this:

> I feel that delegations of this kind have little effect; we are just like bees buzzing around. But I have been a lifelong Conservative and an active supporter of the Conservative party, and I warn this Government that if they do not almost immediately begin the construction of the Georgian Bay canal at both ends and in the middle, something unpleasant will happen at the next election.

With the exception of the hon. Minister of Public Works, these remarks of Mr. White did not seem to have very much effect upon the members of the Government who were receiving the deputation. But the Minister of Public Works, who has a very deep appreciation of the value of votes, turned in his chair and gave Mr. White a keen, scrutinizing look in an effort to find out whether he was joking or speaking in earnest. I believe that the western farmers have formed exactly the same opinion of the value of the delegations as Mr. White expressed on that occasion, and I think it will be a long time before another delegation of western farmers visits Ottawa. But they are not going to sit down quietly under existing wrongs; they are taking steps to protect themselves. At the present time co-operative farmers' associations are being formed in Alberta and Saskatchewan for the purpose of mutual protection in the purchasing and marketing of their products, and I believe that at the next election this co-operative movement will be carried to the point of selecting and electing candidates who will be pledged to further, by their voice and vote in this House, the interests of the western farmer. Enough members will be elected at the next election from the prairie provinces to compel the Government, no matter what party may be victorious, to take some cognizance of the demands of the western farmers. We recognize the

fact that under the present Government a half dozen manufacturers can come to Ottawa and have more influence in shaping the Government's policy on the tariff questions than a delegation of 20,000 farmers could have. I repeat that the farmers of the prairie are preparing to protect themselves by sending to Parliament representatives pledged to further their interests. They are tired of representatives who will talk in favour of a measure and then vote against it.

The member for North Essex (Mr. Wilcox), speaking a few days ago, gave the Conservative party great credit for constructing the Canadian Pacific railway, and also for the part that party has taken in the development of the western provinces. Credit may be coming to the Conservative party for the construction of the Canadian Pacific railway, but absolutely no credit is coming to them for any part they took in the development of the western provinces. The Conservative party built the Canadian Pacific railway and then they went to sleep, having not the remotest idea of inaugurating a policy which would populate and develop the great western provinces. Let me give you a short history of the prairie provinces of Alberta and Saskatchewan, or the Northwest territories, as they were known in 1896. I should like to preface my remarks by saying that I have lived in Alberta for twenty-four years, having come to that province from Scotland in 1889, and I have a very intimate knowledge of its development from the time that it was a purely grazing area until it became the great grain growing province that it is to-day. What were the conditions there in 1896, under the former Conservative Government? From 1889 until 1896 it was practically impossible for a settler, or the man with the plough, as they used to call him in the West, to get a foothold in Alberta. That province, particularly the southern portion of it, was almost entirely given over to large ranching companies. The directors and managing directors of these large ranching companies were nearly all members of the Conservative party, and they were allowed to control practically the whole of the province. They had immense grazing leases at a rental of two cents an acre per annum—even then some of them did not pay the rent—and they absolutely forbade settlers from encroaching upon them. I have seen settlers' shacks pulled down about their ears by the employees of some of the large ranching companies; I have seen the settler walked off the range and told not to come back there; told to go into northern Alberta, the only place for the man with the plough. These are actual facts, Mr. Speaker, not hearsay assertions. I was present and saw these acts committed by managers of the large ranching companies, on instructions received from Montreal.

Mr. W. H. BENNETT: Was there any lease granted in Alberta larger than the Blood Indian reserve lease, and was it granted by the late Government?

Mr. WARNOCK: The Blood Reserve lease consisted, I think, of 240,000 acres. The Walrond Ranch Company had a lease, granted under the former Conservative Government, of 350,000 acres. I know that because I was manager of the Walrond Ranch Company for ten years.

Mr. BENNETT: The hon. gentleman has not answered my question. Was the Blood Indian reserve lease granted by the late Government?

Mr. WARNOCK: Yes.

Mr. BENNETT: Was there a larger lease than that of the Blood Indian reserve?

Mr. WARNOCK: Yes, much larger. The Walrond lease of 350,000 acres was granted by the Conservative Government previous to 1896.

Mr. BENNETT: How many years before?

Mr. WARNOCK: In 1883 or 1884.

Mr. BENNETT: There were not many settlers around then.

Mr. WARNOCK: No, and they were not allowed to come in afterwards. The land was there, the opportunities were there, just the same as they were after 1896, when the Government of my right hon. leader came into power; there was just as much good land, and the climate was just the same; but hardly a settler came into that country, while hundreds of thousands of young Canadians were crossing to the United States to make their careers and to build up homes for themselves. These are the men who to-day are coming back to western Canada and are asking for free wheat. Perhaps the hon. member for South Ontario meant to convey the impression that the Americans who are entering Canada are a disreputable class.

What happened after the Liberal Government came into power in 1896? Within a very short time every large leaseholder was given notice of cancellation of his

lease, the cancellation to take place within two years. But at the same time, so as not to kill the cattle industry altogether, the leaseholder was given the option of purchasing 10 per cent of his leasehold acreage at $1.25 per acre. But so little confidence had these men in the country and so sure were they that at the next election the Conservative Government would be returned to power, that only one ranching company in the country bought land at that price. They said: oh no, we do not have to buy, the Conservatives will be back in power after the next election and we will have the country anyway—and it was not until some years afterwards that some of these big ranching companies purchased land. The conditions became so bad in southern Alberta, owing to the hard treatment of settlers by the managing directors of some of the big ranching companies that one managing director on his annual visit to the ranch from the eastern provinces was shot at by an irate settler and the next time he visited the ranch he travelled under police protection. Every statement I have made can be verified by men in the country, and I know that my statements are absolutely correct. Matters went on and in 1892 the Calgary and Edmonton railway was completed. What did we see then? Where were the settlers? The settlers were not coming in. Some years after the road was completed it ran a mixed train three days a week between Macleod and Edmonton. The hon. member for Calgary will bear out what I say. I think for some time they ran only an occasional train, but then we got down to a schedule of three mixed trains a week, and it used to take a day practically to run from Calgary to Macleod, a distance of 108 miles. But not long after 1897 the Crowsnest Pass road was built. Then the coal mines in the Crowsnest Pass began to develop, great saw-mills were built and we had settlers coming into the country under the immigration policy inaugurated by the Liberal Government. Then we saw immense trains of lumber coming down from the Crowsnest mills to supply the needs of the settlers on the prairie. These were some of the developments that took place after a policy of settling these great prairies was introduced by the Liberal Government; and I say it is to the credit of the Liberal party and not to the credit of the Conservative party that the prairies were developed and populated and became the great grain producing and farming provinces we see them to-day. Had the policy of the Conservative party previous to 1896 been adhered to there would not have been enough farmers in the whole province of Alberta to form the delegation one thousand strong, which came to Ottawa and which was referred to by the hon. member for North Essex in his speech the other night. I repeat that but for the progressive policy of the Liberal party there would not have been that many farmers in the western provinces.

I wish to refer to some remarks of the hon. member for Brantford (Mr. Cockshutt) and the hon. member for Brockville (Mr. Webster). The hon. member for Brantford makes some strong statements at times. I heard him say in a former session that if anything happened to the British navy we would find the guns of the United States trained upon Canada.

Mr. COCKSHUTT: Would the hon. member tell me when I made that statement?

Mr. WARNOCK: I have not it by me.

Mr. COCKSHUTT: I think the hon. member will have trouble finding it.

Mr. WARNOCK: I made that same statement when I spoke on the navy last session, and he did not challenge it.

Mr. COCKSHUTT: Probably I was not present. I do not think the hon. member can show that I ever made such a statement, and if he cannot he should not attribute it to me.

Mr. WARNOCK: I must accept the hon. member's denial if he says it is not correct, but I shall make it a point to look the matter up. He made a statement a few days ago in his speech on the Budget which was just about as bad. He said, as reported at page 2634 of 'Hansard':

> Let me tell him (Mr. Turriff) how his friends the Americans will treat him if he ever gets into their hands, because we know with regret that when we deal with Uncle Sam we have to go in with a coat of mail and with shining armour if we hope to come out again with a whole skin.

Mr. FOSTER: That was figurative speech.

Mr. COCKSHUTT: I was speaking on the trade question.

Mr. KNOWLES: Perhaps he is going to start armour works next.

Mr. WARNOCK: Perhaps that is the reason that the Minister of Finance put a duty on steel rods; he may anticipate the

founding of an armour factory. If that statement of the hon. member for Brantford is correct, then there must be a lot of eastern Canadian farmers who are wearing coats of mail to-day because our export trade, particularly from Ontario and the eastern provinces as well as from the western provinces, into the United States, is growing from month to month, and our farmers seem to like it. If the hon. member for Brantford will ask the Americans who bought Canadian stockers in Ontario last fall what they think, I believe the American cattle men will tell him that it is the American who needs the coat of mail when he deals with the innocent Ontario farmer. The American cattle buyers who bought Ontario stockers last fall found that many of them were worn-out cows that were no loss to Canada. The hon. member for Brockville (Mr. Webster) I believe will admit that many of the stockers sold to the United States buyers were worn-out cows and inferior stockers.

Mr. WEBSTER: I would like the hon. member to show me in 'Hansard' where I made any statement about that. He may find that statement in the speech made by the hon. member for Chateauguay (Mr. Morris).

Mr. WARNOCK: I did not say that the hon. member said so; I said that I did not think he would dispute it if I said so. I am sure I do not want to annoy the hon. member for Brockville; he has a great reputation. Many of the Americans who bought cattle in Ontario and Quebec last fall are losing a lot of money on these investments to-day. As I said before, the American cattle buyer does not get any the best of it when he runs up against the canny Ontario farmer. The hon. member for Brantford, when speaking about the British market, was interrogated by the hon. member for Rouville:

> Mr. Lemieux: What about our cattle?
> Mr. Cockshutt: I do not think we have many cattle to send over there at this time. Our meat would probably bring a very good price in Great Britain, but judging from the prices now prevailing in the home market, I think every one will agree that we should keep most of our cattle at home to feed our own people.

These sentiments are all right, but they do not work out in practice. The United States market is taking thousands of our beef cattle, while the British market is not taking one. Why? Because our cattle do not work out in practice. The United We have shipped a great many cattle to Great Britain, but why are they not going there now? For years the cattlemen of Western Canada have shipped their cattle —not all of them—to the United States market, paid the duty and made a handsome profit and they are doing that to-day. If they had sold to Canadian buyers they would have been compelled to accept only about 60 per cent of the value of the cattle. We shipped those cattle to the United States in face of the opposition of the Canadian beef trust in Winnipeg. They did everything to hinder us. Sometimes they got an option on all the Canadian Pacific railway cattle cars, and we were compelled to drive the cattle across the line and ship from American stockyards over American roads. Those are facts. The hon. member for Brantford also made this statement in reply to the hon. member for Assiniboia (Mr. Turriff):

> Ship your cattle over the border and, as soon as you begin to get a market established, quarantine and the tuberculosis test will do the trick. My hon. friend would not be sending his wheat into the United States for more than a month or two before the Americans would find smut in it, or that it was not properly classified.

When it comes down to impeding the shipment of Canadian cattle by quarantine, how does the United States compare with Great Britain? There has been an embargo on Canadian cattle entering Great Britain for over twenty years. Our cattle were unjustly, I say, shut out of the British market. If cattle are shipped to the British market they have to be killed at the port of debarkation. That embargo was imposed at the time when contagious pleuro-pneumonia was prevalent amongst United States cattle, and the British authorities thought they had found a few cases in Canadian cattle. They said: There is only an imaginary boundary line between the United States and Canada and if United States cattle are diseased, Canadian cattle must also be diseased. The Canadian authorities sent inspectors to England who held many post-mortems on cattle slaughtered on the other side, but they never succeeded in finding a case of disease. Even when the British authorities were petitioned by the Scottish farmers and the cattle feeders of England to remove the embargo, they steadily refused, and it exists to-day. That is another reason why so many of our cattle go to the United States market. The embargo was absolutely unjustifiable, and if the hon. member for Brantford would forget his imperialism for a moment and take a common

sense view of the business of the Canadian farmer, he would not make so many mistakes.

What did the hon. member for Brockville (Mr. Webster) say? He was regretting that so many stockers—I think he was referring more particularly to Ontario and Quebec cattle—had gone to the United States market. I have shown that many of those stockers were no loss to Canada, and I have the authority of the live stock commissioners and other well-informed gentlemen for that statement. I believe it would have been a God-send to the live stock industry of Canada if some Ontario and Quebec farmers had shipped all their stock across the line and then made a fresh start with healthy cattle.

Mr. WEBSTER: That is not the case in Ontario.

Mr. WARNOCK: I will give my hon. friend a little information if he waits. I know what I am talking about. The hon. member said:

> What do these cattle consist of? To a large extent of young stock, one-year olds and two-year olds. That is a mistake that our farmers made. They shipped as high as thirty-five or forty in one car, and we saw carload after carload going out of our country. To-day many farmers regret that they sold that stock, for they could sell it in the home market to-day, in Saskatchewan or British Columbia, for more money.

The hon. member admits that he is correctly reported?

Mr. WEBSTER: Yes.

Mr. WARNOCK: The Ontario farmer could not do anything of the kind, and I will prove it to the hon. member. He knows—perhaps he does not, but others know—that these stockers brought more money from American buyers than they were worth to any buyer in Canada. Some of us who were buying cattle about that time bought them through agents in Ontario and had them shipped out West, but when they landed in Alberta we were so disappointed with them that we did not want any more. That was just before the Underwood tariff came into effect. We were wired by our agents in Ontario that the duty was removed and that American buyers were in the country and that our agents could sell cattle to these buyers at considerable profit. We wired them to sell, and they sold the cattle to American buyers. They were worth a great deal more to them than they were to us. The hon. member for Brockville says that these cattle could have been shipped to British Columbia or Saskatchewan. Let us see. I do not want to convey the impression that tuberculosis is rampant in Ontario or Quebec, but there is more of it than there should be. The Minister of Agriculture will admit that it is one of the hardest problems with which he and his live stock commissioner have to contend. Let us see what the position is in British Columbia. We hear so much about the home market and its value to Canadians. I just wish to quote from the last report of Mr. Richardson, secretary of the Alberta Cattle Breeders' Association:

> One of the most important conditions in connection with the cattle industry has arisen during the past two years as a result of animals not being allowed to be imported to British Columbia from other parts of Canada without first satisfactory passing inspection for tuberculosis.

Mr. BURRELL: Is that stated there without any qualification?

Mr. WARNOCK: Permit me to continue:

> During the past few days this menace has been more forcibly brought home to the undersigned through the fact of a considerable shipment of cattle having been brought from Ontario for British Columbia The shipper was not aware that the animals had to pass a veterinary examination for tuberculosis until the shipments arrived at Calgary, where they were tested. Practically all of the shipment reacted for tuberculosis, and were sold locally in Alberta.
>
> The following resolution was passed at the last annual meeting

That is the meeting, I presume, of the Alberta Cattle Breeders' Association:

> That the Dominion Government be petitioned to put in force the same regulations for Alberta as are in force for British Columbia in respect to inspection for tuberculosis, of all pure-bred animals coming into Alberta, and that the inspection shall apply to grade dairy cattle being imported into the province as well as pure-breds.
>
> Whatever may be the best method of handling this problem in the general interests of the Dominion of Canada, the fact that there is such an inspection in force for British Columbia makes it absolutely imperative that a similar inspection should be in force in Alberta, and no doubt when enforced in Alberta, the seriousness of the problem will be at once apparent to the residents of Saskatchewan.
>
> Mr. Richardson read communications from Hon. Duncan Marshall, Minister of Agriculture, which showed that the department was determined to do everything possible to promote the success of these tests and thus protect the people from meat contaminated by tuberculosis.

Mr. BURRELL: Permit me to point out that the justification for that is the fact that British Columbia, unlike Alberta, has on its statute books an Act which pro-

vides for destruction of and compensation for all animals having bovine tuberculosis, by which they have reduced it to about two per cent, and of course that makes the circumstances different in that province. It is the only province in the Dominion that has done that.

Mr. WARNOCK: I think Alberta has also taken steps of that kind. I know that in the city of Calgary and other cities all dairy cows are inspected, and a great many of these cows have been found to be infected with tuberculosis, and their milk is not allowed to be sold.

Mr. BURRELL: There is no compensation?

Mr. WARNOCK: There is no compensation, but it is illegal for a dairyman to sell the milk of a tuberculous animal. These are some of the points I want to deal with in connection with the statements of the hon. member for Brockville (Mr. Webster), and these are some of the situations that Ontario and Quebec farmers will have to face at a very early date. I heard some remarks made in the Agricultural Committee on this very question by the hon. member for Brockville and the hon. member for Dufferin (Mr. Best), who seem to be very strongly opposed to the application of the tuberculin test, but I can assure you it has got to come. It is one of the problems facing the Minister of Agriculture to-day, and I believe he and his veterinary director-general are taking steps to meet that situation; at least I hope they will take such steps.

The western provinces are not prepared to accept the culls from Ontario, and before we will do that we will do as we have done in the past: we will go down to Mexico and import cattle from Mexico and pay the duty on them. One gentleman from southern Alberta was in Mexico a few weeks ago, but owing to the unsettled conditions in that country he could not buy cattle. However, many thousands of cattle have been brought in from Mexico in the past few years, and we will bring in more of them; they are adapted to our range conditions, and they do not require a great deal of care in the winter.

As regards free wheat, I have already given my views on that question in this House, but I would like to say this further: that I heard the hon. member for Brandon (Mr. Aikins) the other day state that he was glad the Minister of Finance had not closed the door to free wheat. I think, however, the hon. gentleman will have a great deal of difficulty in persuading his constituents that the Minister of Finance has not closed the door to free wheat. I doubt very much, however, if the hon. member for Brandon knows very much about what the Minister of Finance purposes doing. I believe that we will get free wheat before the next election, and if we do I think it will be through the efforts of the Minister of Public Works (Mr. Rogers). As I have already said, that hon. gentleman has a very keen appreciation of the value of votes, and he does not want to see the western provinces vote solidly against the Conservative Government; not he, and he will bring some pressure to bear on the Minister of Finance before the next election to get him to pronounce in favour of free wheat.

On the question of agricultural implements, since the hon. member for Moosejaw (Mr. Knowles) moved his free agricultural implement amendment, we have had many statements made by Conservative speakers in this House and outside of it, and statements made in the Conservative press to the effect that the reduction in the duty on agricultural implements granted in the present Budget is more favourable to the western farmer than that which was proposed under the reciprocity pact of 1911. I have gone through this matter very carefully, taking the figures, the retail cost, the duty, the customs valuation, and the duty collected, and I have also made the same comparison on the basis of the duty set out in the reciprocity treaty. It is estimated that the average equipment of agricultural implements, required by a homesteader, would cost about $1,200, and the duty he paid on these implements, which he absolutely requires came to $153, under the duty existing before it was changed by the recent reduction. Under the proposed reciprocity agreement, that amount of $153 was reduced to about $124, or a saving of $29.42. But under the reduction now granted in the present Budget, the amount is only reduced by $7.50 against the $29.42 as proposed under the reciprocity treaty. Since the hon. member for Moosejaw moved his amendment, I have seen references in the eastern press to what they describe as the tax dodging western farmer. The hon. member for South Ontario (Mr. Smith), speaking this afternoon said that free agricultural implements would not be much good to settlers, but if it would save each settler from $150 to

$154, that would mean a very great deal to him; it might mean the difference between the success or failure of a homesteader.

I must refer again to the coat of mail and shining armour that the hon. member for Brantford (Mr. Cockshutt) spoke about, and I must say if there is any man in Canada who needs a coat of mail it is the western farmer when he gets into the grasp of the Canadian manufacturer of agricultural implements; and to prove this I shall relate a few instances of what has taken place in my part of the country during the past year.

During the past few years the agricultural implement manufacturers and their agents have made themselves very obnoxious in Alberta and, I believe, also in Saskatchewan. I may mention one case that occurred in the month of November last. A young farmer had a team seized which had cost him $500 the year before, and sold at public auction at forced sale by one of the implement companies for $265. I will mention another case. A farmer came from one of the eastern provinces six or seven years ago with a considerable amount of capital and settled in the province of Alberta. He did very well for a year or two, but then he got some threshing machines, ploughs and such things, and got into the hands of the implement men. He was closed out last November and eight or ten head of horses were seized and sold for less than sixty per cent of their true value.

Mr. CURRIE: Would free implements have saved him from that?

Mr. WARNOCK: If the farmer was allowed to buy where he chose he would not deal with an implement firm who treated him in that way. He would have another chance; he would have competition. These are the complaints that are prevailing in the West, not only in Alberta but in Saskatchewan also. I desire to read a few excerpts from the address of Mr. J. A. Maharg, president, at the thirteenth annual convention of the Saskatchewan Grain Growers Association held at Moosejaw on February 11, 1914. Mr. Maharg said:

Why are farmers poor?

Although the present year yielded a bountiful harvest of excellent quality over the greater portion of our province, we are forced to admit that the financial condition of a large number of the farmers of Saskatchewan is very unsatisfactory. This condition should not be allowed to exist, and would not exist were justice and fair-dealing the rule of all those with whom the farmers must do business.

He instances a few cases and proceeds:

My position in our movement, especially in connection with the Co-operative Elevator Company, brings me in closer touch with the financial position of the farmers than possibly that of any other individual in Saskatchewan. I have made careful inquiry along this line, and almost invariably the cases of real hardship that I have investigated have been caused by the implement firms forcing collections. I consider they have taken a very unfair position in this matter—a position which has cost the farmers of this province at least $6,000,000 on the price received for their grain, as well as being indirectly responsible for throwing thousands of men out of employment. This is a question which is of vital interest to every resident of our province, regardless of their occupation, as the prosperity of all is absolutely dependent upon the prosperity of the farmers.

Hasty marketing and unemployment.

In my address two years ago you will remember I stated that should any year's crop be practically all marketed during a few months in the fall, the result would be that thousands employed by the transportation systems would lose their employment. The possible condition outlined then is an actuality now, and because of its far-reaching effect, it is essential that all citizens of the province, whatever their occupation, should join hands in an effort to overcome the difficulty.

Changing implement note dates.

We have tried to arrange a conference with the Manufacturers' Association to see, among other matters, if a change in the due date of notes given for machinery could not be made in order that farmers might not be forced to market their grain so hurriedly. However, up the present we have not been able to arrange for this meeting. Should we not be able to arrange for the changing of the due date of implement notes, then there is only one thing for us to do, and that is to take the matter in our own hands and deal with it ourselves.

I have mentioned already that farmers out there are forming co-operative associations for mutual protection.

This may take considerable time, but nevertheless, we can do it if we only go about it in the right manner. I feel very keenly on this matter as some of the practices that have come under my notice recently have been nothing short of outrageous.

I can corroborate what President Maharg says in this respect.

Mr. BRADBURY: How would you correct that?

Mr. WARNOCK: Do you not think that free implements would help?

Mr. BRADBURY: No.

Mr. WARNOCK: I think it would. In the province of Alberta they took some steps to correct it. At the last session of the provincial legislature a Machine Act was passed, and I want to show what effect that had. A constituent of mine, who had a very promising crop last summer ordered, at the solicitation of one of the implement firms,

a small threshing outfit. Later in the year this man's crop was not doing well, he became afraid and cancelled his order. Do you think the machine company would accept cancellation. No, they shipped the threshing outfit to the farmer's station, told him that it was there and demanded a mortgage on his farm. I had sold the farmer the quarter-section of land and that is how I came to be aware of the circumstances. The company wired me to find out how much this farmer owed me on the land. The farmer refused to accept the consignment of the threshing outfit and instructed his solicitor to refuse acceptance of it for all the reasons mentioned in the Alberta Machine Act. The company promptly recalled the shipment and said no more about the question.

At six o'clock, the House took recess.

The House resumed at eight o'clock.

Mr. WARNOCK (resuming): At six o'clock I had just finished my remarks on free agricultural implements, and I now desire to say a word about the increased duties on steel rods and other articles of steel. But first I desire to refer to the fact that the hon. member for Brantford (Mr. Cockshutt) challenged certain statements which I attributed to him. I had not 'Hansard' with me, but I have looked the matter up since, and I desire to quote just what the hon. member did say. I quote from the debate on the 16th of January, 1913, as reported at page 1634 of 'Hansard'. The hon. member was speaking in reply to Mr. Pugsley:

> What did the Government of which my hon. friend was a member, do? Under the Rush-Bagot treaty the Americans were allowed to have two war vessels on the Great Lakes and these of about 100 tons each, but by the permission of the Laurier Government they got through our canals nine war vessels, some of 1,300 tons instead of 100.
>
> Mr. Pugsley: Only training vessels.
>
> Mr. Cockshutt: But they will have their guns trained on us and we have not got a boat to defend ourselves when the trouble arises.

So, I was correct in what I attributed to the hon. member. Now, as to the changes in the duties on steel: I have had many letters from gentlemen in the West strongly objecting to steel bounties or any tariff on steel. The Minister of Finance has seen fit to raise these duties, and the opinion of the West is that this will have the effect of very materially increasing the price of nails and many articles used by the farmers and settlers in that country. I noticed a few days ago the financial statement of the Steel Company which it is understood these changes in the tariff will most affect, showing the business done during the year and the profits on that business. That statement goes to indicate that these increases in duties on steel rods and other articles are quite unnecessary, for the company has had a profitable year and is doing very well.

Now, as to the question of the Canadian Northern railway, I agree to a great extent with what was said by the hon. member for Medicine Hat (Mr. Buchanan) the other night. But I am content to wait until the Government brings down its proposition in this matter and then I shall endeavour to judge the case on its merits. We want more railways in the West, there is no doubt of that. There are many lines of the Canadian Northern railway projected in parts of Alberta and also of Saskatchewan, and if we do not get these lines, we shall probably have to wait a long time before other companies will build the roads. Mr. J. A. Calder Minister of Railways in the Saskatchewan Government was interviewed in Toronto on the 11th instant, and I desire to quote what he has to say on this question:

> 'People who talk about putting on the brakes and stopping work are totally unfamiliar with conditions,' said he. 'These lines are required not to open up new territory, but to supply railway facilities for settlers who took up the lands years ago. The purport of the decision of the Board of Railway Commissioners on the freight rates case clearly indicates that these branch lines are urgently needed and must be proceeded with. Unless this is done not only will settlement and development be retarded, but thousands of our farmers who are completely disheartened will pull up stakes and leave the country. This represents the real situation, a situation that eastern Canada is interested in just as much as the West. If we are to hold what we have and if we are to secure annually the increase in crop area which we should expect it is imperative that railway facilities should be provided in all the large settlements in the West where the farmers are compelled to haul the grain a greater distance than from ten to twelve miles to market. Wherever this haul reaches out to twenty miles or over grain-growing is unprofitable, and will not be carried on.'

Mr. Calder was referring particularly to Saskatchewan, but conditions in Alberta are practically similar. But, as I have said, I am prepared to wait until the Government brings down its proposal in relation to the Canadian Northern railway question, and then to judge their proposal on its merits.

With regard to immigration questions,

Mr. Calder made some remarks on that question also, and these I desire to read:

'While the West has been receiving its share of the newcomers to Canada, the percentage of those who go on the land is comparatively small,' said the minister.

'The ever-increasing tendency has been to crowd into our cities, and, as a direct consequence, conditions are arising that are unhealthy and undesirable, to say nothing of the fact that agricultural development, the real backbone of the country, is more or less at a standstill.'

Here again his remarks are appliable to Alberta. We also have been getting a great many immigrants, but only a small percentage are going on the land. Yet it is of the utmost importance that we should get settlers on the land, settlers who will cultivate and produce, whose increase of crop and extension of crop area will help to sustain the many villages, towns and cities that have sprung up in the West. In my opinion it is only by giving the farmers of the West a wider market for their products, not only for wheat, but also for oats, barley and flax, and so encouraging them with a profit on their capital and return for their labour, that we will make them content to stay on the land.

We have had a great deal of advice, particularly from people in the East, that we should go into mixed farming. But those who give that advice overlook the fact that many areas in the West are not adapted to mixed farming. It may be because of scarcity of water, or it may be for some other reason, many of our farms are not adapted to stock raising and mixed farming. There must always be a surplus of wheat and other grain to ship out of that country, and for this a market must be found. I am satisfied, and in this I voice the opinion of the farmers of the West, that that market is to be found south of the boundary. Several hon. members on the other side have endeavoured to belittle the value of the United States market. Now, I wish to show just how that market has benefited us in one article within the last two months. This is quoted from the press, and it is practically correct:

Owing to the removal of the United States customs tariff, the sheepmen of Southern Alberta sold their 1914 clip at an average of 3 cents or 4 cents per pound over what could have been secured from Canadian buyers. One Boston firm purchased a million and a quarter pounds for $215,000, which is $80,000 more than the sum paid by Canadian buyers for practically the same amount last year.

Mr. MORPHY: With the hon. member's permission, I desire to ask him a question. For what reason was the tariff removed from wool by the American Government?

Mr. WARNOCK: I presume because they wanted it.

Mr. MORPHY: Won't the same thing happen with wheat?

Mr. WARNOCK: Let me explain that. The United States miller, I believe, does not want our wheat on any other conditions than those on which he gets it to-day. If the United States farmer buys wheat in Canada for purposes of milling and exporting, he gets a drawback of ninety-nine per cent on the flour exported; he is practically in just as good a position to-day as he would be under free wheat—but our farmer pays the duty. He says to the Canadian farmer: there is a tariff of ten cents a bushel on that product; you will have to take that much less. Take our cattle to-day; the large American packers are opposed to our cattle going into the United States; it is the small independent packer of Seattle, Tacoma and other western cities who are buying our hogs and cattle. In the same way if you let wheat, for consumption in the United States, go into that country duty free, the small independent grain buyer will come into Canada and buy grain, and you will get the best of the large American miller. The American millers will fight the United States president if he ever proposes to remove that duty. They do not want it removed: they are in a better position to-day because they have the ninety-nine per cent drawback. Many farmers in my own constituency are shipping their wheat, barley and flax to the United States market, paying duty, and making a handsome profit. If they can do that under the United States tariff, they could make a very much larger profit if they had free entry for their wheat into the United States market. That is why we want free access to the United States market, and I believe that the reason we do not get it from the United States Government is because of the opposition of the American millers.

Mr. W. G. WEICHEL (North Waterloo): Mr. Speaker, very seldom do I attempt to take up the time of this House, and I do so now only because I feel it my duty to take part in this debate—because I feel deeply conscious of my own responsibility to the riding I represent and to the country I serve. In view of that responsibility,

I have taken some pains to place my views on the fiscal policy of Canada before this House, and I hope my remarks will be considered as emanating from a man who has lived in Canada all his life and who has observed with pride and satisfaction the progress that the country has made; and I trust that they will be received as the honest and well considered views of a Canadian business man.

I listened with a great deal of pleasure to the able address delivered by the Minister of Finance when delivering his Budget speech. I followed his remarks very closely and now take this opportunity to congratulate him for the words of good cheer and optimism that rang throughout the whole length of his remarks. Although the country has met with a slight reverse; although pessimists were ready to cry blue ruin, the statement shows that Canada again has passed the billion dollar mark, a fact that is hailed with delight by every optimistic Canadian citizen. We have made the grade, and the lessons learned during the past year or so will have a beneficial and lasting effect upon all of us. Good management, prevention of waste, the adoption of good business principles and methods, and a desire on the part of our banking institutions to further legitimate enterprises, will have their effect on the future prosperity of Canada, and let us hope that before long the nightmare of financial distress will be a thing of the past and only a fleeting memory.

Before entering the House of Commons as a duly-elected member, I had my doubts and misgivings regarding the utterances of members on the fiscal policy of the nation. I often came to the conclusion, while perusing the columns of the newspapers, that the insinuations aimed at certain members were groundless and biased and that they had been wilfully misquoted. These illusions of mine have, however, been sadly shattered since I listened to speeches of hon. gentlemen comprising the Opposition, many of whom think less of the principles of free trade than I do myself. They make the claim that Providence was with the Liberal party from 1896 to 1911. Many and varied were the speeches delivered by these hon. gentlemen deploring the downfall of the Liberal party in 1911. My late opponent declared in most emphatic terms, at a banquet given in his honour in the city of Berlin, that the factory whistles did not blow and the factory bells did not ring at eight o'clock in the morning and at five o'clock in the evening when the Liberal party was in power prior to 1911, and, of course, as usual, blamed it on the present Government and its policy relating to the tariff. Was prosperity, Mr. Speaker, achieved under free trade from 1896 to 1911, or was it achieved under protection? Did hon. gentlemen make many changes downward while they were in power during that period? Certainly they did not, and because of that foresight the people kept them in harness for fifteen years until the free trade bug got in its deadly work and then what happened? The people took a hand in the game and the results were disastrous—and they were not what the followers of the Manchester School anticipated.

Many matters of great moment have been brought to the attention of the country through the speech of the Finance Minister. One matter in particular which attracted my attention during the delivery of the speech should not be overlooked in this House. It is a matter with which I am fully conversant, as it belongs to the business which I follow from one end of the year to the other in my home town—and I wish to congratulate the minister upon the change he made in this regard, which will be so beneficial to the farmers. The House will excuse me, therefore, if for a short time I refer to this particular matter. It is with regard to the item relating to No. 9 fence wire, which is under the present tariff admitted duty free. This No. 9 wire is used in the manufacture of ready-made wire fencing. Customs inspectors are furnished with what is known as a notch gauge, the width of the notch or opening for No. 9 size being 144/1000 in. The opening for the next smaller size, No. 10, is 128/1000 in., a difference of 16/1000 in. The wire that is found too large to pass into the No. 10 notch in the gauge is classified as the next size larger, which is No. 9, one of the duty free sizes. This permits of a great variation in the size of No. 9 wire, all of which passes customs duty free. A reduction of from 8 to 10 points in the size of the wire means a saving of from 8 to 10 per cent in the weight of material used, where this scant material is converted into

woven fencing and sold by the rod, which is the basis on which the farmer buys it. The opportunity for the maker of fencing to rob his customers arises out of his practice of buying goods by the pound and selling them by the rod. I have been in business too long not to know what has been done in this country with regard to the No. 9 gauge wire used in fencing. The practice with some makers is to order American No. 10 size, which is 135/1000 in., but duty free, as I explained before. The farmer has no means of gauging the size of the wire in his fence when he makes a purchase, and it is very difficult even for the trained eye to distinguish between No. 9 and 10 sizes. Let me illustrate the difference:

One lb. of wire, 144/1000 in. diameter stretches 17¾ ft.; 1 lb. of wire 135/1000 in. diameter stretches 20½ ft. This extreme variation in the size of material used in the different kinds of fence, has made the fence question a confusing one for the farmer and he has been led to believe that he will get fully No. 9 gauge wire in his fence; and, without provision for testing after taking his material home, he believes that he has got what he paid for. Confining the size to be admitted, duty free, more closely to the standard of 144/1000 in. adopted by the Canadian Government in their specifications for the National Transcontinental railway, allowing a variation of not more than a few points below the standard, which has been done by this Government, should not work any hardship to the manufacturers of woven-wire fence, who desire to give their customers the size and measure of material which they advertise. This will undoubtedly benefit the farmer who to-day buys and pays for No. 9 gauge wire to be used in fencing. All we ask for in justice to the farmer, is that those manufacturers who advertise wire as No. 9 should be absolutely compelled to furnish exactly what they advertise. Advertising is conducted, in many instances, in a barefaced and bold manner in this country, and something should be done to curb this evil, which to-day has assumed large proportions. By this means money is being taken out of the pockets of the buying public, who, in my estimation, should be protected by some law governing advertising methods as is done in Germany.

I stated before that I was an optimist regarding Canada and her future. Of course, I am a believer in moderate protection, and, while I have the opportunity, I wish, for a short time, to make some comparisons between free trade England and protected Germany; and perhaps my friends on both sides of the House will give me credit for at least giving them facts which I have taken great pains to collect, and which I am not giving to this House with a view of lauding Germany, but simply to show what I believe, in all fairness, to be a great victory for the principles of protection These facts, which are thoroughly reliable, should open the eyes of all Canadians to the danger of free trade, a policy which would mean utter ruin and annihilation to the manufacturing artisan, and agricultural interests of Canada. Some time ago a considerable number of representatives of British workingmen's societies travelled through Germany with a view to discovering whether the workingmen fare better under protection or under free trade. Their reports were very interesting and teemed with interesting and valuable facts. Germany introduced protection in 1879. Let us for a short time, compare Germany and British industrial conditions, taking as a starting point 1880.

The great productive industries are four in number, namely, mining, manufacturing, agriculture and trade. Germany, like Great Britain, mines principally coal and iron ore. The production of these has progressed as follows in the two countries, according to the Statistical Abstract for Foreign Countries, published late in autumn, 1911:

Production of Coal and Lignite.

	Germany, tons.	Great Britain, tons.
1880..	59,118,000	146,969,000
1890..	89,291,000	181,614,000
1900..	149,788,000	225,181,000
1909..	217,433,000	263,774,000

Now, let us turn to the production of iron ore:

	Germany, tons.	Great Britain, tons.
1880..	7,239,000	18,026,000
1890..	11,406,000	13,781,000
1900..	18,964,000	14,028,000
1909..	25,505,000	14,980,000

In 1880, therefore, Great Britain produced 150 per cent more coal and 160 per cent more iron ore than Germany. What a marvellous change since then! In 1909 Great Britain produced 60 per cent less iron ore than Germany, and her superiority in the production of coal has shrunk to a paltry 20 per cent and threatens soon to be a thing of the past.

Great Britain exports 60,000,000 tons of coal a year, whilst Germany exports only 10,000,000 tons. Therefore, Germany, has already overtaken Great Britain in the con-

sumption of coal. As the manufacturing industries are based on the use of coal, iron and steel, the manufacturing eminence and the progress of a country can best be measured by the national consumption of coal and iron and by the power of its steam engines. Compare Germany and Great Britain re consumption of coal and iron.

Consumption of Coal.

	Germany, tons.	Great Britain, tons.
1880..	57,008,000	129,078,000
1890..	90,798,000	152,876,000
1900..	149,804,000	179,083,000
1907..	208,195,000	195,466,000
1909..	206,321,000	198,080,000

Let us look into the production of pig-iron:

	Germany, tons.	Great Britain, tons.
1880..	2,713,000	7,749,233
1890..	4,651,000	7,904,214
1900..	8,507,000	8,959,691
1907..	12,875,000	10,114,000
1909..	12,645,000	9,532,000

Now let us look at the consumption of pig-iron:

	Germany, tons.	Great Britain, tons.
1880..	2,713,000	6,176,000
1890..	4,940,000	6,824,925
1900..	9,106,000	7,705,201
1907..	13,016,000	8,273,000
1909..	12,308,000	8,501,000

In 1880, therefore, Great Britain consumed seventy-two million tons of coal more than Germany; in 1909, or during twenty-nine years of protection for Germany, Great Britain consumed eight million tons of coal less than Germany. In 1880 Great Britain produced five million tons of pig-iron more than Germany; in 1909 she produced 3,110,000 less than Germany.

During the thirty years under review, when the productivity of her mines and the output of her manufactures have grown about seven fold, the rural industries of Germany have made the same wonderful strides. To-day she produces twice the quantity of bread, corn, oats and potatoes, and five times the quantity of sugar, which she produced before the introduction of protection. The increase of Germany's meat production is no less surprising than the increase of her crops, and has kept pace with population. Her population in 1873 was 41,564,000 and in 1908 was 62,083,000.

In 1873 Germany produced 15,776,702 cattle, and in 1907 20,630,544 head. In 1873 Germany produced 7,124,088 hogs, and in 1907, 22,146,532 hogs. Therefore, between 1873 and 1907, the population of Germany increased fifty per cent; during the same period the number of her cattle increased by thirty-three and one-third per cent, and the number of hogs by two hundred per cent. For comparison's sake, let us compare live stock statistics as between Great Britain and Germany. In 1907 Great Britain produced only 11,630,142 cattle and 3,967,163 hogs.

Germany's potato crop amounted in 1908 to the enormous total of 43,700,000 tons; the British potato crop amounted in 1907 to 5,223,973 tons, or just as much as Germany used for seed alone.

During the last thirty years, Germany's railway traffic has increased by more than 300 per cent, and its inland waterway traffic by 400 per cent. Germany recognizes the importance of cheap transportation. She has steadily extended, enlarged and improved her natural and artificial waterways, and keeps on extending and improving them year by year. Her industrial success in a great measure is due to the cheap transportation and the wise development of her waterways. The policy of the German Government with regard to her waterways has been deliberately laid down in an official publication which appeared some time ago, as follows:

> Any means whereby the distance which separates the economic centres from one another can be diminished must be welcomed and considered as a progress for the increasing or strengthening in our industrial competition with foreign countries.

Every one who desires to send or receive goods, wishes for cheap rates. Hence the aim of a healthy transportation policy should be to diminish as far as possible the economical, unproductive cost of transportation.

A country such as Germany, which is happy enough to produce upon her own soil the larger part of the raw material and food which it requires, occupies the most independent and the most favourable position; owing to cheap inland transportation its economic centres are placed as nearly as possible to one another. When this has been achieved, Germany will be able to dispense with many foreign products, and it will occupy a position of superiority in comparison with all those states which do not possess similar means of transportation. Many circumstances which in former times gave superiority to foreign countries, such as superior machinery, cheaper wages, greater natural fertility of the soil, are all being gradually levelled down; but what will remain is the advantage of a well planned system of transportation which makes the best possible use of local advantages.

Germany protects her population, not only against tariff reduction of foreign nations, but against the far more dangerous attacks upon their prosperity from within. Therefore, she protects and fosters her industries, not only by her tariffs but by a practical national education, and by the provision of efficient and cheap means of transportation.

The semi-official year book 'Nauticus' says, in 1910, of the advantage of industrial prosperity of Germany:

> During the last two decades, the industrial production of Germany has experienced a natural, ordinary increase. That increase has been caused less by the greater amount of our exports than by the growing importance of our markets; that is to say, by the growing wealth of the German people.

In the production of steel, which is a basic industry, she has rapidly overtaken Great Britain, as the following figures prove:

	German Steel Production. Tons.	British Steel Production. Tons.
1880	624,000	1,342,000
1908	11,000,000	5,300,000

Therefore, since 1879, the year when she introduced protection, her supremacy in steel over Great Britain has become overwhelming.

Workingmen, as a rule, are the best judges of labour conditions, and the following passage, taken from the report of the Gainsborough Commission of workingmen who, in 1906, travelled all over Germany, should prove interesting reading to those who favour free trade principles:

> We have been forced to face the fact that during the period following upon the introduction of protective duties by Prince Bismark in 1879, Germany has ceased to be poor, and has become well-to-do, that her working people have received a large increase in wages, that the social condition of the land has improved, that Germany's industries have developed, that she has succeeded in extending her foreign trade and acquired ready markets for her continuing increasing industry.

The change in the industrial character of Germany since the introduction of protection, and in the character of her foreign trade, is particularly striking. If a study is made of the nature of the trade between the two countries, prior to the introduction of protection, Germany sold to Great Britain raw material in food, and bought from them manufactured goods. In other words, Germany was Great Britain's farm, and Great Britain was Germany's factory. To-day the conditions are reversed. Now Germany exports to Great Britain manufactured articles of every kind, and receives in return raw material in food. That is the difference between the two countries.

According to the statistics of unemployed among trade unionists published by the British Board of Trade, there are, as a rule, from three to four unemployed workers in Great Britain to every single unemployed worker in Germany. It is also a well-known fact that men leave their country chiefly through lack of employment. Ten to twelve British immigrants leave Great Britain to one in Germany. Free trade exponents never tire of assuring us that protection makes production decrease, that it thus hampers the sale of domestic manufactures in foreign markets and destroys the export trade. Let us see if that is a fact. Since 1879 the exportation of German manufactures has increased from £83,500,000 in 1880 to £239,800,000 in 1910, therefore during the period from 1880 to 1910, while Germany's manufactured exports have increased by no less than 200 per cent, the manufactured exports of Great Britain have increased by only 70 per cent. Certainly the cost of living has increased both in England and Germany. One fact is notable, however, and that is this: That while wages in England remain practically stationary, they have advanced in Germany. Therefore we must draw the following conclusions, namely: That wages are higher in Germany than in England, and that the workingman living in a protected country is better off than the workingman living in a free trade country.

Are not the savings of the people the barometer of the success of a country ? Let us look at the savings of the people. In 1880 Germany deposited in the savings bank £130,690,000, as against deposits by Great Britain of £77,721,084. In 1911 Germany deposited £900,000,000, as against £227,902,840 by Great Britain. In eleven years from 1900 to 1911 the German savings bank deposits have grown more than eleven times as quickly as the British savings deposits, and £700,000,000 of these savings consists of small sums put into the banks by people belonging to the working classes. You cannot find poverty in Germany. The British Workingmen's Society hunted for it in vain, but could not find any. Germany to-day commands the respect of the whole world, and under protection has made enormous strides. The German people do everything in a thorough manner.

Their children receive a technical education which fits them to become masters in their respective trades and businesses, and if you were to ask a German to-day if he desires free trade, he would point to the belching chimneys of his fatherland, to the great commercial history of that people, who, under protection, achieved all these things since the year 1879. One of the most striking portions of Prince Von Bulow's new book on German Thoroughness is that part dealing with the marvellous growth of German industry since Prince Bismarck introduced his tariff system. He gives facts, which the followers of the Manchester school of free traders cannot explain away. One of the most important facts presented is that agriculture and industrialism flourish equally side by side and continue to enjoy the full benefit of her sources of national wealth, a position exactly reversed in England, thanks to free trade. In Germany, although the population is increasing, emigration has practically ceased. In England it increases year after year, especially in the rural areas. In England the production of foodstuffs declines steadily, and can any one be so foolish as not to realize what this would mean in time of war ?

What is the condition in Germany under protection? Thanks to her tariff and despite the fact that the number of persons engaged in agriculture has decreased, the amount of foodstuffs produced has increased enormously. The marvellous progress of that country since 1879 is a hard fact that free traders find it difficult to digest. To-day she challenges our supremacy in the markets of the world; yet only thirty years ago Prince Bismarck said Germany was slowly bleeding to death. I certainly would not make the sweeping assertion that this progress is entirely due to protection. No, Mr. Speaker, her prosperity is largely due to the thoroughness of her methods in all things, especially in matters educational. But these methods would have been of little avail had her industries and home market not been protected, and she might still be in the position described by Prince Bismarck in the following words:

> Germany, being swamped by the surplus protection of foreign nations, prices have been depressed and the development of all our industries and our entire economic position has suffered in consequence.

I have proven by statistics that are thoroughly reliable that Germany under protection has made greater progress during the last thirty years than has Great Britain under free trade. I am not saying this in a boasting spirit because I happen to have German blood in my veins. No, Mr. Speaker, I am deeply conscious of the fact that I am a British subject, and as such my fondest hope is to see all parts of the empire prosperous. But we must face the situation like men and no longer delude ourselves regarding the position we occupy at the present time. We still occupy that proud supremacy which we have occupied for years, but our position is not nearly as secure as it was years ago. Let Canada therefore continue in her present policy, which is similar to the policy Germany adopted, and under which she has made such magnificent strides and progress. Let us follow Germany's example by erecting technical schools, adopting thoroughness as our slogan, both in education and in business, and, above all things, let us not be foolish regarding our fiscal policy. Let us realize above all things that the very considerable expansion which has taken place in our trade under protection absolutely shows that a tariff is no hindrance to industry, as free traders would have us believe, but, on the contrary, is a stimulus to increased production.

A decided stand has been taken in this House by members of the Opposition regarding the abolition of the duties on agricultural implements Why they should single out this one industry is a mystery to most of us, as this particular industry is in many instances the backbone of many of our towns and cities. This is certainly the case in my home town of Waterloo. Let us carefully consider what this industry really means to Canada. The 1911 census shows that there are seventy-seven manufacturing firms in Canada producing some kinds of agricultural implements. They utilized a capital of $45,232,098, and produced products worth $20,722,722 in that year. They employed 8,834 workmen and an office staff of 726 people. The wages paid to workmen was $4,739,750, and to office employees $811,897. This $5,500,000, was spent in Canada among Canadians. This does not, by any means, include the help employed in branch offices, salesmen, agents, etc. If you add these to the former list, you have a total of 9,560, and then you could easily add 5,000 more belonging to outside staffs and selling forces, which would increase the total to 14,506, directly dependent upon this business together, with subsidiary manufactures who are employed in making

materials used by the implement manufacturers. These concerns employ half as many hands as the implement manufacturers, and this would mean another 4,780 employees in implement producing materials. The agricultural implement business means much to Canada. It is certainly a distinct national asset, because if we figure four or five to a family, and, as nearly all the workers are adult males, it will mean that over 100,000 people are benefited directly by this industry alone. Would it not be unjust discrimination to single out this from amongst all the other manufacturing industries throughout the country? The only fair way would have been for the hon. gentlemen comprising the Opposition in voting for the amendment to abolish all duties on agricultural implements, to have suggested also the abolition of all duties on raw materials entering into the manufacture of agricultural implements.

You can readily understand, Mr. Speaker, how this would affect the whole iron industry in this country, which we all admit is, after agriculture, the basis of our prosperity. Discrimination will not do; we must treat all alike; and yet there are those who forget that these people whom I have mentioned must be fed, housed, and clothed; that the farmer has, through these industries, a good home-market near by, and if we allow this particular industry to be discriminated against, it will eventually mean that a great deal of the money paid in wages will be paid south of the line. There is an industry in my home town, Waterloo, employing several hundred men, manufacturing agricultural implements. It is the backbone of the town, and reduction of the duty would absolutely cripple this industry.

The greatest asset that the Dominion of Canada possesses at the present time is her home market, possessed by both the eastern and western farmer of this country, who, despite the 'blue ruin' cry of certain farm weeklies, is not by any means beginning to meet the demands of the consumers of Canada in many kinds of productions. I, for my part, can speak with perfect freedom about this matter, because I live in a community and represent a constituency that has in the short space of thirty years become a marvellous commercial centre. The city of Berlin has increased its population four times in the short space of twenty years, which is due only to the wise policy of protection which has fostered her infant industries and which has given us a splendid home market for our farmers. Hardly anywhere in this Dominion can you find anything to equal the commercial activity of the towns and cities from Brantford to Guelph. They are hives of industry, and the people living in these cities and towns to-day would probably look askance at the policy of any party which talked free trade or a reduction in the duties pertaining to these different industries. We have no high protection in Canada. Taking dutiable and free goods together, the average duty imposed by Canada on imports from the United States amounted to only a little over 12 per cent. Surely this is not a high protection. Out of a total importation from the United States in the fiscal year of 1910 of $223,501,000, nearly half, or $104,667,000, was admitted duty free. Surely these figures do not seem to denote that the eastern and western farmer is being taxed out of business.

I say, to the hon. Minister of Finance and to the members of the Cabinet and this Government: The people gave you their mandate in 1911 and told you they did not even want a fringe of free trade with the United States and that the pilgrimages must cease. The people absolutely meant what they said in 1911, and any Government which goes contrary to the will and wishes of the people deserves what the Liberal party got in 1911.

I liked the language which the hon. Minister of Finance used a few days ago in this House when he delivered his Budget speech. He said: Our policy is to build up and not to destroy. That is the policy that Germany has pursued for the last twenty-nine years, and that is the policy which I hope we will continue.

A celebrated writer once said that the country that sells raw materials only, will always be poor just as the farmer who sells corn only, and not hogs, will never lift the mortgage. If you have a forest and can work it up into tables, chairs, bookcases, and other furniture, you will make a good deal more money than if you sell firewood only. No man ever got nervous prostration pushing his business, you get it only when the business pushes you. So it is with the nation. Let us attend strictly to our own affairs; let us push our own business, and a prosperous, happy and contented people will be the result. If Canada is to occupy the place for which the bountiful resources of nature and the efficiency of her people have equipped her, the intelligence, enterprise and co-operation of the people and Government must be obliged to maintain and

9 p.m.

strengthen her possessions. Do we realize that we are competing to-day with other countries who are striving for supremacy by every means in their power? Let us not forget that, as a nation, all classes within the Dominion prosper or fall together; that the farmer is dependent on the manufacturer and workingmen, and vice versa; that if one is destroyed the other suffers as well. This country is ready for business and more business.. Free trade talk in Canada, when money is scarce, when men are walking the streets by thousands in the big American cities out of work, with manufacturing plants over there ready to dump their surplus products into Canada—the man talking such rot just now should be examined as regards his sanity.

But we hear certain hon. members of the Opposition deny the free trade sentiments within the party. The utterances of the leader of the Opposition in many of his former speeches and the element which brought the 1910 Administration to its knees, now dominate the Liberal party, and in my opinion there is no room for a protectionist if he holds honest views, within their ranks. His counsels go for nothing, and he is regarded simply as an obstructionist. The Liberal party is committed to free trade, and they cannot fool the people any longer. For some time the Globe has argued that there is no way out 'short of the root and branch abolition of all protective duties.' No protectionist is now recognized as a loyal member, and the Liberal leader is now absolutely in the hands of the free trade extremists. The voters will find no fault with them if they act like men and come out boldly with their policy. Why try to hide behind this and that subterfuge? State your policy, gentlemen, so that the country will know what you have in mind. We are waiting for the amendment.

I, for my part, believe in a moderate policy of protection, and I am ready to-morrow to appeal to my people on this issue. Public revenue must be raised in one fashion or another; if not by a custom tariff, then by direct taxation. If our tariff system were abolished to-morrow, we would have to raise ninety to one hundred millions or more by direct taxation.

Another amusement feature that has been put on the screen by our Liberal friends, who certainly know that it pays to advertise, has been the policy 'of the moment,' originated in Hamilton—I am sorry for Hamilton—and expressed in glowing terms by the right hon. the leader of the Opposition.

What a contrast between the two parties! The Conservative party in power in 1878 declared for moderate protection and have never veered from that policy to this day. In season and out of season, in power and out of power, they have had faith in the great resources of our country, hoping and believing that protection, to enable our people to utilize these blessings, was necessary to build up a great, thriving and bustling community.

Mr. MICHAEL CLARK: Did not the Conservative policy of 1878 include reciprocity in natural products?

Mr. WEICHEL: Possibly it did.

Mr. CLARK: Well, then, why complain of us?

Mr. WEICHEL: One of our friends answered that question this afternoon.

Mr. MACDONALD: What did he say?

Mr. WEICHEL: It is not necessary to answer a question twice in this House. The Liberal party, out of power in 1878, cried for unrestricted reciprocity, commercial union, and when in power in 1896 they snugly entrenched themselves behind the National Policy until in an evil moment for them they listened to the voice of the free trade siren, and the result was ignominious defeat. To-day, out of power, they are advocating a policy of free trade, although they do not want everybody to know it. It is to be a secret for a while to lull to sleep the suspicions some of their Liberal manufacturing friends have displayed during the past few weeks. Put us back; we won't hurt you, they say to the manufacturer, and yet they wish to destroy our iron industry in Waterloo, manufacturing agricultural implements, which employs two hundred hands, mostly men with families. And, to disarm suspicion, 'Free food' is introduced into the arena. It was heralded on that memorable evening, and gradually lost its brilliancy, until to-day many advocates of Liberalism wish that some other opportune thought had entered the subtle brain of their leader. 'Free food'—who does not like the words?—they sound well; but sounds leave only an echo, and that is about all that is left of the Hamilton announcement.

Mr. Speaker, economic thinkers in the world to-day agree that the tariff is not responsible for the high cost of living, and

the theory that the abolition of customs tariff will lower prices and better the condition of the masses has been found wanting. Britain has had free trade for more than sixty years, and yet the cost of living in the United Kingdom is going up by leaps and bounds. Holland and Denmark are low tariff countries, yet they pay more for their food-stuffs than do the people of high protectionist countries like Germany and France. But, since Europe is far away, let us come nearer home. Why is it that the abolition of food duties under the Underwood tariff failed to lower the cost of living in the United States? Why, Sir, without going into details, the result has been that in the three months since the new trade policy has been in force, the cost of living in United States has not only not decreased, but has actually increased at as great a rate as during any equal period of time during the past ten or fifteen years. Some of the leading newspapers in the United States have been mercilessly exposing this policy, and they refer scornfully to the Canadian Liberals as opportunists.

Where will the free food come from when there is no cheap food outside Canada to buy? Living is high in all countries to-day. The United States will not buy food-stuffs from us at high prices and ship them back to us at low prices. They abolished the tariff to get cheap food, and therefore, are not in a position to sell it. Not from England, Scotland and Ireland, because they import their food.

Where then will we get it from? The farmer is told he will have better markets—better prices; and the workingman is told that he is to have cheap food. If the Canadian farmer is to get higher prices, then where in the name of common sense does the workingman come in? And if the workingman is to be benefited, where does the farmer come in who produces the food that we consume in Canada to a large degree. Free food means free trade in natural products, and this means the removal of the corner stone of Canadian national prosperity. The National Policy aims to benefit the farmer and the workingman first; it benefited them by causing industries to be built up throughout the country, creating a demand for labour and a home market for the farmer. It has been successful and has made Canada a hive of industry, where the Canadian farmer gets good prices, and the workingman good wages.

Let the workingman of Canada consider well and realize that under free trade our industries would have to compete with cheap labour in the factories of Europe and with low standards of Asiatic and European living. I realize with all others that living is high, but I also realize that I could do with a great many things less than I am doing now, and thus reduce my living expenses. To be honest with ourselves, we must confess that we have been going at a pretty fast clip for the last fifteen or sixteen years, and that it is hard to get out of a rut. Twenty to thirty years ago living was not so high, and it does not require the services of an expert to determine the reasons. Luxuries in many forms, modern inventions, the awful and sinful extravagances in dress, styles, fashions, fads, changing in rapid succession with the moon, the world going mad trying to imitate Paris, New York and London, and rising next morning with a headache and an empty purse—these are the things that increase living expenses, and no amount of legislation will undo the evil unless we receive a check such as we received during the last year. That seems to be the only remedy, and no doubt an all-wise Providence takes a hand in the game of life once in a while and guides the ship into the harbour of common sense and security. We, therefore, Mr. Speaker, believe that Canada has again made the upward turn, and that from now on there will be steady improvement. This great country of ours is just beginning to realize its capacity and power—its tremendous possibilities. Our resources are to-day the envy of the world; opportunities galore face those who boldly and intelligently strike out for a stake in its broad and fertile lands.

In the struggle for the trade of the world Canada will occupy the place for which the bountiful resources of nature and the efficiency of the people have equipped her. The intelligence, enterprise and co-operation of the people and Government, therefore, must be applied to maintain and strengthen her position. As I said before, taxes must be imposed in some way, for we must have revenue to carry on the affairs of Government and to build railways and canals and other public works. If not raised by customs tariff they must be taken out of the pockets of the people by tax collectors. The aim of the Conservative party is so to adjust the tariff that, while yielding sufficient revenue, it will encourage the establishment of

home industries, furnish varied occupations for the people and create a home market for farm products.

What do the people of the United States think about the tariff? I wish to read an article from the Iron Age, of April 16, 1914, entitled, 'Our Losses from Canada's Steel Tariff.' It is as follows:

We have already referred to the 50 per cent falling off in iron and steel exports from the United States, in the first two months of this year. While Canada's statistics of iron and steel imports in the two periods are not yet published, it is fair to assume that the business depression there, in the past year, is responsible for the poor showing in shipments from this side in recent months. Canada, as is well known, is the best customer of our steel industry.

It has been pointed out repeatedly that the preference granted Great Britain in the Canadian tariff amounts to little in comparison with the inducements to Canadians to do business with manufacturers in the United States. Canada's enormous steel trade with the United States might well quiet the fears of those who saw orders for European steel going out from this country as soon as a margin of, say, $1 a ton showed in the foreign manufacturer's favour under our new tariff. Canadian buyers of our steel have found out that it is worth more than one or two dollars a ton to be so close to their source of steel supply that shipments could be traced, that required deliveries could be met, that claims could be promptly adjusted, that the telegraph and telephone could give hourly contact with the producer, with mail connection a matter of over night. They have not underestimated, moreover, the advantage of the credit relations established with large manufacturers on this side of the line. It is these things that have kept Canada from placing more than about 10 per cent of her steel orders in Great Britain.

But what the preferential tariff could not do for British steel makers who coveted the Canadian market and have complained of the lack of loyalty that denied it to them, Canada is now to do for herself as fast as her steel manufacturers can get ready to benefit by the increased duties on iron and steel products. Only actual trade developments will permit of measuring the loss of trade the duties just announced will inflict on American steel manufacturers. Our wire rod exports to Canada, which have been about 60,000 tons in each of the past two years, will be practically all cut off by the new duty of $3.50 a ton, as Canada's wire rod capacity is now ample to take care of the home demand. Wrought pipe shipments from this side will be cut down, particularly in the smaller sizes. It will probably be some time before any impression will be made upon the structural steel trade our mills have had there; but the Canadian duties on these products will be raised as capacity develops there to supply them. Such development is to be expected, as diversification of Canadian steel products will be forced by the decline in rail demand, for the great railroad building programme across the border is nearing the end. In a number of lines little loss will come to our Canadian trade for some years, though it is quite certain that the total of $120,900,000 worth of American iron and steel and machinery products shipped to Canada in the fiscal year ended March 31, 1913, will long stand as a high record. Steel making has not yet been profitable to the larger Canadian companies; it will take years for the industry to become seasoned against such competition as may develop from this side, particularly in times of depression here. In the case of the largest Nova Scotia plant there is the steady handicap of distance from Canada's best consuming district, to which American works have easy access.

So far as concerns the United States Steel Corporation which does a large part of our steel business with Canada, its disabilities under the increased tariffs will be removed when it builds its own works on the other side of the border. Yet there is some food for thought in the transplanting of industries and pay-rolls from the United States, now a low tariff country, open to competition from every quarter, to a country which sees wisdom in so framing its duties that the manufacturers within its border are assured of their home market.

Mr. Speaker, my trade doctrine is moderate protection for our industries and a home market for the farmer, and I am willing to take up the gauntlet on this matter and fight it out to-morrow. Berlin, Waterloo, Galt, Preston, Guelph, Hespeler, Elmira, Brantford, and other towns in the great commercial belt fed by hydro power want no free trade talk. We want and ask for no more favours from foreign countries than we are giving to them. Let us stand united as one people, filled with loyalty and enthusiasm towards our common country, Canada, which, under protection, has reached the point where it is the coming country of the twentieth century.

Mr. D. B. NEELY (Humboldt): Mr. Speaker, I am sure we have all listened with great pleasure to the very eloquent essay of the hon. member for North Waterloo (Mr. Weichel) on the subject of protection versus free trade. I am quite sure, too, that some of the conclusions which he has drawn from a review of the conditions in the two great countries he mentioned must come as new light to members on both sides of the House. With the form of my hon. friend's statement I have no fault to find; with the matter of it I have a very great deal of fault to find. In the first place, I object to accepting as facts statements obtained from the report of a certain travelling tariff committee known as the Gainsborough Committee, and familiarly known to the workmen of Great Britain as 'the trippers' tariff reform brigade.' This committee is the laughing-stock of the British workmen throughout the length and breadth of Great Britain, and my hon. friend should not present as facts the statements which he has presented as a comparison of the

conditions in the two countries. It will, of course, be news to the House, and somewhat disappointing news—whether or not we agree with the tenets held by the majority of the British people—to know that, as my hon. friend has told us, Germany under protection has made greater strides than Great Britain under her well-known policy of free trade. It will be surprising to us Canadians to learn that British statesmen on both sides of politics —because the free trade sentiment is not confined to the Liberal party in Great Britain, but extends to the Unionist party as well—I say it will be surprising news to us to learn that the statesmen of Great Britain to-day, living as they do in close proximity to the German Empire, have watched the progress of that empire since it adopted protection in 1879, and yet have not learned the lesson that the free trade policy of Great Britain is a huge mistake. I say it is a very strange thing; the British people must be slower to learn than most of us have thought them to be.

The hon. member for North Waterloo gave us some interesting statistics with regard to the natural resources of the German Empire as compared with the natural resources of the British Empire. My hon. friend might have given us a few more facts, but he either did not have them at his command or did not care to mention them. He might have told us, for instance, that on the Clyde river alone more ships are constructed in a year than are constructed in a year in the whole German Empire. He might have told us, if he had had the information, that whereas the German workman works 12 hours a day under protection, the British workman works from 8 to 9. He might have told us—and there I must question the source of his information—that notwithstanding the progress and development of Germany under protection, the British workman on the average gets higher wages than the workman in the German Empire. Of course, when we consider the source of my hon. friend's information, it is not surprising that he came to the conclusions that he did.

My hon. friend draws the conclusion that because the Liberal party was defeated in the election of 1911 on the proposed reciprocity agreement with the United States, that is the final decision of the people of Canada on the trade question. I happen to know—and I am sorry my hon. friend has left his seat—that the hon. gentleman spent some weeks during the course of the past summer in the constituency of South Bruce, in the province of Ontario. What about the mandate of that constituency, Mr. Speaker? In the last general election that constituency returned a Conservative member, a supporter of this Government. That gentleman resigned his seat and a by-election was held. It is within the bitter knowledge of members of the Government that notwithstanding the fact that my hon. friend the member for North Waterloo and his colleague the member for South Waterloo (Mr. Clare), both familiar with the German language, freely spoke in the constituency of South Bruce; notwithstanding the fact that my hon. friend the Minister of Finance and other members of the Government took an active part in that contest at that by-election, with a Dominion Government and a provincial Government behind them, hon. gentlemen opposite were not able to retain the allegiance of the electors of South Bruce.

And, more than that, I call on my hon. friend the newly elected member for South Bruce (Mr. Truax) to witness that in and out of season, on every platform from which he expressed his sentiments to the electors, he expressed his continued allegiance to and faith in the benefit of the reciprocity agreement that was rejected by the majority of the electors of Canada.

As I have said, I do not propose to follow my hon. friend through all the windings of his dissertation on the question of free trade versus protection. I have risen to my feet on this occasion to make a few observations with reference to the financial statement which the Minister of Finance has presented to the House in his Budget speech. I join with the Minister of Finance in congratulating Canada in one respect upon the fact that she has been able during the past year to pay such a large amount of taxes into the treasury of the Dominion of Canada, and if my observations in connection with the financial statements are somewhat unfavourable and opposed to the conclusions of the Minister of Finance my statements at least will be fair and frank and as free as possible from partisanship. In that respect, of course, I will be following only the noble example set the other day by the hon. member for Brandon, because I noticed that the Winnipeg Telegram of Saturday last, publishes this brief synopsis of his speech:

Seldom has Parliament heard a franker statement of questions of policy as they affect the West than was made by Mr. J. A. M. Aikins, member for Brandon, in the Budget debate to-day. It was free from partisanship and showed deep study and thorough understanding of conditions.

The second next paragraph reads:

Mr. Aikins showed that nothing had been done for the West by the late Government. They had delayed the construction of the Hudson bay road and even now were hostile to that enterprise.

I at least can show in my observations on the Budget speech as little partisanship as was shown by the hon. member for Brandon as quoted in the Winnipeg Telegram. I suppose it is the universal delight of Finance Ministers, when they make their annual statements to representative bodies, to boast of surpluses. That is natural as it would be for the Minister of War to boast of the number of armouries he had built and of the efficiency of the militia. But I cannot always see that a surplus spells prosperity for the country whose Governhas been able to obtain a surplus by taxing the people. I can understand the condition where a surplus is advisable in times of great material prosperity among the people. In that case a surplus is like the storing up of the corn in the fat years; but when the Minister of Finance, as my hon. friend did the other day, comes to the House and makes the statement that he has the proud distinction of announcing to the House and to the country that there is a surplus of revenue over expenditure and in the very next breath tells us that not for some years has there been such commercial and financial stringency in the Dominion of Canada as there is at the present time; then, Sir, I say that a surplus is not an advisable proposition because it simply means that my hon. friend the Minister of Finance admits that his Government were taxing the people sufficiently heavily to have a large surplus of revenue over expenditure while admitting that there is material distress throughout the length and breadth of the land. I think the greatest surplus that any country can have is a surplus of material prosperity and well-being amongst the people. The Minister of Finance says the worst of the hard times is over, but he probably has made prophecies before which have not come true, and we shall have to await the course of events, because whatever knowledge the Minister may have of future events, he certainly is not omnicient.

We do not know that the worst is over, but we do know, and even my friend from North Waterloo who boasts of his optimism, has said to the House that he knows that conditions have not just been all that they possibly could be in the commercial and industrial life of the country. He knows that fact, and he knows that the people to-day are feeling more than they have done for the last fifteen or eighteen years the burden of taxation. What is the remedy that my hon. friend proposes for this condition of affairs in the country? I say the remedy that he proposes is to add some more burdens to the taxpayers of this country. They are not taxed enough now, they are not burdened heavily enough, and my hon. friend is going to remove the financial stringency and to clear up the difficulties of the situation by adding to the taxes of people who already have too heavy burdens to pay. That may be sound economics, but I do not think it is. I think it is the most indefensible sort f economics that any Minister of Finance could present to the House and to the country.

The hon. member for Brandon (Mr. Aikins) told us that the Minister of Finance had an open mind on questions of tariff and probably on the question of whether or not the people of the West should be granted the boon of free wheat. I am glad that is true, but I have an awful suspicion that if the Minister of Finance has an open mind it is open only on one side. It is open, but the eye that looks upon the needs of the farmers and the ear that listens to their demands, that eye is blind and that ear is deaf. But the senses of sight and hearing on the other side of his mind are abnormally acute where the interests of the highly organized privileged classes of this country are concerned. I must say that so far as the people whom I represent in this House are concerned, the people of a western constituency, the tariff proposals of the Budget speech delivered by the Minister of Finance some days ago are the most bitter disappointment, the most bitter pill to swallow that the western farmer has had placed at his lips for many a long year. My hon. friend from Souris (Mr. Schaffner) can afford to laugh, he has an established future, but there are gentlemen on the other side of the House who have not that established future and who cannot afford to laugh. They know that what I say is true. I noticed the Solicitor General (Mr.

Meighen) paying particular attention to the Minister of Finance as he read the long list of tariff changes, and while there was applause both here and there I noticed that the Solicitor General kept very mum and looked just as mum as he kept. There were others on that side of the House in the same frame of mind. I did not hear any applause from the Minister of the Interior. The Minister of Public Works did applaud once. That was when the Minister of Finance announced that he was going to increase the duty on building stone in order to benefit the stonecutters of Canada. His applause was feeble, it is true, but in that respect at least he showed that he was in accord with the Government of which he is a member. These tariff changes were not altogether a surprise to members of this House. The Minister of Finance as we all know has a political history. He claims that at one time he was a follower of the Liberal party. If that be the case all I can say of his present situation is: how have the mighty fallen! From the moment of his taking office the Minister of Finance has proved to this House and to the country by the methods he has adopted and the policies he has pursued that while he is a friend of certain interests in this country, the farmers and the great consuming masses have absolutely nothing to expect from him.

What was the first thing thing this Government did when they came to office? A lumbermen's deputation came from the far West. Certain kinds of lumber, which under the Liberal Government had for many years been coming into our western prairies free of duty was taxed $2 a thousand by some strange interpretation of the statute on the part of hon. gentlemen opposite. The homesteader who wanted to build a shack on the prairie consequently had to pay $2 extra a thousand. The Supreme Court, I believe, reversed their interpretation, so that the farmers of western Canada who need lumber—and they all need it more or less—have the Supreme Court and not the Government of Canada to thank for saving them $2 a thousand on their lumber. That is only one item. We have heard of other items concerning the far East and all along down the line.

I must, however, give my hon. friend credit for cutting in two the duty on cement in the summer of 1912. I am not going to repeat the arguments that have already been made that this particular reduction happened to synchronize, to use the minister's own word, with the Saskatchewan provincial election. But to those gentlemen who argue that protection has nothing to do with the high cost of living I would say that if that is the case why did the Minister of Finance give the people of the West that reduction in the duty on cement in the summer of 1912? They may answer: To give us a larger quantity. Very true. But if the Minister of Public Works were in his seat, he would not deny that speaking to the people of Regina and through them to the people of the province of Saskatchewan, he boasted that this reduction of the Government would reduce the price of cement throughout western Canada. If a cut in the duty on cement helps to lessen the cost of building homes on the prairies, helps to lessen the cost of living, surely the same argument ought to apply to food-stuffs, to agricultural implements or to anything that hides behind a high protective wall.

Mr. BURNHAM: Do I understand that the hon. member wants to see all these things pouring into Canada free?

Mr. NEELY: I am afraid that I have a slight attack of deafness, and I believe it is in my left ear. I cannot answer just now a question that would take up perhaps half an hour, but I will try to answer it as I go along.

The minister's statement on the Budget was to the effect that the National Policy introduced by Sir John A. Macdonald was a policy of protection that was not subject to variations. That is what I understood him to say. That is not my view of the National Policy. The Minister of Finance and the hon. member for North Waterloo (Mr. Weichel) ought to read up the political history of their own country. If they would read the speech of Sir John A. Macdonald in introducing the National Policy they would find that one of his chief arguments was that Canada must build a protective tariff wall in order to force our nearest neighbour to give us better trade terms than we had hitherto been able to obtain. Does the Minister of Finance or any other hon. member of this House say that the reciprocity clause of the National Policy tariff was not just as important a part of that tariff as any other clause it contained? If the minister reads that speech of Sir John A. Macdonald's he will find that protection was but a means to an end, and that end was to obtain free entry to the United States market for the products of Canada. But it evidently does

not suit my hon. friend's purpose to go back so far in the history of Canada. The hon. member for North Waterloo did not dare to answer the question put to him by the hon. member for Red Deer (Mr. Michael Clark).

I am not on my feet to discuss, as the hon. member for North Waterloo has done, the difference between protection and free trade. To those members of the Government who obtained office by opposition to the reciprocity agreement I would say that while many of us on this side of the House may be believers in the doctrine of free trade we are not the iconoclasts that they endeavour to make us out in the eyes of the people. We recognize that this country is situated under peculiar conditions and has been since Canada became a nation. To the south of us we have a country of 100,000,000 of people who have for many years been in favour of the policy of high protection. Surely we in Canada are not going to admit that we are behind them in our forwardness of thought on the trade question. The Minister of Finance—I have read his speech carefully from end to end—while extolling the policy of protection for Canada, never made a single reference to the trend of thought in the great republic to the south; never called attention to the fact that in these days the people of the United States—and whatever may be our prejudices against that country we must admit that the American people are a great people—have come to the conclusion that they were deceived in their views, and that to-day the President and the Government of that country are setting about to see how rapidly they may do away with that protection, which they consider has ceased to be a benefit even to their manufacturing industries.

I have said that the tariff proposals in the Budget were a great disappointment, and I reaffirm that statement. There is no question of doubt, that the members of this Government understand very clearly and very thoroughly what are the views of the people of the West on the questions that are dealt with in the tariff proposals of the Minister of Finance. I can say to the hon. gentleman, that there will be no question in the minds of the people of the West just what he meant as to these tariff proposals, because when you take the whole list of proposed changes, what do you find? You find one small item of comfort thrown out as a sop to the farmers of western Canada, and you find every other reasonable demand they have made on this Government, along tariff lines, absolutely refused, while on the other hand a great many changes have been made to increase protection on the manufactured products of this country.

Some people say that the farmers of the West do not want to pay their fair share of taxation. That is an absurdity, and, more than that, it is a slander on the people of western Canada. They are willing to pay their fair share of the taxes, but they want a square deal from this Government or from any other Government. If this Government proposes to legislate for certain sections of the country, then the sooner the sections that are to be left out in the cold become aware of that fact, the better it is for them. Here are the farmers of the West, men who have gone out as pioneers to break up the virgin soil, and who have endured hardships and privations of all sorts, and, in many cases, hunger, and want, and cold. There are many of those settlers who have gone forty miles, fifty miles, yes one hundred miles, beyond any available railroad, hoping that some time in the future means of transportation would be provided for them. These men have toiled and waited patiently for the advent of better things. To-day, we have in many cases, better transportation facilities, but what do we find? We find that after these men have gone through all this period of privation and hardship, there comes a time when they are able to hitch their team to a wagon, fill that wagon with the finest wheat grown in the world, and send it to market; but when they get that far, they find that the price they receive for the wheat barely pays for the cost of production. And yet, because there are a few buildings erected a few miles east of Winnipeg, with a certain amount of more or less valuable machinery in them, and because certain wealthy interests from the eastern part of Canada have come up there for the purpose of making money out of the milling of the farmers' wheat, the Minister of Finance says to the farmers: these men who have gone from the East and established their mills to mill your wheat, tell me that it will not be to your advantage to give you free access for your grain into the markets of the United States. True, Sir, these millers are few and the farmers are many in number, and the farmers have expressed, practically unanimously, their desire for free wheat, but the Minister of Finance and the Government bow to the wishes of the millers. I would not take up the

time of this House for one moment, discussing the pros and cons of the question, were it not that I simply wish to ask the House: Who should be the best judges as to whether or not they should have a market in the United States for the product of their hands, and for the result of their toil, year in and year out, if it is not the farmers who produce the wheat by the sweat of their brow and the labour of their hands? I venture to say that if a referendum on this question of free wheat were taken in western Canada—including the cities, taking Winnipeg, Regina, Moosejaw, Edmonton and Saskatoon—ninety-five per cent of the people of the prairie provinces would vote in favour of free wheat. And yet, because of a few mills down farther east than the city of Winnipeg, the owners and operators of which paid last year dividends of from thirty to sixty per cent; because these men come to the Minister of Finance and say: We do not want the farmers to get free access for their wheat into the markets of the United States, the Minister of Finance says to these gentlemen: All right, you seem to have made out a good case, I suppose I shall have to give you what you want.

This is not a political question, by any manner of means. I am stating the case plainly and strongly, because I feel it strongly. I know what the conditions are in the West to-day, and I know that they are extremely unsatisfactory. If this be a party question let the Minister of Finance tell the House what the Manitoba legislature meant on the 12th of January last, when it passed a unanimous resolution in favour of taking the duty off wheat and wheat products. What did the Manitoba legislature mean by that? My hon. friend from Souris (Mr. Schaffner) will not say that his political chief in the province of Manitoba is not a patriot. Sir Rodmond Roblin was knighted by the King not long ago for being a patriotic broad-minded Canadian citizen, and surely he would not have this House legislate for the West against the East, or for the East against the West, and yet the Manitoba legislature unanimously resolved that free wheat should be given to the farmers of the prairie provinces.

I brought this matter up in the House on the occasion of the Address, and I was told it was not the proper time and place to mention it, and I just casually mention the fact again, because I was told then that this would be the proper way to present the subject before the House. I regret to say that I have not met with any more satisfaction now than I did then. And why? I maintain that we in the West have been giving too much credit to our representatives from that part of the country, who are members of and supporters of the present Government. We had thought that the farmers of the West would get justice, with the assistance of the Minister of Public Works, of the Minister of the Interior, of the Solicitor General who is an able supporter of this Government if not a member of the Cabinet, of the hon. member for Brandon (Mr. Aikins) and the hon. member for Calgary (Mr. Bennett), from whom we expected great things in this House, which have not materialized yet, although we are still living in hopes. We expected great things from the hon. member for Calgary. He was going to fight for natural resources, but he has not started that yet. He believes in free wheat; I understand he told his electors so last summer. We have heard nothing of that yet. But there are other things on the way, and then perhaps we will hear the lion roar. Every one of these gentlemen, the hon. member for Souris (Mr. Schaffner), the hon. member for Lisgar (Mr. Sharpe), the hon. member for Calgary (Mr. Bennett), and the hon. member for Prince Albert (Mr. McKay), all supporters of the Government, are perfectly aware that what I say about the sentiment in the West is absolutely true. If my hon. friends do not believe it, just let them read the editorials in the Winnipeg Telegram, which, as everybody knows, is not a Grit organ, but the official Conservative organ in the province of Manitoba. Let them read, for instance, the editorial of the 13th April, and what will they find there? They will find words to this effect, and I think this editorial expresses very fairly the viewpoint of the people of the West on this question:

> There is no undue sectional spirit in the West. If there were, it would display itself in resentment at the refusal of the Government to grant a more substantial reduction in the tariff on agricultural implements.

Further on:

> But much of the discussion on free wheat sounded strangely like a confusion of 'eastern' interests for 'national' interests. A predominantly western issue has been decided by considerations of the East, rather than of the West, or from a strictly national viewpoint. Free wheat is the desire of the western farmer, who is the great wheat producer of this country. It is now within his reach, without the evils that would follow from a compromising of the country's fiscal independence as was proposed under reciprocity. The western farmer believes that free entry for his wheat into the

markets of the United States would be an advantage to him.

This much is not denied in the East, but it is argued that the milling industry and the transportation interests 'might be adversely affected,' and these interests the West cannot avoid feeling are essentially eastern interests. Nor can the western farmer well avoid asking why the West should be expected to maintain the prosperity of these purely eastern interests, by the retention of a tariff that not only does not protect him, but that shuts him out from a great and profitable market? The West, it must be remembered in this connection, already pays a heavy toll to the prosperity of the transportation interests in a higher standard of freight traffic than are in vogue in the East.

The editorial writer of the Winnipeg Telegram can find absolutely no reasonable ground or excuse for the action taken by the Government in refusing the farmers' demand for free wheat. This organ states as openly as words can state that this refusal means nothing more or less than a concession to the milling interests which are essentially eastern interests.

We on this side of the House are accused of raising issues as between the East and the West. We are not attempting to do anything of the kind. If any such issues have been raised they have been raised by hon. gentlemen on the other side of the House, because the Finance Minister knew very well how his announcement that the western Canadian wheat grower was not to be given free access to the United States market would be received on this side of the House. What has he done in this debate?—put up members representing the rural constituencies in Ontario to tell the farmers of the West how they ought to farm, to give us not free wheat, but a lot of free advice on matters about which many of these gentlemen knew nothing? They glibly talk about mixed farming when they do not know the situation in many regions of the West. They are put up to do so, and to say that the West has received very fair and equitable treatment up to date from the East, and so on. That sort of discussion is far from being profitable discussion. It is a species of discussion that should not be heard on the floor of this Parliament. We believe in the West that Canada is one united country, we want to remain a united country, and for that reason we think that this Government, especially in view of the fact that it is giving, or proposes to give, to eastern manufacturing interests very important concessions in the matter of increases in the tariff, and by inserting new tariff items where they have not enjoyed the benefits of the tariff before, might have gone the length of giving the farmers of the West the one thing that they most desire at the present time, and that is free access for their wheat to the markets of the United States.

10 p.m.

We think they might have done that because, while there were objections raised to the reciprocity agreement on account of the fact that it was a sort of treaty between two countries and there might be international complications and disagreements and that sort of thing, all this Government had to do to give the farmers of the West the benefit of the United States market for their wheat was, when the tariff proposals were brought down, to authorize the Finance Minister to say simply: We propose to remove the duty on wheat and wheat products entering the Dominion of Canada. Ipso facto our wheat and wheat products would go free into the markets of the United States. What is the situation? We are told that our wheat should not be allowed to go to the United States. Some of it is going there already. As for other cereals that we grow, oats, flax and barley, what is the condition of affairs? This country refused reciprocity, this country would not endorse it, but what is the condition? I want to appeal to the members of this House from the province of Ontario who won their election by appeals to national and patriotic sentiment. Under the Wilson-Underwood tariff the duty on oats was reduced to six cents a bushel on the 3rd of October last year. What has occurred in western Canada since that time? Up to the close of navigation 20,000,000 bushels of western oats went down and were sold in the United States market mostly for consumption in that country. Since then between 5,000,000 and 10,000,000 bushels more have gone. Every bushel of these oats paid into the United States treasury six cents. Taking the quantity at 25,000,000 bushels, there is $1,500,000 that the farmers of western Canada paid into the United States treasury this year on account of the oat crop alone. That is not the principal crop by any means in western Canada. Is it patriotic, is it conducive to patriotism, is it conducive to strengthening the bonds of empire that we hear so much about from imperialistic gentlemen like the hon. member for Brantford (Mr. Cockshutt) and from other hon. gentlemen in this House, to compel our fellow countrymen to ship their oats and other cereals across the line and pay very liberally for the privilege

into the coffers of the United States? Take the item of flax, for instance. The Underwood Tariff, I understand, reduces the figures on flax to 20 cents per bushel. Everybody in the West knows that the great percentage of our flax goes to the United States, no matter what it has to pay, because there is where the demand is. Now what particular benefit to Canada is there in compelling the flax grower on the western prairies, if he had the privilege of saving that 20 cents a bushel on his flax—

Mr. BLAIN: Will the hon. member allow me to ask why the late Government put a duty of 10 cents per bushel on flax?

Mr. NEELY: I cannot see any point to the hon. gentleman's question.

Mr. BLAIN: I did not wish to interrupt, but I wished to get the information.

Mr. NEELY: I may say that there are members of the Government present, and they could be better able to give the hon. gentleman information.

Mr. BLAIN: Members of the late Government?

Mr. NEELY: I mean of the late Government. I was not a member of that Government any more than the hon. member for Peel (Mr. Blain) is a member of this. I can imagine—though I have not been told—that the late Government put a duty on flax for the same reason that they removed the reciprocity clause from the tariff—in order that they might some day be in a position to make terms with the United States when the United States were willing to consider a reciprocity arrangement. I cannot see any other reason. But I think that the reciprocity agreement proposed in 1911 is the answer to the hon. gentleman's question. Because in that agreement it was proposed to remove absolutely the duty on flax and other cereals, and had that been carried out the western Canadian flax grower would be getting 20 cents per bushel or thereabouts more for his flax in the United States than he can get to-day. Of course, in relation to these items of flax, barley and oats, we have to put up with conditions as they are, because the Wilson-Underwood Tariff is not subject to this Government or the people of this country, it is a tariff made by the United States. But in regard to the item of wheat we are in a different situation, for there they still hold out the offer of reciprocity in wheat and wheat products. The Minister of Finance, when he became a member of this Government attempted to make it plain to the people of this country that his duty would be to see to it that every interest in this country should be fairly treated and that he would do his best to see that the people were not oppressed and ill-treated by the trusts and wealthy interests of this country. How has he carried out that proposal? Why, free wheat, as he knows, means that the millers will have to pay the farmers a little more for their wheat while the consumers will get their flour at a great deal cheaper rate. Yet the Minister of Finance not only refused the requests of the western farmer for free wheat, but I believe that in this respect he has refused the request of his own followers in this House. So, you see, while the Minister of Finance is exceedingly sensitive towards the accusations levelled against him in this House and out of it, that he is a member of the Government representing a certain interest in this country, that he is, as it were, the hired man of certain interests, the position he takes on this question of free wheat, is to my mind absolutely conclusive evidence of the atttitude he holds towards the great mass of farmers not only of the West but of the East as well. For we must admit that it makes no difference whether a man farms east of the Great Lakes or west of the Great Lakes, there is a community of interest. I notice that in the province of Ontario to-day many of the farmers who were deceived and deluded into voting against the reciprocity agreement, are not averse to taking a higher price for their cattle and hogs which to-day they are shipping across the line into the markets of the United States. They are doing this right along the border, in Ontario, Quebec and the Maritime provinces. There is no difference amongst people when it comes to a question of dollars and cents. Since the advent of this Government we have had very pronounced warnings of the terrible dangers that would beset us if we had entered into that reciprocity agreement. But what harm has been done to the country by placing our farmers in a position to send their cattle, hogs and sheep into the United States for sale?

Mr. BRADBURY: Under reciprocity?

Mr. NEELY: Is the hon. gentleman afraid that if we take the duty off wheat this country will be flooded with wheat from the United States?

Mr. BRADBURY: The hon. member was talking about cattle a moment ago.

Mr. NEELY: Yes, and I am talking about cattle still. Is the hon. gentleman afraid that cattle would come in? If he will take up his western papers, he will get some light on that subject. For instance, I have here a copy of the Calgary News-Telegram, a western Conservative paper. I find in this paper a statement that during last month $750,000 worth of cattle and hogs were shipped to points, most of them southerly in the United States.

Mr. BRADBURY: Stockers.

Mr. NEELY: Are the hogs stockers too? The Calgary News-Telegram, though, as I have said, a good Conservative paper, finds no fault with this arrangement. The hon. member for South Ontario (Mr. Smith) talked about dangers of business alliances with the people in the country to the south. In the name of common sense how are you going to stop them if the United States want to take the duties off oats, barley and wheat? This puny talk about granting of free wheat to the farmers of the West destroying Canadian industries, Canadian railways and transportation companies, is the talk of little Canadians and not of men who have the right conception of the possibilities of the great West of this country.

I have under my hand an article published in the official organ of the Canadian Manufacturers' Association, known as Industrial Canada. I shall not read the article, but it is headed 'Free Wheat.' After saying that the farmers of western Canada first wanted a Hudson Bay railway and now want free wheat, the article goes on to argue that the two things are incompatible; that if you build that railway and then give the farmers free access for their wheat to the markets of the United States, you are not going to have any traffic for the railway. What an absurdity that is, in view of the fact that 10 or 12 per cent—certainly not over 15 per cent—of the agricultural soil of western Canada is under tillage to-day. If you can show the people of western Canada and the people across the line who would become settlers in our West if they were assured of its future; if you can show them that they are to have the benefit not only of good transportation facilities for the exporting of their products to Great Britain and the other markets of the world, but also a free access to the market of 100,000,000 people to the south of us. I say that the production will increase by such leaps and bounds that the railroads in western Canada will have all the business they can take care of, and probably a great deal more. When the Minister of Finance talks about waiting for the completion of our transportation systems before we make any experiments in connection with the abolition of the duties on wheat and wheat products, I say that the minister has not a true conception of the possibilities of the country over the affairs of which he and other hon. gentlemen opposite preside.

As I said, I am not going to argue the question of free wheat. I know that argument is probably of little effect at this time because the Government has made up its mind—which is, as I say, open on one side and closed on the other. I do not see any reason why we should beat our heads against a stone wall. The question has been settled by the statement of the Finance Minister and I suppose, notwithstanding the fact that there are a number of western members on the other side of the House, that when the question comes to a vote these gentlemen will line up behind the Government in refusing to grant the request of the farmers. If they did not do so; if they would vote as they think, we would give the Government a mighty close call on this question, but I am afraid they will not vote as they think. I want to tell my friends the members from the West who are supporters of this Government that it is not a mattter of very much concern to hon. gentlemen on this side how they vote. They themselves know, every one of them, that a large percentage of their constituents will be watching the newspapers very closely during the coming days to see whether or not their representatives in this Parliament are going to give allegiance to their party rather than meet the wishes of ninety or ninety-five per cent of their electors.

The issue is clear and plain; the Finance Minister has told us that we have to wait until our railroad systems and transportation routes are completed. I am afraid that by that time conditions in western Canada, if they continue as they have been during the past two years, will have become so serious that our country will have gone back to a position similar to that which it occupied in the year 1896 when the Liberal Administration came into power.

Mr. W. H. SHARPE: A few moments ago the hon. gentleman spoke about some of the milling companies of Canada making as

high as sixty per cent on their capital. I would like to know what authority he has for making that assertion.

Mr. NEELY: In the Montreal Standard of April 14, 1914, a correspondent of that paper makes the absolute assertion, without contradiction, that the Lake of the Woods and Ogilvie Milling Companies last year made from 30 to 60 per cent on their capital. I presume that the Montreal Standard is a fairly reliable authority.

Mr. SHARPE: Does the assertion appear in an editorial?

Mr. NEELY: No, it is in an article on the second page.

Mr. SHARPE: Who signed it?

Mr. NEELY: The name of the contributor, although not given here, must have been given to the newspaper, and must have been considered sufficiently reliable to warrant publication of the article. The article is signed Canadian Consumer.

Mr. SAMUEL SHARPE: It should have been Canadian Liberal.

Mr. NEELY: The Montreal Standard is a Conservative newspaper, and I am sure that if the information were untrue, it would have been contradicted, because the Montreal Standard and other good Tory papers throughout the country know that on the question of the high cost of living this Government has its troubles just at this time.

In dealing with the question of the duty on agricultural implements I will be brief, because I had the privilege of touching on that subject in connection with the resolution introduced by the hon. member for Moosejaw (Mr. Knowles). As I understand it, the main object of a tariff is to give infant industries, as they are called, a chance to become established in the community where they rightfully belong, so that they can bear competition with similar industries in other countries.

In looking through 'Hansard' of 1906-07 the other day in search of a reference, I came across a very excellent definition of protection made in a speech delivered during the Budget debate of that session by the member for Brantford (Mr. Cockshutt). Ever since I first read about the Halifax platform of the Conservative party in which they used the words 'adequate protection' I had wondered just what was meant by that particular expression. I have here a definition given in the speech delivered by the hon. member. He said:

> I do not claim to be a high protectionist, but I stand for adequate protection. I have sometimes been asked to define what I mean by adequate protection and I have replied that adequate protection is a protection that will protect. What I mean by that I explain in this way. If you ask me what clothes I am going to put on to-day, I ask you what kind of weather you are going to have and if you tell me I will know how to dress for it. If it is a cold day I will put on a heavy overcoat; if it is a moderate day I will put on a light overcoat; and if it is a warm day I will go without an overcoat. So it is with the tariff.

That is the definition given by my hon. friend of adequate protection. If it is a cold day he will put on a heavy overcoat, if it is a moderate day he will put on a light overcoat and if it is a warm day he will go without any overcoat—and I suppose if it is a very warm day he will go in his shirt sleeves. That sounds like a very reasonable proposition. Would the hon. member for Brantford, having that definition in mind, tell us when he considers it is going to be warm enough in this country to permit the Government to abolish the duties on agricultural implements? What kind of weather does he want? How warm has it to be? Will it have to be equator weather or, as my hon. friend behind me suggests, would we have to leave this world altogether to find weather warm enough to suit my hon. friend from Brantford. That I think, after all, is a rather fair illustration, if we are going to have a protective tariff at all, of what ought to be its object. The Minister of Finance told the member for Assiniboia the other day that if he were consistent and were going to advocate the abolition of duties on agricultural implements, he must go further and pronounce himself in favour of absolute free trade. That does not follow, in my judgment. It absolutely does not follow the definition of my hon. friend for Brantford of the meaning of the term 'adequate protection.' Adequate protection simply means that you wear an overcoat as long as you need an overcoat and just the minute the weather is warm enough so you can dispense with the overcoat you dispense with it. When does my hon. friend think it is going to be warm enough for the agricultural industry of the Dominion of Canada to go without an overcoat? The charge is laid at the door of hon. gentlemen on this side of the House that because we are

in favour of the abolition of the duty on agricultural implements we are in favour at the moment of the abolition of duties on everything else. I deny that accusation. Whatever my theories, whatever my principles of economics may be, I recognize that we must consider conditions as they exist in Canada to-day and govern ourselves accordingly. But does any gentleman in this House, in view of the fact that members on this side have moved for free agricultural implements, undertake to say that the agricultural implement industry is not in a totally different position from any other manufacturing industry in this country? Why have we a tariff wall around this country? To protect us, very largely, from importation from the United States without the corresponding privilege of exporting to that country. What has the Wilson-Underwood tariff done? Among the manufactured articles placed on the free list by that tariff are agricultural implements. They are absolutely free, so that whereas to-day the Canadian farmer, by what is practically an export duty, is prevented from selling his surplus wheat in the United States, he is also compelled to pay duty on the implements he uses, notwithstanding the fact that the people who manufacture these implements have not only the home market in Canada open to them, but the market of one hundred million people right alongside of the international boundary. Is that market of no advantage to the manufacturers of this country? My hon. friend for some years, I do not know for how long, sent very considerable shipments from his own factory across the international boundary and paid fifteen per cent duty, and a farmer near St. Paul could buy a plough a great deal cheaper than the Manitoba farmer, notwithstanding the fact that that plough had paid on it fifteen per cent duty to get across the international boundary line.

Mr. COCKSHUTT: Who paid the duty in that case?

Mr. NEELY: I care not who paid the duty, that is an old friend, we have heard it often. The essential point is that the American farmer got the plough cheaper than the farmer in Canada after somebody had paid the duty on it. Whether it was my hon. friend or the interest who bought the plough from him makes no difference. My hon. friend was making a profit, and the people who sold the implement in the United States were making a profit, and fifteen per cent duty was paid into the coffers of the United States Government, and yet the American farmer got the plough cheaper than the farmers of this country. My hon. friend must be congratulating himself on the removal of that fifteen per cent duty, because whether he gets a profit or not somebody must. He says it is a poor market. Is it a poor market? How then is it that the Massey-Harris Company or the controlling interest in that company went over two or three years ago into Batavia, New York, and purchased a controlling interest in a large harvester work which they operate and control at the present time? If the manufacturers of agricultural implements in Canada to-day are at some disadvantage in reaching their ultimate market in western Canada on account of long freight hauls, what about the advantage they have acquired by getting free access into eastern United States for the products of their factory so that their products enter that market without one cent of duty? Some of these gentlemen say: You ought to solve this question if you put agricultural implements on the free list you ought also to put on the free list the raw material that enters into them. What have we on this side of the House to do with that question? We are not the Government of the day. What we want the Government to do is to admit the principle that the farmers in Canada, in view of the fact that the United States have given free entry to the agricultural implements of this country, have borne long enough the burden of a customs duty on every implement they use on their farms. It is not our duty to say what shall be done in regard to the raw material. We on this side of the House do not want any manufacturing industry in this country injured. If it is an industry indigenous to this country we want it to flourish. Eight years ago the hon. member for Brantford boasted in that same speech that the agricultural implement industry of this country was in such a flourishing condition that even at that time they could compete in the open markets of the world. If they were able to do that then, surely after eight years of continued prosperity they can do it now. I do not attach so much importance to the question of free agricultural implements as I do to the question of free wheat. The Government have refused one proposition, we appeal to them to give us the other. They have given a five per cent reduction on mowers and binders, but all the operations of farming are not carried

on by means of these two implements alone. First of all, the ground has to be ploughed in the spring or in the fall. The Minister of Finance told us the other night that he had looked into the agricultural implement industry so far as binders and mowers are concerned. I wonder why he did not go a little farther in his investigation and consider the question of ploughs, cultivators, seeders, and other implements. I do not know that we have very far to go to find the reason, but whatever it be let me tell the minister that if all he is prepared to do is for the farmers of Ontario, of Quebec, of the Maritime provinces—I will put the farmers of the West last in this case—is to give a reduction of five per cent on binders and mowers, I am afraid that so far as any particular benefit is concerned—especially political benefit—my hon. friend might just as well have left the tariff as he found it.

There is just one other item to which I shall refer, and then I am through. Within the last few days—I presume my experience is similar to that of many other western members—I have received numerous letters and petitions from the different interests in my constituency, farming and otherwise, protesting against one particular tariff proposal, that is, the tariff on iron and steel products. I had looked into this subject a little before receiving these communications, and had come to the conclusion that if there is one indefensible feature in the Budget it is the proposal to place a tariff on wire rods entering this country. As the House knows, and as the Minister of Finance told us the other night, there are only two large iron and steel plants in this country manufacturing wire rods. These rods are the raw material for wire products, such as nails, screws, etc. The two companies are the Dominion Iron and Steel Company, and the Steel Company of Canada which is situated, I believe, at Hamilton. The Steel Company of Canada is a merger of a number of companies. I have some figures here which go to show that while the authorized capital of this company amounts to the sum of $35,000,000—$10,000,000 in bonds, $10,000,000 preferred stock and $15,000,000 common stock—the actual amount of capital of all the companies participating in that merger was only in the neighbourhood of $10,000,000—$10,000,000 real capital, $25,000,000 worth of watered stock, that is what it amounts to. No doubt the same is true of the Dominion Iron and Steel Company. That company has an enormous capitalization, somewhere in the neighbourhood of $45,000,000. I do not wonder that these two great companies with their enormous capitalization and limited output find it necessary to come to the Parliament of Canada to have a tariff placed upon wire rods in order that they may pay a fair dividend on their common stock. The Minister of Finance explained the situation frankly and fully. He said that during the last fifty years small independent concerns had established themselves in different parts of Canada, at Toronto, Hamilton, and other points for the manufacture of wire products from wire rods which were then free of duty. These independent companies were able to establish themselves because of the fact that the Dominion Iron and Steel Company which, until a year or two ago was the only manufacturer of wire rods in this country could not dictate prices. The United States Steel Company at Pittsburgh enabled these independent concerns to get their wire rods at reasonable prices, and they could consequently make a profit in manufacturing the wire rods into the finished product. About four or five weeks ago a delegation representing these independent companies visited Ottawa and interviewed the Minister of Finance.

They presented their case, I understand, as thoroughly as they could; they stayed here some days, and they told the Minister of Finance that if he gave a bounty to the manufacturers of wire rods, or if he put a tariff on, which would practically have the same effect, he was placing power in the hands of these two companies, viz., the Dominion Iron and Steel Company and the Steel Corporation of Canada, by which they could put every independent wire manufacturing company in this country out of business. In the past, if the Dominion Iron and Steel Company or the Steel Corporation of Canada said to these independent concerns: You will have to pay a bigger price for your wire rods, all they had to do was to send their orders to Pittsburgh and get their raw material from the United States. But, the effect of this new arrangement is that these independent concerns are no longer able to import their rods from the United States. Even yet, under this tariff, some of them will have to import wire rods, made from Bessemer steel, for certain kinds of finished products, but in the main they will be compelled to purchase their wire rods from those two companies, which are the only manufacturers of wire rods in Canada.

This deputation, representing these interests, visited the Minister of Finance in this city, and they presented their case to him. Of course, the Minister of Finance has assured us that he will see to it that the smaller independent concerns get fair treatment and are not put out of business. That is all very fine, but I insist that, if his tariff proposals become law, he is putting every independent wire nail manufacturing company in this country in the hands of these two concerns—and why? Both these companies, as I understand it, propose to go in for the manufacture of the finished products. What then will be the effect of this tariff? It will be, that these two companies can say to the independent concerns: you must pay so much for your raw material; and, if these two mergers want to go ultimately into the manufacture of the finished products of nails and wire, after raising the price of raw material to independent concerns they can drop the price of nails and wire, to such a point that they absolutely will compel every independent concern in this country to go out of business. Does the Minister of Finance deny that, untrammelled and unhindered by his influence or some other, that cannot be done under this tariff proposal? The Minister of Finance does not answer. He may have the utmost faith in the good intentions of these two companies, but it is a very strange thing that the other manufacturing concerns who interviewed him do not possess the same confidence in them. I believe there was a proposal for an arrangement between these two concerns and the independent concerns, that if the tariff were to be put on they would not raise the price of the raw material, but my information is that an agreement was not reached on that point, and yet the Minister of Finance calmly asks us to support this proposal. And Sir, so far as the consumer is concerned, the ultimate effect of the tariff is, that if these two great mergers put the independent concerns out of business, the consumer will have to pay the higher price in the end. I listened very carefully, and I have read carefully, what the Minister of Finance had to say on that subject, and while he did say something to the effect that he would see that no injustice was done, he did not say that if this proposal became law, these two companies would not enjoy the power I have mentioned. I make this protest here, because the matter has been brought to my attention by a large number of my own constituents.

In closing, I desire to say that I listened with more or less surprise to certain statements that were made in this House by my hon. friend from Brandon (Mr. Aikins). That hon. gentleman, who, I am sorry is not in his place to-night, is not a very happy individual these days. He is, I believe, one of those who are not entirely pleased with the tariff proposals of the Minister of Finance. The hon. member for Brandon is a very loyal Conservative; he is what you would call a real good Tory at heart, and, not wishing to attack the Government of which he is a supporter, he turned his attention to an attack on the late Administration, and he gave us a review of the history of the West. I am not going to follow him in that review, except to say that the hon. member for Brandon has lived in the West for a great many years; he has seen the changes which took place in that country previous to 1896, and for the fifteen succeeding years, and it was a source of surprise to me to hear him lay the blame at the door of the late Administration for the serious conditions which confront the people of the West to-day. The hon. gentleman (Mr. Aikins) is one of the respected citizens of Winnipeg, and I believe he has become wealthy in the practice of his profession. He has seen, under the Liberal Administration, his own city of Winnipeg develop from a place of very small dimensions until it is to-day the third city in this great Dominion. He has seen the West populated; he has seen the transportation systems grow throughout the length and breadth of that country. During the fifteen years of the Liberal Government he has seen two new provinces carved out of what years ago was trackless prairie. He has seen other changes, he has seen many things done in the interests of the farmers of the West by the Liberal Government, and finally the hon. gentleman owes his position in this House as a supporter of the Government, and not a supporter of an opposition, owing to the fact that the Liberal Administration went down to defeat in support of an issue that primarily had for its object the benefiting of the great masses of the people of this country, the farmers and consumers. He said we had done nothing and he reminded us of what the present Government had done. I regret that among the things he took credit for was the reduction of the freight rates in western Canada by the decision of the Board of Railway Commissioners. If there is one body in this country that I would deplore seeing brought into the arena of partisan discussion, it is the Board of Railway Commissioners, be-

cause the moment that is done, in my judgment, the usefulness of that board is impaired. Surely the Government does not support the view taken by the hon. member for Brandon that any credit is due to it for that decision? My recollection of the documents in connection with that case is that shortly after the present Government came into power the Winnipeg Board of Trade instituted an inquiry or made a complaint to the Government and to the Board of Railway Commissioners. They took up that complaint, and, as I understand, by order of the Board of Railway Commissioners, this investigation was prosecuted. The provinces of Saskatchewan and Alberta appointed a counsel to represent the people of the West before that commission. In the prosecution of the case no one took so active a part on behalf of the people of the West as did the counsel who was appointed to represent the two provinces. I am very much surprised that the hon. member for Brandon should be in such a bad case that in order to put something down to the credit of this Government he had to bring the Board of Railway Commissioners into partisan discussion.

I have spoken somewhat longer than I had intended to and I have spoken because I feel the responsibility of expressing plainly, and as honestly as I can, the views of the people whom I represent in this House. I am free to say that the tariff proposals are a great disappointment to the people of western Canada. I suppose it is too late for a change or for any remedy, but I do wish that that open mind of the Minister of Finance would open for a little while on the other side and that at least, when he brings down another Budget Speech, it may have more cheer, more hope, more promise in it for the future welfare and well-being of the people west of the Great Lakes than anything I can find in the proposal with which he so recently favoured us.

11 p.m.

Mr. W. A. CLARKE (North Wellington): Mr. Speaker, it is not my intention to occupy very much of the time of the House at this late hour. I would like to compliment the hon. member for Humboldt (Mr. Neely) on his oration. I feel that he has, considering the length of the speech which he has delivered, done remarkably well. I sometimes feel that members from the western provinces take up a very great deal of the time of this House, and at other times I feel as if the members from the Maritime provinces take up a great deal of time. It seems to me that the condition of affairs in the province of Ontario, is sometimes neglected by those of us who are responsible to the poeple there whom we represent. We do not occupy the time in debate that we should, and I feel that it is my duty representing a rural constituency, to make a few remarks upon this question.

I do not intend to try to answer the speech of the hon. gentleman who has just taken his seat. I do not feel that I could answer that speech, and I feel satisfied that he has possibly done what he felt to be the best he could in the interests of the people he represents. I do not know whether, when he asked the question: What is meant by adequate protection? he expected to get a reply. I do not think it would be possible for any man to make a reply to the question as to what is adequate protection. But I would like to advise the hon. member for Humboldt and other hon. members on the opposite side of this House of the fact that the moment they swerved from the National Policy as it existed during the regime of the Conservative party and adopted the policy of free trade that they tried to present to us in 1911, they found out from the electors very decidedly what inadequate protection meant.

Coming, as I said, from a purely rural constituency, I feel that I must give expression to my opinion in connection with the tariff as it will affect our county when applied in accordance with the announcement contained in the Budget speech of my hon. friend the Finance Minister (Mr. White). I was somewhat surprised the other day to hear the hon. member for South Wellington (Mr. Guthrie)—and I am sorry he is not present this evening—when he spoke upon the reduction or abolition of duties on farm implements. He made the remark that he was sorry that some of his colleagues representing neighbouring ridings were not in their seats in order that they might give expression to their opinions. He undertook to state what the existing condition of affairs was in his riding. What he said can be seen in 'Hansard,' and therefore it is not necessary for me to read it, but his observations were to the effect that he had made inquiry and found from the electors of the agricultural portion of his constituency that they would be pleased

to have the duties removed from farm implements. I was not surprised. If any member of Parliament would go to the agricultural electors in his constituency and say to them: We are going to remove the duties from farm implements and we feel that you will get your implements cheaper, he would naturally get a reply to the effect indicated by the hon. gentleman if they thought they were going to save a little money. I have been going up and down at intervals since the session began, and when I arrived in my county I did not hear of any of the agriculturists there complaining about a money stringency or depression. After reading the speech of the hon. member for South Wellington, I felt that it was my duty, when I had gone home for the Easter holidays, to inquire into the state of affairs that existed. I started on this expedition of inquiry, and met farmers of North Wellington and of South Wellington. One farmer living close to the town in which I reside, when I asked him how he thought the new tariff was going to affect the farmers, said he was surprised at the criticism and that he thought the farmers had no reason to complain. He said: I brought into town two teams of farm horses for which I found a buyer at $1,200. That is equal to $300 per head for horses. Well, I feel that if the farmer can raise agricultural horses and take them into a neighbouring town and sell them at $300 a head—he has not much reason to complain. I got into conversation on the train, some time ago, with a gentleman who is one of the best friends the hon. member for South Wellington (Mr. Guthrie) has. We were discussing the abolition of duty on cattle going into the United States. I knew he was a big stock dealer and so I said: I suppose you will be selling a lot of cattle. He said: I have 103 head to sell. I said that would represent quite a sum of money, and he agreed that it would for he was to get 8 cents per pound. I said that he would receive great benefit by the removal of the duty from cattle going into the United States. His answer was, 'Unfortunately, in the interest of my party, the 103 head of cattle for which I am receiving 8 cents a pound and which are to be shipped this week are not going to the United States but to Montreal.' They were not the quality of cattle which the people of the United States wanted from Canada and from which they had removed the duty. The United States seem to know pretty well what they want; they wanted cattle which they could use for almost any purpose. The people of Canada made one of their greatest mistakes in reducing their stock of all kinds for what I feel was nothing more nor less than a bait. And when the time came that the people of the United States felt that they had enough of this cattle imported not only from Canada but from the Argentine—because they had opened their markets to others besides ourselves—they immediately applied the tuberculine test. They did not need to apply their test to Canadian cattle, but they applied it for the same reason that they applied the test for diseased hogs when they felt that they had received enough of the Canadian product. When that was the position, they did what every Government should do—arrange so as to protect their own people first.

Last session I was surprised to hear a proposition laid down by the hon. member for South Wellington. That hon. gentleman and I are very good friends, and I have a great respect for him, for I feel that he is an able representative of one part of the county, a part of which I also represent. So, I am not saying anything in his absence that I would not say if he were present. Last session he spoke of the county of Wellington as being the greatest producing county in live stock. Of course it is a great producing county in live stock. He explained, and I believe he was conscientious about it, that in years gone by we had found in Buffalo a splendid market for our lambs, and that Buffalo was the natural market for lambs shipped from Wellington. On looking up the record of the markets of this country and the United States for the last three months, I find that many carloads of lambs had been shipped from Buffalo and other portions of the United States into Canada. And so the hon. gentleman's argument does not apply at this time. I find that the highest price paid for lambs in Buffalo on Saturday was $8.40, as compared with $9.85 paid in the city of Toronto. These are matters that affect directly the people of the county I represent, and such are the matters I deem it my duty to discuss.

I have been somewhat surprised that one of the members of the Opposition has not offered an amendment in the course of this debate. We have been waiting to hear what their views are, and hoping to have an opportunity to speak on their

amendment. I feel it is just possible that they are not agreeing among themselves possibly as well as they would like to. It has always been the policy of the Liberal party when in Opposition in this House to advocate free trade. I do not think that any Liberal member who has been in the House for any length of time will deny that. In 1891, when the present leader of the Opposition (Sir Wilfrid Laurier) was in opposition, before he came into power, he was calling for 'free trade as they have it in England,' and for unrestricted reciprocity; and the Liberal party had the orators of Canada and the United States going from one part of this province to the other advocating what they thought was right at that time. But at the same time I felt that the leader of the Opposition of that day did not have any faith in it. However, after the Liberal party came into power in 1896 they did not make any such changes in the tariff as they are advocating in this House at the present time. Even their reciprocity agreement did not go as far the present Minister of Finance has gone in the reduction of duties on farm implements. I feel sure that we as representatives of the eastern portion of the Dominion of Canada can go to our people without any sins to answer for, and tell them that the hon. Minister of Finance has made—if they feel that it is a benefit—greater reductions in the duty on farm implements than the reciprocity agreement would have given them had it been put into effect in 1911.

Although some hon. gentlemen opposite have come out pointedly and in a straightforward manner for free trade—and I give the hon. member for Red Deer (Mr. Clark), my namesake, and the hon. member for Westmorland (Mr. Emmerson) credit for doing so—I think that if hon. gentlemen desire to advocate free trade in agricultural implements and in wheat, they should be men enough to stand up in a body and advocate free trade. Then, if they go to the polls on a free trade platform and come back victorious, we will see what effect it will have upon this country.

We have heard a great deal about the tax upon foodstuffs, which hon. gentlemen have denounced as being a very great burden upon the people. I have felt it my duty to endeavour to get information upon which I could come to the conclusion as to the effect of the duties on foodstuffs upon the high cost of living in Canada. In this connection I found the following article in the press the other day:

Speaking in support of their policy of 'free food,' opposition members are making much of the argument that it would lift the 'burden of food taxation, under which the people are groaning.' The contention looks good upon the surface, and no doubt makes an attractive appeal, but it will scarcely stand the test of a careful examination. Meats, poultry, eggs, fish, dairy products, and bread-stuffs, are the commodities which go to make up the dinner table of the average Canadian. The amount of customs duty collected from the import of these, last year, should form the fairest possible index of the extent to which our food is taxed. According to the latest available information in the reports of the Customs Department, the amount of duty collected on meats and poultry brought into Canada in 1913, totalled $1,040,547. Divide this among the population of the Dominion and it will be found that this 'terrible taxation' of meat, amounted in a year to the sum of thirteen cents per head —the cost of half a pound of steak.

The duty collected from the importation of eggs for 1913, amounted to $327,123. Divide it among eight million persons, and it amounts to a fraction more than four cents per head, or to the retail cost at present, of two eggs.

On fish last year the amount of duty collected was $361,116. Divide it among the population of the country and there is disclosed the tax of four cents per head.

Duty collected on imported bread-stuffs last year totalled $261,409. Divide it among eight million persons, and the 'crushing burden' amount to a fraction more than three cents per head.

It will, therefore, be seen that the total amount of duty collected on meats, poultry, eggs, fish, dairy products, and breadstuffs for the whole of 1913 amounted to under thirty cents per head of population, a sum which does not seem to much warrant the assertion that we are 'groaning' under a 'terrible food tax.'

The question of the reduction of the cost of living is one which a great many people have tried to explain, but to my mind those who have endeavoured to explain it are nearly as far away from a conclusion as they ever have been. I think it would be a benefit to us or to any people to get as closely allied with the consuming centres as possible. The improved means of transportation that we have are beneficial as far as the cost of living is concerned. I think the hon. member for Brandon was on the right track the other night when he said he believed that if the waterways of the West were properly developed an impetus would be given to the milling industry that would make it more than ever a world competitor. What applies to the West certainly applies to the East as well. The members of this House will remember that a few weeks ago a delegation of 2,000 persons came here from the province of Ontario. The members of this delegation were interested in trying to exact from this Government subsidies for hydro-radial railways

to be built in the province of Ontario. I am not in a position to say what conclusion the Government of the day has come to in that regard, but, as a resident of the province of Ontario, I feel that we are not too well supplied with railways. It may be a surprise to some of the people who are clamouring for transportation in the West to know that there are people living in the thickly-populated portions of our riding who are fifteen or twenty miles from the nearest railway station. These people have been highly taxed; they will sooner or later undertake the construction of hydro-radial railways, and when these railways are constructed the people will be placed in communication with the great markets; the country will be built up under a policy of protection and the people will be induced to come back on the land.

There has been quite a decrease in the rural population of some of the western Ontario counties. Many of our people have gone out to our great West and we know and are delighted that they have prospered. But the people who are left here to till the soil in the old province of Ontario, those who came in in the earlier days a great many years ago, and had to endure many hardships are entitled to some consideration. I feel that if the Government, as I hope they will, see fit to give some help towards the construction of hydro-electric railways throughout that part of Ontario, and with or without aid these railways must come sooner or later, the farmers in the sections removed from the stations on the lines of the steam railways will be able to send their products in small quantities more rapidly into the splendid market centres in our manufacturing towns. They will then be in a better position than they are to-day even under the new tariff with the great reduction of 5 per cent on agricultural implements.

I shall not speak further to-night, as a further opportunity for discussion will be afforded during the debate on the amendment of the Opposition. I do wish to state, however, that I, as a humble follower of the present Administration, after making inquiry from the people in my county and in the surrounding counties, can assure the present Administration that they are giving what the people consider perfectly satisfactory government. I would like to compliment the Minister of Finance on the splendid Budget speech which he delivered, and at the same time to congratulate him on his restoration to health. I can assure him that the electors of North Wellington are satisfied that if he does not know exactly how to arrange the tariff in the interest of all the people in this country, he must have the credit of having made, as he has done in every Budget speech since the Government came into power, an enlightened guess as to what would suit the people throughout the Dominion of Canada. After what he has done in the present Budget, I, as one of the humble followers, will be pleased to go back to my constituency when the time comes and to pin my faith to the Minister of Finance, as to the other members of the Government and our leader (Mr. Borden) who has endeared himself to the whole Dominion of Canada.

[Mr. W. A. Clarke.]

On motion of Mr. Sinclair, the debate was adjourned.

On motion of Mr. Rogers, the House adjourned at 11.30 p.m.

Tuesday, April 21, 1914.

The House met at Three o'clock, the Speaker in the Chair.

THE BUDGET.

Consideration of the motion of Hon. W. T. White (Minister of Finance) for the House to go into Committee of Ways and Means, resumed from Monday, April 20.

Mr. J. H. SINCLAIR (Guysborough): Mr. Speaker, the function of an Opposition is to criticise, when criticism is merited. There seem to be no dearth of subjects for the present Opposition to criticise. We on this side of the House are very well aware that the Government are having their own difficulties; but we are also aware that they have brought those difficulties on themselves. Many of the difficulties that surround the Government at the present time arise from the last election campaign; they are what my hon. friend the Minister of Finance would call the hereditas damnosa arising out of that campaign. We regard the election of 1911, to use the language of the street, as not a square deal; it was a victory of prejudice over reason, and such victories always bring their consequences. The reckless spirit exhibited by the Minister of Trade and Commerce in that campaign illustrates the condition of the Conservative party. The hon. Minister of Trade and Commerce is regarded as the safest and sanest man among them, but even he fell a victim to temptation.

Mr. W. F. MACLEAN: That is a bad state of affairs.

Mr. SINCLAIR: The temptation came to the minister at the time of the Drummond-Arthabaska election in the shape of a revolt against the naval policy of the late Government, which was the naval policy of my hon. friend's own party and of which he himself was the foster-father. My hon. friend is a shrewd politician; he saw an opportunity to gain a political advantage and embraced it. He went back on his dream of a Canadian navy, built in Canada, manned by Canadians and controlled by the Canadian Parliament. He threw discretion to the winds and announced the slogan that was taken up later by his party all over Canada: 'Anything to beat Laurier.' Mr. Speaker, after that date it was—anything.

The opposition to reciprocity itself was not sincere. Everybody knows that the watchword was: 'No truck or trade with the Yankees.' What has happened since 1911? Have our friends opposite attempted to stop the trade with the United States? On the contrary, it never grew so rapidly as since this Government came to power in September, 1911. This expansion has continued until it now reaches the enormous volume of about $2,000,000 worth of trade a day. That is to say the transactions between the people of the United States and Canada since we met here yesterday at 3 o'clock in the afternoon have amounted by three o'clock this afternoon to the enormous sum of $2,000,000. I have no doubt the transactions are profitable to both parties, but the Government has not raised a finger to stop the enormous trade between Canada and the United States. They have the power to stop it if they wish to do so. The fact that they do not do so shows the hollowness of the campaign they conducted in 1911. If the enormous sale of Canadian cattle in the United States market since the adoption of the Underwood tariff is a bad thing, it could be stopped by the imposition of an export duty. If the sale by our western farmers of 20,000,000 bushels of oats in the American market at profitable prices is a bad thing, it could be stopped by the imposition of an export duty. If it is a bad thing to see the waters of the bay of Fundy and of the Atlantic coast of Nova Scotia white with the sails of ships carrying lumber, laths and shingles to the markets of New York and Boston, why do they not stop it, why do they not act on the principle they laid down in 1911? If it is a bad thing to see Yarmouth spring to the front as a fish exporting port since the introduction of the Underwood Tariff, if it is a bad thing for the fishermen of that part of Nova Scotia to receive twice as much for their catch as they received a year ago, why do they not impose an export duty and stop it? The inference is that they were not sincere in their cry of no truck or trade with the Yankees.

But, in addition to the flag-waving and the cry of 'No truck or trade with the Yankees,' there were special bogus cries in every province of Canada in the election of 1911. On the Pacific coast the cry was: 'A white British Columbia'; but I am told that the labour people of British Columbia have never been so yellow as since 1911, especially the coal miners of Nanaimo. A white British Columbia was an admirable election cry among the labour population. But, Mr. Speaker, while bogus telegrams and bogus policies may be useful at election times, they are no good when the party is in power. In the western provinces the cry was: 'The restoration of the natural resources to the provinces.' That has not been done, and I venture to say it will not be done. The almost insurmountable difficulties in the way of carrying out that pledge were well known to the Prime Minister and the leaders of the party at the time the pledge was given. In the province of Ontario the cry was: 'A uniform marriage law.' In the characteristic language of my hon. friend from West Peterborough (Mr. Burnham) the issue was: 'Are we married or are we not.?' A number of hon. gentlemen from that province won their seats, I am told, on that cry. Pledges were given by candidates on the hustings; the Tory press took up the cry; the Orange lodges passed resolutions; the clergymen thundered from the pulpits of Ottawa and asked the people to return R. L. Borden as Prime Minister in order to get a uniform marriage law. The people acted on this advice and voted for Mr. Borden. But, after the ballots of these devout people were safely in the ballot boxes, what do we see? We see the arms of the Postmaster General around the necks of these champions of religious liberty, and, under the influence of that embrace, my hon. friend from West Peterborough, the hon. member for Centre York

(Mr. Wallace), and the hon. member for Lincoln (Mr. Lancaster), and even the Minister of War himself, do not seem to care two cents whether they were married or not married. I am sorry my hon. friend from Centre York is not in his seat. Permit me to suggest to him that, instead of defying the Imperial Parliament and threatening to devastate Ireland with fire and sword, he turns his attention to this matter of a uniform marriage law. Let him pull off his coat and take a fall out of my hon. friend the Postmaster General, and if he throws him—as I believe he can—he will get more glory out of that than he will ever get by hanging on to the coat tails of Sir Edward Carson.

In the province of Quebec the issue was still more spectacular. There, the children were disembowelled in school houses and used for cannon balls. To quote the language of my hon. friend from Gloucester (Mr. O. Turgeon), it was a campaign of 'blood and bowels.' There was, however, one pledge common to all the Nationalists. Every one of them pledged themselves that if returned to power they would repeal the Naval Service Act. But the Naval Service Act still stands. My hon. friend from Dorchester (Mr. Sevigny) endeavoured to keep faith with his electors in that respect, and, after six months' hard work, he extracted a promise from the Minister of Naval Affairs that the Government would repeal the Act. He has not done so, however, and I venture to say he never will. My hon. friend from Montmagny (Mr. Lesperance), in the early days of the session started in to do the job himself. The Bill was introduced and got its first reading, but then it was carefully laid away in the graveyard where it now rests, and my hon. friend has gone on a pleasure trip to Europe. Whatever else we may say about the Nationalist party—and I do not wish to say anything unkind of them—they are nice fellows; at least, they must get credit for patience. They came to this House in 1911 some twenty alert and vigorous representatives—a score of fighting men, men with ideals. We on this side of the House did not agree with their ideals, but nevertheless they were ideals. Where are those ideals to-day? So far as we can judge, this score of fighting men have become as tame as a score of pet lambs. They seem to be perfectly satisfied to eat out of the hand of the Minister of Public Works, and to pick up the crumbs that fall from the table of the Postmaster General.

In the Maritime provinces we had a variety of issues in the election of 1911. One of them was the loss of the fishing bounty; second, a shipbuilding programme for Halifax; third, the dissolution of the British Empire; fourth, such a demand for pulpwood that there would be no spruce logs left to make apple barrels in the Annapolis valley; fifth, free medicine for the fishermen. These are only a few of them. The fishermen are now getting their medicine in the shape of a tax of 25 per cent on fishing twine. Some of them are finding it a little hard to swallow, and they are making faces over it. I do not sympathize much with the Tory fishermen who were foolish enough to vote against an open market for their fish. But is it any wonder, Mr. Speaker, that the Government is having its own difficulties with all these various and mongrel broods of chickens coming home to roost? Is it any wonder that the Minister of Finance looks anxious or that we see a few more wrinkles in the brow of the hon. Postmaster General? The Finance Minister admits that the country is passing through a period of more or less serious depression, but he offers no remedy. He goes on like Nero fiddling and borrowing more money, and trusting to luck to bring about better times.

In 1911 the cry was: 'let well enough alone.' You do not hear that cry to-day. Is there anybody saying, let well enough alone, to-day? After three years of Conservative rule the Minister of Finance assures us that the worst is over. Well, we knew it would be bad, but if the worst is over, it is a comfort to know it, but there are men in this country who feel that if this Government is to remain in power the worst is yet to come. In the period between 1896 and 1911 we did not need to make long speeches to one another to satisfy ourselves as to whether the country was prosperous or not. We knew it by the jingle of the coin in our pockets. It is a remarkable historical fact that times were hard when the Liberal party came into power in 1896. It is also a well known historical fact that the tide soon changed after their advent to power and that during the whole fifteen years that the country enjoyed Liberal rule we had a period of unexampled prosperity.

Mr. BURNHAM: What, in 1907?

Mr. SINCLAIR: Yes, including 1907. But no sooner were the reins of power taken over by the Conservative party than the wolf

was again at the door. The hon. Minister of Trade and Commerce (Mr. Foster) between 1896 and 1911, was constantly assuring us that the great prosperity that the country enjoyed was the work of Providence. We on this side of the House have never denied that fact. We have always been thankful for the assistance of a kind Providence, but the question remains why does not Providence help the Tory party. That is a practical question in theology that I would recommend the Minister of Trade and Commerce to tackle. What happened after the advent of the Liberal party to power in 1896? Did they attempt to do anything to bring about good times in the years that followed? You will not be surprised when I tell you, Mr. Speaker, because you know, that before twelve months had passed away after the Liberal party came into power in 1896, they had revised the tariff; they had introduced the British preference; they had reformed the western land laws and they had adopted a vigorous immigration policy. These were far-reaching reforms. In the revision of the tariff substantial reductions were made, raw material was made free, specific duties were abolished and the result was a much lower and a workable tariff that was beneficial both to the manufacturers and the consumers.

Hon. gentlemen opposite have said during this debate that the Fielding tariff is the same as the old National Policy. All I have to say is that Sir Charles Tupper was one of the men who constructed the National Policy, and he did not think so, because he said on the floor of this House at the time that the Fielding tariff would ruin the industries of the country. The right hon. Prime Minister (Mr. Borden) did not think so when he moved his resolution in favour of adequate protection. By the British preference one-third was struck from the burdens of the people at one blow. A substantial and almost immediate extension of trade followed with the result that a profitable market for Canadian products was found in Great Britain, Australia and South Africa as well, for the policy of the preference soon spread to the British dominions throughout the world. The vigorous immigration policy introduced by the Hon. Mr. Sifton awakened the West, population poured in, branch railways were constructed, millions of acres of land were brought into cultivation, resulting in an era of prosperity both in the East and the West such as Canada never saw before. This splendid result was achieved by reforms that were introduced during the first year of the Liberal rule.

What have the present Government done in their three years of power ? Admittedly, they have made a record in three particulars. First, they have attempted, I trust unsuccessfully, to ruin a great Canadian enterprise for party purposes; I refer, to the National Transcontinental Railway; second, they have spent vast sums of money, and, third, they have debauched the Civil Service. Anybody can hire an irresponsible busybody like Lynch-Staunton to spread false reports about a great enterprise. Anybody can spend money. You can go out on Bank street, and pick out the stupidest man you can find there, fill his pockets with money, and ten to one he will find some way to spend it. It does not take very much statesmanship to dismiss officials. Nobody knows that better than the Postmaster General. But the question arises: Could these hard times from which we are now suffering have been avoided, could this Government have done what the Liberal Government did in 1896, could they have brought about the good times if they had been capable statesmen ? I submit that, although hard times might not have been altogether avoided, our condition might have been greatly modified if we had had access for our natural products to the American markets three years ago. No one will deny that the profitable sale of $2,000,000 worth of cattle in the West during the past few months, or 20,000,000 bushels of oats, or the ready demand this spring for lumber, fish, and iron ore of the Maritime provinces in the United States have helped materially to tide us over the hard times of the past winter. But it is humiliating to remember that all these benefits that have come to us have come not from our own Government but from a foreign government.

We on this side of the House are very much struck with the spirit of despair that prevails on the Government side. Man after man arises in his seat and tells us that the Government is helpless to do anything to relieve the situation in which we are now placed. When the hon. member for Chateauguay (Mr. Morris) got on his feet the other night our hopes went up on this side of the House. We said: Here is a man fresh from the people, he will not have lost faith in the Government already, but we soon discovered that he was more despondent and hopeless than the others. You will find, Sir, that the lamentations of Jeremiah are cheerful compared with that

hon. gentleman's speech. Let me give you only one quotation from it:

> With regard to the high cost of living, I have only to say that I marvel at some of the arguments that have been adduced. I do not think that we have yet had any arguments advanced that prove to us that this or any other Government could solve that problem. In my opinion, they will simply have to do as the farmers did in my county; that is they will have to wait until the conditions change,—

Poor farmers!

> —for then only can a satisfactory solution be arrived at. It can not be done by this Government.

In other words, if you want cheaper food or a revival of prosperity, you must wait until it comes of its own accord, because it cannot be brought about by this Government. I decline to accept the doctrine that the Government can do nothing in a case of this kind. I have already pointed out what the late Government did in 1896, and I could give many examples. Let me tell you what the late Government did in the way of building up the fresh fish industry in the province of Nova Scotia. In 1896 we had practically no fresh fish industry in the Maritime provinces, the reason being that we did not have proper transportation facilities. There was a good market at Montreal, but it was supplied chiefly from Gloucester. It cost $2.50 a hundred pounds to send fresh fish from Nova Scotia to Montreal by express. It was impossible to send fresh fish by freight because that was too slow; your car might be placed on a siding and left there for a fortnight and the fish would be worthless. That was the system during eighteen years of Conservatives rule. In 1896, when the Hon. A. G. Blair took charge of the Department of Railways and Canals, one of the first things he did was to extend the Intercolonial railway to Montreal. He then equipped it with refrigerator cars and put on daily a fast freight train, something that had never before been heard of in Canada. This train would leave Mulgrave and Halifax at a certain hour in the afternoon, and join at Truro, and run on schedule time to Montreal, so that if you loaded a refrigerator car with fish at Mulgrave or Halifax, you knew that it would reach Montreal safely about forty-eight hours afterwards. The rate on carload lots per hundred pounds was reduced to thirty-eight cents, an enormous cut. This forced down express rates from $2.50 to $1.50, and the Government came forward and said: In order to promote the sale in small parcels by the small trader, we will give a rebate of one-third of these express rates. They did so, with the result that a new industry sprang into life that is putting millions into the pockets of the people of the Maritime provinces today.

What have the present Government done in regard to this fresh fish industry? No sooner were they safely in their seats than they began to exact a duty of 25 per cent on the fishing twine used by the fishermen. It would appear that they secured some expert tariff lawyer to go over the schedule in order to find what they could exact from the people. He discovered what they considered a blunder in the schedulue relating to rough lumber, and a tax was imposed, which, however, was escaped by an appeal to the court. The Government were more successful in the case of the fishermen; the 25 per cent duty on the fishing twine was levied and is still being exacted. They struck another blow at the fresh fish trade by increasing the freight rates on the Intercolonial, so that the merchant in New Glasgow, for example, has to pay $12 more per carload from Mulgrave than he paid during the Liberal regime. A few weeks ago I brought this matter to the attention of the House and moved the following resolution:

> That in the opinion of this House the question of improved means of transportation of fresh fish between the Maritime provinces and the United States receive the early attention of the Government.

I proposed the establishment of a line of fast boats that would carry our fish from the ports of eastern Nova Scotia to the American market. I pointed out that fish has been put on the free list in the United States, a boon for which we have been looking for forty years. If we had proper transportation facilities, we could take advantage of this and build up a splendid business. I pointed out that since the Underwood tariff has come into effect, we have the opportunity which we had not for forty years of exploiting the American market. I also pointed out that in the town of Yarmouth, which has transportation facilities, the price of fish has nearly doubled in the course of six months. The average price paid for fresh haddock and fresh cod in Yarmouth during the three months of November and December of 1912 and January of 1913 was $2.06 per cwt. The average price after the Underwood tariff came into effect, for the

months of November and December of 1913 and January of 1914, was $3.86, or nearly double what it was in the former year, due to the new United States tariff and to the fact that the people of Yarmouth are in touch with the Boston market. In Canso, in eastern Nova Scotia, on the same dates, our fishermen are selling their fish at about $1.50 per cwt.; while, as I have pointed out, the fishermen of Yarmouth are receiving $3.86. The Minister of Marine and Fisheries replied on behalf of the Government that, during the election of 1911, the fishing counties of Lunenburg and Queen-Shelburne had voted against reciprocity and that was put forward as the reason why the Government refused to do anything now to improve transportation facilities between eastern Nova Scotia and the American market. In other words, the fishermen of the counties of Halifax, Guysborough, Richmond, Cape Breton, Victoria and Inverness must remain poor for five years longer because some other fishermen in western Nova Scotia in a fit of hysteria voted for the Tory party. That is curious logic, but that is the answer we got from the Minister of Marine and Fisheries when we brought this important matter to his attention.

But if the Government have done nothing for the fishermen but hamper their business, they claim they have done something for the farmers. They have reduced the duty on two implements by 5 per cent. Harvesters are not used very much in Nova Scotia, I question if there are any harvesters in use in the county I have the honour to represent. Nearly all our small farmers, however, use mowers, on which there is a reduction of 5 per cent, and we must be thankful for small mercies. A mower is worth about $50, and 5 per cent of $50 is $2.50. As a careful farmer will use a mower for about ten years, if we spread that reduction of $2.50 over ten years, it will work out at 25 cents a year, or the price of about half a pound of the cheapest kind of tobacco. Although we get this concession, which is regarded by the Minister of Finance as a great concession, we must not forget that the farmers have still to pay a high duty on a large number of implements. Here is a list which I have taken from the present Canadian tariff:

Implements.	Rate of duty. Per cent.
Ploughs	20
Tooth harrows	20
Disc harrows	20
Planters	20
Horse rakes	20
Cultivators	20
Threshing machines	20
Hoes	22½
Shovels	32½
Pitchforks	22½
Hand rakes	22½
Scythes	22½
Axes	22½
Field rollers	20
Harness	30
Farm wagons	25
Farm sleighs	25

My hon. friend from North Wellington (Mr. Clarke), who preceded me in this debate, made the statement that the reciprocity agreement did not go so far in reducing the tariff on agricultural implements as the minister had gone in the present Budget. I do not think my hon. friend intended to misrepresent the facts, but I do not agree with him in that statement. On the contrary, apart from the question of wider markets, really the great question in reciprocity, and confining ourselves wholly to the question of duty on agricultural implements, we find that reciprocity went much farther than the present reductions made by the Minister of Finance. I have pointed out that the reduction now made is a reduction on two implements only, harvesters and mowers, from 17½ per cent to 12 per cent. Now, what reductions were made under reciprocity in regard to implements used by the Canadian farmers? Here is a list:

Implements.	Present Canadian Tariff.	Proposed Tariff under Reciprocity Agreement.
Farm wagons	25	22½
Ploughs	20	15
Harrows	20	15
Harvesters and reapers.	17½	15
Mowers	17½	15
Seed drills	20	15
Horse rakes	20	15
Threshing machine separators	20	15
Threshing machine parts.	20	15
Hay loaders	25	20
Potato diggers	25	20
Fodder cutters	25	20
Grain crushers	25	20
Fanning mills	25	20
Farm rollers	25	20
Hay tedders	25	20

The hon. member for North Wellington will see that he was mistaken. While it is true that harvesters and mowers have the advantage of a reduction 2½ per cent greater than that which was proposed under reciprocity, I have given a list of 13 very important implements, used practically on every farm, the duties on which were proposed to be reduced 5 per cent

under reciprocity, and are not reduced at all under the present tariff. This concession made by the Finance Minister, which I have described as being equal to the price of half a pound of the cheapest kind of tobacco, is regarded by some of the leading manufacturers as being too much to give to the farmers of Canada. I wish to read an extract from a newspaper article which gives a statement made in this regard by Mr. W. H. Rowley, president of the E. B. Eddy Company, and ex-president of the Canadian Manufacturers' Association. It is as follows:

> In the first place Mr. Rowley thinks the farmers have already got too much and are going to get still more under the revisions.
>
> In the second place, Mr. Rowley believes the changes will bear too heavily on the paper industry.

I understand that Mr. Rowley is interested in the paper industry. (Reading):

> 'The farmers get the best of everything. They always have and they are getting it in the present revisions,' said Mr. Rowley.
>
> 'I think,' he said, 'that the Government acted wisely in not adopting free wheat. It would have been a great mistake to have allowed our grain and fodder to go to a foreign country. Our wheat is better than theirs anyway, and we should keep it.'

There is logic for you. I understand that Mr. Rowley is the head of a large firm that manufactures lumber and sells it in the United States. If we were to apply his own words to the industry in which he is engaged, they would run this way:

> It would have been a great mistake to have allowed the lumber of Canada to go to a foreign country. Our lumber is better than theirs anyway, and we should keep it.

Do you suppose he would accept that kind of doctrine? I do not think he would. But the Finance Minister appears to be alarmed by reason of the policy announced on this side of the House of free agricultural implements. With great emphasis and with a majestic wave of his right arm, he tells the House that 'free implements means free trade,' and this remark was cheered very loudly by his supporters. The tone of his voice conveyed to me the idea that free trade would be a calamity. But if free trade is such a terrible evil, why does the Finance Minister make the 5 per cent reduction? If protection is better than free trade, why does he reduce the duties upon these implements by 5 per cent? I doubt not his statement was intended to frighten us, but it did not have that effect. Free implements means a great deal to the farmer, but it does not mean free trade. There are 711 items in the customs tariff; 203 of them are free, and 508 dutiable. If we place half a dozen or even a dozen additional agricultural implements upon the free list, does that mean free trade? There would still be 500 items dutiable, and the farmer would pay his full share of the taxation on those 500 items. If hon. gentlemen opposite hold that this is free trade, we do not so understand it on this side of the House.

We were also very much struck with the way the announcement of this reduction was received by hon. gentlemen on the other side of the House. The hon. member for Halifax (Mr. A. K. Maclean) pointed out that on this occasion hon. gentlemen opposite cheered more loudly than they did at any other time during the course of the Finance Minister's speech. If he had announced free agricultural implements, the roof of the building would have been in danger. What does that mean? It means that hon. gentlemen on the other side of the House have the same views that we have on this side, and that they would like to hear the minister announce free agricultural implements if the manufacturers would permit him to do so.

I want to refer for a moment to the question of fishing twine. I may say that some of us on this side of the House were disappointed when we observed that this article was not placed on the free list. I have not the slightest doubt that in the tariff of 1897 it was intended that fishing twine should be free. For fifteen years fishing twine was admitted free by the late Administration, but after 1911, as I have already said, some flaw was discovered in the item relating to cordage which enabled the Government to exact a duty of 25 per cent on the fishing twine which is used in the lobster fisheries. Orders were promptly issued by the Minister of Customs and this tax has been collected for the last three years. This matter was discussed in the House in 1912; it was discussed again in 1913, and in order that it might not be forgotten I brought it to the attention of the Minister of Customs in February of the present year. At that time he assured me it would be dealt with when the Budget was brought down, but in the Budget speech it was not mentioned at all. When I asked the Minister of Finance about it he did not give any particular reason, but said that there were some difficulties. I am afraid the chief difficulty is that the

Finance Minister cannot serve two masters. The fishermen are demanding free twine and the cordage combine in Dartmouth are demanding 25 per cent duty, and the minister has to take his choice.

Another matter to which I wish to refer for a moment is that of provincial subsidies which, I think, has not been referred to by any speakers during the course of this debate. There is a very general opinion that the subsidies at present paid to the provinces are altogether inadequate for the important services that they have to maintain. At the Interprovincial Conference held in this city in October, 1913, it was pointed out that in the year 1867 the provinces surrendered customs and excise duties to the central Government amounting to $11,580,988. They received in lieu of the same $2,227,942, in subsidies under the original Act—about 20 per cent of what they surrendered. They pointed out that in the year 1913 the customs and excise duties amounted to $135,312,943 and that the provinces received in cash subsidies only $10,281,042, or less than 10 per cent of the amount that was collected.

Now, they do not claim 20 per cent; they do not claim the same proportion as they had when they surrendered their excise and customs duties, but they do claim 10 per cent, which would give them about $3,000,000 more than at present. My principal reason for dealing with this matter is to point out to the Finance Minister (Mr. White) and to the Prime Minister (Mr. Borden)—who, I regret, is not in his place at present—the discrepancy in the case of the province of Nova Scotia. In order to do this more definitely I wish to place on 'Hansard' a table giving the population of each province according to the last census, the amount of subsidy to be paid to each province according to the estimates now under consideration and the amount payable per head of the population in each province. In this calculation I am leaving out the larger provinces of Ontario and Quebec:

Province.	Population.	Subsidy.	Amount per Head.
Nova Scotia ..	492,338	$ 636,666.86	$1.27
New Brunswick	351,889	637,976,16	1.81
Manitoba	455,614	1,401,391.36	3.14
Brit. Columbia..	392,480	723,135.06	1.84
Saskatchewan .	492,432	1,710,675.00	3.47
Alberta.	374,663	1,401,575.00	3.47
Prince Edward Island.	93,728	381,931.88	4.07

In addition to these cash subsidies, very large land concessions have been made to some of the provinces. Last session I got the following reply to a question I asked of the Minister of the Interior:

Question:
How many acres of public lands in the surveyed portions of the western provinces have been reserved for school lands?

Answer:

Manitoba..	1,300,495 acres.
Saskatchewan	3,706,589 "
Alberta	2,767,634 "

Valuing this land at an average of $8 per acre, which I do not think too high, we find that these additional educational grants represent the following amounts:

Manitoba..	$10,403,600
Saskatchewan	29,662,712
Alberta	22,141,072

I am not complaining about what is given to the West; that is not my object in bringing this matter to the attention of the House and the Finance Minister; I am speaking of the matter merely to show the importance of giving attention to the request of the provincial Premiers at their recent conference and to draw special attention to the case of Nova Scotia.

Now, I desire to say a word on the subject of expenditure. To begin with, let me say that the Canadian people are not narrow on this question of expenditure. The late Government had the cordial support of the people of Canada in the great national works they undertook between 1896 and 1911, such as the equipping of the Intercolonial railway, the extension of that road to Montreal, the deepening of the canals to fourteen feet, the deepening of the St. Lawrence channel to thirty feet and the construction of the National Transcontinental. The last, of course, was much the largest expenditure. But, Sir, the vision of another great transcontinental railway opening up vast new areas of land in central New Brunswick, in northern Quebec and northern Ontario and in the Peace River district of the West, and making it possible to carry to market the great and increasing volume of western traffic to the eastern seaboard, awakened the patriotism and fired the enthusiasm of the Canadian people, and by large majorities they registered their approval of that policy in the elections of 1904 and 1908. But no such enthusiasm attends the expenditure of the present Administration, but rather there is a feeling of alarm at the rapid growth of expenditure. In the manifesto which the Prime Minister issued to the people of Canada prior to the elec-

tions of 1911 he placed the ordinary controllable expenditure for that year at $74,000,000, and he described this as 'extravagance beyond any possible defence.' Yet what is it to-day? The Minister of Finance has placed the ordinary controllable expenditure for this year, if I understand his figures, at $146,786,126, or about double what it was three years ago when the Prime Minister issued that manifesto. Now, if the right hon. Prime Minister was sincere —as I have no doubt he was—when he said that an expenditure of $74,000,000 was extravagant beyond all reasonable defence, what must he think of his own administration when they double that

4 p.m. expenditure in the short space of less than three years.

Among the greatest sinners in this respect is my hon. friend the Minister of Militia (Mr. Hughes), whose drill-sheds are as thick as blackberries in the province of Ontario, to borrow a phrase from the Minister of Trade and Commerce (Mr. Foster). But the Minister of Public Works (Mr. Rogers) has outdone even the Minister of Militia in the increase of expenditure of his department. I must say that none of it has come to the constituency I have the honour to represent; so far as I know, he has not spent a single dollar there. But really the expenditures in the Public Works Department have become alarming. For the year 1911, the total Public Works expenditure was $10,818,834. But what do you think it is for the present current year? Without taking into account the Supplementary Estimates which are yet to come, the estimated Public Works expenditures this year amounts to $28,330,048.89, almost three times as much as when the present Government came into power about three years ago. Under the former Government the expenditure of three or four hundred thousand dollars on wharfs and breakwaters and other improvements in the Maritime provinces was the signal for a wild outcry from hon. gentlemen opposite. My hon. friend the Minister of Trade and Commerce demanded a revision of the geography in order that he might be able to locate the harbours that were being improved in Nova Scotia and the other Maritime provinces, and the hon. member for St. Antoine (Mr. Ames) went around in a schooner with his little camera photographing these places to make a lantern show of them for his audiences in Quebec and Ontario. Why does not he start out with his little lantern now to explain this $28,000,000 of expenditure? If he could show the workings of the mind of the Minister of Public Works, with regard to these expenditures when by-elections are coming off, it would make a very interesting moving picture.

The Finance Minister does not pretend to justify this extraordinary expenditure. I submit that he did not do so in the very able speech he made to the House. He probably agrees with his leader that it is extravagant beyond all possible justification. I do not want to detract anything from the glory that is coming to my hon. friend the Minister of Finance. He has received a great many bouquets from the members who have spoken on that side of the House, and I have no doubt that he deserves these compliments from their point of view. I have myself a great admiration for him in some ways, but I feel that he was started wrong; he fell heir to the splendid financial results that were brought about by the late Minister of Finance, Mr. Fielding. He started housekeeping less than three years ago with a surplus of $37,000,000 and he thought he would never reach the bottom of the chest; like the wild son of a reckless father he proceeded to dash away and spend the money, and now it is all gone and he has to borrow $20,000,000 to meet his liabilities for the current year. My hon. friend will be known in history as Canada's prodigal son. In some respects he is worse than the prodigal son, because the prodigal spent his own money and he was sorry for it. My hon. friend is spending the money which he held in trust for the Canadian people; he is spending it in subventions to my hon. friend the Minister of Public Works to enable him to win by-elections and in gifts to big corporations and in the riotous building of drill-sheds, and he shows no signs of repentance. Mr. Speaker, there are a great many questions to be dealt with yet by the people of Canada. Permit me to enumerate a few of them:

(1) Is protection to be permanent in this country? Are we always to submit to the monopolies arising out of a protective system or are we from time to time to take a step in the direction of freedom?

(2) Shall the first and most urgent step be to lessen the burden on the farmer and throw open a wider market for his products, with a view to settling our vast areas of

vacant land and developing our great national resources?

(3) Shall the National Transcontinental railway be completed according to the original plan or shall it be degraded into a second-class road and made an adjunct of the Canadian Pacific railway?

(4) Shall we solve the question of naval defence by contributing to the Imperial navy, or shall we undertake the task of gradually building up a navy of our own?

These are the questions that to-day divide the two great parties in this country; and we on this side have an abiding faith that we are on the right side of every one of them. There is only one way of settling these questions and that is by an appeal to the people of Canada. The next election will not be like the election of 1911. The methods used in that election can never be repeated. There will be no flag-waving next time, there will be no Ne Temere Decree next time, there will be no Farmers' bank next time, there will be no free medicine next time. The Government will have to face its record of bogus policies and of broken promises and justify its existence on the merits—and we on this side of the House will welcome the earliest opportunity to obtain a verdict of the electors on the record of the present Administration.

Mr. MICHAEL STEELE (South Perth): Mr. Speaker, I feel very diffident indeed in rising to address the House after the speech of the hon. gentleman from Guysborough. The hon. gentleman to-day appeared in rather a new role, that of a humourist; and when he started I began to wonder if at last we were going to have the policy of the Opposition and their amendment to the Budget. I almost convinced myself it was coming, because I could see on the face of the hon. member for South Renfrew (Mr. Graham) a look of entire satisfaction. I could imagine that at last, after two or three weeks' delay, the hon. member for South Renfrew, representing an Ontario constituency, had convinced his followers to adopt the policy which he frequently gives this House. It would be: We have not any amendment, boys; we have not any policy to offer, but we will jolly them along a little longer.

Mr. GRAHAM: It is coming all right.

Mr. STEELE: The hon. member for Guysborough, in very sad tones indeed, spoke of the wolf being at the door since the change of Government; another evidence to my mind of the truth which at least some of the Canadian people believe, that our friends of the Opposition are always hungry when they are in opposition.

I am pleased to be able to say a word in this Budget debate, especially on account of the excellent Budget which the Minister of Finance was able to present to this House. It is not necessary to laud that, because the people of Canada from one end to the other recognize it as a wise and altogether satisfactory Budget. We had the remark, I think from the hon. member for Guysborough, that Canada has made a record in three particulars during the term of office of the present Government. I would like to remind him that the Government has made records in more particulars than that. I shall enumerate some points on which they have made records. During the last two years, while this Government has been in power, the total trade of Canada increased by $275,000,000, the largest increase on record. Our trade with Great Britain during that time has increased $80,000,000, another record. The consolidated revenue increased $27,000,000, the largest increase on record in any two years.

Mr. LEMIEUX: What about the United States ?

Mr. STEELE: Oh, I am such a Canadian that I must talk about Canada, not about the United States. I do wish our friends on the other side of the House would get their eyes off the United States and just settle them on Canada. The surpluses during the two years amounted to $93,000,000, the largest on record. The post office revenue increased by $1,559,334 last year, the largest increase on record. The net debt decreased during the two years by $6,000,000, the largest decrease on record. So when the hon. member for Guysborough starts out to give records that this Government has made, I would ask him, in future, to include those which I have mentioned. We all acknowledge that Canada has been most prosperous for many years. We on this side of the House do not attempt to deny that Canada enjoyed great prosperity during the regime of hon. gentlemen opposite; but that prosperity did not terminate with the change of Government. Let me give a few figures to show how Canada's trade during the last year compares with the trade of other countries. In 1912-13 the trade of Germany increased by 8 per cent; Great Britain by 5 per cent; Australia by 1 per cent; Argentina by 4½

per cent; South Africa by 6 per cent; France by 2½ per cent; the United States by 11 per cent—I am sure the hon. member for Rouville (Mr. Lemieux) will be pleased at that—and the trade of Canada by 12 per cent. Let us look at the trade for the last five years, as last year was an exceptional year. From 1908 to 1913 the total trade of Germany increased by 47½ per cent; the United States by 40 per cent; France by 44 per cent; Australia by 39 per cent; Great Britain by 3½ per cent; and the total trade of Canada by 98 per cent.

It is quite natural that we should inquire what is the cause of the prosperity which Canada is enjoying to-day. This marvellous, and, when comparisons are made with other countries, this exceptional prosperity, is in my opinion undoubtedly due to the fact that for the last thirty-five years we have been under the beneficent influence of the National Policy, the great fruits of which are more and more in evidence as the years go by. As the authors of that policy, the Conservative party retained office for eighteen years. The Liberal party succeeding them remained in office fifteen years—I do not hesitate to say this—because they adhered to that policy, and it was only in 1911, when they attempted to lay ruthless hands on the National Policy, that the people of Canada determined that they should no longer administer the affairs of this country. Under the National Policy factories have sprung up in great numbers, industry has been quickened, the natural resources of our land have been developed, and the labourer and artisan have been provided with abundant and constant employment at remunerative wages. In Canada to-day we have over 20,000 factories employing 500,000 hands, and paying in wages $250,000,000. These factories utilize $601,500,000 worth of raw material; the value added to this raw material in the process of manufacture is $564,500,000, thus producing a product of the value of $1,166,000,000. With 8,000,000 people, Canada is manufacturing more to-day than the United States did in 1850 with 23,000,000 people. From this general statement we see the great benefit the manufacturers of Canada have derived from the National Policy. How has it affected the farmers of this country? The farmers have prospered very greatly on account of the National Policy. We might inquire further what this Government has done for the farmer. We all are quite ready to admit that sufficient attention has not been paid to the farming industry in the past. I do not wish too severely to criticise the previous Administration, but I think I am correct in saying that at no time in the past has Parliament devoted that attention to agriculture that its magnitude and importance warrants. Without saying that the present Government is doing all that should be done, it cannot be disputed that the present Administration is giving largely of its thought and energy to improving the conditions of our agricultural classes. The present minister has won the approval of every farmer in the country for the substantial financial assistance which he is giving them, and especially in connection with the Agricultural Instruction Act, and I doubt not that the benefits accomplished will generously compensate for the expenditure. The expenditure of the Agricultural Department in 1910-11 was $1,200,246, and in 1913-14, $3,358,728, practically three times as much.

We are sometimes told that the taxation of this country is very great, and the statement is made that Canadians are taxed more highly than any other people in the world. Without entering into a discussion as to whether that is so or not, I wish to point out that the great bulk of Canadian taxes goes into the development of our own country. We are a young country of enormous resources and area. Our needs are great, and, like any large business or industry just starting out, we as a country find it necessary to make very large expenditures in order that we may be up with our neighbours and the great nations of the world. I wish to draw attention to one fact in connection with the taxation of this country which to me is very pleasing. In the United States 65 cents of every dollar of taxation is spent on the army, navy and pensions—on war, or that which pertains to war. In Great Britain 34 cents of every dollar of taxation is spent for similar purposes; in Germany, 43 cents; in France, 31 cents; in Japan, 32 cents, but in Canada only 9 cents of every dollar of taxation is used for those purposes. We will not be able to thank our friends opposite for this condition in the future, because we know that by their naval policy, which they placed before the country last year, this young country would have been saddled with an immense naval expenditure, which would very largely increase the percentage

of our taxation spent for war purposes. With an expenditure under their naval policy of $140,000,000 to start with, and an additional expenditure of $15,000,000 per year up, we can readily see that it would have been only a few years before our naval expenditure would have added a very great burden to the people of this country.

Two or three questions of more or less interest to the country are being discussed in this debate. One of these is the duty on agricultural implements. I was rather interested in hearing the calculation of the hon. member for Guysborough (Mr. Sinclair) as to how much his people would save under the present reduction in the duty on agricultural implements. By a reduction of five per cent he calculated that a farmer in his constituency would be saving twenty-five cents a year on a mower —the price of a plug of tobacco. Somewhat quickly I followed his mathematical calculation a little farther with the result that I ascertained that if the duty had been wiped out altogether that man would have saved three and one-half plugs of tobacco. So that the argument of the hon. member for Guysborough, which is probably shared by some of his friends opposite, is that if a man can only save one plug of tobacco the policy is no good, but if he can save two and one-half plugs more it is an excellent policy.

We know the history of the reduction of duties on agricultural implements. We know that the Conservative party cut the duty from thirty-five per cent to twenty per cent, that the Liberal party cut it from twenty per cent to seventeen and one-half per cent during their term of office and that the Conservative party now propose cutting it from seventeen and one-half to twelve and one-half per cent. We, therefore, see that the chief reduction in the duty of agricultural implements has been made by the party at present in power. In fact, if we look into the matter we find that it is only when hon. gentlemen are in opposition that they are in favour of cutting the duty on agricultural implements. When they were in power no effort was made to reduce the duties; in fact, when they were in power, the statement was made that they had no intention of reducing the duties on agricultural implements. To substantiate this I wish to quote from 'Hansard' of March 21, 1911, page 5742 where there is recorded the report of a speech delivered at Woodstock by my hon. friend and neighbour from North Oxford (Mr. Nesbitt). This account is taken from the Toronto Globe, in which the hon. gentleman is reported as follows:

> He could not see that the manufacturers would be touched very much, as few articles manufactured in Canada were affected. He was sure the Bain and Woodstock wagon companies would compete in the world's markets even with 2½ per cent reduction in the tariff. He thought the manufacturers opposed reciprocity because of what might follow, the 'thin end of the wedge', but he had been assured by Sir Wilfrid Laurier and Mr. Fielding that nothing of the sort would follow. They had gone as far in the farmers' interests as they would.

This was the statement made by the hon. member for North Oxford in addressing a meeting at Woodstock during the discussion on reciprocity. In order that there might be no mistake made as to the authority with which he spoke, the matter was brought up in the House at that time and a question was asked the then leader of the Government as to whether the hon. member for North Oxford spoke authoritatively when he made that statement. Sir Wilfrid Laurier replied:

> **The statement** made by the hon. member for North Oxford (Mr. Nesbitt) was quite consistent with our policy, it was nothing new, and he had perfect authority, not only he, but every member of the Liberal side, to make that statement.
>
> Mr. Foster: Did the Prime Minister and the Minister of Finance authorize the member in question to make that statement?
>
> Sir Wilfrid Laurier: I have answered that already. It is perfectly true. The hon. member for North Oxford and every Liberal member had such authority, he was not kept in ignorance of our policy in this matter and knew it well. He only stated what is our general policy.

When our friends were in Opposition in 1911 they made the statement, and it was their avowed policy, that they would make no further reduction on agricultural implements except the 2½ per cent and the percentages which were provided for under reciprocity. But when they got into opposition they clamour for the wiping out of the duties altogether, and they say: We will not be satisfied with a reduction of 5 per cent, but we must wipe out the duties and have free trade in agricultural implements. It is always very easy indeed to advocate a policy when you are not responsible for carrying it out. That is the position in which hon. gentlemen opposite are placed to-day; they can advocate a policy that they are unable to put into force, but when the responsibility is placed upon them and they are in a position to give the country that policy which they have

advocated they are unwilling to do so. For that reason I think the farmers of this country who are in favour of a reduction or the wiping out of the tariff on agricultural implements would do well to keep the Liberal party in opposition continuously, because in that way they will always have one party in this House who will advocate the complete wiping out of the duty on agricultural implements.

We are told that this reduction of 5 per cent is of no value to the farmers. I would like to ask: If 5 per cent is of no value to the farmer, what percentage will be of value? How much of a reduction must be made before the farmer will begin to profit. We are anxious to know what the position of the Ontario Liberal members is on this question. We know that the manufacture of agricultural implements is a very important industry in Ontario, and we would be very glad to know and to hear from the Ontario Liberal members just what their stand on this question is now.

We had some days ago a reference by the hon. member for Assiniboia (Mr. Turriff) to Sir Lyman Melvin-Jones, general manager of the Massey-Harris Manufacturing Company. I have no brief at all to defend Sir Lyman Melvin-Jones, and I have no intention of doing so, but I want to draw the attention of the House to the remark which the hon. member for Assiniboia then made regarding him. He said, 'Hansard,' page 2619:

> It seems to me that if there was any man in Canada who had good reason to stand by his party it was Senator Jones, the president of the Massey-Harris Company. When, years ago, this party was on the other side of the House and made some reductions in the duties on agricultural implements, a drawback was given on the duty paid on the material that went into their manufacture, and I am told that, according to the Auditor General's Report, last year the Massey-Harris Company drew $165,000 in drawbacks. But because the Liberal party came to the conclusion that the time had come when free implements should be given to the farmers, this man, who had got every consideration, who was made a senator and who was knighted, who had 'Sir' put before his name by the kindly offices of this party—I do not know whether the leader of the Opposition at that time put the hyphen in his name or whether that was put in by himself—at all events he is the last man who could say that he was not well treated by this party.

These were the remarks made by the hon. member for Assiniboia regarding Sir Lyman Melvin Jones and it occurred to me as he made them: why should he show such temper over the fact that Sir Lyman Melvin-Jones has left their party? Evidently Sir Lyman Melvin-Jones received a great many favours from that party when in power. Why did he receive them? Evidently because he belonged to the party because as soon as he left the party he was criticised adversely. Is it the policy of the Opposition to grant favours to those who support them, but to have nothing to offer but adverse criticism of those who oppose them? Does that account, to some extent, for their favouring a duty on agricultural implements as long as they were in power and as long as Sir Lyman Melvin-Jones was supporting them? The hon. member would almost lead us to believe that Sir Lyman Melvin-Jones had been bought. Instead of being bought, he was very badly sold by his friends of the Opposition.

We come to another question of interest, that of free wheat. It is unnecessary for me, as a representative of an Ontario constituency, to say that we are very proud indeed of our western wheat fields. So far as the people of Ontario are concerned, there may be some envy but there is no jealousy nor hard feelings against the western farmers. We are proud of what they have accomplished in developing the great resources of the West. We feel, however, that this question of free wheat affects not only the western people but all the people of Canada. The world's crop of wheat is gradually increasing. Between 1880 and 1910 the increase in acreage planted in wheat amounted to 68 per cent, while the yield increased by 67 per cent. The population of the wheat growing countries in that time increased by only 29 per cent, so that the quantity of wheat available, per capita increased between 1880 and 1910 from 170 pounds to 223 pounds, thus showing that the production of wheat is increasing more rapidly than the population of consumers is increasing. This does not prove that we are producing more wheat than the world requires; but it shows that the production of wheat is becoming more and more a question involving difficulties for the producer and this is a situation which must be taken into consideration. The total production of wheat in the world in 1913 was 3,603,360,000 bushels, or 250,000,000 bushels more than in 1912, which up to that time was the record crop. Fortunately, however, all countries are not producing more wheat than they require, and there are countries which import large quantities of

wheat. We have European countries importing in all 533,000,000 bushels, and other countries importing 92,000,000 bushels a year, or a total of 625,000,000 bushels of wheat a year. These are the countries to which the Canadian wheat-grower should look for his market. The United States have a market in some of these importing countries, because during the last year they exported 143,000,000 bushels of wheat and flour. Therefore, if the Canadian wheat-grower had access to the United States market it would simply be by using the United States as a middleman, who would receive that wheat and forward it on to the ultimate market in Europe. As has been stated by some hon. gentlemen opposite, the United States miller now imports Canadian wheat, grinds it into flour and exports the product without paying very much duty, only one-tenth of one per cent, on the wheat, so that for all practical purposes the Canadian wheat has now free access to the United States market.

Some further statements were made the other evening by the hon. member for Assiniboia (Mr. Turriff), to which I wish to refer. In discribing the different grades of wheat, he made the following statement:

It will also be seen that there is a difference of 3 lbs. to the bushel between No. 1 Manitoba Northern and No. 1 Minneapolis Northern.

I do not doubt at all that the hon. member was quite sincere when he made that statement. But there is one very important fact which he ignored in making it: he forgot or ignored the fact that in the two countries different measures are used; that in the United States they use the Winchester measure, while in Canada we use the Imperial measure; and an Imperial bushel of wheat weighs 1½ lbs. more than a bushel of the Winchester measure. So, instead of there being a difference of 3 lbs. between the two grades there is only a difference of 1½ lbs. I think it well to draw the attention of the House to that fact, because, in discussing that question, which after all is a serious question and not a light matter which can be dealt with offhand, it is well to have the facts placed correctly before the people.

We are told that the Canadian farmer will receive more for his wheat in the United States; and that, perhaps, is the important phase of the whole question. Is that a fact? I argue that after removal of the United States duty the price will not be higher to the Canadian farmer. If the American Government had been satisfied that the Canadian farmer would receive more for his wheat, why did they insist on retaining that 10 cents per bushel of duty? If they were not afraid of the Canadian wheat coming in at the same price or lower than the American farmer was receiving, I judge they would not be so insistent on retaining the duty. I am free to admit that prices as between the two countries will vary from time to time; we have had evidence of that in the last few years. In the fall of 1911, with a small estimated crop of 621,000,000 bushels the American market was amply sufficient to meet the domestic needs, and the price prevailing ruled higher than the Canadian price. But when the reciprocity campaign came on with some prospect of being carried, and with the fear of the admission of Canadian wheat free of duty, the price on the Minneapolis market dropped almost to the Winnipeg price. As soon, however, as reciprocity was defeated the price revived. Then came the large crop of 1912, with the fall in price, and in the fall of that year Ontario millers could buy American wheat in Duluth, pay twelve cents per bushel duty and lay it down in the lake ports of Ontario cheaper than they could buy western wheat. In fact they did so, and large quantities of American wheat were imported at that time after paying the duty. In 1913, although the spring wheat crop was 90,000,000 bushels larger than that of 1912, the Canadian prices were very little higher. But let us look forward. Suppose the United States were to have a very large crop, what would happen? And that is just the condition we are up against to-day, for the prospect is that the United States wheat crop of the present year will be by far the largest on record. The estimate made of the crop of winter wheat is 671,000,000 bushels. Allow for some deterioration of the crop between now and the time it is reaped and assume that they have only 600,000,000 bushels. Assume that they gather also the average crop of spring wheat, viz., 300,000,000 bushels. This will make a crop of wheat in the United States of 900,000,000 bushels, by far the largest crop that country has ever produced. That country consumes only 504,000,000 bushels, so this will leave a surplus of 400,000,000 bushels in the fall of 1914. What do our farmers think of the prospect of throwing open our markets to the admission of the American wheat free of duty when that country has so large a surplus? It seems to me this is a ques

tion which they should consider very seriously before asking that that be done. Whatever may be the conditions in years when there is a small crop in the United States, this is not the year when they should ask that the barriers be taken down and our market be thrown open freely to the American wheat growers. Of course, we admit without hesitation that the Canadian farmer is entitled to the best market obtainable; but we think he should take other things into consideration. Suppose he is right in his contention that wheat sells at a few cents a bushel more in the United States than in Canada, will this compensate him for such losses as his inability to feed his live stock? Ontario farmers have had similar experience, and they are in a position to say what is likely to happen under similar circumstances. We must remember also—and I am surprised to see that advocates of free wheat in the West do not think of this—that a very large proportion of the area of the western provinces is not adapted to the growth of wheat and that, if they cannot grow wheat, the farmers of these districts will be compelled of necessity or will be led by choice to go into the live stock business and mixed farming. Now, what will northern Manitoba, northern Saskatchewan, and practically two-thirds of Alberta do in the matter of free wheat? They are not concerned in that, but they are anxious that they shall receive all the assistance which it is possible for them to receive in the development of the live stock industry and mixed farming. I think that the wheat growers of the western provinces should give consideration to their fellow-farmers who are located in districts which are not adapted to the growth of wheat.

Then, we know, the United States may change their policy. Suppose the duty is removed, there is nothing which makes it obligatory for the United States to continue the policy of free wheat. We have no guarantee of the permanency of that policy. So, when new trade routes and new connections are established, if the United States should reimpose the duty, we should be under the necessity of re-establishing the old routes and the old connections—we shall destroy only to rebuild again. If the United States were getting the worst of the bargain they would not hesitate to restore the duty, and if they were getting the better of the deal, what use would it be to Canada? The marketing of our wheat would be under the control of United States politicians, for they would have the regulating of the tariff and we know the danger that lies in that fact.

Now, we have, as I have said, a very great consideration for the farmer. It is the desire, I am sure, of all parties in this House and in this country to benefit the Canadian farmer. But I wish to point out for a few moments some of the differences between the policies which are advocated by our friends in the Opposition and those which are advocated by the Government. The Liberal party comes forward to-day with a policy for the Canadian farmer which says: We are in favour of admitting all foodstuffs free into Canada, we are in favour of admitting wheat free into Canada. Now, I wish to look at this largely from an Ontario farmer's point of view. When I allow my mind to go back to the early days of my life—and western Ontario was not very old at that time—I recollect very distinctly some of the pioneer farmers of the district in which I lived. These men came in from the old land, after, in many cases, a dangerous and tempestuous voyage across the Atlantic lasting from six to fifteen weeks. They came without funds; they came without knowledge of the country; they came without any adaption to the needs of the country. They received no free homesteads; they had no wealthy sister provinces to supply the means for building railways and opening the country; they had no banks to provide them with financial aid, even at a high rate of interest. They were not able to reap a crop the second season, but they had first to remove the dense forest, then clear the land and then cultivate it. While undergoing these hardships of pioneer life, they were developing a type of citizenship unequalled in any part of this broad land for industry, unselfishness, independence, self-reliance and high national ideals. These men were the peers of any farmers on this continent in their methods and in their success. They were the men who have given up their sons and daughters in such numbers to the West, there to repeat in greatly modified form the pioneering of their ancestors, to be the leaders of thought and influence, to retain for this land the love of empire and King, and to act as an offset to those who, though living under British institutions, have not the respect for law and order such as we know it in this Dominion, and such as we desire to uphold. These sons of Ontario in the West, I believe, are invariably

found to be the leaders in supporting school and church, in retaining the high ideals of their worthy ancestors, and in guiding the politics of the prairie provinces. How can any one say, with this knowledge, that the East has no sympathy with the West? Our brothers and sisters, our sons and our daughters, are distributed over the prairies in great numbers, and their interests are our interests, their prosperity is our pleasure, and their happiness our joy. We do not doubt that the future will be just what they themselves make it. I believe that the true destiny of that portion of Canada can only be attained by developing in the mixed population reverence for God and right, a burning desire to be partners in building up a great Canada, and a respect, if not a love, for British institutions as represented in our Parliament and King; by commercially adhering to the policy under which Canada has so far prospered and by politically remaining an influential portion of the mighty British Empire. This, I believe, is the destiny of that great land.

But that is not the question that is under discussion in this House at the present time; it is rather the commercial policy which is adapted to that portion of our Dominion. As I say, I wish to look at the matter from the Ontario viewpoint. I would like to remind our friends of the West on both sides of the House that Ontario is somewhat of an agricultural province—although that fact is sometimes forgotten. I wish to give some statistics as to the production of Ontario farms. In 1911 the value of the field crops produced in Ontario was $180,000,000; the value of the horses, $103,000,000; the value of the cattle, including milch cows, $84,000,000; the value of the sheep and lambs, $6,250,000; the value of the swine, $14,500,000; the value of the poultry, $6,000,000; a total value of livestock of $215,000,000. The agricultural land of the province is valued at $724,000,000; buildings thereon, $318,000,000; and implements, $85,000,000, a total value of $1,342,409,000. This, I think, stamps Ontario as something of an agricultural province. In the early days of the province the farmers raised wheat, and they made considerable money out of it, but the prosperity of the Ontario farmer dates only from the time when he went into mixed farming, and when he developed the dairying and livestock industries. Had the people been carried away by a policy given them for the moment, they never would have been live-stock producers and they would never have been dairy producers. The time is within my recollection when the farmers of Ontario went through hardships, went through trials and commercial depression in the early days such as the western farmers have never yet known and which, I trust, they never will know. I remember quite well the time when the Ontario farmer was selling his cheese at 7 cents per pound and his beef cattle at 3 cents per pound. What did the Ontario farmer do? Did he go to the Government to seek aid? No; he immediately set his brains and his ingenuity to work to devise other means of making the farm pay. He did devise other means, and he is making the farm pay to-day.

If we have free wheat, generally speaking, I think it will hit the live-stock industry of Ontario very hard. This industry is an important one. In 1911 there were sold and killed on Ontario farms $80,675,000 worth of livestock. Free wheat also hits the dairy in-

5 p.m. dustry, which is also an important one. In 1913 we produced $121,000,000 worth of dairy products, $100,000,000 worth of which was consumed in Canada. It is apparent, therefore, that we consume in Canada a very large proportion of the dairy products which the farmers of Ontario are producing. By intelligent attention to the dairy industry the farmer of Ontario from 1900 to 1910 increased the yield of milk per cow from 2,850 pounds to 3,805 pounds, and the value of the product of his cow from $27 to $42. The Ontario farmer needs the offal of the Canadian wheat for the feeding of his live-stock and his milch cows. Without that offal it would be almost impossible for him to produce his live-stock in such a way as to make it pay. Free wheat will hit such a blow at the dairy industry that it will be almost impossible for those engaged in that work to make the remunerative prices that they are making to-day. Not only that, but the farmer depends on his dairying for the feeding of his hogs—and the hog industry is a very important one—and if the offal is taken away from him he is deprived of one of the chief feeds which his hogs require. The Ontario farmer, therefore, is hit on all sides by the policy of free wheat which our Opposition friends are advocating to-day.

Let us look for a moment at the high cost of living. It is against the rules of Parliament, I understand, for any woman to raise her voice in this House, and although we do not give the women votes and a voice in Parliament, there can be no objection to my reading to the House the views of a woman expressed in a letter dated February 20, 1914, and published in the Toronto Globe of February 24. This letter was written by the wife of a farmer of the county of Oxford. I regret that the hon. member for North Oxford (Mr. Nesbitt) is not in his seat to hear what this sensible and intelligent farmer's wife in his constituency wrote to the Globe on the high cost of living. The letter, which is headed 'The Farmer Catches On,' is as follows:

To the editor of the Globe: I was interested in the article in Wednesday's Globe entitled, 'Blames the consumer—defends the middleman', to which might have been added: 'Blames the farmer'.

The fundamental cause of the high cost of living, the article stated, was an underproduction of the primary farm products. That's right, but why should the farmer overproduce, greatly adding to his labour and at the same time reducing the price of what he has to sell?

The farmer was regarded, the article goes on to say, as a hard, narrow, mean, prejudiced man, or as a hard working man who was oppressed by privileged classes and who was deprived of a fair return for his toil. Right you are! He was. But that time is passing. Our farmer is going to change all that. How? Well, by, as the article advises, but not because of that advice, he is getting out and striving to improve his position in response to the pressure from without.

A few of the ways in which he is improving his position, having an easier time and adding to his balance at the bank, which balance by the way, he reserves the right of spending later on in the way which best suits himself and family, and not according to the notions of prejudiced and interested parties, a few of the ways are as follows:

He makes fifty pounds of butter where fifteen years ago he made one hundred. It was more than twice as much work to make the one hundred pounds and twice the expense. If he was lucky and the butter first-class he got fifteen cents per pound. Now he gets thirty or thirty-five cents. Fifteen years ago, if he took the trouble to fat up his chickens, say for a flock of one hundred, he would average perhaps twenty cents each or a total of twenty dollars. Now a flock of half that number costing half the food, housing and care, would bring thirty dollars or upwards. Fresh eggs the same, the fewer he produces the less work and expense, and the more money. In short, the farmer is 'on'. Fifteen years ago he gave away what buttermilk he did not need for home consumption. Anybody was welcome to a quart of buttermilk. Now he sells it for five cents a quart, and cannot supply the demand. The little Dutch cheese made from sour milk many farmers' wives were ashamed to let company see on the table. Now this cheese is a luxury which the city people buy at five and ten cents each and which are almost wholly profit to the farmer. The farmer has quit giving something for nothing, just as the merchants and the middlemen have long since done. The farmer has been the last to 'catch on', but he is in a position to apply the whip, and I am thinking some one will feel the lash pretty sharply in the near future.

Don't worry about the comforts in his home. They are increasing every year. If he prefers to settle in the nearest village, town or city, whose business is it, and if he is considered a nuisance by those who no longer have a chance to 'do' him, he is not 'a nuisance to himself'. Oh,no, not at all. No indeed.

Tired and Retired Farmer's wife.
Woodstock, February, 20.

If the member for North Oxford were in his seat, I would like to warn him that when the farmers' wives of any man's riding begin to take an interest in politics, it is time for the representative to look out; something unexpected is liable to happen.

What are the causes of the high cost of living? There is no need of discussing that question. To put it shortly, it is because people wish to live high. The standard of living of twenty years ago is not good enough for the people of to-day. The waste from an ordinary man's table to-day would supply an excellent meal to the same family twenty-five years ago. But it is not sufficient that Parliament should pass by this question with that simple consideration. It is necessary that Parliament should consider the question, and if there is a remedy apply it. The Liberal party has thought of a remedy. That remedy is free food. I consider this a quack remedy because it does not meet the needs of the case. It is a momentary remedy, and as a physician I should say we have no confidence in a remedy which is applied only for the moment. It is necessary for a remedy to be applied long enough to take effect, and it cannot take effect unless it is applied persistently and used continually. In considering this question of free food, I think we can make the statement that the farmer is either getting too much for his produce or he is not. If he is getting too much for his produce, the remedy of free food is not the remedy to apply. This remedy of free food is one for too high prices for the farmers. It opens competition from the United States and all the favoured nations; and we remember that during the reciprocity campaign the right hon. leader of the Opposition stated that it was not his desire or his intention that the Canadian

farmer should have to compete with the farmers of the many favoured nations. Evidently he thought at that time that it would not be in the interest of the Canadian farmer that he should have that competition; but to-day he throws aside that consideration and says to the Canadian farmer: You will have to compete not only with the food-stuffs of the United States, but also with the food-stuffs of all the favoured nations.

What effect on the prices of food would free food have? What are the facts? What foods are too high to-day? For what foods are we paying much higher prices than we did fifteen or twenty years ago? Is it not a fact that practically the only foods on which we are paying more are animal foods—meat, poultry, eggs, butter, cheese, etc. These are the products of the live-stock industry of Canada; and therefore if these prices are too high, the policy of free food would be a blow at the live-stock industry of Canada. We sometimes say that there is no cheap food to-day. That is true, and it is not true. It is true in one sense and not in another sense. We know that for many years Canada and the United States both were exporting large quantities of meat and cattle to Great Britain. Of recent years that trade has almost vanished. In 1913 the United States exported of cattle only 10,093 and Canada 1,755. From where are the British people receiving their meat if not from Canada and the United States? Here are some figures which will indicate where Great Britain obtains her meat. Of chilled beef, Great Britain imported last year 5,256,021 cwt. Of that quantity the Argentine Republic supplied 5,248,000 cwt. Five years previous to that Argentina supplied only 1,267,400 cwt. There is the secret of whence Great Britain is receiving her food; she is receiving it from Argentina and allowing it to supplant the meat she formerly received from the United States and Canada. If Argentina can send her chilled beef to the English market to displace Canadian meats in the free trade British market, what is to prevent her sending her meat to the free Canadian market to displace some of the Canadian meat in this country? If Argentina does that, it does not necessarily mean that our people will secure cheaper meat, because the middleman will probably take advantage of that cheaper market to procure his meat and bring it in here and then retail it to the consumer at the same prices at which Canadian meat is now being sold. But it will be a competitor for the Canadian farmer's meat, and will supplant that meat to some extent in the home market. Canadian food has to-day practically free access to the United States market. If our Canadian farmer can have access for his food products to the United States market, at the same time excluding United States and other foods from the Canadian market, is it not a wise policy for the Canadian farmer to adhere to and support?

I do not acknowledge that the difficulties of the Canadian farmer to-day are due to the lack of markets. The farmer has difficulties; he has problems of his own, very serious problems. The chief ones are —what? The lack of help on his farm, the extreme cost of the distribution of his products. On this question of help, I might say that in western Ontario we are doing something to aid the farmer in supplying that need. By the hydro-electric policy of our good Ontario Government the western Ontario farmer is being taught to do without the hired help which he has been compelled to employ in the past. Speaking generally, that policy has been very successful on the farms throughout western Ontario. Many farmers are using hydro-electric power. They find it very satisfactory and are most enthusiastic in its praise. In the matter of distribution of food supplies two things are lacking: first of all, local markets. We know that a vast quantity of food on Ontario farms is spoiled simply because it cannot be marketed at low cost. I think the citizens of our towns and cities are somewhat to blame for that because they provide little or no convenience for the farmer who comes to market his goods in their town. How do the citizens encourage the farmer? In the great majority of towns, there is no established market at all and in those towns where a market is established the farmer has to pay a market fee of ten cents before he can sell any of his butter or eggs. It seems to me that if the townspeople want the farmers to come to their town to trade, they should offer them every advantage possible. They should remove the market fees, and provide comfortable buildings wherein the farmers' wives can dispose of their produce, protected from cold in winter and from dust and flies in summer. Another great help would be a system of good roads. We know the stand our friends

opposite have taken on that question in the last two sessions. The Government, anxious to aid the farmer by improving his highways were unable to do so on account of the action of gentlemen opposite supported by their friends in the Senate. A system of electric railways in Ontario would also be of great benefit to the farmers. Whether it is possible to secure that at the present day I am not going to discuss, but I am sure that in the thickly populated portions of Ontario it would be of great advantage to the farmer providing him with cheap and quick transportation to his local market.

I want to devote a little time to the milling industry. We all know that it is one of the great industries of Canada. I believe it is in the interests of the western farmer to adopt that policy which will encourage the establishment of mills in the western provinces. The mills would provide the farmers with the offal and the food for their cattle, which if they do not require now they will in the near future and be glad to get it. And it is only by giving encouragement to the milling industry that they can hope to have mills established there. Under free wheat that encouragement cannot be given and the western farmer will look in vain for the establishment of mills in the West if the policy of free wheat is adopted. I think there is a misapprehension on the part of some people in this country as to what constitutes the Dominion Millers' Association. That association receives a good deal of harsh criticism and is usually spoken of as an association of all the millers of Canada. That is not the case. The Dominion Millers' Association embraces merely the millers of Ontario, and not all of them. It does not take in the large millers of the West. The milling industry, as we know, is very well adapted to Canada. Western Canada particularly is one of the countries where that industry should be encouraged. The milling industry is looked upon by other countries as of sufficient importance to receive very generous encouragement. In European countries very substantial protection is given to the milling industry. In Austria-Hungary, for instance, there is a duty of $2.66 a barrel on flour; in France, $2.72; in Germany, $2.17; in Italy, $1.89; in Portugal the importation is prohibited; in Russia a duty of 72 cents; in Spain, $2.38; in Sweden, $1.51; and in Norway, 47⅝ cents. These duties show that European countries, at least, consider the milling industry of very great importance and desire to have established as many mills of as large a milling capacity as possible. The hon. member for South Cape Breton (Mr. Carroll) stated the other day that Great Britain was not a flour-producing country. I would like to remind him that Great Britain produces 50,000,000 barrels of flour every year. She produces 92 per cent of all the flour consumed in that country. Her yearly consumption is over 60,000,000 barrels, of which Canada supplies only 4 per cent. The milling industry in Great Britain has therefore reached very large proportions. But it was not always so. We sometimes talk of Great Britain as a free trade country and imagine the flour industry flourishing there on that account. The milling industry in Great Britain previous to 1901 was in a very depressed condition. After the cessation of the Boer war the British Government was compelled for revenue purposes to impose import duties on certain goods. They imposed a duty on flour and from that dates the general revival of milling in Great Britain. The millers became encouraged and began to pay attention to their own industry with the result that to-day they are able to mill 92 per cent of all the flour consumed in that country. There was read to the House the other night a statement regarding the prices at which the Canadian miller disposes of his flour in the old land and in some portions of this country. I would like to point out to the hon. member for South Cape Breton who made the statement that he is entirely in error, as he would have seen if he had examined his own figures. For instance, he said that flour in Montreal sold at $5.10 a barrel while at Halifax it sold at $6.50 a barrel. Now the freight on flour between Montreal and Halifax is simply 25 cents a barrel, and it would be an imaginative man who could think that flour would be sold in Halifax at $1.40 more than in Montreal when the freight between the two places is only 25 cents a barrel. The fact is the hon. member was quoting the statement of an anonymous writer in the Montreal Standard as he acknowledged at the time—a man whom he did not know probably, who may be a competent critic or incompetent, and I prefer to think him incompetent because his statements were entirely at variance with the facts. I am surprised that any member of this House should rise in his place and endeavour to support an argument in favour of free wheat

by quoting prices so erroneous as those prices were, and prices which if correct would greatly injure the millers of this country.

In comparing prices of flour too often the error is made of comparing the price of one grade with that of a lower grade, and also of making a comparison of flour in barrels with flour in sacks. The cost of sacks is 30 cents less for 196 lb. of flour than the price of a barrel which contains the same quantity. This error may unwittingly be made by a critic, but when any newspaper correspondent such as the aforementioned writer in the Montreal Standard makes the statement that the Canadian people are penalized by the milling interests to the extent of $1.71 per barrel upon every barrel of flour they purchase in each year, he displays utter ignorance of his subject. If this were the case, surely the American miller would soon be in the Canadian market with his flour, for the duty coming into Canada is only 60 cents per barrel. The fact is that the Canadian miller is selling his high grades of flour in Great Britain at a loss, and Mr. Lincoln Goldie of Guelph makes the statement that he has lost at least 20 cents on every barrel he exported on this crop. But his export trade enabled him to sell the same grades at a less price in Canada, and at the same time gave an increased quantity of mill offal to sell to the farmers. This is one reason why we should encourage the millers of Ontario to grind as much wheat as possible; the more they grind the more bran and shorts they will have to supply to the farmers for their cattle and hogs. The people of Canada buy the best grades, and if it were not that our millers can export some of their product our consumers would have to pay about one dollar a barrel more for their flour than they do now.

If the Opposition desire to build up a policy which the people can adopt, they must build it on something more substantial than newspaper articles. They must have facts on which to found it. The very fact that these anonymous articles, articles without foundation and without truth, are being used by members of the Opposition on which to base their arguments, shows that they have no facts upon which they can found a policy of free wheat and flour.

The hon. member further made the statement, quoting from this writer in the Montreal Standard, that the Ogilvie, the Lake of the Woods and the International Milling Company, according to the published records, made a profit of from 30 to 60 per cent upon their capital. I am prepared to say that if these companies made that profit on their capital it was not made in the milling business. The fact is that these companies do a large general grain business, and handle elevators, and I have no doubt at all that if profits were made they were made chiefly out of the grain and elevator business. Why do I say that? I have not the figures of these companies, but I have the figures of another company which substantiate what I say. I want to quote some figures from the Grain Growers' Grain Company's report. The Grain Growers' Grain Company is in the grain business in the West. According to their report last year they made a loss of $200,000 on their export business. The wheat that they had exported to Europe and other countries entailed a loss to the company of $200,000. This they paid out of the reserve which they had accumulated. They made a further loss of $30,000 in the operation of grain elevators, but they made a net profit on their whole business of $170,000. On what was that profit made? That profit was made on their sales chiefly to Ontario millers. They lost on their export trade, they lost on the operation of their elevators, but when they came to do business with the Ontario millers, and to sell him wheat, they made a profit of $170,000. Therefore, I think that this substantiates my statement that the money is not made on the export business of our millers but is made on the business that is done in this country. Lest these figures should be disputed, they will be found in the annual report of the Grain Growers' Grain Company, in which they say:

> A loss of $200,000 occurred on the export end of the company's business for the last year.

Then, further on they give their profits as I have quoted them. They made a profit of $170,000, which enabled them to pay a dividend of 25 per cent on their capital. The report is published in the Grain Growers' Guide. Coming back again to the hon. member for South Cape Breton, he states that Canadian flour is being sold in the old country at a lower rate than it is being sold for in this country, but in making this statement he is under an entire misapprehension. He quoted prices of grades altogether different. He stated that the export of Canadian flour to the old land is chiefly in the higher grades. The very opposite is the case. I have had access to the

figures of one of the large mills, and I have seen a statement of their business. The fact is that during the term for which I examined their statement they had not exported one barrel of top patent, and 90 per cent of their export was in the lower grades. The truth is that Europe and Great Britain desire the low grades of flour, because there is a demand for them among a certain class of the people, and large quantities of those grades are consumed.

If the policy of free wheat were established, how would the Ontario miller compare with the United States miller? We know that in the United States they have early harvests. In June the Kansas crop, amounting to 86,000,000 bushels of hard wheat, is reaped; in July, in Nebraska, 58,000,000 bushels; in early August, in South Dakota, 23,000,000 bushels of hard spring wheat, and in late August, in North Dakota and Minnesota, 79,000,000 and 67,000,000 bushels respectively, giving a total crop of hard wheat which would be available for marketing before the Canadian wheat was reaped of about 330,000,000 bushels. The American millers can buy this grain, grind it, and ship it into Canada and glut the market here before the Ontario miller has an opportunity of grinding the new crop. But you may say: Why does not the Ontario miller import this wheat? He cannot do so for the simple reason that freight rates prevent him doing so at a profit. But the American miller can buy this wheat, grind it, and ship it to Boston at a cost of about 30.7 cents per hundredweight. If the Ontario miller wishes to buy it, he will have to pay freight to Detroit, then from Detroit to an Ontario point, and then from the Ontario point, say, to Boston, at a cost of about 50 cents per hundredweight. The American miller has an advantage over the Canadian miller of about 20 cents per cwt. on freight rates on the same wheat shipped from the same point. Then the American miller has another advantage. He gets his offal, bran and shorts shipped at 20 cents per ton less than the flour, while the Ontario miller has to pay the same freight rates on both offal and flour. This gives the American miller an advantage of about $\frac{2}{3}$ cents per bushel on his wheat. The Ontario miller must look for his market to Great Brtiain, the great consuming country of the surplus flour produced by the United States and Canada. The Ontario miller would be in a position to ship much more flour to the British market were it not for the fact that the ocean freight rates are so exorbitant. This is due to the fact that we have in the North Atlantic a shipping combine which during recent years has raised the rates enormously. It would be well for this Government and this House to consider whether or not something can be done for the benefit of the Canadian milling industry and indirectly for the benefit of the Canadian farmer by endeavouring to reduce the freight rates on the wheat and flour produced in this country and exported to Europe. To show that these rates are high, I might say that the Glasgow miller has on his wheat a rate which is $8\frac{3}{4}$ cents lower than the Canadian miller's rate on flour. Not only have the shipping combine greatly increased the freight rates on both grain and flour during recent years, but they have increased the rate on flour to such an extent that they are discriminating against the shipments of flour. The Canadian miller has to pay so much more for the shipment of his flour across the Atlantic than the British miller can secure his wheat on such a freight rate that it is making it perfectly impossible for the Canadian miller to compete with the British miller. The excess rates paid on the export of flour to Great Britain during last year amounted to about $500,000 and on the total export of flour to $835,000. This handicap is placed on the Canadian miller; but it affects not only the Canadian miller but the farmer behind him, because all these costs come eventually out of the producer of wheat. The Canadian farmer and the Canadian taxpayer is to-day, on account of these freight rates, bonusing the British miller to this extent, and that high freight rate is acting in the same way as a tariff would affect the import of flour into Great Britain. Therefore the British miller, instead of having free trade, is practically protected in his business as against the Canadian miller, and the imposition of these freight rates is consequently contrary to the interest of the Canadian farmer. If a remedy can be found for this condition, it will help not only the western farmer, but the Canadian miller. I wish to read an extract from the Canadian Grain Growers' Guide of December 10, 1913, which makes this matter clearer than I can make

it. After giving the increased rates on Atlantic freight, it goes on to say:

It will be seen that in 1912 freight rates on both wheat and flour certainly jumped to more than double the average rate that had been prevailing for the previous five years. In 1910 the average rate on wheat from New York to Liverpool was 5.06 cents per cwt., or 3.03 cents per bushel, but in 1912 this rate had jumped to 12.75 cents per cwt., or 7.65 cents per bushel. That is, in two years the freight on wheat from New York to Liverpool was raised from 3 cents per bushel to 7½ cents per bushel, the increase being 4½ cents per bushel, making $45 on a 60,000 pound car of wheat, or $60 on an 80,000 pound car. Figures are quoted from American ports, because they are not easily secured from Canadian ports, but the Canadian rates are much the same. If it now requires $45 to $60 more to have a carload of wheat carried across the Atlantic than it did two years ago, it must be apparent to every one that the farmers in western Canada are receiving $45 to $60 per car less than they would be receiving, because of these high freight rates. . . . The rates on flour have also been enormously increased and the Millers' Association protested vigorously, as it greatly handicapped their business and has already greatly reduced their export trade. This is one place where the millers and the farmers can well afford to work together for mutual protection.

Again, in its issue of December 3, 1913, the Grain Growers' Guide concludes an article on the ocean combine with these remarks:

The probability is that if the full facts are revealed by the promised investigation it will be found that the best method of regulating rates will be by the establishment of competition by a line of public-owned steamers.

I heartily concur in this view. I believe that the Grain Growers' Guide in this statement has given us a policy which will do more for the western wheat grower than the admission of his wheat free of duty into the United States can possibly do for him. The Grain Growers' Guide estimates that on last year's crop the farmers would have saved $9,000,000 had the rates not been increased over what they had been a year or two before. That is a large sum of money, and the matter is well worthy of the attention of this Government and this House; and if any policy can be adopted which will reduce these excessive freight rates, it will be in the interest, not only of the western farmer but of the eastern farmer, because what benefits the eastern miller benefits the eastern farmer. I believe that the establishment of a line of freight boats, to carry agricultural produce from Canada to Europe and to bring back freight from Europe to Canada will be of very great advantage to the farmers of this country.

In conclusion, I wish to say that we in the East are heartily in sympathy with our western fellow-citizens. Anything that can be done by the Ontario representatives to assist the western farmers I am sure will be done heartily; but we ask simply that the western farmers do not forget that the interests of Ontario farmers have to be considered as well. Whatever policy is adopted must be beneficial not only to the West but to the East, and we hope that the prosperity which the western farmer has had in days gone by will continue, and that the prosperity of the Ontario farmer will not be injured in any way by the adoption of the policy which the Minister of Finance has laid before the country.

Hon. CHARLES MARCIL (Bonaventure): Mr. Speaker, I have followed the remarks of the hon. member for South Perth (Mr. Steele) and I must congratulate him on having been so moderate and so orthodox in his views, and in not breaking away from the line laid down by the Government. At the time of the last general election there was some doubt, after the result was announced, as to what the policy of the new Administration would be. It was announced at the time that thousands of Liberals throughout Canada had joined the Conservative party with the sole purpose of preventing reciprocity with the United States, and that the new policy of the new Government would be a broad one, one under which all who had voted under the banner of 'no truck or trade with the Yankees' could come. I am glad to know that the Minister of Finance, in his Budget speech, in the very few words which I shall quote to the House, has laid down the policy of the present Administration; so that any Liberals who were misled into voting for that party on the 21st of September, 1911, may know what is to be the policy of this Government. These words are to be found in the opening remarks of the hon. minister:

I desire to affirm the adherence of the Government to a fiscal policy of reasonable protection to Canadian industries including of course the great basic industry of agriculture. That policy is the historic National Policy of Sir John Macdonald, inaugurated by him and continued by his successors in office down to the present time. We believe it is the best, indeed the only and in a sense the inevitable policy for Canada, situated as it is geographically and in the existing fiscal conditions of the world today. Under that policy Canada has prospered in the past and will continue to prosper in the future. We believe it to be the true policy for Canada and for every part of it if we are to

regard as desirable stable business conditions and a diversified national life throughout the Dominion. It means the development of our natural resources, the maintenance and extension of our industries a fair wage standard for our artisans and a stable and profitable home-market for our farmers thus justifying its name as a national policy—a policy in the interests of the nation as a whole.

We have therefore the statement of the Minister of Finance, speaking for the Administration, that the Government intend keeping up the old National Policy. Of course, no reference is made here to what has happened since 1896. There has been fiscal legislation on several occasions which was approved by the country. Parliament in 1897 declared in favour of a British preference. Later, that preference was increased. And in the fourteen years during which I have had the honour of a seat in this House I have heard many complaints from the other side against the British preference. I have heard the woollen industry, for instance, protest against a further increase in that preference, though their sentiments never got into the shape of a motion. But the Minister of Finance makes no allusion to the introduction of the British preference. There certainly was no British preference in the National Policy of 1879 as laid down by Sir John Macdonald. Nor was there a successful attempt at the introduction of reciprocity. No allusion was made by the Minister of Finance to the charges made in the tariff after the Fielding-Brodeur-Paterson Commission, and its tour of investigation. If the National Policy is to be maintained regardless of changes which have been brought about since then, the speech of the Minister of Finance amounts to a declaration of the Bourbon idea. When Louis XVIII came back to France after the Napoleonic wars and the Napoleonic regime, he went on as if nothing had happened, ignoring the fifteen years of glory that the First Napoleon had shed upon Europe and especially upon France. The same will happen here if you are to eliminate the fifteen years of the Liberal regime and declare that we are still to have the old National Policy. My hon. friend from South Perth (Mr. Steele), who is very moderate in his views, claims that Canada's prosperity is due to the National Policy. He made no reference to the British preference, nor to any changes in the tariff. But he could not give credit to these things, seeing that he has declared himself an out-and-out supporter of the Government.

In his declaration of policy the Minister of Finance has given no consideration to the condition of affairs at present existing. For example, we know that there has been a check to progress—the Minister of Finance has admitted this; that money has been very tight, that there is an increase in the cost of living, that there is a loss of employment, that wages are lower, and that there has been an increase in the urban population and an undesirable decrease in the rural population. We have learned in this House also that there has been a falling off in revenue. And, while we are informed that there has been an increase in our foreign trade, there is a decrease in our imports, possibly owing to the tightness of money, and the increase in our exports is attributable wholly to the change made in the Underwood tariff last October, and is confined to the ten articles of cattle, horses, oats, beef, cream, print paper and fertilizers. The export of these articles, with one or two exceptions, has had the effect of still more increasing the cost of living in Canada. And we know—and both political parties may as well admit it—that the main reason for the increase in the cost of living is that people have been flocking to the cities and leaving the farms; the country has been deserted and the cities overcrowded. Mayor Martin, of Montreal, our colleague in this House, had an experience yesterday. He had invited the unemployed to call on him at the city hall, and 5,000 of them turned up at forty-eight hours' notice. No cards were sent out, but merely an informal notice was given in the papers that the mayor would be prepared to meet the unemployed who called upon him and wanted work. Five thousand of them turned up. That will give an idea of the employment problem in the city of Montreal.

Mr. PELLETIER: Did not he say he had employment for them all ?

Mr. MARCIL: I do not know how far he went. We know that the condition is that the country has been relatively deserted and the cities overcrowded. The Government has appointed a commission to inquire into the cost of living. The exact purpose of this commission was stated by the Prime Minister in answer to a question put by the hon. member for Russell (Mr. Murphy) to be:

To make an inquiry into the increase in the cost of living in Canada and into the causes which occasion or contribute to such result.

I am sorry to say that the members of this commission, are all three of them civil servants—of course, highly respecable men and competent for their ordinary work, but not at all the personnel of a commission required to inquire into the high cost of living under present conditions. One is the Commissioner of Customs, a very busy man, another the Commissioner of Agriculture, and the third the chief statistician of the Department of Labour. These men will probably be able to ascertain that there has been an increase in the cost of living, but whether the cause will be known is another matter—and we are told that it is certainly not to be known this session. I believe that the appointment of that commission is very unsatisfactory.

There is one fact that this Parliament cannot overlook: in what condition would this country be in to-day if it had not been for the opening of western Canada—if it had not been for the settlement of British Columbia, Alberta, Saskatchewan and Manitoba? In British Columbia during the past ten years there has been an increase in population of 119 per cent; in Alberta 413 per cent; in Saskatchewan, 439 per cent and in Manitoba 78 per cent. Is it not a pitiful and a discouraging sight to see this Parliament called upon in the year of grace 1914 to pass a measure to reduce the representation of the four original provinces of Confederation? We may have to legislate to take away one representative from Prince Edward Island; we are going to take away two from Nova Scotia; we are going to take away two from New Brunswick. Quebec, by the fecundity of its people and on account of the large number of persons who have come into the city and island of Montreal, has held its own as far as population is concerned, but the population of Ontario is decreasing. Is there not something radically wrong with a system which presents this spectacle to Canada and to the world at large? Is it because the natural resources of eastern Canada are wanting? Is it because the blood and sinew of our people is not what it should be? Is it because the statesmen of both political parties have not had the foresight to solve the problems which have come before them? What has happened to bring about the depopulation of Prince Edward Island, Nova Scotia and New Brunswick? Is there not there a magnificent climate? Are there not in Nova Scotia, in New Brunswick and in Prince Edward Island almost all the resources which can be found in the northern part of this continent? There you have the forest; you have the mines; you have agriculture and fisheries. The farmer on the seashore has a double crop, one from the land and another from the sea. In these provinces you have everything under the sun that tends to make a country rich, prosperous and happy; everything that tends to develop and increase population. Why is it, then, that the population of those provinces has gone down and is steadily decreasing? Why should Ontario, situated as it is, almost in the middle of the continent, with magnificent railway facilities; with lake navigation; with easy access to the United States and to the seaboard; with the St. Lawrence water route; with electric power developed from Niagara and, soon to extend to all portions of the province—why should Ontario lose so many of her people? With its magnificent school system; with its system of agricultural education so well developed; with its farmers' institutes of all kinds; with its newspapers, telephones on the farms, highways, and adequate telegraph communication; with all the facilities known to modern life, and peopled, as it is, with persons of the best races, why should Ontario lose a portion of its representation in this House? How is it that we have again to submit to the humiliating spectacle of voting to cut down the representation of Ontario and the eastern provinces, as we did in the last Parliament and as we may do in the next Parliament, if things continue as they have up to the present time?

At six o'clock, the House took recess.

The House resumed at Eight o'clock.

Mr MARCIL (resuming): When the House took recess at six o'clock, I was calling attention to the extraordinary fact that, while marvellous progress in population has been made by western Canada in the last fifteen years, the older provinces of Canada had remained about stationary and in some cases their population had actually gone down; so much so that this present Parliament will be called upon to reduce the representation from out of five of these provinces. I notice that at the last census the increase in the rural population of Canada was only 574,787, or 17·6 per cent, whereas the urban population had increased by 1,258,645, or an increase of 62·25 per cent. In Prince Edward Island we find a decrease of 9,531, or 9·23 per cent. In Nova Scotia there was an increase of only 32,764, or 7·13 per cent. In New Brunswick

there was an increase of only 20,769, or 6 27 per cent. In the case of Quebec, owing, as I have said, to the peculiar advantage of the French race and a large increase in the island of Montreal, the population increased by 353,814, or 21·46 per cent. Ontario increased only 343,327, or 15·58 per cent. These conditions point in my mind to the absolute necessity that exists for Parliament to take some thorough measure to solve the greatest problem that now confronts the Canadian people, that is to send the overflowing numbers from the cities back to the farm, to the country. We find that in Montreal probably there is a more pressing necessity for this than in other cities of Canada, because Montreal has a larger population. To illustrate the conditions there I would point to what occurred yesterday; when the mayor casually called upon the unemployed to turn out at the city hall several thousands turned out at a season of the year when there should be employment for all.

My reason for speaking on the Budget is that I wish to call the attention of the Government, because I think it is part of their programme, to some of the requirements of the district I have the honour to represent in this House. These requirements apply to the eastern part of the province of Quebec and the provinces of New Brunswick, Nova Scotia and Prince Edward Island. We have as the first article of the policy of the present Government reasonable protection, including protection to the great basic industry of agriculture. I contend that the protection meant here, that has been meant by most Governments up to to-day, is the protection of industrial establishments in Canada. Very, very few instances can be found of direct protection to the Canadian basic industry of agriculture. In the estimates now before the House, the Minister of Agriculture claims he has about doubled the amount we are voting to agriculture. We are called upon to vote this year, I think, $3,150,000, whereas some three or four years ago the amount was barely half of that, while we are called upon to vote this direct encouragement and help to the agricultural classes, we are called upon at the same time to vote over $10,845,000 for militia purposes. Canada is a peaceful and peaceable country.

The hon. member for South Perth (Mr. Steele), who spoke before me this afternoon, gave a very moderate address. He is to my mind one of the ideal representatives of a rural community in Ontario. He represents one of the leading rural communities of that province. He did very quick work with the naval proposal. I understand that he is not at all favourable to the creation of a Canadian navy nor to the expenditure of any very large amount for warlike purposes. He devoted most of his address to the question of helping agriculture in various ways and increasing the assistance now given to it. I am altogether in favour of that idea, and hope that the Government will see its way to extend the work that it has commenced; and for that purpose I intend this evening, as briefly as possible, to call attention to what I consider should be done in the district I have the honour to represent. Down in the eastern part of Canada, in New Brunswick and eastern Quebec, outside of the main lines of railway communication we are very backward in railway communication, that is, in the matter of branches. The communications are very defective, and without transportation it is useless to expect a farming community to be prosperous. We have a number of branch lines along the line of the Intercolonial railway which should have been incorporated years ago into the Intercolonial system. It is useless to ask farmers to go into a district of country and cultivate land unless there are proper and cheap transportation facilities. These transportation facilities exist to a much larger degree in the old province of Ontario, where the railway map is almost a checker board. Notwithstanding that, the province of Ontario has not made much progress in population. Quebec is still worse. In Quebec, now geographically the largest province in the Dominion of Canada, we have more especially in the district of Gaspé, which I have the honour to represent, an enormous area of about 7,000,000 acres of land with very little railway communication. It is true, we have a branch line from the Intercolonial running 200 miles down the coast of Gaspé. That railway is at present being operated for the benefit of shareholders. In the winter time the service is inadequate. There is little rolling stock or material of any kind except the rolling stock of the Intercolonial. The result is that farming has been discouraged. The three great industries of that district are lumbering, fishing and farming. The lumbering industry is largely carried on by water. A large part of the lumber goes to the United States, to which it now has free entry; some goes to England, and the remainder to South America and the West Indies. As far as fishing is concerned, there is no

way of exporting the fish except by salting it down, which reduces its value. The fish mostly goes to the West Indies and South America. We have no cheap communication with the great centres of population, no refrigerator car system such as they have in the Maritime provinces. Our friends from Nova Scotia often complain that the transportation system of the Maritime provinces is not what it ought to be. In the maritime portion of Quebec no such system exists at all. The Baie des Chaleurs is the finest sheet of water on the American continent, but we are absolutely without facilities for sending away fish.

As far as agriculture is concerned, it is practically confined to local purposes. Little encouragement is given to agriculture. We have asked in this House the late Government and this Government to put an experimental farm in the Gaspé district. The nearest one is at Ste. Anne de la Pocatière, 300 miles from the centre of the Gaspé district. Farming conditions in that district are altogether peculiar, and there should be an experimental farm of some proportions put in that district. I read in this House last year an important communication from Mr. Riopel, a man conversant with farming conditions in that vicinity, and for many years the Conservative representative of Bonaventure in this House. He advocated the creation of an experimental farm at the county seat of Bonaventure. If that could not be done, small experimental farms might be located in various parishes in Bonaventure county and Gaspé. We have a splendid farming stock down there. We have some fine French and Scotch farmers, and in other parts of the county of Gaspé a mixed community. We have an intelligent and hardy population, but facilities are altogether lacking. When we remember that Jacques Cartier sailed into the bay of Gaspé and took possession of it before coming up to Quebec, it seems strange that Gaspé should have been the only county without a single mile of railway up to a few years ago, when, thanks to the initiative of the late Postmaster General, the present member for Rouville (Mr. Lemieux), who worked incessantly for ten years, we got our first railway. It has been built down to Gaspé basin and runs for 200 miles along the coast. It has been subsidized to the extent of nearly $1,500,000 in cold cash by the Dominion. Probably half a million more has been spent by the province of Quebec and $3,000,000 has been invested by the English shareholders of the Atlantic, Quebec and Western railway from Carlisle to Gaspé. The result is we have a branch line 200 miles long built at the cost of four or five million dollars through very difficult country. It should form part of the Intercolonial. The railway skirts the shore of the Baie des Chaleurs and passes through the most picturesque part of eastern Canada where pulpwood can be found in great abundance, where fisheries are of the first order, and land is of the most fertile character, and from which for generations we have seen our young men and girls leave by the hundreds every year for the United States and all parts of Canada because they have not the facilities which they should have in their own country. We have spent a great many millions of dollar to people the Canadian Northwest. I myself have voted for a great many dollars for that purpose during the last fourteen years, and I do not regret it because I have done so with the full consent and acquiescence of my electors. We consider that the opening of the Northwest meant prosperity to Canada as a whole but I think the time has come when this Parliament should give some attention to the conditions which prevail in eastern Canada. The province of Ontario has many spokesmen in this Parliament who can well look after their province, but the time has come when the provinces of Quebec, Nova Scotia, New Brunswick and Prince Edward Island should receive particular attention from this Government.

We have recently had a long discussion about the construction of the Transcontinental railway. I shall only refer to that en passant, for the purpose of showing what we are undertaking to do in that portion of Quebec traversed by the Transcontinental railway. In the Gaspé peninsula we have a region resembling the region from the city of Quebec up to lake Abitibi. We have now the Transcontinental there, and the people of the province of Quebec will undertake to people that section, as they undertook to fill the Nipissing section, the lake St. John section and the Gaspesian district in the old days. The province of Quebec has undertaken its share of work, and it may be interesting for the members of this House to see from the plan that I now produce, prepared by the provincial Government, the opening up

of fifty townships in that portion of Quebec traversed by the Transcontinental railway. These fifty townships bear, I am glad to say, historic names. We Canadians are proud of our past, proud of our heritage and of our heirlooms. Our children and others who come after us, when traversing this country, will be interested in knowing that the first township which adjoins the province of Ontario to the east bears the historic name of La Reine, the name of one of the regiments that took part in the fight on the Plains of Abraham under Montcalm. The next one is La Sarre, the name of another historic regiment that took part in that fight. The next one is Royal Roussillon, and the others are all named after officers in these regiments. The House will be glad to know that the movement of colonization has already commenced. The first train over the Transcontinental will soon leave Harvey Junction for Amos with a whole trainload of settlers who are going to repeat in the Abitibi district what French settlers have done all over the North American continent. The party is led by a French Canadian priest, Rev. Ivanhoe Caron, the agricultural missionary for the province of Quebec. In opening up new country in the Province of Quebec and all over the continent the Church and State have always worked hand in hand. An arrangement has been made by which this contingent will be able to take possession of this land before that section of the road is actually operated. A party even went up there in 1913 around by Cochrane, and Mr. Caron has been kind enough to send me a list of the first settlers that went and took up these lands along the line of the Transcontinental railway. There are on this list the names of 329 people, settlers, including forty families, who have taken possession of the land in that district. They are in communication on the south with the Timiskaming district, and there will be a line of railway running some day from the Timiskaming district up to the Transcontinental railway; so that I hope there are many members of this House listening to me now who will see that region of the Abitibi opened up and peopled with happy and prosperous settlers. We have other territories opened up in the province of Quebec with promising settlements, the result of the explorations that have been made in those northern districts. We have been informed by those who conducted these explorations that the forest growth is sufficient for local purposes and that the land is magnificent. Mr. Henry O'Sullivan, who was sent into that country in 1906 and 1907, reports that in the Abitibi district the most fertile land is to be found. They have a climate there that will be similar to that of the province of Quebec, because lake Abitibi is several miles south of a portion of the province of Manitoba. When the country opens up we will have there a longer summer season, as has been the case in the province of Quebec where, as the country opens up, the season becomes longer and the growth of crops more satisfactory.

We have therefore the first results of the efforts which have been made to open up that district. In the Abitibi country we have an example of a province seconding the efforts of the Dominion Government to colonize the unoccupied districts. The Dominion Government has built a railway and now the province of Quebec is undertaking to do its share. If other provinces follow the example of Quebec in this matter we may have similar movements along the whole of the Transcontinental line. The province of Ontario, I have no doubt, will do her part, as the province of Quebec has done.

We have, in the Gaspé district, a railway that has been constructed jointly by the Dominion and Provincial Governments, outside of the line which runs from New Carlisle to Gaspé, in which some unfortunate investors have placed considerable money. I consider that a parallel can be established between these two cases. If the Dominion Government have spent a large amount of money to open up the Abitibi region and to give more depth to that part of the province of Quebec, and if it is the part of wisdom to open up the newer districts throughout the country, there is no more fertile or interesting district than the Gaspé district, watered by the Baie des Chaleurs, which we call down there the Canadian Mediterranean. You have magnificent fisheries, large and productive timber areas, fertile land, but no transportation facilities. The duty of the Government of the day is imperative in that case. I think they should go beyond the action of the Senate. The Government do not need the Branch Lines Bill which was held up in the Senate. The Government could pass a measure to take over this railway, bring it in touch with the Intercolonial railway and work it as a branch of the Government road. I am sure that this House would approve of the undertaking without waiting until the

majority in the Senate dies out or until the party in power secures a majority in the Senate otherwise. The people at large are not all partisans.

The farmer, the lumberman, the fisherman, who has a long day of hard work before him for the purpose of getting a livelihood for himself and his family, does not know all these fine distinctions between one House and another. It does not make any difference to him what is done in the House or in the Senate. He looks to the results. All he knows is that he has been in that country for a long time, that his father was there before him, that the people have toiled for generations, that they have not had the railway connections which they should have had, that they are still occupying small farms, small holdings, that they have great difficulty in obtaining access to markets with poor roads, that if they produce agricultural commodities they have no way of reaching a market, that if they catch fish, unless the American market is open to them, they are at the mercy of the great fishing companies, and that if they get out logs and timber they are at the mercy of large lumber firms. They have none of the facilities they should have, and it is the duty of the Government, if it intends to carry out its so-called National Policy, as defined by the Minister of Finance, to go in and develop these older parts of eastern Canada.

The natural ressources of eastern Canada have not been developed as they should have been. During the present session we are asked to give some assistance to the coke, iron, and steel industries. We have in the past paid over large amounts of money for the purpose of helping various industries, but the real industry of the country is the farming industry, and we have done very little for that. The present hon. Minister of Agriculture (Mr. Burrell) may boast that he is getting three millions for the encouragement of agriculture. Although that is double what was given some years ago, it is insignificant as compared with the $10,800,000 that we are asked to vote for militia purposes. Canada is a peaceable country, and the time has arrived when there should be a reduction put to this expenditure. Instead of putting up drill-sheds, we should establish experimental farms and schools of agriculture. We should teach our people to stay on the farms. We should adopt the policy in the future of doing every thing possible to encourage men and women to go back to the farm. It was a pitiable sight that was presented in Montreal yesterday, when thousands and thousands of men were seeking occupations who had left their country homes, lured away by the city and many of them not possessing the means of going out West. Could not these people be sent back to the farms where it is so difficult for the farmer to obtain assistance, where the farmer has no help?

The first thing necessary is to open up transportation facilities by rail and water. This railway that I referred to a moment ago could be linked up immediately with the Intercolonial railway at the town of Campbellton. Campbellton is the first important station on the Intercolonial railway in the province of New Brunswick after we leave Quebec. It is the first divisional point in New Brunswick, and it is separated from the province of Quebec and the county of Bonaventure by the Restigouche river. We have in Campbellton the most important and progressive town in northern New Brunswick. It has a population of between 4,000 and 5,000. But, unfortunately, communication is cut off from the country to the north. The people of Bonaventure and the Gaspé coast are cut off from Campbellton, where they might have communication not only with that thriving town but with all points east and west on the line of the Intercolonial railway. The Intercolonial runs from Campbellton to Halifax and Sydney, on the east, and Montreal and Quebec, on the west. There is running south from Campbellton the International railway, which goes to the boundary of the state of Maine at St. Leonards, and connects with the Transcontinental, the Canadian Pacific railway, the Boston and Maine and the Boston and Aroostook railways. All these connections would give a great many advantages to the Gaspé peninsula if it were only linked up with the Intercolonial railway, but they are all intercepted by one river. There is one more river to cross, and that is the Restigouche river. These people have been asking for years, for generations, for a bridge over the Restigouche river, which is an interprovincial river. The provincial governments (Quebec and New Brunswick) have no exclusive jurisdiction over this river, and the Dominion Government should take a hand in providing a solution for this difficulty. This request was made last year, after the advent of the new Government to office, by the town of Campbellton, by the board of trade of

Campbellton, by the county council of Restigouche, by the town council of Dalhousie, by the whole southern part of New Brunswick adjoining the Restigouche river, by the county council of Gaspé, by the county council of Bonaventure, by the whole population of that part of the country. The matter was brought to the attention of the Hon. Mr. Monk, then Minister of Public Works, and also to the attention of the present Minister of Public Works (Mr. Rogers). The intention was that this railway running from Gaspé, where a deep water wharf has been built at the expense of over $200,000, where we have in the Gaspé basin one of the finest seaports of North America, where we have deep water, where we have open navigation for nine or ten months of the year, should at the other end of the line run into the town of Campbellton and connect with the Intercolonial, with the Canadian Pacific railway, with the Transcontinental, the Boston and Maine railway and in fact with the whole railway system. These resolutions set forth in very clear and distinct language the requirements of the district. I am drawing this to the attention of the Government at the present time, not for the purpose of bringing up what may be considered a local question, but for the purpose of calling attention to what I think is one of the things that should be done by the Government of Canada, namely, giving the lower portion of eastern Canada some of the facilities to which they are entitled, in order to induce people to go back to the country districts, where they were once so happy, and where they would be so prosperous now if they were only given the ordinary advantages that they should have. No matter what we may say, no matter what changes we may make in the tariff, whether we reduce the duty on agricultural implements 5, 10 or 50 per cent or cut the duty out altogether, neither this country nor any other country will ever be prosperous unless agriculture is prosperous. Agriculture is the basic industry, and how can it be expected for an agricultural region such as this—

Mr. BURNHAM: Does my hon. friend include Great Britain in that statement?

Mr. MARCIL: Great Britain is not an agricultural country.

Mr. BURNHAM: No, that is what I thought.

Mr. MARCIL: I am speaking now of an agricultural country. I am told that in Great Britain is the finest farming land in the world, but that the area is limited. We have in the Gaspé peninsula an area equal to two or three of the small kingdoms in Europe, and yet it has practically no communication with the outside world. You have a Government system of railways leaving the city of Montreal and going to Halifax costing this country nearly $100,000,000. This railway system has been described as a tree without branches. How can this tree live without these branch lines? The Intercolonial railway should have twenty to twenty-five branch lines, and not one of them is operated as it should be by the parent system. The Canadian Pacific railway has over 9,000 miles of branch lines, the Grand Trunk railway some 7,000 miles, the Canadian Northern railway over 3,000 miles, and the Grand Trunk Pacific railway opened up this year 1,000 miles of branch lines. Confederation was brought about by the Intercolonial railway and the concessions made by the province of Quebec at the time for the purpose of unity and goodwill in Canada. Without the acquiescence of Quebec, Confederation was out of the question, and without the acquiescence of Quebec, with its lasting loyalty to British institutions, the Confederation of Canada would cease to exist. Quebec is the keystone of the arch. We have here a government system of railways that has been in operation for about forty years, but that gives no benefit whatever to the district through which it passes except a few miles on each side of the road. Why should not the north shore of the Baie des Chaleurs, which is peopled by nearly 50,000 inhabitants, have the benefit of this railway system, as the south shore has? If we had taken over the Temiscouata railway, which joins the Intercolonial railway at Rivière du Loup, the Megantic system, the Quebec Central railway and the Arthabaska system, the International system, instead of being a single track road for 858 miles down to Halifax the I.C.R. would have gone into all the different parts of Quebec, New Brunswick and Nova Scotia; and, with the help of the Prince Edward Island railway, would have brought facilities to all parts of that country. We wonder why the population of eastern Canada has been stationery. In my opinion, the first explanation is that you have not given the people of

eastern Canada the facilities that they should have. What is the use of farming in Gaspé peninsula or in Bonaventure county, if you have not a market for the crop? It costs less money to send freight 300 miles over the Intercolonial railway than to send it 100 miles over a branch line railway. The railway board, I understand, is quite agreeable to this, holding that branch line railways, owing to their short haul, are entitled to three times the amount of the rate charged on the long haul on a main line of railway. How can you expect these people to live satisfied and contented in these agricultural districts? They leave the country and flock into the cities. What is the situation today, for example, in the city of Montreal? I mention Montreal because I am more familiar with conditions in that city than in any other city in Canada. In Montreal the house of refuge, the brewery mission, the municipal refuge, all the charitable societies, will tell you that last winter was the hardest winter in Montreal for the last twenty years. At the present time there are thousands of men out of employment. I do not say that this is all the fault of the present Government, but it is the fault of the system by which we do not give the rural parts of Canada the facilities to which they are entitled. It is all right to build up big cotton mills and factories throughout the country, but the biggest factory of all is the farm, and, unless the farm is prosperous, nothing can be prosperous in this country. I appeal to the Government to consider seriously the construction of this bridge, so as to bring that line of railway into communication with the Intercolonial system. My arguments in this particular case will apply, I am sure, to a good many other parts of the country. I would like to read the resolution passed by the Board of Trade of the town of Campbellton, which is equally divided between English speaking and French speaking people and is very closely divided politically, the hon. member for Restigouche (Mr. Reid) having a small majority; so that this is the expression of what we may consider a fair specimen of the Canadian people on a small scale. This resolution, which was sent to the Minister of Public Works, in support of the proposition to link the Gaspé peninsula with the Intercolonial railway, is in the following language:

The Board of Trade of the town of Campbellton in the county of Restigouche province of New Brunswick, most respectfully beg to memorialize your department regarding the importance and necessity of a bridge to be constructed across the Restigouche river at Campbellton aforesaid, connecting the town of Campbellton, on the one side, with the county of Bonaventure, in the province of Quebec, at or near Cross Point, on the other side, such bridge to be a combined railway and highway bridge, the highway part to be free of tolls, and in that connection your memorialists would urge:

1. That said Campbellton is a divisional point on the Intercolonial railway of Canada, where extensive railway works have been built and are in operation.

2. That said Campbellton is the eastern terminus of the International railway, which at its western terminus connects with the Canadian Pacific railway system at St. Leonard, near the state of Maine boundary, and in close touch with other railway systems at that end of its line, both Canadian and American.

3. That said highway bridge would be of great convenience and benefit locally, both to the inhabitants of the county of Restigouche and of the county of Bonaventure, at all times of the year, and particularly during certain seasons when the Restigouche river is closed for traffic on account of running ice and shore ice, the said town of Campbellton being the natural market for farmers and others residing on the opposite side of said river in said county of Bonaventure and the most convenient and advantageous point for the shipment of the surplus farm products, and other products, to the markets of the world.

4. That your memorialists believe and urge that the construction of such bridge would have the effect of stimulating trade in the said counties, and traffic upon the said railways, as well as upon the Quebec Oriental railway in the county of Bonaventure, which latter railway would, in all probability, connect with the two other railways above mentioned at Campbellton if said bridge became an accomplished fact, and it is submitted that the enormous traffic which would pass over said bridge would amply justify the construction of the bridge as a public work by the Dominion of Canada, and not only that, but as a project which must, in the nature of things, be of such an immense benefit, and be so great a convenience to such a large community on both sides of the river, should, your memorialists believe, commend the project to the serious and favourable consideration of your department.

5. Your memorialists would also call to your attention the fact that the Government and Parliament of Canada have already endorsed the project as evidenced by the fact that a subsidy of some one hundred and sixty thousand dollars has been voted for this purpose.

6. That this board of trade joins with the town council of the town of Campbellton, the county council of the municipality of Restigouche, and the numerous petitioners in the counties of Restigouche and Bonaventure, in urging upon your department the great and numerous advantages which would result from the construction of the bridge in question, and the necessity which exists for the same, and beg most respectfully that the project may receive, as we have no doubt it will, your most careful serious and favourable consideration.

By order of the Campbellton Board of Trade.

(Sgd) J. Harquail,
President.

John T. Reid,
Secretary.

Campbellton, N.B., Dec., 1912.

Mr. W. F. MACLEAN: How much would that bridge cost?

Mr. MARCIL: According to the last estimate, $640,000.

Mr. MACLEAN: Would it block navigation?

Mr. MARCIL: No; it would be an iron bridge put up by the Dominion Bridge Company. We incorporated a company called the Interprovincial Bridge Company, and they applied for the usual bridge subsidy, which was voted—$150,000. This was deemed insufficient and an application was made for a guarantee of bonds. The change of Government took place before the matter could be brought to a head. The condition in this case is not the ordinary condition. This is an interprovincial bridge; it would bring the Intercolonial railway into connection with two hundred miles of railway built with Dominion money which has not been fully utilized; it would bring us in touch with the port of Gaspé which is the finest port in North America notwithstanding what may be said by the representatives of Halifax or Sydney. Having Gaspé linked with Montreal, when your steamer from Europe reached Gaspé you could take a fast train and could land your mails in Detroit and Chicago about the time a fast steamer would reach Quebec; and those mails could be far into the western part of this country by the time the steamer reached Montreal. Besides, the construction of this bridge would open up a new part of Quebec to the agriculturists, the lumbermen and fishermen.

It is to such things, in my opinion, that we must look to the solution of the high cost of living. The main cause of the high cost of living, everybody will admit, is that we have ceased to be a nation of producers and are fast becoming a nation of consumers. We have to-day in the island of Montreal 650,000 people. When I was a boy what is now the city of Westmount was an orchard. At the coteaux there they grew the finest apples in the world, the Fameuse. When the late King Edward VII came to Canada he took such a liking to the Fameuse apple, that he gave an order, which has stood ever since and which is still filled every year, that this apple should be furnished for the Royal tables at Windsor and other castles. Those orchards are disappearing from the island of Montreal. And the Montreal melon, which was second to none on the continent, is also disappearing from the island of Montreal.

Mr. W. F. MACLEAN: The Shaughnessy melon is there.

Mr. MARCIL: But the Decary melon is fast fading away. When I was a boy the market gardeners around Montreal were a sight to see, with people coming in twice a week to the great Bonsecours market. But these have disappeared and the whole island of Montreal is being divided up into building lots. To help on the work, the Canadian Northern railway is coming in through the mountain to open up the northern portion of the island. To-day farms on the island of Montreal are sold at $200,000, $300,000, $400,000—whereas twenty-five years ago you could buy a whole parish for that money. With the disappearance of the gardens on the island of Montreal, we have to depend for our vegetables on the Ontario and American supply—largely American. Our people have ceased to be producers and are all consumers. Other portions of the province of Quebec have not gone in for gardening. A movement was inaugurated last week by the Gardeners Association of Montreal, to ask aid from the city in the way of facilities for the purpose of opening up Isle Jesu, immediately north of Montreal island in the county of Laval, and transform it into gardens to supply Montreal with what it needs. And what we see in the island of Montreal is taking place all through the province of Quebec. We have ten or fifteen counties in the province of Quebec whose population is 5,000, 10,000, 15,000 less than before. Here at the very doors of the city of Ottawa, we have the county of Labelle, a new agricultural and colonization region where, thanks to the French-Canadian settlers, you have 50,000 people. But immediately adjoining that you have the old historic county of Argenteuil, so well represented in this House by my hon. friend (Mr. Perley), the total population of that county being only 16,000. Is there any reason why this state of affairs should exist? We go the wrong way in the solution of our difficulties in my opinion, when we discuss as of tremendous importance, slight alterations in the tariff merely because those who are interested in the tariff come here and get up a lobby. But the mass of the people, the honest, hard-working farmers, the men who see the sun rise and are often at work after it has set—such men are seldom seen about these lobbies, but they are the men who are entitled to

the protection, the fatherly protection, of this House. I want this Government to live up to their so-called National Policy as it was intended by their great leader Sir John Macdonald. They are not very generous, our friends opposite. They will not believe that we have improved the National Policy to a great extent; they will not admit that the British preference has been a tremendous improvement, as also have been the changes we made since the British preference was introduced. They are not generous enough to admit that we have made improvements. Still they are satisfied with the National Policy as it was left by the Liberal party, for speakers on that side one after another have risen and told us that this has been the banner year in the history of Canada so far as business is concerned. So much the better; I hope we shall have many other banner years.

I ask nothing but the progress and advancement of the country. The party that is in power is, after all, a secondary consideration; one party may hold the reins of power to-day and another to-morrow, but how best to meet the needs of the country districts and older parts of the province of Quebec—those which bore the burdens of the early days; those which have waited for generations for the assistance which they should have received but which they never did receive—that is the problem to the solution of which we should bend our energies and devote our time. I have indicated one of the ways of linking up Gaspé peninsula with the railway system of this country. The expenditure of $750,000 in the construction of a railway bridge which, being a part of the Intercolonial railway system, would remain the property of Canada, is one of the ways of bringing that about. The Minister of Public Works received the petition which was forwarded to Ottawa in this matter; he transferred it to his colleague from New Brunswick (Mr. Hazen); and his colleague from New Brunswick transferred it to the Minister of Railways and Canals, and that was the end of the effort made by the people in that regard. This is the letter written by the Minister of Public Works to the Minister of Marine and Fisheries:

Dec. 16, 1912.

My dear Mr. Hazen:

I enclose you herewith copy of a petition received from the town council of Campbellton, in the county of Restigouche, N.B., and also a copy of a petition received from the board of trade of the same town, memorializing the Government as to the importance and necessity of a bridge across the Restigouche river at Campbellton on the one side, with the county of Bonaventure, in the province of Quebec, on the other; such bridge to be a combined rail way and highway structure, and requesting the most careful consideration on the part of the Government of the same.

I might say that the two letters in question were accompanied by very numerously signed petitions from the residents of the district interested.

Yours sincerely,

R. Rogers.

The Hon. J. D. Hazen,
Minister of Marine and Fisheries,
Ottawa, Ont.

The letter of the Minister of Marine and Fisheries was as follows:

December 17, 1912.

Dear Mr. Cochrane:

Hon. R. Rogers, Minister of Public Works, has sent me the enclosed letter, covering a petition received from the town council of Campbellton, in the county of Restigouche, also copy of a petition received from the board of trade of the same town, regarding the necessity of a bridge across the Restigouche river at Campbellton, etc. As the matter is apparently one for consideration by your department, I am transmitting the same to you.

Yours faithfully,

J. D. Hazen.

Hon. F. Cochrane,
Minister of Railways,
Ottawa.

The final letter was as follows:

December 19, 1912.

Dear Mr. Hazen:

I beg to acknowledge receipt of your letter of December 17 enclosing petition re a combined traffic and railway bridge across the Restigouche at Campbellton. Rogers also sent me a copy, but we are not concerned as the Intercolonial does not cross the river at that point but at Matapedia further west.

Yours very truly,

F. Cochrane.

The Hon. J. D. Hazen,
Minister of Marine and Fisheries,
Ottawa, Ont.

It is true that the Intercolonial railway crosses the Restigouche river at Matapedia, eighteen miles from Campbellton, but it crosses there for railway purposes only. At Matapedia on the south shore of the river there is a mountainous district where but little settlement is possible; at Matapedia much property is taken up by fishing clubs and used for railway purposes. Campbellton is an important centre, as it is on the line of communication with the New England states, the Maritime provinces, Quebec, and the West. Some years ago there was a bridge at Matapedia belonging to the Intercolonial railway. When the Sydney iron works began to haul their heavy material it was

found that this bridge, like others along the railway, was insufficient, and it was ordered that it be taken down and that a new massive iron bridge be erected. It took us seven years, with the assistance of my colleagues from the provinces of Quebec and New Brunswick, to bring about an understanding between three governments, the Government of New Brunswick, the Government of Quebec, and the Government of Canada, with a view to saving the old bridge across the Restigouche river at Matapedia and using it as a highway bridge. Finally, through the co-operation of the three Ministers of Railways, first the late Mr. Blair, then the hon. member for Westmorland (Mr. Emmerson), and later Mr. Fielding, during the time that he acted as Minister of Railways; through the co-operation of these gentlemen and of the Government of New Brunswick, through the Hon. John Morrisey, whose name I am glad to mention in this connection, the Hon. Mr. LaBillois, at the time he was Commissioner of Public Works; the present member for Restigouche (Mr. Reid) in this House, Mr. Kelly the member for Bonaventure in the local House, and the member for Rouville (Mr. Lemieux), who then represented the county of Gaspé in this House; through our combined efforts we were finally successful in saving the old condemned bridge to be used in crossing this river. Without this bridge the river had to be waded. It took seven years to do this, yet we wonder why people of the rural parts of the country are leaving the farms and going West; we wonder why they have not the pluck and energy and courage that their forefathers had. It is an easy matter for a farmer to go out to the western country, take up land and produce No. 1 Manitoba hard wheat when he has at his command various kinds of machinery which were not available to those who worked years ago in Nova Scotia, New Brunswick, Quebec and Ontario. I presume the Minister of Railways merely acknowledged the receipt of the memorials which he received, and, as he is not familiar with the conditions, I have no intention of criticising him in that regard.

9 p.m.

Agriculture is, of course, next in importance to railways. Agriculture is a basic industry, but what is the use of agriculture unless you have transportation facilities? We have the water facilities which nature has given us, and of which we cannot be dispossessed, but agriculture is not receiving the encouragement in that district and in other parts of Quebec which I think it should receive. I asked the Minister of Agriculture some days ago whether it was his intention to establish a new experimental farm at New Carlisle, and I am sorry that his only answer was that the matter is under consideration. When the Estimates were before the House, I called his attention to the peculiar advantages of that district for the production of butter and cheese. It is a hilly, mountainous country. The report of Mr. Chapais, the officer of the department entrusted with the work in eastern Quebec, declares that there is no finer region in the whole province of Quebec for the production of cheese and butter than the counties of Bonaventure and Gaspé. Would you believe it, we have not a single refrigerator car in the Gaspé peninsula. We never had. If you want to ship butter or cheese from any portion of the district you have to send it on an ordinary freight car and that same car is generally the property of the Intercolonial as the local railway has practically no freight cars; you have to send it one hundred or one hundred and fifty or two hundred miles to the Intercolonial, there to run its chance to be taken up by a refrigerator car on the Intercolonial railway. We have a few butter and cheese factories which eke out a miserable living. But it should be made a magnificent dairy country. It is a splendid country for raising cattle and for the production of butter and cheese. I have called on the Minister of Agriculture to give me some encouragement in that respect, and he has referred me to the Minister of Agriculture for the province of Quebec. I am willing to give unto Caesar that which is Caesar's. This Government has voted $10,000,000 to aid agriculture, but $10,000,000 spread throughout the whole of Canada is a very infinitesmal amount. Quebec has received a certain portion of that vote, but the province of Quebec can do very little when we consider the immense area that it has to attend to. Quebec has at present a Liberal Administration. I am not here to say it is any the worse for that, because I think by common consent it will be admitted that the present Administration of Quebec has been progressive. Its financial standing is of the best, it has shown a satisfactory state of affairs financially and it has gone into the improvement of the highways, following in that the lead given by Ontario. There is to be a congress next week in Montreal at which the province of Quebec, the New England states and Ontario

are to be represented. The provinces at last are going in for what they should have gone in for many years ago, better highways in the rural parts of the country. That is one part of the problem which should be solved. I know our friends will tell us that it is the fault of the Senate that the Highways Bill was thrown out. Well the Senate will have to defend itself. I am not here to defend the Senate; I have not even the right to mention it; but I think the Government of the day should take a broader view of the situation, should consider the interest of the farmer and not the interest of the party. If the Government of the day—and I do not wish to question their sincerity—were really anxious to help in the construction of highways in the parts of the country where they are most needed, I think that another means could be found to improve the highways even before they obtain their ambition, if it is their ambition, of securng a majority in some other place. We were told at Confederation that the other House would never be partisan. It would be a court of appeal where there would be no partisans, a superior body not to be tainted by any of the partisanship found in the House of Commons. But till the political complexion of the Senate changes, this Government is giving no assistance whatever towards the construction of these highways.

These highways are linked up with agriculture, they are linked up with railways. We have spent, I would not like to say offhand how many millions in this country for the construction of railways, and we are not through with their construction yet. We have guaranteed bonds for I do not know how many millions, and we are not through with guaranteeing bonds. The railroads will be back again, they will come back again and again; as long as this House and public opinion in this country are willing to vote subsidies to railways they will come back and ask for subsidies. But a public opinion is being rapidly formed in this country. The Canadian public are now a reading public; there is a large independent population in every riding in Canada that is beginning to do its own thinking. The people are reading the newspapers; they see the returns day by day of what is going on. They see that Canada in the earlier days gave assistance to railways when railways were imperative, when without railways there would be no backbone to the country and practically no progress. But the time has now come when a halt should be called upon subsidies to railways, except those railways which are built in parts of the country where an ordinary railway company could not be expected to build, as, for instance, the Hudson Bay district. But the time for subsidizing the ordinary railway in the old settled parts of the country should be at an end. If I plead to-night for a subsidy for this railway bridge, I pleaded for it because I want this railway bridge to form a part of the Intercolonial system belonging to the country.

I think that the Government should rise to the occasion and find some means of helping in the construction of highways and not let us wait until the hand of death swoops down in another place to give a majority to one side or the other. The people want these highways. They want them opened particularly in the poorer parts of the country. In the old parts of Ontario much progress has been made, but in the northern and eastern parts of that province there is still much to be done, and in Quebec a great deal must be done. We have in the Gaspé peninsula, in Bonaventure and Gaspé, a highway skirting the sea shore. Fortunately the breezes from the ocean dry up this road after every storm and we have a passable road. We used to have in the old days a highway built by the military authorities of this country up through these counties, but it has been practically abandoned because it is not attended to. We also have the Matapedia road following the Matapedia valley from Ste. Flavie to Cross Point opposite campbellton, built by the old provinces of Canada and for some time maintained by Canada. It is now in such a condition that it is hardly passable, for the reason that there are parts of the road which pass through unorganized territory where there is no one to look after it. The province has no jurisdiction, and the Dominion seems to have washed its hands of the whole business of this same highway, 212 miles in length from St. Flavie on the St. Lawrence down to Cross Point, opposite Campbellton. It is now in such a state that at certain seasons of the year it is impassable. The hon. member for Rimouski has taken the matter up with the present Administration, as I did with the last Administration; and I hope he will be successful in directing the attention of the Dominion authorities to a state of affairs which should not be allowed to exist. The Matapedia valley is probably the section on the Intercolonial that has developed most in the last twenty years. When Sir Sandford Fleming used to walk up and down the Matapedia valley on his snow-

shoes trying to find a location for the Intercolonial there was the house of Dan. Fraser at Cross Point, a shanty or two farther back, and all the rest was a wilderness. Now there are twenty-five stations on the Intercolonial through the Matapedia valley and the railway is giving splendid service; it is being improved and has done a great deal to develop the industries all along the Matapedia valley, but the highways have been abandoned completely. There you have a highway partly through municipally organized territory, and partly through unorganized territory, a highway built by the old province of Canada and maintained by Canada for many years; but for want of proper supervision it has fallen into decay and these farmers have not even the ordinary facilities of reaching the market, either at Rimouski or at Ste. Flavie or Campbellton.

Before we had this bridge at Matapedia if a farmer wanted to take his products over to Campbellton, he had to wait for low tide and wade across or take them over in a scow, as was done in the days of our grandfathers. These are some of the conditions that exist in the rural parts of Quebec, and which should be looked into by the Government. The time has come for us to help the farmer. We have done enough for railways, they are able to look after themselves. I think my hon. friend from South York (Mr. W. F. Maclean) will agree that the Canadian Pacific railway has done remarkably well. To-day it is one of the greatest concerns in the world, and in that respect is a credit to Canada. We are all proud when we go abroad of having such a big concern in Canada, although if it keeps on growing I do not know to what proportions it will reach. And there are other concerns like it in the Dominion. The duty of the Government now is to help the common people, to get back to the country districts, and to let the manufacturing people look after themselves under the tariff which they now have. If that tariff needs a little attention now and then, it should not be modified for party purposes or to help combines, because they can help themselves. Let this Government become at last a Parliament of the people. It is a Parliament elected by the people for the purpose of looking after the wants of the people. Let the farmers have all the assistance and education that they need. In thousands of places, but for the existence of the small post office, the farmer would not even know of the existence of the Dominion Government. He has no advantages and no facilities, and no help of any kind is given to him. Agriculture, like everything else, should be taught to the people. It is true we have an experimental farm at Ottawa, and if a man can afford to pay railway expenses to come here and see what is being done at the farm it is all right. But do you expect the ordinary poor farmer, who may have to work like a slave all the year round to amass three or four hundred dollars, to come up here to see what can be done with money? He would say if he saw the experimental farm at Ottawa: Yes, I could do the same thing if I had money. We should demonstrate that these things can be done by the ordinary farmer in his own district on a small scale; that such and such a soil is suitable for such and such a crop. We should have these demonstration farms instead of armouries. I am not in favour of armouries and I am glad to say that in the constituency I represent there is not a five-cent piece expended for military purposes. I made an attempt once to organize a rifle club in my constituency, but my people are mostly sportsmen, and they said: When we go shooting we do not shoot at targets; we shoot at the moose, the lord of the forest.

Mr. W. F. MACLEAN: The member for Calgary (Mr. R. B. Bennett) had better look out.

Mr. MARCIL: They shoot the moose and catch the salmon. The Restigouche salmon is well known, but the fishing on that river is leased by the most exclusive club in North America. Forty New York millionaires have fishing rights on the Restigouche. They have admitted three Canadians to the club: the late Lord Strathcona, Sir Montagu Allan, and the late James Ross. These people come down there and fish splendidly. They spend their money freely; they employ guardians and overseers to protect the fish, with the assistance of the Marine Department; but the poor farmer has not a chance to catch a single salmon in that river. The river is leased just as they are in England and in the old countries of Europe.

There is no inducement to stay on the farm. A farm should be a pleasant place to live in and should be easy of access. There should be good country roads. We often speak of Bonaparte as the great mili-

tary conqueror, the great legislator, but to my mind one of the greatest thing he ever did was to give France those great state roads which are the admiration of all who visit that country to-day, and are second not even to those built by Julius Ceasar. The beautiful roads we see in England, France and the old countries of Europe do not exist in this country. We have spent our money on railroads, but the time has come to spend it on highways, and to give assistance to agriculture. This Government will make a huge mistake if it stands on technicalities, if it says to the people: We were anxious to improve your roads, but the Senate interfered with our purpose; they amended our Bill, and consequently we cannot do anything for you in that matter. I think that would be a very poor defence.

I will close by saying a word for the fishing industry in my constituency. Besides lumbering and farming we have the magnificent Baie des Chaleurs, which is teeming with fish, but we have no facilities. According to the report of the Department of Marine and Fisheries which I have here, fewer men fished in the gulf of the St. Lawrence last year than ever before. Several reasons are given for that. If I refer to the subject it is because it is related to the cost of living. If we wish to reduce the cost of living in cities we must send the food to the people and food comes not only from the earth but from the sea. We have the sea practically at our doors, but the Baie des Chaleurs fish is hardly ever seen in the city of Montreal except in a salted down state. I have almost taken upon myself never to eat any fish except what I eat at the seashore, because I like to keep in mind the taste of that fish. If the people of the cities would acquire the habit of eating salt water fish an immense trade would be created at once. The trade would be beneficial not only to the locality which I represent but to the whole of Canada. The railroads and all parts of the country would benefit by it. Dr. Wakeham, inspector of fisheries, who has been at the head of the gulf fisheries for the last thirty years, calls attention to one or two things in his report. Outside of the mackerel caught at the Magdalen islands, cod and herring are the two chief fish caught in that district. Mr. Wakeham calls attention to the fact that the whale industry which has arisen at Seven Islands has prevented the small capelin from coming into the gulf; and as the cod follow the capelin schools they did not come inshore and the cod fishing in the gulf of the St. Lawrence and the Baie des Chaleurs where the whaling industry is carried on had to be abandoned in July and August. The whaling industry may be important but it is not so important as the fishing industry. And that is one of the questions that the Department of Marine and Fisheries should look into very carefully, because fish is an important food which should not be neglected or allowed to disappear.

Regarding the herring, an attempt was made by a former Minister of Marine and Fisheries to introduce the Scotch method of curing herring in Canada, and Mr. Cowie was brought over from Scotland with a staff to introduce proper methods of curing and packing herring so as to get it upon the market in good condition. The examples that were given were certainly very interesting, and, had the methods been followed out, a great improvement would have been made in the herring business. But, unfortunately, the fishermen did not benefit as they should have done, and the careless way in which the herring has been handled has been more or less destructive to the industry. Commander Wakeham calls attention to this again in these words:

> Herring were very abundant all through the season, and on the coast from Cape de Rosier to Matane, where the cod fishery failed, the pack of pickled herring was unusually heavy. Unfortunately this fish is so carelessly cured, that the returns to the fishermen from it were small. The market for this fish, which in our case is Quebec, became glutted. The common soft wood barrels, with only a few wooden hoops, in which herring is packed, won't stand handling. They will not hold the pickle, so that much of the pack got rusty, and bad, and had actually to be thrown away. This is an old story in connection with our herring fishery.

I hope that the present hon. Minister of Marine and Fisheries (Mr. Hazen), being a Maritime province man, will take particular interest in this matter and will have a system of inspection organized on somewhat the same lines as the system of fruit inspection carried out by the Department of Agriculture. Why could we not have an inspection of the packing of the fish so that any fish that leaves a particular locality for the domestic, American or European market will bear the certificate of the inspector that it has been properly put up in order that it may not bring discredit upon the Canadian fishing industry. If one barrel of herring, or any other kind of fish faultily packed, goes into the United States or into western Canada, it is sufficient to destroy the whole industry. Very important progress has been made

regarding fruit, and I think that a new inspection system should be organized with reference to fish. I think we should pay more attention to our fisheries than we have done in the past. We are neglecting these things, and I do not think we should do so.

I shall conclude these very disconnected remarks by summing up in a few words the position I have taken from the start. I am prepared to give the Government credit where credit is due. I am prepared to call attention to what I think are their faults and shortcomings. What is the position of their followers? I know that the system of party government we have here will induce many men to do many things. Many men will under any circumstances support the measures of the Government; there are some exceptions, but they are not numerous. Governments, like men, are mortal, and they make mistakes. A number of mistakes have been made already, but some of these mistakes might have been prevented. While this Government has the confidence of the Canadian people, which it has as long as it remains in office, it should be up to the requirements of the times, and it should be prepared to face the conditions by which we are confronted to-day—conditions which are serious by reason of the number of unemployed in our large cities, serious by reason of the number of farms which have been abandoned, and most serious of all because of the way in which the cost of living is affecting the industrial classes in the cities. I have it on the authority of people who take an interest in charitable work in the city of Montreal that during last winter many, many families never had any meat at all except what was given them by charity. When we know that a workingman has to pay twenty or twenty-five cents for a pound of beef that he could get a few years ago for ten, or twelve, or eight cents, we must realize that the state of affairs is very serious. The cost of living has gone up almost beyond conception. Those who are poor and those who have to struggle for their daily living, those who have to bring up large families, are almost in despair. The condition is such that the Government should take radical measures to bring about a change for the better and any measure that can be taken for the purpose of bringing back a condition by which we shall have a nation of producers rather than a nation of consumers should meet with the hearty approval and co-operation of this House.

Mr. H. B. MORPHY (North Perth): Mr. Speaker, I rise for the purpose of saying a few words in this Budget debate, and in so doing I must confess that I feel somewhat disconcerted by the smooth manner in which the hon. gentleman (Mr. C. Marcil), who has just taken his seat, has contented himself with talking despair. The hon. gentleman seems to be more or less infected, as indeed have been most hon. gentlemen opposite, with the spirit of gloom and woe. At one time, when the hon. gentleman was in the midst of his gloomy and despairing remarks, I could almost see him standing in the entry to this country and crying: Woe, woe, betide ye souls who dare enter here; this is no place for you; we have sunk into the slough of despondency; this is no place for any man to come from any other country in the world; we are at our very wit's end how to live; there is nothing but despair here; I am going to leave the country myself. I do not think I have listened for a long time to an hon. gentleman possessed of such splendid attainments as the hon. gentleman who has just taken his seat speaking so long in that spirit of despair when he knows in the bottom of his heart that there is a splendid, live, virile Government at the helm that will soon pull this country up to where it ought to be, notwithstanding the slight check which it has suffered in the past.

Before dealing with anything else that the hon. gentleman has said, I desire to congratulate my hon. friend the Minister of Finance (Mr. White) upon the splendid presentation which he has made of the Budget, of the financial condition of this country and of the means and methods that he and his colleagues propose to adopt as the line of policy for the future well-being of Canada. I do not intend to take up very much time in speaking on the question before the House and in what I do say I shall endeavour to hold closely to such matters as I think appertain to the debate in which we are engaged.

The first point that I am going to touch upon is what is known as the high cost of living, and in connection with that, I desire to compare the cost of living of the Canadian workmen with the cost of living of the British workmen, the cost of living under what is known as a protective tariff

in Canada, as compared with the cost of living under a free trade or free food fiscal policy. That is fair and germane to the subject at issue.

I have taken the trouble to secure some figures in relation to the subject just mentioned. I have taken the rates of wages of various trades common in the city of Stratford, in the county of North Perth, which I have the honour to represent, and the rates in the same trades throughout England, using average wages. The figures in both cases I have had prepared for me by the Department of Labour of this Government, and I accept them as accurate. So far as the Canadian figures are concerned, I know that they are under rather than overstated. Let us see in what position the workingman in cheap-food England stands in regard to what pay he gets, compared with the same kind of man in the Dominion of Canada under a protective policy:

Predominant Rates of Wages in certain Trades in England, 1912.

Building trades.

	Per hour. d.		d.	
Bricklayers	8	to	10	
Masons	8	"	9½	(16c. to 19c.)
Carpenters and joiners	8	"	9½	"
Plumbers	8	"	9½	"
Plasterers	8	"	9½	"
Painters	7	"	9	
Bricklayers' labourers	5	"	6½	(10c. to 14c.)
Masons' labourers	5	"	6½	"
Plasterers' labourers	5	"	7	

Furniture and woodworking:

	Per hour. d.		d.	
Cabinet makers	8	to	9½	(16c. to 20c.)
Finishers	8½			"
Carvers	9½			"
Upholsterers	8	"	9½	"
Woodcutting machinists	8½	"	9½	"

Engineering and metal.

	Per week. s.	s. d.	$ cts.	$ cts.
Boilermakers	40		(10 00)	
Fitters	35 to 37		(8 50 to	9 00)
Turners	35 to 37		(8 50 to	9 00)
Patternmakers	37 to 40	6	(9 25 to	10 12)
Iron moulders (sand)	38 to 40		(9 50 to	10 00)
Blacksmiths	—	36	(9 50)	
Machinists	—	40	(10 00)	
Labourers	19 to 22	6	(4 75 to	5 60)

Printing trades.

Compositors	30 to 35	(7 50 to	8 75)

Current rates of wages obtaining in Stratford, Ont., in the following trades:

	Cents per hour.	Per day.	Hours.
Building trades:			
Bricklayers	40	$4.00	10
Masons	45	4.05	9
Carpenters and joiners	35	3.50	10
Plumbers	35	3.50	10
Plasterers	40	4.00	10
Painters	30	3.00	10
Builders' labourers	22½	2.25	10
Furniture and woodworking trades:			
Cabinet-makers	27	2.75	10
Finishers	27	2.70	10
Carvers	27	2.75	10
Upholsterers	30	3.00	10
Machine woodworkers (band sawyers and turners)	30	3.00	10
Labourers	20	2.00	10

Metal trades:

	Cents per hour.
Boilermakers	22 to 33
Pipe fitters	20 to 30
Blacksmiths	20 to 29
Machinists	22 to 33

Printing trades:

Compositors (hand) $13.00 per week of 48 hrs.

I could go over the whole range of industrial life, and show that the artisan in the Dominion of Canada under the present policy is getting a substantial wage which will enable him to live well and put something aside, while the wages paid in Great Britain on the cheap-food plan. In western Ontario the mechanic, who is a any labouring man who wishes to live decently. Hon. gentlemen opposite desire to bring us to the same position as Great Britain is in on the cheap-food plan. In western Ontario the mechanic, who is a thinking man, has the idea that he likes good wages and steady work. His argument is very terse, when some of these advocates of free trade or reciprocity come to him. He says: I want work and continuous work; at good wages; I am an industrious man, and, in getting that work with good wages, it makes no difference to me whether bread costs three cents or seven cents a loaf, so long as I am well paid for my work; I will live according to my pocket, but I cannot pay one cent a loaf for bread if I am out of work and have no wages. I invite hon. gentlemen opposite to come to western Ontario and talk free food to some of our artisans. They will find that they are in the wrong stall and that there is nothing doing along that line.

With regard to what it costs an artisan to live, I have here a table which I desire also to place upon 'Hansard'. It includes the items: steak, mutton, fresh pork, tea, sugar, bacon, eggs, cheese, butter, potatoes, flour, bread and milk. The figures given are the retail prices in London, England, for the month of October, 1912, and the retail prices in Stratford, Ontario, for October, 1912, October, 1913, and April, 1914.

I cannot give the figures of 1913 and 1914, for London; they have not been collated, at

all events, in the reading I have gone through. I take the quantities as follows: Steak 4 lb., mutton 2 lb., fresh pork 2 lb., tea ½ lb., granulated sugar 6 lb., bacon 1 lb., eggs 2 doz., cheese 2 lb., butter 3 lb., potatoes 2 pks., flour 10 lb., bread 15 lb., milk 6 qts. Running those quantities through both tables, I find that the workman in Stratford, Ontario, would pay for the month of October, 1912, $5.71 a week; for the month of October, 1913, $5.71; and for the month of April, 1914, $5.82. Now, in London, for the same quantities on the basis of British prices the British workmen would pay $5.46. In other words, the British workman gets his living just a little cheaper—twenty-five or thirty cents, possibly forty cents a week less than the Canadian workman; but the Canadian workman earns from $4 to $12 per week more. That is the position of the workman in Great Britain with free food and free trade on the one side and the workman in Canada on the other side. So I fancy the Conservative party and hon. gentlemen on this side of the House will be quite willing, having regard to these facts, to let our friends on the other side of the House come along with their free food policy.

Mr. Speaker, one is almost in nubibus—in the clouds so to say—when in a House like this, after the Finance Minister has brought down his Budget and set forth the policy of the Government plainly and squarely, that Budget is debated two weeks in this House with an amendment promised by their financial critic, the hon. junior member for Halifax (Mr. Maclean) showing what the policy of hon. gentlemen opposite is; and not a word of it, not a sound yet as to that policy. What is the matter? Cannot they agree over there? Is the free trade wing of our hon. friends opposite getting the best of them,and somebody else gone into sulk? What is their policy? Surely, in no other parliament in the civilized world can you find the state of affairs you see exhibited here. Our friends opposite claim to be ready to tear down this Government, and promised at the beginning of the debate an amendment setting forth their views; and yet, though their leaders are here and their speakers are up, they do not tell us what that policy is—at least, no two of them give it the same way. There is a complete mixture of opinion, as I should like to show. Yet, at the base, I believe, they convict themselves of being a protectionist party. The hon. member for Rouville (Mr. Lemieux) has shown his colours, like the astute politician he is. He believes that it is right to take the people into his confidence, and he has done so. But his leader has not done so, and neither have many other gentlemen opposite. Let us see where these hon. gentlemen stand. In the first place, the hon. junior member for Halifax (Mr. A. K. Maclean), who is reported at page 2594 of 'Hansard,' said:

Therefore, I say that the proposition that the placing of food-stuffs upon the free list necessarily means the adoption of free trade, is untenable and absurd.

I agree with that; I do not think it would be fair to say that that alone would be an adoption of free trade. He adds:

I do not propose pursuing my argument further upon this point.

So, that hon. gentleman is for free food. I do not know that, living where he does, he could very well come out as some of the western members do and say: I am opposed to protective duties. I am not sure that that would go very well in Halifax. I am sorry the hon. member is not in his seat. But perhaps some day he can explain just how he would be received among his constituents, if he favoured free food, free agricultural implements, and free wheat, and did not care whether there were protection at all or not. I can imagine that a number of people in Halifax would be calling upon the hon. gentleman to tell him where he got off at at the next election. He went on:

Economically our position upon this question is sound. I believe it is in the interest of both the producer and consumer.

Here is the same old thing—telling the producer that he can get better prices, and telling the workman that he can get his stuff for less. They tried to explain that in the reciprocity campaign, with the result that everybody knows. It is an impossible position, and hon. gentlemen opposite know that it is impossible. Apparently the hon. junior member for Halifax has forgotten the trimming his party got owing to their failure to explain that, and he goes back to reciprocity again. He is willing to expose the farmers of Canada to the competition of the world, while the farmers of Canada, on the other hand, stand largely for a policy of protection to their home market and protection to the industrial life of the country as well, which makes for the home market. The hon. member for Assiniboia (Mr. Turriff) is reported at page 2622 of 'Hansard' as saying:

How is it going to hurt the manufacturer if you give the farmer free wheat? How is it

going to hurt the manufacturer if you secure a free market in the United States for the farmer's oats, barley and flax?

The hon. member for Assiniboia is therefore a reciprocity free trader; he eliminates the idea of protection entirely, and in that way does not agree with many of those on the other side of the House. He is a reciprocity free trader with the sectional tinge of the West. The hon. member for South Cape Breton (Mr. Carroll), as reported at page 2648 of 'Hansard,' is also in favour of free agricultural implements, free food and free wheat. He is willing to open up everything to perfect freedom—except that he raises his hands to heaven and says: For God's sake do not touch the duties on iron and steel products, because I live in South Cape Breton and we have very large interests there. He scolds about it, and will not listen to any proposal to take away this protection. I do not blame him; I think he is right. But he ought to be over here. His reason for sitting on the other side of the House, I suppose, is perversity—pure cussedness, as the boy would explain it. He has no business over there, and any man who talks as he does has no business over there. He goes further than many hon. gentlemen opposite. I suppose his people will like that. What people? These big interests they talk about as having some influence over here. But I do not know how the farmers will like it. He says he is in favour of the most drastic kind of protection bounties. This free wheat, free implement, free trade advocate of the public right wants to shackle the people of the eastern part of the province of Nova Scotia, not only with a tariff, but with drastic bounties. He says at page 2650 of 'Hansard:'

But what about the small manufacturers of nails, outside of the Dominion Steel Company and the company at Hamilton? The Minister of Finance holds a bludgeon over the Dominion Steel Company at Sydney and over the steel corporations of Ontario, and he says to them in effect: if you do not sell your wire rods to the small manufacturers of nails at a reasonable price, or at the price they were getting them at heretofore, we shall cut you out and remove the duty.

The Minister of Finance has said to these big interests: 'You have to be fair to the smaller manufacturers of this country—and, through them, to the people of this country—so that they can sell their wares at honest prices.' The hon. member for South Cape Breton complains because the Minister of Finance has had the nerve and the splendid courage to take that decided stand in the interests of the people of this country. The hon. member for Rouville (Mr. Lemieux), with that candour of which I have already spoken, has stated his position very frankly. At page 2686 of 'Hansard' he is reported as saying:

If we were to accept the traditions of good old England, we would accept the gage of battle; we would stand for free trade, because free trade has made England what it is to-day. But we live in America and we have to follow the traditions of the American continent. We cannot have free trade in this country. We are wedded to a system of moderate protection as long as we raise our revenue by way of indirect taxation.

The hon. gentleman says that he speaks only for himself; of course the hon. member for Westmorland spoke only for himself when he said that he was an out and out free trader—and these gentlemen are of the same party, and sit on the other side of the House. The hon. member for Rouville goes farther and says:

I am a moderate protectionist. I say that protection must exist in our country as long as we have to raise a revenue by way of indirect taxation. We cannot have free trade as they have it in England.

The right hon. leader of the Opposition went to the country on that policy; he said that we could have free trade as they have it in England. It is most delightful to observe what a happy family our friends on the other side are, and how well they agree. But when the matter goes to the country we will see what the voters think after they settle down seriously to consider the policy pronounced by hon. gentlemen opposite, which I take to be free food, free agricultural implements, free wheat, and, according to the hon. member for Assiniboia, free oats, barley and flax, and any other little free things anybody in the West wants.

The cry of the hon. member for West Kent (Mr. McCoig) is free corn and reciprocity. As for the hon. member for Wright (Mr. Devlin), no living person can tell what are his views upon the fiscal policy of Canada. He has a policy all his own. He says that the Government ought to make agricultural colleges free, furnish the books free, give the farmers' sons free instruction; assist farm labourers to migrate from one part of Canada to another, keep the land of Canada for the Canadians, lend money to the farmers at 2 per cent, assist labourers to build cottages, &c. The hon. member for Wright is playing with his constituency; he is under the barn himself as far as his views upon the fiscal policy of the country are concerned.

The hon. member for Huntingdon (Mr.

Robb) spoke in this debate, and, as reported on page 2742 of 'Hansard,' he hits straight from the shoulder. One admires the honesty of the hon. member for Huntingdon; I say this in all seriousness. You can see the honesty beaming out of his language. He says:

Under the policy of 1911 the millers of Canada could have gone down into Kansas, Michigan or Ohio and bought wheat; and this would have been of special benefit to the Ontario miller right at this season.

The hon. member for Huntingdon is willing to rob the Ontario farmer of his wheat market and turn it over to the Yankees of Ohio and Kansas. He is willing that Canadian wheat shall go into the western portions of the United States and that the Americans shall come into Ontario and take away the market of the farmers. I have not heard an Ontario farmer complain, they are not of the complaining kind. They are not worrying; they, in common with every other industry and occupation, have had their difficulties, but they have not been whining very much. The hon. member for Huntingdon, however, being a miller, has thought the matter over and sees a way of getting the best of the Ontario and Quebec farmers. Being a miller, he disregards his trade policy and he does not forget the idea, put forth by hon. gentlemen on this side of the House on his behalf, that we should make of Canada a great milling country—the flour bin of the world; but the hon. gentleman would do it on Yankee wheat. I do not see how a manufacturer or miller can be so selfish as the hon. gentleman has been. It has been argued that the free entry of United States wheat into this country would ruin the Canadian millers; the hon. member for Huntingdon endeavours to prove that free wheat would be their salvation. Being a miller, he wants to see American wheat come into Canada to break the price of the Canadian farmer's wheat in Ontario, and Quebec. I myself can see a good deal of force in the argument that it would break the farmer's price at times if the 150,000,000 bushels of wheat that the American people send out every year were lying alongside of the border in elevators ready to be shoved into this market if the farmers of Ontario and Quebec were deprived of that protection to which they are so much entitled.

The hon. member for Medicine Hat (Mr. Buchanan) is one of the fairest members of this House. He says:

In 1911 if the manufacturers of this country had had the right kind of spectacles on they would have realized it was to their advantage to support reciprocity because it would have met the demands of the western farmer and have appeased him.

Made him be a good boy, made him pleasant and nice, so that he would not give sauce back.

Would have appeased him and manufacturers would not have been very much injured if at all.

Now, that is a nice view. The hon. gentleman from Medicine Hat says in so many words that the manufacturers, the managers of industrial concerns, are incapable and know not what they need; but he fixes a policy in the twinkling of an eye, right here on the floor of the House, having thought it over for a long time. He says the manufacturers were fools that they did not take reciprocity. The hon. gentleman expressed himself a convert to mixed farming, and is therefore a western farmer free trader. He honestly expressed the view that the West is a section that ought to have one policy, although the whole of Canada had another. You see the calibre of the hon. gentleman from Medicine Hat in that remark; he is willing to have a policy for the West and let all the rest of Canada have one of their own. He said at page 2763:

I am candid enough to admit that, as long as there is a sentiment in this country that our industries cannot exist without a certain amount of protection, we should have a certain amount of protection.

The member for Medicine Hat is a protectionist sectional free trader.

In regard to the other members to the left of the Speaker, I have not been able to follow carefully all of their addresses, but I find as a general result of the investigation that we are drifting in Canada along the lines of sectionalism as the outcome of the localized desire of members of the House to speak on behalf of their own constituencies or on behalf of a section of this country. As a Canadian, I rather deride that attitude. I have no right to condemn any man, but I have the right to my own opinion and I feel that the Canadian federation was launched on the basis of a confederation of provinces and is deriving its revenue on the basis of indirect taxation. I can understand, as the hon. member for Westmorland (Mr. Emmerson) put it, and put it well, that that fact cannot be got away from. The hon. gentleman put it in this way at page 2777:

I am an out-and-out free trader, and I wish circumstances permitted the adoption of free trade. I am to-day where I have always been. This Canadian Confederation was launched on the basis of indirect taxation; I quite understand that, and we have continued that policy. But if you could change the policy of indirect taxation and adopt a direct tax, then indeed you could have free trade. Speaking for myself, if a plan were proposed which would actually bring that about, I would hold up both hands for it.

The hon. member for Westmorland is a protectionist free trader. He would abolish the customs duty and place a direct tax upon land; but since he finds that impossible there is nothing for him to be but against the Government, and he is now in the same line, although in a different way, with the hon. member for Humboldt. The fiscal policy of both is largely that they are against the Government, except that the hon. member for Westmorland would take another dig at the farmers of this country, and place all the taxation to raise the revenue of the country, upon land, in which case the farmer would be the heaviest taxpayer and the millionaire would escape, the duty would be taken off all his luxuries. The farmer who cannot get away out of the country with his land would come under the benign sway and influence of direct taxation, according to the hon. member for Westmorland, who professes to be such a great friend of the poor, downtrodden farmer.

I have never before had the opportunity to listen to so many men speaking on one subject as in the last two weeks; but I must say it looks like an opposition unorganized, without a leader, everybody getting up and opening his mouth and letting it say just what it pleases. There is no method, there is no unanimity, there is no logical basis, there is nothing. The hon. gentlemen talk about their policy, but they hold it back, they are frightened to bring before the Canadian people the amendment which they promised, leaving it over in the hope that something may develop before the debate closes, when they can get down, choke off the western fellow who wants free trade and all get into one happy family with the doctrine of protection covered with the doctrine of free food for the workingman, free trade in wheat for the western man, coupled with free oats, free barley, free flax, and free everything that they think will bring them in a vote here and there. That is their policy, and it does not seem to be up to the standard of the once great Liberal party.

A great deal has been said about western Canada. Arguments have been put forward that to my mind are seriously to be deplored. The trend of these arguments is towards disintegration, disunion. The general feeling of the Ontario members of the House on both sides is, I believe, that we are sharers, and proud of being so, in the great heritage of the western provinces. It is as much ours in a sense to be proud of, as it is theirs who occupy the land. It is a land fertile, a splendid prairie section where splendid grains are grown, settled with a splendid people who are above the standard of the men who represent them in this House as far as wailing is concerned. You ask the average man in the western provinces how he is getting on and he will say he is doing fine, that it is the best country in the world. He will admit that they have had a little set back in real estate and that things are dull just now, but if you ask him if he would care to come to eastern Canada, he would say: Never, you are not in it, the West is the place for me. The people of the West are full of optimism, and it is a fine spirit, a national spirit, a building-up spirit. But what different language do we get in the House from those representing those people, one continual whine the whole session; and I suppose that will continue as long as life lasts unless the parliamentary opinions of the people of the West change. A member listening to the debate must wonder whether or not there is justification for what members from any part of the Dominion say with regard to their province. I had been taught to believe that the western provinces were practically the great wheat growing country of the world. Let us see what are the great wheat producing countries of the world, because I think every one should be conversant with the facts. They are: Germany, Spain, France, Hungary, Italy, Russia-in-Europe, Russia-in-Asia, Canada, the United States. India and Argentina. Here are the figures of wheat production for 1912 and 1913:

Country.	Area.		Production.	
	1913.	1912.	1913.	1912.
	Acres.	Acres.	Bushels.	Bushels.
Germany	4,878,000	4,759,000	171,077,000	160 226,000
Spain	9,414,000	9,625,000	110,098,000	109,784,000
France	16,170,000	16,239,000	322,731,000	334,342,000
Hungary	8,650,000	9,581,000	166,675,000	184,642,000
Italy	11.842,000	11,751,000	214,407,000	165,721,000
Russia-in-Europe (a)	62,070,000	60,666,000	837,787,000	623,761,000
Russia-in-Asia (b)	13,103,000	10,729,000	138,003,000	103,270,000
Canada	11,015,000	10,997,000	231,717,000	224,159,000
United States	50,184,000	45,814,000	763,380,000	730,267,000
India	29,569,000	31,141,000	358,389,000	370,514,000

That shows exactly where Canada stands in relation to the wheat-producing countries of the world. In face of those figures I do not know whether the time has come when we should boast of our wheat production, and I do not believe that it is worth while spending so much of the country's money running down present conditions just for the sake of wheat. I look forward to the time when, in addition to a greater quantity being raised in our splendid western provinces, there will be an improvement in the quality; because I find, much to my surprise and mortification, that Canadian wheat is not the high priced article in European markets that I thought it was. I had thought that the western wheat was a splendid cereal that beat them all. Some western members look in wonder that I dare make such a statement; but I have here the prices of colonial and foreign produce in British markets for 1913 and 1914:

	(Per bushel.)		
Canadian No. 1	$1.05⅞	to	$1.06⅝
American Spring No. 1	1.06	to	1.07⅝
Australian	1.10⅛	to	1.11⅝
White Bombay	1.14	to	1.14¾
White Calcutta	1.13⅜	to	1.14
White Karachi	1.11⅛	to	1.11⅝
Red Karachi	1.10⅛	to	1.11⅛
Argentina	1.08⅞	to	1.10⅛

I do not wish to weary the House by giving all the figures. The point I wish to make is that we have been led to believe that western wheat was king in the markets of the world; but I find that we have a great deal to do in improving the quality of our production before we can be considered in the same class as a lot of the nations that are competing in the markets of the world. I regret to say that, but it is well to know exactly where we stand.

[Mr. Morphy.]

I wish to say a word or two about the imports of wheat into the United Kingdom. It imports 200,000,000 bushels yearly. How much do we send? Canada sent just one-fifth. The United Kingdom takes one-fifth from Canada, one-fifth from British India, one-tenth from Australia, one-fifth from the United States and one-seventh from the Argentine republic. Notwithstanding the low price of Canadian wheat we send in relation to other countries just about the same quantity, probably a little more than some countries in relation to area. It is not well to boast about what we can do as a country until we can do a little better in the markets of the world. Our market is undeniably there. According to the theory of the hon. member for Huntingdon (Mr. Robb) every pound of Yankee wheat that goes into the Ontario miller's hands shoves a bushel of Ontario wheat to the British market. That is a displeasing fact no matter which way you take it. So long as Liverpool and London rule the wheat markets of the world just so long we shall have to look to our laurels; and before boasting too much we should improve the quality of our wheat. We need to roll up our sleeves and go to work, realizing that after all the government of any country can only do so much, and that everything depends upon the industry of the people. Let me give an illustration in regard to industrial life in my own county. In the county I have the honour to represent we have a large industrial community engaged in various industries. Thousands of workmen are employed in the Grand Trunk shops and train services and hundreds of workmen in the furniture and chair factories. There is a large piano factory and a large

furniture factory in the town of Listowel, and these last two factories worked overtime up to Christmas last year. What on? On pianos, a luxury, and on furniture, a necessity. They felt that trade was going to pick up. They did not sit down and whine, but they set to work as business men and had the best season in their history. They sold their pianos in the Maritime provinces in such large quantities that they had to work overtime. I think that the pessimism that is shown in this House and in the press is a great deterrent to the progress and development of this country. If we as Canadians gave up the pettiness of political partisanship and splenetic political utterances and set to work, Canada would once more resume its wonted sway, and our workmen under the aegis of fair-minded manufacturers, would have regular work.

We have heard a lot about what has not been done for the farmer. In my county there is a mixed community of labouring men and farmers. They each understand their mutual dependence upon one another. The farmer understands that if the mechanic is protected from the large industrial concerns in the United States, he will get good wages and be able to consume the farmers produce. They coalesce and work well together. What are the Government doing for the skilled labour of the country? At great expense they sent a technical commission to the principal countries of the world. This commission published a report which is full of valuable information. I have not the confidence of the Government, I do not know what they are going to do, but every indication leads me to believe that the report of that commission means that something will come out of the coffers of the Government to better the condition of the labouring man. Our industrial life is just as much the basis of our national life as agriculture is. I do not think it can be gainsaid that if the workingman was not here or somewhere else, the farmer would not have any place in which to sell his produce. The artisan is entitled to the fullest and most sympathetic consideration of the Government in any civilized country in the world. What is the result if he does not get that consideration? The other day, I confess it rather with mortification, I was requested to send a man to Stratford to speak to a class of apprentices in the Grand Trunk shops. An expert in industrial life was required to address the young men there along industrial lines. The only man I knew was Professor Robertson, and he was in Nova Scotia. I asked my friends to help me find a man to undertake this duty, but I was told that there was in the Dominion of Canada to-day no expert available to go out and talk to a number of young men and to teach them the higher mechanism and the higher morals of industrial life or to add anything to what these boys already knew. If you have an institution and attempt to govern it by the same body of men without introducing new blood and modern ideas, the thing is going to die. I see my hon. friend the Minister of Public Works (Mr. Rogers) before me, and I would ask him to pay particular attention to this at least. I would suggest that he should take up with his colleagues in a practical way the question of the great good that may spring out of the work of this technical education commission, that after proper consideration practical steps may be taken to carry out its recommendations. Instead of giving $1,000,000, let them give $5,000,000 out of the public treasury to better the condition of the industrial workers from the Atlantic to the Pacific, and if they do that there is no farmer in the whole Dominion that will say them nay.

Mr. ROCH LANCTOT (Laprairie-Napierville): Mr. Speaker, I have listened very attentively to what the honourable member for North Perth (Mr. Morphy) has said, and what I have found to be the most amusing part of his remarks is the quotation which he made of speeches delivered in this House by certain members of the opposition, namely by the hon. member for South Cape Breton (Mr. Carroll) and by the hon. member for Westmorland (Mr. Emmerson). He seemed to amuse himself with pointing out to you, Mr. Speaker, that we on this side of the House, were divided, the hon. member for South Cape Breton being in favour of a revenue tariff and the hon. member for Westmorland being an irrepressible free trader. He also alluded to my hon. friend from West Kent (Mr. McCoig). He quoted those three gentlemen as an instance of the would-be differences of opinion existing on the opposition side with respect to the tariff.

But, Mr. Speaker, I can only regret that the hon. member did not think it proper to scrutinize the views of the ministers now in power. He would have found that, during the campaign of 1911, there were great differences of opinion between those gentlemen. Does he know, for instance, that the Postmaster General (Mr. Pelletier) was against the present Prime Minister on

the question of the naval contribution? Does he know, also, that the Minister of Inland Revenue was opposed to that policy of his leader, and that the Secretary of State (Mr. Coderre) who travelled all over the province of Quebec during the summer of 1910 with several Nationalist members, had denounced not only the naval policy of Sir Wilfrid Laurier, but the very policy of his own leader, which, he said, was even more nefarious than Sir Wilfrid Laurier's? The hon. member, living in a glass house as he does, should not fling stones at his neighbour.

Mr. Speaker, I shall take advantage of the budget speech of the Minister of Finance for 1914-1915, to make a few remarks on certain changes effected in the tariff, especially as regards three kinds of agricultural implements: the mower, the binder and the harvester. The minister has announced a rebate of 5 per cent on those machines. I wonder, Mr. Speaker, if this rebate does enable our Canadian manufacturers to successfully compete against the foreign manufacturers. If so, why then did the minister not make a total reduction of the taxes on rakes, drills, harrows, ploughs, hay loaders, etc., all of which are bought by numbers, especially by the farmers of the province of Quebec? Wherefore I have no hesitation in saying that this small rebate of 5 per cent on the three articles which I have mentioned will satisfy nobody, because it is only partial, whereas it should apply to all articles wanted by the farmers. Why then has the rebate not been general rather than limited to such a small number of articles?

If our Canadian manufacturers are able to face foreign competition as far as those machines are concerned—and it is an established fact to-day that they are—then I fail to see why they could not victoriously undergo the same reduction in the tariff as regards the articles wanted by the farmers.

Let me state, Mr. Speaker, that far from being satisfied, the farmers of Canada shall persist in asking that the duties on such articles be completely removed, for the very simple reason that our Canadian manufacturers do face foreign competition to advantage in all the countries of the world. Why then should we, the farmers of Canada, be called upon to pay more for our implements than do the farmers of the European countries who buy those same machines from our Canadian manufacturers? Less freight is charged on machines used in our country than if they were shipped to

[Mr. Lanctôt.]

European countries, such as France, Russia, or Germany, and moreover, they are free of the import duty which is levied on the same kind of machines by those countries and by some others, and yet, irrespective of this, we pay from twenty to twenty-five per cent more than the European countries do.

I say, Sir, that if such treatment is meted out to us by our manufacturers, it is due to the protective system we have in this country, it is due to the barrier created by the imposition of a 20 per cent or 25 per cent duty in order to prevent foreign competition. I say that this barrier must be pulled down some day or other, because our manufacturers have enjoyed a protective tariff for thirty-six years at least, and it is fully time that the mass of the people should have their own turn, let this be said with all due deference to Senator Melvin-Jones, the president of the Massey-Harris Company.

Who are those who should have supported the reciprocity treaty in 1911? The manufacturers of farming implements especially, in my opinion, because they had enjoyed for thirty-six years a protective tariff, a tariff which enabled them to make millions out of the goods which fetched them all that money from the farmers of this country. When the Liberal Government, in 1911, asked the House of Commons to ratify a reciprocity treaty which they had negotiated with the United States with respect to the exchange of our natural products, who were they who struggled against us in order to prevent the adoption of that treaty? They were the manufacturers of this country, and more especially the manufacturers of farming implements, and they subscribed large amounts so as to ensure the defeat of the candidates who were in favour of that treaty. During the campaign of 1911 our opponents cried out on all the hustings: " If you vote in favour of that reciprocity treaty with the Americans, our markets will be submerged with all kinds of American products and we shall be able to sell our own products but dirt cheap." They talked to us of our cattle as an instance. But is it not a fact, Sir, that just after the barrier concerning our cattle was pulled down in 1913, it took us but four months to export to the United States 162,491 head of cattle, whereas during the same period of the preceding year, we had exported but 20,101, which makes a difference of 142,390 head more? Is it not also a fact that we have imported a great deal of hay since the tariff was re-

duced by one half, that is from $4 which it was in September, to $2 in October? And the same remark applies to several other lines of products on which the duties have been removed or a rebate of one half has been made.

The honourable Minister of Finance has declared a surplus of thirty-six millions and a half over and above the ordinary expenditure, and while presenting this side of the case he seemed to be fully satisfied. But, I would like to examine the other side for a few minutes. The honourable Minister told us that our public debt was less to-day that is on the 31st of March, 1914, than it was when he came to power on the 21st of September, 1911. This is what we are going to examine together, Sir, and just a few moments will suffice. Let us first go back to the early days of the present regime and take the fiscal year 1910-1911. During the session of 1910-1911 under the Liberal Administration only five-twelfths of the estimates were voted for the then current year, so that the expenditure was a good deal less than it would have been had we voted all the money called for in the estimates, and therefore the late Government was precluded from beginning a great number of public works in the whole country. It follows that the expenditure was less than it should have been if the whole list of estimates for 1910-1911 had been voted. As I said a moment ago, during the session of 1911-1912, the first session after the hon. gentlemen had come to power, the balance of our estimates was voted and few estimates appeared on the list of supplementary estimates for that session, and so we expended for public works of all kinds, during those two years, what would have been expended in just one year, had the estimates for 1910-1911 been all voted that same year. This has enabled the Minister of Finance to declare, in his budget speech for last year, a surplus of thirty-six millions and a half over and above the ordinary expenditure, and to finish the year with a surplus over all expenditure whether ordinary or extraordinary. But, unfortunately for the people of this country, the honourable gentlemen have inaugurated their administration but last year, and the new Government asked us then to vote them $250,000,000, thus setting aside such prudence as had been shown by the late Minister of Finance when he limited as much as possible the expenditure called for by the Administration of the country.

Times have changed to a great extent, Sir! In 1910-1911, the ordinary expenditure was eighty-seven millions. This year it is 126 millions and a half, which means a difference of thirty-nine millions more for the administration of the country.

Let us now take the subject of that expenditure. The militia will cost $10,938,905, and under the liberal rule it did cost but $6,658,300 for the year 1910-1911.

In 1913-1914, the expenditure on public works was $32,033,751. In 1910, we, Liberals, have spent but $10,000,000, which means twenty-two millions less. I do not hesitate in saying, Sir, that several of those millions are spent to no purpose. Let us take, for instance, the building of arsenals throughout the country. Millions are spent uselessly on those constructions which bring no revenue to the country, and far from it, they are even a source of expense, because there must be a keeper for each building, and all the buildings must be heated, lighted and cleaned, which requires soap, brushes and brooms; moreover, repairing of all description must be provided for, and this with no return to be expected for the country. Is it not a fact, Sir, that it will cost the Government ten times more to repair their buildings than it would cost a private individual to repair his own, and that the difference is intended for friends of the party in power?

Referring to the surplus of thirty-six millions and a half as represented by the Minister of Finance and to the public debt which the minister said was less to-day than it was in 1911 and left the present Government in a very satisfactory condition in this respect, I may say this: On the 21st of September, 1911, the net debt was $318,593,924.15, and the total debt $472,141,823.88. On the 31st of March, 1914, the net debt was $315,019,288.75. On the same date the total debt had gone up to $530,687,885.62, which means that our public debt was increased by $52,546,061.74 in two years' administration.

The interest on the public debt for the year 1913-1914 has cost us the fair sum of $13,179,913.01. For the current year the interest shall run up to $14,917,926.33, whereas for the year ending in 1911, the total interest paid on the debt was but $12,535,850.81, which makes a difference of $2,382,075.52 less under the Liberal rule.

Now, Sir, the minister may say that we have made investments, such as our loan to the Canadian Northern. Those investments are positively of no benefit to the country, and I am sure the hon. Minister of Finance is aware of the fact, for the

Canadian Northern got some help from this Government last year to the amount of fifteen million dollars, and rumour now has it that this company is trying to get another forty or fifty million this year. Should this be granted, that railway shall have got from the provinces and from the Government of Canada an aggregate amount of more than two hundred and fifty million dollars in the shape or form of subsidies and help. We have reason to believe that, in spite of this, the company will, from year to year, come and ask millions from the Government. Therefore, Sir, you will agree with me that those investments are hardly an advantage to the country. Here is how I consider such investments: Let us take a farmer who has a nice farm clear of debt, that is, a man who does not owe a cent, while his neighbours owe more than their farms are worth. That man borrows five thousand dollars, he mortgages his farm for that much and distributes the sum right and left to his neighbours, who are already indebted to the extent of being unable to face their own obligations. Several of those who have received the funds will never pay them back. However, he calculates these loans as part of his assets; but, Sir, he shall always be bound to pay the interest due on the debt which he has contracted, and as for those who have borrowed from him, if they come to fail, the assets which he had in the form of loans will vanish away and he will remain burdened with his debt. Such is the case of the present Minister of Finance. Several loans forming his pretended assets will never be refunded to him, and the country will have to pay the interest on his total debt and to pay that same debt some time or other.

I have read in the ministerial newspapers the report of an interview given by the hon. member for Argenteuil (Mr. Perley) to the journalists when he visited the Eastern Townships. The hon. minister without portfolio declares that the French Canadians feel enthusiastic and that they approve the Borden contribution owing to the explanations which he gave them off-hand. He concludes that this contribution to the British navy had not been understood previous to his visit during which he was accompanied by the hon. Secretary of State (Mr. Coderre) who, in 1911, had nevertheless preached quite a different doctrine in the county of Hochelaga and in the province of Quebec generally. One must add the name of the hon. member for Dorchester (Mr. Sévigny) who was no less severe towards his leader, Mr. Borden, during the summer of 1910 and the election of 1911 than he was towards his opponents.

I presume, Mr. Speaker, that the hon. ministers have told the electors of the Eastern Townships that, during the year 1913-1914, this Government got the House to vote $2,610,000 for the naval service, and for the current year, $2,410,000.

During the campaign of 1911, we, Liberals, were attacked by the candidates of the opposition on the ground that the Liberal Government had bought the Niobe and the Rainbow, and that those ships, as they said, were only good to be thrown aside and sold as scrap iron.

Has the Government respected the pledge taken at the time by his candidates before the electors? No, Sir, this Government keeps the Niobe in the harbour of Halifax and the Rainbow in British Columbia, with crews on board, crews paid by this same Government who, moreover, maintains the naval school of Halifax at which his friends are admitted as students, and the country spends about three million dollars to continue the naval policy of Sir Wilfrid Laurier through those who have denounced it on all the hustings of the country. At the beginning of the present session the hon. member for Montmagny (Mr. Lespérance) introduced a bill to repeal the naval law of the Laurier cabinet. I thought the honourable member was sincere when he introduced that bill; but, I must confess, Mr. Speaker, that I do not believe in his sincerity any more.

That hon. gentleman has left for Europe, his Bill will not be considered at this session and I do not think it will come up in the near future, judging from the stand taken by the hon. member for Montmagny. I for one, Mr. Speaker, would have been glad if that Bill had come up for its second reading, as that would have afforded me an opportunity to express my views concerning the Act of 1910.

This Government was unwilling to carry out the Laurier Navy Act. The right hon. Prime Minister, with a few of his colleagues proceeded to England during the recess of 1911-12 to confer with the British Admiralty and the Home Government, in order to know what this Government should do for the defence of Canada and for the defence of the Empire as a whole. It was decided to order the building at the expense of Canada of three of the largest dreadnoughts of the best type which science could device and money procure.

It just amounts to this, Mr. Speaker, that

the Admiralty and Government of the mother country have modified their views, and I may add that, as far as I can see, they do not seem to know what they want. Apparently these gentlemen are at liberty to change their minds and to be one day in favour of a local navy and the day following in favour of the building of dreadnoughts.

If the British Admiralty and Government are at liberty to alter their views as regards the action which Canada should take, I trust, Mr. Speaker, that it will be allowable for your most humble servant who is now addressing you, to say what he thinks of that change of front and to make known his views as to the nature of our future intercourse with the mother country in connection with naval defence.

In 1909, I agreed to the resolution of March 29, and in 1910, I voted for the Bill known as the Laurier Naval Bill. But this Government has not deemed it proper to carry out the policy approved in 1910, and, on the contrary, has launched a new policy in 1913, that is to say, a proposal to grant three dreadnoughts to Great Britain. That policy is even worse than the preceding as stated by our Nationalist friends during the elections of 1911, though they have in the meantime become out and out ministerialists in this House. Then we are bound to take into account the present state of things in Europe, a state of things which is constantly improving, all danger of warfare disappearing. Mr. Speaker, I have never been of a warlike disposition, far from it. The British Empire is secure as yet, in spite of the forebodings of the right hon. Prime Minister in his speech of December 5, 1912, when submitting to the House his contribution policy. Conditions are quite different from what they were in 1909-10 and 1911-12; there is no longer any justification either for the establishment of a navy or the granting of a contribution, and it would seem from all we have seen of the doings of the Admiralty that we should henceforth frame our policy in accordance with the sole requirements of Canada. In view of all the above stated facts, I say that we should under the shortest possible delay start the building of the Georgian Bay canal, a departure which would surely be of much greater benefit to the farmers of this country and to Canada's commercial metropolis than the construction of dreadnoughts and the maintenance of a war navy.

Had it not been for the interference of the Senate, the country would be just now pledged to an expenditure of fifty or sixty million dollars for the building of those three dreadnoughts in Great Britain during the three years following the passing of the Bill; that is to say that for the current year we would have been called upon to insert in the estimates $15,000,000 or $20,000,000 for that purpose.

So I say, Mr. Speaker, that the people of this country would much prefer seeing the Government provide $10,000,000 in this year's estimates towards starting, by next spring, the work on the Georgian Bay canal.

A few moments ago, Mr. Speaker, I referred to the tour which some of the ministers had made through the Eastern Townships. I read in the papers an account of their speeches, especially in regard to the Borden contribution. The hon. member for Argenteuil (Mr. Perley) found that the contribution proposal was very popular in French Canadian centres. I may suggest to the hon. gentlemen to pay a visit to my constituents in Laprairie and Napierville during the coming recess of Parliament. I would also like his colleague the hon. Minister of Justice (Mr. Doherty) to accompany him, so that we might discuss the bargain he made with the country, whereby after spending fifteen years on the Bench, he became entitled to a pension for the remainder of his life.

The country is mute, but I represent in this House a fraction of its population equal 1/221, and on that ground I may be entitled to take exception to that enactment and to move for its amendment.

The hon. member for Argenteuil, while in the Eastern Townships, also referred to the Highways Bill. Through this Bill the Dominion Government appropriated an amount of $10,000,000 for ten years to come, which means an average of one million dollars per annum for the next ten years, towards improving highways throughout the country. If, in that Bill, the minister had inserted a provision whereby that amount would have been distributed on the basis of population, which would have meant for the province of Quebec a yearly grant of $270,000, that would have been fair.

Are you aware, Mr. Speaker, that there are in the province of Quebec, 1,048 municipalities, and that just now over 400 municipalities are benefited by the Act passed a good many years ago by the Liberal administration of Sir Lomer Gouin?

I estimate that there is on an average twenty miles of roads in every municipality, an estimate which is very conserva-

tive indeed, considering that in my own constituency some municipalites have as much as 43 miles of roads to make. That will give a total of 20,960 miles of roads to look after in the province of Quebec. I estimate the average cost of such roads at $7,000. Now, 20,960 miles multiplied by $7,000 gives the startling total amount of $146,720,000.

Mr. Speaker, I would like to figure out with you how many years it would take the Government to get through with that work in the province of Quebec. With $279,000 to spend per annum, at the rate of $7,000 per mile, we will be in a position to improve slightly over thirty-nine miles per annum, let us say forty miles per annum in round figures. Let us see how long it would take to go over the 20,960 miles I have just referred to. Since it takes $278,000 to build 40 miles of road, by dividing 20,960 miles by 40 we have the number of years it will take to complete the undertaking, and that is 524 years.

Please note, Mr. Speaker, that I have not taken into account the cost of the machinery required for the building of such roads in the various provinces. Such a plant, complete, costs $6,500, and such an outlay would reduce materially the amount available for road-building in the province of Quebec. Plants would be required from year to year and the $278,000 appropriation would be cut down by so much. I expect that the hon. gentleman I referred to a moment ago would thus address the electors of the Eastern Townships: We had resolved to hand over to you $10,000,000 towards furthering the improvement of your roads which are in a deplorable state, and if the Senate had not amended that Bill, you would have had as good roads here as they have elsewhere. That is the unvarying statement of these gentlemen wherever they go.

Mr. Speaker, I did not have much faith in the Government's sincerity when they put through that Bill for the improvement of highways. It was rather in the nature of a vote catcher in election time, and we had a good example of it when a bye election took place in South Renfrew during the session of 1911-1912. Even previous to the Bill being introduced into Parliament, some politicians were pressing the voters in Renfrew to support the Government candidate as a means of securing a large appropriation towards the macadamizing of their roads. I think that was the only object they had in view, since the Government rejected the amendment made by the Senate, an amendment which purely and simply required that the clause providing that the funds should be left wholly at the disposal of the minister to be spent at his own sweet will be struck out and replaced by the words 'on the basis of population' in the various provinces.

I think that the best means of assisting the farming class in the improvement of the highways would be to increase the subsidies to the provinces. I should say, in passing, Mr. Speaker, that the Quebec provincial act is most satisfactory in its working and all are entitled to take advantage of it, whether the constituency be represented by a Liberal or by a Conservative, whether the parish be Grit or Tory. In a word the Act is for the benefit of all.

Mr. Speaker, to show that I have good reason not to rely on the good faith of the Government in the matter of the improvement of highways, I shall refer to that part of King Edward avenue which traverses Laprairie. The former Liberal Government spent $38,000 on the lower part, called the Laprairie domain, covering a length of 8,000 feet. This Government, which has been in power since September 21, 1911, has not as yet done anything to emerge from that quagmire. The carrying out of that work is urged, not only by the Laprairie and Napierville farmers, but by the whole city of Montreal and also by the automobile clubs of Montreal as well as of the United States. However, as yet the Government has not done anything, and please observe that this stretch of road is only 8,000 feet in length. I stated a moment ago that 524 years, to say the least, would be required to build up the roads in the province of Quebec out of that $278,000 per annum; but if I was to base my estimate on the time it is going to take to complete those 8,000 feet of the Laprairie road, 5,000 years would be nearer the mark. Possibly that stretch of road at Laprairie is left in abeyance to be taken up again in the course of the next electoral campaign.

Besides, how could two Governments carry on simultaneously the improvement of roads within the same county or the same municipality, one stretch of which would be worked by the municipality by means of the 2 per cent loan of the Provincial Government, while another stretch would be under the supervision of the Dominion Government? That would not be practicable, and I am satisfied the Government will not bring back that Bill as framed in the first instance, but, will provide a further grant so as to put the pro-

vinces in a better position to improve their roads as rapidly as possible.

I was referring a moment ago to King Edward avenue. The hon. Minister of Public Works is aware that the said avenue passes through my constituency, as I conferred with him on the subject last year, and he gave me to understand that those 8,000 feet of road, that is about a mile and a quarter, would be built in the course of the summer of 1913. However, nothing as yet has been done. That road was at the time, and is still at the present time, in a deplorable state. The hon. Minister of Inland Revenue (Mr. Nantel) has some experience of it himself since, one evening, returning from the county of Chateauguay, where he had been to canvass electors on behalf of the Government candidate, he came very near being obliged to spend the night in a mudhole, as the automobile in which he was driving got stuck and could not proceed any farther.

Mr. GAUVREAU: He was very lucky to get out.

Mr. LANCTOT: To my mind, the best way of assisting the provinces in the matter of road improvement, is not through the Dominion Government stepping in and doing the work themselves, but simply making grants to the provinces, or extending bonuses to municipalities which are carrying on improvements. Such an Act would be of benefit to all, all municipalities would equally be in a position to take advantage of it, provided they improved their roads. Make the bonus $25 or $50 or $100 as you please, for every mile improved. Such an enactment would be fair to all, nobody would be singled out for special favours. Any municipality effecting such improvements, would be entitled to get the grant provided by the Act. I think such a procedure would be a good deal more satisfactory than that laid down by the Government in its Bill of last session.

In concluding, I wish to draw the attention of the Minister of Public Works—I do not know whether he understands French—to the work on the embankment at Laprairie. When the estimates of his department are brought down, I shall take occasion to confer with him at greater length on the matter. In the meantime, I would like to urge on him the necessity of getting the contractors who signed the papers a few days ago, according to the answer given yesterday to a question put by me, to push the work to completion as expeditiously as possible, so that the farmers of Laprairie and Napierville may take advantage of them. I think that the road might be completed within two or three months, and then not only farmers, but the automobile clubs of Montreal and elsewhere would be in a position to use it.

Mr. Speaker, I shall not tax your patience any longer; I have kept the floor a good deal longer than it was at the outset my intention to do, and in resuming my seat, I must thank the House for the courteous hearing hon. gentlemen have extended to me.

Mr. W. F. GARLAND (Carleton, Ont.): Mr. Speaker, it is with some degree of nervousness that I rise to address the House for the first time; but I will not detain it very long. As a novice, it would be very hard for me, at this stage of the debate, to make a speech without rehashing what has been said by previous speakers. I am proud to represent a constituency which has remained true to the Conservative party since 1867. I am also proud to predict that the same constituency will remain true to the Conservative party for as long again. I am also proud to say further that this constituency has been honoured by being represented in this House by the late Sir John Macdonald and also by the present Prime Minister of Canada. References have been made here to the hon. member for Carleton. I sometimes felt embarrassed when I heard those references made, but I am proud to say that they did not refer to the member for Carleton, Ontario. I am sorry the hon. member for Carleton, N.B. (Mr. Carvell), is not in his seat, because I would like to tell him of a little incident which happened to me, and which perhaps might be beneficial to him. A short time ago I was introduced to a constant frequenter of the gallery as the hon. member for Carleton. 'Oh', he said, 'you are the member for Carleton, who rises in your seat every few minutes and says a whole lot that does not mean anything.' 'No,' said I, 'I am not the member for Carleton to whom you refer. He is the member for Carleton, N.B., and is known in this House by the Conservative party as the jumping jack politician of Canada.'

I must congratulate the hon. Minister of Finance on his businesslike Budget speech. I must also congratulate the Government on having every man in the Treasury benches fulfilling his duties in a businesslike manner. I am proud to be a Conserva-

tive, and I was prouder to be a Conservative when I heard the Budget speech delivered. There is quite a difference between the way in which the country is being administered by the present Government and the way in which it was administered by the late Government. The ex-Postmaster General promised to give us rural mail, but he did not do so. If he had done so, the fact would have been advertised from the housetops and on billposters. The present Postmaster General, besides making rural mail a success, has established parcel post and has done so in a modest and quiet way. Had I been the Postmaster General at the present time, I would have had all those rural mail boxes which he has established painted blue, and on one side the words, 'Established by the Borden Government,' and on the other side 'Protection.' If that had been done, all the rural mail boxes in my county would have been painted blue.

I do not know that I can say anything about the policy of the Opposition; but perhaps I can say something about their policies. The policies, which I have gathered from the members of the Opposition who have already spoken, are: free food, free wheat, inconsistency, do nothing when you are in power except enrich party heelers, promise everything when out of power.

In regard to the high cost of living, there are no complaints from the producers of food-stuffs. The farmer is only getting his rights and in some cases making a little money. The high cost of living is felt in the cities; and perhaps, instead of the high cost of living, it should be better termed the extravagant cost of high living. The high cost of living is caused not by the high cost of food-stuffs, as the leader of the Opposition and all his supporters claim, but by too many car tickets and not enough walking; too many cigarettes smoked, too much ice cream and chocolates, too many extreme changes of style in women's headgear and dress—large hats, small hats, hobble skirts, peg-top skirts—too many nickle theatres by some classes, too many dollar seats in opera houses on small salaries, too many dainties and delicacies on tables, the extravagance of the rich man, and the imitation of the poor man. I would like to see every Canadian living like a prince, but I would prefer to see him living within his income.

With regard to free wheat, I do not think it would be a good thing for Canada, because Canada needs protection. I have taken from to-day's Mail and Empire the following quotations of actual bids on wheat:

	Minneapolis.	Winnipeg.
May..	89⅛c.,	90¼c.
July..	90⅝c.	92c.

The same quotations appeared in the Toronto Globe, which may be of some satisfaction to hon. members opposite. In my opinion, all the wheat should, if possible, be ground in Canada. There are over 600 millers in Canada who, if we had free wheat, would go out of business. The ocean rate on flour is three times the rate on wheat.

The hon. member for West Kent (Mr. McCoig) said that the reason why the farmers did not want mixed farming in Manitoba was because it would hurt mixed farming in Ontario. As an Ontario member, I would say that the member for West Kent need not fear for the Ontario farmer so far as competition is concerned. Every Canadian courts competition rather than shuns it. We sent our Canadian sons to the livestock judging in Chicago, and they gave a good account of themselves; they also won in the beef competition there. The reason why the farmers of Manitoba may want free wheat is that they are not getting the yield per acre which they got when they had virgin soil. If the Manitoba farmer would work his land better, as the hon. member for South Ontario (Mr. Smith) said, he would have a better yield. The Ontario farmer has as good a yield to-day from his farm as he had fifty years ago.

With regard to free agricultural implements, this Government has done something that the late Government did not dare to do; that is, they have taken 5 per cent off the duty on reapers, harvesters, binders and mowers. There has been called to my attention a firm in western Ontario which manufactures the Speight wagon, which was sold twenty-five years ago for $125. The same wagon sells to-day for $85 under protection, and we must consider the extra cost of material and labour.

With regard to protection, the Opposition, when they have time, should read the speech delivered last session by Mr. Wilson, of Wentworth, with regard to binder twine, coal oil and barbed wire. Canada is a young country, and could not exist for long without protection.

The policy of the Liberal party is—anything to return to power. They will say and promise anything when not in power in order to catch votes, but the people will not be fooled again as they were fooled for fifteen years with such speeches. We often hear the quotation: 'My kingdom for a horse!' 'Oh for a seat in the House of Commons!' says the ex-Minister of Labour, of pink-tea fame. 'Oh for a seat in the House of Commons!' says the ex-Minister of Agriculture, of crate-fed chicken fame.

I was somewhat amused when the hon. member for Bonaventure (Mr. Marcil) was delivering his speech. He gave us the same speech with regard to the Gaspé peninsula as he gave last session, when he told us that where Westmount is now located there was formerly an orchard. The people might like to be told that a tree once grew in the place where the hon. member now sits.

With regard to the three transcontinental lines in Canada, perhaps there is already one too many, but better one too many than not enough.

I cannot let the opportunity go by without making a slight reference to the Georgian Bay canal. This undertaking should be adopted by the present Government, as we are in need of a great waterway from the East to the West.

With regard to the Senate, I will only casually refer to it, as I think nearly every other speaker has referred to that august body which is now dying a peaceful death.

As to the navy, I am sorry that this country, the brightest jewel in the Crown of Great Britain, is not doing its duty. I think this matter should have been brought up this session again and put through, or at least another opportunity should have been given to the Senate.

In conclusion, I think we should do away with sectional and provincial discussion in this House, and join hands and boost one Canada. We should boost Canada when we are in Parliament and when we are out of Parliament, and tell the people of other countries that Canada is the greatest country in the universe. Mr. Speaker, you have often been compelled to rise in your seat and say 'Order.' I should like to see you, when some person is knocking Canada, no matter what party he may represent, rise from your seat and say, 'Boost!'

I will not weary the House longer, but will close by thanking you, Mr. Speaker, and the members of this House for having listened so kindly to my rambling remarks.

On motion of Mr. Murphy, the debate was adjourned.

On motion of Mr. Rogers, the House adjourned at 11.27 p.m.

Wednesday, April 22, 1914.

The House met at Three o'clock, the Speaker in the Chair.

QUESTIONS.

(Questions answered orally are indicated by an asterisk.)

VANCOUVER ORANGE LODGE RESOLUTION.

Mr. PROULX:

1. Has the attention of the Government been called to a certain resolution passed on the 30th March by the Vancouver County Orange Lodge, referring to Home Rule in Ireland, etc., a copy of which was ordered to be sent to the Prime Minister of Canada, and to Winston Churchill and Sir Edward Carson?
2. Has the Prime Minister received a copy of the said resolution? If so, has he made any reply, and what was the nature of it?
3. Does the Government approve of the suggestions made in the said resolution?
4. What action, if any, does the Government intend taking regarding the said resolution and the suggestions contained therein?

Mr. BORDEN: A copy of the resolution alluded to, without any covering letter, has been received by the Prime Minister. No reply has been sent. The Government does not feel called upon to offer any opinion in reply to the third and fourth questions.

PROTECTION OF CANADIANS IN MEXICO.

Mr. COCKSHUTT:

1. In the event of war between the United States and Mexico, will the Government take any precautions to insure the safety of the lives and property of Canadians in the latter country?
2. If so, what action will be taken?

Mr. BORDEN: During the past eighteen months representations with regard to the matter alluded to have been made to the imperial Government on several different occasions. In case further representations should be deemed necessary from time to time, they will be made without any delay.

CANADIAN PACIFIC RAILWAY IRRIGATED LANDS.

Mr. BUCHANAN:

1. In the agreement made between the Government of Canada and the Canadian Pacific Railway Company, whereby the latter company was enabled to get their land grant in one block for the purpose of establishing the present irrigation system east of Calgary in Alberta, was a minimum price fixed which the company

could charge for irrigable lands? If so, what was the price?

2. Is the Government aware whether the Canadian Pacific Railway Company, which now hold these lands, is adhering to their agreement in this respect?

Mr. ROCHE:

1. No.

2. Answered by No. 1.

COST OF DRILL HALLS AND ARMOURIES.

Mr. SINCLAIR:

What is the total sum expended in drill halls and armouries in all the provinces of Canada between October 10, 1911, and December 31, 1913?

Mr. S. HUGHES: The total cost of drill halls and armouries constructed by the Department of Militia and Defence between October 10, 1911, and December 31, 1913, is $1,063,000, including those under construction at the latter date.

INTERCOLONIAL RAILWAY PROPERTY PURCHASE AT MONCTON.

Mr. TURGEON:

1. What is the sum total of the cost to the Intercolonial railway to date of the so called P. S. Archibald property in Moncton, N.B., including original purchase and all expenses in connection therewith and the securing of title thereto?

2. What is the monthly rental paid for the use and occupation of said property by F. P. Brady, general superintendent of said railway, and what does said rental charge include?

3. Is water, light, fuel and ice furnished free to the said occupant or tenant?

4. What is the yearly salary paid to the said F. P. Brady as general superintendent, what expenses are allowed him in addition and what do they amount to yearly?

Mr. J. D. REID:

1. Total cost to date, $28,042.60.

2. A monthly rental of $25 per month is collected, including water.

3. No, with the exception of water, which is included in monthly rental.

4. Yearly salary $7,500; no expenses in addition are allowed.

MANITOBA SCHOOL LANDS.

Mr. NEELY:

1. Has the Government sold any school lands in the province of Manitoba since October 1, 1911, to March 1, 1914, other than by public auction after proper and sufficient advertisement?

2. If so, what parcels and to whom have they been sold?

Mr. ROCHE:

1. Yes—to boards of school trustees for school sites under the provisions of subsection 2 of section 39 of the Dominion Lands Act and to railway companies for railway purposes under the provisions of the Railway Act.

2.

FENIAN RAID CLAIMS INVESTIGATION.

Mr. SINCLAIR:

Has the legal adviser of the board who investigated the claims of Fenian Raid veterans, been paid for his services? If so, how much?

Mr. S. HUGHES: Yes; $3,615, as fixed by the Department of Justice.

EMPLOYMENT OF CHARLES McPHERSON.

Mr. SINCLAIR:

On what date was Charles McPherson appointed postmaster at North Riverside, Guysborough county, N.S.?

Mr. PELLETIER: On the 30th September, 1911.

TRANSCONTINENTAL RAILWAY COALING PLANTS.

Mr. MACDONALD:

1. Who were the tenderers and what was the amount of each tender for the mechanical coaling plants proposed to be erected at Monk, Bridge, Fitzpatrick, Doucet and O'Brien, on the Transcontinental railway?
2. What was the address of each tenderer?
3. When were tenders called?
4. When were they awarded?
5. What was the name and address of the tenderer to whom the contract was awarded?

Mr. J. D. REID:

1. Kennedy Construction Co., Montreal, Que., $183,605; C. O. Bartlett and Snow Co., Montreal, Que., $169,700; John King, Fort William, Ontario, $166,410; Williams and Wilson, Ltd., Montreal, Que., $152,250; The Eastern Steel Co., Ltd., New Glasgow, N.S., $110,250; Williams, White and Co., Moline, Ill., $109,578; Roberts and Schaefer Co., Chicago, Ill., $107,931; Republic Structural Iron Works Co., Cleveland, O., $106,646, with wet excavation as an extra, which may mean from $10,000 to $15,000 extra; Ogle Construction Co., Chicago, Ill., $96,386—this is a lighter proposition, two 1-ton buckets instead of one 2½-ton bucket as called for, wet excavation also considered as an extra; Canadian Fairbanks-Morse Co., Ltd., Montreal, $95,000. Elevating capacity 1½ tons only, while our specification calls for 2½ ton elevating capacity. They also reduce the width of the plant some 4-ft. 2-in., which would make it too narrow.
2. See answer to No. 1.
3. November 3, 1913.
4. January 26, 1914.
5. Roberts and Schaefer Company, McCormick building, Chicago, Ill.

NEW HARBOUR BREAKWATER.

Mr. SINCLAIR:

1. Was a report made prior to September, 1911, by resident Engineer Millidge, regarding the proposed extension of the breakwater at New Harbour, Guysborough county, N.S.?
2. If so, did the engineer advise that the extension be made?
3. What was the estimated cost?
4. Was the money voted in 1911 to build such extension? If so, how much was voted?
5. (a) Were tenders asked for? (b) If so, when?
6. What are the names of the tenderers and the amount of each tender?
7. Was the extension ever built? If not, why was it not built?

Mr. ROGERS:

1. Yes.
2. Reported that the extension would be a great convenience to the thirty fishing boats now using the harbour.
3. $27,000.
4. Yes; $10,000.
5. (a) Yes. (b) Tenders were called for from 19th September to 18th October, 1911.
6. No tenders were received.
7. No, as provision is being made for more important works.

SAMPLE MARKETS.

Mr. NEELY:

1. Has the Board of Grain Commissioners recommended to the Government the establishment of sample markets in Western Canada?
2. If so, what date did they recommend for the establishment of sample markets and at what points?
3. Has the Government passed any Order in Council respecting the matter, as required by the Grain Act?
4. If so, what dates were fixed and what points were selected for the establishment of these sample markets?
5. If such Order in Council was passed, has it been given effect? If not, why not?

Mr. G. E. FOSTER:

1. Yes.
2. September, 1913. The board afterwards changed the date of their recommendation to December 15, 1913; Winnipeg and Fort William.
3. Yes.
4. December 15, 1913, but subsequently indefinitely postponed; Winnipeg and Fort William.
5. No. The crop of 1913 was of unusually high quality and remarkably uniform. It was harvested early and placed rapidly upon the market. By the date set, most of the wheat had passed out of first hands, and the farmers therefore would have got little if any advantage from putting the sample market into operation.

BOAR'S HEAD FOG ALARM.

Mr. A. K. MACLEAN:

1. Who was the contractor for the erection of a building for a fog alarm at Boar's Head, Long Island, Digby county, N.S.?
2. What was the amount of the same?

Mr. HAZEN:

1. Messrs. Maynard C. Denton and Maurice A. Condon, of Digby, N.S.

2. $3,350.

LUNENBURG COUNTY MAIL DELIVERY.

Mr. A. K. MACLEAN:

1. Who has the contracts temporarily for the conveyance of mails between Martin's Point post office, Lunenburg county, N.S., and the railway station at Martin's river, N.S.?

2. What amount is he paid?

3. Were tenders asked during the present year for this mail service? If so, who was the lowest tenderer, and what was the amount of the same?

4. Is it proposed to accept the lowest tender? If not, why not?

Mr. PELLETIER:

1. Fred Shupe.

2. $375 per annum.

3 and 4. Tenders were invited and the lowest tender has been accepted. The name of the lowest tenderer and the amount will be given when the contract has been signed.

MORNING SITTINGS.

Right Hon. R. L. BORDEN (Prime Minister) moved:

That on and from Monday next, the 27th instant, and until the end of the session, the House shall meet at 11 o'clock in the morning, and that in addition to the usual intermission at 6 o'clock p.m., there shall be an intermission from one to three o'clock p.m.

Sir WILFRID LAURIER: In point of time this motion may have come at the proper moment, but we should be informed as to the nature of the business which the Government has yet to bring before the House. My right hon. friend is aware that, according to the practice invariably followed, this motion to hold morning sittings is never brought before the House until all the business of the Government has been laid before us. There is a rumour, which is persistent and for which, I believe, there is some foundation, that the Government is going to introduce some very important legislation with regard to the Canadian Northern railway. If it be the intention of the Government to introduce such important legislation as is surmised, it will not be opportune at the present time to hold morning sittings. The moment we commence to sit in the mornings there will be no time for hon. members to give thought or consideration to legislation, or even to the study of matters placed before us. Therefore, I hope my right hon. friend will not press this motion, if I am correctly informed that the whole business of the House is not before us.

Mr. BORDEN: Without committing myself one way or the other to the report upon which my right hon. friend has based his observations, I may say that there will undoubtedly be legislation which does not appear upon the Order Paper. In view of that, and having regard to what my right hon. friend has asked, I will not press the motion to-day, but will let it stand until to-morrow.

Motion stands.

QUEBEC HARBOUR APPARATUS.

On the Orders of the Day being called:

Mr. LEMIEUX: I wish to draw the attention of the hon. Minister of Marine and Fisheries (Mr. Hazen) to the following item which appears in the Quebec Telegraph of April 15, in regard to the works in the harbour of Quebec:

Mr. S. George Boswell, chief engineer of the Quebec Harbour Commission, who has just returned from a six-weeks' trip to the old country, accompanied by Mrs. Boswell and Miss Maud Boswell, was interviewed by the Telegraph this morning.

The object of Mr. Boswell's trip was the inspection of the new apparatus for the Quebec harbour, now under construction on the other side. This includes a crane, a dredge, a floating grain elevator, and a service boat.

The fifty ton crane is being built by a well known Glasgow firm, and the dredge which is of the ladder pattern, is being constructed in the same place by Wm. Simons and Company.

The service boat, which will be a 125 foot, 1,000 h.p. craft, built on similar lines to the tug 'Sir Hugh Allan,' used by the Montreal Harbour Commission, is being built by the Smith Stock Company, of Middlesboro, as is the floating grain elevator.

The grain elevator when completed, will be capable of taking a load of 35,000 bushels, and will be able to load in about four hours.

All the new purchases are expected out here in the month of June, and with the exception of the crane, all will cross the Atlantic on their own steam. The crane will probably not be assembled until it arrives in Quebec.

I am calling the attention of my hon. friend to this matter because I am informed that all this work could have been secured from Canadian firms, such as the Westinghouse Electric Company, the Steel Company of Canada, the Hamilton Bridge Works, at Hamilton, Ont., the General Electric Company, the Polson Iron Works Company, at Toronto, the Collingwood Ship Building Company, at Collingwood, the Western Dry Dock Company, at Port Arthur. Were these firms given an opportunity to tender on these works? The policy of the Government, according to de-

clarations made by my hon. friend in previous debates and declarations made by my hon. friend the Postmaster General the other day in Quebec, has been that as much of such equipments for Government business as possible should be built in Canada.

Mr. HAZEN: I shall be happy to get the information from the harbour commissioners and give it to my hon. friend as soon as I receive it.

RIVER VALLEY RAILWAY.

On the Orders of the Day being called:

Mr. EMMERSON: On the 15th of April, I asked the Government whether or not any action had been taken in regard to additional assistance for bridges in connection with the River Valley railway in New Brunswick. The Minister of Trade and Commerce answered on that occasion that a proposition or application was before the Government and was under consideration. Has any decision since been reached by the Government or any action been taken ?

Mr. BORDEN: The subject is under consideration. Any necessary announcement will be made in due course.

RANCH FOR CAVALRY REMOUNTS.

On the Orders of the Day being called:

Sir WILFRID LAURIER: The other day I asked the Government for information as to a grazing lease to a certain firm for the purpose of establishing a ranch for cavalry remounts. I was told by my hon. friend the Minister of Militia that the matter was not completed. Can he give me any further information on the subject?

Mr. SAM. HUGHES: It has not yet been completed.

TRENT VALLEY CANAL.

On the Orders of the Day being called:

Mr. GRAHAM: By yesterday's despatches I note that a statement was made in the Ontario Legislature by one of the members of the Government that the Dominion Government had handed over or was about to hand over to the province of Ontario all the water-powers developed by the construction of the Trent Valley canal. Is that statement correct ?

Mr. BORDEN: If I remember correctly, there is some litigation pending. I am not able to give my hon. friend definite information at the moment. So far as I am aware, no arrangement has been concluded within some months past.

Mr. GRAHAM: There is some litigation pending in the Exchequer Court, I think, as to the rights of the provinces and the Dominion concerning these water powers. I could not see how the water powers could be handed over in the face of a suit pending.

Mr. BORDEN: That is my recollection, but I am not fully advised.

THE BUDGET.

Consideration of the motion of Hon. W. T. White (Minister of Finance) for the House to go into Committee of Ways and Means, resumed from Tuesday, April 21.

Mr. E. W. NESBITT (North Oxford): Mr. Speaker, I did not have the pleasure of hearing the hon. gentleman who preceded me in this debate, and therefore I shall make no special reference to his remarks, but shall immediately apply myself to a consideration of the Budget speech delivered by the Minister of Finance. Any remarks I shall make will be purely personal, and I do not wish it to be thought that they bind any one else.

The Minister of Finance, in reviewing the economics of the present money stringency, said:

> There is no doubt that the severe and prolonged financial stringency through which the business world has passed and from which it is only now emerging marked the culmination of one of those so-called trade cycles well known to economists. The phenomena of these cycles are well known. First a surplus of loanable capital attended with easy money conditions and low interest rates, next commercial activity promoted and sustained by abundant supplies of such capital resulting in profitable trade and rapid extension of enterprise, next, in consequence of such rapid extension, an undue proportion of the money supply of the world finding its way into fixed capital, then shortage of liquid resources among financial institutions, followed, as a matter of necessity in order to rectify conditions, by advancing rate of interest with curtailment of credit and consequent restriction of trade. When this last condition is reached and has prevailed for such time as is necessary to permit of the accumulation of loanable capital in sufficient surplus to bring about easy interest rates another cycle.

That is the position in which we are at present. Considering the views held by the Minister of Finance with reference to economic cycles, I cannot understand why he, last year, when these loans fell due and it was necessary to borrow money to carry on the capital expenditure of the country, should have made such long-date loans at high rates of interest. I quite agree with him that after the stringency takes place,

and the banks and other moneyed institutions have curtailed their advances to the commercial world and the public, that then there does accumulate a certain amount of surplus fund which brings down the rate of interest on what are called gilt-edged investments. I well remember when, in my own business, we were loaning money on mortgages at four and a half per cent, and now it is commonly six per cent. But I cannot agree with the Minister of Finance that he should have made all these loans, amounting to £12,000,000, or about $60,000,000, to mature in 1960. I think it would have been good financing for him to have renewed at least part of these loans for a much shorter term. I notice that he did renew the loan for £1,700,000 until November next, and while money may not be very much cheaper in November, I would not be much surprised to see it cheaper than it is at the present time; that is to say, for the type of money that we cater for, namely, gilt-edged loans, and I suppose the Dominion of Canada can be looked upon as a gilt-edged borrower. I do not think the Minister of Finance showed his usual good judgment in negotiating so many long term loans, and for such large amounts, because we must remember that the loans negotiated last year, including the £1,700,000, amounted to $68,500,000.

The hon. member for North Perth (Mr. Steele) stated yesterday that the Minister of Finance had had surpluses in the last two years amounting to $93,000,000, and I wondered what explanation a member of this House could give to his constituents for the Government having a surplus of $93,000,000 and at the same time borrowing $68,000,000, even though part of that borrowing was to repay maturing loans. In face of the fact that last April, and for three months before, there were indications of stringency in the money market, and indications that there would be a falling off in our revenue, because of the fewer orders placed for raw material by the manufacturers and wholesale houses, I cannot understand why a man of the financial acumen and business knowledge which I know the Minister of Finance possesses, should have allowed an increase of $14,500,000 in consolidated fund expenditure. I quite appreciate that the possibilities are that the Minister of Finance will never get credit for the amount of resistance he must have put up against the demands of his colleagues in the Government and his supporters generally, for more extravagant expenditures, but in the position he occupies it is his duty to watch over the revenues of the country and see that they are properly and economically expended. Seeing that in 1912-13 the expenditure on consolidated account had increased by $14,000,000, surely it would not have been asking too much of his friends, if the Minister of Finance had counselled them to curtail their anxiety for unnecessary expenditure, so as not to increase the consolidated fund expenditure during 1913-14. But he did increase that expenditure by $14,500,000 in round figures. If he had avoided that increase—every dollar of which probably was unnecessary—he would not have had to borrow more than a small amount to carry him through the financial year. Of course, we recognize that while he borrowed $68,000,000 a large proportion of these borrowings was to purchase Grand Trunk Pacific bonds and pay off maturing loans. But surely we do not intend to go on always taking up our maturing loans with new loans, surely we intend to pay our way in the sense of not constantly increasing our borrowings. The Finance Minister knew that the capital expenditure had to be incurred; he knew what loans were falling in and also what Grand Trunk Pacific bonds he would have to acquire. He knew also that the Grand Trunk Pacific loan had been sanctioned and that he would have to provide for it. Nevertheless the consolidated fund expenditure went on just the same. And a great deal of that expenditure was unnecessary, just as a great deal of the expenditure estimated for the coming year is unnecessary. Let me give one or two instances. But first, I may say that I am not one of those who object to the Finance Department providing for public buildings throughout the country as they may be necessary. But I believe there is reason in all things including the construction of public buildings. In this respect the public business is like the business of any commercial house; it is wise to prepare for the expansion of business, but still that can be overdone like everything else in finance. Take, for instance, the public building in Brantford. My hon. friend from Brantford (Mr. Cockshutt) is a very nice gentleman and very capable. There was voted for the public building in Brantford in 1913-4, $170,000 and this year there is an estimate of $200,000 of which $75,000 is a re-vote. This makes practically $300,000 for a public building in Brantford. Now, Brantford is a splendid city and is doing well; but in my judgment it is absolutely absurd to put $300,000 into

a revenue-collecting building in that city. Besides that there is a new drill hall for Brantford. They already have a drill hall there and surely they could have done without a new one while there is a financial stringency covering this country. Then there is an item of $20,000 for a public building in the village of Burford. There is nobody in the world, I suppose, who deserves anything more than my hon. friend from Brant (Mr. Fisher)—a particularly nice chap. But Burford is a village, and it already has a drill hall. Are you going to spread these buildings over the length and breadth of the land simply because the places chosen for their location send representatives who support the Government, and without regard to the public revenue from those places?

Mr. COCKSHUTT: Will the hon. gentleman please tell me how much the Woodstock post office cost under the late James Sutherland?

Mr. NESBITT: It cost $37,000. And that is the kind of a building that ought to be built in every case—in accordance with the population and the revenue.

Mr. COCKSHUTT: And how much did the drill hall cost?

Mr. NESBITT: Fifty thousand dollars. And the other night an estimate of $120,000 was up for the construction of a building in the town of Amherst, N.S., a place about the size of Woodstock. It is represented by a very excellent supporter of the Government, and a very nice fellow; but that is no reason why the expenditure on a drill hall should be made $120,000 instead of $50,000. And let me tell you, the armoury in Woodstock will be good enough for Woodstock when it has a population of 25,000, if it ever gets there. There is no possible necessity or excuse for such expenditures. And here is an item for a drill hall in Port Arthur, $99,000 voted last year, and $100,000 to be voted this year. Now, with all due deference to my good friend from Port Arthur (Mr. Carrick), I ask the members of the Government, I ask the Finance Minister if he does not think that $199,000 for a drill hall in Port Arthur is simply absurd. In my opinion no other word applies to it. And I tell you that the people of this country will not stand for such silly and extravagant expenditure by any Government, whether it be Liberal or Conservative. There is reason in all things, but there is none in that. This is where our money has gone, and this is why the Minister of Finance had to borrow money this year to pay his way, in the face of a surplus of $36,000,000 above consolidated revenue expenditure, which was ridiculous, and in the face of surpluses of $93,000,000 in two years. Now, whether the Finance Minister agrees with me or not, I am sure that the public agrees with me, and if he is to be the watch-dog of the treasury it is necessary for him to watch his colleagues and brother members on that side of the House more closely than he has done in the last two years. If he does not, it will be unlimited expenditure, expenditure gone mad, as we saw last year when the Estimates went through. Nobody could listen to the discussion on the Estimates and not agree that it was expenditure gone mad.

Now, I would like to say a word with reference to our immigration policy. I have thought for some time that while we have an excellent Immigration Act, and while that Act has been properly administered, yet it is wrong in some ways. We bring the unfortunate immigrant to this country and dump him at the port of entry, and that is the last attention we pay him. He does not know what to do; he does not know where to go. My idea is that the Dominion Government should make some arrangement with the several provincial governments—I do not know what it should be, this is only a crude idea of mine—and these immigrants should be taken in charge by the provincial government who should see to it that some occupation is found for him; and that as much as possible the Dominion Government should confine their attention to immigrants who are capable of going on the land.

It is absurd to bring to this country persons who know absolutely nothing about farming; the cities and towns do not want them, because they would have to face the possibility of providing for them if the winter were long and cold. It would take such persons all the rest of their lives, perhaps, to learn all they ought to know about farming; a farmer does not want to employ that sort of help. I know from experience that immigrants of this kind are of absolutely no use to the farmer, who would rather pay a man who is accustomed to farming, and who does not have to be instructed, $25 a month than pay another, no matter how able-bodied he might be, $5 a month. If it is impossible to avoid bringing that kind of people here, I would advise that the provincial and

Dominion Governments establish some sort of farms where these people could receive a smattering of education in farming processes before they hire out to the farmers in various parts of the country.

Mr. BLAIN: Does my hon. friend not understand that the policy of the Government is to assist only domestic servants and those who go upon the farms?

Mr. NESBITT: I do not know; that may be the general policy of the Government, but it is not followed out in practice. It does not matter what a man's policy may be; it is what he actually does that counts.

Mr. BLAIN: I understood my hon. friend to be condemning the Government for bringing to this country what he regarded as a poor class of immigrants.

Mr. NESBITT: I was not condemning the Government; I was suggesting that they should improve their immigration policy by looking after these people in some way after their arrival. I do not believe, of course, that the Government is purposely bringing such immigrants to this country, but they take charge of a great many of them after they do come here. However, I was not specially finding fault with the Government in the matter.

I now come to the question of the tariff. We on this side of the House have listened to hon. gentlemen opposite telling us that we closely followed and did not change the National Policy of Sir John A. Macdonald. Let me point out that the introduction of corn, free binder twine and free fence wire resulted in a saving to the farmers of this country of millions of money. Large quantities of these goods are brought into Canada, so that the tariff saving in this regard would assume enormous proportions. If the late Administration had done nothing else but that, they would still deserve the thanks of the country. But, as has been pointed out many times during the course of this debate, they also introduced the British preference. I quite believe that the English manufacturers did not take as much advantage of that preference as they could have taken if they had sent men over to see what they could do under that preference. I am pleased to see, however, that during the last few years they have sent men into the field, and the result has been that we have bought more English manufactured goods.

My hon. friend the Finance Minister said that speaking generally it is not advisable that one nation's tariff should be so arranged as to fit into the particular features of that of another nation. Speaking generally, that may be quite true, but let me point out to the House that you cannot very materially change nature by tariffs. I mean that it is natural for us to trade with the United States. Even with the tariff our business with the United States has increased constantly for a number of years. Our friends on the other side tell us that after we came into power we upheld the protective tariff principle as against the United States. It was as natural and proper for us to do that as it was for us to breathe, for the simple reason that the United States had a very high tariff against us and owing to our close connection with the United States we could not be expected to lower our tariff and let the United States put up a high tariff against us. But things have changed in the meantime; the Government of the United States have seen fit to lower their tariff against us. No matter what we do, we naturally follow the course pursued by the United States. It is all very well for hon. gentlemen to say that we should have no truck or trade with the Yankees, but, as a matter of fact, we copy the Yankees even in the matter of dances and ladies' dress--and, so far as I have been able to judge, they are not a bad sort of people to copy, after all. The tendency in the United States is to have lower tariffs; recently that tendency was so pronounced that the Government of the United States were forced by the people to lower the tariff. The tendency in this country, if I read the signs aright, is to lower tariffs. We are forced to have due regard to the raising of revenue, because, whether or not it is proper to collect revenue by imposing tariffs, that is the policy we have been pursuing for a number of years; that is the policy that we are likely to pursue, so far as I am personally concerned, that is the policy that I am going to advocate that we should pursue. At the same time, having due regard to the revenue of this country, which we have to raise, and having due regard to all interests that may be affected, we should make our tariff as low as possible; we should make it as nearly as possible a revenue tariff. I quite appreciate the statement of the Minister of Finance that we should pay regard to infant industries and assist them in getting started in this country. The minister says that that is a policy which we should pursue to as great an extent as we can without hurting other industries. But there are industries in this country that

have been assisted by the tariff for a number of years and are now in such a position that they can compete with the rest of the world; it is on the products of such industries that the tariffs should be decreased to a certain extent. The infant industry starting off in this country has a very great handicap. In the first place, we are a country three thousand miles in length with only eight million people. Thus we are not very thickly settled, and the consequence is that to establish an industry from end to end of this country, to get it on its feet and make it a paying proposition, takes a great deal of work, a great deal of time and a great deal of cost; and in making a tariff I think we should consider that to a very large extent. I quite appreciate that it is a very difficult thing to make a tariff suitable to all sections of this vast country. Then, too, our interests personally clash. I regret the feeling that sometimes arises in this country and is assisted sometimes even by members of Parliament, the class feeling. There is also a locality feeling that should not arise in this country. The interests of all are the same. But I particularly regret the class feeling that it is sometimes attempted to work up by newspapers. Class feeling, in my judgment, is far worse than party feeling although too much party feeling, that is blind party feeling, is a great injury rather than a benefit. The class feeling and class discussions in the newspapers are a great curse, speaking very strongly, to a country, and should not be encouraged by members speaking in this House or by the newspapers of this country. After all there is no difference of interest between the farmers and the manufacturers of this country or the middlemen. The so-called middleman gets a good deal of blame that he does not deserve. We must have the retailer in this country just as we must have the professional man. It will not do for us all to be farmers. A good many of us would starve to death as farmers and many of us would take the rest of our natural lives to learn to be good farmers if we tried ever so hard. But there are a lot of people in this country engaged in other occupations which are just as legitimate, although I confess I do not think are as nice as farming; but these people have as much right to a living as the farmer and that is why I deprecate this class discussion which sometimes arises in this country and for which there is no possible necessity. So far as I understand there is no difference between the farmers west of Port Arthur and those east of Port Arthur in reference to the tariff. The farmers, so far as I have heard from them and so far as my personal knowledge goes, are quite in accord, the farmers of Ontario

4 p.m.

are quite in accord with the requirements of the farmers of the West. I think that the Government, in framing the tariff, should endeavour to satisfy the bulk of the people as far as it is possible to do so, at the same time paying due regard to the interests of all classes and all established businesses.

I would like to comment for a moment or two on some of the changes in the present tariff. Take the steel duties. I suppose that the steel duties were changed at the solicitation of the steel corporations of Canada. We must bear in mind that while we are anxious to help all industries, we cannot help any of the industries too much at the expense of the whole country. I understand that we paid the steel industries of this country in bounties something in the neighbourhood of $16,000,000 in the last few years. That should have been quite sufficient to have established this steel industry, if it is at all natural to the country, on a paying basis. Take the Dominion Steel Corporation. I am not one of those who are opposed to corporations by any manner of means. This blind antagonism to corporations simply because they are corporations I have no sympathy with, because the industries of this country have largely been built up by corporations. That is to say, few individuals in this country have means enough to start a business of their own, and they employ the corporation agency by bringing in the money of the various people to whom they can sell stock, and by that means build up a strong corporation. I am opposed absolutely to over-capitalization of corporations, and I would like to see some system adopted by which all corporations would have to submit their propositions to some power that could find out what the capitalization was going to be used for. Take the Dominion Steel Corporation. It is in the minds of everybody here who has followed commercial industries in this country, that it was in two separate companies at one time, the Dominion Steel Company and the Dominion Coal Company. We know that both companies issued very large amounts of stock. I am not saying anything against them, I wish them all success, and I would not have any criticism to make here this afternoon excepting that they are coming to the Government

of the country for favours. I am not a stockholder of these corporations, and therefore it would be none of my business how they were incorporated or what they did, but when they come to this Parliament and ask for favours, it becomes the business of all of us to investigate, and at least we have the right to criticise. After the merging of the two corporations, with an enormous capitalization, we continued to pay them bounties for some years, and they paid a dividend on their common stock. Now I say that if the company had been properly managed, with due deference to the position of the shareholders in the company, they would not have attempted to pay a dividend on their common stock until they had accumulated a sufficient reserve to warrant them in doing so. If they had pursued this course no criticism would have been made this spring when they did not pay a dividend on their common stock. But they had no right to do it before because they must have used the bounties to a certain extent to assist in paying dividends in place of putting them in an operating position capable of competing with the rest of the world.

Let us now look at the Steel Company of Canada which, as we all remember, is a very recent amalgamation of several wire and nut companies and smelting companies and similar corporations in this country. They also started with an enormous capitalization. I will not go so far as to say that the capitalization is more than may be required in the interests of the business at some future time, but it was certainly an enormous capitalization for the genuine assets that they held when the amalgamation took place. Let me read their annual statement which was published in the press and is fresh in the minds of all. They did not do so badly, as you will see, even without any assistance from the tariff:

> Steel Company of Canada report for 1913 shows net profits, after expending $516,084 for repairs, maintenance and improvement of $1,640,011, which compares with net profits of $1,547,039 at the end of 1912, an increase of about $93,000.

So they could not very well come to this Government with a poor mouth. In my judgment they were doing fairly well. The report goes on:

> Of this amount $480,000 was taken by bond interest, $454,741 by dividends on the preferred stock, $137,500 was credited to the fund for depreciation, renewal and improvement of plants, $56,738 was written off plant account, and $511,621 was carried to credit of profit and loss.

> The report states that since December 31 the directors have disposed of $850,000 of the first mortgage bonds of the company, and the working capital has been increased by the proceeds of that issue.

I do not know what they are going to do with the proceeds of the $850,000 worth of bonds unless it is for betterment. The report, in my judgment, does not show that the company needed assistance to any great extent.

Let us look at some other items. I wonder why the minister put a duty on caustic soda. Every soap maker in this country uses caustic soda. We on this side of the House use soap, therefore we are interested in caustic soda. There is only one factory in this country making caustic soda and it is in the riding of my hon. friend from North Essex (Mr. Wilcox). I have nothing to say against that firm. I hope they will increase their output and make a profit, but I do not think they should be allowed a duty at the expense of the soap manufacturers and of the ordinary people in this country who use soap. Unfortunately, or perhaps fortunately, there are several people besides the gentlemen on this side of the House who use soap.

Sir WILFRID LAURIER: Hear, hear.

Mr. NESBITT: I think it is poor tariff-making to put a duty on caustic soda. I now come to item 546:

> Jute cloth or jute canvas, uncoloured, not further finished than cropped, bleached, mangled, or calendered.

The tariff on that is 7½ per cent preferential, 10 per cent intermediate and 10 per cent general. Why is a duty put on jute cloth? Jute cloth is not made in this country. It is used in the manufacture of all kinds of bags, such as flour bags, cement bags, grain bags—I need not enumerate the whole list, but jute cloth enters into the manufacture of nearly all kinds of bags used in this country; so why put a duty on jute cloth? To me it seems absolutely absurd. If we are ever going to ship grain by the Panama canal it will have to be shipped in bags, not in the loose state. I understand that this duty on jute cloth will increase the cost of a carload of sacked oats by $10. I hope the minister will reconsider that item, also the duty on caustic soda, which would help one firm in this country, at the expense of the whole people.

As to the steel duties, possibly these people could not have got along without as

high a duty as $3 on wire rods. But they could have taken other courses. I am quite sure they could have reduced their capitalization, for instance, and they could have put their brains to solving how they could successfully compete with other manufacturers. Why should not the Dominion Steel Company compete? They have the ore almost at their door. They get it by boat from Newfoundland, which is practically at their door. Coal is actually at their door. I am sure that nobody in the world can beat them, so far as their proximity to coal is concerned. They get their ore cheaper than any similar industry in the United States. The ore used in the Cleveland and Pittsburg steel works is got from the lake Superior district. It has to be taken down there by boat, and ore destined for Pittsburg has to be transhipped; as regards Cleveland, the ore is taken right into their yard. In both cases, however, the ore has to be carried much further than in the case of the Dominion Steel Company. I do not think a concern of that size should be encouraged to come to the Government clamouring for assistance. They have had assistance from the public for several years, and should now be in a position to compete with the world.

That brings me to the question of agricultural implements. The minister has made a reduction of 5 per cent on mowers and binders. That means 5 per cent on the valuation of a binder or mower entered for duty. In the case of a binder, that would mean a reduction of about 3 per cent on the selling price and about 7 per cent on the material and labour cost.

Everybody in the manufacturing business knows that the manufacturer does not reduce or increase his retail price on account of a saving or an extra cost respectively of five per cent on his raw material. It would be too much trouble for him to change his price list. The minister could easily have strained his conscience to reduce the duty by at least seven and one-half per cent on these implements and I see no reason why he should not have reduced the duty on several other items of agricultural implements, such as cultivators, ploughs, horse rakes, seed drills and manure spreaders, without doing harm to the industry. Potato diggers are not manufactured in this country. Double corn-planters—I do not mean double corn cultivators—are not manufactured in this country.

Mr. COCKSHUTT: I think they are manufactured in Canada.

Mr. NESBITT: There may be some manufactured in Canada; but, if so, their manufacture has been commenced very recently.

I was very much surprised first at the hon. the Solicitor General (Mr. Meighen) and the other day the hon. member for South Perth (Mr. Steele) quoting what I said at a meeting at Woodstock. I did not think I would get any notoriety outside of Woodstock and I thought I had very little there. They stated that I had said at a public meeting that we had in the proposed reciprocity agreement taken two and one-half per cent off the duty on wagons and five per cent off other articles; that I thought the Bain Wagon Company could compete with the rest of the world with that two and one-half per cent taken off; that I did not think the Government would reduce the duties any further, and that I thought the farmers should be satisfied. I repeat that exactly this afternoon. If we were to take all the duties off all agricultural implements this afternoon, it would be only a circumstance in comparison with what the farmers would have received under the reciprocity agreement. There would be no cry in the West to take the duty off agricultural implements if the reciprocity agreement had passed. The farmers of the West would have been perfectly satisfied to pay more for their agricultural implements if they had had an open market in which to sell their goods and they would have had the money to pay for these implements. I do not believe there would be any such agitation for the duty to be taken off agricultural implements if reciprocity were in operation. I firmly believe that the farmers of Ontario and the West would have been absolutely satisfied with the reciprocity agreement as it was framed. At the time of that agreement I, as a brother manufacturer, told the manufacturers, publicly and privately, that I thought they were the most short-sighted people in this country. They were the people who raised class feeling, because they made an unnecessary attack on the benefit that the farmer was to receive under the reciprocity agreement. The manufacturers of Canada were not affected by that agreement. I told them then, and I tell them now, that they made a great mistake when they opposed reciprocity, and they will sooner or later find out their mistake. I am speaking now as a manufacturer as much as a farmer. I am as much interested in manufacturing, according to my means, as any man in this House.

Under the reciprocity agreement we took 2½ per cent off the duty on some implements, but we took 5 per cent off the duty on a list of implements, which is more than my hon. friend has done. In addition to that, we gave the farmers the opportunity to trade with the world and, so far as I know from a farmer's standpoint, that is what they ask for and that is what they are going to have.

Mr. A. DeWITT FOSTER: Why was 2½ per cent taken off only two implements and 5 per cent off others under the reciprocity agreement?

Mr. NESBITT: Because the others had a higher protection; and that is why some of the others could have stood a further reduction under the present proposition, because they have a higher protection and also because the manufacturers of some of these implements have recently increased their output in this country so much that they can compete successfully with the American manufacturers. It does not always follow that because a tool is cheap a man is going to buy it. Farmers exercise discretion in buying, just as a man will do when buying a suit of clothes. If I were going to buy a plough, I may say that I would buy a Cockshutt plough, even if I had to pay $5 more for it. I am not sure that I would not buy a Massey-Harris binder—I think I would. It does not necessarily follow that, because the duties are taken off, the manufacturer of agricultural implements cannot compete or that he cannot get a market in the United States. I am interested in a little industry that makes tools approaching agricultural implements, and we have sold them in the United States against a very high duty. Unless we get information to the contrary, I feel that, without hurting the agricultural trade, we can take the duty off certain classes of agricultural implements for the benefit of the farming community of this country.

I have no objection to offer as to the Massey-Harris people, and I have no comment to make on them, because, like the Cockshutt people, I am personally proud of them as enterprising Canadian manufacturers. I would be very sorry to see them hurt in any shape, manner or form, but I think they can compete with other manufacturers without any favours being extended to them. They are competing in Australia, in New Zealand, in Russia, in France, and sometimes I believe they have even butted into Germany. I am endeavouring to speak in the interests of the country at large, without any prejudice against any human being or any industry in Canada, and I do not see why these people cannot compete in Canada against other manufacturers, when they can compete with them in the open markets of the world. It is said that the freight rates from Chicago to Winnipeg or Calgary are against the Canadian industry, but not having these rates before me I will not be certain as to that. We must, however, bear in mind that they get a drawback on their steel and iron, and that they have that advantage over other Canadian industries.

Let me refer to the question of free wheat. I must say that I was never more astonished in my life than when the Minister of Finance announced in his Budget speech that the Government would not give the western farmers free wheat. I see no possible reason why they should not be given free wheat. They have demanded it; they are the people interested, and in my opinion they should get it. I admit that there are some arguments against it, but so far as the farmer is concerned there can be no two opinions but that it would benefit him. If the farmer wants free wheat, I do not see why he should not have it. So far as I know the farmers of Ontario, they are perfectly willing that the farmers of the West should have free wheat.

Mr. BEST: You do not know the farmers of Ontario very well.

Mr. NESBITT: I think I know them better than you do, and I think I know them as well as any man in Canada does; and, speaking absolutely from the standpoint of the farmer's interest, and my own personal inclination, I am perfectly willing that the farmers of the West should have free wheat, and I raise some wheat myself. As a matter of fact, the farmers of Ontario may be selfish, because they do not grow much wheat for sale, and they do not care whether they sell the wheat they grow, or not. If my hon. friend (Mr. Best) lives in a section of the country where they are depending upon selling their wheat crop, I wish he would come up and visit me and I will take him around for a week and board him for nothing, and I will show him where farmers do not need to grow wheat for sale, and I will guarantee they are making as much money as are the farmers in his section of the country. We

grow wheat in our section of the country more for the straw than we do for the wheat.

Some hon. MEMBERS: Oh, oh.

Mr. NESBITT: That is funny, is it not?

An hon. MEMBER: It is.

Mr. BEST: The country will know now the class of farmers you have up in your section of the country.

Mr. NESBITT: Yes, we want the straw for bedding. There is not a farmer in my section of the country who grows wheat for the purpose of making money out of the sale of it; there is not a farmer I know of in my section of the country who would sell wheat at less than eighty cents a bushel, and there are some of them who would not sell it for ninety cents a bushel. They feed their wheat, and at anything less than eighty cents a bushel it does not pay them to sell it. If my hon. friend (Mr. Best) is sufficient of a farmer to keep track of what it costs him to raise pork and what it costs him to raise wheat, he will find that if he has not to sell his pork at less than seven cents a pound, and his wheat is anything under eighty cents a bushel, he had better feed his wheat to his hogs.

Mr. BEST: I made money on pork at five dollars a hundred.

Mr. NESBITT: No you do not; you would starve to death selling it at five dollars a hundred.

Mr. A. K. MACLEAN: He is not a farmer.

Mr. NESBITT: I do not think he is. Let me state another reason why the Government should have provided that wheat should be free. The western farmer tells us that the United States markets are open for their wheat, but a number of hon. gentlemen opposite have said: What is the use of trying to make a market for our wheat in a country which is a wheat exporting country itself. That sounds reasonable, but at the same time I heard the hon. member for Brandon (Mr. Aikins) state the other night that wheat was three or four cents a bushel higher in Minneapolis than in Winnipeg, and he also read letters to show that wheat that graded No. 1 in Minneapolis, graded only No. 2 or No. 3 in Winnipeg, so that there is a spread of from three cents to five cents a bushel between No. 1 and No. 3. One of the best farmers in Canada, and one of the largest farmers in Alberta, authorized me to state that he himself had sent a sample to Minneapolis and a sample of exactly the same wheat to Winnipeg, and the Minneapolis sample was graded No. 1, whereas the Winnipeg sample was graded No. 3. Under such circumstances why not let the farmer have the better opportunity?

Mr. BLAIN: Did the hon. member notice the quotation given in this House last night as to the prices of wheat in the United States market and in the Canadian market, as quoted in yesterday's Toronto Globe and in the Mail and Empire?

Mr. NESBITT: That is for July option; I am not a gambler.

Mr. BLAIN: In Minneapolis the price of May wheat was eighty-nine and a half cents, and in Winnipeg it was ninety and a quarter, and in Minneapolis the price of July wheat was ninety and three-fourths cents and in Winnipeg ninety-two cents.

Mr. NESBITT: The citation the hon. gentleman gives us does not prove anything, for the simple reason that it only refers to the conditions existing at this time of the year. We have got to have in Ontario a certain amount of western wheat to mix with our softer wheat, and we have to pay the price for it, no matter what it is. After the rush in the fall of the year, the wheat is held to a very great extent at the present time, not by the original farmer, but by the buyer, and the buyer naturally must have his profit on the wheat. In October, November and December, when the great rush of wheat is coming out, that is the time when the farmer himself is interested in the price, and not the buyer or the warehouseman, but at this time of the year the probabilities are that Winnipeg is quoted higher than Minneapolis, because fresh wheat is coming into Minneapolis.

There is one thing of which I would like to warn the growers of the West, and they might as well face it fairly, because it is coming, whether the Government wants it to come or not. If there is free wheat between the United States and Canada, the Ontario millers will buy American wheat, at certain times they will buy Kansas wheat when it comes in. So also will the large millers in the West be able to buy American wheat if they want to. That is for the farmers of the West to take into consideration. They must bear in mind that if they get themselves into a position to hold on to their grain until the best market offers—that is what we do in Ontario—they will have competition, with the American wheat coming into Ontario and perhaps coming in for the use of their own millers in the West. The Minister of Finance says that

the millers are opposed to free wheat. Well, the millers may be surprised very much. I know that the millers of Ontario are changing their minds on that subject very materially. For the millers of Ontario have stopped exporting flour; they cannot export it and compete. England, we know, takes wheat from all over the Footstool wherever it is to be had for trade. As I recollect it, England has five-sixths of the carrying trade of the world. She has to trade with the people who trade with her, and if any country has export wheat for sale and England expects to sell her manufactured goods, then England must take that wheat. But the English miller has got so wise that he can take these wheats and wash them and mix them to make as good a flour as is required in England, or as good as we could make in this country out of our better-class wheat.

Mr. ALFRED THOMPSON: Would the hon. gentleman inform the House what class of millers have changed their minds with regard to the export trade?

Mr. NESBITT: I think the Ontario millers are changing their minds.

Mr. THOMPSON: You think they are?

Mr. NESBITT: I know they are.

Mr. THOMPSON: Who are they?

Mr. NESBITT: The hon. gentleman does not want me to name all the men who have mills—it would take all afternoon. The point is that the small miller in Ontario cannot compete in flour in the English market. He recognizes that. Here is a letter from a friend of mine:

Mr. A. K. MACLEAN: A miller?

Mr. NESBITT: Yes.

I am unable to continue the export business, in fact, have practically severed the connection with my Glasgow people. We have not been able to compete with their home millers on Manitoba flour, and buyers are able to get Australian winter wheat flour much cheaper than Ontario. Australian flour costs, delivered in Glasgow, $4.20 per barrel, while our Ontario wheat flour would be worth $4.62 per barrel.

Now, Ontario millers, as I have said, will buy American wheat, in my judgment. To-day, Manitoba wheat at lake ports is quoted at 96½ cents for No. 1, and 94¾ cents for No. 2. The Ontario miller has to pay freight from Georgian bay ports to his mill, and he can grind that and ship in on to the Maritime provinces at the same rate plus two cents for stopover—he grinds it in transit, as it were. So that is what I want to warn my western friends of—that American wheat, in my judgment, will come into direct competition with them. If, in the face of that, they still want free wheat—and I think they will—why should not we give them their way? They are the judges; they are not fools; they know what they want; why not give them what they want?—what harm would it do the rest of the country? Let me explain that in speaking of Ontario millers I do not speak of such mills as the Maple Leaf, but of the smaller millers. The Maple Leaf may be able to compete in the English market. It has one of the best mills in Canada, and particularly well situated at Port Colborne. Being at the foot of the lakes it is favourably situated both as to bringing in wheat and sending out flour. Somebody said the other day that the flour shipped to England was not as good as the flour here. I came down on Sunday night with a baker who pretended to know all about this business, and he claimed that the flour in England is as good as the flour here. He said that the English consumer demands as good a flour as ours, but different—not as dry a flour. They seem to know their business, anyway, and I suppose they have just as good bread in England as we have in Canada.

As to the large millers and their ability to compete, I have never heard an argument that has convinced me that these large millers of western Canada cannot compete. I do not see what is to prevent them. They are right on the ground; they have means to buy wheat and store it in the fall and carry it over. That is the trouble with the Ontario miller—he has not the means to carry over wheat, and he has no storage facilities. If he had, it would not cost him nearly as much as it does to buy, not from the farmer but from the dealer who, at a certain time of the year, as now, raises the price whether at Winnipeg or lake ports. Large western mills, such as the Ogilvies and Lake of the Woods, have storehouses and elevators, and I do not see why they should not compete. They say that the ocean rates keep them from competing with the English mills. But if that is the case, it has nothing to do with this question, because it would be the same whether there was free wheat or not. I read in the North Western Miller that the American millers complain that their export trade is falling off, that they cannot compete with the English and Swiss millers. As statements have been made as to the profits of these large flour mills, I think I had better put the exact

facts before the House. Here are the headings of recent reports:

Ogilvie profits show good gain—Increase of $55,303 reported with earnings on common 13.27 per cent—in a strong position—properties show surplus of $2,000,000 over book values—Goodwill reduced to $1.

So, it was not 30 per cent or 60 per cent, as I have heard it stated, but 13·27 per cent on the common stock. I know nothing about their capitalization. Here are the headings respecting Lake of the Woods:

Lake of Woods had good year—Earnings at rate of 30 per cent on preferred and 15.46 on common—Best since 1908-09—Profits 20 per cent higher than last year—After liberal writing off good surplus was carried forward.

They made a fair profit, and the probabilities are, I think, that they will be able to compete in the British market.

The Minister of Finance, in explaining why he did not grant free wheat to the people of the West, told us that we were building two transcontinental railways and soon would have three such railways for operation. That is one thing which would, I think, solve the problem of freight rates. You cannot make me believe that the Americans can carry that wheat first south and then to the seaboard cheaper than we can carry it direct. I think that the mere allowing of open shipments—that is, allowing the western people to make the best arrangement they can as to freight rates to the seaboard— would be the means of settling this very vexed question of transportation. I believe the railways can compete; I would be the last one to raise my voice in support of anything under which the railways could not compete.

That brings me to the question of railway expenditure. The Government started to assist in the construction of a transcontinental railway which was to be built for the sole purpose of relieving the congestion in the West and lowering freight transportation charges. I believe that had the road been built as it was first decided to be built, it would be quite possible to reduce freight charges and still have a profit on the road. The expenditure of a few millions of dollars would not have made any great difference, in view of the vast traffic that will be built up in the West. It is not right to say that the farmers of the West will not get better prices for their wheat if the market is opened to them and to say at the same time that the wheat will be carried south; that is utter folly. If the farmers do not get better prices for their wheat in the south they will continue to ship it to the east. The Minister of Finance said that after the market is open for a day or two the prices in Minneapolis and the prices in Winnipeg will meet. I quite agree with that, but I do not agree with his suggestion that the price in Minneapolis would lower the price in Winnipeg. I do believe that the two would meet, but I think that the price in Minneapolis would raise the price in Winnipeg to a considerable extent; that is what happened in connection with the cattle shipments to Buffalo and Toronto. Any one who follows the market knows that when the United States duty was taken off cattle the price in Toronto jumped from 50 cents to $1 per hundred; the price in Buffalo decreased considerably, but not to the extent of meeting the Toronto price by any means. The prices met half-way, or a little better in favour of Toronto. I have heard good farmers in my section of the county say that the removal of the duty on cattle going into the United States was equal to an increase of $5 an acre in the value of land in the county of Oxford. How they made that estimate, I cannot say, but I do know that free access to the United States market would increase the value of land throughout Ontario.

The hon. member for Brandon (Mr. Aikins) the other day gloried in the fact that the present Government is building the Hudson Bay railway, and he condemned the late Administration for not building it. Let me say that if there is anything which I shall be proud of in the future it is the fact that we were not stupid enough to build the Hudson Bay railway. From what I have read of the Hudson Bay route I cannot see how it would be possible to lower the freight charges by the transportation of grain by that route. I am told that the road cannot be considered as a colonization road—that there are no lands to colonize there—and if that is the case I am quite sure that it is not worth while building a railway at enormous cost merely for the purpose of transporting the fish that may be caught in Hudson bay. It would be cheaper to assist the Temiskaming and Northern Ontario to reach James Bay and let that railway carry the fish to the thickly-settled parts of the country where they are required and where the people pay very high prices for fish even at the present day.

Mr. LALOR: Is it not a fact that the late Government committed the country to the building of the Hudson Bay railway?

Mr. NESBITT: Quite right; they were foolishly committed by the violent clamour of the people of the West at that time to the building of the Hudson Bay railway. I hope to live five or six years longer, and if I do you will find that I am absolutely right when I tell you that the Hudson Bay railway will never pay for the carrying of that fish from Hudson bay; it will never pay as a route for the transportation of grain. We have three transcontinental roads without it, and the construction of this road will involve an expenditure of $150,000,000 of public money for which we will receive no benefit. I was pleased to hear the Minister of Public Works announce this year that he was going to appoint a committee of business men to inquire into the commercial value of the Georgian Bay canal. This inquiry is, I understand, to be made not from an engineering standpoint —because engineers can do almost anything nowadays; they will be trying to build a road to Mars one of these times—but from the standpoint of its commercial feasibility, I tell the minister that if he appoints a committee not for political purposes—a committee of genuine commercial men who know something about business conditions, they will report against the Georgian Bay canal, just as they would have reported against the Hudson Bay railway, to the cost of which there is practically no limit, and which is a pure chimera.

When our friends on the other side talk about the home market, surely they do not pretend to say that they would not sell to anybody outside of the home market. They do not pretend that they would not export if they had the opportunity to do so; that would be ridiculous. Nor do we pretend that we would not sell at home; that we would not take advantage of the home market as well as of the export market. What we want to do is to encourage the country to produce, and to sell all we can produce in the best market. I have the following clipping as to the demand on the continent for Manitoba wheat:

Montreal, April 20.—There was an increased demand from the continent for April spring wheat in nearby positions, and as the prices bid were fully three cents per bushel higher than those from the United Kingdom, some business was worked.

What do we care whether the market we obtain is on the continent, in South Africa, or in China—with which country the hon. Minister of Trade and Commerce says he is trying to work up trade—so long as we can sell our goods in the best market and to the best advantage? If our hon. friends are consistent in the theory that protection is the only policy for this country, then why not put back the protection on corn, fence wire and binder twine? My hon. friend from Essex (Mr. Wilcox) the other day, speaking on corn, advised the Government to put a duty on corn—and I dare the Government to put a duty on corn or binder twine or fence wire.

Mr. WILCOX: Does my hon. friend think it fair that there should be such discrimination in freight rates that the producer of corn in the United States has the advantage of the Canadian market by four cents over the farmer who produces corn in the county of Essex?

Mr. NESBITT: Certainly not.

Mr. WILCOX: That is the condition.

Mr. NESBITT: I quite agree with the hon. member that that is not right.

Mr. WILCOX: I sometimes pay a great deal of attention to what is said by the ex-Minister of Railways and Canals (Mr. Graham). He said that Mr. Mabee had been sent to Washington with a view to arranging an international commission, that under present conditions the Board of Railway Commissioners for Canada did not have jurisdiction to adjust a rate between a point in a foreign country and a point in Canada. Therefore, under present conditions, a rate is established from Chicago to a point in Ontario over which the Board of Railway Commissioners has absolutely no jurisdiction, and the only way we can have that matter rectified is by a duty.

Mr. NESBITT: The hon. member will not say that Mr. Mabee was not right in trying to get an arrangement between the two countries?

Mr. WILCOX: Absolutely right, but he did not get the result, and therefore we are under that disability.

Mr. NESBITT: We try so many things that we do not get; but we were on the right track, and Mr. Mabee did try to secure an arrangement between the board and the Interstate Commerce Commission of the United States to control the international freight rates.

Mr. WILCOX: I am glad that Mr. Mabee made the attempt, but no result

was obtained, and therefore we are labouring under that disadvantage.

Mr. NESBITT: That is for our present Government to continue and try and get the result. We did the best we could, and I hope my hon. friend from Essex will urge the present Government to try and get any such discrepancy as that rectified. It is absolutely unfair.

Mr. WILCOX: I intend to.

Mr. NESBITT: I still adhere to what I said in the first place that we want a tariff for revenue. We want to assist all we can new industries, but there are industries that do not require assistance, and it is absolutely unnecessary for us, at the expense of the ordinary citizen, at the expense of the general consumer, to impose unnecessary duties on any articles, and thus increase his burdens. Let me warn the Finance Minister that there is nothing so dangerous for a government as an over-surplus and it is not legitimate for the government of a country to take too much of a surplus out of the pockets of the people. It is legitimate for them to collect sufficient to pay the legitimate expenses of the Government, not silly expenses as I pointed out. But it is not legitimate for the Government to collect from the people more than is absolutely necessary for the service of the country, and that is the sort of tariff we want. We want a tariff, in my judgment, that, while it assists as much as possible the growing industries, will not be a burden to the whole people of the country. I hope with all my heart that the Government will be wise enough to grant the people of the West what they want without stirring up this local feeling of West against East, which is absolutely unnecessary and uncalled for.

Mr. ALFRED THOMPSON (Yukon): Mr. Speaker, I desire to make a few observations on the Budget speech delivered by the Finance Minister a few days ago. In following the hon. gentleman who has just sat down (Mr. Nesbitt) I want to congratulate him upon the very clear manner in which he has presented his views on this interesting subject to the House. In some things I agree with him. I am rather glad to find that he is a moderate protectionist, as I am. In other things I do not agree with him. In his strictures on the financial statement which was presented to the House by the Finance Minister, I cannot agree with him in his conclusions. I find that in the two years since the Minister of Finance has been in office he has saved the country $6,000,000. I think the average reference to the national debt is such an abstract proposition that the average man does not grasp it. I shall therefore only make a passing reference to it. I find that the net result of the operations of the Minister of Finance was a net reduction in the national debt of $6,000,000 in two years. It might be worth observing that the Liberals increased the national debt during the four years previous to 1910 by $70,000,000, and in one year 1898-9, by over $46,000,000; so that the financial record of the two parties might be fairly said to be in favour of the Conservatives. The hon. gentleman says he is a moderate protectionist, yet I observe that he did not advocate the abolition of the duty on agricultural implements, which is somewhat at variance with the position of other members who support the right hon. the leader of the Opposition. He would still have a duty on agricultural implements. What I understood him to say was that he would prefer a further reduction of two and a half per cent, that the industry could stand that; but he was not himself in favour of abolishing the duty. I am sure that the House and the country will be interested to know that in Ontario they raise wheat just for the straw.

5 p.m.

Mr. NESBITT: I did not say that I was in favour of some free agricultural implements.

Mr. THOMPSON: I think the hon. member was a little unjust in his reference to the policy of this Government with regard to the Hudson Bay railway. If my memory serves me aright, this country and this Parliament were committed to that policy by the predecessors of the present Government. That project was launched in 1910 and was referred to in the Speech from the Throne of that year. It is one of the legacies that have come down to this Government from their predecessors, along with the Grand Trunk Pacific and a few more.

Mr. LALOR: A good many more.

Mr. THOMPSON: Several, but I will not stop to enumerate them. Canada has stood the strain remarkably well, and I desire to congratulate the Minister of Finance on the condition of our finances during the past year. When we consider that the financial depression was not local, but affected every civilized country in the world, I think we may congratulate ourselves on the way Canada stood the strain. What are the facts? The past decade has been a

period of great expansion. We have spent money in public buildings from the Atlantic to the Pacific. Money has been invested in private enterprises and in the expansion of our manufactures. We have borrowed money from the markets of the world for our municipal and railway enterprises. Some of those enterprises immediately produce revenue. For instance, the money spent on private enterprises and manufactures, if successful, is immediately productive. But there is a class of investment which does not immediately return a revenue. I refer to the money invested in municipal improvements—streets, sidewalks and the like. Such improvements are not for this generation solely, but will be used by the generations to come. The same is true of our investment in transcontinental railways. We do not finance them for one decade, but for several generations. When we consider that Canada has borrowed largely from the world for enterprises productive and partly productive, I say that the condition of our country is one which every Canadian, Liberal or Conservative, should be proud. An enormous amount of capital has also beeen invested in unproductive real estate throughout this country, particularly in the West. Millions of dollars have been absorbed by unproductive land in the cities and towns throughout the country, and until prosperity returns those investments will bring no returns. It is times such as we had last year that test the props which support the country and the material upon which we have built our civilization. Canada has come through the test well, which shows how sound are the foundations of our prosperity. Notwithstanding the pessimistic note which pervades some of the speeches of hon. gentlemen opposite the keynote of Canada to-day is optimism. The people of this country have a profound faith in Canada. Hon. gentlemen opposite may cry 'wolf, wolf,' and 'blue ruin,' but I tell you, Mr. Speaker, that the foundations of this country are secure in our great national resources. The Minister of Finance sounded that note of optimism in his excellent speech. He said that the beacon light could already be seen in the harbour of prosperity, and that in a short time we should again experience a period of prosperity. As I said, the depression last year was world-wide, and to produce a world-wide result there must be world-wide causes. The causes are easy to discern: over-production and over-expansion, which used up the surplus capital. Because of the easy manner in which people to-day can travel from one country to another, money was got in the borrowing centres of the world for various enterprises. The over-expansion and over-production used up the capital, and, as we say in medicine, that had a cumulative effect. Trade slackened and municipal improvements ceased for a time. Our railways are not earning what they were; but the operation of that law is not confined to Canada. It applies universally. It is only a phase in the financial cycle through which Canada and the whole civilized world is passing, and this Government is no more responsible for that phase than it was for the appearance of Halley's comet a few years ago. I clipped the following figures from the Ottawa Evening Journal a day or so ago. The New York Central railway has laid off 25,000 men, the Pennsylvania railway 40,000 men. The latter road has also cut off 118 trains, and many other railways in America are doing the same thing. Surely financial conditions in other countries are worse than in Canada. Our national resources are illimitable and immeasurable. The basis of our wealth is our four great resources: our farms, our mines, our forests, and our fisheries. The fluctations in real estate do not really affect the foundation of our wealth at all.

It is to administer and develop that vast heritage of resources that our Government must address itself. The point is, which policy shall we adopt to develop that heritage? The issue between the two parties is distinct and clear. There is nothing like having a good clear battle-cry when you are going to fight. The Minister of Finance placed the policy of his party fairly and squarely before the people of Canada. He stands, and the men behind him of the Conservative party stand, for a moderate protection. Let me read what he said. He enunciates the creed of the Conservative party so clearly that it stands out in relief:

> We believe it is the best, indeed the only and in a sense the inevitable policy for Canada, situated as it is geographically and in the existing fiscal conditions of the world to-day. Under that policy Canada has prospered in the past and will continue to prosper in the future. We believe it to be the true policy for Canada and for every part of it if we are to regard as desirable stable business conditions and a diversified national life throughout the Dominion.

That has been the policy of the Conservative party since 1879, and it is worth while to note that in 20 of the 35 years since 1879 the destinies of Canada have

been governed by this party and by that policy. This party stands or falls by the policy of moderate protection. Where do our friends opposite stand ?

Mr. SCHAFFNER: Anywhere.

Mr. THOMPSON: I will admit that their policy is a little vague, a little tenuous and shadowy, and in places almost impossible to trace. In passing, it is worthy of notice that the financial critic of the Opposition, the junior member for Halifax (Mr. A. K. Maclean), declared for free trade in food products. The hon. member for West Kent (Mr. McCoig) does not want to encourage mixed farming in the West because the products of the West would compete with the products of the farmers of Ontario. I am giving, in passing, some phases of the Liberal policy. The hon. member for South Cape Breton (Mr. Carroll) out-herods Herod in the protective side of his speech, because he wants a bounty put on steel; he wants protection on diamonds and free trade in everything else; and incidentally he read the Hon. Mr. Sifton out of the Liberal party. Every one knows that we have no duty on diamonds because it is so easy to smuggle them into the country, that the Government decided that the best thing to do was to put them on the free list; but my hon. friend would encourage smuggling by having the duty reimposed. The ex-Postmaster General (Mr. Lemieux) frankly admitted that he was a moderate protectionist. It is well known in this House that my hon. friend the member for Red Deer (Mr. Clark) is an out-and-out free trader. But of all the hon. gentlemen on the opposite side of the House who have spoken I wish to refer particularly to the hon. member for Westmorland (Mr. Emmerson), who is exceedingly penitent. It is surprising how a few years in the cool shades of Opposition modify the sentiments of some hon. gentlemen. He is now rather radical. He says:

> For all these reasons, and because of their greed, the manufacturing and industrial interests are the enemies of democracy.

That is from one who was Minister of Railways in the Cabinet of my right hon. friend. Again he says:

> I am an out-and-out free trader and I wish circumstances permitted the adoption of free trade. I am to-day where I have always been.

Has he always been there? Was it a free trade Government in which he served? I do not think so. My hon. friend's present position reminds me very much of the little verse on the illness of his Satanic majesty:

> When the devil was sick the devil a saint would be;
> When the devil was well the devil a saint was he.

But where is the distinguished gentleman who leads the Opposition? So far as free food is concerned, he has crossed the Rubicon. He advocated free food at Hamilton; he voted for free wheat and free implements. Where does he find himself to-day? It is well known that, when my right hon. friend was captain of our ship of state and walked the quarter deck as Premier of Canada, there was no division in his ranks as there is to-day. How does this happen? Is it because the patronage is not present? Why is it that so many different opinions are expressed to-day by hon. members of the Liberal party? It is because that party has no policy. My right hon. friend to-day leads a divided party, a party which is as much without a plan or a policy as it is without power. This is what the News-Advertiser of Vancouver says of the Liberal party to-day:

> The fact is that there are two Liberal parties with quite different principles. One is the party when in office, the other is the party when in Opposition. The former is protectionist. the latter is free trade. The former acts; the latter talks. Opponents of the National Policy have nothing to hope from either of them. The Liberal party in Opposition is powerless to abolish protection; the Liberal party in office is powerful to maintain it.

The different policies propounded by our hon. friends on this great question show that they are divided. To-day the Liberal ship finds itself in a troubled sea sailing without a compass, without a chart and without a course. This country is no Utopia, no New Atlantis or other ideal state conceived in the mind of some philosopher; this is Canada in the twentieth century, a country that requires a strong policy with a strong party to advocate it and to carry it out. Such is the policy which we have in Canada to-day, and we have a party in power to carry out that policy. So far as we on this side of the House can distinguish, the policy of our Liberal friends has been crystallized up to date in free implements, free wheat, and—although they have not yet seen fit to bring in a resolution advocating it—the leader of the Liberal party has outside this House expressed himself as in favour of free food. I represent a constituency whose chief output is gold.

In the Yukon we have three exports: gold,

copper ores, and furs. Our chief export is gold; and, if there is any section of this country that should favour free trade, it is the territory which I have the honour to represent, because we produce there the medium of exchange. We have no difficulty at all in marketing our products; everybody wants them. During the last fifteen or sixteen years we have produced very nearly $200,000,000 worth of gold; in the year 1913 we produced a little over thirteen tons of the yellow metal. Although we might therefore be supposed theoretically to be free traders, we are not; we are Canadians who believe in a policy for the whole of Canada as well as for the Yukon. We have to come to this federal Parliament to get the grants necessary to develop that territory, 4,500 miles from the place from which I speak, and we know from experience that the moneys of this Government cannot be got except by encouraging the industries and the trade of this country. That is why we are protectionists; because we believe that protection is the best policy for Canada and therefore the best policy for the Yukon.

The Yukon territory is huge in extent, 200,000 square miles, and the last page in its history has not by any means been written. There is in Russia a province similar to the Yukon in area and climatic conditions, the population of which is over one and a half million people; and the Yukon territory is capable of supporting a very much larger population than it has at the present time. Its development is only beginning. The United States Government has recently voted $35,000,000 for railway development in Alaska, and it is only a question of time when we shall come to this Government and ask for the extension of the Grand Trunk Pacific through the northern portion of British Columbia and Yukon to connect with the Alaskan railway system at the boundary line.

With regard to free wheat, these are the arguments which the Minister of Finance has submitted and which have as yet been unanswered by the Opposition:

1. High prices in Minneapolis are due to a local demand for hard wheat. This condition would disappear as soon as our wheat went in free, as the demand is limited.

2. Canada and the United States both export wheat. Therefore the Liverpool price governs.

3. Canadian wheat shipped to the United States would lose its identity, which identity is an asset.

4. The millers have to pay duty on their machinery; and if flour were free, they would be better off under free trade. This is logical, and shows us where the Liberal policy takes us. The policy outlined to-day by the Liberal chieftain tends directly to free trade for Canada.

5. Different latitudes yield early and late wheat, giving an advantage to the wheat of the United States over ours.

6. It would kill the milling industry in Canada.

7. There is no permanence in the United States tariff, and therefore we would not be warranted in incurring the necessary expenditure in developing the market.

8. Mixed farmers need the by-products, which are said to be dearer in the United States, and therefore, if the duty were removed, they would be dearer in Canada.

These are powerful arguments for keeping the duty on our wheat, and I have yet to hear an hon. gentleman opposite answer categorically the arguments of the Minister of Finance. These arguments seem sound to me, and, until I hear better arguments in opposition, I intend to accept them. What he said was, that we were building two transcontinental railways, and opening up the Hudson Bay route, and he asked the people of the West to wait until it was known what effect these new transportation routes would have upon the export trade and the transportation rates. Reasonable protection for our industries has been the traditional policy of Canada ever since the abrogation of the reciprocity treaty between us and the United States in 1866. We have been bending all our energies for nearly fifty years towards the development of this home trade, and what the Liberal party wants now is, at one fell swoop, to destroy this structure to the erection of which the best men who have ever adorned Canadian statesmanship have in the past devoted their talents.

We have 9,500 men employed in the agricultural implement industry, and there are 50,000 people depending for support on the labour of these men. Our friends opposite advocate free trade in agricultural implements, with the probability of wiping out this Canadian industry, and it is reasonable to ask them why, if they think it is a good policy, they did not put it into effect when they had the power, and why, now that they are in opposition, they wish to take a scythe and cut down this great industry. What

care they now for the prosperity and well-being of 50,000 of their fellow-Canadians, so long as they think they can, by advocating such a policy, gain some votes in a certain part of this Dominion. In the textile and other industries there are many women employed, but let it be remembered that in the agricultural implement industry the employees are mostly men who support families and maintain happy homes. Is it not a serious thing to propose to wipe out such an industry? If you take the duty off agricultural implements, it would be illogical to leave the duty on the raw material, and as I understand the hon. member for Red Deer (Mr. Clark) is to speak in this debate, I would draw his attention to the fact that the logical outcome of the policy now advocated by his political friends must be free trade for Canada. That is a doctrine which I will not and cannot endorse. I would also invite my hon. friend's attention to a speech made in this House on December 3, 1912, in which the hon. member for Wentworth (Mr. G. C. Wilson) pointed out that when the Liberals took the duty off binder twine there were fifteen factories manufacturing binder twine in Canada; that fourteen of these were abolished and that only one remained, while the price of binder twine is higher to-day in Canada than it was before the duty was removed.

Mr. MICHAEL CLARK: Then, why does your party not put the duty on again?

Mr. THOMPSON: I am propounding these questions to the hon. member for Red Deer, and when he comes to address the House he can give an explanation of them. I point out to him further that the same thing happened when the duties on barbed wire and coal oil were removed.

Mr. LOGGIE: The hon. gentleman surely knows that the increased price of the article he refers to is because the raw material has very much advanced in value.

Mr. THOMPSON: That is not what the grain growers in the West say.

Mr. LOGGIE: Oh, well, I know it is so.

Mr. THOMPSON: What the grain growers in the West say is that the price is advanced because of the monopoly which exists in the United States, and the grain growers of the West know that to be a fact. And yet these gentlemen opposite would wipe out this great industry, with the result as the Minister of Finance well said, of placing Canadian farmers in the maw of a great United States trust.

Another thing which hon. gentlemen opposite speak of is free food. When they adopted free food, England went free trade, and so must Canada adopt free trade if we are to follow the policy of the Liberal party. Let me point out that this policy of free wheat, and free agricultural implements, and free other things, originated in the West, and I shall address a few observations to what I think is the cause and cure of the situation existing in the West. In Alberta and Saskatchewan, the people have practically no diversity of employment; their efforts are devoted almost altogether to raising the products of the soil. Where did the Liberals meet with the losses last election which placed them in opposition; where did they gain seats, and where did the Conservative party make the gains which put them in power? In actually every province in Canada, except Saskatchewan and Alberta, the Conservative party made gains. And why? It is because the people of Canada are protectionists to the core; because in these older provinces we have diversity of employment and prosperous industries which have contributed in a large part to make Canada the great country it is to-day. In Nova Scotia, New Brunswick, and Prince Edward Island, manufactures are not developed to the same extent as they are in Ontario, but still in the Maritime provinces the Conservative party made gains. In the province of Quebec, where manufacturing industries are developed to a high state, the Conservative party made remarkable gains.

Mr. LEMIEUX: The naval question made the gains there.

Mr. THOMPSON: I am glad the hon. gentleman has drawn my attention to that. I have a profound faith in the genius of the people of Canada to govern themselves; I have profound faith in the optimism of the Canadian people; and I have a profound faith in the judgment of the people of Canada, and I believe that arguments directed to local prejudices and race passions do not appeal to our people. Examine the pages of our political history, and you will find that when the people of Canada tire of a government they do not turn it out piecemeal, but they wake up one fine morning and completely annihilate it.

Mr. PROULX: They will soon annihilate this Government.

Mr. THOMPSON: This Government will go down to defeat in time, but not so long as hon. gentlemen opposite are divided on the trade policy, as they are to-day. The usual course is for the people of Canada to put a government in power with a large majority, and to let that government govern the country, but as soon as the government does not legislate to suit them, they turn that government out of power in good shape, as happened in 1911. The moment the late Liberal Government attacked the traditional trade policy of the country, that very moment the people said, we want none of you, and out you go. In the great province of Ontario, the central province of Canada, where manufacturing has been carried to its highest state of development, there is where the Conservative party got their chief support. The result of the last elections, taking them generally, show that where you have diversity of employment and established industries, the people believe in protection. British Columbia, which has coal deposits, fisheries, horticultural lands, farm lands, diversified climate, diversified employment for the people, did not want reciprocity, and the seven members who represent that province are to-day supporters of the right hon. the Prime Minister. In Manitoba, where manufacturing is developed to a certain extent, but not to the same extent as in the eastern provinces, the Conservative party made gains also. In Saskatchewan and Alberta, in one case there was no change, and in another case there was a loss of two seats. Why was this? The people of these provinces are interested in only one industry, and, having no diversified employment, they require a large number of working people at certain times of the year, but have no employment for them at other times. The people of these two provinces, it is said, want free trade. But, Mr. Speaker, if I judge the people of Canada aright, on the whole they are decidedly opposed to free trade, and it is for us to find where the trouble is with these provinces, and if there is a remedy to apply it. I believe, Sir, that if there were manufacturing communities scattered throughout Alberta and Saskatchewan, you would no longer hear from the people of those provinces any talk about free trade. You will find that these people will be protectionists, the same as the people in eastern Canada. Why are these people not protectionists to-day? For the lack of two things: they have not cheap power and they have not cheap transportation. But these are some of the things to which this Government might well address itself. I will attempt to show the House how this problem may be solved, in my judgment. There are great water-powers in Canada, and one of the causes that will yet make Canada industrially great is to be found in the splendid water-powers scattered throughout the length and breadth of this country. Within a few miles of the city of Winnipeg there is a waterfall capable of developing 500,000 horse-power. Now, one horse-power to five people is about what they require for an industrial city. So, in that water-power on the Winnipeg river alone we have the means to keep going an industrial city of 2,500,000. Now, the public domain in these western provinces belongs to this Government—coal lands, water-powers and everything else. I say to this Government: Address yourself to that question; find out where the water-powers are; develop them and sell power, cheap power, to Manitoba and the other provinces. My hon. friend from Calgary (Mr. Bennett) knows that about 50,000 horse-power awaits development on the rivers within fifty miles of that city. At five people to each horse-power, this would furnish power for a city of 250,000 people.

It so happens that nature in dealing with Canada has been prodigal with her gifts, she seems to have placed things just where we require them. I have shown that at Winnipeg and Calgary we have these water-powers. There are other sections where water-powers do not exist and cannot be developed. But there we have another natural resource which can be converted into energy—I refer to the great beds of lignite coal underlying the soil of these prairie provinces. Any one who has paid attention to mechanics during the past few years will have observed that the gas producer for low-grade coal is a fact. It produces what is known as producer gas at a low rate of expense. The lignite coals of the West are such as can be successfully used to create that gas, and that gas will not only produce power, but it can be made the means of heating homes and factories. It is not very good for lighting, though it can be used for that purpose. So, I say to this Government: Continue the examination you are making into the lignite fields of the West; find out where the industrial centres are or are to be; find out how to

develop the power of lignite coal and sell it at a cheap rate thus encouraging the people to go into manufacturing. If you do this, you will have no more worry about free trade. In advocating this, I am simply pointing to the same course which has been followed in the East, for the East grew by developing its natural resources. I received in this morning's mail a booklet from Nova Scotia. The foreword is as follows:

> The position to-day of the manufacturing industries of Nova Scotia is shown in this picture-story. This country with its half million inhabitants affords a typical example of modern industrial growth.

That is the example I am attempting to picture for our prairie provinces of the West, with their great hidden natural resources.

> At one time exclusively a farming and fishing region, the province now possesses 1,480 manufacturing establishments, paying out $11,000,000 yearly to 38,000 employees. The industrial ascendency of Nova Scotia is broad based upon its immense deposits of coal, its great forests, its farms, its fisheries, its water-powers.

That can be duplicated in the West, and if we pay proper attention to these great natural resources it will be duplicated in the West. Besides the power which can be generated from lignite coal, there is a by-product in the form of nitrogen, which can be combined with sulphuric acid to make ammonia sulphate, which is most useful as a fertilizer and for which there is an endless demand.

These are some of the things which the West can do. As an example of what can be accomplished, I need not go farther than this province, in which we can point out what has been done in the development of water-powers. Consider what has been accomplished at Niagara. Did you see, Mr. Speaker, the vast delegation that came here the other day to ask this Government to subsidize radial electric railways in Ontario? Could such a thing have been thought of before Niagara had been developed? Not at all. Niagara power has made possible for this province this and many other things, and if its water-powers are developed, the same thing will come to pass in the West.

As I say, the policy of our friends opposite tends directly to free trade, and my right hon. friend the leader of the Opposition (Sir Wilfrid Laurier)—for whom, let me say, I have profound respect; he has carved high his nitch in our temple of fame—can hardly deny that his policy tends directly to free trade. We have in biology a condition known as 'reversion to type.' A man may inherit the qualities possessed by a progenitor of several generations back, which qualities, after being latent for a time, may develop strongly. Atavism this condition is called; and the distinguished gentleman who leads the Opposition is a case of political atavism—he is reverting to type.

I have some material on the cost of living, but this I will not submit, because I do not wish to occupy too much time. I wish to say a word about the progress made since my hon. friend from Red Deer (Mr. Clark) came to this country. I congratulate him on the number of converts he has made, judging by the speeches made in this House. He frequently refers—and I give him great credit for being an expert dialectician—to the economic progress of England and the doctrine of free trade. Mr. Speaker, the doctrine of free trade apparently suits the people of England—though we must not be too sure of that. But to hear the hon. gentleman you would think that England had always been a free trade country. England had a greater protection system than Canada ever had, and she had it for 500 years instead of for thirty or forty years, as Canada has had it. When we reach the same stage of economic development as they had reached in England, we may have free trade, too. In England they did not adopt free trade until they had developed an artisan to compete successfully with the best artisans in the world. Let me point out that England in former times had a double protection, not only the protection of import duties, but the protection of her trade guilds as well; and if ever there was a protectionist institution it was the trades guilds of England. They were close corporations. England in time developed this great industrial machine, and not until then did she adopt free trade. And she adopted that policy at a most fortunate time, before the great industrial nations, Germany and the United States, became what they are to-day. She adopted it at a time when practically the whole world was at war, and we know what war does for a country; it paralyses commerce and industry and destroys everything except the fighting spirit of the people. Following the adoption of free trade in England, came the war between Germany and Austria, paralysing the industrial energies of those two countries.

Then came the Crimean war, in which Russia, Turkey, France and England were engaged. Then came the Civil war in the United States, when that great republic was paralysed from the Atlantic to the Pacific, when manufactures were not carried on and could not be carried on. Following this was the Franco-Prussian war of 1870. England was there in her right little, tight little island, making commodities for the civilized world. This is why free trade was such a success in England in those days. It is not such a success to-day. Since that time, Germany, instead of being a few scattered states, has become one great nation, and is engaged in manufacturing in higher degree than England. The United States, since they finished their internecine war, have developed into perhaps the greatest manufacturing nation the world ever saw.

To-day England with her free trade policy competes throughout the whole world with those nations which have a high protective tariff. England has not always been a free trade country; she is not far from being a protectionist country to-day. I have under my hand statements, which I will not read, made by Bonar Law, leader of the Unionist party, and by Mr. Balfour, both of whom proclaim that what they want is protection for the British workman and further, that if they get into power they will put that policy in force. Then what becomes of English free trade? In my judgment it is absolute folly to foist free trade upon a country like Canada, at its present stage of development. Philosophers tell us that every nation goes through three stages: first, the period of free trade, when practically nothing is manufactured; second, the stage when the country begins to manufacture and when a tariff wall is put up to protect the manufacturer; third, the stage where a measure of free trade is adopted. We see that happening to-day in the United States. The United States, which is adopting a lower tariff, was for years the high priest of protection. When our economic structures are built up from foundation to roof; when our industries have reached the stage which the industries of the United States have reached, it may be that we shall lower our tariffs as the United States did.

I want to refer for one moment, for the benefit of the hon. member for Red Deer (Mr. Clark), to the two policies of protection and free trade as exemplified by Germany and Great Britain respectively. The population of Germany, under protection, has increased; her output has increased; the wages of her labourers have been increased, and the cost of living has decreased—all to a greater extent than the same lines have in England under free trade. I refer any gentleman interested in this question to an article in the British Review by Mr. T. Good, which deals with this matter in a clear and comprehensive way and which acknowledges the fact that the free trade system of Great Britain has been beaten by the protectionist system of Germany. He says that the changing of that system in England is only a question of time. This is the opinion of a man who is well acquainted with the two systems exemplified in Germany and in England. I may mention the fact that J. Stuart Mill, the great economic philosopher, favoured protection, and that Adam Smith, the founder of the science of economy, favoured protection in young countries to encourage the development of industries up to a certain point. Another economist in Our Modern Times refers to the policy of free trade in England as having absolutely failed. Yet hon. gentlemen opposite, without any careful thought in the matter, and after fifteen years in power as protectionists, wish to commit this country to a policy of free trade. This policy of free trade is no new doctrine. The following countries have, during the course of their history, adopted and abolished free trade: Greece, Rome, when she was competing with Carthage, Venice, France, Australia, Belgium, Germany, Russia, Sweden, Denmark, Spain, and United States.

One of the great fallacies of free trade is this: Free traders think only of the prices of the things they buy, but it is the ratio between what they earn and what they pay out that really matters. I do not believe in high protection; I believe we should have a moderate tariff, and a tariff commission to ascertain the cost of producing a given commodity in Canada and the cost of producing the same commodity abroad. The tariff can be based upon the difference in cost. If the Government wishes to give the manufacturers protection beyond that, all right; but let us have a tariff commission of experts to advise the Government—something that Canada has never had. Our tariff has been made in a very slipshod manner. Legislation to provide for a tariff commission was voted down by hon. gentlemen opposite, but this Government will put it into effect just as soon as it can.

The tariff is not a sacred thing; it is not handed down from heaven like the oracles of the living God. It is an instrument devised by mankind to raise taxes, and

I believe that it should be made a living part of our politics. It is a thing we have to use; it is a thing which the people of this country in the future will, I believe, continue to use. All economists agree that that country is wealthiest which finds the greatest amount of labour for its citizens. That is what we want to do in Canada; we want to make of Canada a great industrial nation, and the protective policy which this Government stands for will do that. We want to create an industrial system which will correspond to our political system, in which we carefully avoid sacrificing local interests to centralization. We want to bring the producer and the consumer closer together, because the home market is the best market—eighty per cent of our products are consumed by ourselves. We want to give employment to our own people and build up in Canada a great industrial nation. We believe that we can do this, because the people who populate Canada to-day are the most vigorous of the various branches of the Aryan race. Our country extends across the continent. Our back is against the north. We have shores on three great oceans. We have no hostile neighbours. We have great natural resources, which are just beginning to develop. Let us not do anything to interfere with our natural growth; let us create within our own borders a home market for our own people. Let us develop our great natural resources along rational and national lines and thereby build up in Canada a virile, vigorous nation—such, I believe, nature destined her to be.

At six o'clock, the House took recess.

At eight o'clock the House resumed.

Mr. LEVI THOMSON (Qu'Appelle): Mr. Speaker, I trust that my hon. friend and namesake who spoke last (Mr. Alfred Thompson) will not feel at all hurt if I undertake to refer to some of the arguments advanced by him, even although he himself is under the impression that no person of less ability than the hon. member for Red Deer (Mr. Michael Clark) should be considered as a fit opponent, as a foeman worthy of his steel; and apparently he thinks that even the hon. member for Red Deer requires a great deal of education from him before he should place himself in so important a position.

My hon. friend made some very serious complaints against the late Government because they had put certain things on the free list. I think the articles he referred to were binder twine, coal oil and cream separators. He thought the late Government were guilty of a terrible iniquity because they put and left these articles on the free list. The hon. gentleman is now supporting a Government that still leaves these articles on the free list, and has done so for the last two and a half years.

My hon. friend thinks it a terrible thing that any two persons on this side of the House should have different opinions on anything; it is simply horrible. Does he not see that he is digging a pit for his own feet when he says that; as he must see that things which he condemns in unmeasured terms are approved of by the Government which he is supporting?

My hon. friend was very much aggrieved because wicked Grits on this side of the House and an equally wicked majority in the Senate would not allow a tariff commission to be appointed. Surely my hon. friend knows there is nothing in what he says—that it would be impossible for us on this side of the House to prevent the Government from passing and putting into force such legislation if they chose. Surely he knows that the Senate, even that terribly wicked Senate, never attempted to prevent the Government having a tariff commission. All the Senate said was that if the Government appointed a tariff commission they should not consider any application to increase the tariff unless a certain investigation was held and certain information obtained. My hon. friend says that the party with which he is associated is a party which stands for moderate protection. If the party which he supports stands for moderate protection I do not see what better commission they could have than that suggested by the Senate. Our objection to the proposed tariff commission was that it was being appointed to raise the tariff out of sight, as one hon. gentleman said, to raise it higher than Haaman's gallows. The only reasonable objection to the amendment suggested by the Senate was that it would prevent the present Government from carrying out such a policy. No one has ever suggested that there was any objection to the amendment proposed by the Senate except that, unless it be the difficulty as to form, which troubled the Minister of Finance; but of course that could easily have been rectified by some arrangement. My hon. friend says the party he supports stands for moderate protection. That is an exceedingly convenient term.

Mr. GRAHAM: Almost like 'adequate.'

Mr. THOMSON: Almost like adequate, as my hon. friend says; but no one on this earth can give us a definition that will be accepted generally of the meaning of either of these terms. The man who believes in a 5 per cent tariff will say that 5 per cent is moderate protection. The man who believes in a 100 per cent tariff will tell you that that is moderate protection; and even the gentleman who at one time said he was in favour of a Haaman's gallows tariff would probably say the same thing. I am not at all in favour of protection of any kind.

Mr. BURNHAM: What about police protection?

Mr. THOMSON: If my hon. friend from Peterborough wants the police to protect him, I have no objection to their coming in. If he feels the need of police protection I shall raise no objection, I shall make an exception in his case. I should have felt very much disappointed, indeed, if the hon. member for Peterborough had not butted in. I would have felt that he was ignoring me. We are all so accustomed to the inquisitiveness of my hon. friend, that we feel that there is something wrong with our speeches if we are not asked some question by him. 'Moderate protection' is a very convenient term, but it is not at all a satisfactory term, because it means anything or nothing, it means little or much, it means whatever you want it to mean. My hon. friend from North Oxford (Mr. Nesbitt) seems to be satisfied that the farmers of the West would be willing to submit to what he also calls moderate protection, provided the present Government or any government in power will be satisfied to remove their immoderate restrictions. I think my hon. friend from the Yukon would have set the position more clearly before the House if he had said that the party he supported stood for immoderate protection and immoderate restrictions. I do not like protection, moderate or immoderate; but I dislike restrictions, moderate or immoderate, very much more. I am not sure that I would quarrel very much with the proposition of the hon. member for North Oxford, with some little qualifications. I do not know that we in the West would object very seriously to moderate protection if it were coupled with the removal of restrictions to prevent us from readily marketing our wheat, our oats, our barley, our flax and other products in the United States, and other markets of the world, so far as such restrictions can be removed by this House. I do not know that we would object so very seriously for the time being to these things; at least we would perhaps agree to them with a qualification. You know that one thing that the Anglo-Saxon or the Frenchman will hardly tolerate is to be deprived of the right of complaint, or, in ordinary language, of kicking. I am not sure that I would not be prepared to approach the Prime Minister, and, if he would agree to remove the restrictions to which I refer, or to do everything in his power to have all restrictions removed which prevent us from marketing our grain as we would wish to, agree to give a moderate assent to the doctrine of moderate protection. But we would want to have the right to do some moderate kicking in case we were not satisfied with any provisions. We would want, however, like the moderate protectionist, to define what moderate kicking meant, just as the protectionist want to put their own construction on the term moderate protection. We might give a very mild kick, or we might kick to the extent of putting the present Government out of power. That would be a moderate kick under the circumstances. If the Prime Minister is willing to take that matter into his consideration, I have no objection, and we would consider the question later on.

I propose to deal briefly with one particular question before us; in fact, I propose to confine myself almost entirely to the question of free wheat. The present Government show a laudable desire to assist our manufacturers in securing markets for their exports. I think that this is well. It is of great importance to keep our exports up to the mark. Our imports are great and continually increasing, and our exports should also be great and continually increasing. I gather from the remarks of the hon. member for South Perth (Mr. Steele) that he appears to think that the farmers of Ontario are not willing to do their share in building up the exports of this country. I do not think he is fair to the farmers of Ontario. I do not think the letter from which he quoted to show that the Ontario farmers give as little as they can for what they get, fairly states the position of the farmers of Ontario. I am quite sure they are willing to do their share in building up our export trade. The Minister of Finance evidently

believes that exports are of great importance. Quoting from his speech the other day, I see that the exports of manufactured goods for the eleven months ending February last amounted to $51,204,162, and that the exports of agricultural products, including animals and their products, amounted to $241,854,542—nearly five times as much as the export of manufactured goods. The Government is very properly anxious to do what it can to increase the export of manufactured goods. I believe that the export of farm produce could be more easily encouraged. With reasonable encouragement from the Government, I believe that we could double our exports of agricultural products in a very short time, and that would be a splendid thing for this country. What is the Government doing towards increasing our exports of agricultural products? Not very much, I am afraid. Instead of making efforts to increase those exports, they seem to be trying to prevent the removal of artificial restrictions which make it difficult for us to increase our exports. In that respect the present Government are 'doing those things which they ought not to have done and leaving undone those things which they ought to have done.' We all acknowledge the great ability and energy of the Minister of Trade and Commerce. He is ready at all times to use that energy and ability in increasing the exports of manufactured products, but what is he doing towards increasing the exports of agricultural products? I am afraid my hon. friend is like the Pharisees of old, who were very careful to pay tithes of mint, anise and cummin, but very neglectful in attending to the weightier matters of the law. I am not complaining of what my hon. friend has done towards increasing the exports of manufactured products, but I do complain that he has left more important duties undone. The hon. member for the Yukon made a very strange assertion in his speech this afternoon. He said that the arguments advanced by the Minister of Finance against placing wheat on the free list have not been answered by any one. I think the hon. member must have entirely neglected to read or listen to the speech of the hon. member for Brandon (Mr. Aikins). If he had read that speech he would have seen that most of the arguments of the Minister of Finance were knocked into a cocked hat by his follower from Brandon. I wish to dwell for a moment on some of the objections that were raised by the Minister of Finance against placing wheat on the free list. His first objection was that the higher price in the United States would not be permanent. That is a very easy assertion to make, but very difficult to prove. The Minister of Finance is a trained lawyer although he has not practised to any great extent. He surely knows that it is the duty of a lawyer making an assertion to prove his statement, but he did not advance a single argument in proof of what he said. His next objection was that the United States is an exporter of wheat and therefore it would be no use shipping wheat to them. Does the minister really think there is anything in that argument? The records show that even England sometimes exports wheat.

Mr. MICHAEL CLARK: Whenever they have an early harvest.

Mr. THOMSON: Exactly. According to the argument of the Minister of Finance we should not ship wheat to England as at times it exports a considerable quantity. That shows the absurdity of his argument. It is quite true that at times the United States exports a certain quantity of wheat, and at other times it has to import just the same as many other countries. But even when the United States does export wheat, is it the kind of wheat that we sell? That is a point worthy of consideration. Even if it did export the sort of wheat that we sell the objection would amount to very little; and if they do not export the sort of wheat we sell the objection does not begin to amount to anything. I have carefully followed the market reports in the English papers during many sessions, and I have yet to find a report showing the price of American hard wheat. Every time you see the market reports, the price of Manitoba hard is quoted. If the Americans are shipping hard wheat to the English market, why is it not reported?

Mr. W. H. SHARPE: Can the hon. member give the comparative prices on the English market of the wheats that he speaks of?

Mr. THOMSON: There can be no comparative prices when there are no prices quoted. I cannot answer that question, neither can my hon. friend.

Mr. SHARPE: The kind of wheat quoted on the British market?

Mr. THOMSON: I have seen quotations of American wheat, but the spread was tremendously large. I cannot tell my hon. friend now what it was.

Mr. SHARPE: Which is the higher, the Canadian or the American?

Mr. THOMSON: The Canadian. The quotation of Canadian wheat was very much higher every time I saw it. I have looked to-day carefully through the English papers, and I cannot find a single quotation in any of them of American hard wheat, although they all contain quotations of Canadian hard wheat. So much for the second wonderful objection that, it is claimed, has not been answered in this House.

The next objection is the loss of identity, which is an old story. What need is there for any loss of identity? If we sell our grain to the Americans, we do not care about its identity after we have sold it. The Americans can do what they please with it. They can identify it with anything they like; they can abolish its identity or they can establish its identity. Why should not our grain be shipped through in bond? The American millers could mill it themselves and then ship the product in bond. There is nothing whatever in that argument, and the Minister of Finance must have known that when he advanced it.

He tells us that there is no guarantee of permanence of the American tariff. Are we not to ship our grain to any British or foreign country where there is no guarantee of permanence of tariff? Is there any country in the world where there is any such guarantee? I know of none. If the argument of the Minister of Finance is good in regard to the United States, it is equally good in regard to any other country in the world. I do not think there is anything in that argument. We have heard that even in England there is no guarantee of permanence of the tariff. We have more threats from there of putting a duty on wheat than from any other country.

Some further objections have been raised that perhaps deserve a little more consideration than those I have mentioned. One is that we will injure the Canadian railroads—that if our wheat is allowed free entry into the United States, so much of our wheat will go there that serious injury will result to the railroads of Canada. I cannot see why that should follow. At the present time we are exporting to Great Britain and to eastern Canada practically all the grain of the description we are producing that they can take. As a matter of fact, we are sending so much grain to Great Britain that its price there is affected. No one will deny that the grain we raise in Canada is the best grain in the world and that it has a greater actual value than any other grain in the world, but does it command a higher price in the British market? By no means. There are other grains of inferior quality that command a higher price in that market. The reason for that is that we are shipping to the full extent of the amount that Great Britain will take of our particular quality of wheat, and some other countries are not shipping enough of an inferior quality, and therefore the price on that inferior quality is higher. I fail to see how the removal of the restriction, which prevents us at present from shipping our wheat to the United States, will in any way affect the railways of Canada. In the West we are prepared to grow all the grain that eastern Canada and Great Britain will accept and, if the Government give us the opportunity, we will also grow sufficient grain for the American market. We are prepared to go farther. If the present Government have enough enterprise to open up other markets, we will try to supply them too. The Government have no real idea of the resources of the West; they have no idea of the amount of grain we could produce, even if we went into mixed farming in order to increase the amount of our production. It is the duty of the present Government to do their utmost to secure for us not only the American market, but other European markets. Some of these European markets take a certain amount of grain from us at certain times, and there is good reason to hope that in one country in particular a trade agreement might be entered into. The Minister of Trade and Commerce should spend some time in Germany and see what arrangements he can make with the German people whereby we might ship our wheat into Germany under a less duty than we pay at present. This is the day of trade treaties. Different countries are making trade arrangements with one another, and we must do the same if we are to keep the pace. I notice from the Government reports that in the year of 1909 we exported to Germany bread-stuffs to the value of $213,462. Three years later that export had increased to $1,853,724, and in the following year it was $1,509,237. That shows that there is a fluctuation in the demand, as there necessarily will be in such cases; but it shows that the amount which the Germans are prepared to take is increasing, and that there is some hope for a trade arrangement with that country. If such

arrangements were made, wheat sent to Germany or to other European countries would be just as liable to go over Canadian routes as wheat to Great Britain would. Therefore the Government can do a great deal in the development of wheat growing and wheat exporting in the West which would assist the Canadian railways instead of injuring them.

Another reason given in opposition to the abolition of the duty on wheat is that it would injure the milling industry of this country. Is there any foundation for that statement? If there is, it is a very serious matter. The only miller, whom I have heard speak in this House on this question, said positively that it would not injure the milling industry. I think the objection is fully answered by the fact that Canadian millers can compete with the American and other millers in the market of the world; that they shipped to the markets of the world during the year ended March 31, 1913, flour to the value of $19,907,959. If they can pay the freight and compete with the American millers in the markets of the world, surely they can compete with them in the markets of Canada where they have the advantage of freight. It is absurd to suppose anything else.

The only other objection which I have been able to find is in regard to bran, and it is a pretty slim sort of objection. My hon. friend from South Perth (Mr. Steele) was afraid the farmers would not be able to get enough bran to feed their cows; but what are the facts? We are told by gentlemen opposite that bran is so much higher in price in the United States than in Canada, that the United States would absord all the bran we produce and that our farmers would not get any of it. As a matter of fact, the trade returns show us that we are importing some bran from the United States; not a large quantity, it is true, but during the year I have referred to I find bran was imported from the United States to Canada to the value of $16,344, which shows there is not much in the objection. But, what shows that there is nothing at all in the objection is the fact that the Canadian millers exported during that same year bran to the value of $1,603,795. This shows that the Ontario and other farmers do not want the bran we are already producing; the home market will not take it all, and the millers have to look to a foreign market for the sale of their bran. Surely our cow-keepers, whether they live in towns or on the farm, cannot raise any objection to the fact that they will not be supplied with sufficient bran when they do not now take all the bran that is at their disposal.

The question of our obtaining an increased price for our wheat, if we were granted free admission to the American markets, has been sufficiently established, and I do not think it is necessary to go into it any further. Every person who is open to conviction is, I believe, already convinced on that point, and those who are not open to conviction I cannot convince. But there is another phase of the question that might receive a litttle consideration. To my mind, it is not only important that we should get a good price for our farm products, but it is also very important that we should have broad, good, and sufficient markets. That fact is self-evident. I believe that two markets are better than one, and that three markets are better than two. If your first market fails, on account of its being glutted, then you need your second or your third market, and to my mind the whole three should be available. You are no doubt better with four or five markets than with one, or two, or three. The more markets and the bigger markets we have, the safer is our business. A restricted market is always an unsafe and erratic market, and an erratic or unsafe market for our produce is bound to check the expansion of our business. That is a phase of the question that deserves more consideration than it has received. It will be agreed, I think, by every hon. member in this House, that it is necessary that we should have western expansion in order that all Canada should experience progress, development and prosperity. I think it will also be agreed that the reason of the great prosperity of Canada in late years has been caused by western expansion, and, if you check that western expansion, you check the progress and prosperity of the entire country. Western expansion has done great things in late years for the provinces of Ontario and Quebec, and if that expansion continues it will do still greater things for these provinces, as well as for the Maritime provinces. Notwithstanding what is said against the Hudson Bay railway, I have some hope that the Hudson Bay route will be opened up, and that it will bring us into closer contact with our friends in the Maritime provinces, and be of great benefit to them as well as to us.

Let me call attention to a few figures

which show western expansion. In the year 1900, according to the official reports, we had under crop, including land raising cultivated hay, fodder, and roots, as well as grain, 3,597,691 acres. Five years later we had nearly double as much under crop, namely, 6,298,288 acres, an increase of 2,700,597 acres. During the next five years our acreage under crop very much more than doubled. In 1910 we had under crop 14,412,588 acres, an increase of 8,114,300. In 1911 the increase still continued, and we had that year 17,136,414 acres, an increase in that one year alone of 2,723,826 acres. Unfortunately at that time, there was a check in that expansion. I think it was unfortunate, although some hon. members apparently do not think so. In 1911, we had reached a stage where it was quite plain that we were producing as much grain as the markets open to us called for, and it became evident that we would either have to find broader markets or that the expansion should cease. The Right Hon. Sir Wilfrid Laurier, then leader of the Government, saw that this condition existed, and he took the necessary steps to increase our markets, and so he arranged with our friends across the border that we should be allowed to export our grain to the United States free of duty. He made an arrangement whereby we would have a free market for not only our wheat, but our oats, our barley, and other natural products. Unfortunately, our honoured leader was unable to carry out that arrangement, because of a combination between the Conservative party, and the protected manufacturers and the capitalists of the country, including many Liberals. I venture to predict, Sir, that when the future historian writes the history of Canada for that period, there will be no more honoured name than that of Sir Wilfrid Laurier who made the attempt to carry out that arrangement. I venture also to predict that the brightest history in the pages of that period will be the pages which show the tremendous efforts the right hon. gentleman made against tremendous odds, to give the people of Canada, the farmers, the consumers, and the working-people, their rights. I believe that our respected leader was as great in defeat as ever he was in victory.

Let us continue, for a moment, with this record of expansion in the West. In 1912, we had under crop in these three western provinces, Manitoba, Saskatchewan and Alberta, 18,889,260 acres, an increase that year of 1,752,846 acres, or an increase that year of about one million acres less than in the year before, which shows a very serious check.

But the last page in that record is the blackest of all, for in 1913 we had in crop only 18,963,200 acres, an increase of 73,940 acres, or about 3 per cent of the increase during the last year when the late Government was in office. What is the effect of this upon Canada? I think we must agree that the effect of checking western Canada is serious, not only for western Canada, but for every part of the Dominiion.

As I have said, the hon. member for Brandon dealt with free wheat. He told us that he held a brief for the farmers of western Canada. And the newspaper reports say that the hon. gentleman, after he made his argument with regard to free wheat, magnanimously said that he was prepared to bow to the will of the majority. He is not in his place or I would ask him to tell us to what majority he referred. Was it to the majority of the people of Canada or the majority of this House? If the former, how does he know that the majority are opposed to this extension of our market. I am getting a little suspicious, if this report be correct, that he may go back on us after all his fine argument. If he refers to the majority in this House, how is he going to learn what the majority think unless every member votes as he thinks. My hon. friend from Brandon quoted a maxim to my hon. friend from Assiniboia (Mr. Turriff): 'It is not what is said but what is done that is regarded.' If my hon. friend from Brandon and other hon. friends from the West are disposed to go back on us in this question, I would remind them that there is something in that maxim that they should take to heart—it is not what they say but what they do that will be regarded when they go back to the West.

Now, I desire to say a few words with regard to the implements tariff reduction. Generally, while tariff reductions are an important thing to us in the West, yet, in comparison with the removal of restrictions on our trade, they are of little importance. We have often been told in this House, and were told again by my hon. friend from South Perth (Mr. Steele) that between 1878 and 1896 the Conservative Government made tremendous

reductions in the tariff duties. How did they succeed in reducing these duties? Why, first they raised them and then they took them down. If they wished to get credit for reduction on that basis, I wonder that they did not put the duties up to one hundred per cent before knocking them down to twenty. Surely it would look better to say that the duties had been reduced by eighty per cent than to say that they had been reduced by fifteen per cent. But what did the friends of hon. gentlemen opposite do when they were in power during the period referred to? I think I am right in saying that they found the duties on agricultural implements generally at seventeen and one-half per cent and they put them up to thirty-five per cent, and left them there during nearly all the time they were in office. They did make a reduction in some of those duties, but not all. Some they reduced to thirty per cent, some to twenty-five per cent and some to twenty per cent. It is a simple thing to make claims of this kind, but it seems to me that those who make them must be laughing in their sleeve as they do so. When the late Government came into power they found the duties on agricultural implements ranging from twenty to thirty per cent. They reduced these duties generally from twenty to seventeen and one-half per cent and others from thirty per cent to twenty-five or twenty per cent. There may be some particular items of which that is not true, but speaking generally it covers the facts. You must remember also that the late Government made an effort to reduce these duties, some by two and one-half per cent and some by five per cent, but through the operations of the big interests and the efforts of those who support the present Government the changes were not made. If the duties were not reduced it was not through the fault of that Government but through the fault of their opponents.

We hear something of the reductions proposed in this Budget, and comparisons are made with the object of making us believe that these reductions are far more important than those that would have been made under the reciprocity arrangement. The present reductions refer to three items only—harvesters, reapers and mowers. The reciprocity arrangement covered, I think, seventeen or eighteen items, and the reduction on all these excepting four was five per cent, the same as is proposed under this Budget, and a very few other items 2½ per cent. We were told at that time that the reductions under reciprocity were insignificant and were of no use to the people. But now even less reductions are said to be very important. I find that for the year ending March 31, 1911, we imported harvesters, the most important item effected by the present arrangement, to the value of $215,129. But of ploughs we imported six or seven times as much—$1,371,234. But the duty on ploughs is not affected by the reductions proposed under this Budget, while there was to be a reduction of 5 per cent under the reciprocity arrangement. The same is true of threshing separators, of which we imported $2,176,077 worth—more than ten times as much as we imported of binders. In the face of these facts, I do not see how any one can claim that the reductions now made are to be compared with those which would have been made under reciprocity. We were told that the reductions under reciprocity were valueless, that they were so insignificant as not to be worth considering. If that be true, how much more valueless are the present reductions? I do not admit that they are valueless; I think we should be prepared thankfully to receive small mercies from the present Government, because I am sure that that is the only kind of mercies we will ever receive from them. We are thankful for the little things that they have done for us, but we would be more thankful if they would do something worth while. While I say that we are thankful for these things; while I say that we would be glad to have a further reduction of the duty on agricultural implements and other articles, I want to be distinctly understood as saying that nothing of that kind can be accepted for a moment as a substitute for that to which we are entitled—a free market for our produce; an opportunity freely to market, without restrictions, our wheat, our barley, our flax, our oats and other produce wherever the people of any other country are prepared to receive them.

Mr. DONALD SUTHERLAND (South Oxford): Mr. Speaker, I wish to congratulate the Finance Minister on the presentation he has made to the House of the condition of the finances of Canada for the past year. Notwithstanding the settled gloom and evidences of despair apparently existing in the minds of hon. gentlemen opposite; notwithstanding the depression that they claim exists from one end of Canada to the other, the Minister of Finance has been able to report a surplus.

The last speaker (Mr. Levi Thompson), or the one who proceeded him on the other side (Mr. Nesbitt), admitted that there had been surpluses during the last three years aggregating over $93,000,000, and this was the only complaint he had to make with regard to the financial condition of our country. I can imagine what a wail would have gone up from our friends on the other side had there been a deficit—but we are glad to know that there has been a surplus. In view of a legacy the like of which few governments have had handed down to them—a legacy of years of reckless and wanton extravagance—I think we are to be congratulated on the financial condition in which we now find ourselves. As a result of this legacy which has been handed down by hon. gentlemen opposite, we are confronted with a problem such as has, I believe, never confronted the people of this country before; one that will give the Government serious concern, but one which, I have no doubt, they will be able to adjust satisfactorily.

I have been very much impressed with the tone of the debate so far. Almost without an exception the members from western Canada get up in their places in this House and discuss the questions before the people of this country to-day from the standpoint of their province alone, practically ignoring the other portions of Canada. I am sorry that we have not sufficiently advanced in this country to feel that we are a united people with a common object in view; with an ideal before us that we are all striving to realize and work out in the very best interests of the people as a whole. Naturally, we must give and take; we must make sacrifices for the interests of the country at times, but in the end I have no doubt that they will redound to the benefit of the whole country. As I have said, I regret the tone displayed by quite a number of hon. gentlemen opposite in discussing these questions before the House. The same attitude characterized the hon. member for Qu'Appelle, who even went so far as to say that the people of western Canada will grow grain for eastern Canada and for other countries of the world as well. Apparently the whole aim and object of the hon. members from western Canada is to grow grain to feed the people of Europe. They utterly forget that the people of Canada have to be fed; they utterly forget that we have a market here in Canada that is being supplied by the very people with whom hon. gentlemen have been clamouring to enter into closer relationship. The best market in the world is our home market; let us never lose sight of that fact. We have permitted the people of New Zealand to send us butter—yes, we have permitted the people of Ireland to ship potatoes here to feed the people of Canada. In the United States they are growing mutton which is being consumed by the people of Canada; they are raising horses which are being used on Canadian farms. Yet we placidly get up and say: Let us grow wheat; wheat is the aim and object of our existence; if we only had free markets, see what we would do. And then there comes the wail: but we cannot grow wheat at the prices that we are getting at the present time. I was somewhat surprised this afternoon to hear the hon. member for the north riding of the county which I represent (Mr. Nesbitt) say: we in North Oxford grow wheat for the straw; we do not grow it for the grain at all. Wheat is not such a very important commodity after all; it is the straw we grow it for in Oxford. Let me tell the hon. gentleman that in Oxford we grow the finest wheat that is grown anywhere; we grow from 35 to 40 bushels to the acre and we are getting $1.01 a bushel for it at the present time. Hon. gentlemen say: Remove the tariff on our wheat and in Ontario we will get our wheat from Kansas. That is exactly what we will do, but in Ontario we do not want Kansas wheat; we want our own wheat and we want more than that; we want the by-products of our wheat to remain in this country. I want to say to the hon. gentlemen who are so anxious to grow wheat that growing wheat is not the only requirement of a successful agriculturist. Growing wheat is not the basis of agriculture in this country; if you follow the history of agriculture in all European countries you will find that it was when the people departed from grain growing as a specialty and went into mixed farming and stock-raising that they began to realize greater profits. Oh, our western friends say; you must not say anything about that to us; you people in eastern Canada do not know anything about conditions in the West. I think it was the hon. member for Provencher (Mr. Molloy) who, in discussing this matter some time ago upon the motion for free wheat, said: you people down in eastern Canada may go into mixed farming, but we do not propose to be tied up to any business which requires attention from January to January and

9 p.m.

which necessitates your getting up early in the morning and sitting up late at night. We want something easier than that, and we are going to grow wheat. With our friends from the West it is wheat, wheat, every day of the year. I have heard this wail from people who have been in western Canada only a few years. They have gone there and, finding the land ready for the plough, they have mined the fertility that has been stored up there for centuries, without any regard to the result which that course is going to bring about.

Let me tell the hon. gentleman that that system is bound to bring poverty to this country. But, as the member for West Kent (Mr. McCoig) said: If you do not let these western farmers get their wheat into the United States, they will go into mixed farming, and what will happen? They will be raising hogs and cattle; they will be coming down here by thousands and tens of thousands, and they will overrun the province of Ontario with these products. If they come, we will have great game anyway, if we do not have anything else; but I do not anticipate any trouble in that respect. The hon. member for Qu'Appelle complains that he cannot get his wheat into the United States. He can get his wheat into the United States to-day without paying any duty on it whatever. He does not need to worry about that. But let him get busy like other farmers in Canada and pay close attention to his business; let him show that he is a proper farmer and not a miner of the soil, and then he will find that he has not such difficulties to contend with. What do you find? Sir, you find, notwithstanding their weary wail about what we would have had under reciprocity—

Mr. LEVI THOMSON: I would ask my hon. friend if he has ever been out in the West, and if he has seen my farm? Will he undertake to say that he farms better than I do?

Mr. SUTHERLAND: I am not talking about your farm; I am talking about your arguments, and I am telling you you can get your wheat into the United States and get more money for it if you want to without paying any duty. You can feed your wheat and send your stock over there and you do not have to pay any duty on it. They talk about wider markets in the United States, and all that sort of thing. You have to-day, under the present United States tariff, all the advantages that you would have had under reciprocity and you have not any of the disadvantages, yet they ignore all these things. No, it is wheat, wheat, wheat, nothing else but wheat. Let me say that we in Ontario grow considerable wheat, and we do not grow it simply for the straw either. But we find there are other branches of farming that pay much better than growing wheat, and for that reason we do not grow anything like the wheat we used to. But I will admit that the virgin soil of western Canada is rich and fertile.

I was rather struck with the remarks of Professor Robertson before the agricultural committee here last session, or two years ago, pointing out what the Conservation Commission had observed with regard to the farms of whose production they were keeping a record, that in the old settled districts of Manitoba there was an actual decrease from year to year in the production of the farms. This is only what you would naturally expect, and if by any means the price of wheat should drop so low that the people in western Canada cannot make it pay I have not any doubt that the genius of those people, because I know a great many of them, will find a way out of the difficulty. You have in western Canada, I will admit, as fine a class of people as you will find anywhere. You have the youth and the brawn, and many of them from the province of Ontario, and I know their object and aim in many cases their plan to get cheap lands of the West and they hope by growing wheat for a few years, by the increase in value of the land they can realize sufficient profit to dispose of their land at a profit and move out of the country again. That is an unfortunate state of affairs. I believe that after they have been there for a number of years they will change their ideas. Western Canada is not a country for people to desert. There are many things about western Canada which appeal to every one, and I would be the last one that would put a straw in the way of our friends in western Canada that would be considered as detrimental to their interests.

On the mattter of free wheat the member for Qu'Appelle stated that the Americans shipped bran into this country. I have here a clipping from the Toronto Globe of January last which says that the price of bran is $2 to $3 per ton more in the United States than in Canada, and that is correct. In my own county, notwithstanding the wheat straw that we grow up there, we import thousands of tons of bran and shorts every year that are fed there in order to increase our dairy produce. I

suppose ours is one of the largest importing counties in Ontario of these commodities and they tell us we cannot mill in Canada, that the United States mills are the proper places to mill our wheat. I say that what the people of the United States can do Canadians can do if you will only give them time to do it. It would be, I consider, a calamity if we were now to lose our mill feed and all these things that go to build up the agricultural industry of the country. We are handicapped, I will admit, in not being able to grow corn as easily as they do in the United States, with the exception of a few counties in western Ontario. The county represented by the member for West Kent (Mr. McCoig) can grow as fine corn as can be grown anywhere but we have had illustrations of our ability to raise the finest kind of stock. Western Canada has demonstrated it. You have had stock in Chicago in competition with stock from all over the world and have demonstrated that the grains grown in western Canada are sufficient to produce the finest beef that can be grown in the world. I have not the slightest doubt that in a few years all these things will be remedied.

I cannot understand how the hon. the junior member for Halifax (Mr. A. K. Maclean) in his speech claimed that we could not compete with the millers even in Great Britain, in the manufacture of flour. With the splendid water powers that we have here, with the cheap facilities for grinding I cannot understand how it is possible that we cannot do that. But I believe that one of the reasons why that is claimed to be the case is on account of ocean rates which discriminate against us. If the grievances of hon. gentlemen were the ocean rates they would have something more reasonable than what they are complaining about to-day.

I was also a little surprised the day the Budget speech was delivered by the Minister of Finance to find that the Toronto Globe came out on the first page with statements to that effect and the further announcement that he was to be followed by the junior member for Halifax, who was going to move an amendment that wheat and agricultural implements should be put on the free list. I was somewhat surprised when no amendment was forthcoming and still more surprised when that gentleman, instead of going on with his reply to the Minister of Finance, asked leave to adjourn the debate until after the Easter holidays.

However he was granted the privilege of adjourning the debate for that day. I do not know what conferences have been held by hon. gentlemen opposite or what they are going to do. If I did not know them so well, I believe I would almost come to the conclusion that they did not intend to move any amendment at all; but now I suppose, in order to save their faces, they will move some kind of an amendment even if it is only their policy just for the moment. We all remember the negotiations that took place at Washington between two members of the late Government and representatives of the United States Government. Our friends were invited down there, and no doubt were as generously entertained as our neighbours to the south knew how to do. Afterwards, during the campaign of 1911, we quoted statements that had been made by prominent men in the United States during the general election. We were told that those statements were not correct at all. I may say now that I am, and have been, surprised that hon. gentlemen opposite consider that they have not received their dues even after the people have expressed their views on the reciprocity question in the contest—no, I will not say the contest, but in the election of 1911. We have been told that so far as Ontario is concerned the issue was not reciprocity at all, and that passion and prejudice influenced the people there. During my experience covering a number of years, I have never known an election where one single issue was before the people, and everything else wiped to one side to the extent it was in the election of 1911. Reciprocity was the issue, and upon that issue the people of western Ontario, at all events, pronounced. The statements that have been made by prominent men in the United States as to what their object was in that reciprocity agreement have been confirmed to the very letter. By whom? By no less a person than the ex-President of the United States, Mr. Taft. Fortunately for us, we know just what the object of the United States Government was when they invited these two innocents to Washington to put it all over them, as they certainly did. I just wish to quote a paragraph from ex-President Taft's letter to Colonel Roosevelt, which ex-President Taft himself made public on April 25, 1912. I am sure we are all anxious to refresh our memories as to the real object of the then President of the United States. President Taft in this letter said:

The adoption of free trade would rapidly increase the cost of labour in those parts where it is cheaper in Canada, so that the conditions would be the same. It might at first have a tendency to reduce the cost of food products somewhat; it would certainly make the reserve much greater and prevent fluctuations. Meantime the amount of Canadian products we would take would produce a current of business between Western Canada and the United States that would make Canada only an adjunct of the United States. It would transfer all their important business to Chicago and New York, with their bank credits and everything else, and it would increase greatly the demand of Canada for our manufactures. I see this is an argument against reciprocity made in Canada, and I think it is a good one.

Col. Roosevelt, in his reply to Mr. Taft, dated January 12, 1911, said:

Dear President,—It seems to me that what you propose to do with Canada is admirable from every standpoint.

In the heat of the last presidential contest we got at the real object of the United States in desiring this treaty, which was arranged with representatives of the Government of Canada. The Liberal party afterwards endeavoured to force that treaty upon the people of Canada without giving them a chance to say whether they wanted it or not. Thanks to the determination displayed by the right hon. the present Prime Minister, they did not have a chance to do that. They were forced to the country, and the people have pronounced their verdict on the treaty, and now gentlemen opposite are not sportsmen enough to stand up and take their medicine like men.

I want to make a few references to another matter with regard to the United States market. The hon. member for North Oxford (Mr. Nesbitt)—you have noticed, Mr. Speaker, that he poses as an authority on almost everything that comes up—this afternoon made an attack on the Minister of Finance for his lack of foresight in not anticipating cheaper money in a short time. He says: In my own business in the city of Woodstock we loan money—he is a money-lender, you understand—and we anticipated cheaper money. And he criticised the Minister of Finance for negotiating long loans when possibly he might have had better success later on. The hon. member then posed as a manufacturer, and stated that as a brother manufacturer he told the manufacturers in Woodstock that they were making a great mistake in opposing reciprocity. In the same address he also posed as a farmer—a farmer that grows wheat for the straw. I will not weary the House with any more quotations from his speech this afternoon, but I wish to refer to a speech that he delivered on the address in reply to the Speech from the Throne. He said: The farmers—I know them, I am one of them—do not want free trade or anything of that kind. He is reported in 'Hansard' as follows:

They are not afraid of the duties being taken off; they are perfectly willing to have them removed. What they ask for is the open market and cheap transportation. What will happen the cheese industry?

Only last week at Watertown, New York, 3,000 boxes of cheese were offered and sold for 12¼ cents per lb., while right across the line Canadian buyers were paying 13¼ to 13½ cents, and as high as 13¾ cents per lb., which means $1 to $1.25 per box. That is, Canadian cheese brought 1 cent to 1½ cents per lb. more than American cheese. Yet the hon. member asks what would happen to cheese if we had free trade! He also said that we send milk to the big cities in the United States. I admit that, if within easy access to the cities of the United States, you can sell your milk and get a big price for it, but unfortunately every farmer is not so situated. We have millions of dollars invested in the cheese industry in this country, and our cheese has a reputation in the old country that justifies buyers paying from one cent to one and a half cents more for Canadian cheese than for United States cheese. Is not that reputation worth cherishing? I do not think we can afford to lose it, nor do I think, notwithstanding the arguments of the hon. member for Qu'Appelle (Mr. L. Thomson), that we can afford to let our wheat lose its identity. He says, if we get the price why should we care about the reputation? But how long should we get the price if we did not have the reputation? Notwithstanding the hundreds of millions of dollars that we have expended on transportation facilities in this country, hon. gentlemen opposite are prepared to let all that go and to divert traffic to the United States, thereby helping the industries of that country. Then they come to free agricultural implements, and rail at the iniquity of the prices charged the farmers in western Canada. I remember when for the old style of reaper we used to pay as high as from $200 to $225. To-day for a binder, up-to-date in every respect, the cost of the whole outfit is $140. The policy that has developed those industries

in this country was referred to yesterday by the hon. member for Bonaventure (Mr. Marcil), who spoke as follows:

> I want this Government to live up to their so-called National Policy, as it was intended by their great leader Sir John Macdonald. They are not very generous, our friends opposite, they will not believe that we have improved the National Policy to a great extent.

The National Policy that has now been in existence for about 35 years, is the policy that has developed in this country the manufacturing industries that we have here to-day; that has created one of the best markets that we have in the world, and I believe that the Canadian manufacturers of farm implements are not charging the people an exoribant price for their goods.

If hon. gentlemen opposite were consistent with their attitude of last year, they would not be crying for free agricultural implements. When the Naval Bill was before this House, they protested day and night, week after week, against the iniquity of having dreadnoughts built in the old country, notwithstanding the fact that they could be built there for one-third less money than they could be built for in Canada. My hon. friends opposite were great protectionists then. They said that these dreadnoughts must be built in Canada; that the money must be spent in Canada; that nothing else would suit them. To-day they are prepared to let the American manufacturers supply us with agricultural implements. I cannot understand any party committing political suicide as the Liberal party are endeavouring to do. I do not think we should take them seriously; I do not believe they take themselves seriously; I think they are just waiting, Micawber-like, in the hope that something will happen. I believe they would be tickled to death if some great calamity were to overtake the people of Canada, so that they could point to it as a result of the election of the 21st of September, 1911.

My hon. friends opposite seem to be very much afraid of mixed farming. I see the hon. member for West Kent (Mr. McCoig) smiling. I do not believe he was in earnest in anticipating that this province would be overrun with those wild hogs from western Canada. What has happened? During the contest of 1911, I said that undoubtedly there were some things for which we would receive a higher price in the United States than we would receive here; but that taking it on the whole, we stood to lose by the reciprocity treaty. The time had come in the history of this country when protection was of some tangible value to our farmers, and it was not until that time had arrived that there was any disposition on the part of the United States to enter into a reciprocity arrangement. When the old treaty was abrogated by the United States without a moment's warning, after we had developed trade between the two countries, we had to find new channels of trade. While doing that, we had undoubtedly a few years in this country when reciprocity would have been favoured by the Canadian people; but if that treaty had not been abrogated at that time, I am absolutely sure that Canada would have before this become an adjunct of the United States, and we would not have had the manufacturing industries in this country that we have to-day.

Hon. gentlemen opposite will question whether the United States or Canada is the better market. I will give the figures for 1912 and 1913 on a few items of agricultural products that are sold between the two countries under the present tariff. In 1912, we imported from the United States 19,830 horses and we sold them 4,160. We were told what a great market we had in the United States for our horses, whereas they were coming across the border in spite of a heavy duty and filling the market which we ought to have supplied ourselves. In 1913 16,813 American horses were sent to Canada and we sold to the United States 1,770. I remember well, when American sheep were being sold in Toronto and other markets during the reciprocity campaign, the Liberals said: Why, that is a Tory scheme; they are sending the sheep over here to beat the Grits, and are selling them in Ontario at a loss. What happened in the next two years? In 1912, we brought from the United States, 192,530 sheep and we sold them 10,940; in 1913 we bought from them 229,713 sheep and we sold them 5,340. Of course, these figures will not appeal to a man who is bound to grow wheat whether he does it at a profit or at a loss; but they are facts which the farmers of this country realize, notwithstanding the hot air handed out to them from time to time by my hon. friends opposite.

In 1912, we bought from the United States 1,665,893 lb. of mutton and lamb and we sold them 31,993 lb.; in 1913 we bought from them 4,284,300 lb. and we sold them 34,340 lb. In 1912 we bought from the United States 11,223,961 lb. of bacon and ham and we sold them 82,240 lb.; in 1913 we bought from them 13,501,726 lb. and we sold them 154,630 lb.

The hon. member for Huntingdon (Mr. Robb) the other night in dealing with the question of butter, pointed out the splendid market in the United States for our butter and cream. I asked him if he could tell us how much butter had been imported into Canada from the United States, but he could not tell me. He was only giving one side of the ledger. I am giving both sides and you can draw your own conclusions. In 1912 we bought from the United States 929,318 lb. of butter and we sold them 590,480 lb.; in 1913 we bought from them 1,100,431 lb. and we sold them 304,503 lb. In 1912 we bought from New Zealand 2,139,944 lb. of butter and from Great Britain 700,900 lb. of butter.

All this is being sold in Canada; and yet some people are crying out for another market. What the farmer of Canada wants above all to-day is protection, which will shut out the cheap products and the cheap labour of other countries. I was delighted in the Agricultural Committee to-day to see the Minister of Inland Revenue present for consideration a Bill providing for the enforcement of the Pure Food law in Canada, in regard to maple products, and a few weeks ago the Minister of Agriculture sent another Bill to that committee, which would prevent the sale of imitations of our butter and other products. I commend the Government for this legislation promoted in the interest of the farmers of Canada.

It is well to take stock of ourselves occasionally to find out where we stand or where we are drifting to. Canada has a heritage in its vast area of fertile lands such as few people possess, the opening up and development of which requires a wise and careful management to avoid unnecessary waste and to secure the best results. If there is one lesson taught by history it is that the permanent greatness of any nation must ultimately depend more upon the character of its country population than upon anything else. It would be a calamity to Canada to have our farms occupied by a lower type or standard of people than now occupy them. It is impossible not to notice the feeling of unrest that has existed among the farming population of the older provinces for a number of years past. Take for instance the province of Ontario, where I am more familiar with conditions than in any other. The census returns for the past two decades point only too clearly to a condition of affairs that should not exist in a province so richly endowed by nature with all the advantages that should inure to prosperity and content. Having been born and brought up, and having lived most of my life on a Canadian farm, I have watched very closely the attitude of the late Government, and also of the present one, regarding their desire to promote by legislation the interests and welfare of the farmers of Canada. I have noticed the various policies that have been adopted by the right hon. leader of the Opposition, and the party now in opposition. I remember quite well his free trade policy previous to the general election of 1896, and the appeals that were made to the farmers of Canada at that time, which is indicated by the reference to the right hon. gentleman's speech in Winnipeg a short time previous. I also remember the statements that were made by the same right hon. gentleman before a Toronto audience on February 21, 1906, as reported by the Toronto Globe. These are the statements of the Liberal party, who now advocates for the moment a policy of free food for the benefit of the farmers of Canada, which is apparently endorsed by his party.

I remember, when Sir Richard Cartwright represented the riding I now have the honour to represent, how he went from one end of the constituency to the other railing against the protective tariff, but yet a protective tariff remained in existence during the fifteen years the Liberals were in power. I have before me a clipping from a Winnipeg paper which contains a report of the address delivered in that city by the right hon. Sir Wilfrid Laurier, in 1894, when he said:

> When the Liberal party are in power they will at once give a measure of freedom of trade and step by step they will follow it up, and if God spares our lives we shall progress steadily until we have it as full as Great Britain has it. I come before you to-night to preach to you this new gospel of free trade. I denounce to you the policy of protection as bondage, yes bondage, and I refer to it as bondage in the same way as American slavery was bondage. Sir, our policy is freedom of trade such as exists in England, such as is practiced in Great Britan.

That was the Liberal policy in 1894, and apparently, judging from this speech of the right hon. gentleman, he had gone back to his old love. But the Liberals came into power, and strange to say things drifted along practically unchanged as far as the tariff was concerned. In 1904, on October 14, the Liberals of western Ontario gave a banquet to Sir Wilfrid Laurier in Toronto, and at that banquet there was an address delivered by Mr. T. C. Robinette, one of the Liberal candidates, who said:

There can be no full measure of prosperity in Canada unless we have a tariff permanency. I would oppose with all my might as most dangerous and undesirable a reciprocity treaty with the United States, and, however estimable our neighbours may be as individuals, we have had our experience in dealing with their Government that has left in our memories the impression that it would be unsafe, otherwise, in fact suicidal, to make a trade treaty with a Government that might be abrogated in 24 hours by the caprice of a Government swayed and ruled by popular feeling.

I do not believe that truer words were ever uttered than these words of Mr. Robinette.

Mr. PROULX: He must have changed his mind because he approved of reciprocity in 1911.

Mr. LALOR: It is not strange for a man on your side of the House to change his mind.

Mr. SUTHERLAND: Mr. Robinette, after delivering that speech, was followed by the Right Hon. Sir Wilfrid Laurier, who did not denounce the doctrine preached by Mr. Robinette, his candidate; and the only conclusion one could come to from that circumstance was that the right hon. gentleman was heartily in accord with it. Sir Wilfrid Laurier, at that time, was trying to convince the people that the Transcontinental railway from Winnipeg to Moncton would only cost to construct $61,000,000, and that every cent the people of Canada would have to pay on account of the construction of that road, would be somewhere between $13,000,000 and $14,000,000. Two years later, in 1906, Sir Wilfrid Laurier delivered an address in Toronto, and in that manufacturing city, dealing with the tariff, he sang a different song from that which he sang in Winnipeg twelve years before. He said, as reported in the Toronto Globe:

Everybody will agree with me —the business men of Toronto more than anybody—that in a fiscal policy such as we have, where we derive our revenue chiefly from customs duties, it is absolutely essential to the capitalist, to the workingman, to the business man, to the industrialist, that he should know exactly the conditions under which he invests his capital; that he should know that it will be invested under a condition that will not be likely altered.

After referring to the changes that had been made in the tariff by the Conservative party he continued—

But I am proud to say that under our regime the manufacturers always sleep soundly and never fear interference with the tariff. We have made very few changes in the duty.

Here, Sir Wilfrid Laurier was trying by every means to get the votes of the people

[Mr. Sutherland.]

of Toronto, and his remarks seem to confirm the statement then made on every platform in the country that while he was preaching his free trade doctrine there was an understanding between the Liberal party and the manufacturers of Canada, that if the Liberals came into power the tariff would not be interfered with. I wish now to refer to an address delivered by the hon. member for North Oxford (Mr. Nesbitt) in the city of Woodstock on March 4, 1911. That hon. gentleman stated this afternoon that he, as a manufacturer, had told the manufacturers that they were very foolish to oppose the two and one-half per cent reduction in the duty on agricultural implements. That speech of his is reported as follows by the Toronto Globe:

He could not see that the manufacturers would be touched very much, as few articles manufactured in Canada were affected. He was sure the Bain and Woodstock wagon companies would compete in the world's markets even with 2½ per cent reduction in the tariff. He thought the manufacturers opposed reciprocity because of what might follow, the 'thin end of the wedge', but he had been assured by Sir Wilfrid Laurier and Mr. Fielding that nothing of the sort would follow. They had gone as far in the farmers' interests as they would.

That statement was apparently confirmed later on, by the right hon. the leader of the Opposition in this House. 'Hansard' of 1910-11, page 5742, contains this statement by the right hon. gentleman:

The statement made by the hon. member for North Oxford (Mr. Nesbitt) was quite consistent with our policy, it was nothing new, and he had perfect authority, not only he but every member of the Liberal side, to make that statement.

Mr. Foster: Did the Prime Minister and the Minister of Finance authorize the member in question to make that statement?

Sir Wilfrid Laurier: I have answered that already. It is perfectly true. The hon. member for North Oxford and every Liberal member had such authority. He was not kept in ignorance of our policy in this matter, and knew it well. He only stated what is our general policy.

Now, what are we to understand? For myself, I do not believe, in the face of the statements that have been made by hon. gentlemen opposite, that they intend to move an amendment for the reduction of any of these duties. I think they have been just jollying along, talking along this line without any definite idea of what they are going to do. Possibly, later on, they will come to some conclusion as to the course they will pursue. I was a little disappointed that the Liberal authority in our province, the Toronto Globe, fell down in its prediction that the hon. junior mem-

ber for Halifax (Mr. A. K. Maclean) would move an amendment. I wish also to point out with regard to this agitation, which is taken part in by a number of our friends in western Canada, that Ontario, notwithstanding all the hard things you say about it, contributes very generously to the revenue of this country. In 1912-13 Ontario contributed $44,808,000, or about forty per cent of the total revenue of Canada. That is not a small item. And as to agricultural production, notwithstanding the claims made about the enormous value of the wheat crop of western Canada, the farmers of Ontario are doing a good deal along that line. The fact has already been referred to by other speakers, that the field crops, of Ontario almost equal those of the three western provinces put together. Surely, this is a record to be proud of. And with the policy we have in effect in this country to-day, the movement of the people away from the land, has come to an end so far as the province of Ontario is concerned. If you leave the protective tariff which the farmer now enjoys, with very slight alterations, you will find that the movement will be from the city back to the land. For, let me tell you, notwithstanding the splendid country you have in western Canada, the lands of Ontario are cheaper than any in the Dominion of Canada considering their actual value and the comforts and conveniences we enjoy. The movement has already begun, and nothing has been more conducive to that movement than the fact that the prices of farm products have increased.

And now I wish to say a word with respect to this free food fetish of hon. gentlemen opposite and also with respect to the commission that is now investigating what is termed the high cost of living.

Mr. A. K. MACLEAN: Did I understand the hon. gentleman to say that the high cost of living is a fetish?

Mr. SUTHERLAND: I spoke of the free food fetish. Now, I have here a report published by the United States Senate of a committee that was appointed in 1910 to inquire into this matter. That committee came to conclusions, some of which I will quote:

> Increased cost of production of farm products by reason of higher land values and higher wages.
>
> Increased demand for farm products and food.
>
> Shifting of population from food-producing to food-consuming occupations and localities.
>
> Immigration to food-consuming localities.
>
> Reduced fertility of land resulting in lower average production or in increased expenditures for fertilization.
>
> Increased banking facilities in agricultural localities which enable farmers to hold their crops and market to the best advantage. This results in steadying prices, but also tends to advance prices.
>
> Reduced supply convenient to trasportation facilities of such commodities as timber.
>
> Cold storage plants, which result in preventing extreme fluctuations of prices of certain commodities with the seasons, but by enabling the wholesaler to buy and sell at the best possible advantage, tend to advance prices.
>
> Increased cost of distribution.
>
> Industrial combinations.
>
> Organizations of producers or of dealers.
>
> Advertising.
>
> Increased money supply.
>
> Overcapitalization.
>
> Higher standard of living.

I have here the evidence taken by that committee. They had reports from United States consuls in many European countries. These reports show that the increased cost of living is not confined to any one country but is general throughout the world:

> Germany has long since ceased to be an inexpensive country, popular opinion to the contrary notwithstanding. The subjoined tables show conclusively the steady advance of the cost of living all along the line, an advance which is explained not only by the phenomena which accompany the enormous increase in the world's production of gold, but by profound changes which are taking place, which have already taken place, in the social fabric of the German people. Rapidly accumulated fortunes and increasing national wealth have created new standards and new requirements. Shorter hours of labour, higher wages, old-age and accident insurance, abundant tables, better homes—these are among the contributing causes of the higher cost of living, not merely as respects commodities, but as respects total per capital expenditures.

Then, as to Russia, the following is from the report of Mr. John Grout, Consul at Odessa:

> During the past ten years there has been a gradual increase in the cost of almost all articles that enter into living requirements in this consular district and city in particular.

And the consul for the district of Havre, France, Mr. James E. Dunning, reports:

> The cost of living in France has considerably increased in the past ten years and is the subject of constant comment and continual complaint on the part of those whose salaries remain unchanged. Moreover, there is every indication that the augmentation will continue, and that ten years hence we shall be paying still more for the necessaries of life than to-day.
>
> Indeed, the modern Frenchman could very well say: 'Give us the luxuries of life and we will dispense with the necessities.'

We may say the same thing of Canada. That is one of the reasons why the cost of

living has gone up. And if food products are put on the free list in this country, if you are going to allow the countries which produce with cheaper labour than Canada, countries where other conditions may be more favourable, to send their products into Canada free of duty, if you are going to allow the surplus of other protected countries to be unloaded in Canada, you are going to do something that will injure Canadian agriculture. For if there ever was a country under the sun that ought to be termed an agricultural country it is Canada; and it is a shame and disgrace to the country that we have to import from Australia, New Zealand, South America, the United States or any other country the millions and millions of dollars worth of stuff that is being consumed by the people of our own country.

I have spoken at greater length than I intended to, but this is too serious a question to be treated in a frivolous manner. Tariff changes cannot be considered lightly; we must consider what the effect of any proposed change is going to be in the country that we are all so anxious to see prosper and fulfil the destiny which we believe is in store for it.

Mr. ROBERT CRUISE (Dauphin): Mr. Speaker, it is not my intention to take up very much of the time of the House, but I feel that it is my duty to say a few words in this Budget debate. As the representative of a constituency in western Canada I propose to deal more particularly with the matter of free wheat and free agricultural implements and I would first like to reply to some of the arguments which have been advanced by the hon. member for South Oxford (Mr. Sutherland) to-night.

The hon. gentleman claims that the members from the West talk about nothing but free wheat, and he advocates a home market. I would like to ask him where he would find a home market for the surplus wheat that was grown in the Canadian West last year? We raised last year 199,821,586 bushels of wheat and exported 95,311,802 bushels. I do not see any reasonableness in his advising the western farmer to feed his No. 1 Manitoba hard wheat to his chickens, hogs and cattle. When settlement in Manitoba, Saskatchewan and Alberta was first begun, the main industry was the growing of wheat, oats and barley and until Winnipeg attained its present size there was no market for the West except that which was afforded by the incoming settlers. Half the wheat that is raised in the West cannot be consumed in Winnipeg; it cannot be consumed in Ontario, so the people of western Canada will have to export large quantities of wheat as long as they have no home market for it.

I would like to discuss for a moment the benefits to the farmer of the 5 per cent reduction of duties upon binders and mowers. They would save about $7.50 on the two articles. Everybody knows that the farmer buys a mower and a binder only about every ten years; an ordinary binder will last the farmer about that length of time. We admit that he will save $7.50 in that time, but that is a trifle compared with what he would have saved under reciprocity. I would like to show the hon. member for South Oxford and the people of this country what the farmer would gain if he had free wheat. Take the small farmer who sells about 1,000 bushels of wheat in a year. It is only fair to assume that he would gain about 5 cents a bushel on his wheat if he had free access to the American market. Five cents a bushel on 1,000 bushels means $50, which in ten years amounts to a gain of $500 to that farmer on only 1,000 bushels of wheat. That does not take into consideration the benefit he would receive from his oats, barley and flax. If hon. gentlemen want to be fair they will readily see what a benefit the farmers would have by getting free access to the American markets for their wheat.

I would like to refer to an assertion made by the hon. member for North Wellington (Mr. W. A. Clarke) during the course of his remarks, as follows:

> I feel sure that we as representatives of the eastern portion of the Dominion of Canada can go to our people without any sins to answer for, and tell them that the hon. Minister of Finance has made—if they feel that it is a benefit—greater reductions in the duty on farm implements than the reciprocity agreement would have given them had it been put into effect in 1911.

In all fairness to the hon. member for North Wellington, he surely cannot be sincere when he makes an assertion of that kind. I have here a list of fifteen or sixteen of the implements used by the average farmer in the West, with a statement as to the amount he would have saved had reciprocity been put into effect in 1911. Here are a few of them:

	Retail cost.	Duty.	Customs Valuation.	Duty Collected.	Duty under Reciprocity.
Breaking plough	$28 00	20%	$16 00	$3 20	$2 40
Harrow	28 00	20%	17 00	3 40	2 55
Binder (8 foot)	125 00	17½%	110 00	19 25	16 50
Buggy	110 00	35%	60 00	21 00	18 00

So that hon. gentlemen will readily see the advantage the farmers would have received under reciprocity, notwithstanding the fact that the hon. member for North Wellington tries to make the people of this country believe that they will receive greater benefits under the present reduction on binders and mowers than they would have received under the reciprocal trade arrangement proposed in 1911.

10 p.m.

The hon. gentleman argues that if we have free wheat our wheat would all go south of the line. He simply makes the assertion, but submits no proof whatever that this would be the case. Our friends on the other side claim that if we had free wheat our railroads would have nothing to do. The western farmer has made a study of this question, and he does not believe any such thing. The western farmer believes that if he gets free wheat, his wheat will still follow the same channel; where we would get the great benefit would be from competition. Every man who wants to be fair knows that in Canada to-day we have practically no competition in the handling of our grain. Gordon & Ironsides and Pat. Burns have practically controlled the cattle trade of western Canada, and the condition is practically the same with our grain. If reciprocity had gone into effect, we would have opened up the market to the south of us, and the small American buyer and miller would have been allowed to come in and bid on our wheat. The result would have been that the farmers would have got a larger price for their corn, the railways would have reduced freight rates, the men who handle grain would have done so for less money, and the farmer would have been materially benefited.

They say that the Canadian miller can not compete against the American miller; but so far in this debate not a man has offered any proof of that. I for one, as a representative, do not believe in such an argument. I believe the Canadian millers could compete against any millers in the United States or in Great Britain to-day. Perhaps there is one reason why they could not. There are very few men in Canada who make so many trips to Europe or all over this country as our Canadian millers. While they are doing that they are not attending to their own business. Perhaps they would be in a better position to compete if they contributed less money to campaign expenses and put their money and energy into their own business. I am satisfied that the millers can compete with those of the United States or Great Britain if they are made to stand on their own feet. The only way to test that is to give us free wheat, and then we can see whether they can compete against the Americans. When the western Canada farmers come to this Government and ask for anything, they do not come here as a selfish body of men, as they were represented by the last speaker. They meet the organized farmers of Ontario and discuss their questions with these men from all standpoints before they come to this House with any request. When they asked for free wheat and free machinery, they had taken up this question with the farmers of Ontario, and had obtained the advice and consent of these men before coming here; so that when the hon. gentlemen complain that the farmers of western Canada think only of the West, they are greatly mistaken.

Three or four weeks ago there was quite a discussion on the purchase of stone from the American side. The Minister of Public Works was criticised for buying stone on the American side, and justified himself by saying that in this way he saved for the Dominion $28,000. I would ask the minister how he is going to justify that policy with the western farmer? If he was justified in buying this stone on the American side and saving the Dominion $28,000, how can he justify himself to the western farmer when he denies to him the market to the south, from which he would benefit probably $10,000,000 every year? I cannot understand the force of the argument of hon. gentlemen opposite. They tell us that gentlemen on this side of the House

are divided, that some are free traders, some are protectionists, and some are moderate protectionists. Where do the hon. gentlemen opposite stand to-day compared with the position of hon. members on this side? The provincial Government in Manitoba has asked free wheat and free flour. What position are the Conservative members from Manitoba going to be in in the coming elections? Here they are arguing against free wheat but the members in Manitoba are praying for free wheat. The Manitoba Conservative members while in Manitoba are free traders, but while here they are protectionists. Hon. gentlemen from Manitoba sitting on the opposite side, when they were in opposition, were for free trade. I remember reading speeches of hon. gentlemen advocating further reduction on agricultural machinery. We had the members before the House some time ago asking for free trade in agricultural machinery. It would have been more benefit to the farmers than a reduction in tariff would be and hon. gentlemen voted against it, so I fail to see that they were sincere when they were in opposition any more than they are now. Now they talk about protecting the farmer. The trouble with the farmer to-day is that he has too much protection; he is protected from selling his grain in the market to the south or in an open market, and he loses five, six or eight cents a bushel. Then when he comes to buy machinery to cultivate his land with he is forced to pay about fifteen per cent more than he should have to pay. That is the protection the farmer gets. The hon. member for Brantford says that the policy of the Liberal party is, wherever a manufacturer sticks up his head to knock it. If that is the policy of the Liberal party I would like to know what is the policy of the Conservative party in connection with the farmer. Every request the farmer makes he is knocked, he is turned down. He has not been granted one thing that he has asked for, and it appears to me that as soon as the farmers began to do well the present Government refused them a market, and raised the cost of their machinery and thus prevented them from making money. If that is not knocking the farmer I do not know what would be. A great deal has been said about the success of the Liberal party during their fifteen years of administration and whenever you charge the present Government with being responsible for hard times they laugh and sneer. I would like to go back eight or ten years to the time when the flood of immigration into western Canada commenced. Any man with sense will admit that the flood of immigration into western Canada produced the good times and caused our manufacturers to grow. Every man placed on the land must have machinery to work the land and the more machinery purchased by the West the better for the eastern manufacturer.

Hon. gentlemen take great credit for the construction of the Hudson Bay railway and I am sure I am willing to give them all the credit that is coming to them. I trust it will be a great success. It is a very hard road to construct. Most of the work has to be done by station work. What I request of this Government is to take over the Canadian Northern road from The Pas to Dauphin, build it up to a standard road, and operate it as a Government road. If the Government investigate this matter they will come to the conclusion that The Pas is not the proper starting point for a road, and I am satisfied if they look into the question they will take over the Canadian Northern railway, about three hundred miles in length and establish the terminal point in Dauphin. It is much easier for other roads to get to the Government road at Dauphin than at The Pas. I ask the Government to consider this with all earnestness and sincerity and I am satisfied if they do they will adopt that policy.

Mr. F. R. LALOR (Haldimand): Mr. Speaker, I do not intend to occupy the time of the House to any great length, but as a representative of a rural constituency, I feel it my duty to place my views before Parliament upon the questions that are being discussed in Parliament at the present time. I regret that the tariff question cannot be considered on its merits, removed altogether from politics. The tariff to some extent has always been made a political football in Canada and I presume that it always will be. It has formed the platform of both political parties for a great many years, and is likely to continue to be the platform on which we shall go to the people in times to come.

I want to congratulate the Minister of Finance upon the splendid Budget speech he delivered this session. He has, I believe, the confidence of the people of Canada, and has behind him in this House the united support of the Conservative representatives, who are proud of him as one of their leaders and as the Finance Minister of Canada. The people of Canada—Conservatives, Independents, and Independent Liberals—look to him with confidence and

believe that he will administer the high duties of his office with satisfaction to this Parliament and to the people of Canada as a whole. He has announced this year a surplus of $36,000,000 over and above expenditure. That is a record of which he may justly feel proud. It is a larger surplus than any Liberal minister has been able to announce to this House in the past. When the Liberal party came into power in 1896 the net debt of Canada was $258,497,000. When they left office in 1911 they had increased the public debt to $342,042,000. That is, they had increased the national debt during their term of office by $83,545,000. Notwithstanding the legacies left by hon. gentlemen opposite in the shape of unpaid expenditures and contracts which had to be carried out, the present Government under the able management of the Minister of Finance have decreased the public debt of Canada by $6,000,000 in the past two years. That is a record of which the Finance Minister may justly feel proud.

When hon. gentlemen opposite were asking the support of the electors of this country in 1896, they stood upon a tariff platform which at that time they called free trade. Sir Wilfrid Laurier, I think, said the goal of his ambition was 'free trade as they have it in England.' When the right hon. gentleman and his party came to office in 1896 you would naturally suppose that they would have carried their pre-election promises, for I am one of those who believe —and I think others will agree with me— that the election promises of public men are sacred, and that every man who seeks the votes of the electors should carry out the promises he makes to the electorate. Although Sir Wilfrid Laurier and his party had promised free trade as they have it in England, they did not carry out that promise when they assumed office. For the fifteen years they were in office they adopted as their platform the policy of the Conservative party. It was practically the old National Policy. In 1894 the Hon. George E. Foster, who was then Minister of Finance, made great reductions in the tariff. I recall that he reduced the tariff on agricultural implements from 35 per cent to 20 per cent, and there were reductions all along the line both upon manufactured goods and upon the necessaries of life. When the Liberal party assumed office they made very few changes. We are reminded occasionally about the British preference; but, giving them credit for whatever they may have done in the way of tariff reductions, when figured out, all their reductions amount to less than one per cent on the whole; some claim two per cent; but, whether one per cent or two per cent, their tariff reductions on the whole were very little during all the time they held office. Notwithstanding the fact that hon. gentlemen opposite claimed to be free traders and revenue tariff men, they stood upon the platform of the Hon. Mr. Fielding, which, without any question, was a protectionist platform. It is a very fortunate thing that they did not adopt any other platform, for if they had carried out their pre-election promises it would have resulted in ruin and disaster to this country. It is true that just a year or two before they went out of office they reduced the tariff on agricultural implements by two and a half per cent. I was a member of the House at the time, and I remember the applause that greeted Hon. Mr. Fielding when he made the announcement of that reduction. He was applauded by his followers and the Liberal press throughout the country, but when this Government proposed to reduce the duty on agricultural implements by five per cent, hon. gentlemen opposite told us that the farmers were being gold-bricked. If they are being gold-bricked now by a reduction of five per cent they must have been doubly gold-bricked when the reduction was only two and a half per cent. At the time the Liberals reduced the tariff on agricultural implements, they increased the valuation, so that the duty was really higher than before the reduction. At that time the present leader of the Opposition was a great personal friend of Sir Lyman Melvin-Jones. They were very close and intimate, and I think the home of Sir Lyman Melvin-Jones in Toronto was the home of Sir Wilfrid Laurier whenever he visited that city. In order to please his friend, the right hon. gentleman made him a senator. But not only did he do that: While he tried to make it appear that he had given a reduction in the duty on agricultural implements, he had really assisted his friend by increasing the valuation. About the same time, he made Mr. Frost, of Smith's Falls, another agricultural implement manufacturer, a senator. So we see the right hon. gentleman had very close friends in the agricultural implement business at that time.

Mr. A. K. MACLEAN: Do not you go into that business ?

Mr. LALOR: I doubt if a reduction in duties means very much in the way of de-

creased prices to the consumer. I am a firm believer in adequate protection for manufacturers in order to encourage them to locate in Canada, and to build up great manufacturing institutions in this country so that competition will regulate prices. When you lower the duty to such an extent that you close the factories and shut out Canadian competition, you increase prices to consumers in this country. We have instances where a reduction of duty has not done very much good. Some years ago the Government of the day reduced the duty on coal oil, but no one will say that it lowered the price. On the contrary, it put that industry into the hands of the American combine and the people received no benefit. The price of coal oil was raised by that reduction of duty. Take binder twine, another item from which the duty was removed. The farmer is paying more for binder twine to-day than he ever paid before. If protection had been kept on binder twine and Canadian factories encouraged, the competition among those factories would have given the consumer of binder twine the benefit of a lower price than he is paying to-day. The same argument applies to everything in the way of manufactured articles. It is useless, of course, to try to make the free trader believe that this is the case; but the honest opinion of the protectionist is that competition regulates prices and that the public pays less for the goods than if they were manufactured outside the country and imported.

Hon. gentlemen opposite say: If you protect these industries, they will form trusts and combines. In my own county, the Hon. Mackenzie King, addressing the electors, told them about the trusts and combines. What trust or combine was ever incorporated under a Conservative Government? They are all the products of hon. gentlemen opposite, if there are any combines in Canada. Although my hon. friends opposite talk of trusts and combines when they are out of office, they never did anything during their term of office to interfere with them.

Mr. DOUGLAS: Do you think there are any trusts and combines in Canada?

Mr. LALOR: I do not think there are. Hon. gentlemen opposite say there are, but I doubt it.

We have a strange conglomeration of ideas on the tariff among hon. gentlemen opposite. Our good-natured, smiling, and very able friend, the hon. member for Red Deer (Mr. Clark), is, I believe, an honest free trader at heart, but he is a little unfortunate in his record. He was a member of this House for a good many years supporting the late Government. He stood upon the platform of Mr. Fielding's tariff and during all the years I have been in the House with the hon. gentleman, I cannot at this moment recall his ever attacking that platform or saying that the people of this country were being robbed by the protective tariff. He is, however, a free trader in opposition, like a good many other hon. gentlemen opposite. Not only did the hon. gentleman support Mr. Fielding's tariff, but he sat in this House and supported what I suppose might be termed the most iniquitous form of protection that could be inaugurated, namely, bounties.

Mr. MICHAEL CLARK: I am sure my hon. friend does not want to misrepresent me. The same statement was made the other day by a member of this House, and I very modestly pointed out that to the best of my ability I made an attack upon bounties when speaking on one of Mr. Fielding's budgets. That attack is to be found in 'Hansard.' If my hon. friend had been attending to his duties, he would have heard that speech; and before he makes a statement of that kind, he ought to inform himself as to the facts. I made as strong an attack as I knew how, and I must ask my hon. friend to accept my statement, which he ought not to have needed.

Mr. LALOR: I would be very sorry not to accept a statement from my hon. friend, whom I respect very much indeed, but at the same time we must look at the facts as they are. We know that the hon. gentleman was a member of this House supporting the Fielding tariff for many years, and, if he made, as he says he did, a protest against the bounties, it must have been a very feeble one, as it did not have very much effect upon the Government.

Mr. MICHAEL CLARK: My hon. friend must again allow me to correct him. For some reason or other the bounties went out; they disappeared.

Mr. LALOR: I am glad to know the hon. gentleman takes so much credit to himself, because I never knew him to vote against the late Government during all the time

they were in office and all the time he was a member of this House.

Mr. CLARK—I was not going to vote against their removing the bounties against which I protested.

Mr. LALOR: The bounties naturally ran out. The arrangements were made for certain lengths of time, and the bounties expired according to those arrangements.

Mr. CLARK: Disappear is the same as expire.

Mr. LALOR: The Liberal Government paid out $16,000,000 in bounties to the manufacturers. I have another case where the hon. member for Red Deer was an avowed protectionist. There is no question that he is a good Britisher; that he loves the old flag and the old land; but he was opposed to granting $35,000,000 for three dreadnoughts to be owned by Canada and to be put into the British service. He voted against that proposition; but he was in favour of a Canadian navy, which has been designated a tin-pot navy, and which would cost perhaps $300,000,000 or $400,000,000. He showed his free trade principles then by taking the stand that those ships should be built in Canada, even though they cost 25 to 35 per cent more than if built in the motherland. In that case the hon. member was not a very good free trader, although now I give him the credit of being almost in absolute control of the Liberal party, because he is gradually educating and bringing over his hon. friends one by one to his way of thinking. Perhaps it is because they are in Opposition. The hon. gentleman has a deskmate, a good friend of mine and a very able man, who comes from the neighbouring constituency of Welland (Mr. German). It would be pretty hard for the hon. member for Welland to follow the free trade principles of other hon. gentlemen opposite. He would not follow reciprocity; he left his party upon that occasion, manfully and courageously, and he did a great service to Canada by so doing. He helped in the election throughout the country, because every one knew that he was a strong Liberal but that he could not stand for reciprocity. If there is any town in Canada that has grown and prospered, it is the town of Welland. Only a few years ago it had a population of about 2,000, and to-day its population is 10,000. Why has that town grown so rapidly? It is because the Government of Canada said to the manufacturers of the United States: If you want to supply the people of Canada with manufactured goods, you must come here and manufacture them in this country. You must employ Canadian capital and Canadian labour in this country, and thus build up our towns and cities. The result was that they came over to Canada and built up the manufacturing town of Welland. The time is not very far distant when the old Welland canal from Port Colborne to St. Catherines will be one great hive of industries, established by American manufacturers who have come to Canada to manufacture goods in this country in order to avoid the duty. Surely that is a better policy to pursue than one that would permit them to manufacture in the United States, employing American people in their factories, and shipping their goods to Canada. If I mistake not, that is the policy of hon. gentlemen opposite, that is where the parties divide, and I am glad to see that division. I shall be glad if the electors of this country have a chance to decide between the free trade policy of hon. gentlemen opposite, and the policy of moderate protection which the Conservatives have advocated and stood for from the days of Sir John Macdonald down to the present. I shall have no fear as to the result. We know what happened the Liberal party in 1878. From 1874 to 1878 they tried to carry on the affairs of this country under what they called a revenue tariff, and the electors waited for their opportunity, which came in 1878, to declare very decidedly that the Liberals should govern the country no longer. We know that from 1874 to 1878 there was general depression throughout the country, that men were out of employment, that factories were closed, and that the working people were receiving low wages. And we know also, that when Sir John Macdonald came into power in 1878 and adopted the National Policy, general prosperity followed. I remember that, at that time, Sir Richard Cartwright told the artisans of this country that they must work harder and eat less, and when you compare the Liberal policy of free trade with the Conservative policy of fair protection, that is just what it amounts to at the present day.

In 1896, when Sir Wilfrid Laurier was preaching free trade, and promising free trade to the people of this country, he also had friends among the manufacturers. Mr. Bertram was a candidate of his in Toronto,

and just on the eve of the election Mr. Bertram thought he was going to be defeated, and he wired to Sir Wilfrid Laurier, who replied that the manufacturers were not going to be hurt. The right hon. gentleman was carrying on then, as he and his party are carrying on now, a policy of trying to deceive the farmers of this country by making them believe they will do something for them, which they have not the slightest intention of doing. The ex-Minister of Railways (Mr. Graham) spoke in Hamilton last Thursday, and he did not preach then free trade or lower tariff before the manufacturers, but, according to the Hamilton Times, says of his address:

Referring to the tariff Hon. Geo. P. Graham contrasted the Liberal policy of a stable tariff under which Canada had known fifteen years of its most abundant prosperity, with the tariff tinkering of the Tories.

In his speech the hon. gentleman (Mr. Graham) practically gives the assurance to the manufacturers that they will not be disturbed, but at the same time he says there must be free trade in food-stuffs. Not very long ago a delegation of the manufacturers of Ontario who support the Liberal party came here to see some of the leaders of that party, after their famous resolution about free agricultural implements. I do not, of course, know what occurred at the meeting; but I should judge from what these gentlemen say on the train when I meet them that they are quite sure that nothing will be done by the Liberals to hurt them. It would seem as if the platform of hon. gentlemen opposite is a platform to get in on, but a platform which they do not intend to carry out should they unfortunately be returned to power.

Although some people seem to think that I am an extreme protectionist, I am not so by any means. I believe in fair and moderate protection.

Mr. LOGGIE: What is fair and moderate.

Mr. LALOR: I think the present tariff is a pretty fair and a pretty moderate tariff. The hon. gentleman (Mr. Loggie) himself stood upon that tariff and supported it for fifteen years, during which time he never spoke a word against it.

Mr. DOUGLAS: It is pretty high on woollens.

Mr. LOGGIE: The duty on woollens does not compare with the duty on canned vegetables.

[Mr. Lalor.]

Mr. LALOR: And they say there is a pretty high duty on lobsters. I do not believe in extreme protection, but I believe in a moderate protection, and I believe we have a moderate protection now in Canada.

Mr. SINCLAIR: Does the hon. member believe in adequate protection?

Mr. LALOR: Yes, I thoroughly believe in adequate protection?

Mr. SINCLAIR: Then, will he explain why the Government does not give us adequate protection?

Mr. LALOR: I should think the Government is giving us pretty adequate protection.

Mr. SINCLAIR: Will the hon. member explain why he and his friends voted for a resolution asking for adequate protection when we had practically the same tariff as we have to-day?

Mr. LALOR: I think perhaps there may have been some changes made, but if the protection was adequate at that time the resolution fitted into the conditions beautifully; it was only a confirmation of the platform the hon. gentleman for so long supported.

Mr. STEVENS: And the Liberal party opposed our amendment, so that they thought the tariff was inadequate.

Mr. LALOR: A fine spectacle these gentlemen opposite present to the people of Canada to-day. They would lead people to believe that there is no difference of opinion among them, and they are complaining about the platform which they stood for and supported during all the years they were in power. For fifteen years not one of them gave a chirp; they were perfectly satisfied and contented with the Fielding tariff, which they contended was the most beautifully thought-out tariff that ever was put in force. But now, when the Conservatives are in power, these gentlemen think the Fielding tariff is no good, that everything is wrong about it. It makes all the difference in the world where these gentlemen are sitting. In their opinion, they are Heaven-born politicians and statesmen, who were never designed to sit in opposition. When they are in power, they say the country is prosperous and that everything is fine, but the moment they lose patronage and are out of office they think the country is going to the dogs. Just imagine these gentlemen going before

the electors of Canada and talking free trade; these gentlemen who talked free trade before 1896, but who never practised it when they got to power. I do not wish to speak too strongly on the question, but I should think when an appeal is made to the people the Liberals will be the laughing-stock of the country. What faith can the people of Canada have in their assertion when they know how, when in office, they failed to carry out their promises they made before they attained power.

One of the policies these gentlemen opposite are now advocating is free food. They felt that they were not getting the vote of the people in the cities and towns; they saw that the workingmen who wanted good wages and continued employment were putting their confidence in the Conservative party, and now, in an attempt to get their votes, they are talking free food for the workingman and telling him about the high cost of living. What is high in the cost of living to-day in Canada? Sugar is cheaper than ever, tea is as cheap, coffee is as cheap, wearing apparel, I believe is as cheap, and, as a matter of fact, there is nothing of any importance that is dearer to-day, except the products of the farm. Is there any other class of people in this country who deserve protection and good prices better than the farmers? When the farmers are prosperous everybody is prosperous. They are the backbone of the country; they are the people who produce the wealth of the country; and I am only sorry that the farmers are not getting bigger prices for everything they raise. These gentlemen of the Opposition think that by taking the stand on free food they are going to catch the votes of the people of the cities and towns.

Mr. BRADBURY: And fool the farmers.

Mr. LALOR: And fool the farmers at the same time. I think they are greatly mistaken. The right hon. leader of the Opposition announced free food in Hamilton. Then, we did not hear of it for some time and it looked as if the rural members who support him had rather called him off. But we have heard it again in this House, and the hon. member for South Renfrew (Mr. Graham) announced it again in Hamilton the other night. Could there be anything more detrimental to the success of the farmers than free food? Imagine the importation of farm products into this country if duties were removed. The American market has been held out to us as one that offers us great advantages—a country that exports over a billion dollars' worth of farm products every year. Last year we imported into Canada 37,000,000 pounds of meat, over 13,000,000 dozens of eggs and 8,000,000 pounds of butter, of which 6,000,000 pounds come from New Zealand alone. What would happen the farm products of Canada if the duties were removed? Every importation of farm products into Canada to-day meets the tariff at our border. If this were not so it would mean that the Canadian market would be slaughtered and that the Canadian farmer would sell butter, eggs and other products at half the price he does to-day. Denmark exports 200,000,000 pounds of butter a year. They could lay that butter down in Canada at a freight rate of less than 1 cent per lb. If there were no duty that product would come into Canada and the Canadian farmer would be undersold in every town and city in the Dominion. I think the free food policy will be unfortunate for hon. gentlemen opposite, and I shall welcome the contest when it comes upon that issue. I can imagine my opponent in the county of Haldimand standing before a farming audience and telling the farmers they are getting too much for their products now, and that there should be a policy of free food in order that these things may be cheapened. Reciprocity was killed in this country, buried beyond all recall—and hon. gentlemen opposite are still preaching funeral sermons over it. They forget that the farmers are the ones who killed and buried it. But under reciprocity there were at least reciprocal advantages; there was something we were to get back. We got entry into the United States market. But the President of the United States has given us that market for nothing. We defeated reciprocity, and we got the American market for nothing while retaining our own market for the Canadian farmers. But there are no advantages at all under the free food policy—it simply means taking down a wall of protection and allowing the United States and every other country to ship their farm products into Canada.

Let me tell you what my position is upon farm products coming into Canada. I believe the duties are not high enough. We are bringing into Canada the produce of other countries in too large quantities. But we say: Give the Canadian farmers the Canadian market. And the only way you can do that is by giving them proper protection. I will vote to support in this House any measure that may be introduced

to give increased protection to the farmers of this country. What class of people in Canada are more deserving than the farmers? They deserve all they get and a great deal more. There is no class of people who work harder for their money than do the farmers of this country. When the city man is still in bed and sleeping, the farmer is out working, and when the city man is enjoying his evening at home, the farmer is often out working until late at night. There is no class of people who work harder than they do. Our farmers are prosperous we are told, and they are; they are getting along all right. But they make their money slowly, and they need everything that any government, whether Liberal or Conservative, can give them.

Now, we have been doing something for the farmers. I remember the night of my election, when we defeated reciprocity, there was great rejoicing in the county of Haldimand, and I suppose that rejoicing extended throughout the whole of Canada. The farmers gathered for two nights in my town and we had a continuous celebration. I told the farmers at that time what I hoped the Government would do for them. I said: Now that we have a Conservative Government in power, the farmers who have been neglected for so many years by the late Government will receive something from the Conservative Government that has never been given them by the Liberals. I told them I hoped that one of the first things would be to assist them in building good roads. And we tried to give that to them.

Mr. A. K. MACLEAN : You did not try very hard.

Mr. LALOR : In Haldimand the county council have spent about $100,000 in the last three years on good roads, and if hon. gentlemen opposite and their friends had allowed that Bill to become law, every farmer there would have one-third of the money in his pocket because of the help the Government would have given him in the building of their roads. It is most important that the farmer should have good roads.

Mr. A. K. MACLEAN : Why did the hon. gentleman's friends defeat the Bill?

Mr. LALOR : That is rather amusing. I think my hon. friend is joking.

[Mr. Lalor.]

Mr. MACLEAN: No, I am not joking, I am in earnest. Why did your friends destroy the Bill?

Mr. LALOR : The hon. gentleman imagines that his friends are in power. That Bill was introduced in this House, a fair Bill. But hon. gentlemen opposite opposed it and the Grit majority in the Senate killed it, and no one knows it better than the hon. member opposite. I think I can see far enough ahead to see my opponent trying to explain to the farmers why they did it. We have done a little more than that for the farmers. We voted $10,000,000 spread over a number of years for agricultural education in this country, which I think, will be a good thing for the farmers. Another thing I told the farmers in Haldimand, was that now that we had a good Government in power we would give them rural mail delivery.

Mr. A. K. MACLEAN: They had that before.

Mr. LALOR: We were going to give the farmers pleasant and happy circumstances at home. We were going to deliver their letters and their daily papers to them so that they could read them ever night before they went to bed, and I am pleased to know that the Government have carried out that intention. Hon. gentlemen opposite have said: Oh, we inaugurated rural mail delivery. The hon. member for Rouville is a pretty good fellow; I must say that when he was Postmaster General he was very obliging and very kind, but we must speak of rural mail as the hon. gentleman inaugurated it. It was a fine system; hon. gentlemen opposite certainly ought to be proud of it. The mail carrier was permitted to deliver mail to the farmers along the old stage routes and every other farmer in the county had to walk from five to ten miles to the post office to get his mail. The system was unpopular because it was unfair and the first thing this Government did when it came into power was to remedy that condition so that every farmer in the province of Ontario at least has his mail delivered at his door. That is one of the greatest things that has been done for the farmers of this country. The hon. member for East Lambton (Mr. Armstrong), who advocated this boon for the farmers when in opposition, deserves a great deal of credit for the study and attention he gave to that subject. We are doing something for the farmers, and I hope the Government will

continue to do a good deal more for them; they deserve whatever they get.

I am not going to say very much about the question of free wheat, because I do not know so much about the conditions in the West; but I do think that the milling industry, which is a great industry in this country, should be encouraged. I should like to see the wheat of the farmers of Canada manufactured in Canada in Canadian mills. This would help the farmers because they could use the offal for the feeding of their stock and get it perhaps at a lower price than they pay for it to-day. Hon. gentlemen opposite talk a great deal about free wheat, but gentlemen from the West, not members of this House, who have conversed with me in the matter, have expressed the opinion that free wheat would not be as great boon for the West as our friends would make it appear to be. I was talking to a gentleman a few days ago who raised twelve thousand bushels of wheat last year. So far as he was concerned, he did not know that free wheat would be a great benefit to him. He did tell me, however, of one thing that would be an advantage to him—and I quite agree with him on that point—the securing of lower freight rates from the West. Transportation is the important question in the West to-day, but hon. gentlemen opposite by their transportation policy and by the building of the Grand Trunk Pacific railway have done away with the possibility of cheaper transportation in this country for many years to come. If members from the West, having in mind the building of the Transcontinental railway, voted as they should vote, they would vote against the Liberal party on any question. I shall not speak of the commission appointed to investigate the construction of the railway, whose report proved beyond all manner of doubt that over $40,000,000 was absolutely wasted through gross mismanagement in the construction of the road. Further, I submit that the construction of that part of the road between Lévis and Moncton was a sheer waste of money. In that part of the country it parallels the Intercolonial, a government owned road, and through the building of this line $75,000,000 have been thrown away. Aside, however, from this waste of money, the thing was a bad bargain for Canada; hon. gentlemen entered upon a policy of building a road that will cost so much money that transportation can never be cheapened in this country—and that is the most unfortunate feature of the whole matter.

Mr. A. K. MACLEAN: If we ground twice as many barrels of flour as we do to-day, where would we sell it?

Mr. LALOR: In the British market, I presume.

Mr. MACLEAN: How?

Mr. LALOR: The same as we would sell what we are selling now.

Mr. MACLEAN: The British miller wants to buy wheat.

Mr. LALOR: Wheat and flour both. We would not expect to manufacture all the flour, but we could manufacture a considerable portion of it. I claim that the Grand Trunk Pacific railway was a bad bargain for this country; it has killed cheap transportation for all time to come. The farmers of the West will for generations contribute five cents a bushel towards the bad bargain and the mismanagement of hon. gentlemen opposite in connection with the Transcontinental railway; that is one of the greatest taxes the farmer of the West has to pay.

I have already said that I do not believe there is anything too good for the farmers either of western or of eastern Canada. I would be prepared to support the building of Canadian freight steamers to carry our wheat and our farm products to the British market. This would seem to be the only way of remedying the transportation bungle that was made by hon. gentlemen opposite and the only way of cheapening ocean transportation. I hope the Government will inaugurate a system of cheap ocean transportation in the interests of the farmers as a whole, and particularly in the interests of the farmers of the West.

An hon. gentleman speaking from the other side of the House the other day—I think it was the hon. member for South Cape Breton (Mr. Carroll)—read from a paper, a copy of which I have before me, figures by which he endeavoured to show that flour was selling at Halifax at $6.50 a barrel and in London at $4.18 a barrel. If the hon. gentleman had read from another portion of the very paper from which he was reading he would have seen that his figures are wrong, and that there is not such a large difference in the prices. While I am not a miller, I know something about what it costs to make a barrel of flour. It takes two and one-third bushels of wheat to make 100 pounds of flour. On a basis of 90 cents a bushel at Fort William, it would cost $2.10 a hundredweight for flour, 10 cents for the bag, and 20

cents for manufacturing, a total of $2.40. Deducting 36 cents for offal and adding 20 cents for freight, we have a total of $2.24, so that a barrel containing 200 pounds of flour would cost, delivered at Montreal, $4.48. The figures given by the hon. gentleman were, therefore, wrong, but he was doing only what hon. gentlemen on the other side are so fond of doing—knocking some industry. All that an industry has to do is pop up its head and the hon. gentleman will knock it as hard as he possibly can. When he was making that assertion he was knocking the milling industry.

I am interested in an industry which has received some attention on the part of hon. gentlemen opposite. I refer to the canning industry, of which I think all Canadians have just reason to feel proud. The Dominion canners have, I think, about 60 canning factories in Canada and the independent canning factories have about 50. I want to say this about the Canadian canning industry: Whether the goods are produced by the Dominion or by the independent canners, Canadian canned goods are a credit to Canada. The aim of the industry has been continually to improve the quality of the goods; they have done that, and to-day the canned goods of Canada compare favourably with the canned goods of any other country in the world. Ten years ago, when the Dominion Canners was organized, the canning business in Canada was in a bad condition. The factories were not in good shape and the machinery was not adequate or up-to-date, but to-day the canning factories in Canada, whether they belong to the company of which I happen to be a member or whether they belong to the independent canners, are a credit to the country. You can travel through the United States from end to end but you will not find canning factories that compare with those in Canada to-day. The goods that are done up are pure, free from adulteration and, more than that, they are the cheapest food that any labouring man can put on his table. The canning business is knocked by hon. gentlemen opposite because they do not know what they are talking about. In my county my opponent for two general elections followed me around with canned goods and canned goods labels and every time he spoke he made votes for me because the people knew that my statements about the canning business were absolutely correct. I repeat that they are the cheapest goods a labouring man or anybody can put upon his table, and the purest and most wholesome. You can to-day buy a three-pound tin of tomatoes for ten cents. You would wonder how the tin could be made for the money. I have seen advertisements for twelve tins for a dollar but that is too cheap, ten cents is the regular price for these goods. The manufacturer puts them up, puts a beautiful label on the tin, boxes two dozen to a case, and pays freight to the wholesale merchant. The wholesaler, in turn, sells them to the retailer and the retailer sells at a profit to the consumer, and yet they are bought by the consumer three cans for a quarter; but hon. gentlemen opposite are still pitching in to the canning business and calling it a combine and a merger.

11 p.m.

Mr. DOUGLAS: What about the prices last year?

Mr. LALOR: I am speaking of this year. Last year they were high. There was a failure of the crop in Canada and we even had to import them to supply the demand and pay the duty and we sold them at a loss to fill our orders in Canada because we only packed 40 per cent of our requirements. Hon. gentlemen opposite, if they were fair, would know that that is the case, but they continue constantly to attack that industry. These attacks are most unwarranted and unfair. The canning business is not managed altogether by Conservaties. On the board of directors of which I am a member, we have Liberals as well as Conservatives and they must feel very sorry indeed to hear attacks made on a business that is carried on honestly in the interest of the public. We pay millions of dollars to the farmers and employ thousands of men and women in the factories and still that business is attacked session after session although there are no facts to warrant the attacks made upon it. If it is an industry hon. gentlemen attack that industry. They are so disappointed over the defeat of reciprocity that they attack everybody for it and especially the manufacturers; if they would only look a little farther they might rope in the farmers and blame them a little. It looks now as if they wanted to get even with the farmer by giving free food so that the farmer would suffer along with the manufacturer. We know that there is a business depression in Canada. Everybody knows that. All you have to do is to be interested in any business, to hold stock in any concern in Canada and you will know that there is a depression. Canada is not the only country with a business de-

pression. I am interested in manufacturing in the United States as well as in Canada and depression exists over there to a greater extent than here. I know the conditions because I am interested on both sides of the line. The depression is great here, but it is greater there. The New York Central road has laid off 25,000 men lately. On the short road from Buffalo to Niagara Falls and Lockport they have actually in the past month taken thirty trains off that short run. That applies to the whole country. The depression that exists there exists here, and I claim that it is not wise, it is not a proper policy, for members of Parliament in a Canadian House of Commons to decry and knock their country. I claim more than that, that the men who are in this House from western Canada, from Alberta and Saskatchewan, have done their provinces more harm in this House this session than all the good they can ever do. Who would ever think of taking up a farm in the West and settling there after reading one of the speeches of hon. gentlemen opposite. They are doing everything they can to stop immigration into that country. They are doing everything they can in this House to stop prosperity and immigration in the very provinces from which they come; and I say to hon. gentlemen opposite that if they would take some of the wealth that they have made out of western lands, which they and their friends got cheaply probably from the Government that was in power, and invest that capital, which they have taken out of the settlers of that country, in the establishing of manufacturing institutions in their province and their own towns, they would do a great deal more for their conutry than they are now doing. I say, in conclusion, that we should not knock our own country; we should try and boost it. I say, do not knock, but boost, and if we will all do that we may bring about the prosperity that should prevail in this great Dominion always; and if we can grow in the future as we have done in the past everybody, including the merchant, the manufacturer, the artisan and the farmer will be prosperous and successful.

Mr. J. M. DOUGLAS (Strathcona): Mr. Speaker, it is always a delight to listen to the beautiful unpartisan method in which the hon. member for Haldimand (Mr. Lalor) presents his case when he speaks before this House. He is enjoyable to that extent, but I really think that he believes a great many of his own statements. He referred to what he called the unfulfilled pledges of Sir Wilfrid Laurier prior to 1896, when Sir Wilfrid Laurier was appealing for the suffrages of the people of Canada on what he called then a policy of free trade as it is in England. I might remind the hon. member, although it is a tu quoque argument, that his own leader, prior to 1911, went to the provinces of western Canada promising them that if he were returned to power he would give to them the control of their natural resources. As yet we have heard nothing of that, although this Government has been in power something over two years. This was one of the main planks of the platform of the Conservative party in western Canada. It was used by every speaker in behalf of their campaign. The present Prime Minister also promised to give assistance to a chilled meat industry if he were returned to power. He has been in power since 1911, and we have heard nothing further about that part of his promise.

We have been treated by the hon. member for Haldimand to a statement as to the wonderful prosperity that attended Canada under the National Policy in force from 1878 until 1896, when the late Government came into power. If he had studied statistics he would have discovered that for a number of years prior to 1896 the trade of this country was practically at a standstill, and that it did not increase in any respect until the revision of the tariff in 1897. If he had lived in western Canada, as I have, he would know that that statement applies more forcibly to the West than to the East. He also made the statement that food and clothing were cheaper than they have been for quite a number of years. I am afraid the hon. member has not kept in close touch with the clothing trade in recent years, or he would not have made that statement. Clothing is dearer to-day than it has ever been in the history of Canada. He also mentioned the undesirability of the imports of butter which has been coming into Canada in recent years. To my mind, that is not a very undesirable state of affairs. If a country, essentially agricultural, is importing butter, it must be that the people of Canada, who are agricultural people primarily, do not find butter-making a profitable line of business. If the hon. member's remedy of a high tariff wall against the importation of butter

were carried out, where would the consumer be? That is one of the great troubles of this Government. They appear to absolutely forget the consumer in every piece of legislation which they bring forward. The great bulk of our population is made up of consumers. This Government takes little thought for his protection. We are told of the tremendous disasters which will befall the manufacturer if the protection is taken off his industry, but the consumer can starve to death for all gentlemen opposite care. The consumer apparently does not enter into their consideration at all. We were told by a gentleman who ought to have known better that he would support in this House a tariff on butter, and that such a tariff would be a benefit to this country.

I regret that in the Budget speech of the Minister of Finance the same lack of consideration for the consumer presented itself. There was nothing in his speech from beginning to end to give the consumer any hope of redress.

Mr. BURNHAM: How would you benefit the consumer?

Mr. DOUGLAS: Certainly not by the imposition of a tax.

Mr. BURNHAM: Go ahead and tell us.

Mr. DOUGLAS: Cannot the hon. member figure it out?

Mr. BURNHAM: I can, but what about you?

Mr. DOUGLAS: Before the hon. member for Haldimand goes out, I want to say a word about the canning industry. He made the statement that there were sixty factories in the Dominion Canners' Association and fifty independent factories. He also said that the Dominion Canners' Association was not a combine. I will leave the members of the House to judge whether it is or not. He also gives great credit to the Dominion Canners' Association for the very low price of canned vegetables this year. I admit that vegetables, and tomatoes especially, are cheaper this year than they have been for five or perhaps six or seven years. He might also have said that last year in place of canned tomatoes selling at three tins for twenty-five cents they were selling at twenty cents a tin, or two for thirty-five cents. I do not think he would consider tomatoes at that price the cheapest food the workingman can put on his table. As regards the question of a combine, he very conveniently omitted the contract he had with the wholesaler as to how he should handle the products of the Dominion Canneries. That was the most beautiful contract I ever had the pleasure of looking at. By it, the wholesaler pledged himself to handle nothing but the goods of the Dominion Canners' Association. At the end of the selling season he was allowed a rebate of ten cents a dozen on his vegetables, and 12½ cents a dozen on his fruits. If he bought outside of the sixty factories of the Dominion Canners' Association he was liable to lose his whole commission. That strikes me as a combine, and I will leave the members of the House to judge whether it is or not.

Mr. LALOR: Might I ask the hon. gentleman if he thinks that was too much profit to give to the wholesaler?

Mr. DOUGLAS: I do not think it was too much profit for the wholesaler. The profit in the canning industry is not made by the wholesaler or by the retailer, but by the manufacturer. The poor farmer gets very little for his tomatoes, about twenty-five to twenty-seven cents a bushel. That does not strike me as being a very high price.

Mr. LALOR: I think the hon. member wants to be fair. Let me tell him that ten years ago we paid twenty cents a bushel for tomatoes, and now we are paying thirty cents. Nearly everything we buy is nearly fifty per cent dearer than ten years ago.

Mr. DOUGLAS: I am out three cents. The point I wish to make is that the price the farmer gets for his raw product has absolutely no influence on the price at which the manufacturer sells to the wholesaler. The hon. member made the statement that the crop last year was a short one, and for that reason tomatoes were worth $1.35 to $1.50 a dozen. On account of a short crop the manufacturers could not fill all their contracts, he said. That is quite true, but although he was unable to fill his contracts, the manufacturer took every possible advantage he could in the way of enhanced prices.

I shall not take up very much more time of the House, but I wish to discuss the effect of the Underwood tariff in connection with the entry of free wheat into the United States. All sorts of opinions have been advanced by different members. The hon. member for South Oxford (Mr. Suther-

land) scoffed at the idea that the western farmer should desire a market for his wheat other than along lines east and west. He seemed to think that we could force grain to be hauled a tremendous distance through barren country, and yet be profitable to the farmer growing the grain. The next moment we heard another hon. gentleman say that the great problem in western Canada was not markets, but transportation. How on earth the transportation problem is going to be solved by forcing producers in western Canada to send their grain two or three thousand miles to the eastern seaboard, is beyond my comprehension.

In the investigation into the rates recently held before the Railway Commission, it was found that wheat was being hauled from the prairies of western Canada to the head of the lakes at a lower price than to any other part of the continent of America. Therefore we cannot hope for redress from the Railway Commission as long as conditions of that kind prevail. If we had the market to the south of us, we would have, in the first place, the advantage of competition, which to my mind is the most important one. We would also have the advantage of the short hauls as between the country points and the market at either Winnipeg or Minneapolis, because I have faith enough in the people of Canada, even in the millers of Canada, that when they see that they are really up against such a proposition, they will not allow their American neighbours to monopolize the whole trade of western Canada. That argument was used during the reciprocity campaign regarding our cattle and hogs. After the Underwood tariff came into effect in October of last year, it was an absolute boon to the province of Alberta from which I come, inasmuch as we had begun to produce more hogs than we could consume, the first year in our existence when we were able to do so. I have not the figures here to substantiate that statement, but I have an article copied from a Calgary paper, dated March 8, in which the statement is made that in sixty days we shipped from the city of Calgary hogs to the value of $470,000. That is from one city alone in the province of Alberta and these hogs were sold to the city of Seattle, a market of which we never dreamed. By the removal of that duty, which was done by the good grace of our neighbours to the south of us, the farmers benefited to the extent that those hogs brought at Seattle from $7.75 to $8.25 per cwt. and the farmers of Alberta were able to market that tremendous number of hogs within that very short time. I have a paper here from the city of Calgary dated April 18, which says that in one day over $60,000 worth of hogs were shipped out of that city for the Seattle market. Calgary has become to-day one of the greatest shipping points in Canada for live animals, and is rivalling Toronto and Winnipeg in that respect.

We are also going into mixed farming, following the advice of the hon. Minister of Trade and Commerce, and last year we produced more poultry than we were able to consume. For the first time in the history of Alberta our poultry and eggs were more than sufficient to meet the requirements of that province. If we do not get free access to the American market for our wheat products, we will go more extensively into mixed farming. We have no home market in Alberta, and where can we sell this produce? We can grow all the hogs required for the Dominion of Canada, but where are we to sell them? We cannot afford to pay the freight from Calgary to Toronto. We have packing industries, and can pack a certain number of hogs; but, unless we get unrestricted markets not only for our wheat but for all our other products, what is to be the result? Ask the eastern manufacturer what is the result of the defeat of reciprocity. If he is honest, he will tell you that it is more stagnant in eastern Canada than it has been for twenty years. When I was in Montreal the other day I had a conversation with a number of wholesale men there, one of whom said to me, 'We have not had such poor business for twenty years as we have to-day.' He did not know that I was in politics. I said, 'Can it by any possibility be true that this stagnation has resulted from the change of Government?' He said, 'I never thought of it that way, but that seems to be the case; the only place where we can sell goods is in the city of Ottawa.' I said, 'How do you account for that?' He said, 'Because Parliament is in session, and so many delegates come to Ottawa who buy goods. That is the only reason I can give for it.' The hon. member who preceded me (Mr. Lalor) is a manufacturer, and a good one. He has one of the best knitting mills not only in Canada but, of its line, in the world; and for the goods he produces I believe he is capable of producing them against any manufacturer not only in Canada and the United States, but in Germany; yet ask that hon. gentleman how business is just now, and he will tell

you that his travellers are not making expenses, that his resident salesmen on the Pacific coast are just marking time. Nevertheless he is one of the gentlemen who did his best to bring about this state of affairs.

Mr. BURNHAM: Would you advise foreign competition as a remedy?

Mr. DOUGLAS: I do not just see the connection.

Mr. BURNHAM: Neither do I.

Mr. DOUGLAS: An allusion was made by the hon. member for Haldimand to an article which appeared in the Montreal Standard in regard to the price of flour at Canadian points and English points. I was one of the gentlemen who received a copy of that paper, and I presume every member received one. I noticed a mistake in the statement, but I thought it was a typographical error. I took the pains to write to the editor of the Standard to find out if his correspondent was correctly informed or not. I received a letter signed by the man who made the statement, and, addressing himself to the editor of the Standard, he says:

> Your letter of the 8th instant has been handed to me, with copy of letter addressed to you from Mr. Douglas, M.P., in which that gentleman states the alleged discrimination against Canadian consumer has been very much exaggerated. I beg to state that the undernoted figures prove that I underestimated same. Such figures disclose that the difference amounts to $1.70, which proved the figures which I quoted to be a fair average.

I do not know who this gentleman is?

Mr. ROGERS: What is his name?

Mr. DOUGLAS: His name is W. Lutton. Taking as his authority the North West Miller he figures out the price at Montreal at $5.70 a barrel, the price in Liverpool at $3.99 per barrel, and the price in London at $3.99 per barrel, for September, October and November of last year. We have heard a great deal during this debate as to the relative benefits of protection and free trade. Hon. gentlemen opposite have evidently taken it for granted that because the Liberal party have advocated the abolition of duties on a number of articles that they are absolute free traders. For my own part, personally, I am always inclined to let them have that opinion, but I do not think they are doing justice to the Liberal party when they make such statements. I do not think the lowering or the abolition of a duty on any specific article means that the party which advocates such a policy is absolutely going in for free trade. If that were true, then the Conservative party is just as much a free trade party as is the Liberal party, because I notice that in the recent revision of the tariff they have taken the duty off a good many articles, although the unfortunate part of it is that the articles on which the duty has been removed are all used by manufacturers, and not by the consuming classes.

It has been claimed by hon. gentlemen opposite during this debate, that the binder twine industry in Canada was ruined by the Liberal party removing the twine duty in 1897. I have some figures here to show that that statement is absolutely incorrect. The hon. member for the Yukon (Mr. Thompson) quoted from a speech made last year by the hon. member for Wentworth (Mr. G. C. Wilson), the statement that fourteen out of fifteen Canadian twine factories had gone out of business when the duty on binder twine was removed. A gentleman who is thoroughly acquainted with the binder twine industry in this country, informs me that in the days of high tariff on this commodity more factories were closed by the twine trust in Canada than since the Liberal Government reduced and finally put twine on the free list. He points out that the factories closed by the trust when there was a duty on binder twine were: Brown, of Quebec; Bannerman, of Lachute; the Port Hope mills, the Dovercourt mills in Toronto, the St. John mill in New Brunswick, and one of the Brantford mills. These mills, as I say, were all closed under the high protective tariff on binder twine. In fact, the industry had got to such a state that the Ontario Government started manufacturing twine in the Central Prison, and the Dominion Government followed suit by manufacturing twine in the Kingston Penitentiary, in an endeavour to break the combine of the Canadian Cordage Company. There was one binder twine factory in Brantford which did not go under, and the owners of this factory continued to prosper under the high protective tariff, and they paid dividends amounting to 60 per cent in one year, 90 per cent in another year, and 110 per cent the next year. The result was that a number of people, induced by the enormous profits made by this factory, resolved to go into the business. You will always find that where an industry appears to be making undue profits, a great many people will rush into it, and so it happened with regard to the manufacture of binder twine

in this instance. A binder twine factory was established in Brandon, and others were established in different parts of the Dominion. However, they were not managed properly, and they all went to the wall, not because of free twine by any means, but because of bad management. Industries of any description, which are not managed on good business principles, are bound to fail, and the statement that these factories went under because the duty on binder twine was removed, is therefore not borne out by the facts.

Mr. ALFRED THOMPSON: What is the reply of the hon. gentleman to the claim now made by the grain growers of the West, that the binder twine industry is in the hands of an American trust, and that the price of twine is higher now than it was before the duty was removed?

Mr. DOUGLAS: I think that probably the statement is absolutely true, that the binder twine industry is in the hands of an American trust to-day, but that is because they coralled the whole raw product. How any tariff can remedy that state of affairs is beyond my comprehension. If it were a manufactured article that was controlled by a trust, I could understand how the removal of the duty would affect it, but when, as in this case, it is a raw product that is controlled, I fail to see how any tariff is going to remedy the evil.

Mr. ALFRED THOMPSON: What is your remedy?

Mr. DOUGLAS: There is no remedy so far as I can see.

Mr. PARDEE: What is your remedy?

Mr. DOUGLAS: There is no duty on binder twine and what more can be done. It might be possible to get at the combine in some other way, but I do not see how tariff-tinkering is going to assist it. If we had a tariff on binder twine I believe the conditions would be just that much worse to the extent of the tariff.

Now, Mr. Speaker, referring to the Budget speech delivered by the Minister of Finance, I have to say that I regret very much that the hon. gentleman has placed a duty on steel rods. To my mind that is going to be a very serious thing, because I very much fear that the result of the duty on steel rods is going to be to increase to the consumer the price of nails, and all products of steel rods. I was speaking a few days ago to the manager of the nail factory in the city of Calgary, and I asked him: 'What is going to be the effect of this duty on steel rods on your industry'; and he said, 'it is going to put us out of business.' I replied that I feared that it would. He then told me: 'We heard a mention of that very thing last year, and I took it upon myself to write to the Minister of Finance, to the Prime Minister, and to the member for Calgary, protesting to the utmost of my power against any such duty; the answer I got from all these gentlemen was that they would not consider it for a moment; that they felt that the effect would be to put the small nail makers out of business, and that they would not do that.' He told me that the hon. member for Calgary was most emphatic in his statement that under no circumstances would he permit of a duty being imposed on steel rods, as he knew the effect it would have on the industry in Calgary. For that reason I am very sorry that the Minister of Finance was overborne by the arguments advanced by the steel manufacturers, but I hope he has it in his power to protect these small manufacturers in some way should the occasion arise. With the high transportation rates which we have to pay on heavy hardware, such as nails and other commodities which are made out of steel rods, it would be a serious handicap to the people of the country who use nails every day, if the price were now increased. I do not know, Sir, that I can add anything further to the debate. The question has been discussed in all its phases, and I have only to regret now that the Minister of Finance in presenting his Budget this year has absolutely ignored the wants of the great masses of the people, the consumers, the farmers, the artisans, and that he has pandered to the wants of the manufacturers. Then, as to the question of putting the East and the West against each other, and as to the charge made by some hon. gentlemen from Ontario that the farmer of the West is merely a wheat miner, I have to say that these statments are not warranted by the facts. I hope they will grant the wishes of the organized farmers for relief from the restrictions placed upon them to-day in their market.

On motion of Mr. Pardee, the debate was adjourned.

On motion of Mr. Rogers, the House adjourned at 11.47 p.m.

Thursday, April 23, 1914.

The House met at Three o'clock, the Speaker in the Chair.

PETITION REJECTED.

Mr. SPEAKER: With reference to the petition of the Guelph Trades and Labour Council praying the Government to take over the road of the Canadian Northern Railway Company as a public work for the people of Canada and for other purposes, I have to say that as the prayer of the petition, if granted, would involve an expenditure of public money, it cannot be received.

QUESTIONS.

(Questions to be answered orally are indicated by an asterisk.)

MR. LEANDRE PARADIS.

Mr. DEMERS:

1. Has M. Léandre Paradis, of St. Johns, Quebec, been appointed to a position under the Government of Canada?
2. If so, to what position and whom did he succeed?
3. What was his predecessor's salary?
4. What is his present salary?
5. Has the said Léandre Paradis any contract with the Department of Militia and Defence?
6. If so, can a civil servant be a Government contractor at the same time?

Mr. CODERRE:

1. Yes.
2. Superintendent of the fumigation station at St. Johns, Quebec, and an inspector for carrying out the Destructive Insect and Pest Act. He succeeded Mr. P. H. Dupuis.
3. At the rate of $75 per month for such time as he was employed at the fumigation station, which is kept open for about four months in each year.
4. At the rate of $75 per month for such time as he may be employed at the fumigation station, which is kept opeen for about four months in each year.
5. A contract for the supply of forage at St. Johns, P.Q., was made with Mr. L. Paradis, of St. Johns, Quebec. This contract expires on the 31st of August, 1914.
6. No information.

INDIAN MEDICAL ATTENDANTS.

Mr. A. K. MACLEAN:

1. Who are the Government medical attendants of Indians for Kings county, N.S.?
2. What amount is paid annually to each of such attendants?
3. What number of professional visits were made by each of such attendants, for the last fiscal or calendar year of which there is available such detailed information?
4. Who were the predecessors of such medical attendants, and what amount did they annually receive for such services?

Mr. ROCHE:

1. Doctor George McNally, of Berwick, is medical attendant for the western half of Kings county and Dr. W. B. Moore, of Kentville, is attendant for the eastern half of the county.
2. Doctors McNally and Moore are each paid a salary of $200 per annum.
3. Doctor Moore, during the last fiscal year, attended 127 Indians. Returns are not yet to hand from Dr. McNally as to the number of Indians he attended.
4. Previous to the appointment of the above mentioned doctors, Dr. H. M. Jacques was medical attendant for the whole county at a salary of $50 per annum. He did not attempt to do all the work, and in the year 1910-11 accounts amounting to $496.80, were paid. The total cost of attendance for that year was $546.80.

PLANTAGENET RURAL MAIL DELIVERY.

Mr. PROULX:

1. How many tenders were received by the Post Office Department for the conveyance of the mails on the proposed free rural delivery route No. 1, Plantagenet, county of Prescott?
2. What are the names of the tenderers and the amount of their respective tenders?
3. Is it the intention of the Post Office Department to establish said route in the near future?

Mr. PELLETIER:

The tenders will not be opened until the 8th proximo. The service will be established as soon as the necessary contract arrangements have been made.

LIEUT.-COLONEL CHARLES F. WINTER.

Mr. CARROLL:

1. What position does Lieut.-Colonel Charles F. Winter occupy in the Militia Department, and what are his duties?
2. Has he within the past year been given instructions to do any work outside his ordinary duties? If so, what?

Mr. SAM. HUGHES:

1. Military secretary.
2. No.

ALDERSHOT, N.S., CAMP.

Mr. MACDONALD:

1. What are the names of the tenderers for supplies furnished the various militia camps at Aldershot, Kings county, N.S., during the year 1913?
2. What were the several prices quoted?
3. From whom were supplies purchased and what was the price paid in each case?

Mr. SAM. HUGHES: Papers in reply to a motion are being sent in.

HOMESTEAD ENTRY.

Mr. KNOWLES:

1. When was the entry of Harvey Rea McVeigh for the S.W. ¼ of 3-23-12, W. 3rd M., cancelled?
2. When were instructions first isued by the Department of the Interior for a homestead inspector's report with regard to the improvements made on the S. W. ¼ of 3-23-12, W. 3rd M., in connection with the application of Harvey Rea McVeigh for a refund of the moneys collected for the improvements made by him on the above land?
3. What sum of money was so collected by the department for said improvements?
4. On what date was such money paid to the department?
5. Has the homestead inspector's report referred to in question No. 2, yet been received? If so, when?
6. Has any money been paid to the said Harvey Rea McVeigh on account of such refund? If so, how much?
7. Has such payment been on account or in full?

Mr. ROCHE:

1. 10th December, 1912.
2. 19th May, 1913.
3. $165 has been collected from the present entrant.
4. 5th April, 1913.
5. No. The land is situated north of the South Saskatchewan river, and the homestead inspector recently explained that on account of weather and the state of the roads it has been practically impossible to do any work in that country for some time, but that he would make his report as soon after the first of this month as weather and roads would permit.
6. Yes, $50. It was represented that he was in urgent need of money.
7. On account.

THE BUDGET:

Consideration of the motion of Hon. W. T. White (Minister of Finance) for the House to go into Committee of Ways and Means, resumed from Wednesday, April 22.

Right Hon. Sir WILFRID LAURIER (East Quebec): Mr. Speaker, if the Budget, to which it was our privilege to listen some few days ago, had been confined to an exposition of the financial affairs of the country, it would have been my pleasure to have joined in the many encomiums pronounced upon that part of the hon. gentleman's deliverance and to have declared, and declared with perfect sincerity, that it was worthy of all commendation. Barring a few thrusts which my hon. friend attempted at his opponents, and which his opponents at the present time can very well pass by, the exposé of the book-keeping and the business of the Dominion which he presented, the liabilities, the assets and the resulting obligations, was clear, concise and to the point, and if my hon. friend permitted me, I would offer him my heartiest congratulations.

But as to the other part in which my hon. friend discussed the economic situation of the country, I must say that—and I shall appeal to the judgment of those who sit behind him—my hon. friend was, as to his facts and conclusions, singularly in error, and failed altogether to rise to a true conception of his duties and of his responsibilities.

My hon. friend stated, as he has done on more than one occasion in the House and out of it, that the economic situation of the country was satisfactory; that we had passed through a period of depression, but of slight depression only as compared with 1907, and that already we were sailing into calmer waters. He stated emphatically that there was no occasion for alarm; that we could well afford to wait in peace for the reaction, and that as regards the amount of reform he would make, it would be simply to tighten the screws upon a few items of the tariff and to make some semblance of reduction upon farm implements, a reduction so insignificant that it in fact adds insult to injury.

My hon. friend, with great complacency, relies upon the enormous resources of Canada. They are enormous indeed, especially in agricultural possibilities; but my hon. friend, at all events, ought to know—and he is in a position to know more than anyone else in this House—that though the resources of Canada are enormous, and though we have yet hardly touched the fringe of them, at this moment in the eastern provinces agricultural production is not keeping pace with the requirements of the country. As to the western provinces, he knows also that agricultural development is rapidly coming to a standstill. He cannot ignore these facts; but still he turns his back upon the situation. We could not expect anything else, for he is one of those who three years ago so clamorously shouted: 'No change; no improvement; let well enough alone.' The man who has not the energy to improve never will have the courage to reform

My hon. friend stated, however, that agriculture was the basic industry of all industries. If it is true, as I shall be able to prove later on, that at this moment agriculture is not returning what we have a right to expect from it, is not that proof that there is something ajar in the situation of the country which requires the attention of the Government; and if the Government fail to apply themselves to the task of remedying the situation, then it is also proof that they are not worthy of the confidence that the people have reposed in them?

I am well aware that nothing that I can say can convince my hon. friend, but I will place him face to face with a statement which came not long ago from his own side of the House. My hon. friend from Dundas (Mr. Broder), whom I regret not to see in his seat to-day, has a well deserved reputation in this House for being a shrewd and keen observer of what is going on in the country. Lately he addressed himself to this situation, and, within the hearing of my hon. friend, made the statement that agricultural production is in many respects not equal to the demand now pressing upon it. His words were:

> The right hon. gentleman must realize that Canada is not producing the quantity of dairy produce that we might expect from it, an agricultural country. How can we justify this? Just last winter a gentleman sat down to his breakfast in the city of Ottawa and he had for his breakfast eggs from Russia, potatoes from Ireland, bacon from Denmark and butter from New Zealand.

Then the hon. member added pathetically:

> That should not happen in this country.

On that list there was not one article of Canadian produce; it all came from abroad. No wonder that the hon. member for Dundas added pathetically, almost despairingly, that that should not happen in this country; but it has happened in this country; and it is happening at this moment. 'Tis true; 'tis a pity; and a pity 'tis, 'tis true. The hon. member for Dundas, who is a practical man, was not satisfied with pointing to the evil; he also suggested the remedy and immediately added these significant words:

> That should not happen in this country. There is only one remedy and that is to get the people on the land.

These words were spoken within the hearing of my hon. friend the Minister of Finance, but what is there in his Budget to get the people on the land? There is not a trace of a thought in any word of his speech towards that object. This is the situation. My hon. friend the member for Dundas dilated upon what he had stated, and he made the statement and gave the proof also that in the last ten years the number of dairy animals had decreased in the provinces of Ontario, Quebec, New Brunswick, Nova Scotia, and Prince Edward Island. Every one knows that the milch cow is the wealth of the farmer. We may have increased our wealth otherwise, but in that respect we have been losing wealth to a large extent in Ontario. According to the figures given by the hon. member for Dundas, there was in the last decade, a decrease in milch cows of 33,784 in Ontario; 14,691 in Quebec; 2,552 in New Brunswick; 9,515 in Prince Edward Island, and 2,484 in Nova Scotia, a total of 63,026. Therefore at this moment, that particular form of wealth is decreasing and not increasing. The hon. member for Dundas might have gone farther and added that not only in dairy produce but in almost every other form of production the eastern provinces have not been keeping pace with the wants and requirements of the population. He might have modified his language and stated that the remedy for the situation is not only to get the people on the land, but that in the eastern provinces, Ontario, Quebec, New Brunswick, Nova Scotia, and Prince Edward Island, the effort and the duty of the Government should be to get the people back on the land. It is a fact that at this moment the land is deserted, and that we have not now in the eastern provinces the same number of tillers of the soil that we had ten years ago. This is the problem which was facing my hon. friend. I do not charge the Government with the responsibility; I do not say it is the fault of the Government that this is the state of affairs to-day, but I charge them with the responsibility for their failure to deal with the situation which is staring them in the face. They cannot plead that they are not responsible; what are they in office for? What are the pledges they have given to the people? Their pledges were pledges of reform, so as to make the people more prosperous, but instead of being more prosperous the people are less prosperous than they were. I charge the Government with failure of duty at least in not attempting to relieve the situation.

It is a fact of which everybody is aware that in every civilized portion of the world there is a tendency for the rural population to desert

the land and to flock into the cities. In this respect Canada is not peculiar but suffers in common with every other land. There are general cases which affect the rural population everywhere, but also there are special causes almost everywhere which are peculair to the country, and which can be remedied by legislation. As to the general causes, I say frankly, that probably they also may be remedied; but as to the particular causes it is certainly possible to remedy these if we apply ourselves to the work. Sir, in Great Britain to-day population is leaving the land and flocking to the cities. The causes there are largely to be found in the vicious land laws, the remnant of the old feudal system, which they are trying to remedy. These efforts that are being made in that country to remedy, if possible, these old vicious laws and win back the people to the land, is a spectacle to arouse our admiration. But in this country we have no feudal tenure, thank the Lord! We are free from that evil, but still we are not keeping our population on the land. And if we are to seek a remedy for this lamentable condition of affairs, that remedy, as I shall presently show, is to be sought in the direction of an expansion of trade.

Such is the situation in the eastern provinces, and as to the western provinces we must always remember the primary factor that in those provinces there are 150,000,000 acres of land ready for the tiller. Of these lands only 18,000,000 acres are to-day under culture, leaving 132,000,000 acres of as fertile land as there is in any part of the globe, and yet, as my hon. friend knows, we are making no headway towards increasing the settlement of that country. My hon. friend in his speech the other day rejoiced that our immigration is keeping up its volume. Here are his words:

> It is gratifying to know not only that the stream of new settlers continues to flow into the Dominion, but that there is also apparent from year to year a marked improvement in the class arriving due to restrictive regulations.

I take issue with my hon. friend upon this statement. True, the volume of immigration is not decreasing, it is keeping up as before; but the hon. gentleman is in error when he speaks of 'new settlers.' They are not new settlers for the land that are coming in at the present time, but rather mechanics and artisans. At the present moment, as he knows, the number of people who settle on the land, and the acreage of land which goes under cultivation are decreasing year by year. In 1910-11, the homestead entries, pre-emptions, purchased homesteads and South African veteran homesteads were 63,830; in 1911-12, they were 52,553; in 1912-13, 43,552; and for the year just ended the number was only 38,856. So, they are not new settlers who are coming in, but rather a different class of immigrants. The immigrants we desire in this country are farmers, farm labourers and domestic servants and instead of these we are getting artisans and mechanics who find no work and simply drift into the cities to swell the ranks of the growing army of the unemployed.

We are beyond all an agricultural country. But, if agriculture is at a standstill, there is a blemish upon the country to which nobody can close his eyes, and that is the situation at the present time. For this situation there must be a cause. If in the older provinces, the people leave the land and flock to the cities, if in the new provinces the tillers of the soil no longer go upon the soil, then there must be some cause for it. Of course, as this question has been more than once debated in this House, various opinions have been expressed upon it. There may be occasion for honest differences of opinion; but there are men who are in a position to give us information upon the subject and whose opinion is more valuable than the opinion of any others, and they are the farmers of this country. The farmers who have been heard more than once, before the Government have stated what are the causes which have produced this result, and they have pointed out the remedy. So far as I have been able to inform myself by reading their memorial, those causes are two: first, the high cost of production and the next the insufficiency of markets. As to the high cost of production, more than once, and with unanimous voice, the farmers have declared what they wanted and have suggested the remedy which would afford them relief. They asked to have agricultural implements free from taxation. We have heard this question debated in this House more than once and have heard many opinions expressed upon it. When the farmer asks that the tools of his occupation should be free from taxation, that they should not be made heavier in his hands than they naturally are, nobody can say that is an unfair demand. Everybody, whether he sits on this side of the House or on that would agree with me that this is a perfectly natural demand, and one

which ought to be granted unless there is a paramount reason to the contrary.

It has been asserted on the floor of this House during this debate that the hardships which the settlers of the prairies suffer do not compare with the hardships which our forefathers in this part of Canada had to undergo when hewing out for themselves and their families homes out of the forest. I am disposed to agree with that: I believe that the hardships of the men of the prairies to-day, are not to be compared with those of our forefathers in this part of Canada. But, Sir, because we can do nothing for the dead, is that reason why we should refuse help for the living? I believe it to be true that the settlers of the West do not suffer as great hardships as did those of a generation past in this section of the country; but, Sir, if it is in our power to remove from the tiller of the soil to-day a part of the burden which he has to carry, why should we not apply ourselves to it? The hardships of to-day are not as great as were those of the past; but, Sir, there are hardships to-day also. There are members in this House who have in their desks letters from settlers of the western prairies enclosing notice sent from the agent of the implement maker telling the settler that unless his account is paid it will be collected by the sheriff. Such letters I have seen myself. It is a cruel hardship when a man is subject to such treatment; and if it be in my power to diminish and minimize this evil in any way, I will take the risk of attempting it whatever be the consequence to myself. But, when the farmers came to the Government and asked that their implements be relieved from taxation, the answer was that it could not be done. And what was the reason? The reason given was that free implements means free trade. And, my hon. friend the Minister of Finance is responsible for that sentiment. It is a sentence to which he gave utterance evidently with some satisfaction, because he repeated it on more than one occasion in the course of his Budget speech, as well as in his speech on the Address. The Minister of Finance says that not only free implements, but that free food also, means free trade. I ask my hon. friend what does he mean by saying that free implements would mean free trade? I say to him in all frankness, as friend to friend, that his expression is neither fact nor metaphor, it is loose and illogical. Free implements in 1914 mean free trade no more than did free lumber in 1893 or 1894, granted under a Conservative Government. I tell my hon. friend the catch phrase 'free implements means free trade' is an appeal to the prejudice which we know exists in certain parts of this country against the very idea of freedom of trade. Even in this House the very mention of free trade is met by derisive laughter and jeers from hon. gentlemen on the other side. After all, Mr. Speaker, whatever may be the opinion on this side or the other side as to the benefits of free trade, it cannot be denied that there is only one country in the world to-day which has free trade, and that is the country which of all others, has shown itself above any other in commerce, in finance, and in the art and science of government In the fields of human speculation and human thought there are other nations which maintain supremacy over England. Germany is certainly ahead of England and of all other nations in philosophic research. I think that for precision and grace in literature, France can claim unmatched excellence. But in commerce, in finance, and in the art and science of government, the nation does not exist, and never has existed, which can compare with Great Britain—the mother of freedom of thought and of civil and commercial liberty. It seems to me, in view of the fact that that great nation has emerged from her protective policy of years, to a conception of the value of free trade, that the least hon. members can do is to reflect that perhaps there is something in free trade which has never been dreamed of in their philosophy.

The application of economic principles is not to be determined simply from theoretical conceptions. We on this side of the House; we, the Liberals of Canada, while we have upheld the cause of free trade—

Some hon. MEMBERS: Oh, oh.

Sir WILFRID LAURIER: We have always contended that the policy best suited to this country is not a protective tariff but a customs tariff for revenue purposes. I am well aware—and this is evidenced by the jeers which I heard a moment ago—that I have been taken to task in this debate and in many other debates for what is termed my economic and fiscal inconsistencies.

Some hon. MEMBERS: Hear, hear.

Sir WILFRID LAURIER: I observe that I have struck a responsive chord in hon. gentlemen opposite. I have been accused of having been at one time in favour of commercial union and of I do not know

how many other different heresies. The House is aware, Sir, that I never answered any such charges, not because I do not fully appreciate the courtesy and honour which was offered me by bringing my poor person into prominence, but because I never thought that my poor person was worthy of the honour of taking up so much of the time of the House. But there is one man in this House whom I will not allow to take such liberties with the truth, and that is my hon. friend the Minister of Finance. He knows that these assertions are not true; he knows that if they were true he would not for so long have pulled an oar in the boat of which I was in charge, and in which he and I together had to face, and to successfully plough through many an angry billow. The time came, however, when my hon. friend changed his mind. This is a free country, and he had a right to do so. Of course I am sorry—sorry for myself, but more sorry for him, because if any one changed his mind or his politics it was not I, but my hon. friend.

When we came into office in 1896 we found a protective tariff in force. A protective tariff creates a factitious atmosphere, capital is invested and new industries are started and if you incautiously interfere with that tariff you may produce a financial crisis or a commercial panic which may bring serious disaster to the country. We had that in view; we have it in view yet. The Democrats of the United States, when they came into office two years ago, had the same thing in view; they did not tear the tariff all to pieces at once; they had to proceed cautiously so as not to do injustice to any class and so as to give relief to the consumers without hurting the manufacturers. I think I can say that in 1896 we ourselves did the same thing; we were able to give relief to the consumers and did no injury to any of the manufacturers. But to-day we are told a different story. When we brought in our tariff in 1896 we were at once told on the floor of this House that we would destroy the industries of Canada. As time went on and it was found that the tariff suited the needs of the people; and had produced a period of unexampled prosperity, the tune was changed and we were charged with having kept the tariff in its entirety. I say that there is as much truth in the one statement as there is in the other. When we are told by hon. gentlemen on the other side of the House that we did nothing to reform the tariff, let me remind them that we took the duty off many articles used by the farmer. We removed the duty upon binder twine, upon barbed wire and upon cordage. We did more than that. When we introduced the British preference we introduced a principle the effect of which is felt to this day. We introduced the British preference cautiously. We first reduced the duty on imports from the British Empire by 12½ per cent, then by 25 per cent, and finally by 33⅓ per cent of the general tariff; and the result has been that the British preference has kept the price of articles in this country, both those manufactured in Canada and those imported even from the United States, at a reasonable level, because it is a fact that while manufactured goods imported from the United States have to pay the general duty, the price to the consumer is fixed by the price of articles imported under the British preference. We introduced a new principle the effect of which to-day is enormous. My friend Mr. Paterson, of lamented memory, said once, and I believe with perfect truth, that if the importations of 1911 had been under the tariff of 1896, the Government would have taken from the consumer of this country something like $8,000,000 more than we did take. Therefore, this is our justification for the policy which we adopted, the policy which we maintain and the policy which we propose to apply on the present occasion.

Now, Sir, we propose to deal with farming implements as with everything else. Is the duty on farm implements required for revenue purposes? Nobody will pretend that. Then, can the duty be taken off without any injury to the manufacturer of implements? I have yet to learn that under present conditions the manufacturers of implements in Canada cannot compete with the American manufacturer in the home market. We know that he competes with the American manufacturer in England, in France, in Germany, in Hungary and in many other countries. If the Canadian manufacturer can meet his American competitor in England, or in France, or in Germany, or in Hungary, is there any reason why he cannot meet him on the soil of Canada? An objection has been made for which there is some ground, in that it has been said that it is not fair to remove the duty from the manufactured article because there is a duty upon the raw material. There may be something in that, but I believe that it is a sufficient answer to say that upon everything except coal there is as much duty upon the raw material in the United States as there is

in Canada, and if there is as much duty on one side as on the other there is a parity of manufacturing conditions and the objection does not hold. As to coal, there may be an argument, but it is a notorious fact that coal is being gradually, nay rapidly, replaced by electrical energy. If, after all, these different elements cannot be conciliated, if we have to make the choice between one and the other, whatever may be the position taken by our friends on the other side of the House I say for my part; if we have to make a choice between one interest and the other interest I stand by the agricultural industry which, in the language of my hon. friend, is the basis of all industries, without which no other industry can flourish.

Then, Sir, we come to the other request which has been made by the farmers. They have represented that they are hampered by the cost of production; and that they are still more hampered by the insufficiency of markets. If there is one thing to-day which the farmers want, especially the western farmers, it is wider markets for their products. Their demand has been denied, rudely denied I may say. But there is one thing which the farmers have been given without asking for it and given with a plenteous hand; they have been given advice. The advice is given to them from all quarters on the other side of the House; 'Why don't you go into mixed farming?' How many times have we heard that during the present debate? It can be depended upon that the western farmers will go into mixed farming as soon as they find it more profitable than wheat raising. But we have the experience of the past all over this continent to show that on new soil, whether prairie soil or forest soil, the crop most profitable to the farmer has been wheat. We can follow the production of wheat from the earliest days of the discovery of this continent until the present time; first of all the New England states, in the province of Quebec, in the province of Ontario, in the Genesee valley, then in the state of Illinois, in the state of Minnesota; until now at last it is centered in the three prairie provinces of Canada. As soon as it is profitable for the farmer to go into mixed farming he will do it, but in the meantime he grows wheat. Last year he grew 200,000,000 bushels of wheat. Where is that wheat to go? At present he has only two markets, the home market and the English market. How much can the home market consume? Not 50,000,000 bushels. It is known from statistics that the proportion of consumption is five bushels per head of population, and therefore not 50,000,000 bushels will be taken by the home market. Up to the present moment the English market has not taken more than 50,000,000 bushels and where is the rest to go? The farmers of the West has to find a market for it somewhere. You tell him he cannot send his wheat to the United States, but even now he sends his wheat to the United States in spite of all obstacles. In the last two or three months of the last fiscal year, 2,000,000 bushels of grain were sent from Canada into the United States in the face of an adverse duty. But we are told by hon. gentlemen opposite: It is no use to try to open the markets of the United States to the western growers of wheat because the Americans are themselves exporters of wheat. What a fallacy. The Americans are growers of wheat, it is true; but they are not growers of our wheat and they must have it. Everybody knows that for the last ten years, more perhaps, but certainly for the last ten years, the American people have imported our wheat in bond to grind it in their mills for the European market? What the Americans are doing for the European market they will have to do for their own market also. We are told that the farmers of the West do not know their own business. At all events we can trust to them that they understand this question as well as their critics, and the monopolists who tell them that they do not know anything of their business and that they have a monopoly of intelligence as well as a monopoly of markets. There is another reason which I was surprised to hear advanced upon the floor of this House during this very debate. We have been told: Beware of the Americans; there is a sinister intent in their tariff to-day. The Americans have revised their tariff. Their new tariff provides that wheat shall be free from all countries except those having a tariff against their wheat and wheat products. We have been told: Beware, there is a sinister intent in this. I have only this to say, that the present American tariff is the direct inspiration of President Woodrow Wilson, and I do not hesitate to say, and everybody will agree with me, that with the advent of Mr. Wilson a new page has been turned in American history. If there was a time when it could be charged against American tariff legislation that it was hostile, you cannot charge that to the legislation which is inspired by Mr. Wilson; you cannot charge it against a man who to-day is risking his own popularity amongst his own party to keep intact the honour of the American people, to main-

tain sacred international obligations, and to give to the trade of the world equal treatment with American trade upon a canal built with American money.

When hon. gentlemen charge there is hostile design in that tariff which was the inspiration of President Wilson, I say that such charges fail to reach the man against whom they are directed, and recoil to the confusion and shame of those who make them.

Against the removal of the duty on wheat, I have heard only one argument which has made the slightest impression on my mind, and that is the complaint of Canadian millers. Upon this subject, however, I speak with some diffidence because I do not profess to be competent to discuss the technicalities of this matter; but I have yet to learn from anything that come before me that the Canadian millers are not on a footing of equality with American millers either in the Canadian or the American market. I have not been able to discover what advantage the American miller would have over the Canadian miller if we had the American market? My belief is that the millers on the Canadian side of the St. Lawrence—on the Welland canal and on the Lachine canal—can capture the market of New York against the Mississippi Valley millers because of their advantage in greater proximity to that market. I have nothing further to say on this point except, as I said a moment ago in reference to agricultural implements, that, if the two interests cannot be reconciled, and if we have to choose between them, I stand for the basic industry of this country and without which no other industry can flourish. That is the situation so far as one part of the question is concerned.

All the requests of the farmers have been met with a deaf ear and stern refusals, and as to the consumers the Government has not given them even a passing thought. When Parliament met some three months ago, the very first thing we, on this side, did, was to call the attention of the Government to the high cost of living. We did not press the Government, but we put them on their guard by asking them to look into the matter and to provide some measure of relief. Our suggestion met with a very cold reception, and the Government has evidently remained callous up to this moment. If they are not impressed with the conditions in Canada as to the high cost of living they are the only people in this Dominion who are not. Some days ago I read a lecture on this question by Professor Osborne of Manitoba University, and coming from such a source, you may well imagine that his opinions are not influenced by party politics, his lecture being a mere economic discussion of the problem. This is how he opened:

4 p.m.

> That the cost of living in Canada to-day is exorbitant, there can be no question. The fact is in evidence on every hand. We see signs of it in every newspaper. A commission of investigation has been appointed in one quarter, an angry league of consumers is being formed in another, and the general public may be said to be in a state of revolt on the question. A recent British investigation shows that the cost of living in Canada has increased fifty-one per cent in twelve years. Its nearest competitor in this regard shows an increase of only thirty-nine per cent. The condition has emerged finally in the appointment of a commission by the Government of Canada, but the best evidence of the fact lies in the struggle the large proportion of our population is waging in order to make ends meet. The number of dependents in our own midst is evidently alarmingly on the increase. Ten thousand free dinners are reported to have been given in Winnipeg on Christmas Day. It is admirable that the dinners should be given, but it is a shame that the majority of them should have had to be.

Who will dispute that? I am sorry I cannot give his arguments or statistics, but the conclusion to which he came was that if the cost of living is high, it is not because the producer is paid an abnormal price, but because of enormous profits that go into the pockets of combines and trusts. Speaking of the high cost of food, in so far as that high cost means higher profits for the farmer, nobody makes any objection. The price of food-stuffs commenced to increase some fifteen years ago when we had the commencement of that period of prosperity which synchronized—to use the word of my hon. friend—with the coming to power of the late Administration, and with defeat of which the disappearance of prosperity also synchronized. Prices increased in those fifteen years, but everybody was satisfied that the farmer should get higher prices for his products. Times have changed; there are hard times now. Prices are just as high as they were, the difference is that they are going into the pockets of combines and trusts and not into the pockets of the farmers. Trusts and combines are the bane of these latter days. They are everywhere, but especially in protected countries, where they seem to find a congenial habitat, just as do microbes in dirt and darkness. In the United States they have combines in milk, in meat, in bread, in sugar, in all kinds of commodi-

ties, and Canada is following suit at a pretty lively rate. We have combines in meat, in bread and in flour. Bacon is an article of daily consumption, to be found on the table of every consumer, and to-day bacon is sold to the consumer in England at 14½ cents per pound, while in Toronto, Montreal and all the western cities of Canada it is sold for 19½ cents per pound, or five cents more than in England. That five cents does not go into the pockets of the farmer, but into the pockets of the combine. So it is with flour. To-day flour sells in Canada for something like $5.50 per barrel, and in England the same flour sells for $4.70. These differences in price do not go into the pockets of the farmer, but into the pockets of the combines. I will be told —I am sure of it—that prices in England are lower because wages are low in England, while wages in Canada are high. I will be told that in England the working man is paid a starvation wage, but that in Canada he is paid such a wage that he can bring up his family in comfort and respectability. When it was suggested to the Minister of Finance that we might have free food, he at once objected with horror, and he said it could not be done, because in Canada we wanted to keep the wages of our artisans and our workmen up to the fair wage standard.

These are his very words. Then he gave a concrete example. He said some time ago, in answer to myself, that he could not think of having free food because free food would affect prejudicially some 7,000 establishments and the wages of some 50,000 operatives. I had better quote the words of my hon. friend on this point:

> In addition to that, free food means that the policy of my right hon. friend affects in Canada, according to the statistics of the Year Book, 6,985 establishments with a capital of $133,000,000, employing 52,000 men on wages, paying $14,000,000 in wages every year, using material to the amount of $175,000,000, and with an output of $245,000,000.

These are high sounding words. The figures sound big, but analyse them, and they are perfectly hollow. The reason my hon. friend says he cannot think of having free food is because if we were to attempt it we would affect the wages of 52,000 men who earn something like $14,000,000. How much is that for each one of these 52,000 men? What does it represent? It would mean for each $270 a year or $5.20 a week. That is the standard which my hon. friend says must be kept up in the interest of the operatives of the country. Is my hon. friend serious? Here are his own words, the statement and the figures which he gave—$14,000,000 divided among 52,000, operatives and it means $270 a year for each one of these operatives upon which to bring up his family in comfort and respectability.
