What becomes of the theory of my hon. friend? Delusion! Oh, delusion it is. The theory that taxation increases wages is not justified, at least for the kind of products to which my hon. friend refers. Are we to be told that we are going to continue to pay two and three prices for food in order to have such wages as $270 a year? This is the condition to which my hon. friend has reference. It has been written that truth and justice will in the end prevail. Truth and justice have already come. When the prophet Balaam was called upon to curse the people he met in his path the angel of the Lord, and in spite of himself he had to bless instead of curse. My hon. friend met in his path the angel of truth, and from his own words he blessed where he wanted to curse, and he cursed where he wanted to bless.

We have in this country a condition of things that is a cause of anxiety to every wage-earner and to every mother of a family. But we have been told that this thing is to be preserved intact because if we touched it we would affect the wages of the operatives of Canada. Many people believed, and I am sure that hon. members on the other side of the House believed, that working men were paid a high wage, that they were getting $600, or $700 or $800 a year, but they are only getting $270 a year, and you have it from the mouth of the Minister of Finance.

In the face of such a condition, these figures teach a lesson and that lesson is that there is a great deal of fallacy in the theory which has long been prevalent, that taxation means high wages. These figures show clearly that it does not, and it is time—high time—that we should revise the tariff with a view of reducing the cost of living and relieving the wage-earners, and the mothers who have to bring up families upon this meagre income, from the incubus which has been upon them night and day, and which is a disgrace to the fair name of Canada.

We on this side of the House are not revolutionists; we are reformers, but we tell hon. gentlemen opposite that the tariff exists for the people and not the people for the tariff. The tariff is not immutable

like the laws of the Medes and Persians. The tariff has to be readjusted from time to time to bring it into harmony with changed conditions. It has to be readjusted periodically, because after the lapse of a certain period we know that changes in conditions have taken place and the tariff has to be readjusted in order to correct errors and to remove evil where evil exists.

But, I may be told that the tariff is of my own creation. The tariff was of our own creation; it suited the year 1897, but eighteen years have passed since and the time has come when we must have a revision in order to correct errors and to meet changed conditions. We were told the other day by the Minister of Finance that he was ready for and invited the challenge. We on this side of the House accept the challenge upon this one question, and, animated with the view that the time has come for a new revision of the tariff, I beg to call the attention of the House to this proposition, which I move:

That this House is of opinion that in view of the prevailing economic conditions of the country it is advisable to place wheat, wheat products, and agricultural implements on the free list; and that without doing injustice to any class, steps should be taken to alleviate the high cost of living by considerate removal of taxation.

Hon. GEORGE E. FOSTER (Minister of Trade and Commerce): Mr. Speaker, at this particular period of the debate, when the ground has been very well gone over and everything winnowed out, it is not to be wondered at if my right hon. friend (Sir Wilfrid Laurier), who has just spoken, or that I, who am to follow him, should find it very difficult indeed to get enough material upon which to base a speech.

I do not know that I could in any more humane way let down my right hon. friend on the words which have just been uttered by him, and he will probably be in a position to return the compliment to me when I have made my few remarks. Two courses are open to me; one, make a review of the situation, the other to devote my attention to the remarks made by the preceding speaker and make as fair an answer as I can to him. Should I take the latter course, I am quite conscious, if I do it properly and do it tersely, that it will not be necessary for me to take up much of the time of the House; should I take the other, I am afraid I will have to trespass upon the patience of both sides of the House, and be open to the imputation of having left the remarks of my right hon. friend unanswered. Therefore, if the House will allow me, I will say a few words with reference to the remarks of my right hon. friend.

The motion moved by the right hon. gentleman is not quite so inclusive as many people in this country had been led to believe it would be. I remember reading a speech made by my right hon. friend in the city of Hamilton in which he took very much broader grounds than he takes to-day; grounds in which he covered the necessities of the occasion as he saw them, in far more vigorous English than he has used here to-day. What has taken place which has reduced the broad, wide platform of my right hon. friend enunciated as the foreword and motto from this time on of the party that he leads? What has necessitated the paring down of that wider ground to the far narrower limits in which he has confined it to-day? I think we, who have been observers of what has been taking place, quite well understand some of the reasons why the motion of my right hon. friend is so inadequate to his lofty and wide professions. Perhaps my right hon. friend knows more about these reasons than I do; but I am inclined to think that none of us will be far away from a proper conclusion, if we arrive at a solution of this little problem somewhat in this way, that my right hon. friend leads a heterogeneous army made up of many small battalions, each battalion being almost limited to the leader of the same, he being both the leader and the battalion itself. My right hon. friend has had difficulties facing him for the last three weeks, if not longer, and he has tried to cut the Gordian knot by putting on the table of the House a resolution in which he and his party—after all they have said, after all their declamations, after all their professions, after all their vehement assertions as to the cost of food products and as to the necessity for giving the homes of this country something cheaper in the way of food—stand for free wheat and free agricultural implements, but not for free food. That is not as broad a gage of battle as the Minister of Finance invited him to throw down. We certainly have the advantage on this side of being broader gauged in that respect and it is no doubt a disappointment to the Minister of Finance, as it is to all of us, that the field of battle has been brought down from a high and broad series of plains and hills, where you could have deployed in splendid style and carried on the battle in

many directions, to a small restricted field, of two or three very small things in so far as they affect the dining table of the people of this country. My right hon. friend felt insulted that the Minister of Finance had only taken five per cent off agricultural implements; at least he said so and looked as if he were insulted, and perhaps he was. All I have to say to him in answer to that is, that he knows what we on this side felt when on one particular occasion he brought down on agricultural implements a reduction of only two and a half per cent. He has been paid back in his own coin, but we give him a more liberal measure than he meted out to us.

Agricultural production, he declares, is on the decline; that it is not proving itself equal to the demand; that in the East as well as in the West it is, if not a vanishing, certainly a receding industry. That may very well be so. It is true that the worst and most inveterate diseases are longer in coming to the surface than are the less inveterate diseases, and the virus, the microbes, which were implanted and deeply implanted during the fifteen years of the administration of my right hon. friend, must be given a fairly generous time to develop themselves in the body politic and show the results. If these are the results, then they are the sowing not of the last two and a half years, but of fifteen years, coming now to the fruition of evil results upon the basic industry of this country. My right hon. friend draws a long bow when he speaks of the decadence of agriculture in this country, as he himself knows. It is rhetoric that he has been using, not fact, and there is not a farmer from Cape Breton to British Columbia that will agree with him in his statement that agriculture is decadent in this country. There never were better agricultural methods employed in the Dominion of Canada than in this year 1914; and the progress has been continuous, though slow in some years and in some respects; but the fact remains, I believe, absolutely true, that the methods of agriculture and the results of agricultural methods are far better to-day than they have been at any previous time in the history of Canada, and are constantly improving.

All Canadian governments, for the last thirty years, provincial as well as Dominion, have felt it a duty incumbent upon them to instil methods of better culture and by experiment, by expenditure, by representation and distribution of these experimental results to improve the grade and the power of agricultural production. They have succeeded. My right hon. friend may show that there are fewer cows in a certain agricultural district to-day than ten years ago, which is a thing not very new in the history of all progressive countries. But he might also have learned that the cow of to-day is often a much more useful and productive animal than the cow of ten or fifteen years ago. He might have learned that in the way of grain raising and in agriculture of every kind, production has been largely, in some cases very largely, increased, and that the same quantity of land and the same number of kine are not necessary for even a greater production than we had ten or fifteen years ago. I wish particularly to call the attention of the House and of the country to the statement made by the right hon. leader of the party which is to rule after the Liberal-Conservatives have grown tired of their job—a statement made in the face of the knowledge of the whole country—that agriculture is to-day a decadent industry in Canada.

He declared that our agricultural production is not equal to the demand. There is another side to that question. Is not demand for agricultural product very greatly increased in this country as compared with what it was ten years ago? Is there not a much larger consuming population? If we went into the figures accurately, taking our exports, which have decreased in some lines, and, taking our home consumption, which is very largely increased, we might come to the conclusion—and I think we should come to the conclusion—that to-day the agricultural products of this country are greater than ever before; and that if there is less export in certain lines there is a far larger home consumption. I just call to my recollection now when making that statement that this was the argument used by hon. gentlemen opposite when they were on this side of the House, and we, then in opposition, called attention to the fact that in certain lines our export of agricultural products was not increasing as we thought it should have done.

I want to come right down in one single word to the argument of my right hon. friend, when he says that the land is being depopulated and that what we must do is to get the people back on the land. I wish to call his attention to the heroic remedy which he proposed. What was that remedy? In Hamilton it was free food. Why was it

free food, in Hamilton? Because the cost of living was so great that he felt that as leader of a party he had to point the way out to a reduction in the cost of food. In the maturity of his powers, and after his own careful consideration of the question he came to the conclusion that there was but one way to do it, and that was to make food products free. That was his bold, his logical, his real panacea when he spoke in Hamilton. He would get the farmers back on the land and keep them there, and he would cause new settlers to go upon the land by bringing in measures which would reduce the price of the articles that the farmer has to sell. My right hon. friend is not so courageous to-day as he was at Hamilton. Why? Is the principle any less clear than it was in Hamilton four months ago? Are prices of food any lower to-day than they were in Hamilton four months ago? Is the condition of the householder and housekeeper any different from what it was then? These were the considerations that weighed with my right hon. friend then; and when he had sifted out the matter he came to the conclusion that there must be relief, that relief was possible in one way and one way only—give them cheaper food. And this was to be done by taking the tariff off food products and letting the people have their food free. Where is he to-day? And why is he on more backward ground to-day than he was three months ago? He has no answer but the opportunist's answer—the men behind him and the men from whom he expected support have told him: 'Wrong again! Right about face!' and he has made the right about face. There is the courageous, heroic leader of the party of reform. Convinced by logic and the experience of thirty years as to what he ought to do, he yet snuffs himself out and drags along at the tail of a small drove which is talking free wheat, free agricultural implements and 'considerate removal of taxation.' He tells the people: If you cannot get bacon at any less price—and he has described how it is five cents a pound more to the artisan and consumer here than in Great Britain—if you cannot get bacon for less because I am not as brave as I should have been, take comfort—you can have bran! If you must pay eighteen cents to twenty-five cents for your beefsteak, pay it; or, if you do not feel able to pay it—eat bran! Free wheat and wheat products, says the right hon. gentleman. Flour changes less in price than any staple article of food in the country, and so he is in favour of the great blessing and relief of free wheat. Look at the ordinary man's breakfast table; how much of it is composed of wheat and wheat products and how much of other things? What benefit do you give the householder who, because of my right hon. friend's eloquent advocacy of some relief in this respect feels still more the great burden that he has to bear; what relief do you give him?

He can have, if you have the power to give it, a free market for his wheat and wheat products; he can get his hoe or his harrow or his reaping machine, which he does not use, at a little less, because the duty would be taken off. But in respect of what he has to eat; in respect of what goes into his stomach three times a day, you were not brave enough to follow out your professions and your convictions.

My right hon. friend turns to us and says: What are you there for as a Government; something has to be done, and you are to do it. Well, he has given us about the measure of what things we ought to do. We would rather that he himself would carry out that policy as a remedy for the whole situation; it is not one that appeals to this Government. He says that, historically speaking, the new lands are for wheat and the older lands for other agricultural products. Historically, that is true, but it is a thing which follows naturally. I tell my hon. friend right now that the time is coming in the West, as it came earlier in the East, when wheat will no longer be—and, for the best interest of the country, ought no longer to be—the only great product of our new western land. If history teaches the lesson which my right hon. friend has stated with reference to the cycles of growth and the successions of them, history is repeating itself to-day in our great West. We are told that we are very fond of giving advice on this side of the House and that whenever the western situation is brought up all we do is give advice. The hon. member for Humboldt (Mr. Neely) is rather nettled at the idea that gentlemen on this side of the House should express any sympathy for or any good will towards the western farmer. I do not think that is a right and Christian spirit. There are few hon. gentlemen on this side of the House and very few people in eastern Canada who have not friends, relations or neighbours in the West. Every man in the East has a lively sympathy for and the best of good-will towards his friends in the West who are carrying out the earlier pioneer movements. If we mention the people of the West, it is

not to lecture them. If hon. gentlemen on this side give their views, that is what men in this House are here for. The business of public men is to get the best information that they can and to give to the public the best information that they can after they get it; to interchange their views, one with another, for the common benefit and for the common interest. Our advice to the western farmer to go into mixed farming, which has been scouted by hon. gentlemen opposite, is the very thing which is taking hold of the West to-day from one end to the other. In all organizations in the West; in all bankers' meetings; in the meetings of any society; in all the agricultural associations and agricultural papers, the burden of the song, the advice and the counsel to-day is: We must change our methods and get into mixed farming. Why should we be objurgated because we express the same opinion here? What we are trying to do and what we ought to try to do in this House is to give the best information that we can and to interchange our views for the good of the country. I have no hesitation in saying that in this time of readjustment—for it is a time of readjustment all through the country—one of the biggest things in readjustment is that which is taking place in our great West to-day, and that readjustment is on the line of less exclusive wheat production for the sake of the sale of the wheat, and for more variety of industry and production in the West.

What my right hon. friend and his followers on the other side of the House are agreed upon is the assertion that this is a period of depression in Canada. There is no lack of unanimity among them in that respect. Some of them are so set upon having this little idea all to themselves that they resent any attempt on our part to show that there is any similar depression in some other country. This they vigorously deny; the hon. member for Assiniboia (Mr. Turriff) was very wrathy in the thought that any one should suggest that any other country should have a bit of this depression at this particular time. He wants it all for Canada, and especially he wants it all for the West. We will agree, for the sake of peace and quietness, that this is a time of depression as compared with the buoyancy of the past in the Dominion of Canada. But I take leave to point out what I think has already been pointed out: That there are many features of this so-called depression in Canada that are worth keeping in mind. What are they? That after a period of unexampled expansion, extending over a long period of years, with very little break, all the indicia of progress and virility and power are pretty nearly as striking to-day as they were in 1912 or 1913. Your revenue, which is an index of the business that is done, is $163,000,000 for the year which has just ended; only $6,000,000 less than it was in 1912. Turn again to another indication—the trade of the country. After an unexampled series of brilliant and progressive trade years, 1913 shows you a trade which is greater than 1912 by $200,000,000, and which is well up to, if not in advance of, the trade of 1912-13. But you go still further than that; you go down to what are the foundations upon which the nation rests—its great basic productive industries—and what do you find? I believe that when the figures for 1913-14, marked by the depression so dearly loved and so expatiated upon by our friends opposite, are totalled up you will find that in our basic industries we have reached the largest output in the history of the country. You will find that our mines will show as compared with 1912 for 1914 some $14,000,000 worth of extra output, and you will find that our manufactures will show $20,000,000 extra output. You will find that our fisheries will show $4,000,000; that our forests will show $3,000,000; that our animal products will show $6,000,000; our agricultural products $101,000,000 and, as I said, our manufactured products, $20,000,000. Can you go back to any other period of the history of Canada or of any other country and show a silver lining like that to the depression which was upon the surface of the cloud? It cannot be found in Canada, it cannot be found anywhere else. That is in all the depressions you talk about in the very year in which you talk about it, all these great basic industries are producing by millions more than they did in any other year in the history of our Canadian nation. The depression is not a sign of inherent weakness; it is more like the case of a man of super-abundant energy who, for a time, has been putting forth superhuman exertions and is tired and his nerve force and his bodily vigour are somewhat dulled for the time being. All you need to do is to give him a rest and put him on a fair regime for a little while; the man's inherent vigour and vitality will break forth in still greater effort and be crowned with still greater results. A depression like that I am not going to lament over, and I present that

kind of a depression to my hon. friends for their sustenance and their comfort. It is perhaps not just the kind they would like, but it is the only one that the country can give them at the present time, and they will have to be content with it.

My right hon. friend thought he made a great point in proving that agriculture was on the decline by the declaration that there had been a diminution in homestead entries in the West during the last few years. But my right hon. friend, if he had gone back a little earlier than that, would have found that these things are apt to occur; they are not inherent signs of decadence or of a downward tendency, they are a temporary thing, which, in the very mutations of social and national progress, always vary the landscape, sometimes throwing a shade of darkness, at other times breaking out into splendid light. From 1906 to 1908 in his time, homestead entries went down by 11,000. In the last period that he has quoted they went down by about 11,000. As a matter of fact about 600 less than in the preceding period to which I have alluded. Well it is worth while calling it to mind that I did not hear my right hon. friend in 1908 talking about the decadence of agriculture and proving it by the fact that homestead entries in those two years had gone down by about 11,000.

I want to ask my right hon. friend a question. As leader of the Opposition, putting forth the facts upon which he based his case, has he been certain that the facts are correct? I allude to just one point. He was talking about the millers and the flour industry, and made the statement that flour sold in Canada for $5.50 per barrel, and was selling in London and Liverpool for $4.70. Where does my right hon. friend get these statistics and that information? We had a statement made by the hon. member for South Cape Breton the other day which conveyed a double inaccuracy. He declared, in order to make a point against the millers and to curry favour with the consumers, that flour was sold for $5.10 in Montreal, and that down in Halifax you had to pay $6.50 for it. That is a strange statement when you come to think of it. The freight from Montreal to Halifax is exactly 25 cents a barrel; 25 cents added to $5.10 would make $5.35. I never believed that the Halifax people were so bereft of business acumen and ability as to pay $6.50 there for flour which they could have got in Montreal for $5.10 and carted down by the Intercolonial for 25 cents. He made the statement also that flour which sold for $5.10 in Montreal was sold in London for $4.18. My right hon. friend, wherever he got his information, was sadly out. He was not? Well, I am not going to quarrel about the adjective, but I am bound to maintain that he was far out. I hold here the actual statistics and the prices of flour in the different months. Canada spring patents in January are quoted in Liverpool at from $6.33 to $6.81. All through the month of January they ran about those even quotations. In February the same quotations were followed pretty closely, $6.33 to $6.81, and the other patents in varying degrees.

Mr. A. K. MACLEAN: Per barrel?

Mr. FOSTER: Per barrel.

Mr. A. K. MACLEAN: Is flour sold in barrels in England?

Mr. FOSTER: It is sold in bags, and there are so many bags to the barrel, and the price here is the barrel price.

Mr. A. K. MACLEAN: The hon. gentleman may be right, but he should not be too sure about it.

Mr. FOSTER: I think I am so sure that I cannot help but be right. The Liverpool price is quoted on the basis of a sack containing 280 lbs.

Mr. A. K. MACLEAN: How many pounds in a sack?

Mr. FOSTER: So long as my hon. friend and myself are going to have a little tilt about sacks, I am going to tell him that there are several kinds of sacks.

Mr. A. K. MACLEAN: You would make a good sheep farmer.

Mr. FOSTER: I would like to ask my hon. friend if he can answer a conundrum. Why are there more black sheep in Nova Scotia than white ones?

Mr. A. K. MACLEAN: The hon. gentleman is so efficient in his knowledge of sacks that I thought he would also be proficient in reference to sheep.

Mr. FOSTER: If my hon. friend wants to get to the facts, the price quotation is based on 280 lbs., which may be all contained in one sack. There are sacks that have 98 lbs., and sacks that run to 280 lbs., and sacks that contain 112 lbs. They run so many stone to the sack. As I stated before, the price is reduced to the barrel basis of 280 lbs.

Sir WILFRID LAURIER: Is it higher in England than in Canada?

Mr. FOSTER: Yes, for that kind.

Mr. A. K. MACLEAN: I do not think the figures from which the hon. gentleman is quoting reduced the cost from sacks to weight in barrels.

Mr. FOSTER: If they are not reduced from the sack to the barrel, then they are reduced to the sack price for 280 pounds. You can figure out the difference and you will still find that I am on the right side of the equation, and that the wrong figures have not been given.

Mr. A. K. MACLEAN: Withdraw the statement about prices, and go ahead.

Mr. FOSTER: I will tell you what I will do: I will look at it again.

Sir WILFRID LAURIER: The hon. minister challenges my figures. I do not pretend to be an expert myself, but in some correspondence in the newspaper the other day I saw the statement that the price of flour in England is lower than in Canada. I asked a friend to look into the matter—he is a very careful man, and I rely on his authority—and this is the information he sent me. He gives the price of flour in Toronto, Winnipeg, Montreal and London, England, for the month of April in the years 1912, 1913 and 1914. In 1912, the prices were: Toronto, $5.30; Winnipeg, $5.70; Montreal, $5.50; London, $4.95. In 1913, Toronto, $5.10; Winnipeg, $5.70; Montreal, $5.20; London, $5.04. In 1914, Toronto, $5.30; Winnipeg, $5; Montreal, $5.40, and London, $4.70.

Mr. BORDEN: Was it the same quality of flour in all cases?

Sir WILFRID LAURIER: Yes, so I understand. Moreover, I think it cannot be denied that bread and flour are cheaper in England than in Canada.

Mr. BORDEN: I would like to say to my right hon. friend that I was present when a delegation of millers from different parts of the country presented their views to the Government, and I put that very question to them. I said that it had been stated in the public press that flour was sold abroad at a lower price than in Canada, and they assured me that that was not the case. I have no personal knowledge of the facts, but they said the flour sold abroad at lower prices was of a quality that could not be sold in Canada.

Sir WILFRID LAURIER: I do not know personally, but I got the information from a man on whom I can rely.

Mr. CARVELL: Change the figures to $4.40 a barrel and you will be all right.

Mr. FOSTER: These little difficulties occur because the question has not been carefully studied beforehand. This was put in my hands just before I came in. I had the impression that the prices I have read were reduced to the barrel basis, but looking at it again I find that they are reduced to the 280 pound sack basis; so that you would have to take that proportion off from the $6.33 to the $6.81 to get at the barrel price. That would bring it to $4.80.

Mr. CARVELL: $4.40.

Mr. FOSTER: The question remains as to whether the prices which my right hon. friend has read are for the same grades of flour or not. That is the point. I have the best information I can get. I have here a list of the different grades of flour which I propose to give to the House: first of all, there is the top patent; then the second patent or bakers' flour; then first clear and second clear. The top patent is the highest grade of flour, and of that grade very little, if any, is exported to the old country. I think I am correct in my facts up to that. The second patent is a flour which is used by bakers, and a very small proportion of that grade is exported to the old country. In the month of January, for instance, only about 36 per cent of the total product of that kind of flour was exported. The kind of flour exported to Great Britain is the first clear. That is a strong dark flour which is almost unsaleable in Canada. Our householders use only top patent flour, and the bakers use second patent, so that when you say flour costs the householder in Toronto $5.10 or $5.18 and sells at Liverpool or London at $4.18 or $4.20, you have got to be certain that you have your grades of flour lined up properly, because in all probability you are comparing first clear in the London or Liverpool market with top or second patent in the Canadian market.

The hon. member for South Cape Breton (Mr. Carroll) said that Britain took only the best grade of flour, and so he came to the conclusion that the flour quoted in London at $4.18 compared with the flour sold in Montreal or Toronto at $5.10 or $5.18.

Mr. CARROLL: No, I did not say that. I said the very best flour was used for export, and that the statement that only the worst grades of flour were exported to England was incorrect. I gave statements to show that the very same kind of flour selling for $5.50 in Montreal costs only $4.18 in Liverpool.

Mr. FOSTER: My hon. friend will find that he is wrong in that. I think he was challenged for his authority, and he stated that he read from a statement in the Montreal Standard by a correspondent who did not attach his name. I am quite certain that if he will go to the proper sources of information he will find he is mistaken in saying that the best grades of flour are exported to the old country. The opposite is the fact; it is the low grade flour that is exported to the old country. Of the first clear grade, about 90 per cent is exported to the old country, and but 10 per cent used in this country. Of the second clear, 90 per cent goes to the old country, mostly for feed purposes, and but a small proportion is used in this country, also for feed purposes. We must distinguish the flour quoted at Montreal, Toronto, Halifax and St. John, which is always either top patent or second patent if it is for bakers' use, or blended if it is a family flour, from the flour exported to the old country, which is of a quality that our people will not use.

5 p.m.

Mr. A. K. MACLEAN: Is not our export flour made from a blended wheat?

Mr. FOSTER: I am informed that blended flours are not exported from this country to any appreciable extent at the present time.

Mr. A. K. MACLEAN: I understand that almost nothing else is exported at the present time.

Mr. FOSTER: My hon. friend will find that his information is not correct. After this digression on the technical point of the price of flours, I want to get back to my remarks in reference to the speech of my right hon. friend.

In talking about the influences which tend to attract people to the farms, the diversion from which was so much deplored by my right hon. friend, there are several which are working in the direction of attractions to the farm and the land. Amongst these influences none is greater than the question of good roads. In all the foremost agricultural countries of the world, where they are striving to keep people on the farm and to attract them to the farm, the subject of good roads is receiving the greatest attention and in this connection large amounts of money are being expended. It is in that direction that much good is being done in the Dominion of Canada as well. But I would remind my right hon. friend that he has not been forward in helping this present Government in its endeavour to have good roads constructed in the different provinces of the Dominion. I believe that a forward policy on the question of good roads, carried out fully and carefully in the country, will do more than almost anything else to keep people upon the farms, to attract people to the farms and to make farming a more delightful and companionable occupation than it is at the present time.

In connection with that, good roads also includes electric railways and tramways and everything of that kind that can contribute to the quick carriage both of information and the products of the field from where they are produced to the centres of population where they are marketed. It is along that line that this Government has taken a forward step. My right hon. friend's party have not assisted this Government in aiding and helping the farmers in that direction in the way in which they should have done.

My right hon. friend had his play with my hon. friend the Minister of Finance, recalling the time some years ago when he and the Minister of Finance were paddling in the same canoe and he rather thinks it is to the disadvantage of the minister that he got out of that canoe. There are two remarks which I have to make in respect to that. When the Minister of Finance was paddling in the canoe with my right hon. friend the leader of the Opposition, honest now, was not the leader of the Opposition telling the Minister of Finance—not Minister of Finance at that time: Do not have any qualms of conscience; I am talking free trade where I want to get votes, but—whisper it in confidence—go paddling along in that same old canoe with me and I will take care of the manufacturers. And to use a word of my right hon. friend, there is a synchronization in time, as to when the Minister of Finance left that canoe, when he began to get very suspicious as to whether or not his right hon. friend was not playing double with him and when he thought discretion was the better part of valour and that the canoe should be

left. I do not think I shall follow my right hon. friend any farther along the line of his remarks but shall take up some new subjects in the time that remains to me along more general lines and I will possibly touch on some things that my right hon. friend has said.

My right hon. friend is looking for a policy —I sympathize with him very much in the difficulties which surround him—and is trying to find a policy that is practical and that will carry with it some few shreds of consistency. My right hon. friend's position is a hard one. He was opposed to the National Policy from 1878 to 1896, opposed to it tooth and nail and with every resort in his power. He came into power in 1896 and, despite all his professions of hostility to protection and its methods, he espoused the protective principle, embalmed it in his tariff, kept it there against assaults from within his own ranks and assaults from without, and up to the time of the dissolution of Parliament he maintained that principle of avowed protection in his tariff. In 1911 he took up the idea of the reciprocity pact with the United States Government, and he ventured his fortunes upon that. He went to the country upon that issue. Never in the history of Canada was an issue more clearly put before the electorate than was that issue in 1911. Never was there a more intelligent discussion of a public question on the hustings than in August and September of that year. Never was there a more emphatic reply to the issue which was raised than the reply given by the electorate in September, 1911. My right hon. friend remembers that defeat and finds it very difficult to go back to the reciprocity issue of 1911. He is disinclined to go back to the protective policy which he carried into effect from 1896 to 1911. Why? Not perhaps because he does not think that it embodies the right principle but because it does not differentiate him sufficiently from the party in power and therefore it is of no effect in the country for him to espouse that principle. It is a political policy that he is after and not a policy for the country.

If it were a policy for the country it would be one of two; either the policy that he carried out for fifteen years, that he gave the seal of his approval to and under which he declares this country progressed with immense strides, or it would be a repetition and recall of the policy of reciprocity as set forth by the party in 1911. But my right hon. friend finds this last impossible in face of the great revolt of the electors. He finds the first impossible because it gives him no line of cleavage with the party in power upon the great issue of the country—the fiscal issue. Therefore, he is bound to look for a political and party tariff question in order to make an issue before the electors. So he catches on to this cry, the most patent and the easiest.

Who does not like to have beefsteak, fresh and juicy, put on his table at twelve cents a pound rather than to have to pay eighteen cents a pound for it? There is a wide constituency in this country who would rather pay five cents less for a dozen eggs than five cents more. There are an immense number of people scattered from Vancouver island to Cape Breton who would like, if they could have it, to have their bacon for fifteen cents a pound instead of paying nineteen cents a pound for it. My right hon. friend, in his cogitations in his bed at night and in his walks by day, says: There is the biggest constituency to be tapped in this country. You just go to them with the propaganda that, if they put you into power, you will give them their eggs for five cents less a dozen, their beef for five cents less a pound, and all their food products at a reduction; and if you do not capture all of them, because there are a good many sensible people in this country, you will stand to capture quite a number of the unthinking crowd. We will make that No. 1 of our new policy. Then he says: There is the farming class, a large class, the dominant class, the basic class in this country. Every farmer would rather have free agricultural implements than to have to pay even a small tax upon them. We may not get all the farmers by making an appeal for free agricultural implements, but we may get a certain number of them and shall have a wide constituency to which to appeal, and a splendid electioneering ground. We will make that No. 2 of our new party policy. Again he looks upon the West and says: The Grain Growers' Company, the Agricultural Association, the man who follows the plough and who operates the reaper, all would like to get their agricultural implements cheaper by the amount of the duty, if it could be done. We shall have a large operating ground there if we adopt the plank of free agricultural implements. My right hon. friend, if I am not misrepresenting him, came to this House and met his party with the firm view that free food, free agricultural implements, and free wheat should be the slogan with which they would next appeal to the electorate. My right hon. friend has had to omit the largest and widest part of this propaganda; but am I wrong or

right in saying that, what my right hon. friend has pitched upon, is not a policy which he has based upon the needs of the country and the best interest of the nation at large, but the particular policy upon which he thought, under all the circumstances, he could combine his following as an appeal for party advantage and for party plans, if possible. That, I think, is a fair version of this matter. I doubt if my right hon. friend will succeed; in fact, I have no faith that he will succeed. Why? Because it is not statesmanlike ground, because it is not national ground; it is an appeal to section and class, and no appeal to section and class will be ultimately successful in this country, and no appeal to section and class is a national appeal in this country or will square itself with the national feeling and aims of this country. My right hon. friend says: If it is to be a choice between two, I will take the farmer and give him his implements free rather than take the manufacturing industry concerned with the making of agricultural implements in this country, and give it even a small protection. I will take my stand between those two. He says the same with reference to the wheat growers and the wheat millers, and he thereby differentiates between classes in the basing of a national fiscal policy which, if it has any solid basis, must have one of principle and not of expediency. By what methods of reasoning can he justify the basing of an economic fiscal policy upon simply the demands of one or another class without taking into consideration the whole nation, the whole pact of industry, the whole pact of production? My hon. friend from Westmorland (Mr. Emmerson) uttered a truth in his free trade speech the other night when he said, 'You cannot favour one and discriminate against another in this matter of tariff policy.' So my hon. friend made himself an out-and-out free trader. There he is consistent, if he has the courage to carry it out in his political work. But it is dangerous ground and weak ground to go upon to pick out two or three classes for special favours in tariff matters and base your fiscal policy for the whole country upon ground of that kind. Why? Because in the first place, it is neither fair nor just, and, in the second place, it does not tend to security. A fiscal platform should be based upon something which has principle, so that the great mass of the people may know upon what they can depend. What dependence is there if you base a tariff upon picking out this and that and the other for special tariff favours? Every other industry, going along on a certain basis, does not know at what moment there may be another picking out, another alignment for the same purpose which will interfere with their business. With such an alignment as that you produce a feeling of insecurity and a lack of stability in your tariff which will react upon the stability and development of the industries of this country.

In regard to free wheat, my right hon. friend uttered what almost every speaker on that side of the House has uttered, a statement something like this: The farmer asks free wheat; why not give the farmer what he asks? Will the members on both sides of the House just let that settle into their minds, and see where it leads us? The appeal is made that in a matter of fiscal legislation we must base ourselves upon this as a proposition: If any one interest asks a certain thing, then they know more about that thing than anybody else does; give them what they ask. Is that possible as a basis for fiscal legislation? Is it possible for Canada to proceed upon that basis? I say it is not; I say that the tariff of this country is inter-related, every industry almost with every other, and the very moment you admit the principle that, if one particular industry must have what it wants in the way of fiscal legislation because it wants it and has most to do with it, you will be on a basis as unstable as water and as liable to injustice as anything possibly can be, which will work for the downfall of any fiscal system based upon it. Let us see how far that goes. The farmer wants free wheat in the West. Why? Because it will be to his advantage in the way of price. His business will be better, he thinks, if he has free wheat. He therefore says: My interest lies in the direction of free wheat; give me that on the fiscal calendar and I will make more money. The miller comes in and says: I have to do with the grinding of wheat; I know this business and know it perfectly; my interest lies in giving me a certain fiscal line on my wheat. Why do you not listen to the miller as well as to the farmer? If you are going to single out one class and take the dictum of that class and base your legislation upon it, to be consistent you will have to do it with other classes as well. I believe the farmers of this country know that of all classes they are most interested in having a populous, prosperous and progressive country in which to conduct their operations. There is no industry more

tied to its habitat than is the farmer's industry. The broker is here to-day and there to-morrow; the small manufacturer, while, to a certain extent tied to a locality, yet finds it comparatively easy to change. But the farming community is settled upon its acres, thousands of miles away from a distant market, and its prosperity depends upon filling up the country with a population that consumes the farm products, it depends upon the establishment and maintenance of a good home market. Calculate the value of the products of agriculture in this Dominion, and substract the comparatively small amount of the exports, and you find that probably eighty per cent of what the farmers of this country produce is consumed within the bounds of the Dominion. So, the farmer is vitally interested in having the industries of the country at their highest level of efficiency and their widest range of distribution. And I do not think the farmer himself is oblivious to this; I take it to be true that from 1878 up to the present time the mass of the farming population has been absolutely in accord with the general protective policy of this country because it has brought to them a great and prosperous home market. Nor is the farmer averse to paying his proportion of the taxes involved.

I remember, not so many years ago, when the duty on agricultural implements was thirty-five per cent. That was reduced to twenty per cent under the Liberal Conservative regime. There was a reduction under the Liberal Government of two and a half per cent, and a further reduction was made by my hon. friend (Mr. White) a few days ago of five per cent. So, in coming down from thirty-five per cent to twelve and a half per cent—all but two and a half per cent of which reduction has been made by the Liberal Conservative party—if agricultural implements are to-day at the call of the farmers of a country whose policy is a policy of protection at no more than twelve and a half per cent, I believe the farmers do not object to paying that duty as their contribution to the revenues. For the farmers, as a class, have had very much done for them. Every Government, whether that of my right hon. friend or that of the party opposed to him, has had a favoured and favouring face towards the farmers. In the way of experimental farms and stations, in the way of education, in the way of experiments in seeds and everything else, hundreds of thousands and millions of money have been expended for the benefit of the agricultural, stock raising and dairying industries of this country. There is not one class that has had so much attention paid to them—and rightly so—as have the farmers of this country. And they quite understand that.

Now, I wish to say this in connection with free wheat: My right hon. friend thinks is is an easy thing to single out wheat and put it on the free list and not run up against difficulties. My mind does not run in that way. This question has its relation to a great many other industries. In the first place, let us follow the matter up to see who will get the benefit of the increase in price supposing there is such an increase. The argument of my right hon. friend is: Give free wheat so that the farmers of the West can get a number of cents per bushel more by having the United States market opened to him. But if you have a country that has a surplus of 140,000,000 or 150,000,000 bushels of wheat and you open up the market of a surplus country directly alongside of it having a surplus of 180,000,000 to 200,000,000, what happens in the rush for the fall market? What happened in the rush for the fall market when the United States market was not open but the Liverpool market, the distant market, was open? On account of the quick sale of the bulk of the crop in the Northwest the market price of the wheat went below the normal and stayed there. This occurred in the year when the best wheat that ever was raised, and the largest percentage of good wheat that ever was raised, was harvested in the northwest. But change your market to Minneapolis and St. Paul, where for three months wheat has been coming in in steady streams from the more southern parts of the United States, seek that market at a time when the Dakotas, north and south, and Wisconsin come in, and bring in your 150,000,000 or 200,000,000 bushels of wheat from Canada's Northwest and I ask you, will not that have the effect of reducing the price of wheat during the time of that rush? And it is during the time of that rush that the man who raises the grain is getting the grain out of his hands and delivering it over to the man who buys and speculates in grain. My opinion is that free wheat and the rush to the market from the Northwest into Minneapolis and St. Paul will depress the price of wheat during the time of the rush market and the farmer will get less for his wheat than he otherwise would. The man who will reap the benefit is the buyer, the storer, the speculator who buys it at its lowest, keeps it and sells it when it goes highest. So, you can-

not carry to every farmer of the West the pleasing thought that he is going to get an increased price for the wheat he has raised, because he cannot keep the wheat on his farm and regulate it to the uniform outflow that will give him any chance to keep the market from breaking. So, as I say, the boon will not be to the farmer who raises the wheat, but, if there is any advantage, it will go to the buyer, the speculator, the storer of wheat in the later of the many stages of the grain on its way to the final market.

But in considering the question of free wheat you have to have in mind other interests than those of the man who raises the wheat; you cannot give free wheat without disturbing other interests as well. You either believe or you do not believe that if free wheat were given, the bulk of the wheat in the West would go over to the American side; it would be of no benefit to open up the United States market unless it did go to the other side. The hon. member for Halifax (Mr. Maclean) is the greatest philosopher I have ever known. He first declared that if the wheat did not go to the United States, no harm would be done; he then declared that if it did go to the United States, no harm would be done, and he capped the whole thing by saying that it did not make any difference to him which way it went.

Mr. A. K. MACLEAN: No, no.

Mr. FOSTER: Then I will leave out the personal part of it and say that his assertion was that it did not particularly matter whether the wheat went one way or the other. I submit that that is not a statesmanlike characterization of the position. Is my hon. friend absolutely certain that the farmer who raises the grain will get the advantage of a single additional cent in the price of his product if free wheat is given?

Mr. A. K. MACLEAN: I was arguing not about the price, but about a market for the increasing production; that is the most interesting side of the question.

Mr. FOSTER: I will come to that later. The question as to whether or not under free wheat the farmer who raises the wheat will get higher prices is an important one. Is my hon. friend certain that he will? To a large extent it is a matter of opinion, a matter of reasoning. Neither the hon. member for Halifax nor my right hon. friend is able to say that the farmer will actually get a better price for his wheat. It is arguable on the other side that under the circumstances which I have mentioned he will get a lower price for his wheat.

Mr. A. K. MACLEAN: My hon. friend will not deny that the British market will still be open to the Canadian wheat exporter if he does not get a better price.

Mr. FOSTER: If the wheat goes to the United States it is certain that a great many important interests in our country will be affected—interests for the protection and guidance of which we have spent immense sums of money. My right hon. friend, when he initiated his transcontinental railway policy, declared that that policy was justified, no matter what the expense, because what we wanted was to get an outlet for the products of the West. Later, in Montreal, he declared that he would never rest until every bushel of wheat raised in the West went out via the port of Montreal. Hundreds of millions of dollars have been spent on great transport lines in the West in order to carry our wheat over our own lines to our own ports, en route to the European markets, in whatever part of the continent that may be. If free wheat results in the grain being carried from the West down to Minneapolis, St. Paul and Duluth, to that extent it takes away from the freightage upon our roads, upon which we have spent millions of money in order to carry out the products of our country. That is incidental, but such conditions would militate against the transportation interests of our country in so far as our great transcontinental lines are concerned. The adoption of free wheat would also run up against every other interest which is concerned in the handling and transporting of wheat—elevators, shipping marine, sea ports and Canadian ocean marine.

My right hon. friend does not feel absolutely certain, nor can he, that the Canadian miller, if free wheat is given and the wheat goes to the United States, will be able to carry on and extend his milling operations—for their extension is quite as important as their being successfully carried on. He is not able to say that the Canadian miller will be able to do this, but he thinks that he ought to. He believes that he will, but very careful thought must be given to the matter before you introduce such a change in your fiscal policy as will place so great an industry as the milling industry of this country in a position of peril.

A thought which has occurred to me just now is, I believe, one that is worthy of consideration. What is the whole trend of our commercial advancement and the upbuilding of our nationality? It is not the old-time idea of taking out the raw material which is of less value and disposing of it in a foreign market. The whole trend of our policy from 1878 up to the present time has been that we should throw all possible influences around what will conduce to the greatest amount of handling of the raw products that we raise in our own country. In so far as you encourage the idea that the raw wheat should be run off at a nearby market at an advantage on present prices, to that extent you strengthen the policy of taking one of the finest and most prolific of the products of this country out of Canada in its raw state and of taking with it the by-products which ought to find their place in our own country. Is it not a fact that if the milling power of the great West could be used to the full extent of its present capacity, it would almost double the present market which is given to western wheat by the millers? If the milling industry is an industry which takes the raw product, divides it, separates it into portions and gives it for food and feed and for various other additions and helps to the other productions of the country, is it not the wisest thing for us to have all the wheat we can, milled in our own country and use and export the product rather than run it out of the country as raw material?

Mr. A. K. MACLEAN: Would the hon. gentleman tell us where Canada would sell this additional product of the mill?

Mr. FOSTER: I will come to that later. So far as mixed farming in the old and in the new provinces is concerned, I do not know whether I am right or not, but I can see some features in the situation of the last two years in the western and eastern provinces which, to my mind, are due to certain causes. This depression has been less felt in the eastern than in the western provinces. Why? Because in the eastern provinces the home market has been more dense and more valuable; because in the eastern market there has been less speculation and consequently less waste and extravagance. You do not hear very much talk about depression from the farmers of the province of Ontario. Why? Because their products are varied; the salvation of the eastern provinces in these hard times has been in the varied nature of their products.

If there is not a high value for their barley, they use it in the production of stock and make up for it in that way.

They have various products which they can sell in the home market; and it is that variety of production and the greater density of the home market, with the comparative absence of speculation, that differentiates the situation in the East from the situation in the West. How are you going to get back to a proper readjustment in the West? You will get back to it in proportion as you introduce and strengthen those conditions; and not by legislation to any very great extent, but by a reformation and a readjustment amongst the people themselves, you will cure the causes that have led to the present condition of things. Now, Sir, if it be true that the salvation of the West must be dependent on its going more and more into mixed farming, if you obliterate milling or weaken the milling industry of the Northwest, how do you act upon the greatest factor of mixed farming in the Northwest, and the feed that is absolutely necessary for raising the varied animal products that you should have in the West? So it seems to me that a policy which would militate in favour of drawing the raw material out of the country rather than manufacturing it to the greatest possible extent in the country itself, would not be in the best interests of the Northwest itself.

Mr. A. K. MACLEAN: If the United States put wheat on the free list themselves we would be in the same danger then?

Mr. FOSTER: Exactly, and if a man burns down my house I am not fool enough to say I wish I had burned that down myself so that he could not do it. I look to our great West, we all look to it, to be the great centre of our country for many, many years to come. Everything which tends to make easier the growth and export of grain for itself, as an exclusive industry, on the farm lands of the West, tends to impoverish and rob the virtue from the soil which is to compete in after years and after ages with the countries of the world in the products which come from that soil. Therefore I think that it looks very much like a nature cure which has taken place. There has been a rush to the sole raising of wheat. There is now a marked diversion towards mixed farming. The circumstances of the last year and of to-day will give an impetus to the mixed farming development of the West by the

very fact that the price of grain is approaching a point where it will be more profitable for a man in the West to put at least a certain amount of his grain growing capacity into mixed farming, to feed stock and raise dairy produce.

Mr. NEELY: Would the minister tell us what we will do with the stock? Will we export it or will we put on an export duty? Our beef is exported now, as the minister knows.

Mr. FOSTER: I would not like to credit my hon. friend with not knowing what to do with his stock when he got it ready for market. I think he would dispose of it very quickly. It is far better that instead, for instance, of selling off his sucking pigs and his young calves that he should put them into the shape of the weightiest pork and the best beef and the best stockers before he sells them. That is all I am asking and that, I think, is good policy for this country. My hon. friend calls to my mind one of his arguments. He was arguing the other day that 25,000,000 bushels of oats went out of this country since the Underwood tariff came in force and he said that every bushel of oats had to pay six cents customs duty and that therefore on that 25,000,000 bushels just $1,500,000 less was received by the producer of the oats than if that duty of six cents had not been on. That is an easy calculation, easily done with pencil and paper, but does my hon. friend's practical sense follow that argument upon paper? If so I will put another phase of it to him. The former duty on oats, the season before last was fifteen cents per bushel. This year it is but six cents. Therefore the seller of that 25,000,000 bushels of oats by the reasoning of my hon. friend is just $2,500,000 better off than he would have been last year. The same kind of reasoning applies to everything that has been put on the free list or on the reduced list by the Underwood tariff. If you take wheat on which the duty is now only ten cents against twenty-five cents, if you take cattle, beef, everything, sum it up and you can just add to it the number of cents per pound or per bushel of duty that has been taken off by the Underwood tariff, and according to the hon. member, a perfect flood of money has rushed into that great Northwest and is now in the hands of the farmers. But my hon. friend says that you did not do that, that was done by the Underwood tariff. I am not denying it, but is it therefore of any less advantage to the farmer of the West and how is it that to-day the farmers in the West are poorer than they were last year and have less money to send down to the East for manufactured products when the 25,000,000 bushels of oats put $2,500,000 cash into the hands of the sellers and they also received innumerable millions on the stock and other products that have gone to the United States under the Underwood tariff? I do not like to say that I do not subscribe altogether to the remarks of my hon. friend from Humboldt, but I am bound to say to him that if his argument is right there are a great many things to be accounted for that he has not accounted for in his philosophy. My hon. friend from Halifax has asked: where will we get a market for our wheat.

Mr. A. K. MACLEAN: Oh no, I did not; the hon. gentleman was arguing that all the wheat which we grew should be ground into flour and I asked him to tell me where we would find a market for that flour.

Mr. FOSTER: I have not argued that all our grain must be ground into flour.

Mr. A. K. MACLEAN: You have made an elaborate argument.

Mr. FOSTER: I am arguing for a policy which will give an impulse in the direction of grinding in our country as much of our wheat into flour as possibly can be ground. I make the same argument with reference to every other natural product of our country. My hon. friend from Halifax (Mr. A. K. Maclean) asked as to where we could get a market for our wheat and for our flour. He declared that Great Britain consumed a certain amount, of which we supplied a fractional part at the present time, and he did not think there was any chance for an expansion of the market in Great Britain, particularly for flour. Afterwards, when he was trying to meet the argument that if the wheat went across the border there would be nothing left for our own railways to transport, he declared that he expected to see in the near future the products of grain in different kinds going out in ever-increasing quantities over our own transport system via the Hudson bay and the St. Lawrence, and through St. John and Halifax. I can pose the same question to him that he posed to the House in the early part of his speech: 'Where do

you expect to get a market? Now, the question of markets troubles people to a certain extent, and yet there is a vast undeveloped market that this country has at hand. Let me for a moment refer to a table that I have prepared. It shows the value of wheat imported into the great wheat-consuming countries—not producing countries—and the total volume of flour imported into flour-consuming countries. It totals up to this: These great market countries—deficit markets, so to call them—imported wheat last year to the value of $644,954,000, and of that amount Canada sent only $65,000,000 worth to fill that vast demand. Flour was imported into flour-consuming countries to the value of $82,171,000, and of that Canada sent only $16,161,000 worth. Taking wheat and flour together, there was a market of $727,000,000, of which Canada supplied $81,000,000 worth. There is, then, a vast market to which Canada can appeal with her good wheat and her good flour in competition with the world, and it is in competition with the world that she will have to sell her wheat and her flour whether at Minneapolis, Rotterdam, or Liverpool. There is also a vast unfilled market for farmers' products in this country, and for the products of our different industries as well. I think that the difficulty to-day is not to find markets for what Canada produces; and not that we do not get into the United States market, but is to be found in other directions. One thing is, I think, certain, and with that I propose to close my remarks: taking it by and large, the country which has a surplus of any product must seek its market in that country which has not a surplus of that product; and taking it by and large, it is not defensible that a country which has a surplus of 200,000,000 bushels of wheat should seek its natural or profitable market in a country that has a surplus of about the same quantity. It strikes me that it is something like this: Two farmers are travelling along the great road, each with an immense wagon load of wheat. One is Johnny Canuck and the other is Uncle Sam. Uncle Sam says: I have a large family of nearly one hundred millions of people; I have supplied them for the year with all the wheat and flour that they need, and now I am carrying on my truck to sell in the European market about two hundred million bushels of surplus for which there is no market in my own country. Johnny Canuck says: I have a family of about eight millions of people, and I have supplied them with all the wheat and flour they need for this year. I have a surplus of about 150,000,000 bushels which I have in my cart here and I am headed for the very same market that you are heading for, Uncle Sam, to sell my surplus product. Johnny Canuck thinks a moment and says: Why not you take this, Uncle Sam, then I can turn my steps and go home; buy my wheat from me? But Uncle Sam says: I have more than I want, and am looking for a purchaser myself. And so they haggle till a bright idea strikes Uncle Sam and he says: Very well, Johnny, I will take your wheat. I have quite a large family, and I will set some of them carrying your wheat down to the seaports; others shall mill some of it in their mills; I will set hundreds of thousands of people to work on that wheat of yours, all getting some profit out of it and adding to its value until at last it is sent to Liverpool and London, its ultimate market. But, Johnny, I cannot do that unless I get your grain at a price which will enable me to do it at profit to myself. That is, Uncle Sam will be the broker, the handler, the manager and the profit maker; he will act in that friendly way for Canada. But why should we not do that work ourselves? Then Uncle Sam says: In the back of my head I have another idea. We are great raisers of cattle, hogs, and sheep in my country. If I take your wheat I will manipulate it on its way to London so that it will make millions of pounds of the best feeding material for my stock, as well; and, Johnny, after I have done all that, and fattened my cattle and hogs for market whatever surplus I have will meet you in London and Liverpool when you go over there to sell your surplus products.

At six o'clock the House took recess.

The House resumed at eight o'clock.

Mr. MICHAEL CLARK (Red Deer). Mr. Speaker, the significant absence of any Government member at nearly five minutes past eight would almost seem to indicate that after the speech of the hon. Minister of Trade and Commerce (Mr. Foster) the Government was seriously contemplating resigning. Even now the only ministers to turn up are my good, genial friend the Minister of Finance (Mr. White), who is very attentive to his post, and my equally good friend (Mr. Rogers), who is very likely to leave us for a higher position across the Atlantic. The hon. Minister of Trade and Commerce has been living a good

deal of the last two and a half years at sea—

Some hon. MEMBERS: Oh, oh.

Mr. CLARK: I mean actually at sea. This afternoon he was still at sea metaphorically. I do not think that even the warmest of the hon. gentleman's admirers will consider that that very able gentleman did anything this afternoon to add to his great reputation as a debater and somewhat of an economist. His speech consisted in a few quips at my right hon. friend the leader of the Opposition (Sir Wilfrid Laurier), in which he is a past master, in his getting hopelessly fogged in figures concerning flour, and in the very moderate rehash of an argument extending to an hour and a half, an argument which took four hours previous to the reciprocity agreement of two and a half years ago, or the attempted reciprocity agreement. The minister himself said that there were two courses open to him; one was to discuss the speaker who had preceded him, and the other was to dwell upon the general financial situation and the general field of thought and discussion presented in the Budget. He chose the one of confining himself to a reply to my right hon. friend who preceded him. I shall, for one particular reason at any rate, take the opposite course. I propose to devote myself to what I think the people of the country are vastly more interested in than a duel between such veterans as crossed swords this afternoon. I shall devote myself to that which I believe the country is very much interested in and that is the general financial situation and the way that financial situation is dealt with in the Budget speech of my hon. friend the Minister of Finance. I ought also to say that my hon. friend the Minister of Trade and Commerce very courteously told me that he had a previous engagement at St. George's Society, and could not be here this evening. I shall all the more gladly only refer to his speech as it is necessary to do so in the general course of my remarks.

I want to follow the example which has been very general and congratulate my hon. friend the Minister of Finance upon the qualities which appear to me to have characterized the Budget speech which he delivered. It was a matter of very great regret that I could not listen to his speech; circumstances beyond my control took me into the West, but I read it with the utmost care and it appeared to be characterized by very great lucidity, very great candour, considerable inconsistency, and not more than the average of the fallacies that are sure to overtake any one who attempts to defend protection. There was another quality in the speech which was commented upon by my hon. friend the junior member for Halifax (Mr. Maclean). I take it that he formed his judgment as to that quality being present partly from the matter of the speech and partly from the manner of it. As I did not hear the speech I only got the impression from the matter. The quality to which I refer was the very great change from the previous speeches of the Minister of Finance in this House. The previous year when he was handling the condition of the country, as it was immediately bequeathed to him, good times, accompanied by surpluses and trade expansion, he spoke in tones which reached what I might venture to call a key of shrill falsetto. He was very well satisfied with the result of the last elections and with the condition of the country and that was the tone se spoke in. This year he was dealing with his own production and he struck a distinctly minor key better suited to the times.

I am glad the minister admitted, however, that we are having times of depression. I noticed that the admission has not been quite general on the other side of the House. No one has denied it but there has been a tendency on the part of hon. gentlemen on the other side of the House to seek for a depression in the ranks of their opponents. They have referred to our speeches as indicating some sort of pessimism on this side of the House. I do not know what is the actual state of mind of those by whom I am surrounded but I think it is not different from my own and I will say there is no pessimism on this side of the House which is in the slightest degree discreditable to us whether as good party men or good Canadians. There is no one on the other side of the House who has any more profound belief than I have in the greatness of the destiny of this country. There is no one on the other side of the House who is surer that his party is sailing in good water in this Budget debate than I am. Hon. gentlemen mistake us. We are not pessimistic about Canada. Our pessimism is about the present Government. I think that before I finish I shall be able to reveal the grounds of the pessimism and show that it is well founded.

The Minister of Trade and Commerce had a somewhat light and easy way of dealing with the depression of the country. He said

this thing is just like a man taking a sleep and he will wake up again all right—meaning Canada. If he had said that the Government was asleep I should have been in agreement with him. It is not Canada that is asleep. The Minister of Trade and Commerce is rather drowsy and he has not got over the tropical seas and climes through which he has been sailing and the whole Government is asleep. Our pessimism is not on the ground of Canada but on the ground of the Government. The Minister of Finance, conscious of his position, differing as it does from that of former years, perfectly conscious and perfectly candid about it, takes refuge in the proposed universality of the depression. He says it is a cycle of bad trade and that we are in the cycle. I do not admit his contention. I do not think he can establish it. I shall take it as regards the United States. Even in the short time that the Wilson-Underwood tariff has been in operation it has produced a marvellous effect upon the condition of commerce in the United States, and has given an enormous impetus to the trade of that country. The other day 2,000,000 pounds of wool arrived in Boston harbour from our colony of Australia, a record for the port. What is happening to that wool? It is going into the factories of the United States; and I read in the Daily Chronicle of London that, as a result of that and other like imports, nearly all the factories of the United States are working overtime. The very moderate reduction of the tariff which has taken place in that country has given an enormous impetus to commerce there. At the very time when our trade is shrinking, if we judge by our trade returns, the trade of the United States is expanding. I do not admit, as regards our neighbouring country, the universality which the minister claims for this condition of depression, much less do I admit it with regard to the United Kingdom. In Great Britain it is notorious that for the last three years they have been passing through times of phenomenal prosperity. The pauperism last January was the lowest in Great Britain that has ever been recorded either in the aggregate of paupers or in the pauperism per thousand. These are facts and one could multiply them indefinitely to show that this condition that the minister admits is not world-wide, and does not apply to the two countries with which we in Canada are most intimately connected, which we most intimately resemble and towards the condition of which whether as to adversity or as to prosperity, we will most nearly approximate. I want to urge that our Government are in a very large measure responsible for the existing condition. They are face to face with that responsibility and they will have to face it before the people of this country.

In a recent debate my right hon. friend the Prime Minister referred to the legacy in regard to railroads that had come down from the previous Administration. He charged upon the previous Government the difficulties in regard to railroads with which this Administration is saddled. It is not a very noble method, when a man gets into a scrape, to blame the other fellow; but, if it is not very noble, it is very ancient; it originated in the garden of Eden, so that it is very human as well as very ancient. I do not want to minimize any force there is in that argument or in any fair argument of an opponent. I think I used sentences myself, during the course of this session, which would indicate that we had a considerable load of railroads for the size of this country and for the number of people in the country. But I think it is a fair reply to that argument of my right hon. friend; it is a fair rejoinder in the face of that argument to say that, if there was some legacy of railroads which was not as good as it might have been, that legacy was accompanied by a condition of tremendous prosperity in the country and by a surplus of some $50,000,000 or $60,000,000 in the treasury. There is nothing in the railroads of Canada to frighten the people of Canada, if the policy of the Government of Canada is right. Take the condition of that western country and our railroads. As my right hon. friend the leader of the Opposition pointed out in his speech this afternoon, we have tilled some six per cent of the possible arable land of Canada, and the Canadian Pacific railway has built up upon that fractional tillage a prosperity and a greatness almost beyond the dreams of human avarice. If the policy of the Government is wisely directed to an increase of the production of the wealth which is possible in western Canada, is there any Canadian so poor spirited that he sees any difficulty in making the other two railroads of Canada as prosperous? This is not the only thing that the previous Government bequeathed; they bequeathed to the country these railroads; they bequeathed to the country the prosperity and the enormous surplus to which I have referred. If they had not been defeated by the party opposite and by argu-

ments, which even Ontario will one day regret, which she is regretting now, we would have carried out a policy in this country which would have gone to maintain fully the prosperity which characterized the fifteen years of Liberal rule. I charge it upon this Government that the defeat of reciprocity is largely responsible for the condition in which the country is found to-day. Just as the lowering of the tariff against Great Britain was followed by an enormous increase of our international commerce, by great land settlement, by increase of our wealth and of our prosperity, so a farther widening of our markets would have brought about a similar result.

I want to say farther that the hard times, which have been prevented by the extension of our markets, have been tremendously aggravated by the extravagance of the present Government. In my judgment, the expenditure of this country in the two and one-half years that this Government has been in power has gone up in a way that is reprehensible, indefensible and unnecessary. It has gone up in that way against the most specific and fair warnings that ever were addressed by an opponent to a gentleman in the position of my hon. friend the Minister of Finance. My hon. friend, the junior member for Halifax (Mr. Maclean), in his first Budget criticism, warned my hon. friend of his duty in this matter. The Minister of Finance was new to political life, he was new to the duties of his office and the junior member for Halifax warned him that he was surrounded by colleagues who would characterize his Government as an extravagant Government, and in spite of that, the Minister of Finance neglected his first duty and invited extravagance. His very first duty towards the people of this country was to keep a tight watch upon the treasury. He is the custodian of the national moneys. There are what are called the spending departments of the Government, but it is my hon. friend's duty in his office to be the watch dog of the treasury and to hold those spending departments off except for what is absolutely necessary. That is a very serious charge to bring against my hon. friend. I have charged him with inviting extravagance, or, if I have not, I charge him with it now, and I am going to prove it in his own words. I listened with great interest, as I always do when he speaks, to his Budget speech of last session, at the close of which he used these words:

> I do not believe—

This was in spite of the warnings of my hon. friend.

> —in a Government curtailing expenditure simply because it appears that on account of financial depression there might be a limitation of trade.

There is a specific declaration of policy on the part of my hon. friend. What does it immediately commit him to? If trade is limited—and twelve months ago he seemed to foresee a limitation of our trade —it meant a limitation of revenue, for our revenue is collected under a tariff, and its extent depends on the foreign trade of the country. Limitation of trade meant diminished revenue, and there has been only one course open to the minister, and that was to borrow money, and he has indicated in this Budget his intention to continue that policy. I think myself that is most unsound finance, and I should be wanting in my duty both to my hon. friend and to the country if I did not state that opinion and the grounds upon which I base it.

I think it is most unsound finance to extend our borrowings in a condition such as that of Canada at the present moment. And that opinion seems to be shared by those who lend money in the old country; because from the hon. gentleman's experience in that country I rather think they did not quite smile upon his most recent efforts in the direction of borrowing. My hon. friend justifies borrowing by a very old argument. He says we are using the money that we borrow to effect improvements, part of the benefit of which posterity will get, and therefore it is right that we should leave posterity to pay part of the cost. Well, the investors in the old country did not seem to have the unlimited belief in my hon. friend's posterity that he himself has. Nor do I think there is any soundness in his argument. I have never read of a posterity in the past that did not have enough trouble with its own finances, its own expenditures and its own times. I may not have as strong an imagination as the hon. minister's, but certainly I cannot imagine a posterity in a world constituted as this is that will not have trouble enough of its own. I think this is unsound finance and based on unsound reasoning. In this speech the hon. gentleman went farther and said:

> We have a population to-day of eight millions, and it will soon be ten millions, fifteen millions, twenty-five millions.

Let me say to my hon. friend that the realm of figures is a very, very bad realm indeed, in which to introduce too much imagination. When the Minister of

Finance, introducing too much imagination into the realm of figures, thinks of this country as having a population of twenty-five millions, in an administration like his he can always find a Minister of Militia who will immediately begin to spend upon the twenty-five million basis. And that is exactly what happened to my hon. friend. He stood at the treasury box of the country, of which he ought to be the guardian and watchdog, and he practically said: 'Come along; dip in.' And the Minister of Militia (Mr. Hughes) dipped in. My hon. friend the Minister of Public Works (Mr. Rogers) rejoices in his ability to spend money and in his department, as a spending department. I would like my hon. friend the Minister of Finance to consult the Minister of Trade and Commerce (Mr. Foster). In spite of the speech he made this afternoon, there are some good things about the Minister of Trade and Commerce, and I am sure if the Minister of Finance were to consult him about some of the things I am saying he would say I was preaching sound doctrine. I know he would, for when he went to South Lanark recently, he told the people that the cure for bad times was to be frugal, careful, and economical. I have no objection to the Minister of Trade and Commerce delivering advice like that in South Lanark; but he should know that advice, like charity, should begin at home, and I wish he would give that advice to the Finance Minister.

I wish to impress upon the Finance Minister that the farther he goes on this course the more he will find out that a nation, no more than a man, can spend and borrow and tax itself into prosperity. It has never been done in the world. I have referred before to my hon. friend's illustration of the Prodigal Son; and he knows that the Prodigal Son was not a success along that line. He spent himself into adversity, and I have known many people do the same. But no man or government can spend themselves into prosperity; it is contrary to reason and common sense. Borrowing as a policy, cannot be too strongly condemned, especially in a country like ours, in the case of a federal government. For the federal government is imitated by the provincial governments, and these by the municipalities, and the result is that we get into the position in which we are in Canada today a position of hard times in a country inhabited by a people who are capable of the greatest things but have the handicap at the present time of being the most indebted people in the world per capita, taking all their debts, municipal, provincial and federal. I think that statement is capable of proof past all possible doubt.

I would like to follow this a little farther in order to impress it upon the minister. I know that we never talk economy in this country; the extravagance of the present day, I have no doubt, will make my words sound very old-fashioned. But it does not trouble me to hold and to proclaim an unpopular opinion. I had the pleasure to follow the greatest man I am likely to look upon in this world when, twenty-eight years ago, he went down to defeat in an effort to give Home Rule to Ireland. It has taken twenty-eight years to give Home Rule to Ireland, but I do not think that even Sir Edward Carson will be able to prevent it much longer. It may take me even longer to succeed with free trade, but I know it will not take me nearly so long to succeed with my teachings with regard to economy, for when a man or Government spends too much, Providence steps in and sees to it that they do not get what they want to spend, and though they may run through one fortune, they do not readily get another. I desire to cite an article in the Statist of February last, which, I think, any one can read with great profit and which will explain exactly what we borrowed last year, what happened to our borrowings, and what the effect was upon the commerce of the world and upon Canada as a nation. In the debate on the address I referred to the fact—and the minister was good enough to agree with me—that when we borrow we do not borrow money but credit, and everything we borrow comes into the country in the shape of commodities. Now what actually happened with regard to the borrowings of Canada in 1913, according to this article in the Statist? We borrowed credit and immediately transferred that credit in London to the United States by buying goods from the United States with that credit. The United States did not immediately buy from Great Britain, but with the credit which we had transferred to them, the United States proceeded to buy coffee, rubber and other produce from Brazil, importing last year three times as much from Brazil as they sold to that country; they proceeded to buy tea, jute and other products from India, importing four times as much from India as they exported to India; they proceeded to buy silk and other produce from Japan, their imports from Japan being very much in excess of their exports to Japan.

I am often called a theorist, but this is not theorizing; these are the actual facts concerning the trade of these countries during the last year. Our original credit borrowed in London and transferred in this way was finally discharged by these three nations, Brazil, Japan and India, taking last year unprecedented quantities of wool, cotton and machinery from the old country —and so the circuit was made. I want the minister to think of that for a moment. I have no reason to assume that he is not cognizant of the facts, but I want this House to think of them for a moment. What has happened ? Our borrowings last year—this ought to be extremely interesting to those who preach a national policy for the building of home industry—our borrowings last year promoted to an enormous extent the industries of the United States, to an enormous extent the industries of Britain, to an enormous extent the industries of Japan, of Brazil and of India, and Canada was left with a debt and has the interest to pay on it. That is all that came to Canada for these borrowings last year; no promotion of the industry of Canada was made in the exchanges as between these countries. I think that these simple economic truths—and they are truths—ought to produce something to recommend to the minister my opinion that borrowing is an unsound line of policy.

I have been looking up some of the masters for the benefit of my hon. friend, if he would care to hear about them. I have been looking up some of the things that Mr. Gladstone said in a speech which I very well remember being delivered in Edinburgh in the year 1879, in which he laid down certain principles of finance. In that speech dealing with finance, and laying down these principles, he made the claim that the principles he was laying down were those that had built up the financial greatness of England in the beginning of its career; that they were the principles laid down alike by the Liberal and the Tory parties, and he claimed to have learned them from Sir Robert Peel. In laying down these principles he referred to Sir Robert Peel coming into power, not at a time of prosperity, as my hon. friend did, but in 1842, when Britain was in a state of adversity for which I think Canada has no parallel in her history. That was four years before protection was done away with in Britain. When Sir Robert Peel came into power in 1842, he found a deficit. I remember as if it were yesterday Mr. Gladstone on one occasion standing at his place at the table of the House and saying: Shall I meet this condition by the miserable expedient of making provision by loans from year to year? Founding himself upon the high authority of Sir Robert Peel, Mr. Gladstone laid down the principle that each year should as far as possible provide by taxation for the expenditure of that year. That was one of his principles of finance. He went on further to say that he himself believed—and this was another principle of finance—that the Chancellor of the Exchequer, the Minister of Finance, ought to aim at a surplus, for this specific reason: not only that it was necessary to avoid borrowing, but that an honest financier should always be endeavouring to wipe out the national debt. Mr. Gladstone laid it down as a sound principle of finance that a surplus should be aimed at as the main instrument for the steady reduction of the public debt of the country.

My hon. friend in answering the charges of extravagance which were brought against him last year in the Budget debate by the hon. member for Carleton (Mr. Carvell) and the hon. member for Halifax (Mr. Maclean) said: the charge is too general; why do you not particularize? I think we have come to a time when particulars are being given to the minister. My hon. friend the hon. member for North Oxford (Mr. Nesbitt) did something in this line yesterday and I think I can particularize from an authority to whom even the Finance Minister would give considerable attention; I mean his chief in the Cabinet. I do not know how far it is within the recollection of hon. gentlemen that the right hon. leader of this Government said in the debate upon the naval resolution of five years ago that in his opinion at least half of the money spent upon the militia at that time might be diverted to the naval defence of the empire. If my hon. friend wants particulars he can take half the military expenditure of that time and put on several millions that have been spent since his Government came into power and he will get a good round sum in the way of detail with which to begin to practise economy in the handling of the moneys of the people of this country. He could, again, go to my hon. friend the Minister of Trade and Commerce for advice on this subject. A short time ago the hon. Minister of Trade and Commerce said that a great deal of money was being wasted on commissions in this country—commissions which were wasting a

good deal of ink and paper in the printing of reports which were laid upon shelves and never read. It is too late to save the $60,000 to $100,000 that has been spent on probably the most useless commission that ever sat in this country, the National Transcontinental Commission; but these are some of the particulars that I would like to call to the attention of the minister. Let me point out that it is not part of our duty to supply the minister with these particulars; he is the watchdog of the treasury and ought to find them out for himself. He knows what is going on within the Government; it is his duty to know these particulars. I want on that point to finish my quotation from Mr. Gladstone's principles of finance by quoting to the minister—I am afraid it will fall on deaf ears in this country, almost in the case of any government, but I will quote nevertheless —the words in which Mr. Gladstone laid down what he called the first principle of finance:

> The first of them is, that the Chancellor of the Exchequer shall boldly uphold economy in detail; and it is the mark, gentlemen, of, I was going to say a chicken-hearted Chancellor of the Exchequer when he shrinks from upholding economy in detail. He is ridiculed no doubt, for what is called saving candle-ends or cheese-parings. No chancellor of the exchequer is worth his salt who is not ready to save what are meant by candle-ends and cheese-parings in the cause of his country. No chancellor of the exchequer is worth his salt who makes his own popularity either his first consideration or any consideration at all, in administering the public purse.

My hon. friend is so agreeable a gentleman and I am so fond of him that I hate to say what I am going to say now, but unless he improves his ways we will have to say one of these days that as the guardian of the public treasury he is not worth his salt—and to say that will hurt me more than it will hurt him.

This has been a rather dry lecture, I am afraid, but sometimes it is necessary to give dry lectures; at any rate the minister will not charge me with bringing too much imagination into the realms of finance.

When we turn to the trade of the country I think there is ground for anxiety. I want to say that the last thing I think any patriotic man should do is to exaggerate any financial depression we have, and I do not think that that is the duty of an opposition. But equally it is wrong to hide evident truths from the public view and especially from the view of those who are responsible for the Government of this country. Taking the twelve months, the minister is just able to show an increase of our trade, but if he had taken the last six months he would have had a report that the trade of the country is declining. That is the fact as to the external trade of Canada at the present moment; there is not the expansion and the buoyancy that there has been in our trade for sixteen or seventeen years past. I very much doubt if the conditions of our trade are such as to give the optimistic outlook which the minister endeavours to maintain. Our imports have declined; that, from my point of view, is not wholly bad; it is not bad so far as it indicates a decline in our borrowings. In so far as it indicates fewer people coming into our country, I think, it is bad. I notice that my hon friend the Minister of the Interior, speaking in Montreal the other day, admitted that during this year we may look for a falling off of fifty per cent in our immigrants. It is the same in regard to immigrants as it is in regard to building of railroads, if we do not know what to do with immigrants when they come I agree with the minister that they should not be brought; but it is a melancholy confession that in a country with two people to a square mile you cannot so frame a policy that these people can make a living on the finest area of land ever cultivated in this or any other country. Our exports during recent months have been declining, and this is wholly bad because it means production has been reduced to a minimum, and the country is living from hand to mouth.

There is another aspect of the trade of the country of which I thought the minister would have had more to say because trade matters have been very much in dispute in this country in recent years and we have arrived at a point when, having regard to matters which were forward in the last election and which have been occupying the minds of the people and of Parliament ever since, we as an Opposition have a right to ask: How are the alternatives of the Government coming along in the way of providing for an external trade for this country? I think we have a right to ask that and in asking it I am founding myself upon the example of my hon. friends when they were in opposition. I looked up the other day a book adorned with the features of the present Prime Minister and called 'Facts for the People,' and I read in that this statement of fact for the people: The Laurier Government has not opened to Canada a single foreign market. Now, that is a shady kind

of a fact to begin with, because the moment the Laurier Government came into power they introduced the British preference which gave us a market, resisted by our friends at the time but lauded high now. Immediately, as the result of the British preference we got a tremendous hold on the British market in which we have been doing an ever-increasing business. But in addition to that the Government went out of power, as we have shown again and again, endeavouring to provide another market and it does not lie in the mouths of these gentlemen to say that the Laurier Government has not provided us with a single market. But what have they done in regard to markets? Well, of course, we heard a great deal this afternoon about the home market as we have been hearing throughout the whole of this debate. Anybody would think that the party opposite created the home market. Every country has its home market for the staple lines of its produce. In every country, in spite of the Government, whether the Government be Tory or Liberal, as soon as people begin to trade they trade in the home market. It is the only market they have. I wish my friends opposite would study the history of trade in this connection. An interesting theory was propounded by the hon. member for Yukon (Mr. A. Thompson) yesterday. My hon. friend is coming along very nicely in his economic studies. He was one of a number of members who made special reference to myself and he formulated a theory of trade that I could not quite endorse, but which went a considerable distance in the direction of the truth. He said: It appears that every country is free trade to begin with and then becomes protectionist and then gets back to free trade again. I think if we should go back right to the origin of trade we would find that to begin with every country is more or less protectionist; they are at any rate in regard to the home market. When there was nobody but the Indian in this country and he went out each morning and caught a little fish or killed a little venison and came home to the tepee and shared it with the squaw and the papooses, you had the ideal of protection theory realized, you had the home market for home consumption—you had Canada for the Canadians. So I think my hon. friend in his evolutionary theory did not go quite far enough back. In regard to free trade there is no doubt that his theory is quite correct. I am very anxious to believe it, and it was consolatory to myself to know it was coming. I regret that he should think Canada is only qualified as yet to be in the backwoods stage of her development and I am sure that he and those by whom he is surrounded will never be angry with me because I want to hurry up their evolution.

Do our friends really believe all they have been saying about the home market? Does the Minister of Trade and Commerce himself believe that the home market is of the tremendous importance that he seemed to indicate this afternoon? He recommends as a cure for western conditions the building up of a home market in western Canada. That was the first portion of the cure that this Government proposed for present conditions, that is their first alternative. They are continually mentioning the policy on which we went down to defeat two and one-half years ago. I wish my friends would reflect that there never was a people who had to be so patient with advice as the representatives of the West and those whom they represent have had to be during this Budget debate. There is apparently not a man in Ontario who could not run the affairs of the West with the utmost ease if we would only put those affairs right into his individual hands. If we were dependent upon the home market in western Canada, as these gentlemen advise, I want to ask the Government what would happen to their elevator policy. Mixed farming is the cure, the home market is the cure for the West. In other words, we are only to grow enough wheat for western consumption. Then I charge it upon this Government that they are the most foolish people on the face of this earth, because they are spending an enormous amount of money on elevators and they are threatening to spend $150,000,000 on the Hudson Bay railroad, all of which is based upon the presumption that Canada is going to have an enormous outside trade in wheat. So that one part of these gentlemens' argument is thoroughly destructive of the other part. I want to bring to the attention of our hon. friends who talk about the home market in the West as a cure for our conditions. The elevators and the railways under those circumstances can only become monuments of the folly of the present Government. I want to tell our hon. friends something about the home market as it exists in the West to-day. Day before yesterday, in the last Albertan that came to hand from Calgary, I notice a statement that 4,000 hogs had been shipped from Calgary to the Seattle market in one day. That has been going on ever since the Wilson-Underwood tariff came into operation. If that tariff had not given us a relief for those

hogs, will our friends who preach the home market tell us that we should never have produced those hogs, that we should have waited until we had built up a home market to dispose of them? The thing is absurd on the face of it. We dealt a couple of years ago with a grain blockade. Without the Underwood tariff we would have had a hog blockade. When I was at home ten days ago my people on my own farm were collecting a large number of eggs every day, and had received a letter from the merchant with whom they deal in Calgary dated the previous week saying: Send no more eggs at present, and our neighbours who deal with the same merchant had got the same message. So that I was up against an egg blockade. These hon. gentlemen who talk to me about a home market would suggest, I suppose that I should play battledore and shuttlecock with my eggs one week and send them to Calgary the next week. I wish people would be reasonable in talking. To speak of the home market alone as of any use in a country containing 300,000,000 acres of arable land is to mock the farmer, to express distrust in Canada and its future, and to expose one's self to the ridicule of all thoughtful men. How much of a home market do hon. gentlemen opposite recommend for any province in this country? Let us see how much there is in that argument, and how it conflicts with their other arguments. We have 400,000 people in the province of Alberta, half of whom are in the towns and cities. Hon. members have expressed an opinion thoroughly in agreement with my own, that there are too many already in the cities and towns, but what does the home market theory really mean? It amounts to more cities and towns. That is one of the evils from which we are suffering, and the cure of hon. gentlemen opposite is to build more! Those are the economists who talk about the home market. I will give them facts from my own province in regard to the home market. The people of Calgary, according to the greatest beef men in the West—the men who buy and sell beef wholesale—are not able under this Government to eat beef in that town. They are eating custards instead, and then they cannot get through all the eggs we are producing. If they have stopped eating beef and eat only half the eggs produced, how would hon. gentlemen opposite, in the shoes of the Alberta farmer, like to have those preachments about the home market thrown at them?

Mr. BURNHAM: Is it not true that the ideal condition of trade of this or any other country is a perfect balance between all avenues of distribution?

Mr. CLARK: I am not a millenium producer. When we have a perfect balance, we will all be angels and we will not eat either eggs or beef. What as to the other alternative of which hon. gentlemen opposite spoke so much about two and a half years ago, but of which we do not hear so much to-day? I have here some words which the present Minister of Trade and Commerce used in a speech he delivered on the subject of reciprocity in this House two or three years ago. He said:

9 p.m.

> What are the distinctive features of this treaty and how far do they conform to the conditions of reciprocity? Suppose I am a maker of jack-knives of a certain quality and my hon. friend opposite is a maker of jack-knives of the same quality. I could send over to him and buy a dozen jack-knives and he could send over to me and buy a dozen jack-knives, and this might be called trade, but there would be reciprocity about it.

Of course all the gentlemen opposite who were in the House at that time cheered him to the echo. No possibility of reciprocity between the United States and Canada because it would be only an exchange of jack-knives! And then the minister went on to proclaim his alternative:

> Two countries that show ideal conditions of reciprocity in trade would be the West India islands and Canada.

That was a very cleverly stated alternative policy on the part of the Minister of Trade and Commerce. In the same speech, using those powers of ridicule which, after all, do not carry a man very far, he gave a wonderful description of how two old fellows went down to Washington—estimable gentlemen but in no way very able—and got closeted with the Government authorities there, and of how they cut the telephone off and drew up the reciprocity agreement; and the minister showed how futile it would all be. But since that time, following out his idea of an alternative, he has been visited in Ottawa by no less than fourteen old or young gentlemen from the West Indies, accompanied by their wives. I do not know whether the telephone was cut off in this case but a treaty was made with the West Indies, and we wasted considerable time last session in the discussion of that treaty and other matters—that is,

the Government and their supporters wasted time by presenting it to us, and they had to introduce the closure to finish up the work of the session. Well now, what about that alternative, the treaty with the West Indies, that ideal place for trade? My hon. friend from Carleton (Mr. Carvell) put a question on the Order Paper the other day asking for the figures of our trade with the West Indies for the last six months of 1912—prior to this wonderful treaty—and for the last six months of 1913, during which the treaty was in operation. The figures showed that where conditions were ideal for trade, and where a treaty had been made by those people who knew so much better how trade should be done than we did, our trade decreased with the West Indies by $600,000. That is the way they have been increasing the trade of the country. During the same period the people of this country have increased their trade not by tens but by hundreds of thousands of dollars with the United States, where we could only exchange jack-knives. Of course, we were told there would be danger to the empire in that trade. The real danger to the empire is from people who base the permanence of the imperial connection on a wrong foundation, and they are the worst friends of the empire. If trade with the United States means annexation, we are annexed now. The condition of our people does not brook any longer this foolish talk. The people know now that it was foolish talk. Our friends opposite are great admirers of Britain and everything British. How did Britain regard the Wilson-Underwood tariff? In London, within a few weeks of that tariff coming into operation, there was a meeting of the shareholders of a sugar company with large interests in the West Indies. The shareholders were told by the chairman that the company was going to do ever so much better trade in future because they had now free entry to the markets of the United States for their sugar from the West Indies. And yet gentlemen opposite, who admire everything British, come here and weave the most ingenious and elaborate arguments to show the folly of trading with the United States, and the danger to the empire that comes from such trade. How would a business firm act in regard to this matter? I venture to think our individual citizens in Canada are as sensible as the individual citizens of the old country, and that, taking every legitimate advantage of the Wilson-Underwood tariff, they are forcing their business in the United States. But we have got a Government in power—and that is what is the matter with this Government—who are not up to the average of the individual citizen of this country in commercial intelligence.

Now faced with these conditions, faced with this condition of trade which barely shows an increase and faced with this commercial depression, what does the Government do in its Budget? It is notable that in the tariff changes which are made the minister refuses free wheat, (does his best by that to limit our export) puts a large line of duties on iron and steel (and does his best to limit our imports) therefore showing that he is a thorough believer in the home market argument although I must do him the credit of saying that he does not use it quite as much as others do.

I want to dwell upon the tariff changes and the arguments of the Minister of Finance for a few minutes, endorsed as they were by the hon. Minister of Trade and Commerce. I was rather surprised to find that the somewhat extensive tariff changes were made. Free wheat, of course, my hon. friend was bound to deal with but the other tariff changes were rather a surprise to me for the reason that in the debate on the address my hon. friend had said that to alter the tariff in times like these could have no effect but to dislocate the industries of the country. He said that in the debate on the Address about three months ago, and I was therefore very much surprised when I saw that he had announced tariff changes. As to the dislocation of the industries of the country, with the unemployed that are flooding our towns, with factories closing down and the exodus from our western farms, I think there is considerable dislocation already. It is not causing dislocation of industries that the Government want to look to but the prevention of it; there is already too much dislocation.

Of course, I do not quite agree with him that this is not the time to change the tariff because if we are not to change the tariff when we are depressed the minister would offer a far stronger argument for not changing it when we are prospering. Therefore, as long as he is minister the tariff is eternal; he would never alter the tariff. I am very glad that he changed the frame of mind that he was in because it betokened a departure from financial sanity. Having got over this surprise, I was very much interested again when the minister proceeded to give us a brand new theory of

protection. He said that a protective tariff is a structure fearfully and wonderfully made—I am reading between the lines—and he further said that you have to look at the solidarity of the structure. That was news to my hon. friend the Solicitor General (Mr. Meighen). It surely conflicts with the original theory of protection. What is the original theory of protection? We have heard it again in this debate. It is that you must bolster up infant industry, that you must help infant industry. But according to the new theory, the minister himself contemplates all industries reaching maturity at the same time my hon. friend says that the industrial family are all infants. They grow in beauty side by side and you must not interfere with one of them until they are all matured. That is why you could not interfere with the tariff. Then he goes on and interferes with some of them but interferes with them mostly to put them upwards. He was so insistent upon this new theory that he betook himself to the creation of epigrams. He said, in a previous debate, that free food means free trade. He was replying to some remarks of my own in a particular speech and if I had not already spoken in the debate I should have wanted to ask him why he was so angry with me, or why he chided me so strongly, because I had said that President Wilson had torn protection up by the roots in the United States. They have practically free food in the United States, and if that means free trade it looks as if the minister's new epigram means that we must have free trade at once. According to the minister, this policy in the United States means free trade, and if that be true my hon. friend's epigram means free trade. I offer my very sincere thanks to the minister for his conception. I think I understand what he means. I think he means that once you give free trade along certain lines it will follow in others. I congratulate him upon seeing so clearly.

I cannot congratulate him, however, upon the position he took in his economic work on behalf of Canada. As Great Britain is a free trade country and, according to the minister's epigram, the United States is rapidly becoming a free trade country, he will have to go to Russia and Japan for his economic companions. I do not like to see my hon. friend taking a position like that for the great body of Canadians. Does my hon. friend see what he commits himself to there? Free food, says my hon. friend, means free trade. Well, now, would it be possible to turn back? Suppose we gave free implements, we could turn back instead of going on. Does not the minister know the position he implies when he says that free implements means free trade? He says that if you give the people of the East and the West a taste of this thing it will prove so nice to them that they will go on and put the whole policy into operation? I do not think he quite saw what he was committing himself to. The Solicitor General did not argue on this theory when he was arguing the question of agricultural implements. He argued the question of agricultural implements in his most able manner absolutely on the merits of agricultural implements, and he proved that there was good ground for a part of the policy embodied in the amendment of my right hon. friend the leader of the Opposition.

I wish to offer some more congratulations to my hon. friend the Minister of Finance. I want to congratulate him on the fact that he did alter the tariff and he did it without the help of a tariff commission. Two years ago he indicated to Parliament and to the country that a tariff commission was absolutely necessary to the proper and scientific handling of the tariff. But I think he has, by his recent action, taken a position in which we can ask him to acknowledge that he owes the Senate thanks for their action upon that particular measure. There would have been an enormous amount of money spent annually by the commission and I think my hon. friend owes the Senate his warmest thanks for their opposition in regard to it, not only because they opposed in a measure the commission, but because of the amendment which they introduced to the Commission Bill. What was their amendment? The amendment was to the effect that in dealing with the tariff we should look to the interests of the consumers as well as to the interests of the producers. I want to call the attention of the House to the fact that in his tariff changes the minister seems to have been absolutely innocent of the thought that there are either farmers or consumers in this country. The tariff changes, according to his own showing in his Budget speech, have been carried out in the interests of producers of certain commodities. Take free wheat—to whose representations did he give weight and attention? To the millers? I give him credit for the painstaking work that he and his

helpers have done but when he gave us the particulars it was apparent that fifty per cent of the case that he presented to us was made up of information relating purely to the people engaged in the agricultural implement industry. He has examined the books of these people; he has examined the condition of these people; he has found out that they are the bankers of the farmers. I wonder if it did not strike the minister that he ought to have examined into the financial condition of the farmers who are in such a condition that the implement makers have to be their bankers. What does that fact mean? It means that the settlers are tied body and soul to pay not only for the implements but huge interest upon their cost from year to year, and that is one of the causes that has produced the condition of the West to-day. Surely further inquiry should have been made into the financial condition of these farmers.

In regard to the iron duties, the minister also examined into the iron industry. He does not seem to have seen the need of looking at the effect of this change in duty upon any one except those engaged in the industry of steel and iron. Yet my hon. friend pretends that the policy of which he is the exponent is a national policy. It is sectional, nothing but sectional and always sectional. My hon. friend admitted that in the very method by which he put his arguments on agricultural implements before the House. He enumerated every place in Canada where implements were made and, by the witty retort with which he met an interruption of the hon. member for Brantford (Mr. Cockshutt), he showed that in his own mind this protection is a local and a sectional thing. He hoped that he would be able to outlive the mistake of having overlooked Brantford in his enumeration.

There is no need, in my judgment, for a long argument upon the question of free wheat. That question was debated and voted upon in this House during the present session; but it is permissible and I think is my duty to look at the arguments by which the minister has satisfied himself that he ought to refuse free wheat. The arguments which have weighed most with him are very peculiar. In the first place he doubted, like my hon. friend the Minister of Trade and Commerce, whether the price of wheat would be raised, because he says that the price is fixed at Liverpool. This is quite true in a degree, but not the price to the farmer. It is a truth that has been very well known for a great many years. Mr. Gladstone put forward that argument in regard to America. He once said:

> It has been very well said, and very truly said though it is a smart antithesis—the American agriculturist has got to buy everything that he wants at prices that are fixed in Washington by the legislature of America, but he has got to sell everything at prices which are fixed at Liverpool by the free competition of the world.

That argument is only partially true to-day, because it was used thirty years ago. The fact to-day is the fact brought out by my right hon. leader this afternoon, namely, that the price which the farmer gets and the price which the consumer pays are both to a large extent fixed by the combines. This consideration explains what, the minister tells us, puzzled the people of Ontario during the last election. What puzzled the people of Ontario in the last election was how you could possibly benefit the producer and the consumer at the same time. It is a fact, capable of absolute proof, that you can do so. In my native county of Northumberland in England, for several harvests past, as soon as the wheat was garnered, the farmers in the northern part of that country received into their hands an average price of 96 cents a bushel for their wheat. That is under freedom of trade. It was proved to-day, not to the satisfaction but to the dissatisfaction of the Minister of Trade and Commerce, that in the same county of England where the farmers are getting into their hands 96 cents a bushel for their wheat as opposed to the bare 65 cents a bushel which the farmers in southern Alberta and Saskatchewan get, flour containing Manitoba wheat is being sold cheaper than it is sold in Winnipeg. That is the fact. What is the explanation? The explanation is that, when you shut out competition and create combines, these combines give what they like to the producer and take what they like from the consumer. Last night my hon. friend from Haldimand (Mr. Lalor), who almost led one to believe that he is a lineal descendant of the good Samaritan and is spending his time giving away tomatoes these days, denied that there were any combines. Yet in reply to an interruption by my hon. friend from Strathcona (Mr. Douglas) he actually admitted that the farmer in Ontario is getting something like twenty-five and thirty cents a bushel from year to year for his tomatoes and that the consumer is paying some years something like thirty cents for two or three cans. I do not know how many cans of canned tomatoes you can get from one bushel of tomatoes and a barrel of water, but there is a

tremendous spread of profit between the twenty-five or thirty cents that goes to the farmer and the enormous sum that is got out of that barrel of water. That is what is raising the cost of living to the poor people of this country. It is the combines that are doing these things. In a recent debate I advanced the argument to the minister that the high cost of living in this country was due to the tariff and the combines that arose under the tariff, and he replied to me in the course of the same debate that it was not a sound argument that the tariff is the cause of the high cost of living, because the price has gone up more than the tariff in so many years. It was not quite a fair argument on the part of my hon. friend to deal with only fifty per cent of what I advanced. I never said that the tariff alone was responsible for the high cost of living; I said that the tariff together with the combines was, and I want to give a confirmatory opinion of my own. Mr. Woodrow Wilson said:

> It is now no longer arguable that these combinations do not settle what prices shall be paid; settle how much the product shall be, and settle moreover, what shall be the market for labour.

The other argument which seems to have satisfied my hon. friend in refusing free wheat was a more peculiar one. He said, before you try the market to the South, you should wait until you get the Transcontinental railway completed East and West and until you get the Hudson Bay railway completed. Is my hon. friend serious when he asks us to wait until these railways are completed, which will be in the time of our prosperity to which my hon. friend is sending his borrowings? I endorse what my hon. friend from North Oxford (Mr. Nesbitt) said in regard to the Hudson Bay railway. I never said a word in its behalf on any platform in this country, and I myself have very little belief in the clearness of the economic thought of any one who seriously turns aside to avoid a market of 90,000,000 people and goes and builds a railroad where you have to navigate amongst the seals and icebergs in the hope that you will be able to dispose of your wheat.

Mr. CARVELL: For two months in the year.

Mr. CLARKE: I would not like to send my wheat there for any months in the year; I have very little belief in the project. I know that both parties have supported this project, but I wish to put in a word for my own party, because when they were in power the case was altogether different. The Liberal party did foolish enough things when in power, but they never were foolish enough to prefer the Hudson Bay road to an assured market of a hundred million people. That market was not open to us then, and the Hudson Bay road was an alternative to nothing south of the line. But to propose to the farmers of the West that they should wait for this railroad development is a very weak argument—certainly it is utterly unsatisfactory to my mind. I should say that the policy for people who want to do business and develop the country along wise lines is to try that which is at your hand—try the market to the south and go on with that when you can get it.

But this whole argument of the Minister of Finance was vitiated, as was that of the Minister of Trade and Commerce this afternoon, by the thought that all this fine dreaming, all this fine political weaving can be reduced to naught by the United States Government. The interruption was perfectly pertinent, I think, of some hon. member on this side who asked the Minister of Trade and Commerce: What will you do when the duty is taken off wheat by the United States Government? We are absolutely at the mercy of the United States in that matter. They have proven that in the case of cattle. Everything that my hon. friend the Minister of Trade and Commerce advanced about the impossibility of trade south of the line was advanced with regard to cattle as well as with regard to wheat two years ago. And everything advanced with regard to cattle has been absolutely falsified by what has happened and the prophecies of hon. gentlemen opposite are discounted to that extent. We on this side of the House have the right to say that our predictions and the position we took two years ago have been absolutely justified; and I believe that if free trade in wheat were given we should be justified in that particular also.

I should like my hon. friend opposite to compare the dignified position which Canada occupied under the reciprocity treaty with that to which the people of Canada have been reduced by the attitude of the present Government. When we arranged reciprocity we made a treaty which was equally honourable to us and to the United States, a treaty under which we should have

dealt on equal terms. But with a Government supinely holding their hands and incapable of doing anything, the Canadian people are, if you like, dragged into commerce by the scruff of the neck by a foreign Government. I give the people that thought as showing that the policy of the present Government is weakness itself compared with that of their predecessor.

There is a great responsibility resting upon my hon. friend yet in this matter, and upon the Government of which he is a member. I wish to impress this upon him. And the responsibility is all the greater because it has been proven past all doubt by the action of the Conservative Manitoba Legislature that even in Manitoba there is no difference on this subject. I presume that the members of the Manitoba Legislature are aware what is the opinion of the people of that province. Yet my friends opposite come forward as exponents of what they call a national policy and tell the West not to look at things sectionally. What harm can it do the East if we get free trade in wheat? Of all the peculiar arguments I have ever listened to, the argument directed to the idea that you can hurt, for example, the manufacturers of agricultural implements by promoting the prosperity of the farmers is the most peculiar. Did ever any one hear such nonsense talked—you make prosperous farmers and you thereby ruin the manufacturers of agricultural implements. That is the true National Policy—build your farmers, and they will build your railways and your manufacturers as well.

Now, I do not need to dwell long upon the question of free implements; I will just say that I think the Government have made a great mistake in the way they have handled this subject. They are very inconsistent in touching it at all. We heard something from my hon. friend the Minister of Trade and Commerce this afternoon about a political policy. I do not think that the Government in taking off a paltry five per cent from the duties on two lines of implements can be said to have acted absolutely free from political considerations. I do not think they believe that this change will affect the prices of implements one jot or tittle. This reduction has been given to save the face of my hon. friend the Solicitor General (Mr. Meighen) and the other Conservative representatives from western Canada—that is the whole object of this paltry reduction. Sound economics following the line of argument of my hon. friend's speech would teach that the only way to be sure of decreasing the revenue from these articles—and if we are going to economize, we must decrease revenue and take less from the pockets of the people—would be to make the implements free; and the only way you can be sure of reducing the price to the farmer is to make them free, as Mr. Wilson has done in the United States. We are told that this will destroy the industry. I do not believe it. Did the placing of cream separators on the free list destroy the industry on cream separators? There are splendid and flourishing cream separator manufactories in this country. Why? Because the moment you made these machines free to that extent you helped the dairy industry, and the dairy industry reacts upon the cream separator industry. And there you have exactly the proper method of developing an industry and increasing the prosperity of this country. My hon. friends who are protectionists are continually trying to build the prosperity of the country by poising the cone upon its apex. You must put the cone upon its base, and the apex will stand all right—it requires a juggler to do it the other way, not an economist.

Now, I wish to say something in conclusion about the iron and steel duties. I am bound to admit that while the placing of these duties on iron and steel like the reduction of the implement duties will not have much effect in Western Canada one way or the other, it is a very astute political move. As such it is a strange comment on the term 'national' as applied to the protectionist policy. It appeals to Nova Scotia and to Ontario, and it has made its appeal in these directions in a way that is interesting to me as a free trader looking on. The very fact that it is an astute political move is the strongest condemnation of it economically; it is an unwise move economically just because it is not a national policy. The hon. Minister of Finance indicated, as have certain other speakers, that the iron and steel industry is next in importance to agriculture in this country. I do not agree with that; transporation, railways, is the next in my opinion. And this is where the mistakes come in of putting these duties upon steel and iron. It is sometimes said that protection is a good policy for a young country. Here is an interesting sidelight upon the study of the problem: the name of John Stuart Mill was mentioned by the hon. member for Yukon (Mr. Thompson) as giving his authority to that view. Well, I have somewhere a pamphlet containing

several letters from Mr. Mill, in which he expressed the utmost regret that in a moment of inadvertence he had given passing countenance to that opinion. But we do not need to depend upon authority for the settlement of that question; we are a young country; we have common sense, and we can settle it for ourselves. We can settle for ourselves whether the duties on steel and iron are good for a young country. Is there anyone who will get up in this House and deny that transportation to the farms and to the people of this country is next in importance to the basic industry of agriculture? I do not think any western member will. The Government and their supporters admit my views upon this matter; they say: we agree with you that railways are very important; let us promote the building of railways by making iron dear. Is that good logic? Is it common sense? You will promote the building of railroads by making iron cheap; if you put a tariff upon iron you make iron dear, and to that extent you put obstacles in the way of the development of a young country. England could afford far better than Canada to have a tax upon steel and iron. England has now 20 miles of railway to every 100 square miles of the country; that means that no one in England is, on the average, more than two and a half miles from a railway. England, an old country, could much better afford, from this transportation point of view, to have taxes upon steel and iron than we can. But, after all, what is the good of arguing with a Government that talks about building railroads by making iron and steel dear? What is the good of arguing with a Government that gives bounties or imposes duties in favour of the iron and steel industry, and then puts up its Solicitor General to talk for three hours and a half in favour of wooden trestles on railways? The way to promote the iron and steel industry is to use iron and steel, not wooden trestles. If I were the Solicitor General, I would not take a brief for wooden trestles; I would leave a wooden argument like that to wooden heads. The people do not want iron. I do not want any iron; what is the good of mere iron to me? I want nails; I want stoves and I want railways; I do not want iron. But you make all these things that I do want costly by putting duties upon steel rods; you make the things the people actually do want costly, and then you say that protection is a good thing for a young country. I am a young inhabitant of a young country, and I am reminded by these good things that are said to me of the labourer in the south of England, who, in the anti-corn law days, made the most effective speech ever made against protection. He went on the platform and said: 'Ladies and gentlemen, I be's protected; I be's starvin' and I am agin protection.' The men who make nails are already complaining. This particular industry of iron and steel is a good illustration of all the evils of the protective system. Cheap iron and steel would help the railroads; it would help shipping; it would help the making of cutlery; it would help the making of stoves; it would help the making of agricultural implements and all the things that a young country really wants, but dear iron operates the other way. Who does it help, this iron industry? The millionaires; granted. I mentioned this point before: Mr. Carnegie retired from the steel trust of America recently with a reputed income of $1,000,000 a month. Yes, it makes the millionaire; it makes them Schwabs and Carnegies—there is no doubt about that. I have tried to show in the sentence I have just uttered that it does not help the consumers, and who are left as a special class—the labourers. The time is coming, and coming rapidly on this continent, when the people are going to see that the workingman is not helped by protection. I think a puncture was put in that bubble this afternoon by my right hon. leader when he analyzed the figures the Minister of Finance gave in regard to that and showed the miserable wages that are being earned on the average by the people engaged in the food industry. This idea of protection helping the workingman, shared by the Minister of Finance, as quoted by my right hon. friend, is an example of the persistence of an unfounded belief. So far as I have been able to examine the question I am unacquainted with a single fact in support of the contention that protection helps the workingman. All the facts I have been able to find point the other way. It is an old belief. I think in the very first speech he delivered in the House of Commons in 1841, Mr. Cobden, replying to a statement that free trade in grain meant the reduction of wages, used the following language, the simplicity and completeness of which cannot be improved upon:

> We should, by free trade in corn, very much increase our trade. How can this be done, unless by an increased amount of labour? How can we call into requisition an increased de-

mand for labour without also increasing the rate of wages?

That was the argument put in simple language by one of the greatest men that ever lived, though he never got inside a cabinet—perhaps that was because of his size—and I defy any one to meet that statement. That was a prophecy; how did it work out? Who was right? The fact is that in Britain the actual prices of labour rose after the repeal of the corn laws and the introduction of free trade faster than they ever have done in any civilized country in the world and they have risen until the labourers of Britain are the aristocrats of European labour; they get higher wages, whether for skilled or for unskilled labour than are paid anywhere else on the continent. At that very time—I come now to another fact in this argument; I hope I am not wearying the House—at that very time Mr. Cobden pointed to the United States, long before there was any protection there, as the El Dorado of the workingman: as the place where the workingman should go to earn larger wages. Now, what facts have we got? That the wages were miserably poor in Britain under protection and that at the time they were poor in Britain under protection they were high in the United States under free trade. Mr. Carey, who wrote a book called Past, Present and Future, said that one of the reasons given for the introduction of protection in the United States was that it would reduce the wages which were too high. That is to be found on record in that book. Compare that with the condition of wages in the United States to-day. Wages in Britain have gone up; nobody who knows the facts will deny that for a moment. What has happened in the United States? If you read Collier's Weekly of March 9, 1912, referring to the Lawrence strike, you will find that Collier's Weekly tells of the textile workers in Lawrence, Mass., denying themselves the common necessaries of life and taking lodgers into houses already overcrowded by their own families to scrape up money to return to their native land. That is one of the most highly protected industries in the United States—the woollen industry. If I had time I would like to have gone into this question a little more fully. An interesting book has been published—a little book which I know and have read—by Professor Nearing, of Pennsylvania University, on wages in the United States. The book has this very great merit for any one who wants to find the truth upon the question, that it is a purely sociological study, and the tariff is never mentioned in it from beginning to end. What are the main findings of that book bearing on the question under discussion? The author sets out by quoting Professor Chapin to the effect that a New York artisan with a wife and three children needs $900 for a living wage for himself and his family. And how far do the United States conditions to-day, after high protection for sixty years, go towards the standard laid down by Professor Chapin? Nearing finds that, taking a line through the Rockies and north of the Mason and Dixon line three-quarters of the adult male workers of the United States of America actually earn less than $600 a year. Nine hundred dollars needed for a man, his wife and three children, three-quarters of the people in the industrial portion of the United States, according to this professor, upon less than $600 a year, or, in other words, only two-thirds of a decent living wage! And yet the minister indicates his opinion that in Canada protection helps to raise the wages, that it gives a proper standard of living to the workingman. What are the further findings of this book? The author finds that westward the wages rise. We who know anything of Canada know that is absolutely true in Canada. Westward the wages rise. Well, that means that the farther you get from the centers of concentration of highly protected industries, the higher are the wages. These are rather peculiar comments from a United States professor upon the theory that protection raises wages. He finds what we absolutely know in western Canada to-day, that the highest wages are paid in the building trades and that is also true of eastern Canada. Now, protection cannot raise the wages in the building trade because we do not up to now to any extent, import houses. Bricklayers, he finds again, are much more highly paid than brickmakers. You cannot protect bricklayers in their business. You can protect brickmakers by a tariff on bricks, because you can import bricks; but the bricklayers are paid more highly than the brickmakers. We find that the men's unions are weakest where the tariff is highest. That is, the tariff strengthens the employer and not the employed. These are the main facts of the book as I have collated them.

What about iron and steel? because I want to bring it before this House and the country and Parliament that this ministry

has started to build up an iron and steel industry in this country corporable to the iron and steel industries of the United States. The iron and steel industry is the most highly protected trade in the United States. When we are following the bad example of the United States I am determined that, so far as I am able to prevent it, the people of this country shall not go into it with their eyes shut. At a conference held in Pittsburg by the skilled labourers of America a petition was drawn up to President Taft. I shall tresspass for a moment on the House while I read what was said by the leading men in American labour unions about the United States steel corporation in its relations to labour. This petition alleges that the United States Steel Corporation

(a) Is an illegal combination existing in defiance of the laws of the land. Its power and scope as a trust have been so often made manifest in its own circulars to investors and in magazines and the press, that no detailed evidence on this point is here deemed essential.

If government officials will, as they have done in the cases of the Standard Oil Company, and the Tobacco Trust, present to a competent court the facts which are public and notorious, the decision must logically follow that the United States Steel Corporation exists in violation of the Sherman anti-trust law. It is not to be doubted that the law and the courts can reach this monopoly even if its annual revenue is counted in the hundreds of millions of dollars. Its power of wealth must not be permitted to paralyze the arm of the law.

(b) In this so-called 'great American industry,' founded upon the tariff enacted for the protection of American labour from the competition of 'the pauper labour of Europe,' it is speedily and effectually excluding American labour, skilled and unskilled, from its employment. It has almost wholly eliminated from numerous departments men who speak the English language. It has again and again advertised that 'Syrians, Poles and Roumanians are preferred' as its employees.

(c) It is accumulating hundreds of millions of dollars by exacting excessive prices for its product from the American public and enforcing an exhausting stint of toil from its labourers and by reducing the masses of its employees to a rate of wages insufficient to provide for the American standard of living.

(d) It not only degrades labour by low wages and a twelve-hour workday, but denies a day of rest by enforcing work seven days in the week, as was made clear in the revelations of the Survey.

(e) Its products are made in reckless sacrifice of human life and human blood, the shocking details of which also appear in the Survey.

(f) It tyrannically prevents the organization of its workers to elevate the standard of living.

(g) It denies the right, recognized to workers by law, to form associations for the promotion and protection of the interests of the toilers.

[Mr. M. Clark.]

(h) It suppresses and prevents free speech and public meetings.

(i) It boycotts American labour and insists upon submissive foreign labour.

(j) It has enforced decrees of banishment from communities where it dominates.

(k) It has in such communities exercised powers beyond the law and in defiance of law, denying to citizens rights fully guaranteed to them as American citizens.

(l) It has both usurped and controlled the exercise of authority in local communities in its own name in violation of the plainest fundamental principles of law.

(m) It is organized illegality, dominant and defiant, with no respect for legal right or human right, with brutal indifference as to human capacity for endurance and for deaths and injuries of its toilers.

(n) Its continued existence and methods are a menace not only to labour but to the business men yet outside of its baneful power and influence, and particularly to the perpetuation of our Republic based upon the independence, character and sovereignty of the masses of our people.

Now, that is a charge that is brought by the heads of American labour against the steel trust of America; and yet hon. gentlemen come to this House, the Minister of Finance tells us that the national policy which is the son of the republican protectionist policy of the United States raises the standard of the workingmen of this country. In case this evidence should not be believed, let me say that in the case of the Bethlehem strike, within the area of this great steel trust, the Federal Council of the Christian Churches of America appointed a committee of investigation into the conditions prevailing in that industry and they found briefly this: fifty-one per cent of all employees had a twelve-hour day. In free trade Great Britain anything beyond a nine-hour day is unknown. They found that twenty-eight per cent of the employees worked regularly seven days a week. This agrees with Nedring absolutely. The committee went on to state in regard to the wages then the wage scale leaves no option to the common labourers but the boarding boss method, with many men occupying the one room. A man with a family takes in lodgers or the woman works. Immigrant parents are reported to send their little children back to the old country to be reared while the mother goes to work.

Mr. Speaker, I would have been lacking in my duty to the people of this country if I had not protested against these iron and steel duties as the first step in the direction of introducing into Canada what is the greatest industrial shambles upon the face of the earth. I support the amendment of my right hon. friend with the very greatest pleasure. I support it in spite

of the very thin fun that was poked at it by my hon. friend the Minister of Trade and Commerce, and which produced for a few minutes such hilarity upon the benches opposite. My hon. friend in poking that fun disregarded the terms of the amendment. He attacked the amendment as if it only dealt with free wheat and free agricultural implements. Why, it ended in favour of a reduction of the tariff all round—at least so I heard it read. Could you have a more complete division between the parties than the policy of the Government as I have examined it—at too great a length, I fear—and that amendment? We are told that it is not a free trade amendment. Even I did not expect that; I had too much regard for history. The first really large step in the direction of free trade in Great Britain itself, was the repeal of the Corn laws. That was exactly equivalent to free wheat. President Wilson before the last election in America, so far as I have read his speeches, did not mention a single duty that he would interfere with. He attacked the evils of protection, and showed the road he was going. My right hon. friend is in excellent company on the tariff when he follows the example of Sir Robert Peel in 1846, and of President Wilson last year. I cannot see where the joke comes in in the fun of the Minister of Trade and Commerce, and I do not think they will find it much of a joke a little later on. On its merits I believe the amendment would receive the support of every patriotic and thoughtful Canadian. I do not think any thoughtful Canadian, if he considered the subject in a non-partisan, unprejudiced manner, would see anything objectionable if free food were in the amendment. And who says free food is not in the amendment? When you start to reduce the tariff, who is going to say where it will stop? According to the Minister of Finance free trade is in the amendment, for he says free implements mean free trade.

Mr. MEIGHEN: What do you say about it?

Mr. CLARK: I am trying to say a good deal about it. I 10 p.m. say that it is an amendment which will commend itself to a very large portion of the people of this country, and I think that a large majority of the people of this country would be in favour of radical treatment of the tariffs of this country. And I not only think, I think I know, that the more the people of this country get to know about tariffs along the line of what I have been trying in my feeble way to bring before this House to-night, the more they will be in favour of reductions in the tariff. In any case, we shall vote as a united party in favour of the specific policy of free wheat and of the specific policy of free implements and for a reduction of the tariff. The party opposite on the other hand stand for the maintenance of tariffs, and for the so-called National Policy. They stand for the introduction of a steel trust in this country, and for all the enormities of protection for combines as they have been exposed and found out in the United States, and as they are being deserted in that country. I would have voted for free food if it had been specifically mentioned. I agree with what Lord Macaulay said in Edinburgh in 1845:

> If there be anything in which all peoples, nations and languages, Jews, Greeks, Romans, Italians, Frenchmen, Englishmen, have agreed, it has been that the dearness of food is a great evil to the poor.

I agree with someone else who has said that taxes upon food are a crime against humanity. I have been called a theorist. There is nothing theoretical about protection, it is practical enough: millionaires and multimillionaires at one end of society and on the other hand the great masses of the people exposed to dear food, racking house rents, unapproachable clothing owing to price, thousands of unemployed,—and this is all true of Canada—falling immigration, falling revenue, farmers leaving their farms, falling trade and increasing debt—those are the accompaniments of the so-called National Policy in Canada at the present time, and every gentleman opposite knows it. I will tell the Government that building armouries will not cure these things. The amendment might have gone farther in specific terms without hurting me. If it had said free necessaries of life I believe the people would have stood for it, but with sufficient reductions in the tariff we will get the free necessaries of life. The amendment as it stands would increase our commerce, it would help to smash combines and to reduce the cost of living. It would also be a step to raising the price of labour. It is a policy of infinite good as compared with the supine, do-nothing or worse, policy of the Government and their supporters.

Mr. H. H. STEVENS (Vancouver): Mr. Speaker, the occasion of the Budget debate

is, I understand, a fit and proper time to offer criticism of the policy of the Government and the administration of the financial affairs of this country during the preceding year. It is also the occasion upon which we look into the future and discuss the question of ways and means in regard to our financial and commercial policy. It is not my intention to follow the arguments of my hon. friend who has just taken his seat (Mr. Michael Clark) in so far as they referred to the expenditures of the Finance Minister during the past year. He characterized the administration of the Finance Minister as one of gross extravagance. On the contrary, I believe that the Budget speech of the Minister of Finance on the affairs of this country and the management of its finances has passed through the criticisms of hon. gentlemen opposite, and that it stands to-day in a very creditable position indeed. A very violent attack was made by the hon. gentleman who has just taken his seat upon the whole question of protection, and if we wanted a concise and brief argument in favour of railway protection in this country I would point to the last two paragraphs of the speech of my hon. friend.

He has drawn the most lurid picture in this House—I do not know his authority for it but I am taking his word—as to the condition regarding the iron and steel industry in the United States. A few moments ago he said it was a crime for this country not to allow its citizens to buy in the open market and that in so far as he was concerned it was his intention to buy stoves, rails, knives and this and that in the cheapest markets irrespective of the conditions under which they are produced. He knows perfectly well that if you are going to improve the conditions under which iron and steel are produced in the States one thing will follow in all probability and that is increased cost. I would like to know what the hon. member for South Cape Breton (Mr. Carroll) thinks of the iron and steel arguments which have been presented by the hon. member for Red Deer and whether or not he would like to hand the people of Sydney over to competition with the conditions which have been so luridly drawn by the hon. member for Red Deer.

I purpose taking up a little later other statements of the hon. gentleman and he will pardon me, if, for a moment, I digress and refer to some statements made by the right hon. leader of the Opposition (Sir Wilfrid Laurier). In his remarks he stated that agricultural production is not equal to the requirements. In another moment afterwards he said that the greatest need of Canada for her farmers was larger markets. These are two sample arguments taken from the speech of my right hon. friend. Then, throwing the responsibility upon the present Government, he added: This Government has done absolutely nothing since it came into power in order to deal with this great problem which he characterized as the greatest problem of the age. I purpose drawing your attention, Mr. Speaker, and that of the House, to what has been done, not by a mere statement of the condition of affairs but by giving the actual facts. In 1899 the Government of the right hon. leader of the Opposition spent $376,000 in the interests of agriculture; in 1905 the Government spent $651,000; in 1911 and 1912, we spent $1,646,000; in 1912-13, we spent $2,703,000 and in the present year, ended March 31, 1914, we spent $4,027,000. This money was spent by the present Government in the interest of agriculture, yet the right hon. gentleman says that this Government has done nothing for agriculture. But I do not base my case merely upon figures and I might add that these figures are absolutely authentic and taken from the departmental reports. I hold in my hand a large number of testimonials from various parts of the country and I will read extracts from a few of them so that my right hon. friend may know that not only the Conservatives of Canada but the citizens of Canada irrespective of politics, including some of our political opponents, compliment this Government on the efforts it has made in the interest of agriculture. The Hon. Walter Scott, Premier of Saskatchewan, speaking in Ottawa at the Canadian Club and in the presence of the right hon. gentleman himself, said:

> Hon. Mr. Scott dwelt at some length on the progress of the province he represented in the last seven years. Seven years ago 63,000,000 bushels of grain were produced. This year 230,000,000 bushels. Seven years ago there were 900,000 head of stock; to-day there are 2,000,000.

This is evidence of the progress of the West under the present Administration. We have been told by hon. gentlemen opposite that everything was going to the bow-wows, but we know from the statements of a gentleman like the Hon. Walter Scott and others that this is not the case. Now, I shall read a letter from the province of Nova Scotia in

which the Agricultural Society of Halifax county—

—do express our appreciation of the grant made from the federal appropriation for agricultural education, which has been used to assist in erecting a building suitable for 'short course instruction' on the Middle Musquodoboit exhibition grounds. And that we also express our thanks to the staff of the Nova Scotia Department of Agriculture for arranging and conducting in that building, the very satisfactory 'short course' on agriculture just completed, and that we as farmers express our approval of the co-operation of the federal and local departments for agriculture.

And so on. Then we have a speech delivered by the Hon. Duncan Marshall, Minister of Agriculture of the province of Alberta, also a Liberal Government, in which he compliments very highly my hon. friend the Minister of Agriculture (Mr. Burrell) and says that he is working in co-operation with the Minister of Agriculture of the different provinces in a manner that means much not only for the success of agriculture but for its progress in future years.

Here is a resolution from the Yarmouth Agricultural Association along the same lines and I shall not detain the House by reading it. There is another letter from Truro, N.S., which is along similar lines on behalf of a hundred and five teachers in attendance at the rural science school held in the Agricultural and Normal College, Truro, N.S. It says:

We, the undesigned, do hereby wish to express our appreciation of what has been done by the Dominion Government. We hope, in return, to instil some of the knowledge and enthusiasm which we have acquired at Truro into the pupils that attend our schools.

I have others along that line, but I do not wish to detain the House at the present moment. What I wish to say is that this Government has grappled with the question in a manner that the late Government never attempted to do, and while it takes some time to see results, yet I think what has been accomplished answers the criticism of the leader of the Opposition.

During the past three weeks we have been favoured with the criticisms and the observations of hon. gentlemen opposite and I have carefully listened to find out exactly where they stood in connection with the fiscal policy of the country. I was impressed by the fact that their policy was very much like Joseph's coat; it was a thing of many different colours. The main portion of the coat was blue, exceedingly blue, I think, for the hon. member who has addressed the House on this occasion used very doleful terms and pointed to a gloomy outlook. Then we had the scarlet of the extremely radical, that element which looks upon every manufacturer, every captain of industry, every leader in transportation, as a veritable rogue, a man who is seeking to rob the country. These hon. gentlemen have not a kind word or a moment's consideration for that class. Then we have the white purity squad—the hon. member for Carleton (Mr. Carvell), the hon. member for Richmond (Mr. Kyte) and the hon. member for Humboldt (Mr. Neely) who were the chief critics of the Government with regard to allegations of corruption. We have also here or there an hon. member who is a wearer of the royal purple of the old National Policy. This is the only saving feature of the policy which has been brought before us by the leader of the Opposition to-day in the amendment. I would like to look for a moment at the amendment. It starts off with a reference to the prevailing economic conditions:

That it is advisable:
1. To place wheat and implements upon the free list.

This is a sop to the western farmers. Then it goes on with a very clever suggestion which is intended to allay any disturbance which may arise in the minds of the manufacturers of the East:

And that without doing any injustice to any class, steps should be taken to alleviate the high cost of living by considerate removal of taxation.

Reference has been made to vague definitions, but of all the vague definitions of expressions of opinion that I have seen, the vaguest is summed up in this amendment to the resolution. Let me give some of the opinions of my hon. friend opposite. The hon. member for South Renfrew (Mr. Graham), speaking at Hamilton the other day before an audience of ladies, had this to say:

It has been said that the Liberals are free traders and the Tories protectionists. I myself say free trade is out of the question. We must have revenue and the people pay a tariff much more easily than direct taxation. Stability of tariff is another thing that Sir Wilfrid has fought for.

On the same occasion when he was speaking to the men in the same city, he had this to say:

When Sir Wilfrid Laurier appealed to the people in 1896, he declared that the tariff would be regulated so that indebtedness would be wiped out and the people would show their prosperity by the jingling of dollars in their pockets. The tariff would be treated by Sir Wilfrid in recognition of the fact that the Government would be responsible to the people.

There never was any desire on the part of the people to injure Canadian industries, but food that goes on the workman's table should go there untaxed.

We have the word of the hon. the junior member for Halifax (Mr. Maclean), of the right hon. the leader of the Opposition and of the hon. member for South Renfrew that food should go on the workman's table untaxed. As pointed out by the hon. Minister of Finance, it is perfectly clear that it is utterly impossible to disturb the tariff to any degree without interfering with the whole fabric of a reasonably protective tariff. If you have a tariff in a country, it must be one which protects the various interests in as just a manner as is possible. If you are going to put implements on the free list, then as the Minister of Finance pointed out, you must extend other concessions to the implement industry. By so interfering with one part of the tariff to any appreciable degree, you find yourself sooner or later interfering with the whole fabric of the tariff.

I desire to deal with some of the statements made by the hon. member for Red Deer (Mr. Clark) and I am sorry he is not in his seat, as I have under my hand some information that I think would be valuable to him. He has constantly posed as a particular student of political economy and he has entertained this House with many unsupported statements as to the effect of free trade in Great Britain, the United States and other parts of the world. I have already alluded to the picture which he drew a moment ago regarding conditions in the United States. I think, before I am through with my remarks, I shall be able to controvert successfully the statement he has made. Before doing so, I wish to correct the impression conveyed to this House by the hon. gentleman a few weeks ago, which has been placed upon 'Hansard' and gone out to the country as an accurate illustration of the condition of affairs. He said with very great force indeed, which is characteristic of him in his speeches, that during the last three years Great Britain had increased her manufactured exports by £70,000,000 and that that was a record that had never been equalled in the world. He went on to say that that was an argument in favour of free trade. The facts are these: In 1907, the British exports amounted to £426,000,000; in 1908, they fell off by £50,000,000 in one year and amounted to £377,000,000; in 1909, they remained stagnant at £378,000,000. From 1910 to 1912 they rose to £478,000,000, the increase being £61,000,000 in a period of six years instead of £70,000,000 in three years, as stated by the hon. member for Red Deer. Canada during five years has increased her total trade by $514,000,000 and her exports by $132,000,000; or in other words, the per capita increase in six years in British exports was $6.50, while the per capita increase in Canadian exports over the same period was $18.50. When my hon. friend picks out odd years and makes statements regarding the value of free trade, it is always well to examine his figures.

He made another statement on that occasion, which I wish to controvert. Picking out two years again, he stated that in 1883 Canadian trade was about the same as it was in 1896. These are the actual facts: From 1869 to 1873 we had a Tory government in this country, and the total trade for 1869 taking exports and imports together, was $130,000,000. In 1873 the total trade rose to $217,000,000, an increase of nearly 100 per cent. Then came into office the Liberal Government and immediately the trade fell off from $217,000,000 in 1873 to $153,000,000, in 1878. Again, came into office the Government under Sir John Macdonald with the National Policy, and our trade increased from $153,000,000 in 1879 to $239,000,000 in 1896; and in 1911, it had increased to $769,000,000, but in the following year the increase was over $210,000,000 in one year, or in the two years from $769,000,000 to $1,085,000,000. When the Liberal Government was in power before the adoption of the National Policy, the trade dropped off nearly 100 per cent; when the National Policy was introduced there was a continual climb, but the climb has been more rapid under the present Government than it was even during the palmy days of the Liberal Government, in spite of the fact that they perpetuated our fiscal policy.

We have heard a good deal regarding the home market, the Northwest, and so on. I would not presume for one minute to controvert the opinions of hon. gentlemen from the prairie provinces with regard to what should be done in that part of the country, but I want to make a few observations and I am sorry that the hon. gentleman for Red Deer has vacated his seat. He went out to the prairie provinces about eight or nine years ago. I take it from his own statements that he is a man of considerable business ability; at least he poses to be an authority on matters of finance and business. I take it for granted that when he went out to the prairie country to engage in farming, to raise steers, as he says, he knew what he was doing. I assume that he knew

what the price of steers was and what his profit would be and that he would not have gone into the business unless he thought he could make a profit. At that time he could get from $42 to $45 a head for his steers, and this, it is to be supposed, was profitable business. But to-day he would get $80 to $91 for the same animal. And still he complains of conditions in the West. That is, he is making more than a hundred per cent more than when he went into the business; and still he says the business is in a languishing condition. Then he pleads for foreign markets. But what are the facts as given in this House the other day? Last year there was put on the market for consumption in Alberta $10,000,000 worth of beef. Of that $5,000,000 was sold to the British Columbia market and $4,500,000 to Calgary and Winnipeg, and the balance, $500,000, or five per cent, went to the United States. These are figures that cannot be controverted.

Now, reference was made during the remarks of my hon. friend to the tariff conditions in the United States. He said that during the early part of the last century the United States had practically free trade and that wages were higher than they are to-day under protection. Mr. Speaker, that statement is absolutely aside from the fact. Briefly, the history of the tariff in the United States is this: The first tariff, a revenue tariff and very low, was put on in 1779. In 1816, material increases were made. In 1824, led by Henry Clay, there arose a demand for a national policy, and a higher tariff was put into operation. In 1842, a protective tariff was introduced There was a reduction to twenty per cent under the Democrats, but this remained on the statute book for only two months, and then the protective tariff was put on. In 1857, the tariff was reduced to twenty-four per cent, which was called free trade, and remained there for a few years until the Civil War, when again there was an increase. So it went on until 1897, when, under the Dingley tariff, the duties were raised, as we all know, to the highest point. I shall not review in detail the tariff of the United States, but I merely quote these figures to show that the statement of the hon. member for Red Deer was absolutely inaccurate when he said that in the early part of the last century they had practically free trade in the United States. They have never had free trade in the United States since they broke away from the mother country in 1776.

Now, I wish to make, as briefly as I can, in view of the lateness of the hour, some comparisons of free trade versus protection. I stand firmly on a policy of protection. My hon. friend from Red Deer can hurl all the abuse he likes at us; he can tell us we are lacking in common sense, and can give us the remarkable stories he works himself into in his speeches in this House; but the facts are the things upon which we and the country will base our conclusions, and I challenge him to produce at any time in his future speeches facts that will controvert the statements I shall give in the remarks I shall now make. I draw attention to the fact that Great Britain did not dare adopt free trade to any considerable degree until she had control, practically, of the commerce and industry of the world. The hon. member for Red Deer, the champion of free trade in this country, knows that fact perfectly well. He knows also that the people of Great Britain would never have adopted free trade if they had thought there was the slightest competition. Germany and the greater part of Europe had free trade, or practically free trade, and the British leaders said: If we can put on free trade now that will form a precedent, and the nations of the earth will follow and we will keep them from building up their industries. That was the statement of Canning, Huskisson and all the other political economists of that day; it was the statement of the whole school of free traders in England. And their policy had that effect for some time. The hon. member for Red Deer quotes Cobden in this House. Let me tell him that after fifteen years of free trade, from 1846 to 1861, Cobden admitted that free trade was an utter disappointment to the British people and suggested—and succeeded in introducing—a system of treaty making. This began with the treaty with France, which treaty resulted in the tremendous reduction of the manufacturing industries of France during the short time it existed. France learned a lesson during that period of free trade or reciprocity, and they wiped it out and have never had it since. And France is in a better condition than any other country so far as working conditions and the cost of living are concerned. From 1852 to 1860, practical free trade was introduced into England. That is, they call it free trade,

but it is not free trade, and no country in the world has free trade. Why, in the year which ended on the 31st of last month, Great Britain took in $177,000,000 in customs duties, a large portion of which is on foodstuffs. Now, coming down to the period in which free trade was introduced, I desire to quote from Mr. Clive Day, an eminent writer on these subjects. He says:

> If we measure the value of goods exported from 1800 to 1849 on official standards, we should find that they had increased from $120,000,000 to $950,000,000, or 682 per cent.

Now, I will give the exact figures as taken from the blue books. In 1800, the imports were $140,000,000 and the exports were $165,000,000, total, $305,000,000, an excess of exports of $25,000,000. In 1846, during the period of protection, this had increased to $369,000,000, and the imports to $723,000,000, a total of $1,092,000,000, or an increase of 500 per cent. That was a very creditable increase at that time. And I wish to observe that the exports during this period exceeded the imports by $354,000,000, which again is a very creditable story in connection with the trade of the country. In 1860 this rose to $1,825,000,000, caused by the large increase in imports as the result of the repeal of the Corn Laws and the importation of food into England. The imports in this period exceeded the exports by $223,000,000. Now, I have a statement here of the trade of different countries. I have already given the figures for the early part of the century. During the latter part of the century the increase was 225 per cent, as against 500 per cent during the first part of the century. The greater increase was while it was a protective country, and yet according to the statements of the hon. member for Red Deer it should have been going rapidly to the bow-wows.

Now, coming to the United States we find that in 1790 they had an export of $20,000,000 only; in 1912 they had an export of $2,171,000,000. Comparing the total trade of England for the last half-century with the period of free trade, we find that in 1840 the total trade of the United States was $221,000,000 and in 1912, $3,812,000,000, an increase of 600 per cent. That, Mr. Speaker, is a very creditable showing. What do you find in connection with Germany? I have been unable to get the figures with regard to all the German states prior to 1871; hon. gentlemen will remember that at that time under Bismarck the states of Germany were brought under one head and a national policy was introduced. In 1872 the total trade of Germany was $1,843,000,000; in 1910 it was $4,192,000,000, or an increase of 230 per cent, which is a very credible increase. Again, this was under protection. The same thing applies to France and to other protectionist countries in general; I shall not quote the figures at this time.

In 1880 the exports of Great Britain exceeded those of the United States, France and Germany by £16,000,000. In 1908 the exports of these three countries were doubly as large as those of Great Britain; in other words, Great Britain, even as late as 1880, had the supremacy of the commerce of the world, but in 1908 the conditions had so changed that she had only half the export trade which those other three countries had. During the first half of the nineteenth century, under protection, the cotton trade of Great Britain increased 1,000 per cent, or more than tenfold. The hon. member for Red Deer, speaking in the House some time ago, attributed any increase in the trade of Great Britain for the first half of the century to the development of the railways. If that applies to the first half of the century it doubly applies to the last half of the century, because if there has been development in railways it has been during the latter period. In 1800, 32,000,000 yards of cotton were produced in Great Britain; in 1830 the output, under protection, had increased to 347,000,000 yards. In 1850 Great Britain produced more cotton than all other nations combined. She had two-thirds of the world's shipping and two-thirds of the world's coal production. Forty years ago Britain had over fifty per cent of the world's trade in firearms; this has decreased to less than ten per cent at the present time. In 1911, after fifty years of free trade, she lost her position of supremacy and controlled only sixteen per cent of the trade of the thirty-four leading nations of the world. Mark the change: when she adopted free trade she had two-thirds of the trade of the world; fifty years after free trade was introduced this had dropped to sixteen per cent. She entirely lost her place of supremacy.

I wish to deal with one or two industries in a specific manner. We have heard a great deal about the iron and steel industry from the hon. member for Red Deer. He has pointed out that we should not adopt protection because of certain alleged objectionable conditions which obtain in the

United States. While that may be true, that is not what we are concerned with. What we are concerned in is what is the best fiscal policy for this country; it is our business to see that the conditions which surround the industries of our country are right. I shall not weary the House with very many comparisons, but, as briefly as possible, I wish to give a comparison of the conditions in certain nations. In 1840 the United States produced 290,000 tons of pig-iron. In 1900 this output had increased to 13,000,000, an increase of 1,840 per cent. In 1913 the output was, I think, 27,000,000 tons. In 1840 Great Britain produced 1,390,000 tons of pig-iron; in 1900, 8,000,000 and ten years later she produced only approximately the same amount. In 1840 Germany produced 170,000 tons of pig-iron; in 1900, 8,498,000 tons. This has increased by twenty-five per cent during the last few years. I could quote a large number of other figures, but the hour is late and I shall not weary the House with them at this time.

I must draw the attention of the House to what I deem to be one of the tragedies of free trade in the old country. In 1860, when the duties were removed from the silk industry, in London alone there were 24,000 looms and 60,000 operators. By 1884 these were reduced to 1,200 looms and 4,000 operators, a reduction of about one-twentieth. In Coventry in 1861 the ribbon trade employed 40,600 persons; in 1884 the number was reduced to 10,000 persons. In Derby the number of employees was reduced from 6,500 to 2,400 persons, and in Manchester the trade was absolutely wiped out. In the year 1823 the output of manufactured silk in the old country was £6,200,000. By 1857 this had increased to £21,500,000, and after forty years of free trade it had dropped to £6,000,000, exactly where it was at the beginning of the century. In the year 1912 the consumption of silk in Great Britain was £19,000,000 and the imports £13,000,000; in other words, the silk industry, which produced over £21,000,000 worth of silk in 1857, had dropped in 1912 to where it was at the beginning of the century. That, I say, is one of the commercial tragedies of Great Britain, absolutely attributable to the policy of free trade. In the United States they produced in 1850 $1,800,000 worth of manufactured silk. In 1910 they produced $197,000,000 worth, or an increase of eleven hundred per cent. That was done under protection. In 1850 wages in the United States in that industry were $300,000; in 1910 they had increased to $38,570,000. Will any hon. gentleman say that a trade of that kind is not valuable to a country; that an industry of that kind is not desirable? Yet, under the free trade policy that my hon. friend from Red Deer talks so much about, this valuable business was practically wiped out in the old country.

I desire to refer very briefly to the cotton trade. It is well to remember a few facts in connection with the cotton trade in Great Britain. In 1721 the cotton of the world was practically all produced in India and China. Great Britain undertook to produce and manufacture cotton at home; she prohibited the importation of cotton goods from these countries, although at that time or shortly afterwards she controlled the Indian Empire and its production. She prohibited the importation of cotton goods into Great Britain, and speaking of the free trade policy of buying in the cheapest market, she paid more for her cotton manufactured at home than she would have paid for it under other conditions. What did she do? She protected the industry until the middle of the last century, with the result that last year Great Britain shipped $172,000,000 worth of manufactured cotton into India, which at one time was the chief cotton producing country of the world.

We find that early in the century, before protection was raised to a reasonable degree, the United States imported manufactured cotton, although they grew a large amount of raw cotton. We find that in 1850 the manufactured product was $61,000,000, and in 1910 this had been increased to $628,000,000, or an increase of 1,000 per cent in half a century. I wish to show very briefly how Great Britain, since the adoption of free trade, has lost her position of supremacy in the manufacture of cotton. We are inclined to believe still that she holds the premier position in the world in that regard. The figures of the consumption of raw cotton for last year are as follows: Great Britain consumed 19 per cent of the total production; the United States consumed 27 per cent of the total production; Germany 10 per cent, Russia 9 per cent, and Japan 7 per cent, and the rest was distributed in small quantities among other countries. I quote this to show that Great Britain has fallen from the place of absolute control of the cotton industry to the production of only 19 per cent of the manufactured cotton of the world.

We have heard a great deal about the question of taxation. My hon. friend from

Red Deer a few moments ago referred to Great Britain as the El Dorado of the workingman in connection with taxation, cost of living and wages. I desire to place on 'Hansard' some very important facts in regard to this question. I have already stated that Great Britain collected $177,000,000 this year in customs taxes. In the year that Great Britain adopted free trade she collected $4.25 per capita in customs taxes. Last year she collected exactly the same amount, $4.25 per capita, in spite of the increase in population; so that although they have free trade in Great Britain to-day, the customs collections are exactly the same per capita for the country. But from 1904 to the present time she has collected on an average $80,000,000 per year from buildings occupied by manufacturing industries, or an amount equal to 15 per cent of the total manufactured imports of Great Britain. Consider that for a moment. Here is a taxation of $80,000,000 placed upon the industries of the country. Who pays it? It must be paid, it is paid by the people of Great Britain, it is paid by the consumers in other words. Great Britain could have collected the same amount of taxation by placing an import duty on manufactured goods, and thus have protected and helped her manufacturers. She put the tax on them by a taxation on the buildings they occupied. A more false basis on which to rest a fiscal policy I do not know. The taxes on farmers in Great Britain have increased during the last half of the century, or from 1860 to 1910, by 80 per cent; and to bear out that statement I wish to quote from a statement made by Lord Lucas, a Liberal peer:

Lord Lucas speaking at Hitchin, on April 7 last, said:

> I am in a position to announce that it is the intention of the Government to make considerable grants out of imperial taxation to assist the rates in this country and it will be done in the coming Budget.
>
> The Government recognize that the method by which a farmer is assessed upon practically the whole of his stock-in-trade is a very unfair one, and they will try as far as possible to alleviate this injustice by making a very considerable grant towards the rates in the country districts.

That is the statement of a Liberal peer made only a week or so ago. The statement has often been made that customs duties are a very expensive form of taxation to have because it costs a great deal to collect them. I examined very carefully for a number of years the cost of collection in Great Britain of customs and the cost of collection of the excise revenue, that is the income tax and some other taxes such as the succession dues, etc. In 1913, Great Britain's customs revenue was $169,500,000. The cost of collection was $4,200,000 or 2.4 per cent, which is recognized as a very low cost. The inland revenue contributed $410,000,000 at a cost of collection of $9,800,000 or exactly the same rate, 2.4 per cent. But, in addition to merely collecting taxes, the customs officers do the clearing of vessels and many other duties which are indispensable and for which they would have to be employed in any case. I have heard many references to the income tax. My hon. friend from Red Deer is constantly stating that direct taxation is a system that should be adopted. He holds that taxation by a tariff is the most unjust system. I would like to refer him to a statement made by one whom he has set up as a veritable god. I refer to the late Right Hon. W. E. Gladstone, who, speaking on a memorable occasion to which my hon. friend alluded a moment ago, in the Midlothian campaign in 1879, said:

> This, at any rate, is clear—there was a clear stage upon which, on our responsibility, we were ready to repeal the income-tax, and it would have been done with fairness to every class of the community. The Tories came in: the income-tax since then has been raised from 2d. to 5d. in the pound, and when we will get rid of it I do not know. I hope it; but it will be perhaps in the days of your children and grandchildren.

That was Mr. Gladstone's opinion of direct taxation by the method of income tax which the hon. member for Red Deer recommends so highly to this country.

I wish to call attention to the taxation of various countries. The taxation of the United Kingdom is $19.86 per capita. The United States under protection, supposed to be heavily taxed and bearing the awful burdens of which hon. friends tell us, collected $10.25 per capita; Germany $10.58 and Canada $16.63 per capita. That was for 1912. In other words, the taxation of free trade England was 100 per cent. greater than that of Germany or the United States, the high protectionist countries.

Mr. M. CLARK: That, of course, is the federal taxation in the United States.

Mr. STEVENS: Exactly.

Mr. M. CLARK: My hon. friend understands that a great deal done under our taxation is done by our local governments.

Mr. STEVENS: If the hon. gentleman had been in his seat a moment ago, he would have heard me read a statement by Lord Lucas in which he pointed out that the Imperial Government had found the local taxation so burdensome that they were going to provide an additional sum in the Budget to reduce the taxation in the rural districts of England. So we see that the people of Great Britain are finding the rural taxation so heavy as to be almost unbearable, in addition to having to pay imperial taxes. I had some extracts from the London Times on this point which I have apparently mislaid.

I wish to discuss very briefly the question of the debt of these countries. Great Britain's debt is something like £700,000,000. They hold £40,000,000 worth in Suez shares, and the balance is pure unadulterated debt. In Germany the debt is also £700,000,000, but in that country there are several state-owned enterprises bringing in revenue. As an illustration of that let me give the figures for 1909: Germany's state-owned railways produced a revenue of $130,000,000; forests, $14,000,000; mines, $4,500,000; factories, $4,000,000; and agriculture, also under ownership of the Government, $4,000,000; or a total from state-owned industries of $157,000,000. In 1870, Germany was a borrowing country, but in 1907 she had loans out to the extent of $5,000,000,000, bringing in an interest of $300,000,000. That interest was increased in 1912 to $500,000,000. In other words, under protection Germany, in thirty years, changed from a borowing country to a country that was lending foreign countries $6,000,000,000. In savings deposits, which are a good indication of the prosperity of the country, we find that the per capita savings deposit in the United Kingdom is $24.67; in the United States, $46.80; Germany, $62; and Canada, $90. In Germany in 1900, savings deposits amounted to $2,200,000,000, and in 1911 this had doubled to $4,500,000,000. In Great Britain, in 1900, savings deposits amounted to $908,000,000, and in 1911 to $1,140,000,000, or an increase of only 25 per cent. My hon. friend from Red Deer (Mr. Michael Clark) has often referred to the splendid condition of the workingmen in the old country, and has stated that there was no place in Europe where workingmen were better off. What are the facts? Eighty per cent of the wealth of Great Britain is held by one and a half per cent of the population, and 18 per cent of the wealth by 11 per cent of the population; or 98 per cent of the wealth of Great Britain is in the hands of 12½ per cent of the population. That is an indication of how wealth is distributed in a free trade country. Hon. gentlemen talk about combines, and the amassing of wealth by individuals, but there is no country in the world where there is so much poverty among the masses and so much wealth in the hands of a few as in Great Britain. My hon. friend from Red Deer may say that I am

11 p.m.

not very loyal to my native country, but one thing I do regret is that Great Britain ever adopted the policy of free trade. She is rapidly losing the position that she won under the protective policy. I have in my hand a great many figures relating to the increase of the cost of living in various countries, which I will condense as briefly as I can. These figures are given by the British Board of Trade—an authority which I am sure the hon. member for Red Deer will not question. From 1900 to 1912, Great Britain shows an increase in the cost of living of 16⅔ per cent; France, 4 per cent; Germany shows a decrease of 5 per cent in cereals from 1890 to 1910, and an increase in meats, &c., of 1 per cent, and an increase of 5 per cent in textiles; or a very slight average increase in 20 years. Canada from 1890 to 1912 shows an increase of 38 per cent distributed as follows —and this is a point we should consider— in dairy products an increase of 56 per cent; in fish, 52 per cent; animals, 46 per cent; other foods, 6 per cent; farm implements, of which we have heard so much, have increased by exactly 1 per cent. The British Board of Trade Inquiry into the cost of living and wages reported in 1911 as follows:

> In 28 large American industrial cities east of the Mississippi (exclusive of New York) it was found that the hours of labour were 11 per cent shorter in building trades; 7 per cent shorter in printing and allied trades, and about the same in mechanical engineering trades; and that wages were 113 per cent higher in building trades; 132 per cent higher in printing; and 146 per cent higher in engineering trades. Rents are 50 to 77 per cent higher in the United States.

They sum up the comparison as follows:

> The workman's wages are higher in the United States by 130 per cent (over double) with shorter hours, while his expenditure for food and rent is only 52 per cent higher than Great Britain, and unemployment is far less conspicuous than in Great Britain.

Mr. MICHAEL CLARK: Does it say that in the report?

Mr. STEVENS: Yes, that is from the report of the British Board of Trade Inquiry. They further say:

It may be noted also that wages in the United States are higher relatively to the cost of living, with the result that in times of depression earnings may suffer a considerable diminution before the level of actual privation is reached.

I could also quote from the Gainsborough Commission's report. When the hon. member for North Waterloo was quoting from that report the other night the hon. member for Red Deer sent a note over to the hon. member for Humboldt who afterwards pointed out that the report of that commission was totally unreliable. The Gainsborough Commission consisted of workingmen who visited Germany to investigate working conditions there. I shall not quote them. They carry out the statements which I have already quoted from the Board of Trade.

I wish to turn now to another phase of the question and that is pauperism and unemployment. We have heard a great deal regarding pauperism and therefore I would like to give some figures upon this question. These again are taken from the Board of Trade and I would commend them to my hon. friend for his consideration. Germany has 27,399 paupers in the workhouse as compared with a population of 64,000,000. Great Britain has 400,000 paupers in the workhouse as compared with a population of 45,000,000. Great Britain gives annual relief to 700 out of every 10,000 of the population and Germany to 300 out of every 10,000. The percentage of paupers in the two countries in 1903 was: in Germany, 2·7 and in Great Britain, 5 per cent; in 1909, in Germany 2·8 per cent and in Great Britain 7·7 per cent. The average for seven years was 2·1 per cent in Germany and 5·6 per cent in Great Britain, or over double. The hon. member for Red Deer told the House to-night that conditions in Great Britain were the best of any country in Europe.

Mr. MICHAEL CLARK: I never made that statement. The only reference I made to Great Britain as compared with Europe was as to the wages of skilled and unskilled labour and I said that they were the highest in Europe. That is very different from saying that the condition of the country is better. Of course, if it is correct, I would be prepared to say it, but I did not say it as a matter of fact.

Mr. STEVENS: In any case it does not alter what I am about to say in connection with the conditions. My hon. friend has very frequently on the floor of the House pointed out that a most lamentable condition obtained in 1846. He has drawn most lurid pictures of the suffering and starvation of the poorer classes at that time. The Rev. J. A. Macdonald, of the Globe, whom my hon. friend knows very well, on August 28, 1909, gave a very interesting account of his impressions of a trip with the Press Conference to the old country at that time. He considered his statement very carefully before he made it, because he says:

The question has been asked so often that I have taken myself in hand to answer it.

Then he goes on to give his impressions of the industrial conditions of Great Britain and I am going to read the article although it is somewhat lengthy because I recommend it to the study of the members of this House. He says:

It was not Lord Rosebery's speech, brilliant and striking though that speech was. It was not the face or message of any of the statesmen, or pro-consuls or scholars or heroes—Asquith, or Grey, or Haldane, or Morley, or Crewe, or Birrell, or Balfour, or Churchill, or Cromer, or Curzon, or Milner, or Roberts, or French, or Beresford, or Fisher—whose names gave distinction to the programme. It was not the mother of parliaments, or the glory of the church, or the shrined history of Oxford, or the liquid history of the Thames. It was not the splendor of Stafford House, with the charming Duchess at the head of the grand staircase, or the exclusive privileges of Aspley House, or the Lord Mayor's freedom of Mansion House, or the Archbishop's benediction at Lambeth. It was neither Aldershot, with the army, nor Spithead with the navy . . . Frankly, the thing that impressed me most, the thing that stands out as the background of every reminiscence, was the bloodless, mirthless, hopeless face of the crowd. . . The pale and sunken faces of the nameless city crowd haunt one like a weird.

London, Sheffield, Manchester, Glasgow, Edinburgh—each had its distinctive features, but everywhere the marks were deep of disease and degeneracy in body and mind and morals.

In some of the smaller places where industrial percentage is large, or the occupations unhealthy, the blood-poisoned workers present an appearance that to unaccustomed eyes is simply ghastly. Sheffield staggered all the delegates—it is a hive of industry.

The conditions of the poor may be worse in other industrial centres of England, but certainly no delegate had ever seen the like in any white country overseas, or even imagined it possible within the limits of human nature.

What struck every observant delegate was the utter blankness of the faces which looked up at us—stooped shoulders, hollow chests, ash-coloured faces, lightless eyes, and, ghastliest of all, loose-set mouths with bloodless gums, and only here and there a useful tooth.

I consider that somewhat of a libel on the mother country but this is the statement

of the Rev. J. A. Macdonald over his own signature, and written, as he says, after taking himself carefully in hand. It is a statement of the conditions obtaining in the industrial centres of England under the free trade policy which according to my hon. friend, should result in a very high condition of living indeed.

I observe that I must hasten along in my remarks as the hour is getting late and I shall cut out a great deal of what I intended to say. A great many hon. gentlemen opposite have denounced in most unmeasured terms the leading manufacturers and men of industry in this country. One would judge from the remarks which have fallen from their lips during the past week or two that these men were veritable robbers, that they had no interest in the country and that their only object was to fleece the public out of their money. I am just going to draw attention to the importance of the manufacturing industries as a source of the country's wealth which merits our consideration. We find that the production of manufacturing industries in the year 1910 was $1,965,000,000 of which about $200,000,000 was paid out in wages to workingmen. This is an ample indication of the value of the manufacturing industries of this country. I differ entirely with hon. gentlemen who denounce the manufacturer as a person whom we should avoid. I believe that the manufacturer, just as much as the farmer, has his place in this community and has a business to carry on. I believe that the manufacturers, as I have met them, are just as estimable, just as moral, just as good citizens as you will find in any part of the country. Why should we be constantly debating the manufacturer on the floor of this Parliament? It has been said by the very highest authorities on political economy by such men as John Stuart Mill, Adam Smith and others, that a purely agricultural country could never progress to a very high place among the nations of the world. It is no reflection upon the agriculturist, the farmer, to say that from the very nature of his occupation, separated from his fellows by considerable distances, it is impossible to develop the social conditions necessary for the highest culture, education, or the development of art and science. But an ideal country is a country which has manufacturers, which has transportation, which has commerce and which has agriculture as well. The possibility of developing these conditions obtains in Canada to-day in a very marked degree. No other country in the world is richer in natural resources than Canada. We have waterpowers and coal for the development of industries and we also have the greatest area of fertile land probably of any country in the world, so that we have everything necessary to build up a very highly developed country. It is the duty of this Government and of all Governments to stand by a policy which will develop all these various branches of industry in this country.

I wish to speak very briefly in regard to this vexed question of flour and wheat. I shall not touch upon the free wheat side of the question, because it has been so fully discussed already. According to the statements of some hon. gentlemen opposite, the millers are shipping flour to the old land for a figure less than what it can be bought at in this country, and the statement is made that flour which is sold in Montreal at $5.10 a barrel sells in the old country at $4.80 a barrel. The facts are briefly as follows: We produce in Canada four or five grades of flour. First, we have the Top Patent, which is Ogilvie's Household, the Lake of the Woods Five Roses and such grades of flour. This grade is sold almost exclusively on the Canadian market. The largest shipping mill in Canada ships practically none at all of this grade of flour to the old country; out of a shipment of five or ten thousand barrels there might be 100 barrels of Top Patent flour, a practically neglible quantity. Of the second grade, which is No. 2 patent or Strong Bakers' flour, they exported 36 per cent. Then they have a third grade, No. 1 and 2 clear, of which 90 per cent is exported to the old country market. I have here a statement for the month of January, 1914, giving the prices which are being secured:

Grade.	Average sales return comestic business during January, 1914. f.o.b. Toronto	Selling Price to Importers at					Percentage exported in January, 1914
		St. John's, Nfd.	Delagoa Bay	Glasgow	London	Copenhagen	
Top Patent	5·18	5·45	5·64	.....	.....	.....	18
2nd Patent	4·59	.....	5·16	4·41	4·37	4·59	36
Blended	4·51	.....	.....	4·28	4·24	4·49	90
1st Clear	3·91	.....	.....	4·03	3·99	4·22	90
2nd Clear	3·19	.....	.....	3·53	3·49	3·74	80

These are the actual figures of the output of the largest shipping firm in Canada. If we consider for a moment the statements of hon. gentlemen opposite, they answer themselves without any such statements as I have made. It was stated that this flour sold at $6.50 a barrel at Halifax. The hon. Minister of Trade and Commerce covered this point, but I will repeat it for the sake of making it perfectly clear, because he was interrupted at that moment and the trend of his argument was disturbed. The price in Montreal was $5.10 according to hon. gentlemen opposite. The freight to Halifax is 25 cents a barrel which means $5.35 in Halifax. The hon. member for South Cape Breton (Mr. Carroll) stated that the price was $6.50 at Halifax and he held it up as a crime against the millers that they were charging such high prices at Halifax as against Montreal. Let us look at the old country prices which I have just quoted and which are absolutely authoritative. $5.10, he says, is the price in Montreal, but he was quoting the lower grades. The price of these in Montreal is $4.60 which, with 30 cents freight, makes the price $4.90 for export. If the statement made was true that we were charging $6.50 at Halifax, merchants could re-import that flour, pay the freight both ways and the duty, and still the consumer would get it cheaper. The arguments in regard to the export of flour are absurd on the face of them. We export the lower grades, while practically none of these top grades are exported. Our hon. friends opposite have been quoting the figures of the top grades in Canada and of the lower grades on the European market, thus confusing the whole question.

It may be well to draw attention to a condition which obtains in regard to the freight rates from here to the mother country. In 1911, the freight rate on flour was 8·9 cents per cwt.; in 1912, this was raised to sixteen cents. The Association of Millers at London, together with the transportation companies entered into collusion, because they had a meeting no more than four mouths ago in London on this very question, to raise the freight rates on flour to such an extent as to constitute a very adequate protection for the millers of the old country as against the millers of this country. While they are supposed to have free trade and we are supposed to have free access to the old country market, they are just as well protected by this method as our market is protected by our tariff.

The same principle applies to our beef. I think it was in 1884 that an embargo was put against our cattle in the old country. Sir Charles Tupper, who was shortly after our High Commissioner to the old country, investigated the whole situation with veterinary surgeons and others, and found that there was absolutely no reason why this embargo should be put on except to protect the farmers and raisers of beef in the old country. That is the return we get for putting on the British preference. We can hope for very little sympathy from the present Government in the old land in so far as so-called reciprocal relations in trade are concerned. When they had the offer of reciprocity by giving some preference, they absolutely refused to do so, but placed an embargo against our flour and our beef which I consider to be totally uncalled for.

I intended to make a brief comparison of the tariff of President Wilson with our own tariff. I have gone carefully over the figures of the Underwood tariff and I find that about half the articles he has placed upon the free list have always been on the free list in so far as our tariff is concerned. I find also that our tariff is still quite as low as the American tariff, taking it all through on an average.

I wish to say, in conclusion, that it seems to me the Government is wise—in fact I congratulate them upon it more than

upon any other point—in having declared themselves frankly and openly as sustaining the great policy of the Conservative party throughout the history of Canada. I believe this is no time to tamper with the tariff in a downward revision. We have a very moderate tariff. I find that even the hon. member for Red Deer in a speech in this House not very long ago referred to our tariff as being a tariff for revenue only and congratulated the late Finance Minister because he had maintained this as a revenue tariff. Now he says it is an iniquitous protective tariff and seeks to stir up the country against it. Yet for years he sat and supported the right hon. leader of the Opposition when, as head of the Government, he was primarily responsible for this tariff. I find on looking up the records, that the present leader of the Opposition himself was a protectionist in 1879 when the National Policy was introduced and that he declared himself in favour of protection. When he was in office he carried out that principle; and we know, and he knows perfectly well that should the country be so unfortunate as to return him to office, he would still carry on the policy of protection. That is plain in the very amendment he lays before us with its words ' without doing injustice to any class.' In other words: I will do the manufacturers no harm; return me to power and I will do no injustice to you, just as in 1896 I promised not to do you injustice and carried out that promise. They talk of the revision of 1897. Mr. Fielding himself said in his Budget speech on that occasion that he was not going to tamper with the tariff, but that all he was going to do was to remodel the forms of it. And that is all he did do; it was identically the same tariff except for the introduction of the British preference—a very questionable benefit. With this exception the tariff is identical with that passed at the instance of Sir John Macdonald in 1879. I am glad that this Government is determined to carry out this policy, for I believe that it is the only policy under which this country will prosper.

I wish to add a word before sitting down in connection with the statement made regarding the earnings of the Lake of the Woods Milling Company and the Ogilvies Milling Company, which I have before me in the Annual Financial Review. I take it also from the Banking Annual. I find that the Ogilvies Milling Company earned last year 8¾ per cent on its capital. The profit on every barrel of flour ground by the Ogilvies Milling Company was 13¼ cents. When you quote the figures showing $500,000 of a profit, some hon. gentlemen seem to think that a crime. As a matter of fact, I repeat, they earned a profit of 13¾ cents per barrel and 8¼ per cent on the capital of the company. And the Lake of the Woods earned, as I figure it out, 12 per cent on its total capital. Now, these are reasonable earnings, and such as no one should complain of. But you would think, to hear our friends opposite talk, that it was a crime for the industries of this country to be prosperous. For my part I am glad to see them prosperous. And I am glad the condition of this country is improving. I believe we have before us in years to come an era of prosperity that has not been equalled in the history of Canada. I do not mean that we are to have an era of speculative prosperity, but of real prosperity for the industries of the country, for the farmer, for the artisan and for all classes of our people.

Mr. GEORGE H. BOIVIN (Shefford): Mr. Speaker, at this late hour, when the members from all over Canada are patiently waiting an opportunity to express by their votes the opinions of their constituents upon the amendment presented this afternoon by my right hon. leader (Sir Wilfrid Laurier), I do not propose to delay the proceedings by making a long speech. I must, however, express my regret that the hon. member for Vancouver (Mr. Stevens) is unable to agree upon the question of free trade or protection for his native country with such great men as Asquith, Gladstone, Codben and Peel. But if I were to place these four on one side of the balance and the hon. member for Vancouver on the other side, I fear that they would prove to have the most weight. I congratulate the hon. member upon the able manner in which he repaired in his own mind and perhaps in the minds of his colleagues on his side of the House the enormous mistake made this afternoon by the hon. Minister of Trade and Commerce (Mr. Foster). I wondered, when I heard him make the statement during his speech what the hon. Minister of Trade and Commerce would do if he had not the hon. member for Vancouver to put him on his feet every time he made a mistake. Also, I congratulate him sincerely upon the able manner in which he has repeated all the arguments we have heard here again and again in favour of protection and high tariff. And now, Mr. Speaker, I will proceed to repeat a few of the arguments advanced by many able speakers on this side in favour

of a revised tariff, free wheat and free agricultural implements. It would be impossible at this late stage to say anything very new upon the subject before the House, but what our friends opposite would considerably enjoy would be a speech or two from some Conservative members from Manitoba, Alberta or Saskatchewan who would come out openly against free wheat and free agricultural implements. They dare not speak in favour of the Conservative tariff policy, and they dare not vote against it. Some Conservative members from Manitoba should at least demonstrate to the Minister of Finance and his colleagues that the Conservatives in the Manitoba Legislature are not free traders. The Minister of Finance says that every one who is in favour of free wheat is a free trader, that free wheat means free trade. Some Conservative member from Manitoba should have taken issue with him and demonstrated that the Conservatives of Manitoba are not free traders. That should not be a difficult task, because no one believes that statement that free wheat means free trade, except the Minister of Finance himself. And I would say that even he does not believe it, if you had not ruled a few days ago, Mr. Speaker, that such a statement would be absolutely unparliamentary. For that reason and for that reason alone, I place the Minister of Finance in a class by himself. It is for that reason only that I admit that he is the only person in this country who believes that the hon. member for Brandon (Mr. Aikins) who made a speech in favour of free wheat is a free trader. When that Conservative member for Manitoba has convinced the Finance Minister that he has made a mistake, he will still have a more difficult task left, and that will be to convince the intelligent farmers of Manitoba and western Canada that they are not intelligent enough to know what they really want, and that it would be a terrible thing for them to have three markets in which they could dispose of their wheat instead of only two. The hon. member for Vancouver says he is a protectionist. I regret that in the arrangement of speakers it should be left to me to reply to his strong arguments not in favour of the people whom he represents, but in favour of the interests who placed our friends opposite in power. I am not able to reply to each and every argument as eloquently as many hon. gentlemen upon this side of the House have replied to them, but I will say that the most eloquent and the most convincing reply that he and the Minister of Finance could possibly receive was the applause of his fellow Conservatives, who made the walls of this old Chamber re-echo their cheers again and again when he told you, Mr. Speaker, that he had gone the Liberals one better on the road to free trade and reduced the customs duty on reapers, mowers and binders two and one-half per cent lower than the Liberal party had proposed to reduce it under the nefarious reciprocity agreement of 1911. I thought at the time that if a reduction of five per cent in the duty on reapers and mowers could create so much enthusiasm in the protectionist party behind him, that a reduction of ten per cent on all implements would have so gladdened the hearts of all his followers, with the possible exception of Sir Melvin Jones and the hon. member for Brantford, (Mr. Cockshutt) that they would be cheering yet.

I do not by any means contend that the Conservative party is a free trade party any more than I contend that the Liberal party is a protectionist party, but I do say that if it were not for the necessity of being unanimous; if it were not for the interests which placed them in power; if it were not for the interests which helped form the Cabinet; if it were not for the interests upon which they count to remain in power, their spontaneous and unbiased enthusiasm at the news of a tariff reduction; their absolute lack of applause at the news of a tariff increase, is absolute proof that they would be in harmony with us in our desire to help the Canadian farmer by giving him, at the lowest possible price, the plant which he requires, to develop the great industry of agriculture upon which the whole superstructure of our other Canadian industries depend. They would, as we will before long, go one step farther and, give the western farmer an extra market and a higher price for his produce, thereby increasing his wealth and purchasing power, increasing the population upon our boundless western prairies, increasing the resultant demand for the products of our eastern industrial establishments, increasing the population of our eastern cities without driving our farmers' sons from the soil to the workshops; increasing the home market for the supplies of the eastern mixed farmer, increasing the demand for fish from the provinces by the sea and making instead of a divided Canada, a greater and more prosperous nation.

Since the beginning of this debate I have

listened attentively to every Conservative speaker; I have read those speeches which I did not have the pleasure of hearing and, with the exception of that of the ex-Minister of Finance, the hon Minister of Trade and Commerce (Mr. Foster) I have not yet found one which did not contain its quota of incense and flowers for the hon. Minister of Finance. He himself, of course, paved the way for all this praise by telling you, Mr. Speaker, that he knows something about a balance sheet when he sees one. Let me follow the good or bad example of hon. gentlemen opposite and compliment him upon not only knowing something about a balance sheet when he sees one, but of knowing how to make a good looking one when he needs one.

The hon. gentleman desired to show a surplus in this year of all years when a deficit might very properly synchronize with hard times and would be entirely justifiable. He began by keeping up the tariff as high as though everyone had money to burn, making the farmer and the labourer pay into the coffers of the Government his last cent in customs duties and then mortgage his farm in one case or beg for bread in the other and by this means collected from the people the sum of $163,000,000. He has spent, no one knows precisely how much, but he decides to charge to consolidated fund expenditure the sum of $126,500,000 and there remains a surplus of $36,500,000. His followers cheer unanimously; they shower compliments upon him to such an extent that a disinterested spectator would almost think that he had taken off his coat, gone out and earned the money and given it as an Easter offering to the people of Canada.

But what becomes of the rest of the expenditure, the public buildings built, the railway subsidies which include $15,000,000 for the Canadian Northern, now asking for more, the interest paid upon the public debt, the loans repaid, the advances made to the Montreal and Quebec harbour commissioners and the money spent in September last upon the ice-breakers in the Chateauguay river in the county of Chateauguay? They would annihilate the surplus, so he differentiates between these expenditures and the others and charges these to the capital account. In this way they do not count, but when Canada wants to know how much she owes, her bookkeeper and balance-sheet maker has to answer $502,000,000, nineteen million more than we owed at this time last year. We have had a prosperous year in spite of the hard times. We only owe $19,000,000 more than we did last year. Allow me right here, Mr. Speaker, to say that if it had not been for the members of the Liberal party in the House of Commons and in the Senate during the past year; if it had not been for their untiring efforts to chase away the clouds that darkened and the lightning that brightened the horizon of the hon. Prime Minister and made him find an imaginary emergency where none existed, the head bookkeeper would have been obliged to charge $35,000,000 more to the capital account or practically wipe out his surplus, and our debt would have been $537,000,000, or $54,000,000 more than it was in March, 1913. The hon. Finance Minister would have been more worthy of praise if he had put the brakes upon some of the spending departments of the Government, notably the Department of Public Works, which spent $10,818,832.05 in 1911, and asks for $28,330,048.89 for the year which has just begun, and the Department of Militia, where furs and feathers, gold lace, automobile rides in Europe and other expenses will cost this year $10,867,000, exactly $4,000,000 more than they did in 1911 when this great spending party arrived in power and this without counting the $186,900 spent by the department under the head of Civil Government and $2,315,000 included in the public works estimates for armouries and drill sheds, a total of $13,368,900.

The words, 'dash away and spend the money,' were eliminated from 'Hansard,' but, what is worse for the people of Canada, they are put into constant practice by the Government. 'To spend or not to spend' is never the question with hon. gentlemen opposite, and just so long as the people of Canada remain indifferent to their own interests and until they banish this Government from power, they will have to pay through customs and excise duties all the money that the hon. Ministers of Public Works and Militia may desire to spend.

With these few remarks upon the financial part of the Budget speech, allow me, before passing on to the method of collecting this vast amount of revenue, to congratulate once more the hon. Finance Minister and to shower upon him my share of flowers and incense, upon his ability to make a good-looking balance sheet when he needs one.

Many of the Conservative speakers during this debate have ridiculed free trade. They have used several arguments against it, but the two most reasonable and most important arguments are that our infant industries require protection, and that our Finance Minister requires a tariff to pro-

vide revenue for the use of the spending departments of the Government.

Let us take the second argument first. Like my right hon. leader I believe we require a tariff for revenue purposes. The ministers of the present Government and many of the speakers opposite say that absolute free trade means direct taxation, and I am inclined to believe they are right. But is it any wonder they fear anything and everything that would lead to direct taxation? Just think of the Hon. Col. Sam. Hughes taxing every man, woman and child twenty-five cents to pay his expenses upon an automobile trip through Europe, one dollar to build a large drill-hall here or there, or two dollars to send the school children of Canada to camp. Just think of the Hon. Mr. Rogers taxing every man, woman and child one dollar or two dollars each to build a monument to the hon. Postmaster General, for instance. How long would they remain in power? Until the next general election but not a moment longer. The people pay these expenses by indirect taxation, they will continue to do so upon the ground that the Government needs the revenue. Let us consider upon what articles this customs duty should be imposed. We agree that in collecting this revenue we should protect our infant industries. We have in Canada to-day many industries, some infants and some promising youths, some advanced in years but still in need of protection, but when those manufacturers prove to Canada and to the world that they can manufacture their products cheap enough to compete with the factories in the great republic to the south of us and compete with them in their own and foreign markets, we on this side of the House claim it is time to lift part of the weight from the shoulders of the Canadian farmer and allow him to go into the United States if he likes and buy a harrow, plough, rake or binder manufactured in Canada cheaper than he can get it at home without being obliged to place a sum representing seventeen or even twelve per cent of the purchase price in the hands of a customs official.

In 1911 our hon. friend the Solicitor General made a very good speech in favour of a reduction of the duty on agricultural implements. It was not to be a reduction of 5 per cent on binders and mowers; it was to be a substantial reduction. In moving for this substantial reduction, he said that the effect of the tariff on agricultural implements upon revenue was to benefit the revenue of other countries rather than of our own country. He went on to say:

> As at present constituted this is not so much a tariff for the revenue of Canada as a tariff for the revenue of Spain, as a tariff for the revenue of Austria. In Austria the manufacturers of binders and mowers are able to leap over a duty of some $33 on every binder, and yet they sell at a profit in Austria. It is, Sir, a tariff for the revenue of Roumania, a tariff for the revenue of Russia, a tariff for the revenue of France rather than a tariff for the revenue of Canada.

Further he said:

> It means that this is an additional Chinese wall, if you may call it such, that this Government has seen fit, in violation of every principle of public honour and of its own, to hedge round the manufacturers of the articles I have mentioned, and which enables them to make a profit after leaping over these tariff walls of considerable height in all these countries.

To-day he is the Solicitor General. To-day he says that the Cabinet and the party behind the Cabinet must be unanimous, and for that reason he is willing to abandon the rights of his constituents in the constituency of Portage la Prairie and to say that a reduction of 5 per cent on reapers and mowers, in other words, that the knocking off of one or two bricks from the top of this Chinese wall is all that the western farmer requires. Does the knocking off of these two or three bricks from the top of this wall, does this reduction of 5 per cent mean that the farmers of western Canada are going to buy mowers and reapers cheaper than they are buying them now? There was a cheer of delight from the party sitting behind the Minister of Finance when he announced that the duty would be reduced by 5 per cent, but we have not yet heard the cheers or the echoes of the cheers of delight from the farmers of Canada who wanted free wheat, who wanted free agricultural implements of all kinds and who got nothing at all. I say that they have got nothing at all for two reasons. If they received the benefit of 5 per cent on reapers and mowers, as the hon. member for Assiniboia (Mr. Turriff) said, it would only mean ninety cents a year to the most prosperous farmer. The Minister of Finance pointed out in his Budget speech that the only firms in Canada making reapers and mowers are the International Harvester Company, the Massey-Harris Company, the Frost and Wood Company, of Smith's Falls, and the Noxon Company, of Ingersoll. These concerns manufacture on both sides of the

line, and have practically a monopoly of the implement business so far as reapers and binders are concerned. They control prices on both sides of the line. Do you think, Mr. Speaker, that the American International Harvester Company or the American Massey-Harris Company is going to ship its goods here to compete with its Canadian branches? What will happen is that they will raise their prices in the United States to a sufficient figure to leave the Canadian price the same as it is to-day, so that the Canadian farmer, in spite of this reduction of 5 per cent, will be obliged to pay the same price he has always paid for his ploughs, his harrows, his rakes, his cultivators, his manure spreaders, his threshers, his reapers and mowers. But the Conservative politicians and campaigners will be able to tour through the West and say the Conservative Government has done something for the farmer reducing the duty on reapers and binders by 5 per cent. The reduction in agricultural implement duties may mean free trade. That is what the Minister of Finance said in 1911 about the reciprocity pact. I am sure, however, that if he considers himself a free trader because he has given this reduction on implements, the farmers of western and eastern Canada will say: From such free traders as this, O Lord deliver us. He is not a free trader, and in his Budget speech he repeated his declaration of allegiance to the tariff policy of Sir John A. Macdonald. He is in favour of protection for all Canadian industries, and, above all, protection for the basic industry of agriculture. We are all protectionists in a way. Protection does not always mean a protective tariff. We on this side of the House stand for that protection which protects, and not for the protection which kills. If refusing free wheat and free agricultural implements is protection for the Canadian farmer, I am sure that it is a protection which he does not appreciate and does not want. Let us for a moment imagine the magnates of any Canadian industry coming in a delegation to the office of the Minister of Finance and saying to him: We are manufacturing goods at such favourable prices that we can not only supply the entire Canadian market, but we want to send our goods outside of this country, and want your assistance to that end. What would these magnates think if the Minister of Finance replied: All right, gentlemen, we will put an export duty on your goods, or at all events leave on your goods the export duty that is already there? I claim that the refusal of the Finance Minister to give free wheat to the Canadian farmer is equivalent to a refusal to remove the export duty on Canadian wheat which now exists. It is worse than an export duty, because when an export duty is imposed on an article, the money is paid into the coffers of our own country. But in this particular instance our farmers cannot sell their wheat in the United States without losing the amount of the duty. I claim that they are paying an export duty into the coffers of the American Government, and it is that duty which we are asking the Finance Minister to take off, because the Canadian farmer has more goods than the home market requires. That request has been refused. Did the Minister of Finance go to the farmers and ask them how much money they were making? Did he examine their books? No, he went to the millers and the railway companies and asked them if the Canadian farmer needed free wheat. In spite of the fact that every Canadian farmer wants free wheat, the railway men and the Canadian millers say he does not require it, and the Minister of Finance bows to their will. For the purpose of pleasing three or four rich and influential friends he turns down the request of the farmers of the western prairies. Why does he do so? Is it really going to hurt our railways to give the farmers free wheat? Is it not the desire of everybody in this House to encourage the right class of immigration, to people the western prairies with immigrants who will draw from Canadian soil the wealth that will make Canada great and prosperous. Is it not the wish of the railway companies that that immigration should flow in in great streams, so that they can transport the immigrants and their effects to the West and keep on transporting goods to them in the West. Those immigrants would begin by wanting material to build their homes, and they would end by buying the luxuries which they can afford when they get a decent price for their wheat, and cheap agricultural implements. Is not that the wish of every eastern manufacturer who knows that there is more money in an increased output and moderate profits than there is in a

high tariff with closed factories. When the American market is open to the western farmer it does not mean that he will ship all his grain there. He will not be obliged to sell everything that he has to sell to the United States, but it will mean that he will have three markets instead of two: the home market, always the best; the English market, and the American market. The wheat which he will ship to eastern Canada and to Great Britain will be carried over Canadian railways from the West to the East. A great portion of that going to the United States will be for the New England states, not for the western states where they grow their own wheat. The population in the eastern states is dense and they will need our wheat for flour; and if freight rates are the same in Canada as in the United States—and if they are not they should be made the same—there is no reason why that wheat should not travel from West to East over Canadian railways. The Minister of Finance in the Budget speech made a comparison with the Underwood tariff. He says that in the United States the average tariff is twenty-six per cent, that the average is the same on one side of the line as it is on the other. That is an argument for the hustings and not an argument for the Canadian House of Commons. The weak point is that it does not take the free list into consideration at all. He compares the average duty on steam locomotives, typewriters, pianos and gramophones in the United States with the duty which the Canadian labourer has to pay upon his bread, butter, meat and flour and then arrives at the illogical conclusion that the tariffs of Canada and the United States are the same. In one breath he says that it is wrong to revise our tariff to meet the tariff of the United States. In the next breath he prides himself upon copying it and keeping the same average. For one reason he keeps the tariff on wheat and for the other he refuses to reduce the tariff on wheat. He talks about protection to the farmer. Protection to the farmer when he refuses to give him free agricultural implements? Protection to the farmer when he refuses to give him an extra market for his wheat? Does he mean protection for the eastern farmer? Does he, like the hon. member for Chateauguay (Mr. Morris), consider that the western farmer does not deserve to be honoured by that name? Does he even give protection to the eastern farmer? The eastern farmer is a purchaser of flour and he is a seller of the products of mixed farming. He cannot export to the United States or to western Canada, and he must sell his produce in his own market where it can be delivered to the people in good condition and it is only by increasing the population of western Canada that the home market can be increased and that the eastern farmer can be benefited.

12 p.m.

To make my point more clear, let me say that the market for the eastern farmer, with the exception perhaps of the dairy products and the cattle which he ships away, for the products of mixed farming is the village, the town and the city of eastern Canada. The village, the city and the town of eastern Canada are, as a general rule, manufacturing centres. This year in the city, the village and the town in eastern Canada, the factories are closed and the men are out of work because there is no demand for their products by the western farmer. If the men are out of work they are unable to buy the produce of the farmer in the east. I say without fear of contradiction that if the western farmer is benefited, if the population is increased upon the prairie, the eastern farmer will be benefited by having a home market for his mixed farm produce and that everybody in Canada will be happier and wealthier. Adam Smith, who has been frequently cited on the other side of the House, once said:

> The annual produce of land and labour of any nation can be increased in its value by no other means than by increasing the number of its productive laborers or the productive power of these laborers.

We agree with that statement and it is to increase the number of productive labourers in Canada, and to increase their productive power as well, that we are in favour of free wheat and free agricultural implements. We believe that from our fertile western prairies more wealth can be extracted and that this wealth so extracted from the virgin soil of Canada will make Canada a wealthy and prosperous country. We want to increase production because it means wealth and prosperity and happiness to our people. To do so we propose to remove the export duty which keeps our farmer from selling in the United States market and we propose to remove the duty from the agricultural implements required to till the soil. We are in favour of a tariff for revenue and we are in favour of protection for every Canadian industry which requires protection but not for those which do not require it. We are blamed by hon. gentlemen opposite for having pro-

tected these industries during the past fifteen years. We gave them protection for fifteen years and we will continue to give them protection if they can prove to us that they require it, and we will give them that protection without hurting the other classes in Canada.

The Minister of Finance asked us to throw down the gauntlet. This afternoon my right hon. friend the leader of the Opposition threw it down. I say to hon. gentlemen opposite: Pick it up and hasten the day when the people of Canada can decide between Borden and Laurier. The life of a man or party that never knew a failure would miss much. Such a life in mercy was not given to the party opposite. It has had its share of failures in the last seventeen years; it has had another failure in the present Budget speech which satisfies neither consumer nor manufacturer nor farmer. We met with one failure at the polls in 1911 when we attempted to stem the tide that later brought hunger and misery to many a home. Think of the spectacle the other day in the city of Montreal where thousands and thousands of unemployed assembled in response to a call of the mayor who had promised them employment. A photograph of these thousands of men seeking employment, ready to take a pick and shovel at $2 or $2.25 per day, is an answer to the argument of hon. gentlemen opposite who claim that our country is prosperous and that we, the Liberals, are the only ones who are preaching that it is not prosperous. A more eloquent answer than that could not be given. We admit that in trying to stem this tide we met with a failure but as Edmund Vance Cooke puts it:

> What is a failure? It's only a spur
> To a man who receives it right,
> And it makes the spirit within him stir
> To go in once more and fight.

Just twelve months ago we were willing to go out and fight; just twelve months ago the hon. member for Portage la Prairie (Mr. Meighen) introduced the closure resolution which, with the aid of your interpretation of the new rules, Mr. Speaker, gave his party a lease of power of three more years. He was rewarded with an appointmnt to the high position of Solicitor General. If he could now invent some rule to amend the Canadian constitution and stave off the fatal day for a few more years, he would undoubtedly be given the position of Prime Minister of Canada. But to stave off the fatal day beyond the stated term of five years is a task to which his ability is unequal, a task which he cannot accomplish.

The gauntlet has been thrown down. The hon. Minister of Trade and Commerce (Mr. Foster) has pretended that he did not understand the issue as contained in the amendment proposed by my right hon. leader. He has already commenced, true Conservative that he is, to distort the meaning of our policy in an effort to combat it more easily. It is the same old story, the same old guerilla warfare, but the people of Canada will not again be taken in by arguments levied at a policy which does not exist. They will read the amendment which pledges the Canadian Liberal party to free wheat, free agricultural implements for the farmer, cheaper food for the labourer, and a reasonable protection to those Canadian industries which require protection.

The manufacturer from eastern Canada, who prefers a large output and reasonable profits to a high tariff and a closed factory, the farmer who wants an extra market for his wheat and cheaper agricultural implements to produce that wheat, the railway magnates who are anxious to transport thousands and thousands of settlers to the farm lands of western Canada, the labourer who wants steady employment and something more than dried bananas and dessicated cocoanut in his dinner pail and on his table, will all wend their way to the polls to register their votes with one slogan, with one thought uppermost in their minds: 'We'll send Laurier back to power.'

The House divided on the proposed amendment of Sir Wilfrid Laurier:

Mr. NESBITT: I was paired with the hon. Minister of the Interior. Had I voted I would have voted for the amendment.

Mr. EMMERSON: I was paired with the hon. Minister of Finance. Had I voted I would have voted for the amendment.

Mr. MARCIL: I was paired with the hon. Minister of Justice. Had I voted I would have voted for the amendment.

Mr. MICHAUD: I was paired with the hon. Minister of Marine and Fisheries. Had I voted I would have voted for the amendment.

Mr. PERLEY: I was paired with the hon. member for Russell. Had I voted I would have voted against the amendment.

Mr. NORTHRUP: I was paired with the hon. member for Stanstead. Had I voted I would have voted against the amendment.

Mr. CHABOT: I was paired with the hon. member for Beauce. Had I voted I would have voted against the amendment.

Amendment negatived, main motion agreed to, and the House went into Committee of Ways and Means.

Progress reported.

On motion of Mr. Borden, the House adjourned at 12.38 a.m. Friday.

Friday, April 24, 1914.

The House met at Three o'clock, the Speaker in the Chair.

THE PRUDENTIAL LIFE OF CANADA.

Mr. W. F. NICKLE (Kingston) moved:

That the Order of the House of 22nd April, 1914, authorizing the refund of fees paid on Bill No. 150 (letter H-2 of the Senate), an Act

to incorporate the Prudential Life of Canada, be rescinded, and that that portion of the sixth report of the Select Standing Committee on Banking and Commerce, reporting the preamble of the said Bill as not proven, be referred back to the said committee for further consideration.

Some hon. MEMBERS: Explain.

Mr. NICKLE: It is perhaps fair that in moving this motion I should mention some of the circumstances surrounding this legislation. The Prudential Life Assurance Company, a company incorporated under the laws of Manitoba, desires this legislation from this Parliament. It is opposed by the Prudential Life Insurance Company of America, a company that took its name from the British company of that name, and which has been doing business in the United States for about twenty-seven years. The American company was licensed by the Finance Department of the Dominion of Canada in 1909. The Canadian company was incorporated by Manitoba in 1902, but did not begin business until 1907. However, in the year 1907 the Canadian company started business in Manitoba, Saskatchewan, Alberta, British Columbia, and further it extended its business to New Brunswick in the year 1910. The reason this legislation is desired is, that owing to the diversity of the provincial laws regarding insurance, the company finds that under its provincial charter it is practically prohibited from carrying on its business throughout Canada as a whole.

Sir WILFRID LAURIER: What is the object of the legislation sought from this Parliament?

Mr. NICKLE: The legislation sought from this Parliament is to give Dominion incorporation to a company that hitherto has had only provincial incorporation, so that the company may be enabled to do its business throughout Canada rather than be restricted to certain of the provinces. The Bill introduced this year in the Senate was introduced in the House of Commons last year, and passed successfully through the committee stage and through the House, but it was stopped when it reached the Senate. This year, to overcome any fundamental objection, the promoters of the measure introduced it in the Senate, where it was successfully passed. It was then introduced in this House, and was referred to the Committee on Banking and Commerce. The promoters of the Bill were somewhat surprised, when the measure came before the Banking and Commerce Committee, to find that for some inexplicable reason—or perhaps, Mr. Speaker, I should recast that sentence and say that for reasons they had not foreseen, a phalanx of members were gathered there, and for one cause or another opposed the legislation going through the Banking and Commerce Committee.

Various objections were offered to the Bill, and perhaps it is fair that I should summarize these. One was, that confusion would result from another company bearing the name 'Prudential' getting legislative sanction from this Parliament. May I direct your attention, Mr. Speaker, to this difference between the name of the American company and the name of the Canadian company. As I have said, when this Canadian company was authorized by Manitoba to begin business, the name was the Prudential Life Insurance Company; the name of the American company being the Prudential Insurance Company of America. That there might be no confusion, the promoters of the Canadian legislation signified their intention to change the name, so that the new name would be 'The Prudential Life Company of Canada.' There would then be this fundamental difference between the two names: the American company would have as an affix the words 'of America' while the Canadian company would have as an affix the words 'of Canada.' The American company would carry the word 'insurance' and the Canadian company would be described as a 'life' company.

For reasons that met the approval of the committee, however, the Bill did not yesterday successfully get through the Banking and Commerce Committee. Objection was further made that it would be an offence against international comity that a Canadian committee should give legislative sanction to a company whose name was so similar to that of an American company; that as the American company had first made application to the Dominion Parliament for authority to conduct its business in Canada, it would be improper that a provincial company should now be recognized. I might say, in passing, speaking of the possible confusion of names, that I find on looking up the record that we have in Canada doing business the Mutual Life Assurance Company of New York, and that we also have the Mutual Life Assurance Company of Canada. We have the Travellers Life Assurance Company of Canada and the Travellers Life Assurance Company of Hartford. That legislation was piloted

through this Parliament by the junior member for Halifax (Mr. A. K. Maclean). We have the Phoenix Assurance Company of London and the Phoenix Assurance Company of Hartford. When application was made by the Sun Life Assurance Company of Canada to the English authorities to carry on business in England, they consented, although there was a British company carrying on business under the name of the Sun Life Assurance Company, to let the Canadian company do business in England if the words 'of Canada' were added to their name. Therefore the Sun Life Assurance Company of Canada is doing business in England to-day.

Objection was also raised that the American company was the big company and the Canadian company was the little company, and that the big company should have the advantage and the little company procure another name. That hardly seems to be fair. The Canadian company had the western sphere of business entirely to itself from 1907 to 1909. The American company then entered the field of operation, and they now say: Although you came first and had provincial incorporation; yet, because we were first in Dominion license, you should be stopped from extending your business. The name 'Prudential' to the small company in the West certainly means more to it than the name 'Prudential' to the American company, with its extensive ramifications and business connections. To show how this small company has prospered, the following figures will show the growth of its business from 1908 to 1913:

Date.	Business in force.
On June 30, 1908	$1,311,500
On Dec. 31, 1908..	2,230,000
On Dec. 31, 1909..	3,321,083
On Dec. 31, 1910..	2,277,028
On Dec. 31, 1911..	6,294,464
On Dec. 31, 1912..	7,576,631
On Dec. 31, 1913..	8,617,015

Mr. SPEAKER: It seems to me that the hon. member is extending the discussion beyond reasonable grounds upon a motion to refer a Bill back to the committee.

Mr. NICKLE: I have not the slightest intention of trespassing upon the patience of the House; but if any other method can be suggested to me than that which I am at present adopting, I shall be very pleased to carry out the suggestion.

Mr. AMES: Are any new facts to be presented to the committee for consideration?

Mr. NICKLE: The facts as they were laid before the committee yesterday I think cannot be amplified if the Bill goes back to the committee; but the legislation is of such an important character to the company involved and the throwing out of a Bill simply for the preamble not being proven on the ground that the name is not satisfactory is such an unusual proceeding that I think the Bill should be referred back to the committee for further consideration in the hope that a favourable decision may be reached. Last year, without a murmur, the House of Commons passed this legislation and the Senate killed it. This year the promoters introduced the Bill in the Senate, believing that once it passed the Senate it would safely pass this House. Suddenly without a word of warning, the Bill is stopped by the same committee and the same House of Commons that last year allowed it to pass without a murmur.

Mr. AMES: Are there any provisions outside of the name which the company believe to be necessary for them to carry on their business?

Mr. NICKLE: The only provision, I understand, is the power to increase the capital.

Mr. BOYCE: The motion made by my hon. friend from Kingston to refer this Bill back to the Banking and Commerce Committee is of a somewhat unusual character and one not usually pursued in this House. The House having committed a Bill to one of its committees and that committee, as my hon. friend has stated, with a phalanx congregated there, that is, with an unusual number of members, having deliberated on the Bill and having reported, it would be a most unusual practice for the House, without a single reason being shown beyond the charge made by my hon. friend that the committee has decided wrongly, to order the recommittal of the Bill to the committee. I entirely agree with your ruling, Mr. Speaker, that it is not proper now to go into details of the case. The Banking and Commerce Committee was represented on that occasion by the largest number of members it has had this session; and during the greater part, if not the whole, of two hours, this question was debated pro and con. The hon. Minister of Finance was present and gave his advice to the committee; my hon. friend himself and his cohorts and his phalanx of members gave their views, and the judgment of the committee was unfavourable to my hon. friend. Under such circumstances, it would be con-

trary to the usual practice of this House and a slight upon the dignity of the Banking and Commerce Committee that this Bill should be relegated again to that committee for its consideration, without its being shown that there was a mistrial, that there was a paucity of members; that there were points which were ill-considered or not considered. During the ten years that I have been in the House I remember only one case where a Bill was so dealt with, and that was a case where it was alleged—my right hon. friend the leader of the Opposition will bear me out—that there was such a small representation upon the committee and that there were certain facts not considered by the committee that it was open to the House, in the exercise of its discretion and in the fullness of its power, to relegate that Bill to the committee, which it did. Therefore I consider it would not be an exercise of the judicial or proper discretion of the House to treat the Banking and Commerce Committee in such a way in this case. That committee having digested and disposed of and decided the whole question, it ought not to be again burdened with the consideration of the matter. Therefore I for my part shall strongly oppose and, if necessary, vote against the motion of my hon. friend.

Mr. MEIGHEN: Possibly the fact that in the previous session of Parliament I had charge of the Bill now under consideration would justify a word or two upon my part. It may be that the ruling is correct; I question it not, that the merits of the Bill are not under review at the present time, and it may be that the hon. member for West Algoma is within his rights in saying that some special consideration should in the ordinary course be present in the mind of the House before it would be justified in referring the Bill back to the committee. In my experience in the House, though, I have never been able to detect any rule that the House has come to in the way of determining what these considerations shall be or how compelling they shall be before a Bill be committed back. Every Bill is treated, and I think should be treated, and every Bill for reference back should be treated, strictly on its own merits and on the merits of whatever considerations may be brought before the House in regard to it. It cannot be argued—and I think the only deduction from the reasoning of the hon. member for Algoma is that it must be argued—that as soon as a Bill passes the committee the House is entirely robbed of its deliberative capacity on the merits of the Bill itself. Or, putting it another way, as soon as the Bill is thrown out by committee, if the hon. member for Algoma is correct, then the House is robbed of its power to deliberate on the merits of that Bill.

Mr. BOYCE: I did not suggest that.

Mr. MEIGHEN: I can find no other deduction from my hon. friend's reasoning. If his reasoning is correct, that condition will at all times prevail unless there happens not to be many members of the committee present. That, however, would not be a cause better than any other, because the committee itself should be the judge of whether or not its numbers are sufficient to enable it finally to pass upon the merits of the Bill. There are, though, especial considerations in the present case, and I think the important one is this: the Bill has already passed committee and passed this House, and the judgment of this same House has been reversed by committee. Is not that a material consideration? The Bill has passed this House in respect of the clause which was a stumbling block to the present committee. I understand that it was stated when this Bill was before committee yesterday that the matter of name was not under review, that the name was not objected to when the Bill was before the committee a year ago. I had charge of the Bill at that time and I remember quite well that objection was raised to the name. I do not know whether it was pressed very strongly in committee; if it was not it was because the objection at that time appeared, I must say, more or less trivial; but objection to the name was pressed by some one and the committee in its wisdom decided that the objection was not tenable and that the Canadian company had prior rights to the name. That judgment of last session was under review in this House; was favourably passed upon by this House and the committee now step in, rebuke the judgment of the House of last session and throw out the Bill. I am not arguing that the committee had not the right to do so; I am not saying that the committe was estopped from deliberating on the merits of the name merely because the same House of Commons had approved it, but I do say this: that the fact that the committe did so in

contradistinction to its own action a year ago and in opposition to the judgment of this House a year ago, is an especial and a material consideration that should weigh with this House in discussing whether or not the Bill should go back. I do not argue that there were not sufficient members present at the meeting of the committee. I myself came in only a short time before the vote was taken, in time, however, to hear the arguments raised against it by the hon. member for West Algoma. As a consequence, I do not know what degree of discussion did take place, but I was more or less conversant with the subject before I came in. However, there were sufficient numbers present at the committee, no doubt and I do say that the merits of the case itself are such that a very brief review of them would convince the House, were I permitted to give them, that the position taken by the committee is indefensible and that the committee offers a very serious precedent for this House to adopt if that decision is not to go back for review.

Mr. BOYCE: Supposing the Bill to be recommitted and reconsidered by the committee and that there be a much smaller phalanx of members present, what would my hon. friend say then as to the reason for its being recommitted?

Mr. MEIGHEN: I would say that those who had opposed the Bill had seen the error of their ways and had stayed away. After the Bill has received the notice that it does receive and goes back to the committee, there is ample notice to all members of the committee and there is nothing to hinder their being present. I must say that those interested in the passing of the Bill will welcome all who may come to that committee, be they opposed or be they not, and welcome a fair consideration of the claims of this measure on its own merits.

Mr. BURNHAM: Would my hon. friend be satisfied if an adverse judgment were then given, and, if so, why is he not satisfied now?

Mr. MEIGHEN: When the adverse judgment comes I will give my decision upon it. I do not know what will produce it; it may be that there will then be special considerations, but I will say this: if my good friend the hon. member for West Peterborough will disarm himself of all prejudices that may now be in his mind and will address himself to this question with all the intelligence that he can command, I think I will be satisfied with his judgment on the merits of this Bill. If the Chair rules that I am forbidden to discuss the right of this Canadian company to retain the name under which it has been operating through six provinces of the Dominion and which it is now proposed to rob it of, I criticise it not; I bow to it, but I ask that it prevail throughout this discussion.

Mr. J. E. ARMSTRONG: Before the motion is put, I rise merely to say that I, as a member of that committee, voted in opposition to this measure, and I resent strongly the insinuation of the hon. member for Kingston (Mr. Nickle) that the members who voted in opposition to it were influenced in any way, or that they were asked to come to the meeting of the committee. So far as I am concerned, I wish to state emphatically that I was not asked to come to the committee and vote; I felt myself perfectly free to act as I did. While on my feet I may say also that I strongly resent a similar assertion made by the hon. member for Brantford (Mr. Cockshutt) in the committee. I am surprised that hon. gentlemen should make such statements, because they include members of the committee who, I believe, went there for the purpose of conscientiously carrying out their convictions.

Motion agreed to.

PRIVATE BILLS.

FIRST READINGS.

Bill No. 156, for the relief of Frederick Joseph Campbell.—Mr. Ames.

Bill No. 157, for the relief of Elizabeth Chausse.—Mr. Schaffner.

Bill No. 158, for the relief of Beatrice Mae Stinson Fotheringham.—Mr. McCraney.

Bill No. 159, for the relief of Eva Jane Bateman.—Mr. Douglas.

Bill No. 160, for the relief of Florence Rolf.—Mr. Douglas.

ERROR IN DEPARTMENTAL MAP.

On the Orders of the Day being called:

Mr. EMMERSON: I want to call the attention of the Government to a very glaring and inexcusable error to be found in a map published by the Department of the Interior showing the number of chartered banks in New Brunswick, Nova Scotia and Prince Edward Island. In this map, Lawrencetown is represented as being east of the city of Halifax, and in Halifax county. Lawrencetown is in Annapolis county.

Mr. BORDEN: My hon. friend is giving us an example of a little knowledge being

a dangerous thing. There is a Lawrencetown east of Halifax in Halifax county, as well as a town of the same name in Annapolis county.

Mr. EMMERSON: But the one in Halifax county is not a banking town so far as I am aware. This map was sent to me by the manager of a prominent bank in eastern Canada. In calling attention to this error he said that the Lawrencetown where the bank is located is in Annapolis county, and not in Halifax county as indicated by the map.

Mr. BORDEN: I think my hon. friend is quite correct in that.

Mr. EMMERSON: The map is to that extent inaccurate. I wish to call the attention of the Minister of the Interior to the error, as the maps are being distributed all over the country, I myself having received one. Lawrencetown in Annapolis county is quite an important place, but I never heard of the one in Halifax county.

Mr. BORDEN: Doubtless the confusion has arisen over the identity of names.

ST. PETER'S CANAL.

On the Orders of the Day being called:

Mr. KYTE: I desire to ask the acting Minister of Railways and Canals, when he expects that work will be resumed on the St. Peter's canal. I understand that owing to a change of plan the contractor has been obliged to discontinue work for some time. In the present condition of unemployment throughout the country I am bound to say that it is a matter of supreme urgency that the work be resumed as speedily as possible.

Mr. J. D. REID: Work on the St. Peter's canal ceased during the winter, as is usual, on account of the cold weather. During the winter borings were taken for the proposed lock, but the material turned out to be different from what was expected and the chief engineer is now considering the advisability of having the lock in another place. If that plan is adopted it may mean the closing of the canal for one season. I discussed the matter with the chief engineer this morning with a view to arriving at a conclusion on that point, so that work might be started at the earliest possible moment.

INQUIRY FOR RETURNS.

On the Orders of the Day being called:

Mr. W. CHISHOLM: I desire to call the attention of certain members of the Government to delay in bringing down returns ordered of the House passed several weeks ago: one was with reference to the mail service between North Lochaber and West Lochaber; another had reference to reports re dredging in Antigonish harbour; and a third asked for correspondence re the appointment of a collector of customs in Antigonish.

Mr. EMMERSON: I would like to call the attention of the acting Minister of Railways to a return I asked for some time ago relating to an agreement with reference to power rights on the Trent Valley canal. I understand my hon. friend proposes to go into his Canal Estimates to-day, and certainly the information to be found in the return should be before the House when that particular item is being considered. I do not think the return is of such a lengthy character as to take a great deal of time to prepare.

Mr. J. D. REID: I was under the impression that it had been brought down, and I am surprised to hear that it has not. That particular item will not be taken up until the hon. gentleman has the return, and has had time to look it over.

TRUST COMPANIES.

On motion of Hon. W. T. White, the House went into Committee on Bill No. 70, respecting Trust Companies, Mr. Blondin in the Chair.

Mr. WHITE: My right hon. friend (Sir Wilfrid Laurier) usually desires to know what changes, if any, have been made by the committee, and I shall be very glad to give him that information now. The committee gave this Bill very careful and thorough consideration, and made a number of minor changes. Some valuable suggestions made by members of the committee have been incorporated in the Bill. It will be sufficient for the present to mention that amendments have been made as to the following matters: Qualifications of directors, the quorum of directors' meetings, the forfeiture of shares for non-payment of calls, the liability of shareholders to creditors, the liability of directors, loans to directors, and the investment of the company's own funds. The last-mentioned amendment is the principal change made by the committee. Under the draft Bill, the trust company was permitted to invest 40 per cent of its paid-up capital in office premises. That provision was changed by the committee so that 35 per cent of the paid-up capital and reserve may now be

so invested. Under the provisions of the draft Bill, 25 per cent of the capital of the company might be invested in stocks of banks and incorporated companies. That was amended by the committee so that not more than 20 per cent of the stock of any bank and of the stocks and securities of any incorporated company may be taken by way of investment, the total not to exceed 25 per cent of the paid-up capital and reserve. This section is made retroactive after January 1, 1917, so that the trust companies incorporated hitherto will have between now and that date to arrange their investments so as to comply strictly with the provisions of the new Act.

When I was dealing with the Bill on the second reading, my right hon. friend referred to the very wide powers which in the past had been granted to trust companies incorporated by letters patent from the Department of the Secretary of State, and asked if we would inquire as to how many of these companies had organized with a view to seeing whether the powers of those companies which had not organized should be cut down so as to comply with the provisions of the new Bill. We made that inquiry through the office of the Secretary of State. We found that most of the companies had organized and were carrying on business at the present time. A few of the companies have not organized. The changes which have been made by the committee in section 66, which deals with the investment powers of the trust companies incorporated under this Act, together with the retroactive provision, effectually clip the powers of any of the companies which have not yet organized, and which have powers of investment wider than I think this House would deem it wise that trust companies should have. So I think the point which my right hon. friend had in mind has been met by the committee.

On section 4—Incorporation and organization:

Mr. TURRIFF: Does the Minister of Finance think anything can be done to secure an arrangement with the different provinces about incorporating trust companies? I know that in the West for some years past a number of trust companies have been incorporated by the different provinces, some of them with exceedingly small capital and without the necessary safeguards. I know cases where stock in trust companies has been paid up by turning in agreements of sale as if they were cash although they may or may not represent cash. In most cases I imagine that those agreements would not represent one hundred cents on the dollar in cash. In those cases the result is an apparently large paid-up capital, which is in reality not nearly as large as appears on the face of the incorporation as being paid up. In one particular case where one of the western provinces had provided that only trust companies could act as official assignees, a company which was not a trust company was doing business as an official assignee. It immediately organized as a trust company with a capital of $5,000, of which, I think, under $2,000 or under $3,000 was paid up. That company is now acting as an official assignee, and is advertising to act as a trust company for other trust purposes, although it has practically nothing behind it. The innocent public may be easily misled in the matter. While I do not suppose Parliament can do anything that will affect that, possibly something might be done by taking the matter up with the attorneys general of the various provinces and endeavouring to have some peaceable understanding by which companies could not pose before the public unless they had sufficient capital and were under proper restrictions.

Mr. W. T. WHITE: As my hon. friend is aware, there is concurrent jurisdiction in the matter of incorporating trust companies. The Dominion of Canada has jurisdiction, and each province has jurisdiction, so that the Dominion could not, as a matter of right, interfere with the legislation of any province. The point was raised, I think, upon the occasion of the second reading of the Bill, and I stated that I had received communications from the attorneys general of, I think, two or more provinces asking in a general way what legislation we proposed to introduce. They evidently desired to have it before them in connection with some similar legislation which they had in mind for their respective provinces. We are sending copies of this Bill to the several attorneys general, but beyond that I think we have not any power whatever to interfere with their discretion in the matter of provincial legislation. The only thing that could be done would be by way of suggestion. In sending a Bill with a covering letter we

might possibly be able to do that, but of course anything like interference might be misunderstood and even resented.

Sir WILFRID LAURIER: There is another way of determining the respective powers of the Dominion and of the provinces to incorporate companies. The late Government had this matter referred to the courts. I do not know in what position the matter stands to-day; but we shall never have complete satisfaction upon this point, but shall always have clashing of interests and possible complications, until we have, whether by legislation or by judicial determination, complete knowledge as to the power of the provinces to incorporate companies. Take the case we have had before us to-day of a company which has been incorporated in Manitoba. It comes to the Parliament of Canada to have its powers enlarged, and very properly so I believe. That company recognizes that there is more security in a Dominion charter than in a provincial charter. If a company wishes to do business not only in a province but beyond it, according to my judgment, it should have a Dominion charter. We have allowed the provinces to give charters to companies, and many of these companies have obtained powers just as extensive as those obtainable from the Dominion. I would like to know from my hon. friend in what stage the lawsuit is between the provincial governments and the Dominion Government as to the power to incorporate companies. Has the matter been prosecuted or not?

Mr. W. T. WHITE: My recollection is that the Supreme Court gave judgment in the matter, and that the case is standing for appeal to the Privy Council. I did not suppose that the Dominion or the provinces would be content with the decision of the Supreme Court, although that body is entitled to our fullest respect. I am afraid that I shall not be able to make a statement as to this matter without some notice.

Sir WILFRID LAURIER: Perhaps the hon. Solicitor General (Mr. Meighen) can tell us in what position the litigation is. There has been a judgment of the Supreme Court, as I understand, affirming the right of the Dominion against the provinces. Am I right in that?

Mr. MEIGHEN: I regret to say that I cannot give my right hon. friend any information. The matter has not come in any way whatever under my cognizance since I have been in office.

Sir WILFRID LAURIER: I am afraid that my hon. friend has not been very diligent in getting information in reference to this matter and that this remark applies not only to himself but to the whole Government. They have not been diligent in getting this matter settled in one way or another. I know that there is a conflict of opinion between the provinces and the Dominion and that the provinces hold very strongly to the view that they have the power to incorporate companies. The Dominion, I believe, has not been as diligent as it might have been in order to have this question decided. The only way to secure a decision is by a reference to the Judicial Committee of the Privy Council, and if the hon. Solicitor General has not the information, I think he should exert himself to secure a final determination of the question.

Mr. MEIGHEN: I am quite aware that the matter has been under review judicially, and at the same time I know of many similar questions between the provinces and the Dominion that are under review, some of which, to a degree, and some altogether, are under my own charge. But this is not one of them. That does not say, however, that some other member of the Government may not have had it in his charge.

Sir WILFRID LAURIER: My hon. friend is young in years and young in harness. He has an excellent opportunity of immortalizing himself by having this matter decided once for all.

On section 6—model Bill:

Sir WILFRID LAURIER: All these clauses are in the original Bill, I suppose? There is nothing new in them?

Mr. WHITE: No, subject to certain modifications by the committee.

4 p.m. On section 29—calls:

Mr. TURRIFF: I see that the minimum capital stock is fixed at $250,000. Is there provision later on that a certain amount shall be paid up before they can begin business?

Mr. WHITE: I would refer my hon. friend to section 13 which provides that the company must have $100,000 in a chartered bank.

On section 34—share warrants:

Sir WILFRID LAURIER: I wish my hon. friend would give us some explanation of share warrants.

Mr. W. T. WHITE: My hon. friend is doubtless aware that there are two methods in general vogue of transferring shares in an incorporated company; in reality it is the same method, but the form in the two cases is different. A shareholder, holding shares in an incorporated company in Canada, may be entered upon the books of the company as a shareholder, and have a stock certificate issued to him, which is in reality a receipt or an acknowledgement that he is a shareholder in the company. That stock certificate, if there is no power of attorney upon its back, is not negotiable. If the shareholder desires to transfer his holdings of shares in that company, he signs a power of attorney, and the party to whom he sells the shares takes that power of attorney to the office of the company and there makes a transfer to any name he desires. That completes the transfer, and the legal ownership of the share is then vested in the transferee. For convenience, stock certificates, such as I have described, have in many cases a blank form of attorney endorsed on them. Upon that blank form of attorney being signed by the party in whose name the certificate stands, the certificate may pass from hand to hand, giving to each successive holder the right of a shareholder to transfer the shares upon the books of the company. That certificate is called a scrip certificate. The transaction is precisely similar to the other one, save that there is no power of attorney upon the first stock certificate, as there is upon the second, and that the first does not pass from hand to hand, and is not in any way negotiable. These are the two methods of transferring shares in Canada or in Great Britain.

On the continent, the share warrant is very much in vogue. The share warrant is in reality the certificate of the company that the holder is a holder of so many shares.

Mr. EMMERSON: Not the holder, but is entitled to them.

Mr. WHITE: Yes, I was using the word 'holder' synonymously with 'owner.' A bearer share-warrant is a certificate that the bearer is entitled to so many shares, or is the owner of so many shares, and is entitled to receive the dividends thereon when declared. The bearer share-warrant is negotiable; it passes from hand to hand like a bond payable to bearer. For example, if my right hon. friend were the holder of ten shares under a bearer share-warrant and desired to sell them to another party, he could pass on his title by merely delivering the bearer share-warrant to the purchaser. It is important, of course, that the company should have a record, and a careful record, of all outstanding share-warrants that may be issued. The holder of an ordinary certificate or scrip certificate, for so many shares in a company, delivers up his certificate and makes application for the issue to him of a share-warrant representing the same number of shares. The company after cancelling the stock certificate, or certificates, delivers to him the share-warrant. It then has no record of the name of its shareholder, and the share-warrant passes from hand to hand. There has been a great demand in this country for share-warrant provisions in special acts and in general companies acts, in order to meet the requirements of the European investor, who otherwise would be obliged to send a power of attorney or a scrip certificate across the ocean, and make the transfer to the name of the party to whom he sold. Personally, I see very little reason why the provision as to share-warrants should find its way into an Act incorporating trust companies, but there have been trust companies incorporated with the power to issue share-warrants, on the ground that they derive certain of their capital from the continent of Europe, and so I thought it better, because the matter is certain to arise again, to confer that power upon the companies incorporated under this Act. It is open to the directors or the shareholders, by by-law, to adopt a different course and to provide that share-warrants shall not be issued. If the shareholders adopt a by-law providing that share-warrants may be issued, I personally do not see that any harm can come to the public. My assistant deputy minister calls my attention to the fact that the share must be fully paid before a share-warrant is issued.

Mr. EMMERSON: I have very strong prejudice against this provision in an Act of this kind, and especially because of the secrecy it involves. I believe that the shareholders of any incorporated company in Canada should be open to the full light of day, so that every one who cares to know, or who is entitled to know, may know the personnel of those who constitute a company. If I am a shareholder in a company,

under this provision, I could go to the company, hand over my certificate for 100 shares say, and receive a share-warrant in lieu thereof. My name is then blotted out of the register of that company as a shareholder. The shares thus surrendered are suspended, and remain so as long as the share-warrants issued in lieu thereof are in circulation. The share-warrants may pass from man to man, and from continent to continent, and no one knows where they are, there being no identity as to the holders. This may be a convenience for an individual living abroad, and for the purposes stated by the Finance Minister, but I do not think it is in the interests of the public, nor do I think it is suited to the conditions in this country. This provision certainly should be withheld from a general Act, until a policy is adopted, whereby our Companies Act has such a general provision. There are a few isolated acts of incorporation containing this provision, and these have been granted only within the last year or two. If it is to be the policy of this Parliament to grant such legislation, then it should be made to apply as well and more particularly to the Companies Act. In this Bill, and in the Bill relating to loan companies, the provision has appeared for the first time as a general provision. I think it is worthy the consideration of the minister, as to whether this should apply to trust companies and loan companies, when it does not apply generally to companies incorporated under the Companies Act.

The secrecy, the veiled circumstances, seem to be very objectionable in the interest of the public. We grant to a body of individuals certain powers, sometimes large and exceptional, and we know the individuals as they start out; but there may come a time when all knowledge ceases as to the individuality of the shareholders or as to the personnel of the company. For that reason I think this committee should hesitate before stamping its approval upon this proposition. The minister, although he may have considered the matter very carefully, in view of the doubt so generally expressed as to the wisdom of this provision, should hesitate before taking this step at this time, and I think it should certainly be withheld in the case of trust companies and even in the case of loan companies. We have not done it in respect to private corporations in the past.

Mr. NESBITT: If we had done so, what harm would it do ?

Mr. EMMERSON: Because of secrecy. It may not do harm; I cannot put my finger on conditions or circumstances which would demonstrate that harm had resulted, but I think there should be the fullest publicity and opportunity for knowledge with respect to every Act of incorporation granted by this Parliament.

Mr. W. T. WHITE: I appreciate the view put forward by my hon. friend that there should be general legislation, if it is decided by Parliament that share warrants shall be allowed. My hon. friend the Minister of Justice has now under consideration, and will, I believe, within a few days or a week or so, introduce to the House an amendment to the General Companies Act under which permission will be given to issue share warrants. There is no doubt that any change of this kind should be carefully and seriously considered by Parliament, but this legislation is not new. The English Companies Act, under which companies may be incorporated for any of the objects within the legislative jurisdiction of Parliament in England has for a long time authorized the issue of share-warrants.

Sir WILFRID LAURIER: For trust companies ?

Mr. WHITE: I would say, yes, with this qualification, that I have not looked especially at the Act, but I believe that trust companies can be incorporated by the English Companies Act. The legislation is general, and the use of share-warrants is well recognized in England and has been brought about by the demands that I have mentioned, namely, from the continental investors. The safeguard is that the shareholders themselves have to pass a by-law authorizing the issue of the share-warrants. I have never known of any case of abuse. One could conceive of a case in which practically all the shares of a company might be represented by share-warrants, but I think it is hardly probable. As I stated at the outset, I was influenced in introducing this section of the Bill, not by anything that I had especially in mind, but by the fact that trust companies had within the last two or three years sought this power and it had been conferred by this Parliament. As I decided to frame a Bill which would cover any application that might come up for the incorporation of a trust company, it occurred to me that I had better include the powers that had already been granted by

Parliament. My own belief is that the provision as to share-warrants will be inserted not only in the Dominion Companies Act but in the Companies Act of every province of Canada. This will be brought about by the demand of the continental investors for share-warrants.

Sir WILFRID LAURIER: Would you do it in the case of banks?

Mr. WHITE: I would hesitate to do it in the case of banks, and I do not see the same necessity for it in the case of a trust or loan company as I do in the case of an ordinary commercial company whose shares are widely dealt in and in some cases speculated in. Undoubtedly we shall have applications in the way of special Bills brought forward to incorporate trust companies in which this power will be asked, because the investors will desire to sell their shares on the continent and will be asking for share-warrants. If a Bill such as that were brought forward, in all probability it would pass through the House.

Sir WILFRID LAURIER: I would hesitate to affirm a positive opinion upon this question, because the matter is altogether new to me. I can understand the advisability of facilitating commerce in shares as in other forms of commodities, because shares are commodities which are sold on the market every day, and there is good reason that we should facilitate transactions in shares. I can see very good reason why this provision should apply to ordinary companies, but as regards banks and trust companies there may be the objection that the character of their shareholders is one of their best assets. The stock of a company is an asset of its creditors. If you can conceive of a bank or a trust company the whole list of whose shareholders does not appear in its books that fact would be a fatal blow to it because such an institution adds very much to its value and its reputation by giving a list of its shareholders to the public. Trust companies are becoming one of the most important forms of management of estates that we have. They are coming more and more to be the managers of the funds of orphans, infants, widows, and so on. The character of the directors is the first asset, and the character of the shareholders is the second; but if you introduce a system whereby it is possible that the whole list of shareholders shall not appear in the books, I doubt if the same security will be felt by the public in regard to trust companies as there is at present. That is the only objection that I can see at this time.

Mr. WHITE: Does not my right hon. friend consider that as one reason why the Act would not be abused, namely, because the company would consider the names of the shareholders a valuable asset and would not permit the occasion to arise under which all the shares, or the greater part of them, would be represented by share-warrants. If we do not insert this provision now, we shall be inserting it in special Bills, so that unless there is some special objection to it, I feel that the provision had better stand.

Mr. TURRIFF: It is provided in this section that a shareholder cannot qualify as a director by holding share-warrants. A man holding ordinary shares could qualify as director, so that it would not be possible for all the stock to be in the form of share-warrants.

Mr. SAMUEL SHARPE: It is my opinion that there is a great deal of objection to the use of share-warrants in ordinary companies. Business is now carried on largely by companies, and the whole purpose of the new Companies Act is to give greater publicity to the affairs of these companies. Share-warrants are going to defeat that very object; the people are not going to know who are the shareholders of the companies. There is another objection to the use of share-warrants. The local legislature collects succession duties from the estates of deceased persons. By the use of share-warrants a man who wishes to do so may defraud the treasury of the province by taking out share-warrants and handing them to members of his family prior to his demise. The object and purpose of our Companies Act should be not to enable companies and corporations to conceal the identity of their shareholders, but to have more publicity; the whole object and purpose of the use of share-warrants is to create secrecy in the transaction of business and secrecy as to the identity of members of companies. While provision for share-warrants is in the English Companies Act, their use is, I understand, not very general in the commercial life of Great Britain, although they are used to some considerable extent on the continent. Legislation of this kind is sought by rich Brazilian and other companies, so that they may float their bonds

and sell their shares in the old country and at the same time conceal the identity of their shareholders. Personally, I am very much opposed to the use of share-warrants.

Sir WILFRID LAURIER: There is great force in what the hon. member for North Ontario says. The question is a new one; perhaps the Minister of Finance may think it advisable to leave the matter over for further consideration.

Mr. WHITE: The difference between scrip certificates of Canadian Pacific railway stock, for instance, and bearer share-warrants, is only a matter of form. My hon. friend might be the holder of twenty-one shares of Canadian Pacific railway stock and if he handed me a stock certificate endorsed in blank I could transfer it to B and it could be passed on to C and D and so on until it finally got into some one else's name. The scrip certificate form is used, and I think, will continue to be used, in Canada. I do not know that share-warrants are used in this country at all; I am satisfied that they are not used to any considerable extent. The only purpose of this legislation is to meet the requirements of the European market, where they are not familiar with scrip certificates and where they are asking for share-warrants in order more readily to make the transfer of shares. With regard to the succession duties mentioned by the hon. member for North Ontario, it is a question of fact as to whether a decedent was the owner of shares or not and the same consideration would arise in connection with bearer bonds. A, who is the owner of $100,000 worth of bearer bonds, dies. He may have transferred those bonds by delivery to the members of his family or to others; it would be a question of fact as to whether or not he owned those bonds or whether he had parted with them for the purpose of defrauding the treasury of the province. Precisely the same consideration would arise in connection with share-warrants, so that I do not regard that argument as a conclusive one. I repeat that, so far as I know, the only ground upon which the privilege is asked is that of meeting the requirements of the European market. In this country we get most of our money from Great Britain but a great deal of money has been coming over from Belgium and France and the investors in these countries ask for bearer share-warrants. The question is: Shall we make legislation to meet their requirements? If we have not legislation to meet their requirements, they will not so readily invest. The question, then, is whether we are willing to provide facilities under which the continental investor may get the kind of document to which he is accustomed in connection with the holding of shares.

Mr. SAMUEL SHARPE: Could not the same object be attained by having a transfer office in London? Provision is made under the English Companies Act for what they call colonial transfer offices. If an English company wishes to sell its stock in any of the colonies they may establish colonial offices for the transfer of shares. The only argument in favour of the use of share warrants is that they facilitate the sale of stock on the continent. If a Canadian company wishes to transfer or sell their shares in the continental or English markets they could have a transfer office in London or on the continent, which would facilitate the transfer of shares and at the same time remove any objections which might be urged against the use of share-warrants.

Mr. NESBITT: I would like to draw the attention of the committee to the fact that these share-warrants are issued only for fully paid-up stock. Not only would they be a convenience to the people of the continent, but they would be a great convenience to the trust and loan companies in this country who want to get money from the continent.

On section 51—directors jointly and severally liable:

Sir WILFRID LAURIER: This is a very important clause. What is the meaning of the word 'knowingly'?

Mr. WHITE: My right hon. friend has happened upon a word that was rather carefully considered by the committee; in fact, it was inserted by the committee for the purpose of protecting directors against undue liability. The wording of the section in the Bill as originally introduced, so far as it is relevant to my right hon. friend's question, was as follows:

If the directors of the company declare and pay any dividend when the company is insolvent, or any dividend the payment of which renders the company insolvent, or diminishes the capital stock thereof, they shall be jointly and severally liable, as well to the company as

to the individual shareholders and creditors thereof, for all the debts of the company then existing, and for all thereafter contracted during their continuance in office respectively: Provided that if any director present when such dividend is declared does forthwith, or if any director then absent does, within twenty-four hours after he becomes aware of such dividend being declared and is able so to do, enter on the minutes of the board of directors his protest against the same, and in either case within eight days thereafter publishes such protest in at least one newspaper published at the place in which the head office of the company is situated, or if there is no newspaper there published, in the newspaper published nearest thereto, such director may thereby, and not otherwise, exonerate himself from such liability.

This was considered by the committee, and I think properly, to be an exceedingly drastic provision. We traced it up and found that it had appeared in Dominion legislation since 1877, but there was no English precedent for it. Our surmise is that it was adopted from American legislation. The committee, after having given the matter very full consideration, came to the conclusion that the section was too severe upon directors. Whether a company is insolvent or whether a payment will make it insolvent, is in each case a question of fact. The result of the section, therefore, would be that, on a strict interpretation, a director who concurred in declaring a dividend when the company was as a matter of fact insolvent, even although not to his knowledge insolvent, or who concurred in paying a dividend payment of which rendered the company insolvent, although it was not to his knowledge that it would do so, would nevertheless be liable under the provisions of this section. The committee, therefore, concluded that it was too drastic, and they amended the section to read as follows:

If the directors of the company declare and pay any dividend which impairs or diminishes the paid-up capital of the company, the directors who knowingly or negligently concur in the declaration or making payable of such dividend whereby the paid-up capital of the company is impaired or diminished shall be jointly and severally liable for the amount of such dividend as a debt due by them to the company.

That is the way it was left by the committee.

Sir WILFRID LAURIER: I do not think that the amended clause has improved the Bill. In my estimation it has deteriorated it. The Bill as drafted provided that if a director paid a dividend when the company was insolvent, or a dividend which made the company insolvent, he should be liable.

[Mr. W. T. White].

For my part I would certainly be in favour of that legislation; in fact, while I cannot speak as to the common law, my impression is that, under the civil law under which I was brought up, without any legislation or statute, the director would be held liable personally.

Mr. WHITE: Apart from negligence or knowledge?

Sir WILFRID LAURIER: I think that if the directors made the company insolvent by their own action they would be liable. They might not be under the common law, but under the civil law I think any act of any director which made the company insolvent would render that director liable to the company. I think the legislation as at first proposed was wise legislation. A trust company will administer estates ten or twenty times larger than its own capital stock. It is a wise form of administration of estates, none better, I believe, if properly done. One of the things that makes trust companies so efficient and useful is the character of the management, from whom the very strictest account should be required. I do not think the old Act went too far, but as it has been amended I will not substitute my own opinion for that of the committee who drafted this Bill. But I want to call the attention of my hon. friend to one word in this section to which I take strong objection, that is, the word 'knowingly' in the sentence, 'The directors who knowingly or negligently concur in the declaration or making payable of such dividend,' shall be liable. Why should you say 'knowingly?' If a case of that kind arose, what would be the result? The director, when called to account, would say: 'You cannot expect me to know every detail of the business; I passed those dividends upon the reports made to me by the cashier and other officers of the company; I acted in good faith.' That will have the effect of clearing him of responsibility. He will plead that he did not know personally that he was doing wrong; but I say that it is his business to know what he is doing whenever he acts officially. I think he should be made liable and not allowed to take refuge in the statement: I did not know what I was doing. I think the word 'knowingly' should be struck out.

Mr. W. T. WHITE: My right hon. friend, I am sure, will agree with me in this: that if the director in that suppositious case refrained from informing himself on matters that he ought to know about, he would be guilty of negligence. My right hon.

friend will observe that the section reads, 'the directors who knowingly or negligently concur,' so that a director who says, I did not know, would not necessarily excuse himself from the consequences. If a charge of negligence were brought home to him, he would still be liable. While appreciating what my right hon. friend has said, and realizing, I think, precisely what he has in mind, namely, that under a clause of this kind it would be difficult to bring home 'knowledge' to a director so as to make him liable, I would like to call his attention to the fact that this section is almost similar in wording to section 58 of the Bank Act, which reads as follows:

> The directors who knowingly and wilfully concur in the declaration or making payable of any dividend or bonus whereby the paid-up capital of the bank is impaired, shall be jointly and severally liable for the amount of such dividend or bonus, as a debt due by them to the bank.

For the words 'knowingly and wilfully' we have substituted in this Bill 'knowingly or negligently'—making it stronger. For the information of my right hon. friend, I may say that in the Yarmouth case this section of the Bank Act was effectual in enabling the liquidator to recover from the directors of the bank substantial sums paid as dividends in violation of its provisions.

Mr. NESBITT: As the hon. minister knows, when this Bill was before the committee I objected to the word 'knowingly' on the same ground as my right hon. friend.

Section agreed to.

On section 70—investigation:

Mr. MARCIL: I would like to ask the minister if there is any control or inspection over joint stock companies incorporated by the Dominion. For instance, one company is selling Panama bonds in the province of Quebec; another one is advertising guessing competitions in the newspapers and is coining a lot of money.

Mr. AMES: What is the name of the Panama company?

Mr. MARCIL: The Provident Financial Association, Limited, incorporated by the Dominion Parliament in 1905. Last year I called the attention of the Superintendent of Insurance to the matter, and also that of the Minister of Justice. A circular is circulated in my county and various parts of Quebec, stating that these bonds are guaranteed by the French Government. They are sold to the farmers down there for $52 on the instalment plan, or for $40 cash, and the farmer also has a chance in a lottery that takes place subsequently. The largest amount he can draw is $96,500.

Mr. MURPHY: Is the company incorporated by Parliament?

Mr. MARCIL: Yes, it is a Dominion company, incorporated in 1905. I wrote to the Superintendent of Insurance on March 13, 1913, and he said in reply:

> I am in receipt of your letter of the 13th inst. The Provident Financial Association, Limited, was incorporated by an Act of the Parliament of Canada in 1905, but its Act of incorporation does not require it to make a report of its operations to the Minister of Finance. As to the bonds referred to in the circular contained in your letter I have no knowledge whatever. If they are in the nature of a lottery, the parties dealing in them may be prosecuted under the Criminal Code.

There is no disguising the fact that this is a lottery. Large numbers of these Panama bonds were sold in my own constituency to people who did not know any better. They were induced to buy them because on the face of the certificate it appeared that they had been guaranteed by a company incorporated by the Parliament of Canada. The hon. Minister of Justice (Mr. Doherty), to whom I referred the matter, wrote to me on April 19, 1913, to this effect:

> Ottawa, April 19, 1913.
>
> Dear Sir,—There is not information enough in the papers you send me to enable me to judge as to whether the Panama bonds referred to in the circular you enclosed are a legitimate investment or not, nor would I like to express any opinion upon foreign bonds and debentures. I remember that lotteries were authorized and held in France to raise money for the Panama canal, but whether these bonds are connected with the lotteries or not I do not know. Lotteries are, of course, forbidden under our law.
>
> Yours sincerely,
> (Sgd) Chas. J. Doherty.

I have heard no more about it except that I have learned personally that a number of bonds were sold.

During March of this year large advertisements appeared in the newspapers of Montreal and Quebec. The one I have here is in French. It is headed, 'Grand Guessing Competition.' In the centre of the advertisement is a large picture showing a Roman chariot with four horses, and in the chariot a goddess holding a horn of plenty and scattering gold along the way. In the picture are the figures of four women, and the riddle is to make out these figures, which are not apparent at the first glance. This is the inducement offered:

Grand Guessing Contest.

We will give, absolutely gratis, to every person who will find the solution of this guess, one hundred shares in our mining syndicate, formed for the purpose of acquiring and exploiting one of the richest gold mines in the province of Quebec, with the right to participate in ten thousand dollars in gold distributed in prizes amongst members of our syndicate.

Then the conditions follow. The company is the Chesham Gold Mine Promoters, Limited. The advertisement continues:

This $10,000 is to be distributed gratis among the members of our syndicate.

There are 811 prizes, divided as follows:

One prize	$5,000	in gold.
"	1,000	"
"	500	"
"	200	"
"	100	"
Two prizes	50	"
Four prizes	25	"
One hundred prizes	10	"
Two hundred prizes	5	"
Five hundred prizes	2	"
811 prizes.	$10,000	

Then they state the conditions of the competition as follows:

To all persons who will send us a correct solution of this puzzle we will give absolutely free 100 shares in our syndicate, with the right to participate in this distribution of $10,000 amongst the members of our syndicate. All you have to do is to make a cross on the four figures which are found on this sheet and send them to us together with a five cent piece to cover the cost of postage. Write your name very legibly as well as your address. This offer is without precedent and is made for the purpose of advertising our syndicate. Do not forget to write your name very plainly, and enclose the five cents in your letter, which entitles you to take part in this competition.

A well known citizen in Montreal, who takes an interest in these matters, and who sent me this information, stated that he was informed on good authority that on the first day after this competition was announced on which a reply could be made, the 16th of February, 1,300 five-cent pieces were received, that on the following Tuesday 2,200 five-cent pieces were received, and that on the following Wednesday 4,400 five-cent pieces were received. The whole thing seems to be a sham. The advertisement appeared first in the Montreal papers, and then I saw it in the Quebec papers. The great objection is that this is being done under the Dominion Companies Act. This company was incorporated on the 26th January, 1914, under the Dominion Companies Act. I want to direct the attention of the hon. Postmaster General (Mr. Pelletier) to this company. It is called the Chesham Gold Mines Promoters, Limited. The idea of giving 100 shares in a syndicate for five cents! I have several other cases that I want to call the Postmaster General's attention to as being an abuse of the post office. I thought it was my duty to call the attention of the ministers present to what is being done. There is no inspection of these companies, and these things are liable to occur again.

5 p.m.

Mr. W. T. WHITE: My hon. friend from St. Antoine (Mr. Ames) has handed me the statute to which my hon. friend (Mr. Marcil) has referred—4-5, Edward VII. By chapter 151 the Provident Financial Association, Limited, was incorporated, but I fail to see anything in the powers granted to them which would enable them to carry on the business which has been described by my hon. friend. The powers set out in the Act are as follows:

The company may—

(a) Underwrite, buy, pledge and otherwise deal in bonds, debentures or obligations of corporations, whether secured by mortgage or otherwise, Dominion, provincial, British, foreign or other public securities, with the privileges and rights thereto attached;

(b) borrow money upon the security of mortgages, hypothecs, bonds or other securities belonging to the company.

There is no objection that I can see to the legislation of 1905 incorporating the company in question. From what my hon. friend has said, I should judge that they are carrying on what is termed a guessing competition. Whether they are violating the provisions of the Criminal Code or not I am unable to say. I think it would be impossible to have any return made to the minister which would expose the character of the business carried on by a company having the powers mentioned in this Act. It is quite probable that the powers that were got by the letters patent referred to by my hon. friend are similarly proper in character; but the mode of carrying on business is objectionable. Possibly the Attorney General of Quebec would be the party who might be usefully informed as to the matters brought to our attention by my hon. friend.

Mr. MARCIL: I would not like there to be any misapprehension. The sale of the Panama bonds has taken place by a company with a special charter.

Mr. WHITE: That is the company incorporated by chapter 151.

Mr. MARCIL: The other company is incorporated under the General Companies Act. Would any sane man think that he was going to get 100 shares in a gold mine in Quebec for five cents? Yet a lot of people have been taken in—4,400 in one day. There is not the supervision of these matters that there should be. If there is no inspection of these companies by the Dominion, there should be some prohibition against their misleading the public.

Mr. WHITE: I shall be very glad to bring the matter to the attention of the Secretary of State.

Mr. MARCIL: What I am doing in this case, is, of course, in the public interest.

Mr. WHITE: Oh, certainly.

Mr. MARCIL: I was asked to call the attention of the Postmaster General to it, so that these notices might be stopped going through the mails. The other company I refer to is the Panama Bond Company, which probably is the most dangerous of all.

Mr. LEMIEUX: When I was Postmaster General, an order was issued prohibiting the Panama Bond Company sending its matter through the mails. They employed counsel to argue the case before Sir Allen Aylesworth, who was then Minister of Justice, and he decided that they had no right to issue these bonds or to sell them to the public. We issued an order against them in the post office, but since that time apparently they have renewed their efforts.

Mr. MARCIL: There was a circular published and circulated in my constituency, stating that some person in Rockland, near Ottawa, had benefited to the extent of $15,000.

Mr. PROULX: Did he get the money?

Mr. MARCIL: I never heard he got the money, but such a notice would induce others to spend their money.

Bill reported.

LOAN COMPANIES.

On motion of Hon. W. T. White (Minister of Finance) the House went into committee on Bill No. 83, respecting loan companies, Mr. Blondin in the Chair.

Mr. WHITE: It will be unnecessary for me to make any general explanation upon this Bill, because the same remarks apply to it as to the Bill respecting Trust Companies, which has just been reported.

Bill reported.

BINDER TWINE FOR EXPORT.

Hon. GEORGE E. FOSTER (Minister of Trade and Commerce) moved second reading of Bill No. 109, to amend the Inspection and Sale Act. He said: This is the Bill introduced upon the resolution which we discussed the other day in Committee, and which was, I believe, agreed to on all sides.

Motion agreed to, Bill read the second time, considered in Committee, reported, read the third time, and passed.

SUPPLY.

The House in Committee of Supply, Mr. Blondin in the Chair.

Mail subsidies and steamship subventions—Steam service between Canadian Atlantic ports and Australia and New Zealand, $140,000.

Sir WILFRID LAURIER: There is an increase there.

Hon. GEORGE E. FOSTER (Minister of Trade and Commerce): A comparison of the mileage of the service under consideration with that of the service with South Africa gives the following: distance from St. John to Dunedin, summer service, 15,656 miles; winter service, 15,303 miles. Distance from Montreal to Durban, 8,162 miles; St. John to Durban, 7,802 miles. It will be seen that the distance travelled is twice as great in the service to Australia and New Zealand as it is in the service to South African ports. That of course, makes the expense greater, and the company in charge of the service to Australia asked for an increase in subsidy. I did not grant the amount that was asked, but I did give an increase of $20,000 a year. This service is developing a fairly large amount of traffic. In 1913, $3,364,000 worth of exports of Canadian origin were carried, being about $500,000 of an increase over the preceding year. The increase in the value of exports of United States origin carried was about $270,000, making in all an increase of about $750,000 in the year. The service is being largely used by the export trade of eastern Canada; the use of the long railroad across the continent is impracticable for most classes of freight. I am glad to be able to say to the House that during the last two or

three months the quantity of freight offering for these vessels has been increasing with satisfactory rapidity.

Sir WILFRID LAURIER: This service was established as an experiment some years ago because manufacturers and others could not conveniently use the Pacific route. We hoped at that time that the service would be well justified by the results, and I am glad to see that so far our anticipations have been fulfilled. Has my hon. friend a list of the freights transported by this service?

Mr. FOSTER: I would direct my hon. friend to part 6 of the report of the Trade and Commerce Department, which deals with subsidized steamship services. It has been our aim to obtain a statistical report of all freight carried so that a comparison can be made from year to year and a check kept upon the progress made. The vessels in this service carried last year the following articles of Canadian origin:

Lumber, automobiles and parts thereof, calcium carbide, chair stock, paper, sole leather, agricultural implements, rubbers, iron pipe, hardware, cattle, clothespins, seed, fruit jars, corsets, cereal food, wire and organs.

Of United States origin the following articles were carried:

Cereal foods, machinery, automobiles and parts thereof, steel rails, organs, lumber, fruit jars, roofing paper, shoe polish, wire and sewing machines.

Of West Indian origin the following articles were carried:

Coffee, cocoa, pimento, ginger and cassava products.

Sir WILFRID LAURIER: Were there return cargoes?

Mr. FOSTER: We do not have a return voyage. We subsidize the vessels for the trip from Canadian ports for export trade to Australia and New Zealand, but it has been impossible for the company up to the present time to get cargoes which would make it at all economical for them to bring return cargoes to our ports. When they discharge cargo at Australian and New Zealand ports, they load from whatever part of the world they can, generally taking cargo from there to British ports and then returning to our own ports to carry out their export contracts.

Sir WILFRID LAURIER: My right hon. friend was in Australia last year. Whilst there is no cargo coming back aboard the steamers, is there any sign of any future trade from Australia to Canada?

Mr. FOSTER: Yes. In another of the publications of the Trade and Commerce Department which details the transactions and exchanges of the different countries my right hon. friend will find set out the articles that return. The traffic between Australia and our own country is now mainly by the Pacific, and it has not been found practicable to get return cargoes to our eastern Canadian ports. But there is a very satisfactory increase in the interchanges between Australia and ourselves. If it would be possible for a provisional arrangement to be made covering certain lines of articles, that would be largely increased. That is shown in the trade between New Zealand and Canada, where we have a mutual preference, the trade, both going and coming, having very largely increased. It is not an extensive trade in one way, yet the increase has been rather remarkable and Canada enjoys a large part of the advantage of that trade, in agricultural machinery, some other kinds of machinery and manufactured articles of various kinds. With New Zealand, which has no very large manufacturing industries itself, our trade in automobiles and motor cars is increasing very rapidly. In paper there has been a very rapid extension of our trade; in fact, we supply practically all the paper for New Zealand, and we are supplying a very large proportion of what is used in Australia so that for our paper industry, our iron industry and the others that I have mentioned there is an extension of trade. Then, there is an opportunity for traffic between Australia and New Zealand and Canada in the matter of fruits, the two seasons being absolutely the opposite of each other. They are taking quite large quantities of our fruit from the British Columbia coast.

Mr. SINCLAIR: From what ports do the ships sail?

Mr. FOSTER: From Montreal and St. John.

Mr. SINCLAIR: What route do they take?

Mr. FOSTER: They take the South American route by Cape Horn.

Mr. SINCLAIR: Will the opening of the Panama canal have any effect on the business?

Mr. FOSTER: I am not sure that it will make the passage very much shorter, but one cannot tell what will happen.

Mr. SINCLAIR: Will it have the effect of reducing the subsidy ?

Mr. FOSTER: If it makes the passage shorter I am not sure but it would.

Mr. LEMIEUX: Is there not an application before the hon. gentleman for a subsidy when the canal is open for a line of steamers from the east coast to the west coast of Canada, and what consideration does my hon. friend intend to give that matter ?

Mr. FOSTER: Several propositions have been placed before the department and the Government for subsidies for lines of steamers connecting the eastern with the western coast by the Panama canal. Up to the present time, although I have given a good deal of attention to the matter, I have not seen that it is necessary to subsidize freight steamers between our eastern ports and our western ports. These are not and cannot be mail carriers; they must be exclusively freight carriers. What may take place when the canal is opened no one knows; but it does seem to me there would be an increase in the lines of steamships from the European countries through the Panama canal to the Pacific ports of Canada, and that it might be quite possible to combine the services between the old countries and those western ports with calls at the eastern ports of Canada. So far as my department is concerned, we are allowing that matter somewhat to develop itself and seeing what the lines and tendencies promise to be before we undertake to subsidize a freight service between ports on these two sides of the country.

Mr. SINCLAIR: Has the minister considered the question of defining a coasting service in view of the opening of the canal ? At present a coasting voyage on the eastern coast of Canada extends from Labrador down to about the mouth of the Amazon, but no farther. There has been an application from parties connected with the shipping business to have the definition made larger so as to allow coasting vessels to go down to the ports of South America as far as the river Platte. Many of them are getting business that far, and there is no reason, as far as I am aware, why they should not be allowed to go to these southern ports. Then, on the opening of the canal, if we adopt the idea that has prevailed in the United States for many years, we would call it a coasting voyage between the eastern coast of Canada through the canal to the western coast of Canada. I understand that in the United States a voyage from New York to San Francisco is a coasting voyage, although it is around South America at present, and under that system the business is confined to vessels belonging to the United States. This question of defining a coasting voyage is a matter of a good deal of importance to Canadian shipping, and I was wondering if it had been brought to the minister's attention. It is primarily, I suppose, a matter for the Department of Marine and Fisheries, and I have brought it to the attention of the minister of that department during this session. No steps have been taken, but in view of the opening of the canal I think it would be worth while for the Government to consider this question in connection with the coasting trade.

Mr. FOSTER: Primarily and naturally I suppose a coasting voyage is that which proceeds continuously along the coast of the country to which the ship belongs. The United States, as my hon. friend says, smile at such contractions as that, and their coasting voyages, I believe, go as far as the Phillipines and the widest extension they have. The matter is one that belongs to the Customs Department, I think, more than to any other. I do not think the question of definition of a coasting voyage has come up as a serious matter, but in connection with the opening of the Panama canal it is a question that may very well come up for consideration.

Mail subsidies—Canada, Great Britain ocean and mail service, $1,000,000.

Mr. MACDONALD: Might I ask the minister what is being done in that regard?

Mr. FOSTER: The present contract expired at the end of the fiscal year, and communications and conferences are now going on with reference to the service for the coming year. I will ask that this item stand for the present until I have full information before the House.

Mr. SINCLAIR: I would like to suggest to the minister that he consider a sliding scale of subsidies for ships according to their speed. As everybody knows, it is very important that we should have a fast service. At the present time the ships participating in this subsidy have different speeds; the Victorian and the Virginian, I understand, are 16-knot boats; the Empresses are about 18 knots, and I think

the Calgarian and Alsatian are even faster than that. Speed costs money and it would be an encouragement to the owners of ships in this service to get something extra for extra speed. I think it would be a good principle to adopt that when new contracts are made some weight should be given to the speed of the ship, and that more should be paid for a fast ship than for a slower one.

Mr. FOSTER: So far as the mail service is concerned, that principle is perfectly legitimate and ought to be acted upon; and it is acted upon to a certain extent. We are trying to get a fleet of Canadian vessels between our ports and the old country which will give us the greatest possible speed. The ships are being built with satisfactory progress, if not so rapidly as some of us could wish. The Victorian and the Virginian have a nominal speed of 18 knots, but I do not think they made that speed from shore to shore. The Alsatian has a speed of 19½ knots or more, and the Calgarian is expected to be even a little faster.

Mr. SINCLAIR: What is the speed of the Empresses?

Mr. FOSTER: Eighteen-and-a-half knots, and the Royal Edward and the Royal George have a speed of nineteen-and-a-half knots; so that when the Calgarian is in commission our service between here and the old country will run very close to a nineteen-knot service in fairly good weather. That will be an improvement on the old service, and much more satisfactory in a great many ways.

Steam service between Canada and Cuba, $25,000.

Mr. FOSTER: Last year's vote has not been expended. The last contract we had was with the Elder-Dempster line, who went out of this service more than a year ago. The question then came up as to whether we should have a subsidized service between our ports and Cuba; and after communications with shipping firms I received the assurance that they would go into the business, preferably, if a subsidy were granted—of keeping up a communication between Canadian and Cuban ports if they were given assurances that they would not be interfered with by subsidized vessels from Halifax and St. John. I agreed, with the proviso that if the service did not prove to be reasonably good I reserved the right to put on a subsidized service. The service has been carried on by those firms and I think they have fairly met the needs of the two countries. While there is some chance of an export business to Cuba, we have the disadvantage of the preference being given to the United States. Not much is imported into this country from Cuba.

Mr. SINCLAIR: Could not our West Indian service be combined with that?

Mr. FOSTER: No.

Steam serivce between Canada and Newfoundland, $70,000.

Mr. KYTE: Is the service between Halifax and Newfoundland included in that?

Mr. FOSTER: No, this is for the service between Port-aux-Basques and Sydney, which is a daily service, Sunday excepted. The two new boats, the Bruce and the Lintrose, have a speed of fifteen and one-half knots and they make the run between Newfoundland and Sydney in about seven and one-half hours. As to traffic returns, I find that this year there have been carried goods of Canadian origin to the value of $981,000 in round figures, and of United States origin $288,232; and that the total value of the traffic shows a slight increase over 1912. The new boats were not in service except for a portion of last year. With the Lintrose taking the place of a less efficient boat the passenger and freight traffic shows signs of increasing.

Mr. MACDONALD: I had the opportunity of visiting Newfoundland last summer, going via North Sydney to Port-aux-Basques. The new steamer is a splendid boat, and we can congratulate ourselves on Canada's means of communication with the oldest colony to-day. The service is very satisfactory. Of course, they have a very strong competitor in the service which is maintained from New York via Halifax, and which carries a tremendous quantity of American goods to Newfoundland. I do not know whether that service receives a subsidy, I would question the wisdom of subsidizing it, as the thing to be attained is the furtherance of Canadian trade, and a subsidy to that service would really be assisting American trade.

Mr. FOSTER: It receives no subsidy.

Mr. MACDONALD: I am glad to hear it. I thought perhaps the Halifax people, for local purposes, might have asked the minister to subsidize that service. I want to take this opportunity to say to the minister that I do think that the contribution which was announced by the Prime Minister two

weeks ago of $10,000 for the people who have been left homeless in Newfoundland is a very meagre one for the Canadian people to make at this time. Since the date of the announcement of this contribution it appears that the Southern Cross, of whose safety some hopes were entertained, has now, beyond question, gone down with all on board. The situation is that there are a thousand families left absolutely without breadwinners in that colony. I notice that the great city of Toronto gives $5,000, which is one-half of the contribution of the whole Canadian people. I am well aware that in eastern Canada, in the business centres, which have business connections with Newfoundland, the personal generosity of the people will be exercised, but we ought to be exceptionally neighbourly to our own kith and kin in this sister colony, and over and above everything else I think the special duty is thrown upon the whole people of Canada of giving such a contribution as will materially assist in alleviating the distress which has arisen on account of this abnormal calamity. I therefore hope that the Government will be more generous and will increase the contribution with a greater sum than that of $10,000 which was announced by the Prime Minister two weeks ago.

Mr. FOSTER: My hon. friend must keep in mind that the extent of the disaster, as far as the vessels were concerned, and certainly as far as the loss of life was concerned, was not at all known to the Dominion Government when the cable was sent offering our sympathy and aid. But since then the calamity has widened and more and better information has come to hand. Whilst I am not making any promises, the matter will certainly receive more consideration by the Government. We are closely allied in every way with Newfoundland, and a disaster of that kind is one that appeals to Canada from one end of it to the other.

Mr. SINCLAIR: In reference to freight carriage on the subsidized boats, I would like to know if the minister has any system by which he can control the rates. There is a great deal of feeling along the coast that some of the subsidized boats are charging too much for freight. The tendency of subsidizing boats is to drive schooners and other modes of carriage off the routes. On the south coast of Nova Scotia there were a great many schooners carrying freight some years ago, but, as we began the policy of subsidizing boats between Halifax and the eastern ports, the schooners were cut out of the business and driven off the routes. The result is that some of these subsidized boats have put the freights up to what is regarded as an abnormal figure along the coast. When these contracts are being renewed it would appear to me to be a suitable time to see whether, if we have not the power under the law to regulate rates, we can do so by contracts. We could arrange with these people to submit their rates to the minister, and he would approve of them before they would be operative. I received a letter a few days ago from people in my own constituency as to the rates which are being charged by the Scotia, which is one of the subsidized boats on the coast of Nova Scotia. The statement made to me was that under the old rate a barrel of flour was carried from Halifax to the small ports on the southern shore for fifteen cents, and that at the present it costs twenty-eight cents. I made some further inquiries, and I was informed that four cents must be added to the fifteen for wharfage, which would make it nineteen cents under the old rate, and the difference is therefore as between nineteen and twenty-eight cents. That is quite a large addition to make, and I have had a number of complaints of that kind. I would like the minister to say whether he has taken any supervision over the question of rates?

Mr. FOSTER: I have taken supervision in two ways. In the first place, in every one of these contracts there is a clause, which my hon. friend will find in the latter part of the report to which I referred a moment ago, and which provides that the service shall be performed:

> At tariff rates both as to passengers and freight which may be from time to time approved by the minister.

The minister has control. None of these vessels can raise the rate which has been approved in a previous year without first getting the assent of the minister thereto. The other way in which the service is being supervised is by having a supervising officer, who travels on all these routes at least once or twice during the season of navigation, makes notes of these things, and calls them to the attention of the minister. In that way we are keeping a pretty fair supervision over these services. I am having the matter to which my hon. friend has called my attention looked into.

Mr. BLAIN: Is that provision new?

Mr. FOSTER: These last clauses have been added.

At six o'clock the House resumed, and then took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

PATENT OF THOMAS LEOPOLD WILLSON.

The House in Committee on Bill No. 130, respecting Certain Patents of Leopold Willson.—Mr. Fripp. Mr. Blondin in the Chair.

Mr. NESBITT: Will somebody explain this Bill?

Mr. FRIPP: There are eight patents involved in this. Mr. Willson has been carrying out these patents near Ottawa, and has spent a quarter of a million dollars on them. He now requires a larger plant as well as water-power, and he has interested some Americans, who have acquired water-power, I think, in the province of Quebec. Only two of the patents have not been manufactured, and the desire is to place them in such position that if any person has manufactured in the meantime he shall be protected. There is nothing unusual in the Bill.

Bill reported, read the third time and passed.

PATENT OF RUDOLF GOLDSCHMIDT.

The House in Committee on Bill No. 135, respecting a certain patent of Rudolf Goldschmidt.—Mr. Fripp. Mr. Blondin in the Chair.

Mr. FRIPP: The instruction I have received from the solicitor in this case, is, that Dr. Goldschmidt is associated with Paulsen and Marconi, inventors of wireless telegraphy. Through inadvertence, this patent was allowed to lapse in February last, and he asks to have it renewed, saving the rights of any persons who may have required the right to manufacture in the meantime.

Mr. MICHAEL CLARK: Does a man with a name like that ever do anything inadvertently?

Some hon. MEMBERS: Hear, hear.

Mr. OLIVER: If this Bill is passed, in what position will this man stand as compared with the position he would have stood in had he not allowed the patent to lapse? Is he getting a further extension of time than he otherwise would have been entitled to?

Mr. FRIPP: Yes.

Mr. OLIVER: Then I shall have to register my vote against it.

Mr. FRIPP: No injury is done to anybody. He failed to manufacture within two years and by this Bill he is put under the operation of the license clause, which provides that if any person has obtained from the department a license to manufacture he can proceed to do so.

Mr. EMMERSON: The practice of this House for many years is not to permit Bills of this character to go through, unless the Minister of Agriculture is present to explain them. I believe that it is a very good practice. Bills relating to the renewal of patents ought not be passed in this House without the representative of the Department of Agriculture being present.

Mr. FRIPP: The Deputy Minister of Agriculture was present in the committee and said that this was a proper Bill to pass, and that the department had no objection.

Mr. OLIVER: That does not exactly explain the position in which members of this House are before the country. Each member of the House of Commons has a responsibility to the people of Canada in regard to the protection not only of public right, but of private right. The fact that a Committee of the House has seen fit to pass upon a question of public and of private right does not relieve each individual member of the House of his responsibility in regard to that. The Government is primarily charged with responsibility for administering the patent law. If the responsible minister will from his place in the House of Commons declare that this Bill is a proper Bill, in which the rights of the individual and of the public are adequately protected—to borrow a phrase from the Premier—then each private member of the House is relieved from responsibility in the matter—he has done his duty by the public; but unless and until either there is an expression of opinion from the Committee of the Whole or from the proper minister, the members of the House are not discharging their responsibility to the people who sent them here. For all I know there may be people in my constituency who elected me for the protection of their interests who may be affected by this particular Bill. I have a right to know, on the responsibility of the Government and of the minister, whether that is the case or

not, and I protest very strongly against bills of this class, which necessarily affect intimately private as well as public rights, going through the House without adequate information and an assumption of responsibility by those who are entitled properly to bear that responsibility.

Mr. CARVELL: It is something like ten years since I first protested against the railroading of patent bills through this House. I must confess that my protests have not produced very great results, because it seems that the door is getting wider each year, and it has now reached a stage when a man need not bother whether he follows the law or not; all he has to do is to pay $200 and get his patent renewed. Perhaps the worst offender in the whole 221 of us is my hon. friend the senior member for Ottawa (Mr. Fripp). I do not know why it is; perhaps it is because he is so near the seat of Government that he is chosen as the channel by which these Bills shall be railroaded through. As explained by my hon. friend the senior member for Ottawa, there may be some difference of principle between Bill No. 130 and Bill No. 135. In 1903 Parliament in its wisdom provided that, when a patent is taken out, the patentee can have inserted a provision by which he is exempted from the necessity of manufacturing within two years provided he holds himself ready to lease or sell to another person the right to manufacture the article in Canada. That is done to provide for cases in which there would not be a very large sale, for instance heavy classes of machinery. My recollection of the law is that, either at the time the patent is being taken out or within six months thereafter, application can be made to the Commissioner of Patents to have this clause inserted. In the case of Bill No. 130, which has just passed the committee after the very lucid explanation given by my hon. friend the senior member for Ottawa, possibly no very great harm is done because it only allows the holder of the patent to retain his right and he has to give another person the right to manufacture. As I understand the explanation of the Bill now under discussion, it is on a different principle altogether. The well known patent law of Canada, of the United States and of most European countries is that the patentee must commence the manufacture of his patented article within two years and continue to manufacture the same so that any one may be able to purchase it; otherwise, his patent is void. A patent is a monopoly given by Parliament to a man who invents a new and useful article. The law of the country says: We protect that man to a certain extent; we encourage him to employ his thoughts and ability in seeking out these new devices and we give him a monopoly for a certain number of years providing he complies with certain conditions. This man has been remiss in his duty; he has allowed the matter to drift along and now he comes back to Parliament and says: I was guilty; I was remiss in my duties; I did not fulfil the conditions of the law, but that is nothing. I will pay $200 and you ought to reinstate me in my interest. Supposing I had a note endorsed by a neighbour for $1,000 and on the day of maturity I failed to present that note at the proper place and to send him notice and he said: 'Because you have failed to do what the law demands of you, I will not pay this note,' would not I be laughed to scorn if I came to Parliament and asked to be replaced in my position because I had been negligent? The two cases are parallel. The way these patent Bills are railroaded through Parliament is trifling with justice and with the rights of the people. It has been stated here a great many times that the granting of patents should be taken out of the hands of Parliament. Why not hand the matter over to the department and let the department in some way exercise a discretion that is a discretion? It is all very well for my hon. friend to say that the Deputy Minister of Agriculture was in the committee. I presume he was there, but the deputy minister knows that this Parliament is railroading these patent Bills through by the dozens. We were guilty when members on this side were in power, and our friends are guilty now that they are in power.

Mr. BURNHAM: Is there anything to prevent this man from taking out a new patent?

Mr. CARVELL: Well, the law says—

Mr. BURNHAM: Apart from the law, as a matter of equity?

Mr. CARVELL: I can only state what the law says. He cannot take out a new patent after it has been in force one year. From the equity standpoint, if he sleeps upon his rights and other men have manufactured his article and purchased it, it is not fair that he get a new patent. I had a very important case in my own practice

some five or six years ago where an American patented a logging engine in the United States and also in Canada. His first patent was workable, but he had not manufactured in Canada within the two years. A client of mine spent about $20,000 in building this same machine, not knowing that it was patented. He had gone to the trouble of employing one of the best patent lawyers in Canada, a man having an office in this city to search the record, and he informed my client that there was no patent on that article. The patentee, an American concern, finding that their patent had been infringed upon, brought action in our Chancery Court to prevent my client from continuing the manufacture of the article, and to claim the payment of royalties. It was a long-drawn-out fight, but we won in the end because the patentee had not complied with the law. I cite this instance to my hon. friend to point out that we ought to lay down a definite principle with regard to this matter. Either we should renew these patents or we should not, and if we are going to renew them we should lay down some reasonable rules and hand the matter over to the department to be dealt with according to their discretion.

Mr. FRIPP: The hon. member for Carleton, N.B. (Mr. Carvell), is apparently under some misapprehension; the remarks which he has made with regard to the renewal of patents do not apply to these two cases. We are doing no more than what the Patent Act allows us to do: apply to the commissioner, through this Parliament, for the right to renew these patents under section 44, which gives to any third person who applies for license and shows that he has been manufacturing in the meantime the right to occupy the field in the interim. My hon. friend referred to cases where the patentee neglects to renew his patent within the proper time and thus loses his rights. In these cases the rights are still existing, and under the Patent Act we have the right to ask that this Bill be passed. There is a difference between a patent which lapses by non-renewal and one which has not lapsed unless it be by non-manufacture. If the hon. gentleman will look at the Act he will see that we may apply to the commissioner through Parliament for this right at any time, but we have to give within six months to any third person the right to obtain a license or lease from us of our patent rights to manufacture. The argument that Parliament should not interfere in the case of a patent which fails by reason of non-renewal and the payment of fees is good, but the cases under consideration come not under that head, but under section 44, which provides this very remedy.

Mr. CARVELL: I am satisfied that my hon. friend is labouring under a misapprehension of the law. The law provides that when a man applies for a patent, or six months thereafter, he may be brought under section 44 of the Act, which provides that the commissioner of patents has the power to grant to any person the right to manufacture that article by paying a reasonable royalty. If the parties themselves cannot agree upon the amount of the royalty, the commissioner of patents has the right to settle the matter. Under section 38, if the patentee does not manufacture the article within two years his patent is dead. If after the expiration of from six to twelve years a man has not renewed his patent, it expires. My hon. friend himself admits that we ought not to renew patents under such circumstances, but we are doing it every day. Here is section 38 of the Act:

> Every patent shall, unless otherwise ordered by the commissioner as hereinafter provided, be subject, and expressed to be subject, to the following conditions:
>
> Such patent and all the rights and privileges thereby granted shall cease and determine, and the patent shall be null and void at the end of two years from the date thereof, unless the patentee or his legal representatives, within that period or an authorized extension thereof, commence and after such commencement, continuously carry on in Canada, the construction or manufacture of the invention patented, in such manner that any person desiring to use it may obtain it, or cause it to be made for him at a reasonable price, at some manufactory or establishment for making or constructing it in Canada.

That is the provision which has been violated in this case. The man has not manufactured within two years; his patent is dead, yet my hon. friend is asking this Parliament to give back to him that which he lost by his negligence. This is section 44:

> On the application of the applicant for a patent previous to the issue thereof, or on the application within six months after the issue of a patent of the patentee or his legal representatives, the commissioner, having regard to the nature of the invention, may order that such patent, instead of being subject to the condition with respect to the construction and manufacture of the patented invention hereinbefore provided, shall be subject to the following conditions, that is to say:
>
> Any person at any time while the patent continues in force, may apply to the commis-

sioner by petition for a license to make, construct, use and sell the patented invention.

That is, while the patent is in force, not after it is dead. The section goes on to say:

The existence of one or more licenses shall not be a bar to any order by the commissioner for, or to the granting of a license on any application, under this section, and the patent and all rights and privileges thereby granted shall cease and determine, and the patent shall be null and void, if the commissioner makes an order requiring the owner of the patent to grant any license, and the owner of the patent refuses or neglects to comply with such order within three calendar months next after a copy of it is addressed to him or to his duly authorized agent.

Under this law the patent died because the holder did not manufacture within two years; yet my hon. friend, though he admits that the patent has lapsed through negligence; though he admits that he did not, at the time of application for the patent or within six months afterwards, request that the patent be brought under the conditions of section 44, asks this Parliament to reinstate this man and not only to bring his patent back to life and to give him six additional years in which to carry on business, but to give him as well the right to come within section 44. This section provides that he need not manufacture in Canada; he can signify his willingness to the Commissioner of Patents to give to another person the right to manufacture in Canada.

Progress reported.

PACIFIC, TRANS-CANADA AND HUDSON BAY RAILWAY.

The House in Committee on Bill No. 142, respecting the Pacific, Trans-Canada and Hudson Bay Railway Company.—Mr. Douglas. Mr. Blondin in the Chair.

Mr. OLIVER: That is quite a large order. I do not know if anybody in the House knows anything about this Bill.

Mr. NESBITT: It is a first renewal that came up in the committee yesterday morning and was passed by them with discussion.

Mr. OLIVER: Can the hon. member state where its termini are?

Mr. NESBITT: One terminal is on the Pacific coast north of Prince Rupert, and the line runs along through the north country to the Hudson bay.

Mr. MORPHY: When this Bill was in committee I took an objection to the name of the company. My objection was that, if the Bill goes into effect and the public are invited to subscribe in any way the name carries on its face something calculated to deceive the public, inasmuch as there is at present under construction a Hudson Bay railway. I was informed that the name having been given to the company previously, it seemed hopeless to do anything to change it in the committee. The House will notice that the name also contains the words 'Pacific' and 'Trans-Canada,' incorporating within the one name the names common in a measure to three great systems of railway, either built or building in this country. I thought the name was suspicious. I do not know anything about the incorporation or who is behind this enterprise, but I thought it was my duty to point that out, as I now do, to the House, lest by an improper use of the name—and I cast no reflections as I know nothing about those behind the Bill—the public might hereafter in some way suffer. I notice it is running through similar territory to some of the other roads, and I leave that to the committee and the Whole House for their consideration. I would like to have it discussed.

Mr. BORDEN: In the absence of the mover, it had better stand.

Progress reported.

PRINCE EDWARD AND HASTINGS RAILWAY.

The House in Committee on Bill No. 93, respecting the Prince Edward and Hastings Railway Company.—Mr. Hepburn. Mr. Blondin in the Chair.

Mr. OLIVER: I do not wish to delay the progress of this Bill, but I have asked for explanations in regard to different railway Bills, not because I took exception to the charters, but because it is always possible that special provisions may be inserted in one of these charters that may affect the public interest. When the Chairman of the Railway Committee (Mr. Lancaster) was in the House, he was always able to give the House a thorough explanation as to whether the public interest was being protected or not, and in what manner. It was very satisfactory, to me at least as a responsible member of the House, that that information should be placed upon 'Hansard' as a protection and defence to members under all circumstances. I do not wish to interfere with

the course of legislation, particularly in this case, but in regard to railway charters in western Canada I have always desired to be satisfied as a matter of record that there is nothing in the charter inimical to the public interests.

Mr. BORDEN: I think there is nothing in the Bill out of the usual course, but inasmuch as neither the acting Minister of Railways nor the gentleman whose name appears on the Bill is here, and as the Chairman of the Railway Committee is unfortunately absent through illness, the Bill had better stand.

Progress reported.

GRAND TRUNK-CANADA ATLANTIC.

The House in Committe on Bill No. 154 respecting the Grand Trunk Railway Company of Canada, and the Canada Atlantic Railway Company.—Mr. Fripp, Mr. Blondin in the Chair.

Mr. FRIPP: This is a very simple Bill. The Grand Trunk railway acquired the Canada Atlantic railway some years ago, and this Bill is simply to ratify the agreement consolidating the two companys under the name of the Grand Tunk Railway Company of Canada.

Bill reported, read the third time and passed.

LABRADOR, QUEBEC & SOUTHERN RAILWAY.

The House in Committee on Bill No. 97, to incorporate the All Red Line Railway Company (and recommending that its title be The Labrador, Quebec and Southern Railway Company.)—Mr. Fripp. Mr. Blondin in the Chair.

On section 1—incorporation:

Mr. OLIVER: As the member in whose name the Bill stands is here, perhaps he will give the House a lucid explanation of the Bill.

Mr. FRIPP: This is a new railway charter for a line running from some point on the cost of Labrador to the city of Quebec. It was originally the intention of the promoters of the Bill to run across to the Pacific coast, but the committee cut down the charter to between the two points I have mentioned.

Mr. MACDONALD: As neither the acting Minister of Railways nor the Chairman of the Railway Committee is here, I think the Bill had better stand.

[Mr. Oliver.]

Mr. J. E. ARMSTRONG: The Bill was very carefully considered in the Railway Committee when both the acting Minister of Railways and the Chairman of the Railway Committee were present.

Mr. MACDONALD: We have had so many people seeking railway charters in Canada that when a proposition comes to the House in the way this one originally came—seeking a charter from some harbour in North Labrador which may not be in Canadian territory, but under the jurisdiction of Newfoundland,—and when that proposition has been whittled down by the Railway Committee to a local road from Northern Labrador down to lake St. John, I think under those circumstances we should have a little fuller explanation; especially in view of the fact that propositions of that kind have within them the germ of exploitation, and may not in the end result to the advantage of Canada.

Mr. PARDEE: As my hon. friend says, this society originally sought a charter to cross the continent, but at the last meeting of the Railway Committee the Bill was very much curtailed. A large amount of money has already been spent by this company on plans, surveys, etc. The Bill was thoroughly threshed out in the Railway Committee, and it appears to me that the Bill might pass in its present shape.

Mr. NESBITT: The Railway Committee gave it a good deal of consideration, and passed it in its amended form.

Mr. MACDONALD: Why do these gentlemen come here and ask for a line of railway from Labrador to the Pacific coast, and then appear to be satisfied with a line of railway running through absolutely impossible territory, as everybody knows, from Northern Labrador down to lake St. John?

Mr. BORDEN: I think under the circumstances the Bill had better stand.

Mr. OLIVER: Before the Bill is disposed of, I would suggest that the question raised by my hon. friend from Pictou be considered; that is, as to the jurisdiction of Canada over the Atlantic terminus of this road.

Mr. J. E. ARMSTRONG: That was thoroughly explained in the committee. The railway already has a charter for that portion of the road.

Mr. MACDONALD: That brings up the question as to whether or not this Govern-

ment, having recognized the Newfoundland charter over the disputed territory, is disposed to give full recognition to the rights of Newfoundland. That is a question still to be determined by some independent authority before Canada gives up its full rights.

Mr. BORDEN: I should not think there would be any difficulty in framing legislation committing neither one country nor the other. If the Newfoundland charter is confined to the territory of Newfoundland, whatever it may be without expressly defining it, and if ours is made complimentary to that, I suppose it could be worked out. I think the Bill had better stand.

Progress reported.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill No. 126, for the relief of Ethel Cora Robinson.—Mr. German.

Bill No. 133, for the relief of Johann Andreas Horn.—Mr. Schaffner.

Bill No. 144, for the relief of Henry Elmer Bicknell.—Mr. McCraney.

Bill No. 148, for the relief of George Gracie Smith.—Mr. McKay.

Bill No. 149, for the relief of Harry Cracroft Pugh.—Mr. Douglas.

Bill No. 151, for the relief of Charles Low Hutcheon.—Mr. Fripp.

Bill No. 152, for the relief of Jessie Eleanor Grassett Parkhurst.—Mr. W. H. Bennett.

Bill No. 153, for the relief of William Godfrey Thorp.—Mr. Carvell.

Bill No. 131, respecting The Sterling Life Assurance Company of Canada.—Mr. Buchanan.

Bill No. 117, respecting the Montreal and Lake Victoria Railway Company.—Mr. Achim.

SECOND READING.

Bill No. 155, for the relief of Bertha Hétu.—Mr. Oliver.

SUPPLY.

The House in Committee of Supply.

Steam service or services between Canada and Newfoundland, $7,000.

Mr. BLAIN: I understand that there is now a better inspection of these subsidized steamship services by the Department of Trade and Commerce than there has been hitherto.

Hon. Geo. E. FOSTER (Minister of Trade and Commerce): The inspection of these subsidized steamship services is now a branch of the Department of Trade and Commerce. Until within two years ago, there was really no supervision of these services at all. We entered into contracts with these different companies, and we exercised as much oversight as we could from the department itself, but we had no system of examination and report in any way. For instance, a claim was made for the opening up of a new route, and that was decided, probably in the minister's office, or somewhere between the club and his office, in conversation, as gentlemen were passing. So far as the conduct of the service was concerned we sometimes got complaints, and then made some examination of these complaints and found out certain things. That seemed to me to be irregular in several ways, so that I appointed a superintendent of these subsidized steamship services, and for the past two years he has been carrying on this work. He has made a yearly trip and inspection of each one of these services on the eastern coast of Canada.

9 p.m.

Mr. SINCLAIR: Who is this officer?

Mr. FOSTER: Mr. Tupper. If there are applications for new services, he is instructed to go over the routes and report upon the population, the number of towns and villages, the business which would probably offer, and that report gives some guidance to the department, as to whether the application is worth considering and as to how far it ought to be considered. These small services, without supervision, got into slovenly ways; the sanitary conditions were bad; the life-saving apparatus was deficient, the conduct of the vessel during the service was not in point of order what it should be. All these things are taken up by the supervisor, and he reports upon them, and points out the deficiencies, and then the department is in a position to write to these gentlemen and say: you must have such and such put in proper shape. That supervision is jacking up the service, and there has been great improvement. Sometimes vessels are found to be of inferior standard, and notice can be given that a better vessel must be provided or no subsidy will be paid, and in some cases we have got better vessels. Before this inspection was instituted, there was no means of checking up whether a subsidy was greater or less than should be granted, and in order to get at that, there has been embodied in the contract a clause

by which these steamship services are to give thorough statements of their expenses and revenues in reasonable detail. We have then, at least, a basis for a judgment as to whether too large or too small a subsidy is paid. You can then deal more justly with these services, giving those that are worth it a little advance in the subsidy, if that be thought necessary, or, bringing down those which have too much to what is reasonable, but I must say that our subsidies, as a rule, are not placed upon any unreasonable basis. In this way, the different services are, I think, being gradually placed upon a more satisfactory footing.

Mr. A. A. McLEAN: Has an application been made recently to subsidize a line of steamers between Halifax, Charlottetown, Sydney, and southern Newfoundland? The trade of that portion of Newfoundland is rapidly increasing, but I fear it is going into the hands of the Americans. The trade of Newfoundland last year amounted to over $14,000,000, and we only captured about $4,600,000 of that, while the United States took $5,000,000, and Great Britain $4,000,000. My opinion is that Canada is neglecting the best paying portion of the trade of Newfoundland by not subsidizing steamers to carry it on. There is a very paying trade in the southern part of Newfoundland, and the people there require our manufactured goods, our breadstuffs, and farm products. If a line were subsidized to carry those manufactured articles to that part of Newfoundland, it would be of great advantage to the people of Canada. The population of Newfoundland is now, I suppose, about 245,000 and is increasing at the rate of 25,000 every ten years. We ought to cater to the trade of that country and to look after it better than we do after the trade of more distant places. It costs less to put our goods on the markets of Newfoundland than to put them on the markets of New Zealand or Australia. We are neglecting places near at hand for places far away. I would ask the minister to look into the matter and see if the trade between Canada and Newfoundland cannot be increased and if better inducements cannot be held out to our people to deal with Newfoundland. The fishermen of Newfoundland are becoming very prosperous and have money to pay for our goods, and it is the duty of this Government to see that the people of Canada get their fair share of the trade of that colony.

Mr. GEORGE E. FOSTER: The trade between Canada and Newfoundland, although not of the largest, is still an important trade, as my hon. friend has said. It is also fair to say that the trade services in connection with the Newfoundland trade have been pretty carefully looked after. The trade between Canada and Newfoundland, taking the latest figures that we have, shows a gradual growth. The total imports of merchandise from Newfoundland during the last year were $2,057,297, an increase of about $250,000 over the preceding year, and the largest in the history of the trade between Newfoundland and Canada. The exports amounted to $4,472,717, an increase of $350,000 over the preceding year, and the largest by far of any in the history of the trade between the two countries. That makes a total trade of $6,530,014. We have five or six services between Canadian ports and Newfoundland, some of which are of a very superior order. The service between Sydney and Port-aux-Basques is one of the best we have on our coast—good vessels with good speed and so far as I can learn, well managed. Then, we have a service from Halifax to Great Britain with a regular call at St. John's. We have also a service between Montreal and Newfoundland, with calls at Prince Edward Island ports, allowing of the export of Prince Edward Island goods, as my hon. friend has intimated. Then, we have two other services running out of Halifax which skirt along the southwestern coast of Newfoundland. An application is before the department at the present time for a new service from Halifax via Mulgrave, touching at Prince Edward Island, skirting over to Cape Breton island and thence to Newfoundland. That service is now under consideration, but a decision has not yet been arrived at.

Mr. MACDONALD: Who are the applicants for that?

Mr. FOSTER: The applicants are Farquhars, the same firm that runs the Seal at the present time. The Seal is a very good boat and is giving a very good service, and that firm is a good firm in the trade service. While it is true that we ought to do everything possible to increase trade—and one means is by subsidized service—there is still a limit, and we have both coasts to cater to and satisfy as far as possible. We have to look a little to the amount of money that it is supposed we can put upon these services. Our trade in the last

two or three years in Newfoundland is gaining in competition with the United States. The latter country has, however, a very good service running as far as Halifax and calling at St. John's, which gives them very direct and very prompt service and we have to compete with that.

Mr. SINCLAIR: Are the reports made by the superintendent, Mr. Tupper, available for the members?

Mr. FOSTER: Yes, in Part VI of the reports of the Department of Trade and Commerce.

Mr. SINCLAIR: I have seen the abstracts in the blue book, but the report itself I suppose is much fuller.

Mr. FOSTER: The report contains a special report for every service, and it is in a certain way at the service of the House, but these reports have sometimes confidential parts, so that we have to be a little judicious as to whether they shall become public property or not. They are primarily for the information of the department, and then, in so far as they can be made common to the members, for their information. If any member who is interested in any service will come over to the department, I shall be very glad to give him an opportunity of looking at the reports, and in some cases they may be brought to the House.

Mr. SINCLAIR: I was going to suggest that the minister should show us the reports, if he has any, of the service between Halifax and St. John's, Newfoundland, and Liverpool. This is an old hardy annual that we have been voting for a great many years. If the minister can show that report, it will be interesting to myself to see it, as I have never been able to see the justification for this service. It is simply a service to carry deals in the Furness-Withy boats, in competition with tramp vessels that are doing the same business. So far as I can learn, there is no business done of any advantage to Canada that cannot be done without this service, unless the connection between Halifax and Newfoundland is important. As far as traffic between Halifax and Liverpool is concerned, there is no necessity for paying a dollar to any ship for doing the work that these boats are doing, because they are simply pocketing $20,000 of the public money for work that can be done and is being done just as well by ships that do not get any subsidies. This matter has been before the House several times. I do not know whether the present minister promised to look into it or not; but the former minister did, and I never could understand why it was not attended to.

Mr. FOSTER: Perhaps my hon. friend will defer the matter until we come to that item, when I will give him all the information I have in regard to it.

Mr. OLIVER: The hon. member for Guysborough, in dealing with the item before the House, brought up a question of principle that may have a very wide application and may lead to an understanding of a difficulty that has been up for consideration in the House on former occasions. I would like to have the views of the minister with regard to that matter; I refer to the effect upon the rates of the subsidies granted to coastal services. If I understood the hon. member for Guysborough correctly, he offered the suggestion that the paying of subsidies for coastal services had the effect of increasing rather than of reducing the rates. We are facing a condition of increased rates across the ocean. Is there not a possibility that like causes have produced like effects, and that, as a matter of fact, the bonuses or subsidies that we have paid for our cross-Atlantic services are the foundation reason for that condition of monopoly in transportation and continual increase in rates that has taken place during recent years? I need not argue how very important this question is, and how very desirable it is that the House and the country should know where the trouble comes from, if it is possible to find the source of that trouble. The minister has said that in regard to the coastal services he has taken means to inspect, to regulate, and control; but after he has inspected and regulated and controlled, the outstanding fact remains that according to the assertion of the hon. member for Guysborough it costs more to carry a barrel of flour between two certain points on the coast of Nova Scotia to-day than it did before subsidies were paid; and it also costs more to carry a barrel of flour or a bushel of wheat from Montreal to Liverpool to-day than it did when subsidies were very much less than they are at the present time. May I suggest, although I am not a maritime man, that just as the subsidy is enabling steamers in coastal services to drive sailing competitors out of the same business, so the subsidy that is

paid to the Atlantic liner enables the liner to drive the tramp from the port of Montreal and then enables the liner to raise its freight rates against Canadian business. The facts in regard to the conditions of the coastal services are established; the facts in regard to the conditions of the cross-Atlantic services are established. As to the reasons for those conditions, if we accept those given by the hon. member for Guysborough in the case of the coastal service, we are almost compelled to accept the like reasons for the like conditions in regard to the cross-Atlantic service. As a matter of fact the Dominion of Canada is paying immense sums of money year by year to our steamship lines crossing the Atlantic, with the result that instead of our getting a cheaper service we are getting a dearer service. I take the liberty of putting this suggestion before the minister at this stage, whether or not I am in order, because it seems to me that the reasoning is apt, having regard to the assertion of the hon. member for Guysborough and to the fact that the matter is one of such paramount importance to the well-being of this country.

Mr. FOSTER: I suppose it is not profitable to devote a little time to the discussion of a question so wide and so important as the one which my hon. friend has just raised, but whether we should attempt that to-night or take occasion to discuss it when there are a greater number of members in the House is a question of which hon. gentlemen in this committee will have to be the judges. I do not think that anything that has been said by the hon. member for Guysborough has laid a stable foundation for the deduction that my hon. friend has just made: that the rates on our coastal services have been raised because of the subsidies which are being granted. The hon. member for Guysborough mentioned one or two specific cases on one route, which have not at all been examined or looked into. Of course, I am not questioning the information of my hon. friend.

Mr. SINCLAIR: The point I desire to make is that as you pay subsidies to coastal steamers you drive the schooners and the other methods of transportation off the line, and on that account the greatest care is required by the department with a view to seeing that the rates are carefully guarded.

Mr. FOSTER: That is a perfectly legitimate point, but that hardly lays the foundation for the sweeping conclusion of the hon. member for Edmonton that the coastal service rates are going up because of the payment of subsidies. The hon. member for Guysborough did not go that far.

Mr. OLIVER: That is exactly how far he did go.

Mr. FOSTER: Then I do not understand him, or he does not understand me.

Mr. SINCLAIR: I think that it is the fact that the tendency of the rates is to go upward, but I do not know of any specific cases except that of the Scotia, which I have mentioned.

Mr. FOSTER: The Scotia is only one out of probably 75 or 100 services, and the case which has been cited with reference to the Scotia has regard only to the cost of transporting a barrel of flour and some other things. What I am trying to maintain is that the assertion of the hon. member for Guysborough is hardly a sufficient basis for the sweeping assertion that the rates of our coastal services are all going up because we are feeding them with subsidies.

Mr. SINCLAIR: Will the hon. minister say they are not going up?

Mr. FOSTER: I think I am quite right in saying that within the last three years there has been very little, if any, increase in prices on our coastal services.

Mr. MACDONALD: They are subject to your supervision, are they not?

Mr. FOSTER: They are subject to the supervision of the department, and not a single case would occur of allowing them to raise their rates unless it came before the minister himself. I am quite certain that in the two or three years that I have been in charge of this department I have not sanctioned the raising of rates, so far as I can remember, in a single instance. There have been instances in which they have been brought down, but as a general rule the rates in our coastal services for the carriage of products are very reasonable and very low; I do not think that any of our coastal services are making very much money out of the operation of their vessels. With most of them the plea is that they are not making even a reasonable wage for their own supervision, to say nothing of a return on the capital they have invested, and there are few of them who are paying, out of the subsidies we give and the earnings they make, dividends to their

shareholders. So I think we are on a pretty good basis as far as that is concerned in respect to the coastal service, and I do not think the hon. member for Edmonton, if he made a full investigation would find that he could base such a deduction as he has drawn to-night. Of course, the old schooner is gone. The hon. member for Guysborough never expects to see her back again in these days of steam and electrical power. There is a place for the old schooner, or for the new schooner to be built, or for the sailing vessel, but it is a place which is narrowing every day of the year and every year of our existence. Steam and motor communication takes its place.

With reference to the ocean service, I think conditions are very different. I do not believe that there is any combine, any conference, any pool in our coastal services; at least if there is I have not come across any symptoms or any points which would lead me to come to that conclusion. But with ocean steamers and those engaged in the world's traffic there is an opportunity for conventions, combines and pools, and there is not a league of the sea in which steamships are not traversing the routes of trade under conventions and arrangements and pools, one with the other, which are carried out the wide world over. One of the most exhaustive examinations that has ever taken place into ocean rates has lately been concluded in the Congress of the United States. I have not been able to read all of the evidence, but I have read the report, and it is instructive to see the outcome of that examination. In the conclusions arrived at by that committee—and a very able committee I believe it was—they find, speaking generally, that pools, conventions, arrangements, typify the world's seaborne services; that they do exist at the present time; and the committee comes to the conclusion that if they are reasonably carried out they are not only for the benefit of the carriers, but for the benefit of the shippers. The whole thing depends on whether these arrangements are reasonably made and reasonably carried out. In their conclusions they come to these two chief points, first that it is not practicable to prohibit conference arrangements and pooling arrangements and arrangements of different kinds between the different branches of the merchant service of the world. That it is not advisable in the general interests either of the carrier or the shipper that they should be prohibited; but that what is needed is a system of reasonable control of these services the wide world over, which would be a tremendous undertaking. They have recommended, so far as the United States is concerned, that the control of ocean traffic be taken over by the Interstate Commerce Commission, with enlarged powers and with certain additions to its force of traffic experts as far as seaboard commerce is concerned, and that an attempt be made, which they consider to be the sanest method of approaching and meeting the difficulties, by a system of control of rates. We are to a certain extent confronted with the same problems in our ocean-going commerce between Canadian ports and Great Britain and European ports. A very exhaustive examination was made by a Royal Commission in Great Britain not many years ago on this very thing and the matter has been agitated a lot. I think I explained to the House on one occasion that the British Government and the Canadian Government came to the conclusion to relegate the matter to the dominions royal commission and to authorize them to make an inquiry into these matters of freight rates on produce between Great Britain and Canada and, after having found out the facts, to base their recommendations upon the facts as they found them with a view to establishing a system of control which shall be jointly exercised by Great Britain and Canada so it will have a force and efficacy which it is impossible for Canada for instance to secure herself. The commission have already taken it up in Great Britain and in their trip to Canada they will hold sessions in the various parts of the country and take evidence upon that subject. The shippers will have every facility for putting their case and the carriers will have every facility for putting their case and both will be examined as thoroughly as the commission can do it, in order to arrive, if possible, at the facts in the case. The authority and power of Canada to exercise control over ocean rates is nil, looked at from one point of view, and restricted, looked at from another point of view. We may be told that where we subsidize a line we have authority to a certain extent to control rates. Theoretically we have; practically it is very difficult to do that with reference to ocean carriers. It could be done much more effectively if a system of control could be carried out by Great Britain and Canada jointly.

When you come to exercise the small control that you have in view of the subsidy that you give to a few of the carrying lines, you begin to realize how small the power really is to regulate by virtue of these subsidies. Another proposition which has been up before the Government and that has been heard is that the Government shall itself undertake to buy for itself or charter vessels and to carry on a freight service between the ports in Canada and the ports of Great Britain and that they shall cater for the farmer and the shipper of this country and carry freight at cost rates or near cost rates. Any hon. gentleman who thinks of that for a little will see that it is not a light or an easy thing for a Government to undertake. It has been undertaken by governments. In Australia I met with instances of it, particularly with reference to West Australia where it was carried out. In all the evidence I was able to get I could not find that it had been successful in the aim it had or that it had paid the State to undertake the service in the way they did. Perhaps few of us, may be none of us, understand very thoroughly the position of the steamship companies in this regard. My hon. friend from Edmonton said that rates have been raised.

Mr. OLIVER: Doubled.

Mr. FOSTER: Since the cost of everything has very largely increased in late years, is it not reasonable that rates of carriage by sea should also have been raised? If it costs a ship more for coal, for supplies, and for service than it did, I think it cannot be denied that there should be some remuneration for that increased cost in the way of rates. You may say that the huge vessels of to-day carry very large quantities compared with the quantities carried in former days, but large capacity in a vessel adds immensely to the first cost and to the daily maintenance expenses. If we took one of these first-class vessels plying between Canada and the old country, and inquired into the cost of the ship, the cost of her up-keep, and the revenues derivable from passengers and freights, I think it would probably make us a little more temperate in our statements with reference to the inordinate greed and exorbitant rates of steamship companies. There is the possibility of going too far on the line of reducing freights, and there is need for some system—not yet organized in any country of the world that I know of—which will guarantee reasonable charges for ocean carriage. In a country like Canada where it is possible by legislation to control freights on all goods carried by land, and where immense sums are invested in transport facilities, the argument is a strong one that if we guard and guide our expensive investments by regulations and control of freights on land, we ought not to lose the benefit of that regulation the moment our goods take the sea to be carried the remainder of their journey on ocean vessels. I think that argument is a perfectly good one, and the only thing is to get some method of deciding what is a reasonable charge. I am not going to pose as an expert on shipping because I am not, but we all know that shipping is more variable than probably any other kind of transport. Transport by railway is comparatively uniform and steady, and it is impossible—although we have gone a great way towards making it possible—to get, in the course of a few months, a new railroad running over the same course that an older railway has been travelling for years. On the ocean, however, the steamships can go wherever they like; they do not have to lay down tracks for themselves and are not subject to those stable restrictions that land carriage is subject to. The consequence is that the variations in ocean carriage are immensely greater, are less uniform, and more sudden than they are on land. It was so in the time of the old schooners in New Brunswick. They had their periods of great prosperity, and they sank into periods of equally great depression. They made money at certain times and lost money at other times, and that is one of the difficulties that we meet with when we try to regulate, or even talk of regulating, ocean traffic.

Mr. OLIVER: I am sure the committee is under an obligation to the minister for the very full statement he has made, so far as it has gone, but I wish to get at one or two points. First of all, as my hon. friend has appointed a commission to regulate coastal service rates as a condition of payment of subsidy, it seems reasonable that he should do the same in regard to the transatlantic service, in aid of which we are paying very large sums of money. Surely the payment of that money could be made conditional upon some measure of control similar to that exercised over the coastal service, and exercised in somewhat the same manner. In regard to the increased rates in the coastal service as the result of no competition, which, in turn, is the result measureably of the advantage which certain lines have by reason of the

subsidies they have received, I think my hon. friend will agree that regulation of the coastal service rates is an absolute necessity under those conditions. The fact that he has established such a regulation is evidence of its necessity. When these people took advantage of their monopoly of the traffic, which came to them largely because of subsidies, the minister found it necessary to regulate the rates in order that the people should get the benefit of the subsidy they were paying. And so in regard to ocean rates. I say that when we pay a subsidy we ought to have some measure of control over the rates, and I am urging that the minister consider that point in due course and deal with it as may be possible.

Some little time ago there was a discussion in the House, in the course of which it was pointed out that a very large proportion of the grain of western Canada found its route to market by way of Buffalo and New York instead of by way of Montreal. One reason for that was because the rates from New York to Liverpool were less than the rates from Montreal to Liverpool. The reason why the rates from New York to Liverpool were less than the rates from Montreal to Liverpool was because New York was accessible to the tramp steamer and Montreal was not. Conditions at Montreal being as they are, insurance being high and the trade restricted, it is possible for the subsidized Canadian steamship lines to keep the tramp steamers out of Montreal and as a consequence the rates from Montreal are higher than the rates from New York although the distance is less because the tramp steamer gives competition to New York which it does not give to Montreal. The argument is that the condition of higher rates for Canadian freight across the ocean is exaggerated by the amount of money the people of Canada pay in subsidies towards the steamship lines. That is a startling view of the situation. I certainly was startled when I heard my hon. friend from Guysborough (Mr. Sinclair) make the statement he did but it struck me that it was desirable that the matter should be drawn to the attention of the House and that we should have the best information the minister can give us in regard to it. There is no doubt about the tremendous disadvantage that the present high rates are to the development of the agricultural industry of western Canada. There is no doubt that it rests as a wet blanket upon the development of our country and if it is in any degree the fact that it is the result of the money that we are paying certainly it is a startling condition and one that calls for very close attention on the part of the authorities.

Mr. SINCLAIR: I think the minister will find that these matters are regulated by supply and demand and that it is practically impossible to control these rates. Suppose we did undertake to say what the rates on 100 pounds of flour, or a standard of lumber, would be from Montreal to Liverpool, the ship would not necessarily come to Montreal. The bulk of the freight business on the ocean is done by tramp vessels, and there is no combine among them, never has been and never can be when they are owned all over the world by various owners who are competing one with another for every freight that is available for carriage. If there are a million bushels of wheat to be carried from Montreal to Liverpool, it is put on the board in London, they all bid against one another, and the ship that will carry the wheat for the lowest rate will get the contract. That is the history of the business. If we should impose a certain rate and say that such and such will be the rate for wheat, or lumber, or any of the exports we send abroad from Montreal to the west coast of England or anywhere else, the result would be that the ships would go somewhere else. Our traffic is only a very small part of the traffic of the ocean. I have on my desk a very interesting little book written by Sir Norman Hill, Secretary of the Liverpool Steamship Owners' Association, relating to the question of the Dominion's Royal Commission, to which my hon. friend referred, and I have no doubt that the minister is also familiar more or less with the contents of this book. Sir Norman Hill is an expert upon the question and he gives a great deal of interesting information. One of the things that is pointed out here is that, taking the total tonnage carried by British ships throughout the world, Canada only represents 4·7 per cent. All the business that British ships get from Canada is a little over 4 per cent of the carrying trade they do throughout the world. You can therefore see that we cannot control it and that if we attempt to put up the rates on lumber or flour or any of these articles and to say that that shall be the rate from Montreal

10 p.m.

to Liverpool the ships would not take it if they could make a penny more by going to the River Plate for wheat, or to any other part of the world, for the whole world is open and a ship may go where she pleases. If she can get a penny a hundred weight more in the Black sea she will go there. Consequently, if we put the rate lower than the level of what is a good profit from other parts of the world, the ships will not come to Montreal at all, and the consequence will be that we will have to pay more to induce them to come. That will be the result. That has been the result in Australia in connection with the attempt they have made to regulate bills of lading and freight rates. It has been the result in the United States in connection with the Harter Act and it will be the result in Canada if we impose restrictions of that kind. I find from this book that in 1911 the number of British ships engaged in the ocean trade was 4,102 and that of these 1,262 were liners and 2,840 tramps. Out of a total tonnage of 9,653,015 tons, the tramps represented a tonnage of 5,770,000 tons showing that there is a much larger tonnage represented by the tramp vessels than by the liners. The liners which are receiving subsidies from various governments might in some way be controlled, but I am not able to understand how any single government can control tramps in their trade.

There is just one way, in my mind, of getting our freight rates down and of making them lower and more reasonable and that is by importing more goods. Increase the British preference so as to enable them to get return cargoes from Great Britain to Canada and in the way the outgoing cargoes will be cheaper. If you will look at the daily reports in the shipping newspapers which are found on the tables in the Library you will see that the most important trade carried on by British ships is the trade between Great Britain and the River Plate. The ships carry out large quantities of coal from Wales, Newcastle, and so on, to the River Plate. The cargo they usually get on the return trip to Great Britain is grain or cattle. Comparing the rates from day to day, you will find that as the rate on grain goes up from the River Plate to Great Britain the rate on coal goes down and as the rate on coal goes up the rate on grain goes down. This means that a ship must have an average rate for her voyage out and back, and that both trips have to be counted to get that average rate. If we in Canada, insist on refusing to import goods from Great Britain, we may expect to pay higher ocean freight rates for our exports to that country. I thought it worth while to contribute this much to the debate, to show the view set forth in this very interesting pamphlet published by Norman Hill.

Mr. STEELE: The question we are now discussing is of very great interest to the agriculturists of Canada. I have listened with very great interest to the statements made by the hon. Minister of Trade and Commerce, by the hon. member for Edmonton (Mr. Oliver), and by the hon. member for Guysborough (Mr. Sinclair), but I fear they have offered no solution for the existing difficulty. The hon. member for Edmonton said that the present condition of high ocean freight rates is a great disadvantage to the agricultural interests of this country, and that we all must admit and cannot dispute. We have also the statement of the hon. member for Guysborough that it is almost impossible to control ocean freight rates, and that if we attempt to control them the vessels will avoid our ports and in that way refuse to carry out produce. This question of ocean freight rates between Canada and Europe is, as we know, from the statement of the minister, under investigation at the present time. As a matter of fact it has been under investigation for a long time past, and we cannot tell how much longer it will take. I point out that the existing condition is of great disadvantage to the farming and other interests of this country, and that it is not likely to be remedied in the near future. If the shipping interests are aware that a question of this kind is to be investigated by a commission, rather than to be dealt with directly by the Government, they are encouraged to put on higher rates, because they know it will take several years before a commission can investigate and report, and, in the meantime, they will enjoy the highest possible rates they can get. If, after a number of years a commission should report that the rates are too high, the companies stand to lose nothing, because, in the interim, they will have reaped the advantage of the high rates. I do not know whether the policy which I would advocate is practical or not, but it does seem to me that the common sense method of dealing with this matter is for the Government to put on a line of Government-owned and Government-controlled steamers, for the purpose of carrying our agricultural products of Canada to Europe, and such return cargo as can be got. The

existing condition works great disadvantage to our people, and it is a condition that requires prompt and effective treatment. Why, instead of appointing a commission to investigate the matter, which will take years and years to come to any conclusion, do we not deal with it in a way which will check this evil at once. This suggestion is somewhat radical; it is perhaps too radical for this Parliament, but it does seem to me to be the common sense and effective method of dealing with the difficulty. I trust this matter will be given further consideration by the minister; that in the end some scheme of that kind will be adopted, that the shipping interests of the North Atlantic will be given notice that these high rates will not be any longer tolerated, and that the agricultural interests of Canada must be protected against them. I would like to hear from the minister as to what are the prospects of this Parliament obtaining control over the North Atlantic ocean freight rates. We have American vessels, British vessels, German vessels, Canadian vessels, and it seems to me it would be a complicated matter to organize any tribunal which would have effective control over these various interests.

Mr. SINCLAIR: There is a great fluctuation in these freight rates. For example, about nine months ago you had to pay 60 shillings for cotton from Savannah to Liverpool, but to-day the rate is only 32 shillings for the same freight over the same route. The rates, at present, are extremely low all over the world; they have taken a great drop within the last few months. The trouble about the proposal of my hon. friend (Mr. Steele) is that he would find difficulty in getting work for his ships the whole year around. If he put them into the wheat-carrying trade on the St. Lawrence, I am sure he would not know what to do with them when the season for that trade had closed. If the Government should go into the shipping business they will find they have a bigger contract on hand than any they have undertaken yet. But, of course, all these things are worth considering.

Mr. FOSTER: I am afraid that I cannot give my hon. friend (Mr. Steele) a statement which will satisfy him. There are very great difficulties to be met with in any attempt to prohibit, control, or regulate traffic which is world-wide and international. We could do it, of course, in the case of vessels plying between our ports on the Great Lakes, or coasting vessels, where we would run no risk of any contingency which would inevitably occur when we came to deal with traffic of an international character. Another difficulty would be, that if the Government is going into the business of moving the agricultural products of the country, how could it refuse to go into the business of moving the products which are imported into the country, and which the farmers, amongst others, consume. The importing people of this country are just as strongly against the rates of the steamships as are the exporting people who are sending out the natural products of the country. Both of them, and for the very same reason, want the rates reduced, declaring that they are too high. If you take up those interests, you have to take up the interests of other producers, and the Government immediately goes into a national system of transportation in competition with the wide world. That has its difficulties, one of which has been spoken of by my hon. friend. In matters of other than trivial concerns, our relief takes a great deal of time to bring about. A small matter can be quickly regulated; you can take it into your own hand; but when it comes to the planets, it takes Providence with all the force of the ages to keep them within their orbits. While those are extreme things to contrast, what I want to bring out is the great difference between managing small and local concerns and managing concerns which run into world-wide interests.

There is always one saving consideration: that is, that competition, whatever we may say, is a mighty big force notwithstanding all your pools and conferences and everything else. Competition upon the sea is a much easier thing than competition by land, and in sea-borne commerce that competition is constantly exerting itself. Last year there came into the river St. Lawrence some fifty or sixty tramp vessels which took out from that river between 6,000,000 and 9,000,000 bushels of grain. These tramp vessels were in no pool and were competitors of the liners. Do not let us run away with the assumption that the liners are necessarily enemies of tramp steamers. I do not think they are. The liner which comes into Montreal harbour and lies at the dock is a vessel which takes high-class freight and which caters to a very wide area; and bulk products like wheat, she takes only as a last resort. If she cannot fill up with other freight, she will take wheat; and if she has a hold big enough for a thousand bushels

of wheat she will take the wheat. If she cannot get 5 cents for it, she will take 2 cents; and if she cannot get 2 cents she will take 1½ cents, or anything that will pay for the cost. You could not possibly make a head against all those forces by a Government system of carriage, which would have politically and economically to widen itself to all the demands of all the producers and of all the consumers in this country. The tramp steamers would still exist; our Government vessels would not drive them off the face of the ocean; they would come and take the wheat, as they did out of Montreal last year, and would leave our Government steamers there. Of course, there is the ready answer to this that the Government would be able to stand the loss, supposing they made one. But the Government, after all, is all the people aggregated, and every man has to pay his shot into the locker.

Mr. SINCLAIR: Has the minister made any progress in regard to the insurance rates on the St. Lawrence? The high rates are one reason why the tramp steamers are kept away from the St. Lawrence. Some intimation was given that the Government was looking into the matter, and I would like to know if the minister has had any success in lowering the rates.

Mr. FOSTER: We Canadians are optimistic and we rightly stand by the statement that we are the best country in the world and can do almost anything; but we are still subject to atmospheric storms and geographical conditions. No matter what advantages we have, we have some disadvantages, amongst which is our geographical position, and the question of insurance plays a great part in that respect with reference to our freight. Whether rightly or wrongly, insurance rates are higher for the St. Lawrence and for ports along a certain range of north Atlantic territory than they are for those that lie to the south. We may think that this is not right, that it is unjust. We may say: Look at our buoys, our lights, at the immense sums we have expended; see how we have made almost a lighted street of the St. Lawrence until you get out past the Strait of Belle Isle. Yet when you go to the hard-headed men of business who manage the marine insurance of the world, and talk to them, they simply meet you with the statement: It is all a matter of demand and supply, and the rates are higher there because in the working out of the insurance business it has been demonstrated to us that we must have higher rates or else make greater losses. My hon. friend has said that some intimation was given that the Government was looking into the matter. So they were; and I think I made the statement myself that if the men who are interested in the Dominion of Canada will organize themselves into a combination and put their capital behind it in order to bring about a system of insurance which will make it easier for vessels, tramp and others, to come into the St. Lawrence and what you may call the interdicted ports, so far as higher charges are concerned on the Atlantic, the Government is sympathetic to a movement of that kind and will help it. That challenge has been made; but the shipping interests have not taken advantage of it; they have not organized themselves. If they would do so and would put themselves behind an organization to help to make matters better, the Government would be quite willing to assist them materially in doing it; but the Government is hardly in a position to ask the people to take the matter of insurance into their own hands for that part of the Atlantic, and to bear the risks and burdens and what is also a very great item, the conduct and management. There again is an item which bulks large when any demand is made that we undertake a Canadian system for carrying the freight of this country that is to be managed on business principles. It is a very difficult thing for a Government; and I, for my part, feel that the matter should be very gravely considered before the Government of Canada should undertake to do the ocean-carrying business of the Dominion of Canada.

Mr. BURNHAM: Representing a large number of farmers who have often expressed their opinion to me on these matters, I feel it my duty to say that this difficulty which is presented in various forms, whilst being undeniable, is not insurmountable. The hon. minister has just outlined the fact that the problem before him is difficult and the Government hesitates to undertake to solve it, but that does not excuse the Government. Great Governments will do great things. If this country were at war, they would take possession of all the means of transport, guard all the avenues of output and of import and see to everything. Napoleon once held Europe in the palm of his hand. He

blockaded the whole continent of Europe at one time.

Mr. FOSTER: Yes, and Europe had a hard time of it for many years.

Mr. BURNHAM: Yes, because he was in supreme control; that only emphasizes the point I am trying to make. Surely in this age we are not going to throw up our hands and say, because a difficulty is a great one, that it is therefore insoluble. The very fact that some system of national insurance could be contrived, if the different interests of the country would bind themselves together for that purpose, shows conclusively and at a glance that it is the Government's duty, as representing the people, to undertake that very thing. That is the function of government. People combine in communities and in nations for the purpose of having combined interests and of managing them in a combined or national way. Governments, I submit, are elected for that purpose and accordingly as they display capacity for administration, so do they make for the success of the national interests, as well as of the individual. If the farmers must be told that their produce will have to run the chances of an inclement clime, of rivers difficult of navigation and of all the other troubles that arise in a country like this; if that is the final finding of this Government, why then we must accept it. If it is a correct finding, we must resign ourselves to our fate, but the simple fact that the problem is a difficult one is surely no excuse for leaving it unsolved.

Mr. J. J. HUGHES: Change the Government.

Mr. BURNHAM: That would only make it worse. We surely may expect that such a minister as we have will grapple with great things and solve them. We have tremendous means of internal transportation, but we are blocked by the sea. For my part, I have been thinking this question over for many years; I have been reading it up to the best of my ability and associating myself with those who understand it, and I must confess that I do not understand it, notwithstanding the fact that I have brought myself in contact with those whose interests are most involved. I cannot help saying however that I view with great disappointment any statement to the effect that another year is about to close without some supreme effort being made to solve this question. It is all very well having commissions of various kinds who bring in ineffectual findings, which are pigeonholed and that is the end of it; we farmers want to see these things grappled with; we want to see them solved. Speaking in a somewhat radical way, I think that if a government at any time finds that it cannot do things, it is that government's duty to give place to another. I am speaking in a genral way; I do not know that anybody in this country would for one moment advise such an exchange of horses as was suggested a moment ago. But it is a well-known maxim of law and equity that there is no wrong without a remedy. It is certainly no sign of strength, no sign of progress, no sign of aptitude that year after year we cannot do what other countries can do. Look at little Holland, covered with the sea, as it was. She shut the sea out; she actually defied the sea by raising dykes and pumping them out. Holland is a country of marvellous prosperity; she has become a country of happy and prosperous people. Now here are we with enormous natural resources, as we are told every day, and with great wealth; yet, in confusion, we are actually throwing up our hands before one of the most ordinary difficulties of everyday life. The farmers ought to feel that those in charge are capable and are ready and willing to do their duty in this respect. The farmers must know that the Government have some plan or will mature some plan which will give the farmers better facilities for the carrying of their produce and the transaction of their business. The farmers, as we all know, not being banded together in well-connected relationship like other classes of business men are unable to grapple with these questions for themselves; therefore they must be particularly looked after by the Government. Other branches of business can by instantaneous communication or by well-conducted methods of business contrive plans for the solution of their problems. The farmer is, of course, an authority on the question of the productions of the soil; he is not an authority on business by any means. I cannot emphasize it too strongly that the wish, nay, the demand of the farmer is that the present or some Government will rise up in Canada and solve the question of ocean transportation; and it must be solved.

Mr. CARROLL: I wish to bring to the attention of the minister a matter that was before the department first in the year

1901, on different occasions between that year and 1908, and again in the form of a petition during the last year. I refer to the efforts that the people of Mira River have been making to get a subsidy for the steamship which runs up that river. When the matter was brought to the attention of the hon. minister's predecessor, I think he took the ground that the Government was not supposed to grant subsidies or subventions to boats running upon inland rivers. The late Government voted sums of money to build public wharfs up that river, and this Government carried out the intention of the late Administration by building those wharfs. I think that does away with the objection that the Dominion Government should not subsidize vessels running upon inland waters like the Mira river. A large petition has been placed, I understand, with the minister or in his department by the residents of Mira, and I simply want to support the claims of those people as best I may. The Mira river is being navigated by a steamer which carries passengers and freight for a distance of between 25 and 30 miles inland. At the entrance of the harbour there is a railway which connects Louisburg with Sydney, and the river is the only means of transportation by which the farmers along the Mira—and it is a fine and thickly-settled farming district—can send out their produce, unless they drive between sixteen and eighteen miles either to Sydney or to the mining centres. I take the opportunity of bringing this to the attention of the minister to see if it is not possible to include in his supplementaries of this year some appropriation for this purpose. The Government have undertaken to build wharfs on that river. I think the Government should help the residents of that section of the country farther by granting a small subsidy to this river boat. The local Government grants a subsidy to the boat, but it is rather small and they are looking for a daily service. Any person undertaking this service, even a subsidy, would have to be very wide awake to make a daily service pay.

Mr. FOSTER : I will look into it.

Mr. MORPHY: We are on item 162, the service between Canada and Newfoundland. I have often thought, and this is my excuse for saying a word or two at this late hour, that there are great possibilities of trade between Canada and Newfoundland that are not taken advantage of to the extent that they should be. The people down there trade very largely with this Dominion. The hon. member from Prince Edward Island (Mr. A. A. McLean) gave the figures, so I need not go into them. I speak as a casual visitor having visited the island last summer. I was very much struck with the number of Canadian goods displayed, and in conversation with men of commercial standing there I discovered that our own people appear in their minds to be backward about catering for the trade. I notice that the people down there are practically Canadianized. I think that the banks of Nova Scotia, Montreal and Commerce give them their currency. Canadian money passes current there from hand to hand and they speak absolutely our language with a delightful addition to it of the Irish brogue. They say it is the land of fish, frogs, dogs and Irishmen. I found a quiet desire for a closer trade relationship and I believe they are really anxious to have closer relations; and yet for some reason, for something that happened in the past which I need not go into, there is a reticence about entering into any closer alliance with us, national or commercial. Cabot's Head is the gateway of Newfoundland. At that point you enter through rugged cliffs on each side, into a most beautiful harbour, the crowning cliffs showing impregnable strength. I could not but be impressed that Newfoundland was not only the gateway to Canada but the gateway to British North America and to North America and I felt that if something could be done, whether along trade lines or otherwise, to round out the Confederation by bringing in that splendid colony, people of kith and kin to ourselves, it would be a great step in advance. There is along the southern coast of Newfoundland splendid territory for hundreds of miles from Port-aux-Basques to Placentia bay and then to St. John's. Every village along that coast is remote from the railway, it is essentially a place for ocean trade; and with the progress that Canada has made there to-day, with the cordiality of feeling which I heard expressed by prominent business men and others, I think the time opportune to press for some measure to increase our trade with Newfoundland. During the fifteen years that hon. gentlemen opposite were on the Treasury Benches nothing was done in that direction. I think we on this side of the House might bring

to the attention of the Government the great possibilities of increasing trade there. I found a peculiar thing down there. The people of that colony are adventurous traders. I saw boats loaded at St. John's with codfish for South America. I found that they shipped also to the European countries. I found that the supply of fish was almost inexhaustible and while their trade is growing largely away from Canada and while they leave our Maritime provinces to supply us as they can with fish as far inland as refrigerator car service and other railway equipment will be able to carry it, the trade of Newfoundland in natural products, which I understand are largely fish and pulp and some minerals outside of the Belle Isle mines, has yet to be exploited and developed. Their trade is now moving in other directions and we should make an effort to secure a larger proportion of that trade, especially when they are so willing and anxious to receive the produce of this country. When I saw the moderate sum of $70,000, in that Estimate I was surprised; my idea rather runs to $700,000. I have no accurate data but I wish to convey my impression of the possibilities that exist there. Whereas to-day our export trade to Newfoundland amounts to $4,000,000 I think with a little extra pushing we might easily increase that to ten or twelve millions dollars to the great gain of the producers of Canada.

Mr. SINCLAIR: I wish to take issue with my hon. friend's statement that the late Government did nothing to increase trade with the colony of Newfoundland. The British preference stimulated trade between Canada and Newfoundland to a very large extent, and I have no doubt that the preference is largely responsible for the increasing trade between those two countries. That is to the credit of the late Government who extended the British preference to all British colonies. The present Government, although it has been in power over two years, has nothing to its credit in the way of increased trade with Newfoundland. My hon. friend was the first to introduce politics into this discussion, and I did not want to let the opportunity pass without giving him a little light on the question as to which party is entitled to the credit for the increased trade with Newfoundland. There is a way of increasing that trade still farther. If my hon. friend will persuade the Government to give an additional preference to that colony, he will find that Newfoundland will respond, and I am sure that that would do more towards increasing trade than paying subsidies to steamship companies.

Steam service between Halifax, St. John's and Liverpool, $20,000.

Mr. SINCLAIR: What company gets that?

Mr. FOSTER: Furness, Withy and Company.

Mr. SINCLAIR: Has the minister the rate schedule of that company?

Mr. FOSTER: Yes, so far as Newfoundland is concerned. We have the same clause in our contract with that company as in the other contracts, and which I have already read.

Mr. SINCLAIR: Do they submit rates each year when the contract is renewed?

Mr. FOSTER: They raise the rates, they do.

Mr. SINCLAIR: Are the rates the same this year as last?

Mr. FOSTER: Just the same.

Steam service between Montreal, Quebec and Manchester, England, $35,000.

Mr. SINCLAIR: What company gets that?

Mr. FOSTER: The Manchester Liners, Limited.

Mr. SINCLAIR: Do they carry the mails?

Mr. FOSTER: No.

Mr. SINCLAIR: What is the object in subsidizing that line?

Mr. FOSTER: For the extension of our traffic. As my hon. friend knows, Manchester lies in the centre of the most populous district in Great Britain, and I would like to call the attention of my hon. friend to the increases that have taken place in that connection. This service carries a large amount of freight. Last year it took a total tonnage of 269,438 in weight and 72,761 by measurement, as compared, let us say, with 1908, when only 112,759 of weight was taken. The trade has more than doubled, and is constantly increasing.

Mr. SINCLAIR: It is simply competing with the tramp steamers.

Mr. FOSTER: If the tramp steamers are there, they will compete. As to the value, $8,246,791 worth of goods of Canadian origin were carried, and $3,000,000 worth of goods of United States origin; that is, they carried over $12,000,000 worth of

freight, which represents an enormous amount of stuff. The subsidy is not a large one.

Mr. SINCLAIR: In that case they ought to be able to run without a subsidy.

Mr. FOSTER: There is that question as to whether or not, and to what extent, these services ought to be self-supporting. One object I had in view in demanding a statement of revenue and expenses, was that with data covering a period of two or three years one might be able to judge as to whether this or that line ought not to be allowed to go on its own resources.

Steam service between St. John, Dublin and Belfast, $7,500.

Mr. MACDONALD: Who gets the Irish subsidy?

Mr. FOSTER: The contract is with the Ulster Steamship Company, Limited. Last year they carried goods of Canadian origin to the value of $1,200,000.

Mr. MACDONALD: How much of that was deals?

Mr. FOSTER: There were some, but they also carried wheat, barley, rye, lumber, flour, oats, apples, hay, linseed cakes, washboards, steels, and handles. They carried a large amount of general freight.

Winter steam service between St. John, Halifax and London, $15,000.

Mr. FOSTER: The Canadian Pacific railway has that contract. Last year they carried goods of Canadian origin to the value of $2,600,000, and $1,141,000 worth of goods of United States origin—a total of nearly $4,000,000 worth.

Mr. SINCLAIR: How many trips do they make?

Mr. FOSTER: Ten.

Mr. SINCLAIR: What is the object in paying that subsidy?

Mr. FOSTER: The purpose is to stimulate trade between the two countries.

Mr. SINCLAIR: It seems absurd that we should have to subsidize freight steamers for carrying goods from St. John and Halifax to London, when there are a dozen companies willing to carry the freight at ordinary rates. We are not trying to develop trade with London especially, are we? If we are not getting any reduction in rates by paying this $15,000, what are we paying it for? That is the point that worries me. If it were a particular trade that was being developed, if these vessels were carrying apples from Annapolis, for instance, it would be a different matter; but if this company is simply carrying deals or ordinary freight we are throwing away our money.

Mr. FOSTER: It is not quite fair to say 'if they are only carrying deals' because they are not simply carrying deals. Let me direct my hon. friend's attention to the situation. These services were not started last year or the year before. They had been subsidized for a series of years, going back to twenty-five or thirty years ago. The very same question that was asked to-night might have been asked, and it might have been just as difficult for me to answer it as it has been to-night, at any one of these times. There was really no data before the department until we undertook the system of trying to get at just about what were the revenue and expenses of these different lines. We could not do that in one year, but taking it over a period of two, three or four years, you have the data for making up your mind and basing your judgment as to whether this particular line, or any other, ought to be assisted. I think we must come to the time when our freight services between large cities or countries must carry their own charges and costs, and we will gradually become limited in making provision by way of subsidy to services for the carrying of the mails with as great speed as is required and to pioneer services breaking the way into new countries where we have great difficulties to encounter in carrying and establishing trade. In the course of time I hope we will be able to do some work of discrimination with respect to these services, which I have found impossible because I had no data.

Steam service between Canada and Australia or New Zealand, or both, on the Pacific ocean, $180,509.

Mr. MACDONALD: Are our imports from Australia increasing?

Mr. FOSTER: Our exports and imports both are increasing. In 1913 the value carried out of Canadian origin was $770,412, and there was a large amount of United States origin, the whole value being between $3,000,000 and $3,500,000. It would be more satisfactory if the returns of the department were looked at to see the different lines into which this trade was divided.

Mr. MACDONALD: What do we get from them particularly ?

Mr. FOSTER: Exports of Canadian products increased from $2,574,000 in 1902 to $3,954,000 last year. There were foreign products to a small amount, making the total exports about $4,000,000. The imports are much smaller, amounting to a little less than $500,000. In the trade exchange between us and Australia, the balance is very largely in our favour; Australia raising much the same character of staple products as we do ourselves.

11 p.m.

Mr. MACDONALD: Do we send any agricultural implements out there ?

Mr. FOSTER: Some agricultural implements go there, and they are very well thought of, too.

Mr. SINCLAIR: I suppose the subsidy decreases as the business increases ?

Mr. FOSTER: The subsidy, as are all our subsidies, is a stated sum during the term of the contract.

Mr. SINCLAIR: The hon. minister says that there is a very large increase in the business. It struck me that there might be a corresponding decrease in the subsidy, because the increased business must give a much larger revenue to the steamer.

Mr. FOSTER: Yes, on a strictly logical basis that would be so, but our subsidies vary a little from that basis.

Steamship service between Victoria and San Francisco, $3,000.

Mr. KYTE: Has any progress been made in regard to the application on behalf of some interests in the town of Yarmouth and vicinity to subsidize a steamship service between Yarmouth and Boston ?

Mr. FOSTER: Yes, so much progress has been made that I have been obliged to decline paying any subsidy to the line of steamers that run between Yarmouth and Boston. The Yarmouth line of steamers were on the point of increasing their service and then an attempt was made to get a subsidy from the Dominion Government. On looking the whole matter over, and upon considering it, I was obliged to say that I believed they ought to carry their own costs and charges and improve the service. They have improved the service since without a subsidy.

Mr. KYTE: Has there been any proposal made to subsidize a new line of steamers between Shelburne and Boston?

Mr. FOSTER: I do not know whether you could say that a proposal has been made or not. There have been communications and a deputation visited Ottawa and talked over the matter with me. But aside from the general idea that they would like to have a service between Boston and Shelburne, there was no founded proposal upon which a judgment could be taken as to the subsidizing of a service. Generally speaking, we have not subsidized direct services between our large cities and the large American cities. Although the matter has not been absolutely decided upon, I still think there will be difficulties that cannot at present be overcome in endeavouring to inaugurate a new and up to date transport passenger and freight service between Boston and the ports on the southern coast of Nova Scotia.

Mr. KYTE: A condition of affairs has arisen in respect to the trade between Nova Scotia and the New England states particularly in regard to the transport of fish that has not hitherto prevailed. The United States markets are free to the fishermen of Nova Scotia. The fishermen of the western part of Nova Scotia would appear to be pretty well served by the very excellent steam service which has been established for so many years between Yarmouth and Boston. However, the fishermen in the eastern portion of Nova Scotia are not so well provided with means of transportation in that respect. There has been a very excellent line of steamers established between Charlottetown, Port Hawkesbury, Halifax and Boston. Unfortunately, however, there are other very important centres of the fishing industries lying along the coast of Nova Scotia which are not served by any direct communication with Boston and I would like the minister to have an open mind in regard to the propriety of subsidizing some service between Nova Scotia and Boston and giving it the same consideration that he gives to other services that are bonused for the purpose of promoting traffic and the interchange of commodities between different sections of the British colonies.

There are very important fishing centres at Arichat and Canso, where are caught large quantities of fish, which will naturally find a market in the United States. At present, there is no means of ready transport, by reason of the fact that the steamers do not call at any intervening port between Port Hawkesbury and Halifax. It would be worth while for the minister to consider

whether he could not give a subsidy to the Plant Steamship Company, in consideration of their steamships calling at Arichat and Canso, for the purpose of taking fish shipments, which would find a much more profitable and ready market in the United States than they can find within our own territory.

Mr. SINCLAIR: I would like to urge the same point on the minister, as it is a matter that my constituents are deeply interested in. I took occasion some time ago to bring the matter to the notice of the Minister of Marine, and we had a discussion on it, and a number of reasons were put forward by gentlemen on this side of the House in favour of granting some assistance to a line of fish boats to ply between the south shore of Nova Scotia and the Boston market. It is obvious that we should be able to take advantage of the free open market of the United States, but we cannot do so with our present transportation facilities. The town of Yarmouth has transportation factilities to a certain extent; I understand there is a boat from Yarmouth to Boston making three trips a week.

Mr. FOSTER: Four.

Mr. SINCLAIR: The Yarmouth people are able to forward their fresh fish to the Boston market, and I am informed, on the best authority, that the result has been that the price at Yarmouth has about doubled since the United States duty on fish has been removed. Fish is a very perishable commodity, and unless it is put into the market quickly it is almost impossible to carry on a trade in it at all. At Canso, we have had a dead slow price of $1.50 per hundred pounds for fresh haddock and fresh cod, for a number of years past, while at Yarmouth they have been getting on an average during the present winter $3.86 per hundred pounds for the same kind of fish. The Montreal market is a good market as far as it goes, but it is expensive for us to send to Montreal, and the freight by water, from the ports of southern Nova Scotia to Boston, would be very much less than we could possibly expect them to be by rail to Montreal. Then, Montreal is a small market, and if you put more than two or three carloads of fish into it in one day, you break the market. On the other hand, you can bring as much fish as you like to the Boston market, because it is a great distributing point for Chicago, New York, and the big cities of the United States. The price at Boston goes up and down, but sometimes it is quite high. Sometimes it is lower than in Montreal, but the average Boston price is much better than the average Montreal price. We can never expect to get a large fish trade developed on the south coast of Nova Scotia, with our present home markets. The United States market is now open to us, and the one thing needed to make a great and profitable business for the people of Nova Scotia, is transportation facilities. The Minister of Finance told us that our trade with the United States is large, because we purchase from the United States in great quantities, but here is an opportunity to sell them a commodity that we have on the southern shore of Nova Scotia, and for which a ready market is waiting in the United States. I have no doubt that if we had those facilities our fish trade with the United States could be worked up to be an enormous industry. The Minister of Trade and Commerce will find that during the past year enormous strides have been made in the fresh fish business in the town of Yarmouth, because of the Wilson tariff. We can equally develop the trade at Canso, Isaac's Harbour, Drumhead, and a number of other places along the coast of Nova Scotia. I would suggest that the Minister of Trade and Commerce should get collecting boats to take the fish to some particular point, from which there would be a subsidized line to take it to the Boston market. I do not know what the difficulties are, but I cannot conceive that there should be any difficulties which would prevent that being done. I hope the minister will have an open mind on the question, and that he will carefully look into it, because I think it is one of the opportunities which our people in Nova Scotia have been looking to for a long time.

Mr. FOSTER: I quite understand—though not so well as my hon. friend (Mr. Sinclair) who lives in the atmosphere—the possibilities of the fish trade of the Maritime provinces, particularly of that most highly endowed province of Nova Scotia, in that respect.

Mr. MACDONALD: In every respect.

Mr. FOSTER: At the same time, there are difficulties in the way of having a fast line of steamers running to Boston, from all the eligible points in Nova Scotia, New Brunswick and Prince Edward Island, for developing the trade in fish. A very large

amount of money could easily be spent in arranging fast services at frequent intervals, but the hon. gentleman (Mr. Sinclair) will see that there would be difficulties in multiplying steamship services from all these eligible points. The fish trade of Nova Scotia is flourishing; it gives very large employment; it has a large number of men, who are not men of capital, to gather the fish, but it has also a large number of men who are men of capital, and who are able to put their means into the services necessary to transport the fish to the markets awaiting it. From Halifax and from Yarmouth you have direct lines of steamers running to this market. From Yarmouth you have another eligible line of steamers, and the line that runs out of Yarmouth does not simply serve the harbour, but the coast next to Yarmouth. Yarmouth is a centre for collecting from the south of Nova Scotia and even from points as far distant as Mulgrave, by the railway communication which they have and which caters very largely to the steamship companies that run out of Yarmouth. It would be a good thing if we could get in all these boats, but there are some difficulties in the way. It is a common idea amongst some that we are made of money and $100,000,000, or any number of million dollars should not stand in the way. We must be careful in one way to keep some check on our administrative expenditure; we must on the other hand have an open mind and look into these questions as thoroughly as possible, which I am well disposed to do with reference to Nova Scotia, because I know the value and the increasing value of its industries. Possibly a little time and patience will do a great deal for us in that respect.

Mail subsidies and steamship subventions—steam service from the opening to the closing of navigation in 1914, between Gaspé basin and Dalhousie or Campbellton, $20,000.

Mr. MARCIL: Will the minister give us some information about that?

Mr. FOSTER: We had that service under contract with the steamer Canada for a period of years at a subsidy of $20,000 a year. That subsidy was made up of an advance of some $5,000, just a year or a year and a half ago. That grant was given because that portion of the coast showed a growing trade. There is in the first place, as my hon. friend knows, the competition of a line of railway which runs along the coast which does not serve all the points or the ports. In consideration, however, of local considerations, $5,000 was added to the subsidy a year or so ago, and a contract was entered into with the Canada, a very good vessel, so far as I remember; but the proprietor of the Canada died and his estate was not able to carry on the service. Therefore we have arranged on very short notice, because all this has taken place within a short time, to carry on just about half the service at half the subsidy, using the Canada as one of the vessels and the Gaspesia, a vessel which will be known to my hon. friend, to carry on the other part of the service. We subsidized just to the same extent in point of distance and to the same ports, or very nearly so as were served under the old steamship contract with the Canada, but the service is distributed between the two vessels. I believe it is the object of the contractors to go as far as Montreal. We subsidized them no farther than Gaspé; but if they can go to Montreal and back and do the service on the schedule, there is no objection to their doing so. That is the best arrangement which we can make at present. What will happen in the future, I am not in a position to say.

Mr. MARCIL: Will there be two trips a week between Campbellton and Gaspé as at present?

Mr. FOSTER: There will be only twenty-six round trips—half the subsidy and half the service.

Mr. MARCIL: Have the people down there expressed any desire for a service of that kind?

Mr. FOSTER: I have not had time to communicate with the people, and it is not quite open to do in a few days' time what might be best for the service. If you have plenty of time to call for tenders and get competition in that way, you might do better. Here was a service which was about to open and that was the only proposition I could get placed before me and I took it up rather than have the service lapse.

Mr. MARCIL: Why not have the Canada continue the contract of last year?

Mr. FOSTER: That might have been possible if I had had a proposition to continue it, but I had not.

Mr. MARCIL: You had a contract.

Mr. FOSTER: A contract is not much use against a man who has died and whose estate is not prepared to carry it on. My hon. friend would not like me to press a service in a case of that kind.

Mr. MARCIL: I understand the boat has been sold to another company.

Mr. FOSTER: Yes.

Mr. MARCIL: What is the name of the new manager of the company?

Mr. FOSTER: The contract will be with the Gaspé and Baie des Chaleurs Steamship Company, Limited, manager Mr. Blouin.

Mr. MARCIL: Is he a resident of Quebec city?

Mr. FOSTER: I do not know.

Mr. MARCIL: I put a question to the minister some time ago about the state of the steamer Canada, whether she had undergone any inspection or not, and the Minister of Marine and Fisheries gave me the following information:

The SS. Canada was inspected by the Government inspectors and granted a certificate on the 5th May, 1913; this certificate expired on the 1st December, 1913. No further report of official inspection has yet been made to the department, and no certificate for 1914 has been issued.

This answer was given on the 6th of April, three weeks ago.

Mr. FOSTER: I cannot say whether a certificate has been issued since then or not. I have not any information that I can give my hon. friend. With reference to the other vessel to be put on, I made inquiries and an inspection of the vessel made to satisfy myself that she was able to carry on the other half of the service. I am informed by the Postmaster General that the Canada is in dock being repaired, and that, when repairs have been made, she will get her certificate. The vessel must get her certificate in order to run on the route.

Mr. MARCIL: I have, in a return brought down to the House on the 2nd of March of the present year, a letter from the late president of the company, who gave as his reason for going into dry-dock last year on the 28th of November, at an earlier date than usual, the fact that he had asked Lloyds, of London, England, to certify the vessel, and they had instructed him to place it in dry-dock and he had complied with their instructions. I would like the minister to make sure that he is putting a safe boat on that coast.

Mr. FOSTER: I certainly will do that.

Mr. MARCIL: This boat was bought in 1892. It was formerly called the Pro Patria. It was reported as of no further use to the company which owned it, and lay in the harbour of Halifax for sale for quite a time until it was bought and put on the Gaspé route. The service was not as bad as the one given by the Restigouche, but almost as bad; since the Admiral was taken off the route the service has been going from bad to worse. The Canada was patched up; a couple of cabins were built on the deck, but the machinery is out of date and she did not give satisfaction at all last year. The service used to be sixty trips during the season; that was cut down to fifty-three and it is now to be cut down to twenty-six, a trip every week. In the months of May and June, large quantities of salmon are taken from Gaspé to Charlo, transferred to Dalhousie and there put into the icehouses to be transported by rail. The people found the service of the Canada, two trips a week, entirely inadequate, and they organized local services. A resident of Bonaventure put on a special boat; the hon. member for Restigouche (Mr. Reid) sent a sailing vessel over from Charlo and Loggies, I think, had an independent service of their own. All these agencies were employed to carry the salmon taken up in May and June. The Canada gave a poor service, but if the service is to be made poorer still the people will have to rely on the railway to carry their fish. That is one more argument in favour of the suggestion I made the other night: that the time is coming when the Government should take over that railway and make it a branch of the Intercolonial. We spent a million and a half in cash upon that road and $250,000 were paid in special subsidies for the building of twenty-six iron bridges. The road between Carlisle and Gaspé, which was built at a cost of $3,000,000, is giving practically no satisfaction at all. During the winter only one train a day is run and for weeks at a time the country is without any service at all. The old line between Carlisle and Matapedia has to be rebuilt, but the chief requirement is a bridge between Cross and Campbellton to bring the Gaspé peninsula in touch with the International railway, with the Intercolonial at Campbellton and with the Transcontinental railway at Edmunston. If our friends in Nova Scotia get better steamship service for the carrying of their fish to the American market, we would have an ideal

service if we could but link up Gaspé with Campbellton. We could then take advantage of the International railway as well as of the Intercolonial system; we would be connected with the Boston and Maine and our fish could reach Boston within twenty-four hours. In the Baie des Chaleurs there are great possibilities. If the railway service were improved I think the steamship service could be dispensed with altogether from the freight point of view, though I would be sorry to see it go, becausé Gaspé coast is one of the most picturesque parts of the province of Quebec; during the summer season that district is one of the most attractive portions of eastern Canada. I know that difficulties present themselves to the Government but I hope that the inferior steamship service and ineffective railway accommodation to which the people of the Gaspé peninsula are subjected will be taken into consideration by the Government and some improvement made.

Mr. PELLETIER: My hon. friend knows that the Bill providing for the purchase of that railway was thrown out last year by the Senate.

Mr. MARCIL: The Postmaster General knows well that if he brings in a measure now to take over that road I will support it.

Mr. FOSTER: I have paid a great deal of attention to the route mentioned by my hon. friend, but the question is rather a difficult one. When I came to look for results I found that with a payment of a subsidy of $20,000, the amount of freight carried was only 1,600 tons. The question arises as to how much money you can expend on a route which in some respects seems to be on the diminishing side. I gave only the $5,000 and continued the granting of that amount because of my love for the scenic properties of that beautiful stretch of water, which I always liked to see visited by tourists and travellers. However, situated as we were, I could not see anything better to do than that which I have done.

Mr. MARCIL: The minister knows, of course, that although traffic on the Canada has decreased, that does not mean that the Gaspé peninsula is not progressing. If the steamship traffic has gone down, it is because the railway now reaches Gaspé and because there are three independent lines of steamers running from Montreal to Quebec. In the old days the Admiral was sufficient to do the whole business; now the Canada, the Gaspesian, the Lady of Gaspé, the Cascapedia and Gaspé railway are all employed in the carrying of trade.

Steam service between Halifax and west coast Cape Breton, calling at way ports, $2,000.

Mr. WILLIAM CHISHOLM: How far north on the west coast of Cape Breton does this boat go?

Mr. FOSTER: She goes to Pleasant bay.

Steam service between Halifax and Sherbrooke, $2,000.

Mr. SINCLAIR: Is there a contract for that service, and if so, with whom?

Mr. FOSTER: Yes, with W. J. Murdoch. The service has been running for some time. I think without subsidy. Last year it came under subsidy.

Mr. SINCLAIR: It received a subsidy from the local government of Nova Scotia.

Steam service between Kenora and Fort Frances, $8,000.

Mr. OLIVER: This is an inland service. Would the minister give some explanation?

Mr. FOSTER: That has a peculiar history. I wonder if I would be betraying any confidence if I explained it. A certain minister at a certain time had for a long time been very much importuned to grant a service over this route but he fought against the principle of subsidizing services in interior lakes in Ontario as a doughty soldier in the interests of economy and what he thought was proper steamship service. But at last he had to give so many steamship services to the ports in Nova Scotia and New Brunswick that, in a rather irate fit or mood, upon a certain occasion he declared he would give one subsidy on this internal lake and river in Ontario as a bit of an offset for the number that he had to grant in Nova Scotia. I felt that I would not be doing honour to his memory if I did not continue that subsidy.

Mr. OLIVER: I do not want to be understood as objecting to the service at all.

Steam service from the opening to the closing of navigation in 1914 between the mainland and the Magdalen islands, $15,000.

Mr. J. J. HUGHES: This is a service that takes in part of Prince Edward Island. If I understood the minister aright he said there was no increase in the rate since he took charge of the department. My information is to the effect that there is an increase in the rate.

Mr. FOSTER: My impression is exactly the opposite. One of the troubles I have been up against is in regard to this service which is peculiar in many respects. It is not a service of very great volume of trade and the trade that is carried on is of a peculiar nature in which a sympathetic captain may very much help and an unsympathetic one very much hinder.

Mr. J. J. HUGHES: I think the service is a good one.

Mr. FOSTER: Then we will start from a common basis that this service is a good one. I have gone carefully over the accounts of the service for the last two years with Mr. McClure, and I satisfied myself that something more would have to be given in order to retain that vessel in this service. We have had several vessels on that service and had chronic complaints on the part of the people of the Magdalen islands and of other portions as well, against the service. This vessel is, if anything, superior for that service; but she has given a good service and the people are very anxious that the service should be retained. I have come to the decision to add a little more to the service in order to keep it for the present year with the same vessel and the same captain. One of the difficulties I met with was that the rates to the Magdalen islands were so reasonable, so far reduced in fact, that there had to be a larger subsidy or an increase in the rates.

Mr. MACDONALD: I was familiar with the granting of this subsidy five years ago and with the rates that were then especially stated in the contract, and I am in a position to know that there has been no change in the rates since, because the gentleman who is running the service is performing the contract as it was made five years ago without any change. I have spoken to the minister privately about the matter, as the service starts from my own town. I understand the minister has granted an additional sum but only for the year.

Mr. FOSTER: Yes.

Mr. MACDONALD: What is the minister's policy in regard to the future?

Mr. FOSTER: These subsidies all around our coasts have been yearly subsidies. There are some difficulties to the department in the administration in having them fall in each year and so as soon as we have worked out some better system of checking up the receipts and expenditures we hope to make a change and to enter into contracts for a period of years, perhaps three years or five years.

Steam service between Mulgrave and Guysborough, calling at intermediate ports, $5,500.

Mr. SINCLAIR: I have had requests that the port of Sand Point, a place with a wharf on the strait of Canso should receive a call from this steamer. It would have been easy to do but I find there is a difficulty in this way. A new wharf was erected there for the purpose of providing for a call of that boat. Money was voted in the session of 1911 and a contract was made for building the wharf. After the new Government came into power, the Minister of Public Works did not cancel the contract but he decided to change the site. The first site gave sufficient depth for the steamer to call at the outer end of the wharf and do the business, but the minister changed this site to a point half a mile away, in order to give $150 to a friend of the party and to please some of his political friends who resided there.

Mr. FOSTER: Of course that is an assertion.

Mr. SINCLAIR: That is the only reason. the consequence is that the wharf is now no good to anybody, because there is not sufficient depth of water in front of it for any boat to call at low tide. I would like the minister to have a consultation with the Minister of Public Works, and if he can induce him to add 100 feet to that wharf so as to give a sufficient depth of water it will be a great accommodation to the people of that locality.

Mr. FOSTER: I will consider the matter and have it fixed one way or the other: either get a little more water, or shave something off the bottom of the vessel.

Mr. CARROLL: Will the boat call at Big Pond?

Mr. FOSTER: Did it last year?

Mr. CARROLL: I am told by a resident there that it did in the first part of the season, but not in the latter.

Mr. FOSTER: I cannot say whether that is included in the contract or not, but I will make a note of it.

Mr. CARROLL: There is a Government wharf there.

Mr. FOSTER: Has it water?

Mr. CARROLL: I presume so.

Steam service—Pictou, Mulgrave, Cheticamp, $7,500.

Mr. SINCLAIR: Who has the contract this year?

Mr. FOSTER: I forget the name of the company, but it is the one in which Roderick McDougall is interested. I suppose my hon. friend wants some information on that matter. I have had more trouble over that than over any other service.

Mr. A. W. CHISHOLM: If the minister had consulted me, I could have helped him out very easily.

Mr. FOSTER: One never knows what silent and unobtrusive friends are close at hand to help out in times of difficulty, and often loses the aid he might have had. The facts of the case—I have them pretty fresh in mind—are these: The vessel was the City of Ghent—Captain Beatty. I remember the captain, and I have some recollection of the City of Ghent. So far as I can learn, the Ghent was a popular vessel, though not the best in the service, but the captain was not quite so popular as the vessel, and there was a great deal of trouble and many heartburnings. I took the ground at last that if I could get a suitable vessel and a suitable captain to cater to what seemed to be the wish of the customers of the route, that it was my duty to do so. After a long while I found a sea-faring man who undertook to get a suitable vessel and to organize the service, and I have given him the contract for the present year. The vessel is the steamship Kinburn, refitted so as to give what seems to be sufficient accommodation for the route. We will try it out and see what happens this year.

Mr. MACDONALD: I hope the minister will see that she starts from Pictou.

Mr. FOSTER: Oh, yes, and goes back to Pictou every time.

Mr. A. W. CHISHOLM: If I have one particular objection to the whole contract, it is that one fact that she starts from Pictou.

Mr. FOSTER: I have no hesitation in saying that if I were making the service anew, I would start the vessel from Mulgrave and run that route. I would divide the service into two, and if it were necessary put on a service from Pictou to Mulgrave, serving the points in Antigonish county between those two towns and also run a boat from New Glasgow. But it is not possible for me to do that this year.

Mr. CHISHOLM: Here is another case where the minister might have been helped out if he had consulted the representative of the county the year before last. The minister will not forget that he changed the service two years ago. Under the late Government there were two services. There was a boat from Pictou to Cape Breton ports, and a boat from Mulgrave to Cheticamp. The minister—I suppose from the standpoint of economy—undertook to amalgamate both services and gave the contract to Captain Beatty. If Captain Beatty did not turn out according to the expectations of the minister, he has himself to blame.

Mr. FOSTER: He was more energetic than I thought he was.

Mr. CHISHOLM: If the service does not please the people of Inverness county they may blame the minister, because, as I have pointed out, it is impossible for one boat to do that service; and the same thing will happen again this year. The slightest consideration on the part of the minister would show him that it is an absolute absurdity for the boat to make one trip from Pictou to Cheticamp, and two from Mulgrave to Cheticamp in one week. On all that coast there is a large quantity of fresh fish, particularly salmon, and if we cannot have a regular two-trips-a-week service from Cheticamp to Mulgrave, the service is practically useless. We could not have it last year and certainly we cannot have it this year; the man simply cannot do it; the distance is too far. Another thing I want to point out to the minister is this: in my opinion the boat he has on the service now will not be any improvement on the service last year, and I question whether it will be as good.

Mr. MACDONALD: She is not as good a boat.

Mr. CHISHOLM: That is my information, and I think the department ought to have had that information—I had it long ago. The boat that was on three years ago gave satisfactory service and I venture to say there were no complaints against it; but the minister took that contract away and gave it to Beatty. He found no satisfaction in him and drove off that boat, and I venture to say that this third boat will be the worst of the three. The minister ex-

pects this boat to perform a service that is physically impossible.

Mr. FOSTER: The member for Peterborough says there are no impossibilities.

Mr. CHISHOLM: Let me ask the minister if he will be good enough to watch the service of this boat this year? Rather than have the Inverness service sacrificed, as it will be, I would suggest that Pictou be cut out altogether. I am very anxious to be connected with Pictou and we would have been connected with Pictou in a satisfactory way if the minister had not tampered with the conditions he found when he took charge. But he did tamper and the result is evident; we have now no service at all. If we are going to have a repetition of what occurred last year let him cut out Pictou altogether this year.

Mr. FOSTER: My hon. friend the member for Pictou and the member for Inverness can have a private conversation about cutting out Pictou.

Mr. CHISHOLM: There is another thing with regard to the passenger service at that point. I understand the Kinburn has been equipped with passenger accommodation. If it turns out that in two months' time this boat is not equipped what will be the result?

Mr. FOSTER: If my hon. friend tells me that the boat is not equipped, I will take some means of finding out whether she is equipped or not. She has to be equipped reasonably well for the service. My hon. friend will find that summer weather will make him less pessimistic than he is now.

Mr. CHISHOLM: I am not pessimistic; it is the people who are suffering, and not I.

Mr. FOSTER: I started out with the heroic idea of economizing and squeezing into one some of the many double services I found on that coast. I have had my experience with that matter—I am quite willing to admit it.

Mr. KYTE: Did the minister get a report from any official as to the suitability of this boat for the service that it professes to perform ?

Mr. FOSTER: The boat was on the service from Halifax out to the southwest coast last year, but it had not sufficient passenger accommodation. Outside of that it had sufficient accommodation. It is in part a night service and there must be sleeping accommodation. I summoned the superviser, who was in Ottawa at the time, talked the whole matter over with him and we came to a conclusion as to what would be reasonably good passenger accommodation. They must fulfil that condition or they will not get the subsidy.

Mr. SINCLAIR: Does the inspector, Mr. Tupper, report on the question of the suitability of vessels ?

Mr. FOSTER: Yes, of every vessel.

Steam service between Pelee Island and the mainland, $5,000.

Mr. FOSTER: The subsidy given so far has been $5,000. They have had for a series of years rather an old
12 p.m. and not a very serviceable vessel, although it has done the work that it was necessary to do. This year the people of Pelee Island have subscribed their money, built a new vessel into which they have put about $70,000, they are going to give a better service and I am going to raise the subsidy to $8,000 for the improved service.

Steam service between Pictou and Montague, calling at Murray Harbour and Georgetown, $6,000.

Mr. J. J. HUGHES: There is a feature in connection with the services between one or two places to which I wish to call the attention of the minister. I think that in the contracts there is a clause to the effect that steamers subsidized by the Government shall use the Government wharfs where such wharfs exist. I think that is a proper clause.

Mr. FOSTER: If they have water.

Mr. HUGHES: I do not know of any wharfs in Prince Edward Island that have not water. This steamer does not use the Government wharfs, and the Government wharfs, as a rule, are better than the private wharfs. They have better freight sheds and are capable of giving better accommodation to the public. The hon. minister can understand that perhaps some of the shareholders, or some of their friends, may have a private wharf that the steamer people would like to use. I get letters in reference to this matter, and sometimes people who are aggrieved do not wish to make complaints personally.

Mr. FOSTER: At what ports?

Mr. HUGHES: At Montague there is an excellent Government wharf; it has a new freight shed and it should be used. I understand there is a clause in the contract to that effect.

Mr. FOSTER: I do not know whether there is any clause in the contract or not, but I think the rule is that, if there is a Government wharf which is suitable for the people, the vessel has to call there if she is required to do so.

Mr. HUGHES: I would ask the minister to give notice to the steamship owners in time so that they cannot raise the plea that they were not notified and that they thought they could do as usual. Last year the steamer that called at Souris on the way from Pictou to the Magdalen islands did not use the Government wharf and a greater hardship was inflicted upon the people who shipped by the steamers in consequence of that than would have been the result even at Montague. A good deal of freight carried by that boat from Souris comes over the railway from Charlottetown and when the Government wharf was not used that freight had to be carted over from the Government wharf where the cars come down, around quite a distance to the private wharf, or it had to be carted from the station which was some distance back in the village and the goods had to pay unnecessary cartage and the double wharfage. Possibly this extra charge may have given rise to the idea that the freight rates were increased. After considerable trouble last year I got that matter adjusted.

Mr. FOSTER: There is no longer a grievance?

Mr. HUGHES: I do not know whether it may arise this year or not.

Mr. FOSTER: Do not greet possibilities; you know that the thing is all right now.

Mr. HUGHES: I can quite see that the minister does not take the matter seriously.

Mr. FOSTER: I am here to listen to you.

Mr. HUGHES: I am glad to hear that.

Mr. FOSTER: My hon. friend should not deprecate himself enough to think that in adressing his remarks to me he would not address remarks which would receive serious attention. Every member of this House, on any side of it, that wants to say anything in reference to any service in which he is interested has a right to be seriously treated, and I always so treat him.

Mr. J. J. HUGHES: I am glad to hear that. If the minister's method of answering me did not convey that impression it is my misfortune. I suggest to the minister that he should give notice to the steamship owners that that clause in the contract will be carried out.

Mr. FOSTER: If there is a clause in the agreement and they have signed the contract and I have signed it, it will be carried out; there is no necessity of giving notice.

Mr. HUGHES: Lest there be any misunderstanding, I tell the minister that in the case of Montague, the Government wharf was not used last year.

Mr. FOSTER: I shall be glad to inquire into that.

Mr. KYTE: I see in one of those votes that you are subsidizing a schooner; is that a sailing vessel?

Mr. FOSTER: No, it is a motor boat.

Mr. KYTE: Is it a new departure for the Department to subsidize motor boats for work of this kind?

Mr. FOSTER: It is pretty hard to say what would be a new departure in the application of these subsidies. The Ghent, which ran from Pictou to Northern Cape Breton, found it impossible to get into a number of the smaller ports along the Antigonish coast, and this small vessel ran from Glasgow, and performed a very useful service to the people of that locality. I have the letters of the merchants and the priests along that coast congratulating me for putting on the service, and telling me how important it was that the contract should be continued.

Mr. SINCLAIR: Who is performing that service?

Mr. FOSTER: I think the man's name is Macdonald; it is a small subsidy of $500 a year.

Mr. KYTE: This opens up a new field for the exploitation of persons who desire to get their names on the pay-roll for Government subsidies. I realize that there are many situations similar to those described by the minister, where ordinary steamers would be unable to call at certain places on account of the shallowness of the water, and it would be very desirable to subsidize gasoline boats for that purpose. I am glad to see the minister has undertaken to supply this much-needed service, and I may say to him that it is quite possible that in the near future very many similar applications will be made.

Mr. FOSTER: I do not propose to extend the principle.

Mr. J. J. HUGHES: I may tell the minister that I know the rates have been increased on the service about which we were speaking, but I cannot be sure of the year in which the increase took place. Is the minister sure that no increase has taken place?

Mr. FOSTER: I can only say that my recollection does not warrant me in saying that as to that particular service a request for an increase in any of the rates has been made. The instructions are absolute, and the clause in the contract is absolute that they must not charge any higher rates without the permission of the minister. I do not recollect receiving any complaint on that score.

Mr. J. J. HUGHES: I know that some years ago they charged $5 a head for cattle, and I think the charge is now $7.50.

Mr. FOSTER: I do not think I should take the ground that the rates should remain the same over a period of years, during which there have been many essential changes in cost. I take it that what the contract means is that the rates shall not be increased beyond what is reasonable. There might occasions arise when the Department would think it reasonable to allow an increase.

Mr. J. J. HUGHES: I understood the minister to say there was no increase at all.

Mr. FOSTER: No increase, unless authorized.

Mr. HUGHES: I am not objecting to a reasonable increase, and perhaps there might be good reason for it in some cases.

Mr. FOSTER: I do not recollect any application for an increase.

Mr. HUGHES: Some years ago these boats called at Souris on their way to Newfoundland, but that service was cut out, and they now call only at Summerside and Charlottetown. The subsidy was only $8,000 when they called at Souris and they are now getting $16,500. I think they should make a call at each county, in consideration of the increased subsidy.

Mr. FOSTER: The vote is $16,500, but it is regulated according to the number of calls they make, and for a series of years they have made calls which entitled them to $12,500 per annum.

[Mr. Kyte.]

Mr. HUGHES: If they called at Souris would they be entitled to $16,500?

Mr. FOSTER: My impression is that they would be entitled to more subsidy if they called at Souris, but I am not positive. I think there was correspondence on the point that they had not reserved space, and that therefore, the freight that offered was not carried, and I took that matter up with them.

Mr. J. J. HUGHES: That would be at Charlottetown. Of course, it would be a great convenience to the people living in the neighbourhood if we could get at least one of these boats to call at Souris.

Mr. FOSTER: I have the impression that they declined to call at Souris unless they were paid more subsidy.

Mr. HUGHES: Well, we are voting a larger amount than they have been receiving. Is the contract for one year only?

Mr. FOSTER: Yes.

Mr. HUGHES: Is there a possibility or a probability of getting the steamer to call at Souris during the coming season?

Mr. FOSTER: I do not know, I will take the matter up.

Mr. HUGHES: If not, we will try to have it next year.

Mr. OLIVER: Would my hon. friend have prepared a list of the rates of the different services that might be laid on the table of the House at a later date?

Mr. FOSTER: It could be prepared. There would be seventy-five or eighty of them.

Mr. OLIVER: Merely the rates so that there would be no divulging of private information. It would be convenient for comparison. While the accommodation is important, the rate is also important.

Mr. FOSTER: I will see whether or not there can be prepared for the annual report a table which will give the rates.

Mr. OLIVER: That report would not be received until next session of Parliament.

Mr. FOSTER: We will try to get something for my hon. friend at an early date.

Steam service during the year 1914, between Quebec and Blanc Sablon, calling at ports and places along the northern shore of the river St. Lawrence between such terminals, $20,000.

Mr. GIRARD: Before this item passes, without complaining of the past, I want

to congratulate the Government, and principally the Postmaster General, who is the minister of the Quebec district, on the success they have had in getting to do this service, instead of poor people, a strong company which will give two boats, one of them being prepared to carry one hundred first-class passengers at fair rates, under the supervision of the Government, and ready to take all means possible to advertise the resources of the north shore which has been neglected until now. The people living along the north shore will appreciate this service; and, in their name and my own, I want to thank the Government, and principally the Minister of Trade and Commerce and the Postmaster General, for their work in bringing about this service, which will materially promote the prosperity of that part of the country.

Mr. KYTE: It would be satisfactory to hon. members who are not present if the last item should stand to give them an opportunity to discuss matters in which they might be interested.

Mr. FOSTER: Any questions can be asked on the former item that was allowed to stand.

Progress reported.

On motion of Mr. Foster the House adjourned at 12.20 a.m. Saturday.

Monday, April 27, 1914.

The House met at Three o'clock, the Speaker in the Chair.

RAILWAY ACT AMENDMENT BILL.

Right Hon. R. L. BORDEN (Prime Minister) moved:

That a message be sent to the Senate to inform Their Honours that this House agrees to their request to appoint a special committee to meet with a similar special committee of the Senate to consider Senate Bill No. B 2, intituled 'an Act to consolidate and amend the Railway Act,' to take evidence, if necessary, and to hear parties interested, and that each such special committee report to their respective Houses, and also to inform Their Honours that Messrs. Ames, Armstrong (Lambton), Bennett (Calgary), Blain, Beland, Carvell, Crothers, Emmerson, Fowler, Graham, Green, Lancaster, Lemieux, Macdonell, Maclean (York), McCurdy, McKay, Meighen, Murphy, Nesbitt, Oliver, Perley, Rainville, Reid (Grenville), Sinclair, and Turriff will act as members of the said special committee.

Mr. GRAHAM: Is it the serious intention of the Government to go on with this Bill this session? It is a very lengthy and important Bill; there are over 100 amendments in it as well as some new sections; in fact, the railway law of Canada is to be entirely overhauled. From my knowledge of railway legislation, I think it would take this House a month to handle this Bill, if we gave it the attention it ought to have.

Mr. BORDEN: There is a good deal of force in what the hon. gentleman says as to the importance of the Bill and the necessity for careful and perhaps lengthy consideration. It was hoped that the Bill might have been introduced at an earlier date in the session than that which eventually proved practicable. We would like to have the Bill passed this session, but we do not propose to make any attempt to force it through without due consideration and full deliberation. In any event, there is no harm in having the committee appointed and doing what can be done this session in that regard.

Mr. GRAHAM: In what position will the committee of the House of Commons be to examine this Bill, unless the Minister of Railways introduces the Bill?

Mr. BORDEN: I inquired as to precedents with regard to the matter, and the information was conveyed to me, as emanating from the Speaker and the officers of the House, that it was not necessary to do that, in view of the message from the Senate. There is no objection to introducing the Bill here if it should be desired. I am merely acting in accordance with what I understand to be the proper procedure as conveyed to me by the officers of the House.

Motion agreed to.

APPOINTMENT OF MESSENGER.

Right Hon. R. L. BORDEN (Prime Minister) moved:

That the recommendation of His Honour the Speaker of the House of Commons in the matter of the proposed appointment of Mr. Herbert D. Throop as permanent messenger in the Library of Parliament, laid upon the table of the House with other papers in connection therewith on the 20th day of April last, be concurred in, and the said messenger's salary begin at six hundred dollars per annum from March 25, 1914, as recommended by the Librarians of Parliament; and that a message be sent to the Senate acquainting Their Honours therewith.

Motion agreed to.

REPORT.

Report of the Department of Trade and Commerce for the year ended March 31,

1913; part IV—miscellaneous information.—Hon. George E. Foster.

PRIVATE BILLS.

NATIONAL COUNCIL OF WOMEN.

The House again in Committee on Bill No. 140, to incorporate the National Council of Women of Canada.—Sir E. Osler. Mr. Blondin in the chair.

On section 1—incorporation; name:

Mr. OLIVER: Would some person in charge of this Bill explain what its purpose is?

Mr. BORDEN: I am not very familiar with the Bill. I was just looking over it. Sir Edmund Osler, in whose name the Bill stands, is absent through indisposition. There has been an institution in Canada, as my hon. friend knows, called the National Council of Women, which, as I understand, is designed to bring into co-operation various societies and associations of women throughout Canada for charitable, benevolent and other purposes of a like character. I understand that the object of the Bill is merely to give a more efficient organization by the acquisition of corporate powers. I have looked over the Bill and it does not seem to contain anything of an objectionable character. Perhaps we can take it up clause by clause and have it read.

On section 5—constitution and standing orders:

Mr. NESBITT: What does the Premier think of clause 5, by which we legalize the by-laws of the Council, although we know nothing about their by-laws?

Mr. BORDEN: I am not familiar with the by-laws of the various local councils; but, inasmuch as the ladies in the various cities and towns of Canada carry on the affairs of these local councils under these by-laws and have done pretty good work, I think we may safely assume that the by-laws are reasonable, and that if they are not reasonable they will be amended under the provisions of this Act.

Mr. GERMAN: Is this the inauguration of female suffrage?

Mr. BORDEN: I am not prepared to answer that, because I really do not know anything more about the Bill than my hon. friend; and, in the absence of Sir Edmund Osler, I thought I would like to help it along if I could.

[Mr. Borden.]

On section 9—acquisition of real property:

Mr. BORDEN: That is the only other important section. It provides that the National Council may hold real estate to the amount of not more than $20,000, and any local council to an amount not exceeding $10,000.

Bill reported, read the third time, and passed.

PATENT OF JOHN ARNOLDI.

The House in committee on Bill 143, respecting a patent of John Arnoldi.—Mr. Macdonell. Mr. Blondin in the Chair.

On section 1—power to commissioner of patents for extension of patent:

Mr. CARVELL: What is this patent?

Mr. BURRELL: This is a patent against whose renewal our department raise no objection. Arnoldi, the patentee, had paid in fees for two terms, that is twelve years, and then became very ill just before the final payment was due, so that he could not attend to his own business and would not allow anyone else to do so, and the third payment lapsed. The patent is the only thing left to the widow, who is the beneficiary legatee, and she asks that she may be allowed to revive it through this Bill. The Senate unanimously passed it, and our department raise no objection under the circumstances.

Bill reported, read the third time, and passed.

PACIFIC, TRANS-CANADA AND HUDSON BAY RAILWAY COMPANY.

The House in committee on Bill 142, respecting the Trans-Canada and Hudson Bay Railway Company.—Mr. Douglas. Mr. Blondin in the Chair.

On section 1—extension of time:

Mr. LANCASTER: I was unable, on account of the state of my health, to be here on Friday night, but I understand from reading 'Hansard' that some hon. gentlemen desired an explanation of this Eill. We have passed the Bill from the Senate as printed without any amendment. It is the first extension of time asked for this line of railway, and, of course, to that extent the Railway Committee had some sympathy with it. It originated in 1912. The line runs from Edmonton to Port Nelson or Fort Churchill, and from Lone river to Peace river, crossing thence

through Laurier pass to Prince Rupert or Portland canal. It is about a thousand miles in length, and the capitalization in 1912 was fixed at $10,000,000.

Mr. LEMIEUX: Who are the promoters?

Mr. LANCASTER: I have not the original act of incorporation before me, so I cannot give that information. The only objection made in the committee was as to the name. One hon. gentleman thought that the words Hudson bay were objectionable, but he did not press the objection. The difficulty is that the company has had corporate powers since 1912 by the Act of this Parliament, and in the absence of some very good reason for making a change in name we did not like to make one.

Mr. OLIVER: What is the route of the railway from Edmonton? I am informed the route is through Athabaska Landing. If so, I shall be glad to consent to the extension of time, but if it is not routed through Athabaska Landing, I want it so routed as a condition of the extension of time.

Mr. LANCASTER: As a matter of fact, I cannot say that it is, or is not so routed. The language is not so specific as that. It reads: 'from Edmonton to Port Nelson' and the railway is not required to run actually though Athabaska Landing. The Minister of Railway will have to deal with that question in approving the route map.

Mr. OLIVER: I wish to make very emphatic objection to the extension of time in the charter. Either the charter means nothing at all, or it means that a railway will be built. If it means nothing at all, it should not encumber the statute book. There are certain railroads built, and building, to the northwest and to the northeast of Edmonton. If this railroad is to be routed approximately near Athabaska Landing, as the representative of that district, I want it routed through Athabaska Landing. I do not want this railroad to be able to hold up an established town that is adjacent to their proposed line of railway. If, on the contrary, it is routed to pass a considerable distance from Athabaska Landing I have nothing to complain of; but as the representative of that district I want to know what is the intention of Parliament in this matter, and to have the interests of this established town protected so far as Parliament can protect them.

Mr. LANCASTER: I see that the section does make it an alternative.

Mr. OLIVER: I notice that the original Bill provides that the company may build from a point at or near the city of Edmonton, thence northerly by the most feasible route to, at, or near Athabaska Landing. I do not object to the words 'at or near' in the case of Edmonton, which is an established city and railroad centre, and a railway constructed thereabouts would necessarily be constructed from Edmonton. The interests of the railroad would compel that, but in the case of Athabaska Landing the position is different, and I would like the committee to amend the charter in order to make the railway run through Athabaska Landing.

Mr. LANCASTER: Perhaps we can do that here. If the House is unanimous, we could strike out the words 'at or near.'

Mr. OLIVER: That would be very satisfactory to me.

Mr. LANCASTER: Then I would move that a new section be added at the end of the Bill as follows:

Section 8 of chapter 134 of the statutes of 1912 is amended by striking out the words 'at, or near' after the word 'to' in the fifth line of the said section.

Mr. GRAHAM: Perhaps the hon. member had better give notice of that amendment; then it will not be necessary for him to be here when the Bill goes through.

Progress reported.

PRINCE EDWARD AND HASTINGS RAILWAY COMPANY.

The House again in Committee on Bill No. 93, respecting the Prince Edward and Hastings Railway Company.—Mr. Hepburn. Mr. Blondin in the Chair.

Mr. LANCASTER: Perhaps the committee would like a word of explanation. We are not changing section 1 at all, but we are changing section 3 by striking out the words 'from a point at or near,' so as to make the railway run from Brighton. They have authority to build from Trenton easterly to Belleville, thence northwesterly to Frankford, thence to Trenton; also a branch line to Picton and also three branch lines from Picton to Ferry Point, West Point and Black River, respectively. This authority is given in the original incorporation. Under section 2 of the present Bill we are allowing a little additional construction.

Mr. GRAHAM: As the member for Prince Edward (Mr. Hepburn) is in his seat, perhaps he may explain section 2, which authorizes the construction of new lines from a point at or near Brighton by the most feasible route to Picton.

Mr. LANCASTER: We have struck out the words 'a point at or near,' so that the railway will run from Brighton.

Mr. HEPBURN: The distance from Brighton to Picton, and thence to Kingston is about 72 miles.

Mr. GERMAN: How are you going to get from Picton to Kingston?

Mr. HEPBURN: We propose bridging at Glenora.

Mr. GERMAN: A rather long bridge.

Mr. GRAHAM: Could the promoter of the Bill tell us the names of the directors of this company? The Chairman of the Railway Committee, I presume, has not that information at hand. Is this railway for some large company now in existence?

Mr. HEPBURN: It is an independent road. The directors all reside in the county of Prince Edward.

Mr. GRAHAM: Is it an electric road?

Mr. HEPBURN: No, steam.

On section 3—securities:

Mr. LANCASTER: The amount of securities is exactly the same as in the original Bill.

Mr. GRAHAM: I see that an additional amount of security is required in case they double track. I do not suppose they will double-track for some time.

Mr. HEPBURN: You cannot tell; that is the most fertile county in Canada.

Section agreed to.

Bill reported, read the third time, and passed.

RAINY RIVER RADIAL RAILWAY COMPANY.

The House again in Committee on Bill No. 141, respecting Rainy River Radial Railway Company.—Mr. Carrick. Mr. Blondin in the Chair.

Mr. LANCASTER: This Bill, which came to us from the Senate, has not been amended at all except that we added the standard clause, which prevents the construction on highways without the consent of municipalities.

Mr. GRAHAM: This is a renewal of a charter granted in 1910. One of the questions that arise frequently in connection with the renewal of charters is in reference to the distribution of electric energy and the powers in connection with it. The Railway Committee has adopted a standard clause, and inserts it even in a renewal of a charter. Has that been done in this case?

Mr. LANCASTER: There are three standard clauses that we now insert in every railway charter. One is as to water-powers and electricity, one as to putting up poles upon the highways, and the other as to securing the authority of the municipality before constructing upon highways. The first two are in the charter as passed in 1910, and the third is inserted by our amendment.

Mr. GRAHAM: What is the route of this railway?

Mr. CARRICK: It runs through the northern section of the Rainy River district. The route is given in section 8 of the charter, chapter 152 of the Statutes of 1910:

> From a point on the northern boundary of the state of Minnesota at or near the town of Fort Frances, to a point on the lake of the Woods at or near the mouth of Big Grassy river;
>
> From a point on the said line west of the township of Mather, to a point on the lake of the Woods at or near the mouth of the Little Grassy river;
>
> From a point, or points, on the first described line in or east of the township of Mather, to a point on the northern boundary of the state of Minnesota at or near the Long Sault rapids on the Rainy river, and to the town of Rainy River or a point on the northern boundary of the state of Minnesota at or near the town of Rainy River.

Mr. GRAHAM: I suppose the reason for getting a charter in this Parliament was that the fact that it touches the Minnesota border makes it an international railway. Is this an electric railway?

Mr. CARRICK: I do not think so.

Mr. GRAHAM: Is it intended to get the water-power from Rainy river? There are a good many water-powers on Rainy river and these are in dispute between Minnesota and Ontario.

Mr. OLIVER: This charter seems to raise a very serious question, and I think the acting Minister of Railways (Mr. Reid) should state the position of the Government with regard to it. It will be noticed

that this railway touches the United States boundary at two points. I am sure the House would like to know, and know very definitely, whether it is the intention of the Government, in sanctioning this charter, to permit the carriage of wheat from the Canadian West into the United States. Surely, there are enough railways now crossing the boundary diverting the trade of Canada to the United States and preventing profit-earnings upon Canadian transcontinental lines without any more such railways being permitted. We would like to have a declaration from the Minister of Railways upon that point.

Mr. REID: This Bill came up in the Railway Committee the other day. I was not present, having another committee to attend. I have not looked into the matter very carefully and would not like to pass an opinion now. If there are any objections or if the question is deemed important, we will let the Bill stand over. But I am surprised to hear the hon. member objecting to more railways taking wheat into the United States, because he was urging that very strongly a day or two ago.

Mr. OLIVER: That will not do. I am not objecting to the Bill; I am asking for a declaration of principle in regard to the Bill by the Government whose policy is distinctly against the carrying of wheat into the United States as that policy was put forward by the Minister of Finance in his Budget speech, and I think by almost every other hon. member on that side who followed him.

Mr. REID: I think that was the policy of the hon. member when the Transcontinental Bill was brought in—that is, to bring wheat from the West through Canada. I hope he has not changed his policy.

Mr. OLIVER: Of course, if it is necessary to explain, the explanation is that the policy of those who established the Transcontinental was to provide all facilities for the export of the productions of the West in every available direction—whether by the construction of the Transcontinental, the construction of the Hudson Bay railway or the construction of lines across the international boundary. It was hon. gentlemen opposite who opposed the construction of lines across the international boundary. Yet, though in control of the House, they sanction the building of such lines.

Mr. GRAHAM: As a matter of fact, on that point the Government is not serious; that is the explanation.

Some hon. MEMBERS: Oh, oh.

Mr. GRAHAM: They are just talking for effect, and not for traffic. This Act was passed in 1910, and consequently it must be a fairly good Act. What I wanted to get at was just where the railway ran and what its powers were. I had the route generally in mind, but wished to know it more definitely. So far as the traffic north and south is concerned, the increase in traffic between Canada and the United States shows the wisdom of improving facilities for that traffic. For, so long as that traffic is profitable, you cannot stop it. I think that after the explanation of the promoter of the Bill we ought to let it pass, as the Government now say it is their policy to have all the railroads possible.

Mr. NESBITT: Is the expression 'at or near' Rainy river all right?

Mr. CARRICK: I think that is satisfactory.

Bill reported, read the third time, and passed.

LABRADOR, QUEBEC AND SOUTHERN RAILWAY.

The House in Committee on Bill No. 97, to incorporate the All Red Line Railway Company (its title to be the Labrador, Quebec and Southern Railway Company).—Mr. Fripp. Mr. Blondin in the Chair.

On section 1—incorporation:

Mr. LANCASTER: There is an amendment to section 1 as to the name, striking out the words 'All Red Line' and inserting the words 'Labrador, Quebec and Southern.' The Bill was very much cut down in the Railway Committee. The company were seeking powers to build from Labrador to the Pacific ocean. They found they could not get such a Bill through, and concluded they would go from Labrador to Quebec only. That makes it a reasonable charter, and we cut down the mileage, the capitalization and the bonding powers to suit.

Mr. GRAHAM: Who are the promoters of the line of railway?

Mr. LANCASTER: The promoters' names are given in section 1 of the Bill, as follows:

Edward J. Holland, agent, of the town of Prescott, in the province of Ontario; Freeman H. Palmer, manufacturer, and Walter F. Stafford, manufacturer, both of the city of Buffalo, in the state of New York, one of the United States; George F. Hope, agent, and George A. White, agent, both of the city of Toronto.

Mr. GRAHAM: That really originates in Prescott.

Mr. J. D. REID: I will not acknowledge that.

Mr. LANCASTER: Two in Toronto, two in Buffalo, and one in Prescott.

Mr. GRAHAM: The acting Minister of Railways will have to take a good deal of responsibility for this Bill, as it really originates in his own town. It seems reasonable that this railway project would not be launched without consultation with him.

Mr. J. D. REID: This is not the project that was originally launched.

Mr. LANCASTER: The minister opposed the project that was launched; this is it as we cut it down.

Mr. GRAHAM: This is the remnant, and no doubt the hon. gentleman will be responsible for it. Can the acting minister tell us what backing there is behind the project and what was in the mind of the promoters when they proposed the original charter? It may be of deep interest to the people of the country to know what the promoters originally wanted, and why it was curtailed. Why were they not allowed to carry on their philanthropic intention to the full? No doubt the acting Minister of Railways knows all that, seeing that the principal promoter is a neighbour of his.

Mr. J. D. REID: Mr. F. A. Knapp of Prescott was the only one who spoke to me about the original proposal of a railway from Labrador to the Pacific coast.

Mr. LEMIEUX: Is that the Knapp of Knapp's roller boat?

Mr. REID: Yes. Mr. Holland, who is mentioned among the promoters, is Mr. Knapp's son-in-law. Mr. Knapp asked me simply if I would urge that the Bill go through; but, instead of doing that, I opposed it very very strongly, for the reason that I did not think any one could get sufficient backing to build a railway from Labrador to the Pacific coast.

Sir WILFRID LAURIER: What do you think about it now?

[Mr. Lancaster.]

Mr. REID: I think now as I thought then, that he could not get sufficient backing to build a railway from Labrador to the Pacific coast, and I opposed the Bill. It came before the Railway Committee, but I was attending a meeting of the Redistribution Committee and could not be present. He tells me now that he

4 p.m. has sufficient backing to build the road from the Labrador coast to Quebec, and he said he had Mr. Gould of New York and several other capitalists interested in it.

Mr. EMMERSON: Is that the Mr. Gould who is building a railway in New Brunswick?

Mr. REID: I have not the slightest idea. I would not feel justified in allowing a railway Bill to go through, for what is called the All Red line, from Labrador to the Pacific coast, because I believed it would be simply a promoter's scheme, and for that reason I opposed it. But the committee felt they were justified in reducing it to a railway from Labrador to Quebec.

Mr. GRAHAM: The minister is right in saying that they should not be allowed to call it the All Red line. My own opinion is that it will never be any more than a thin red line on the map.

Mr. REID: That is what I think myself.

Mr. GRAHAM: And I am not quite so sure that it is a proper thing to charter them to build a railway from Labrador to Quebec. The acting minister tells us he was at the Redistribution Committee instead of being at the Railway Committee, but so far as I am concerned I think he would do far better work in the Railway Committee, in the interests of the country at large. I am not satisfied with what he is doing in the Redistribution Committee, and I am only partially satisfied with what he is doing in the Railway Committee.

Mr. J. D. REID: I have done nothing in the Redistribution Committee yet.

Mr. GRAHAM: I am afraid your intentions are bad. We have been in the habit here, of, in almost every instance, giving charters for railways in the hope that something would come of it, but we are rapidly arriving at a point where we can afford to be more careful about giving indiscriminate charters, else we may stop some legitimate project, which would have substantial backing. I do not know enough about this charter to oppose it, but I do

believe it is proper to curtail its powers and to prevent these people calling it the All Red line, which might deceive investors in the old land, and we do not want any more of that.

Mr. MACDONALD: Is it alleged by the promoters that they have made any arrangement for steamships to connect with this railway from a Labrador port? Has the minister considered as to the right of this Parliament to grant a charter in territory which is now in dispute with Newfoundland? Where do the promoters expect to get the capital for this enterprise?

Mr. J. D. REID: The only information I have as to the financial backing of the road is that Mr. F. A. Knapp of the town of Prescott gave me his word that Mr. Gould of New York and other wealthy men were interested in it.

Mr. MACDONALD: Which Mr. Gould?

Mr. REID: He simply said, Mr. Gould of New York. So far as I am concerned, I must say that I have not sufficient evidence before me to justify me in saying to the House that I believe there is sufficient financial backing to build this railroad. As to the right to go through Labrador, as I understand it, this Bill only grants a charter to the Labrador boundary line. I do not know anything about their arranging for steamships. No doubt the promoters will try to float the scheme, but I do not myself believe that this road will be built for some time.

Mr. DEVLIN: It was stated in the Railway Committee that the promoters of this Bill had already received a charter from Newfoundland, for steamships to the Labrador coast.

Mr. OLIVER: I wish again to draw the attention of the House to the change of policy on the part of the Government as regards railways. Within the last quarter of an hour we have seen the acting Minister of Railways support and pilot through the House a charter to build a railway to the international boundary at two points, and now we hear him avow his opposition to the project of a railway running east and west, intended quite evidently to carry the products of the western plains to the European markets by the most available railroad route. I would like to know if this is a reversal of policy, merely on the part of the Department of Railways under the acting minister, or, if it is to be taken by the country as a new departure by the Government at large. This, it would appear to me, would be a very appropriate time for the House to be informed exactly as to where the Government stands on this very important question of railroad construction, east and west, and north and south.

Mr. J. D. REID: I would not object to a charter being granted for the building of a railroad from Labrador to the Pacific coast, if I thought there would be any possibility of the promoters building it.

On the Other hand, when a promoter comes before the Railway Committee with a Bill to incorporate the All Red Line Railway Company, which in my opinion may result in a scheme being floated which, I believe, will be only a promoter's scheme after all, I feel perfectly justified in preventing that Bill from going through, in the interest of those who might subscribe for stock and also in the interest of the good name of Canada. It would not matter to me whether the line were east and west or north and south. I opposed this Bill simply for the reason that I believe it was a scheme that, if allowed to go through, might result in a great loss to those who might subscribe, and injure the good name of Canada in raising money in other countries.

Mr. OLIVER: I am sure the House will congratulate the Government upon the new policy now enunciated by the acting Minister of Railways, namely, that the Government will assume responsibility for the bona fides of railroad charters put through this House. There is no doubt that, if that were done, it would have a very beneficial effect upon railroad construction in Canada. From what the minister has said, I presume we are bound to conclude that the large number of charters which have been put through this session have been examined by the Department of Railways, that the fact of their having gone through with Government sanction is an assurance of the bona fides of the applicants, and that we may be assured that these railroads will be constructed.

Mr. MACDONALD: On this measure a situation has developed that should be considered by the House. We are building a railway to Hudson bay, and I assume that the Minister of Railways will very shortly ask this House to vote large appropriations in connection with the terminals on the bay. This railway will bring into active communication with the rest of Canada the

whole of the coast from Hudson bay to the strait of Belle Isle. I noticed not long ago the statement with reference to the visit to England of Sir Edward Morris that one of his chief objects in going there was to settle the question as to whether Canada or Newfoundland had the absolute right to the territory along the coast. The title and the right of government to that territory will become of vital importance to Canada with the construction of the Hudson Bay railway; and the proposal in this Bill that we should give the right to construct a railway from a point in the province of Quebec to a Labrador port, and the statement made that this company has obtained from the Newfoundland Government chartered rights over this disputed territory, brings acutely before the House the question where this Government stands in regard to this point. On the map of the Dominion of Canada there is a yellow tinge along the coast from the strait of Belle Isle north, and it has always been assumed that that was the territory over which Newfoundland claimed to have some control. I would regard it as unfortunate if the Dominion of Canada did not control every atom of territory from the Atlantic to the Pacific. In view of the development of Hudson bay this question of control becomes exceedingly important. Would the Prime Minister tell us what is the situation in regard to the disputed territory?

Mr. J. D. REID: I do not see how the building of the Hudson Bay railway comes into the question, because the terminus will be at Port Nelson. Labrador runs from the strait of Belle Isle to the head of the Hudson strait. I do not think it goes around the whole bay to Port Nelson. The proposed railway is to go west near the strait of Belle Isle from a place called Cape St. Charles, which, I think, is only 50 or 100 miles from the strait, so that there will not be raised any question between Labrador and Canada.

Mr. MACDONALD: There is now no protection for shipping going to Hudson bay. The inauguration of the Hudson Bay railway of necessity involves tremendous expenditure by this Government in order to provide for the navigation of the bay and the strait. My hon. friend in administering the Department of Railways has found that supplies for the bay have to be transported in vessels from the Maritime provinces; and the safety of those vessels and the control of the territory lying between the strait of Belle Isle and the Hudson strait are matters of great importance.

Mr. BORDEN: Some difficulty arose about the exact form of question which should be submitted for the determination of the Judicial Committee of the Privy Council. It was found that under an Imperial statute this question could be decided by the Judicial Committee itself.

Mr. MACDONALD: As a matter of law or as a matter of arbitration?

Mr. BORDEN: The Judicial Committee would act under the provisions of an Imperial statute.

Sir WIFLRID LAURIER: As a matter of law.

Mr. BORDEN: It would have to be a matter of law. I do not know the exact provisions of the statute at this moment. The matter has been altogether in the hands of the Department of Justice, and I am not very familiar with it except as to these particulars. There was a distinct agreement between the two Governments that the matter should be referred to the Judicial Committee; but when it came to settling the form of the question to be submitted, a difference of opinion arose, and I understood that, under an Imperial statute, it was competent for the Judicial Committee of the Privy Council to settle the form, and proceedings were taken for that purpose.

Sir WILFRID LAURIER: I know something about this matter, because a question arose some years ago with respect to it. The Newfoundland Government gave a license to cut timber upon the Labrador coast. The Quebec Government had also given a license. The holders of the license from the Quebec Government and the holders of the license from the Newfoundland Government found their rights clashing, and the matter was referred to the late Government of the Dominion. The suggestion was made to refer the matter to the Judicial Committee of the Privy Council. So the matter stood when the late Government left office. I do not know what has happened since; perhaps the Minister of Justice (Mr. Doherty) will inform the House.

Mr. DOHERTY: I understand that action was taken between the parties in the dispute referred to. Representations were

made to the Government by the Government of the province of Quebec and upon those representations being communicated to the Home Government it was suggested that the question of the boundaries between Labrador and Newfoundland should be referred to the Privy Council under a statute of William IV which makes provision for such a reference. Or rather, the original representation made to the Home Government was in the form of a complaint that Newfoundland had been infringing upon our territory. The Home authorities communicated with the Newfoundland Government who answered that they were within their lines and within their rights in what they had done. Thereupon, the Home Government suggested that there should be a reference to the Privy Council and also that the Newfoundland Government and the Government of Canada should agree upon such a reference. This was agreed to and there followed negotiations looking to a settlement of the precise form of the proceedings that should be taken in the matter. Furthermore, the province of Quebec, being directly interested, represented that they ought to be parties to the case. So far as that representation is concerned, we felt that the issue being with an outside possession the Dominion was the proper party to act, but we did agree that in applying to the Privy Council we should act in consultation with them, and if they desired to name counsel in connection with the drawing of the pleadings we would be agreeable. Then, if they thought proper to ask the Privy Council that they should be represented at the hearing we would make no objection. Upon that matter being so adjusted, with the co-operation of the provincial government, or at all events counsel named by them, the next step was to arrange with the Government of Newfoundland as to the proceedings to be followed. In reference to that, interviews were held in London last summer, and we were under the impression that final agreement had been arrived at. It would appear, however, that, as I presume, when the matter was reported to the Newfoundland authorities, they took exception to the form in which the question was put. Thereupon, as it seemed to us, that the question as agreed to was properly put, and agreement being apparently impossible, we approached the British Government and asked that the question should be by His Majesty referred generally to their Lordships under the statute of William IV. to which I have referred, leaving it to them finally to fix the precise form in which the question should be submitted to them, and also the proceedings to be taken. And the matter stands in that position.

Mr. MACDONALD: The wording of this Bill recognizes the existence of a boundary line between the territory of Canada and the territory of Labrador. If hon. members will refer to section 8 they will see that that is so. In view of the situation in which this matter stands between Canada and Newfoundland, is it wise for us to pass legislation in this House which plainly recognizes the existence of a boundary, whereas we are proposing to argue before the Judicial Committee of the Privy Council that no such boundary exists.

Mr. J. D. REID: So far as the Bill is concerned, I was going to say that the question which the hon. member has raised is one of great importance, and so I would ask that the committee allow the Bill to stand until another day.

Mr. DOHERTY: I do not understand that we propose to argue that there is no boundary line; on the contrary we contend that the precise points through which that line is to be drawn are fixed by the proclamation that dealt with the matter, and what we propose to have referred for determination was just where this line runs as a matter of fact and what land lies on one side of the boundary and what lies on the other. My recollection is that the instrument gives Newfoundland that part of the Labrador coast that lies eastward of a line drawn from a certain point direct north to a certain parallel. What we hope for under this adjudication is to learn just where that line runs on the land itself. We do not say there is no boundary, but we say that it is necessary to determine in accordance with what is defined, just where the line so defined, runs.

Mr. MACDONALD: I apprehended—of course, I may be incorrect—that the question was how much of this northern land was under the protectorate of the Colony of Newfoundland for the purpose of maintaining order, etc. I was not aware that there was any defined territory there constituting a part of Newfoundland. It would seem to me desirable—and I have no doubt the minister is already seized of this point—that Canada should, if possible, establish territorial rights to every part of the land that is within what is known as the Dominion of Canada in a territorial sense. While Newfoundland may, on account of her situation

and proximity, be the Government in the best position to deal with it so far as protectorate is concerned, yet Canada, having acquired larger responsibility in the northern country which she is now exploiting, should obtain control—by negotiation or otherwise—absolute control, of the territory there. This question is important, and I think well worthy of consideration in connection with the terms of this Bill. We should not pass legislation which could and might be urged as having some effect in fixing the boundary line.

SASKATCHEWAN CENTRAL RAILWAY COMPANY.

Further consideration of amendments made by the Senate to Bill No. 49, respecting The Saskatchewan Central Railway Company—Mr. McCraney—resumed from April 2.

Mr. LANCASTER: I understand that the hon. gentleman in whose name this Bill stands is not able to be present, but desires us to report to the Senate on the lines of the report of the Railway Committee. I therefor beg to move:

That a message be sent to the Senate to acquaint Their Honours that this House disagrees to their amendments to the Bill 49, an Act respecting the Saskatchewan Central Railway Company, for the following reasons: Because it does not appear to be in the interest of that part of the country to allow two years further extension of time to commence construction and five years to complete this railway.

Motion agreed to.

SECOND READINGS.

Bill No. 157, for the relief of Elizabeth Chausse.—Mr. Schaffner.

Bill No. 158, for the relief of Beatrice Mae Stinson Fotheringham.—Mr. McCraney.

Bill No. 159, for the relief of Eva Jane Bateman.—Mr. Douglas.

Bill No. 160, for the relief of Florence Relf.—Mr. Douglas.

QUESTIONS.

(Questions answered orally are indicated by an asterisk.)

GOVERNMENT RAILWAYS COAL SUPPLY.

Mr. MACDONALD:

Who are the persons, and what firms or corporations whom the Railway Department, or any of its officials, have asked to make offers for the supply of coal to the Intercolonial and Prince Edward Island railways during the present year?

Mr. J. D. REID: The following firms have been asked to submit offers for the supply of coal for the Intercolonial and Prince Edward Island railways for the year 1914-15:

Nova Scotia Steel and Coal Co., New Glasgow, N.S.
Dominion Coal Co., Ltd., Montreal, P.Q.
Inverness Railway and Coal Co., Halifax, N.S.
Acadia Coal Company, Stellarton, N.S.
Intercolonial Coal Mining Co., Westville, N.S.
Maritime Coal, Railway and Power Co., Joggins Mines, N.S.
Rothwell Coal Company, St. John, N.B.
Colonial Coal Company, North Sydney, N.S.
Minudie Coal Company, River Hebert, N.S.
Minto Coal Co., Ltd., Minto, N.B.
Northfield Coal Co., Minto, N.B.
George H. King, Minto, N.B.
Elwin Long, Maccan, N.S.
Harvey Welton, Minto, N.B.
Royal Coal Company, Amherst, N.S.
Thomson Coal and Brick Co., Adamsville, N.B.
John Rector, Amherst, N.S.
J. M. Kennedy, Minto, N.B.
Cape Breton Coal, Iron and Railway Co., Ltd., Broughton, N.S.
J. Bert Ross, Buffalo, N.Y.
American Steel Company, Pittsburg, Pa.
Moreland Coke Company, Pittsburg, Pa.
Ernest Law & Company, Philadelphia, Pa.
Keystone Coal and Coke Co., Philadelphia, Pa.
Watkins Coal Company, Philadelphia, Pa.
Pennsylvania Coal and Coke Co., New York, N.Y.
Geo. Hall Coal Company, Ogdensburg, N.Y.
J. H. Weaver and Company, Philadelphia, Pa.
Whitney and Kemmerer, Philadelphia, Pa.
Widnoon Coal Mining Co., Buffalo, N.Y.
H. W. Somers, Albany, N.Y.

RAILWAY APPOINTMENTS IN BONAVENTURE.

Mr. MARCIL:

1. Who recommends the appointment of sectionmen and labourers on the Intercolonial railway in Bonaventure county?
2. To whom are said recommendations made?

Mr. J. D. REID:

1. The Minister of Railways and Canals assumes the responsibility of all appointments made on the Intercolonial railway, using his best judgment to secure proper persons for the work required.
2. Answered by No. 1.

AGRICULTURAL SUBSIDY OFFICERS.

Mr. E. LAPOINTE:

1. Referring to the following question, and answers appearing in the French 'Hansard' of 2nd February last, on page 390.—Mr. E. Lapointe.
1. Has the Government appointed officers with instructions to supervise the distribution and management of the federal subsidy intended for the provinces for agriculture?
2. If so, what are the names of these officers and the provinces for which they have been appointed?
3. Prior to granting to the provinces of a special subsidy for agricultural purposes, has the Government ordered an investigation or study, or caused information to be taken by

one of their officers as to the situation and the agricultural wants in each of the provinces?
4. If so, has such officer sent in a report?
5. What parties have been consulted in each of the provinces?

Mr. Burrell:

1. Yes.
2. Dr. C. C. James generally, assisted by Mr. Chapais for the province of Quebec.
3. Dr. C. C. James was appointed for the purpose.
4. He reported to the Minister of Agriculture.
5. The provincial departments of agriculture and the various agricultural educational authorities.

What officers of the Department of Agriculture for the province of Quebec have been consulted, as stated in answer No. 5?
2. Was the Minister of Agriculture of the province of Quebec consulted?
3. Did Dr. C. C. James personally go to each of the provinces of Canada in order to supervise the distribution and management of the federal subsidy intended for agriculture?
4. If not, in what provinces has he been?

Mr. BURRELL:

1. The Minister and Deputy Minister of Agriculture.
2. Yes.
3. Dr. James has visited all the provinces in connection with the federal subsidy for agriculture, although arrangements for plans and expenditure in Quebec have chiefly been dealt with by the Minister and Deputy Minister of Agriculture of Quebec, the Minister of Agriculture for Canada and Mr. Chapais.
4. Answered by No. 3.

INTERCOLONIAL RAILWAY REPAIR SHOPS.

Mr. MACDONALD:

1. Has the Department of Railways under consideration the taking over of the shops of the Truro Foundry and Machine Company at Truro, Nova Scotia?
2. If so, for what purpose are these shops to be used?
3. Has any agreement been made?
4. If so, what is the amount of the consideration?
5. Does the Railway Department intend to increase the facilities at Stellarton, Pictou county, with a view to making provision for making greater repairing conditions there?

Mr. J. D. REID:

1. No.
2, 3 and 4. Answered by No. 1.
5. Yes, such as the business may demand from time to time.

VANCOUVER LEASED BUILDING.

Mr. MACDONALD:

1. Has the Government under lease a building in Vancouver, B.C., from MacLean Bros.?
2. If so, when was it leased, and for what term?
3. What rental is paid, and for what purpose is it used?
4. When was the new examining warehouse in Vancouver completed?
5. For what purpose is it now used?

Mr. J. D. REID:

1. The Government has a warehouse in Vancouver rented from MacLean Bros.
2. The warehouse was rented from MacLean Bros. on June 15, 1912, for a period of time until the new examining warehouse was expected to be ready.
3. The rental paid is $650 per month.
4. Final estimate for construction was passed on September 12, 1913; fittings are now being installed.
5. The new building is now used in part for customs examining warehouse purposes, but will soon be used wholly for these purposes when the fittings are completed.

INTERNATIONAL CONGRESS OF DENTISTRY.

Mr. LEMIEUX:

1. Has the Government been invited to officially participate in the International Congress of Dentistry to be held at London, England, on the 7th of August next?
2. Have Canadian delegates been appointed by the Government? If so, who are they?

Mr. W. T. WHITE:

1. The Government has been invited to be represented at the Sixth International Congress of Dentistry, to be held at London, England, in August next.
2. Inasmuch as dentistry is a matter appertaining to the provinces, the various provincial Governments have been communicated with on this subject. Pending their replies, no appointment of delegates has been made.

INTERCOLONIAL RAILWAY — STANDARD RULES.

Mr. CARROLL:

1. Are the so-called Standard Rules in force on the Intercolonial railway?
2. If so, when did they become effective?
3. How many teachers were engaged instructing the Intercolonial railway employees on the said Standard Rules?
4. How much money has been spent to date on said instruction?
5. How many Intercolonial railway employees have resigned as a protest against such rules?
6. How does the management of the Intercolonial railway hope to get reimbursed for the cost of making those rules apply to the Intercolonial railway?

Mr. REID:

1. All standard rules are in force on part

of the Intercolonial railway, and many of them in force on the balance of the Intercolonial railway system.

2. At various times.

3. As many as fourteen.

4. Approximately $5,000.

5. None.

6. By promoting safety, efficiency, economy, and despatch in the operation of the railway.

TOBACCO MANUFACTURE IN QUEBEC.

Mr. SEGUIN:

What was the excise duty and the revenue derived by the Government from the manufacture of tobacco in the counties of l'Assomption and Montcalm respectively, during the last five years?

Mr. NANTEL: Revenue derived from manufactures of tobacco during the five fiscal years ended March 31, 1914, in the counties of L'Assomption and Montcalm:

L'Assomption.

Year.	License fees.	Tobacco.	License fees.	Cigars.	Total.
1910	$150	$5,172 05	$125	$6,122 70	$11,569 75
1911	150	4,369 57	150	6,194 40	10,863 97
1912	200	5,140 70	150	5,394 85	10,885 55
1913	200	6,579 14	200	5,518 42	12,497 56
1914	175	8,312 60	200	7,283 50	15,971 10
	$875	$29,574 06	$825	$30,513 87	$61,787 93

Montcalm.

Year.	License fees.	Tobacco.	License fees.	Cigars.	Total.
1910	$ 75	$ 248 89	.....	.....	$ 323 89
1911	100	346 28	.....	.....	446 28
1912	100	233 25	.....	.....	333 25
1913	125	570 75	.....	.....	695 75
1914	225	1,655 05	$25	$48 60	1,953 65
	$625	3,054 22	$25	$48 60	$3,752 82

CUSTOMS VALUATION OF AGRICULTURAL IMPLEMENTS.

Mr. TURRIFF:

1. Have any changes been made for customs purposes since October 1, 1911, in the valuation of binders, reapers and mowers imported into Canada?

2. If so, on what dates were changes made?

3. What changes were made?

Mr. J. D. REID:

1. No.

2. and 3. Answered by No. 1.

VALLEYFIELD EXCISE AND CUSTOMS REVENUES.

Mr. MORRIS:

1. What were the excise revenues at Valleyfield in 1910, 1911, 1912 and 1913?

2. What were the names of the excise officers at Valleyfield in 1910?

3. What are the names of the excise officers at Valleyfield now?

Mr. NANTEL:

1. 1910, $53,995.13; 1911, $75,126.32; 1912, $86,703.89; 1913, $113,091.54—Total, $328,916.88.

2. A. Raymond, collector of customs, acting for Inland Revenue Department.

3. Alfred Lefebvre, Denis Emond.

Mr. MORRIS:

1. What were the revenues of the customs office at Valleyfield, Que., for the years 1910, 1911, 1912 and 1913?

2. Who are the actual employees, and what are their salaries?

Mr. J. D. REID:

1. For fiscal year 1909-10- - - -$38,434.04
" " " 1910-11- - - - 81,247.54
" " " 1911-12- - - - 90,307.77
" " " 1912-13- - - -137,604.68

2. Raoul Miron, collector, $1,700; Ismail Bourassa, preventive officer, $850; Ovila

Corbeil, preventive officer, $1,050; Arthur Seguin, preventive officer, $1,000.

SHERBROOKE DRILL HALL.

Mr. McCREA:

1. From whom was the site for a drill hall in Sherbrooke, Quebec, North Ward, purchased, and at what price?
3. If so, what is the amount of each tender?
4. Was the contract let to the lowest tenderer?
5. Was there any allowance for extra work? If so, for what amount?

Mr. SAM. HUGHES:

1. F. O. Loomis, old court house property; for court house and site, $10,000; deed dated 26th April, 1912.

Remaining questions not understood.

SHERBROOKE POST OFFICE INSPECTORS AUTOMOBILE.

Mr. McCREA:

1. Has an automobile been provided for the use of the post office inspector in Sherbrooke?
2. If so, what manufacture, and is it a new or second-hand car?
3. What price was paid for same?
4. Does the department bear the cost of keeping and running this car?

Mr. PELLETIER:

1. Yes.
2. Packard; purchased at Montreal after repairs necessitated by an accident.
3. $4,500.
4. Yes.

SHERBROOKE POSTAL INSPECTION DISTRICT.

Mr. McCREA:

1. Has a new postal inspection district been created in Sherbrooke?
2. If so, how many new employees have been appointed in connection with the new district?
3. What is the total amount of salaries paid the new employees, including the inspector?

Mr. PELLETIER:

1. Yes.
2. Five new employees have been appointed in connection with the new district.
3. $4,752 a year.

PENITENTIARY COMMISSION'S REPORT.

Mr. EDWARDS:

Has the report of the Penitentiary Investigation Commission been received by the Minister of Justice? If so, on what date?

Mr. DOHERTY:

1. Yes; laid on the table, April 22.
2. The report on April 15; the evidence on April 21.

CLAIMS AGAINST QUEBEC RAILWAYS.

Mr. MARCIL:

1. Does the Government intend paying the claims against the Baie des Chaleurs railway, the Atlantic and Lake Superior railway and the Quebec Oriental railway, reported on favourably by the commissioner, Arthur Plante, Esq.?
2. When may such payments be expected, and what will they amount to?
3. If any such payments are not to be made, why not?

Mr. J. D. REID:

1. The report of Arthur Plante, Esq., with reference to paying the claims against the Baie des Chaleurs railway, the Atlantic and Lake Superior railway, and the Quebec Oriental railway is now being considered by the Department of Justice.

2 and 3. Answered by No. 1.

CLAIMS AGAINST INTERCOLONIAL RAILWAY.

Mr. MACDONALD:

1. Have any claims been received from parties in the village of Hopewell, Pictou county, asking for damages from a fire occasioned by sparks from a locomotive on the Intercolonial railway during 1913?
2. If so, what were the names of the claimants, and what was the nature of each claim?
3. Have any of the claims been settled? If so, how much has been paid in each case?

Mr. J. D. REID:

1. Claims have been received from parties in the village of Hopewell, Pictou county, asking for damages occasioned by a fire caused by sparks from an Intercolonial railway locomotive on the 22nd of September, 1913.

2. The names of the claimants are as follows: J. D. M. Fraser; Alexander F. Grant; Independent Order of Foresters, by H. D. McLeod; Mrs. Enon McDonald; Mrs. J. A. McPherson. The claim in each case was for loss of buildings and contents.

3. All these claims have been settled, and cheques covering amounts accepted are being issued in payment of claims, as follows: J. A. M. Fraser, $1,450; Alexander M. Grant, $1,400; Independent Order of Foresters by H. D. McLeod, $900; Mrs. Enon McDonald, $900; Mrs. J. A. McPherson. $350.

CAP DE LA MADELEINE WHARF.

*Mr. BUREAU:

1. Is the wharf at Cap de la Madeleine, county of Champlain, being constructed by contract or by the day?
2. If by contract, who is the contractor, on what date was the contract awarded and what is the contract price?

3. (a) Were tenders called for, (b) how were they advertised, and (c) how long were they advertised?

4. How many tenders were received, what is the name of each tenderer, the amount of each tender, and the deposit accompanying each tender?

Mr. ROGERS:

1. Under contract.

2. Charles Pagé, contract signed on 3rd March, 1913. Awarded by Order in Council date 13th February, 1913. Schedule of prices.

3. (a) Yes; (b) in the following newspapers: Quebec, Chronicle, L'Evenèment, Le Travailleur; St. Joseph de Beauce, Le Ralliement; Grandmère, La Semaine; Montmagny, Le Peuple; Montreal, La Patrie, The Gazette; Rimouski, Le Progrès; Three Rivers, Le Bien Public; Shawinigan Falls, L'Industriel; Chicoutimi, Le Travailleur; Jonquières, L'Avenir; Chicoutimi, Le Progrès; (c) For four weeks, from 3rd December, 1912, to 27th January, 1913.

4. Two tenders received: Charles Pagé, based on schedule of price, approximately $49,461.92. Security deposit, $5,000; F. A. Verrette, $64,309.84; security deposit, $6,000.

EMPLOYMENT OF ALLEN J. CAMERON.

*Mr. KYTE:

1. What is the number of days Allen J. Cameron, barrister of Arichat, N.S., Fenian Raid Bounty Commissioner, county of Richmond, devoted to the work of investigating Fenian Raid bounty applications?

2. What was the daily remuneration paid to him for such services?

3. What is the total amount paid to him for such services?

4. How much was paid to him for expenses?

Mr. SAM. HUGHES:

1. Mr. A. J. Cameron was local member of the Board of Inquiry for Richmond county for five days.

2. No remuneration, but a subsistence allowance of $5 per diem, under Order in Council of 6th August, 1913.

3. $25.

4. $6.20.

ALEXANDER POST OFFICE.

Mr. A. W. CHISHOLM:

1. Has a change been made in the location of the post office at Alexander, county of Inverness, since December 1, 1913?

2. If so, on what date did such change take place, on whose recommendation and for what cause?

3. What is the name of the former postmaster and the name of the present incumbent?

4. Was any investigation held relative to the dismissal of the former postmaster?

5. Has there been a petition received by the Postmaster General from the inhabitants of the district protesting against such change?

6. What action, if any, has the department taken with regard to such petition?

Mr. PELLETIER:

1. Yes.

2. On the 15th December, 1913.

3. Edward McQuarrie and Finlay Beaton.

4. As the case was one of re-instatement of a postmaster who was dismissed in 1897, an investigation was not required.

5. Yes.

6. No action.

BURY DRILL HALL.

Mr. TOBIN:

1. Has the Government erected a building to be used as a drill hall at Bury, Compton county, Quebec?

2. If so, were tenders asked for the construction of this building?

3. What are the names of the different tenderers and the amount of each tender?

4. To whom was the contract awarded?

5. Was any change made in the site of this building after the tenders were received and the contract awarded?

6. If so, why was the change made?

7. Was there any change in the contract price owing to the said change of site?

8. How much has been paid for extras over and above the contract price?

9. To whom was the money paid?

10. Is the building complete?

11. If not, when will it be completed?

12. By what regiment or company will this building be used?

Mr. SAM. HUGHES:

1. Yes.

2. Yes.

3. In response to public advertisement, one tender was received, viz., Mr. Ayton Cromwell, Cookshire, Que., $11,750.

4. Mr. Ayton Cromwell, of Cookshire, Que.

5. Yes.

6. Because the site finally decided on was in every way more suitable for drill hall purposes than the old site.

7. No.

8. $350.

9. The contractor for construction of the building.

10. Yes.

11. Answered by 10.

12. 'B' Squadron, 7th Hussars.

MEGANTIC PUBLIC BUILDING.

Mr. TOBIN:

1. How much has been paid for repairs to the public building at Megantic, Compton county, since January 1, 1912?

2. Was the work done by tender or otherwise?

3. What are the names of the parties who

did the work and how much money was paid to each?

Mr. ROGERS: Nothing.

COOKSHIRE PUBLIC BUILDING.

Mr. TOBIN:

1. How much has been paid for repairs to the public building at Cookshire, Compton county, since its completion?
2. Was the work done by tender or otherwise?
3. What are the names of the parties who did the work and how much money was paid to each?

Mr. ROGERS: Nothing.

LEVIS PROPERTY PURCHASE.

Mr. BOURASSA:

1. What is the total cost to the Government of the Carrier-Laine property at Lévis, including new wharf adjoining this property, recently constructed by the Government?
2. (a) Is it the intention of the Government to lease this property to Mr. C. H. Carrier, Lévis? (b) If so, at what rental, and will the new wharf be included in the lease?
3. Were tenders called for the leasing of this property?
4. Is it the intention of the lessee to extensively operate this plant, thereby furnishing labour to a large number of working men in the community?
5. Has the Government taken the necessary steps to assure themselves that the lessee is in a position to operate this plant?

Mr. ROGERS:

1. $754,079.78.
2. (a) Under consideration; (b) No.
3. No.
4. So stated by Mr. Carrier.
5. No, but the department is satisfied that Mr. Carrier will be in such a position.

LARRYS RIVER HARBOURMASTER.

Mr. SINCLAIR:

1. Who is the harbourmaster at Larry's river, Guysborough county, N.S.?
2. When was he appointed?
3. Who recommended him?
4. What is his remuneration?
5. Is he paid a fixed salary or does he receive his remuneration from tonnage dues?
6. If the latter, how much did he receive for the year ending March 30, 1913?
7. How much did he receive for the year ending March 30, 1914?

Mr. HAZEN:

1. Isaiah Fougere.
2. By Order in Council of the 25th of August, 1903.
3. The late Hon. D. C. Fraser.
4. $200 per annum of the fees collected.
5. He receives his remuneration from fees collected.
6. $14.50 for calendar year 1912.
7. $8 for calendar year 1913. No returns have yet been received for 1914.

CANADIAN PACIFIC RAILWAY LABOUR AWARD.

Mr. A. K. MACLEAN:

What has been done by the Government to secure the carrying out of the award of the Board of Conciliation made and filed on the 9th December, 1912, in reference to the dispute between the Canadian Brotherhood of Railroad Employees and the Canadian Pacific Railway Company?

Mr. CROTHERS: The Minister of Labour followed the usual procedure, and took all such steps as seemed possible to secure the acceptance of the award by both parties to the dispute.

SHELBURNE COUNTY FISHERY GUARDIANS.

Mr. KYTE:

Who were the fishery guardians in Shelburne county, N.S., for the years ending March 31, 1913, and March 31, 1914, respectively, and what were the respective amounts paid to such fishery guardians for the fiscal year 1913-1914?

Mr. HAZEN:

1912-1913:

Jonathan Smith,
Rufus McKay,
J. R. King,
J. F. Hagar,
Chas. Towner,
John T. Hyer,
Herbert Smith,
Oliver Goodick,
Sydney Smith,
John McKay,
R. Firth,
J. F. Farrington,
Geo. Longhurst,
H. C. Dash,
John Nickerson,
Jas. E. Cross,
W. E. Decker,
D. P. Swim,
Fred. Poole,
Vincent Brannen,
H. D. Shand,
L. H. Crowell,
J. E. Smith,
B. H. Smith,
Judah Nickerson,
Heman Swaine,
J. M. Davis,
David Atwood,
S. H. Hagar,

1913-1914:

Daniel P. Swim	$ 25 00
Wm. E. Decker	25 00
Fred. Poole	25 00
Charles Towner	25 00
Robt. E. Hagar	30 00
Wm. McLean	6 25
Burtrum O. Bower	40 00
Robt. Firth	40 00
John McKay	40 00
Sydney Smith	40 00
Oliver Goodick	40 00
Herbert Smith	40 00
John J. Ryer	40 00
Rufus McKay	12 50
Freeman Hagar	50 00
Isaac King	50 00
George Longhurst	404 25
J. F. Farrington	248 25
H. C. Dash	182 40
James E. Cross	132 75
James R. King	17 50

J. E. Smith	469 50
B. H. Smith	469 50
H. Swaine	244 50
John Nickerson	274 50
Judah Nickerson	469 50

P. A. Stoddart	$447 00
D. Atwood	469 50
J. Morton Davis	50 00

Mr. KYTE:

1. Who is the fishery guardian at East Ragged Island, Shelburne county, N.S.?
2. What amount was paid such fishery guardian for salary, travelling expenses and for any other purposes respectively, by the Government for the year ending March 31, 1913?
3. What remuneration for all purposes did he receive as fishery guardian for the year ending March 31, 1914?

Mr. HAZEN:

1. Wm. E. Decker.
2. $25.
3. $25.

PRESCOTT COUNTY MAIL DELIVERY.

Mr. PROULX:

1. How many tenders were received by the Post Office Department for the conveyance of the mails on free rural delivery route No. 2, Plantagenet, county of Prescott?
2. What are the names of the tenderers and the amount of their respective tenders?
3. Is it the intention of the department to establish the service in the near future?

Mr. PELLETIER: This information will be given when the contract has been awarded and executed by the contractor.

FENIAN RAID VETERANS.

Mr. SINCLAIR:

1. Referring to the duties of the Commissioners appointed to investigate the claims of veterans of the Fenian Raid in Nova Scotia, were their duties confined solely to an investigation of the historical facts relating to the action taken in the spring of 1866 by the various regiments of militia in Nova Scotia, and to ascertain and report as to whether such regiments turned out for special drill, or were the Commissioners authorized to deal with the claims of individual veterans and either allow or reject such claims?
2. Were the claims of the individual veterans in Nova Scotia ever submitted to the said Commissioners for their approval or disapproval.
3. Were the claims of the individual veterans in Nova Scotia or in any county of Nova Scotia, submitted to the legal adviser of said Commissioner, Mr. Rowlings, for his approval or disapproval?
4. Whose duty is it in the first instance to investigate and decide as to whether a veteran's claim is valid or invalid?
5. Did the department authorize any agent or agents in Nova Scotia to charge veterans a fee for services in putting in claims?

Mr. SAM. HUGHES:

1. Under the Order in Council of the 6th August, 1913, the Board of Inquiry was authorized to investigate and report upon the claims of the various applicants.
2. Yes.

[M. Hazen.]

3. Mr. G. A. R. Rowlings had no say in the approval or disapproval of any claim, but was consulted by the board as to the legality of any claim upon which advice was required.
4. The officials engaged in carrying out the terms of the Fenian Raid Volunteer Bounty Act of 1st April, 1912.
5. No.

GOVERNMENT PROPERTY IN MONTREAL.

*Mr. LEMIEUX:

1. Has the Government disposed of the property purchased a few years ago near Bonaventure station, St. James street, Montreal, for postal purposes?
2. What is the superficial area of said property?
3. What was the purchase price?

Mr. ROGERS:

1. No.
2. 15·732 feet.
3. Taken in exchange, in 1907, for property on Cathedral street.

DISMISSALS.

Mr. EMMERSON:

1. Have the services of Robert Amos, as an employee in the Intercolonial freight department at Sackville, N.B., been dispensed with? If so, when and for what cause?
2. Who has been appointed to fill the vacancy, from what place does his successor hail, and what is his age and the compensation paid him?
3. On whose recommendation was the appointment of the present incumbent made?

Mr. REID:

1. Yes. April 2, 1914, services not satisfactory.
2. Fred. Doucett, Point Duchene, 29 years and 5 months; $62.50 per month.
3. Already in the service and transferred.

CONSTRUCTION OF ICE-BREAKER.

Mr. MACDONALD moved:

For a copy of all letters, tenders, telegrams, plans, specifications and other documents in regard to the construction of the new ice-breaker by Vickers-Maxim Company of Montreal.

Mr. HAZEN: I presume my hon. friend means the Canadian Vickers Company.

Mr. MACDONALD: The information I desire is as to the contract made for the construction of an ice-breaker. I would like to have the motion amended to conform with the suggestion of the hon. Minister of Marine and Fisheries.

Motion, as amended, agreed to.

UNOPPOSED AND UNDISCUSSED MOTIONS

Mr. Turriff.—For a copy of all letters, telegrams, etc., in the Department of the Interior in connection with the N.W. ¼ section 20-4, range 16, west of 2nd meridian.

Mr. Turriff.—For a copy of all papers, letters, telegrams, etc., in the possession of the Department of the Interior in connection with the N. ½ 1-3 16, W. 2nd M.

Mr. A. K. Maclean.—For a copy of all correspondence, pay-rolls, accounts, receipts, vouchers and papers relating to the construction of Western Shore wharf, Lunenburg county, N.S.

Mr. A. K. Maclean.—For a copy of all evidence, letters, correspondence, reports and documents in reference to the dismissal of Mr. Andrew Flinn from the Railway Service Department, Halifax, N.S., on or about September, 1913.

Mr. A. K. Maclean.—For a copy of all correspondence, pay-rolls, accounts, receipts, vouchers and papers relating to the construction of Feltzen South wharf, Lunenburg county, N.S.

Mr. A. K. Maclean.—For a copy of all correspondence, pay-rolls, accounts, receipts, vouchers and papers relating to the construction of Kraut Point wharf, Lunenburg county, N.S.

Mr. Marcil.—For a copy of all documents bearing upon the application made to the Department of Marine and Fisheries for the dismissal of Ulric Dion, lightkeeper at St. Charles de Caplan, Quebec, and the appointment of Omer Arsenault in his place, and on the action taken by the department in that connection.

Mr. Macdonald.—For a copy of all letters, telegrams, reports, correspondence and documents relative to the claims made for damages from a fire in the village of Hopewell, county of Pictou, which was occasioned by sparks from a locomotive on the Intercolonial railway.

Mr. Lanctôt.—For a copy of all papers, letters, tenders, telegrams, plans, specifications, Orders in Council and other documents relating to the construction of the retaining wall at the high lands at St. Lambert.

Mr. Marcil.—For a copy of all documents relating to the dismissal of W. N. Campbell, lightkeeper of New Richmond, Quebec, and to the appointment of James W. Robertson as his successor.

TRUST COMPANIES.

On motion of Hon. W. T. White, Bill No. 70, respecting Trust Companies, was read the third time and passed.

LOAN COMPANIES.

On motion of Hon. W. T. White, Bill No. 83, respecting Loan Companies, was read the third time and passed.

SUPPLY.

The House in Committee of Supply, Mr. Blondin in the Chair.

Canals—Construction Welland ship canal, $4,000,000.

Mr. KYTE: May I be permitted on this item to draw the attention of the minister to the St. Peter's canal in Richmond county, Nova Scotia. For the last two years the department has had under construction very considerable improvements at the St. Peter's canal, and for some reason, which is attributed to a necessary change to be made in the location of the lock, that work has been suspended for some time. From information I have received from various sources, I understand that this change involves a considerable increase in the original contemplated outlay. It is very important that as little delay as possible should take place in the carrying on of this work. It is an important waterway which opens up the Bras D'Or lake for navigation to coasting vessels. For the past two years work has been carried on, and a great many labouring men have obtained employment there. I ask the minister to take the earliest steps possible to make arrangements, either with the present contractor or by calling for new tenders, if that be necessary, so that the work may be continued. I understand that the present plan of the department necessitates the closing of the canal for a season, and if that be so it is of the utmost importance that notice be given immediately to all parties interested in the navigation of the Bras d'Or lake. It is also desirable that the canal should be

5 p.m. closed as early as possible, so that one season only shall be lost. Would the minister make a statement to the committee as to the present position of the work on the St. Peter's canal?

Mr. J. D. REID (Acting Minister of Railways and Canals): The memorandum I have before me, with reference to the work on the St. Peter's canal, states: That this work is under contract to a Mr. W. H. Weller; that owing to the extremely hard nature of the material to be excavated, necessitating drilling and blasting before it can be removed, coupled with the very bad weather encountered last season, this work is very much behind, and instead of being completed on November 30, 1913, as called for, it will, from present indications, not be completed until some time in 1915. The matter has been before me several times. The representative of the contractor has been urging that some new arrangement shall be made, for the reason that the material they found, as they proceeded with the work, is very much harder, and is different from that set out in the specifica-

tions. Mr. Bowden, the chief engineer, feels that it would be better for us to get a new site for the lock. If this were done, St. Peter's canal would be closed all this season. Mr. Bowden tells me that if we allow the present contractors to take a new site and proceed with the work at the present prices, it can be gone on with at once. He tells me further, that it will cost probably $100,000 more to build this new lock, and I have hesitated up to the present. I must, however, take the matter up within the next few days, as I am exceedingly anxious to have the work commence immediately. I was unable to decide upon the matter before, as I have been very busy recently. I think I will feel justified in recommending to Council that the suggestion of Mr. Bowden to erect a new lock and close the canal during its construction might be considered. I was very much afraid, however, that if we did that we would be censured for closing the canal for the whole season. As I understand from the remarks just made by the hon. member (Mr. Kyte), if the work is proceeded with now and the canal closed for the season, he thinks that would be the least objectionable course to the people interested. I am giving the matter my serious consideration. I discussed it with the chief engineer to-day, and I hope to arrive at some conclusion within a few days. I will be able to give the hon. member more definite information before my Estimates are finally passed.

Mr. KYTE: I am quite familiar with the change that seems to be necessary, owing to what has developed, as the work progressed. It was originally intended to construct the lock in the new portion of the canal. That was found to be impossible owing to the failure to locate rock bottom at the place where the new lock was to be located, and it necessitated the placing of the new lock in an oblique position across the present canal. That rendered it necessary to close the canal for a longer period than was originally intended. As there is no way of avoiding that difficulty, however, and inasmuch as it will be necessary to close the canal to traffic, I think the best judgment would be that the earlier it is closed the earlier it will be reopened for traffic.

Another point I wish to impress upon the minister is that for the past two years a considerable amount of employment has been given to the labouring people in that part of the country. Employment is not as readily obtainable at the present time in that portion of Nova Scotia as it formerly was, and a great many people will be very much disappointed if the work is delayed for any considerable time. A number of these people had theretofore pursued the calling of fishermen; but, owing to the guarantees they had of continued work for a few years they gave up their other occupation, and they now find themselves without any employment whatever. For that reason, in addition to those I have already given, I think it is of the greatest importance that the work be continued so that employment may be given to those men who are dependent upon that work for their livelihood during the course of time the work will be in progress.

Mr. J. D. REID: I realize that it is very important to these men and also to the contractor that they be not kept waiting for the decision any longer than is possible. I will therefore give this matter almost immediate attention and come to some decision as to what will be done.

Mr. McKENZIE: I am also particularly interested in the navigation of the St. Peter's canal. The county which I have the honour to represent has several industries, the transportation from which depends upon the capacity of that canal. It has been already pointed out by the hon. member for Richmond (Mr. Kyte) that practically the capacity of navigation of the Bras d'Or lakes depends upon the capacity of the St. Peter's canal. There are two other outlets to the sea from the Bras d'Or lakes, but ships going to the sea find it safer and shorter to go through the canal. The other day I had a letter from the president of the Victoria Gypsum Company, a concern doing considerable business on these lakes, making inquiries about the improvements to the canal. At present they are unable to go through the canal; but after the improvements are made, they hope to be able to use it. It would be a great pity if it were necessary to close the navigation of the canal for the whole summer. I do not know much about canal work, but I think much of the work could be done in the winter time, as the frost in that part of the country is not so severe that cement and excavation work cannot be done just as well in winter as in summer. Pumping and such other work as is necessary can also be done in the winter time. I think that the work should be advanced as far as possible in

all its stages before the closing of the canal takes place. There is such a thing as contractors not being sufficiently advanced with their work before they take that step. For instance, the minister will find parties commencing the building of a wharf before they have all their material ready, and in that way dragging along with the work very much longer than necessary. Very slow progress is being made in the work on this canal, and I am afraid that the contractors are not doing all that should be done in order to push forward with vigour this important work; in fact, I understand that nothing at all has been done during the whole of this winter. In our part of the country the winter is the very best time for cutting a canal, for the removal of clay and so on. I hope that the work will be pushed forward as rapidly as possible; and that the minister will take care to make the term of the closing of the canal as short as possible, as it will interfere with a great many industries there and with the route of a number of steamers that go to Newfoundland, such as the Seal, a very large steamer, the steamer that carries the French mail from Halifax to St. Pierre, and a number of other boats of a similar kind.

Mr. GERMAN: I would like to know from the acting minister if a decision has yet been reached as to whether or not the canal and the Welland river at the town of Welland are to be put on the same level, with a dam at the village of Port Robinson, the river from the town of Welland to the village of Port Robinson being used as a canal. The contracts are being let, and, if the work is to be completed in the time estimated by the chief engineer of the canal and by the chief engineer of the department, I think a decision should be reached forthwith as to that matter.

Mr. REID: That question has not come before me at all so far, and this is the first I have heard of any difference of opinion in regard to the matter. If the hon. member will let it stand for a few moments, I have sent for information and shall be glad to take it up again.

Mr. GERMAN: I shall be very glad to do so. I supposed that the acting Minister of Railways knew something about the affairs of his department. The present canal is carried over the Welland river by an aqueduct. The proposition of the engineer in charge of the Welland canal is to put a dam in the Welland river four miles below Welland, to raise the level of the river by five feet and to lower the level of the canal by four feet, so as to put them on the same level, thus flooding a large area of land west of the town of Welland and to some extent east of the town. It is a matter that has reached such proportions that it should be attended to immediately.

Mr. LEMIEUX: I am not opposed to the Welland canal; far from it. We are for the Welland canal, but we are also for the Georgian Bay canal. Whilst I do not wish to launch into another debate on the Georgian Bay canal, as the matter was brought up not very long ago before the ministers who received the huge delegation from Montreal and from northern Ontario on that subject, yet I regret that the Government has not thought proper, after the very complete investigation which took place some years ago when the late Administration was in office, to undertake the construction of the canal. It is well known, and nobody doubts it, that the answer given the other day by the hon. Minister of Public Works (Mr. Rogers) means that the Georgian Bay project is shelved for many, many years to come. I am inclined to believe—in fact, I know—that at least one of the three commissioners appointed on that new commission is himself deadly opposed to the construction of the Georgian Bay canal. That is a secret which is now public amongst the businessmen of Montreal.

Mr. PELLETIER: What does the hon. gentleman say?

Mr. LEMIEUX: I will give the name to my hon. friend if he wants it. I regret that the ministers who represent the district of Montreal are not in their places. I include the Minister of Justice (Mr. Doherty) amongst the three. The people of Montreal, the Board of Trade, the Chambre de Commerce and the Civic Federation have declared on many occasions that the construction of the Georgian Bay canal would be the logical completion of our transportation system. They had hoped that the present Government would favour the construction of the Georgian Bay canal. But it is evident, from what I have heard of late, that the present Government is opposed to its construction, and will stand only by the construction of the Welland canal. I am told that the opposition to the Georgian Bay canal which suddenly came the other day from

the Quebec Board of Trade was engineered so as to show to the public that there was a division of opinion in the province of Quebec as regards that great undertaking. But the minister may be assured that public opinion is unanimous on that question in our province. Now, I would like to get a frank statement from the hon. gentleman: Does the Government intend, yes or no, to proceed with the work? Or is it intended to deepen the section of the French river in order to give North Bay the whole benefit of the work and leave the other sections unconstructed? To hand over to a new commission the question of the commercial advantages of the project is, to say the least, simply farcical. A commission sat years ago in the Senate and the best experts in the country were heard, amongst them being no less a personage than Sir William Van Horne himself. Much as we may differ with the opinions of Sir William Van Horne in politics, especially on reciprocity, yet everybody will admit that on transportation matters he is a great authority indeed. Well, he gave his evidence, and my hon. friend can read it in the report which was published. He will see that the ex-president of the Canadian Pacific railway is not only a friend, but an advocate, an ardent advocate of the construction of the Georgian Bay canal. Now, why fool the people of Northern Ontario and of the province of Quebec with another commission? Has Mr. Gohier, who was appointed by the Government as one of the commissioners, agreed to sit on that new board? The hon. gentleman can probably give us the information. Before I take my seat, I say again, it is simply fooling the people to pretend favouring the construction of the canal, and at the same time to appoint a new commission, when two commissions have already been appointed, and possibly fifty expensive reports have been published dealing with the subject on its merits and giving all possible data to the Government. I would like to get a straight answer from the hon. gentleman.

Mr. PELLETIER: The hon. member for Rouville (Mr. Lemieux) gets up at a moment when the ministers from the district of Montreal happen to be away—

Mr. MACDONALD: They are never here.

Mr. PELLETIER: They are here most of the time and oftener than the member for Rouville.

[Mr. Lemieux.]

Mr. MACDONALD: The Minister of Justice (Mr. Doherty) is never here.

Mr. PELLETIER: He is always here as a matter of fact. But some members of the Government have other public affairs to attend to, and I think it most unfortunate that the suggestion should be thrown across the floor that the members of the Government from one district are away, and that at a moment when we are discussing the Railways and Canals Estimates. The Georgian Bay canal, which does not relate to this department, should not be brought up now. It is under the Public Works Department.

Mr. LEMIEUX: Is it not germane to what is before the committee?

Mr. PELLETIER: It may or may not be. But the hon. member, in order to gain an advantage as against the members of the Cabinet from the Montreal district, rises to discuss the Georgian Bay canal when the Railway Estimates are under discussion, which is not the proper moment for the consideration of this mattter. It may have something to do with it, but it is not the time when the subject of the Georgian Bay canal is supposed to be taken up. As I say, it is when the Public Works Estimates are under discussion would be the opportune time for the consideration of this matter. But the hon. member, seeing that the members of the Cabinet from the Montreal district are away, and the Minister of Public Works (Mr. Rogers) is away—because we are not considering his Estimates—takes this as the time to ask for a proper and complete answer from the Government on this Georgian Bay canal proposition. That is, he puts his question at a moment when he knows that the minister who can answer him is not here. My hon. friend has said that the Quebec Board of Trade resolution was 'engineered,' to use his own expression. He has only repeated what was said in the newspapers on this subject. But I wish to take this opportunity of telling the hon. gentleman that the members of the council of the Quebec Board of Trade are honourable men, and they have answered this allegation that the resolution which they passed was 'engineered' or inspired. Everybody will understand what the statement of the hon. gentleman means; no names are given. The members of the council of the Board of Trade of Quebec, have over the signature of their president or secretary—president, I think—declared in the most emphatic manner that nothing of the kind

was suggested to them, that nobody approached them and that in this matter they had expressed their own opinion. As a matter of fact, I wish to declare here from my seat in the House that I have not had an interview with any member of the council of the Quebec Board of Trade about this, and, moreover, that what they have expressed does not represent my own views. That is going as far as a man can go, and I hope will once and for all put a stop to the suggestion that the Quebec Board of Trade is being used against this proposition.

Mr. MACDONALD: What are your views?

Mr. PELLETIER: My views are that we were face to face with this proposition, which is a very big one, and that we had to inquire into its commercial feasibility. Consequently we have appointed a commission to make a report upon it.

Sir WILFRID LAURIER: That is to say you have no views at all.

Mr. GRAHAM: Your views are not established yet.

Mr. PELLETIER: If I had views about the question as it stands at present, and if the Government had decided about it, surely there would be no need of a commission. The commission has been appointed in order to have further light on the commercial feasibility of the project. The hon. member for Rouville says that we are fooling the people and that one of the commissioners has his mind made up on this project. If that is so, it would be my hon. friend's duty to enlighten the public. He has said he would let me know personally, but then I would not be at liberty to make use of the information.

Mr. LEMIEUX: As Montreal is not represented on the commission, I shall let my hon. friend know.

Mr. PELLETIER: I shall invite my hon. friend to give the information not in a private manner, but openly in the House, so that the public will know about it. I think that would be the best course to adopt under the circumstances.

Mr. MACDONALD: Is this commission one of those of which the hon. Minister of Trade and Commerce spoke of as consuming good ink and paper but doing nothing for the country, or is it some other kind of a commission?

Mr. PELLETIER: It may be that in late years commissions of that kind have been appointed, but this is not that kind. The commission has to its credit and for its merit the fact that its members are going to work for the public and to make this report without being paid for it. They are working in the public interest.

Sir WILFRID LAURIER: Then the others were not?

Mr. PELLETIER: I agree that many of the commissions appointed by my right hon. friend were not, and they were paid money out of the public treasury for doing nothing. Here we have the very reverse: we have a serious commission which is going to do some good work and which is not going to cost the country much. We have appointed this commission, and the fact that the hon. member for Rouville (Mr. Lemieux) says we are trying to fool the people will not cause us to recall the commission. We have acted seriously in appointing the commission; we intend that it shall do its work, and we will wait for its report. My hon. friend is much more in a hurry about the Georgian Bay canal now than when he was on this side of the House.

Mr. MACDONALD: That is the old story.

Mr. PELLETIER: A very old story, and it is true.

Mr. MACDONALD: My hon. friend was not in the last Parliament, but we have had three sessions under a new Government. That Government have never done a single thing themselves in reference to anything under heaven about which they did not say when asked any question: You did not do something ten years ago. Can you not get some new argument?

Mr. PELLETIER: I am sorry if I have said anything that will hurt the feelings of my hon. friend from Pictou, with whom I am such good friends, but after all how can we dispose of these questions? The members of the late Government had this question before them for years, and they did not decide anything about it; and now, when we have appointed a commission to inquire into the commercial feasibility of the project, they are in such a hurry that the commission does not count for anything; they want us to come to a decision before we have the report of that commission. If we did that we would be stultifying ourselves; and, in spite of my earnest wish to be agreeable to the hon. member for Rouville, I will tell him that

no decision will be arrived at on the Georgian Bay canal scheme before the commission has reported on it.

Mr. DEVLIN: I am very glad that the hon. member for Rouville has brought this question before the House. I know that the Georgian Bay canal comes up under the Estimates of the Minister of Public Works, but the whole scheme of the Georgian Bay canal has always been associated with the Welland canal, and it is very seldom that the Welland canal has been under discussion without a word being said about the Georgian Bay canal. I listened with interest to the remarks of the Postmaster General. His views are not exactly the views of the Minister of Public Works, as I understood that minister to speak to the delegation the other day. He did not say to wait until the commission would report before the Government would commit itself. He told the delegation that they would have to wait until the Prime Minister's return when he would lay their request before him. We know that the Prime Minister is back from Virginia, and without doubt the minister has placed the delegation's request before him. The Prime Minister is within the building now, and perhaps could be brought into the House to tell us whether the Georgian Bay canal is going to be built or not. The Postmaster General said this afternoon that as the ministers of the Montreal district were absent the Georgian Bay canal could not possibly be built. There is absolutely no doubt that is what he said.

Mr. PELLETIER: I am sorry my English is so bad.

Mr. DEVLIN: The member for Rouville (Mr. Lemieux) asked that the Government give a serious answer to the question as to whether or not they intended to construct the Georgian Bay canal, and the Postmaster General said that it was unfair for the member for Rouville to bring this question up this afternoon and expect an answer to be given by the Government. Then, remembering that the Minister of Public Works had said, 'Wait till the Prime Minister returns from Virginia' the Postmaster General said: 'This is not fair. The Government cannot give an answer because the ministers for the district of Montreal are not here.'

Mr. PELLETIER: My hon. friend has no right to put words into my mouth which I did not use. Perhaps my English is so bad that—

Mr. DEVLIN: It is very good.

Mr. PELLETIER: I said it was not fair of the hon. member for Rouville to bring this question up when the ministers were away. I said that the Georgian Bay canal concerned the Department of the Minister of Public works, and that the question could not be discussed in his absence. That is far from meaning what the hon. member for Wright (Mr. Devlin) said.

Mr. DEVLIN: Whether the Minister of Public Works is in his seat or not, the building of the Georgian Bay canal is a national question, not a political one, and it is a question upon which the Government ought to be prepared at all times to give their views. The late Government never hesitated to do so. My right hon. friend the leader of the Opposition, when Prime Minister, said time and again from his seat in this House that the Georgian Bay canal would be built. Practically every one of his ministers similarly committed themselves from their seats in this House in answer to questions put to them by members on both sides of the House. The hon. member for Rouville explained this afternoon that the delegation that came here a few days ago was not satisfied with the answer given by the Minister of Public Works, and he asked the Government to give a direct answer to the questions: Is it the intention of the Government to go on with the building of the Georgian Bay canal, or is it their intention not to build the Georgian Bay canal? I have had a seat in this House for nearly ten years and I know what has been done by the late Government in connection with the Georgian Bay canal, and I know, unfortunately, what has not been done by the present Government. The late Government had a most extensive report prepared by the engineers of the Public Works Department. Any one who reads that report will find it most comprehensive; it not only settled the engineering feasibility of the canal, but gave enough information to determine on its commercial feasibility also. We also have the report of the special committee appointed by the Senate a few years ago, which contains testimony from some of the leading business men and railway men of this country who all state that the canal is commercially feasible. With this testimony before the House, surely the

Government ought to be in a position to render a verdict. They ought to be in a position to say whether or not the canal ought to be built, and whether or not it is going to be built. Therefore, I simply rise to second the remarks of my hon. friend from Rouville and to ask the Government for a direct answer as to whether or not they are going to build the canal.

Mr. PELLETIER: If, instead of the very eloquent words which fell from the lips of the hon. member for Rouville and of the hon. member for Wright, those gentlemen would draft a resolution on this question and bring it before the House the results might please them better.

Mr. DEVLIN: Resolutions have been drafted time and again and brought before the House. Last session I, myself, drafted one and presented it to the House, following out exactly the words of the present Prime Minister. The right hon. Prime Minister speaking on the question of trade said:

> Our object is to get Canadian trade in Canadian channels, and to continue as much as we can the policy of making that trade run east and west.

Anybody who knows anything about the canal system of Canada, knows that by the deepening of the Welland Canal trade would run north and south instead of east and west.

Mr. ARTHURS (Parry Sound): The hon. member for Rouville (Mr. Lemieux) said: 'Why fool the people all the time'. Then he went on to say that 50 reports have already been made on the Georgian Bay canal project. I might say that every one of those reports was in possession of the late Government for many years. I just wish to point out a few of the absurdities in the speech of the hon. member for Rouville. For instance, he mentions Sir William Van Horne, the president of the Canadian Pacific railway, who said that this canal was commercially feasible. Sir William Van Horne's opinion is embodied in a report made to the late Government in 1907—a report very exhaustive, as the hon. member for Wright has justly said, and which covers the engineering end of the canal very fully. The late Government had all this material at hand from 1906 to 1911, but they did absolutely nothing. The member for Wright has said that the late Government was absolutely in favour of building this canal. I have been in this House for the last four or five years, but I never heard the late Government make any such statement. I have heard, however, the right hon. leader of the Opposition make the statement both in this House and at North Bay that he, personally, was in favour of the Georgian Bay canal; but during the time I have had the honour of being a member of this House, I never heard the Government commit themselves as a Government to that project. The late Hon. Mr. Tarte was very strongly in favour of building this canal, and I have also heard the ex-Mininster of Railways and Canals (Mr. Graham) state on several occasions that he was in favour of this project. I heard him make that statement at a by election at South Renfrew where, I think, it was one of the leading planks in his platform. I think the Government is perfectly justified in appointing this commission, although I am one of those members of this House who are first, last and all the time in favour of the completion of this work. We have had cases in point to justify the appointment of this commission—for instance, the building of the Grand Trunk Pacific railway, a work entailing the expenditure of many millions of dollars. I do not want to state the figures as hon. gentlemen opposite might dispute them, but at any rate the figures contemplated in 1904 are not the figures given to the public to-day. This was the direct result of the fact that the Government entered into this work without knowing what they were stepping into, and I think the present Government were justified in appointing this commission. I believe personally that the commission will report in favour of the building of the canal, and I think that my hon. friend the Minister of Public Works (Mr. Rogers), who is not present to-day, was amply justified in saying that there was nothing to hinder this commission, if their report should be delayed for any reason, going on and reporting upon either or both ends of the canal; that is, they might build the canal from Montreal to Ottawa or Pembroke and the other end of it at the French river. It must appeal to any ordinary man who has gone over the ground as being a feasible project. I think the hon. member for Rouville (Mr. Lemieux) was ill-advised when he made the statement that this Government had done nothing to forward this canal, or to infer that the late Government with all these fifty reports, as he said, on their hands, had done anything more during their sixteen years of office than this Government had done during the last one or two.

Mr. GRAHAM: My hon. friend the Postmaster General (Mr. Pelletier) seemed to

get a little bit annoyed because the Georgian Bay canal was mentioned. You cannot disassociate the two schemes in the minds of some people. There is a class of people who favour one and think that in favouring the one they must look with disfavour upon the other. I do not belong to that class, but still, in discussing the Georgian Bay canal, it is perfectly proper to discuss the Welland canal in connection with it, or vice versa. Although the hon. Minister of Public Works (Mr. Rogers) is not in his seat and this Georgian Bay canal is in his department, the Government could not but expect that when they asked this House to discuss an appropriation for the Welland canal, the Georgian Bay canal scheme would be discussed at the same time. If the Government is not prepared to give us any information on the Georgian Bay canal that is not our fault. We must exercise our right and discuss it along with the Welland canal. My hon. friend who just sat down (Mr. Arthurs), intimated that the late Government had never been committed to the Georgian Bay canal scheme. Being a member of that Government, I think I am in a position to say that the hon. gentleman is in error in that statement. If the Prime Minister himself be committed to the scheme, and publicly says so, if the Minister of Railways and Canals be committed to the scheme, part of which is in his department, and if the Minister of Public Works also is committed to it, that pretty nearly commits the Government, I should imagine. If the Postmaster General, for instance, were to arise in this House and say: I am in favour of some improvement in the postal department and outlined the scheme—

Mr. ARTHURS: That is a different thing.

Mr. GRAHAM: No, not in principle; the one is on dry land and the other is on water—that is the only difference—if he were to outline a scheme and say that he was in favour of it, and the Prime Minister were to state that he was in favour of it, I imagine that the country would say that they were committed to the scheme.

There was a reason why the late Government did not feel at liberty when it was in power to proceed at once with the construction of the Georgian Bay canal. It began with the preliminaries and spent hundreds of thousands of dollars in getting a full and complete report as to the feasibility of the scheme from the engineering standpoint. Appended to that report was also a report from Sir William Van Horne as to the commercial feasibility of it. The late Government took these preliminary steps. Now, you ask: Why did not the preceding Government, after they had done so much, proceed with this work? The reason was given by my hon. friend himself. The Government had committed the country to the expenditure of many millions of dollars for the National Transcontinental railway and that money was being expended. The then Prime Minister, on many occasions, gave his reason, and so did the Minister of Finance, why the work would not be proceeded with at once, although it would eventually be undertaken, and that reason was that until the Transcontinental railway was practically completed they did not feel it to be wise to embark upon this other great project involving the expenditure of many millions more. The country was assured time and time again that so soon as the National Transcontinental railway neared completion the other scheme would be proceeded with. The country fully understood the position of the former Government as to each of these two projects, I stand now just where I stood then.

Mr. ARTHURS: Is the hon. gentleman speaking for the Opposition as an opposition?

Mr. GRAHAM: If the Postmaster General could not speak for the Government, he being a member of it, I cannot be expected to speak for the entire Opposition, being a private member only. I am speaking for myself, I am pointing out the position I took as a member of the former Government and I say that that Government was committed to that position through the Prime Minister. These two great projects, the Welland canal and the Georgian Bay canal do not conflict. I have always been in favour of the construction of the Welland canal. I see that I was criticised by the senior Conservative organ of Ottawa because I did not object to the expenditure on the Welland canal. How a conclusion of that kind could be arrived at by any process of reasoning, having reference to the speeches I had made in the country, I cannot conceive. I have always favoured the immediate construction of the Welland canal and the first appropriation of money for it was voted in this House at my request. The surveying and preliminary work must be done before the practical work of excavation and construction can be proceeded with in connection with all of these projects. I never was of the opin-

ion that the enlarging of the Welland canal, or the building of a new Welland canal, would tend to send our traffic to the United States as has been suggested. I do not believe that. I have as a private member of this House, discussed this great question of the traffic between the East and the West between the Great Lakes and the city of Montreal and Europe. We have undoubtedly a good deal to contend against. In the first place, we have to fight the companies which make New York, Boston and Portland their ports on account of our insurance rates in the St. Lawrence. I am of the opinion that the insurance companies are too severe on our Canadian route and that we ought to have better rates. I think the Government ought to wake up and establish, or have established, some new system of insurance by which these Canadian ports would not be treated as they have been treated by these companies in insurance matters. A great many millions of dollars have been expended on the St. Lawrence route from Montreal to Quebec and my belief is that that route is a good deal safer route than the insurance companies would have us believe. Millions more would have to be expended upon it.

Then we have our St. Lawrence canals. In discussing the question of freight rates from the Great Lakes east to Montreal one or two of the leading authorities upon this question have placed their views before me on different occasions and they have contended that the freight rates at present existing could be materially decreased by the enlargement of the Welland canal, or the building of a new Welland canal, deepening the channel in some places down as far as Kingston, Brockville and Prescott, and by having, as at present, canals only fourteen feet in depth from there to Montreal. They argue, from their standpoint as transportation men, that the grain can be taken from any of these three ports at the end of lake navigation down to Montreal and be there reloaded more cheaply than it could be carried by the deepening of the canals and attempting to bring larger vessels up through them.

I am giving these views for what they are worth; I am not practical in this respect, but these men have practical experience, and they figured out the different rates from the different points. I put this question to them time and again: Will it tend to divert our traffic to the American ports, after the grain comes down through the Welland canal? and these men were unanimously of the opinion that such would not be the case, and that the rates which would be available by this Canadian route could not possibly be met by any project that the United States could undertake, for the carrying of traffic from the Lake ports, or the St. Lawrence, to New York, Boston or Portland. We hear a great deal about the Erie canal in the state of New York, and they are spending $100,000,000 for the deepening of that canal, but when deepened to its utmost it will not have any greater draught than have our St. Lawrence canals at the present time.

Mr. J. D. REID: It will be 12 feet, while our canals are 14 feet.

Mr. GRAHAM: Yes. One of the engineers informed me that they hoped to get 14 feet on the Erie, but so far as I have been able to see from their plans they only provide for 12 feet. They never can carry the grain a longer haul through a 12-foot canal, cheaper than we can carry it by a 14-foot canal from Prescott down; and, when they come to carry it by rail, it will be still more costly. Of course, the harbour of Montreal has got to be more thoroughly equipped for the accommodation of this traffic than it is at present. Great improvement has been made, but the carriers complain that even now they cannot get rid of their cargoes with sufficient speed so as to make good time in getting back for other cargoes. There must be extension of the facilities at the port of Montreal. Money must be expended in making the St. Lawrence channel, east of Montreal, more safe than it is at present. With the reduction of insurance rates which we should have on our ocean traffic, and the enlargement of the Welland canal, we will be in a position to compete all the better with the American routes for the traffic from West to East, for some years. This, of course, is only for immediate requirements. I believe, if we look at the vast amount of products which we may expect in the West, and the traffic that consequently must come from West to East and the return traffic from East to West, that in a few years, even with the Welland canal deepened and with these improvements which I have outlined carried out, we will not have sufficient water carriage for the traffic we may expect in this Dominion, and so it will be necessary to have another outlet. My own personal view is, and I think it is the view of the

late Government, that that other outlet should be the Georgian Bay canal. While we are getting ready to go on with that great project, we should not hesitate to deepen the Welland canal as rapidly as possible, improve Montreal harbour and equip it with the most modern facilities, make the channel east of Montreal as perfect as we can, get cheaper insurance rates, and then proceed with that other great scheme of transportation, which will give us the benefit of further water carriage. We need the Welland canal now, and we ought to start with the Georgian Bay canal as soon as possible.

At six o'clock, the House took recess.

The Committee resumed at eight o'clock, Mr. Blain in the Chair.

Mr. BURNHAM: Before the House rose at six o'clock, the Georgian Bay canal was discussed by the hon. ex-Minister of Railways and Canals (Mr. Graham). A more mature deliberation upon the conditions in general of transportation at even this late date will convince people that canals as through routes are like burrowing in the earth—they have long since passed their useful stage. It is a well known fact that a very easy and safe means of transportation for enormous quantities of freight is by dirigible balloons under the control of a monoplane, or, if necessary, of a hydroplane, or, if preferred, of a biplane. A thousand tons of wheat can be trailed along at a low altitude for an enormous distance at a very high rate of speed and at a very low cost. I am fully persuaded that the people who are arguing in favour of the Georgian Bay canal are animated solely by a desire for the general benefit of Canada. Therefore if we find that the people of the extreme West do not want it, that the people of the middle West do not want it, and that the people of the Maritime provinces do not want it—

Mr. CARVELL: Who said so?

Mr. BURNHAM: I am saying so. You can say the opposite afterwards.

Mr. MACDONALD: You cannot speak for the Maritime provinces.

Mr. BURNHAM: I am judging by opinions that have been expressed at different times.

Mr. MACDONALD: You are wrong.

Mr. CARVELL: Leave out the Maritime provinces.

[Mr. Graham.]

Mr. BURNHAM: I make the assertion that the people of the Maritime provinces do not want the Georgian Bay canal.

Mr. MACDONALD: Prove it.

Mr. BURNHAM: I am not called upon to prove it, and it is not susceptible of proof. The contrary, moreover, is not susceptible of proof. I am merely retailing opinions which I have heard expressed. My friends may rest assured, however, that I do not attach undue weight to them, coming as they do from the Maritime provinces.

The people of the middle West have frequently said so—so I have heard and so I have read—that so far as the Georgian Bay canal is concerned, it is of no use to them whatever. The remedy for the ills of the West is said to be free wheat, because it is to the south of us that the export of the cereals of the West should be made, they say. In that event the Georgian Bay canal will be of no use for through traffic to the West. The local traffic is not worth considering; the Georgian Bay canal would not be built merely for local traffic.

With this brief introduction, I wish to state that I know of a company forming which will undertake to transport all the food products of the West from Winnipeg to Quebec at a very much less rate than can be dreamt of by any other means, viz., the dirigible balloon, otherwise known as the airship. Hon. gentlemen, who scout and laugh at everything they hear as the Opposition are now doing, remind me of Noah, who told the people to come in out of the wet and they would not do so. I liken myself to Noah. I am perfectly serious in regard to this matter, however. I know quite well that some hon. gentlemen opposite, especially from Montreal, will scout any theory that will in any way interfere with Montreal and with their pet scheme. The Georgian Bay canal is to cost in the neighbourhood of two, three, or four hundred million dollars. For 1-200th part of the sum it will take to build that canal, which will be locked up for eight months of the year and will have a repair bill which will frighten the people of this country, we are prepared to establish a line of air transportation which will carry both ways immense cargoes at a very rapid rate. These dirigible balloons can turn aside in different direction, so that there is no necessity for disputes about high or low grades or whether we are to have permanent ways or

trestles. These balloons, moreover, have proved themselves capable of sailing against a sixty-mile gale. It is a strange thing that these so-called peaceful men of the Opposition are willing to hand over these modern means of transportation to the devotees of war. It does not concern them that 'peace hath her victories no less renowned than war.' It does not seem to concern them that they might apply these dirigibles to the purpose of transportation for the relief of the farmer in whom they pretend to take so much interest.

There has been discovered lately a gas with one-tenth of the density of hydrogen, which has been the gas used for expanding balloons in the past. This gas can be produced very cheaply, and consequently the expense incident to a line of transportation such as I have outlined is very small. The envelope for the dirigible balloon need not be of fine silk, as it used to be, but can be constructed of cheaper material; and I venture to say that in twenty-five years from now every enterprising man will have an airship or a monoplane of his own. The land is obstructed in every way, and the sea, which is the next best thing, is obstructed by rocks, icebergs, and so on. The air is really the only element that is not obstructed; and it has been finally settled between those who contend for the heavier than air machine and those who contend for the lighter than air machine that both serve their purpose, the lighter than air being for freight and the heavier for speed and direction.

With both combined, the purposes of both are well served. You can easily imagine, Mr. Chairman, one of those great dirigible balloons—they may even be constructed 1,000 feet long—settling over a modern goods train, or its equivalent, filled with grain or whatever it may be. There is linked to it the extra chemical advantage—or aerial lightness is given to it—it is got under way by a motor, and off it glides into the air moving easily from one part to another. It might go in whatever direction wished. That seems to appeal to members of the Maritime provinces, No doubt the one from Halifax would avoid St. John, and vice versa—I may get their support on that ground. However, I wish in all earnestness to bring this matter to the attention of the Government. We are desirous of having them consider the feasibility of the project which I am now outlining, and in a short time we intend to bring it to their attention in a thoroughly practical manner. As I said, it is not necessary, especially in an intelligent House like this, to discuss the feasibility of the project because everybody knows it is feasible. A few years ago people scoffed at the telephone and wireless telephony and had no idea that wireless telegraphy was possible. Telegraphy, itself, was considered impossible until the Hertzian waves were discovered, but surely in these days no man, unless he belongs to the Opposition in this House, will say that anything is an impossibility. I admit that gentlemen on the Opposition side scoff at anything that is new—they are inclined to scoff at anything also that is true, but I wish emphatically to call the attention of the Government to this matter with a thoroughly practical purpose in view; with the view of gaining the attention of advocates of such a scheme as the Georgian Bay canal, who will probably turn back from that project for the general benefit of Canada now that they see something much less expensive and much more serviceable. The beauty of this thing is that if at any time there is not sufficient traffic for it to run in one direction, we can go in another; there is no such thing as holding us up, and in that respect it is unlike the National Transcontinental railway. If that railway does not fit the occasion we are done. Our whole trade policy will have to be changed to fit the National Transcontinental railway. It reminds me of the story of Theseus of ancient Greece. That heroic gentleman, as no doubt Mr. Chairman you are aware, found that the bed provided by his host was too small for his gigantic frame. The host said, 'I will chop off your legs to make them fit the bed,' but Theseus replied, 'Oh, no, I prefer to have the bed extended.' That is just what the people are doing every day. They are making the subject of their care fit their preconceived theories instead of making their theories fit the object of their care. Of course, this is not always the case. It is not the case with the present Government, I am happy to say, and I congratulate the Government upon that.

Mr. MACDONALD: Are they all right?

Mr. BURNHAM: Yes; the reason they are so successful is that they are open to suggestions. It is understood, Mr. Chairman, that I am anxious to call the attention of the Government to this matter.

Mr. GERMAN: The minister has said that he will announce later on what effect the construction of the Welland canal will have on the level of the Welland river. I have no criticism to make. I will submit with pleasure to the decision of the

engineers, because they know what is the best thing to do. But I think a decision should be arrived at as speedily as possible, and I am inclined to think that the engineers have already had time to reach a decision.

Mr. LEMIEUX: Before the minister answers my hon. friend, I wish to emphasize for a few minutes more the importance of this question of the Georgian Bay canal. On the general question of transportation, I may say that I agree with the remarks made by my hon. friend the ex-Minister of Railways and Canals (Mr. Graham) this afternoon, namely, that the construction of the Welland canal should not be an impediment to the undertaking of the Georgian Eay canal. On this point I wish to say further that, although I do not see eye to eye on public questions with the late member for Jacques Cartier (Mr. Monk), yet I am free to confess that on the question of the Georgian Bay canal I concur with the views he has expressed on many occasions on this important question. It is to be regretted that the hon. member for Jacques Cartier is no more in this House, because in him I am quite sure our hon. friends opposite would find a doughty exponent of the views which are generally expressed in the East and in central Canada in favour of that great project. I also regret to see that the Cabinet ministers who represent more especially the interests of the district of Montreal are not here to voice the feelings of the public bodies, and public opinion generally in the East, in favour of this great undertaking. It is true that one of the ministers, the Secretary of State, introduced a large delegation the other day to the Minister of Public Works in favour of the Georgian Bay canal; but the hon. member has not yet found time to express his own opinion, and from what I can gather it is quite clear that on this question the Minister of Inland Revenue and the Secretary of State are simply ignored by their colleagues, and that the interests of Montreal are being sacrificed once more. This project affects considerably the whole question of transportation, and the whole question of wheat production in western Canada. The Government of Saskatchewan has appointed a Grain Markets Commission, which, as I said the other day, has issued a most interesting report on that question. The question of the transportation and marketing of grain is discussed in this report most intelligently. With your permission I would quote a few words about water carriage in Europe and the part it plays in the cheap transportation of grain:

> The commission was impressed with the extent to which natural and artificial waterways are used in the transportation of grain and grain products in the United Kingdom and on the continent. The great bulk of the grain imported is never placed on the rails. The port which has behind it a navigable stream or a system of canals or both has a tremendous advantage over its competitors that are dependent chiefly upon rail transportation for the carriage of imports of this class inland. On the continent, such ports as Antwerp, Rotterdam, Amsterdam and Hamburg are each at the confluence of extensive systems of internal waterways that teem with craft engaged in the transportation of lower class commodities in bulk.

Another feature of the report impressed me. We have always been of the opinion that Canadian ports would suffice to carry the products of Canada to the Mother Country and to Europe generally. Some facts are established in this report which are simply appalling and should, it seems to me, awaken the Government. Let me give a few figures of the losses which are met by Canadian ports to the advantage of American ports:

> It is to be regretted that with such a magnificent waterway as the St. Lawrence in our possession, Canadian grain should be exported through any but Canadian channels. There is, however, some slight compensation in the fact that a considerable quantity of United States grain is exported via some Canadian ports principally Montreal. The following statement sets forth the volume of these two crossing streams:
>
> Quantity of Canadian wheat exported from United States ports in the years mentioned:

	Bushels.
1909	23,487,488
1910	27,129,471
1911	24,192,228
1912	55,507,853

> Quantity of United States wheat exported from Canadian ports in the years mentioned:

	Bushels.
1908	10,908,194
1909	12,761,605
1910	3,884,202
1911	1,623,172
1912	7,335,494

Mr. EDWARDS: The proportion of the exports by American ports to the total export would not seem to have increased except in the year 1912.

Mr. LEMIEUX: In 1912 there was nearly double the quantity shipped that way that was shipped in 1910. These figures disclose an appalling state of things. The American ports are capturing our trade, and I am sincere when I say to my

hon. friend that the time has come when the Canadian Government should fool no more with this question of the Georgian Bay canal if we want to keep within our own ports the trade of Canada. What is still more striking is that the rates through these American ports are higher than the rates through Canadian ports; and yet, with all that, we let slip such a large quantity of our trade to the American ports. The time for referring the building of the Georgian Bay canal to a commission has passed long ago; the Government should come to a decision on the question one way or the other. I listened to the interesting presentation of the case for the Georgian Bay canal by the delegation that waited on the Minister of Public Works. I was impressed especially by the speech of Mr. White, of Renfrew, a very able gentleman, a friend of the Conservative party. I was impressed with his sincerity and with his desire that this great work should come at last to a head. But unfortunately the answer given by the Minister of Public Works was so unsatisfactory that most of the delegates returned to their homes with their heads bent. They felt that once more the Government wished only to dilly-dally with the question and not to face it. The question is a most important one; it has reached the acute stage, and when we read such figures as I read a moment ago it seems to me that the Government should give another answer than the one given this afternoon by the Postmaster General.

Mr. J. D. REID: The hon. member for Welland (Mr. German) asked what decision the Government had come to as to raising the level of the Welland river to that of the Welland canal. As I understand the situation, if you raise the level of the Welland river, the water would not be drinkable by the people of those towns which depend upon it for a supply. On the other hand, they could place a dam farther down and have an aqueduct underneath. But, even if they raise the water level of the Welland river, there is a way to overcome the difficulty, and get the water necessary for the use of places like Thorold, St. Catharines and Welland, that is, to run a pipe line to the lake Erie level. Mr. Weller, the superintending engineer, and the chief engineer have that question before them. They are giving the matter most serious consideration, and it is not expected that they will give their decision to the Government for consideration until they are prepared to advertise for tenders. I said this afternoon that the question had not come before me, and this explains why. As the decision has not been reached, I cannot give the hon. gentleman information as to the plans to be followed. I hope before the session closes to be able to give the hon. gentleman the definite information which he is anxious for and which he is entitled to have. I hope I have made myself clear and that my explanation is satisfactory.

Mr. GERMAN: Instead of the hon. minister being clear, he is absolutely un-clear. As I have said, I have no criticism to make. This is a very serious problem; I quite appreciate that. But the engineers have had the matter before them for two years, and I think they should have been prepared to give a decision before now. Certainly, they should reach a decision before the end of this session, for this is a very serious proposition for St. Catharines, Thorold, Welland and other towns taking water from the river.

Mr. LEMIEUX: The acting minister asked me as to the proportion of traffic from Port Arthur and Fort William via American and Canadian ports respectively. At page 40, I find a table showing the routing of shipments of grain from Fort William and Port Arthur for 1910, 1911 and 1912. In 1910, the total shipments were 78,381,035 bushels, of which 23,173,804 bushels went by Buffalo and other United States ports. In 1911, the total was 95,182,011 bushels, of which 36,694,334 bushels went by the United States, and in 1912, of a total of 135,545,946 bushels 56,758,292 went via Buffalo and other United States ports.

Mr. J. D. REID: As to the total exports from our own ports, I have before me a statement showing the grain movements via Canada and via the United States. One column shows the exports of wheat and flour to all countries except the United States. From 1896 to 1900, the average was 15,772,000 per year on the average. From 1901 to 1905, the average was 24,124,000. From 1906 to 1909, the average was 45,301,000; and for 1910-11 it was 60,134,000. The hon. member will see from these figures that our exports from Montreal to Quebec are increasing rapidly. I believe that the reason why for a great many years there was comparatively little export of grain from Montreal and Quebec during the summer was that we had not the facilities in Montreal to handle the grain. Up to about ten years

ago there was only the floating elevator. Grain went to Montreal, probably, in barges from Kingston, or it might be that a steamer would go straight through from Fort William. But they had to wait and store their grain, or it was taken from the vessels into the ocean vessel by a floating elevator. But there was delay which meant demurrage and expense. On the other hand, they could take the grain to Buffalo and immediately unload into the elevator, and I think that for about fifteen or twenty days no storage was charged. Canal barges were there to take the grain to New York and at New York also there were complete facilities. Then the Government built an elevator at Montreal of, I think, a million bushels capacity. Soon after the Grand Trunk railway built another elevator, then the Government built still another of about three million bushels capacity and increased the capacity of the old elevator. So, that in Montreal now we have an elevator capacity of about eight or nine million bushels. The result is that vessels are not delayed in Montreal. With these facilities the shipments to Montreal are increasing very much because the freight rates from Port Arthur and Fort William to Montreal are much less than via Buffalo. At this moment, the shipments are being made to Buffalo by American boats and Canadian boats are carrying the grain from Buffalo to Montreal. American boats are not able to quote a rate via Buffalo and New York, to compare with the present rates from Fort William to Montreal via the Welland canal. Now, I agree with what has been said by some hon. members, that the Welland canal should be deepened for this if for no other reason. In about five years you would have the advantage of the deepening of the Welland canal, whereas, if the Georgian Bay canal were to be proceeded with, it would take many years before you could get the full advantage of it. But I agree that there is no good reason why the other canal should not be proceeded with also if this investigation shows that we would be justified in going ahead with it. I believe that transportation is one of the most important questions before us to-day. The deepening of the Welland canal is a work that will pay for itself in a very few years. I remember when I was on the other side of the House I took a very strong stand that in time it would be a good thing not only for navigation but also for power purposes to construct dams on the St. Lawrence between a point east of Prescott and Montreal which would make navigation between Liverpool and Port Arthur possible for almost the largest vessels that cross the ocean.

Mr. GRAHAM: That would mean the damming of the Sault to which my hon. friend is opposed.

Mr. REID: No, I do not oppose the damming of the Sault provided the Governments of both countries do the work. I claim, however, that the five dams should be under the control of the Governments of the two countries; three of them will be between Canada and the United States and two of them will be wholly in Canadian territory. If this project were carried out we would have about 2,000,000 horse-power developed between Prescott and Montreal.

Sir WILFRID LAURIER: That is pretty far in the future.

Mr. REID: I admit that. Of course, it would involve an enormous expenditure but as population increases, and if the Government keep control, it will come. I hope that the Government will never allow these resources to pass into the hands of private individuals. A contract has been let for four sections of the Welland canal.

Sir WILFRID LAURIER: How many miles long?

Mr. REID: Twenty-four miles.

Sir WILFRID LAURIER: How many locks are there?

Mr. REID: There will be seven when this work is completed and then there will be the guard locks—

Mr. GERMAN: There will be ten locks in all because there are three twin locks.

Mr. REID: I understand that, but we only pass through seven locks and then there are the guard locks. We have let four sections and another small section.

Mr. GRAHAM: Have any been sub-let?

Mr. REID: I have no idea.

Mr. GRAHAM: I imagine there have been.

Mr. REID: Not to my knowledge.

Mr. GRAHAM: Quite a number of them.

Mr. REID: Perhaps so; the hon. member may have more information than I have.

Contracts have been let representing about half of the work to be done.

Sir WILFRID LAURIER: How many millions do you want for the four contracts?

Mr. REID: If I remember rightly, the minister stated that it would cost about $50,000,000 in all. The estimate of the engineer on the four contracts was about $25,000,000, but the contractors' prices come to about $20,000,000. The engineers' estimate exceeded the contractors' prices by about $5,000,000.

Sir WILFRID LAURIER: Did you think of dividing the work amongst small contractors?

Mr. REID: We divided the 24 miles into nine sections.

Mr. GRAHAM: They were not on the level, though; they were down below.

Mr. REID: No. 1 was 2 8-10 miles; No. 2, 4 miles; No. 3, 2 miles; No. 5, 2½ miles.

Mr. GRAHAM: I suppose the minister can give us an idea now about what the estimated saving in freight rates will be owing to the enlargement of the canal? Large vessels now have to tranship at Port Colborne elevator. Suppose you can take the largest vessel as far as Prescott after the canal has been deepened to 22 feet—

Mr. REID: Twenty-five feet.

Mr. GRAHAM—what will be the saving on one bushel between Port Arthur and Montreal on the rate now charged? I have had it figured out for me on different occasions and it is considerable.

Mr. REID: I have had it figured out by grain men and they have told me that the saving would amount to at least one cent a bushel. On a cargo of 300,000 bushels coming down to Prescott it would amount to about $3,000. That is what the large shippers tell me. Some others figure it a little less—about three-quarters of a cent per bushel. On 40,000,000, or 50,000,000, or 100,000,000 bushels it would represent a large amount in one year.

Mr. GRAHAM: A good many figures were given to me by Mr. Richardson, a prominent Kingston man who is a large shipper. I would like to ask the minister his views on the assertion that has oftentimes been made that the deepening of the Welland canal would assist in diverting traffic from our Canadian ports rather than in developing it. I have never been convinced that it will be the case, and I am not convinced yet. Another point that my hon. friend referred to was the deepening of the St. Lawrence. When we are discussing the deepening of the St. Lawrence canal we are discussing a greater problem than many people imagine. I have entertained serious doubts whether the St. Lawrence canals could be deepened without a system of dams in the river. It is difficult now to maintain head enough to secure a depth of 14 feet over the mitre sill, and in order to get a greater depth to compare with 25 feet in the Welland canal it would mean a system of dams, which would practically eliminate a number of rapids on the river, if not all of them. I suppose the department has given that question some study. What does the minister think as to the comparative cheapness of carrying grain with the present Welland canal deepened and the St. Lawrence canals remaining as they are, bringing the grain down as far as Prescott, Brockville or Kingston, and transhipping it into the barges where it can be carried very cheaply? It has been argued that grain can be carried as cheaply in that way as if the larger vessels were taken through to Montreal, with the resultant delay. It has been argued that if vessels, instead of being delayed while getting rid of their cargoes, could return to the head of the lakes and come back with other cargoes, the number of trips that could be made in a season would be increased and grain would be carried as cheaply without the enlargement of the St. Lawrence canals as with it.

Mr. J. D. REID: I agree with the hon. member (Mr. Graham) that after the grain gets through the Welland canal there is no possible chance of it being diverted from Montreal to Ogdensburg or Oswego. Some years ago, when I did a little shipping, the rate, I think, between Kingston and Montreal, was one and a half cents a bushel, and between Prescott and Montreal, one and a quarter cents per bushel, by barge. Within twenty-four hours, after notice, they could have the grain from either of these ports to the vessel's side in Montreal. If the grain went from Ogdensburg it would have to go 400 miles to New York, and counting 1,000 bushels to a car, at one and a quarter cents a bushel, that would be only twelve and a half dollars for that car for 400 miles. In addition you would have to pay elevator charges, whereas, by send-

ing it to Montreal by barge, the elevator charges would be included. If that grain came to the Welland canal and was taken to Oswego, it would have to be put in small barges and travel 400 miles by the Erie canal and the Hudson river to New York. They could not possibly carry it for so low a rate as the rate from Prescott or Kingston to Montreal. Even if the present canal were deepened, you would still have to deepen the water stretches on lake St. Louis and lake St. Francis, and that would be enormously expensive. A system of dams would keep the levels up and you could have any depth of water you needed. I think the hon. member (Mr. Graham) will agree with me that if it were not for the dam stopping the boats, it would almost pay at the present time to put a dam across the Galops rapids. That, I understand, would not be a difficult engineering feat, and because of that dam holding the water back, instead of letting it run through the rapids, the large amount now expended annually for dredging the different channels would be saved.

Sir WILFRID LAURIER: I am astonished and scandalized to hear my hon. friend (Mr. Reid) advancing the idea of damming the St. Lawrence. I have heard him speak, when he was in opposition, in tones of despair at the very possibility that there might be such a scheme carried out by the then Liberal Government. For weeks and for months, day in and day out, he watched the Government for fear they would assent to the very proposition which he now favours. I was impressed by his argument in those days, and the Government would not agree to the damming of the St. Lawrence, and I hope that this Government will not agree to it either. All the reasons which he gave against damming the St. Lawrence at that time, are as true now as then; the beauty of the St. Lawrence would be marred now just as then, if a dam were erected. Moreover, there is no necessity for damming the St. Lawrence now, if the object be to keep the freight from being diverted to the New York route, because the New York route cannot compete with the St. Lawrence route. For my part, like my hon. friend (Mr. Graham), I believe we need the Georgian Bay canal, but we need the Welland canal just as much. I have the greatest hope in the Welland canal, because by it you can avail of water navigation from Port Arthur to Kingston. At present, these large boats which carry a quarter of a million bushels of grain, come to the end of the Welland canal, and have to discharge cargo, but when we have this new Welland canal, one of these big vessels will leave Port Arthur and go to Kingston, and then her cargo can be transferred to river barges, for destination at Montreal. There is cheap freight from Kingston to Montreal, and neither Buffalo nor Oswego can compete with that route. That is the justification for the Welland canal, and the sooner it is built the better.

9 p.m.

Mr. W. H. BENNETT: One would imagine from this discussion that the port of Montreal was open throughout the winter months, and that there would be a continuous procession of grain vessels from the head of the lakes to Prescott or Kingston, whence their cargoes would be forwarded to Montreal. It is wonderful to hear the guessing competitions that are ind lged in in this House, about the results of this undertaking. I want to point out that the majority of the vesselmen in Canada are frightened at the deepening of the Welland canal. The port of Montreal is invariably closed on the 20th of November, and the rush of grain from the Northwest comes after that date. I have lived in the town of Midland for thirty years, and through Midland an enormous lot of grain comes every year; so that I know whereof I speak. Hon. gentlemen no doubt know that even up to the 15th of December, when the port of Montreal has long since been closed, there is a considerable quantity of grain coming out of Port Arthur. The idea of the Canadian vesselmen is that the deepening of the Welland canal, which I suppose we are bound to go on with now, is eventually going to ruin the Canadian shipping trade, in that the immense barges of the Steel Trust, which have been in commission all summer carrying ore, will proceed to Port Arthur, get their 400,000 or 500,000 bushels of grain as a cargo, pass through the deepened Welland canal, anchor at Oswego—Montreal being closed—and by cheap handling elevators the grain will be taken out of these vessels during the winter months and shipped to New York for European destination. Freighters will not be found in the summer time lying around Montreal looking for cargoes, because the trade there is small. On one occasion I was at a place called Point Comfort, where Hampton Roads, a well known harbour on the American side, is situated. You can see any day large British freighters lying there at anchor. Any one will tell you that they are lying there waiting for tele-

grams from New York to tell them where they can pick up freight. In order to avoid the cost of tying up at the docks at New York, they are lying at Hampton Roads ready to move up to New York when a cargo is in sight. There would be a system of cheap elevators at Oswego or Ogdensburg emptying the 400,000 or 500,000 bushel freighters and loading the grain in the cars to be taken to New York.

One of the best freights for vessels on the upper lakes is the first cargoes of coal that go up in the spring of the year. After these vessels have dispensed with their cargoes of grain in the fall, they will be filled with coal and will be the first vessels to go up the lake in the spring. A year or two ago a gentleman was advertised to speak in Berlin, from which place most of this agitation has sprung in regard to the deepening of the Welland canal, although they are as much interested in the deepening of that canal as a man in Timbuctoo would be. This gentleman said that it was necessary for the welfare of Canada that the Welland canal should be deepened. His initials and his name are the same as those of the general manager of one of the biggest freighting companies in Canada. At breakfast in the hotel I had read the speech of this gentleman. I met the vessel man on the street and said, 'Are you in favour of the Welland canal?' He said, 'You are the second man that has met me on King street that has asked me that question. No, I am not the gentleman who made the speech. Do you think that I as a ship owner would be so crazy as to advocate the deepening of the Welland canal?' It is, however, going to be done. We are all in a guessing competition now, but at Oswego and Ogdensburg the matter has gone beyond the guessing stage. The people are getting prepared for the stern reality, and real estate has increased in those places from twenty-five to thirty per cent by reason of the fact that the Canadian Government is to deepen the Welland canal and thus give them access to the lakes.

Sir WILFRID LAURIER: If Montreal harbour is closed after the 20th of November, how would grain be taken from Oswego to New York after that date?

Mr. BENNETT: Lake Ontario will be open and the boats will be able to come down the lakes.

Sir WILFRID LAURIER: From Oswego?

Mr. BENNETT: By a system of cheap elevators that will handle the grain out of these huge vessels, carrying 400,000 or 500,000 bushels. It is nothing unusual to see on the upper lakes vessels capable of carrying 500,000 bushels. These elevators will put the grain into the cars which will take it to New York, which is open all the year around.

Mr. EDWARDS: Is Kingston closed any more than Oswego? Do you forget my little village?

Mr. BENNETT: Kingston is open in the winter months. The Canadian Pacific railway and the Grand Trunk railway have connections there. What will be done if any business is done there, is this—I am referring to the winter season—the cars will be loaded from elevators, should they be built, and the Grand Trunk will take these cars to Portland. As it is a longer haul from Kingston to Portland than from Oswego to New York, the latter route would naturally be preferred. A few years ago I met an engineer who was in charge of the deepening of the Erie canal. He did not know I was a Canadian, and I said to him, 'Why not deepen the Welland canal and have the big boats go through to Oswego?' He said: 'You do not appreciate the point; the Welland canal belongs to Canada and the Canadian people will never be so simple minded as to deepen that canal for the convenience of the American people. The advocacy that the Welland canal should be deepened has been too from the American side. The American Congress even expressed its willingness to pay half the cost of deepening that canal; and if a close bargain had been driven with them, they would have done it. The work, however, is now going on. It is all in the guessing stage and when it is completed we shall see the result. In the meantime it is the duty of the Government to do everything possible to improve the elevator facillities at Montreal so as to get as much grain down there as possible in the fall, and then by a system of ice-breakers to endeavour to keep the harbour of Montreal open later than the 20th or 23rd of November.

Mr. EDWARDS: I agree with the hon. member in so far as the advisability of providing the very best elevator facilities at Montreal for handling grain is concerned, but I cannot agree with his conclusions in regard to the probable movement of the grain, if the Welland canal is deepened and enlarged, as we propose doing. I cannot see why a 400,000 bushel grain freighter passing from

Port Arthur through the Welland canal down into lake Ontario should select Oswego rather than Kingston, even supposing that the port of Montreal is closed to navigation on the 20th of November. I think I am correct in saying that the lake will be open as late at Kingston as it will at Oswego, and I can see no particular reason why a freighter should put up at Oswego and unload its grain into the cars to be taken through to New York rather than put up alongside an elevator at Kingston and unload its grain to be taken in cars to St. John. I am not prepared to say just what the difference is, but I do not think there is very much difference between the distance from Kingston via Montreal to St. John and the distance from Oswego to New York.

Mr. J. D. REID: It is shorter to St. John.

Mr. EDWARDS: So far as railway freight rates are concerned, the grain could be shipped from Kingston or Prescott just as cheaply over Canadian railways to the Canadian port of St. John as over American railways to the port of New York. If that is true, then surely we would all prefer to see that grain passing from the port of Kingston or Prescott over Canadian railways to St. John, where this Government and previous Governments have spent large sums of money, than to see it passing through the United States to the port of New York. I think I can take that for granted. I could not help wondering if my hon. friend would not have the town of Midland in his eye when he was discussing the deepening of the Welland canal. I think I have heard the hon. gentleman advocate a grain railway from Midland to Montreal.

Mr. W. H. BENNETT: They have two of them now.

Mr. EDWARDS: I think the hon. gentleman was advocating another; I will not be sure. If the Welland canal is not deepened, the effect would be, I suppose, to turn the grain to Midland to be shipped by rail to Montreal. I cannot blame my hon. friend for desiring to see the grain go through his own town. That is a local patriotism of which we all should have more or less. I should like to see the Welland canal deepened and the grain brought down by vessel—

An hon. MEMBER: To help Kingston.

Mr. EDWARDS: Yes, and incidentally to help the old historic county of Frontenac.

[Mr. Edwards.]

The hon. member for Rouville (Mr. Lemieux) quoted from the Grain Markets report. I think that report speaks very favourably of the deepening of the Welland canal and carrying the grain down to the port of Kingston. I read the report carefully, and I do not recollect that any fear is expressed of the grain going to Oswego and down through the United States. I think the deepening of the Welland canal is one of the best movements which has been made; and I do not say that merely because I believe it will assist in developing Kingston, but it seems to me the reasonable and logical thing to do. Nature has provided a waterway in our splendid chain of lakes. If the grain is carried without breaking bulk from Fort William to Kingston or Prescott it can be transferred to very cheaply constructed grain barges to be taken to Montreal. I notice that is one of the things that cheapens the handling of grain in the Erie canal. The grain goes into barges which are practically boxes. They are not made to resist a heavy sea, nor is it necessary they should be so made. In the same way, when the large steamer comes to Kingston or Prescott, the grain will be unloaded into barges which will practially be floating bins which can make the trip to Montreal, though they could not stand the seas on the lakes. And as they are cheaply constructed, they will help to cheapen the freight rates. I think the movement is one in the right direction.

Mr. OLIVER: It is so seldom I have the good fortune to agree with my hon. friend from East Simcoe (Mr. Bennett) that I am glad to take the opportunity to declare such an agreement when it occurs. But even on this occasion, I am afraid, I cannot go with him all the way. I do believe, as he does, that the best and most profitable route for grain from the West is via large freighters to Midland and then by rail to Montreal.

Mr. W. H. SHARPE: How about the Hudson Bay railway ?

Mr. OLIVER: If the hon. member will have patience, we will come to that. It seems to me that the freighter of maximum capacity carrying grain to Midland, with quick loading, quick discharge and quick return, could handle more grain in a specified time than a freighter of less size making a longer trip. And, as it is important to get as much as possible of the grain out in the fall, I think this is the route that offers the best advantage. But

because that is a good route, it does not follow there should not be others. I cannot follow my hon. friend when he, if I understood him aright, protested against the improvement of the Welland canal, for the reason, as he alleges, that it will foster the transport of grain to New York. Under present conditions altogether too large a proportion of our western grain goes to New York, although the Welland canal has not been improved. I cannot think, as the hon. gentleman seems to do, that there is some deep-laid plot or conjunction of effort, as between the Government of the United States and the Government of Canada in the building of the Welland canal, against the well-being of the port of Midland. For I would remind him that, not the Government of the United States, it is true, but the government of the state of New York, is spending $200,000,000 in improving the Erie canal, the result of which expenditure would not have a bearing at all on the transport of grain via the Welland canal. That is, if the Welland canal is improved, the grain goes to Kingston or Oswego, and merely renders the Erie canal useless to that extent. Now, my hon. friend from Lisgar (Mr. Sharpe) wants to know about the Hudson Bay railway. With the production we have in the West, and with the production we ought to have in the near future, we want, and absolutely need, the advantage of all the outlets that can be secured. It was many years ago that a great transportation authority declared that what Canada needed was the enlargement of the spout—of the means of getting the grain out in the shortest time. So, while we approve of the improvement of the Welland canal, we approve also of the Hudson Bay railway, and also of means of access to the milling centres south of the line. We approve of the Transcontinental giving us a route to the Pacific, and also a winter haul to the Atlantic. I am unable to put the case just as I would like, but if we are to have the development that we hope to have, we need all these different outlets, and unless we have all these different outlets we cannot achieve that development that we hope to have. We need them all, and we need them under the most favourable circumstances.

Mr. J. D. REID: With reference to the grain going via Ogdensburg, the Welland canal will benefit trade between the East and the West during the whole season of navigation. The only time when there might be some disadvantage would be in the fall of the year, when the vessels anchor at Ogdensburg. That was the point taken by the hon. member for Simcoe. I think he is in error in saying that the grain will be unloaded there; it will be unloaded, as the hon. member for Frontenac (Mr. Edwards) has stated, at Kingston or Prescott.

Mr. OLIVER: Prescott in preference.

Mr. REID: But then it should be the duty, and no doubt will be the duty, of the Government to see that the grain is not diverted to Portland or other United States ports. The distance from Kingston or Prescott to St. John and Halifax is practically the same as to New York, and surely the Government of Canada, with two roads running to St. John and Halifax, the Intercolonial railway and the Grand Trunk Pacific, can keep the rates as low as those from an American port to New York, so we should have it in our own control. The difficulty has been that we have not had the facilities at St. John or Halifax to handle the grain during the winter months, and it has gone to Portland and New York. At Halifax there is one small elevator. Last winter a few large steamers came there, and over two million bushels of grain were handled there in the few winter months. But facilities were improved last year, and they have been able to handle more grain. I am satisfied that the amount handled at St. John has increased also. The Canadian Pacific railway are building a large elevator there, and have no doubt that all these elevators will be kept busy. It is absolutely necessary that we should, at the earliest possible moment, improve the facilities at Montreal, Quebec, St. John and Halifax, so that we may handle the products of the West and of Ontario and Quebec through Canadian ports. When we are in a position to do that the grain will go by our ports. It is not likely that large vessels will go to Oswego. They can make three trips to Midland to one to Oswego, and make a great deal more money. Grain going by Oswego would have to pass through 340 miles of canal with 30 locks to New York, as against 175 miles to Montreal from Kingston or 123 miles from Prescott. The advantage of these large vessels coming down to Kingston is that they would only have thirty miles of canal from the time between Port Arthur and Kingston.

Mr. W. H. BENNETT: What does the minister consider the stretch from Sarnia

down to Detroit? Is that not canal? They slow down all the way.

Mr. PARDEE: No, they do not. They slow down part of the way through lake St. Clair, and that is all.

Mr. REID: The river may be not as deep in some places, and they may have to slow down a little; but I have never recognized that as part of the canal. Look what has happened since the elevator was built at Port Colborne. Prior to that all the vessels that went through the Welland canal went to Port Arthur and got their cargo to return to Montreal. The late Mr. Tarte as Minister of Public Works devised the scheme of building an elevator at Port Colborne to be used until the canal could be enlarged. Last year that one million bushel elevator handled over twenty million bushels of grain. Large freighters bring it to Port Colborne and the other small Welland canal boats have been running from Port Colborne to Montreal. My opinion is that as soon as the Welland canal is enlarged the large boats can go down to Kingston and there transfer to the same boats that now go to Port Colborne or else large barges will be built for the purpose. Personally I have not any fear, I do not think any man who understands the situation has any fear, of either Buffalo, Oswego or Ogdensburg or any place affecting the grain going to Montreal when the Welland canal is built. As to Ogdensburg, it is many more miles from Ogdensburg to New York than from Buffalo to New York. It is not likely that a vessel will come all the way down through the Welland canal, across lake Ontario, down the St. Lawrence to stop at Ogdensburg in order to ship the grain to New York.

Mr. GRAHAM: By rail.

Mr. REID: Yes, by rail. It is absurd to make any such statement. There may be a little more grain come down to Ogdensburg for their own use in the eastern states adjacent to Ogdensburg as it is a distributing point for grain for use in small mills in that section just as Kingston and Prescott are for places back from the river.

Mr. GERMAN: I would like to have a word to say in regard to this question of transportation. I am inclined to think that many hon. gentlemen who have spoken on the matter really know very little about it. The hon. acting Minister of Railways and Canals—probably he may be Minister of Railways later on, but we hope not, because we want to see the present minister continue in that office—must remember that vessels carrying grain from Port Arthur, or Duluth, to Buffalo or Port Colborne, do not make their money in carrying that grain, but in carrying coal back to western points. It has been stated that the enlarging of the Welland canal will mean that American boats will go to Ogdensburg. No doubt they will, but they will have to go back through the Welland canal, and take their load of coal for the West just the same as the Canadian boats; so there is no reason why the Welland canal should be any more advantageous to American than to Canadian shipping. For myself, the Welland canal construction is beneficial. I would like to see the St. Lawrence route deepened and, with due deference to other opinions, I would like to see dams put in at every rapid on the St. Lawrence, and the river made navigable. That is what will happen in the future, and electric power development will pay the whole cost of construction. My own idea is that the scenic problem is practically obliterated, or will be in a few years. So far as the Georgian Bay canal is concerned, I have never taken part in the many discussions which have taken place hitherto, because I rather thought that if I discussed the Georgian Bay canal hon. members would say: You are absolutely in favour of the Welland canal and consequently opposed to the Georgian Bay canal. I wish to say now that the Georgian Bay canal is absolutely an impossible proposition, financially. It will cost $200,000,000 or more to build a ship canal from Montreal to Georgian bay. The interest on that money would pay the carriage on all the grain the Northwest can produce in the next hundred years. We have built a Transcontinental railway; pay that road four cents a bushel for carrying grain from Georgian bay to Montreal, and you will be paying less than the interest on the $200,000,000 necessary for the construction of the Georgian Bay canal.

Mr. GERALD V. WHITE: Is it only from the standpoint of cost that the hon. gentleman is opposed to the construction of the Georgian Bay canal?

Mr. GERMAN: Not at all. Outside of the question of cost altogether, I challenged my hon. friend from North Renfrew (Mr. G. V. White) to get any man who owns a ship or knows about running a ship to say that they will ever get a ship carrying 250,000 bushels of wheat to go through the Georgian Bay canal. They will never do it. Imagine 400 miles of a canal and vessels going at the rate of four or five miles an

hour, which would be the maximum speed! It is absolutely impossible. I have never said a word about this matter before but I hope the hon. gentlemen appointed to the commission will discuss the possibility of a ship drawing twenty-five feet of water, and carrying 250,000 bushels of grain going through 400 miles of canal. There is not a vesselman who will say it can be done. The curves are too short; they cannot get around them.

Mr. GERALD V. WHITE: Are there not boats carrying that quantity going via the St. Lawrence and Great Lakes?

Mr. GERMAN: Not at present, but there soon will be. I may say, however, that the Osler carries 250,000 bushels and goes to Port Colborne. When the Welland canal is finished they will carry that grain to Prescott, and tranship to Montreal. I would like to see the St. Lawrence canals enlarged so that those ships could go straight through to Montreal. I quite recognized the fact that my hon. friend from North Renfrew does not agree with me about the Georgian Bay canal, but if he will talk with his Conservative friends who own ships—he need not talk to Liberals— he will not find a Conservative vesselman who will say that the boats can do it. I would be very glad to see power developed on the Ottawa river, but that is another thing altogether.

Mr. GERALD V. WHITE: What about the international aspect of the powers on the St. Lawrence, that my hon. friend is so anxious to have developed?

Mr. GERMAN: That is only an adjunct to the deepening of the St. Lawrence river.

Mr. GERALD V. WHITE: How much of that power will belong to the United States when developed?

Mr. GERMAN: From Kingston to Cornwall about half of it belongs to the United States, and the United States Government will be only too willing to join with the Canadian Government in putting in locks and dams to develop power. I hope Canada will never agree to that.

Mr. GERALD V. WHITE: They would take care to get most of the power.

Mr. GERMAN: Not if I had anything to say about it. My hon. friend and his friends are not going to be in power very long. Outside of that problem altogether, however, the question of transportation in Canada is a big one. We have expended large sums of money in building a Transcontinental railway. It is our duty to develop all our resources to the best possible advantage but I doubt exceedingly if the development of these resources will be promoted by the building of the Georgian Bay canal.

Mr. GERALD V. WHITE: Mr. Chairman, I am glad to know where my hon. friend from Welland (Mr. German) stands in regard to the Georgian Bay canal. A few moments ago the hon. member for Edmonton (Mr. Oliver) told us—I presume he was speaking as an ex-Cabinet Minister and on behalf of the Opposition—what the position of hon. gentlemen opposite was. He said: We are in favour of the Hudson Bay railway, we are in favour of the Transcontinental railway, we are in favour of the deepening of the Welland canal, but I notice that my hon. friend from Edmonton took good care not to say that the Opposition were in favour of the construction of the Georgian Bay canal. It has been stated by members on the Opposition side of the House that if the late Government had remained in power a little longer the next great work of importance which they would have undertaken would have been the construction of the Georgian Bay canal. It seems to me, from the views expressed to-night by several prominent members on the Opposition side of the House, including ex-Cabinet Ministers, that if the late Government had remained in power the country would have been a long way from the construction of the Georgian Bay canal. My hon. friend from Welland has given the committee some of his views with regard to the Georgian Bay canal. When my hon. friend stood upon his feet he said that several members had spoken with regard to the question of transportation and that from what they had said he did not think they knew very much about it. I can tell my hon. friend that, whatever he may know about the general question of transportation, he is lacking a little in knowledge in regard to the Georgian Bay canal. I would be only too glad to take my hon. friend from Welland with me on a trip over the route of the Georgian Bay canal and possibly, when he has seen that great waterway with its immense possibilities of power development and such like, his views in regard to that particular project will change materially. My hon. friend referred to the fact that this route meant about 400 miles of canal. If he will take the trouble to digest the report which his

hon. friends presented to the House in 1908 he will find that along that 400 miles of waterway there are only twenty-eight miles of canal and sixty miles of improved waterway.

Mr. GERMAN: What is the greatest depth of water in any of the lakes?

Mr. WHITE: Offhand, I am not able to enlighten my hon. friend on that question but I could take him to certain sections of the Otttawa river where he would have a hard time to find bottom.

Mr. GERMAN: You have not a depth of thirty feet for nine-tenths of the distance from North Bay to Montreal.

Mr. WHITE: Under the present circumstances?

Mr. GERMAN: Yes.

Mr. WHITE: That may be, but what about the Welland and St. Lawrence canals? My hon. friend is talking about moving the point of transhipment from Port Colborne to Kingston or Prescott. I think that is a most silly argument. Why are the advocates of the Welland and St. Lawrence canals sending literature all over the country? I notice in one of the pamphlets which they have been sending to members of this House that they pay particular attention to a speech delivered by Senator Townsend of the United States Senate before the Lake Carriers' Association at Detroit on the 22nd January, 1914. I would like to know why Senator Townsend would not be in favour of the deepening of the Welland canal. I doubt very much if Senator Townsend is sincere in what he says in this speech, and I presume that the synopsis contained in this pamphlet is correct. Senator Townsend says:

> I have said this much as a preface to the special plea I propose to make for the improvement of waterways, and particularly for the speedy and intelligent improvement of the natural water course extending from the head of the great lakes to the gulf of St. Lawrence, an improvement having for its object the enlargement of that waterway to accommodate ocean going vessels in their voyage from lake ports to foreign parts, and all for the benefit of transportation.

He may be in favour of the improvement of the waterway down to Oswego or Ogdensburg, but I doubt very much if Senator Townsend favours the deepening of the rest of the system.

Mr. OLIVER: My hon. friend from Renfrew (Mr. White) has gone rather out of his way to establish a case against the late Government with regard to the Georgian Bay canal, using not what I said but what I did not say in proof of his argument. I think my hon. friend was entirely unwarranted in taking the position he did. He knows the late Government made a very precise and thorough survey of the route of this canal and placed before the people of the country and of the world information in regard to it which establishes the engineering possibility of its construction. As to what the late Government might have done, I am not prepared to answer, but as far as what they did is concerned, my hon. friend cannot successfully lay the accusation that they did not show their favourable attitude towards the construction of this canal.

Mr. GERALD V. WHITE: The report to which my hon. friend (Mr. Oliver) referred was laid on the table of the House, I think, in January, 1909, and they did not go to the country for two years after that, or until September, 1911. If hon. gentlemen opposite were so strongly in favour of this particular project and if, as my hon. friend from Edmonton states, they were perfectly satisfied that, from an engineering standpoint, the canal was a feasible proposition, why did not these hon. gentlemen take it up?

Mr. OLIVER: I think that ever since the present Government took office it has been the stock argument in their mouths that the late Government had undertaken such very great responsibilities. I am not quoting the words of the hon. Minister of Finance (Mr. White), but that hon. gentleman has from time to time taken occasion to condemn the late Government because of the vast projects which they had undertaken. I am sure that even my hon. friend from Prince Edward Island, who gave such noted counsel to the present Government, would agree that the announcement of a project to cost a minimum of $200,000,000 might very well cause any Government to take counsel and to consider all the circumstances and conditions before going on with the work.

Mr. GERALD V. WHITE: My hon. friend does not evidently believe in the report his own Government submitted, because that report stated that the cost would be $100,000,000.

Mr. GERMAN: $100,000,000 for a fourteen foot canal, without land damages.

Mr. WHITE: Not at all; twenty-two feet on the sills. My hon. friend evidently does not understand the report.

Mr. GERMAN: For fourteen feet on the mitre sill, without land damages, the cost would be $100,000,000.

Mr. WHITE: My hon. friend is entirely mistaken.

Mr. MACDONALD: It seems to me that some hon. gentlemen opposite are still under the impression that the Liberal Government is still in control of the affairs of this country. I am not surprised that my hon. friend from North Renfrew (Mr. White) should be very anxious on behalf of his constituents to see some forward step taken in this work, but he is not strengthening his case in any way by talking about what a Government that went out of power two and a half years ago did or did not do. The question before the people of North Renfrew to-day is, not what the Liberal Government did or did not do, but what this Government now in power is going to do. No doubt my hon. friend from North Renfrew (Mr. White) realizes that when he goes to his constituents at the next election on this great question, he will be in a very miserable position when he tells them that for four years the Government which he supported had the power to build this canal, and that they absolutely failed to take any step in that direction.

Mr. GERALD V. WHITE: This Government has only been in power three short years, and the late Government was in power for fifteen years.

Mr. MACDONALD: And each year is as long or as short as another, and there are 365 days in a year now, just as there were then, and my hon. friend from North Renfrew will not be able to escape responsibility by any suggestion of that kind.

Mr. GERALD V. WHITE: I am doing all I can.

Mr. MACDONALD: How long does the hon. gentleman from North Renfrew want this Government to remain in power before he expects them to move towards the construction of the Georgian Bay canal? The Government now in power controls the finances of the country, and to them alone is committed the task of building the Georgian Bay canal or of not building it, and what excuse can the hon. gentleman give his constituents for the Government, which he supports, doing nothing.

10 p.m.

Mr. BURNHAM: We will help the farmers.

Mr. MACDONALD: My hon. friend from Peterborough to-night started an aeroplane theory, and very interesting it was, but no later than last Friday night he gibed the Government upon their absolute inability to do anything.

Mr. BURNHAM: Oh, no.

Mr. MACDONALD: This Government came into power with a tremendous announcement from the Prime Minister, as to what he was going to do. He declared that the Liberals had failed in their duty, and in high-sounding phrases he called Heaven to witness his intentions; he told the Canadian people that once he was in power a new era would dawn on this country, and things would begin to move.

Mr. BURNHAM: Hear, hear.

Mr. MACDONALD: My hon. friend says, 'hear, hear', but he says 'hear, hear' to almost everything the Government does. If the Government can tell us what they have done or attempted to do in regard to one single item of the programme announced by their leader when he took office, we shall await that statement with interest.

Mr. HUGH CLARK: How about the grain elevators?

Mr. MACDONALD: That was arranged for by the late Government before they went out of power.

Mr. HUGH CLARK: What about the Hudson Bay railway?

Mr. MACDONALD: Why, the Hudson Bay railway was provided for and the contract let by my hon. friend the ex-Minister of Railways (Mr. Graham) before the Liberal Government went out of power. I believe that the voyageurs of centuries ago found the true water passage from the Lower St. Lawrence to the West when they went up the Ottawa river and followed the line of what is now called the Georgian Bay route, and that in this twentieth century that water route should be improved, so as to meet the modern requirements and conditions of traffic by water. I agree with my hon. friend from North Renfrew (Mr. White) as to the construction of the Georgian Bay canal, but I do ask him to be big enough to realize that the men whom he supports will never move if he continues to make such speeches as he has made to-night. They will sit in placid contentment and say: as long as the repre-

sentatives of the people most interested in that project will defend us when we do nothing, we will continue our policy of doing nothing on this, as on every other question. I believe that the Georgian Bay route should be the great national waterway of this country, and that the conditions are such that this Government, having found when they came into power an overflowing treasury—which they have been dissipating day after day to political favourites in regard to every petty project presented to them—ought, at once, to have proceeded to move in the construction of the Georgian Bay canal. They at least might commence to deal with some item of their programme. The people interested in this project will hold these men to account for their inactivity, and their inability to conceive or construct anything. The defence put forward by my hon. friend from North Renfrew and others like him, for the inaction of the Government in this matter, will be easily understood by the plain people of this country.

Mr. OLIVER: I would not wish to have any misunderstanding in regard to the position of the late Government towards this project, or my own. As a representative of the West, I have always objected to those who favoured the construction of the Georgian Bay canal putting it forward as a project in the interest of the West. The West has always been and will always be prepared to pay its share for the development of this country, either in the East or in the West. If it should seem good to the people of Canada to build the Georgian Bay canal, I am satisfied that our western people will be ready to bear their share of the burden of cost. For my own part, I have always held the view that the construction of the Georgian Bay canal was not an essential to the development of the West, any more than the construction of any other single means of ingress or egress for the products of the West. If we have a transcontinental railway carrying freight winter and summer; if we have the lake routes as we have them now; if we have the improved Welland canal; if we have the Hudson Bay railway; if we have access to the markets of the world by way of the Pacific; if we have access to the American milling centres by the American railways, we are not in a position of such urgent need that we should demand that the people of Canada pay $100,000,000 or $200,000,000 towards the construction of still another means of access which will only be of use during a part of the year. I hope I have made my position clear. We do not object to the building of the Georgian Bay canal; we do not object to the paying of our share of it, but we object to being saddled with the responsibility for its construction as being a necessity for western development. As a national undertaking, for the benefit of the nation, if the nation at large thinks well, we are quite willing to pay our share; but for my part—and I think there are other gentlemen from the West who will take exactly the same stand—we certainly object to western Canada being saddled with the responsibility for that vast expenditure as being for the benefit primarily of the West.

Mr. G. V. WHITE: I do not think the hon. gentleman should look at the matter from that point of view. It is what is going to be of advantage not only to the West but to all Canada. I think my hon. friend from Edmonton is taking a very sectional view of the matter.

Mr. GERMAN: The Welland canal is being enlarged; that is, it is being made a ship canal. It is twenty-four miles from lake Erie to lake Ontario, and the estimated cost of that canal is $50,000,000 for twenty-four miles. There are seven locks, three of them being twin locks, or really ten locks.

Mr. G. V. WHITE: Who made that estimate?

Mr. GERMAN: The engineers of the Department of Railways and Canals.

Mr. WHITE: Of the present Government or of the late Government?

Mr. GERMAN: Of both Governments.

Mr. WHITE: If there is anything in my hon. friend's contention, the deepening of the Welland canal will cost at least $100,000,000, because he states that the Georgian Bay canal will cost $200,000,000, notwithstanding the engineer's report that it will cost $100,000,000.

Mr. GERMAN: This canal is estimated to cost $50,000,000. Where there is rock, it is limestone, which is easy of excavation. The bulk of the work in the canal is dredging work.

Mr. WHITE: I thought it was practically a new canal.

Mr. GERMAN: For thirteen miles from Port Colborne it is just enlarging the present canal, widening and deepening it. For the rest of the way to lake Ontario it is a new canal with new locks that are being constructed. The estimated cost is $50,000,000 for twenty-four miles of a canal. The Georgian Bay canal is 400 miles long, either submerged or otherwise, through the hardest granite that the earth can produce.

Mr. WHITE: Solid foundation?

Mr. GERMAN: Absolutely solid granite rock that you have to blow out.

Mr. WHITE: Does my hon. friend mean to say that through the whole length of the Ottawa and Georgian bay waterway there is solid granite?

Mr. GERMAN: No. What I say is that through the whole distance you have to have a canal constructed through the rock or through the lake, a submerged canal, because there is not fifty miles in that distance that a ship drawing twenty-five feet of water can navigate.

Mr. WHITE: I think my hon. friend is mistaken.

Mr. GERMAN: I may be wrong for a few miles, but my hon. friend will agree with me that there are not at any rate 100 miles—I do not believe there are 50 miles that you would not have to excavate and have a submerged canal. If the Welland canal for 24 miles cost $50,000,000, as 24 miles is to $50,000,000 so is 400 miles to the cost of the Georgian bay canal, which will be $100,000,000, putting it on the same basis. With all the land damages you simply cannot build the Georgian Bay canal short of $300,000,000, and that will pay all the cost of transporting all the wheat of the Northwest to Montreal very much longer than any of us will live.

Mr. G. V. WHITE: The hon. member had better confer with the hon. member for Pictou (Mr. Macdonald) and get some enlightenment on this subject.

Mr. ROBB: While we have been discussing the merits of the Georgian Bay canal and of the Welland canal, the men in Winnipeg who own the grain have been negotiating sales; they have probably sold as much wheat to New York merchants as they have to Liverpool merchants, and these merchants will ship that wheat by whichever route is the cheapest. They figure on the rate they can get from Fort William to Rotterdam or to Liverpool, wherever the wheat is going. While a man in Winnipeg has been negotiating sales of wheat through a New York house, perhaps a man in Chicago has been selling corn through a Montreal house. I venture to say that our canals, since they have been constructed, have carried as much United States grain as Canadian grain. It is nonsense for us to discuss the question as to whether grain will go through United States ports or through Canadian ports; it is all an interchange of business. A man who owns corn will use the Canadian route because it is a northerly and therefor a cooler route, and his corn transhipped at Kingston or Prescott will be shipped to Montreal and will go through in better condition. If wheat is in good condition, it can be routed cheaper by New York; and it will go through that port whether you build the Georgian Bay canal or the Welland canal.

There is also the question of insurance. At certain seasons of the year there is a discrimination of half a cent to three-quarters of a cent a bushel in the insurance rate between the Montreal route and the New York route. Shortly after this Government came into power, the Minister of Trade and Commerce, who recognized that discrimination, went to Montreal, met the Board of Trade, and admitted that that was the real issue. He endeavoured to remedy the matter.

From that day to this, so far as I know, there has not been one sixteenth change in the insurance rates downwards, but the rate did go up last fall. Our friends opposite had better get to work and try to do something towards carrying out their promises in regard to insurance rates.

Mr. MACDONALD: Would the minister tell us who are the tenderers on the Welland canal, which of them were successful, and the amount of the contract on each section.

Mr. REID: I have here a statement showing all the tenders for each section:

Section No. 1.

M. P. & J. T. Davis	$5,394,780 00
Sir John Jackson (Canada) Ltd.	5,207,277 60
H. Quinlan & A. W. Robertson, Montreal	4,023,140 00
The 'Soo' Dredging & Construction Co.	5,970,505 00
Canadian Dredging Co., Limited	3,870,075 00
The Dominion Dredging Co., Ltd.	3,487,725 00
F. D. Brown and J. A. Aylmer	5,213,850 00
Booth & Flinn, Limited	4,483,156 25

Anglo-Canadian Contractors, Ltd.	$4,954,245 00
Baldry, Yerburgh & Hutchinson, Limited, Westminster, London, S.W., England, and St. Catharines, Ont.	4,081,537 60

Contractor: Dominion Dredging Co., Ltd.

Section 2.

James H. Corbett, Fredericton, N.B.	$5,418,075 00
The Canadian Carter Co., Ltd., Ottawa	6,557,125 00
Consolidated Construction Co., Limited	6,595,542 50
Inland Construction Co., Toronto	5,687,487 50
A. C. Stewart & Co., Fort William	9,680,010 00
Baldry, Yerburgh & Hutchinson, Limited	5,377,185 75
Foley Bros., Welch, Stewart & Co., Ottawa	6,163,260 00

Contractor: Baldry, Yerburgh & Hutchinson, Limited.

Section No. 3.

Anglo-Canadian Contractors, Ltd., Toronto	$10,620,325 00
Booth & Flinn, Ltd., New York.	12,331,057 50
James H. Corbett, Moncton	10,220,665 00
Sir John Jackson (Canada), Limited, Montreal	11,490,244 00
Carter Construction Company, New York	11,402,075 00
Foley Brothers, Welch, Stewart & Company	11,103,290 00
O'Brien & Doheny, Renfrew and Montreal	9,540,050 00
M. P. & J. T. Davis, Ottawa	10,066,955 00
Consolidated Construction Co., Limited, Toronto	10,647,590 00

Contractor: O'Brien & Doheny.

Section No. 5.

Confederation Construction Company, Ltd.	$2,506,462
The 'Soo' Dredging & Construction Co., Sault Ste. Marie, Ont.	2,304,362
Brown, Aylmer & Russell, Toronto, Ont.	2,380,398
Canadian Dredging Company, Ltd., Midland	1,945,788
Consolidated Construction Co., Ltd., Toronto	2,475,745
James H. Corbett, Fredericton	2,549,004
The Inland Construction Company, Toronto	3,172,348
G. F. Fauquier, Ottawa; W. C. Chambers, Harriston; C. McQuiggs, Nepigon; W. A. McCaffrey, Toronto	2,618,610
The Canadian Carter Company, Limited, Ottawa	3,010,285

Contractor: Canadian Dredging Company, Limited.

Section 4a

Jennings & Ross, Ltd., Toronto	$ 97,138 00
Clarke & Monds, Ltd., Toronto	175,386 50
J. H. McRae & H. A. Campaigne, Niagara Falls	302,774 00
Peninsular Construction Co., Ltd., St. Catharines	89,495 50
Maguire & Cameron, St. Catherines	80,477 50
Lauzon Engineering Company, Limited, Lévis	97,852 00
The C. S. Boone Dredging & Construction Co., Ltd., Toronto	99,648 00
F. R. Wilford, Lindsay	$116,917 00
Canadian Dredging Company, Ltd., Midland	98,764 00
J. K. Kernahan, St. Catharines	108,258 00
Jones, Girouard & Company, Ltd., Ottawa	102,386 00
Campbell & Lattimore, Toronto	146,295 40

Contractor: Maguire & Cameron.

Mr. GERMAN: The Dominion Dredging Company have a pretty hard contract. Are they going on? Does the minister think they can carry out their contract with the prices they have got?

Mr. REID: I never heard anything to the effect that they were not going on. They have a splendid plant at work. It was in the fall when these contracts were let, and of course we would not expect much to be done in the winter.

Mr. GRAHAM: When does the minister expect to let the other contracts, and how many will there be?

Mr. REID: There are yet to be let sections 4, 7, 6, 8 and 9. I understand from the engineers that these contracts, except section 8, will not take more than half the time of the others, and so there is no urgency so far as they are concerned. As to Number 8, that will be let before very long, in order that the work may be finished about the time that the work on the other four contracts is finished.

Mr. GERMAN: When will the contract be let?

Mr. REID: The plans are very nearly ready. But I thought that as the Minister of Railways and Canals (Mr. Cochrane) will probably be back within a month or so, I should probably await his return. There is no very great urgency for that length of time. We could let that contract within the next two or three months and yet have that one ready by the time the others are carried out.

Mr. GRAHAM: I understand that some provision is being made for the future as to the lock-gates, so that if the canal is to be deepened a certain part of the work will be already done.

Mr. REID: The lock-sills and the locks are being built to thirty feet, so that if in future we want to make the canal one of thirty feet depth, it will only be necessary to do the dredging of the five feet.

Mr. GRAHAM: Let me offer a word of paternal advice to the minister. Do not boast unduly that a contract is made at a lower figure than the estimate. Better to boast of that after it is all over. The esti-

mate of the engineer is an approximate estimate only and allows all the tenderers to base their figures on the same information. But it does not necessarily cover all the work to be done; the quantities may be different from those estimated. The probabilities are the work will cost eventually—without any dishonesty, but under the system—a good deal more than the original estimate, because the quantities will vary.

A great deal of dispute arises in connection with these larger contracts. An engineer will estimate so much solid rock and so much excavation of a certain kind of clay and so much loose rock and so on. These are estimates, and when the work comes to be done contractors and engineers may find a great deal more solid rock than they anticipated, even by boring. The final cost of the work will vary a great deal although the contractors will have tendered on the same basis. I would advise my hon. friend, who has rather gloried that the tenders are less than the estimates, that the time to glory is when the contract is through and the bills are paid, not when the contracts are let.

Mr. REID: I quite agree with that; but to me it was a surprise that the total of the tenders was so much less than the estimates, for, as a rule, the tenders are very close to the estimates. I agree that although the contracts are much less, in the final wind-up, if we get out for the engineers' estimates, we shall do very well.

Mr. GRAHAM: With two exceptions the tender prices on the Transcontinental were less than the estimates of the engineers. Can my hon. friend tell me when this work will be completed?

Mr. REID: The Minister of Canals is making a hard push to have it completed within five years and he has told the contractor that they must push their work with the greatest possible speed. The date of completion for the contract is April 1, 1917.

Lachine canal—improvements, lock 4, $90,000; concrete vertical walls, $125,000.

Mr. REID: The $90,000 is to cover the removal of the banks obstructing the entrance to lock 4, and for other work there. The original estimate was $300,000. This was revised to $240,000. There was expended in 1913-14, $140,000.

Mr. GRAHAM: Is this vertical wall the contract that has been going on for years with Quinlan and Robertson?

Mr. REID: This appropriation is to cover work provided last year but not completed. It is similar work to what my hon. friend has referred to and with the same firm. The work drifted away so much from the original work that it was decided to let a new contract to the same firm; but it is the same work.

Soulanges canal—protection works, upper entrances, $110,000; new mooring posts, $3,500.

Mr. REID: This work is being done under contract by Haney, Quinlan and Robertson. Operations commenced in May last and have been carried on vigorously through the summer. The breakwater is now completed except for some filling in front of lock 5. Five cribs which will form the continuation of the present guard pier have been sunk in position and filled with stone. The sixth one is now being built and will be completed next summer. This is at the upper entrance to the Soulanges canal.

Mr. GRAHAM: In Montreal I was discussing with several gentlemen a very good piece of road made by the provincial Government. In a few days the Good Roads Association of America is to meet in Montreal. These gentlemen were desirous of showing them some work that had been done by the provincial Government, but they said there was a difficulty in going out to this piece of road, because this Government had not completed a piece of their road along the canal for which an appropriation was taken last year. This could only be done in a temporay way before the meeting takes place in May.

Mr. REID: Would not that be on the Chambly canal? There is a road there that members have been after me to repair.

Mr. GRAHAM: Would my hon. friend ask about that in the department?

Mr. REID: I will inquire and send the hon. member a note to-morrow.

Trent canal—construction, $1,000,000.

Mr. MACDONALD: I wish the minister would ascertain at what date a gentleman by the name of Cinnamon was first employed on the Trent Valley canal.

Mr. REID: I will find out.

Item stands.

Enlarging Port Colborne elevator, $75,000.

Mr. GERMAN: Will that complete the elevator?

Mr. REID: Yes. It is proposed to enlarge the elevator from its present capacity of 800,000 bushels to 2,000,000 bushels at an estimated cost of $389,000. Mr. Jameson promises that it will be completed in June or July.

Mr. GERMAN: Last year the concrete that was used in the building was made from gravel brought from the United States. I would like to call the minister's attention to the fact that they can get plenty of gravel in Canada at the same price as from United States firms, and I would suggest that gravel be bought from Canadian rather than from United States firms. As long as the minister can get gravel from Canadian firms, pumped on the Canadian side of the boundary line, he should do it.

Mr. REID: As I understand it, Mr. Jameson, who had charge of the construction, purchased the gravel from a man living in Port Colborne, who had purchased it from a dredging company on the Niagara river; therefore, I suppose he did not know from which side it was pumped.

Mr. GERMAN: Mr. Jameson bought the gravel from a gentleman in Port Colborne, who purchased it from a United States firm, who pumped it from the United States side of the international boundary line.

Mr. REID: We will see that it does not occur again.

Mr. GRAHAM: Do I understand that they have put through that elevator this year over 20,000,000 bushels?

Mr. REID: 21,000,000 bushels.

Mr. GRAHAM: This is rather my elevator, and I take a little pride in it. I want to see whether our prophecy as to its usefulness has been fulfilled. I have been told by vessel-men that it is one of the most complete elevators for its size on the continent, and that it can handle cargoes as quickly as any elevator of its size in Canada. The people of Canada should be proud to know their elevator is at least up to the standard of company-owned elevators. Can the minister give us a comparison as to the cost of handling as between company elevators and this elevator.

Mr. REID: The total quantity of grain handled last year was 21,441,000 bushels. The elevator was not working at full capacity, as at that time the work of construction was going on. It is very probable they would have had a bigger run if the elevator had been in proper shape. The gross earnings were $98,358.36; total expenses, $45,311.30; and net earnings, $53,047.06.

Mr. GRAHAM: What was the cost per bushel?

Mr. REID: They do not seem to have figured that out.

Mr. GRAHAM: They ought to know what they charge a shipper for handling a bushel of wheat.

Mr. REID: I will have that information here when another item in the Suplementary Estimates is taken up.

Mr. GRAHAM: The minister will find there is a certain price per bushel, with a limited number of days for storage.

Mr. REID: We have a circular for the trade showing the rates, and I will bring it down and get it in 'Hansard' to-morrow.

Mr. GRAHAM: I suppose that one of the reasons why the addition to the elevator can be made at a reasonable cost is that in the original building we provided foundations for such additions.

Chambly canal—Renewing bridge, Deigneault's Crossing, $4,500; new lock gates, 6 $5,500.

Mr. REID: As the old wooden bridges have got past repair, we are replacing them by permanent steel structures.

Mr. GRAHAM: Why not wooden trestles?

Mr. REID: This is a canal. The estimate for the superstructure is based on the contract price for the bridge at Laroque's Crossing, now being built by the Hamilton Bridge Works. That accounts for $4,500. The $1,000 is to provide a pair of spare gates for lock 6.

Cornwall canal—Improving lower entrance, lock 15, $2,500; improvements, $1,200; rebuilding lower entrance pier, lock 20, $21,000; walls at upper entrance old locks 19 and 20, $4,500; total, $39,500.

Mr. REID: Mr. G. R. Phillips is finishing a contract for the lower entrance which will take up $2,500; rebuilding and extending the wharf at locks 17 and 18 will take $4,000. The old cribwork forming the outer end of the north entrance pier at lock No. 20 is in a very bad condition and must be taken down at once. It is proposed to remove the old cribwork pier, which is only eighty feet in length, and rebuild it with

reinforced concrete from bottom of canal, at the same time making it 200 feet long. The bulk of the work will be done in April, 1914, while the canal is unwatered, but the top of the old cribwork should be removed to at least three feet below water, after the close of navigation this season, to expedite the spring work. An appropriation of $3,000 was voted at the last session of Parliament to commence the work. The total estimated cost of the work is $24,000. The work is being done under contract. The next item is for walls at the upper entrance, old locks, 19-20, $4,000. As it seemed to be extremely unlikely that the old locks 18, 19 and 20 on the Cornwall canal would ever be used again for the passage of vessels, and as new gates for all these locks would be required at once if kept in condition, it was decided last year to permanently close them by the construction of concrete walls across the locks at the upper recesses. An amount of $6,000 was voted by Parliament last session for the closing of locks 19 and 20. While the canal was unwatered in April, 1913, the concrete wall was constructed across lock 20. It is proposed while the canal is unwatered in April, 1914, to construct the wall across lock 19. The work is being done by the canal staff.

Mr. GRAHAM: That lock No. 20 is nearly opposite the power house?

Mr. REID: Yes, right opposite.

Mr. GRAHAM: Some inquiry has been made of myself as to a claim by the New York and Ottawa Railway Company concerning some work they did at the time of the break in the Cornwall canal. My hon. friend will remember that a very serious break occurred in that canal in 1907 or a year later.

Mr. REID: Is that the time that Mr. Weller was sent down there?

Mr. GRAHAM: Yes, Mr. Butler was ill, and I wired for Mr. Weller to come and take charge of the work. A portion of the bridge of the company had been carried away and another portion had not been carried away. In order to expedite the restoration of navigation it was necessary to remove a certain portion of the bridge that still stood. My recollection is that the manager of the road was there with Mr. Weller, myself and the superintendent. We had no time to discuss ways and means; this thing had to be done quickly. After consultation with Mr. Weller, I said to the company: Do whatever Mr. Weller asks you to do to get your property out of the way so that we can get this work done quickly. I had it in my mind that the Government would pay for any work ordered in that way. Later a claim was made against the Government for damages to the bridge on account of the break and a certain amount was asked for this work. I refused absolutely to pay the account because there was a claim for damages included in it. I said that the company in building the bridge across the canal took the risk of any breaks that might occur. I do think that they should not be paid one cent for damages, but I think it would be fair to pay them a reasonable amount for the work I ordered them to do.

Mr. REID: I received a letter a few days ago from this company asking me to pay an account. I cannot recall whether there was anything in it for damages or not but they stated in this letter that the hon. member for South Renfrew (Mr. Graham) had been present and had ordered the work to be done. Of course, I quite understand that in a case of that kind there was nothing else to do and that the Government should pay for anything the hon. member, or the engineer, ordered done because you could not possibly wait. I asked the deputy minister to write to the hon. member and I said that whatever he had ordered would be paid for. Whatever arrangement the hon. member recollects having made in reference to the matter will certainly be carried out as far as I am concerned. If I find any difficulty in coming to a conclusion after going over the matter I shall certainly take it up with the hon. member and endeavour to come to some arrangement that is fair and just.

Mr. GRAHAM: The reason I did not settle the matter was that I would not consider any question of damages.

Quebec canals—Dredging, $31,000; new hull for derrick, $8,000; concrete facing dam at Valleyfield, $26,000; protection walls, lake St. Francis, $6,000.

Mr. REID: Of this $10,000 is for cleaning basins 1, 2, 3 and 4 and removing obstructions in the Lachine canal, and $3,000 for dredging on the Chambly canal; $8,000 is for the hull of our derrick built thirty years ago and which cannot last longer than one more season. This derrick is being used in connection with our dredge. We are asking for $26,000 for concrete facing, dam at Valleyfield. This contract was awarded to

Cossette and Company last summer but owing to difficulties in procuring the necessary plant the contractors were not in a position to commence operations before the end of the fiscal year. This is a firm belonging, I think, to Valleyfield. If I remember rightly, a few days ago we cancelled the contract and intend advertising again for new tenders.

Mr. PAPINEAU: When was the contract cancelled?

Mr. REID: Only a few days ago. We had been pressing this firm to proceed with the work and they refused. There was nothing else for us to do but to cancel the contract. I gave instructions to the department to call for new tenders, these tenders to be received, I suppose, withing two or three weeks, and then we intend awarding the contract to the lowest tenderer.

Mr. PAPINEAU: I understand that the contractors had already begun the work and had spent $3,000 or $4,000. I understand that after beginning the work the Montreal Cotton Company sent in a protest against the work proceeding because they had some barges of coal that they wanted to get through with the result that the contractors were shifted from one place to another and their work interfered with. I understand further that they asked for an extension of time but I believe that they did not receive any answer. They were told that their contract would be cancelled and that their materials would be confiscated.

Mr. REID: They asked for an extension of time but it was not granted. They did not show any inclination to go on with the work and they did not seem anxious about it at all. We urged them to go ahead. The hon. member states that they have spent $3,000 or $4,000. The engineer in charge of the work did not feel justified in giving them an estimate.

Mr. PAPINEAU: They did some work at the bottom of the river and prepared the foundation for the concrete wall. They were told they were to get a machine from a firm in Coteau, but they were not able to get it and they had to do the work by hand labour. The men were shifted about from one place to another whenever a coal barge would come in for the Montreal Cotton Company, and they were hindered in their work in that way. There were petitions presented against the awarding of the contract to this firm, and these petitions were originated by political opponents of the contractors, in Valleyfield. I understand the contractors' deposit has been forfeited, and I believe that to be absolutely unfair.

Mr. REID: We were anxious to have the work proceeded with, and after the contract was awarded last summer the engineer did everything in his power to try to get the contractors to proceed with the work, but they showed no inclination to do so. It seemed to me that they thought the prices were too low, and that they were holding back. The engineers of the department have been pressing on me for some time that the contract should be cancelled, and new tenders called for. The contractors did not live up to their contract; the time had expired, and I thought there was nothing else to do but to order the cancellation of the contract and to call for new tenders.

Mr. PAPINEAU: What about the deposit?

Mr. REID: We will keep the deposit unless they can show some reason why we should not.

Mr. PAPINEAU: I can assure the minister that the contractors are in a position to do the work if they are given an opportunity to do so.

Mr. ROBB: When was the contract given to this firm?

Mr. REID: 26th July, 1913.

11 p.m. Mr. ROBB: I submit to the minister's spirit of fair play these circumstances. These people were given the contract at Ottawa on the 26th July, and it is reasonable to think that they would have a week to get to work. They had hardly been awarded the contract when the Montreal cotton mills began to receive coal at this dock, and when the contractors started working at one place, the engineer would move them to another place, and then a barge would come in there and they would have to be moved back again. I was in Valleyfield at the time, and I knew all that was going on. It so happened that the lowest tenderers were Liberals. If they were not Liberals they were Ministerialists. The minister will know what a Ministerialist is. They formerly supported the Liberal party, and there was a row among some of the Conservatives when this work was given to Cossette Brothers. Immediately delegations started for Ottawa and petitions were sent saying that these contractors must be stopped from doing that work.

Mr. REID: I never heard of that before.

Mr. ROBB: The work was delayed; the cold weather came on in the fall, and they could not put men to work in the icy water. The contractors were prepared to go on with the work this spring, when they discovered that their opponents in Valleyfield were objecting to their doing the work. Then there was an arrangement with another gentleman who had been a life-long Conservative, to transfer the contract to him, but the political friends of the minister in Valleyfield objected to that and insisted on the minister canceling the contract, and punishing the Liberal contractors by forfeiting their deposit. That is the history of the case. The minister knows these men were punished at the request of his political friends at Valleyfield.

Mr. REID: The hon. gentleman is not fair in putting it in that way. All this has occurred recently, and I do not think it came before Mr. Cochrane at all, but, so far as I am concerned, it is the first time I have heard what the politics of the contractors are. I never heard mention made of that before. No person has been up to see me from Valleyfield or from any other place to have this contract transferred from this firm to a Conservative in Valleyfield, except one man, but I have never seen any petition.

Mr. GERMAN: What is that man's name?

Mr. REID: I think it is Boyer; but I refused to transfer it to him. I am informed by the officials that the object in getting this contract was to get a change in the contract on account of the railway the contractor was promoting in Valleyfield, or some other reason of that kind. At all events, I can assure the hon. member (Mr. Robb) that there was nothing political in the matter at all, and no suggestion of that kind was ever made to me. This firm did not seem to take any interest in the work, and if I had not been informed by the official that there was no chance of them going ahead, I would not have agreed to the cancellation of the contract.

Mr. PAPINEAU: I can assure the minister that these contractors have already spent three or four thousand dollars on this work, which is to cost $16,000. The contractors are really in earnest and intend to do the work. As my hon. friend from Huntingdon (Mr. Robb) has said, it is a political quarrel, and this cancellation of the contract is an attempt to choke them off and to confiscate the work they have done. Petitions have been signed in Valleyfield by 25 or 30 persons, and I have no doubt they have been forwarded here. The contractors were working at that contract for about two months last fall, and when they could not work in the river they were preparing material to commence the work this spring. They asked for an extension of time in good faith. I believe these contractors are the best men in Valleyfield to do that work.

Mr. REID: If they have spent $3,000 or $4,000 on a $16,000 contract, it is surprising to me that they never made application for a progress estimate.

Mr. PAPINEAU: They were preparing the material and getting in plant, and they could not have asked for an estimate before the concrete was put in.

Mr. REID: In every contract progress estimates are made on the material before it is put into the work. From July up to the present time these contractors have never asked for a progress estimate and they never made any claims since we have cancelled the contract.

Mr. PAPINEAU: It is well known in Valleyfield that they encountered so much opposition from the engineers that they preferred to cease work and ask for an extension of the contract this year.

Mr. REID: That may have been going on in Valleyfield; and it may have been the impression of the contractors; but, so far as I personally am concerned, their complaint never reached me and the chief engineer states that such a complaint as the hon. member states never reached him. I can assure the hon. member that the contract was not cancelled on account of the political situation; the contract was cancelled entirely on the recommendation of the engineers that these people would not go on with the work. They did not seem to have any desire to go ahead; and if we wanted to get the work done, the only thing to do was to cancel the contract and ask for new tenders.

Mr. ROBB: Is it the policy of the department to cancel all contracts that come before it?

Mr. REID: We certainly do not do so, as long as a contractor shows good intentions of completing his work. That has been the system with all governments.

When we award a contract and the work does not proceed and is not likely to proceed, then the contract is cancelled. I am satisfied that every government since Confederation have cancelled contracts during the time they were in power. It seldom occurs, but it certainly does occur.

Mr. ROBB: We have just told the minister that these men were so delayed last fall that it was simply impossible for them to do the work on account of his engineers who kept them back. The men were ready to go on with their work this spring and came to the minister asking for an extension of the contract so that they might do so. When their contract expired on the 31st of March, they applied for an extension of time so that on the 1st of April they might commence work when the ice went out, but they were not given that extension.

Mr. REID: So far as I understand from the officials of the department, these people never brought a dredge there at all, although a dredge was necessary for that work. They were trying to do the work with a diver. I do not remember meeting any member of this firm; but they interviewed the chief engineer a few days before the contract was cancelled, and they stated that they did not wish to go on with the work at all; all that they wanted was the return of their deposit. I acted entirely on the recommendation of the officials of the department, and no one asked me to cancel this contract because these men were not supporters of the Government. We have cancelled the contract; they have not asked for any more than their deposit back, and that is a matter that I personally have not the power to decide. Once a deposit is made on a contract, it requires an Order in Council or a vote of the House to refund it. We would have to put it in the Estimates, and a matter of that kind would have to be considered by Council before it could be brought before the House.

Mr. PAPINEAU: One of the contractors came to Ottawa on the 30th of March. I have seen him since then, and he told me that he had received a letter stating that he was liable to forfeit his deposit. There must be some understanding, as the contractors seemed anxious to keep the contract and would have kept it had they been allowed to do so.

There was a question of having a dredge on the work, but I understand that the engineer in charge advised the contractors that the work could be done with a dredge; but a dredge could not be procured at that time as all were at work for the season. There was nothing left but to do the work by day labour, and they worked in that way for some weeks. I am surprised that they did not get an extension of time, because I saw them last week, and they seemed anxious to do the work.

Mr. REID: The matter was handled by the engineers of the department; I acted on their recommendation, and the contract was cancelled. We cannot do anything now but have a new contract. There is the question of the deposit which will have to be taken up at some future time.

Mr. GRAHAM: After the lengthy statement by the hon. member from Beauharnois (Mr. Papineau), who seems to know the situation thoroughly, I hope the minister will look into the matter; and if it is as stated, that the men were prevented by the engineers from proceeding with the work for certain reasons, I think it might well be considered a case for the return of their deposit; because deposits have been returned before when the contractors have not been at fault.

Mr. REID: I will certainly look into the matter; and, if conditions are as the hon. member states, the contractors are certainly entitled to consideration. We do not want to take advantage of them if the fault has not been theirs.

Mr. PAPINEAU: Many affidavits can be produced in proof of what I have stated.

Mr. GRAHAM: We had better let this item stand so that we can discuss it again.

Item stands.

Soulanges canal — rebuilding of wharfs, $10,000.

Mr. ROBB: Where are they building these wharfs?

Mr. REID: The two wharfs mentioned were built by the Department of Public Works at the time of the construction of the canal, and they have both fallen into decay to such an extent that they have to be entirely rebuilt. These being on a canal it seems reasonable they should be under the jurisdiction of this department.

Soulanges canal—draining Clements' gully, $50,000.

Mr. REID: This ditch which is cut through the very soft clay to be found almost everywhere on the Soulanges canal has always given a great deal of trouble and its maintenance therefore has been exceedingly

expensive. The concrete abutments of a number of farm bridges spanning the ditch have fallen down, and it is only a question of time when the others will tumble down also. It had been intended to line the bottom and slopes of the cut with concrete slabs and to reinforce the floorings of the bridge at a cost of $40,000. But the scheme now proposed comprises the laying of 7,200 lineal feet of 4½ feet reinforced concrete pipe. This will entail a somewhat larger expenditure, but when completed the cost of maintenance will be reduced to a minimum.

St. Peter's canal—Improvements, $135,000.

Mr. KYTE: How much has been paid the contractor?

Mr. REID: About $60,000 has been paid up to the present time.

Mr. KYTE: I think the tender put in by the present contractor was very much lower than the tender of the next above him.

Mr. REID: Very much.

Mr. KYTE: So much so that it would be scarcely possible for him to make a profit, assuming that the others were right. Did I understand the minister to say this afternoon that the changes proposed in the plans involved $100,000?

Mr. REID: The tenders received were W. H. Weller, $266,887; M. Connolly, $369,040; Haney, Quinlan & Robertson, $395,565; and Brown & Aylmer, $427,525.

Progress reported.

On motion of Mr. Reid, the House adjourned at 11.20 p.m.

Tuesday, April 28, 1914.

The House met at Three o'clock, the Speaker in the Chair.

PRIVATE BILLS.

FIRST READING.

Bill No. 161, respecting the Western Life Assurance Company.—Mr. Bradbury.

RESUME OF GENERAL ELECTIONS.

Mr. MARCIL: I desire to draw the attention of the Prime Minister and the Government to the fact that a pamphlet has been distributed to members of the House containing a resumé of the general elections of 1896, 1900, 1904, 1908 and 1911, and of by-elections held between June, 1, 1896, and January 1, 1914. This work is a valuable one, but it does not cover the whole period from Confederation. I would ask the Prime Minister to instruct the Clerk of the Crown in Chancery to prepare a similar resumé for the period between 1867 and 1896. This would give a complete record of all Dominion elections from 1867 to 1914 in a handy reference book. I may state that with reference to general and by-elections held between Confederation and 1896 there is very little information available. From what I know of the Clerk of the Crown in Chancery he is the man to prepare such a resumé. Every year's delay in the preparation of this election record means so much more difficulty in obtaining the information necessary for its proper preparation. I am sure that the right hon. gentleman will give the subject due attention and will see that the work is done.

Mr. BORDEN: I shall be glad to give consideration to it.

NEWFOUNDLAND SHIPPING DISASTER.

PROPOSED AID FOR SUFFERERS.

Mr. BORDEN: I desire to allude to a matter which I mentioned a few weeks ago. At that time we had tidings of a very regrettable disaster which had befallen a number of fishermen of Newfoundland. I then informed the House that the Government intended to bring down an appropriation of the sum of $10,000 to assist in the relief of the families of those who had been lost. Since that time it has transpired that, most unfortunately, the disaster was much greater than then known. It has been definitely ascertained that the steamer Southern Cross with a very large number of persons on board has been lost and that the number of sufferers will be two or three times as great as when I made the announcement to the House previously. Under the circumstances, I think we shall all agree in the desirability of increasing the appropriation. I take the opportunity of announcing that we propose to increase the grant from $10,000 to $25,000 for the purpose of relieving those who have suffered in this way.

Sir WILFRID LAURIER: The circumstances which have come to light since my hon. friend made the announcement some time ago of the Government's intention to give $10,000 are such, I think, as to justify the increase, and I have great pleasure in supporting it.

QUEBEC MARINE AGENCY.

ALLEGED IRREGULARITIES.

Sir WILFRID LAURIER: I have seen reports in the press of this date to the effect that certain officers of the Marine Department at Quebec have been suspended. Can my hon. friend the Minister of Marine and Fisheries give us any information on the subject?

Mr. HAZEN: Last week the attention of the Marine Department was called to the fact that there was reason for believing that very serious irregularities had occurred in the Marine and Fisheries agency at Quebec, covering a number of years. In consequence of the information that was received, Mr. Doutre, the purchasing and contract agent of the department, was sent to Quebec, and, as a result of the inquiries Mr. Doutre made, and the information which he received while there, he has been placed temporarily in charge of the Marine and Fisheries agency in that city, four officials have been suspended, and a thorough inquiry is to be made at once into the charges which have been made. The charges which have justified this action on the part of the Department of Marine and Fisheries are to the effect that in the years 1908 and 1909, and possibly in subsequent years—the full facts are not known—the pay-lists of the department were padded; the names of fictitious persons were put on the pay-lists as well as the names of others who, while employed by the department, were not employed in the capacity designated on the pay-list. These pay-lists were certified by the timekeeper, by the accountant of the agency, and by the paymaster, and went through the usual departmental channels and were paid. There is, I think, no doubt whatever about this having occurred, as it is practically admitted by one of the clerks in the agency, and, I am informed, by the accountant of the agency himself. As to the position the agent occupies in the matter, there may be difference of opinion; that will have to be ascertained by investigation. Mr. Beland, it is fair to say, told Mr. Doutre that he had no knowledge of the matter at all; other officials of the department say that Mr. Beland did know what occurred, and that in doing what they did they were acting under his instructions. It is said that the persons who got this money did not themselves benefit by it; but the information is that certain bills were incurred which the purchasing agent of the department at Ottawa refused to sanction, and that for the purpose of paying those bills fictitious names were placed upon the list, the money drawn in the names of these fictitious persons, and then used for the purpose of paying the bills. This action involved conspiracy; at least, I think that is the case—I do not want to make statements that will not in future be verified—but it seems to me it involved complicity amongst a number of the officials of the department and in some cases involved what was practically forgery, because the checks were sent payable to the parties whose names had been placed on the list, and these checks were endorsed by somebody with the names of those to whom they were payable. In addition to that, a charge is made to the effect that certain junk and properties were disposed of by the agency and that no account was made of the moneys received. In that case an explanation is given to the effect, I believe, that in connection with some celebration which was held in Quebec the money that had been obtained through the sale of this junk and old material was used to defray certain expenses of decorating the agency premises. But the fact was never reported to the department; no return was made of the money, and no account was ever sent in for these expenses. The amount, however, is, I believe, comparatively small. In view of the circumstances, we have thought it desirable to ask the Governor in Council to sign an order appointing a commission under the Enquiries Act to investigate the whole matter. That commission, which will consist of Mr. Doutre, the contract and purchasing agent of the department, and one of the officials of the Justice Department, will proceed at once to ascertain exactly what the state of affairs is. I may say that the statement is made—and it would appear on the face of it to be a frank statement—that nothing of this sort has occurred since the year 1909; that these irregularities, which have since come to light, originated in the years 1908 and 1909. But we are told of another case where an official employed in the department placed his own name upon the list two or three years ago as having done work as a mechanic, to the amount of $20. The statement is made to us that this money was used by him, not for his own private

purposes, but to pay an account that had been contracted at Bic, I think, by the agency on his instructions, which the department refused to recognize, considering it not a proper charge to make. The report of the investigation of the commission will be laid before the House as soon as it is received.

THE ST. JOHN VALLEY RAILWAY.

On the motion of Hon. W. T. White (Minister of Finance) for Committee of Ways and Means:

Mr. F. B. CARVELL (Carleton, N.B.): Before you leave the Chair, Mr. Speaker, I desire to call to your attention and to that of the minister a matter of great importance, not only to the province of New Brunswick, but to the Dominion of Canada as a whole, regarding the construction of a railway in our province known commonly as the St. John Valley railway, but legally as the St. John and Quebec railway. I regret being compelled to bring this matter up this afternoon when my hon. friend the Minister of Finance is anxious to enter into the consideration of tariff matters, but as I may be called away at any moment I feel that I would not do justice to myself and to my constituents in the province of New Brunswick were I to leave this House without laying before the Government and the country certain facts of grave importance which I think should be given to them.

It is well known that very grave charges have been laid against the Premier of New Brunswick by Mr. Dugal, a member of the legislature, on two important matters. The first is in connection with the extension of timber licenses; with that I do not intend to deal at the present time, because we have the promise of the Government of the province of New Brunswick that a tribunal will be created to give that matter a thorough investigation, with that matter I will deal at the proper time and in the proper place. We are also promised that a tribunal will be created to investigate certain matters in connection with the St. John and Quebec Railway Company. In so far as those matters can be properly discussed and investigated before that tribunal, I do not propose discussing them here this afternoon.

But I want to discuss a side of this question which appeals to this Government, to this Parliament, and to the people of Canada as a whole. You will remember, Sir, that there is an agreement on our statute books— placed there as a result of a number of different statutes—by which the Government of Canada have agreed to take over and operate this railroad as a portion of the Intercolonial, as soon as it is in a position to be taken over. In fact, the Government agreed to take over each individual section when completed; and they agreed to pay the company owning the road forty per cent of the gross earnings, upon which the province of New Brunswick were to have a lien for the interest on the bonds. The balance, if any, would go to the company as their own private property. As the House of Commons is going to operate this road for sixty per cent of the gross earnings, it is a matter of great importance to the people of this country that the road be properly constructed, that it be properly located, and that it be not over-capitalized and generally that it is a proposition from which sixty per cent of the proceeds will make a proper fund for operating the road.

As regards the inception of this transaction, I take credit to myself in so far as I am entitled to it. It is an absolutely justifiable proposition for the people of New Brunswick and for the people of Canada as a whole—a proposition which was justifiable from any standpoint whatever under the original inception, a proposition which, in my judgment, could have been carried out and made a paying proposition to the people of Canada or to any person. This agreement was entered into in the session of 1911, between the Dominion of Canada and, we might say, the province of New Brunswick, because they were really the contracting parties. It was agreed in this House that they were to build a road through New Brunswick up to the standard of the Transcontinental, and that the road was to go from Grand Falls to St. John, N.B. It was to run from the Transcontinental to the port of St. John, and was to be a highway over which the commerce of the Transcontinental intended for export from the city of St. John should pass. It was to be a road in every sense of the word, and equal to the Grand Trunk Pacific or Transcontinental in grade, curvature, and general make-up. Prior to the election of 1911, there was a good deal of backing and filling between my hon. friend the Minister of Marine and Fisheries, then Prime Minister of New Brunswick, and this Government. I am not going into the details of that as it is ancient history, and plays no great part in the important

matter which we have to consider at the present time. Suffice it to say that no agreement was ever come to before 1911 by which they were to commence the construction of the road. We supposed we had them to the sticking point a good many times but they always got away from us. They promised first of all that it was going to be next month, then next week, then the next day, and then the next day and this went on until the 21st of September, 1911. Up to the 21st of September, 1911, when the Liberal party was defeated, the contract had not been signed by the Government of New Brunswick, but the moment my hon. friend's party came to power the whole matter was plain sailing. Instead however, of a contract being entered into between the province of New Brunswick and the St. John and Quebec Railway Company whereby a road was to be built of the character which we had stipulated—the character set forth in the statute of 1911—this Government passed legislation authorizing a contract between the province of New Brunswick and the company for the construction of a road of an entirely different character—a road of any specifications which the contracting parties could agree upon. What was worse, it referred to certain schedules when there were no schedules in the Act. Therefore, the matter was left wide open. I will not take up the time of the House reading about this point as it was all placed on 'Hansard' last year. I have referred to the statutes; I quoted the original statute, and the statute of 1912. If my hon. friend the acting Minister of Railways wishes to inform himself on this point, he will find the vicious section in chapter 49 of the statutes of 1912 wherein it is provided that the road shall be built according to the specifications agreed upon. Now, the specifications agreed upon are something we know nothing about—except the information that was given us in a return brought down last session.

Mr. J. D. REID: You have seen the specification, then?

Mr. CARVELL: No, I saw no specifications. I only got some correspondence. I asked for plans and specifications a number of times, but the Minister of Railways told me it would be an endless job preparing the plans, but that I was at liberty to go to the department at any time to examine them. I have no fault to find with the Minister of Railways and Canals—I am speaking now of the Hon. Mr. Cochrane as I assume the acting Minister of Railways knows nothing whatever about it—he is disposed to do what is right in the matter. He is willing to give us all the information in his possession if we like to go over to the department, but as it was so very voluminous and as I could not carry it in my head I did not get it. Certain returns were brought down in this House a year ago, and were discussed by myself on the 3rd day of June last. My hon. friend will find the discussion if he refers to 'Hansard' of that date. According to those returns it appears that the company was allowed to put in 7 degree curves and 1 per cent grades wherever they wished. The result is that they have built 117 miles from Gagetown to Centreville; the two miles through the city of Fredericton have not been built. I do not mean to say that every mile of the 117 has been completed, but they have been working over that distance. I make the statement here, Mr. Speaker, that it is not a first-class road, it is not a second-class road, it is not even a third-class road. The only thing that can be said in its favour is that it has 80 pound steel rails, and so far as the railway is completed it has a reasonable amount of ballast. The bridges—what few of them there are—are to be of steel, and the larger culverts of concrete. So far as that goes, it is all right, but there are dozens and dozens of little corrugated iron culverts. I can tell the minister of one place where there is a three-foot corrugated culvert under a twenty-foot embankment. The culvert is broken down, and it is almost impossible for trains to get past that point.

After the remarks which I addressed to the minister a year ago, he promised me that he would have these things remedied. I told him that the road was not being built upon the plans and specifications in his office. I told him not to take the word of the company, but to put his engineers upon the right-of-way and take the levels. I told him to go to the contractors and ask them. I told him about these culverts. I believe that they did make an investigation but the trouble was that instead of the railway company changing their road to meet the plans and specifications, they changed the plans and specifications to meet the road. I happen to know that new plans and profiles were prepared. It took nearly half of the summer of 1913 to bring these things to completion. They made new plans and profiles in order to

meet the conditions and there are dozens and dozens of places—I think I am safe in saying hundreds of places—anyway, there are dozens and dozens of places, where the plans show a certain curvature while the actual curvature is much greater. I am informed that new plans have been prepared to meet these conditions. That is the character of the road. In every place where it was possible to do so they have used a seven degree curve and a one per cent grade. While I have never put a level upon this road myself, I can take the minister to places where the grades are greater than one per cent. If the minister will come with me, or if he will give me an engineer, I will tell him the places to look for them. He will find that there are grades greater than one per cent. I can take the minister to places where he can find four seven degree curves in a mile and one-quarter on a one per cent grade. I can take the minister to a place where he can find a swamp with about two feet of earth on the top of the bog and where he can run down a pole seven feet in the soft mud and no ditch on either side of the railway.

Mr. J. D. REID: Well, then, the railway is not completed.

Mr. CARVELL: It is completed; it is taken off the contractors' or the sub-contractors' hands, and the sub-contractor agreed to build the road. The sub-contractor was my own brother and I know what I am talking about.

Mr. J. D. REID: But the Government have not taken it over.

Mr. CARVELL: The sub-contractor has been paid off in full. I am not talking through my hat; I am stating the facts. The sub-contractor has been paid in full, the road has been finished to the satisfaction of the engineer, that is the condition of affairs. I am only pointing out to the minister the kind of road that he is going to take over, operate and upon which he is going to pay back to the province of New Brunswick and the company forty per cent of the gross earnings. I want the minister to consider whether he can run a train over that kind of a road and make any money out of it. If the minister will send an engineer, or go himself with me, I will take him to the place where the conditions exist which I am pointing out to him now. He can visit them himself and see whether I am stating the actual facts or not.

The next important point is with respect to the location. As I stated some time ago, when the scheme was first originated, the road was to run from Grand Falls to St. John. It was to be the outlet of the Grand Trunk Pacific traffic which was intended for export through the port of St. John. If my hon. friend will look at the statutes of 1912, chapter 48, The Railway Subsidies Act, he will find that the subsidy reads as follows, subsection 2 of section 2:

> For a line of railway from St. John to Grand Falls, N.B., exclusive of a railway bridge across the Kennebecasis river, at or near Perry Point, and two railway bridges across the St. John river, one at or near Mistake and one at or near Andover; in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 12; not exceeding 228 miles.

The original subsidy provided for a line of railway from Grand Falls to St. John, and that was only a revote of the subsidy passed by this House in 1910, also for a line running from Grand Falls to St. John. If the minister will take The Railway Subsidies Act of 1913, chapter 46, section 2, subsection 4, he will find the following in place of the Act to which I have just referred:

> To the St. John and Quebec Railway Company, for a line of railway from Andover to St. John, N.B., exclusive of a railway bridge across the St. John river, at or near Mistake, and a railway bridge across the Kennebecasis river at or near Perry Point in lieu of subsidy granted by chapter 48 of 1912, section 2, item 2; not exceeding 200 miles.

In other words, this Government, in renewing the subsidy in 1913, cut out that portion of the road from Andover to Grand Falls. They have made it impossible to make connections with the Grand Trunk Pacific, and if they do not make connections with the Grand Trunk Pacific they can not pay for axle grease. The Intercolonial railway will lose, I believe, hundreds of thousands of dollars a year in trying to operate that road as a local institution. While it runs through a progressive, well-settled country, the most productive and fertile portion of New Brunswick, it would simply carry out the farm produce of that territory, because in that portion of New Brunswick there is practically no timber. It would only be for the use of the farmers, and running through a large portion of New Brunswick from Andover to St. John, or, as I believe they intended to go only to Westfield on the Canadian Pacific railway, they simply could not operate it except at a loss of hundreds of thousands of dollars. The only way it

was safe, either from the standpoint of the province or of the Dominion, was to carry out the original intention to run from Grand Falls down to St. John.

We protested against this proposition. I can tell you that we knew our friends in New Brunswick perhaps better than the minister did; we knew the hon. Minister of Marine and Fisheries (Mr. Hazen), we knew the hon. member for York (Mr. McLeod), we knew those gentlemen who were running the province of New Brunswick at that time, and in the year 1912 when this Parliament voted $1,000,000 to aid in the construction there was a protest, to which I shall refer later on. My hon. friend from Victoria and Madawaska (Mr. Michaud), through whose county this portion of the road ran, moved that at least $250,000 of this $1,000,000 be set aside to build a bridge across the St. John at Andover which would have to be built in order to make connection with Grand Falls. We did that because we did not believe that they intended to go to Grand Falls. The Minister of Marine and Fisheries in his blandest manner, and that is saying a good deal, assured the committee, for the House was in committee at the time, that it was not necessary to take any such step as that, that there was no doubt whatever that this road was going to Grand Falls, and he asked the committee to disregard the vapourings of the hon. member for Victoria and Madawaska, and the hon. member for Carleton. They were only throwing dust in the eyes of the people, they were only playing their own game of trying to defeat the construction of this road! This is what they have been firing in our faces for three or four years. Every time that we have pointed out the iniquities of these gentlemen we have been told that we are only trying to prevent the development of this work, that we are only trying to prevent the construction of this road, and every Tory paper in New Brunswick will come out to-morrow morning and say: Carvell is at his old tricks trying to prevent the construction of this railway. I know their game; I can almost hear it sizzling through the press gallery now. But we know what we are talking about. The Minister of Marine and Fisheries was in control at that time, and he opposed the amendment of my hon. friend from Victoria and Madawaska. The next day the Bill came up for third reading, and in the absence of my hon. friend I moved the same amendment, and we put the members on record, as you will find in the 'Hansard' of 1912. That was voted down. The next year, 1913, the very thing happened which we were afraid of in 1912, because when the Subsidy Bill came down, we found that that section from Grand Falls to Andover was left out, and, of course, it would not be necessary to build these bridges. Well, my hon. friend from Victoria and Madawaska (Mr. Michaud) got interested again, and he called the attention of the Minister of Railways to this fact, and he asked why they cut out the subsidy on the road from Andover to Grand Falls, 25 miles, and what it meant. The Minister of Railways practically told him they were going to make some sort of a trade for running rights over the Canadian Pacific railway for that distance, as will be found reported in 'Hansard' of June 3, 1913, columns 11672-11673. Then I asked the Minister of Railways if they were going to cut out the subsidy and did not intend to build the road, if he would agree that a certain proportion of the bridge money should also be withheld. The Minister of Railways said: 'Certainly, we will hold the bridge money.' Then I told him, in as polite language as I could, that I did not believe it, and I told him further that they would be back inside of a month for that money. Here is the emphatic statement of Mr. Cochrane—I will read the whole reference:

Mr. Carvell: The minister will remember that last session this Parliament agreed to lend $1,000,000 to the St. John and Quebec railway for the purpose of helping to construct three bridges. If this proposed agreement with the Canadian Pacific railway goes through, it will be unnecessary to construct the Andover bridge.

Mr. Cochrane: At present, anyway.

Mr. Carvell: Will the minister pay that $1,000,000 to the company or will he retain a part of it?

Mr. Cochrane: No, the vote is for three bridges and we should not have authority to pay it out for only two. We shall have to deduct a portion for the Andover bridge.

Mr. Carvell: I am glad to hear that statement. But I want to tell the minister that they will be here inside of one month to have that $1,000,000 voted for the two bridges, the Mistake and Kennebecasis; and more than that, the minister will give it.

Mr. Cochrane: The hon. gentleman may know more than I do, but the minister will not give it.

But, did he give it? Why, Sir, when you talk about $1,000,000, I must confess I did not know these gentlemen as well as I thought I did, for instead of wanting $1,000,000 they are back here now for $3,000,000, and they are going to get it. That is what I am afraid of.

Mr. MURPHY: Dash away with the money.

Mr. CARVELL: Yes, dash away with the money. I will tell my friends opposite where they are dashing this money away, and I want the acting Minister of Railways to be seized of all the facts of the case. Things have been travelling fairly rapidly in the province of New Brunswick over this Valley Railway question in the last three or four months. These gentlemen have a double subsidy of $6,400 a mile, and they have drawn every dollar which they are entitled to, and I think a good deal more. But, there again, I do not blame the Minister of Railways, because from my personal knowledge the Minister of Railways has held these people down just as tightly as he possibly could hold them, and I have personal knowledge that he has refused to pay them the money they wanted. It is true he is compelled to pay them according to a certificate handed into his department, but I do not think the Minister of Railways is in league with these gentlemen in any way, shape or form, and I believe that if this thing were left to the Minister of Railways it would be perfectly straight and aboveboard. I feel it is only fair to say that, in the absence of the Minister of Railways; but I must say it on account of the way he has treated me and the information he has given me, whenever I have gone to him for information.

I do not know that the over-payments on this subsidy amount to a very great deal anyway, because I believe that when this road is completed it will cost $21,400 a mile, and that is all it must cost to entitle them to the full double subsidy.

In addition to that, they have received a four per cent bond guarantee from the province of New Brunswick for $25,000 per mile, which makes altogether $31,400 per mile. When the original act of New Brunswick, 1910, went through, it was provided they could sell these bonds either in block or in smaller quantities, but of course they sold them in block, to the extent of the 120 miles. It was provided under that legislation that these bonds must not be sold less than 98, but when this crowd of shrewd Yankees, to whom they have handed over the province of New Brunswick, found they were having some difficulty in doing the proper amount of boodling on that transaction, they came back to the province of New Brunswick, and they promptly amended the Act for them and allowed them to sell the bonds at 95.

Mr. LEMIEUX: Who did that?

Mr. CARVELL: The legislature of New Brunswick did that. My hon. friend from York (Mr. McLeod) can tell you who was responsible for it.

Mr. GAUVREAU: Was he there?

Mr. CARVELL: Most certainly he was there. They allowed these gentlemen to sell these bonds for 95. That was away back in 1912. There was no necessity for selling New Brunswick four per cent bonds for 95 in 1912.

Mr. LEMIEUX: To the Yankees?

Mr. CARVELL: I will tell you about the Yankees later on. In the year 1909 or 1910, a company was incorporated in the province of New Brunswick, known as the St. John Valley Railway Company, composed of local people. I do not say they were capitalists, but they were good men anyway, and they represented both sides of politics; men who honestly wanted this road to be constructed. I want to tell you, Sir, that there is no road under construction or under discussion in Canada to-day that was needed more than this railway between Grand Falls and St. John. The Minister of Trade and Commerce is listening to me, and I am glad of it, because he knows this whole question. He knows the history of the people along the route of this railway; he knows the conditions there; he knows what the people suffered, because he has represented two of the constituencies along the route, namely, the counties of Kings and York, which are vitally interested in this matter. This portion of the province of New Brunswick has been settled for 125 or 130 years by the United Empire Loyalists, the finest stock I believe in Canada to-day. The settlers there had been closed up in the winter months, twenty-five or thirty miles away from railway communication, and they consequently suffered great hardships. This condition of affairs existed in portions of Kings, Queens, and York counties. There is no place in Canada where railway facilities are needed more than just along the route where this road is being built.

In the inception of this project everybody was working together, everybody was working for the common weal. As I have said, a company of local people was incorporated for the purpose of the construction of this road. But when the thing became almost a certainty, and it looked as though the road would be built, then you could see

something else commencing to work. The Minister of Marine and Fisheries, I have no doubt, will tell the House the rest of that portion of the story, because there is nobody better qualified than he to give the history of that aspect of the case. Suffice it to say that in 1910, a certain gentleman was imported from the United States, by the name of Arthur R. Gould. Instead of blaming Arthur R. Gould, I have an intense admiration for the man. He is a bright, shrewd, industrious Yankee, a man who could twist the Minister of Marine and Fisheries, and the member for York (Mr. McLeod), and the Premier of New Brunswick, all up together in balls and throw them over this building half a dozen times; a man who could mould and chisel these people just as he could a piece of putty; a man who says to these gentlemen, I want $25,000 a mile, and I want the right to sell the bonds at ninety-eight, and he gets the legislation; a man who could come back two years afterwards and say, I want the right to sell these bonds at ninety-five, and he gets that right; a man who could say to them, I want $10,000 a mile in bonds additional to what I have got, and I will negotiate this transaction through a Mr. Lisman of New York, and he gets that right; a man who did come back a few weeks ago and said: 'Well, legislation is a failing of mine, and I fell down and did not get the money; you had better grant me another $10,000 worth of bonds.' He got that also, so that he has now received $35,000 worth of bonds. He was not satisfied with the last issue at 4 per cent and he got them at 4½ per cent. If Mr. Gould is not entitled to some credit, I do not know who is. A man who can come to the province of New Brunswick and twist the Government and the Legislature of that province around his finger and bleed our people to the extent of four or five or six million dollars, is a man of some proportions. Why was Mr. Gould brought over? Before the election of 1911, we were determined that this road should be operated by the Intercolonial. My hon. friends had a wonderful leaning towards the Canadian Pacific railway. When this company was incorporated in 1910, nothing would do but an electric road. As Mr. Gould was the representative of the Canadian Pacific railway in the state of Maine, he was imported into New Brunswick, and became the only man on earth with whom my hon. friends would do business, and they gave him what he wanted. In 1911, Mr. Malcolm, a railroad builder who has built the International, a 112 mile railroad, on a bond guarantee of $8,000 a mile and a subsidy of $6,400 a mile, and who has financed the rest of that road himself, with the assistance of the owners and managers of the Toronto Mail and Empire, who are the men of means and who know how to handle their means, offered to take the bond guarantees and subsidies and build the road up to the standard existing at that time, which was the standard of the Transcontinental railway. He was, however, simply laughed to scorn by my hon. friend the Minister of Marine and Fisheries. The Government would not listen to him; they would hardly give him civil replies, and he was practically kicked out of Fredericton. In their opinion, this road must be given to Gould, and therefore they gave him an act of incorporation in 1910, at which date there were associated with him four other gentlemen, respected and responsible residents of the province of New Brunswick.

After the election of 1911, when this party came into power and saw visions of millions and of having everything in their own hands, the funny business commenced. A very important lawsuit has been going on in the city of St. John, where there resides a gentleman of the name of J. D. Seely, an honourable, upright, estimable gentleman, and a man of some financial ability. The only failing he possesses, so far as I know, is that he is a Liberal; and, of course, he had to be squeezed out, as it would not do to leave him in. This is how they got him out. My hon. friend the member for York, N.B. (Mr. McLeod), is given credit in the courts as being the gentleman who engineered the matter. Mr. Gould applied to the legislature for certain amendments to his act of incorporation. There is a rule in the Legislature of New Brunswick that notice must be given in the newspapers, &c., but they did not give any notice as to the real issue in the Bill.

Mr. McLEOD: Is that an Act of 1912?

Mr. CARVELL: Yes, chapter 18. The original Act was in 1910, chapter 52, which has sixteen sections. The purpose of the Act of 1912 was to amend the Act of 1910 and to add certain sections. Section 17, an unimportant one, was added; and then came the real fine Italian hand of my hon. friend the member for York, N.B., and of the Premier, according to sworn testimony

4 p.m.

given in the court at St. John last week. Section 19 reads as follows:

> No person shall after passing of this amending Act be a director of the company, unless he is a shareholder holding fifty shares of stock in the company, which have been paid in cash and not otherwise to be extent of the full par value thereof.

Unfortunately Mr. Seely did not meet those requirements, as he had not paid for his fifty shares in cash. Section 19, which is as follows, was added:

> The issued shares of the company which on the 10th day of April, A.D. 1912, had been fully paid up to the extent of the par value thereof in cash and not otherwise shall, on the date of the passing of this amending Act, constitute the whole of the issuing shares of the company.

This Act was passed on the 20th day of April, 1912, and provided that only those men who actually subscribed and paid up their money to the extent of $5,000 on the 10th day of April were eligible to be directors of this company; and, as Mr. Seely did not come within that provision, he was squeezed out. In St. John, sworn testimony was given that Flemming and McLeod engineered this matter. I do not know, because I was not there; I am only giving the sworn testimony as reported in a St. John newspaper. This is the way in which they did so. As this was a private Bill, these sections could not be added because notice had not been given. Therefore, they made a Government Bill of it; they were able to put the Bill through without notice and squeeze Mr. Seely out, and then Mr. Gould had the whole thing in his own hands. He, however, was afraid of trouble and tried to settle with Mr. Seely. In the first place, he gave Mr. Seely his note for $4,000, which he paid. Then he gave him the note of the St. John and Quebec Railway Company for $12,000. It is important to remember the different names, as they are so nearly alike that sometimes they get mixed up. This note was endorsed by the Quebec and St. John Construction Company. Mr. Seely sold the note to Mr. Nagle, a prominent gentleman in St. John. At its maturity, the companies refused to pay the note. Mr. Nagle brought suit, and the matter was tried out the week before last; the case was adjourned until yesterday, and I presume has been settled before now.

The point at issue in the court was that Mr. Seely obtained the endorsement of the Quebec and St. John Construction Company by some fraudulent representations. It is not denied that the note was given nor that Mr. Seely endorsed it to Mr. Nagle as a bona fide business transaction; but it is claimed that in some way the Quebec and St. John Construction Company were misrepresented when they endorsed the note, and they therefore claim that they were not liable. In this lawsuit some very important evidence became public. According to the Act, the Dominion subsidy was voted to the St. John and Quebec Railway Company—not to the railway, but to the company. The St. John and Quebec Railway Company was incorporated in 1910, its Act was amended in 1912 by the Legislature of New Brunswick, and it is the company which squeezed out the Canadian directors and left only the Yankees and a man of the name of Ross Thomson, who, I believe, was originally a Canadian, but was brought over here by Mr. Gould. It does not make very much difference who the directors of the railway company are, because they have not got anything. My friends talks about Mackenzie and Mann financing. Why, they are only in the infant class, in the kindergarten class, compared with these fellows in New Brunswick. The St. John and Quebec Railway Company, with the knowledge and consent of the New Brunswick Tory Government, assigned the stock over to a man by the name of—well, I have forgotten his name; perhaps my hon. friend from York (Mr. McLeod) can give it, as he is more familiar with these things than I am. At any rate, this man is a clerk in Mr. Gould's office. He assigned all the stock of the company, $2,000,000—all the bonds, all the subsidies, all the contracts with construction companies to build the road—over to the Quebec and St. John Construction Company. Now, the Quebec and St. John Construction Company does not have Mr. A. R. Gould as its president, but it does have Mr. A. R. Gould's son. And Mr. A. R. Gould's son and his American associates are the men who are getting our good money and taking it to New York, and the road is being built from New York. We cannot investigate the thing, because the money is all handed over in bulk to the New York concern, and the New York concern are doing the real trick. I think I have made good my statement that Mackenzie and Mann are only in the kindergarten class of finance as compared with these people. Because, while it is

alleged that Mackenzie and Mann, or the Canadian Northern railway—I do not know this, I am only saying that it is currently reported—assign their bonds and subsidies over to the Mackenzie and Mann Construction Company, yet the Mackenzie and Mann Construction Company live in Canada, and you can get at them and investigate them and know what they are doing. But the Tory party in New Brunswick hand over millions to an American concern who are doing their business in New York, and the books are kept in New York.

We are going to try to investigate this thing. I know we shall have a lot of trouble trying to get those books. I see that my very dear friend, Mr. Flemming, the premier of New Brunswick, has so far recovered from a recent illness that he is able to take a trip to New York, ostensibly for his health; but I think almost any member of the House, in view of the information I have given, can understand the real reason of that gentleman's trip to New York. And I have no doubt that if we ever get those books in court we shall find them doctored up in pretty good shape. But we will get them if it is possible to get them.

Mr. EMMERSON: Under what Act is the Quebec and St. John Construction Company chartered?

Mr. CARVELL: The Quebec and St. John Construction Company is chartered under the provisions of the Dominion Joint Stock Companies Act. I have the facts here, and, as my hon. friend has asked me, I will give them. I read from a synopsis of the letters patent, at page 47, I think, of the last report:

Quebec & St. John Construction Company, Limited.

Incorporated, May 10, 1912.

Amount of capital stock, $1,000,000.

Number of shares, 10,000.—Amount of each share, $100.

Corporate members.—Charles Austin Barnard, advocate and K.C.; Leopold Barry, advocate; Edward Denis Maguire, accountant; Woltomar Hector Huhn Hume, secretary; and Charles Francis Adams, stenographer all of Montreal, Quebec.

First or provisional directors.—Charles Austin Barnard, Leopold Barry and Edward Denis Maguire.

Chief place of Business.—City of Montreal, Quebec.

Objects of the company...Vide p. 4297, Canada Gazette, 1911-12.

It is safe to say that none of these gentlemen have anything to do with the company now. As I stated, the president is the son of Mr. A. R. Gould. I believe that Mr. Ross Thomson, who is acting in the dual capacity of secretary of the St. John and Quebec Railway Company and chief engineer of the road, is also a director of the Quebec and St. John Construction Company.

Now, we have found that up to the present time some $2,728,000 of the good money of the people of New Brunswick has been handed over to this Yankee concern to take to New York and do with as they have a mind to; and that something over $500,000 —I have forgotten the exact amount—of subsidies of the Dominion Government have been handed over to the same, and they have been building this tramway. It is alleged by Mr. Dugal, and I am satisfied he is able to prove his statement, that some of this money has not gone into the construction of the road. But, as I have said, that is a matter that will be threshed out before another tribunal. But to show that Mr. Dugal is not moving in the dark, to show that he has good reasons for the faith that is in him, I want to give to the House the actual estimate of one section of that road south of Fredericton. This we have absolutely, and know what we are talking about. They will tell you that the railway from Fredericton to Gagetown is the expensive part, because they are building it to a 0·4 per cent grade. It is true, they are building it to 0·4 per cent one way and to 0·6 per cent the other way, except in two or three places, where they have changed it. But they are following the river St. John, and the tide ebbs and flows on that river along that whole twenty-eight miles of railroad. It ebbs and flows above the city of Fredericton. So, if you put in enough crooks and turns you cannot fail to build a road with a low grade. But so crooked is this line that the first man to protest against it to this Government was the gentleman who was then member for York, now Mr. Justice Crocket. He made his protest in the form of a letter to this Government away back early in 1912. I read that letter in this House in the course of a debate which has been referred to before. Hon. members will find it in 'Hansard' of 1913, page 11677. When sitting in this House as representative of the county of York, that gentleman felt it his duty to apprise the Government of the actual condi-

tion of affairs. Now, I have here the actual progress estimates of that road down to the end of 1913, and no work has been done since then, for by that date the road had been practically completed. And remember, Mr. Speaker, it is not a difficult matter to find out what this road has cost, because it is under contract to three different contractors, and they are building the entire road ready to be taken over by the Intercolonial railway. The company furnishes rails and fastenings, ties, bridges, right-of-way, engineering and station houses. With these exceptions, everything that goes to make the completed road is being built by these contractors. The contractors for this particular portion are J. H. Corbett and Son. Mr. Corbett is a well-known contractor. He built section 1 of the Transcontinental; he is—either a contractor or a sub-contractor—sub-contractor, I think—on the Welland canal; a man who looms big in the railway contracting world of Canada, a man who knows exactly what he is doing and how to do it. Here is the progress estimate down to 1913:

Residency No. 11—Oromocto to Upper Gagetown.

	Actual.
Clearing, 77.37 acres at $40	$ 3,094 80
Grubbing, 6.28 acres at $150	942 00
Solid rock, 20,678 cu. yds. at $1.25.	25,847 50
Other material, 163,716 cu. yds. at 30c	50,314 80
Rock borrow, 2,184 cu. yds. at $1	2,184 00
Train haul, 12,703 cu. yds. at 40c.	5,081 20
Overhaul, 1,023,415 cu. yds. at 1c.	10,234 15
Track laying, 10.66 miles at $400.	4,264 00
Ballast, 19,200 cu. yds. at 40c	7,680 00
Concrete, 490.56 cu. yds. at $8	3,924 48
" streets creek, 300 cu. yds. at $8	2,400 00
Culvert excavations—	
Dry, 89 cu. yds. at 50c	44 50
Wet, 529 cu. yds. at $1	529 00
Fencing, 7,116 rods at $1	7,116 00
Gates, 45 pairs, at $7	315 00
Telegraph line, 11 miles at $100	1,100 00
Actual	$125,070 43

That makes a total of $125,070.43 for 10.7 miles of railroad. I have gone over this with a man who knows all about it, and I am going to give the House now a statement of what the company itself has furnished and what it will take to complete that part of the road:

Station houses on mud sills, 2 at $2,000,	$4,000
Plank for road crossings, 9 at 1,000 ft.	180
Road signs, 9 at $5	45
Cattle guards, 9 at $25	225
Water tank, 1 at	3,000
To complete fill at Street's Creek, 25,000 cub. yds. at 40c.	10,000
Passing sidings, 2 of 1,800 ft. long; common sidings, 2 of 500 ft. long, 4,600 ft.	$5,000
Right of way, $1,000 per mile	10,600
Sleepers, 30,000 at 40c.	12,000
Rails and fittings, 13,354 tons at $33	44,068
Bolts, spikes, etc., $500 per mile	5,260

In going over that I find there have been two omissions and, for fear my friends may find fault with me, I will give those omissions. I do not think the rails for sidings are included and, of course, the engineering is not included. The rails could not amount to more than $400 a mile; if you take the engineering and the rails together you could not add to the cost more than $1,500 a mile. The total cost, as I have it here, is $219,448.43; if you divide that by 10.7 you have a cost per mile of $20,509.20. If you add to that $1,500 a mile for engineering and rails for sidings you have practically $22,000 a mile. That company is getting $31,400 of our good money, excepting a little discount and some interest which they will pay on construction, and the Government of New Brunswick have given them $10,000 a mile in addition to what they have already received. They are building that ten miles of road for about $22,000 a mile. They have already cleaned up about $7,000 or $8,000 a mile in cold cash, and the Legislature of New Brunswick has just voted another $10,000 a mile to be put into the pockets of these Yankee and Canadian boodlers. This ten miles of road is giving them a profit of $18,000 a mile, or $180,000 for the ten miles.

Mr. J. D. REID: We were justified in paying double subsidy, were we not?

Mr. CARVELL: I am admitting that you were justified in paying double subsidy. I am satisfied that the Minister of Railways has been watching this matter as closely as it could be watched and I am satisfied that he has not paid out a dollar unless he has found figures in his department which have justified him in doing so. I would almost think, from the knowledge I have of the gentleman who represents the minister on this particular work, Mr. Taylor, that the figures are all right too. I know they have fooled Mr. Taylor; I know they have not given him correct information. I know that Mr. Taylor has not been able to report the true state of facts to the Government, but I do believe that he has been absolutely honest and above-board, and has tried to keep his chief properly informed.

Mr. J. D. REID: We paid only on Taylor's certificate.

Mr. CARVELL: I believe that. While I dare say Mr. Taylor's figures are incorrect, I am not blaming Mr. Taylor for it, because he would have to go to the railway company to get the figures or a great number of them. I am not arguing that the whole road can be completed as cheaply as this ten miles can, but I do say that the 117 miles will not cost $28,000 or $29,000 a mile. The company received not bonds but actual cash out of the bonds and subsidies of about $28,000 a mile, and they owe to-day $200,000 or $300,000 to their contractors. I am informed on the very best of authority that it will take $500,000 or $600,000 to finish that 117 miles of road. If I am right in saying that, in addition to the $28,000 a mile which the company have already received, this road will cost $500,000 or $600,000 before it is completed, and that the company owe their contractors $200,000, then there are $700,000 or $800,000 in cold cash which the people of this country have handed over to this gang of Yankees from New York, who are now coming back to the Legislature of New Brunswick and saying: give us more money or we will not finish this road. It is my duty, as representing the people through whose territory part of this road runs, to bring these facts before the members of this House; I would be a criminal if I did not do so. I am laying these facts before the acting Minister of Railways; I am laying them before the Minister of Trade and Commerce (Mr. Foster), a gentleman who, I am sure, will give this matter honest and serious attention; a gentleman who, I feel confident, is a juryman who has not been packed for the purpose of giving a false verdict, and who will consider this matter upon its merits only.

I am not going into the cost of this road because on another occasion that aspect will be dealt with before another tribunal. The particulars I have given my hon. friend can be verified by application to the railway company. I am not merely giving him the source of my information; I am giving him the document itself and he can go to the railway company, to their engineers or to James H. Corbett, and he will find out whether or not my figures are correct. I know that portions of this road will cost more than the figures given. I am familiar with the construction of this road from Woodstock to Centreville, twenty-six miles distant. It passes through my own constituency; through the homestead where I was born and where my mother and brothers live to-day; where I am every week of my life when I am in New Brunswick. I know every mile of it.

Mr. J. D. REID: Where are the ten miles of which the hon. gentleman is complaining?

Mr. CARVELL: It is residency No. 11, Oromocto to Upper Gagetown. I know that other portions of that road will cost much more than $28,000 a mile; I know that many miles have not cost anything like that amount. I know that the whole road from Woodstock north will not cost more than $28,000 a mile when finished. I know that the company has received $28,000 a mile from this Government and from the Legislature of New Brunswick in actual cash. I know that they owe the contractors $50,000 on that part of the road, and that it will take $50,000 more to finish it. I know that $100,000 is still unpaid on that twenty-six miles. I know that the Legislature of New Brunswick gave them money to pay that $100,000, which these people put in their pockets or paid out for political purposes, or for something just as bad. I know that certain sections of the road from Woodstock to Fredericton—my hon. friend from York, N.B. (Mr. McLeod) knows a good deal more about this than I do—have cost probably more than $28,000 a mile. I can tell my hon. friend just where the hard spots are as I made it my business to travel over that road a good many times last summer, and I know a little about a piece of work when I see it. I can tell my hon. friend that there are dozens of miles that did not cost as much as the road from Fredericton south. I am very anxious to see the figures and reports of the engineers as to what the road cost from Fredericton to Woodstock, and I can tell my hon. friend—and he can tell it to his friends in New Brunswick—that it is no use trying to pad the engineer's statements because practically all the road was sublet, and we have the Estimates given the sub-contractors. We know what the sub-contractors got paid for, so that if the Estimates are padded a certain company which my hon. friend would not like to see badly injured will have the pleasure of paying out a good deal of money.

Mr. McLEOD: What company is it that I do not want to see badly injured?

Mr. CARVELL: The Hibbert Construction Company.

Mr. McLEOD: I am not interested in that.

Mr. CARVELL: I did not say you were.

Mr. McLEOD: You insinuated it; you had better talk straight.

Mr. CARVELL: If the shoe fits my hon. friend, I have no objection to his wearing it.

Mr. McLEOD: If you want to say it, say it; but do not insinuate it, be a real man.

Mr. CARVELL: I would be sorry to see my hon. friend and I disagree, because heretofore, we have been agreeing very well on railway matters in New Brunswick. It would be a pity to spoil the entente cordiale existing between us.

Mr. McLEOD: I prefer straight talk.

Mr. CARVELL: I have another railway matter to refer to, before Mr. Speaker, leaves the Chair, on which I am sure my hon. friend and I will agree.

Mr. McLEOD: What name?

Mr. CARVELL: The Tobique and Campbellton. I am just giving my hon. friend warning. Do not let us quarrel over this, because we are going to agree on another matter.

I come now to the question of bridges. I told my hon. friend that in 1912 this Parliament voted a million dollars as a loan to the St. John and Quebec railway for the purpose of building three bridges, one was to cross the Kenebecasis river near Perry's point, another was to cross the St. John river at a place called the Mistake, and the third was to cross the St. John river above Andover in order to tap the Transcontinental. It was believed at the time that there would be a sufficient sum saved out of the construction of the railway proper to apply $1,000,000 to the building of these three bridges, and I have not the faintest doubt in the world that if the money received in the way of subsidies and bond guarantees up to the present time had been honestly applied, that $1,000,000 could have been spent on those three bridges. But then, Sir, there would not have been any election fund, no rake-offs. To build those three bridges would have taken the whole of the million dollars, and possibly some of these shrewd Yankees might have been compelled to put up a dollar of their own money. I do not know that it is any hardship to ask them to put up a dollar, because remember they own the road when it is completed, every spike, every sleeper, and every acre of land on the right of way. Under the contract, the Intercolonial gets 60 cents out of every dollar of gross earnings for running the road—no matter what it costs to operate. They have to pay the other 40 cents to the Government of New Brunswick to pay the interest on the bonds; after that interest has been paid, whatever is left goes to this company of Yankees. So they own the road absolutely and why should they not be asked to put up a dollar of their own money when we treat them so magnificently as we are doing. They come back here and ask this Parliament to grant $3,000,000 instead of the $1,000,000, and while it is true that the hon. Minister of Trade and Commerce stated in reply to the hon. member for Westmorland (Mr. Emmerson) that the matter has not been decided, yet it is stated by the members of the legislature of New Brunswick that the Government have agreed to give $3,000,000 to build these bridges. I have no hesitation in giving the name of the gentleman who said that. He is a son of that grand old man of New Brunswick, Sir Leonard Tilley, and this steal was jammed through the legislature of New Brunswick on the pledge that this Government had agreed to grant $3,000,000. Those bridges should be built. This road will be a curse, not a blessing to the people of New Brunswick, unless they are built. The road will be a financial millstone around their necks, which will drag them into eternal ruin unless it goes to Grand Falls and St. John, and gets business from the Grand Trunk Pacific. Let not the Conservative newspapers to-morrow say that I have tried to prevent the building of these bridges. I say they must be built, not only the bridge across the St. John river, but the bridge at Andover, because I look upon it as more important than the bridges down below. You could eliminate the bridges across the St. John river and strike the Canadian Pacific tracks at Westfield. You might make some arrangements for running rights that would not be very satisfactory, and get traffic into St. John, but you would not get it there at the right place; it would be at the west side instead of the east. But unless you cross at Andover and tap the Transcontinental you are out of it, and cannot do business of any kind. Therefore, this question of bridges goes to the very life of the province of New Brunswick. A bridge must be built at or near Andover in order to tap the Transcontinental. I want to ask the acting Minister of Railways, and to appeal to the Minister of Trade and Commerce, as a fair juryman, as to whether they

are willing, in view of what I have said about the manipulation of this company, and in view of the facts I have given as to what they are doing with this money—are they willing to hand over $3,000,000 to a gang of shrewd Yankees to take off to New York to build any kind of railroad and any kind of bridges they want? Is there any man in this House, Liberal or Conservative, —even the Minister of Marine and Fisheries —who would vote for such a proposition? I only want to say to the acting Minister of Railways: give this assistance,but do it yourself; keep your hand on the purse strings; do not hand over a dollar to the Government of New Brunswick, or to the Yankee concern; build the bridges under the Department of Railways and Canals. If the Hon. Frank Cochrane has the handling of it I believe it will be honestly done. It may be said that this breaks up the whole scheme. It does, to some extent, but it is necessary to break up schemes sometimes in order to protect the public weal.

Let the Department of Railways build these bridges and own them. Let the department allow the railway company to use them. It is true that they will be available for the Intercolonial railway later on, but charge up to the company something more than the sixty per cent of the gross earnings. Take a certain other percentage of the gross earnings to pay the interest upon these bridges, but do not, I pray you, hand over that $3,000,000 to this gang of Yankees to boodle with, and probably use one-third of it when the next elections come on in the province of New Brunswick. On this 117 miles already built there has been $3,200,000 or $3,300,000 expended and I have not the faintest doubt that a million dollars was absolutely squandered for the benefit of the Yankee manipulators and the Canadian manipulators as well. I have not any doubt in the world that at least $1,000,000 or $2,000,000 out of this vote will be absolutely squandered, and I have no doubt that if you vote $3,000,000 more for these bridges another million will be squandered by these people. While I never boil over with patriotism to any great extent, if there is any red blood in the veins of any Canadian, it will boil over at the thought of handing over $1,000,000 or $2,000,000 of the money of Canada to these Yankees to boodle with and to put away in their own pockets for their own purposes. I am almost ashamed to be a New Brunswicker when I consider the iniquitous story that is told, and is being written in our papers everywhere, with regard to the transactions of the Conservative Government of New Brunswick in reference to the St. John and Quebec Railway Company.

Perhaps I have been a little plain in my language, but no plainer than the necessities of the case demanded. I have tried to point out to the Minister of Railways and Canals the condition of affairs. I have warned him as well as it was in my power and, if this scheme goes through and if this $3,000,000 is handed over to this company, he cannot say that I did not warn him and the people of New Brunswick, who will pay interest upon this money, cannot say that at least one representative of the people did not warn the powers that be of the existing state of affairs and pray them for God's sake to try and keep control of this money and not hand any more of it over to a gang of Yankee swindlers.

Before I take my seat, and before you leave the Chair, Mr. Speaker, there is another railway matter in New Brunswick that I want to refer to, because it seems that the good Lord only knows where the end of these railway schemes is going to be in that province unless something is done to prevent them here and now. About the first act of the hon. Minister of Marine and Fisheries, after he became leader of the Government in the province of New Brunswick, was to guarantee bonds for a road in that province. I do not know what it is called, but it is in the county of Gloucester and it is a road going into some iron mines in which Mr. Drummond was interested. Between $300,000 and $400,000 of public money has gone there—absolutely gone. The road closed down, the mines are closed and we are going to pay the interest upon that money.

The next scheme was the Southampton railway, which my hon. friend and I agreed upon very nicely not so very long ago. The sum of $155,000 went into that, upon which I do not believe one-tenth of the interest will be paid by the Canadian Pacific railway. This has been handed over to the Canadian Pacific, and they are to operate it and pay 40 per cent of the gross earnings to the province, which is to pay the interest upon the bonds. It is a railway spur running through a country not well populated and with no business anywhere beyond a lumber mill, which is owned by a man named Pinder, a particular friend of my hon. friend from York. The railway

cannot do sufficient business to pay the cost of operation, and I would be surprised if one-tenth of the interest on these bonds will be provided for out of the earnings. We have to pay the interest on this $155,000.

If this scheme goes through, and I do not know how in the world we can stop it, we are responsible for the interest and you can figure it out for yourself. There will be 220 miles of road at $35,000 a mile and the total capital amount will be between $7,000,000 and $8,000,000. With the class of road that I have described to you, with its location, with the gang controlling it, I tell you, Sir, that the amount that we will have to pay will be simply enormous.

There is another railway scheme that I want to discuss here, because I want to exact a promise from my hon. friend the minister that he will not allow these people to make another big steal on this other railway deal. The minister would be surprised if he knew how close a call the people of New Brunswick had from a $150,000 steal being pulled off in connection with that enterprise. The Tobique and Campbellton railway extends from Plaster Rock up the Tobique Valley to a place called Riley Brook a distance of twenty-eight or thirty miles. Some years ago a few gentlemen, the leader of whom was Mr. John G. Stewart, got a charter from the New Brunswick Legislature to construct that road. They came here in 1910 and through the good offices of the hon. member for Victoria and Madawaska a Dominion subsidy was voted for the road. That subsidy was renewed in 1912. In the summer of 1913 the Department of Railways and Canals signed a subsidy contract with the railway, company of which Mr. Stewart was president, to construct the road. It was the ordinary subsidy contract calling for $3,200 a mile up to $15,000 a mile and then the ordinary graded scale beyond that amount. The company tried to get a guarantee of bonds from the provincial Government to an amount sufficient to build the road. They did not want very much; they would have been satisfied with $10,000 or $11,000 a mile. They were put off as the hon. member for York knows, and I have seen, within the last three weeks a letter written by the Premier of New Brunswick agreeing to guarantee these bonds to the extent of $15,000 a mile upon certain conditions.

Mr. McLEOD: That is what Mr. J. G. Stewart's Company asked for.

Mr. CARVELL: No, they did not.

Mr. McLEOD: Yes.

Mr. CARVELL: Well, we will not quarrel about that little point. I have seen a letter written by the Premier of New Brunswick agreeing to guarantee these bonds subject to certain conditions. To build this road will cost about $12,000 or $13,000 a mile. I have seen the plans and profiles. I have helped to figure them out and with my knowledge of the kind of railways that they build in New Brunswick, the Pinder road and some of these others, I am somewhat of an authority. I can tell you, Sir, that that road, according to the plans and profiles, can be built for from $12,000 to $14,000 per mile. Last year the charter expired. They went to the Legislature of New Brunswick and asked to have the subsidy renewed. They were opposed very viciously by certain interested parties but they succeeded in getting the charter renewed for one year. They had to commence operations before the 5th of April or their charter would lapse. They went to the Government and tried to get them to give them an agreement in the form of an Order in Council that they would guarantee these bonds in order that they could finance the undertaking and commence operations. But nothing was done except the imposition of conditions which it was practically impossible to carry out.

The annual meeting of the company was to be held in the month of January and when the company met a gentleman representing Mr. Flemming went to the company and suggested that it would be very wise indeed if they would postpone the annual meeting in order that they might confer with Mr. Flemming. It was represented that it would be very much to their advantage to do so. They then attempted to get control of the company by getting the stock away from Mr. Stewart. Mr. Stewart had put up $10,000 worth of this stock with Pinder's son-in-law in order to help the Southampton railway. But it was understood, so Mr. Stewart says, that it was to be used as collateral security for a loan which Pinder was to pay out of the proceeds of the bonds and which the holder of the note, or stock, says was not paid.

I leave that with them. Anyhow, they got that $10,000 away from Stewart; they would not have to get a very great amount outside of that to have control of the company. They got this matter put off until the 5th day of March, and in the meantime a member of the local legislature, rep-

resenting the county of Victoria, who was trying to prevent Stewart from getting a bond guarantee, was the means of having an execution, about fifteen years old, which was given to Stewart's brother as a matter of financing between them, issued in order to seize this stock. The execution was placed in the sheriff's hands and the stock was seized, and his brother was then somewhere in the West on railway construction, and the wires were set busy, and fortunately they were able to get hold of him, and before the sheriff could sell the stock he was sent instructions to quit, and told that Stewart never intended to press his brother on that claim. When the annual meeting was held on the 5th of March, the old company were in the position to elect their board of directors, and they elected two men from Grand Falls, who had not been on the board before, and started in to do business, and I am informed they did commence to work, and are now carrying on the work in order to hold their charter, although they have no bond guarantee from the local government.

So insistent were these people to get control of the charter, that when they could not get it by means of an old judgment, that never was intended to be acted upon, they then took the molasses method of getting it, and they sent a certain gentleman of the name of Edgar R. Teed—perhaps my friends opposite have heard of him—who lives in the town of Woodstock, to Grand Falls, and he pointed out to these directors that, being contractors, they could not be directors, and he thought they had better take a contract from the company to build the road and resign their positions as directors, and he would be willing to take their place on the board. If Mr. Teed got on the board of directors, then Flemming and his crowd would own the road; then they could have guaranteed the bonds for $15,000 a mile. They could have gone on and built it and played the same game they played with the Southampton road, and they could have pulled out at least $150,000, providing Mr. Johnson, the inspecting engineer, was not a little more particular than he was in the case of the Southampton road.

Mr. J. D. REID: He will not do any more inspection.

Mr. CARVELL: If he does it right I have no objection to him.

[Mr. Carvell.]

Mr. REID: He will not do any more.

Mr. CARVELL: The key of the situation is the subsidy contract in the hands of the acting Minister of Railways. So long as the acting Minister of Railways will not cancel that subsidy contract, then the boodlers down in New Brunswick cannot work out their scheme. All I ask him to do is to hold that subsidy contract until such time as we can have this matter straightened out. The province of New Brunswick ought to give a bond guarantee which, together with the subsidy from this Government would be sufficient to build the road. That is a portion of the country that really is suffering for want of railway communication, because it is well settled, and there are people living thirty miles away from a railway. The road should be built; the legislature of New Brunswick should guarantee these bonds for an amount sufficient together with the Dominion Government subsidy, to build the road, but neither Mr. Stewart, nor Mr. Teed, nor Mr. Flemming, nor any other man, is entitled to make a thousand dollars out of it. They did not pay any money into it. There has not been a dollar of private money put into railways in New Brunswick for the last twenty years. There was not a dollar of private money put into the Southampton road; not a dollar of private money put into the Drummond road; not a dollar of private money put into the Minto road, which is about the best of them all, and which came pretty near being honest; I think that was a pretty fair transaction. Not a dollar of private money was put into the St. John Valley railway, and they do not intend to put a dollar of private money into the road. So long as the acting Minister of Railways will retain control of that subsidy, then these people down in New Brunswick will not be able to make a steal out of it. I hope he will not cancel the subsidy contract; I hope he will hold it until after the next session of the Legislature of New Brunswick, and no matter who may be in power or who may be controlling affairs there then, I believe that some kind of an arrangement can be made by which these bonds will be guaranteed. I believe there can be something done by which this road can be built, and built honestly, and so that there will not be a steal of $100,000 or $150,000 made out of it, as would have happened if these explosions had not taken place in New Brunswick, and if Stewart had not been bright

enough to have had the subsidy contract signed by this Government last year. That is the only thing that saved another great big boodling transaction in building railroads in New Brunswick. Having pointed this out to the acting Minister of Railways, I am satisfied, as long as he is looking after the department, that he will see that nothing will be done to jeopardize the position of these people, who have been working on that road. I should apologize for that statement I have made; I believe they have put some of their own money into it, because they have done the engineering and surveying and are preparing the right of way. They are really to-day putting in their own money. I want to be fair and to say that; I think their intention is that the bonds and the subsidies will build it. I believe that up to the present time they have spent probably $15,000 or $20,000 of their own money, in an honest attempt to give the people of that country railway facilities, of which they are in much need.

If the acting minister will hold control of that, he will control the situation and there will not be any chance for any more schemes, and deals, and boodle, such as I have been describing this afternoon. I do hope that when the Legislature meets next year the atmosphere will be cleared, and the worst of them will be eliminated, and we will be able to have decent, honest, legislation in New Brunswick. We will then be able to guarantee these bonds to a reasonable amount, and to see that the road will be built under proper inspection, and that every dollar of the proceeds of these bonds will go into that road, and that the people living in that territory will get the long-deferred railway accommodation, which has been promised to them for so many years, and to which they are entitled.

I have spoken very much longer than I anticipated, Mr. Speaker but, as I told you, I may be called away from here at any moment to look after important matters in New Brunswick. I felt it was my duty to bring these matters to the attention of yourself, and of the House, and especially of the acting Minister of Railways. I have pointed out to him only the surface of the things that are taking place in New Brunswick; I have shown him the pitfalls, and I have pointed out to him where they might get another million dollars of his good money the same as they have our money in New Brunswick. I have pointed out to him the remedy, and I have asked him not to prevent the building of the bridges, not to prevent the building of the Tobique railway, but to keep control of these great works so that the boodlers cannot handle them, and so that the people of the province of New Brunswick, and the people of the Dominion of Canada as a whole, will have some protection for the money they are putting into these works, and so that we will not have a repetition of the horrible condition of affairs which has been existing in New Brunswick for the last two and a half years, and, I am afraid, to some extent, for the last five or six years.

Hon. J. D. HAZEN (Minister of Marine and Fisheries): Mr. Speaker, I trust that the acting Minister of Railways (Hon. J. D. Reid) and my hon. friend from York (Mr. McLeod), who is more particularly the object of this violent attack by the hon. member for Carleton (Mr. Carvell), will pardon me for preceding them in this discussion, because I have an appointment that may make it impossible for me to be in the House at eight o'clock this evening, when probably this debate may be resumed. If one did not understand the ways and methods of the hon. member for Carleton as well as I do, he would be surprised and puzzled; surprised at the strong character of the language used by him, and puzzled to find what good purpose the hon. member had to serve in bringing this matter to the attention of the House of Commons.

But it is a matter of no surprise to those of us from New Brunswick, who know the hon. gentleman so well, that he indulges in language of the violent character that he has indulged in this afternoon. We in that province are well aware that the more violent his language the less ground he has for the attack he is making. When the hon. gentleman has good grounds for an attack, he almost invariably couches it in language which for him is moderate in the extreme.

We might be puzzled to know what good purpose the hon. gentleman wishes to serve by bringing this matter to the attention of the House. I understand the hon. gentleman to acquit the Railway Department of Canada and the Minister of Railways of any blame in regard to this matter, and I also understand the hon. gentleman to admit that the subsidies paid to the St. John Valley Railway by the Department of Railways and Canals under the provisions of the Act, have not been overpaid; that they have been fully justified and that the road upon which the subsidies have been paid has cost a sum of money which justifies the Railway

Department in paying the amount of subsidy which it has paid. That being the case, many hon. members are no doubt at a loss to understand why my hon. friend brings before this House a matter which is largely of local concern and which should be dealt with by the province of New Brunswick. It would be a matter of surprise to us if we did not understand the character of the hon. gentleman, that he should bring before this House a matter on which charges have been made in the House of Assembly of New Brunswick and to investigate which a tribunal will be appointed in a few days under legislation passed by the Legislature of New Brunswick when those charges were made. Charges in connection with the St. John Valley railway of a serious character, involving the honour and the reputation of two members of the Government of New Brunswick were preferred during the recent session of the Legislature. The gentleman who preferred those charges, in the course of his remarks, exonerated explicitly and clearly every member of the Government of New Brunswick from them, with the exception of the Prime Minister and my hon. friend from the county of York, N.B. (Mr. McLeod), who now occupies a seat in this House. He moved that a committee of the House should be appointed for the purpose of investigating these charges, which were to the effect that money had been diverted from the use of the railway for the purposes of the two hon. gentlemen whom I have mentioned. It will be remembered that the legislature of the province of New Brunswick consists of forty-eight members, two of whom are in opposition to the present Administration. The Government did not accept the hon. gentleman's resolution, but moved an amendment to the effect that the matter be investigated by a royal commission to be appointed by His Honour the Lieutenant Governor of the province. They were impelled to take that course because they felt that the charges were of an extremely serious character; that, if a committee of the House were appointed, it would be composed almost wholly of supporters of the Government, and of friends of the hon. gentlemen who had been charged with these offences; that it would be far more in the public interest to have the charges investigated by an independent commission appointed by the Lieutenant Governor, consisting of judges of the highest courts of the land or of other leading citizens, and that such a commission would be far more apt to get to the bottom of the charges made, to inquire into them thoroughly and to make a fair and impartial report than would a committee composed mainly of supporters of the Government and of friends of the two members of the Government charged. I am not going into the merits of the question because I do not think this is the time or the place to do so. In my opinion we should wait until the commission makes its report before we condemn or justify the gentlemen who have been accused. At a very early stage of the recent session of the legislature, at a party caucus consisting of Government supporters, five members of the legislature were appointed a committee to investigate certain rumours and charges made in connection with the disposition of the St. John Valley railway. That committee was composed of five of the best men in the legislature; in fact, five of the best men in the province of New Brunswick. It consisted of Frank B. Black, a business man of Sackville, a representative from the county of Westmorland, a man of ability, knowledge and experience; of Mr. George B. Jones, a gentleman from the county of Kings, also a large business man who takes part in large affairs, and who has been extremely successful in his business: of Mr. T. J. Carter, K.C., of Victoria, of Mr. Leonard P. D. Tilley, K.C., of St. John, who has been referred to by my hon. friend in the course of his remarks, and of Mr. A. J. H. Stewart, a member from the county of Gloucester. A better committee could not be found in any legislature in Canada or anywhere else. Mr. Black stated in the House of Assembly, when this matter was under discussion, that, while he approached the subject with prejudice against Mr. Gould and against the methods adopted in the building of this railway, the result of a careful investigation of the books of the company, of the books of the provincial secretary's office and of all the different facts they were able to get together, convinced him that every dollar of provincial money that had been handed over under the provisions of the guarantee of the bonds and every single dollar of Dominion Government money paid under the Subsidy Act had gone into the construction of the road in a bona fide manner, and that, in addition to that, other funds had been spent in the construction of the road up to that time. My hon. friend from the county of

5 p.m.

York, N.B., (Mr. McLeod) is here to speak for himself and is well able to do so; he has defied his enemies and has said that there is no ground whatever for the charges made against him. The Prime Minister of New Brunswick has done the same thing. In view of that, would it not have been a course more consistent with the dignity of Parliament and with the proprieties of public life if my hon. friend had waited until this Royal Commission had thoroughly investigated the matter and made its report before bringing this matter before the House and scattering these charges broadcast over the country? In view of all these facts, if some people have been puzzled as to the reason why my hon. friend should bring this matter before Parliament at this time, those who know my hon. friend will not be surprised, because they know that he never misses an opportunity of vilifying and slandering those who differ from him politically, and of circulating stories about them irrespective of their truth or falsity.

I do not intend to follow my hon. friend in his story of the St. John Valley railway, as to what this ten miles has cost and that other ten miles has cost, because these are matters which will be investigated by the Royal Commission which will be named in a few days by the Lieutenant Governor of the province.

Therefore I do not propose at this juncture —I do not think it would be proper or right—to enter into a discussion of matters of that sort. So I content myself with stating what has been stated by Mr. Black as chairman of the House of Assembly. My hon. friend the member for York (Mr. McLeod) will make his statement for himself.

My hon. friend travelled far afield and engaged in a most inaccurate historical account of the St. John Valley railway. Under the circumstances, I may be pardoned if I say a few words with regard to the history of that enterprise. The St. John Valley railway, from the time I can remember up to the present, has been a lively subject of discussion in the province of New Brunswick. At the time when the confederation of the British North American provinces was mooted and the idea went forth that the Intercolonial railway, to bind together Nova Scotia, New Brunswick, Quebec and Ontario, was to be a part of the confederation pact and that the work would be proceeded with soon after Confederation, the general belief in the province of New Brunswick was—at least in that magnificent section of it that is watered by the St. John river—that that road would be built to the city of Quebec following the course of the St. John river to Grand Falls and Edmundston and on across the province of Quebec to the city of Quebec. That was undoubtedly the shortest route for the Intercolonial railway to take. In addition to that, it was much the cheapest route by which it could be built. But, owing to reasons which it would be useless to discuss now—probably the influence of our friends in Nova Scotia and along the lower St. Lawrence to some extent, and also the influence exerted by the British Government in favour of having the line of railway further removed from the border of the United States than the St. John valley as a precaution in case of war—the Intercolonial railway was built by the northern route along the Miramichi and St. Lawrence to the city of Quebec. That was an exceedingly great disappointment to the people living in the valley of the St. John. I may say for the information of those who do not know intimately the province from which I come, that about the oldest settled part of the province is the St. John valley. And not only that, but in that valley are many splendid farms. It has been estimated—and I think the estimate is within the mark —that the St. John valley alone is capable of providing for a population of at least two million having regard to the quality of the land, the lumber resources and other resources that it possesses. The people, while disappointed, looked forward to the time when a transcontinental line would be built, and believed that that line would be built down the valley of the St. John. The Canadian Pacific railway was built. It came across the state of Maine and struck the St. John river only about fourteen miles from its mouth. True, in later years the Canadian Pacific railway acquired by a long term lease what is known as the New Brunswick railway running along the St. John from Woodstock to Edmundston. But this left a large part of the St. John valley without the desired railway facilities such as were being provided in every direction including many districts and settlements that had not been to the front or flourishing when the St. John valley was the best part of the province. The result was that the St. John valley was seriously handicapped, it was losing population, its farms were depreciating in value—all because its people were a long distance from market and, being without railway communication, had

to reach market in the same primitive way as when the country was first settled.

Well, Sir, the hopes of the people were again uplifted when they heard of the building of the National Transcontinental, of the great scheme for building a road from the Atlantic to the Pacific entirely in Canadian territory. They confidently believed that the time had come, when, at last, they would be given those facilities which so long had been denied them, though they had been paying their quota to build railways in other parts of the country. Well, Sir, the National Transcontinental did not follow the valley of the St. John. Something has been said as to the route it did follow. It went from Grand Falls to Moncton, practically through the wilderness, whereas if it had followed the valley of the St. John it would have gone through a well-settled country that would have given it local support from the start, and it would have reached tidewater by a shorter route. In the language of my hon. friend from South Renfrew (Mr. Graham), speaking in this House the other night, it was not only an outrage that it did not go by the St. John valley, but it almost verged upon the criminal. With the completion of that road and with no railway communication along the valley, the people began practically to lose heart.

From the time I entered the legislature in 1899, and for years before, and down to the time when I became Premier of the province, the St. John Valley railway was made the sport of politicians. Everybody talked about it, but nobody took effective steps to build it. Before each election we would have statements made as to what certain politicians would do if they got back into power. But when they got back into power no effective steps were taken. In the session of 1909 a very large delegation from every part of the St. John valley came to the city of Fredericton —almost as large as the one we had here the other afternoon—and urged that steps should be taken to give the people the railway facilities enjoyed by other parts of the country. I felt, Sir, rightly or wrongly, that the time for temporizing or dilly-dallying with this project was past, and I made a clear, plain statement to the gentlemen who assembled on that occasion. I pointed out that the Government, of which Mr. Pugsley was the leader, had negotiated with Mackenzie and Mann but those negotiations proved abortive. The offer was for a guarantee of bonds for $15,000 a mile. But neither Mackenzie and Mann nor anybody else would think of building such a road for a guarantee of that sort. I told the delegation that I was prepared to pass legislation authorizing a guarantee of the bonds of the company to build a line of railway along the St. John valley to the amount of $25,000 a mile, if the Dominion Government would undertake, when the road was completed, to operate and maintain it as a part of the Intercolonial railway system, this to be done on the basis of 40 per cent of the receipts to the province and 60 per cent to the Dominion. This would save the province against the large interest charges which would have to be paid on the guarantee of $25,000 a mile. While I did not expect that for the first few years of operation the revenue from the 40 per cent would be sufficient to pay the full interest charges on the guarantee, yet I felt that after it had been running a few years and had developed business, the result would be that the province would be saved harmless and the people would get the advantage of this railway communication and we should have the absolute certainty of the road being operated because it would have to be operated by the Government of Canada as part of the Intercolonial railway system.

Mr. EMMERSON: The road between what points?

Mr. HAZEN: The road between Grand Falls and the city of St. John. One of the proposals made by the hon. gentleman who succeeded my hon. friend as premier was that the road should be built from Centreville to Woodstock as a part of the Intercolonial railway. No action, however, was taken on that suggestion. The delegation met at Fredericton and appointed a committee which came here to Ottawa and had an interview with the Government, placing before them the proposition to which I have referred. They met my right hon. friend, my hon. friend and colleague from the city of St. John (Mr. Pugsley) and other members of the Administration, and they came home full of hope that something would be done in that direction. Nothing was done for some time; no definite reply to the propositions made was received from the Government of Canada. But a little later—I think I am correct in saying that it was in the year 1910—the hon. member for Carleton, addressing a meeting held in the city of Woodstock, read a telegram or a communication he had re-

ceived from Mr. Pugsley stating that the Government of Canada would undertake to maintain and operate this road on the basis of sixty and forty per cent if it were built according to a certain standard—naming the standard, to which I shall refer later. That was further accompanied by a telegram, I think, received by the hon. member for Carleton from the right hon. gentleman who sits opposite to me, and who then led the Government, stating that he confirmed what had been said in the telegram of Mr. Pugsley. At the next session of the provincial House, the session of 1910, I introduced a Bill for the construction of a railway along the valley of the river St. John. Part 1 provided:

The Lieutenant Governor in Council is hereby authorized to cause to be made a survey of said proposed line of railway, namely, from Grand Falls, at a point on the line of the National Transcontinental railway, in the county of Victoria, via the villages of Centreville and Lakeville, in the county of Carleton, and through Woodstock, Fredericton and Gagetown to the city of St. John or to a point on the Canadian Pacific railway, near Westfield, in the county of Kings, or between Westfield and Welsford, in the county of Queens.

And so on, with other provisos. Part II of the Act provided that before any bonds should be guaranteed the company constructing the line should give a first mortgage to the Lieut.-Governor in Council. There was also a proviso that a deposit should be made by the company that would secure the Government against the payment of interest for three years after the construction of the road was completed. I understand that that has been lived up to.

Mr. CARVELL: Is it not a fact that any deposit that has been made comes out of the proceeds of the bonds?

Mr. HAZEN: That may be quite true.

Mr. CARVELL: Has Gould put up a dollar of his own money?

Mr. HAZEN: It will be established in the inquiry to be held by the Royal Commission whether Mr. Gould put up any of his own money or not. I can only repeat the statement made by Mr. Frank Black, the member for Westmorland, that every dollar of the bonds guaranteed for that section of road went into it, and other moneys as well. Section 11 of Part II of the Act provided as follows:

No such agreement shall be entered into with any company or corporation for the construction of the said line of railway or for the guaranteeing of the said bonds, and no such bonds or debentures shall be guaranteed, unless and until the Parliament of Canada shall enact legislation authorizing the granting of a subsidy in aid of the construction of the said railway, to the amount of not less than $6,400 per mile, and authorizing the entering by the said Government of Canada into an agreement with such company or corporation and with the Government of New Brunswick aforesaid, for the leasing of the said line of railway, when completed, with its appurtenances and rolling stock and for the operation, equipment, maintenance, upkeep and repair by said Government of Canada as part of the Government railway system of Canada, for a period of ninety-nine years, and for the payment by the Government of Canada to the said province of New Brunswick, or Government thereof, each year, during the said term of ninety-nine years, of forty per centum per annum of the gross earnings of the said railway as or in the nature of rental therefor. The amount of such rental shall be applied in payment of the interest on the bonds guaranteed by the province of New Brunswick, and if any surplus of such rental remains after paying the full amount of the interest upon such bonds and of all sums paid by the province for interest thereon, the same shall be paid to the company with whom the agreement shall be entered into for the construction of the said line of railway.

The letter of my hon. friend and colleague from the city of St. John and the telegram of my right hon. friend, to which I have referred, provided that the Government would undertake to operate the road if it were built up to a certain standard, and in drawing the Act I inserted a provision that the road should be built up to that standard. Section 16 of the Act provided:

The specifications for said railway and the contract between the Lieutenant-Governor in Council and such company, for the building of the same, shall require and call for the construction of a first-class trunk line of railway, with grades, not to exceed four-tenths of one per cent and to be ironed with rails weighing not less than eighty pounds to the yard, and shall provide that all bridges shall be of steel superstructure, with substructure of stone or concrete, culverts to be of masonry or concrete, being the description of the character of the road as set forth in a letter from Hon. William Pugsley, Minister of Public Works of the Dominion of Canada, to the secretary of the Saint John Valley Railway Company, dated the nineteenth day of June, A.D. 1909, and approved by Sir Wilfrid Laurier, Prime Minister of Canada, in a letter addressed to F. B. Carvell, M.P., dated the 28th day of January, A.D. 1910, and the said line of railway shall be built up to the before-mentioned specifications and standard, and shall be constructed, subject to the inspection by, and shall be built to the satisfaction of the provincial engineer or such other engineer or engineers as the Lieutenant-Governor in Council may, from time to time, appoint to inspect the same; and such contract shall also provide that such railway shall be equipped by the said company or by the Government of Canada, with proper and sufficient rolling stock.

That was in 1910, but no sooner was that Act passed by the legislature of New Bruns-

wick than my hon. friend the hon. member for Carleton and other members of the party to which he belongs went through the length and breadth of the country saying that the Government of New Brunswick had no intention of building this road because they were asking that it should be built up to a high standard, although that was the very standard laid down by the Government of which my right hon. friend was then leader. The hon. member for Carleton, in the course of his speech to-day, spoke as if the Government of New Brunswick, of which I was then premier, had not been sincere in its desire to build this road; that they had placed obstacles in its path. Let me tell him that it was the party to which he belongs that in season and out of season tried to burke the building of that road because they did not wish the local government of New Brunswick to have the credit of giving to the people of the St. John valley those railway facilities which they had so long been without and which they had so long desired. That Act was passed in the year 1910. It was found impossible to secure any contractors willing to build the road under the provisions of the Act up to the standard required, even with the guarantee of $25,000 a mile and the Dominion subsidy of $6,400 a mile.

Little more was said about it, and in June, 1911, as the representative of my province I went to London to attend the Coronation, on the invitation of the Government of Great Britain. While I was away my hon. friend Mr. Flemming, who was acting as Premier, entered into further negotiation with Dr. Pugsley, Minister of Public Works, with regard to the matter.

Mr. CARVELL: I know my hon. friend wants to give the historical record. Will he now deal with the legislation passed by this Parliament prior to his leaving for London in June?

Mr. HAZEN: That is the statute which my hon. friend said had such a vicious clause, which, however, he was unable to find.

Mr. CARVELL: Let us straighten this thing out. I am referring to the legislation of 1911.

Mr. HAZEN: I will treat my hon. friend with every courtesy and extend to him every proper latitude, but I do not propose to allow him to rise and make speeches while I am on the floor.

Mr. CARVELL: You will not give the facts; you dare not do it.

[Mr. Hazen.]

Mr. SPEAKER: I would like to say that in my judgment the hon. member is out of order in saying that another member dare not give the facts.

Mr. CARVELL: I wish he would do it.

Mr. HAZEN: When the hon. member talks about not daring to give the facts, shakes his fist, and loses his temper, he is at a very great disadvantage and is really doing injustice to himself more than to anybody else. I was going on to say that from that time down, I had very little, if anything, to do with the negotiations regarding the St. John Valley. I arrived back in Canada a day or two after the Dominion elections were announced. I had met my right hon. friend (Sir Wilfrid Laurier) in London, and he left for Canada a week or two before I did. From the time I heard the House had dissolved, I was in the midst of the general elections and was soon after requested by my right hon. friend and leader to take a seat in the federal Government.

In regard to the standard of this road, it must be built up to a proper standard, as I believe it is going to be one of the greatest links in the chain of through communication to be found anywhere in Canada. Not only will it connect at Grand Falls with the Grand Trunk Pacific, but I believe before many years' time you will find a road running from Andover across the state of Maine to the Quebec bridge, which, in conjunction with the St. John Valley road, will be the shortest means of communication from the city of Quebec to an ocean port in the Maritime provinces. Work in that direction has already been begun. When that road has been completed—and some day it undoubtedly will be—and when the Valley railway is connected with it and is also connected with the National Transcontinental railway at Grand Falls, as it will be, and with the great amount of local traffic that will be developed in the splendid country through which it passes for almost its entire length from Grand Falls down to the sea—I believe the road will be one of the greatest trunk lines of communication in Canada, and therefore it is desirable that it should be built up to a high standard of excellence. My hon. friend from Carleton says it is not being built up to that standard. My information is to the contrary. I am informed that when the contract was entered into with Mr. Gould, having regard to the

carefully prepared estimates of the road made by David Maxwell, a civil engineer of large experience who has worked under both Governments in Canada—it was found that the $25,000 and the $6,400 would not be sufficient to build the road up to the proper standard. Every one of us knows that railroads cost enormous sums of money compared with their cost a few years ago. Parts of the Grand Trunk line through the centre of New Brunswick cost over $100,000 a mile, and that the average cost was well up to $70,000 a mile. In the present case, the road is being built with 80-lb. rails; with steel, stone and concrete bridges; proper grades, proper ballast, and with everything necessary to fit it for being in the future a trunk line of railway. My hon. friend says that it is not being built up to that standard. All I can say is that the work is being carefully inspected as it proceeds by Mr. Taylor, on behalf of the Dominion Government—a most competent engineer—and also by Mr. Maxwell, on behalf of the provincial Government, and that no sums are paid out except on the certificates of those engineers. I, of course, do not possess the great engineering skill and science which is so eminently possessed by my hon. friend from Carleton, N.B., in common with knowledge on pretty nearly every subject that is brought up in the House; but I think it will be found on investigation that the men who are charged with the responsibility of seeing that the road is built up to the proper standard are carrying out their duties faithfully, and that the road, when completed, will be very satisfactory. I would have had the estimate of Mr. Maxwell here had I known earlier that my hon. friend was going to bring this matter before the House. He kindly gave me notice, which I only received at a quarter to one to-day, when I could not lay hands on the estimate; but I remember that it was found that the guarantee and the bonds would not be sufficient to build the road, and that further money would have to be obtained. The company was given authority to issue bonds to the amount of $35,000 a mile, $25,000 of which was to be guaranteed by the Government of the province. Before the Government entered into this contract with Mr. Gould for the purpose of building this road, they had what appeared to them satisfactory assurances from a banking house in the city of New York. They made inquiries regarding the standing of this banking house from different banks and institutions in New York, and they were all of a highly satisfactory character. The gentleman representing this firm came before the Government and said he was prepared to advance without any provincial guarantee the sum of ten thousand dollars a mile, and gave his guarantee and undertaking to that effect. As the time went on, he was forced to come before the Government and say that in view of the money stringency that was prevailing in the United States and everywhere else, he was unable to carry out his guarantee. It was found that to bring action against him on his guarantee was impossible, and therefore the Government of the province in order to get the road completed were compelled at the last session to guarantee bonds to the extent of a further $10,000 a mile. That is entirely exclusive of the bridges which have been referred to this afternoon. In order to bring that road by the shortest route into the east side of the city of St. John, in touch with Courtenay bay and the new harbour improvements being carried on there, bridges have to be constructed, one across the St. John river, at some point below Gagetown and another across the Kennebecasis river at Ferry Point. Then the road will follow the valley of the St. John down to The Mistake, or thereabouts. After connecting with the Intercolonial it will go on to Courtenay bay over the Government railway. Those bridges will be very expensive. In addition to these another less expensive bridge will have to be built crossing the St. John river on the east to the west side in the neighbourhood of Andover, in the county of Victoria. After the change of administration in 1911 the representatives of the province of New Brunswick came to Ottawa, and placed their case before the Government for consideration. They put forward that the Government had entered into an agreement to operate this road as part of the Intercolonial railway system, thereby recognizing the advantages of that road to the country. That being the case, they asked, in order to secure the completion of the contract that the company had entered into, that the Government would guarantee the loan that was required to construct the bridges along the route. They had an opinion from Mr. Maxwell that these bridges would cost possibly $1,000,000 or in that vicinity and, acting upon that opinion, which they believed to be correct, I am very glad to say that my colleagues of the Government agreed to guarantee for a period of fifteen

years the interest on the bonds of the bridges. It was provided in the Act that after fifteen years the bridges should be credited with the earnings of the road in proportion to the cost of the bridges as compared with the cost of the road when it was constructed. Doubt arose as to whether this amount was sufficient to build these bridges. The result was that the provincial government engaged the services of Mr. Monsarrat, an eminent bridge expert who was employed in connection with the construction of the Quebec bridge. Mr. Monsarrat found that at the point on the St. John river where it was proposed to erect the bridge, the point where it should be erected geographically speaking, one would have to go hundreds of feet down to get a sufficient foundation. At Mistake they went down 120 feet and found no foundation and I believe it was estimated that the foundation would have to be put down to a depth of 260 feet. He reported that the site was impossible but he located another site at Durham wharf and he found that a foundation could be obtained there at less depth, that it was practicable to build a bridge at this place and that it could be built at a cost of $2,063,000. The bridge at the Kennebecasis was estimated at $500,000.

The Government of New Brunswick again came to Ottawa and asked the Government of Canada if they would not render further assistance. The matter was taken up and considered by the Government and I believe that the Government is willing, not to guarantee the bonds of that bridge, but to build the bridges and give the use of them for fifteen years free of rental subject to the conditions that are contained in the Act which passed this House two years ago. I see no reason, speaking for myself, why the Government should not do this. They have recognized the necessity of this railway up the St. John valley, they have recognized the principle of assisting in the construction of these bridges and they believed, when they were willing to guarantee the interest on a million dollars for fifteen years, that it would enable the bridges to be completed. Now that they have found that these bridges will cost a larger sum of money, I think it is a fair matter for favourable consideration that the Government shall agree to build the bridges out and out, that the railway shall use them for fifteen years and that the arrangement in regard to the proportion of the cost of the bridges to the whole road which is embodied in the Act passed in 1912 by the Parliament of Canada shall be applied after that.

The speech of the hon. member for Carleton might be read in two ways. To a certain class it could be said: The hon. member for Carleton is entirely opposed to having these bridges built at all. Is the hon. gentleman sincere and candid in the statements which he has made to the House to-day? Is the hon. gentleman not still playing the game that he has played for so many years of trying to prevent the Government from coming to the aid of this road, and to the aid of the province and making provision by which these bridges shall be built and without which the rest of the road is an impossibility? The hon. gentleman has also referred to the question of the connection at Grand Falls. There is no doubt in the world that there will be connection at Grand Falls with the St. John Valley railway. The only doubt about the matter in the mind of the Minister of Railways and Canals is whether it will be necessary to build a bridge across the river and to build twenty-five or thirty miles of railway, or whether the same result can be attained without any such expenditure by obtaining running rights from Andover to Grand Falls over the existing line of railway and which, in large measure, would be paralleled if a new line were built. A year ago there was no doubt, and there is no doubt to-day, but that the railway known as the St. John Valley will connect at Grand Falls with the Grand Trunk Pacific and be in a position to receive from that railway western freight at Grand Falls to be hauled over the road and shipped out of the port of St. John, and also to carry freight from the port of St. John to Grand Falls.

Not content with talking about the St. John Valley railway, my hon. friend has also made a further reference to the Southampton railway, a road that is now under investigation, and to investigate which a gentleman has been appointed by the Railway Department. The hon. gentleman made some unfounded statements even in regard to that road. The province originally, when I was premier, guaranteed the bonds of that road to the amount of $10,000 a mile. It was thirteen miles in length. But we did not guarantee those bonds until the Canadian Pacific railway had agreed to enter into a contract to maintain, equip

and operate the road and pay a rental of forty per cent of the gross earnings therefor and until I had in my possession the report of their traffic manager to the effect that the road would earn such a sum of money that with the division of the rental at forty cents on the dollar there would be quite sufficient to pay all the interest on the bonds guaranteed by the province and leave a surplus in addition.

The hon. gentleman has also made reference to a railway line extending from the Intercolonial railway to the Grand falls on Nipisiguit river. A guarantee of $15,000 a mile was given by the provincial Government. That line has been in operation during a number of years, and the province has not been called upon to pay a dollar in consequence of that guarantee. The road was built for the purpose of opening up the great iron deposits at and near the Grand falls of the Nipisiguit. These deposits were operated by the Canadian Iron Company, with which Mr. Drummond was connected, and large quantities of ore have been taken out and shipped away to the markets of the world. Employment has been given to a large number of people and quite a thriving town has been built at Grand Falls.

The hon. gentleman speaks as if the money had been thrown away. Every member in the House of Assembly voted in favour of it. Everybody regarded it as a good business transaction; not only did it develop this property, but the province got royalties on the iron that was taken out from the mines. While the mines may be temporarily closed down, I feel that they will shortly be operating again and I am sure that the province will not be out of pocket in consequence of that policy which was approved of by every member in the House of Assembly, Liberal and Conservative alike. I will venture to say that the hon. member for Gloucester (Mr. Turgeon) will not assert that it was improper for the Government of New Brunswick to guarantee the bonds of that railway. He knows the place, he knows the value of the deposits, he knows the nature of the road, he knows how thoroughly and well it is built; and I hope the day is not far distant when the improvements now going on in Bathurst harbour being completed, they will be able to ship the iron ore at Bathurst and not be compelled to take it so much farther Newcastle, as at présent. Further, I hope that in the near future we shall have a smelter established at Bathurst, where the iron will be treated, thus giving employment to a large number of people.

I feel, Mr. Speaker, that I should not have trespassed so long upon the time of the House, as the matter of the Valley railway has been discussed for several years here by my hon. friend from St. John (Mr. Pugsley), by my hon. friend from Carleton (Mr. Carvell), by other hon. gentlemen, and by myself. Little, if any, new light has been thrown on the subject by what has been said here today. I cannot help expressing my regret and the pain I feel that my hon. friend from Carleton, for the purpose of making an attack upon the Premier of New Brunswick, whose case will soon be under consideration by a high tribunal, and who represents the same county in the Legislature that my hon friend represents in this Parliament, should have made the uncalled for suggestion that by going to New York, as he has gone this week, he is going for the purpose of trying to cover up and conceal some transaction in connection with the Valley railway. The Hon. Mr. Flemming has been a very sick man. Three or four years ago, when I was in the legislature with him he had an illness very similar to that from which he is now suffering, and for months he was in a very bad state of health. He has been exceedingly ill this year; he has for a long period been confined to his room, and for part of that time confined to his bed. Under these circumstances, my hon. friend from Carleton (Mr. Carvell) might have been a little more generous, a little more magnanimous, a little more imbued with the feeling of fair play, and of appreciation of the fact that even our adversaries in politics should be treated with some degree of fairness and decency, than to make the unprovoked attack he has made on Mr. Flemming, alleging, practically in effect, that Mr. Flemming's trip to New York, where he has gone to consult a specialist, is for some improper purpose in connection with the Valley railway.

I feel that it is not necessary for me to go into the details of the construction of the railway, which have been referred to by the hon. member. I shall leave that matter where it is, believing and hoping that all the facts in connection with it will be submitted to the public, so that they may judge of the charges that have been made.

If the statements made to me, not only by Mr. Black, but by other members of

the committee, the statements made to me by individual members of the Government, the statements made to me by gentlemen in whose judgment and honesty I have always had confidence, are true, then the investigation will show that not a dollar of money has been diverted from its proper purpose, that every dollar of public money voted and handed over has gone into the construction of the railway, and that the province of New Brunswick and the Dominion of Canada are getting good value for the assistance they have given to that very necessary public work.

Mr. PIUS MICHAUD (Victoria, N.B.): I desire to say a few words, Mr. Speaker, on this Valley railway question. I must congratulate my hon. friend from Carleton (Mr. Carvell) on giving his views so forcibly to this House. I cannot agree with the Minister of Marine and Fisheries (Mr. Hazen) that my hon. friend from Carleton used vulgar language in telling certain stories. There are circulating in the province of New Brunswick to-day stories which I am afraid will be found to be true, and that is why some of our friends opposite do not like these stories to be repeated in this House before they are proven. I assure the House that the question of the Valley railway is the great question in the province of New Brunswick to-day. We are not satisfied with the construction of that railway at the present moment. The building of the road is entirely in the hands of the Yankees, and while we love the Yankees as neighbours, we do not love them when they come into our country to do work that we should do ourselves. We had some very good advice from the Minister of Marine and Fisheries, when he came to my town a couple of years ago and told us to keep away from the Yankees. He told us that, as we were neighbours with the Americans, we would probably be tempted to deal with them, but he warned us to have nothing to do with them. I ask this House why Mr. Gould, instead of a Canadian, has the contract for this Valley railway. I shall give an answer, and I think that answer will be accepted. Mr. Gould's head office is in Presqu' Isle, in the state of Maine, and there is where he keeps his books and conducts his correspondence. To-day there are before the Legislature of New Brunswick charges that money has been improperly spent on that road, and the question is how we are going to reach the books of Mr. Gould in order to prove the charges. A Royal Commission will be appointed soon, but I ask hon. members, under what authority can we reach these books? I do not see any.

At the upper end of the St. John river is the town of Grand Falls, which is supposed to be the terminus of the St. John Valley railway. But subsidies have been voted to build the road only as far as Andover, twenty-five miles from Grand Falls. The whole point is that the road should be built to Grand Falls in order to compete with the Canadian Pacific railway and connect with the Transcontinental railway. If that road is not built as far as Grand Falls, we shall never have any competition along the St. John valley. Grand Falls is developing very rapidly; we have great water-powers there and new industries will come in; we are buying lands all around the town, and we are preparing to erect pulp and paper mills. The St. John valley is the most fertile valley in the Maritime provinces, and indeed in all Canada. We have on both sides of the river the very best soil, and the people are progressing rapidly. There is no reason why that part of the road between Andover and Grand Falls should not be built at the present time, along with the rest of the railway. But there is one reason which is not openly stated, and I think I shall not be mistaken if I give it to the House. There is another great railway corporation interested in this Valley railway, and we know why Mr. Gould has been hired by it to construct the St. John Valley railway. This railway connects with the Transcontinental railway at Grand Falls, and is going to take much traffic from another great corporation which runs from St. John, N.B., through Grand Falls, and out to the Pacific coast. The Minister of Marine and Fisheries spoke of railways across the state of Maine, and I was surprised to hear him make that allusion. I do not believe he was sincere when he did so. Why a road across the state of Maine in order to reach Quebec? Have we not, at the present time, a road practically finished from St. John to Quebec or Lévis? But that is not the road which the Canadian Pacific railway wants to be built; it does not satisfy the Canadian Pacific railway. The Canadian Pacific railway wants a line independent of the Transcontinental railway or the Intercolonial railway—a line of its own. In order to have a line of its own it is obliged to cross the state of Maine. The

St. John Valley railway is being built entirely with Canadian money upon the bond guarantees of the provincial Government and the subsidies of this Government; not a cent of American money is invested in it. The people of New Brunswick are not satisfied with this railway, as it is not being built to a proper standard. When my hon. friend the Minister of Marine and Fisheries said that my hon. friend from Carleton was not satisfied with this road, he was right. We are ready to criticise it in order to have a better one, if possible. There are charters for many railways in the province of New Brunswick, for roads which should be built and which are not being built. I know all that is going on in regard to the road from Plaster Rock to Riley's Brook. It is not being built because the members of the company are Liberals and not Tories. That is the whole story. The company made application to the provincial legislature last year and again this year; but because certain parties are in the company, the provincial Government have no faith in them. I am sorry that during the last two or three years there have not been more Liberals in some of the railway companies in order to protect the public treasuries of the country.

At six o'clock, the House took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill No. 142 respecting the Pacific, Trans-Canada and Hudson Bay Railway Company. —Mr. Douglas.

Bill No. 97, to incorporate the All Red Line Railway Company, title changed to The Labrador, Quebec and Southern Railway Company.—Mr. Fripp.

THE ST. JOHN VALLEY RAILWAY.

Mr. MICHAUD (resuming): Mr. Speaker, when you left the Chair at six o'clock I was about to show the members of this House the importance of building a railway between Riley Brook and Plaster Rock in the county of Victoria, N.B. The provincial Government has refused to guarantee the bonds for the construction of this railway, for many reasons. I have already cited one or two reasons, and I wish to give a couple of others. There seemed to be a great objection to the members of the company which was to construct the road. The provincial Government look only to their own political friends. The members of the company are to-day building the road, or a part of it, at their own expense; they are putting their own money into the project with the hope of ultimately getting assistance from the provincial Government. I understand that they have what we call a subsidy contract with the Dominion Government, and I hope that the Minister of Railways will make this contract good in order to encourage the construction of this road. Every possible effort was made to prevent the construction of this railway line and I am sorry to say that without the aid of the provincial Government nothing can be done for some time. This road, if it is built, will run through the best parts of the province of New Brunswick. It will follow along the Tobique valley, one of the most fertile districts in the province. I saw wheat growing there five feet high; other kinds of grain are successfully grown. They grow good hay there, and at the head of the Tobique river are probably the best lumber limits in Canada. A railway line from Riley Brook to Plaster Rock is certainly needed.

Some reference has been made to the Southampton railway. I am not going to touch that subject at all, except to say that this railroad has been built for a certain amount of money and it is said that the contractors have made a big sum out of it. I was told that the St. John Valley railway, now under construction, is not much better built than this Southampton railway. If that is the case, the contractors are making quite a profit in its construction. I am glad to say that the members of the Legislature of New Brunswick have consented to vote $10,000 a mile in order to finish the work of the Valley railway if all this money goes into the construction. The road in its present condition, and if finished as started, will not be satisfactory to the country. I am glad to say that the members of the Opposition in the provincial Legislature, Mr. Dugal and Mr. Pelletier, have given their consent to this subsidy, and I am sure that they are to be congratulated on what they have done. The hon Minister of Railways told me last year that the railway from Andover to Grand Falls—that is the continuation of the Valley railway—was not to be built immediately. I cannot understand why a part of this road should not be built; it is just as important as the building of a road in any other part of the province. There are at the upper end of the province of New Brunswick a number of rapidly-rising towns. We have at Grand Falls the greatest water-power in Canada; we need better transportation facilities, and this

road should be built as far as that town. We are told that we can have running rights over the Canadian Pacific railway from Andover to Grand Falls, a distance of twenty-five miles, but that will not be satisfactory; we want a road of our own. The province has voted money to build this road; why have running rights over the Canadian Pacific railway for such a short distance? I am glad to notice that the Minister of Marine and Fisheries has promised a bridge at Andover; this bridge will be much needed if we are to build this road as far as Grand Falls.

In closing, I desire to say that this Valley railway has been the occasion of a great many discussions in this House and in the provincial Legislature of New Brunswick, but we have obtained very little satisfaction from what has been done so far. I hope that the road will soon be completed not only as far as Andover, where it will branch out to the state of Maine, but also along the St. John river as far as Grand Falls.

Mr. H. F. McLEOD (York, N.B.): In the few remarks that I shall address to this House with regard to the matter under discussion, which got before the House I know not how—I believe the hon. member for Carleton (Mr. Carvell) was entirely out of order—I wish to confine myself to my memory of the facts, of which I have a general knowledge—of the facts and otherwise, chiefly otherwise, that have been brought before the House by the hon. gentleman who has preceded me. I sometimes wonder, when the hon. member for Carleton addresses the House, as he does very often, whether he himself actually believes what he, in hysterical tones, states to this House.

Some hon. MEMBERS: Order, order.

Mr. SPEAKER: I do not think the hon. gentleman is out of order. If he had said that the hon. member did not believe what the hon. member presented to the House, he might have been out of order; but I do not think that in saying what he did he was out of order.

Mr. McLEOD: I sometimes wonder, Mr. Speaker, whether the hon. member for Carleton actually himself believes the violent and vicious statements that he makes in this House.

Some hon. MEMBERS: Order.

Mr. McLEOD: If he does, then I can only say that my sympathy goes out to the perverted mind and the dishonest intellect that allows him to make such statements.

Some hon. MEMBERS: Order.

Mr. OLIVER: Mr. Speaker, is that remark in order?

Mr. SPEAKER: I do not think the words 'dishonest intellect' are exactly in order.

Mr. McLEOD: May I explain what I mean by the words 'dishonest intellect'? It is a perverted frame of mind: it is a state of mind which the hon. member gets himself into, believing that no man on the other side who differs from him politically can have an honest conviction or can pursue an honest course. I do not wish to follow the hon. member in the violent assault which he has made, but I do say that any man who, standing in his place on the floor of this House, is unable, by reason of the unfairness of his mind, to come to believe that any member holding different political views from his has not honest, straightforward, manly views—that man has a dishonest intellect, and is unable to give an honest view on any political situation.

My hon. friend the Minister of Marine and Fisheries, in his discussion of this matter, has gone into the early history of the St. John Valley railway, as we understand it in the province of New Brunswick. I shall not follow him in the detailed and specific outline of that proposition. May I say this, though, that for many years the St. John Valley railway was a football for politicians in the province of New Brunswick. We came into power in New Brunswick in 1908, and with no promise given to the people of that province—as my hon. friend will admit—to build a line of railway along the valley of the St. John. We did recognize, however, that for many years there had been an insistent demand—a demand founded upon right, and upon all that makes for the prosperity of the country—from the people of the St. John valley, for a railway there. At the time of Confederation we looked for such a line to be built, and we looked more hopefully still when the National Transcontinental railway was talked of. We expected that the line would be built where geography said it should be built. If we believe the statements made by the hon. member for Carleton, N.B., since he has had a seat in this House, he should be the most valiant exponent of the rights of the people in the St. John valley. When the National Transcontinental rail-

way was being exploited, and when there was a desire all over the province for that road to be built down the valley of the St. John, the Liberal party called a convention. Mr. Porter, from the parish of Andover in the constituency of my hon. friend from Madawaska and Victoria (Mr. Michaud)—a true Liberal and a gentleman who had the interests of the province of New Brunswick at heart—moved a resolution at that convention that the National Transcontinental railway should go not across the wilderness of the province, but down the valley of the St. John. My hon. friend from Carleton from party expediency and in order, as he said, not to embarrass the Liberal Government at Ottawa, made that resolution still-born.

Mr. CARVELL: My hon. friend does not know what he is talking about; no such thing ever happened. I say that what the hon. member says is not true; he is misinformed, and I want him to take it back.

Mr. SPEAKER: Since the hon. member for Carleton denies the truthfulness of the statement, the hon. member for York is obliged to accept his statement.

Mr. McLEOD: By parliamentary usage I am obliged to accept his statement, but will my hon. friend deny that Mr. Porter of Andover proposed a resolution at that convention that the railway should come down the valley of the St. John?

Mr. CARVELL: No, I will not.

Mr. McLEOD: More than that, Mr. Porter's resolution was still-born in that convention, was it not?

Mr. CARVELL: No.

Mr. McLEOD. Did it reach the convention?

Mr. CARVELL: Yes.

Mr. McLEOD: No, it did not.

Mr. CARVELL: I say it did.

Mr. McLEOD: It was called off, and my hon. friend was the chief executioner of that resolution.

Mr. CARVELL: That statement is false, and I want my hon. friend to withdraw it.

Mr. SPEAKER: I would like to say to the hon. member for Carleton that after the withdrawal by the hon. member for York, the hon. member for Carleton is certainly out of order in still declaring that he made a false statement.

Mr. CARVELL: Mr. Speaker, I want to tell my hon. friend that he is entirely misinformed; no such thing ever happened.

Mr. SPEAKER: The hon. member for York is bound by parliamentary rules to accept the hon. member for Carleton's statement.

Mr. McLEOD: Undoubtedly I am bound by parliamentary rules, and I propose to be during the few remarks I have to make. I accept, by parliamentary usage, the statement made by my hon. friend. The hon. member for Carleton has admitted that such a resolution was prepared by Mr. Porter of Andover; but did it pass the Liberal convention? Did it, my hon. friend? It did not, and yet the province of New Brunswick stood as a unit absolutely in favour of the St. John Valley route. What happened to that resolution? Had my hon. friend lost his influence with the Liberal party in New Brunswick? Did he exert his influence to put that resolution through the convention, or did he not? He is on the horns of this dilemma: either he did not and was therefore opposed to that route; or he had lost his weight and influence with the Liberal party in the province of New Brunswick.

He must decide between these two horns of the dilemma in which he finds himself. We did not get the Valley railway on that occasion. It was not the responsibility of the Conservative party that we did not get it. The responsibility lies with hon. gentlemen opposite and lies at the door of my hon. friend from Carleton and in other places. We came into power in 1908, we were unpledged and unpromised in regard to this road, but we did have at our door the responsibility of providing adequate railway transportation facilities for the province of New Brunswick. There came to us, as the hon. Minister of Marine and Fisheries has said, not from one county, but from many counties, gentlemen of both political parties urging us to give them those transportation facilities so long denied them by hon. gentlemen opposite. We were then the Conservative Government in the province of New Brunswick. There was in power then at Ottawa a Liberal Government supported by the hon. member for Carleton. It needed, as was stated on the floors of the Legislature by a gentleman of the Liberal persuasion from the county of St. John, the conjunction and the united forces of a party at Fredericton and a party at Ottawa to make this thing a success.

The hon. member for Carleton, at a meeting in Woodstock, read a letter. The letter, fortunately, is embodied in a statute of the province of New Brunswick. He read in the city of Woodstock a letter from the hon. member for St. John City (Mr. Pugsley), then Minister of Public Works, in which he indicated the kind of railway that he would be willing to take over and operate as a part of the Canadian Government railway system. My hon. friend knew when he read that letter that he specified a kind of railway that it was impossible to provide with the aid that the province had given and the Dominion subsidy. The Premier of New Brunswick then, the Hon. Mr. Hazen, had said that if the Parliament of Canada would take over and operate the road the province would guarantee the bonds for $25,000 per mile. My hon. friend the member for Carleton read in the city of Woodstock a letter from Mr. Pugsley in which he said that he would take over and operate such a line if it was built with a 4 per cent grade, with concrete bridges and culverts and up to the standard of the National Transcontinental. So, in 1910, having in mind the guiles and wiles of the gentlemen opposed to us, we passed an Act guaranteeing the bonds of the St. John Valley railway for $25,000 a mile provided the road was built to a standard of 4/10 per cent grade, and with concrete or stone culverts and bridges. We did that because we knew that the road, with the aid in sight could not be built up to that standard.

My hon. friend this afternoon, in the course of the hysterical, wild remarks that he made, said that the Government of New Brunswick had held off, had tried to hold up this railway, and had tried to hinder it in every way. Absolutely the reverse is the truth. We honestly went into that project with the idea of building the road. We knew that our friends at Ottawa, then in charge of the Government of this country, did not want that road built by a Conservative Government in New Brunswick. We knew that every obstacle that could be placed in the way of building the road by a Conservative Government would be placed by my hon. friend from Carleton and my hon. friend from the city of St. John who is not now in his seat. My hon. friend from Carleton stated, I think I am right although I am speaking from memory, on many platforms, that the road could be built for $31,000 a mile.

Mr. CARVELL: The kind of a road you are building now—yes.

[Mr. McLeod.]

Mr. McLEOD: I think I am right in stating that the hon. gentleman said that the road could be built for $31,000 a mile. I regret that I have not the contract before me, but, speaking from memory, our contract provides that there shall be a maximum grade of one per cent going west, and that there shall be from the city of Fredericton to St. John, where the heaviest traffic goes, a maximum grade of 4/10 per cent. Am I right?

Mr. CARVELL: No.

Mr. McLEOD: I am right.

Mr. CARVELL: Four-tenths going east and six-tenths going west.

Mr. McLEOD: Four-tenths going to the sea; that is what I said. The hon. gentleman will admit that this is a very high class road. If there was one thing that impressed me more than another while I heard the hon. gentlemen for Carleton discussing this matter this afternoon, it was that he was presenting the most pitiable indictment that could be framed against the National Transcontinental railway in New Brunswick. There has been built through the virgin wilderness of the province of New Brunswick, through the uncut timber regions, the crown lands of the province, through the revenue-producing timber area, a road from Edmundston down to the seaport of Moncton which never saw the sea. If my hon. friend will speak honestly as a man he will tell me to-day that that road stands there as a monument to a crime. Will he say so? He will not speak because he knows that that railway, built from Edmundston across the virgin wilderness of New Brunswick to the seaport of Moncton, which was never a seaport and never will be, is a monument to a crime. Had I been in his place, I would have been man enough, I would have loved the province I grew up in enough, I would have been independent enough to have stood up in this Parliament for the old province of New Brunswick, settled by loyalists as he said. I would have been man enough, party or no party, to have stood up for a line where it ought to have been built—down the valley of the St. John, settled, as he says, by good, old, loyal stock.

Mr. CARVELL: If my hon. friend will turn up 'Hansard' for 1905, he will find that in the first speech I ever made in this House I was doing exactly what he says he would have done.

Mr. McLEOD: How did you vote?

Mr. CARVELL: You cannot find it on record anywhere that I voted against the road going down the St. John valley.

Mr. McLEOD: Nor can it be found on record anywhere that the hon. member (Mr. Carvell) ever moved in this House that the road should come down the valley, because he never did it. I admit that the hon. member was in favour of the Valley road; he could not be anything else.

Mr. CARVELL: Then, what are you talking about?

Mr. McLEOD: You know what I am talking about. Living as he does in the St. John valley, my hon. friend in his heart—I think he has a heart—could not oppose the railway coming down the valley. I have every regard for him; I have nothing to say about him except politically. My hon. friend had it in his heart to do the right, but actually to do the right is another thing. My hon. friend is a man of courage in elections, and I believe he possesses some bulldog pertinacity; but he did not have enough of the old stock in him to go against his party. That is the whole thing. The dominant side of his party was against him, and he did not have enough of the big fist to stand up and be a real man against his party, for the province and for the St. John valley. That was the trouble with him. We fought our little fight; we came to Ottawa. I myself came to Ottawa during the dark days of the St. John Valley railway, when the Liberals were in power. We came here, and the Hon. William Pugsley received us with that charming manner with which he receives everybody—with that graciousness of spirit that always characterizes him. I believe that he in his heart was in sympathy with the St. John Valley railway, but he was not in sympathy with the Tories building it; he did not want them to get the credit. We negotiated with him off and on, from time to time, with indifferent success; and then came that happy moment in September, 1911, when the Lord delivered them into our hands. Then we came to deal with gentlemen who had a friendly interest in the building of that railroad. I myself came to Ottawa and interviewed the hon. Minister of Railways, who is not now in this House, I, acting for the Government of New Brunswick, entered into a contract or agreement to lease for ninety-nine years the road; and to-day the hon. member for Carleton (Mr. Carvell) said: Why, they actually changed the statute. Well, we did. We did not want to build across New Brunswick a line like the National Transcontinental railway, which cost $102,000 per mile—some of it went into the road. We did not want to build that kind of a line, but we did want to build a line better than the Intercolonial railway, and better than the Canadian Pacific railway in New Brunswick, and we entered into a contract or agreement to lease for ninety-nine years the St. John Valley railway, to be operated by the Government of Canada as part of the Government railway system. It is a road constructed to the maximum of a one per cent grade going West—

Mr. CARVELL: Going both ways.

Mr. M LEOD: But a maximum of ⅒ per cent grade going from the city of Fredericton to the port of St. John, where the heavy traffic would be. This afternoon my hon. friend made a great many ex parte statements, which he said were deduced from his own knowledge. He is a politician of some merit, and he says he has gone over this road and knows it. I think I may speak for the sixty-two miles in my own county, which I know better than he ever will, as I have been over it more than he ever will, and I have examined its grades and know its curvatures. I have done more than that; I have sat as a member of the Government of New Brunswick, and I know that when my hon. friend (Mr. Carvell) makes the statements he made this afternoon, he states what is absolutely beyond the fact. Save only the National Transcontinental railway, there is no better line of railway constructed in Canada, built to a higher standard, or constructed more exactly to specifications, than the line of railway down the valley of the St. John, from Woodstock to the city of Fredericton. We do not exceed at any one point on that line a maximum grade of one per cent.

Mr. CARVELL: Yes, you do.

Mr. McLEOD: We only reach that maximum in two instances in the sixty-two miles. I heard my hon. friend this afternoon exonerate Mr. Taylor, the Government engineer appointed by the Department of Railways and Canals to supervise the estimates and to supervise that railway. I heard my hon. friend state that Mr. Taylor was a gentleman of repute. Am

I right? Mr. D. F. Maxwell is also an engineer of repute.

Mr. CARVELL: I did not say that.

Mr. McLEOD: I say so; do you deny it?

Mr. CARVELL: I have not said so yet.

Mr. McLEOD: I know that, too. Mr. D. F. Maxwell has no connection with the St. John Railway Company; no connection with the St. John and Quebec Railway Company; no connection with the Quebec and St. John Railway Company; he is employed by the province of New Brunswick. I observed, in the discussion this afternoon, that the hon. member for Carleton, in one of his wild moments, said that $1,700,000 had been sent away to New York to the Yankee boodlers.

Mr. CARVELL: It is $2,700,000.

Mr. McLEOD: You said $1,700,000.

Mr. CARVELL: I was wrong if I did; it was two millions.

Mr. McLEOD: I took your word for it that it was $1,700,000, and that was an error of judgment on my part. The hon. member stated, then, taking what he says now, that $2,700,000 had been sent to these Yankee boodlers and carried away to the city of New York. Am I right?

Mr. CARVELL: You are not very far from the truth.

Mr. McLEOD: Well, I was only one million dollars out, taking the hon. gentleman's own statement. Does my hon. friend seriously propound that proposition to this House, or does he not?

He observed also that the St. John and Quebec Railway Company had floated the bonds guaranteed by the province of New Brunswick at 95 in the city of London in 1912. He is a little in error; they floated them at 96 and a fraction, which price in 1912 was pretty good for guaranteed bonds. If my hon. friend knows anything about finance, he must know that guaranteed bonds sell at from three to four points lower than straight bonds of a province. Every one knows that. When they got 96 and a fraction for these bonds, not 95, which is a minor error on the part of my hon. friend, they sold them at a mighty good price and were mighty lucky to sell them then. Any man who has to do with finance knows that he could not sell those bonds now; that he could not have sold them six months afterwards. The depression of the money market in all parts of the world had come, and tightness of money had made it impossible that any bonds, no matter how good they were, could be sold at a profit in the markets of the world. My hon. friend knows that; yet he went into hysterics this afternoon because, as he said, they sold the bonds at 95. Then he said that they took $2,700,000 to New York to these Yankee boodlers. As a matter of fact they did nothing of the kind. Before those bonds were given, before a single dollar went into the hands of the men who had the contract to build that road, arrangements were made with the Prudential Trust Company of the city of Montreal, which I think is a reputable concern, by which all the proceeds of the sale of those bonds, which, as he says truthfully, were guaranteed en bloc, were to be paid into the Prudential Trust Company and to be paid out on the certificate of an engineer of the province of New Brunswick and on the authority of an Order in Council of that province. Therefore not a single dollar of the $2,000,000, or the $1,000,000, whichever he likes, went to the city of New York or to any other place in the United States, but remained in the city of Montreal in the Dominion of Canada in the hands of the Prudential Trust Company to be paid out only on the authority of an Order in Council. Does my hon. friend deny that?

Mr. CARVELL: I certainly do. My hon. friend surely knows that the company got $2,700,000, which was handed over to the Quebec and St. John Valley Railway Company and taken to New York.

Mr. McLEOD: The St. John and Quebec railway had a contract from the province of New Brunswick, which they let to the Quebec and St. John Construction Company. This company also had their office in the city of Fredericton, and they also could not draw a single dollar from the treasury except by an Order in Council of the province of New Brunswick. My hon. friend need not attempt to draw a red herring across the trail or to speak about sending the money to Yankees. When my hon. friend referred to Arthur R. Gould as a down-east Yankee, a man who could twist myself, the hon. Minister of Marine and Fisheries and the present Prime Minister around his finger, I wonder what created the animosity in his mind against that gentleman.

9 p.m.

Mr. CARVELL: I have none whatever. I admire him.

Mr. McLEOD: Yes. Mr. Arthur R. Gould is a man who goes ahead with things, who not only does things in the St. John valley, but is interested in cheap power, as my hon. friend knows. Not long ago he applied to the town council of Woodstock, which is my hon. friend's home, to be allowed to bring cheap power to that town. My hon. friend was there with his big fist up fighting as hard as he could for his company, but Mr. Gould got in even against the competition of my hon. friend's company. That is the whole story.

Mr. CARVELL: My hon. friend is wrong only to the extent that Mr. Gould did not get in.

Mr. McLEOD: My information is that, notwithstanding every effort of my hon. friend to preserve his own high-priced company, he did get in.

Mr. CARVELL: He did not get in.

Mr. McLEOD: Although I am neither a prophet nor the son of a prophet, I venture to predict to my hon. friend that within six months Mr. A. R. Gould's Aroostook power will be driving his company out of business.

My hon. friend referred to the fact that we had entered into an arrangement by which, under the operation of the St. John Valley railway, the Intercolonial should take 60 per cent of the gross earnings to pay the upkeep and the maintenance of the road, and 40 per cent should be paid to the province of New Brunswick to take care of the interest on the bonds guaranteed. My hon. friend asserted that 40 per cent would not pay for the axle grease that ran the road, if it was a local road. About half an hour afterwards in his argument he said: Why, this road belongs to the St. John and Quebec Railway Company; they own every inch of the right of way; this province has guaranteed the bonds of a road that belongs absolutely to the St. John and Quebec Railway Company. Watch my hon. friend twist. He says that the 40 per cent would not pay the interest on the bonds; that it would not pay for the axle grease. Yet the St. John and Quebec Railway Company does not get a single dollar until the 60 per cent is paid and until that 40 per cent pays the interest. Where does my hon. friend find himself? When he says that the 40 per cent will not take care of the interest, he means that, as an asset, the St. John Valley railway is absolutely valueless to the St. John and Quebec Valley Railway Company. Then he turns around and says that they have that great asset, which fifteen minutes before he said was valueless.

Now I come to the point that is interesting to my hon. friend from Victoria, N.B. (Mr. Michaud), and interesting also to my hon. friend from Victoria and Carleton, as I presume it is going to be. My hon. friend from Carleton this afternoon, in tones that might well have suited a more dramatic occasion, said that it was much better that this road had never been built than that these bridges had not been built. We have heard, not now only but for years, since 1910, that the intention of the Government of New Brunswick was not to build that road to the port of St. John nor to continue to a point on the Transcontinental at or near Grand Falls. My hon. friend expressed grave doubts as to whether that road would be built to Grand Falls, and he cited the fact that the subsidy was not granted from Andover to Grand Falls. That is true; and the reason why the subsidy was not granted is that the route from Andover to Grand Falls has not yet been located or approved by the Department of Railways and Canals. Does my hon. friend know that the Government of New Brunswick has entered into a contract with the St. John and Quebec Railway Company? And does he know the terms of that contract? I speak from memory, but I state it correctly when I say that that contract provides that the road shall be built from a point on the Transcontinental at or near Grand Falls following as closely as may be the valley of the St. John river down to the Mistake in the county of Queens crossing the St. John river at or near the Mistake and the Kennebecasis river at or near Perry's Point to join the Intercolonial railway at or near Rothesay. Do I quote it correctly? The hon. gentleman knows I quote it correctly. He knows as well as any one in New Brunswick knows that we have entered into a contract to build this line from the National Transcontinental at Grand Falls to St. John, carrying the through traffic, if it may be, not through the wilderness of New Brunswick, but bringing it down by a shorter route to the port of St. John? Of course he knows it, and he sits quiet because he knows I state the facts. May I point out to him that we have also a further project in our mind? We have in mind the building of a line of railway, from Andover, from the boundary line, across the state of Maine by the shortest route, making connection

with the transcontinental lines and bringing the traffic of the West down to the port of St. John and also to St. Croix and L'Etang in the near future, by a line more than one hundred miles shorter than any now in existence. My hon. friend asserted here this afternoon that he had never seen the specifications of this road.

Mr. CARVELL: I did not say that; I said plans and profiles.

Mr. McLEOD: I think my hon. friend said he never saw the specifications. If he says he did not, I will accept his word, but hon. members of the House know what he said.

Mr. CARVELL: I was referring to the plans and profiles.

Mr. McLEOD: The hon. gentleman said 'specifications.'

Mr. CARVELL: I may have used the word, but what I had in mind was the plans and profiles.

Mr. McLEOD: I shall not undertake to place my word unsupported before this House in regard to the quality of the road. My hon. friend from Carleton did venture to place before the House his unsupported testimony as to the grades and curves of this road. I might say there is on that St. John Valley railway a maximum grade of one per cent in very few instances. When estimates came before the Government from Mr. Taylor, the Dominion Government engineer, and from Mr. Maxwell, the provincial Government engineer, not one dollar was paid to that company until the monthly progress estimates were in, and even then we did not pay them the whole of the progress estimates, but all the time, at least when I was a member of the provincial Government and I believe since, we paid them only five-sevenths of the money actually expended on the road. And, notwithstanding that my hon. friend has said, that neither Mr. Gould nor his company has put one dollar into that road, the fact is that we have only paid five-sevenths of what the Dominion and provincial Governments' engineers stated had been actually put in the road. The only exception is that we did pay them the actual cost of the steel rails and steel bridges. Thus, at this moment, so far as the 117 miles now under construction and practically completed is concerned, we have paid only five-sevenths of that money.

Mr. CARVELL: Was that inclusive or exclusive of the Dominion subsidy?

[Mr. McLeod.]

Mr. McLEOD: Exclusive. I stand here on my responsibility as a member of this House, knowing what I am talking about —some gentlemen do not—and I say we paid them five-sevenths only except that we paid them the actual value of the steel rails and the steel bridges.

Mr. CARVELL: And they got the Dominion subsidy besides that.

Mr. McLEOD: They got the Dominion subsidy when they established to the satisfaction of the department here that they had earned it, and not until then.

Mr. CARVELL: My case is pretty nearly made out.

Mr. McLEOD: Not at all. Then we reached the point where we had guaranteed the bonds; we had authorized by the legislation of 1910 in the province of New Brunswick, the issue of bonds not for $25,000 a mile, but for $35,000 a mile. We were to guarantee $25,000 a mile; but my hon. friend, if he is fair, will admit that in 1910 times were buoyant; money was easily borrowed in the money markets of the world, and everybody knew that it would be very easy to finance $10,000 of second mortgage bonds of the St. John valley railway. F. J. Lisbon & Company, of the city of New York, concerning whom we had the very finest reports, guaranteed to us that they would finance the second mortgage bonds. But there came in this country, as there comes at times in every country, a period of money stringency, and second mortgage bonds unguaranteed could not be given away. Then came that time when we handed over, as my hon. friend says, $2,000,000 more to the boodling gang. What should we have done? We had guaranteed $25,000 a mile; we were receiving $6,400 a mile in Dominion subsidies, and we were face to face, not with a railway the cost of which exceeded the estimates, but a railway lacking completion because we had not money to provide the amount of the estimate of $42,000 or $43,000 a mile made by our engineers. Should we let the matter stand, or should we see the project through? The men who ruled the destinies of the province of New Brunswick decided that there was only one thing to do. Here was the road to which they had contributed $25,000 a mile; for which they had a subsidy for $6,400 a mile. Let my hon. friend note this. the National Transcontinental railway was built, as he says, at a ½ per cent grade. My hon. friend did not mention that they had

a pusher grade of 1¾ per cent at Wapski, in the county of Victoria.

Mr. CARVELL: It is only one and one-tenth.

Mr. McLEOD: It is more. My hon. friend admits that that road has a grade of one and one-tenth per cent and cost $102,000 a mile, and he says that our road should be built for $31,400 a mile. Examine it where you will, inside and outside, you find the same result: absolute heresy; absolute attempt on the part of the hon. member to make political capital where he has no facts to back him up.

I want to make one little reference to the great bridges with regard to which my hon. friend almost got down on his knees and wept. My hon. friend says that he is anxious that those great bridges should be built; that unless they are built the construction of the line is a waste of money. Do I understand my hon. friend right when I apprehend that he said that?

Mr. CARVELL: No, I did not go that far; I said that it was necessary to build them.

Mr. McLEOD: I think the hon. gentleman went farther.

Mr. CARVELL: You can put it any way you like.

Mr. McLEOD: I will put it fairly. My hon. friend said that it is necessary to build these bridges. In connection with the bridge which crosses the St. John river at the Mistake, we have the report of Mr. Monsarrat, probably as capable a foundation bridge engineer as we have in this land, who says that bridge will cost $2,063,000 if it is an engineering possibility at all. I am frank enough to say to this House—and I do not speak for any party, I speak only for myself—that I believe the proper way to enter the port of St. John is not by crossing the St. John river at the Mistake and Kennebecasis but by double-tracking the Canadian Pacific railway to the west side. My hon. friend the Minister of Marine may not agree with me; I do not think he does; but I have opinions of my own, and I do not care who agrees with me and who does not. But we have contracted to take that railway into the port of St. John across the St. John river and across the Kennebacasis by Rothesay and the Intercolonial railway, and we are going to fulfil the contract. We have another bridge to build across the Kennebecasis at Perry's Point, which will cost more than $500,000. My hon. friend says—mark the inconsistency of it, Mr. Speaker—that those bridges are absolutely necessary, and yet he believes that the Minister of Railways should give no aid to them.

Mr. CARVELL: I said: let us build them ourselves, and not hand the money over to Yankees.

Mr. McLEOD: The contract has been let, and it includes the bridges.

Mr. CARVELL: It has not.

Mr. McLEOD: My hon. friend knows that the St. John and Quebec Railway Company have had the contract for the line, including bridges.

Mr. CARVELL: No, it has not.

Mr. McLEOD: My hon. friend either knows that or he does not know what he is talking about. I know that a contract has been let for the building of that line of railway, including these bridges. A subsidiary company may build the bridges, but the contract has been let for the building of that line of railway, bridges included. My hon. friend is so much in doubt that he dare not deny my assertion. It is the old, old story. My hon. friend says that in its inception, the idea of building this road was an excellent one, a grand thing—he dare not say anything else. This road is to serve the St. John valley, which was peopled long ago, before the landing of the Loyalists, by the French Acadians, some of the best blood of old France—men who hewed out their home plots there, and peopled afterwards by men who left their homes, established in luxury in the United States, came to that valley and hewed out home plots for themselves in the wilderness, until their habitations re-echoed the songs of the old flag.

My hon. friend was right when he said that there was no such magnificent valley in the province—a land which in fifteen years will produce apples that will wipe out competition the world over; but he and the party behind him have thrown every possible obstacle in the way of the determined, honest effort to give transportation facilities to that province, not only as regards local traffic but for the through traffic that must, from geographical reasons, come from the middle and far west down to the port of St. John. My hon. friend's speech to-day was just another link in the chain of the determined effort to take away from the Conservative party the credit which they deserve for their courage and energy in the fight against odds which

they made for building a line of railway down the valley which I love and desire to serve, and which my hon. friend also ought to love.

Hon. H. R. EMMERSON (Westmorland): In the semi-ready and unique exhibition of declamatory eloquence to which we have listened, we have been favoured not only with a definition of dishonest intellect—a perverted mind, as I understand it—but have been given an illustration, or object lesson, as well. I have appreciated very highly indeed listening to the production of my hon. friend (Mr. McLeod), but I would have been more grateful—and I am sure the House would have been—had he dealt with the subject brought before the House by my hon. friend from Carleton (Mr. Carvell). I observed from my seat that my hon. friend from York (Mr. McLeod) was very highly gratified with his performance, but I did not observe hon. gentlemen around him indulging in the same gratification, and I am sure that they, as well as myself, would have been under a debt of gratitude to him had he favoured the House with some expression of opinion on the subject which my hon. friend from Carleton very properly and aptly brought to the notice of the House this afternoon.

Without attempting to follow the hon. member for York in his—shall I say serpentine movements, always avoiding the subject, I ask you, Sir, if it was not opportune and apt that my hon. friend from Carleton should bring this matter to the notice of the House. I know that my hon. friend the Minister of Marine and Fisheries, as well as the hon. member for York, charged my hon. friend from Carleton with indulging in vituperation, and they considered it very unfortunate that the hon. member for Carleton should have indulged in language that could by any process be misconstrued. If my hon. friend from Carleton did indulge in that kind of discussion, and if it is wrong, it is very unfortunate that both my hon. friends the Minister of Marine and Fisheries and the hon. member for York followed his example. Mr. Speaker, what did the hon. member for Carleton bring to the notice of the House this afternoon? Unfortunately, there have been matters occurring in the province of New Brunswick which should bring the blush of shame to the cheek of at least every New Brunswicker. Unfortunately, in the Legislature of that province there have been incidents recently that do not reflect credit on the Government of the province or upon the people of the province—more's the pity that there should have been the necessity for any such incidents. We have heard a great deal with respect to the St. John Valley railroad. My hon. friend from Carleton has, I know, a habit of not mincing matters when he speaks. This at least can be said for him: there is no excuse for misunderstanding him. He never indulges in insinuation or innuendo. No one will charge him with that. When he has anything to say, he says it, and hon. gentlemen opposite know full well that those are his methods. For the purpose of warning the acting Minister of Railways, he told us this afternoon that in the province of New Brunswick they have been attempting to construct a railway, that the province, in addition to the subsidies granted by the Parliament of Canada in aid of that road, had also pledged its credit in guaranteeing its bonds; that of the proceeds from the bonds guaranteed by the province, over half a million dollars had been improperly diverted from its legitimate purpose; that charges had been made in the provincial Legislature against hon. members of that House, namely, the Premier of New Brunswick and a member of that Administration, now the member for York, New Brunswick. Those were the only two individuals named, and let me say that instead of indulging in the style of speech to which we have just listened, it would have been far better if the hon. member for York had not attempted to say a word along the lines which he followed, inasmuch as he stands before the Legislature of New Brunswick charged as a former member of the Government of that province with being implicated in the misappropriation of those funds. My hon. friend the Minister of Marine appealed for sympathy with respect to his former colleague, the Premier of the province of New Brunswick. He referred to the fact that these charges had been made, and that they were now under consideration by a tribunal. When were those charges made? About a fortnight ago. The Minister of Marine took credit for his friends because they appointed a Royal Commission to investigate those charges. But have they appointed a commission? They authorized it, but since then a fortnight has passed and no tribunal is considering the charges at this moment; nor has the tribunal authorized by the Legisla-

ture of the province of New Brunswick been created. When charges are made against members of a Parliament or Legislature under the British Constitution, it is usual for the members so charged to demand an instant inquiry. Was this done?

Mr. CARVELL: Never.

Mr. EMMERSON: Was this done by Hon. Mr. Flemming, the Prime Minister of New Brunswick? No. Although public notice of the charges had been given, he came before the Legislature and, as Prime Minister of the province, rushed through a Bill to its third reading to give an additional guarantee in aid to this railway to the amount of $2,000,000; but he never opened his mouth about these charges; he never referred to the transaction in any way whatever, and yet my hon. friend from York thinks the hon. member for Carleton should have been silent with respect to the Hon. Mr. Flemming's connection with the transaction. I say it would have reflected very much to the credit of Hon. Mr. Flemming, and he would have had a greater claim upon our sympathies, if he had gone before the Legislature and demanded that an inquiry into the charges be held at once, and before any further action was taken with respect to the additional aid that was asked for this railway. Here is a charge that some half million or more of the funds of the province have been improperly appropriated in connection with the construction of this road. Before the Premier will even speak of the charges he asks that the company shall be placed in a position whereby they can realize, by reason of the credit of the province, an additional $2,000,000 ostensibly to aid in the completion of the road. No action has been taken by the Premier. The inquiry has not been held and although the legislation was rushed through, although the legislature prorogued a week ago last Saturday, although legislation has been enacted authorizing the inquiry, no steps have been taken by the Government. Here is the head of the Government, the accused, the Premier of the province of New Brunswick, withholding action and preventing the people of that province from knowing the actual facts with respect to the charges.

The hon. Minister of Marine and Fisheries (Mr. Hazen) comes before this House and condemns my hon friend from Carleton for daring to mention the matter in order that my hon. friend the acting-Minister of Railways and Canals (Mr. Reid) shall be warned with respect to the application that is now pending before the Dominion Government for an additional $2,000,000 in connection with some bridges that it is proposed to construct. I am sure that the hon. acting-Minister of Railways and Canals is grateful to my hon. friend from Carleton for bringing to his notice the conditions which have been prevailing in the province of New Brunswick and for advising him in respect to the matter. The Dominion Government, in the light of the facts that have this afternoon been ventilated before this House, would not, I venture to say, even dare to bring down to Parliament a proposal in aid of the construction of these bridges until these charges have been inquired into and until the facts have been declared and exposed, if there are facts to be exposed, to the people of this Dominion. It is a fair proposition that no action should be taken by the federal Government in connection with this railway until that inquiry has been held. Action should not have been taken by the legislature of New Brunswick in relation to this railway until the charges had been investigated and disposed of. But this was done and the circumstances are before the country. This was not a matter to be treated with the levity with which my hon. friend from York (Mr. McLeod) treats it. It is a matter of very serious and grave concern, it is a matter which affects the future financial condition of the province of New Brunswick and my hon. friend from Carleton is doing very great public service in the interests of the province, and aye, indeed, in the interest of the Government and the people of all Canada, in so pointedly bringing to the notice of the House the facts which seem to be but too evident.

I am not going to prejudge any gentlemen whose names have been mentioned in connection with this matter. I appreciate the fact that it is a very easy matter to make charges. I have the fullest possible sympathy with the gentlemen who stand charged with these matters to-day and I would not prejudge them. But these gentlemen, when they take the attitude which they have taken, when they burke inquiry and will not create a tribunal, when they draw the veil before the vision of the people of the province and of the Dominion in the effort to obscure the facts of the case, I am sure are not in a position to appeal to the sympathy either of this House or the

people of any province in Canada. We will suspend judgment but with a suspension of judgment there should be a suspension of action in the matter of legislation relating to this undertaking.

I am not going to discuss the character of the undertaking. I shall not enter into details as to the road running here or there. It is not even pertinent, in my judgment, to this discussion to refer to the character of the road. The one point that was so well made by my hon. friend from Carleton was that wrong-doing had been charged with respect to moneys that have already been paid, perhaps with respect to moneys that have been paid under the authority of this Parliament. Charges have been made with respect to the appropriation of these moneys as well as the moneys received from the province of New Brunswick. Until these charges are determined, until the facts are exposed, until the men are exonerated or found to be guilty, this Parliament should withhold action. I hold that the Legislature of New Brunswick and, aye, indeed, the Governor of the province of New Brunswick, should have had their hands stayed before any further movement was made in respect to the matter.

My hon. friend from Carleton has referred to the aid that has been given by the province of New Brunswick in connection with other railways in that province. It is a very important matter to the province. It is a matter of supreme importance in my judgment, and it affects not merely parties. We have the hon. member for York, N.B., (Mr. McLeod) talking about Liberals and about Conservatives in face of the facts as they have been disclosed.

This subject rises superior to the fate of parties; it is the fate of a province that is hanging in the balance, and not the fate of a Government. My hon. friend from Carleton is entitled, not merely to the thanks of this House, but to the thanks of the people of all Canada for the action he has taken this afternoon; and these thanks he will receive. The Minister of Trade and Commerce, in answer to a question put by me the other day, practically said that there had been a proposition placed before the Government of Canada, asking for three million dollars to aid in the construction of these bridges which have been so lightly referred to by the hon. member for York (Mr. McLeod), and he said that proposition was under the consideration of the Government. The hon. member for Carleton seized this opportunity, as was his duty, to bring to the notice of the Minister of Railways and his colleagues the facts concerning the whole miserable transaction, with the idea of impelling this Government to pause in any action that it might intend to take. I am sure the Minister of Finance is grateful for having the facts brought to his notice. The Minister of Finance, in that splendid Budget speech he made the other day, was called upon to explain and apologize for a great many misfortunes, and I am sure he feels grateful to the hon. member for Carleton for having brought to his notice facts which may induce him to be careful in his steps, so that next year he will not be called upon to apologize, and to excuse, and to explain with reference to this three million dollar transaction, in connection with the River Valley railway bridges.

My hon. friend from York (Mr. McLeod) indulged in some very extravagant language with respect to the character of the National Transcontinental railway through the province of New Brunswick, and he said it would be a monument of the crime that had been committed against that province. The province of New Brunswick during the last two or three decades has been declining in population in proportion with the increase in the other provinces. At every decennial census we have been brought face to face with the loss of representation in this House of Commons, and the construction of the National Transcontinental railway through this unsettled portion of the province, traversing a country rich in natural resources will, it is hoped, contribute very materially to adding to the population of our province. That railway was built in the interests of Canada; it was built, in my judgment, in the proper location and along the proper route, and I think history will demonstrate that the wisest course was pursued by the Government, and that the province of New Brunswick will have reason to feel grateful.

But, that is apart altogether from the question raised by my hon. friend from Carleton, which seems to have been misapprehended entirely by the hon. member for York. I have never heard in the Legislature of New Brunswick any similar utterance to that to which we were treated this afternoon by the hon. member (Mr. McLeod). I do not know whether that style of oratory prevails to-day in the New Brunswick Legislature, but I do know, that if

it were indulged in in my days there, the man who indulged in it would be laughed to his seat, and I wonder why that did not occur in this House this afternoon. Perhaps the novelty of the situation made us generous and indulgent to the hon. member for York. The hon. member (Mr. McLeod) closed his remarks by saying: the Lord delivered them into our hands, in September 1911, and apparently he said it with the utmost satisfaction—was it in connection with any memories he had? Be that as it may, what happened on the 21st of September, 1911, apparently has resulted in delivering into the hands of certain looters, the St. John River Valley railway, which has been looted from that day to this, and in the judgment of every respectable man in the province of New Brunswick, it stands looted.

This Mr. Gould of New York, whoever he may be, has apparently cast avaricious eyes on the water-power rights in the town of Woodstock, and certainly, if he is desirous of securing any rights to the detriment of the hon. member for Carleton or in competition with any other company, he can congratulate himself that he has, on behalf of the Yankee power company of Aroostook which he represents, a very excellent 'tooter'—perhaps 'touter' is the better word—in the person of my hon. friend from York, because my hon. friend from York was apparently inspired with great glee at the prospect of a Yankee coming over from Aroostook, and seizing for himself and his Yankee associates, power rights in the town of Woodstock. In his closing remarks my hon. friend from York indulged in the usual higher patriotism and he waved the old flag. But, he was delighted at the prospect of Mr. Gould getting these rights in Woodstock, and yet he was one of the clan that indulged in the cry: 'no truck or trade with the Yankees,' a few years ago.

I must apologize, Mr. Speaker, for devoting even so much time to the speech of the hon. member for York, but I did want to say a word on the subject introduced by the hon. member for Carleton.

Mr. A. DeWITT FOSTER (Kings, N.S.): I do not rise for any extended argument on the subject matter brought before the House by the hon. member for Carleton, but I wish to point out that in the course of the remarks made by the hon. member for York, he was interrupted by the hon. member for Carleton, who said that in 1905 he made a speech in this House in which he advocated that the Transcontinental railway should come down the river St. John valley. I have here 'Hansard' of 1905, and I would like to send it over to my hon. friend from Carleton, and ask him to point out where he is reported as ever having uttered such language.

Mr. CARVELL: It may have been in 1906. That is about the size of the calibre of my hon. friend; I am not surprised that he brought up that question.

Mr. FOSTER: I have also 'Hansard' of 1906 under my hand; and I would like my hon. friend to take 'Hansard' of 1906, or 1907, or 1908, or 1909, or 1910, or any 'Hansard' from the year 1905 to the present time, and point out where he ever made such a speech in this House. Nevertheless he asks hon. gentlemen on this side of the House to accept his word. He can take his own time to point out the place, until the end of this session if he likes.

Mr. CARVELL: Do not worry.

Mr. FOSTER: He says that is about my calibre. Well, if my calibre is getting at the truth, that is calibre enough for me in this House or elsewhere. My hon. friend from Westmorland (Mr. Emmerson), in his few remarks following the hon. member for York, N.B. (Mr. McLeod), deplored the style of language used by that hon. member. I say that there can be no possible comparison between the style of language used by the hon. member for York, N.B., and that used by the hon. member for Carleton, N.B. The hon. member for Westmorland himself was not free from using certain words which would hardly be the most classical language that one would expect from a gentleman so well informed and so learned as my hon, friend. He seemed to think it was a tremendous thing that any one should regard the Premier of New Brunswick with any degree of sympathy. If there is one member in this House that ought to feel tender on a subject of that sort, it is the hon. member for Westmorland. When a man is ill and has been confined to his room for days and weeks, and charges are made behind his back——

Mr. CARVELL: He was present when they were made.

Mr. FOSTER: He is not present here to-day.

Mr. CARVELL: He was in the legislature of New Brunswick when these charges were made.

Mr. FOSTER: Well, assuming that he was, my information was that he was ill in bed.

Mr. CARVELL: He was in the legislature when these charges were made. I saw him there.

Mr. FOSTER: The hon. member from Carleton has spoken half a dozen times.

Mr. CARVELL: I was merely giving the truth of the matter.

Mr. FOSTER: I gave my hon. friend the opportunity to give us the truth, and he has not done so yet. I only gave the information as it was given to me; and, in my judgment, it is nearer the truth than what my hon. friend calls facts which he has laid before the House, facts which he has adjudicated upon, which he has pronounced upon but which will come before a tribunal to be established in the province of New Brunswick.

Mr. EMMERSON: When ?

Mr. FOSTER: When will that tribunal be appointed ? At the good pleasure of the Lieutenant Governor of the province.

Mr. EMMERSON: Advised by Mr. Flemming ?

Mr. FOSTER: Do you know that he was advised by Mr. Flemming to withhold the appointment of that commission ? You make these insinuations in this House, and yet you deplore—

Mr. EMMERSON: Will you pardon me ?

Mr. SPEAKER: Order. The hon. gentleman should address his remarks to the Chair.

Mr. EMMERSON: I was referring to the fact that the Government would, when advised constitutionally by the Prime Minister of New Brunswick, who is Mr. Flemming, make the appointment.

Mr. ROBIDOUX: The hon. member knows that the acting Premier to-day is the Hon. Mr. Clarke.

Mr. EMMERSON: I know that Mr. Flemming is still Premier of New Brunswick and that he has not resigned.

Mr. FOSTER: My hon. friend from Westmorland knows that Mr. Flemming is still Premier of New Brunswick and he knows also that the acting Premier is Hon. Mr. Clarke. I presume that duty would fall on the acting Premier in the absence of Mr. Flemming, who has gone 10 p.m. to New York to consult a specialist with regard to his health. Nevertheless, these insinuations are made. Mr. Flemming is not here to reply to them, but they are made by the hon. member for Westmorland, who is so solicitous about insinuations and about language used.

Mr. EMMERSON: I must correct my hon. friend. I made no insinuations whatever against Mr. Flemming. I made no unkind reference to him. On the contrary, I expressed sympathy for him.

Mr. FOSTER: I am sure my hon. friend has no desire to be unfair, but I understood him to say that the delay in appointing this Royal Commission was due to the fact that the Lieutenant Governor was so advised by Mr. Flemming—

Mr. EMMERSON: Constitutionally.

Mr. FOSTER: —who had left the country. We have the fact that Mr. Clarke is acting Premier of the province of New Brunswick, and that duty would fall upon him.

I will close my remarks, as I see no indication on the part of the hon. member for Carleton, N.B., to attempt to substantiate the truth of his statement that he made a speech in 1905 in which he advocated that the Transcontinental railway should come down the St. John river valley.

Mr. O. TURGEON (Gloucester): As a member from northern New Brunswick, who is interested in the St. John Valley railway, I wish to say a few words in commendation of the attitude of my hon. friend from Carleton this afternoon in bringing to the attention of the House and more especially of the Government and of the hon. Minister of Railways and Canals, a situation as it exists to-day in the province of New Brunswick. It is to be regretted that some political capital has been made by certain politicians; but unfortunately we are confronted with a circumstance that some members of the Government of New Brunswick are to-day lying under a charge made by a member of the legislature of that province who has put his seat in jeopardy in making charges in regard to the administration of certain public monies by these gentlemen. It happens that this undertaking of the St. John Valley railway is connected with the Parliament of Can-

ada, and to-day there is a large sum of money voted by this House towards the construction of that railway, and under the circumstances this Government may ask this Parliament to vote again $2,000,000 or $3,000,000 to be given into the hands of the same contractors who are at present under suspicion, whether rightly or wrongly, I do not know. Until a commission has been appointed and has had time to investigate and to make a report, everything should stand still. It is to be regretted, as affecting the fair name of the province of New Brunswick, that when these charges were made, so heavily lying upon the head of the Premier of the province and upon that of his colleague in the Government, the province did not take the course recommended not only by the Liberal press of the province but by papers that had supported the Administration until that very date, papers perhaps more independent in mind than attached to their party. I can quote the St. John Globe, which is a supporter of the Flemming Administration as it was a supporter of the Hazen Administration, and which has taken that stand. The Legislature should have taken the course recommended by the St. John Globe of immediately appointing a Royal Commission, adjourning the House for two or three weeks and proceeding at once with the investigation. If that course had been taken, we would not be in the position of calling the attention of the Minister of Railways and of the federal Government to the regrettable situation at present existing in the province from which I come. Therefore, I rise merely to commend the position taken by my hon. friend from Carleton. I think it should appeal to the good sense of every one on the other side and especially to the Minister of Railways and Canals. I hope yet that that hon. gentleman, notwithstanding any exaggeration of language in which the hon. member for York may have indulged, will take the suggestion of my hon. friend from Carleton seriously, as every citizen in New Brunswick does to-day. The hon. Minister of Marine and Fisheries, in a very eloquent speech, dealt with everything except the very point which interests the country. He made reference to a statement of my hon. friend about the railway assisted by the province to run from Bathurst Mines to the town of Bathurst. While I do not agree altogether with the statement of my hon. friend from Carleton on this point, his statement merely reflects public opinion in the province of New Brunswick since the Canada Iron Company had to suspend not only their operations in their iron mines but all their operations in the country. If I say a word, it is more to dispel the misapprehension in the minds of our people as to the Bathurst railway. I was only awaiting the Estimates of the Minister of Public Works to call the attention of the House to the importance of the Bathurst road. While the Canada Iron Company has suspended operations, while it is in the hands of a receiver, the road from Bathurst in the promotion of which the Minister of Marine and Fisheries has co-operated and to which I also have given assistance in the matter of securing subsidies from the Dominion Government, is bound to be operated, and the mine, being inexhaustible, is also bound to be operated. And it is needed to-day not so much in the interest of the company but of the province as a whole. Its operation will help the transportation development of Bathurst. When the Estimates of the Minister of Public works are before the committee I may say more on this subject. At present my suggestion is that the Government should take over that road as a branch of the Intercolonial railway and complete it from the junction to the harbour of Bathurst. And not only will there be the products of the mines to be carried, but also the products of the pulp and paper mills now under construction at Bathurst, at the head of the harbour. Their electric power comes from the same source as that for Bathurst Mine —Grand Falls.

I hope the Minister of Railways and Canals will take seriously the suggestion of the hon. member for Carleton that, until the investigation is over, no further assistance should be given to that company or to the Government of New Brunswick in respect of that railway. I am not personally acquainted with the Prime Minister of my province, Mr. Flemming. He may be exonerated on these charges, but it is important that the public should know that he is exonerated before anything further is done. The charge has been made in the Legislature of New Brunswick by a gentleman who, personally, has my confidence and respect, and that of every one who knows him in his county and throughout the province. That signifies to me that we should take no action until this matter has been investigated, and those

who are under a cloud to-day have been proven either guilty or not guilty.

Hon. J. D. REID (acting Minister of Railways): With regard to this question brought up by my hon. friend from Carleton (Mr. Carvell), I am always pleased to hear questions brought forward in which the House is interested, especially if information is given to prevent wrong-doing in the future. However, I can hardly see where we are so much interested as the hon. member for Carleton seems to be. As I understand this matter, the provincial Government of New Brunswick issued a charter to the St. John and Quebec Railway Company to construct a line from a place on the Transcontinental to St. John. They carried a certain amount of bonds, and the Dominion Government gave a subsidy; and when the road is completed the Dominion Government is to take it over and to operate it, paying for it a certain proportion of the earnings. Now, where the Dominion of Canada comes in in this matter is in connection with the question whether the subsidy is paid in the proper way—in other words, is the road costing a sufficient amount to justify the payment of this subsidy? As I understand from the hon. member for Carleton, there is no doubt about that. We must pay the subsidy, provided that the road has cost over a certain amount; and, as I understand the hon. member for Carleton, that point has been guarded. Therefore, up to the present time there has not been any laxity nor any amounts paid improperly. As I understand the hon. member for Carleton, he has confidence in the Government engineer, Mr. Taylor. And as to the payment of the balance of the subsidy, if Mr. Taylor carries on his work as he has done in the past, there would not be any difficulty.

Mr. CARVELL: My hon. friend correctly states my position with regard to Mr. Taylor, provided Mr. Taylor is allowed to get the proper information. I strongly suspect that Mr. Taylor is furnished by the company with incorrect information.

Mr. REID: I will come to that. The main point, as I understand it, is to see, before the subsidy is paid, that the road is going to cost a certain amount. There is no doubt whatever, that the road is costing a sufficient amount to justify Mr. Taylor's paying the $6,400 a mile.

The hon. member for Carleton, as I understood him, says that the road has certain curvatures and grades which he believes are not in accordance with the specifications.

Mr. CARVELL: No, I said that the plans and profiles had been changed to meet the character of the road.

Mr. REID: At any rate, according to the hon. gentleman's conception, the road is not being built as he would expect it to be built, in accordance with the original specifications.

Mr. CARVELL: Not by any means.

Mr. REID: The Dominion Government engineers should see that the road is properly built.

Mr. CARVELL: Mr. Taylor has reported to the department a hundred times at least and they have turned him down every time. It is useless for him to report to the department.

Mr. REID: That is news to me. I do not know anything about Mr. Taylor or any of the engineers, but I should think that Mr. Taylor is responsible for the line being properly built, in accordance with the specifications.

Mr. CARVELL: That is all right if he is not overruled by some higher authority.

Mr. REID: That is true, but I cannot believe that he is interfered with.

Mr. CARVELL: Ask Mr. Taylor.

Mr. REID: I will not ask anybody; I will consult the files or officials of the department, if there is any wrong-doing. I think I am right in saying that the Dominion Government, if they take over that road, must see that it is built in accordance with the special agreement. I am satisfied that, so far as the Dominion Government have a right to interfere, the hon. Minister of Railways will, when he takes over the road, see that it has been completed in accordance with agreement. I do not see where we can do any more than we are doing, as long as we protect ourselves in so far as the payment of subsidies is concerned.

With regard to the question of bridges, the hon. member believes that the engineers of the Dominion Government should see that those bridges are built, and he suggests that they should be built and owned entirely by the Government. So far as I am concerned, I can only say that the Dominion Government have had the matter under consideration. If anything should be done by the Dominion Government, I

am sure that the hon. member will not find fault, because I believe that they will protect themselves in a manner satisfactory to him.

The hon. gentleman referred to other matters, one of which was the Southampton railway. I think I mentioned the fact that a commissioner had been appointed to investigate this railway. Shortly after his appointment the commissioner pointed out to me that it would probably be better to defer any investigation for a couple of weeks until the snow was off the ground, and he would be in a better position to see the road. For this reason, the investigation did not immediately proceed. The commissioner subsequently notified me that he had fixed a date for the hearing of this investigation; I think it has been arranged to take place within the next ten or twelve days. The hon. member may be assured, therefore, that the investigation is to be proceeded with; I have endeavoured to explain why the short delay did take place.

Mr. CARVELL: I accept my hon. friend's statement, but I would like to suggest to him that when the commissioner goes down there he have somebody with him besides Mr. Pinder, because I think it is important that the fullest light shall be thrown upon the subject.

Mr. REID: I told the commissioner that he must give ample notice of his intention to be there. He informed me verbally a few days ago that he was going to hold a public investigation of some kind, I think in Fredericton. I am glad the hon. member mentioned the point; I shall see the commissioner and urge him to see that everything is done along the lines suggested.

The hon. member also mentioned the Tobique and Campbellton road, and urged that the subsidy contract be not changed. So far as I am concerned, I have had no application before me for any change. I am glad the hon. member has mentioned the matter; if it comes before me in any way I shall look into it very closely. It is altogether likely that if any application should be made to me in connection with any changes, other than any affecting the present arrangement between the companies, I will ask that the matter be laid over until the return of the minister, when I intend to bring his attention to the discussion that has taken place in connection with the three railways mentioned.

Motion agreed to.

WAYS AND MEANS—THE TARIFF.

The House in Committee of Ways and Means, Mr. Blondin in the Chair.

Resolved, that it is expedient to provide, in substitution for section 7 of the Customs tariff, 1907:

(a) that goods the produce or manufacture of any foreign country which treats imports from Canada less favourably than those from other countries may be made subject by Order in Council in the case of goods already dutiable to a surtax not exceeding twenty per centum ad valorem, and in the case of goods not dutiable to a rate of duty not exceeding twenty per centum ad valorem;

(b) that goods the product or manufacture of any foreign country imported into Canada in vessels registered in such foreign country may, if such foreign country imposes higher duties of customs upon goods imported into such country in vessels registered in Canada than upon the like goods when imported in vessels of such country, be made subject by Order in Council in the case of goods already dutiable to a surtax not exceeding twenty per centum ad valorem, and in the case of goods not dutiable to a rate of duty not exceeding twenty per centum ad valorem.

Mr. OLIVER: Why is the surtax reduced from 33⅓ per cent to 20 per cent?

Hon. W. T. WHITE (Minister of Finance): I may explain to my hon. friend that there is not a reduction in the surtax. Subsection 1 of section 7 of the Customs tariff of 1907, is as follows:

Articles which are the produce or manufacture of any foreign country which treats imports from Canada less favourably than those from other countries may be subject to a surtax over and above the duties specified in schedule 'A', such surtax in every case to be one-third of the duty specified in the General Tariff in the said schedule 'A'.

The amount of one-third is fixed and definite. It is not 33⅓ per cent ad valorem, but one-third of the amount of duty. That is to say, if the rate of duty is 30 per cent the surtax would be 10 per cent, neither more nor less. I wish to call the attention of my hon. friend to the fact that section 7 does not apply to free goods, because if goods are free one-third of no duty would add nothing. We propose the changes which have been indicated in the resolution, namely:

That goods the product or manufacture of any foreign country which treats imports from Canada less favourably than those from other countries may be made subject by Order in Council in the case of goods already dutiable to a surtax not exceeding twenty per centum ad valorem, and in the case of goods not dutiable to a rate of duty not exceeding twenty per centum ad valorem.

That is to say we might increase by 1 per cent, 10 per cent or 20 per cent.

Mr. OLIVER: I quite understand that, but what is the purpose to be achieved by the change? I presume it was not altered merely for the sake of making a change.

Mr. WHITE: The section is not flexible, and we are of the view that it should be flexible. I admit that a surtax should be sparingly and reluctantly applied, but we are of the view that it should be in the discretion of the Government to impose the surtax up to 20 per cent ad valorem.

Mr. OLIVER: I believe there are times when it is right and proper to impose a surtax, and when the time comes it is to be done as a war measure—reluctantly, of course, but still effectively. Is the 20 per cent limit considered as severe a retaliatory measure as the one-third tax would be?

Mr. WHITE: The twenty per cent is not a fixed amount, it is the maximum.

Mr. OLIVER: Is that maximum equal, on the average, to the amount that existed before?

Mr. WHITE: Assuming that our average tariff upon dutiable goods is twenty-six per cent, one-third of that would be eight per cent. On the other hand this does not admit of any surtax upon goods that are free. It is difficult to compare the two. When the matter was under consideration it was suggested that we should fix a maximum higher than twenty per cent. For myself, I should be exceedingly reluctant to enforce a surtax, but I thought that the provision should exist in our legislation and finally settled on twenty per cent as a reasonable maximum with the idea that it would be seldom, if ever, invoked. Of course, the Government might impose five per cent or ten per cent, but no more than twenty per cent. In the case of some other countries, whose legislation I have examined in this regard, the maximum is much higher. For example in the case of Germany it is the amount of the tariff rate on dutiable goods. Free goods may be taxed with a duty not exceeding fifty per cent ad valorem; in Italy goods proceeding from countries in which Italian vessels and products are subject to a differential regime, may be burdened with an increase of frontier duties up to fifty per centum of the duty inscribed in the general tariff. In the case of goods duty-free under the tariff ,the same may be burdened with an import duty up to twenty-five per cent of their official marked values. In Japan with respect to articles the produce or manufacture of a country in which vessels or produce or manufacture of Japan are subjected to less favourable treatment than those of other countries the articles of such country may be designated by Imperial Ordinance, which shall be liable to customs duties not exceeding in amount the value of such articles in addition to the duties prescribed in the tariff.

I only instance those as illustrations from which my hon. friend may deduce that we have fixed a reasonable maximum erring, if at all, on the low side.

Mr. OLIVER: If you have to take retaliatory measures it is desirable that they should be effective. It must always be understood that retaliation does not hurt only the other fellow, it hurts yourself too. I gather that a serious difference between this proposal and the regulations formerly on the statute book is that under the former tory measure did not increase it seriously, and if the goods were free there was no retaliation. Under this legislation my hon. friend has power to establish a duty against imported goods where no duty formerly existed, and under other circumstances to impose a duty against goods coming in under a low tariff, which could not have been levelled against them under the former regulations.

As a matter of fact, while my hon. friend speaks of a mild measure of retaliation, I gather that the effect of the legislation is that it is more drastic, or might be more drastic, against the home consumer than the former Legislation could have been made.

Mr. WHITE: I think not necessarily so as I shall be able to point out.

Mr. OLIVER: Not necessarily so, but still it might be.

Mr. WHITE: Take the case of a duty of 30 per cent; under the surtax provision of the present customs tariff the amount of the surtax would be fixed at 10 per cent but you might not desire to enforce a surtax as high as 10 per cent ad valorem. That is a very serious increase. The Government might be satisfied that the end would be served by increasing the duty one, or two, or five per cent ad valorem. Under the present customs tariff that would not be possible. Under the amendment it would be possible. I had a case like that in view, not a specific case, but a case of that nature, and my intention was not to increase the surtax but to make the surtax more flexible so that it might

be lower or higher as the case might demand and in fixing it at 20 per cent, having regard to the legislation of other nations, we thought we were fixing it substantially on the low side.

Mr. OLIVER: I do not wish to delay at all in the matter, but when my hon. friend was reading the laws of other countries, it seemed to me that the attitude of the other countries was more in line with what I have considered the true theory than what my hon. friend proposes. Germany may charge a surtax of fifty per cent of the existing tariff. That is distinctly a war measure. It is intended to hurt, to be effective, and it is only to be continued long enough to produce whatever result is hoped to be produced by it. On the other hand, my hon. friend proposes here a system under the suspicious name of a retaliatory tariff which may simply impose a burden on the Canadian people. I would not like to see this legislation pass without calling attention to the possible effect of it.

Mr. WHITE: I think that my hon. friend and I would agree that any measure of this kind should be invoked only as a matter of the most urgent national necessity. I entirely agree with my hon. friend that legislation of this kind is retaliatory and that sometimes the invoking of it would do more harm than good. As far as the intention goes, although, of course, the statute speaks for itself, we should hesitate under any circumstances to invoke legislation of this kind unless an absolute necessity exists for it in the national interest of Canada. In fixing it at 20 per cent it was my desire to fix it at a reasonable amount, not to fix it at a high amount but rather at a low amount. It is true, as my hon. friend has pointed out, that it is possible under this legislation that the surtax would be higher than under the customs tariff of 1907, but at the same time it is also possible that it would be lower and it was my intention to make it sufficiently flexible that it might be lower if the Government desired at any time to invoke it.

Resolution agreed to.

2. Resolved, that the customs tariff, 1907, be amended by authorizing the Governor in Council when satisfied that rolled iron or steel angles, beams, channel and other rolled shapes or sections, or iron or steel weighing one hundred and twenty pounds and less per lineal yard, are manufactured in substantial quantities in Canada from steel made in Canada to direct that there be substituted for tariff item 379 in schedule A to the customs tariff, 1907, the following:

Rolled iron or steel angles, beams, channels, and other rolled shapes or sections, of iron or steel, not punched, drilled or further manufactured than rolled, weighing over one hundred and twenty pounds per lineal yard, n.o.p., not being square, flat, oval or round shapes, and not being railway bars or rails per ton—British preferential, $2; intermediate, $3; general, $3.

Mr. A. K. MACLEAN: Would the minister tell us what was the quantity in tons and the value of the importations of articles of this kind last year?

Mr. WHITE: Fortunately I am able to give that information to my hon. friend although I did not expect it would be asked for. The imports during 1912 and 1913 were as follows:

Year.	Quantity.	Value.
1912	2,957,541 cwt.	$3,625,107
1913	4,013,570 "	5,319,456

Mr. OLIVER: What are the present duties?

Mr. WHITE: Under the present tariff these products, which are called merchant mill products, up to 35 lb. per lineal yard, have a duty of $7 per ton against them. Products that are over 35 lb. per lineal yard have a duty, under the general tariff, of $3 per ton. I am extending the 35 lb. per lineal yard up to 120 lb. per lineal yard. At the time the Customs Tariff of 1907 was enacted merchant mill products up to 35 lb. per lineal yard were produced in Canada but merchant mill products of a heavier character were not produced in Canada. In some mills to-day structural steel beams, channels and other rolled shapes heavier than 36 lb. per lineal yard and up to 50 or 60 lb. per lineal yard are being produced but no change has taken place in the tariff. It was represented to us by the Algoma Steel Company, and by other steel companies, that if legislation should be introduced, to be brought into effect by Order in Council, so that the company would have an assurance that in future it would be brought into effect, they could get the capital requisite to increase their plants and establish merchant mills which would manufacture products up to 120 lb. per lineal yard; that is to say, the larger structural steel required for buildings, bridges and many other manufactures. The Government, therefore, is asking Parliament to enact legislation which is to be brought into effect under Order in Council when the Governor in Council is satisfied that the products in question are being manufactured in substantial quantities in Canada from steel made in Canada. There is a precedent for this under the

late Government—the resolution of the 17th April, 1903, appertaining to steel rails. That resolution imposed a duty of $7 per ton but it was not to become effectual until the Governor in Council was satisfied that steel rails were being manufactured in substantial quantities in Canada. On the 27th August, 1904, an Order in Council was passed making steel rails dutiable at $7 per ton and it has been effective ever since.

Mr. OLIVER: I did not get the answer I wanted. I wanted to know what was the duty, on the bringing into force of this provision, upon structural and iron steel over 120 lb. per lineal yard.

Mr. WHITE: I answered that question; $3 per ton on all structural shapes and merchant mill products weighing over 35 lb. per lineal yard. The products that are manufactured in Canada were protected by a higher rate and we propose to increase the limitation from 35 lb. to 120 lb.

Mr. CARVELL: Were not the heavier products like I-beams only subject to a duty of 10 per cent, not forged, or punched or otherwise manufactured? How will that class of goods be affected?

Mr. WHITE: I will read the present item in the tariff:

379. Rolled iron or steel beams, channels, angles, and other rolled shapes of iron or steel, not punched, drilled or further manufactured than rolled, weighing not less than 35 pounds per lineal yard, not being square, flat, oval or round shapes, and not being railway bars or rails, per ton—British preferential, $2; intermediate, $2.75; general, $3.

Any of these articles weighing 35 lb. or more, were $3, while under 35 lb. per lineal yard, the duty was $7 per ton, as a protection to the Canadian manufacturer, because the Canadian manufacturer was able to manufacture products up to 35 lb. per lineal yard. Beyond that the product was not manufactured in Canada, and the duty was less. What we are doing now is to extend that up to 120 lb. If my hon. friend will look at resolution No. 2, tariff item 379, he will see it applies to these products weighing over 120 lb., and we are fixing that at $3 per ton.

Mr. OLIVER: Which it was before.

Mr. WHITE: Yes, but it went down to 35 lb. This 120 lb. is substituted for 35 lb.; all below 120 lb. falls into the other item of the tariff, on which there is a duty of $7 per ton.

Mr. MURPHY: Up to the present, there has been no structural steel of this weight produced in the country?

Mr. WHITE: That is it. Of course, it will be some considerable time before it is brought into effect, because the mills capable of producing these heavier products will have to be established.

Mr. CARVELL: Would the minister give any reason why it is necessary to impose this extra burden on the users of these products? The minister knows that it is not a very big piece of steel that does not weigh 120 lb. per lineal yard, and if he puts this into force, he will be putting a great burden upon the articles that are consumed everywhere. As I understand it, the very moment this Order in Council goes through, and this product is brought up to $7 duty, the consumer will have to pay the $7 duty, no matter whether the article is manufactured in Canada or imported. I hope the minister realizes that he is certainly imposing a pretty heavy burden upon the ordinary consumers of iron and steel products, for the purpose of benefiting a prospective manufacturing industry. I think we might as well understand that clearly. Will the minister tell me now, whether I am right or wrong in that idea?

Mr. WHITE: I thought we discussed the question of the fiscal policy on the Budget.

Mr. CARVELL: I was not here.

Mr. WHITE: My hon. friend (Mr. Carvell) and I would view this from a different standpoint, and without wishing to be controversial I may tell him that some of his colleagues on the other side of the House would also view it from a different standpoint from him. It is a question of whether we believe in protection of Canadian industries. I am perfectly frank in saying that I believe if this duty is allowed to stand as it is we will not have these mills manufacturing the larger products in Canada. I believe, on the other hand, if this Order in Council is passed, we shall have these mills manufacturing the larger products in Canada. It does not always follow that the full amount of duty would be added to the price of the article. Possibly it would if there were only one mill, or perhaps two mills in Canada, and they had an understanding as to price. I could point out to my hon. friend many cases in which the full amount of duty was not added to the cost to the consumer. Once a fiscal policy of protection is adopted

by the Government, it seems to me it follows that within reasonable bounds we are justified in asking for the imposition of duties which have the effect of causing these plants to be erected in Canada, rather than that the Canadian consumer should buy from the outside. Canadian steel plants and other plants are at a decided disadvantage with some of the larger plants, especially in the United States. They have a larger home market there: they have been built up over a large series of years, and it is a fact that they can throw their products into this country at a much lower rate than our manufacturers can compete with them at. Our policy is reasonable protection, and we think we will succeed in establishing mills by increasing this tariff upon that range of products, from 35 pounds up to 120 pounds. With respect to the products weighing between 35 pounds and 120 pounds per lineal yard, we are doing precisely what the late Government did with regard to products up to 35 pounds per lineal yard, and we have the same object in view. I know that is no defence for this legislation, which should be dealt with on its own merits, but it is nevertheless the fact.

Mr. CARVELL: The Minister of Finance is perfectly fair about it, and I only want to have a fair understanding. As I understand him, he is perfectly willing to allow the manufacturer to charge the people of Canada a greater price than they could buy these articles for in other parts of the world, in order to establish one of these industries in Canada.

Mr. WHITE: The charging of the higher price may not necessarily follow, or it might follow. The chances are that it will follow that a higher price will be paid by the Canadian consumer upon these particular products, at least for a time, than they could be bought for, let us say, by reason of the manufacturers in the United States dumping them upon this market.

Mr. CARVELL: That is the fairest presentment of the protectionist policy I have ever heard in this House. I am glad the Minister of Finance comes out flat-footed and acknowledges the corn. It is the truth; we all know it is the truth; and I think the Minister of Finance is entitled to a great deal of credit for admitting it.

Mr. WHITE: I am much obliged to my hon. friend, but I am not going to apologize, because I know that I am going to have established, as a result of this, a large plant at the Sault, employing Canadian workmen, and I know that the establishment of that plant will be of great advantage to that whole section of the country. I know also that if this change were not made in the tariff that plant would not be established, and we expect to have large mills established also at Sydney and at Hamilton.

Mr. EMMERSON: Who will pay for it?

Mr. WHITE: The people will be benefited on the one hand, and they may pay something for it on the other, but they will not complain.

Mr. A. K. MACLEAN: Two years ago, when the Minister of Finance was presenting his Tariff Commission Bill, the principle was laid down that the measure of protection should be the differential between the wages of the home country and those of the competing country. Do I understand that the minister has abandoned that principle to adopt the one just stated by the member for Carleton?

Mr. WHITE: It was provided in the Tariff Commission Bill that the cost of production should be ascertained in the several countries of the world, but I do not think any principle was laid down. I do not think either that the remarks of my hon. friend (Mr. A. K. Maclean) have any bearing upon the question raised by the hon. member for Carleton. What I have said is this: That without the assistance which we are giving by way of protection, a Canadian plant could not establish itself and compete with the United States plant selling their products in competition, and selling them cheaper than they sell them in the home market. I think that is a little different from the proposition which my hon. friend has put forward, arising from the Tariff Commission Bill.

Mr. MURPHY: Has structural steel of this weight been produced by the Dominion Bridge Company?

Mr. WHITE: Not produced, but used by the Dominion Bridge Company. The Dominion Bridge Company has used the material very largely. We have not had any representations made; but I expect they will be made, and it may be necessary, although I have not in mind now anything definite respecting it, to make some adjustment of the tariff with regard to bridges, because the bridge manufacturers will un-

doubtedly be affected by this change; that is to say, they might have to pay more for the materials which they use in making the bridges.

Mr. MURPHY: That was what I had in mind when I asked the question.

Mr. WHITE: No representations have been made, but it is quite probable that they will be made. If so, we shall have ample time to take them up and consider them.

Mr. McCREA: If there is any doubt in the minds of any hon. members as to who pays for this encouragement of the steel industry, I will give a little personal experience. The company with which I am connected is engaged in the construction of a paper-mill, and we have asked for prices on a large quantity of steel. Some of the orders were placed before the new tariff came in, and some were not. As regards the latter, the firms simply withdrew their prices and raised them the amount of the duty.

Mr. OLIVER: Is the surtax in provision (b) new or is it a continuation of what prevailed before, with the same variation as my hon. friend has in subsection 1?

Mr. WHITE: Subsection (b) is entirely new.

Resolution agreed to.

3. Resolved, that schedule A to the Customs Tariff, 1907, as amended by chapter 15 of the Acts of 1913, and by Orders in Council be further amended by striking thereout tariff items: —113, 184, 208, 210a, 296, 306, 315, 361, 375, 398, 404, 410, 411, 445, 446a, 460, 471, 486, 542, 543, 545, 546, 575, 577, sections (a) and (d) of the Orders in Council dated 11th August, 1908, designated as items 717 and 720 of the Customs tariff, the several enumerations of goods respectively, and the several rates of duties of Customs, if any, set opposite each of said items, and to provide that the following items, enumerations and rates of duties be inserted in said schedule A.

Mr. A. K. MACLEAN: I desire to ask a question at this stage. The hon. member for Pictou (Mr. Macdonald), who was obliged to leave the House a short time ago, desires to offer some remarks to the committee at a later stage. The hon. member for Northumberland, N.B. (Mr. Loggie), also desires to offer an amendment a little later on, and I think the hon. member for Westmorland (Mr. Emmerson) wishes to do so also. Might we have this understanding that an amendment might be moved to-morrow? We can take up as many items of this schedule as we can to-night.

Mr. WHITE: I would like to facilitate my hon. friend. I am not sure that it is possible in committee to move amendments. We might ask the chairman to consider the matter. With regard to any item under consideration, an amendment may be moved to reduce the tariff.

Mr. MACLEAN: It could be arranged that the House go into Committee of Ways and Means to-morrow or on some other day in order that these gentlemen might have an opportunity to move their amendment.

Mr. WHITE: Subject to its being an order, I am entirely agreeable.

Mr. EMMERSON: It seems to me the proceeding is to move amendments on the second reading of a Bill, or in committee or on the third reading. This resolution has been approved by His Royal Highness, to whom it was submitted, so that I do not think we can amend it.

Mr. WHITE: We will see as to that.

Mr. CARVELL: When the Tariff Bill of 1907 was being put through the
11 p.m. House, we amended the resolutions only in so far as we reduced taxation, but we did not increase it. That is where the distinction was drawn.

Mr. GRAHAM: The procedure is the same as in Committee of Supply. We can move to reduce but we can not move to increase or to divert the money from the object for which it was intended.

Mr. WHITE: There is probably no difference of view respecting this matter. With regard to any of the resolutions under consideration, my view is that a motion may be brought forward to reduce the duty, but not to increase it; but I have some doubt as to whether a motion may be moved by a member with respect to some article or item that is not before the committee for consideration.

Mr. CARVELL: The third resolution is a resolution that schedule A be amended by doing certain things with it. I think it is quite in order to extend that amendment by affecting some other items

Mr. WHITE: That is probably so. We will see.

Mr. OLIVER: What are these items that are struck out in a general way?

Mr. WHITE: A number of items must be struck out because other items take their place.

Mr. OLIVER: Are these items which have been struck out included in these that are dealt with in the schedule?

Mr. WHITE: They must be struck out in order that others may take effect.

Mr. OLIVER: Are any struck out that not are replaced; and, if so, what are those items?

Mr. WHITE: Some may be struck out that are not replaced; but the items that they govern are otherwise dealt with. Every number that is struck out here is necessarily struck out in order that others may be given effect to.

Mr. GRAHAM: Does not my hon. friend think, in view of what he has said in a previous debate in this House, that he is running the risk of criticism in the country as being in favour of free trade?

Mr. WHITE: I will take chances on that.

Mr. GRAHAM: He has in this schedule 24 items that are on the free list. If putting agricultural implements or wheat on the free list implies that the person doing so is in favour of free trade, what will one say of a person who puts twenty-four items on the free list? Will he not be regarded as being twenty-four times as much in favour of free trade?

Mr. WHITE: I think I can convince my hon. friend that the conclusion he appears to have reached need not necessarily follow. Of course, I do not think it necessary that I should discuss with him the question already so fully discussed, whether free agricultural implements and free food mean free trade. But he was so impressed with the idea that free food might savour of free trade that he shifted his ground so materially from it that he would not likely find his tariff policy would reduce the cost of living.

Resolution agreed to.

39c. Cassava flour, when imported by manufacturers of explosives, for use exclusively in the manufacture of such articles in their own factories—British preferential, free; intermediate, free; general, free.

Mr. OLIVER: What is the duty on that now?

Mr. WHITE: The explanation of that change is that cassava flour is used for the manufacture of explosives by the Dominion Explosives, Limited, of Sand Point, Ont. Others use glycerine which is free under item 664. Manufacturers who use cassava flour as a base complain that they are at a disadvantage in competition with those who use glycerine, and have asked that cassava flour be placed on the free list.

Mr. A. K. MACLEAN: Where is it made?

Mr. WHITE: In the West Indies, I think.

Mr. OLIVER: Does it still remain dutiable at one cent per lb. for other purposes than the manufacture of explosives?

Mr. WHITE: Yes, the free importation is limited to the use of the manufacturers of explosives in their own factories.

Mr. PARDEE: Did the millers combine consent to this change?

Mr. WHITE: The hon. gentleman may have inside information on that point; I have not.

Item agreed to.

79a. Rooted carnation cuttings in their first year of introduction—British preferential, free; intermediate, free; general, free.

Mr. A. K. MACLEAN: What is this for?

Mr. WHITE: This change is made for administration purposes. Seedling carnations are admitted free of duty under item 79. Commercially, these carnation cuttings in their first year are known as seedling carnations, and it is to clear up a doubt in the minds of the Customs Department and to make it clear that these carnation cuttings in their first year are seedling carnation stock, that this item is put in.

Mr. MACLEAN: And there is no change?

Mr. WHITE: No.

Mr. GRAHAM: Can the hon. minister tell us what is the duty in the United States on this item? The reason I ask is that there are florists who do business on both sides of the line—say they might have a place at Alexandria bay—and I just wondered whether they were accorded the same treatment on the other side of the line.

Mr. WHITE: I am not advised as to that.

Item agreed to.

99a. Dried or evaporated bananas per pound —British preferential, free; intermediate, ½c.; general, ½c.

Mr. OLIVER: What was the former duty?

Mr. WHITE: It was formerly 25 per cent under the general tariff; British preferential 17½ per cent.

Mr. OLIVER: Is this a reduction?

Mr. WHITE: Yes.

Mr. LOGGIE: The item I want to call particular attention to is 83 of the tariff, and I suppose ordinarily it would come in here.

Mr. WHITE: I have no objection to my hon. friend dealing with that now.

Mr. LOGGIE: Mr. Chairman, I have a matter to bring before the committee which I think is very important to the whole population of Canada. It primarily refers to the basic industry of Canada, agriculture, and I should be glad if the minister would consider that I present this resolution not from a party standpoint. I desire the minister to consider it on its merits, and waive, for the time being, consideration of the fact that I am on this side of the House, while he occupies a seat on the right of the Speaker. I admit that in my arguments there may be some remarks that will be considered of a partisan character, but the resolution itself I think ought to be received by every hon. member not from a party standpoint. The resolution I intend to move involves the admission into Canada free of duty of potatoes, the growth and production of the United States. In this connection I would refer to the remark of the minister in his Budget speech. Speaking of the increased exportation from Canada during the last few months of last year, he said:

> I think the increase is due, in large measure, to the Underwood tariff, which has placed live stock, dairy and certain other farm products, fish and manufactures of lumber, and other natural and manufactured products of Canada upon the free list.

I assume that the minister, in using these words, led members of the House to believe that it was his opinion that the increased sale of these commodities in the United States markets inured to the benefit of the Canadian producer. If there were no increased prices for these commodities during these months after the Underwood tariff went into effect, I ask, why should there be an increase of exportation? If the value was not enhanced by the duty remitted by the United States on the commodity we have to sell, why did the increased exportation take place at that particular time?

If it can be demonstrated that the United States consumer received the benefit of the reduction of the duty upon articles going into the United States, why would the exports be increased at that particular time? I propose to demonstrate to the committee that the enhanced value inured to the Canadian producer; just as soon as the United States tariff was taken off, because of the increased value, his exports found market across the line.

Mr. BRADBURY: Where did the increase come from?

Mr. LOGGIE: It came from Canada. Canada had the goods to sell and Canada got a better price for them; as soon as the increased value came about, the goods were placed upon the market. Perhaps I should first of all demonstrate, if I can, how the duty affects the prices of the products of the Canadian people, especially commodities that have no world market value. I think we are all united in the principle that any tax imposed upon an article will increase the cost of that article to the extent of the amount of the tax, and that the consumer pays the increased cost. Suppose a New York merchant wants to buy a case of clothing in Huddersfield at a cost of £100, or $500. On that case of clothing there is 50 per cent duty, so that the cost, including duty, would be $750. To that amount we may reasonably add 20 per cent wholesaler's profit, which would bring the amount up to $900, and to that we may add the retail man's profit, bringing the amount up to $1,350. All hon. gentlemen will admit that not only the duty but the profit on the investment of the amount of the duty must be paid by the consumer.

Mr. BURNHAM: How would it be if the profit were made on this side of the line?

Mr. LOGGIE: The same thing would be true on this side of the line. Of course, there are exceptions to the rule; I will come to that later. I am now endeavouring to establish the principle that the country that imposes the duty taxes its consumers just to that extent.

Mr. BURNHAM: Is the American consumer affected in that way?

Mr. LOGGIE: I have endeavoured to show the committee that in the illustration which I have given the consumer is affected by having to pay not only the

50 per cent duty but the retailer's profit on that duty as well. The first cost of the article was only $500; the consumer has to pay $1,300 for it. There are exceptions to every rule, and there are exceptions in the case of small countries lying adjacent to countries with large populations. With eight million people, a border line of some three thousand miles, and situated adjacent to a country of one hundred million people, if we in Canada have a commodity that has no world market value and which finds a market in the larger country, in every case the Canadian producer has to pay the cost of duty. For this reason many of the commodities that have no world market value are necessarily more or less of a perishable nature, and they are marketed through produce commission merchants. In other words, we must sell our commodity at the market price of the larger country. If we in Canada can sell our potatoes in Boston, no matter what the market price in Montreal or elsewhere in Canada may be, we must sell them at the price which the potatoes bring in Boston, less whatever the extra charge may be. If a duty is imposed, the result is that the price is that much less to the Canadian producer. That is absolutely true of all the fish that we export from Canada. Here let me point out what a boon it is for the people of Canada to have a free market for their fish in the United States. In Canada we have a small population and we produce a surplus of certain commodities that have no world market value; we must put those commodities on the nearest available market or not market them at all. Let me illustrate this in another way. From the north shore of New Brunswick we produce each year about 200 carloads of smelts. Canada consumes probably 10 per cent of that 200 carloads; the other 180 carloads find a market in the United States. That fish could not be sold on any other market at any price; therefore we are compelled, as a matter of course, to send them to the United States market and accept market conditions that exist when our fish arrive there. If the weather is stormy and the fishing smacks from New York and Boston cannot go out to the fishing grounds, of course the market is bare of fish and our product may rise in price. The weather also affects the price considerably, and I need not say that supply and demand has much to do with it. The point I wish to make is that the price on the New York market will be the same, duty or no duty, and if there be no duty the net results will be that much better to the producer in Canada. When the duty was taken off live stock its value increased. The same also applies to fish and potatoes, as I will demonstrate a little later on. The removal of the duty against fish going into the United States has been a great boon to the fishermen. I do not know whether the minister was present when I mentioned that 382 tons of smelts were shipped from my own county in the month of February alone. Formerly, there was a duty of $15 a ton, so that its removal meant a saving to the fishermen in one month alone of upwards of $4,000.

Mr. BRADBURY: Did the fishermen get better prices ?

Mr. LOGGIE: Prices were never higher than last year. One hundred and eighty carloads at $15 per ton means $27,000 in the pockets of the fishermen.

Mr. DAVIDSON: Did the fishermen get that ?

Mr. LOGGIE: Yes.

Mr. DAVIDSON: Did the producer get the benefit of the removal of the duty ?

Mr. LOGGIE: Without a doubt.

Mr. DAVIDSON: How much higher prices did the hon. gentlemen pay fishermen for smelts last year ?

Mr. LOGGIE: Three-quarter cents a pound more than they would have got if that duty had been paid into the United States treasury. The resolution I wish to place before the committee has to do with this question of who pays the duties collected by the United States. Let me tell the committee what the exports of potatoes amounted to from New Brunswick in the months of October, November and December last. A table can also be got from the Customs Department giving figures for the whole year. There were shipped from New Brunswick in October, 200,829 bushels of potatoes valued at $95,525; in November, 269,269 bushels valued at $101,592; in December, 181,655 bushels valued at $72,963; or a total for the three months of 650,753 bushels valued at $270,080. The duty paid into the United States treasury was $27,008 on the three months' shipments from New Brunswick alone.

Mr. EDWARDS: How do you account for the falling off in December?

Mr. LOGGIE: I fancy every hon. gentleman knows that the United States put an embargo on our potatoes in December.

Mr. BLAIN: What is the matter with your potatoes down there?

Mr. LOGGIE: If I was being questioned under oath I think I could very truthfully say I do not know.

Mr. BURNHAM: How do you propose to abolish the American duty?

Mr. LOGGIE: If this resolution passes, ipso facto the duty is abolished.

Mr. EDWARDS: Would the embargo ipso facto go off?

Mr. LOGGIE: No the embargo is not ipso facto.

Mr. H. CLARK: If reciprocity had gone into effect would that embargo have been put on potatoes?

Mr. LOGGIE: That is not a fair question. I am not administering the affairs of the United States, so I do not know. If there is a reason for the embargo being put on, I suppose it would be put on; and I assume that they had good cause. We would do the same thing in Canada.

Mr. BURNHAM: If the hon. gentleman considers that potatoes are properly embargoed, what is the use of discussing this?

Mr. LOGGIE: I am surprised at my hon. friend asking me such a question as that. He knows very well that next week or next month the embargo may be removed, and that next season we shall have to pay the duty. We could avoid that by passing this resolution to-night—now is the accepted time.

Mr. J. J. HUGHES: I might mention that an official of this Government admitted at the conference in Washington in December last that Canadian potatoes were diseased. It was an unfortunate admission—there was no need of it—which had much to do with the embargo being put on.

Mr. LOGGIE: These potatoes netted the producer forty-two and one-half cents per bushel f.o.b. Canada. In nineteen years out of twenty, potatoes are much dearer on the United States market than on the Canadian market.

Mr. EDWARDS: What was the price on the other side?

Mr. LOGGIE: I have not the prices here, but I can promise you that they were sold on the basis of forty-two and one-half cents a bushel, plus duty and freight. Of course, I do not know whether they were sold through commission merchants and whether those charges were deducted from the account sales or not.

Mr. EDWARDS: Has the hon. gentleman the importations of potatoes into Canada?

Mr. LOGGIE: Yes, I will give the figures in a few minutes. The potato-raisers, or growers, are men and they do not fear competition from any country in the world. We have the men of brawn and brain, we have the climate, we have the soil and we can compete with the world on potatoes. By these tables the committee will see that in three months we exported to the United States 650,000 bushels of potatoes, of a value of $270,000.

Mr. EDWARDS: How much did we import?

Mr. LOGGIE: I will give the hon. gentleman that in a few moments. We exported $270,000 worth of potatoes and the Canadian producers paid into the United States treasury in the form of duty, $27,008. Let me give the hon. gentleman the information he asks for. This also is a statement prepared by our customs authorities, and it is a table of the imports of potatoes from October, 1912, to November, 1913, both inclusive. The figures are as follows:

Province.	Quantity. Bushels.	Value. $	Duty. $ cts.
Ontario	245,573	205,974	49,114 60
Quebec	62,193	53,143	12,438 60
Nova Scotia.. ..	1,500	1,484	300 00
New Brunswick.	152	180	30 40
Manitoba..	34,027	29,357	6,800 54
Saskatchewan. ..	4,024	3,563	800 80
Alberta	11,640	8,994	2,338 00
British Columbia.	32,368	30,530	6,447 36
Yukon	24,533	23,477	4,906 66

We thus find that during a term of fourteen months there were imported into Canada 416,010 bushels valued at $356,702, and on which a duty of no less than $83,167.04 was paid.

Mr. EDWARDS: Who paid that duty?

Mr. LOGGIE: The Canadian consumer.

Mr. EDWARDS: And the Canadian consumer paid it when it was exported?

Mr. LOGGIE: No, the Canadian producer pays it then.

Some hon. MEMBERS: Oh, oh.

Mr. LOGGIE: Hon. gentlemen seem to enjoy that, but I challenge contradiction

of the statement I have made. I have had practical experience and they have not.

Mr. SEXSMITH: What is the duty on potatoes going into the United States now?

Mr. LOGGIE: Ten per cent.

Mr. EDWARDS: If the Canadian consumer paid that duty, as the hon. gentleman alleges, was it not in the interest of the Canadian producer of potatoes?

Mr. LOGGIE: No, it was not. These potatoes were practically all imported into Canada during the season when our own potatoes are not palatable, before our new potatoes are ready for market. Most of the potatoes that I have referred to are imported into Canada during that interval. Therefore, by no means is the Canadian farmer hurt by the importation of these potatoes. I want to demonstrate if I can to hon. gentlemen how much the Canadian consumer has paid for these potatoes and then we will have some idea why it is we complain of the high cost of living in Canada. But by this table we find out that the cost of these potatoes f.o.b., shipping point, was 85½ cents per bushel. We must add to that the duty under tariff item No. 83, which is as follows:

Potatoes, n.o.p per bushel—British preferential, 12½ cents; intermediate, 17½ cents; general, 20 cents.

The price, plus the duty, makes the cost $1.05½ per bushel. Then, there is the freight which I can only estimate and I fancy it is perhaps not too much to say that it will amount to 20 cents a bushel, which brings the amount up to $1.25½. I put down the retailers profit at fifty cents per bushel.

Some hon. MEMBERS: Oh, oh.

Mr. LOGGIE: I challenge hon. gentlemen, if they are anxious to make money, to go into that kind of business, retail these potatoes all around the country and make a success of it at a less profit than fifty cents a bushel. With a retailers profit of fifty cents we have as the cost $1.75½ per bushel. This cost applies to the 416,000 bushels of potatoes imported into Canada during the off-season when our own potatoes are not very good, and before our new ones are ready for the market. What does that mean? It means that the Canadian consumer has paid no less than $5.25 per barrel for these potatoes. That, surely, is some evidence of the high cost of living in Canada.

Mr. BLAIN: Does my hon. friend suggest that the retailer makes a profit of fifty cents a bushel on potatoes?

Mr. LOGGIE: I should think that if a retailer paid $1.25 for a bushel of potatoes, took them into his store, sold them out by the peck or the half-peck, delivered them with a team and kept up a staff, there could not be a less profit than fifty cents a bushel on the average.

Mr. STEVENS: That is based upon the lobster business.

Mr. BOIVIN: Remember that these are new potatoes.

Mr. LOGGIE: What has this to do with the lobster business. My hon. friend (Mr. Stevens) should make a more pertinent remark than that, unless he wants to insinuate that every man who retails potatoes is a lobster. We sold in three months from New Brunswick, $270,000 worth of potatoes, to which you must add, to get the cost and duty value, the duty amounting to $27,088, which gives $297,088 as the cost, duty added in the United States.

Mr. SEXSMITH: Would it not be much better for you to sell these potatoes in Ontario, if you could only get 42½ cents a bushel for them?

Mr. LOGGIE: I am surprised at the hon. gentleman asking such a question. I venture to say that there is not a household in Ontario, that has not had its regular supply of potatoes during the past few months. Does the hon. gentleman mean to say that even if Ontario does not want our potatoes we should send them up there and say: 'you must take our potatoes, we have no other market for them.' That contention is absurd.

Mr. SEXSMITH: There would be an abundant market all the year around in Toronto.

Mr. LOGGIE: It is absolutely unfair for the hon. gentleman to make that allegation. I have demonstrated that we sent out of Canada 650,000 bushels of potatoes, and I know now where there are thousands upon thousands of bushels of potatoes awaiting a market, and because of the potato embargo by the United States at the present moment, there will be considerable loss to the farmers of Canada.

Mr. DAVIDSON: It is the embargo you want removed?

Mr. LOGGIE: I will help you to get the embargo removed if you help me now. Had

there been no duty on potatoes entering the United States, the farmers of New Brunswick would be richer on three months' shipments of potatoes by the sum of $27,088.

Mr. EDWARDS: Did I understand the hon. gentleman to say that the price is 85 cents, and then he added 20 cents a bushel on to that?

Mr. LOGGIE: Yes.

Mr. EDWARDS: That is coming into Canada?

Mr. LOGGIE: Yes.

Mr. EDWARDS: I noticed the hon. gentleman said, speaking of exportations, that the price is 42¼ cents.

Mr. LOGGIE: Yes.

Mr. EDWARDS: How do you account for it that there is only a difference of 20 cents, when the price is 42¼ cents on one side and 80 cents on the other?

Mr. LOGGIE: I am surprised that the hon. gentleman should ask such a question. I have explained that we purchased these potatoes in the United States at a period before our new potatoes are ready for the market.

Mr. EDWARDS: What time of the year is that?

Mr. LOGGIE: The large importations into Canada are in June, July and August. This 85½ cents is what the Customs of Canada tell us was the cost price of these potatoes at shipping points. The other charges we know. I have estimated the freight, I know what the duty is, I have estimated what the profit was, and I say now that these potatoes cost the consumers of Canada practically $5 per barrel, for every barrel of them. And yet you tell me you want a duty to protect the farmers. Who gets the benefit? Does the farmer get any benefit from that duty paid into the Canadian Customs?

Mr. SEXSMITH: Have you no potatoes in New Brunswick to sell in June and July?

Mr. LOGGIE: We have some old ones, and not many of them.

Mr. CARVELL: We have no new potatoes until September.

Mr. LOGGIE: I have worked out what this $5 per barrel means to the people of Canada. By the table I received from the Customs, I find that for the 14 months the cost of the potatoes imported into Canada was $356,702, and the duty paid $83,167.04, the cost and duty being $439,869.04. Add to that the cost of selling and the profit at fifty per cent.

An hon. MEMBER: That is a pretty good profit.

Mr. LOGGIE: I am doubtful if any vegetable man does his business at a profit of less than fifty per cent. At any rate that is the estimate I have made, and while it may not be correct, you can take it for what it is worth. Therefore, the cost value of the potatoes imported into Canada during the 15 months would be $356,702, the duty $83,167.04; total, $439,869.04, and fifty per cent profit, $219,434.52, or a total cost to the consumers of the potatoes imported amounting to $659,803.56, under our present law. If there was no duty, then the invoice cost would be $356,702, fifty per cent profit, $178,351, total $503,053, and the difference between these two amounts would be $124,750.56, which would have been saved to the consumers of Canada if these potatoes had come into Canada free of duty.

Mr. SUTHERLAND: Have you the quantity imported during each month of the time referred to?

Mr. LOGGIE: Yes. Ontario is a large importer of potatoes. From the United States, in October, 1912, there were imported 441 bushels; November, 981 bushels; December, 2,845 bushels; January, 1913, 359 bushels; February, 755; March, 1,781 bushels; April, 4,308 bushels; May, 3,792 bushels; June, 42,105 bushels; July, 126,299 bushels; August, 53,998 bushels; September—this is about the time our potatoes are ready for the market—6,705 bushels; October, 366 bushels; November, 1913, 538 bushels. Total, 245,573 bushels. These potatoes are practically all imported during the months of June, July and August.

Mr. SEXSMITH: What year ?

Mr. LOGGIE: 1912 to 1913.

Mr. SEXSMITH: During the year 1913-14 the importations would be much less.

Mr. LOGGIE: This is up to November, 1913. The same thing applies to the whole of Canada. For the province of Quebec, in October, 1912, there were only 5 bushels imported; in November, 8 bushels; in December, 10 bushels. Importations were practically all in June, July and August. In Nova Scotia, the same thing applies:

in July and August, we import some potatoes from the United States for the reason that our own old potatoes are hardly fit for use and the new ones are not ready. In Manitoba, nearly all the importations are in the months of June, July and August. The same thing applies to British Columbia.

Mr. SUTHERLAND: Were all these potatoes imported from the United States ?

Mr. LOGGIE: Every bushel. The statement comes from the authorities over in the west block.

I want to say to the minister that this imposition of 20 cents a bushel by the Canadian Government is of no benefit to the farming community of Canada. We import these potatoes at a cost of 85½ cents a bushel f.o.b.

Mr. EDWARDS: For how long has it not been a benefit to the farmers ?

Mr. LOGGIE: For as long as the duty has been imposed.

Mr. EDWARDS: This is the first time you have come to that conclusion, although you have supported a Government for fifteen years.

Mr. CARVELL: They always go to that argument when you have them cornered.

Mr. LOGGIE: I think I can handle that all right. If by taking the duty off potatoes coming into Canada, we were going to hurt the Canadian farmer to any appreciable extent, then my argument would not carry the weight that it does; but from my knowledge of how this trade arose and of the importing of potatoes going on in all parts of Canada, I believe that the Canadian farmer will not be hurt by the importation of potatoes into Canada. I repeat what I have already said, that 19 years out of 20, potatoes are much dearer in the United States than in Canada; and if dearer in a market, how can they be brought in and sold to compete with the prices that we get for our potatoes?

Mr. STEVENS: Does the hon. member refer to the whole American market or just to the Boston market with which he is familiar ?

Mr. LOGGIE: I think there is no difference in the markets of the United States, except on account of transportation.

Mr. STEVENS: There is a vast difference.

Mr. LOGGIE: I admit that transportation is a very important factor in the matter, and I am perhaps dealing more particularly with markets that are nearer us. Except as regards the question of transportation, there is no difference whatever.

An hon. MEMBER: What is the price in Oregon ?

Mr. STEVENS: Very much higher than in British Columbia.

Mr. LOGGIE: What is the yield in British Columbia?

Mr. STEVENS: Millions of tons, 700 bushels to the acre.

Mr. J. J. HUGHES: Where?

Mr. STEVENS: Ashcroft, Kamloops. The finest potatoes in the world.

Mr. LOGGIE: What price does the farmer in British Columbia get for his potatoes on the field at the digging season; that is to say, if the digging season is in the month of October?

Mr. STEVENS: I could not say off-hand They are sold by the ton.

Mr. BURRELL: The price varies from $12 to $20 a ton, or 60 cents a bushel.

Mr. LOGGIE: Let me tell the hon. gentleman what price the United States got for the potatoes they imported into British Columbia. The potatoes imported in October, 1912, to November, 1913, according to the table, cost practically $1 a bushel f.o.b. United States points.

Mr. STEVENS: The hon. gentleman refers to new potatoes from California and Oregon.

Mr. LOGGIE: Supposing I do, how does that affect the case?

Mr. STEVENS: There is a vast difference.

Mr. LOGGIE: These are potatoes you import every month in the year, and that is the average price.

Mr. STEVENS: Will you give me the quantities imported every month?

Mr. LOGGIE: In 1912, in October, 662 bushels; in November, 970 bushels; in December, 547 bushels; in 1913, in January, 280 bushels; in February, 50 bushels; in March, 1,611 bushels; in April, 482 bushels; in May, 1,995 bushels, in June, 6,697 bushels, in July, 14,601 bushels, in August, 3,045 bushels. Then we come to our time for potatoes; in September, 970 bushels; in October, 239 bushels; in November, 219 bushels, or a total of 32,368 bushels of the

value of $30,530, or practically a dollar per bushel on the average.

Mr. STEVENS: Nearly all new potatoes?

Mr. LOGGIE: Would they be new potatoes in October, November, December, January and February?

Mr. STEVENS: Take the figures for the three months on new potatoes.

Mr. LOGGIE: That is exactly what I have tried to present to the House—that we import practically nothing but new potatoes, and import them at a very high price because we have not got them in Canada. If we had them in Canada they would be cheaper.

Mr. STEVENS: People are prepared to pay for them out of season.

Mr. LOGGIE: The hon. gentleman may be prepared to pay more for them; but other people may not have so much spare cash as he to pay that extra price, especially when it has no result except to enrich the treasury of Canada. No other person gets any benefit. I say this means an increased cost of living on the importations of potatoes into Canada of $125,000, and without any benefit accruing to the farmers of Canada.

Now, Mr. Chairman, I wish to hurry on We have power now, by passing the resolution I shall place in your hands in a few moments, to give effect to this desirable situation, that as soon as we put the potatoes on the free list coming into Canada, our potatoes going into the United States, will, ipso facto, enter the United States market free of duty.

Mr. EDWARDS: Except for the embargo.

Mr. LOGGIE: Never mind that, I will come to that later on. I allege that Canadians paid in fourteen months duty on imports of potatoes to the amount of $83,167.04, and this amount must be added to the invoice cost of potatoes of eighty-five and one-half cents per bushel, making them cost, without freight, but simply cost and duty, over $3 per barrel. In addition to all this borne by the Canadian consumer, I allege, and can establish beyond question, that the New Brunswick growers of potatoes on their shipments in three months paid into the United States treasury $27,008 for duty. Now, had there been no duty, that $27,008 would have been jingling in the pockets of the farmers of New Brunswick. Now, what earthly reason can there be for this tax? It is much worse than an export duty, because if we put an export duty on our potatoes, at least our own Canadian treasury would reap the benefit. But by leaving our potatoes on the dutiable list for the United States we, to all intents and purposes, put on an export duty for the benefit of the United States treasury.

Mr. EDWARDS: What reason did Mr. Fielding give for keeping on the duty?

Mr. LOGGIE: I am surprised at the hon. gentleman asking such a question. He knows as well as I do that when Mr. Fielding, or the Liberal party, went to the country in 1911, it was on the proposition that we should have an interchange of natural products, practically not interfering with manufactured products.

Mr. DAVIDSON: Why did they wait so long before bringing that in?

Mr. LOGGIE: I will tell the hon. gentleman. I would like to have it out with him. Let me tell him what, perhaps, he does not know, that from 1879 to 1896, the waiting policy was the policy of the Conservative party. Every time they went to the people they went on a platform of protective tariff and reciprocity in the natural products of the United States. And they waited, and waited, and waited.

Mr. EDWARDS: And what did you do in 1896?

Mr. LOGGIE: In 1896 the Liberal party revised the tariff, reduced the duties to some extent and then adopted the same policy of waiting to see if the United States would allow our natural products in, in exchange for a similar concession on our part. The policy of interchange in natural products was the policy of both parties until 1911. Hon. gentlemen are quite familiar with the reason why it was not made effective—it was simply that the United States were not ready for it. And they know why the interest was manifested in having natural products put on the free list as between these countries; it was because the United States put a clause in their tariff imposing a penalty duty upon commodities entering their country from a country that did not receive the same commodity from the United States at as low a rate as that under which it was admitted from any other country. And then it resulted in friendly relations. The people of Canada made a grave mistake in 1911, but let us act upon the conditions which exist at the present time.

We have to-day in the United States the very tariff for which the Conservative party waited for eighteen years; the very tariff for which the Liberal party waited for fifteen years. It is offered to us to-day;. are we friendly or unfriendly? I allege that the United States tariff of to-day is most friendly towards Canada. When the hon. Minister of Trade and Commerce was speaking in New York two years ago, I think, he held out the olive branch, and said that when the United States reduced their tariff Canada would probably reduce her duties or give some advantage to American goods coming into Canadian markets. The United States tariff is to-day a most friendly one. I keenly regret that the minister made during the course of his Budget speech a statement which, read between the lines, might be regarded as unfriendly towards the United States. Never in forty years of Canadian history has any minister of finance made such a remark as this, indeed, the very opposite has prevailed from the time of Confederation up to the present day. This was the remark of the hon. minister:

> Speaking generally, it is not advisable that a nation's tariff should be so arranged as to fit into the particular features of that or any other nation.

Why did the minister make that remark, having regard to the friendly tariff which has just been put in force by the United States? For forty years we have had an unfriendly tariff; we have sought their friendship so far as tariff has been concerned; we have wished that they would put our natural products on their free list. This they have done as far as a large number of our natural products are concerned. But the minister almost says we do not reciprocate your kind consideration; we do not appreciate what you have done with regard to the putting of our natural products on the free list. I regret this exceedingly, because I think that it is an epoch in the history of Canada when the United States gives us free markets for our natural products, which are of immense value to our Canadian producers. I do not believe that hon. gentlemen fully realize the great possibilities of our Canadian potato production, especially when we have a market of one hundred million people to the south of us. Gentlemen should not forget that the population of Canada is proportionately two rural to one urban, while in the United States the population is two urban to one rural.

Some hon. MEMBERS: No.

Mr. LOGGIE: Well, that is the way Mr. Sifton put it to the House when he was speaking on the subject.

Mr. BURRELL: Our population is in the proportion of 45 urban to 55 rural.

Mr. LOGGIE: In any case, what I want the minister to bear in mind is this: that the United States tariff to-day is a friendly one and that we in Canada should act in a businesslike way and take advantage of the benefits which are offered to us by the friendly tariff of the United States. I have special reference to potatoes. I quote from the free list of the United States tariff, item 581:

> Potatoes, dried, desiccated, or otherwise prepared, not specially provided for in this section, provided that any of the former specified articles shall be subject to a duty of ten per centum ad valorem when imported directly or indirectly from a country, dependency or other subdivision of government which imposes a duty on such articles imported from the United States.

From the day, therefore, that Canada puts potatoes on the free list our Canadian product will enter the United States free of duty, and the result will be a decided benefit to the Canadian producer. Under present conditions we dare not increase our planting because if the Ontario crops are exceptionally good, what will the Maritime provinces do with their surplus produce? We have the West Indian market, but it is a limited market. I have endeavoured to argue this matter according to the facts, and if my remarks are partisan it simply shows that I am on the right track. And if I am right, surely the minister is big enough to take this matter up and deal with it on its merits.

Mr. BLAIN: If we had free trade between Canada and the United States on potatoes, what effect would it have on the price of potatoes in Canada when the United States have a large surplus crop, which very often happens?

Mr. LOGGIE: I thought I had made myself perfectly clear on that when I said that in nineteen years out of twenty, potatoes are much dearer in the United States than in Canada; and if they are dearer in the United States why in the name of common sense should we want them here? If we can get our own potatoes at 42½ cents a bushel, why should we want their potatoes at 75 cents a bushel or perhaps a smaller amount than that?. Hon. gentlemen should bear in mind that thirty barrels out of every carload of three hundred barrels of potatoes go to pay the duty.

Mr. EDWARDS: The hon. gentleman says that in nineteen years out of twenty the price is higher on the other side. That means that in nineteen out of twenty years they would not be sending them over here.

Mr. LOGGIE: When we have not our own potatoes, we would pay the higher American price.

Mr. EDWARDS: That would be in one year out of twenty.

Mr. LOGGIE: What I said was that there is a market price for potatoes at digging time and in the following three or five months. I say that in nineteen years out of twenty the market price in the United States is higher than in Canada, and therefore there is no danger of American potatoes interfering with our home market. We buy American potatoes when our own are not available; that is, between seasons when our own potatoes are not palatable to city customers, at any rate. American potatoes are perhaps largely imported into Canadian cities during the months of June, July and August. I appeal to the minister to consider my resolution not from any party standpoint but for the following reasons: It will synchronize with the Underwood tariff. I have already pointed out that the United States tariff was unfriendly for forty years, and that it is now friendly; it will enrich our potato growers and will do them no harm because importations are principally made at high cost, and when old potatoes are not palatable, and before Canadian new potatoes are on our market. It will not harm our farmers because in nineteen years out of twenty potatoes are dearer in the United States than in Canada. It is urgent in the future interests of our trade and commerce; it will pave the way for enlarged markets, and increased production of Canadian potatoes; it will bridge the chasm between theory and practice, as we will realize a levelling of prices on potatoes as between Canada and the United States, resulting in immense possibilities for our farmers; it will remove from the minister's speech a sting of unfriendliness that may be read into it—I have already referred to that paragraph. It was the policy of the Conservative party, until 1911, at any rate, to have exchange in natural products. I think the minister might strain a point and put this one item on the free list. To-day and not to-morrow, this session and not next session, is the important time to act. Our non-action may be interpreted as not appreciating the United States market, and the offer may be removed. We had a similar offer on our statutes for years, but deaf ears caused it to be withdrawn. Why enrich the United States treasury by $38.25 per carload on all potatoes from Canada to the United States when this money can be put into the pockets of our farmers? I have already mentioned that in three months the duty paid on the exportation of potatoes from New Brunswick alone amounted to $27,008. With free entry for our potatoes into the United States our potato growers would prosper, I am sure, in an unprecedented manner. We sent our deputy minister to Washington to get the embargo removed—proof of the value, in the opinion of the Government of the day, of the United States market for our potatoes. Put potatoes on our free list, and, ipso facto, our potatoes will be free into the United States. I have very much pleasure in moving the following resolution, seconded by Mr. J. J. Hughes, of Kings, P.E.I.:

That resolution 3, schedule 'A,' be amended by adding after 79a, the following:

That tariff item No. 83 be amended by adding thereto the following words: Provided, however, that potatoes dry, desicated or otherwise prepared, being the growth and production of the United States, shall be admited free of duty when, and as soon as, the United States removes the embargo regulations now existing against like articles, the growth and production of Canada.

Mr. WHITE: I have listened with much pleasure and interest to the remarks of my hon. friend, and I am sure he will acquit me of any discourtesy if at this late hour I do not reply at any length, as he has covered a good deal of ground. I notice that my hon. friend from South Renfrew looks tired and I certainly feel tired. I think we should promote the national interests if we all went home to bed rather than stay here to continue this discussion. The resolution of my hon. friend synchronizes with the embargo against our potatoes. I take the position that we must negative this resolution as being inconsistent with the fiscal policy which I have announced in the Budget. I hope my hon. friend will not think I am dealing in any way abruptly or cavalierly with his resolution, and will acquit me of any discourtesy if I do not deal with it at any greater length.

Progress reported.

On motion of Mr. White, the House adjourned at 12.35 a.m. Wednesday.
