The copy filmed here has been reproduced thanks to the generosity of:

Library of the Public
Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

La bibliothèque des Archives
publiques du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

MARINE AND FISHERIES DEPARTMENT.

Hon. Peter Mitchell, Minister of Marine and Fisheries. G. Washing-
ton Smith, Agent for New Brunswick, of Light Houses, Marine Hospitals,
Signal Stations, Steam Fog Alarms, Buoys and Beacons, and Fisheries.
John Harley, Engineer, Inspector of Light Houses, Marine Hospitals,
Signal Stations, Steam Fog Alarms, and Buoys and Beacons, for New
Brunswick.

FISHERIES' DEPARTMENT.

W. H. Venning, Inspector for Nova Scotia and New Brunswick.

Cape Sable Seal Island Light.—The first Light in approaching the
Bay of Fundy is on the South Point of the Seal Island. This is a plain
White Light, elevated about eighty feet above high water mark, and may
be seen on approaching the Island from any point of the compass. A
very dangerous rock, under water, but upon which the sea always
breaks, called *Blonde Rock*, lies about $3\frac{1}{2}$ miles S. by W. by compass,
from the Light House. Between this rock and the Island, there are
some dangers—the ground is rocky throughout, and large vessels,
therefore, ought not to attempt passing between them.

Brier Island Light.—In advancing up the Bay, the next Light is
situated on Brier Island, about half a mile N. E. from the N. W. point
thereof—a plain white light.

Digby Gut Light.—The next light on the coast of Nova Scotia, is
placed on the West side of Digby Gut—from Brier Island North East-
ward. The coast is very bold, and not indented; the light is therefore
chiefly intended as a guide into Digby Basin—a white light.

Gannet Rock Light.—This light is intended to warn vessels of their
approach to a very dangerous range of shoals and ledges, which ex-
tend from the Old Proprietor to the Seal Islands, off Machias, a dis-
tance of about twenty miles. It is a light of the Fourth order, Holo-
photical system—fixed white light 45 seconds, eclipse $5\frac{1}{2}$, flash $5\frac{1}{2}$, eclipse
 $5\frac{1}{2}$. The Light House is painted in stripes, vertical, black and white.

Bearings and Distance by Compass from the Gannet Rock Light House.

This Light bears from the Light House on Brier Island, N. N. W. $\frac{1}{4}$ W.,
22 miles.

From the Gannet Rock to the Old Proprietor, E. $\frac{1}{4}$ S., distance 7 miles.

- From the Gannet Rock to the Black Rock, off White Head Island, N. E. $\frac{1}{2}$ E., 7 miles.
 From the Gannet Rock to the South West Head of Grand Manan, N. N. W., $6\frac{1}{2}$ miles.
 From the Gannet Rock to the Northernmost of the Murr Ledges, N. W. $\frac{1}{2}$ N., $2\frac{1}{2}$ miles.
 To the Southernmost of ditto, called Saint Mary's Ledge, W. S. W. 2 miles.
 From the Gannet Rock to Machias Seal Island, W. and by N., $\frac{1}{2}$ N., 12 miles.

NOTE.—Between the Northernmost and Southernmost of the Murr Ledges, there is a range of dangerous rocks and shoals, many of them always above water, and which extends Westward from the Light House about four miles; from this range, farther Westward, about six miles from the Gannet Light, lies a dangerous breaker, called the Bull. This may be avoided by keeping three remarkable headlands near the S. W. end of Grand Manan, open.

From Brier Island Light to the Old Proprietor, N. and by W. $\frac{1}{2}$ W., $18\frac{1}{2}$ miles.

The Blonde Rock from the Southernmost point of the Cape Sable Seal Islands S. and by W., $3\frac{1}{2}$ miles distant.

Machias Seal Island Lights.—There are two fixed white lights upon the Machias Seal Islands, one elevated about forty-five feet above high water; the other a new tower, erected last season, fitted with a 3d Dioptric light, stands 69 feet above high water level, and visible from all points of approach for a distance of 25 miles in clear weather; and bear from each other E. S. E. and W. N. W., distant about 170 feet, by which circumstance of two Light Houses at the same station, they will be immediately distinguished from all other lights upon the coast (British or American.) Both the buildings are painted white. The following are the bearings from them, viz.:

- To the Southernmost Murr Ledge (St. Mary's) E. S. E., easterly.
- " Gannet Rock Light, E. by S. $\frac{1}{2}$ S., 13 miles.
- " Southern Head of Grand Manan, E. by N. $\frac{1}{2}$ N.
- " Northern Head of Grand Manan, N. E. $\frac{1}{2}$ E.
- " N. E. Rock, distant 2 miles, N. E. by N.
- " Little River Head, N. by W.
- " Libby Island Light House (American), N. W. by W.

Vessels standing to the Northward, between these Lights and the Gannet Rock, should tack or haul off the moment they bring these Lights in one, as they will not then be more than three-fourths of a mile from the Murr Ledges, if more than five miles to the East of the Lights.

[It is recommended that the Ships' Compasses should be well compared and adjusted particularly in new ships, before they leave Partridge Island, as serious errors have frequently occurred from want of attention on this point; and as the variation in the Bay of Fundy is seventeen degrees Westward, (or $1\frac{1}{2}$ points), it will be found by the latest published Admiralty Charts, that the course from Partridge Island down the Bay, South Channel, between the Old Proprietor and N. W. Ledge, is S. W. $\times$ S.; but the course to be steered must depend on the direction of the wind on leaving Partridge Island.]

Head Harbour Light.—Next in order, after passing Grand Manan and the plain white Light (American), on West Quoddy Point, is Head Harbour Light. This is placed on the North East extremity of Campobello, and is a guide to vessels entering the main channel to West Isles.

Moose Island, and the inner Bay of Passamaquoddy; it enables vessels also at all times to enter Head Harbour—it is a fixed *white* light. The building is painted white, with a red cross on it.

Point Le Preaux Lights.—Upon this projecting head land, two lights are placed, one above the other, in the same house, and distant 28 feet. Both lights can be seen from every point of the compass, where they may be useful—both are fixed, and *white*. The Light House is painted red and white, in stripes of five feet broad each, horizontally.

A Steam Fog Alarm has been placed in this Station, which will sound twice in each minute.

Partridge Island Light.—This Light at the entrance of the River and Harbour of Saint John, having been established upwards of forty years, requires no particular notice, further than that it is a fixed *white* light, and that the Light House and Keeper's Dwelling are painted red and white, in vertical stripes. The Steam Whistle on this Island is sounded ten seconds in every minute during foggy or thick weather.

Beacon Light.—Within Partridge Island, and upon a Spit or Bar, which extends about half a mile S. S. E. off Sand Point, and which dries at two-thirds ebb, stands the Beacon Tower. Upon this Tower a Fourth Order Dioptric Light, visible ten miles, is established, which is eminently useful to the coasting trade of Saint John, and to all other vessels having pilots on board, as it enables them to enter the harbour at all hours of the night. A fixed *white* light. The house is white and black, in stripes vertically.

Quaco.—A revolving *white* light is placed on a small rock off Quaco Head, showing twice full and twice dark in a minute. This light can be seen from any quarter where a vessel can approach. The Light House is painted white and red, in horizontal stripes.

Cape Enrage Light.—On the Point of that name, in Westmorland, nearly opposite Apple River Harbour, N. S. A fixed *white* light. The house is painted white, and is about 120 feet above the water. Light visible 13 miles.

West Quoddy Light.—This is an American Light, and is placed on the West side of the entrance into the St. Croix by Lubec and Eastport.

Cape Forchu Light.—On Cape Forchu, on the Western side of the entrance to Yarmouth (Nova Scotia), in lat. 43° 39' N. long. 66° 8' W. It exhibits a plain, revolving light—visible one minute and a quarter, and invisible half a minute. The building is painted white, and is elevated 235 feet above the level of the sea.

Grindstone Island Light.—An Octagonal Tower, 60 feet above the level of high water on Grindstone Island, in Chignecto Bay, in lat. 45° 43' 13" N. Long. 64° 37' 25" W. The Tower is painted white, as is also the Keeper's House, one story, situate about 50 feet to the Eastward of the Tower.

Bearings and distances of several places from the above Light House: Cape Enrage Light, by compass, S. 61½ W., 10 1-7 miles.

Highest Point of St. Mary's Ledge, by compass, N. 40 W., 6-10 mile. The point of low water off the Light House, by compass, S. 78 W., 2-10 mile.

Jones' Ledge, N. 10 W., 3-10 mile—it dries at low springs, and has about 2½ fathoms on it at half tide.

J. F. Lawton, Alexandra Works, St. John, N. R.

A Sand Bank, S. 15 W., 6-10 mile; it has 1½ fathoms on its shoalest part at low water springs.

Grand Manan.—There is a Light House and Keeper's house at the "Swallow Tail," on the North Eastern part of the Island of Grand Manan, in the Bay of Fundy. The Light is 45 feet from Base to Deck; the point on which it stands is 103 feet above high water, making 148 feet elevation. This is a conspicuous mark in the South Channel between Briar Island and Grand Manan. Both houses are painted white.

Richibucto Head Light.—This is a fixed White Light, situated on Richibucto Head, Northumberland Strait, in the Gulf of Saint Lawrence. The light is placed at an elevation of 70 feet above high water, and should be seen in clear weather from a distance of 14 miles. The illuminating apparatus is dioptric or by lenses of the fourth order. The tower is square, about 50 feet high from base to vane, painted white, and stands in lat. 46° 39' 40" N., long. 64° 43' 30" W. of Greenwich.

Cape Jourdain, Straits of Northumberland.—Lat. 46° 10' 00" N.; long. 63° 51' 00" W.—Visible from all points of approach from S. E. around by N. to W. The Light House is an octagonal wooden pyramidal building, painted white, 40 feet high, elevated 72 feet above high water, and stands 66 feet from the extremity of the cliff. The Keeper's house, a one and a half story wooden building, painted white, is situated 50 feet to the westward of the Light House.

Point Escuminac Light.—This Light House is situated in Miramichi Bay, north latitude 47° 4' 30"; west longitude, 64° 50' 30". It is a fixed bright light, elevated seventy feet above high water. The Falls are level or still water at about three and a half hours on the flood, and about two and a half on the ebb, so that they are passable four times in twenty-four hours, about ten or fifteen minutes each time. No other rule can be given, as much depends on the floods in the River Saint John, and the time of high water or full sea, which is often hastened by high winds, and in proportion to the height of them.

The Time Ball at the Observatory, Fort Howe, St. John, N. B., Will be hoisted half its elevation each day (Sundays excepted) at fifteen minutes before 1 o'clock. At one minute before 1 o'clock it will be hoisted its full height; and at 1 o'clock, mean time at Observatory, the Ball will be dropped. A Chronometer keeping correct Greenwich time, should then show 5h. 24m. 15s., and the difference between this and the time shown by a Chronometer, is its true error on Greenwich time at that moment. As the above hour of 1 o'clock, when the Ball drops, represents 5h. 24m. 15s. at Greenwich, the error of a Chronometer may be ascertained, no matter where the Ship is lying. Masters of vessels arriving at Saint John should compare their Chronometers by the Time Ball, as it will enable them to get the sea rate, which frequently varies from harbor rates. If Gaul be deemed identical with modern France, then would the Rhine and Alps as eastern boundaries, be to France a restoration of her ancient limits. Her efforts to regain these limits if successful would restore Nice, Savoy, Switzerland, Rhine Prussia, Belgium, and part of Holland, to her dominions.

The era of the Olympiads, so called, from its having originated from the Olympic games, which occurred every fifth year at Olympia, a city in Elis, is the most ancient and celebrated method of computing time. It was first instituted in the 776th year before the birth of our Saviour, and consisted of a revolution of four years.

FROST BITTEN FEET.—This is one of the cases in which an ounce of prevention is better than a pound of cure. But if the ounce has not been taken, and the frost has, much depends upon timely remedies. The feet should be put immediately into cold water, and thawed out very gradually. The sudden thawing does more injury than the frost. Apply sweet oil to the injured parts, and keep quiet until the system has time to repair damage.
