PRIVATE BILLS

On the order for first reading of senate bills:

Mr. SPEAKER: If the house agrees I shall refer to these bills by number.

Hon. R. B. HANSON (York-Sunbury): Mr. Speaker, before this motion is carried I desire to take advantage of the opportunity which it presents to reaffirm the position which I have taken in regard to this matter.

Mr. SPEAKER: The first reading of senate bills is not debatable.

Mr. HANSON (York-Sunbury): I do not know why I cannot speak now. I can speak on the question of procedure, I believe. I am not consenting to this at the moment.

Mr. SPEAKER: Standing order 71 provides:

When any bill is presented by a member, in pursuance of an order of the house, or is brought from the Senate, the question, "That this bill be now read a first time," shall be decided without debate or amendment.

Mr. CHURCH: May not the house refuse leave?

FIRST READINGS—SENATE BILLS

Bill No. 10, for the relief of Theodore Zalopany.—Mr. Gray.

Bill No. 11, for the relief of Thelma Alice Warren Whittet.—Mr. Fulford.

[Mr. A. L. Macdonald.]

Bill No. 12, for the relief of Ethel Sangster Muir.—Mr. Factor.

Bill No. 13, for the relief of Kiril John Christo.—Mr. Gray.

Bill No. 14, for the relief of Helaine Ethel Leopold Lax.—Mr. McIlraith.

Bill No. 15, for the relief of Cecil Benjamin Pomeroy.—Mr. McIlraith.

Bill No. 16, for the relief of Pinnie Rosenhek Leopold.—Mr. Casselman (Grenville-Dundas).

Bill No. 17, for the relief of Paul Sanson White.—Mr. Fulford.

Bill No. 18, for the relief of Mary Hope Beers Ross.—Mr. McIlraith.

Bill No. 19, for the relief of Wasyl Usypchuk, otherwise known as William Usypchuk.—Mr. Factor.

Bill No. 20, for the relief of Walter Stanley Spencer.—Mr. Fulford.

Bill No. 21, for the relief of Emma Gertrude Groves Morris.—Mr. Hill.

Bill No. 22, for the relief of Gertrude Margaret Amy Ogilvie.—Mr. Hazen.

Bill No. 23, for the relief of Myrtle Josephine Teel Odell.—Mr. Emmerson.

Bill No. 24, for the relief of Majorie Helen Parker Leduc.—Mr. Boucher.

Bill No. 25, for the relief of Margaret Derry Kirby.—Mr. Boucher.

Bill No. 26, for the relief of George Thomas Bragger.—Mr. Hill.

Bill No. 27, for the relief of Freda Watson Norman Daniels.—Mr. Emmerson.

Bill No. 28, for the relief of Iris Mabel Dash Wilkinson.—Mr. Hill.

Bill No. 29, for the relief of Joseph Ulric Edouard Burns.—Mr. Hill.

Bill No. 30, for the relief of Thomas Henry Dwyer.—Mr. MacInnis.

Bill No. 31, for the relief of Elsie Margaret Ormandy Henderson.—Mr. Boucher.

Bill No. 32, for the relief of Arthur Charles Duffy.—Mr. Gray.

Bill No. 33, for the relief of Kathleen Edna Ellis Wainwright.—Mr. Hill.

Bill No. 34, for the relief of Diana Lenore Carsley Tenenhouse.—Mr. Gray.

RADIO BROADCASTING

INQUIRY AS TO APPOINTMENT OF GOVERNOR AND GENERAL MANAGER OF C.B.C.

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I should like to ask the Minister of National War Services when he expects to be in a position to announce the appointment of the new governor to the board of the Canadian Broadcasting Corporation, and also when the general managership of the corporation is to be filled?

Hon. L. R. LaFLECHE (Minister of National War Services): The hon. member was kind enough to let me have a notice of his question. In reply to the first question, I am not yet in a position to make an announcement; and in regard to the appointment of a general manager to the Canadian Broadcasting Corporation, I have not yet had recommendation from the board of governors. I shall be very happy to announce the appointments to my hon. friend and to this house at the earliest possible moment.

Mr. GRAYDON: It is six months since we had a general manager.

Mr. LaFLECHE: May I reply to the second question? I simply wish to observe that of all Canadian citizens the hon. member for Peel (Mr. Graydon) should understand that appointments cannot always be made immediately. He himself is acting, and has been for a long time.

FISHING INDUSTRY

PACIFIC COAST—LING COD—TIE-UP OF FISHING VESSELS

On the orders of the day:

Mr. ANGUS MacINNIS (Vancouver East): I should like to put a question to the Minister of Fisheries. I regret I did not have time to give him notice of it. Is the minister aware that two hundred and fifty fishing vessels ordinarily engaged in ling cod fishing are tied up at the present time on the Pacific coast because of the dispute between the fishermen and the fishing companies over the price of ling cod as set by the wartime prices and trade board? Would the minister be kind enough to take this as a notice and reply on Thursday?

Hon. ERNEST BERTRAND (Minister of Fisheries): I shall ask the hon. gentleman to put his question on the order paper.

Mr. HANSON (York-Sunbury): No; it is on now.

Mr. BERTRAND (Laurier): There are two or three questions in the one question.

ROYAL CANADIAN AIR FORCE

CLOSING OF CERTAIN TRAINING SCHOOLS

On the orders of the day:

Mr. J. G. DIEFENBAKER (Lake Centre): I should like to ask the Minister of National Defence for Air a question with regard to the announcement that was made yesterday with respect to the closing of certain elementary flying schools, service training schools and air observer schools. What was the basis for determining the particular schools to be closed? Was it on the basis of administrative weaknesses, or non-flying facilities, or of there being too many accidents in the schools? I ask the question because the people in the districts are anxious to know the circumstances connected with the closing of the schools.

Mr. SPEAKER: This is a question that cannot be answered to-day. The minister may take note of it and answer it at the proper time.

WAR SAVINGS STAMPS

ANNOUNCEMENT OF RESULT OF FOOD INDUSTRY'S FEBRUARY DRIVE

On the orders of the day:

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): On behalf of the Minister of Finance I should like to announce the most successful result of the food industry's February war savings stamp drive. The food industry established for themselves an objective of $2,000,000. They have obtained total sales of $3,055,188, being fifty-three per cent in excess of their objective.

Never before in the history of war savings have so many stamps been sold in a single month. The success of this campaign has been a stimulant to the war savings effort. I am confident that its impetus will be an important factor in emphasizing the need for greatly increased and continuing sales of war savings stamps throughout the year. I cannot speak too highly of the efforts of the thousands of people who did so much to make this campaign a success. They have made an important contribution to our war financing.

PENSIONS

ARREARS DUE TO OLD AGE PENSIONERS AND CERTAIN WAR VETERANS

On the orders of the day:

Mr. D. G. ROSS (St. Paul's): Will the Minister of Pensions and National Health endeavour to speed up the back payments which are due to old age pensioners and burned out veterans, whose pensions I think were increased last January? I have had many inquiries in this connection.

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health): Of course I am only concerned directly with those in receipt of the war veterans' allowance. The old age pensioners come under the Department of Finance, but I shall be glad to direct the attention of the parliamentary assistant to the Minister of Finance (Mr. Abbott) to the question.

INDUSTRIAL DEVELOPMENT BANK

PROVISION OF ADDITIONAL CREDIT FACILITIES FOR FIXED AND WORKING CAPITAL

The house resumed from Monday, March 13, consideration of the motion of the Minister of Finance for the second reading of Bill No. 7, to incorporate the Industrial Development bank.

Mr. H. R. JACKMAN (Rosedale): Mr. Speaker, it has long been the opinion of some that there was a need in Canada for an industrial development bank or some similar institution which would advance intermediate credit to small businesses. But while there may have been a need, such an institution never got under way, and I believe this house may be interested in some of the reasons why a bank of the kind never flourished in this or any other country. While one may advocate an industrial development bank, nevertheless one should look at the proposal very critically.

In Canada there has always been plenty of money both for long term investment and for working capital, as well as for intermediate credit if that was a desirable form of credit to advance to industry. When the parliamentary assistant to the Minister of Finance (Mr. Abbott) outlined the need for the proposed bank he set out, if I may say so, very sketchily the details or reasons why that bank should be incorporated at the present time, and particularly why it should come under the Bank of Canada. The main purpose he suggested was to help small industries. There was no suggestion on his part, beyond a mere expression of probabilities in the future, that investment dealers had not supplied sufficient permanent capital, or that there has been an over-centralization of commercial banking to the extent that credit was not forthcoming to small industries which might have deserved better treatment in regard to working capital. He did not say, nor does the preamble contain any suggestion, that this bill was designed primarily to create employment in the post-war period, though I suspect that this may be one of the chief reasons behind the bill, and also the reason it has received support from so many quarters in this house. Should a loss be sustained in the operation of this bank, though at the same time the bank may help create employment, it may very well be that the loss will be counted small in view of the greater gain. Then it has been thought by some that this bill aims to prevent a depression by avoiding the under-investment of savings which, according to some theories, initiates a downward trade cycle. We find nothing in that regard in the preamble, but it could be read into the bill, and I should like to know from the parliamentary assistant whether or not that consideration was in the mind of the government in bringing down the measure at this time.

I have just suggested, Mr. Speaker, that there were reasons why this type of credit institution did not get going previously; because there always has been the same need though perhaps not in the same degree. We find that these institutions were considered in the Macmillan report, which dealt also with the types of credit obtained by industries in various other countries. In Germany, for instance, we found that the banks were hand in glove with industry; that before a new company was formed the banks provided the money, stated what the capital should be, and eventually sold the securities to their depositors. In France there was also a close tie-up between the banks and industry, and there was some tie-up in the United States. In Great Britain, however, the connection between the banks and industry was not nearly as close as in the other countries I have mentioned; and the Macmillan report of 1932 recommended that there should be a closer connection, that an intermediate credit bank or an industrial development bank should be created, particularly for the purpose of increasing foreign trade.

I have always had a personal interest in these intermediate credit banks, which, as I say, never really got going. Apparently the only way they could proceed was to start in a small way, prove themselves worth while and, if they made a profit, expand and serve a greater need. But that did not come about. One small company was formed in the city of London for the purpose of supplying intermediate credit, but the experience of that company, according to the last information I had, which was before the war, was not such as would justify its expansion. It was found that if you lent $50,000 or perhaps $250,000 to a small company, you virtually had to become a partner in that industry in order to watch the loan. It was not like a commercial loan, which would come back to you within a year or so; it was an extension of credit for from five to twenty years, and you had to become almost a partner in the business in order to make sure that the money would be returned to you without loss. It has always been desirable to help the small business man, not only from an altruistic point of view but because, in the view of business men and bankers, the small business is simply one that hopes to become large. One difficulty in connection with extending

intermediate credit to a small industry has been that if it issued bonds or stocks the investing public were not interested in them because there were not enough of the bonds or stocks outstanding to create a market on the exchanges or through the investment dealers, so that it was almost impossible to resell the issue after it was purchased in the first place by an investment dealer.

Are present conditions very different from the conditions which existed before the war? To-day we have a great number of new factories. Small factories have grown large; in fact it is said that the industrial capacity of this country is approximately one-third larger than it was in 1939. Existing plants engaged in the production of civilian goods will require modernization and expansion after the war. They will need to make use of some of the new techniques developed during the war, and they will require fresh capital with which to buy new machinery. Again, if we are to maintain anything like our present employment we must develop our foreign markets to the fullest extent possible; and the development of those markets, together with the extension of credit to our foreign customers, may well mean that a bank of this kind will have to advance credits which might not be easily forthcoming from private investors or any other credit institution under the set-up that exists to-day. The preamble states that it will be the purpose of this bank to extend credit to companies which may reasonably be expected to prove successful if a high level of national income and employment is maintained, but if those conditions prevail there will be no need for the government to establish a credit institution such as that set up under this bill. Money will be forthcoming literally in an avalanche if we can promise the maintenance of anything like the national income we have to-day. Even if it is 75 per cent or 80 per cent of it, there can be no question that the public will be more than willing to provide all the money that industry requires. Certainly the $100,000,000, which is the total of assets envisaged by this bank when it begins operations, will be a mere drop in the bucket as compared with the money which will be forthcoming if the conditions laid down in the preamble of the bill are true, and are really the conditions precedent to bringing into being the operation of this bank.

Furthermore before the government embarks upon any such legislation as this we should know not only our whole post-war programme, but more particularly what our post-war taxation is going to be. At the present time no corporation pays less than forty per cent of its earnings in taxation, even though those earnings be actually less than they earned in pre-war days. Then, should the earnings exceed the pre-war base, the average of 1936-39, the excess profits tax comes in and one hundred per cent of earnings above that base are taken away.

The purpose in imposing these taxes was the exact opposite of the purpose of this bill, and the exact opposite of the purpose of our post-war programme. Namely it was to throttle any expansion in civilian production. Labour was frozen, except in regard to war industries. War industries offered higher wages and took labour away from civilian industry—and quite properly—and that is how our war production got started. But if we are to look forward to civilian production going ahead—and we hope that civilian production will be the major form of production in the post-war period—then we must remove the hand from the throat of business, and reduce taxes, so that there may be some incentive and also some compensating reward for those ventures which prove unsuccessful, because business is more often unsuccessful than it is successful.

The need for extension of credit, such as this bill envisages, however, has been aggravated by the tax policy of which I was speaking. Because of the heavy incidence of the corporation and excess profits taxes, no company has been allowed to build up its working capital position, whereby it pays for its inventory and supplies, and pays its weekly wage bill before the goods are sold. Then there have been many small companies, some of which were just starting up and did not expect to make very much money, if any, during the early days, but, as obtains in a nursery, expected a period of five or seven years' credit before they woud get any return on their capital. All those companies, realizing that they could not go through the period of the war, which might be four, five or six years, threw up the sponge and sold out to other companies which had large organizations and could maintain themselves.

So that there has been a mortality among young, new and growing companies, and this condition has been aggravated by the incidence of war taxation. Moreover, not only is there Canadian money available for industrial development after the war, but we shall have United States and British money looking for expansion in Canada. We have here the advantages of imperial preference, and a relatively bomb-proof country. I predict there will be no scarcity of venturesome money if we have fair taxation legislation in Canada.

If there is need for intermediate credit, plus the economic justification for it, there will be private money in bountiful supply.

Let us assume the need for this institution. What of the method? We find that our chartered banks, our commercial banks, as of January 31, 1944 had deposits amounting to $4,344,000,000—and from that sum I omit the $600,000,000 government deposits. The loans against that total of $4,344,000,000 amounted to only $1,285,000,000. In other words, there was over three times as much money in our chartered banks to be lent as business was willing to take. If we go to the banks with any reasonable kind of proposition they will welcome us with open arms. If we go to pay off a loan, one which is considered reasonably good, the banks dislike it, and would much prefer that we borrow money, because they are simply plagued with money at the present time, and this sum of $100,000,000 as against the $4,344,000,000 of deposits is so small that it is not even a drop in the ocean.

There is no likely shortage of commercial funds facing the country now, nor may I say will there be in the post-war period. Furthermore we have the action of the Bank of Canada. Truly, it may only be a gesture, but the fact is that only recently it did reduce the rediscount rate from 2½ per cent to 1½ per cent. This indicates that there is plenty of money not only now but, in all likelihood, for the post-war period. Certainly that is the inference to be drawn from the bank's action. And it can be done; that is, the commercial banks can rediscount at the rate of 1½ per cent, making available to business more credit. Yet the government comes to us and says there is a need for this industrial development bank because there may be a shortage of adequate funds in the post-war period.

Mr. ABBOTT: Would the hon. member suggest that the banking system should lend money for ten years at 1½ per cent?

Mr. JACKMAN: I suggest that the commercial banking system should not lend money for ten years, and I also suggest that the industrial development bank should not lend money for ten years either. As I will show later in my remarks, there may be another set-up much more desirable than the one proposed in the bill.

Mr. RALSTON: Is that the hon. member's opinion? Is that just my hon. friend's personal view?

Mr. HANSON (York-Sunbury): Let him go on with his speech. We are not butting in with you.

Mr. RALSTON: Is that the view of my hon. friend?

Mr. HANSON (York-Sunbury): There is no cross-examination here.

Mr. RALSTON: Is that the view of the Progressive Conservative party?

Mr. GRAYDON: Keep politics out of this business.

Mr. HANSON (York-Sunbury): Don't be so fresh.

Mr. GRAYDON: Don't try to talk politics now. Let us have a holiday once in a while.

Mr. JACKMAN: It is easier for the commercial banks to advance the type of credit to which the parliamentary assistant had reference a moment ago.

In regard to longer term credit, much, while advanced by investment dealers, is collected in small rivulets and handed over to industry in large amounts, so that it may be economically useful. There is no shortage of money on that score and no shortage of machinery. In fact, investment dealers to-day are largely engaged in making the victory loans a success. And after that job is finished they will be only too delighted to get back into industrial banking, which is their ordinary business. If anything, the investment dealers' business is an industrial business. There is to-day a plentiful supply of money, and any sound business will find that it has offered to it all the money it can possibly use.

At page 1059 of *Hansard* the parliamentary assistant is reported to have said:

> But industry's own resources may be far short of the total amount of financing required. It is therefore in the national interest to ensure that such additional financing as may be necessary and desirable will be available to industrial enterprises.

He could not go farther than to say "may". I should like to know where the demand for this bank has sprung from. Is it a government measure Is it a brain child of the Bank of Canada, or where has the demand come from? If it is part of the over-all post-war plan, then let us see the post-war plan so that we can fit this piece into the whole scheme and realize just what significance it has and what part it is going to play. Moreover, if it is to be of any importance at all, the $100,000,000 of assets it is to be allowed to have will be so small that it will be of no consequence. It will be largely experimental. If the government believes in this type of business, and believes that it is sound, then it should provide an adequate amount. I should like to know whether the government has looked into the question whether a guarantee of credit under the existing lending institutions would not be sufficient without setting up another bank with all the overhead and cost that goes with it.

What does the bill suggest? Simply that industries which may reasonably be expected to prove successful if a high level of national income and employment is maintained will be granted credit. Such a condition would be nothing short of an investor's paradise. There will be no risk involved if we can maintain the national income at a high and fairly steady level. Therefore, if the government can do what it presupposes in the preamble it can do, there is no need which will not be satisfied by private enterprise. But, assuming that there will be a need in the future, is this bank to be anything more than a bank of last resort?

May I say to the parliamentary assistant and to the government that if the bank is to advance credit only where credit is not forthcoming through ordinary channels, it will suffer a great many political headaches. For every small business that will be granted a loan there will be at least a dozen, if not a score, that will have to be turned down. All I can say to my hon. friends on the government benches is that they are aiming straight for a severe headache. It must be well known that of a hundred new businesses that start up, very few succeed, and a much smaller number become real successes. The types of business which will seek aid under this bill will be those which are either too small or too young or too risky for financing by public issue. If this bank is to be a bank of last resort it is likely to become a sink-hole for the taxpayers' money.

The parliamentary assistant has suggested that it is not going to supplant, it is merely going to supplement private banking through commercial banks or investment dealers; they are going to go on as before and this bank is merely to supplement their work. I cannot for the life of me see how it will supplement without supplanting. That is what will happen, and if it does, it may prove detrimental to the whole Canadian economy.

It has not been stated what rate of interest will be charged by the proposed bank on the advances it makes. Let us assume that the rate will be five per cent. This may seem a reasonable rate, but it is unlikely that the private banks could advance money on that basis. I believe it would be an unsound basis. From time to time there will be losses in connection with the advances made to these small companies; in fact I should think that the losses would bulk largely in the total. If you are to have losses, you must make them up on other loans which are successful; otherwise you will have a net loss and the bank will lose its capital. If that happens, not only this bank but the Bank of Canada will be placed in an embarrassing position. If this bank proposes to lend money at cheap rates, or what looks like a cheap rate of five per cent, it will be impossible for the ordinary suppliers of money to continue in business. They cannot compete on any such basis. As I say, we have had no indication whatsoever from the government as to what rates are to be charged.

Mr. ABBOTT: I said reasonable rates.

Mr. JACKMAN: "Reasonable" means many things. I suggested five per cent, but that may be anything but reasonable. Unless there are windfalls in this type of business you will not be able to offset your other loans. I cannot for a moment see the government collecting windfalls on advances to private industry. That would be regarded as unconscionable. They do not own the business, and the risks increase every time they embark on a new venture.

A word as to the type of credit which this bank will advance. Ordinarily intermediate credits are for from two to five years in length, or perhaps even longer. Is it the intention of the government to take hold of some of these small companies, advance money to the proprietors, nurse them along for a number of years, and then distribute the securities? I do not know, but this would open up a tremendous field. The government would be going into private business to compete with those who are already supporting the government through the payment of private taxes.

Is the government to become a speculator in industrial enterprises? The proposed bank could not disclose the true facts with regard to its loans and sell them to the public, because that practice just would not hold water. It is said that the purpose of this bill is not to supplant the functions of the investment dealers, it is to supplement; but if an investment dealer attempted to sell an issue, such as this bank contemplates taking, without full disclosure being made to the investing public, the government would prosecute. I suggest that there is no difference between the care which should be taken with regard to the public's money and the care which should be taken with regard to a private individual's money. If capital issues owned by the Bank of Canada or by this industrial development bank are sold to the public and then go bad—such things are contemplated under the bill—there are bound to be distasteful repercussions. Unscrupulous people will say that the government is behind the issue. We know that with the turn of conditions some of these ventures are bound to prove unsuccessful and the government will be faced with the opprobrium attached to such an outcome.

Under this proposed industrial development bank, unworthy credit risks will be assumed if the bank is to supplement and not supplant. The

credit system as we know it in this country and as it is in all industrial countries is based on the human equation as much as on the material; it is based on character more than on assets. Judgment is formed only after long experience, and I suggest that there is no one in the Bank of Canada who by training is likely to be able to exercise that function successfully. The bank is likely to be successful only through using and perhaps abusing the government's power of borrowing at low rates of interest and relending the money and supplanting rather than supplementing the ordinary banking channels, particularly investment banking channels.

If the purpose of the bank is not to keep its capital intact, if it is willing to lose money for the Canadian taxpayer because the benefit of job creation may be worth the candle, then the government should be frank and say that that is the intention and design of this bill. May I ask how a loan advanced under this proposed legislation can be repaid as long as we have our present tax laws? Every dollar which is earned will be subjected to a minimum of forty per cent taxation. A company may earn five per cent on its capital, or even seven or eight per cent at the outside, but that will be subjected to a forty per cent tax. How will it be possible under present tax legislation to repay a loan? I suggest to the parliamentary assistant that it would be much better if some information were given to us as to what we can expect in the way of tax legislation in the post-war period before we look into such a matter as this industrial development bank.

Is the real object of this bill to create employment even if that employment is not economically productive? Or is the desirable objective of full employment to be aided by other measures divorced from this particular institution? It is well to know what we are doing, and the effect on competitive businesses struggling on their own must not be lost sight of. Where is the Bank of Canada to find the trained personnel which it will lend to the industrial development bank? I understand from the bill that there is to be an executive committee composed of directors who are members of the executive committee of the Bank of Canada. The two could not be more closely tied in than is the design under the present bill. The executive committee may deal with anything that the bank may deal with. It is purely a Bank of Canada show, with no independence and no original thought outside the central banking circle, and yet the type of business which it is to do and the function which it is to perform are entirely different from those carried on not only by the central bank but by a commercial bank. Even the staff is to be provided from the Bank of Canada or is to come under their joint arrangements. There will be the same secrecy as to salaries, I suppose; yet we have the companies act requiring disclosure of executive salaries, and everyone knows what civil servants and many other people receive. There is nothing wrong about that. I see no reason why the salaries of the Bank of Canada and of this proposed bank should not be made public.

Then this bill contemplates establishing branches, which can lead to the invasion of all banking fields except the taking of deposits. This proposed bank may spread across the country, with great overhead cost, and there may be no limit to the encroachments which it may make upon the business of ordinary tax-paying citizens.

There is another point which I wish briefly to mention. The capital of the bank is $25,000,000, and yet this amount will be forthcoming from the Bank of Canada, whose capital is only $5,000,000. The bank made $15,000,000 last year, but it would seem that the Bank of Canada is giving birth to a pretty big baby when it is going to embark on a subsidiary bank which has a capital five times the amount of its own.

The business and powers of the bank are to provide credit or other financial resources which would not otherwise be available on reasonable terms and conditions. Just who is to define "reasonable" is a matter of some interest, and I should like to have some elucidation from the parliamentary assistant. If my surmise is correct, anything this bank does will be either outside its powers, or it will be a sink-hole for the taxpayers' money, because the preamble states that it will advance money only to companies which may reasonably be expected to succeed if a high level of national income and employment is maintained. In this event there will be so much money available that this bank could not possibly lend a single dollar unless it supplants rather than supplements the present banking institutions. Then, it may lend, guarantee, underwrite or purchase stocks with a view to resale, but there is no limiting factor on when the stocks are to be resold. The bank may get into business in competition with the taxpayer and remain in business apparently indefinitely. There should be a strict limitation.

Furthermore, it fails in its purpose because it does not put emphasis upon permanent or semi-permanent capital rather than putting the entire emphasis on debt. There should be

power in a bank such as this to purchase prefered or common stock issues rather than to have as its main purpose the lending of money. Companies which want money for five years or twenty years for permanent capital do not want to have to repay or will not be able to repay it in a short time, particularly under a system of heavy taxation, and the money becomes part of the proprietary interest. This bank should be in a position, if it is to do a real job, to subscribe to the stock of the companies. I believe the parliamentary assistant is going to ask me whether I am in favour of this bank and of government ownership.

Mr. ABBOTT: Not at all. I was just going to point out to my hon. friend that if he will look at the bill he will see that the bank has power to do just what he has suggested.

Mr. JACKMAN: In the bill there is power to do nearly anything. As I have suggested, it can establish branches in every hamlet in Canada. But in looking through the multitudinous sections—

Mr. ABBOTT: Look at section 15.

Mr. JACKMAN:—I observe that the main purpose of it is to deal with borrowing. That only strengthens my argument that this bank is to become the proprietor, the actual owner, not a mere banker for industrial companies, and it makes it all the more a competitor with the taxpayers of the country—a situation which, unless you are going to be a national socialist, I think you would do well to keep out of.

Mr. SLAGHT: Does the hon. member find from his analysis of the bill that the bank will be able to finance mining companies?

Mr. JACKMAN: Does the hon. member ask me if I think this bank is to finance mining companies?

Mr. SLAGHT: Whether the power is there.

Mr. JACKMAN: I have not examined that. It is the parliamentary assistant's bill; it is not mine.

Mr. ABBOTT: I shall be glad to deal with that when I close the debate.

Mr. ADAMSON: What did the parliamentary assistant say?

Mr. ABBOTT: I said I shall be glad to deal with that when I close the debate. I have a note of that point. Other hon. members have raised it.

Mr. JACKMAN: I should just like to point out the effect of government engaging in competitive businesses. We have examples of it, somewhat more in the provincial fields than we have in the federal field. But, once any part of the crown, whether it be in the dominion right or the provincial right, engages in business, we know it is not taxable, and therefore private companies which otherwise could compete and render equal service with it cannot compete, because one company cannot have forty per cent of its profits taxed away and the other company, which happens to be publicly owned, have no part of its profits taxed away and bear no share of other public burdens. That is a quite impossible position. I wonder what the situation is to be with the government wholly owning now the central bank and, by two stages removed, the industrial development bank—whether or not these companies will be required to pay taxes.

Furthermore, this is a banking institution, and if it gets going and does make profits they will not be taxed, I suppose, any more than the Bank of Canada is taxed; yet they are in direct competition with commercial banks, all of which pay a minimum of forty per cent corporation tax. So that you get into a field where the ordinary taxpayer endeavours to make a living, and one scarcely knows where one is at.

There are several other sections with regard to the powers of the Bank of Canada to which I will refer briefly. The Bank of Canada under its own charter has power to buy and sell or rediscount bonds and debentures issued by the bank—that is, this bank—provided that the amount of bonds and debentures maturing after ten years may not exceed twice the paid-up capital and rest fund of the Bank of Canada, that is, $13,000,000. It may not be enough to be important, but if the securities which the bank purchases prove to be worthless, then it is enough to wipe out the whole capital and surplus of the Bank of Canada. I suggest if this industrial development bank is merely to supplement and not supplant, is merely to get loans which nobody else will look at, there is a good chance of the loans going bad and the Bank of Canada being affected.

The Bank of Canada has three instruments of control: first, the discount rate; second, open market operations; third, foreign exchange operations. These instruments are designed to serve the purpose of a central bank. For its own safety the bank's authority to deal in securities is restricted. There is no limit to the short-term securities which the Bank

of Canada may hold. Long-term government bonds, however, are strictly limited to five times the amount of capital and reserve of that bank. Under this bill the Bank of Canada endeavours to make possible what is not possible under its own act of incorporation. In particular, the underwriting permitted under this bill greatly enlarges the amount of long-term securities as to which the Bank of Canada may have a contingent liability.

Furthermore, the Bank of Canada does not deal directly with the public. The proposed industrial development bank will deal with the public, which is an important defect from the point of view of the major purpose of the central bank. Through the tie-in with the industrial development bank, the Bank of Canada no longer remains a bankers' bank and will come in direct competition with banks whose own funds are invested with the Bank of Canada, and these funds will be invested in securities which the chartered banks could not themselves hold.

While the machinery of an industrial development bank as designed might be workable and safe in certain hands, one must always recognize the fact that the set-up must be safe as far as the public is concerned, even if in less satisfactory hands than those which now control the operations of the Bank of Canada.

What was the opinion of the British Macmillan commission in regard to central banks operating an intermediate credit bank such as is proposed in this Bill No. 7? In their report of 1932 we find the following:

> The best course might be if the leading private institutions and the big banks were to cooperate in creating one or more such concerns. We understand that the creation of the Bankers' Industrial Development Company was due originally to the belief that help in these directions might be given to industry by the city—

That is, the financial end of London.

> —which was not being given. We have been told ,however, that the authorities of the Bank of England consider, as we do, that these are not proper permanent functions for a subsidiary of a central bank. It would seem desirable, therefore, that the Bankers' Industrial Development Company should at a convenient stage be definitely separated from the Bank of England, have an independent existence, and rely upon its profit-making capacity as a private institution. It is possible that it might form a nucleus for that closer cooperation between finance and industry which we think is required.

Again, in one of the authoritative textbooks, Kisch and Elkin on Central Banks at page 146, I find the following:

> The business proper for a reserve or central bank to undertake must be hedged round by conditions which will make for the maximum of safety and promote the maximum of liquidity in its assets.

[Mr. Jackman.]

And yet we find that this bank is to become literally part and parcel of the Bank of Canada.

> In addition, therefore, to prescribing the permissible business in unambiguous terms, there are advantages in barring explicitly certain kinds of business inconsistent with the primary requirements already discussed. This makes for security and relieves the bank from possible risk of pressure to stretch its powers in a sense that might be inimical to its stability and responsibilities as a reserve bank. Thus we find that the acceptance of an interest in a commercial undertaking is barred by the constitution of the banks in a number of cases. . . .

Mr. SPEAKER: The hon. member's time has expired.

Mr. J. S. ROY (Gaspé): I have listened with much interest to all the speeches delivered by hon. members who have taken part in this debate regarding the incorporation of the industrial development bank, and I have noticed that most hon. members who have spoken, if not all, have criticized the bill to a certain extent, and on certain points, seeming, especially, to be dissatisfied with what is lacking in this bill.

There are many reasons why one should be dissatisfied with this bill. If I rightly understand it, the purpose of this bill, like others that have been submitted before, is to prevent in the post-war period a recurrence of such conditions as those we have suffered from in the period before the war. It seems to me, however, that the bill does not touch the sore.

In the first place this bill does not provide anything for agriculture; it does not even include that industry. We are told that a measure dealing with the needs of agriculture is about to come. It has always been the fate of agriculture to be the object of many promises and encouragements that were always to come but which never came. In my humble opinion the deficiencies that exist in the farming industry explain to a certain extent the reasons why we have had so much unemployment and why conditions throughout the country are so badly adjusted.

To substantiate that statement, I should like to submit some figures taken from the Canada Year Book and from other publications of the government, such as "The cost of Living Index Numbers for Canada", published by the dominion bureau of statistics in 1943. This is an index of average annual earnings of all wage earners in manufacturing industries, showing constant purchasing power from 1926 to 1939 inclusive. Taking the year 1926 as the base year, and 100 as the base figure, we find

that the earnings of the various workers I have mentioned, have risen as follows:

1927	103·1
1928	105·1
1929	106·2
1930	102·2
1931	105·1
1932	103·1
1933	99·5
1934	104·7
1935	108·6
1936	109·7
1937	114·9
1938	112·4
1939	111·0

I have not the figures up to 1943, but I am under the impression that the earnings have gone up considerably from 1939 to 1943. We can see that from 1926 the earnings of that class of people have gone up from 100 to 111.

Now the index of the average annual earnings of all employees of Canadian steam railways in money of constant purchasing power 1926=100:

1926	100·0
1927	104·0
1928	106·8
1929	106·9
1930	107·2
1931	114·2
1932	115·4
1933	114·6
1934	111·9
1935	117·8
1936	117·1
1937	120·0
1938	125·3
1939	128·1

I shall now give the average annual earnings of all dominion civil servants, temporary as well as permanent. The figures are taken from the same source, which shows the earnings in money of constant purchasing power from 1926 to 1939 inclusive. The year 1926 is given as the base year and is placed at 100. The figures for the years 1927 to 1939 are as follows:

1927	105·1
1928	105·4
1929	104·7
1930	106·8
1931	121·3
1932	119·7
1933	126·1
1934	122·7
1935	129·3
1936	124·8
1937	125·5
1938	123·9
1939	125·9

This table shows that there was an increase in so far as that class of workers are concerned. I shall now give a table for the agricultural workers in the same years, using the year 1926 as the base year at 100. The table is headed "Income of farm operators in cash and in kind, including the rental value of their houses, as a percentage of the national income of each year, and on the base 1926=100."

1926	100·0
1927	95·9
1928	112·6

And here it begins to go down:

1929	94·9
1930	54·8
1931	30·6
1932	19·8
1933	23·09
1934	36·0
1935	39·09
1936	53·06
1937	58·0
1938	57·9
1939	69·4

In spite of their sadness these figures eloquently prove that agriculture is the industry which has suffered the worst of all. I believe it also explains why a large number of people from the rural districts have gone into the industrial cities where they have swelled the number of unemployed.

If we consult the book "Canada 1944, the official handbook of present conditions and recent progress," we shall see that the census of 1931 shows that the population of the rural districts amounted to 4,804,728, and of the urban sections, 5,572,058. There is a difference in these figures of 767,330. That is quite a difference in the population of these two sections, and that difference has increased since 1931. In 1941 the rural population amounted to 5,254,239, while the urban population was 6,252,416. There is a difference there of 998,177. The last figure I have given shows that the disparity between the rural population and the urban population is increasing. These figures explain to a large extent why we have had such a grave unemployment problem in the past, and why we seem to have lost control of the situation.

If a measure such as the one now before the house is supposed to cure the sore and prevent the crisis like the one we have had in the past, I cannot understand why we did not deal with the matter earlier. I believe if we could solve the problem of the disparity between the populations of the rural districts and the urban districts, many of our difficulties would be overcome. If that problem were solved I am sure it would help to solve very easily our other difficulties. One of the best ways to overcome them would be to adopt a

housing policy to remove the slum hovels in all the cities;and this would help to prevent unemployment. It would help also to a certain extent to diminish juvenile delinquency. It would improve health conditions.

I should like to say a few words about the matter of public health before dealing with slum hovels. We have been told that a measure dealing with public health will be brought before the house very shortly.

Mr. SPEAKER: Order. The subject under discussion is the second reading of a bill to establish an industrial development bank. It has nothing to do with public health. The hon. member must confine his remarks to the provisions of the bill.

Mr. ROY: I may be wrong. I shall try to follow Your Honour's ruling; but I must remind Your Honour that quite a few hon. members have spoken about public health in this debate. I thought I was within the rules in doing the same thing.

Mr. DOUGLAS (Weyburn): You were dealing with health as related to the need for housing.

Mr. ROY: In my opinion the need for housing should be included in this bill.

Mr. ABBOTT: If my hon. friend will permit me, he may recall that in my opening remarks I stated that the government would be proposing measures at this session to provide similar credit facilities in connection with agriculture and housing.

Mr. ROY: That is what I say; those measures are to come, but they are not here yet, and housing is the thing we should look after first of all, because it would, more easily and surely than anything else, take care of post-war conditions. Should this bill provide the financing of a housing scheme which would do away with our slums-hovels it would be a wonderful thing. If, let us say, $100,000,000 could be advanced for that purpose, which amount could be recovered later on, it would enable about twenty thousand families to possess their own homes, figuring the cost of each house at $5,000. That would constitute the strongest possible fortification against the trend of revolt that we hear roaring among the population. That would be the best asset Canada could have, and it would not take very much to give those families their own homes.

Mr. ABBOTT: Again I rise to a point of order, Mr. Speaker. I do not think we can discuss the housing problem on this bill.

Mr. SPEAKER: The parliamentary assistant to the minister has made the statement on his responsibility that measures will be brought before the house in connection with agriculture and housing. Therefore the hon. member is anticipating something that will happen in the future, when his remarks will be relevant. At the moment the bill before the house deals only with the setting up of an industrial development bank, and the debate must be confined to that.

Mr. DOUGLAS (Weyburn): On a point of order, Mr. Speaker, last Friday the hon. member for Moose Jaw (Mr. Ross) devoted his entire speech to a discussion of agriculture.

Mr. SPEAKER: The point of order has been taken now and I have ruled on it. I am stating the situation that exists at present; we have before us a bill dealing with an industrial development bank, and the discussion must be confined to that.

Mr. DOUGLAS (Weyburn): The scope of the debate seems to vary, depending on which side of the house it comes from.

Mr. SPEAKER: The hon. member may not criticize my ruling, which is that this debate must be confined to the provisions of the bill now before us.

Mr. DOUGLAS (Weyburn): It is a great pity that Your Honour was not in the chair on Friday night.

Mr. ROSS (St. Paul's): On the point of order—

Mr. SPEAKER: I cannot permit hon. members to question my ruling. It can be appealed if necessary, but the ruling has been given and the hon. member must comply with it.

Mr. REID: I am glad Your Honour is being fair, because last night you stopped another hon. member—

Mr. SPEAKER: Such remarks should not be made. The hon. member knows my ruling, and that he must confine his remarks to the bill now under consideration.

Mr. ROY: Thank you, Mr. Speaker; I am perfectly willing to accept your ruling, and I thank you for giving me a directive in this connection.

My contention was that the provisions of the bill are not complete, and I was trying to indicate what else should be included in the bill to make it more acceptable. According to the bill its objects are to finance the development of small industries, to see that the bad conditions from which we suffered previous to the war do not return, to prevent unemployment and so on. All these measures are brought before us with the promise that when the war

is over the old conditions will not return, but they do not go far enough. We are to have health insurance, but that is not going to cure the cause of the evil; it will not touch the source of the trouble. My contention is that if we do not get at the cause of the trouble, that if all our legislation misses the mark as this measure seems to miss it, we will not have any better results when the war is over than we had from 1930 to 1939, during which time both old political parties were in power and both promised to bring in all sorts of measures which would put a stop to unemployment. They could not succeed, and the people became disgusted and discouraged. Finally the war put an end to it. That was a very poor way of settling a question of that kind. I wonder if such bad conditions will not come back again unless the government takes steps now, unless it gives the people right measures in which they can believe and upon which they can rely?

Coming back to the principle of the measure, as the parliamentary assistant would like me to do, I say this bill should tell us explicitly how it will work against the evil we are seeking to cure; how it will prevent trusts, monopolies and cartels from carrying on their practices, which, according to a statement made a few days ago by Mr. Harold Ickes, Secretary of the Interior of the United States, were the cause of the present war. We should be told how this bill will prevent further abuses by these monopolies, how it will protect small industries and free enterprise. Though it is a very important point there is no mention of it in the bill. The bank may use this money to favour the big trusts; it may work in the interests of the electrical trust or the packing trust, to mention only those which have been referred to in the course of this debate. We have no guarantee of any kind that it will protect us against the real evil, the trusts and cartels; that it will help only the small industries; that it will develop family industries, and bring back prosperity to the rural districts; that it will do away with the surplus population we have in our cities, which has become such a heavy burden to the state and a cause of anxiety and fear for the future.

That is why I am criticizing the bill. That is why I am trying to point out some matters which I think should be included in the bill, and which I believe would improve it. In my opinion most hon. members favour the principle of a measure of this kind, but I for one should like to be assured that this new bank will not come under the control of high finance. I would be ready to support a measure that would be really fit to correct the evils from which we are suffering; because in the post-war period we want to be protected against a return of the bad conditions that existed before the war. That is why, Mr. Speaker, unless this bill is redrafted, and its provisions are set out more clearly, I am afraid that all the work we are doing at the present time will remain but fruitless.

Mr. R. W. MAYHEW (Victoria, B.C.): Mr. Speaker, I admit that one might almost apologize for speaking this afternoon, in view of the fact that much time has already been spent in the debate and there has been much repetition. However I rise as one who has had some personal experience in respect of loans of the kind here indicated, and therefore I shall speak not so much with respect to the bill itself as to my belief concerning the government's intention.

I cannot become enthusiastic about the bill, but I can offer all the support I am capable of giving to the principle behind it, namely that of giving financial aid to small industry, and particularly that part of small industry which is engaged in the pioneering field. I would support, too, the provisions of the bill which would give encouragement and financial assistance to the young men who will return from overseas.

Let me say just a word about what I mean when I refer to pioneering in industry. To-day we are entering a period when we will hear much about plastics. Who is to do the pioneering if it is not done under some such scheme as we have before us? We are also entering a period when the use of light metals is increasing. Are these two commodities to be taken away from the young men who have ideas and the desire to develop them, but who, if they wish to see their ideas developed, must sell them to the larger corporations or to people with money? I believe that, as the bill proposes, we should give the necessary assistance to young men.

If the money is made available it will give assistance in the development of our natural resources. What is our great natural resource to-day? What is the one in which we are mostly interested, and the one which must be developed if we are to develop Canada? I have in mind a natural resource to which reference has not thus far been made. It is not our forests; it is not our mines; it is not our fisheries. It is opportunity. I have in mind the young man who will come back from overseas and who will have the right to a chance for personal development and personal expression. The young man who is honest, who is industrious and healthy, and who has an idea, is the type of resource we cannot afford to ignore. If there is a pool of money from which men of that type can

get some assistance, then I say that in making such money available we are doing something worth while. Nothing has thus far been presented at this session which gives me greater encouragement than that which I derive from this bill, although I do not agree entirely with the manner of procedure. I do not believe that under this measure the money can be properly distributed, or that it can be properly handled through a bank.

Let us, for instance, consider the young man who is going into business. What does he want? What will be of the greatest help to him? In what I shall say I am speaking from experience. The thing he wants first of all is to be surrounded by three or four responsible, experienced, reliable elderly men who can give him advice and assistance, men who have been through the mill and who know how to solve problems. Yes, if he is honest he will submit his quarterly statements to his bank. He will submit his annual statements and will tell more than appears in those statements. He will set before his banker the problems he must face. But is he to ask his banker how those problems are to be solved? No, he is not, because a banker's first obligation is to the security of the loan he has made available. In my opinion that young man will consult his friends who have had experience and who have carried responsibilities.

If these young men—and the same would apply to older men—must come to Ottawa and seek only banking experience as a directive in the conduct of their business, this scheme will fall short of its objective.

There is something further we must remember in connection with the bill. I have reference to the supplying of the money. If we look upon this organization as one which must prove financially successful, in my view we are not going to acomplish the utmost good for the Canadian people. We must take the long-term view. I do not believe the cushion of twenty-five per cent for which the measure provides is sufficiently great, because we must remember that the operations involved will be highly speculative. I do not believe that only twenty-five per cent of the loans granted under this measure will fail. If twenty-five per cent of these ventures are successful, then the over-all picture in Canada might quite easily be a success.

I may be pardoned at this point if I tell the house of my own experience. I know there will be hon. members in the chamber who will appreciate what I am about to say. In 1919, at the close of the last war, the British Columbia government set aside a million dollars for just such a purpose as the one we are now discussing. I was manager of a plant then struggling for existence. Our difficulties were in the securing of certain raw material. Upon placing certain facts before the British Columbia committee I secured a loan of $100,000, which we were fortunate enough to pay back. One or two others were equally fortunate, but certainly fifty per cent did not make good. I believe those who succeeded would have numbered about twenty-five per cent, probably less than that. But in my opinion the British Columbia government's plan of assisting industry was successful. The over-all picture will be a success if we get away from the banking idea and think more of assisting industries that need assistance, and it will prove a failure if we encourage industries that are already over-producing. There are many fields of endeavour—I have indicated some of these—in which assistance will be required for some time in order that the usefulness of the product may be demonstrated. It may be ten, fifteeen or even twenty years before the usefulness of a certain product can be demonstrated to the country.

Some of us are connected with the construction industry, and there is nothing more conservative than that industry. Why? When you are building a house you do not want your architect or contractor to experiment. You are going to live in that house for a lifetime, and you want to stick to the things you know about, bricks, mortar and stone. There are materials being developed which might be used by the construction industry, but the success of those materials cannot be demonstrated in a year or two. What more legitimate use could be made of this bank than to encourage things like that in this country? I am enthusiastic about credit being available to be directed in a sane and sensible way, but this cannot be done without some speculation and risk. We should not look at these things from the standards of to-day or to-morrow or a year hence, but rather on the basis of the broad picture spread over perhaps a quarter of a century.

If you expect this bank to be a success by doing what the bankers would have to do, then you are doomed to disappointment. Those who think that this is going to prove to be a boom politically will find themselves mistaken. There will always be small men on both sides of the house who will want to play politics, who will take only the narrow view. I am sure that if the narrow view had been taken in British Columbia the venture would have been considered a failure. But it has not been a

failure because the twenty or twenty-five per cent that were successful more than offset the unsuccessful ones.

There is another way of operating which might prove successful. This bank could purchase the stock, either preferred or common, of the companies which it is promoting. But I would not like to see such a plan in effect. I do not believe in the government going into business. I am going to say something which I have never seen in print or which I have never heard expressed in just this way. The government seems to be getting away from the duties which it was intended to discharge. In my opinion the government is a referee for the people in the game of life. In carrying on that referee-ship they must defend us against attack by our enemies, they must furnish us with education and they must see that we have sound bodies; but they expect us to play the game of life according to the rules laid down by this parliament and put into effect by the government. It is for that reason that I would not like to see this bill go into effect in its present form. I have never seen a referee in any game take part in the game himself, and I do not want to see this government—which should be the referee to prevent us from fouling the others in the game, and to see that we all play fair and have a chance—take part in the actual game.

Much has been said upon this matter and there is much more I should like to say, but I know hon. members are weary of listening to this debate and I shall conclude.

Mr. THOMAS REID (New Westminster): Mr. Speaker, at this late stage of the debate it is not my intention to delay the bill very long, but there are one or two things which prompt me to rise and say what I am about to say. I am not a member of the committee which will go into the details of this bill and so have one or two suggestions I wish to make before the bill goes to the committee, in the hope that some consideration will be given to them.

From a cursory reading of the bill it would seem to me that it is to be a case of first come, first served. There is no limitation on the amount of the loan which a firm will be able to obtain, and I can visualize demands being made upon the bank for loans when there is no provision for curtailing the amount of the loans, with the result that the $100,000,000 referred to in the bill will soon run out. It is perfectly true that the government has power to increase the amount available for loans, but it can do so only after parliament has given its authority. I suggest to the parliamentary assistant to the Minister of Finance and to the committee that some thought be given to holding down the amount of a loan which any company may secure. If the bill is designed to encourage small industry it may well be that some of the larger ones will take the lion's share of the $100,000,000.

A great deal has been said by hon. members from the eastern and western provinces about the lack of industry in their provinces. This may not be the time to go fully into the question of the centralization of industry, but I cannot be unmindful of the fact that if proper direction is not given by the bill it may well be that those in charge of granting loans may act strictly from the business point of view and consider only the ability of the borrower to pay back. They could thus prevent development which should properly take place in certain provinces.

Mr. SLAGHT: Would the hon. member favour financing the mining industry?

Mr. REID: I would favour financing anything that would be for the welfare of Canada. I trust that answer will satisfy the hon. member, at least for a little while. What I had in mind when the interruption occurred was the possibility of a group of men, say in British Columbia, starting a steel industry to take care of the surplus scrap metal in that province. I can visualize them coming to the bank for a loan. If the demand for a loan is looked at from a strictly business point of view, I have little hope of their chances of obtaining that loan, because it might be pointed out that there are already steel industries in the east, and in the province of Ontario, and that it would be unfair to grant a loan with government assistance to compete with private industry. So that if some direction is not put into the bill in some form or another, I fear that the men who will have charge of the granting of loans and who—I say this without fear of successful contradiction—up to this point have been "centrally minded", may very well frown upon loans for the development of industries either in the eastern maritimes or in British Columbia. It must be recognized that at the moment Canada is fairly well industrialized and at the cessation of hostilities we shall have factories and machinery adequate to supply more than this country's needs. British Columbia, by the way, has developed industrially despite the opposition and competition of the two great provinces of Ontario and Quebec, but it is faced with the condition that it must perforce sell most of the goods manufactured there on the world's open markets to help pay for the goods which we in British Columbia up to now have had to buy from the protected eastern provinces. We in British Columbia are

desirous of going ahead and getting help to develop our industry so that it will be complementary to our agriculture. There is to-day, I fear, little to encourage men to go on land in British Columbia unless such settlement is backed with the developing of war industries to provide a market and payrolls for the consumption of surplus agricultural goods. I do not know just how it may be put into the bill, but personally I should like to see some direction inserted to guide the men who will be handling these loans, because if some such direction or control is not put in there, and the matter is looked at from a strictly business point of view, there is very little hope or prospect of further development by way of assistance under this measure to small industrial concerns in either British Columbia or the eastern maritimes.

Having given expression to these two thoughts, I would ask that they receive some consideration from the committee. I realize, as everybody does, that the principle of the bill has a great deal of merit. At the same time, if it is designed, as it should be, to take care of all the industrial requirements of Canada, every section of Canada should then be placed upon an equal footing when applications for loans are made.

Mr. D. G. ROSS (St. Paul's): I had not intended to speak on this bill, but I have listened with great interest to some of the things which have been said in the course of the discussion.

I intend to support the principle of the bill as it is outlined in the preamble, although I do not quite understand why the chartered banks could not have been used in some such way as the central mortgage bank uses the insurance companies and the loan companies in connection with its business. Insurance and loan companies were forced to do business with the central mortgage bank, but they were guaranteed against loss. I have some doubt on this question of the Bank of Canada entering into an industrial banking business and setting up a staff all through the country when we have available the staffs of the various chartered banks from one end of Canada to the other. One of the main factors involved in this business will be the integrity, the ability and the knowledge of local conditions of the men who will be required to administer the project, and I do not know who is in a better position to understand local conditions than the branch managers in each community.

Some measure of this kind is, I think, necessary, because our young men coming home from overseas will be full of ambition to engage in business of some sort. As the hon. member for Victoria, British Columbia (Mr. Mayhew) remarked a little while ago, if the bank is to serve its purpose it will probably lose a certain amount of money. It will be useful also to large business where the risk will not be too great but where it may be difficult to do financing otherwise. The only specific purposes for which the bank is to be used which have so far been mentioned by the parliamentary assistant are in connection with a rolling mill and shipbuilding out at the coast somewhere, to which he referred in reply to the hon. member for Vancouver South (Mr. Green). He did not say much about small businesses.

I should like to point out that the socialist party, or the Cooperative Commonwealth Federation, do not really agree with the principle of this bill. They cannot agree with it, because its purpose is to assist and promote private enterprise and initiative. It is to make it possible for the borrower, not only to produce and employ but also to make a profit, to build a small business into a big one. The C.C.F. spokesmen have tried to skate around the main principle of the bill. Each one has said that he supports the principle, but he really does not support it. Those who represent this party have tried to avoid the issue by such words as those of the hon. member for Winnipeg North Centre (Mr. Knowles), who informed the house that he supported the principle of the bill because, he added, as reported in *Hansard*, at page 1413:

> . . . there should be established a public authority under the control of the parliament of Canada with power to give effect to the necessary financial arrangements to make possible the kinds of industrial activity parliament regards as being socially desirable.

Well, it is not for parliament to decide what this bank is going to do; it is for the bank to decide.

Mr. DOUGLAS (Weyburn): Up to a point.

Mr. ROSS (St. Paul's): The point is that it is for the bank to decide what is to happen, and I think it would be a sad day if the socialists ever got into power in this country and parliament were to decide what was to happen in connection with this bank.

The main principle of the bill is, of course, outlined in the preamble. The whole idea of the socialists is that there should be no capital and no profits, but the very idea of this bill is to let the people of this country—the small man and the big one—have capital, increase their capital, and make profit and create em-

ployment through their production. But the point is that the C.C.F. cannot afford to oppose the principle of this bill because there are too many small businesses in this country, too many people who do not believe in socialism and who would turn away from them if they did not support the principle of the bill.

Mr. DOUGLAS (Weyburn): Do you support the bill?

Mr. ROSS (St. Paul's): You are supporting it.

Mr. DOUGLAS (Weyburn): Do you support it?

Mr. ROSS (St. Paul's): I am supporting it, certainly. So are you.

Mr. SPEAKER: Order.

Mr. ROSS (St. Paul's): I just wished to point out how far one can depend upon the policy of the Cooperative Commonwealth Federation party. It is one way one time and another way the other, depending upon what they are looking at.

Mr. DOUGLAS (Weyburn): Your spokesman said that this bill was a measure of socialism.

Mr. ROSS (St. Paul's): I do not care at all what one of our spokesmen said. I am just stating a matter of fact, to show exactly the postion of the hon. gentleman's party. It just shows you how much faith the public of Canada can have in what is said by their spokesmen throughout the country when they support the principle of capital and profits and then curse capital and profits, declaring that the only panacea for the country, the only thing that will do any good, is to do away with profits and capital. To say the least, their position is hypocritical—I should not say that; I beg your pardon. It is inconsistent.

Mr. MacNICOL: They face both ways.

Mr. ROSS (St. Paul's): They face both ways at the same time. Even their leader in the House of Commons, as reported at page 1270 of *Hansard,* supports the principle of the bill; he supports the principle of profits and capital. He says:

> A publicly owned institution of this description is an attempt, at least, to do something in the way of financing the development of this country by means of a public institution.

The bill intends that this sort of thing shall take place by private capital and individual enterprise and initiative, and profits.

I wish to say a few words with regard to the bill itself. It is unfortunate that it should have been brought down before the house had had an opportunity of examining the bill with reference to the revision of the Bank Act. Of course, that is the way the government always act; they put the cart before the horse every time. One would suppose that this bill involved the principle on which the Bank Act is to be revised this year. It seems to me it should have been the other way; we should have had first an intimation of what the government intend to do in connection with the Bank Act so that we could intelligently discuss the situation. The government know; as a matter of fact they have known for quite a long time, that the revision of the Bank Act will take place this year. They have had nine years to make up their minds about what will happen to the Bank Act when the revision is made. Surely in that time something could have been done about it. One hon. gentleman said that the industrial development bank bill was the major piece of legislation that had to be brought down. I hardly agree with him. In my opinion the major piece of legislation is the bill for the revision of the Bank Act.

A great many hon. members agree that it will be difficult to discuss this matter before the bill for the revision of the Bank Act is before the house. The purpose of the industrial development bank bill, however, is a good one. It gives the bank very broad powers, much broader even than the chartered banks are given, with the exception of one thing, namely, the receiving of deposits. The purpose of the bill is set out in the preamble. That purpose is to promote the economic welfare of Canada. No one can disagree with that, and that purpose is to be achieved:

> . . . by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained.

I repeat, the purpose of the bill is an excellent one; but is this the right way to bring it about? There are a good many reasons why it is probably not the right way and I think, therefore, the bill will require a great deal of consideration. It is a new venture, something new in Canada, and the banking and commerce committee will have to examine it very carefully.

One of the chief criticisms of the bill is that it fails to describe in greater detail the functions of the bank. Most of the legislation we have had since the war began has been subject to regulations of one kind or another and has been changed by order in council. I hope it is not the idea of the government to revise the Bank Act this year by order in council, because a good many major things have been done in that way.

The parliamentary assistant said:

Undoubtedly the cash resources of industry, including refundable taxes, have risen in recent years and will be used to finance part of the expenditures I have just mentioned.

As a matter of fact, it is really only those industries which have had an opportunity of taking advantage of accelerated depreciation under the excess profits tax which have been able to do this. Many companies, and especially small ones, have carried on without government assistance in the production of war goods and goods for civilian use as well, and they have found the excess profits tax has caused great difficulties. In connection with their reserves, whatever tax resources they have been able to maintain have been so maintained at the expense of depleted inventories in their business. Also, and this is very important, in the favourable commercial situation which has obtained during the war, provision for bad and doubtful debts has not been so great, and doubtful credits have been at a minimum. In the ordinary course of events, proper reserves would have been put by for these contingencies. They may be there and have not been used but have been taken in income tax.

I think the bank will be of great assistance, and people will want to take advantage of it. With respect to the powers, they are to be used mostly for the financing of small industry, and I think it is an excellent idea, because they can be used for the purpose of decentralizing industry. That is the proper way to use them, and, as the hon. member for Victoria, British Columbia, pointed out, this would be a great aid in the fulfilling of the ambition, initiative and private enterprise of the people who are returning from overseas, people who have to be placed in peace industry. As I see it, however, there are dangers in the set-up. I think it is a great mistake to have the board of directors composed of the board of directors of the Bank of Canada. This bank will sell its securities to the Bank of Canada. In other words, it takes its securities out of one pocket and puts them into another. One of the safeguards would be to have a board of directors entirely different from the directors of the Bank of Canada with the exception of perhaps one or two, because one set of directors have to pass judgment on the loan and the other set of directors have to pass judgment on the security which they accept for the loan and the amount of money to be advanced.

The whole success of the bank will depend upon the calibre and the enterprise of the people who run it. As I said before, the board of directors should be composed of two or three members of the Bank of Canada and representatives from various stages of industry having at least the following qualifications and characteristics: undoubted integrity, free from political control, and a record of ability, showing ability to recognize and meet problems of employment, manufacturing and merchandising, and the acceptance of the obligation to work at their job of directing the bank. That is going to be a big job. They should not leave the execution of those obligations to a working staff who may or may not have the necessary wide connection or vision to do the right job. As I said, it is a full-time job, and when I see that the whole board of directors are to receive a remuneration of only ten thousand dollars it does not look as if the proper administration of the bank has the least chance of being fulfilled.

It is very important in times like these that the bank be started off on the right foot, for if it became mixed up with politics a lot of harm might be done before the public woke up to the mismanagement and corrected the situation. It is much more important because of the possibility of political interference and patronage. As the hon. member for Rosedale (Mr. Jackman) said a little while ago, if we once get patronage and political influence into this bank it will be a headache. We of this party do not want to see it become a headache, because it will not be very long before we shall be in power and shall have to look after the management of the bank ourselves.

Mr. GIBSON: Now you are being funny.

Mr. ROSS (St. Paul's): Well, it is a true possibility. I do not understand why a politically controlled bank such as this is preferable if the needs of business only are to be served. The Bank Act comes up for revision and reform this year. Is it not possible to make the present banking system fit into the needs of this bill? Your Honour called the hon. member for Gaspe (Mr. Roy) to order because he spoke of farming and of housing. I wish to point out to you, Mr. Speaker, that we have no farm bank bill before the house; we have no revision of the Bank Act before the house. That is the trouble. The abbreviated remarks of the parliamentary assistant to the minister gave us very little information. He told us we were to have something. The speech from the throne told us that. But what is the conjunctive legislation? Why do we not have it? When will the bill revising the Bank Act be brought down? We should like to see it and study its proposals. This bill will go to the banking and commerce committee and we shall then be able to discuss its various phases. As I said before, I support the

principle and purpose of the bill although I think there are perhaps better ways of carrying out its objectives.

Mr. M. J. EDWARDS (Calgary West): Coming as I do from what on very good authority may some day very well be the industrial centre of Canada, I think something should be said as to Alberta's views with respect to this bill to promote the industrial development of Canada.

A year ago I gave expression to this thought on the debate on the reconstruction resolution, that in future years I believed we would have to look at Canada from the basis of economic units rather than political subdivisions, and I expressed the idea at that time which I did not know was entertained by such high authority as Mr. Griffith Taylor, one of the most outstanding geographers in the world, professor of geography in the university of Toronto, president of the British and American geographers' association, a man of outstanding ability in his line, and one who, I believe, has not only served Canada well but was in Australia for a number of years and later held a very important chair in the seats of learning in the United States. I commend to hon. members, who are interested in the future industrial development and population of Canada, a little brochure got out by "Contemporary Affairs", entitled "Canada's Role in Geopolitics by Griffith Taylor". I wish to call hon. members' attention to the last sentence in this brochure which, I believe, is a condensation of several books which Mr. Taylor has written on the subject. The concluding paragraph is as follows:

> In conclusion it is interesting to speculate as to the centre of gravity of Canada's population a century hence. The agricultural and industrial potentialities of Alberta lend some support to the view that Calgary may surpass Ottawa; and even some day rival London as a focus of the empire. Consideration of the above cultural and economic distributions suggests that the political centre of the empire may move away from stormy Europe to the better protected Canadian section of the empire. Here it will be well placed to join hands with the great American public in promulgating and defending principles of democracy and liberty.

This brochure is dated August 17, 1942, and this world-famous authority and student had the present world situation before him when he wrote it. The main point of his thesis is that world centres of population are determined by geography in relation to the following: climate, latitude, soil and mineral resources. As far as industrial development is concerned, the most influential factor is the greatest source of all industrial power, namely coal, and he points to the fact that in Alberta, centering around Calgary, there is probably the greatest coal reserve in the world. He points to what Britain and Germany have been able to do, and to the fact that their present power is largely dependent upon the use they have made of their coal resources.

I bemoan the fact that we in Alberta have not had the industrial development we might reasonably have expected. I think that is largely owing to lack of credit. Some ten years ago there came into power in that province a government which was to provide us with credit. That government had as one of its objectives something for which I have always praised and commended it, namely the idea that it should develop the latent resources of coal, oil, gas and water power which are found in Alberta, in greater abundance than in any other part of Canada. The "social credit" mechanism did not work.

This bill, I believe, points the way to the future industrial development of Alberta, and I am sure the business men and small industrialists of that province will welcome this legislation. Personally I have some doubts and misgivings as to its efficiency. In the preamble to the bill itself it is stated that this legislation is designed to promote the economic welfare of Canada by supplementing the activities of other lenders and providing capital assistance to industry, with particular consideration to the financing problems of small enterprises. In other words, primarily it is to finance small enterprises; but to succeed, small enterprises require something more than credit. Markets are required, and you must know something about what your tax structure is to be. As I see it, this measure will be of greater assistance to the small industries in the industrial centres of eastern Canada, because here there is a much more favourable situation as far as taxes are concerned than we have in any other province.

I shall not soon forget an occasion in 1940 when members of this house from Alberta approached the Minister of Munitions and Supply (Mr. Howe) with the plea that he should give some contracts for munitions and supplies to Alberta in order to stimulate industrial development in that province. I recall his answer: "Gentlemen, the keystone of the arch of industrial development is surplus power, without which you cannot hope to build an industrial structure. At the present time in the province of Alberta you have no surplus power. When you have, come back and see me, because I have numerous contracts that I should like to award." At that meeting he stated that the proposed capacity of the ammonia nitrate plant at Calgary had been cut by more than forty per cent, because the power company was not able to supply the

requisite amount of electrical energy. Fortunately that situation has been rectified; but Alberta, in common with all but one of the other provinces, finds itself under a disadvantage which will militate against our industrial development when this war is over.

That situation arises as a result of our present federal method of taxation. It is true that Ontario has gone ahead industrially by leaps and bounds, because it has an abundance of cheap power; but at what price as far as the rest of Canada is concerned? The Ontario hydro electric, of which that province is so justly proud, does not pay one red cent of revenue to the federal treasury toward the carrying on of the war, whereas the power companies of Quebec, the maritimes, Manitoba, my own province of Alberta and British Columbia are paying literally millions of dollars in federal taxes. That in itself is bad enough, but in addition we find that the power industries in all these other provinces by reason of federal taxation, are not able to keep up, replace and modernize their machinery and distribution systems in anticipation of post-war needs.

Mr. SPEAKER: Order. I have had occasion to-day to call an hon. member to order in connection with the discussion of a proposition which was not related to the bill. As I understand the argument of the hon. member, he is now proposing to make some distinction in connection with electrical power in the various provinces. That does not come under this bill, and I would ask the hon. member to refrain from that line of argument.

Mr. EDWARDS: Well, Mr. Speaker, the bill itself specifically refers to the generation or distribution of electricity. I refer Your Honour to section 2, paragraph (d), which reads:

> "Industrial enterprise" means a business in which the manufacture, processing or refrigeration of goods, wares and merchandise or the building of ships or vessels or the generating or distributing of electricity is carried on.

I bow to Your Honour's ruling, if I am out of order.

Mr. SPEAKER: As I understood it, the hon. member's argument was that there was power in some provinces, but not the same power in Alberta, and he was making a plea to the minister in order that some assistance might be given to Alberta. But that is far beyond the provisions of the bill, which deals with financial assistance to industry.

Mr. ABBOTT: I think in fairness to my hon. friend I might say that, as I understood, he was discussing the handicap which his province, among others, had suffered because the power industry in Alberta is subject to federal tax, whereas in other parts of Canada it is not. That might not be closely related to the subject matter of the bill, but it does, of course, relate to the general question of industrial development in Canada.

Mr. SPEAKER: I would not wish the hon. member to emphasize that point unduly.

Mr. EDWARDS: I was just going to refer to the preamble of the bill, which limits the asistance to those industries likely to succeed. I was pointing out that small industries in one part of Canada are more likely to be favoured under this legislation than are small industries in other parts of Canada, unless some regard is given to taxation.

I draw this statement to the attention of hon. members, because I believe it crystallizes what I have been saying. Mr. K. A. Christie, K.C., vice-chairman of the Hydro Electric Power Commission, told the Toronto board of control that the hydro would not be able to continue as a public utility without this advantage of tax exemption. That is a frank admission of an important truth. If power development in one section of Canada is relieved of taxation, both federal and provincial, the advantage to industries using it is obvious.

I urge that for the bank to succeed in rendering that assistance which it should render to small industry—and in this respect I suggest the bill is defective—some regard will have to be had to the suggestion that there be some geographical considerations as to where this assistance can be applied. As other hon. members have pointed out, it would be just too bad if the industrial development bank were to look at the industrial field in Ontario and Quebec, and say, "It is in those provinces that small industries are more likely to succeed. We are going to have a greater population in those centres, so, perforce, it is in those provinces that the assistance will be given by the bank. Power is cheaper, because the power producer pays no provincial or federal taxes. On the other hand, in the other provinces of Canada every user of electricity must pay more, because it is bought from a private corporation which does pay taxes to the municipal, provincial and federal authorities."

I, too, share some misgivings in connection with putting the federal treasury into the banking business. It is really not the banking business, and I think the fact that the bill has been referred to as one setting up an industrial bank has created a wrong impression in the minds of most people. The organization proposed is really a loan company, and its opera-

tions will be more analogous to those of a loan company than to those of a bank, as we understand banking.

I should like to think of this institution as a pontoon bridge, a temporary auxiliary structure designed purely and simply to get us back from a war-time to a peace-time economy; that it will have served that purpose, within the five, ten or fifteen post-war years during which we shall pass from a war-time to a peace-time economy, and the need for government assistance will have passed out of existence, because in the meantime private enterprise and private industry will have caught up with the normal needs. As a matter of fact, I believe the fact that this bill is deemed desirable and necessary is a criticism of our private banks, loans companies and insurance companies, owing to the fact that they have not seen the necessity and desirability of setting up some such institution as is contemplated in the bill.

There is now, and there will be in even greater volume when the war is over, a tremendous amount of money looking for investment. The era of employment to which we all look forward can come about only to the degree to which industry becomes active and alert. I would hope, and I would certainly think the government would hope that there might be a rapid conversion of victory bonds in order that the money represented thereby might find its way into industry for the production of consumer and capital goods. So far as I can see, it is only in that way that we can ever have that era of industrial prosperity we all desire so much.

It is for that reason that I for one favour the bill, and in that I believe the people of Alberta will support me. I suggest, however, that the committee should give serious consideration to some direction as to where and how the loans of the bank are to be allocated. We must visualize the diversification of industry, and that can be brought about only if the men who are doing the lending view Canada as a whole, see the potential industrial future of the whole country, and give some thought to developing new industry in new areas.

The fact that we have no dye or chemical industry, and that we have never had one, is a trite commentary on our Canadian economic policy. Surely with the reserves of coal we have in Canada we should never again be as dependent as we have been upon Europe and other countries. I would hope that the directorate of the bank would envision a broad and diversified industrial development, so that we might give a start to those industries which bid fair to operate successfully in Canada.

One of the things which has come out of this war and of which I am very proud is the nitrogen plant located at Calgary. For the first time this chemical is being produced in Canada as an industry in itself. I am reliably informed that the Calgary plant is one of the most economically and efficient producers of ammonia nitrate, the base for all explosives, to be found anywhere in the world. Thanks to the engineering and scientific ability of our own Canadians a way has recently been found of pelleting ammonia nitrate, and this can now be used as a fertilizer. A few months ago we were shipping this chemical to five or six different explosive plants in the United States, but now the same product is being shipped in the form of fertilizer to at least four different countries.

I hope that the board of this bank keeps in mind not only the diversification of existing industry but the sponsoring and assisting of new industries, of which we have all too few in this country.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): Mr. Speaker, there have been a good many matters raised in this debate, many of them relevant to the bill which is under discussion and some of them not quite so relevant.

At the outset of my remarks I wish to refer to certain statements made by the hon. member for Lethbridge (Mr. Blackmore) which fall under the second category and which relate to the price and supply of sugar, which, as the house is aware, falls under the department with which I have the honour to be associated. Speaking in the debate last Tuesday, March 7, he made this statement, as reported in *Hansard* at page 1278:

> I believe solemnly that there has been no need of scarcity of sugar in Canada during this war, or for the years immediately preceding the war, nor has there been any reason or justification for the high prices of sugar which have prevailed. Evidence which I adduced the other night proved conclusively the soundness of my position. I believe that quantity and price have been affected, not so much by the circumstances of war, as by the fact that prior to the war and also during the war the production and sale of sugar have been manipulated by a sugar trust or combine and that one of the dominating units in this trust has been the St. Lawrence Sugar Refining Company.

I find it hard to imagine a statement of comparable length which could contain a greater number of errors and inconsistencies.

Let us see what the facts are on this question. The hon. member alleges, first, that there was a scarcity of sugar immediately preceding the war, and the fact is that there was no shortage of sugar immediately preceding the war. On the contrary, there had been a huge surplus of sugar overhanging the world market for many years. Then he went on to say:

. . . nor has there been any reason or justification for the high prices of sugar which have prevailed.

Before the war, in fact during the whole period from 1920 to 1939, the price of sugar was not high as he says, but was consistently lower than in any previous time in history.

Coming now to the period of the war itself, just think of the difference in the way in which sugar was dealt with in this war and in the last. In the last war the government did not take any effective action to control prices and the price of sugar went as high as twenty-five cents a pound. With that experience in mind, the government in this war at the very outset took appropriate steps to control the distribution and to control stocks. As a consequence of the measures which were taken there was no shortage of sugar in Canada until rationing was adopted in February, 1942, and the price of sugar has increased to only about eight and one-half cents a pound.

Mr. HANSON (York-Sunbury): May I ask the hon. member a question. Is he aware that during the period of the last war there was no control in the United States and no control in Britain?

Mr. ABBOTT: No, I was not aware of that.

Mr. HANSON (York-Sunbury): That affects the situation.

Mr. ABBOTT: I do not particularly desire to put blame on anyone. I was simply comparing the results in the last war and in this war, and I prefaced what I said with the statement that, based on experience in the last war, steps had been taken at the very outset of this war.

Mr. HANSON (York-Sunbury): Of course there is a tendency over there to show how much better we are than the other fellow was.

An hon. MEMBER: And it is true.

Mr. HANSON (York-Sunbury): We won the last war, and this is not won yet.

Mr. ABBOTT: Now as to the question of shortage. The shortage which occurred and which led to rationing was entirely owing to the difficult shipping situation, and now that that shipping situation has been to a large extent remedied the fact is that world supplies have been considerably depleted, so that rationing has to be continued.

Mr. BLACKMORE: Will my hon. friend permit a question?

Mr. ABBOTT: Yes.

Mr. BLACKMORE: Would he contend before this house that it would have been impossible for Canada to establish four or five or six factories for the manufacture of beet sugar during the period immediately preceding the war?

Mr. ABBOTT: I do not know whether it would have been impossible or not, but I will say this to my hon. friend: he will see in a moment, from what I have to say, that it would not have made any difference to the amount of sugar available to the Canadian consuming public.

That brings me to the point I was just about to make, that the surplus production of the world is divided by agreement between Great Britain, the United States and Canada, and under that agreement sugar is made available to Canada in order to meet our needs. An increase in the production of beet sugar, in which the hon. member for Lethbridge is particularly interested, would not result in any increase in the total quantity of sugar available to Canada under the agreement.

Mr. BLACKMORE: May I ask the hon. gentleman if Canada had anything to do with making the agreement?

Some hon. MEMBERS: Order.

Mr. BLACKMORE: I am not going to ask too many questions.

Mr. ABBOTT: I wish to get to the provisions of the bill as soon as I can, and I do not want to dwell too long on this question of the price of sugar. Since October, 1939, all the sugar brought into Canada has been allocated by the sugar administrator to the sugar refineries at fixed prices. The refined article has been distributed at prices fixed by the sugar administrator. It has been a difficult operation, and I think it is only fair to say that it has been carried out with conspicuous success, to the great advantage of the Canadian people. And yet my hon. friend says:

. . . during the war the production and sale of sugar have been manipulated by a sugar trust or combine and that one of the dominating units in this trust has been the St. Lawrence Sugar Refining Company.

Had there been such a sugar trust as my hon. friend alleges we might have seen sugar

rise to twenty-five or thirty cents a pound, as it did in the last war, and I do not imagine that that is the kind of action which my hon. friend would have wanted or that the Canadian people would have wanted.

Another statement made by the hon. member for Lethbridge, as reported in *Hansard*, at page 1278, was:

> . . . since the war broke out, men came into this city and went to see responsible officials in the dominion government and offered to bring into Canada three sugar factories, and they were refused the concessions which they needed in order to give them a chance to establish sugar factories to produce sugar in this country. The men in charge of the government chose rather to let the Canadian people go short than risk an abundance of sugar—an abundance which they dreaded.

I have already dealt with the question of abundance, and I have pointed out that under the agreement any extra production of sugar in Canada would not have resulted in any additional sugar for the Canadian people. Until February, 1942, there was in fact no shortage, and since then Canada has shared in the available sugar with the United Kingdom and the United States. I should like to know, however, who these people are to whom my hon. friend refers who offered to bring into Canada three sugar refineries. The sugar administrator has been in close touch with the sugar situation and should have been aware of any serious approach of that kind if it had been made, and yet I am informed that he does not know of any serious project to build additional factories in Canada during the war.

Mr. BLACKMORE: His memory is very short.

Mr. ABBOTT: I say this without going into the question as to whether additional factories would have added to the total amount of sugar available in Canada.

Finally, the hon. member asks as to the relationship between the government and this alleged great sugar combine. I have already stated and the house knows how sugar has been dealt with by the government during the war. Because of the nature of the commodity, the government felt that drastic action had to be taken at the very outbreak of the war. I do not suppose that under ordinary circumstances the sugar refiners would have particularly welcomed that action. Nevertheless, events have proved that the action was justified; and in view of my hon. friend's remarks I think it is only fair to say that the sugar administration of the government has received the most loyal and wholehearted co-operation from the sugar refiners of this country.

Mr. HANSON (York-Sunbury): They were guaranteed a profit.

Mr. ABBOTT: I should now like to turn to the provisions of the bill which is under discussion.

As I said at the outset, a good many points of substance have been raised in connection with this measure and, as some of the hon. members who raised them have indicated, I feel that a good many of these points can be more appropriately dealt with when the bill is before the banking and commerce committee. A good many of them involve questions that are perhaps of a rather technical or detailed nature, and the committee will probably want to call evidence in order to obtain the benefit of specialized views on these questions. However, there have been a considerable number of suggestions and criticisms involving matters of principle, and with these I should like to deal briefly in my remarks in closing the debate.

The first point is the need for the proposed bank. The hon. member for York-Sunbury (Mr. Hanson) and the hon. member for Rosedale (Mr. Jackman) in particular have suggested that in my opening remarks I failed to demonstrate the need for such an institution. I thought I had, and that thought has been rather borne out by the majority of the speeches which have been made on the second reading. The majority of hon. members who have spoken seem to feel that there is a definite need for an institution of this kind. I am convinced that there is, and, if I may, I should like to illustrate that need by a concrete example.

Take the case of an individual or a group of individuals contemplating the establishment of a small or medium-sized industry, say a plastic industry such as was suggested by the hon. member for Victoria, British Columbia (Mr. Mayhew) this afternoon. These people have $25,000 of their own capital. The enterprise they have in mind would require an investment of, say $50,000 to put up the plant, equip it with machinery and so on, and in addition to that they require $10,000 or $15,000 for working capital to purchase raw materials and pay wages until the product is sold. If they had $50,000, if they had the plant constructed and in operation, there is no doubt in the world that the existing commercial banks of the country would be ready and willing to make them that working capital loan of $10,000 or $15,000 to which I have referred. The difficulty they face is to get a loan of $25,000 to enable them to build a plant.

I know the experience of my hon. friend the member for York-Sunbury is greater than my

own. However, I have practised law in one of the largest industrial centres of Canada for over twenty years. In the course of that time I have acquired some knowledge of the financial problems of industrial enterprises, both large and small, and I know, and I believe the hon. member for York-Sunbury knows, that it would be extremely difficult for an enterprise of that kind to get that $25,000 to enable it to construct and equip that plant. There would be only two sources from which they could get it. They might possibly get it from one of the mortgage institutions, although as a rule life insurance and mortgage companies do not like to lend for five, ten, or fifteen years on mortgages on industrial property. They might get it from a private lender, but under those circumstances, I fancy, speaking from my own experience, they would probably have to pay a high price for the money.

I am satisfied, therefore, that in such a case —and I think it is perhaps fair to say that it is typical of the small or medium-sized industries which this bank is designed to assist—there would be no readily available credit agency from which that credit of $25,000 could be obtained; and yet the enterprise might be a perfectly sound one, quite likely to succeed, with competent management and all the rest.

The purpose of this bank is not, as some hon. members have suggested, to make obviously bad loans but to supplement the operations of existing lending institutions. It is not intended to compete, nor do I believe that it will compete, with existing chartered banks. It does not extend government ownership or control over those banks, and it does not encroach upon their operations in any way which in my view might undermine their earning power or their independence.

Incidentally, I was rather puzzled in listening to the hon. member for York-Sunbury and the hon. member for Rosedale when they expressed the view that existing credit institutions were entirely capable of taking care of intermediate or long-term credit for small industries in cases such as I have outlined, and particularly so because the day before the hon. member for York-Sunbury made his speech with reference to this bill I read in the Ottawa *Journal* what I assumed to be the latest supplementary programme of the Progressive Conservative party, of which he is such a distinguished member, and I noticed item five of the suggested programme recommending "consideration of the establishment of a central farm bank to operate in cooperation with private lending institutions."

I find it a little difficult to see why the credit requirements of agriculture should be so different from those of industry that they should require a government central farm bank to operate in cooperation with private lending institutions. I cannot help having a shrewd suspicion that if it had not been indicated in the speech from the throne that the government proposed to introduce legislation to create an industrial development bank we might not have seen a suggestion of that kind in one of these supplementary programmes. Be that as it may, I find a certain inconsistency between the suggestion contained in that proposed platform and the criticism which was offered, particularly by the hon. member for Rosedale.

The second point I should like to deal with relates to the scope of the bill. There has been a considerable amount of discussion of that feature. I simply wish to point out that loans will be made to industrial enterprises as defined in the bill; it is the type of business engaged in which is the limiting factor, and there is no intention to limit the operation of the measure by reference to the class of persons engaging in that business. The point was raised by the hon. member for Rosetown-Biggar (Mr. Coldwell) as to whether it would be available to cooperative enterprises. My own view is that it would. I do not know what the legal situation would be. I assume they are able to incur obligations, and I do not see why a cooperative carrying on industrial enterprises of the nature contemplated in this bill would not be eligible for credit under the proposed legislation.

I do not want to discuss detailed matters. They can be more appropriately dealt with before the committee. However, the question was raised as to assistance to mining. In that connection I would say that the facilities of the bank will be available to a mining enterprise which was in that stage of production; that is to say, if the mine wished financial assistance to build a smelter or a processing plant in order to process ore, then it would come within the definition of an industrial enterprise. On the other hand, the bill does not contemplate and would not permit loans to prospecting mining companies, and in my view I think it would be most undesirable for an institution of this kind—

Mr. HANSON (York-Sunbury): The hon. member means proven ventures?

Mr. ABBOTT: That is correct, proven ventures which have a plant or a mill in which they are processing ore.

The third point made was that all the credit legislation of the government should be brought in at the same time.

Mr. HANSON (York-Sunbury): Hear, hear.

Mr. ABBOTT: There is a good deal to be said for that suggestion, but in answer to the criticism I would say that the government considers that, whatever other credit legislation may be adopted, the creation of an industrial development bank of the nature provided for in this bill will be necessary in any event. It is a new institution. It will require a certain amount of time to organize, and it was felt that the bill for the creation of this bank being ready it was desirable to place it before parliament as soon as possible in order that parliament might discuss it and the banking and commerce committee discuss it. It was thought that was preferable to bringing down the Industrial Development bank bill, the Bank Act and other bills which may be introduced. Certainly they could not all be discussed at the same time. There may be some merit in the suggestion that they should have been brought down at the same time, but I think, Mr. Speaker, that it is not really a very serious objection, and that parliament and the country would probably be just as well served by this bill being introduced first and the members being given the opportunity. as they have been given, to debate it now and have it referred to the banking and commerce committee for detailed discussion there.

The next point which was raised along general lines was that capital resources of this bank are inadequate for the purposes which it is designed to serve. Here again, I wish to emphasize the point that this bank is only supplementary to existing credit agencies. It is not intended that this bank should provide all the industrial credit that is needed in this country. The larger enterprises, the larger concerns, which have been able to rely in the past on the investment market by making public issues of preferred stocks and bonds, may and should continue to avail themselves of that market. It is anticipated that they will do so. The comparisons that have been made with the increased national income are, I suggest, completely misleading, and as a final point on this question of the adequacy or otherwise it was felt that parliament might well object to creating what, for want of a better term, I may describe as an open-end credit institution. Just in passing I might state that prior to the war the industrial loans of the chartered banks averaged somewhere in the vicinity of $200,000,000. I cite that figure simply to give the house some idea that an institution with lending resources of $100,000,000 is not merely a drop in the bucket as some hon. members appear to believe.

There is also this further point. It is felt, and I believe rightly so, that the influence of this bank may well be greater than the amount of its own resources, and the very fact that the industrial development bank is willing to participate in an industrial enterprise may well encourage others to put in capital as well.

Finally, there is the point touched on by the hon. member for New Westminster (Mr. Reid) this afternoon, namely, if $100,000,000 proves inadequate it is open to parliament to amend the bill and to increase the permissible amount of loanable funds. There was objection taken to the association of this industrial bank with the Bank of Canada, our central bank. It is perfectly true, as the hon. member for Vancouver-Burrard (Mr. McGeer) and others have indicated, that the primary function of a central bank is to control the volume of money and credit in the country. But that fact does not preclude a central bank either directly or through a subsidiary, as in this case, from engaging in lending operations of a special character. There is ample precedent for that in the central banks of other countries. For instance, the federal reserve bank in the United States makes loans under section 13 (B) of the Federal Reserve Act. The Bankers' Industrial Development Company, to which the hon. member for Rosedale referred this afternoon, was set up under the auspices of the Bank of England, and I am advised that the central banks of other countries do engage in lending of a special character.

The hon. member for Vancouver-Burrard also raised the point that if this bank commences its operations with $100,000,000 of Bank of Canada money, which in the ordinary course would go out into the commercial banking system of the country, it would enable the chartered banks, the commercial banks, to expand their loans and deposits by some $2,000,000,000. While that is perfectly true in theory, of course, it would only happen if the Bank of Canada saw fit to allow this to take place. The chartered banks would be in a position to expand their deposits and their loans only to the extent suggested by my hon. friend if the Bank of Canada failed to take appropriate action. The Bank of Canada controls the reserves of the chartered banks. It is buying and selling securities every day for the purpose of increasing or decreasing those reserves, and the amount involved here would cause no difficulty whatever so far as controlling the reserves of the chartered banks is concerned.

Finally, Mr. Speaker, the question was raised that the creation of this bank was an undesirable encroachment on the field of private enterprise; that it was a field which private enterprise was quite capable of filling, and that consequently it should be left with private

enterprise to make loans of this kind. As to that, I suggest that in the past private enterprise in this country has not, for very good reasons, mind you, made the intermediate loans or long term loans of the nature contemplated in this bill.

Mr. HANSON (York-Sunbury): What are those reasons?

Mr. ABBOTT: I would say the principal reasons are, as I indicated in my opening statement on the bill, that their liabilities are entirely or largely of a demand nature or of a very short term nature, and that consequently the type of credit which our banking system contemplates they should extend is credit which will be for a year or not much longer than a year. Our banks, and I think quite properly so, have never gone into the long-term lending field, lending of the type I have described in the example I gave at the outset of my remarks. I feel that they quite properly have not gone into that field, and I think the wisdom of that course was demonstrated during the period from 1930 to 1935 or 1936 when banks in other countries ran into serious difficulties as a result of following a different policy.

The question of public ownership of certain enterprises is, of course, a moot one. My own view is that public ownership is only a means to an end. It is not an end in itself, and it is justified in those cases, but those cases only, where we have a policy that we wish to be carried out and where we believe that that policy can best be achieved by public ownership.

Mr. HANSON (York-Sunbury): The hon. member does not believe in the expropriation of the Montreal Power?

Mr. ABBOTT: Well, public ownership of power is certainly not a new development in this country; but I do not know that the expropriation of the Montreal Light, Heat and Power company is particularly relevant to the bill I am discussing.

Mr. HANSON (York-Sunbury): It follows naturally from what the hon. member is saying.

Mr. MACKENZIE (Vancouver Centre): A leading question.

Mr. ABBOTT: This bank is a publicly owned institution to assist private enterprise, and in my view is an ideal example of the partnership between government and private industry which is so much to be desired. I should like to conclude my remarks, which I hope have not been too long, by quoting from a speech made by Mr. Churchill a little over two years ago, in which I entirely concur. He was speaking in the Guildhall on March 21, 1942, and said:

> The modern state will increasingly concern itself with the economic well-being of the nation, but it is all the more vital to revive at the earliest moment widespread, healthy and vigorous enterprise, without which we shall never be able to provide in the years when it is needed the employment for our soldiers, sailors and airmen to which they are entitled after their duty has been done.

And a little later in his speech he said:

> And I tell you my solemn belief, which is that if we act with comradeship and loyalty to our country and to one another, and if we can make state enterprise and free enterprise both serve national interests and pull the national wagon side by side, then there is no need for us to run into that horrible devastating slump or into that squalid epoch of bickering and confusion which mocked and squandered the hard won victory which we gained a quarter of a century ago.

Motion agreed to, bill read the second time and referred to the standing committee on banking and commerce.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, March 9, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF NATIONAL DEFENCE FOR NAVAL SERVICES

1. Civil salaries, $6,511,987.

Mr. CHURCH: In the statement the minister made the other evening he covered almost every phase of this subject and left very little for a member of the opposition to say. I believe the record of Ontario and of Toronto has been most creditable as far as the navy is concerned, with 2,044 officers and 29,958 ratings enlisting in that province and city. Starting from scratch the navy, the senior service, has written a glorious page in the history of courage in this war, and I believe a great deal of the credit for the showing made by the navy in the Toronto district is due to the work which was done by the city itself, the harbour commission and the schools. I was a member of the Toronto harbour board when it was first formed, before the Navy League was formed, and the city of Toronto was very generous in helping the senior branch of the service with grants of all kinds and tag days. I remember when there was no navy

league, when the sea cadets carried on the work; I can also remember when there was a navy league, which sometimes between the two wars went to sleep on the job. I was glad to hear the minister give credit to the work done by the sea cadets, who were largely instrumental in bringing so many men into the naval service and merchant marine.

The reclamation work in the harbour of Toronto covered twelve or thirteen miles of waterfront; and notwithstanding what was said the other evening, a great deal of that work to aid the senior service was done by the public bodies I have mentioned and by the rowing clubs, the canoe clubs, the swimming clubs and the small yacht clubs; not the larger clubs, which were not much interested at the time. From 1923 on, splendid work in connection with the navy was done by Commander Hose, who had a great deal to do with putting the naval service on its present basis. At one time the navy had a boathouse at the western end of the harbour, at Hanlon's point; then the old steamer *Cambria* was given to them, and it was kept at the foot of York street before the waterfront improvements were begun in 1913. With the coming of the viaduct it was necessary for us to move the various aquatic clubs out to Sunnyside, and after that the navy work was carried on with the assistance of grants from the city of Toronto and tag days held by the Navy League, and so on. I want to make a fair statement of the case, and I shall take only a few moments to do so.

Shortly after the war we were visited by three admirals of the fleet. The first to come was Admiral Jellicoe, in December, 1919. I showed him the old quarters of the sea cadets and the naval volunteers. Later on we had a visit from Admiral Beatty, Admiral of the Fleet, and the third to visit us was Admiral Tyrwhitt. The work of the Navy League in Toronto was greatly aided by regattas and tag days held by it. I was glad to see the minister at the Canadian Henley last year. We had the Dominion day regatta, the high school regatta, the canoe regatta, the swimming regattas, the Canadian Henley, and finally the exhibition regatta in the fall. We also had a visit by Mr. Peter Wright, president of the British seamen's union, who came to urge that something should be done for the merchant marine of this country. I well remember in this house, when I was calling attention to the necessity for rearmament on land, on sea and in the air, for many years before the present war broke out, and between the two wars, that when there were several disasters on the great lakes I suggested advancing the grain crop from the head of the lakes, ships were wrecked, and we had no proper merchant marine service on the lakes or aids to navigation to take care of those men. Many of them were drowned, and all they could do was blow a whistle, in the hope that they would attract the attention of some United States life-saving station in order that their lives might be saved. That showed the length, depth and breadth to which disarmament and pacifism had gone in this country.

In my opinion the statement made by the minister is a most commendable one, because we must realize that the sea is our life. This empire came into being by the sea, and cannot exist without it. But between the two wars disarmament and the reduction of our sea power had its effect. As I have said on many occasions when speaking in that period between the two wars, I have been opposed to the absolute complacency of parliament in not having paid more attention to this matter. It has been stated in our financial statements that at one time we were the fifth trading nation of the world. I pointed out that we had no fleet, with the exception of the merchant marine, and that that merchant marine was doing good work on the oceans and the seas, and in the inland waterways of Canada. As I said, at a most critical time nothing was done about it.

In 1937 I urged a vast shipbuilding policy for Canada and the empire. The imperial conference was about to be held in London, and it will be remembered that New Zealand and Australia asked for a vast empire shipping and air scheme, not only to look after conditions at that time, but to prepare for what was believed to be an approaching war. Canada said, "We have no commitments," and that parliament would decide. We missed one of the greatest opportunities at that conference to prepare for this war and to join in the work. I have always laid stress on the importance of our merchant marine for the defence of Great Britain—and not only Great Britain, but the whole empire. I have called attention to this fact on many occasions when speaking in the house. I have asked about the inability of the British merchant marine and empire to retain the commercial supremacy they had for 150 years, without increased votes and without looking after the merchant marine.

The merchant sailors got very little help. I have seen steamers leave Toronto, many of them without proper crews. All they could do was pick up some stragglers on the docks. I was glad to hear the minister's announcement the other night with respect to the sea cadet movement, which is preparing a way not only

for the present war but for the merchant marine trade war which will follow. The sea cadets are being trained so that when they take their places in any ship of any size, either on the oceans or on the inland waterways of Canada, they will be found helpful. This is a most commendable feature. I saw something of them at the Royal Canadian Henley. I was glad to see the minister there, and to note the interest he has taken in this particular branch of the work of his department. It is the most important of all.

Before the days of Munich, in 1934, 1935, 1936 and 1937, I urged in the house that we should do something for those who were riding the rods, young men who were coming out of high schools, numbering about 250,000 each year. I proposed in the debates of those days that instead of spending a billion dollars on the dole, as was done by the municipalities, provinces and the federal authorities, we should do something for those young people. In that I was borne out by my late friend, Mr. Rogers. I took that stand, realizing that since the days of the Nile rebellion we have been an aquatic people. It will be recalled that during the General Gordon trouble in the Nile river they had to send to Ontario and Quebec, to the lumber camps, to get men to navigate the rapids. For many years before the war I urged in the house that we should have a naval policy, a grant to Singapore base, and should have adopted the Jellico report for the pacific. We should have had a vast shipbuilding policy, and in addition to that we should have gone into some sort of educational system by which we would have taken the young people who were riding the rods in the days of depression and given them an opportunity to learn trades and have a military training. At the end of three years, after having served their apprenticeship, they would have been ready to man any ships on the lakes or the oceans. Had we followed that suggestion, not only on the sea but on the land and in the air we would have had at least 25,000 skilled pilots and air mechanics, and at the outbreak of war we would not have had as much trouble.

I am glad to see that provision is being made for the future, because, when the war is over—and there is no doubt about this at all—Canada will have to maintain a large army, navy and air force for many years to come. There should be a future for the young people who are coming out of the high schools and universities to-day, and entering the navy. There should be some future occupation for them, and they should be able to accept naval service as their profession; because, if we are to hold our own in the days that are to come, both in war and after the peace is won, we shall have to do something to maintain our position as a great trading nation on the seas.

The Book of Common Prayer—it is not often read in the house—does contain two prayers which the rubric directs shall be read and used twice a day by those in His Majesty's navy. In one of those prayers the officers and men pray that they may be a safeguard unto our Most Gracious Sovereign Lord King George, and His Dominions, and be security for such as pass upon the seas, upon their lawful occasions. I direct attention to the last few words, "upon their lawful occasions", because they describe most eloquently the true function of the whole fleet, and the duty of the navy. It means that it has a duty in peace and war, one which is realized by all who serve in it, from the ratings to the top, to establish and maintain order, justice and freedom in the world; for sea power is not an instrument of tyranny; it is anti-tyrannous. It does not seek domination, but offers freedom for all those who pursue their lawful occasions, as it is set out in the Book of Common Prayer. So that I believe the minister, in the step he has taken, has fulfilled the object of that particular work.

In 1793, during the darkest hour of the war with Napoleon, Pitt referred to the drawing forward of many domestic matters, and the drawing of red herrings across the trail to divert attention from the war, which was then in a most dangerous state, despite some recent victories. Pitt said, "We are engaged in a war for the purpose of defending ourselves against foreign enemies. Is this the reason why we should hazard the consequence of it by distraction at home?" That is more true to-day than it was when he said it away back in 1793. Therefore I hope that for at least the remainder of the war we shall give almost exclusive precedence to matters connected with the war.

Since the minister made his last statement a year ago to the house there has been a vast improvement, so far as his department is concerned. A year ago the war in the Atlantic was in a grave state. It caused many anxious hours not only to the mother country, lest she might be starved out, but to others. The war in the Atlantic was in a most precarious state, and the position was grave. The mother country for centuries has depended upon her supremacy on the seas. But no army, navy or air force could defend them if the merchant marine were inadequate or ceased to function.

The sea is our life, and without in any way deprecating the splendid work that has been done, and will again be done if necessity arises, by our soldiers and our airmen, it is an undeniable fact that any war in which we

may find ourselves involved against a maritime nation will be won or lost at sea and nowhere else. The greatest menace on the Atlantic during the past year or so undoubtedly has been the U-boat. For a long time the organizers of our defence against this deadly menace ignored the fact that the U-boat could be mastered only by combined operations in the air and on the sea. But the inertia of the higher war direction was at last overcome; the fleet air arm was strengthened, and the admiral commanding and the commodores of the western approaches were given the means to counter this attack. The results are shown by the figures. On November 10, 1943, Mr. Churchill issued an Anglo-American statement to the effect that during August, September and October, 1943, some sixty U-boats had been destroyed. This was mainly on account of the fact that there was unison between the operations on land, sea and in the air. We had land forces in Iceland because we realized that an air base can be held only by an army. The result of all these operations has been that the U-boat has practically retired from the Atlantic.

The figures given on page 17 of the February issue of "Canada at War" show the magnificent achievement of our Canadian merchant marine. I quote some of these figures:

Certified to date in central registry, Ottawa	44,498
Merchant seamen's identification certificates issued	29,083

In his statement the minister referred to the success achieved in the Mediterannean. I referred the other night, when speaking on the air estimates, to the glorious work of the Royal Navy. I was glad to hear the tribute paid by the hon. member for Vancouver North (Mr. Sinclair) to the Royal Navy and Admiral Cunningham. I have already spoken on these matters but I repeat my remarks to-night. Other matters can be taken up when the various items are before the committee, but in conclusion I should like to refer to one or two matters.

Something should be done, and I hope it will be done before very long, in connection with the adoption of a scheme of national insurance for the three forces. A great deal of economy could be achieved through such a system. Many of our young people are going to be lost in the months to come and we should consider the great losses which the navy has sustained because of lack of proper preparations. A system of national insurance such as they have in the United States would save us a great deal of money, especially in connection with the Department of Pensions and National Health and the payment of subsistence and other allowances to families after the war.

We had a long statement about the pay and allowances in the three forces, from the heads down. There are still many inequalities, even in the navy. I want to plead the case of the low paid man. We have a citizen army, a citizen navy and a citizen air force. When a man joins the forces there is no reason why he should lose his status as a citizen. Nearly all these men own property of some kind or another and their investments should be protected. A cost of living bonus should be paid to those men and I hope that these matters are taken up at the proper time.

We are part and parcel of the British empire. On four or five occasions I have called attention to the great need of ports and bases on the Irish sea. Those ports belong to the empire and I hope that this matter will be taken up before very long. I realize that this does not come under the minister's department; it probably belongs in foreign affairs, but the fact remains that New Zealand, Australia and the United States are asking that something should be done. We should have some statement about this. A little while ago I received a letter from Mr. John M. Andrews, formerly Premier of Northern Ireland, in which he referred to the great losses that had occurred through lack of bases and from espionage. He said in part:

> The empire must stand together or break up. The neutrality of Eire has been a great disadvantage in this tragic world war and has cost many gallant lives of British and Canadian citizens, as well as those of the United States.

I hope that something will be done to strengthen the hands of the mother country. I hope that something will be done to prevent the giving of signals and tip-offs by spies as was done at the time of Dieppe and Dunkirk. I wish to compliment the minister upon the statement he has given to the committee. Thirty-two thousand men have joined the navy, mostly from the central part of Ontario, and I trust that something will be done immediately about building the new naval barracks at Toronto. The city has provided a site on a waterfront that cost over a million and a half to fill in behind a retaining wall. This is the second occasion since the last war on which Toronto has provided a site for the navy, the other one being on the waterfront at the foot of Dowling avenue, given for one dollar a year to the Navy League while I was chairman of the harbour board.

I hope that something will be done to provide greater protection for our soldiers, sailors and airmen after the war. These men must

now be taken through the northern channel on their way to England when we should be able to use the southern channel to Portsmouth and other ports. If we had not had the use of those bases off Eire in the last war we would have lost it.

Mr. MACDONALD (Halifax): Mr. Chairman, like other speakers who have taken part in this debate I listened with great interest to the review by the minister of the activities of his department. I should like to congratulate him upon the excellence and clarity of his speech, and upon the record of the navy. The record of the Canadian navy in this war is an impressive one and one for which the minister is himself entitled to a great measure of praise. The principal base for the navy is Halifax and any one who has the slightest knowledge of the life of that great port must realize the great task being accomplished by the Canadian navy. As is well known, Halifax is the western terminus of the Atlantic lifeline. It is the control station for the north Atlantic. Throughout the war it has been the outlet for munitions and men. From that port have gone forth great convoys of ships.

One of the most critical phases of the war was the enemy attempt to sink shipping in the Atlantic and prevent our fighting men and supplies from reaching the other side. We have reason to be thankful that that attempt has not met with success. Only a few days ago it was announced that the shipping losses of the allied nations for the month of February were the lowest of any month since 1941. In the defeat of our enemies' attempt to sink shipping and in the successful anti-submarine activities on the Atlantic the Canadian navy took a leading part, the full story of which has not yet been told. It is one in which all Canadians might well take pride.

I wish to express my appreciation of the work done by the Department of National Defence for Naval Services at the dockyard and elsewhere in Halifax and Dartmouth. New buildings have been constructed; improvements and additions have been made, and we now have a thoroughly modern and well equipped naval base. One cannot but be struck with the transformation which has taken place since 1939. I have often thought how much farther we would be advanced to-day in the task of defeating our enemies if we had had at the outbreak of the war the naval facilities which we now have in Halifax or any substantial part of the navy's present strength in personnel and in ships. The submarine menace would have been much sooner overcome; many precious lives would have been saved, and many valuable ships with their cargoes need not have been lost.

I commend the progressive and far-sighted policy of the navy in acquiring Tribal class destroyers by purchase. It is not without significance that destroyers of this class are designed for offence and not for convoy. Particularly do I commend the government for their decision to build this class of destroyer in Canada. The minister has told us that Tribal class destroyers are the best and fastest afloat. They are heavily armed: They carry as part of their armament 4·7-inch guns. One of this class of destroyer, H.M.C.S. *Micmac,* was launched at the Halifax shipyards last autumn. I am sure that the many thousands who saw that vessel proceed down the runways into the water must have hoped that she was the forerunner of many more which would be built in Halifax, and that the building of warships will continue to be a permanent and an indestructible industry in the life of that city.

A most important work being carried on by the navy to-day is the repair of warships and naval craft. It has required the presence in Halifax of many thousands of naval personnel, most of whom are skilled tradesmen. They are engaged in work of the highest priority. It is work which is carried on night and day, seven days a week. The repair facilities of the dockyard and the ship repair yards in Halifax and Dartmouth are taxed to the utmost, and they will, I am sure, continue to be used to full capacity for many years after the war is over.

That which is of great interest and importance to the people of Halifax to-day is the continuance of the building of warships after the war. This raises the question of the role of the Royal Canadian Navy in peace time. The navy is now, I understand, constituted of over 250 fighting ships and over 80,000 personnel. Would the minister give the committee some idea what it is anticipated the strength of the navy will be in peace time, and also his view with respect to the continuance of the building of destroyers and other naval craft in Halifax when the war is over? It is true that the war is not yet won; and until it is, our maximum effort must be directed toward its successful and efficient prosecution. The time is come, however, when we are justified in giving some thought to post-war conditions and post-war planning. I realize that money costs and other factors will assume great importance when peace-time estimates for the armed services will be up for consideration in this house. The heavily burdened taxpayer will make his voice heard. I would not want, however, to think there is any possibility of the discontinuance of the building of warships in Halifax or in Canada because of false economy. The industry must

not be endangered by a policy of centralization. Maritime industries must not have to close up because of their centralization elsewhere for purposes of economy.

I also hope that never again shall we allow our navy and the other armed services to dwindle into insignificance as they did at the termination of the last war. I would expect that a certain measure of navy, army and air force activity will continue in Halifax when the war is over. It will be little short of a calamity if, for instance, our dockyard, now modernized and at a high degree of efficiency, is allowed to fall into disuse.

It is not only the naval facilities of the city of Halifax which have been improved. New buildings have been constructed for army accommodation, and we have not far from the city limits, a well equipped and modern aerodrome which after the war will help to meet expanding air travel requirements.

There is another matter which I wish to bring to the minister's attention. A survey of housing conditions in Halifax has been commenced by E. L. Cousins, wartime administrator for Atlantic ports. He has been studying the problem for months. Questionnaires have been sent out to every man and woman in the city over the age of eighteen. They are asked to answer questions as to their occupation, their length of residence in the city, and also as to whether their wives or husbands are members of the armed services or the merchant marine. It is well known that the acute housing condition has created very difficult conditions in the city of Halifax. It is to the credit of her citizens that they have recognized that this situation has been caused by expanding war activities and that they have accepted it in the proper spirit. Of course there are always some to be found who for political or other purposes attempt to mobilize grievances arising out of these conditions and to capitalize the natural desire of the people to return after the stress and strain of war to normal life. Happily they are few in number and they succeed in fooling no one but themselves.

Mr. Cousins, when announcing his proposed survey of conditions in Halifax, gave a statement to the press in which, referring to redistribution of population, he said:

> The present condition of population congestion had, of necessity, to be dealt with, and in the first instance some relief provided in the form of redistribution of population.
>
> From the viewpoint of prompt relief, the solution of the problem was not to be found in more housing accommodation. The time factor for construction during the winter period, in conjunction with the general material and artisan labour situation, did not permit it, therefore it was necessary to request the co-operation of the R.C.A.F. and the army as to their assigning to the navy a portion of their hutment facilities. The rapid but necessary expansion of all the services, particularly the navy, has resulted in serious population congestion in Halifax, Dartmouth and vicinity, and some two months ago there were over 7,000 naval officers and ratings living out of barracks, plus some three thousand dependents in these areas.
>
> As to the R.C.A.F. the number was 1,455, and for the army 1,277.
>
> The R.C.A.F. officials kindly cooperated in turning over the major portion of their "Y" depot quarters to the navy. This transfer was made early in January of this year, with the result that on completion of this movement it will permit of housing some 3,000 officers and men of the navy. The officials of the army are also cooperating to the fullest extent in an endeavour to provide more barrack accommodation for officers and men, also the Merchant Seamen's Pool are cooperating as to the use of a portion of their facilities for general use, so that in a reasonably short time we should be in the position of providing barrack accommodation for approximately 4,500 officers and men who were previously living out of barracks on subsistence allowance, thereby relieving the rooming-house congestion in both Halifax and Dartmouth.

I think Mr. Cousins' statement makes it clear that the acute housing situation which has developed in Halifax during the last year has in his opinion been occasioned primarily by the rapid expansion of the navy and the fact that arrangements were not made to provide adequate accommodation in Halifax for the greatly increased naval personnel in both officers and ratings.

I do not wish to be understood as passing strictures on those charged with the responsibility of running the navy. I fully realize that warships cannot be held up awaiting repairs, but I would ask the minister whether the transfer of naval personnel of the "Y" depot, and other transfers proposed by Mr. Cousins, will be made and, if so, whether they will solve his housing difficulties in Halifax. I should like to know whether further construction is contemplated for the accommodation of officers and ratings now on subsistence.

The building programme now under way of the armed forces in Halifax is fast nearing completion, so that a supply of skilled labour will soon be available. I should like also to call the minister's attention to one other matter, namely the urgent need in Halifax for restaurant and recreation facilities for members of the services. A large dance hall and canteen is badly needed. Even more urgent is the need of restaurants. The serious situation that existed in Halifax has recently been aggravated through loss by fire of the Knights of Columbus hostel, which I hope

will soon be replaced on a much larger scale and with much greater dining-room accommodation.

I would ask the minister to cooperate in any way he can in helping the Knights of Columbus war services to get the materials needed to complete the new building and hurry the work through. I realize that the Anzac building has been taken over by the Canadian War Legion services. This building has been remodeled and the Canadian War Legion will soon open a cafeteria. This will improve conditions to some extent but it will not fully meet requirements. I know that the three services are interested in recreation and restaurant facilities, but the navy has the greatest interest because of the very large number of naval personnel now on subsistence in Halifax. I should like the minister to deal with these questions before his estimates are disposed of.

Mr. ROSS (Souris): May I add a word to what has been said as to the growth and development of the navy during these war years. The work they have done in convoying troops as well as food and munitions for the united nations has been remarkable and is something that Canada might well be proud of.

The minister pointed out that the most important obligation is the winning of the war. I suggest that the war may yet be far from won. I have been struck with the figures placed on *Hansard,* showing that from the most central of the prairie provinces, my own province of Manitoba, there has been an enlistment of over 6,200 officers and ratings. To me it is remarkable that these lads from the prairies should make the efficient sailors that they do. Many of them prior to enlistment had never seen a body of water apart from a prairie slough or creek. A number of these gallant lads from my own constituency have already made the supreme sacrifice.

The minister stated that with respect to those who will return home for demobilization and rehabilitation a directorate has been set up to study the problems of demobilization, rehabilitation and kindred matters and that they will work with the officers of the other armed services and other departments such as the Department of Pensions and National Health. As I have pointed out on other occasions to the ministers of defence for the army and the air, and as I now suggest to the Minister of National Defence for Naval Services, many matters regarding those who are discharged from the armed services are still very unsatisfactory. I might mention, for example, clothing allowance. I repeat this, because I think it should be repeated. I assume that those discharged from the navy will be granted the same allowance as is given to those from the other armed services. I refer to mustering-out pay and general rehabilitation. May I repeat what I said to the other ministers and express the hope that the present minister, in cooperation with his colleagues, will have some improvement brought about for those under his department who may be discharged. I submit that something ought to be done to improve matters with regard to clothing allowance, mustering-out pay, general rehabilitation and so on. These and other matters may be brought up under the various items, but I wanted to take this opportunity of saying something with regard to the many gallant youths who have gone into the navy from the prairies and the central part of Canada and who are doing such a fine job.

Mr. KINLEY: Many have spoken from all sides of the house on this motion, which is supply for the Royal Canadian Navy. Members who have contributed to the debate come from all over the dominion and I am sure they represent public opinion generally. They all speak in praise and appreciation of the services and achievements of the Royal Canadian Navy. I am sure it must be pleasing to the minister and I think it is a tribute to him, as Minister of Defence for Naval Services, and also to Canada's navy. We in Nova Scotia have always admired ships and the men who go down to the sea. It is a part of our tradition and we meet it in our daily toil. While it would be expected that we would have every appreciation for the navy and its activities in war-time, I think it is most pleasing that it has caught the imagination of the whole of Canada as it has. It shows that we are becoming sea-minded. That will be a good thing for the maritime provinces in the future. Canada will depend upon foreign markets in the future. The sea is the road to the foreign market. The roads must be kept secure and open. While the navy is busily engaged at the present time in defending our shores and contributing to the work of the allied nations in winning victory, I am sure that it will be retained to do a good service when peace comes to this and other nations. Foreign trade depends to a great extent upon the navy. The navy maintains our prestige. It visits foreign ports. It carries our flag into all parts of the world. In the past we have depended upon the British navy. I am sure that Canada has received great benefit from the fact that our navy flew the white ensign and that it was associated with the British navy. But I think the time has come when we must do something for ourselves, and on our own, and I believe that one of the things we

must be sure of is that Canada will have a substantial navy that is worthy of the traditions and of the efforts of this country in order that we may pursue our foreign trade, which will play such an important part in activities after the war.

It is nice to know that every part of Canada is interested in the navy. We down by the sea are particularly interested because, while the boys come from every part of Canada and every section of the country have contributed a splendid quota to the navy, yet we have the rendezvous of the men and the ships. We see them depart from our shores, and after performing their tour of duty at sea they come back and visit in our ports of Nova Scotia. Nova Scotia in the winter time is the only rendezvous, with the exception of Saint John, New Brunswick, for the Royal Canadian Navy, because of ice conditions on the Atlantic. Because of those conditions the southern and western coast of Nova Scotia is the only place where refitting can be carried on in the winter time and where the navy can enter and depart without difficulties caused by ice.

The navy must be refitted. I think we are doing a splendid job there in keeping the navy in a fit condition for sea. The refitting of the navy is a highly technical job. A ship is a mechanized machine. It calls into play almost every feature of modern applied science. A ship must be kept in repair and seaworthy. Her power equipment is of many kinds and types. There are different designs and types of engines. The turbine engine, reciprocating engine, diesel engine, internal combustion engine, gasoline engine, the electrical equipment and the armament—all these demand technical skill and properly-trained men to operate and care for them. Then there is the auxiliary equipment, equipment for purposes of intelligence such as asdics, compasses, signals and all the things that go to make the ship an effective weapon upon the sea. You must also provide for the accommodation of a lot of men. They are placed in rather close quarters on the ship. Their comfort must be looked after. They must be fed. Taken all in all, a ship is a highly technical machine that demands the highest training and men of skill and experience. We have in Nova Scotia at the present time schools where men are trained for the Royal Canadian Navy. I wish to refer particularly to one of those schools, a school that is known as His Majesty's Canadian Ship *Cornwallis* situate at Deep Brook on the Annapolis basin.

I have heard a lot of talk in this house about good harbours. We all know that Halifax is a good harbour. We know there are good harbours on the Pacific coast; but I doubt, Mr. Chairman, if there is a place on the Atlantic coast more adaptable or more secure than the place where His Majesty's Canadian Ship *Cornwallis* is situated. It is situate on tidewater just at the foot of the South Mountain in Nova Scotia. It has the South Mountain on one side and the North Mountain on the other side and it is on Annapolis basin, a beautiful sheet of water twenty miles in length, with adequate depth of water, protected on all sides from the sea and free from ice in the winter time. The entrance to it is through what is known as Digby gut, a narrow neck of water. On both sides of it there is high land easily protected, making secure the naval base. Ships entering Annapolis basin must come up the reaches of the bay of Fundy, with the United States on one side, Nova Scotia and New Brunswick on the other side. The road to Annapolis basin would be a hazardous one for any enemy ship to undertake. I believe that Deep Brook, where His Majesty's Canadian Ship *Cornwallis* is situate is the most secure from the land, the air and the sea of any place I know of along the Atlantic coast. I am supported in this opinion by men of high naval training, men in the other branches of the services who have given it great consideration.

The places where ships are repaired in Nova Scotia are on the southern coast, and the port of Shelburne, the port of Liverpool, the port of Lunenburg, and the port of Halifax. The training station is across the province on the other side, protected by the equipment on the south shore; and while we on the south shore would have liked to see this station placed nearer to ourselves, I am sure that the navy was wise when they chose Deep Brook as the great naval training station in Nova Scotia. You know, Mr. Chairman, the French came here over two hundred years ago. Champlain and those other great French leaders chose Annapolis basin as their rendezvous when they first came to Canada when the explorers wanted safety. Apparently they knew what they were doing. To-day, at Annapolis, we have Fort Anne, built by the French, which is one of the show places of Nova Scotia. Only a few years ago there was revived what is known as the Order of Good Cheer, patterned after the association set up among the men who were with Champlain at Annapolis, and who passed the long winter evenings in association with each other. That organization has been formed as part of our tourist movement in Nova Scotia, and we invite all Canadians to join it.

I wish to say just a word, Mr. Chairman, about a company of men whom I think deserve the admiration of the people of Canada. A

few months after the beginning of the war a band of Norwegians came to our shores. As you know, Norway is not a big country but it is a great country. Norwegians have sailed all over the world, and their fishing industry and merchant marine are worthy examples to all other nations. Their whaling fleet was in the south seas when war broke out. Naturally they were not permitted to return to Norway, and the admiralty directed them to the province of Nova Scotia. They first came with their ships to Halifax, but we thought they should be invited to make their headquarters in the port of Lunenburg, the largest commercial fishing centre in Canada, and so they came there and brought their ships with them. The first thing they did was to refit and rearm their ships, which was done in our ports; then they took their place with the Canadian and British navies in protecting the sea routes of the north Atlantic. They opened a training school, to which they brought men from all over Canada and the United States to train for the Norwegian navy. They were with us for nearly three years, during which they built a splendid barracks, which is now used by the Canadian naval service. These men were our fellow citizens for that length of time. They were superior men. They had followed the sea; they knew discipline, and their example was so good that perhaps we were a little envious when they first came to our port. Now they have headquarters in the United States; most of them are at sea and some have made the supreme sacrifice.

The thought I should like to leave with the minister is that these men were making history for their country while they were in Canada, and in addition, while here, they formed an element in the defence of the coast of Nova Scotia. They were training for service with their own navy; they were more or less outside the circle of things in London and other places where Norwegians received more attention, and it seems to me that something should be done to commemorate their service to Canada and their sojourn in this country. If we have any typically Canadian decoration I think it should be given to those Norwegians, for they earned it by their courage, their discipline and their contribution to this country. I am sure they enjoyed the hospitality of Nova Scotia, which is made more manifest as a result of the war and because of the admiration we always have for ships and sailors. When we said good-bye to these Norwegians we felt that we were losing good citizens. We believed they were men who would do a good job wherever they went. We hope that ere long they may return to their own country, freed from oppression, and help it once more to become a great marine nation.

I want to thank the minister and his department for several things they have done in the last few years that concern the people I represent. The deep-sea fishermen of Nova Scotia go one hundred, two hundred or three hundred miles out to sea. They go east of Newfoundland to the grand banks, the St. Pierre bank, the middle bank and off the coast of Nova Scotia, and they are subject to all the war-time hazards in addition to the hazards of the elements. Our men felt that the submarine danger was so great they were sure to be attacked; and while they were prepared to accept that as one of the hazards of their calling, they thought that to be left alone in a dory three hundred miles out to sea would put them in rather a hopeless position. They came to me, and with the assistance of the minister I was able to get the admiral of the fleet on the east coast to confer with them and arrange for a patrol, so that if they were torpedoed they would know where to find a place of refuge. They were also placed in a restricted area, where they could fish without fear of being run down by the convoys, and our fishermen expressed their great appreciation for the consideration they had been given by the navy. At another time while the navy was operating in St. Margaret's bay, a very deep and spacious body of water west of Halifax, during their training activities they destroyed some of the fishermen's nets. I suppose it was unavoidable, but we brought the matter to the attention of the navy, and they decided that they would so restrict their operations as not to interfere with the shore fishermen. In addition, an undertaking has been given that the nets which were destroyed will be paid for. Some of the fishermen have already been reimbursed for their losses, and I trust that in the near future the others will receive their money so that this spring they may be able to buy new nets in order to carry on their business.

We are also very much interested in the merchant marine. Nothing is too good for it. The merchant marine faces all the dangers that exist today without very much in the way of defence. It is true that these ships have guns with which they may protect themselves to a certain extent, and I understand that there are two naval men on each ship, but the gun crew is composed of members of the merchant marine. Something has been said here about the merchant marine being forgotten. Well, an order in council was passed which for the first time, in war or in peace, placed the men of the Canadian merchant marine in the same

category as members of the armed forces with regard to pensions and with regard to any disability they might suffer by reason of war activities. May I tell the committee that from my own home town two schooners were sunk in collision because of wartime action. In one collision over twenty men were lost. The Department of Justice interpreted the statute liberally, so that the wives and families of those men are protected, and they are recognized as the dependents of men who have done a splendid service.

There are some who believe that the merchant marine should be put into uniform and be regimented, and they seem to think this would be an easy thing to do. But we must remember that men of the merchant marine come from every quarter of the world. They are the men who assemble in seaports, wherever there are ships. They go from one port to another; and while I suggest that their services should be recognized, and that we should do anything we can in order to have their services recognized as those of first importance, yet it is difficult in connection with the merchant marine to regiment them the same as we would the personnel of the army, the navy or the air force.

Let me point out, too, that the air force has a considerable marine section. In our part of the country we continually see them in our harbours. We build them and they come there for refitting and reconditioning. The air force has a marine section which is very practicable, and doing a great service along our coast.

When we think of the merchant marine we immediately think of the Navy League. The Navy League of Canada is doing a splendid job for the men of the merchant marine. I am sure anyone who knows Halifax will have seen there the work the league is doing in the interest of seamen, and they will say, "God bless the Navy League." The ditty-bags given to the men at Christmas-time are all provided through the good offices of the Navy League. Our ladies receive letters back from the boys, and some of them say, "Your ditty-bag was the only present we got at Christmas. It was splendid. We thank you for it and we hope that your work will prosper."

In Nova Scotia we have a double duty, because the men of the navy are our guests when their ships come to port for repair. Every vessel must be in port a month to six weeks once every year to have repairs. We know that those boys are receiving a hospitality in keeping with their needs, because our people are most anxious that their morale and their health shall be sustained both in the interests of our country and of the men themselves. The women along the coast of Nova Scotia work continuously for the navy, the air force and the other services. In my own town the Canadian Legion, a veterans' association, has done splendid work. At that point they have a big hostelry where the men of the navy and the other services are invited to come every night of the week. On Sunday nights they have sing-songs, and they have dances once a week. Ladies of the Imperial Order of the Daughters of the Empire are continuously working with the Navy League. They make sweaters and socks, and all those comforts the men require. Women's institutes and church organizations in Nova Scotia are contributing their share to the welfare of our men on our coasts. There are dances every week, which are properly chaperoned by the ladies of the town and are under the supervision of naval officers.

I say to the committee that, notwithstanding what has been said about other ports in Canada, down there life is clean and pure, and your boys are in a healthy atmosphere. Their parents can feel that they are well looked after, that they are behaving themselves and that they are a credit to Canada. Lunenburg is a naval base and repair port. Liverpool teems with activity, carrying out repairs for the navy. All hon. members know that Halifax is a great port, where all this work is carried on.

Then, with regard to the navy may I say that much of the work carried on below decks is not spectacular. Much must be done to a ship before she can sail the seas, or take part in that show which we all admire. While we may hear about a vessel when she is at sea, we must realize there are thousands of boys working in the construction and repair shops, and in special services of the navy, who are doing a good job of work. Were it not for them, most certainly the navy could not do its work.

As a member from Nova Scotia I believe I should emphasize the fact that while the navy and industry look after the equipment and refitting of ships, we have a special and personal duty to look after personnel from all parts of Canada who are in our ports. Jack ashore makes a lively scene in our community. There is something about the sea that brings out social characteristics one does not find anywhere else. Comradeship of the sea is generous, and it is liberal. It is international in its aspect. It goes all the way toward those who work on the sea, who face the elements and who fight battles in which there is no quarter. I am sure that down there that

comradeship is so exemplified and so well carried out that while there might be some question of pollution existing in some of the congested parts of Canada, I can assure the committee that in the ports along the south shore of Nova Scotia life is clean, and everything is as it should be.

When we first started receiving these men from the navy I thought perhaps we were a little extravagant in providing washrooms, toilets and all those things men must have on the waterfronts in order to keep clean. But I changed my mind, because I concluded there is great need; nothing is too good for the health of those men, and we must see to it that they are kept clean and healthy. People come to me and say, "Oh, they are putting linoleums on ships. Look at the extravagance." I want to tell the committee that I have never seen a carpet in an air force or army mess, or a linoleum on a ship that was better than those we have in our homes in the town of Lunenburg. And if we can afford to have them in our homes, then surely the boys who go to sea in congested quarters, boys who are away from their homes and rendering service to their country are entitled to any little comfort they may get when they are off duty, when they are away from danger, or in a place where they may recuperate for the hard days ahead.

We in Nova Scotia are all for the navy because it is part of our life and traditions. We hope that it will be victorious and will continue to carry on. We hope, when peace comes, it will be one of our agents to promote our foreign trade and protect our dignity in other lands, to show the world in after years that Canada is a country that will be great upon the sea.

Mr. PERLEY: Mr. Chairman, coming as I do from the prairies it is always interesting for me to listen to maritimers speak, particularly on a subject about which I am frank to say they do know something. But why should they not know more about shipping, naval affairs and the like than we who come from the prairies? The hon. member for Queens-Lunenburg (Mr. Kinley) is an exceptionally enthusiastic maritimer. Before he spoke this evening I asked him how long he expected to be because I was anxious to say just a word or two. He said he would be about fifteen minutes, but I notice that he took nearly forty minutes. However, when he referred to the purity, cleanliness and sweetness of the naval centres in the maritimes I did not mind him going on because so many of our boys and girls from the prairies are down there.

[Mr. Kinley.]

Before this first item passes I should like to take a moment or two to express my admiration for the men and women in the Canadian navy. On March 9 the minister gave us a most interesting review of his department and the Canadian navy. He detailed the part that it has played in the war up to date. All of us have a right to be proud of the facts he set out. We are proud of the most creditable showing the men and women of the Canadian navy are making. Many of these men and women knew nothing about naval affairs, but they joined this service from a sense of patriotism. The minister told us that when war broke out we had only fifteen ships and some 1,700 men, whereas to-day we have over 600 ships and 75,000 men. He told us that he hoped to get another 12,000 this year, and I have no doubt he will. I know many of the young men and women of the prairies are enlisting in this particular branch of our services.

The minister put on the record the enlistments from the different provinces. Of course Ontario had the banner position, but on the basis of population I think the prairie provinces had a splendid record. Saskatchewan is perhaps the most inland of all provinces. In parts of that province there is not enough water to cover five or ten acres to a sufficient depth to float a rowboat. Many of the boys and girls in that province did not know what a rowboat looked like or whether it was going backward or forward. I am told that when those young men and women from the prairies arrived in Halifax they showed great enthusiasm for the training and made an excellent showing. I am proud to say that some have received commissions. One young man from my own home town is a sub-lieutenant, and there are many other officers from the prairies. Many of them are in the medical services on hospital ships in the Mediterranean and in every other theatre of war where a naval vessel is to be found.

When the figures of enlistments are broken down I think it will be found that my constituency, perhaps the most inland of any in Canada, has a splendid record. I could give the details of some of those who have enlisted from my home town and tell the committee where they are to-day, but I shall not take the time. Occasionally I meet some of them on the streets of Ottawa in the morning heading toward the naval building. They are fine looking chaps and we are proud of them.

The minister's department paid my constituency a compliment by naming a cargo vessel after a historical point there. Unfortunately that vessel was lost, and I hope that another one will be named after some other

historical point. On March 9 the hon. member for Calgary West (Mr. Edwards) made an announcement. As reported on page 1339 of *Hansard,* he said:

I am particularly pleased this evening—I do not know whether the announcement has been made already, but it will be made to-morrow at the latest—that plans are completed and a contract awarded for the building of the new training ship *Tecumseh* at Calgary.

That was in his own city. I think he was a little premature in making that announcement because the minister did not confirm it, but he may be a little closer to the inner circles than some of the rest of us. I do not intend to make an announcement about anything that is going to happen in my constituency, but on the Qu'Appelle lakes there is open water which I think would be as suitable for a vessel of this type as the city of Calgary.

We have had a lot of discussion on this item. This and the other items are going to pass. In the minister's estimates there is a reduction this year of some $79,000,000, although there are increases in certain items. No doubt there is a good reason for this. We are going to support these items because we are all behind the Canadian navy. We know the part it has played and will have to play in the winning of this war. We know what was done last year and the year before in clearing our coast-line of the submarine menace. We know what has been done in seeing that our merchant ships make a safe landing. I think this is one of the most important branches of our services and it will continue to play a most important part.

In conclusion, I join with other hon. members in praise of our men and women in the navy, and with the hon. member for Regina City (Mr. McNiven), who, speaking on March 9, following the minister, put on record a statement, in more detail than I care to do to-night, with respect to enlistments from the prairies and particularly from the district which he represents and which borders on mine. I may say that my constituency extends around the city of Regina, and when he speaks of Regina he is including a number of people from my own district. I associate myself with him in expressing admiration of these young men and women from the prairies. They have played and will continue to play an important part in the war. I am sure the minister will have no trouble in getting the men he requires next year. Many of them will come from our district, but I do not want him to take all the boys from the farms; let him leave a few there, because they are needed. But he will get many from the prairies.

Mr. MacKENZIE (Neepawa): There are one or two questions I should like to ask the minister, but may I first join those who have spoken in voicing appreciation of the glowing eulogy which he has paid to the Royal Canadian Navy, and in paying just tribute to the rapid expansion and the courageous and effective record of the naval forces during the present struggle.

I also join hon. members from the prairies in paying a deserved tribute to the boys and girls from that part of the dominion. It might be thought that we on the prairies, including Manitoba, are not especially aware of Canada's navy and of its wonderful record to date in this war; and it would not be surprising, taking into account our geographical position as the central and keystone province of the dominion, if our boys were not navy-conscious. But if anyone has any doubt about whether our young people in Manitoba have answered the call of the sea during this war, he should examine the figures stated in the house by the minister on March 9, and to be found in *Hansard* at page 1309. He there gives the enlistments by provinces from September 1, 1939 to December 31, 1943. Strange as it may seem to the uninitiated, if those figures are compared and related to the population of the provinces according to the 1941 census, it will be found that the record of enlistments in the Royal Canadian Navy from Manitoba surpasses that of every other province, on a percentage basis, except Prince Edward Island and Nova Scotia.

Mr. KINLEY: There are the merchant marine recruitments in Nova Scotia and Prince Edward Island, too.

Mr. MacKENZIE (Neepawa): It is a record to be proud of, and when one considers our geographical position, so far from the eastern and western shores, it is all the more remarkable. It is true that most of our young men and women are in the air force and in the army, and it is natural that they should be. Nevertheless the province as a whole has that splendid record of navy enlistment. Quite a number have joined up from my own constituency; in fact, one of my constitutents, Lieutenant Commander Robert Philip Welland, has been awarded the Distinguished Service Cross. The citation reads: "For courage and enterprise in action against enemy submarines while serving on loan to the Royal Navy." So that the province of Manitoba is enlisting naval men not only in large numbers, but of unsurpassed brains and morale.

I wish to thank the minister for having personally looked into and corrected the matter of income tax rates for a certain class of naval officers, one of them from my constituency.

The training given boys in the navy is undoubtedly of a high order. When I was speaking the other day to a vocational training man of high standard who has conducted and observed the work of trades training in all the services, he gave it as his opinion that the navy training in trades was unsurpassed. I understand that the complete training programme is equally good.

The question I wish to leave with the minister is this. In some countries, all young men have to do a certain amount of military training. Some people in Canada are looking forward to that very thing after the war. Has the minister given any consideration to having all young men in this dominion undertake a certain amount of naval training in peace time?

Mr. RICKARD: It is not my intention to occupy more than a very few minutes with regard to this item of the naval estimates. There are, however, a few things I should like to put on record at this time.

It is a source of satisfaction to hear the high praise which has been given to the Minister of National Defence for Naval Services and the navy in general from all sections of the house. It is rather different from what we heard not so long ago, when the Canadian navy was called a tin-pot navy. The growth which has been made in the last four years is remarkable.

The Minister has put on record the number of men and of ships we have to-day as compared with the beginning of the war. The government have built a number of destroyers, corvettes and mine-sweepers, and we in the county of Durham have been fortunate in having two ships named after two of our towns, one, the mine-sweeper, *Port Hope*, and another, a corvette of a larger size called the *Bowmanville*. The mine-sweeper *Port Hope* was built in Toronto and sailed down to the harbour at Port Hope, one of the finest harbours on lake Ontario, and it was dedicated in August, 1942. At that time we had the honour of having the Minister of National Revenue and Vice-Admiral Nelles, of the department of naval affairs, at the dedication. It was my privilege to donate and hoist the ensign of that ship; and the people of Port Hope have contributed generously to the upkeep and the comfort of the sailors of that ship. I have here what is a friendly challenge to any mine-sweeper on the Atlantic by the sailors and crew of the mine-sweeper *Port Hope*, and I should like to read it into the record at this time. It is dated from an Atlantic port:

Here's a friendly challenge from a group of Canada's best-contented sailors, including some from every province in the dominion.

[Mr. F. D. MacKenzie.]

The commanding officer, officers and ratings of H.M.C.S. *Port Hope* are cheerfully defying the crew of any other Canadian minesweeper to disprove her own claim to be the "best cared for 'adopted' minesweeper in the Royal Canadian Navy."

The ship now sweeping and escorting convoys in the western Atlantic, was built at Toronto and commissioned there July 30, 1942. A sturdy sweeper of the "Bangor" class, she was adopted formally a few days later by her namesake town, the lake Ontario community of Port Hope.

Lieutenant Richard K. Lester, R.C.N.V.R., of Vancouver, commanding officer of the *Port Hope*, in an interview here said that in the intervening 18 months the "warm-hearted citizens of Port Hope" have showered the ship with so many gifts and kindnesses that "we're beginning to feel they've adopted not only our ship but each one of us, personally." He added: "We are all tremendously grateful."

Here's a random list of some of the presents sent by Port Hope to the men of the *Port Hope* to bolster their morale and to show that the town is proud of having a navy warship named after her:

An initial gift of 4,000 cigarettes, followed by more thousands month after month; eight radios, complete with batteries; electric irons, toasters and numerous other gadgets designed to make life easier ashore or afloat; bats, baseballs and various other sports equipment; sets of checkers, cribbage and many other games; a gramophone and a fine, varied stock of records; socks, leather jackets, scarves, Balaclava caps, helmets, gloves, woollen mitts, bedsheets, pillow-cases, wastepaper baskets; books by the hundred; subscriptions to several popular magazines and a constant supply of old ones; large tinted photographs of Their Majesties the King and Queen for the wardroom.

The town even sent the ship a "glorious great washing machine," said Lieutenant Lester. As a result the *Port Hope* sailors at sea now do their laundering or "dehobieing" easily, quickly, and scientifically instead of by the old-fashioned salty methods. Some of the lads, the captain reported with a grin, even compete briskly for the distinction of turning out "the whitest wash in the messdeck", reminding him of a group of tidy housewives comparing notes over their Monday clothes-lines.

Every Christmas, the Port Hope townsmen put on Santa Claus garb and send their adopted mine-sweeper a bulging Yuletide ditty-bag for every man aboard. The latest included a selection of luxurious zippered bedroom slippers.

That is characteristic of the people not only of the town of Port Hope but of the county of Durham. These gifts have been donated by many people in the surrounding district as well as in Port Hope. A ship is being named after the town of Bowmanville. It is a large corvette which is being built in Britain and which I believe will be launched in the summer. I am sure that town will do as well for the corvette they have adopted as the people of Port Hope have done for the mine-sweeper *Port Hope*.

Mr. STIRLING: Does the minister intend to reply to some of the points raised and the questions asked?

Mr. WOOD: Before the minister replies, I should like to say just a word or two. I have listened with a great deal of pleasure and pride to all hon. members who have taken part in this discussion as they have pointed to the achievements of men from their own parts of the country and the magnificent effort those men have made as members of our Canadian navy. I would be remiss if I did not call the attention of the committee to the fact that my own constituency has the honour of having produced Vice-Admiral Nelles, the man who is responsible for the splendid work our navy has done. I thought it was only within my rights, while others were emphasizing the great contribution that has been made by men from their own constituencies, that I should point out that the vice-admiral of our splendid navy comes from my own district, where he was born.

Mr. MACDONALD (Kingston City): I may answer now some of the questions that have been asked in the last few days and I shall endeavour to answer them in the order in which they were put. The hon. member for Yale (Mr. Stirling) wished to know how many men would want to retire from the navy at the end of the war. It is difficult to say at this moment how many men will wish to retire and how many men the navy may have permanently after the war. The present authorized complement of the Royal Canadian Navy, post-war, is between 8,000 and 9,000. That complement was authorized in 1941. That is the post-war complement, and various plans have been brought up by the staff at different times, suggesting other possible maxima and minima complements, but I am not able to say at this time what the post-war complement will be.

Mr. STIRLING: Since then two cruisers have been announced and two aeroplane carriers.

Mr. MACDONALD (Kingston City): Yes. I hope, as many hon. gentlemen have hoped, that the complement will be reasonably adequate for a country the size of Canada and for the duties which the Canadian navy may be called upon to perform.

My hon. friend went on to ask whether the navy would take part in the Pacific war. That question is covered by the general statement made by the Prime Minister, that we were all in the war together as united nations and would all pursue it to the end. The Canadian navy, I should think, would play a part in the war against Japan.

Mr. STIRLING: If I may interrupt for a moment, there was another question with regard to rehabilitation, whether the minister plans to have training courses, or whether they will come in under the pensions and national health training scheme.

Mr. MACDONALD (Kingston City): That was another question asked by my hon. friend, whether the navy intended to have training classes for itself alone, as I understand, or its demobilized men, I assume—

Mr. STIRLING: For those about to be demobilized and desiring training, or whether they would come under pensions and national health.

Mr. MACDONALD (Kingston City): Of course, any training of men after they are demobilized will have to come under the Department of Pensions and National Health. As to the training of men before demobilization, I think I can say to my hon. friend that at the present time practically the entire effort of the navy is directed to the winning of the war. Forty per cent of the men are at sea, and in the type of ship we have, the smaller ship, there is not a very great opportunity for these men to take any courses of an educational nature beyond, of course, such training as they may acquire in the ordinary course of their duties. When the pressure of training eases, it is our hope that we can use a certain amount of the time, of some of the men at least, in training them for the post-war period. In that step we shall cooperate with the Department of Pensions and National Health, the Canadian Legion and those other groups that are interesting themselves in the educational welfare of the men of the armed services. We also plan, when we can spare the personnel from present operational duties, to institute a programme of vocational guidance or counselling for our men. I think I said the other night that we had a directorate of demobilization and at the head of it we had a reserve officer. We thought that would be the proper branch of the service from which to select an officer for such a task, because practically all the men demobilized will be from the reserve. This officer is at present out of Ottawa, proceeding around from place to place, talking to officers and ratings, endeavouring to study their problems and bring back to us suggestions for their solution.

My hon. friend asked whether entry in the R.C.N.—that is the permanent branch of the service—was now made from the volunteer reserve division, or whether there was any direct entry into the R.C.N. I may tell him that a man can come into the R.C.N. either directly or through the volunteer reserve

division. My hon. friend then spoke about an advertisement which he had seen calling for certain types of ratings in the navy, namely, stokers and communication ratings. He wanted to know whether any others were needed. I would say to my hon. friend, yes, there are others needed, but the great need is for cooks, stewards, stokers and communication ratings. As I intimated to the house the other day, we plan to take into the navy in the next fiscal year some 12,000 personnel of all classes. That would include, of course, some ordinary seamen. Sometimes we need a certain type of rating and at other times another; and when we fill up the need we stop recruiting in that particular category. At the moment, however, cooks, stewards, communication ratings and stokers are the types of ratings we need most.

Mr. STIRLING: Are they coming forward in satisfactory numbers?

Mr. MACDONALD (Kingston City): They are coming forward in reasonably good numbers, yes. We have to advertise for some of them and the divisions are constantly on the look-out for the types of men needed.

The hon. member for Davenport (Mr. MacNicol) paid a well deserved tribute to the Navy League for its work. He paid a tribute to the founders of the league in this country, such as the late Sam Harris, Aemilius Jarvis and the present head of the navy, D. H. Gibson. With all that I agree. My hon. friend then wanted to know whether we were training Canadians to fly off aircraft carriers; that if we were to have carriers Canadians should be trained to fly off them. On that point I may say to my hon. friend that we have not yet established a branch of what is called in Britain the fleet air arm, but there are certain Canadians who are doing naval flying in Great Britain. There has been an organization in Halifax known as H.M.S. *Canada* which did some recruiting of Canadians for the fleet air arm of the Royal Navy. Some seventy-six Canadians have gone into the Royal Naval Fleet Air Arm through H.M.S. *Canada*. There is also another way of getting into the fleet air arm, and that is by an arrangement under which we have agreed to lend to them a limited number of R.C.N.V.R. officers for training and employment in air duties. We have agreed to give them thirty-two pilots, twenty-five observers and fifteen air engineer officers. These officers are already in the Canadian naval service or they will be taken into the service of the Canadian navy and then lent to the Royal Navy.

[Mr. A. L. Macdonald.]

Mr. MacNICOL: Before the minister leaves the fleet air arm possibilities, may I ask a question?

Mr. MACDONALD (Kingston City): Yes.

Mr. MacNICOL: The minister stated that some seventy-six young Canadians are being trained for the fleet air arm of the Royal Navy. At the present time some are being trained in the United States.

Mr. MACDONALD (Kingston City): No doubt, yes.

Mr. MacNICOL: Where are they going after they are trained?

Mr. MACDONALD (Kingston City): They would go back to the Royal Navy.

Mr. MacNICOL: If, later on, Canada finds it necessary to have aircraft carriers is it possible that those young Canadians will be brought back?

Mr. MACDONALD (Kingston City): I would hope that that might take place, yes.

Mr. MacNICOL: While they are in the Royal Navy, are they paid according to the Royal Navy standard, or is their pay supplemented by the difference between the Canadian rate and the British rate?

Mr. MACDONALD (Kingston City): As to those men who enter the Canadian navy and are then lent to the British navy, they would continue at the Canadian rate of pay, but I should assume that a man who joined the British navy directly, without going through the Canadian navy, would receive the British rate of pay just the same as a Canadian who went over to England before the war and joined the Royal Air Force. He is a member of the Royal Air Force and would get Royal Air Force pay.

Mr. MacNICOL: When I asked the question before, I understood that the minister answered it by saying that they would be taken care of in every way, the same as if they had joined the Canadian service. Apparently that is not the case.

Mr. MACDONALD (Kingston City): Those who joined the Royal Navy directly from here without passing through the Canadian navy would not be under our control. We would have no control over them, and I should assume that they would get—I shall look into the matter and make sure of it by to-morrow—Royal Navy rates of pay.

Mr. MacNICOL: I am informed that the pay is much smaller than if they were in the Canadian navy; but with regard to the seventy-six mentioned by the minister, may I

say they were all young lads, mostly university students. What I cannot get into my head is how they got into the fleet air arm department. I do not know whether they tried to enlist in Canada; but I believe they were all too young; at least I know some of them were too young to be admitted into the Canadian navy. In some way or other, however, they were enlisted into the Royal Air Force. How did that happen?

Mr. MACDONALD (Kingston City): There are, as the Minister for Air said in his speech several times, a good many Canadians in the Royal Air Force, Canadians who went directly into the Royal Air Force. Some of them went over before the war; some of them went over shortly after the war and joined the Royal Air Force directly. They stand in exactly the same position as a native of Britain would stand in that air force, I should think. They would be paid the British rates of pay. The same thing applies to those in the fleet air arm. If a Canadian, of his own accord, went to England and joined that branch of the service, without ever going through the Canadian navy, I think he would receive the British rate of pay, because we would have no control or jurisdiction over that person.

Mr. MacNICOL: As I understand it, these young lads did not go to England to join the fleet air arm; somebody, either from England or representing the British Government in Canada, enlisted these young men directly out of university schools just a year ago, two or three years after the war broke out.

Mr. MACDONALD (Kingston City): If they enlisted directly from Canada they never passed through Canadian hands at all, so that I should think it would be very difficult for us to try to follow them and give them Canadian rates of pay. To begin with, we would not know who they were; we would have no record of them.

Mr. MacNICOL: I am trying to find out by what method someone from Great Britain, or someone in Canada representing Great Britain, got these young lads out of the university schools.

Mr. MACDONALD (Kingston City): I am afraid I am not making myself very clear, but this is the memorandum I have here. In the early days of the war, before the United States entered it, Admiral Bonham-Carter looked after the entry of Canadians who wanted to join the Royal Navy Fleet Air Arm. That was the beginning of the arrangement under which Canadians joined that branch of the service. It is estimated that some seventy-six Canadians have entered the Royal Navy for air duties. These men who joined the fleet air arm of the Royal Navy directly from civilian life would, I should think, have to accept the ordinary pay and other arrangements of the service which they joined. I do not think there is any question about that. I may tell my hon. friend, however, that some of those officers and ratings who joined the Royal Naval Air Service have since expressed a desire to transfer to the Royal Canadian Navy, and in some cases that has been done; they have come back and attached themselves to the Canadian navy. If, however, they have not done that, they will have to take British rates of pay, having joined a British service directly.

Mr. MacNICOL: I appreciate very much the courtesy of the minister, but the matter still is not clear in my mind. The minister speaks of a time prior to that which I have in mind. The young lads to whom I refer were taken into the fleet air arm within the last year or thereabouts. A number of them were attending schools in Toronto and elsewhere, and I am trying to find out how some authorities outside Canada could come into this country in 1943 and enlist these young men from our universities. Undoubtedly these lads wanted to join the fleet air arm, but I should like to know how it happened that they were taken right from under our very noses, one might say, and enlisted in the fleet air arm. Perhaps they might have been enlisted in our own air force.

Mr. MACDONALD (Kingston City): As my hon. friend knows, in addition to this group of men to whom I have referred, some two thousand Canadian officers and ratings are serving with the British navy on loan at the present time, so that it is not unusual for our people to find their way into the British navy. There was a period, though I am not sure just how long it lasted, in the early days of the war when the British wanted us to enlist certain types of young men for them; skilled radio men, for instance. Young men with a high degree of scientific skill and training in our universities were very much sought after by the British, and we allowed a certain number of them to be enlisted in that way in order to help the British meet the great problems facing them at that time. If my hon. friend would give me the dates he has in mind, the last dates on which this enlisting took place, I would be able to tell more definitely, but the total number involved, according to my figures, is only seventy-six who have gone in this way since the beginning.

Mr. MacNICOL: Into the fleet air arm?

Mr. MACDONALD (Kingston City): Yes, directly into the fleet air arm.

Mr. MacNICOL: Does that include the number who were enlisted last year?

Mr. MACDONALD (Kingston City): That is the number given me up to date. In addition, as I told my hon. friend, some others have gone in from the Canadian navy. We have a full record of those men; we know who they are and we know the number we are to furnish. We are to supply some seventy-two in all. They pass through our own divisions and establishments, and we know all about them.

Mr. MacNICOL: I shall obtain more particulars and give the minister the information. Then he may be able to tell me what I am trying to find out, for I am afraid I have not secured the information in what I have been told so far.

Mr. MACDONALD (Kingston City): Very well.

Mr. TUSTIN: Are these young men who are enlisted in the fleet air arm trained in Canada or sent to England for training? I believe a number of these men are being trained in this country, though I am not sure whether they are Canadian or English boys.

Mr. MACDONALD (Kingston City): I think there is some preliminary training done here for the fleet air arm. Kingston is one place where it is carried on, I think, and Aylmer is another; but the advanced training would have to be done outside Canada, some in England and some in the United States.

Mr. TUSTIN: Then any Canadian boys who enlist in the fleet air arm would be partly trained in Canada before leaving?

Mr. MACDONALD (Kingston City): Yes, they may be trained here; it would depend upon where the British would want to send them. Probably most of them would be trained here.

Mr. GREEN: Would the minister explain why Canada is not acquiring the two aircraft carriers, just as she is acquiring the two cruisers? Apparently we are merely manning the two aircraft carriers, and the ships and planes will still belong to Great Britain, while the pilots who fly those planes are to come from Great Britain, according to the minister's statement of March 9. Would he explain why we are not acquiring the ships and why we cannot man them completely?

Mr. MACDONALD (Kingston City): The question of acquiring the ships is bound up with the whole question of lend-lease. That is a complicated and intricate business which would take a long time to explain. That is why we have not acquired the ships outright. The cruisers we are acquiring are British ships, built in Great Britain and controlled by the admiralty. They can do what they wish with them, but the aircraft carriers in question are not in that position. They were built in the United States and acquired by Great Britain, and then they were turned over to us. As I say, it is a matter in which the three countries are involved, and at the time this seemed to be the only arrangement we could make. However, the matter is still under consideration and it is possible that some change may yet be made in that arrangement.

Mr. GREEN: Is it hoped that eventually Canada will acquire the two aircraft carriers?

Mr. MACDONALD (Kingston City): I would hope that we might, but, as I say, we cannot acquire them without the consent of the other parties to the bargain; we have to secure that first.

Mr. GREEN: Why can we not supply the pilots?

Mr. MACDONALD (Kingston City): I do not think we have enough Canadian pilots to operate those two carriers. We might, by scouring the whole British fleet air arm, get enough. But I hope that some of the pilots which the British will put on those ships will be Canadians serving with that branch who, I am sure, would be glad to serve alongside Canadian naval officers.

The hon. member for Vancouver North (Mr. Sinclair) raised a question about the acoustic torpedo, and recent developments in German methods of attack. He praised the admiralty for the speed with which they had instituted counter measures against the acoustic torpedo. May I tell the committee that the Canadian navy has a scientific research branch which has been most active in this very field, and which had anticipated and had begun studies before the attacks were made by the acoustic torpedo. Although this is the sort of subject which one cannot discuss in complete detail, I think I can say that the information given by our scientists to the admiralty was of considerable value in the establishment of these counter measures. I might say, too, that immediately the attack by the acoustic torpedo was made, an officer was flown from Canada to England to ensure that there would be a complete interchange of information between our department here and the admiralty. The result of this cooperation has been highly gratifying.

The hon. member for Peterborough West (Mr. Fraser) asked if we were going to build carriers in this country for our navy. The answer to that is that there is no intention at the present time of doing so.

The leader of the opposition (Mr. Graydon) raised the question as to why the pay for women in the services was not equal to the pay for men, and ventured the hope that I would be able to be more generous than my colleagues in the two other services had been. The arrangements in the services are the same, namely the basic pay of women is eighty per cent of that of men. But the trades pay is the same. In the United States I understand the basic pay for women is exactly the same, while in Great Britain I believe it is two-thirds of that received by the men. So that we are in between the American and British systems.

My hon. friend wants to know why there is not equal pay for women. I do not know whether my colleagues have given these reasons, but the chief reason assigned for the difference in pay is that normally women are not employed in active combatant positions, nor are they trained for combat. In the strict sense, therefore, women cannot be said completely to replace fighting men.

Mr. GRAYDON: But of course there are some men who are not fighting men.

Mr. MACDONALD (Kingston City): That is true, and that is the argument made against what I have said. But the point is that every man is liable to go on active service. Even such men as paymasters, while employed at one point in one week, may in the next week be aboard ships on active service. The same applies to doctors, special branch officers and so on. Everyone is on active service and liable to be placed in a zone of danger. It would be difficult to divide the men to a point where we could say that one man is combatant and another is not. I am giving the reasons which have been given to me.

Mr. GRAYDON: I imagine the minister is like me in that respect; probably he is pretty hard to convince.

Mr. MACDONALD (Kingston City): It might have been simpler from the beginning to have given them all the same rate of pay.

Mr. GRAYDON: I think they should have it, really.

Mr. MACDONALD (Kingston City): But there it stands, in that position. I do not wholly defend the discrimination against women, because there are many women working for us in clerical positions, women doing the work of coders, cipherers, signallers, and the like, who are certainly doing their work just as well as it would be done by men. They are quite equal to men, and it is a hardship on them that they do not receive the same pay as do men working opposite them.

Mr. GRAYDON: Has there been a conference between the army, air force and navy officials respecting this matter? I think I see a more sympathetic glint in the minister's eye than I found in the case of the two other ministers who have charge of the other defence departments.

Mr. MACDONALD (Kingston City): Perhaps just a touch of chivalry.

Mr. GRAYDON: Perhaps through his good offices he might persuade the other two. I believe I can see much more sympathy in the minister's atitude than I have seen thus far in the debate. My suggestion would be that when we have got this far perhaps we might go a little farther.

Mr. MACDONALD (Kingston City): That is a matter which would have to be settled by the three services. I would not, and neither would my colleagues, think of adopting a different scale of pay from that in the other services. But the matter has been considered at great length. We began, I believe, at the British rate of two-thirds, and we raised it to four-fifths. With good luck and generous hearts it might be that we would go even a little farther. But I cannot assure my hon. friend, still less members of the women's services, that that would happen. However, some progress has been made in the past, and it may be that more can be made in the future.

Mr. GRAYDON: I understand the door is not definitely closed, then.

Mr. MACDONALD (Kingston City): Where I am concerned, the door is never closed. All these matters can be reconsidered.

The hon. member for St. Paul's (Mr. Ross), inquired whether the ship *Toronto* had been commissioned. The answer is that that good ship is not yet in commission, but that she will be this year.

Mr. PERLEY: Since speaking about an hour ago I have been informed by the hon. member for Yale that an announcement was made to-day to the effect that a ship has been named the *Qu'Appelle*. I refrained from speaking at length when I spoke before, but I wonder if the minister would inform the committee as to the type of ship, and the reason for naming it thus? I believe the announcement was made in the radio news at one o'clock.

Mr. MACDONALD (Kingston City): My hon. friend referred to the *Fort Qu'Appelle*, which was sunk?

Mr. PERLEY: Yes.

Mr. MACDONALD (Kingston City): I shall give an answer before the committee rises, and shall ascertain that there is no confusion between names.

The hon. member for St. Paul's asked about Canadians serving with the Royal Navy and inquired whether they would receive pensions at Canadian rates. The Pension Act provides in effect that where the British act does not meet the case, full pensions will be paid by Canada. What we do is to make up the difference between the British rate of pension and the Canadian rate.

Mr. ROSS (St. Paul's): Is it proposed to have the service chevrons now used by the army adopted by the navy as well?

Mr. MACDONALD (Kingston City): I believe the regulation applies to all three services. I do not know that the navy was greatly in favour of the business, but they are entitled to wear chevrons.

The junior member for Halifax (Mr. Macdonald) raised the question about the role the Canadian navy would play in peace and what strength the navy would be. I believe I answered his questions when dealing with certain matters raised by the hon. member for Yale.

The hon. member then went on to ask whether destroyers would be built in Halifax and expressed the hope that this would be done after the war. Of course these post-war plans and projects are difficult to assess with accuracy at this time, but I can say that if there is to be a Canadian navy in the post-war period, there should be destroyers. I think the destroyer is the heart of the navy; whatever other type of ship you have or have not, you must have destroyers. I think they should be built in this country. There has been some criticism of the cost of building these destroyers in Halifax. Undoubtedly it has been greater than the cost in Great Britain, but these were the first two to be built in Canada and then Canada's wage rates are somewhat higher than those of Great Britain. However, I do not think we could ever hope to develop a navy in this country unless we resorted to our own shipbuilding facilities for at least the greater number of the ships in that navy. I should think that destroyers will be built in Canada as long as there is a Canadian navy. Halifax seems to be the logical place for the building of destroyers. They have to put in there for repairs and refits, and in the winter months many other ports are denied to them. It seems to have the proper combination of building and repair facilities.

The hon. member made some inquiry about the transfer of naval personnel to the former air force barracks at Halifax. I am able to tell him that the transfer is proceeding and it has been found to be very helpful. I understand some 2,000 naval personnel have been transferred and this will help to relieve congestion in the city. My hon. friend wanted to know if we contemplated any additional building in Halifax. In the past, building in Halifax has been difficult on account of the great shortage of labour, and at the moment we have not in contemplation the building of any new barracks. Undoubtedly restaurant and recreation facilities are greatly needed, and I shall be glad to do anything I can to assist or to strengthen the hands of the auxiliary services and those others who are interested in the matter.

The hon. member for Qu'Appelle (Mr. Perley) referred to the freighter which unfortunately was lost, but I am glad to be able to say to him that there is a fine destroyer called the *Qu'Appelle* which we have acquired from the British navy.

Mr. FRASER (Peterborough West): I asked about the naval disposal committee.

Mr. MACDONALD (Kingston City): My hon. friend's question was about the arrangements made for salvage and disposal.

Mr. FRASER (Peterborough West): I wanted more details about naval order 3444. I wished to know whether tenders were called for.

Mr. MACDONALD (Kingston City): There is at naval headquarters a disposal committee, of which one of the officers of the stores branch is the chairman. At each base there is a sub-committee which deals with the question of salvage and disposal and which reports to the headquarters committee. My hon. friend wanted to know why they had to refer matters to headquarters.

Mr. FRASER (Peterborough West): I wanted to know if tenders were called for in connection with the disposal of these goods, and I should also like to know just what is disposed of. Would this not come under the new disposal committee set up under munitions and supply?

Mr. MACDONALD (Kingston City): It does. The fact is that the naval services disposal committee authorized by naval order 3444 is a collecting body to determine what assets are surplus to our requirements. The chairman of that committee is the deputy chief of naval equipment and supply, Mr. L. C. Thompson, who was formerly manager of

stores, Canadian National Railways. This committee is made up of representatives of all the branches which have anything to do with buildings or properties or ships or naval ordnance or stores of any description. At each base there is a small counterpart set up. The naval services disposal committee is not empowered to effect any sale of surplus assets; this must be done by the committee under the jurisdiction of the Department of Munitions and Supply. The committee of which Mr. Thompson is chairman reports any surplus through the deputy minister to the crown assets allocation committee, after having first offered the surplus to the army and air force. It often happens that a thing which is surplus with us is needed by the other services. Similarly, the local committees of other places have no power to dispose of surplus assets by tender or otherwise.

Mr. FRASER (Peterborough West): I should like to ask a few more questions.

Mr. MACDONALD (Kingston City): On the next sitting day.

Progress reported.

At eleven o'clock the house adjourned until Thursday at 3 o'clock p.m., pursuant to special order made Monday, February 21, 1944.

Thursday, March 16, 1944

The house met at three o'clock.

PRIVILEGE

MR. POULIOT—ARTICLE IN VANCOUVER "SUN" OF MARCH 8

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): I rise to a question of privilege arising out of an article published on the front page of the Vancouver *Sun* of Wednesday, March 8. The article reads:

Government May Get Rid of "Vocalamity".

That is a new word. I pronounce it differently from the way in which it is spelled because it sounds so bad when it is correctly pronounced.

Mr. HOMUTH: Will the hon. member speak louder? We cannot hear him at all.

Mr. POULIOT: Thank you. I continue with the quotation:

From the Vancouver *Sun* Ottawa Bureau.

Ottawa, March 8—Amid all the talk about parliamentary reform, a major step in that direction is being considered very quietly in Ottawa. The step is naming Jean François Pouliot, the too-talkative member from Témiscouata, to the Board of Transport Commissioners.

While observers say it would be a surprising appointment, the price might not be too great to pay for the ending of his lengthy speeches—

By the way, Mr. Speaker, I did not address the house since Thursday of last week.

—his bitter attacks on Defence Minister Ralston, and his criticisms of war expenditures.

He isn't just too talkative, he's "a vocalamity."

Accompanying the article is a picture of the person about whom it is written. Now, sir, may I make a brief answer. It is this. The writer of this article wants to cut the grass under the feet of the official press reporter of the senate. He wants to get the job of Tom Green in the senate. He is a nasty little fellow. For the rest, the article is perfectly untrue.

INTERNATIONAL AGREEMENTS

AUSTRALIA-NEW ZEALAND, 1944—AVAILABILITY OF COPIES TO MEMBERS

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I have a few announcements to make to the house. First of all may I say that the Australia-New Zealand agreement of 1944, which the hon. member for Vancouver South (Mr. Green) asked to have printed, has now been printed and copies are available in the library or they may be obtained from the Clerk of the House.

I should like to commend this document to the hon. members as an illuminating example of the flexible and effective methods of cooperation between countries of the British commonwealth.

EMBASSIES

EXCHANGE OF DIPLOMATIC MISSIONS WITH MEXICO

Right Hon. W. L. MACKENZIE KING (Prime Minister): As hon. members are aware, the government of Canada and the government of Mexico have agreed to exchange diplomatic missions. I have pleasure in informing the house that the Hon. W. F. A. Turgeon has been appointed the first Canadian Ambassador to Mexico.

Mr. Turgeon's career is well known, but I should like to place on *Hansard* the following points of interest: Mr. Turgeon only recently returned from Buenos Aires. He was appointed first Canadian Minister to Argentina and Chile in September, 1941. Prior to that time he had a long career at the bar and on the bench culminating in his appointment as Chief Justice of Saskatchewan. Before going to the bench Mr. Turgeon was a member of the legislature of Saskatchewan and Attorney

General of that province. He has also served with distinction on royal commissions regarding the grain trade and the textile industry.

It is my understanding that the Mexican government are to-day announcing the appointment of Doctor Francisco Del Rio Canedo as Mexican Ambassador to Canada. Doctor Del Rio's diplomatic career has also included the posts of Mexican Minister in Uruguay, and Mexican Ambassador in Guatemala.

Mr. GRAYDON: Will the Prime Minister give the house such information as he possesses with respect to the replacement of the Hon. Mr. Turgeon as minister to Argentina?

Mr. MACKENZIE KING: I may say to my hon. friend that the government does not contemplate making an immediate appointment of a successor of Mr. Turgeon in the Argentine. The Charge d'Affaires, Mr. Kirkwood, is in charge of the office at the present time.

MINISTER OF FINANCE

ANNOUNCEMENT AS TO ABSENCE FOR PURPOSES OF REST

Right Hon. W. L. MACKENZIE KING (Prime Minister): I should like to mention to hon. members that on Sunday evening last the hon. Minister of Finance (Mr. Ilsley) left for Washington where he has been during the last few days taking up matters of financial relations between the two countries with Mr. Morgenthau, the United States Secretary of the Treasury. I am glad to be able to say that I have been able to persuade the Minister of Finance to take a very much needed rest. It has been with the greatest difficulty that he has agreed to remain away from his official duties for a few weeks. I am sure that the house will share the feelings I have just expressed at the Minister of Finance having at last agreed to take this very much needed rest. No minister of the crown, I believe, has ever given himself more completely to the duties of his office or has had more difficult problems to contend with than has the Minister of Finance since the beginning of the war. I would express the hope that he may come back very much reinvigorated by the short absence that he will have. My colleague, the Minister of Defence (Mr. Ralston) is the acting minister of finance in the absence of the minister.

WAR LABOUR BOARDS

ANNOUNCEMENT OF RESIGNATION OF CHAIRMAN OF NATIONAL WAR LABOUR BOARD

Right Hon. W. L. MACKENZIE KING (Prime Minister): I wish to announce to hon. members that the Hon. Mr. Justice McTague has tendered his resignation as chairman of the national war labour board and the government has felt obliged, in the circumstances which have had to be considered, regretfully to accept Mr. McTague's resignation.

I should like to read the letters which have been exchanged between Mr. McTague and myself. I shall read first Mr. Justice McTague's letter to me:

Canada
National War Labour Board

Ottawa,
March 8, 1944.

The Right Honourable W. L. Mackenzie King, P.C.,
Prime Minister of Canada,
Ottawa, Ontario.

Dear Mr. Prime Minister:

As I advised you in our conference of two weeks ago, I have made up my mind to resign as chairman of the national war labour board. I have consulted the Minister of Labour and now ask you to accept the resignation as of March 17.

May I say, so that there will be no misunderstanding, my decision is not based on any differences with the government nor with the Minister of Labour personally. While the new wages order and the new labour code are perhaps not as I would personally devise them, I recognize the government's responsibility for them. As an administrator it is no function of mine to criticize. As a matter of fact I think the new code represents a milestone in labour relations and an excellent start. No doubt with experience amendments will prove necessary in both orders. That is to be expected in the natural course of things.

As I explained to you in conversation, I feel that what I set out to do on your invitation is completed to a point where someone else can now take over with a degree of confidence. The past year has been a particularly arduous one for me and I am rather tired. Besides I feel that I have been away from law too long. As you know I have spent more than three and one-half years in Ottawa on the work of the war contracts depreciation board and the national war labour board.

May I thank you personally and the other ministers for the manner in which you have all cooperated with me in my work. If some of my public statements have proved embarrassing at times I am sorry but I still think I must have been right.

Sincerely yours,
C. P. McTague.

My reply to Mr. Justice McTague is as follows: It was written to-day.

Office of the Prime Minister

Ottawa, 16th March, 1944.

Hon. C. P. McTague,
Chairman, National War Labour Board,
Ottawa.

My dear Mr. Justice McTague:

I duly received your letter of the 8th of March, and have delayed its acknowledgment

until to-day in the hope that you might find it possible to reconsider your decision and to continue as chairman of the board for at least a few months longer. From my conversations with you I understand fully the circumstances which have prompted your action, and which cause you to feel that you must adhere to the decision you had practically reached some little time before your letter was written. I have to-day communicated the contents of your letter to my colleagues in the cabinet. It is with regret that the government feels it should accede to your request and accept your resignation as chairman of the national war labour board.

I should like to take this opportunity to express anew the appreciation felt by the government of the signal service you have rendered to Canada's war effort in your capacity as chairman of the national war labour board throughout a very difficult year in the life of the board; also of the services you had previously rendered over a period of two and one-half years on the war contracts depreciation board.

I should like to add a word of warm personal appreciation of the uniformly helpful and cordial relations which we have enjoyed during the whole of the period you have served as chairman of the board, and of your readiness throughout that time to be of such assistance to the government as lay within your power.

In the light of the strenuous nature of your duties I can well understand your present feelings of fatigue. I hope that being relieved of some of the pressure under which you have been working, you may speedily regain the resiliency of mind and spirit which in the past you have greatly enjoyed.

With kindest personal regards,

Yours sincerely,

W. L. Mackenzie King.

Mr. MacINNIS: Has a successor to the Hon. Mr. Justice McTague been appointed, and, if not, will the functions of the board be continued in the meantime?

Mr. MACKENZIE KING: The successor will be announced as soon as he is appointed. I do not contemplate that there will be a delay of any length of time in the appointment of a successor. In the meantime the board will continue to function.

WARTIME LABOUR RELATIONS BOARD—APPOINTMENT AND PERSONNEL

Hon. HUMPHREY MITCHELL (Minister of Labour): I wish to announce that His Excellency the Governor in Council to-day approved of P.C. 1895, establishing the war-time labour relations board for the purpose of administering the war-time labour relations regulations provided by P.C. 1003 of February 17 last. Mr. Justice G. B. O'Connor of the trials division of the Supreme Court of Alberta has been appointed chairman, and Mr. Justice J. N. Francoeur, of the Court of King's Bench of Quebec, vice-chairman.

The other members of the board are: Representing the employers, Mr. Harry Taylor, Toronto; Mr. W. H. Brown, Toronto; Mr. A. Deschamps, Montreal, and Mr. A. J. Hills, Montreal. Representing employees are Mr. A. R. Mosher, Ottawa; Mr. W. L. Best, Ottawa; Mr. Fred Molineux, Hamilton, and Mr. R. Harmegnies, St. Joseph d'Alma, Quebec. The representatives of the employers were selected after consultation with the Canadian Manufacturers Association, the Canadian Chamber of Commerce, the Canadian Construction Association, and the Railway Association of Canada. Mr. Taylor represents the manufacturers' association, Mr. Brown the chamber of commerce, Mr. Deschamps the construction association and Mr. Hills the railway association. The gentlemen representing labour were appointed after consultation with the four major labour organizations in Canada. Mr. Mosher represents the Canadian Congress of Labour; Mr. Molineux the Trades and Labour Congress of Canada; Mr. Best the railroad brotherhoods, and Mr. Harmegnies the Canadian and Catholic Confederation of Labour. The members of this new board will meet shortly to organize and set up the machinery for the carrying out of their important work, which I sincerely feel will contribute in substantial measure to the creation of good relations between employers and employees in the Dominion of Canada.

I now table a copy of the order in council in question.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

DEPARTMENT OF AGRICULTURE—ALBERTA EMPLOYEES

Mr. BLACKMORE:

How many employees in Alberta are on the payroll of the Department of Agriculture at Ottawa?

Mr. GARDINER: 381 full-time employees; 27 part-time employees.

HALIFAX FREIGHT HANDLERS POOL—STAFF HOUSES

Mr. ISNOR:

1. How many staff houses were constructed by the Department of Transport in Halifax, Nova Scotia, to accommodate men employed in the so-called freight handlers pool?
2. What was the total cost of construction and furnishing of same?
3. How many will each house accommodate?
4. How many men were registered and actually occupying rooms as on December 31, 1943?
5. What rental and board per man per day is charged?
6. What has been the total cost of construction, furnishing and maintenance from date of erection to December 31, 1943?
7. What has been the total revenue for rental and board to December 31, 1943?

Mr. MICHAUD:

1. Five bunk houses, 1 dining hall, 1 hiring hall for longshoremen. The units are provided for the joint occupation of C.N.R. freight handlers and men of the longshoremen's reserve pool.

2. Total cost not yet available. Amount to date is $310,472.53. Estimated final cost is $328,939.12.

3. Bunk houses 1, 3 and 4 accommodate 144 men each; bunk houses 2 and 5 each accommodate 160 men—total 752 men.

4. On December 31 there were 405 men registered and occupying rooms. This was during the holiday period. The week prior to this there was an average of 546 men.

5. No rental charge. Boarding rate is $1.25 per man per day, which is deducted from the men's wages and paid to the boarding contractor.

6. Total cost of construction and furnishing to December 31, 1943 was $293,930.62; maintenance $1,247.62; heat $1,174.14; light $1,317.53; watchman service $2,227.17; janitor service $1,216.44, total $301,113.52.

7. No revenue to government. See answer to question 5.

PRAIRIE FARM ASSISTANCE—REVENUE AND BONUSES—ADMINISTRATION COSTS

Mr. DOUGLAS (Weyburn):

1. What were the total proceeds from the one per cent levy collected under the Prairie Farm Assistance Act from, (a) the 1941 crop; (b) the 1942 crop; (c) the 1943 crop?

2. What was the total amount paid out in bonuses during each of the above crop years in the provinces of Manitoba, Saskatchewan and Alberta respectively?

3. What was the total amount spent for administration in each of the above crop years and in each of the above named provinces?

Mr. GARDINER:

1. (a) $1,459,482; (b) $2,728,753.03; (c) $1,827,862.85 (to January 31, 1944).

2. 1941-42 Crop Year—August 1, 1941, to July 31, 1942

Province	1940 Programme	1941 Programme	1943 Programme
Alberta	$26,005 36	$ 2,994,561 82	
Saskatchewan	31,514 74	11,682,893 00	
Manitoba	1,920 80	36,324 94	

1942-43 Crop Year—August 1, 1942, to July 31, 1943

Province	1940 Programme	1941 Programme	1943 Programme
Alberta	$ 772 59	$ 476,982 18	
Saskatchewan	nil	316,830 00	
Manitoba	nil	1,365 20	

1943-44 Crop Year—August 1, 1943, to January 21, 1944

Province	1940 Programme	1941 Programme	1943 Programme
Alberta	nil	$ 4,567 78	$ 943,282 35
Saskatchewan	nil	4,551 00	1,946,155 69
Manitoba	nil	nil	nil

3.

Province	1941	1942	1943
Manitoba	$ 15,189 57	$ 5,592 69	$ 4,883 17
Saskatchewan	353,437 70	89,149 98	138,821 71
Alberta	104,197 89	26,816 51	46,244 49

PERMITS TO PURCHASE TIRES—SASKATCHEWAN

Mr. DOUGLAS (Weyburn):

What are the names, addresses and occupation of all persons in the province of Saskatchewan who, up until December 31, 1943, were granted permits to purchase tires for passenger cars?

Mr. CHEVRIER: The number of permits issued for passenger car tires and tubes in the province of Saskatchewan from the inception of rationing (May 15, 1942) to December 31, 1943, was 48,644.

It is the policy of the department not to give names, addresses, occupation, etc., of citizens or firms granted or refused permits.

CANADIANS OR BRITISH IN CANADA SUBJECT TO UNITED STATES MILITARY LAW

Mr. DIEFENBAKER:

1. Are Canadians or British subjects in any part of Canada subject in whole or in part to United States military law?
2. If so, where, and under what circumstances?

Mr. ST. LAURENT:

1. Yes.
2. Anywhere in Canada if they are members of the armed forces of the United States and are stationed or on military duty in Canada.

POSTAL SERVICE—USE OF FOREIGN POSTAGE

Mr. DIEFENBAKER:

1. Are there any post offices located in Canada where foreign postage is accepted for the transmission of letters?
2. If so, how many?
3. What are the particulars of the arrangements under which this course is made possible?

Mr. MULOCK: There are no Canadian post offices at which mail would be accepted prepaid with foreign postage.

At certain centres the United States army provide postal facilities for their personnel, and carriage of the mail is furnished entirely by United States army facilities in accordance with their requirements.

It is not considered in the public interest to disclose the location of these centres.

*BOARDS AND COMMISSIONS

Mr. FRASER (Peterborough West):

1. How many boards, commissions and/or bureaus, appointed under federal government authority, are now in existence, and what is the name designate of each?
2. How many persons are employed by each such board, commission and/or bureau?

Mr. McLARTY: A return passed on the motion of the hon. member for Kootenay West (Mr. Esling) on February 16 was tabled to-day. The information asked in that order was almost identical with the questions which have been asked by the hon. member for Peterborough West (Mr. Fraser). I wonder if the hon. member would be kind enough to drop this question and look at the information in the return which has been given. Perhaps after that, if he desires any further information, he might put his question on the order paper again.

Mr. FRASER (Peterborough West): Could we not let the question stand for the time being?

Mr. McLARTY: The questions were identical, and I am quite sure the hon. member will be content to drop his question, subject to the understanding that if he requires further information which is not contained in that return they might be placed on the order paper again.

Mr. FRASER (Peterborough West): In the same terms—very well, under those circumstances.

Mr. SPEAKER: Dropped.

RESERVE ARMY—TOTAL COST

Mr. WHITE:

What has been the total cost of the reserve army, by districts, in each of the years 1940, 1941, 1942 and 1943?

Mr. MACDONALD (Halifax):

Estimated cost of the Reserve Army by Districts for 1940-41, 1941-42, 1942-43 and 1943-44

Military Districts	1940-41	1941-42	1942-43	1943-44
No. 1	$1,224,863	$1,174,257	$1,215,204	$1,162,013
No. 2	2,741,366	2,628,102	2,719,751	2,600,697
No. 3	1,283,190	1,230,174	1,273,071	1,217,347
No. 4	2,158,093	2,068,929	2,141,075	2,047,357
No. 5	1,151,955	1,104,360	1,142,871	1,092,846
No. 6	1,239,445	1,188,236	2,229,671	1,175,847
No. 7	816,575	782,838	810,136	774,675
No. 10	1,020,719	978,547	1,012,670	968,344
Pacific Comd.	1,210,281	1,160,277	1,200,738	1,148,184
No. 12	860,320	824,775	853,536	816,176
No. 13	874,902	838,755	868,003	830,009
Total	$14,581,710	$13,979,250	$14,466,726	$13,833,495

Note.—The above estimate of costs have taken the following into account: Pay and allowances; travel, transportation and freight; construction and repairs; operating expenses of properties; clothing and necessaries; personal equipment; barrack, camp and miscellaneous equipment; supplies—food, forage, etc.; medical stores and services; dental stores and services; signal and wireless equipment, ammunition, armament stores, MT vehicles and tanks; operating costs of mechanical and water transport; printing and stationery, sundries.

With the exception of pay and allowances, and travel and transportation wherein actual expenditures were recorded, the various objects of expenditure above described were estimated

for the strength (in man-years where applicable) of the reserve army; and then broken down by districts in accordance with the relative district strengths, in each of the years under consideration.

PRAIRIE FARM ASSISTANCE—DUGOUTS—MANITOBA

Mr. MATTHEWS:

In what municipalities in Manitoba have dugouts been completed under the P.F.R.A., and how many in each municipality?

GOVERNMENT EMPLOYEES COMPENSATION ACT—DR. AIME CHARTIER

Mr. DIEFENBAKER:

1. Is Dr. Aime Chartier, of Montreal, employed in connection with the work of the Government Employees' Compensation Act? If so, how much was paid to him for all services connected therewith, (a) for the year 1943; (b) for the year 1944 to date?

2. Have any accounts been rendered by Dr. Chartier which are as yet unpaid? If so, what is the total amount thereof for the said periods?

Mr. MICHAUD:

1. Dr. Aime Chartier of Montreal, is employed as medical expert and treating physician in connection with the work of the Government Employees' Compensation Act.

Amount paid to Dr. Chartier for all services connected therewith: (a) For the year 1943, $41,869.25; (b) For the year 1944—to March 9, $6,218.00.

2. Accounts rendered by Dr. Chartier and not yet paid (outstanding current accounts in process of audit) (approximately), $1,800.

PRICES—ALUMINUM INGOTS

Mr. KNOWLES:

1. What was the gross price per pound for aluminum ingots charged by the Aluminum Company of Canada, Limited, as at January 1, 1943, to Canada, the United States, the United Kingdom, and Australia?

2. On what dates since January 1, 1943, have changes been made in the above prices, and what changes were made on these dates to each of the above countries?

3. What is the present gross price per pound to each of the above countries?

Mr. CHEVRIER:

1. The price per pound for aluminum ingot charged by the Aluminum Company of Canada Limited as at January 1, 1943, is as follows: (a) To Canada: There were no sales. (b) To the United States: the Department of Munitions and Supply is unable to supply this information. The company bills the United States government direct through its agent, the Metals Reserve Company. (c) To the United Kingdom: Base price, 16 cents per pound; escalator price, 1st quarter, 1943, 5·5 cents per pound; 2nd quarter, 1943, 6 cents per pound; 3rd quarter, 1943, 6 cents per pound; 4th quarter, 1943, 5·5 cents per pound: average escalator price for 1943, 5·75 cents per pound; gross price, 21·75 cents per pound. (d) To Australia: The Department of Munitions and Supply is unable to supply this information. The company bills the government of the Commonwealth of Australia direct.

2. (a) To Canada: Answered by 1 (a). (b) To the United States: Answered by 1 (b). (c) To the United Kingdom: Base price, 15·5 cents per pound—as at November 1, 1943; escalator price, the price fluctuates quarterly; average for 12 months is shown in 1 (c); gross price, 21·25 cents per pound. (d) To Australia: Answered by 1 (d).

3. There was no change in base price to United Kingdom from that effective November 1, 1943. The escalator price is not available until after the first quarter of 1944.

GASOLINE RATIONING—AIR RAID PRECAUTIONS

Mr. REID:

Of the 1,879 granted extra gasoline for duties in connection with air raid precautions, how many of those granted extra gasoline are located in Toronto and Ottawa?

Mr. CHEVRIER: Special categories for allotment of gasoline for A.R.P. duties in Ontario were issued as follows as of December 31, 1943:

From the Toronto office	1,549
From the Ottawa office	161
From the Windsor office	169
Total for Ontario	1,879

The figures for those residing in the cities of Toronto and Ottawa are not readily available. Each city mentioned above takes in the surrounding cities, towns and district adjacent thereto.

INDUSTRIAL USES FOR MANITOBA CEREAL CORN AND POTATO CROPS

Mr. WINKLER:

1. Is investigation and research into the uses of Manitoba grown cereal corn and potato crop for starch being made or contemplated?

2. Have any other uses for industrial purposes for these crops been investigated?

Mr. MacKINNON (Edmonton West):

1. Certain investigations on corn produced in Manitoba are being carried on by the associate committee on grain research of the national research council. It is proposed to expand these studies as facilities permit. Investigations into possibilities for drying root crops, such as potatoes, are contemplated in the future as facilities permit.

2. Fermentation of starch-bearing crops to butylene glycol and other chemicals is actively under investigation and this will be extended to cover cereals and root crops as facilities and staff permit.

GEOLOGICAL SURVEY PARTIES

Mr. ROY:

From 1920 to 1943 inclusive, when and how many geologist parties have been sent by the dominion government, (a) in the province of Quebec; (b) in the province of British Columbia; (c) in the Gaspe peninsula; (d) in the county of Charlevoix-Saguenay?

Mr. MACKINNON (Edmonton West):

	(a) Quebec	(b) British Columbia	(c) Gaspe Peninsula	(d) Charlevoix-Saguenay
1920	1	9	..	..
1921	3	9	1	..
1922	3	9	..	..
1923	7	7	2	1
1924	5	9	1	..
1925	7	13	1	..
1926	6	9	1	..
1927	5	9	1	..
1928	5	9	1	..
1929	6	7	2	..
1930	9	8	3	..
1931	5	6	1	..
1932	6	6	..	..
1933	5	4	..	..
1934	6	5	..	..
1935	8	11	..	..
1936	6	10	..	..
1937	7	9	..	..
1938	6	8	..	..
1939	4	7	..	..
1940	7	4	..	..
1941	7	6	..	..
1942	5	9	..	..
1943	3	8	..	..

NOTE.—It was a condition of union of British Columbia with the Dominion of Canada that Canada would assume and defray the charges of the geological survey.

HOSPITAL ACCOMMODATION FOR B.C. TUBERCULOSIS PATIENTS

Mr. MacINNIS:

1. Has the government received any request from the government of the province of British Columbia for providing more hospital accommodtation for tuberculosis patients?

2. If so, what action has the government taken in the matter?

Mr. MACKENZIE (Vancouver Centre):

1. Yes.

2. The government has authorized the purchase of additional land adjoining the Shaughnessy hospital property (and the necessary legal steps to complete the transaction are in progress) upon which to construct accommodation for 150 beds for cases of tuberculosis and other chest diseases, it being considered that these beds are required in addition to the 150 beds costing the federal government $495,767 which were provided at Tranquille Sanatorium, Kamloops, at which institution are now being treated 34 departmental patients at federal expense.

*GALLUP POLL

Mr. CHURCH:

1. What is the Gallup poll; what public control is there over it, and who are its officers?

2. Has the government a copy of Gallup poll voters' list?

3. How many of its officers have served in this war, and in what theatres, and are its pronouncements under public control?

4. Will any steps be taken to censor or regulate it?

5. Who are the writers of this poll, and who do they represent besides themselves?

6. How many members of the Canadian parliament or of the legislatures of the various provinces or municipal councils have voted in this poll?

Mr. McLARTY: Perhaps I can answer this question orally. If by "public control" is meant government control, there is no control whatsoever. This is a private enterprise; it is not even incorporated, so that the information concerning the officers, requested in paragraph 3, could not possibly be given. In question 4 the hon. member asks whether any steps will be taken to censor or regulate this organization. It being a private enterprise, it is subject to all the laws and regulations with regard to censorship and all other matters, that apply to private enterprises in this country. Perhaps with that explanation, and bearing in mind that the government has no information which would enable it to answer questions 5 and 6, the hon. member might be willing to drop his question.

Mr. CHURCH: I believe the censorship regulations should be applied in this case, for I think also there has been a breach of the defence of Canada regulations. This poll is a fraud on the public and political propaganda in wartime; it causes disunity at a time like this. It is just an American fake; it is all Gallup and no poll.

[Mr. J. A. MacKinnon.]

SOCIAL SECURITY—PENSIONS, ETC.

Mr. RAYMOND:

Will anything be done by the government to implement the recommendation made last session by the special committee on social security that the advisability of lowering the pensionable age and increasing the amount of pension in connection with old age pensions, pensions to the blind and veterans' allowances, be considered?

Mr. MACKENZIE KING: This question relates to matters of policy and it is not the practice of the government to disclose policy in giving answers to questions.

QUESTIONS PASSED AS ORDERS FOR RETURNS

NATIONAL DEFENCE—EXPENDITURES ON AMHERST PROPERTIES

Mr. BLACK (Cumberland):

1. What expenditures have been made by the government and Department of National Defence since the commencement of the war on properties of the maritime winter fair commission and the maritime stock breeders association at Amherst, Nova Scotia, stating names of contractors and sums paid each for, (a) improvements and additions to buildings; (b) heating and plumbing; (c) fittings and furnishings; (d) total expenditures?

2. To whom have rentals been paid, stating amounts?

NIAGARA-ON-THE-LAKE MILITARY CAMP

Mr. FRASER (Peterborough West):

1. What was the total capital expenditure since January 1, 1939, on Niagara-on-the-Lake military camp, (a) on construction; (b) on equipment?

2. How many men in training were passed through the camp records during the years 1939, 1940, 1941, 1942, 1943, and what was the largest number of men in training at any one time during each year?

3. How many men in training are at present resident in the camp?

4. How many officers and men of the ranks are on the camp staff as instructors, camp management, kitchen staff and duties other than in training?

CORN, BEANS AND PEAS

Mr. CRUICKSHANK:

1. What stock of the following are on hand as at March 1, 1944: canned corn, canned beans, canned peas?

2. Are there any unfilled orders on hand for canned corn, canned beans, canned peas for Britain or elsewhere?

3. Is it expected sufficient corn, beans and peas will be produced for domestic and export market for 1944?

4. Are any supplies of canned corn, beans and peas being accumulated for export to occupied countries after the war? If not, why not?
5. Have canned corn, beans and peas been rationed in Canada? If not, why, and are they rationed now?
6. What is the average cost of production of corn, beans and peas in each province?
7. What is the minimum wage paid in vegetable canneries for males and females in each province for the following years: 1938, 1939, 1940, 1941, 1942, 1943?
8. What rate was paid per ton for each grade of corn, beans and peas by the canneries in each province during 1943?
9. Have any representations been made to the government regarding subsidies on corn, beans and peas? If so, by whom, and what amount was recommended in each case?

BEEF AND CATTLE

Mr. SENN:

1. Has the export of live cattle from Canada to the United States been forbidden during the months of December, 1943, and January and February, 1944, and to date? If so, on what authority, and by whose orders?
2. Has there been any form of embargo by the United States authorities against the importation into the United States of live cattle from Canada during the past, (a) three months, or (b) the past six months prior to March 6, 1944?
3. How many head of cattle were left over, unpurchased at the close of trading on the Toronto live stock market on Monday, March 6, 1944?
4. Has there been any shortage of beef for, (a) military purposes, or (b) ordinary civilian use during the past two months prior to March 6, 1944?

WARTIME PRICES AND TRADE BOARD—NEW BRUNSWICK

Mr. HANSON (York-Sunbury):

1. How many wartime prices and trade board offices are there in New Brunswick?
2. Where are they located?
3. How many officials are attached to each office, and what are their grades?
4. What are the names, positions and home addresses of each of these employees of each of these offices?
5. What are the salaries and other remunerations received by each of these employees?
6. How many of these employees are returned soldiers, (a) of the war of 1914-18; (b) of the present war?
7. Who recommended these employees, and how were they appointed?
8. If these appointments were made by the civil service commission, were they made after examinations?
9. Who were the examiners, and at what places were such examinations held?

CANADIAN FORCES—ENLISTMENTS—RACIAL ORIGINS

Mr. DIEFENBAKER:

1. What is the total enlistment for overseas service to date in, (a) the navy; (b) the army; (c) the air force?
2. What is the breakdown of said figures on the basis of racial origin?

Mr. MACDONALD (Halifax): In reference to the second part of the question, as far as the army is concerned the information is not available. There is no record of the racial origin of army personnel.

Mr. POWER: With respect to the air force, there may be some record of racial origin as far as English-speaking and French-speaking personnel are concerned, but certainly there would be no record of racial origin to take in Scotch, Irish, Swedish, Norwegian and so on.

Mr. SPEAKER—Dropped?

Mr. DIEFENBAKER: No. Mr. Speaker. I should like to know whether this information is not available. We have in the armed services people of Ukrainian, Polish, Russian and German origin, and so on, and I believe all such information is in the possession of the authorities and should be made available. A similar question was asked in 1942, when it was said the information was not available in detail. As far as the division between French-speaking and English-speaking is concerned, that is not what I want. I want the racial origin of all recruits.

Mr. POWER: I submit that any hon. member who considers this question will agree that it would be impossible to give an answer. Just consider the races which are most numerous in Canada, Scotch, Irish and English. Would it be possible for us to go through all the attestation papers to find out who were a man's grandfather and grandmother, and whether they came from Scotland, Ireland, England or any other part of Europe? I think the question in its present form is impossible to answer.

Mr. DIEFENBAKER: Very well.

Mr. SPEAKER: Dropped.

Mr. GRAYDON: Perhaps I should not intervene at this time, but I should think the first part of the question could be answered quite readily.

Mr. POWER: Certainly.

Mr. MACDONALD (Halifax): There is no objection to that.

Mr. SPEAKER: The first part of the question will stand, and the second part is dropped.

Mr. RALSTON: Order for return.

Mr. SPEAKER: The first part will be an order for return and the second part dropped.

LUMBER—PRICES AND SUBSIDIES

Mr. BRUCE:

1. What were the ceiling prices on lumber during, (a) 1942; and (b) 1943?

2. Did increases occur during 1943? If so, on what date or dates did such increases become effective, and what was the increase in each case?

3. Were any subsidies paid or depletion allowances granted on lumber or saw-logs between October 1, 1942, and December 31, 1943, and if so, on what authority, and on what basis?

4. What companies or persons received such payments of subsidies or depletion allowances on timber products or lumber during the period October 1, 1942, and December 31, 1943, and what was the amount paid or allowed in each case?

SCHEELITE IN THE YUKON

Mr. BLACK (Yukon):

1. What amounts, if any, were expended by the government in assisting the development of scheelite in the Yukon in 1943?

2. To whom were said amounts paid; (a) what amount to each; (b) what for?

3. Was part of such sums expended in wages?

4. If so, (a) to whom were the same paid; (b) at what rates of pay; (c) how much to each?

5. What amount of scheelite was recovered and received from Yukon by the government in 1943, in weight and value?

6. What sums, if any, were paid, and to whom, for scheelite produced in Yukon in 1943?

7. Are any sums owing to the government for advances made in 1943 to the producers of scheelite in Yukon? If so, by whom, and what amount is owing by each such person?

VISITING PRIME MINISTERS

MR. CURTIN OF AUSTRALIA AND MR. FRASER OF NEW ZEALAND

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I should like to direct a question to the Prime Minister, of which I have given him notice. It has been intimated in the press that the Prime Minister of Australia plans to visit the United States within the very near future. Has an invitation been extended to Mr. Curtin asking him to include Canada in his itinerary? In the event of Mr. Curtin accepting such an invitation, can the Prime Minister give any information at the moment as to the approximate date of his visit to Canada?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Some time ago, I extended the Right Hon. Mr. Curtin an invitation to visit Canada on his way to the meeting of prime ministers to be held in London at a forthcoming date. I am happy to say that in the reply received from Mr. Curtin he said he would be pleased indeed to visit Canada. At the time he was unable to say whether he would visit our country on his way to London or on his way back. I imagine Mr. Curtin may find it more convenient to pay his visit on his return from the meeting overseas, when other matters may not be so pressing. I should like to say that it will mean very much to the government to have the opportunities of conference with Mr. Curtin on many matters of mutual interest to Australia and Canada, and I am sure the Canadian people will very much welcome a visit from Mr. Curtin.

I should like to add that if it is possible for the Right Hon. Mr. Peter Fraser of New Zealand to pay another visit to Canada, either on his way to London or on his return, we should very much welcome such a visit on his part.

Speaking of the meeting of the prime ministers in London I was somewhat surprised to notice within the past day or two in one of the Canadian papers a lengthy statement to the effect that I myself might not be attending the meeting of premiers. From reading the article it was apparent to me it had been written for purposes of political mischief. I just wish to register a protest about statements of the kind being given publicity without my being given the opportunity of saying in advance whether or not there is any ground for such assertions. I mention this because I have noticed that there seems to be some new instrument at work in this country, which is continuously making references to matters which I am supposed to be doing, or that I am not going to do, most of which have no foundation at all. I should be pleased if those who attach importance to my doings or movements would, where the matters are important, kindly indicate a little in advance their intention to make public pronouncements and seek to ascertain the truth before inventing or spreading rumours.

CANADIAN ARMY

QUESTION AS TO FURLOUGH FOR OVERSEAS PERSONNEL AFTER LONG SERVICE

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, I should like to draw a matter to the attention of the Minister of National Defence—I am sorry I was unable to give him more notice of the question. Has the Department of National Defence under consideration the establishment of a scheme which would allow a service man with a long record of service to return for periods of furlough or service in Canada from active theatres of war? This matter was raised earlier by the hon. member for Lake Centre (Mr. Diefenbaker) and I now raise it again at this time because of the republication yesterday in the Montreal *Star* of an article

written by Honorary Major C. W. Bailey, which appears in the *Eighth Army News*. This dispatch from the Italian front would indicate that the question is a live issue among the servicemen there, and would seem to merit a statement by the minister. If he is not in a position to answer to-day, perhaps he will do it at some other time.

Hon. J. L. RALSTON (Minister of National Defence): Mr. Speaker, generally Your Honour has ruled that answers to questions such as these are not to be given immediately. However, I think this is a matter about which I might speak now, because I wish that there be no misapprehension with respect to it.

I say to the house and my hon. friend that the memorandum from the Royal Edmonton Regiment was received by me, and I might say that it is of a piece with the document I received some time ago from that same regiment in connection with the rehabilitation problem. It is a thoughtful and temperate document which is worthy of the traditions and the fine record of that very splendid regiment. It has had, and will continue to have, every attention.

The subject of leave for men overseas, it almost goes without saying, has had consideration steadily. As the leader of the opposition has said, it was mentioned by the hon. member for Lake Centre during the discussion of the war appropriation resolution. At that time, as reported at page 855 of *Hansard*, I said this:

> I am not in a position to make a statement on a matter of that kind, and the committee will understand why. Great events are pending and, if I took down correctly what my hon. friend said, he refers to a plan for rotating furloughs from certain areas and consideration being given to some foreign theatres. My hon. friend knows the location of our troops generally speaking, and I am not in a position to make an announcement of that kind to-night.

I can only add to that at this moment that operational conditions and shipping make it quite impracticable for me even to raise any hopes in this matter for the immediate or near future at least. I wish to add further that that does not mean that it will not continue to receive the attention it deserves, when changed conditions may warrant it. I should like to express the hope that nothing might be done which would indicate the possibility of favourable action at an early day. I think it is really only raising hopes which are not justified, and which possibly might create uneasiness at a time when we need steadiness perhaps as much as we have needed it at any time since the beginning of the war.

DEFENCE OF CANADA REGULATIONS

RELEASE OF A. N. SCHNEIDER FROM INTERNMENT CAMP

On the orders of the day:

Mrs. DORISE W. NIELSEN (North Battleford): Mr. Speaker, I should like to ask a question of the Minister of Justice, of which notice has been given.

1. Has Mr. A. N. Schneider, well known as a German fascist bund leader, been released from the internment camp, where he has been since 1940, and allowed to return to his home town of St. Walburg, Saskatchewan?

2. If so, upon whose orders?

3. Has any person or organization made representation for his release?

4. If so, what are the names of such persons or organization?

5. What reasons were given in asking for the release of this man?

Mr. SPEAKER: That is a question which should be placed on the order paper.

POSTAL SERVICE

CHANGE IN POSTAGE RATE ON AIR MAIL FROM ARMED FORCES OVERSEAS

On the orders of the day:

Mr. JAMES SINCLAIR (Vancouver North): Mr. Speaker, I should like to ask a question of the Postmaster General affecting our troops overseas. Whereas British troops serving outside Great Britain send air mail letters home for threepence, Canadian troops must pay the civilian rate of sixpence. I would ask the minister to consider that matter.

Hon. W. P. MULOCK (Postmaster General): In reply to the hon. member for Vancouver North I am glad to be able to state that the British postal authorities have agreed to suggestions made by us, and that the rate on the armed forces air letter—that is, the blue letter—sent by our troops in the United Kingdom to Canada, will be reduced from sixpence to threepence, effective immediately.

TUBERCULOSIS

LABOUR SHORTAGE IN SANATORIA IN ONTARIO

Hon. H. A. BRUCE (Parkdale): Mr. Speaker, may I ask a question of the Minister of Labour, of which I have given him notice? Will the minister say what steps he has taken to relieve the serious situation which has developed in two tubercular sanatoria in Ontario as a consequence of a labour shortage, resulting in patients having a delay of many

months in securing relief by way of an operation known as thoracoplasty, very much to the detriment of their health?

Hon. HUMPHREY MITCHELL (Minister of Labour): I shall be glad to give immediate attention to the question my hon. friend has raised. A similar situation has developed in other provinces, and with the cooperation of provincial governments we have been able to meet that situation. My hon. friend can rest assured that, given the same degree of cooperation from the government of Ontario—

Mr. HOMUTH: Now, now; you are not getting away with that.

Mr. SPEAKER: Order.

Mr. HOMUTH: You cannot play politics with that.

Mr. MACKENZIE (Vancouver Centre): You never did, did you?

Mr. MITCHELL: Let me say this to my hon. friend from Waterloo—

Mr. HOMUTH: And there are a lot of things I want to say to you one of these days, too.

Mr. SPEAKER: Order.

Mr. MITCHELL: I say to my hon. friend from Waterloo South (Mr. Homuth), that this is too serious a matter to play politics with.

Mr. HOMUTH: It certainly is, but you are doing it.

Mr. MITCHELL: Given the same cooperation—and if "degree" is not the proper word to use I will eliminate it—from the province of Ontario, I feel certain we will meet the situation there.

Mr. BRUCE: It is not a question of cooperation; it is a question of your selective service functioning properly.

BUSINESS OF THE HOUSE

TABLING OF MUTUAL AID AGREEMENTS—WAR APPROPRIATION BILL

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, at eight o'clock I shall ask permission to file copies of Mutual Aid agreements entered into between Canada and the United Kingdom, Australia and the Soviet Union. My reason for waiting until eight o'clock is so that the time may synchronize with the publication of these documents in the other countries concerned.

[Mr. Bruce.]

I gathered it was intimated last sitting that this afternoon the Minister of Munitions and Supply would be following the Minister of National Defence for Naval Services in the discussion of his estimates on the war appropriation measure. If I may, I would change that order now, and say that to-morrow the Minister of Munitions and Supply will make a statement with respect to civil aviation, and that he will not follow either this afternoon or this evening the Minister of National Defence for Naval Services. If the estimates in the war appropriation measure of the naval minister are concluded, we shall take up supply for the Department of Agriculture.

Mr. GORDON GRAYDON (Leader of the Opposition): When the Prime Minister mentions civil aviation, I take it he refers to the whole statement in connection with the war appropriation resolution so far as the Department of Munitions and Supply is concerned. I understand that civil aviation would form only part of it; is that correct?

Hon. C. D. HOWE (Minister of Munitions and Supply): The statement to-morrow will be wholly on civil aviation. At the same time I shall table the war estimates of the civil aviation branch. Early next week I shall make a statement with respect to the Department of Munitions and Supply, and that will be as a wholly separate statement.

Mr. GRAYDON: We will not be faced with the necessity of debating civil aviation after the statement is given?

Mr. MACKENZIE KING: No.

Mr. GRAYDON: Is it intended to debate civil aviation to-morrow?

Mr. HOWE: No. The intention was to give the statement on Friday, and the debate may go on on Monday, or later.

HOUSE OF COMMONS

AUDIBILITY OF DEBATE

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, it seems to me that when I am myself at fault perhaps it is best to make a confession; it is possible that my example might then be followed more eagerly by other hon. members. I have noticed that when anybody is speaking from the far end of the house it is difficult for us here to hear, and conversely it must be difficult for those in the far end in certain circumstances to hear the discussions which sometimes take place between the Prime Minister and myself and

other members sitting, shall I say, in the more active area, or at all events the area where there seems to be perhaps more activity. I think we might perhaps all take a lesson from the fact that it is difficult for those at the far end to hear us. We who sit up here ought to make a personal resolution that we will speak so that we may be heard by those at the far end, no matter what the circumstances of the debate may be, and on behalf of those who sit with me on this side I suggest that that be done. I am sure that the Prime Minister will be only too glad to cooperate with me in this matter as he does in so many other matters—with perhaps some strange exceptions at times.

Mr. MACKENZIE KING: I think my hon. friend knows how effectively I have co-operated with him. May I say to him both on his behalf and my own that hon. members will also have to cooperate with us by maintaining silence while we are speaking.

Mr. GRAYDON: I am sure that the Prime Minister, having got that off his guilty conscience, will feel ever so much better.

OIL

REQUEST FOR STATEMENT ON DEVELOPMENTS AT FORT MCMURRAY

On the orders of the day:

Mr. J. R. MacNICOL (Davenport): May I ask the Minister of Munitions and Supply if either to-morrow or when he proceeds further with his remarks he will tell the house of the progress made at Fort McMurray in the production of oil?

FISHING INDUSTRY

PACIFIC COAST—LING COD—TIE-UP OF FISHING VESSELS

On the orders of the day:

Hon. ERNEST BERTRAND (Minister of Fisheries): Mr. Speaker, at the last sitting the hon. member for Vancouver East (Mr. MacInnis) asked a question which had some relation to an order No. A1096, which was returned on February 10. This order fixes the prices of eighty different fish items. For ling cod a price of ten cents per pound was fixed by the order. The O.P.A. has fixed for the same ling cod a price of ten cents per pound for a certain period and eight cents per pound for another period, while our fish administrator has fixed the price at ten cents per pound during the whole season. It so happens that on a portion of our coasts some of our fishermen have boats on which the ling cod is kept alive and landed fresher than fish caught in the open sea and brought to shore dead, and accordingly they want a little higher price of from one to two cents per pound. The hon. member's question should perhaps have been asked of the wartime prices and trade board, because Mr. Burgess, who sent the telegrams to the different members from British Columbia, did not even send me a copy of the telegram. However, I got in touch with Mr. McLean, the fish administrator, and he is in correspondence with Mr. Burgess. He is the officer to whom Mr. Burgess reports, and he should hear further within a day or so.

Mr. HARRIS (Danforth): Is the O.P.A. price of ten cents in American or Canadian dollars?

Mr. BERTRAND (Laurier): In American dollars, I suppose.

Mr. HARRIS (Danforth): And the other price is in Canadian dollars?

Mr. BERTRAND (Laurier): Yes.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, March 14, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF NATIONAL DEFENCE FOR NAVAL SERVICES

1. Civil salaries, $6,511,987.

Mrs. CASSELMAN: Mr. Chairman, the statement which the Minister of National Defence for Naval Services has put on the record is just one more chapter of the achievements of the men of the armed services of this country. It is impossible to tell which has made the greater contribution, the men of the army, the navy, or the air force, but this is one more chapter of the achievements of the naval service.

The minister mentioned Royal Roads in his speech. I wonder whether he would give us a little more information on Royal Roads. How the the boys chosen who are sent to Royal Roads? Is there a quota from each province? Are they chosen on their scholastic records? Have they to make application for permission to enter Royal Roads?

I was glad to hear the minister praise the women of the armed services, especially of the naval division, and by the way I am glad to think that we have long since passed from naval defence to naval offence. I cannot see any reason, of course, why the women should not receive equal pay with the men. It should

be the contribution that is made, rather than the sex, that determines the pay. However, the women of the naval service are glad to be serving. They are all volunteers and they serve gladly. But it is not only those who are in uniform who are serving. We should never forget that at home there are many who are serving for Canada just as much as the women in uniform. I refer to the women who are staying in their own homes, doing dull tasks sometimes, sometimes more pleasant ones—the women who are serving in the various societies that are sending comforts to the men overseas. I do not think there is a woman across the length and breadth of Canada who is not in touch in some way with a soldier, an airman or a naval man who is serving, either through their letters or through their efforts with the various organizations such as the I.O.D.E., the Red Cross, church organizations and auxiliaries, navy mothers and so on. The navy mothers are very active in my own city of Edmonton. All this work helps to keep up the morale not only of the men overseas but also here on the home front, which is also so important.

Alberta has 196 officers and 5,778 ratings in the naval service. That is a very good record, I think, for an inland province, and they are to be found in every branch of the service. There are those who are engaged in convoy work and others who are serving in the merchant marine. I think perhaps the convoy work is as important a work as any, taking the food and munitions and our men safely across the seas. It was a great triumph for the convoy system to bring down the number of ships sunk from one out of 181 in 1941, to one out of 233 in 1942, while in 1943 only one out of every 344 was lost. It shows how excellently our men have served.

I was glad to see the list of decorations for the naval service which the minister put on record on Monday. Five decorations were won by men from Edmonton, and I wonder if I might be permitted to read the citation for just one of them. I read this particular one because it is first in alphabetical order in the list, beginning with "B". It is E. E. Binnie, Able Seaman, Royal Canadian Navy, who was decorated with the British Empire Medal on June 2, 1943. The citation reads:

> During prolonged engagements with U-boats in heavy attacks on convoys in the north Atlantic, this rating performed his duty with certainty of precision which led to sight of U-boats on five occasions, thereby contributing to the saving of merchant ships.

That is only one citation out of many that might be given for devotion to duty and gallantry in action. There are, of course, many who have given their lives in the service, and our sympathy goes out to their loved ones at home.

May I ask if it is the general principle that the men who are in training here in Canada are given a subsistence allowance rather than being provided with living quarters? If so, is the rate of subsistence for naval service the same as for the other services? When a man gets subsistence, is the rate the same here in Canada as it would be if his home base were abroad?

I was glad to hear the minister's remarks about the cadet corps. It shows that our youth are very anxious to take their part as much as possible in actual positive work, and the training given is good not only for the service but also for citizenship here in Canada. Many of the leaders in this movement give freely of their time to this work.

Have many of the men of the naval service been taken prisoners of war, and is anything known about their treatment in camps? When they are able to escape and some marvellous stories of escape have come through is there any danger that the telling of these stories will make it more difficult for others to escape, or are there likely to be repercussions affecting those who help men to escape?

The frigate *Stetler,* I believe, is to be commissioned very soon. The minister will remember perhaps that the city of Edmonton did not have the honour of having a ship named after it for the reason that its name is so much like Edmundston in New Brunswick. However, the men of the town of Stetler have shown great bravery, and the *Stetler* is the ship which we claim as ours. I am sure that the men who serve on that ship will carry on the tradition of their fellows in the service up to the present time, and when they come back they will have a great work to do here, apart from the work they are doing abroad now for the building up of Canada. I do not mean building entirely in the material sense. It is true that we need reconstruction and the development of our natural resources, but we also need citizens. Citizenship should mean something more than paying taxes and voting. It should mean something in the direction of building up the character of the country and the dignity of labour. A good citizen should contribute in more ways than materially.

Mr. FRASER (Peterborough West): I was asking a few questions with regard to the new naval surplus disposal committee. This committee has to report to the crown assets

allocation committee. The committee, I understand, cannot dispose of any goods but in turn has to take up the matter with the war assets corporation. I do not know whether I am right in that, and I should like the minister to give us the facts. This naval surplus disposal committee came into being on February 26, because that is the date of the order. Can the minister tell us what was disposed of during the past year by the navy —the kind of goods and the amount? How many new civil employees have been taken on during the past year and where are they stationed?

Mr. MACDONALD (Kingston City): Replying to the hon. member for Edmonton East (Mrs. Casselman), the first question was with regard to Royal Roads. I believe the question referred to provision for clothing.

Mrs. CASSELMAN: My question had reference more to students entering Royal Roads. How are they chosen when they are given that privilege and what are the quotas from the different provinces? Does each of the provinces get a chance to send some of its boys to Royal Roads?

Mr. MACDONALD (Kingston City): There was noise in the chamber and I thought my hon. friend was referring to clothing. It seems she was referring to the manner of choosing students for the college. That is all set out in a pamphlet, a copy of which I shall be glad to hand to her. The students for the college are ultimately chosen by a selection board, consisting for the most part of members of the college staff, assisted in various parts of the dominion, by officers from the locality. The students all pass the same written examination. They are then interviewed by the board and after the interview and examination, if they are physically fit, they are admitted to the total number of 100—fifty each year. There is a quota of twenty-six divided among the provinces according to population. In a given year a province might have no students applying and qualifying for the college, though I should hope that all provinces would be represented. The remaining twenty-four students are selected from all over the dominion in order of merit.

Mrs. CASSELMAN: Is a special examination set for these boys? Do they make application and try a special examination for admission?

Mr. MACDONALD (Kingston City): Yes. A set of papers are prepared by the staff of the college and they are submitted to all the candidates. The same questions are submitted to all the candidates and they write their examinations on the basis of those questions.

Mr. MACDONALD (Brantford City): They have to be matriculants?

Mr. MACDONALD (Kingston City): The examination is of approximately junior matriculation level. As to women's pay, I do not think I can add anything to what I said the other night. I am always glad to reconsider any matter, however, and I shall discuss the subject with my two associates in the other services.

As to the number of naval prisoners of war, I am glad to be able to say that it is very small. I believe the number is about six in all. I shall get the exact number presently. As to the prisoners of war who escape and who recount their stories, I think they are all careful not to say anything that might interfere with the safety of those who are left behind or who are likely to escape. They are careful not to give details regarding the route they followed or the manner in which they escaped.

As to subsistence, may I say to the hon. member for Edmonton East that the rate of subsistence in all points outside Canada is not necessarily the same as in Canada. Inasmuch as naval ratings are stationed at a great number of places outside Canada,—some in London, some in Washington, and some in St. John's, Newfoundland—I had better place on *Hansard* a table showing the different rates. For instance, in the United Kingdom, in the London area, a rating gets $2.25 subsistence whereas in Canada he gets only $1.25, and so on. In Washington there is another rate again. I think it would be well to put the complete list on *Hansard* for the information of my hon. friend.

The total number of prisoners of war I have given as six. It is nine—seven in German hands and two in Japanese.

The hon. member for Peterborough West (Mr. Fraser) asked a question as to the amount of naval material disposed of in the past year. Up to the present we have made no disposals through the newly instituted board under the Department of Munitions and Supply. We have disposed of certain goods under the former arrangement, through the salvage officer. I shall have to look up the record.

Mr. FRASER (Peterborough West): That is before February 26, when this came into being?

Mr. MACDONALD (Kingston City): Yes. If my hon. friend wants the record of what was disposed of prior to that date I shall get it.

Mr. FRASER (Peterborough West): The naval surplus disposal board has to report to the crown assets allocation committee, which, I believe, in turn supplies the goods for the war assets corporation. I am not quite sure how that arrangement was made and I should like to know.

Mr. MACDONALD (Kingston City): That was all done under order in council, which I assume has been tabled, passed on the recommendation of the Minister of Munitions and Supply.

Mr. FRASER (Peterborough West): But this all has to go through these three channels?

Mr. MACDONALD (Kingston City): Yes, before it is disposed of. That is right.

Mr. FRASER (Peterborough West): Does that apply also to ships' stores? I understand that there was quite a lot put ashore last year in British Columbia and left there for some time.

Mr. MACDONALD (Kingston City): Food?

Mr. FRASER (Peterborough West): Yes, ships' stores.

Mr. MACDONALD (Kingston City): I do not know of that but I shall look into it. Is my hon. friend referring to food that was sent to the west coast for shipment to prisoners of war?

Mr. FRASER (Peterborough West): No. Do the ships not get a new shipment of goods every six months?

Mr. MACDONALD (Kingston City): It would be oftener than six months.

Mr. FRASER (Peterborough West): They restock every six months?

Mr. MACDONALD (Kingston City): The ships?

Mr. FRASER (Peterborough West): Special things are restocked every six months.

Mr. MACDONALD (Kingston City): On the ships?

Mr. FRASER (Peterborough West): Yes.

Mr. MACDONALD (Kingston City): More frequently than that. They requisition for stores and supplies as they need them. Usually I think ships would take on food and stores a good deal oftener than every six months.

[Mr. G. K. Fraser.]

Mr. FRASER (Peterborough West): There are special things they handle every six months, I believe. Then they take on a new lot and at the end of that time they put off the old stores they have had on and put on new things.

Mr. MACDONALD (Kingston City): Perhaps my hon. friend is thinking not so much of food as of other materials for the ships—repairs on ships?

Mr. FRASER (Peterborough West): Yes, other materials.

Mr. MACDONALD (Kingston City): Usually a ship comes in for repairs every year. An old part of an engine may have to be removed and a new part substituted or something like that. That would take place normally once a year.

Mr. REID: Complaints have reached me regarding the length of leave granted to navy personnel who have served at sea for some time. I have received complaints that boys doing service on the Atlantic on reaching port are being granted not over two weeks' furlough. My last complaint came from the boys who saw service on the high seas at Kiska. It has been pointed out to me that after a considerable period of duty of a very hazardous kind at Kiska they were granted only one week's leave of absence. Would the minister care to make a statement regarding the furlough of boys who have done service on the high seas? It was recently stated to me that the same leave is granted to them as is granted to those on shore duty in offices.

Mr. MACDONALD (Kingston City): In that case a good deal would depend on when these men had their last leave. The normal leave for a member of the naval services is twenty-eight days in a year. I should think that if any of the ratings to whom my hon. friend refers, those who had taken part in the Kiska expedition, had had no leave for a year previously, they would certainly get twenty-eight days on their return. It might be that some of them had leave a few weeks or months before the expedition set out and consequently would not be entitled normally to the full twenty-eight days' leave. I shall look into the particular point with regard to the Kiska men and give my hon. friend a more definite answer later.

Mr. GREEN: I should like to ask the minister one or two questions about the naval situation on the Pacific coast in so far as Canada is concerned. Each of the ministers has made a brief reference to Canada's war policy on the Pacific. The Minister for Naval

Services made his statement on Tuesday last in answer to a question of the hon. member for Yale which is found at page 1497 of *Hansard*. The minister said:

> That question is covered by the general statement made by the Prime Minister, that we were all in the war together as united nations and would all pursue it to the end.

Then he went on to use these words:

> The Canadian navy, I should think, would play a part in the war against Japan.

The minister gave much the same type of statement on March 9, which is found on page 1314, of *Hansard*, when he used these words referring to the personnel of our navy:

> They are keen, of course, to get the war against Germany over, and then they feel that they have a few matters to attend to in the Pacific.

On March 6 the Minister of National Defence for Air made this statement in so far as his particular branch of the armed forces was concerned—it is to be found at page 1192 of *Hansard*:

> Canada will be in the war against Japan until the very end. I am no strategist and cannot tell my hon. friend just what part we are going to take in the war on the Pacific, but we are going to shift from the European theatre to where we can do the most harm against Japan at the proper time.

The Minister of National Defence said on February 14, to be found at page 466 of *Hansard*:

> In the first place, what I said with regard to Japan or what I wanted to say was, that no commitments have been made at the present time as to the nature or extent of Canada's participation in the war against Japan.

Hon. members of the committee will notice that each of these statements is indefinite. I think it can be assumed with accuracy that the policy of the present government is to leave the fighting against the Japanese in the meantime at least to the United States, Australia, New Zealand, Great Britain and possibly the Netherlands. Further, another branch of this policy is that the United States fleet is being relied on to defend Canada's Pacific coast, and, in the third place, it is the intention, I take it, that Canada will eventually participate in the war against Japan, when the war against Germany has been successfully concluded. I think that is a policy which requires careful consideration by the government and, frankly, a policy which requires revision.

May I emphasize these facts? Canada as a Pacific power should be taking part in the war against Japan now. As a Pacific power we cannot afford to stay out of the fight and allow those other nations to fight Japan for us. If that is not to be our policy, certainly there can be no question that Canada should, at any rate, be carefully planning now what part she is to take in the war against Japan. I am afraid that the difficulty is that our staffs at Ottawa are thinking only of the war across the Atlantic. That has been the position from the start, ever since Japan struck at Pearl Harbor. Those of us who come from British Columbia had a difficult time in the winter and spring of 1941-42 prodding the government into taking action on the Pacific that would give us at least a reasonable defence against the Japanese on that coast. I repeat, I think the staff here, perhaps of the whole three forces, the navy, army and air force, is one-ocean minded. They do not realize that Canada is a two-ocean country—in fact we are now a three-ocean country. We are bounded by the Atlantic, the Pacific and the Arctic oceans.

I suggest that special preparation should be made now against the day when Canada really goes into the war with Japan. The British are doing that. I have here a press dispatch dealing with the speech of Sir James Greig, British Secretary for War, which was made in the House of Commons in Great Britain on March 2. In that speech he used these words:

> In one field the ministry (of supply) can expect from us a whole range of new demands —those for specialized weapons and equipment which will be needed when we transfer our main weight to the war against Japan.

It is perfectly obvious that special equipment will be needed there along with special training. I do not think anybody can question it is a different type of war. Probably the fighting will be of an amphibious nature, landing from ships and seizing various islands, and naval fighting. Probably much of the fighting will be between the Japanese fleet and the American fleet, plus the British and the dominion fleets.

As I have said, Great Britain is preparing to take a very important part in the war against Japan. Her ships and troops are moving into that area. I have another press dispatch in my hand dated November 27, 1943. It states that the British navy is moving on to the Pacific coast of Canada.

Mr. MACDONALD (Kingston City): Are they?

Mr. GREEN: I want the minister to tell me.

Mr. MACDONALD (Kingston City): My hon. friend knows very well the answer to that question, I think.

Mr. GREEN: I am hoping to get an official answer from the minister. This dispatch says:

Vast expansion of naval base and repair facilities on the British Columbia coast, in preparation for the all-out drive against Japan, is foreshadowed in a statement by Admiral Sir Percy Noble, head of the British admiralty delegation at Washington, D.C.

Then the dispatch goes on to say:

Sir Percy declared that it is likely that the Royal Navy will—in its Pacific operations—seek permission to make use of Canadian bases. Such bases would undoubtedly remain under Canadian control. He considered it "unlikely" that separate bases would be operated by the Royal Navy.

Indications of increased naval activity on this coast in the near future are the recent presence of British and United States naval experts in Vancouver.

It has been reported, too, that Vancouver and Prince Rupert will share largely in the activity to come.

Our own admiral on the Pacific, Admiral Brodeur, is reported in the press of December 3 last to much the same effect. He is quoted as saying:

There is no doubt in my mind that Vancouver and Victoria will be used in case of large naval operations for the repair of ships. There are bound to be a few damaged ones.

The newspaper report goes on to say:

Asked whether the Royal Canadian Navy would operate with the Royal Navy, Admiral Brodeur pointed out that such action has been a matter of long-standing policy with both services, and said the R.C.N. "will play a very big part when the 'first class second front' begins."

The position is that the first thing we know, if Canada does not take her fair share in the war against Japan, she will be left out of the decisions that will be made after the war with regard to all the lands lying around the Pacific ocean. Only to-day the Prime Minister referred to the agreement between Australia and New Zealand which was negotiated late in January; he pointed out that he thought it was a very important agreement. Incidentally the Australians and New Zealanders have asked Canada to become a party to that agreement. These specific questions must be faced by the Canadian government; they must not be pushed aside to be dealt with "if" or "perhaps", after the war with Germany is ended. Canada, as a Pacific power, must have a fair share in the decisions which will be made after the war as to the future in the Pacific.

I suggest that the members of this committee and the Canadian people are entitled to know what part the Canadian navy is going to play in the war against Japan and also what is the Pacific policy of the present government. We should have that in far more detail than the general statement made by the minister to this effect: "The Canadian navy, I should think, would play a part in the war against Japan." Then we are entitled to know whether or not Great Britain has sought permission from Canada to use naval bases on our Pacific coast and, if that permission has been sought, whether or not Canada is granting it, and also whether the Canadian Navy is cooperating fully with the Royal Navy on the Pacific coast. I have no doubt that will be done if it is left to the personnel of the Canadian Navy. We are entitled to be reassured on this whole question.

Mr. CHURCH: While I appreciate what has been said by the hon. and gallant member for Vancouver South with regard to the great Pacific question, Canada is now bound by the arrangements made between Mr. Churchill and the President of the United States at Cairo and the other conferences which have been held. As you know, Mr. Chairman, both before and after Pearl Harbor Great Britain had practically left the Pacific, which was looked upon as the exclusive preserve of the United States. Great Britain was not ready for war. After Hong Kong and Singapore fell we found that commitments and preferences had been made, to the effect that Britain was not able to take charge of the war on the seven seas; she had not the fleet, owing to disarmament on land, sea and in the air. So as a result of the conferences that were held, by which Canada is bound as a member of the British empire, the Pacific war came to be looked upon as the particular allotment of the United States.

What has happened? You have all seen what has taken place in the Pacific, which I spoke about before Pearl Harbor, when I saw the war coming. I said that the Japanese, who were our allies in the last war, would be island-hopping around to all the ten thousand miles of islands in the Pacific, and that is what they have been doing. They have appeared in all those islands, and they are all mined. we have the gravest possible state of affairs in that particular campaign. What happened at the Cairo conference, to which Canada was a party? Mr. Churchill and the President of the United States made commitments with regard to the Pacific. What are those commitments to which Canada has agreed? Canada, by Cairo, has agreed that Japan must give up all the territories it has acquired in the last fifty years, and as well must give back everything she has conquered since Pearl Harbor. Well, it seems to me, and we do not even yet appreciate it, that the war with Japan will last another four years, and I am

afraid that sooner or later the allies will have to agree not to go as far as they went at the Cairo conference, which by the way has been criticized very strongly in the British press and house. Certain commitments have been made since the war started; some are primary, such as aid to Russia, and others are secondary. The defeat of Germany is the most important thing of all, and Canada should keep out of the Pacific until she has a fleet strong enough to play its part in that campaign. After all, the mother country is in this war against Japan on land, sea and in the air.

As I said the other night, the Canadian navy has played a glorious part in the war so far, but we have not yet the ships or the men to play a very active part in the Pacific at the present time. That theatre of war has been left pretty much to New Zealand, Australia and the United States; and the contribution that has been made by the splendid United States forces and by Australia and New Zealand is most praiseworthy. It is true that after Hong Kong and the rout at Singapore Canada sent a number of men to Kiska, where they did splendid work. It is also true, as the minister said the other night, that we have done a good deal in connection with the development of harbour facilities there; but as I said in 1936 and 1937, speaking from this side of the house, from Puget Sound for six hundred miles through the Queen Charlotte islands we had at the Pacific an undefended coast line which was just inviting trouble, absolutely unprotected, through the policy of this country in not having a proper fleet or any proper form of defence. British Columbia is entitled to everything we can give her; I am very sorry it has been necessary to have blackouts there and all that sort of thing, but I do not see what we can do at the present time. The government is bound by the arrangement that has been made, giving the United States the prerogative in the Pacific, which we abandoned after the Singapore base was lost.

Back in 1937, when the Japanese question was under discussion, the present Minister of Pensions and National Health, who was then Minister of National Defence, did manage to get some increases in the estimates in regard to the Pacific coast. At that time I pointed out that 630 miles of that territory was unprotected; that it had hundreds of inlets and harbours, but we had no fleet to guard it. The minister brought down a return showing the size of our navy, which consisted of two or three destroyers, I believe, totalling less than ten thousand tons in all. It was not the fault of anyone, as far as I can see, because they were all pacifists, both in and out of this house. I know I was accused of being a warmonger away back on March 24, 1938, five months before Munich, when I pointed out the grave danger in the Pacific, as well as the dangers over in Europe.

I appreciate the position of the hon. member for Vancouver South, the hon. member for Vancouver North and all the members from British Columbia, who have been most active in the interests of their province, but we must face the facts. The mother country had no fleet left; she threw away her defences and depended on Geneva up to the time the war broke out. Blame the pacifists who brought about this state of affairs after Britain had ruled the seas for a hundred or more years. We had peace for a hundred years from 1815 up to the time of the last war, except for a little outbreak in 1900. Britain had supremacy on the seas, together with commercial supremacy; and when you lose that you cannot get it back in a day, a month or a generation. I think the minister was quite right in what he said the other evening, that the war with Germany was primary, and I believe the government is quite right in its Pacific policy, until such time as Germany is beaten, and dear knows she is far from beaten yet. Where are you going to get a fleet to operate in the Pacific? Can you take it out of the Atlantic, the North sea, the Mediterranean and the Indian ocean at the present time?

We had a little experience in Kiska. I can tell you this, that we do not want any more Hong Kongs in the Pacific, or any of that kind of thing. With all the tipping off that has been going on, until we are ready we do not want to send troops, air force or forces of the army to the Pacific area, to those numerous islands which are all mined. Look at the loss of life the United States has suffered in the glorious work it has done. Look at the awful loss in the United States fleet in the Pacific, and in their air and land forces. Do not forget the great debt of gratitude we as a dominion owe to New Zealand and Australia. Before the war started they gave to maritime freedom in the Pacific $5,000,000 a year to the Singapore base. That base was lost by bad management, by the infiltration of infantry, and the lack of forethought.

Until we know that Germany is beaten I cannot see how we can put up a fight against Japan—we a people of only 10,000,000 people. We have not the armaments to do it. The main thing is to see that Germany is defeated and, as Mr. Churchill has said, when Germany is defeated all the power of the mother country will be placed behind the United States

to destroy Japan, that awful race which has acted as cannibals toward our soldiers overseas.

Mr. GREEN: May I have an answer to my question?

Mr. MACDONALD (Kingston City): With regard to the use of bases on the Pacific by the British navy, my hon. friend wanted to know whether the United Kingdom had asked permission to use those bases, and if so whether such permission had been granted. By the agreement of 1910, when Great Britain abandoned her bases in Canada, and when they were taken over by the dominion, there was a clause to the effect that the British government should always have the right, or that His Majesty's ships should always have the right, to use the bases both at Halifax and Esquimalt, free of any charge, with the exception of charges for labour and materials, which those ships would have to bear.

Then, as to whether Canada should take part in the war against Japan: I believe my hon. friend made the same plea last year with regard to land forces of Canada. He pointed out that Canada should take part in that war, and I think he indicated that a contingent of land troops should go into the war against Japan. He now makes the same request with respect to naval forces. I am not speaking unkindly when I say that there have been a great many suggestions as to how the Canadian Navy should be disposed. Many suggestions have been made since the beginning of the war, some in the house, some by newspapers outside the house, and others on public platforms. We had a remarkable number of such suggestions in 1942. Some people thought we should take the whole Canadian Navy and defend the gulf of St. Lawrence only, or the strait of Belle Isle, or Cabot strait. That, they thought, was the entire function of the Canadian Navy. Those entrusted with the strategic direction of the navy said no; that that was a ridiculous naval policy, and that no navy worthy of the name would adopt a policy of that kind—sitting back on its own shores, waiting to be attacked. They pointed out that the thing to do was to go out and meet the enemy as far away from our own coast as possible, and to endeavour to defeat him there.

That policy was adhered to in the face of strong and bitter criticism from certain quarters in Canada. It was adhered to, and it bore results, because in 1943 not a single German submarine made an attack in our coastal waters. Why? Because they were being attacked themselves out in mid-Atlantic, and they are being attacked almost at this very moment in mid-Atlantic. Some of them are being sunk by Canadian ships of war. That was the policy we pursued then, and we were right.

With regard to the Pacific, and the sending of our naval forces to that area, I would point out to my hon. friend that the sea is one. That is an old and very true naval maxim. My theory is that anything done in one part of the sea against the enemy may be taken to be done in all parts. If you destroy an enemy submarine in mid-Atlantic you weaken the general power of the enemy. When they sank the *Scharnhorst* off the north tip of Norway about the end of the year, that was a blow at the entire axis sea power. When a few days later two cruisers, one of which was commanded by a Canadian officer, sank four German destroyers in the bay of Biscay, that too was a blow at axis naval power.

Mr. GREEN: But the bulk of axis sea power is in the Japanese fleet, is it not?

Mr. MACDONALD (Kingston City): Probably it is, although the German submarine fleet, I think, is more powerful than the Japanese.

Mr. GREEN: Not more powerful than the Japanese fleet, surely?

Mr. MACDONALD (Kingston City): I was speaking of the submarine fleet. I think the German submarine fleet is more powerful than the Japanese. The Japanese fleet of course has more surface vessels. But the point is that the fact that we have not many ships actually in Pacific waters at the present time does not mean that we are not assisting in the battle of the Pacific. By no means does it mean that. For instance, how much assistance is Great Britain giving with respect to the war in the Pacific at the present time? How many units of the British fleet are in the Pacific? But will my hon. friend say for one moment that Great Britain will not have a voice at the peace table so far as the Pacific possessions of axis powers are concerned, merely because the bulk of her fleet is elsewhere at the present time? Does my hon. friend say that Russia will have a lesser voice in peace discussions because she has no fleet in the Pacific?

Mr. GREEN: The British have had units of their fleet in the Pacific.

Mr. MACDONALD (Kingston City): As the hon. member for Broadview (Mr. Church) pointed out, the strategy of this war to a great extent was to leave the Pacific very largely to the Americans, to leave the Atlantic to the British fleet, and the convoy work to the

British and Canadian fleets. That was the general arrangement made, and it has worked out with reasonable satisfaction.

I cannot undertake, even if I knew, to give my hon. friend the exact number of ships in the Pacific, either Canadian, British or American.

Mr. GREEN: I did not ask for that.

Mr. MACDONALD (Kingston City): I cannot attempt to do it. And I do not think I can amplify the statement I made the other day, that it is the intention, as announced by the Prime Minister, that Canada shall have a part in the Pacific war. I have no doubt that the Canadian navy, the Canadian air force and the Canadian army will take part in it. Beyond that I cannot go. I do not take that stand with any intention whatsoever of disregarding our great coast which faces the Pacific, or the importance of the ports in British Columbia.

We are disposing our fleet to the very best possible advantage, in accordance with the plan agreed upon by all those vitally concerned—Canada, the United States and Great Britain. And in view of impending events in Europe, which I need not discuss at the present time, in view of their importance, and in view of the part Canada is going to play, and play on the sea, in those events, I say it would be very difficult for us to do anything different from what we are doing.

Mr. GREEN: Is any thought being given to plans for the Canadian Navy in the Pacific, once Germany is beaten? Is there any special planning being done, or any special training being carried out for the type of warfare which will be followed in the Pacific?

Mr. MACDONALD (Kingston City): As I said the other night when speaking with regard to rehabilitation, some people think we should be devoting our whole time to consideration of post-war problems. As I said last week it is my view, and I am proud to say it is the view of the personnel of the Canadian Navy, that our great concern is: Let us win this war first. I say of course that we are giving some thought to after the war. But let us get the war over first. We have a job to do as a navy, and we are doing it, and doing it successfully. While we have that job to do I do not know that we can spend too much time in sending ships to the Pacific to study methods of warfare in that area.

All our staffs are constantly endeavouring to keep up to date with the progress of the war in the different theatres of war. They are endeavouring to follow the new types of warfare being developed at sea, on land and in the air. And our naval staff is not at all remiss in that regard. But when my hon. friend asks me if we will send ships to the far Pacific, to the southwest Pacific—

Mr. GREEN: I did not ask that at all. The minister cannot put words into my mouth like that. I do not suppose he wishes to be unfair. but I did ask him whether he has any branch of his naval staff, or whether he has any officers or others doing special planning work for the Pacific. I am not questioning the good work that is being done by the navy in the Atlantic. It is unfair to drag a red herring across the trail in that way. I am asking whether there is any planning being done in regard to Canada's part in the naval war on the Pacific. Surely there are enough personnel in the navy now for some at least of them to be put on that job.

Mr. MACDONALD (Kingston City): The department of plans of the navy and the naval staff are giving attention to all matters of this kind. I say again that we cannot do a hundred things at once. You cannot fight on the Atlantic and on the Pacific too with the same ships. My hon. friend ought to realize that.

Mr. GREEN: I did not suggest anything of the kind.

Mr. MACDONALD (Kingston City): Let me ask my hon. friend, does he say that we should take one-quarter or one-third of our forces in the Atlantic and send them to the Pacific, or what proportion?

Mr. GREEN: I did not say that at all.

Mr. MACDONALD (Kingston City): Give me a figure. He thinks we can take part in the Pacific war. I ask him, to what extent should we do that?

Mr. LOCKHART: Calm down!

Mr. GREEN: He cannot calm down. I suggest to the minister that there should be on the naval staff right now, and there should have been for a long time, somebody whose job was to make plans in regard to Canada's part in the naval war on the Pacific. I did not suggest that one ship or ten ships should be moved or anything of that kind. I do say this to the minister, that if Canada does not watch out and pay a little more attention to the war on the Pacific she will seriously endanger her relationships with Australia and New Zealand and possibly with the United States. We are a Pacific nation and it is part of our job to prepare for participating in the war on the Pacific.

Mr. MACDONALD (Kingston City): My hon. friend is changing his stand considerably, because he started out by saying that Canada should take part in the war in the Pacific, and I understood him to say that we should send ships to the Pacific. I ask him where he thinks we would get them, and where should we take them from? Does he suggest in view of what is going to happen in Europe that we should take ships out of the Atlantic? I can tell my hon. friend that we are going to take part in that action against the continent of Europe. Canadian forces, land and sea and air, will take part in that invasion in no small measure. Would he say that we should jeopardize the success of that invasion by taking ships from there? Should we take them out of the convoy service to Europe, where we are already doing 40 per cent of the convoy work now? In addition, a large part of the north Atlantic is entirely under the command of Canadian naval officers. Does he think that we should take ships out of there? If he says no, then I ask him where are we going to get the ships to send to the Pacific?

As I have already said, there is a plans branch in the department and we have a naval staff which is giving attention to the Pacific war as it is to all types of sea warfare. Beyond that I cannot go.

Mr. GREEN: Why did not the minister say that ten minutes ago?

Mr. MACDONALD (Kingston City): I did say before my hon. friend rose that we had a plans branch and a naval staff that were always studying naval warfare. They are studying the Japanese war and Japanese methods. But my hon. friend was asking us to send ships to the Pacific just as last year he wanted a contingent.

Mr. GREEN: There are already ships in the Pacific, as the minister knows.

Mr. MACDONALD (Kingston City): Does my hon. friend want us to withdraw those ships from those waters?

Mr. WARREN: Mr. Chairman, I am prompted to speak after listening to the remarks of the hon. member for Durham a couple of days ago describing the enthusiasm of the people of Port Hope because a ship of the Canadian navy had been named after Port Hope. It recalled to my mind that in the early days of the war some of the citizens of the town of Pembroke, the county town of Renfrew county, had asked me if it might not be possible to have a ship named after the town of Pembroke. I wrote to the department of naval service, and we were disappointed to get a reply that that was not possible as there was already a ship by that name in the British service.

But as I listened to the hon. member for Durham the other night, it occurred to me that perhaps there would be no objection to naming a ship after the township of Wilberforce. Wilberforce is not a city or town; it is a township of lakes, splendid scenery, some very good farming country, and many good farm homes maintained by hard-working ambitious farmers. While it may have no great claim to fame, it has perhaps some little claim for special notice in that it has contributed its fair share of men to public service in this country. Doctor Maloney, who was elected to this house as a member of parliament for South Renfrew on three occasions, was born and raised in the township of Wilberforce. The late Alexander Stewart, who spent his life time in the township of Wilberforce, was elected on two occasions to represent North Renfrew in the Ontario legislature. Stanley Hunt, who was elected to represent North Renfrew in the Ontario legislature at the last election, was born and raised in the township of Wilberforce. I have myself spent my lifetime in the township of Wilberforce, and North Renfrew has done me the honour of choosing me to represent them for one term in the Ontario legislature and on two occasions they have elected me to represent them in this house. I would therefore ask the minister if it would not be possible for him to consider having a Canadian ship named Wilberforce.

Mr. STIRLING: Will the minister give a reply to the remarks made by Sir Percy Noble, followed by Admiral Brodeur, with regard to the use of facilities on the Canadian Pacific coast for the British fleet? He did refer to the old agreement of many years ago with regard to the facilities then existent, but as I read the remarks of Sir Percy Noble they were extremely definite that it was intended to quarter ships on that part of the coast, and Admiral Brodeur was of the same opinion. But from the minister's reply to the hon. member for Vancouver South it sounded as if there were nothing in it. Would the minister say there was nothing in it?

Mr. MACDONALD (Kingston City): I would not say there was anything in it or nothing in it. All I say is that if the British wish to make use of the base at Esquimalt for their ships they are at perfect liberty to use it under the agreement of thirty or more years ago. As to British Columbia ports being made

a base for a large section of the British fleet in the war against Japan, if Sir Percy Noble made such a statement—I have not got it here —I assume that he was speaking with due deliberation and it may thus be assumed that he was speaking correctly. But I cannot add to or take anything away from his statement. That is all I can say. I know of no plans involving the use of Pacific ports by the British fleet beyond the old agreement of thirty years ago.

Mr. STIRLING: The implication in Sir Percy Noble's remarks was undoubtedly that Canadian ships being extremely busy on the Atlantic side it was the intention of the government—

Mr. MACDONALD (Kingston City): The British government?

Mr. STIRLING: I presume he would not have made that statement had the idea had not had the acquiescence of the Canadian government, and I am surprised to hear the minister say that so far as he is aware no such pronouncement is accurately made.

Mr. MACDONALD (Kingston City): There is very little definite about the Pacific war except, as I said the other day and have said repeatedly, that we are planning to take part in that war. I have no doubt that the British fleet will take part in that war, but in exactly what way is another story. On that point I can give my hon. friend no information at all.

Mr. POTTIER: A few days ago when the minister was asked as to the type and size of vessels for a permanent Canadian navy he indicated, as I understood him, that this was a matter that should be left until the war was over and that it would depend on the urgency and particular needs of the times. I am one of those in this house, and have been and will continue to be who are in favour of Canada having a substantial permanent navy. I believe that Canada needs a navy, and if Canada is to be a great country it needs a navy particularly from the standpoint of defending its shores and taking part in any combat in which it sees fit to engage. That brings up the question, and that is why I speak about it to-day, of maintenance and repair facilities, plans and personnel. If it is suggested that I am too realistic, I reply that we have to look at what is going to happen in connection with our repair yards and shipbuilding facilities when the war ends.

May I state my view in a few words. As soon as the war ends the cargo shipbuilding programme will cease and our naval shipbuilding programme will in a large measure be discontinued. It will be found that shipbuilding and ship repairing facilities will decline in consequence. It appears to me, therefore, that some thought should be given to the maintenance of repair facilities in order to look after naval ships when the war is over and to keep them in proper condition. We should also have trained workmen available at all times for the purpose. Unless some plan is made in that regard we shall be faced with a lack of proper facilities as well as of the workmen who will be needed when the time comes. The minister should keep in mind the present facilities that have been set up on the Atlantic coast. The maritime ports are available twelve months of the year and the facilities that are there now should be kept up so as to fill the need which will make itself felt in the future. Unless this is done we shall find, if Canada is ever faced with the situation that existed in 1939, that it will be necessary for us to build all over again and it may be two or three years before we can recover the position we hold at the present time. I hope that the planning departments under the minister are giving some thought to this matter, that they will approve the idea of retaining the facilities we have now and our ships as well and of keeping them in as good condition as they are in at the present time.

Mr. MACDONALD (Kingston City): The hon. member for Peterborough West asked for the number of civil servants taken on during the past year. The number is 545, both here and at outside points.

Mr. FRASER (Peterborough West): In the return tabled on March 3 it appears that seventy of these men are in Newfoundland. How many civil employees have we there altogether, and how many are in Britain—or are there any there?

Mr. MACDONALD (Kingston City): I will get that information in a moment as regards Newfoundland. The number serving in the United Kingdom is eight.

Mr. FRASER (Peterborough West): The return shows that there were seventy added in Newfoundland.

Mr. MACDONALD (Kingston City): That is quite possible. There is a considerable expansion in St. John's, Newfoundland, and it may be that seventy were taken on since August of last year.

Mr. ROY: The minister repeated a few moments ago the very same statement he made the other day, namely, that there were certain short-sighted people in 1942 who were

asking that the whole Canadian navy be moved into the gulf of St. Lawrence to deal with the submarine menace there. I suggest that he is magnifying the fact a bit when he says that people asked for the whole Canadian navy to be sent there. I am not aware that any person or any newspaper ever asked that the whole navy be moved to that locality. What people and the newspapers asked was that some protection should be given our ships there. The minister goes on to say that the policy of his department was a wise one, that by fighting the submarines on the open sea we took the best means of destroying and getting rid of them. I wonder if the submarines could not have been got at and destroyed more easily in the St. Lawrence. If they could have been got rid of in that locality would not that have served the end as well as fighting them outside? But that is not all. If the minister's policy was the right one, and if in 1943 we did not have any submarines in that section by reason of the fact that his department followed the right policy the year before, how is it that the government made provision for such effective defence of the Gaspe coast last year? The defence organization was widely advertised throughout the Canadian press last summer. Every hon. member must recall the kind of publicity that was given the organization that was established on that coast last year. As a matter of fact, we had a very good organization last year and that may explain in part why we had no submarines then. Well, if it was advisable to fight the submarines in 1942 on the high seas, because that was the best way to destroy them, I should like to know, assuming that it was useless for short-sighted people to ask for some protection in the St. Lawrence, why the government has set up such admirable protective safeguards as those we have now.

Mr. MACDONALD (Kingston City): I suppose a submarine could be sunk in the gulf or the river St. Lawrence as well as anywhere else. There is no doubt about that. But I must leave to the naval staff rather than to my hon. friend the task of determining how the navy should be disposed of to the best advantage. They disposed of it as they thought best in 1942. There were naval ships in the gulf and the river St. Lawrence all the time in 1942, and there were others on the high seas. Submarines did not attack in the gulf of St. Lawrence last year. I am sure that if they had done so, the civilian defence corps, which my hon. friend speaks of, would have been helpful in spotting and reporting them, but I cannot think that the civilian defence corps kept the submarines away from the gulf.

Mr. ROY: I am not talking only about the civilian defence corps on the coast; I am referring to the number of ships we have had in Gaspe harbour. Moreover, we have had planes and telephone lines and all the other organization that has been set up. We had more ships and planes last year than the year before.

Mr. MACDONALD (Kingston City): Of course we had more ships and planes last year than in 1942. We have added considerably to the strength of the navy and air force and consequently we had more ships for mid Atlantic and the gulf of St. Lawrence. My hon. friend is quite right about that.

Mr. GRAYDON: May I say a word, which has been prompted by the debate that took place a few moments ago in which the hon. member for Vancouver South and the hon. member for Gaspé took part. I can recall the debate that occurred in the last session when I came to the rescue—or rather to the support, shall I say, since he did not need to be rescued—of the hon. member for Gaspé, when he made certain suggestions with regard to strengthening the position on the east coast from the point of view of submarines. I should not like to think the minister is not susceptible to suggestions from any part of the committee, but in that particular instance it seemed to me that when the hon. member for Gaspé did come forward with suggestions they were not welcomed in the manner I should like to have seen. I hope that the inquiries which are being made by the hon. member for Vancouver South will not be found in the future to be in the same category. Perhaps the minister may find that there is something with respect to the position on the west coast that has a similar bearing to that which was brought to the attention of the ministry last year by the hon. member for Gaspé. I should like to think the minister is prepared to give careful and keen consideration to the suggestions and inquiries brought forth honestly and in a desire to help by members of this committee. On reflection I think he will not want to deal with the hon. member for Vancouver South in the way that he did this afternoon. I think all the hon. members of this committee, regardless of party affiliation, are anxious to try to be as helpful as they possibly can; otherwise the debate and the appropriations and the opportunities given to discuss them become, of course, of limited importance.

Mr. MACDONALD (Kingston City): In answer to my hon. friend, the leader of the opposition, the only thing I wish to say to the committee is this: I cannot attempt to give the detailed disposition of ships, whether

it be in the Pacific or in the gulf of St. Lawrence or in the Atlantic. It simply cannot be done.

Mr. GREEN: Nobody was asking that.

Mr. MACDONALD (Kingston City): If anybody asks me how many ships there are, here or there, I cannot attempt to answer such questions. I do not think they should be asked. I do not say my hon. friend from Vancouver South was endeavouring to put his question as pointedly as that, but I think my hon. friend himself knows, for instance, how many British ships are in Vancouver at this time.

Mr. GREEN: I do not.

Mr. MACDONALD (Kingston City): I thought there was nothing that I could tell him which he did not pretty well know already.

Mr. GREEN: The minister is quite wrong there.

Mr. MACDONALD (Kingston City): I shall be glad to tell my hon. friend anything I can.

Mr. ROY: I am prepared to accept the explanations made by the minister when they are reasonable. But since the year 1942 has been mentioned by the minister, may I say I do not like to be called a traitor or short-sighted. I think the minister would do well to desist from giving expression to such remarks in the committee.

Mr. MACDONALD (Kingston City): I never suggested that my hon. friend was a traitor or anything of the kind. My hon. friend is mistaken if he assumes I ever intimated that he was anything of the sort.

Mr. GREEN: In opening his discussion on these estimates the minister said that during the next fiscal year the navy planned to take in personnel to a number of about 12,000. That is half the number required during the present fiscal year. I presume that there is quite a large wastage, quite a few men are discharged each year. Will the minister tell us whether or not those 12,000 men will simply maintain the navy at its present strength of 80,000 or whether the establishment is to be increased?

It has been announced that the Canadian Navy is now to be a fleet with large ships. In other words, it is no longer to be what the minister described as a small-ship navy. Perhaps we are all in agreement with the change in policy. I am glad those heavier ships are being acquired, but there is considerable uncertainty as to the government policy with regard to a merchant navy. I take it that in peace time the principal job of our navy will be to protect our shipping. Some one or another of the ministers should explain the policy of the government with regard to a merchant navy. Admiral Brodeur said on November 24, 1943:

> It is incorrect to think that a strong sea power can be obtained by building a strong fighting navy alone. To have real sea power a nation must also have a strong merchant navy.

Last December the Minister of Munitions and Supply advocated Canada having a proper merchant fleet. He said:

> Canada should provide a merchant marine worthy of the dominion's export position.

Two weeks later the Minister of Transport said that he could see no future in Canada going into the shipping business on a big scale after the war. He went on to point out the difficulties of keeping up a merchant navy. Is the minister in a position to state to-day the policy of the government with regard to a merchant navy? It is of the utmost importance to the whole of Canada.

Mr. MACDONALD (Kingston City): I am not in a position, because, while it was suggested the other night by the hon. member for Cape Breton South that the merchant navy be put in uniform and made part of the service navy, that has not been done in this country or in Great Britain. The merchant navy is a totally distinct branch from the service navy. I really have nothing to do with the merchant navy beyond the general interest that I hope every Canadian has in the establishment of a strong mercantile marine.

Mr. GREEN: The minister is not in a position to state the policy of the government with regard to a merchant navy?

Mr. MACDONALD (Kingston City): No, I am not.

My hon. friend asked if the complement of the Canadian Navy would be increased during the year. I may say it will. The total complement at the end of the fiscal year will be, we hope, about 12,000 men more than it was at the beginning of the fiscal year, allowing for discharges and casualties.

Mr. DIEFENBAKER: There are a few matters I should like to bring to the attention of the minister. One of them is a year old and I have not as yet received an answer to it. It has to do with the establishment of an insurance scheme for the armed forces. I am not going into details in connection with it. I did that on June 9, 1943. I then set out the particulars of the scheme in effect in the

United States. Under that scheme some 7,750,000 servicemen in the various armed services of that country had made application for insurance under the system in effect there. Under that system insurance is available for $6.70 a month per $1,000 of insurance. If a similar system is adopted in Canada, those who serve will be able to build up a nest-egg when they return, and if they do not return then those nearest and dearest to them will be assured of a monthly payment over a period of fifteen years on the basis of a $10,000 policy. The amount paid per month is, I believe, approximately $50. When I asked the minister a question last year on this matter he stated that he would take it up with the other ministers for defence and in due course would give an answer. Without going into the particulars to-day, I now ask him whether or not it was taken up; whether the decision of the Canadian government is that it will not bring into effect a system of insurance for the armed services in order to place those who serve in the Canadian army in the same position as are the men who serve in the United States army.

Then there is one other matter. As far as the other armed services are concerned we find to-day many young men who for a period of four or five years since the beginning of the war have been in the armed services, but prior to that time had not been. They have achieved senior ranks to-day. Men who in 1939 ranked as lieutenants or captains command divisions to-day. In the air force the same situation prevails. I think of a young man in my own constituency who was mentioned in the press to-night, Wing Commander Robert Turnbull, D.F.C., A.F.C. In a period of nine months of service he rose from the rank of sergeant-pilot to wing commander, one of the most distinguished records in the Royal Canadian Air Force overseas.

As far as the navy is concerned I have heard it said on many occasions that men from the Royal Canadian Naval Volunteer Reserve are, by the operation of things, denied the opportunity of promotion to the senior ranks. I know it will be said that the position is different in the navy from that in the army or the air force. But I do feel that in so far as the thousands and thousands of young men who to-day serve the navy are concerned, those who are officers but who had not served before the war and who are giving of their best, consideration should be given to enable some of those officers to achieve ranks beyond that which they have been able to secure up to date. I should like to have a statement from the minister of the number of R.C.N.V.R. officers of the rank of commander and senior thereto; the number of senior officers above the rank of captain who have been retired from the service during the last year; and whether there is in the navy any system similar to that referred to the other day by the Minister of National Defence for Air, under which senior officers are being retired because to retain them in their present positions would mean a ceiling on promotions for other officers lower in rank.

There is just another point, with respect to the post-war navy. Naturally, coming from the prairie provinces, I am very proud of the magnificent record made in the navy by the young men from that part of the country who had no previous experience at sea, and I thank the minister for his kind reference in that connection. What about these young men after the war? In the matter of rehabilitation, what about the opportunity for those who so desire to continue in the naval service? There is a very strong feeling in Canada to-day that after the war Canada should maintain a two-ocean navy. The minister may disagree with that view; but Doctor Weir, director of training in the Department of Pensions and National Health, in presenting a report to the House of Commons reconstruction committee on February 23, said he had questioned many thousands of people across Canada and that the people questioned were in favour of maintaining a two-ocean navy and a modern merchant marine, with permanent navy, army and air force personnel.

The question I ask in that regard is this. Is anything being done to-day to the end that before the war is over there will be a plan in that regard? I do not think that is looking too far ahead, for concentration now on the matter of rehabilitation will prevent confusion when the war is over. I realize that no permanent plans can be made; we do not know as yet what will be the course of events. The future must unfold; but the men who serve, the men who have received the technical training to qualify them to fill technical positions in the navy, should be given some hope of securing positions in the navy after the war, and of being rehabilitated in that way. There is not a Canadian who is not proud of what has been done in connection with the expansion of our navy during this war, and of the exploits of our sailors. I wish to say to the minister that any suggestions we make from this side of the house are made in that spirit. I would not want him to take the position he seems to be taking this afternoon, that these suggestions are made in a desire to embarrass him or the navy, or with any improper purpose. When I look back over the past four years and think of the suggestions that have come from this side of the house

which were frowned upon and criticized when they were advanced, but later accepted, I do not feel it necessary to apologize on behalf of the opposition for bringing forward constructive ideas and suggestions.

Mr. WOOD: Was that the tin-pot navy?

Mr. HOMUTH: That is just what we would expect to hear from Brant county and from the mentality representing it.

Mr. DIEFENBAKER: I am not going to answer that remark. If that is the hon. member's contribution to this serious debate I have nothing more to say.

Mr. MACDONALD (Kingston City): The matter to which the hon. member referred last year, namely, insurance for service men, has been under consideration chiefly, I think, by the pay experts of the services, who have studied the United States system and various alternatives. I must tell my hon. friend frankly however, that as yet there has been no decision as to what type of insurance, if any, we should adopt. The matter is still in the study stage by the three services combined.

Then the hon. member wanted to know the number of men in the naval volunteer reserve with the rank of commander and higher, and also the number of men of the rank of captain or higher who were retired in the last year. Probably it will take some hours to secure that information; however, I shall be glad to get it and place it on record for my hon. friend. Then he wanted to know if in the navy there was any policy in regard to retirements similar to that referred to by the minister for air. Beyond the retiring ages fixed by naval regulations—

Mr. DIEFENBAKER: What are those ages?

Mr. MACDONALD (Kingston City): They vary according to rank. In the executive branch the age runs from forty-five to sixty-five; in the engineering branch it runs from forty-five to sixty and, in the accounting branch from fifty to sixty, depending on rank. Beyond these age limits we have no arrangement in the navy as to retirement.

Mr. DIEFENBAKER: Is the retirement automatic in the various age groups?

Mr. MACDONALD (Kingston City): Yes.

My hon. friend then spoke of rehabilitation, and I agree with what he said. I think he had in mind particularly a determination now of the size the navy should be after the war, so that those men who might wish to choose the navy as a career could adopt that type of rehabilitation, if I may put it in that way. The only fixed figure we have as to naval strength shows a total of about 8,700. That was the figure laid down and agreed to by the government in 1941; but, as I pointed out the other day, the staff have prepared various plans showing different strengths for the navy after the war. In most cases the strength suggested exceeds 8,700. It is impossible, I think, to say at this moment exactly what will be the strength of the navy after the war. I hope it will be reasonably strong, reasonably large in number and reasonably adequate for the purposes the Canadian navy might have to serve, but we have not gone beyond that figure. I think that is the only figure that has been laid down by any of the three services; I do not believe the air force or the army have endeavoured as yet to fix definitely what will be their post-war strength.

Mr. HARRIS (Danforth): I should like to pay tribute to the way in which the youth of Canada rallied to the navy at the advent of war. Very often the utterances we hear from the government side of this chamber might lead one to think all this has been done through the navy department itself, but in my opinion that department is being pushed on by the youth of this country who are so anxious to serve in that branch of the service. I congratulate the hon. member for Brandon, who made some observations in regard to graduates of the sea cadet school in that city, many of whom had never seen salt water before joining the navy. I recall that on one occasion I was grounded in Regina when passing through on a plane, and on that Sunday I had the pleasure of seeing in the Presbyterian church across from the hotel an exercise which was being held by four hundred sea cadets of that city. Perhaps ninety-nine per cent of the enthusiastic youth of Canada who enlisted in the navy had never before seen salt water; yet there is something in their make-up which makes them want to serve, and they are doing something really fine for Canada.

I rose particularly to say that we in Toronto have a large enrolment in the naval services. Their exploits and the work they are doing certainly deserves mention in this honourable chamber. Unfortunately in Toronto we do not have a headquarters for naval work. Executives, and those charged with responsibility, find themselves in rented quarters. Some space is given without cost. I would ask the minister to see that that important centre in Ontario may have a headquarters for the navy.

Toronto has given about three and a half acres of land close to the waterfront in the westerly section of the city, near the exhibition grounds. Then, in the eastern portion there is also to be given to the unit looking after sea cadets another strip of ground without cost to the department. That ground, at Kew beach, is bounded on the east side by Kippendavie avenue and on the west by Kenilworth avenue.

We shall be maintaining naval services after the war, and we should have a headquarters in Toronto. I am hopeful that, as to-day, we may train our boys in the sea cadet movement. At present those boys are being trained in school and church basements, or whatever space can be secured. The supervision they receive is the best, but the facilities for training and the space provided are not at all adequate.

Toronto is peculiarly located. It has some sixteen miles of waterfront, the population being placed east, west, and north, with the lake to the south. It is my opinion that the westerly section of Toronto could be served by a headquarters building, provided that building had one or two decks in which the boys could be trained. The present quarters are located some twelve or fourteen miles away from a large section of the city east of the Don river, where there are some 250,000 inhabitants. People from that area would have to travel the entire width of the city to reach the west end. So that when the vote is before the committee for the headquarters in Toronto, with respect to the three and a half acres in the westerly section, I would ask the department to give consideration to establishing in the easterly section at least one or two decks in which the sea cadets might properly be housed and cared for, so that boys in the eastern part of Toronto might have proper training.

I am hopeful that the minister will make some definite statement this session as to the policy of the department. The matter is now before the city council of Toronto. Within the last two or three weeks representations were made by His Worship the Mayor asking what the attitude of the department was with respect to a headquarters in that city. When they are considering those plans I suggest something must be done for the sea cadets. One or two years after joining the cadet movement those boys find their way to the naval services, and we must do everything we possibly can to help them in that regard.

[Mr. J. H. Harris.]

Mr. MacINNIS: Thus far I have not taken part in the debate. I am, however, constrained to say something because of the speeches made this afternoon. I was impressed, as I think all hon. members were, with the very fine statement the Minister of National Defence for Naval Services was able to make in respect of the organization of the navy, and the good work it is doing. I have spoken to many men who have received technical training with the navy since the beginning of the war, and all have been high in their praise of the quality of that training. The more thoughtful ones, however, were wondering to what use the training could be put when the war is over. Before the war they found themselves in dead-end occupations, and they are wondering if they will have to go back to those occupations or none at the end of the war.

I do not believe the answer to that question can be decided altogether by the size of our navy after the war. If I understood the hon. member for Lake Centre correctly, he said that some people in Canada were talking about a two-ocean navy. He did not explain exactly what a two-ocean navy was, and I do not know what the term means. I believe the size of our navy when the war is over will depend upon the obligations we shall assume in the post-war period for the maintenance of world peace. If any organized attempt is to be made to maintain world peace at the close of the war, as I believe there should be and must be if we are to avoid other wars, then undoubtedly Canada will have to assume her share in that regard. We shall have to be prepared to send armed forces, if necessary, to put down aggression, after a decision has been made that aggression exists. I agree with the minister that that cannot be decided to-day, nor can it be decided until we know what post-war conditions will be.

I hope that we may so arrange our economy in Canada that we can harness the energy of the young men in the various armed services and in industry, and give them social objectives that will be as strong as the national objectives they were given in preparing themselves for war. If we do not do that there is very little hope that they will be any better off after the war, regardless of the size of our navy, than they were before the war when we had practically no navy at all.

Mr. ROSS (St. Paul's): I was keenly interested in what was said a few moments ago by the hon. member for Vancouver East. I

hope, however, that if we ever find ourselves going into another war we shall not be in the same position we were in when we entered this one. In passing, may I say that one of the reasons why we were unprepared for the present war was the attitude of hon. members in the party to which the hon. member belongs. Pacifist expressions came from them. Every time estimates were before the committee, hon. members in that group were trying to cut them down. It was only because of the real understanding by men in the Royal Canadian Navy at that time that we did have a nucleus which, at the beginning of this war, was able to expand to such a great extent.

The hon. member for Danforth has just referred to establishing a naval headquarters at Toronto. I agree with him, but I think we must go farther than merely having a headquarters at that point. As I have said before in the committee when discussing the estimates, the people of Toronto have always been keen in their interest in the navy. My suggestion is that we should have not only a headquarters, but something better than that. I say that we should have some real, fighting ships. Perhaps they would not be able to carry guns, but we could have those ships, to be used for training the young men who want to enter the navy. In that way we would have preparedness, and the youth of our country would be trained on real ships.

While I do not believe that we have any desire to detract attention from the winning of the war, at the same time some plans must be laid for after the war. Many men who have never been on ships before, will, after the war is over, not want to go back to farming or various other occupations but will prefer to sail on ships. Has any planning been done in connection with our merchant marine? There is no doubt that with its great lakes and two oceans Canada should have a great merchant marine. We should be able to have our ships operating from Canada to all the ports of the globe, thus presenting great opportunities for a livelihood to men who will be coming out of the navy when the war ends. It is not beyond the bounds of possibility that the St. Lawrence great waterway may become an all-winter route to the sea. Certainly it will have access to the sea for longer and longer periods as the years go by. There should be an opportunity for the men who have served in the navy to enter the merchant marine after the war and make it their life work. Can the minister tell us what planning has been done along that line?

The hon. member for Danforth spoke of the naval barracks which are to be constructed in Toronto and made certain suggestions. Would the minister give us a full outline of what is proposed?

Mr. MacINNIS: Mr. Chairman, I wish this group had the great influence which the hon. member for St. Paul's implies we have or had. It is amazing how a party of seven members out of the 245 could block necessary military preparations if such preparations were necessary, and I may have something to say about that later. But now may I draw to his attention that the smallest appropriation for military services ever voted by parliament within my memory, was voted when the hon. member's own party was in office between 1930 and 1935. At that time his party were, if I remember correctly—and I have been so told on many occasions by people who ought to know—so intent on building up proper armed services in order that this country could meet the world single-handed, that the men in the militia had even to buy their own shoes and other equipment. It was under the Bennett government also, I believe, that what little air force we had was scrapped. This group was not responsible for that. Other conditions arose between 1930 and 1935, and no action was taken to meet them. There was a very serious unemployment situation in this country. Was it because of opposition from this group that nothing was done for the unemployed? Was it because of opposition from this group that when the war came, many people were in such poor physical condition that they were not fit for military service?

The CHAIRMAN: Order. I cannot see how that comes under this item. Armaments might be in order, but not unemployment.

Mr. MacINNIS: Possibly the Chairman is right, but if the hon. member for St. Paul's is to be answered properly I have to deal with these matters in an extensive way.

Mr. ROSS (Souris): On the proper item.

Mr. MacINNIS: We cannot do it on the proper item because hon. members are too vulnerable to raise these matters when the proper item comes, and they are vulnerable on this item, too. I ask them, before they blame this group, to tell the committee why they did not do the things they now say should have been done, when they had the majority to do it during the years they were in office.

Mr. ROSS (St. Paul's): I just want to say in reply that it was because of the pacifist preaching of my hon. friend's group in this country that we were unprepared for war.

The CHAIRMAN: Shall the item carry?

Mr. ROSS (St. Paul's): I should like to have an answer to my question about the naval barracks in Toronto.

Mr. MACDONALD (Kingston City): The question would come more properly under another item, but I can answer my hon. friend now. We have decided to build a naval barracks in the city of Toronto, as was announced last Thursday. I should hope that the sea cadets, as is customary in most places, would have certain facilities in that headquarters. I sympathize with the hon. member for Danforth whose sea cadet corps, I understand, is rather too far away to be able to make full use of the facilities of the new barracks, and he suggested that we might perhaps establish some sort of headquarters on the east side of Toronto. I must tell my hon. friend that we have not in mind at the moment the building of a second barracks or headquarters for the naval service in Toronto. As to the sea cadets we have never endeavoured in the naval service to build special facilities for them, but we have always been happy to make available to them any buildings and facilities that we had. In some cities, like Montreal for instance, the Navy League raised a certain sum of money and was able to build a most handsome addition to an existing building for their sea cadets. I am sorry to have to tell my hon. friend that as far as the navy is concerned I do not think we could undertake, apart from providing some accommodation in the barracks, to build or otherwise acquire any accommodation for the sea cadets, much as I am interested in the movement and deeply as I appreciate the good work the movement is doing throughout Canada.

Item agreed to.

DEPARTMENT OF NATIONAL DEFENCE FOR AIR

The CHAIRMAN: I understand that the parliamentary assistant to the Minister of National Defence for Air has some statements to make.

Mr. MACMILLAN (Queens): Mr. Chairman, with the consent of the committee I should like to place on *Hansard* the answers to certain questions which were asked during the discussion of estimates of the Minister of National Defence for Air (Mr. Power). The leader of the opposition (Mr. Graydon) asked a question with regard to sergeant-pilots on leave without pay at civilian operated schools. His questions and the answers are as follows:

Question:

1. How are sergeant-pilots chosen to be on leave without pay for civil-operated schools?
2. What is the basis?
3. How many of them are there?

Answer:

1. Staff pilots on leave without pay are now employed at air observers schools only. Procedure for choosing staff pilots is as follows:

A request is received from the manager of an air observers school for a certain number of pilots. Instructions are issued by air force headquarters to the commanding officers of secondary flying training schools to select this number of suitably trained graduates. By "suitably trained" is meant trained on twin-engine aircraft and above average in navigation. Personnel so selected by their C.O.'s are posted to the air observers schools on service strength. If they prove satisfactory, and acceptable to the civilian manager, after a reasonable period of service, they are requested to make application through the R.C.A.F. chief supervisory officer at the school and the civilian manager to be released on leave without pay. The application is reviewed at air force headquarters, and if satisfactory, the pilot is struck off strength on leave without pay.

Occasionally, the civilian manager of an air observers school will request the services of a specific pilot who has been employed on staff or instructional duties at an R.C.A.F. training unit, and who has a large number of flying hours to his credit. Each of these cases is reviewed strictly on its merits, with due regard for the individual's value to the R.C.A.F. in that capacity at that particular time.

All pilots on leave without pay at civil-operated schools are subject to immediate recall at any time.

2. Answered in question 1.

3. Figures for sergeant-pilots alone are not immediately available. The total number of staff pilots on leave without pay at eight civil-operated air observer schools at 29th February, 1944, was 596. A very few might be officers, the remainder being non-commissioned officers.

The hon. member for Peterborough West (Mr. Fraser) asked a question with regard to discharges and retirements, and the medical reasons therefor. The answer is as follows:

Discharges and Retirements—Medical Reasons
September, 1939-February, 1944, inclusive

1. A total of 7,872 R.C.A.F. personnel have been medically boarded ApBp (medically unfit for any form of service) from September, 1939, to February, 1944, both inclusive. Most of these personnel have already been discharged or retired—a few cases are still pending.

2. Table I provides a breakdown of the 7,872 cases by diagnosis for male and female personnel separately.

Table I

Approved Medical Boards—ApBp—R.C.A.F. Personnel
September, 1939-February, 1944, Inclusive

Diagnosis	R.C.A.F. (Male) No.	%	R.C.A.F. (W.D.) No.	%	Total Number
Nervous and mental disorders	2,392	32·2	196	44·0	2,588
Diseases of digestive system	849	11·4	14	3·1	863
Foot conditions	281	3·8	13	2·9	294
Ear conditions	213	2·9	7	1·6	220
Injuries	487	6·6	13	2·9	500
Eye conditions	213	2·9	9	2·0	222
Respiratory diseases	609	8·2	22	4·9	631
Heart, arteries and rh. fever	689	9·3	28	6·3	717
Hernia	114	1·5	1	0·2	115
Tuberculosis (all forms)	355	4·8	24	5·4	379
Arthritis and rheumatism	232	3·1	3	0·7	235
Other diseases and conditions	992	13·3	116	26·0	1,108
Total	7,426	100·0	446	100·0	7,872

3. The figures in table I include both officers and other ranks.

The hon. member for Souris (Mr. Ross) asked a question with regard to airframe overhaul contractors. The answer is as follows:

Overhaul Contractors.

In answer to the House of Commons query regarding the number of civilian contractors engaged in overhaul and repair of aircraft for the R.C.A.F. the following list shows:

(a) Airframe overhaul contractors
(b) Engine overhaul contractors
(c) Miscellaneous repair contractors.

(a) Airframes

Aircraft Repair Ltd., Edmonton, Alta.
Canadian Pacific Air Lines, Vancouver, B.C.
Canadian Car & Foundry Ltd., Amherst, N.S.
Central Aircraft Ltd., Crumlin, Ont.
Clark Ruse Ltd., Dartmouth, N.S.
Clark Ruse Ltd., Moncton, N.B.
Coates Ltd., Vancouver, B.C.
Cub Aircraft Corp., Hamilton, Ont.
Fairchild Aircraft Ltd., Longueuil, P.Q.
Leaven Bros., Toronto, Ont.
M. & C. Aviation Ltd., Prince Albert, Sask.
MacDonald Bros., Ltd., Winnipeg, Man.
Midwest Aircraft Ltd., Winnipeg, Man.
Noorduyn Aviation Ltd., Montreal, P.Q.
Patterson & Hill Ltd., Toronto, Ont.
Prairie Airways, Moose Jaw, Sask.
St. Maurice A/C Repair, Cap de la Mad., P.Q.
T.C.A., Malton, Ont.

(b) Engines

Aircraft Repair Ltd., Edmonton, Alta.
British Aero Engines Ltd., Montreal, P.Q.
British Aero Engines Ltd., Sea Island, B.C.
Canadian Airways Ltd., Winnipeg, Man.
Canadian Pratt & Whitney Ltd., Longueuil, P.Q.
Canadian Wright Ltd., Montreal, P.Q.
Central Aircraft Ltd., Crumlin, Ont.
DeHavilland A/C of Can. Ltd., Toronto, Ont.
Laurentian Air Services, Ottawa, Ont.
M. & C. Aviation Ltd., Prince Albert, Sask.
Midwest Aircraft Ltd., Winnipeg, Man.
Ottawa Car & Aircraft Ltd., Ottawa, Ont.
Standard Aero Engines Ltd., Winnipeg, Man.
T.C.A., Winnipeg, Man.
Leaven Bros., Toronto, Ont.

(c) There are 110 firms engaged on overhaul of components such as instruments, electrical equipment, mechanical equipment such as oleo legs, etc., and recapping of tires.

The hon. member for Cape Breton South (Mr. Gillis) asked with regard to the admission price to the theatre at Sydney Air Station. The answer is as follows:

(a) Price of admission is 25 cents. This price was agreed to by station personnel until such time as a loan obtained from outside sources for the purpose of installing the present moving picture equipment has been liquidated.

(b) Revenue from the theatre is intended to cover only operating costs and liquidation of the loan over a reasonable period. If there should be any profit, it becomes part of station non-public funds, to be used for the benefit of station personnel. Price of admission is subject to review from month to month, and no complaints have been received on the station regarding the present admission price.

(c) Present price of admission is not considered exorbitant, as the quality of films shown is comparable to commercial theatres in Sydney, where the admission price is approximately 45 cents.

The hon. member for Lake Centre (Mr. Diefenbaker) asked a question with regard to annotated positions and the number of officers who thereby secure exemption from income tax. The questions and answers are as follows:

1. Q. The minister possibly can give us an answer that will cover the situation by telling us the number of administrative officers who fill annotated positions and who thereby secure exemption from income tax although they are not actually engaged in flying.

A. Only general list positions are annotated and in the event of a non-flying list person filling a general list position which is exempt from income tax, the non-flying list person is not exempt from income tax by reason of the position annotation.

2. Q. And will the minister give the committee a list of the annotated positions?

A. It would take considerable clerical work to complete a list of all annotated positions but it is felt that the following definition of the policy covering position annotations will suffice:

(a) The following positions are annotated:

(i) All general list positions established for aircrew duties.

(ii) The commanding officers of stations where the primary function is flying operations.

(b) The following positions are NOT annotated:

(i) Any position at air force headquarters or the headquarters of a command, group or wing.

(ii) The commanding officers of units whose primary function is not flying, e.g., repair depots, wireless schools, initial training schools, equipment depots, etc.

(iii) General list positions in ground instructional schools or ground instructional sections of a flying school, second in command of stations, or any other positions which do not require the performance of continuous aircrew duties.

Questions were asked by various members with regard to civilian flying schools. The answer is as follows:

Re: Civil Flying Schools

E.F.T.S. When it was decided that flying clubs should be asked to sponsor E.F.T.S. pains were taken to appoint a committee consisting of the most competent and experienced people available. This committee included: Colonel K. S. McLaughlin, then Acting Deputy Minister of National Defence; Air Marshal G. M. Croil, then C.A.S.; Brigadier Orde, Judge Advocate General; Mr. M. A. Seymour, K.C. and Mr. C. W. Nicholl, C.A. as representing the Canadian Flying Clubs Association; Mr. Henry Borden, K.C.; Mr. H. G. Norman, C.A., now Financial Adviser to the B.C.A.T.P. This committee drew up a form of contract as between the Crown and the individual operating companies, in most cases sponsored by the flying clubs. It had no experience to draw upon; yet the form of contract has functioned fairly satisfactorily with the exception that the remuneration proved somewhat generous and took the following form:

(a) Savings on management fee.
(b) Profit per flying hour.
(c) Savings on gasoline and oil.
(d) Savings on crash reserve.
(e) 25 per cent savings on operation and maintenance.

The contract provided for an adjustment between the contractual parties at the end of each 24 weeks period to be based on the experience of the previous 24 weeks.

The schools were originally opened to provide for a pupil population of 48 and all were from time to time increased to a pupil population of 90, 120, 180 or 240.

These increases detracted from the value of the cost of operation experience gained when endeavouring to apply these in adjusting the allowances by the crown.

The various sources of profit or savings which I have mentioned also tended to complicate the situation and this was brought out at the enquiry before the parliamentary committee.

In an endeavour to simplify the situation, the operating companies voluntarily agreed to reduce their flying hour profit from 50 cents to 25 cents and later to eliminate it.

They also agreed to forgo profits or savings on gasoline and oil as well as on their crash reserve. No fees were paid to directors and the only disbursement made out of profit was the 5 per cent dividend on the subscribed capital.

All surplus funds accruing in the hands of the operating companies were invested in non-interest bearing certificates of the Dominion of Canada.

When the contracts were renewed as on the 1st April, 1943, the above concessions were legalized, management was included in operation and maintenance and all savings on operation and maintenance were made divisible as to 80 per cent and 20 per cent between the crown and the companies, instead of 75 per cent and 25 per cent as heretofore.

These concessions or modifications have resulted in considerable savings to the crown. At the same time the subscribed capital of these companies was refunded to shareholders out of surplus in the hands of the companies, thus eliminating the dividend.

The companies have now only one source of profit which is the savings on operation and maintenance and the contract declares ". . . that any savings or profits accruing shall not be distributed and shall be held by the company in a reserve account until the termination of the contract and shall then be paid to a flying club approved by the minister, failing which they shall revert to the crown."

During the operation of these contracts, the pro forma or basis for payment to these companies have been carefully revised at the end of each 24 weeks period and despite the revision downwards per pupil population intake, the companies, through increased efficiency in operation, have continued to make savings, some of them more than others, depending upon the efficiency in operation, the terrain in which they function, etc.

The modifications in the terms and conditions of the contract and the concessions demanded from time to time have been immediately and generously conceded by the operating companies who have declared that they are more anxious to do a good job than to make profits. Their only desire is that upon completion of the contract, each school will be able to hand over

to its sponsoring flying club sufficient funds to rehabilitate its club so that it may in the post-war period continue in advancing civil aviation in Canada.

A special form of charter and by-laws under part II of the Dominion Companies Act have been drawn up and approved by my department under which any club benefiting from these profits must be incorporated and which protect such profits in the hands of the flying clubs from being exploited.

A meeting of managers of all E.F.T.S. was held lately when they agreed to recommend to their directors that all and any profits or savings, accruing from the operation of their school and in turn to their sponsoring flying club, be limited to $5,000 per annum. Resolutions of the board of the various operating companies to this effect are now being received.

Of the 80 per cent savings in operations $1,951,404.40 has actually been returned to the crown and a further $1,250,000 is now available for return, for which demands are being sent out this month, in accordance with the terms of the agreement.

Up to 2nd January last, 38,775 pupils have graduated from E.F.T.S. at an average cost of $911.55 per pupil.

Statement Showing Financial Situation Between Companies Operating Elementary Flying Training Schools and the Crown as on 2nd January, 1944

* All Savings revert to the Crown.

† Vancouver Air Training Co., Ltd., and Boundary Bay Flying Training School, Ltd., have undertaken to surrender all Savings accruing from the operations of No. 8, Vancouver, B.C., No. 18, Boundary Bay, No. 33, Caron, and No. 24, Abbotsford, B.C., with the exception of $30,000.00 set aside for Aero Club of B.C. (sponsoring Club) subject to approval of Minister.

Note (1)—From the surplus arising through excess of Allowances over Expenditures the subscribed Capital of the Operating Companies has been refunded and necessary working capital provided.
Any surplus funds remaining in the hands of the Operating Companies over Working Capital requirements varying with the size of the School are invested in Dominion of Canada Non-Interest Bearing Certificates.

Note (2)—No. 1—Malton was transferred to No. 31 E.F.T.S. De Winton, Alta.
No. 3—London, Ont., closed 3rd July, 1942.
No. 8—Vancouver, was transferred to No. 24 E.F.T.S. Abbotsford, B.C.
No. 14—Portage la Prairie, Man., transferred to No. 25 E.F.T.S. Assiniboia, Sask.
No. 16—Edmonton, Alta., transferred to No. 32 E.F.T.S. Bowden, Alta.
No. 18—Boundary Bay, B.C., transferred to No. 33 E.F.T.S. Caron, Sask.
No. 21—Chatham, N.B., transferred to No. 26 E.F.T.S. Neepawa, Man.
No. 22—Ancienne Lorette, Que., closed 3rd July, 1942.

Note (3)—Out of these sums the Companies have paid Income Tax and dividends at the rate of 5% per annum up to 31st March, 1943 (date of Renewal and Modification of Agreement) when subscribed capital was refunded out of surplus earnings. Any residual amount, in accordance with paragraph 5 of Schedule II of Agreement, "..... shall not be distributed and shall be held by the Company in a reserve account until the termination of the Contract and shall then be paid to a Flying Club approved by the Minister, failing which it shall revert to the Crown."

24th May, 1943.

* Half Size School (280).

REVISED: 6th December, 1943.

Mr. STIRLING: Mr. Chairman, I would draw your attention to the fact that this is a most unusual procedure. Just a moment or two before six o'clock these questions are being answered, or rather the answers are being placed on *Hansard*. I would imagine that it might be well that the hon. member who asked a question might want to ask something further with regard to it. We are in the midst of a discussion of another minister's estimates when this matter is introduced. I wonder whether provision can be made for an opportunity when the Minister of National Defence for Air is in the house, even though the Minister of National Defence for Naval Services might be piloting his estimates through the committee at the time, for certain further questions to be asked if it is found necessary.

The CHAIRMAN: I would have no objection.

Mr. MacINNIS: To put these answers on *Hansard* requires the unanimous consent of the house. This is a most unusual way to answer questions that have been asked during the discussion of a minister's estimates. We are following the procedure now of answering questions put on the orders of the day, when a written answer is submitted. I have never known this procedure to be followed before with questions asked on items of estimates.

Mr. POWER: The only point is that I am between the devil and the deep sea to know how long I am to wait for an opportunity to answer the questions that have been put to me. I have other business to do and so has my assistant. I am quite willing to come into the house at any time and read the answers into *Hansard*. But these were questions asked by members of the house. If the house wants them read, I have no objection. I agree that it is a most unusual procedure, but it was done simply to expedite the business of the house.

Mr. DOUGLAS (Weyburn): Yesterday the hon. member for Lake Centre asked the Minister of National Defence for Air a question with regard to the closing of airports and the basis on which this is being done. It would save a lot of discussion and correspondence if the minister would make a statement on the matter during the course of this debate.

Mr. POWER: I am willing to commence all over again at any time, if hon. members want to start up again on my estimates, because there is so much good for me to explain to the people of Canada about the air force.

I am in the judgment of the committee as to putting these answers on *Hansard*, but I think the committee will readily agree that I should not be asked to wait day after day for the moment that some hon. members might agree would be fitting for me to give my answers to the questions that have been asked. I am willing to suggest that the answers stand over and be read into the record to-night or at any other time that is convenient, or if the committee is willing to give its consent to their being placed in the record, the questions can be asked later. I have no objection, but I should like to know when the questions are going to be asked so that I can be here.

Mr. PERLEY: Is the minister not going to make a further statement with respect to the closing of some of these airports? I understood that on March 20 he would.

Mr. POWER: I had not intended making any statement in particular. I have made three so far and I shall have to look them up to see that they do not contradict one another. I have on three occasions told the committee that schools were going to be closed. I have no objection to saying it again at any time, but I hope the committee will not ask me to enter into a discussion of the matter when each individual member asks questions as to the reasons for closing any particular schools. Let me say, however, that there is no reflection on any community or on the management of any school, nor is it intended that anybody should be offended by our closing schools. I can say that.

Mr. PERLEY: No, but there was a statement the other night about closing twenty-eight schools throughout Canada, and telegrams are coming—I have one in my hand—asking for information. I should like to know if we are to get that information.

Mr. POWER: If the committee wishes to discuss it I shall be only too willing. I have no objection at all, at any time, to having a full discussion. I should like every hon. member who feels himself aggrieved by the closing of any school to make a speech. As I said two years ago, every hon. member who thought there should be an air-training establishment in his constituency could make a speech about it. That would satisfy everyone. Similarly everyone who thinks the school in his constituency should not be closed might make a speech, and I would answer all.

Mr. PERLEY: It is the disposition of the properties they are asking about.

Mr. STIRLING: I raised the question not from the point of view of making objection to these answers being placed on *Hansard* but to call attention to the fact that we are setting a precedent. The matter arose in this way. At the close of the discussion on the estimates of the minister for air, rather than hold the whole matter over, he consented to give answers to certain questions, possibly during the discussion of the estimates of the minister for naval services, and that was consented to, in a very cooperative spirit, I may say. We did not want to hold the minister longer. I now call attention to the fact that this very unusual procedure is being followed, and I think that during further discussion of the naval estimates, if it be convenient for the minister for air to be in his seat, those whose questions have been answered might have an opportunity of asking supplementary questions if they desire to do so. I do not know what these answers contain. I shall know when I read them in *Hansard.*

Mr. POWER: The minister for naval services says I should not cross his bows and I do not want to.

Mr. STIRLING: It was that minister's own suggestion that the hon. gentleman should cross his bows.

Mr. POWER: I am quite agreeable to the suggestion of the hon. member, and if the committee desires we can withdraw the request for consent of the committee. If the committee would prefer to look at the answers and then ask further questions—

Mr. STIRLING: I suggest that these answers be allowed to go on *Hansard* and at some time convenient to the minister for air and to the minister for naval services, supplementary questions can be asked.

The CHAIRMAN: This is an unusual bill and certain procedure has been adopted which is unusual, to say the least, though unanimous consent has been given in this instance. This has been a precedent, and I would point out that the answers were given in writing and put on *Hansard,* unlike other instances in which answers had been given orally.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Progress reported.

MUTUAL AID

TABLING OF AGREEMENTS BETWEEN CANADA AND THE UNITED KINGDOM, THE U.S.S.R, AND AUSTRALIA

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, by arrangement with the other governments concerned, I desire to lay on the table at this time, copies of general Mutual Aid agreements which have been concluded between the government of Canada and the governments of the United Kingdom, the Union of Soviet Socialist Republics and the Commonwealth of Australia. The agreements with the United Kingdom and Soviet governments were signed on February 11 and the agreement with Australia was signed on March 9. Similar agreements are in process of negotiation with other governments or authorities receiving supplies from Canada in significant volume under the Mutual Aid Act, notably China and the French committee of national liberation.

These agreements set forth the general terms and conditions under which war supplies are being transferred under the Mutual Aid Act to the three countries which have so far received the largest quantity of such supplies from Canada. When the Mutual Aid legislation is before the house there will be an opportunity for discussing the terms of these agreements, if the house so desires. At this time I wish only to give a general explanation of their purpose and contents.

The preamble of the Mutual Aid Act declares that "it is essential to the defence and security of Canada and to the cause of world freedom that Canada should make the utmost contribution to the victory of the united nations". It continues that "it is necessary that the products of Canadian war industry be made available not only for use by Canadian forces, but also to other united nations, in accordance with strategic needs, in such manner as to contribute most effectively to the winning of the war." The preamble concludes that "it is expedient that the conditions upon which Canadian war supplies are made available to other united nations should

not be such as to burden post-war commerce, or lead to the imposition of trade restrictions, or otherwise prejudice a just and enduring peace". Since early in the war, the government has taken the position that the accumulation of large war debts was contrary to the public interest. This policy has been endorsed by parliament on several occasions. It is to be noted that a similar policy was adopted by the government of the United States with the passage of the Lend-Lease Act on March 11, 1941, nearly nine months before the United States entered the war. The United Kingdom, which is the third large provider of munitions and war supplies for the use of other united nations, has pursued a parallel policy in providing supplies to allied goverments unable to pay for them.

These agreements set forth the general terms and conditions under which effect is being given to our policy. They are in some respects parallel to the Lend-Lease agreements which have been concluded by the government of the United States with many of the goverments receiving supplies from that country under the Lend-Lease Act. It is to be remembered, however, that the Lend-Lease Act was adopted when the United States still retained her neutrality, whereas the Mutual Aid Act was passed when Canada had been at war for over three and a half years. The Lend-Lease Act was based on the conception that the defence of the United States would be furthered by the provision of supplies on other than a cash basis to countries at war with the axis. The Mutual Aid Act was based on a realization that the provision of materials to the common cause was no less vital and no less a duty than the provision of fighting men.

The preamble of these agreements sets forth their purposes in language similar to that used in the preamble of the Mutual Aid Act which I have already quoted. I do not propose to analyse the agreements at any length. They are designed to make clear that the recipient governments accept these purposes and will cooperate in their fulfilment. Article II of each agreement contains a pledge of reciprocal aid to Canada. Article X (article IX in the Soviet agreement) contains a mutual undertaking to pursue international economic policies designed to implement the economic objectives defined in the Atlantic charter and accepted by all the united nations, policies which are reflected in the far-seeing philosophy of the Mutual Aid Act. These policies will make it possible for Mutual Aid to prove its post-war value in enabling trade to thrive without the barriers which huge war debts would have imposed.

It has been our purpose in instituting the Mutual Aid procedure to leave at the end of the war no indeterminate obligations arising from the provision of war supplies by Canada, which would have to be settled by subsequent negotiations. By article VI of our Mutual Aid agreements it is laid down that the government of Canada will not require the recipient government "to redeliver to the government of Canada any war supplies delivered under this agreement except as specifically provided" in articles VII, VIII, and IX. Article VII provides that title to cargo ships furnished under Mutual Aid shall remain with the government of Canada. Article VIII provides that supplies which, at the end of hostilities in any major theatre, have not yet reached their destination may revert to Canadian ownership. Finally, article IX provides that in certain circumstances the Canadian government may request the transfer of specified types of supplies still serviceable at the end of the war to other users, for relief purposes or for Canadian forces still serving overseas, and that we may also ask for the return to Canada of serviceable aircraft and automotive equipment if required for use at home.

The agreements with the governments of the United Kingdom and Australia are identical in substance. I should explain to the house the reasons for certain minor differences between these two agreements and the agreement with the Soviet government.

Since the German attack on the Soviet Union the war supplies provided to the Soviet government by her allies have been settled by a special procedure which is employed in no other case. Annual protocols have been signed between Russia on the one hand and the supplying countries on the other hand, to which are attached schedules listing the stores which each supplying country undertakes to furnish during the period of one year. The parties of the first two protocols were the United States, the United Kingdom and the Soviet Union. Canada is a direct party to the current third protocol which covers the supplies being furnished to Russia during the year which will end on June 30 next. Direct Canadian participation in this third protocol was made possible by the adoption of the Mutual Aid Act at the last session. These protocols are of necessity very secret in character, since they contain information which would be of much value to the enemy.

Article III of the Soviet agreement refers directly to the protocol procedure, and therefore differs somewhat from article III of the other agreements. We have a full opportunity, in the course of the negotiation of the protocol, to secure whatever information is required to support the requests of the Soviet authorities. Article VII in the United Kingdom and Australian agreements is not repeated in the Soviet agreement. It relates specifically to cargo ships, and we have not found it possible to provide the Soviet government with any cargo ships; hence the inclusion of the article in the Soviet agreement is unnecessary. These are the only differences of importance between the agreements.

I now table copies of the agreements.

Mr. GORDON GRAYDON (Leader of the Opposition): May I ask the Prime Minister a question with respect to the statement? Do the agreements cover the—

Mr. BLACKMORE: Louder, now.

Mr. GRAYDON: Of course, that was just a preliminary. Do the agreements which are tabled and about which the Prime Minister has made some comment by way of clarification of certain clauses cover the period from the beginning of our Mutual Aid arrangements as envisaged by the passing of the legislation last year until the end of June? Do they cover not only last year and the current year but the succeeding year which will no doubt be covered by a further vote in the house when the legislation comes up?

Mr. MACKENZIE KING: The agreements relate solely to such matters as have been negotiated under the Mutual Aid Act which was passed at the last session. They do not go into the past. They relate to the present legislation.

Mr. GRAYDON: I realize that, but if we pass legislation at this session having to do with further Mutual Aid will those agreements cover that period?

Mr. MACKENZIE KING: The agreements are of a general nature and do not relate to specific allocations. Some of the agreements will continue to operate, but the country is not committed beyond any appropriations this parliament has made or may make.

Mr. GRAYDON: That was the point I had in mind.

Mr. GREEN: If I may ask one further question, are there agreements with any other nations; for instance, is there one with China?

Mr. MACKENZIE KING: Perhaps my hon. friend missed what I said. There will be two further agreements very shortly, one with China and the other with the French committee of national liberation.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF NATIONAL DEFENCE FOR NAVAL SERVICES

2. Pay and allowances, $114,698,835.

Mr. NICHOLSON: When we were on the first item the hon. member for Lake Centre raised the question of promotions. I note that at page 1190 of *Hansard* the Minister of National Defence for Air is reported as having said:

> As I said, there is a thick ceiling of comparatively young men at the top. Through no fault of their own, these men have not been able to see active service, and it was hoped that men who had seen active service would gradually get to the top as they returned from overseas.

And later he said:

> I think the country will agree with me in this—because it is imperative that we show these young men that there is a way through this ceiling by which they can get to the top. That is the general policy.

I could not hear what the minister said in reply this afternoon, but I understood him to say there was no similar policy in his department. I believe the statement made by his colleague has caught the imagination of the people of this country. Many young men in their early twenties have distinguished themselves in the air, and the same thing is true in the naval service. I should think that if some of these young men who have had distinguished service at sea could find it possible to rise to the top, it would be a very good thing for the morale of the whole service. Could the minister make a further statement in regard to the general policy concerning promotions?

Mr. MACDONALD (Kingston City): I do not know that I can add a great deal, except to say that training in the naval service requires a great length of time, I should think probably longer than in either

of the other two services. That is inevitable, from the nature of the work naval officers have to undertake. They have to be trained not merely theoretically, and on land; there is a certain type of training they can get only at sea, through experience. They have to sail under all sorts of conditions, in all kinds of ships, meeting all kinds of weather, in order to get the training to fit them for their tasks. As I said, we have certain age limits in the naval regulations beyond which an officer cannot go, but other than that we have adopted no policy such as the air force seems to have adopted. I do not think I would want to deviate very much from the policy we have followed in the past. I will say to my hon. friend that from time to time officers are discharged from the naval service. It is an unpleasant duty of mine every week, and sometimes several times a week, to sign memoranda declaring that certain officers are no longer required in the naval service, though usually that is for reasons other than age. As I have said, the age factor is governed by the regulations.

Mr. CASTLEDEN: What are the present facilities for giving the ratings actual sea training? Have any ships or destroyers been assigned to that work recently, and what has the minister in that line now on the east and west coasts?

Mr. MACDONALD (Kingston City): I am glad my hon. friend asked that question. For a time we were short in training ships, because every ship that could be put into active service we put on the sea, but now some of the ships are becoming old; some have passed the stage where it pays to repair them, and these are being used as training ships. I do not know the exact number at the moment, though I can get it for my hon. friend; but I know that on the great lakes we have several training ships, not of great size but nevertheless ships in which men can get considerable training in engine work, helm work and all the other work that goes with the running of a ship. On the east coast we have some ships that are a good deal larger; and as time goes on of course the number of training ships will increase almost automatically, because more and more ships will become worn out and useful only for training purposes.

Mr. ROSS (St. Paul's): Are the ships on the great lakes fighting ships?

Mr. MACDONALD (Kingston City): I doubt if any of the ships on the great lakes were ever ships of war in the true sense, but I think some of them are as long as 140 feet. They are fairly large, and men can get a good deal of ship experience on them.

Mr. CASTLEDEN: What has been the disposition of the destroyers which Canada received from the United States, I think in 1940 or 1941? Are any of those being used as training ships now, or are they still in active service?

Mr. MACDONALD (Kingston City): Some of them are being used as training ships.

Mr. CASTLEDEN: The minister could not say how many?

Mr. MACDONALD (Kingston City): No, I have not the figures before me.

Mr. ROSS (St. Paul's): Before the dinner recess I asked the minister whether there was any liaison between the merchant marine and the navy with respect to the post-war period. I realize that at the moment we must put our minds on the war and nothing else, but I was wondering if any plans were being developed along that line.

Mr. MACDONALD (Kingston City): As I have said before, I cannot undertake to speak for the merchant navy, which would come under the Department of Transport. There is no doubt, as my hon. friend well knows, that we have built in Canada a very large number of merchant ships, and after the war at least some of these ships could be used as the nucleus of a merchant marine. To give a direct answer to my hon. friend, however, no policy has been formulated by the government with regard to the creation of a Canadian mercantile marine after the war.

The CHAIRMAN: Shall the item carry?

Mr. MACDONALD (Kingston City): Before the item carries, the hon. member for Edmonton East (Mrs. Casselman) asked a question with regard to subsistance allowances both within and without Canada. I intimated that I thought it would be better to place a table on *Hansard,* because there are a great many figures. With the consent of the committee I should like now to place on *Hansard* a table showing the allowances in lieu of lodgings, provisions, fuel and light, authorized by Canadian naval regulations.

The CHAIRMAN: By unanimous consent of the committee.

Mr. MACDONALD (Kingston City): The table is as follows:

DEPARTMENT OF NATIONAL DEFENCE (NAVAL SERVICE)

Rates of Allowances in Lieu of Lodgings, Provisions, Fuel and Light authorized by Canadian Naval Regulations

Rank or Rating	Canada (See footnotes)		U.S.A.			United Kingdom and Northern Ireland		Newfoundland	West Indies, Bermuda and North American Continent (other than U.S.A. or Canada)	Elsewhere
			Washington		Elsewhere in U.S.A.	London	Outside London			
	(*)	(†)	1st month	Thereafter						
	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.
Rear Admiral and Commodore, 1st Class	4 10	3 10	8 00	7 00	5 00	4 00	3 00	3 00	5 00	4 00
Commodores, 2nd Class	3 85	2 10	8 00	7 00	5 00	4 00	3 00	3 00	5 00	4 00
Captains	3 10	2 10	8 00	7 00	5 00	4 00	3 00	3 00	5 00	4 00
Commanders	2 85	1 85	8 00	7 00	5 00	4 00	3 00	3 00	5 00	4 00
Lieutenant-Commanders	2 60	1 70	8 00	7 00	5 00	4 00	3 00	3 00	5 00	4 00
Lieutenants	2 35	1 70	7 00	6 00	5 00	4 00	3 00	3 00	5 00	4 00
Sub-Lieutenants, Commissioned Officers from Warrant Rank and Subordinate Officers.	2 10	1 70	7 00	6 00	5 00	4 00	3 00	3 00	5 00	4 00

Nursing Sisters	1 70	1 70	7 00	6 00	5 00	4 00	3 00	3 00	5 00	4 00
Ratings	1 45	1 25	5 00	3 75	3 50	2 50	2 00	1 75	3 50	2 25

NOTES:—

* Officers entered in service prior to 8th May, 1942, may continue to receive these pre-war rates until they elect to receive the new rates of dependents' allowance. Ratings attested on or before 31st May, 1942, receive these "pre-war" rates.

† Officers entered in service on or after 8th May, 1942, receive these "new rates" also officers who elect as above. Ratings attested on or after 1st June, 1942, receive these "new rates".

The hon. member for Lake Centre (Mr. Diefenbaker) asked for the number of naval reserve officers of the rank of commander and above. There are thirty-seven confirmed commanders and above and sixty-three acting commanders and above, or a total of 100 officers of the R.C.N.V.R. who have obtained the rank of commander and above. The same hon. member asked how many officers of the rank of captain and above have been retired in the past year, including all three branches of the service. As yet none has been actually retired, but two captains of the Royal Canadian Navy are now on leave preparatory to retirement.

The hon. member for Peterborough West (Mr. Fraser) asked me just before six o'clock what the navy had sold by way of salvageable material in the last year. The navy sold in that year salvageable material which realized $60,533.33. This material consisted of scrap metal, clothing, rags, kitchen by-products, equipment, machinery and miscellaneous items, all of which were sold through the acting salvage officer in the Department of Finance.

Mr. BROOKS: I have a question to ask, but before doing so I should like to add a brief word to what has been said in praise of the navy. It has been very pleasant listening to the words of hon. members from all sections of Canada, but we from New Brunswick have said nothing. I think that can be attributed to our great modesty. However, it does not mean that we are not proud of the men in the navy who have come from New Brunswick. Possibly we take the sea as a matter of course. A great many of our men earn their living from the sea, not only in time of war, as at present, but in peace time.

We have our full share of men in the navy and more than our share in the merchant marine. We are very proud indeed of the men from our native province who are in both these services. I would say in the words of our great Canadian poet, Bliss Carmen, who was also a New Brunswicker:

> Our hearts go sailing outward
> With the ships of grey Saint John.

My question is in relation to rehabilitation. I believe the hon. member for Souris brought up the matter a few days ago and, in reading *Hansard* I find that it was discussed under both the army estimates and the estimates for the air force. As a matter of fact, it was also discussed by the hon. member for St. Paul's. I should like to read what was said with respect to the men who are discharged from the army, and I assume the same applies to the navy at the present time. The hon. member for St. Paul's mentioned some cases in which he thought a rehabilitation allowance should be given. Replying to the hon. member, the Minister of National Defence (Mr. Ralston) said, as reported at page 622 of *Hansard:*

> My hon. friend will understand that the rehabilitation grant is exactly what it states, namely a grant for the purpose of refitting a man into civilian life.

I do not think anyone can have any argument, as far as that is concerned. Then he goes on to say:

> The assumption is that if he takes the option and requests a discharge, he has somewhere to go, some occupation at which he may be engaged. Otherwise he would not be asking for the discharge.

My experience has been that all men asking for discharge have not some place to go. There are other reasons for which they ask for discharge. I have found in the army—and I know this must also be the experience in the navy and the air force—that many men ask for discharge on account of sickness in their families. This has often come to my attention as a commanding officer. There are also matters of family trouble, where the head of the family may find that it is better for him to join his family than to stay in the army. Very often the mother in a family is dying, and the father has to go back to look after his children. Then in many cases, too many in fact, it is found that the wife has deserted the children and that someone must look after them. For every case where a man asks for a discharge to go back to a job I am satisfied there is another case where he asks for a discharge for one of the other reasons I have mentioned. These men are not going back to jobs, and their case is a very difficult one. They are being continually met with.

There is also the question of men who are not fit for overseas service. Hundreds of them —I think I would be safe in saying thousands of them—are to be found at bases in England, and at depots and other places in Canada, who really have not very much to do in the army. Their position becomes irksome, and they are asking for discharges. But no rehabilitation allowance is provided for them, and they continue in the army.

I believe if some agreement were made, or some programme arranged among the three departments for the release of these men from service, there would be a very large sum of money saved to the country, and justice would be done to the men. Many men are suffering injustices at the present time, because they are simply being told, "You have asked to leave the army. You must have a job to go back to." Accordingly, out they go, without

any allowance of any kind. I hope that there may be some programmes to look after these men.

As I said a moment ago, anyone who has had anything to do with the administrative work of the different units, in all branches of the services, will come across cases of this kind almost daily. Many of these men who are in the different depots and other base units become tired of the work in the army, and if they go back to their homes they find, if they have been business men, that it takes them some time to get back on their feet. They may have been carpenters, painters, plumbers, or men in other trades. They have been away from their work for three or four years. They may have to buy tools and equipment, so that they can get back on their feet.

Is there any joint programme either arranged at the present time, or anticipated, to look after the rehabilitation of these men who, I claim, should receive justice. I refer to those who are leaving the army, and many others who should be out of the army at the present time.

Mr. MACDONALD (Kingston City): As I intimated before, and as I believe has been intimated by my colleague, there is a directorate of demobilization in the naval services, and in the other two service departments. There is a combined committee for the three services, a joint service committee, and also an interdepartmental committee on which I believe my colleagues the Minister of Pensions and National Health and the Minister of Labour are represented as well. They are now giving a great deal of study to this matter of demobilization. I would point out to my hon. friend that once a man is demobilized the responsibility of the three armed services ceases and he becomes the care of the Department of Pensions and National Health. I think my hon. friend was referring at one stage of his remarks to the problem of a man who wants to get out before the end of the war, and he asked what is being done for him. Am I correct?

Mr. BROOKS: Yes, that is correct.

Mr. MACDONALD (Kingston City): With regard to the gratuity, or mustering-out pay, or whatever you wish to call it, which he might receive, that matter is at this very moment, and has been, I think, for some two or three months, under consideration by the three service departments and the Department of Pensions and National Health. I am not in a position to say definitely, because I do not think the matter is quite in definite shape, what the financial provisions will be. I think it is only fair to say that they will be at least as generous as, and I think in most cases more generous than, they were at the conclusion of the last war. My hon. friend from his experience with the army is no doubt familiar with the blue booklet which was sent out showing the possible training benefits, vocational education and so on that a man may receive who is discharged from the services. These provisions are, I believe, quite generous. In the matter of the young man who left college and wishes to complete his education, there are very generous provisions. In the case of the man who wants to take up farming, very generous assistance is given. I believe that it covers commercial fishing as well. But my hon. friend, having come direct from association with service men, is probably more familiar with that than I am.

Mr. BROOKS: I understand the cases which the minister has mentioned. But what I am concerned about is the case of the man who, on account of family trouble or for compassionate reasons, is discharged from the army; his wife has died and he has to look after his children, or the children have been deserted, or there is other serious trouble at home. There are quite a number of these cases. According to the minister, or according to the Minister of National Defence, it is assumed that because a man has asked for his discharge he is going back to his job. The point is that he is not going back to his job, and at the present time no provision is made for these cases, of which a great many are coming up continually. I think the Minister of Pensions and National Health will agree with me that that is the situation, and I think something should be done at this time.

Mr. MACDONALD (Kingston City): In many cases, I assume, the man to whom my hon. friend refers would go back to his job.

Mr. BROOKS: Well, he goes back to look for a job. He may have a job and he may not have. A good many of these men, for instance the younger men, were married at the beginning of the war, and were not established, or at least some of them were not, and some of them have young children. There are a good many such cases.

Mr. MACKENZIE (Vancouver Centre): If I may be permitted to intervene, it is at the present time the definite responsibility of the department over which I preside to enable such men to find adequate employment.

Mr. BROOKS: Yes, but the fact that it may be the department's responsibility does not mean that the men have the jobs. There

should be some provision for them until they do get jobs. That is the principle of rehabilitation.

Mr. MACKENZIE (Vancouver Centre): We have that now.

Mr. BROOKS: Well, what about these cases which I have mentioned?

Mr. MACKENZIE (Vancouver Centre): We have out-of-work benefits payable for twelve months after discharge if the man is unable to find adequate employment, as well as preferences both in contracts and in government service.

Mr. BROOKS: How it works now is that a man is kept on the depot for thirty days and given thirty days pay.

Mr. MACKENZIE (Vancouver Centre): Of course, if there is any gap at all between his being struck off National Defence and taken up by Pensions and National Health, that gap will have to be closed. I agree, too, that it is our responsibility to apprise the man in the first instance of what he is entitled to in post-war discharge benefits, and, second, to provide him with employment.

Mr. BROOKS: The whole point is this. I know the Minister of Pensions and National Health and the other ministers are discussing rehabilitation programmes, and we hear it rumoured that the men will get two or three months pay, or whatever it is. But here are men who have been in the army for three or three and a half years and who go out before the war is over. These men get nothing. I claim that there should be some plan for rehabilitating these men.

Mr. MACKENZIE (Vancouver Centre): There is. We have found employment for over 85,000.

Mr. CASTLEDEN: Further with regard to this matter of the programme, we find a definite reduction in the air force training service programme. I believe the minister for air announced that about twenty-eight flying schools across Canada were being disbanded this year. How will the general programme of naval expansion for 1944 compare with the 1943 programme? Is there any reduction at all?

Mr. MACDONALD (Kingston City): My hon. friend means, the number of men to be taken into the service? I would say to him that there will not be as many men taken in during the coming year as there were last year, so that there is a reduction in that regard. On the other hand, the number of ships next year will be greater than it was in the previous year, so that there is an increase there.

[Mr. Brooks.]

Mr. DIEFENBAKER: Just in connection with the matter which has been brought up by the hon. member for Royal, the Minister of Pensions and National Health stated that some 85,000 men had been found employment. If my memory serves me right, some 118,000 have been discharged. Does the minister suggest that all of the 118,000 are in employment and have had no difficulty in securing work?

Mr. MACKENZIE (Vancouver Centre): No; that is not correct. But I do suggest that, through the direct agency of our organization in the Department of Pensions and National Health, combined with the work of national selective service in the Department of Labour, over 85,000 have been placed. In the last month—I am speaking from memory now; my hon. friend will pardon me if my figures are not strictly correct—about 3,000 were discharged and placements were found for five or six thousand. Of course it is a rotating figure; it is not a fixed figure at all. But we find out that those asking for unemployment benefits are very few, because of the condition of employment in Canada to-day. That condition will not necessarily prevail after the war. I believe there are about three hundred accepting unemployment benefits; that is, those who are waiting for definite employment and who are entitled to the unemployment benefits provided under order in council P.C. 7633.

Mr. DIEFENBAKER: I assume this would be the right point in the discussion to suggest an amendment of the Reinstatement in Civil Employment Act. It is a matter which I think I should bring to the attention of the minister, because no opportunity will be given later on to do so. In 1942 this house passed the Reinstatement in Civil Employment Act which as hon. members know, provides that an employer shall reinstate his employee upon discharge from the armed services in the position which he had prior to his enlistment. But there is a provision therein which, I think, is even now being taken advantage of.

Section 4, paragraph (d) provides:

> In any proceedings for the violation of section three of this act—

Section 3 sets out what the duty of the employer is with respect to reinstatement.

> —it shall be a defence for the employer to prove—
>
> (d) that he—

The discharged soldier.

> —was physically or mentally incapable of performing work available in the employer's service.

That section, as things now stand may or may not be taken advantage of. But when

the war is over and the patriotic urge recedes, and there is a desire on the part of some employers to secure the largest return they possibly can, that section might very well afford a defence to a refusal or a denial of an opportunity for employment to the man who, after service, has been physically disabled in any particular. I raised this point, if I remember correctly, when the bill was up. In the United Kingdom a reinstatement act is in effect, or at all events it was recently introduced, very much along the lines of the act in Canada.

Mr. MACKENZIE: (Vancouver Centre): If my hon. friend will allow me, I do not think the act has been passed as yet in Great Britain, but the bill is very much more comprehensive than the act we passed in Canada two years ago. Our act is confined to ex-service men, while the bill in Great Britain includes those who have been injured in civil accidents, and that is the great criticism against the bill in Great Britain. They say that a man who has served his country in battle should have the preference in reinstatement over a man who has been injured in civil or industrial life. That provision has caused bitter controversy over there.

Mr. DIEFENBAKER: I am not dealing with the provisions with respect to employers in civilian industry but with the provisions in connection with the reinstatement of men after their discharge from the army. They have found it necessary in Great Britain to pass another act or submit another bill—I do not know whether it is yet law—known as the Disabled Persons bill.

Mr. MACKENZIE (Vancouver Centre): That is the bill to which I was referring.

Mr. DIEFENBAKER: It is based on the principle that disability is a handicap but not a barrier to employment, and it imposes the obligation upon employers of twenty-five workers or more to take a quota of men and women who are disabled, the quota varying with the different trades. Has consideration been given in Canada to a similar provision to apply to men who, after service in the armed forces, are discharged by reason of disablement? Is it in the contemplation of the government to introduce some such measure to assure reinstatement for those who, while not physically perfect, are not so handicapped that they could not take employment?

Mr. MACKENZIE (Vancouver Centre): I am afraid I am speaking out of turn more or less by intruding on the estimates of my colleague. The bill passed in Canada a few years ago was sponsored by my colleague the Minister of Labour, although I gave it all the support I could. The Disabled Persons bill in Great Britain affects civilians as well as ex-service men.

Mr. DIEFENBAKER: I was referring to ex-service men.

Mr. MACKENZIE (Vancouver Centre): The committees here have been and are considering that very point very carefully. There is no phase of rehabilitation to which keen-minded civil servants in my department and others are not giving serious attention. We are all anxious to do everything we possibly can to meet the very problems my hon. friend has mentioned.

Mr. DIEFENBAKER: Has consideration been given to that very point?

Mr. MACKENZIE (Vancouver Centre): Yes, I remember that it was discussed a year ago.

Mr. ROSS (St. Paul's): The answer that was given to me by the minister for naval services is the same answer that I have had given to me in half a dozen cases of men who have been discharged on compassionate grounds, not because they wanted to get out of the army or the navy, but for family reasons. I know one of these men in particular whose family has suffered to a great extent. I do not see any reason in the world why men discharged on compassionate grounds cannot be treated exactly the same as men discharged for some other reason. A man who is discharged on compassionate grounds is discharged for a definite reason which is accepted by the department; otherwise he would not be discharged. But he does not get the same discharge pay and allowances as men discharged for other reasons. I have three cases in mind now. In one there was definite hardship. The man had a family of five children and no place to go. The minister of pensions said that these men were all taken care of, but this man was not taken care of. He had great difficulty in getting a job. All he got upon discharge was $35—nothing else—and he has a family of five children. It seems to me that there should not be that discrimination. I think the hon. member for Royal was talking about the same thing that I am talking about now.

Mr. MACKENZIE (Vancouver Centre): I think my hon. friend has in mind cases where a man asks for his own discharge on compassionate grounds. That does not debar him from the benefits under order in council P.C. 7633. I should like to know the name of that man and whether he ever reported to one of our welfare officers.

Mr. ROSS (St. Paul's): I shall be glad to talk to the minister about him. This man got nothing but $35 upon discharge. I would ask the minister for naval services whether the pay and allowances upon discharge, clothing allowance and so forth, are exactly the same as in the other services.

Mr. MACDONALD (Kingston City): Yes, the clothing allowance, $65, and the other discharge benefits are the same. I think there is a distinction between the man who is discharged at his own request, and the man who is discharged from the army because the army has no longer any use for him. It may be that it is a little unfair to take the man who is discharged on compasisonate grounds and put him in the same category as the man who takes his discharge simply because he wants to go back to farming or something of that sort.

Mr. ROSS (St. Paul's): That is the point.

Mr. MACDONALD (Kingston City): There is something in what my hon. friend says. The man who is discharged because of a death in the family which necessitates his presence at home to look after his family is hardly discharged at his own request. Technically he is, but in reality he is moved by circumstances beyond his control, and it may be that we should be a little more generous in a case of that kind. That is one of the points which are now under discussion, together with the whole question of gratuities upon discharge. I shall certainly bear in mind the representations my hon. friend makes and those of the hon. member for Royal.

Mr. ROSS (St. Paul's): There is one other point I wish to bring up. We had a long discussion the other night on dependents' allowance in the case of a man who goes A.W.O.L. I have several cases where the woman has not heard from her husband for two years. Take one case as an example. The wife had been receiving an allowance from her husband up until October 2, after which she got no more. What is to be done in that case? The woman is in this position. The man is of no use to her; he is of no use to the army, the navy or the air force, and yet she is saddled with him. There is the difficulty. It is a great injustice and there is no remedy for that woman at all. It is very necessary that something should be done about the matter. The man obviously is tired of her and has deserted her. She cannot receive any further allowances from him, and there you are. I would like to bring this to the attention of all ministers. There should be some way of freeing this woman; it is absolutely necessary. I do not think she wants to be bothered about getting pay and allowance from him any more; she just wants to be free. That is the situation, and many hon. members no doubt have the same sort of thing they can bring up. I do not think there is any remedy in the present situation. Would the minister say something about this matter?

Mr. MACDONALD (Kingston City): Do I understand my hon. friend to say that a married man who gets tired of his wife can prevent her from getting her dependents' allowance?

Mr. ROSS (St. Paul's): She is in this position—and this particular case is illustrative of many others. The man is in the clink all the time and therefore she gets nothing. She has not heard from him for two years. Surely there must be some remedy. The woman has suffered; what is to be done about it?

Mr. MACDONALD (Kingston City): I shall be glad to look into that case and get a reply for my hon. friend possibly before the sitting is over to-day.

Mr. GREEN: Will the minister explain the present position with regard to the fishermen's reserve on the west coast? There was a suggestion last fall that it might be disbanded. I hope that is not the case. Will he explain the situation at the present time?

Mr. MACDONALD (Kingston City): There is an order on that point and I am looking it up.

Mr. GREEN: May I ask one other question; it has to do with the classes carried on recently at Deep Brook, Nova Scotia, for officers. I understand that these young men were picked out from civilian life, passed two or three boards and were enrolled in the course there but that only a very small percentage of them passed the examinations, the standard being very high. In the finish those who had not been successful were given the option of going to sea for a period of three years or of taking their discharge from the navy. That was after they had been on the course for a period of almost a year. That may or may not be a correct statement of the situation, and I would like the minister to explain it. These courses, I understand, have been discontinued.

Mr. MACDONALD (Kingston City): Does my hon. friend say that they were given the option of going to sea for a period of three years?

Mr. GREEN: Going below decks for three years.

Mr. MACDONALD (Kingston City); No; there was never any such rule as that. There was a rule that a man who had failed in his course as an officer would be given the option of going back to the lower deck or of being discharged from the service. Some have gone back while others have not, but I do not think the proportion of failures was ever great. Certainly by far the great majority of those men taking the course were successful. There would be a small percentage, but a very small one, who failed. I can get the figures on that in a moment. Take one set of figures at Kings. That is the training establishment on the east coast where many candidates come direct from the sea. Accurate figures are not readily available as to the number of failures in Kings, but the percentage is less than four. The Kings course includes a mixture of lower-deck, officer candidate, and direct entry officers from shore. At Cornwallis 476 have completed the officer-candidate courses to date; 295 have been promoted to commission rank, sixty-two discharged, and ninety-seven continued on lower deck as ratings. Twenty-two failed the course but retained officer-candidate status on the lower deck and will again appear for officer-candidate courses when recommended by the commanding officer. That may be in six months or a year, but I should not think it would be three years.

Mr. NEILL: That is not on the west coast?

Mr. MACDONALD (Kingston City): I am speaking of the officers training establishments at Kings in Halifax and Cornwallis in Digby.

Mr. GREEN: I was referring to the courses at Deep Brook. Apparently they were discontinued recently.

Mr. MACDONALD (Kingston City): No; they are still going on.

Mr. GREEN: My information is that, in the last few courses, fewer than thirty per cent have passed.

Mr. MACDONALD (Kingston City): Oh, no; that is not accurate; my hon. friend is away off the mark. He may be thinking of those who appeared before selection boards, but even there more than thirty per cent passed.

Mr. GREEN: They were in that category.

Mr. MACDONALD (Kingston City): That is a different thing from failing the course. These were men who were not recommended by the selection board.

Mr. GREEN: I am wrong. They appeared before the boards, were duly recommended and spent practically a year taking the course, and only thirty per cent passed. They were then given the option of going to sea or being discharged.

Mr. MACDONALD (Kingston City): I am sorry, but my hon. friend's figures are wrong. To begin with, it would not take a year for them to take the course; it would be about six months In the second place, the number of failures would be very much less than seventy per cent. The number of men failing at Kings, where they take the final officers training, is said to be less than four per cent. I have not the number that failed at Deep Brook, where part of the course was taken, but it would not vary substantially from the four per cent that failed at Kings. My hon. friend may rest assured that it is nothing like seventy per cent.

Mr. GREEN: What option have they once they have failed in the course?

Mr. MACDONALD (Kingston City): My hon. friend will understand that practically all entries now are made from the lower deck. The man who fails in his course at Kings—that is, the final failure—would be given an option of going back to the lower deck for a time and endeavouring in the course of some months, or perhaps a year, to get a recommendation from his commanding officer and again appear before the selection board and take the course, or he could be discharged from the service on the ground that he had failed to qualify. Those are the two options available.

Mr. FRASER (Peterborough West): I believe the hon. member for Vancouver South is talking about boys who tried the examination in December. From our district, I know, there were a number who failed and they wondered why. They got high percentages and they were given the option of becoming ordinary seamen again, starting at the beginning and taking basic training all over again. They felt quite hurt about it.

Mr. MACDONALD (Kingston City): I know. They naturally would be disappointed. I shall get the exact number who have failed at Deep Brook for the hon. member for Peterborough West and the hon. member for Vancouver South. I think the hon. member for Peterborough West referred particularly to the month of December.

Mr. FRASER (Peterborough West): I think it was in December that they tried their examination.

Mr. MACDONALD (Kingston City): These matters all come before me in one way or another, these men who are to be discharged on account of having failed to qualify. If

eight or nine failed out of a list of seventy or eighty I should say it would be rather a high percentage.

Mr. GREEN: Could the minister get the records for the last ten classes at Deep Brook?

Mr. MACDONALD (Kingston City): It might take me a little time but I shall get it.

Mr. FRASER (Peterborough West): It was in the fall, whether December or not I cannot tell. The boys told me that in the previous class over seventy per cent passed, but in their class hardly fifteen per cent passed.

Mr. MACDONALD (Kingston City): I think those figures are absolutely inaccurate but I shall check them.

Mr. DIEFENBAKER: Through inadvertence the minister failed to answer a question that I asked. I asked for a statement showing the number of officers of the rank of acting commander and senior. He stated there were 100, but I want to know how many of those 100 senior officers belonged to the R.C.N.V.R.

Mr. MACDONALD (Kingston City): Those that I gave.

Mr. DIEFENBAKER: That is the number.

Mr. MACDONALD (Kingston City): That is the number of R.C.N.V.R. commanders and above. I think that is what my hon. friend asked.

Mr. DIEFENBAKER: There is one other question. In so far as the opportunity now affords itself for men in the lower decks to train for commissions a notable step has been taken. A moment ago the minister, if I understood him aright, stated that there were still exceptions to that rule. What are the exceptions?

Mr. MACDONALD (Kingston City): There are certain branches of the service into which men come directly. Take as an example the medical branch, the special branch, as it is called, which consists of lawyers, technicians and other professional men. Some men come directly into that branch. But for the executive branch, which is sea-going, what I might call the combatant branch, all entry is made from the lower deck, and I think more than two thousand men have come from the lower deck to commissioned ranks.

Mr. NICHOLSON: Would the minister give some explanation of the wide variation in the ratio of officers to ratings in the different provinces. The table which was placed on *Hansard* at page 1309 indicates that Prince Edward Island has a ratio of approximately four officers to every 100 ratings; Nova Scotia, about ten; New Brunswick, seven; Quebec, thirteen; Ontario, seven; Manitoba, four; Saskatchewan, three; Alberta, three; and British Columbia, twelve. Those of us who come from the prairie provinces will never admit that those who joined the navy from the prairies are not giving a good account of themselves. There are many cases of heroism, and it seemed to me that the ratio from the prairies should be higher. It is hard to understand why the ratio from Prince Edward Island is four compared with ten in Nova Scotia; why the ratio from British Columbia should be so high. It is true that those who live near the sea have opportunities which the prairie boys do not have. In every field of war activity the men from the plains have adapted themselves very quickly to their due responsibilities, and the officers who have been trained have done exceptionally good work. Can the minister explain why there is that variation?

Mr. MACDONALD (Kingston City): It is quite natural for my hon. friend to raise the question, and I am glad that he did so because he allows me to make an explanation which perhaps I should have made earlier. It is quite true, as he says, that the proportion of officers to ratings in the prairie provinces is not so high as it is, say in the maritime provinces, or in British Columbia; but I think the reason for that is to be found in the fact that a great many of the Royal Canadian Naval Reserve officers, the men who, before the war, were at sea in the mercantile marine and so on, came from the maritime provinces, the St. Lawrence, the great lakes and British Columbia. I should suppose that very few of the R.C.N.R. officers would come from the prairies because, through the accident of geography, there are no great waterways in those provinces as there are in the five eastern provinces and in British Columbia. Then again there are a great many yachtsmen in the maritime provinces, on the banks of the St. Lawrence, on the great lakes and in British Columbia. These men were available at the beginning of the war and many of them entered the service. On account of their experience with boats and engines and with sail they came into the service. But I should not want it thought for a moment that men from the prairies, given the same amount of training, would not make officers just as competent and just as reliable and faithful in every way as men from any other part of the country. I am sure that they would; they would main-

tain the magnificent record which the prairie provinces have already achieved in the naval service.

Mr. FRASER (Peterborough West): The Minister of National Defence put a table on *Hansard,* which appears at page 990. This table shows that an ordinary seaman signing on gets $1.25 a day; whereas a private in the army gets $1.30. Why the difference?

Mr. MACDONALD (Kingston City): Well, it is a long story. The fact is that there is some discrepancy all through the table between comparable ranks in the three services. My hon. friend will find, for instance, that certain ranks in the naval service get a little more than the corresponding rank in the army. We find that other ranks get a little less. In the case of the ordinary seaman there was a time when he got $1.45 in the navy, as against the private's $1.30. Then we had to adjust it in some way and we also had to adjust the matter of subsistence. Then, the marriage allowance in the navy was a little bit lower than in the army for some curious reason, and by trying to adjust those things as equitably as we could it was felt that the ordinary seaman who joined the navy after June, 1942, I think it was, should receive $1.25 a day instead of $1.30 for the private. I will agree with my hon. friend that it is difficult to take these tables and find them wholly and absolutely comparable. They are not, but it was about the best we could do at the time.

Mr. FRASER (Peterborough West): The reason why I brought this matter up was that these boys, when they join the navy, the army or the air force at $1.30 a day, would like to have a few dollars to spend. But they find they have practically nothing on account of the things they have to buy. I think when they join up they should have the same pay all the way through the services. After they step up it might be a little different, but when they join I really believe they should have the same all the way through.

Mr. MACDONALD (Kingston City): Yes. I shall bear that in mind. Certainly I have no objection whatever to seeing their pay raised by five cents.

Mr. STIRLING: Would the minister explain whether the assigned pay in the navy is exactly the same as in the other services? Then, in connection with the allowance to a dependent mother, does the navy take a more generous view than the other services with regard to a mother who was entirely dependent on a son who goes into the navy and pays an allowance for the mother's keep?

Mr. MACDONALD (Kingston City): The dependents' allowance is the same for all three services, and I understand that the principle with regard to the allowance for mothers is the same in the navy as in the other services.

Mr. STIRLING: And the assigned pay?

Mr. MACDONALD (Kingston City): A rating in the navy must assign fifteen days' pay for his wife and five days' pay for any other dependent, such as a mother, which I think is about the same as in the army and the air force.

Mr. GREEN: Did the minister get the information concerning the fishermen's reserve?

Mr. MACDONALD (Kingston City): I am just getting that order; I do not have it here, but I will return to the point before the sitting is over.

Mr. GREEN: There is one other question I should like to ask, having to do with recreational facilities at St. John's, Newfoundland. Both officers and men who have been stationed there tell me that facilities for the men are very poor. They come in after a trip lasting several days, under very hard conditions, and there are no proper recreation huts. It is difficult to get accommodation in St. John's, and the suggestion has been made that a building or buildings should be erected there by the dominion government. Could the minister tell us the situation in St. John's?

Mr. MACDONALD (Kingston City): Certain buildings have already been erected there through the Department of National War Services, which in turn acts through the Legion, the Knights of Columbus, the Y.M.C.A. and the Salvation Army. There are some recreation buildings in St. John's, but it is a very busy place, and like other towns and cities in Canada its population has greatly increased.

Mr. GREEN: I am referring to St. John's, Newfoundland.

Mr. MACDONALD (Kingston City): Yes; I am speaking of St. John's, Newfoundland. Personally I should like to see conditions improved, and every step is being taken to do so. Up to the present, however, it has been very difficult to erect buildings, particularly on the eastern seaboard; it has been difficult to get materials and supplies, and in some cases labour. Gradually all these difficulties are being overcome, and I hope we may be able to do a great deal better than we have done in the past, not only at St. John's, Newfoundland, but at other ports in the east.

Mr. GREEN: Are new buildings to be erected there?

Mr. MACDONALD (Kingston City): Yes; the Y.M.C.A. is contemplating the erection of a building on the south side of the harbour; the matter was before me only a day or two ago in connection with the plan of the building and what they wanted to provide. They also have a building in the main part of the city, and so have the Knights of Columbus. Their building was destroyed by fire, but I think it has been rebuilt. The Salvation Army is there also, and I think there are one or two local organizations as well. The seamen's institute of St. John's operates a building there, or used to do so, at any rate. Of course the new Y.M.C.A. building will be a great help.

Item agreed to.

3. Travel, transportation and freight, $92,957,866.

Mr. KNOWLES: I should like to deal with a matter relating to transportation home for men who leave the navy, technically at their own request. As the minister knows, I wrote him about a particular case some time ago, and at that time he quoted to me a particular regulation and said it was impossible to do anything in connection with the rating about whom I wrote. Later on, thinking the regulation stood for all three services, I raised the matter in the house; I believe it was on February 17, when the Minister of National Defence was before the committee. At that time I learned that a change had been made, with respect to the army at any rate, providing for transportation from the place of discharge, even when a man was discharged at his own request, back to the place of enlistment or to the home of the individual. There was a little confusion that night as to whether the regulations were the same in all three services, but the next day the Minister of National Defence for Naval Services tabled a regulation which had been passed some days earlier, providing for the very thing I was mentioning, namely transportation from the place of discharge to the place of enlistment or the rating's home.

On the basis of that new regulation, even though I knew it was dated in February while the case with which I was dealing went back to December of last year, I drew this case to the attention of the minister again. I did so because I felt that it was a particularly unfortunate case in itself, and also because I felt that there must be other similar cases. This rating had enlisted at London, Ontario. On account of his wife's illness, which was quite serious, it became unquestionably necessary for him to leave the service. I am bearing in mind what the minister said a few moments ago, that there are cases like this in which, though technically a man is discharged at his own request, still the situation is not of his own creation, and in my opinion special consideration should be given a man under such circumstances. This particular man, who was discharged in Victoria, was given the balance of pay that was coming to him up to that time and the clothing allowance, which at that time was $35. He was told, though he did not need to be told, that he would have to spend that $35 on clothes, which left him with only about $20 or $22 to go from Victoria to near London, Ontario. Eventually the man made contact with the Navy League of Canada in Victoria; and a man whom I happen to know, a former solicitor of the city of Winnipeg working with the Navy League in Victoria, did his best to help this man. When I discussed the case previously I implied that the Navy League of Canada had supplied the money to enable this man to get home. Really that was not the whole of the story. It was through the Navy League and the assistance of the gentleman to whom I have referred that help was obtained for this man. But actually it had to be obtained in the form of borrowed money. The money was lent to him, through the instrumentality of the gentleman to whom I have referred, by the Salvation Army. That was the source to which this man had to go to get money to go home. He is now home. In the meantime he has secured employment again, but he has been faced with very heavy medical bills because of the serious illness of his wife, and he still owes as a debt the money that was borrowed from the Salvation Army to enable him to get home.

As I say, fully conscious of the fact that I was asking for something that dated back prior to the date of the new regulations, nevertheless I felt it was a case that should be given more generous and sympathetic consideration by the minister. Accordingly I wrote him again on March 2, and in his reply to me the minister said he did not think it would be wise to pay transportation in this case, because that would be establishing a precedent. As a matter of fact, I do not think that is any argument against it. If there are cases similar to this, of men who have offered their services, and spent time in the forces, but who through no fault of their own have been forced to get out, and have been left with a debt such as this so that they could get home, it would not do any harm to establish a precedent to treat generously men who find themselves in that situation.

I was a little put out by the comment of the minister when he said at a later point

in his letter that he did not altogether approve the paying of transportation in such cases. The minister used these words:

> When men are discharged at the end of hostilities, or through wounds, or for other causes not of their own making, then I feel it is only fair for the government to pay transportation.

With that we all agree. But then he goes on to say:

> On the other hand, when a man leaves the service for his own private reasons, it seems to me that he is in a totally different position.

I do not think that comment should have been made about a man who has offered his services, spent four years in the navy, and who would have preferred to stay in the navy but who, for reasons not of his creation, because of difficulties at home, is forced to leave the service.

I should like to quote from one letter I received from this man, just to indicate his spirit in the whole matter. As hon. members will realize, after the conversation I had with the Minister of National Defence in this matter in the committee, following which the Minister of National Defence for Naval Services tabled the revised regulations, I conveyed that information to this man. This was his reply to me:

> I feel much better now. At least the next fellow that has to be discharged under the same circumstances will fare a whole lot better than I. There is a saying in the navy, "Grim, isn't it?" And that just about sums it all up.

I emphasize the fact that the spirit of this man, despite his unfortunate and unhappy situation, is indeed commendable. I present the case because I feel that in this and similar cases a point should certainly be stretched in their favour.

It has now been recognized under the new regulations in all three services that when a man is discharged at his own request, particularly in a situation such as this, his transportation is paid back to the place of his enlistment, or to his home. That is now the rule in all three services. I make a plea again for this man, and for other men in similar situations, even though their cases may have been prior to date of the new regulations, and I ask that the department see what can be done by way of taking care of any debt they may have had to incur to get home.

Mr. MACDONALD (Kingston City): I would have to look up the correspondence. I do not know whether it appeared to me at first that this man was in the position described by my hon. friend. But I still say, generally, that the man who leaves the service at his own request because he thinks he can better himself, or for some other such reason, should not be paid by the service for his transportation—although we are doing it, even in that case. The case of the man discharged at his own request under circumstances such as my hon. friend has described, through the illness of some relative or for some other domestic cause which urgently requires his presence at home, is a little different.

When I said I was opposed to paying transportation to a man who left the service at his own request I meant this. Why should the service take any more interest in the man who leaves, as I say, because he wants to go back to farming, into business or something of that sort and hopes to better himself? There is no reason why it should. He leaves when it suits him. We shake hands and part, and that is the end of the transaction.

But in the case my hon. friend describes, one where there was some domestic trouble or domestic worry which compelled him to go home, I agree there is a little difference. However, I am not sure that that was made clear to me in the correspondence. I shall look into it and find out.

Mr. KNOWLES: I wish to make a plea to the minister in dealing with a case of this kind not to use language such as he did, when he spoke of men leaving the service to better their own positions. I appreciate the minister's offer to look up the correspondence again. He will find I have written him two letters, each of which was two pages in length, in which I gave far more detail than I have given on the floor of the house. The details make it clear that it was a case in which generous treatment should have been given the man. It was in no sense any attempt to better his position, but simply because there were reasons why he had to go home.

Mr. MACDONALD (Kingston City): My hon. friend may have written me two letters, but I get a great many letters, and I cannot attempt to recall what was in a letter written to me a month or six weeks ago. I am sorry, but that is the situation. I should like to have time to look up the correspondence, and see whether it was made abundantly clear that it was not so much a case of a man's being discharged at his own request as one where the circumstances imperatively required his presence at home. I have every sympathy with such a case.

I have not so much sympathy, however, with the man who, to better his own position, says, "I want to go farming. I have had a year or two in the navy, and I want to leave it." He should pay his own way home. But

even in that case, under the recent ruling, we pay his way. But I draw a distinction between the purposes for which a man wants to leave the service. If it is for a commendable purpose, for what might be called humanitarian reasons, that is one thing. I have every sympathy with that. But if it is because a man wishes to go home only because he thinks he can make more money, then I say that is his own lookout, and he should pay his own way.

Mr. KNOWLES: I object, and the reason why I have protested so vigorously against the minister making the comments he has made in this case is that, in spite of the detail which I have placed before him—and I think, when he examines the correspondence in the light of this discussion, he will see my point—the direct statement he made was, "I do not think it would be wise to pay transportation in this case."

I shall draw the case to the minister's attention again by correspondence, and I am sure after what has been said to-night he will look into it further.

Mr. MACDONALD (Kingston City): I shall be glad to look into it further.

Mr. FAIR: On an earlier occasion, when the estimates of the Minister of National Defence were before the committee, a number of hon. members made a further plea for free transportation for members of all services when on furlough or on embarkation leave. We were told then that the matter was under consideration. Has any decision been arrived at up to this time?

Mr. MACDONALD (Kingston City): The matter of free transportation for members of the armed services has been brought up in the house almost every session in the last three or four years. I do not know that we can ever go so far as to give free transportation to members of the armed services to all parts of Canada, but there has been a suggestion—that is all I can say; it is now under consideration—that we fix a certain maximum payment beyond which the soldier, the sailor or the airman would not have to go. That, I may say, is quite a reasonable maximum and it may be agreed to. But it would be difficult to grant free transportation all round in a country as great as Canada. I recognize that in the United Kingdom service men are given free transportation, but there the distances are much shorter than they are from one side of Canada to the other, and the matter is a good deal simpler.

Mr. FAIR: I think one of the main reasons why this question has been brought up so often is the size of our country. In a number of cases men who belong in Vancouver are stationed on the east coast, and it costs them quite a lot of money to get to the west coast. So that if a ceiling is determined upon, I hope it will be set very low.

Item agreed to.

4. Construction, purchase, repairs and operating expenses of properties—

(a) Capital expenditure, $17,990,462;

(b) Repairs, operating expenses and rentals, $6,715,891.

Mr. CRUICKSHANK: I should like to ask the minister a question in connection with sub-item (a). In my riding is a most excellent building. It is a kind of "hush, hush" building too, but he knows the one I mean. Although he has, I believe, highly trained naval men there and an elaborate and expensive building, there is no place for the men to live. Some are living in barns, some in tents—wherever they can. Is any provision being made for a barracks for the building to which I am referring? I am always afraid that it will be deemed not in the national interest if I call a place by its name around here. It is what I think is called an interceptor station. The reason I am asking is that it is a permanent building; while it is not, as the minister knows, merely a temporary structure, yet there is absolutely no provision for the men to live there.

Mr. MACDONALD (Kingston City): If my hon. friend would send me over the name by secret message I could look it up here.

Mr. CRUICKSHANK: Then we would not have the privilege of getting on *Hansard* the location of a most elaborate and up-to-date building. It is at Matsqui, in the Fraser Valley. I understand there is no "hush, hush" about it. It is an interceptor station.

Mr. MACDONALD (Kingston City): Is the name Sumas?

Mr. CRUICKSHANK: No; Matsqui is where the building is. Where the men are living is at Aldergrove. The navy personnel have to travel sixteen miles from Aldergrove to the building.

Mr. MACDONALD (Kingston City): I cannot tell my hon. friend exactly what it is proposed to do there, but I may say that a considerable sum is set aside in the estimates for construction of works and buildings at three places out there, of which I assume Aldergrove is one. The sum of $187,000 has been set aside for the construction of works and buildings, and I have no doubt that the barrack building to which he refers is included in that.

Mr. FRASER (Peterborough West): I should like to ask the minister how much more it will cost to complete Deep Brook, or Cornwallis, and, if possible, I should like to know how much it has cost so far.

Mr. MACDONALD (Kingston City): I will turn that up in a moment.

Mr. FRASER (Peterborough West): While the minister is looking it up, could he tell me if all the different buildings for the men will have lockers in them? I understand that at the present time one or two of the buildings have lockers, or "decks" I believe they call them, but not all of them have lockers.

Mr. MACDONALD (Kingston City): I assume that lockers will be provided as quickly as they can be had. It is important that the men should have lockers in which to keep their clothing and other gear. My hon. friend asked what was the cost and what are the proposed future requirements at Deep Brook. I may tell him that up to January 31 of this year there was expended, in round figures, $7,848,000, and the estimated cost to complete is $1,043,000.

Mr. FRASER (Peterborough West): Does that include the dock at Cornwallis?

Mr. MACDONALD (Kingston City): Yes. I have the information here. The wharf is included in the totals which I have given my hon. friend.

Mr. FRASER (Peterborough West): Does the department intend to extend that dock out another 500 or more feet in order to accommodate corvettes and other naval ships which come in there? Will it be extended farther into the Annapolis basin?

Mr. MACDONALD (Kingston City): No, I think not. I do not believe any such extension is contemplated.

Mr. FRASER (Peterborough West): That means that the boats which come there will have to anchor outside?

Mr. MACDONALD (Kingston City): Not all the boats. There are a great many boats which come to the wharf.

Mr. FRASER (Peterborough West): But they can stay only a short time.

Mr. MACDONALD (Kingston City): Well, at high tide, I think, almost every boat can come into that wharf.

Mr. FRASER (Peterborough West): But at low tide?

Mr. MACDONALD (Kingston City): At low tide only a certain type of boat can come in.

Mr. FRASER (Peterborough West): That is why I wondered if the minister was going to extend the wharf out.

Mr. MACDONALD (Kingston City): No, I think not; probably the cost would be too great.

Mr. BLACK (Cumberland): Could the minister state what the depth of water is at that dock at average high tide and the depth of water at extreme low tide?

Mr. MACDONALD (Kingston City): There is more than a twenty-foot difference between high and low water in that bay.

Mr. FRASER (Peterborough West): I think twenty-eight feet in the minimum, and it sometimes runs to thirty-two feet, as the extreme.

Mr. MACDONALD (Kingston City): That may be in some places. What it would be around the wharf I am not sure, but I will look into the matter.

Mr. MARSHALL: I see that this item covers buildings only and that the sum of $17,990,462 covers expenditures in connection with the erection of other new buildings or repairs to old buildings. Would the minister give a break-down of that amount, showing what will be spent on new buildings and what will be spent on old buildings; also a break-down of the $6,715,891 into the three separate items of repairs, operating expenses and rentals.

Mr. MACDONALD (Kingston City): I will just give round figures. The first item of $17,990,000 covers capital expenditures on properties. Of that sum $16,571,000 is for works and new buildings, and $1,418,000 is for machinery to be purchased. The $6,715,000 is made up as follows: fuel, $1,619,000; rentals, $650,000; telephones, $136,000; repairs to buildings, $691,000; alterations to buildings, $1,159,000; repairs to machinery, $177,000. Then there is an item, maintenance proper, $2,255,000. Those taken together aggregate the sum set forth in the estimates.

Mr. BLACK (Cumberland): Did I understand the minister to say that at high tide the depth of water at the wharf at Deep Brook was twenty feet, and that there was no depth of water at low tide?

Mr. MACDONALD (Kingston City): That is not what I said at all. I was asked the difference between high and low water in the basin and I made a rough estimate of twenty feet.

Mr. BLACK (Cumberland): The question I asked was what was the depth at the wharf at extreme low tide.

Mr. MACDONALD (Kingston City): I am not sure. I know that smaller boats, how small I do not know, can use the end of the wharf at any state of the tide, but whether it is six or eight or five feet at extreme low tide I do not know. I will find out and give my hon. friend that information.

Mr. FRASER (Peterborough West): What does Stadacona No. 2 at Halifax cost? Has the department acquired any new camps for the sea cadets? I understand that there are 5,000 more sea cadets this year. Are there any new summer camps acquired for them?

Mr. MACDONALD (Kingston City): When my hon. friend refers to Stadacona No. 2, he is referring to the building we acquired from the air force?

Mr. FRASER (Peterborough West): Yes, and you made a number of change-overs there, did you not?

Mr. MACDONALD (Kingston City): We made some slight changes to the interior of the building. I do not know that they are fully completed or that I could give my hon. friend the exact cost to date.

Mr. FRASER (Peterborough West): Were there not some swimming pools put in there?

Mr. MACDONALD (Kingston City): We did not put them in. Any alterations we made would be of a relatively minor nature, because the building had already been used as a barracks for the air force.

Mr. FRASER (Peterborough West): It is supposed to be a fairly good building?

Mr. MACDONALD (Kingston City): Yes.

Mr. FRASER (Peterborough West): Have any new properties been acquired for the sea cadets?

Mr. MACDONALD (Kingston City): As I intimated to the hon. member for Danforth this afternoon, we do not pay for any of these sea cadet camps. We provide for some maintenance, some naval officers, some help and some boats, but the camps are in existence because of the generosity and close interest of the Navy League of Canada and others.

Mr. FRASER (Peterborough West): There were no new camps taken over in the past year?

Mr. MACDONALD (Kingston City): Some new camps were opened last year.

Mr. FRASER (Peterborough West): That is the question I asked: not the cost, but which new ones were acquired.

[Mr. P. C. Black.]

Mr. MACDONALD (Kingston City): At Gananoque a new camp was opened, largely, I think, because of the interest of the Rotary club of that town. I have a list of the camps here. There were camps at Comox, on the east coast of Vancouver island; Chestermere lake, at Calgary—that was not new; lake Wabamun, not far from Edmonton; Shepley island, not far from Saskatoon; Stevenson's point, near Winnipeg—the sea cadets have been there before; lake Eva, 125 miles from Port Arthur; Kitchigami, not far from London; Princess Alice camp, on Georgian bay; Queen Elizabeth camp, on Georgian bay—that was opened a year before. There was a new camp at Rotary island, not far from Ganonoque; and a camp at Crow island, near Three Rivers —I think that was new last year. There was a camp at Buchan, not far from Charlottetown. There was Rainbow haven, twelve miles from Halifax, which was also opened in previous years. These are the thirteen camps which were opened in various parts of the country.

Mr. STIRLING: None of them belonging to the dominion government.

Mr. MACDONALD (Kingston City): No.

Mr. STIRLING: Last year the sea cadet camp on the west coast was at Comox, and I was informed it was not the intention of the minister to use it again for that purpose. Does the minister know whether that is the case?

Mr. MACDONALD (Kingston City): I cannot answer my hon. friend. Is the camp being put to some other purpose this year; is that the question?

Mr. STIRLING: What I was told was that another site more suitable for the purpose of a sea cadet camp was being considered and that it was not likely that Comox would be used again.

Mr. MACDONALD (Kingston City): I could find that out from the coordinator of sea cadets. It may be that the camp is to be put to some other use this year. Last year it was quite a large camp; 574 boys attended.

Mr. FRASER (Peterborough West): During the past year have any new barracks been built for the Wrens, or are any new ones contemplated this year?

Mr. MACDONALD (Kingston City): Speaking subject to possible correction, I think the only new building we actually erected for the Wrens was at St. John's, Newfoundland. We did acquire several existing buildings in several parts of the country for the use of the Wrens, and in fact we built other buildings, too.

Mr. FRASER (Peterborough West): They are under rental?

Mr. MACDONALD (Kingston City): Some of them have been bought, in fact most of them. There may be one or two under rental.

Mr. SINCLAIR: This afternoon the hon. member for Vancouver South spoke at some length on the war against Japan in the Pacific. While I, too, am a Vancouver member, I must say that I am more in accord with the views of the minister and the hon. member for Broadview in that our job with the navy is the battle in the north Atlantic. We in British Columbia are aware of the fact that the Canadian navy will eventually fight in the Pacific against the Japanese. Having that in mind, may I ask how much of the $17,000,000 to be spent in the current year will be spent in the great harbour of Vancouver, where certainly the British navy and parts of the Canadian navy will be based at dockyards and piers, which will have to be built in advance, without detracting from the efficiency of Canadian ships in the north Atlantic.

Mr. MACDONALD (Kingston City): The question of works and projects to be undertaken in Vancouver harbour is still under consideration. There is ample scope within the estimates to take care of any expenditure which we may find it necessary to make there, but the whole discussion is still proceeding and nothing definite has been settled as to just what will be done in the harbour.

Mr. SINCLAIR: Is this discussion based on the needs of Canada's navy out there at the present time or on the basis of what the British navy and the Canadian navy will need when they fight Japan?

Mr. MACDONALD (Kingston City): Perhaps my hon. friend will allow me to give a little thought to that question and bring down the answer later. We did acquire from the Department of Transport the right to use certain sheds on one of the harbour commission piers in Vancouver and that helped us out for the time being. I am not sure, and I do not think anyone in the department is sure, whether that will be sufficient to take care of our needs. It may be that we shall have to put up still more storage space in Vancouver harbour, but that is a matter which is still being considered and which I should like to have an opportunity of thinking over before replying.

Mr. SINCLAIR: I think the war in the Pacific will involve more than a few sheds and a government pier. I suggested the other evening that the great harbour space in North Vancouver could be used. It is not a matter of building docks when the war actually develops out there.

Mr. MACDONALD (Kingston City): It is not a matter of building docks now? I thought my hon. friend was advocating the building of a naval dock.

Mr. SINCLAIR: I am advocating just that, on the north shore of Vancouver harbour.

Mr. MACDONALD (Kingston City): I thought my hon. friend said it was not a matter of building docks. I did not hear him correctly. I shall be glad to give him a considered answer later. I have no doubt he is interested in the harbour of Esquimalt. There is an estimate for Esquimalt of $968,000 in connection with the dockyard joint service magazine and fueling depot at that point. If my hon. friend will be good enough to let me look at the Vancouver matter I shall give him an answer later.

Mr. CRUICKSHANK: Will the minister look up for me the aggregate item? I am interested in knowing whether there is provision there for the locality with which I am concerned.

Mr. MACDONALD (Kingston City): I told my hon. friend there was an aggregate item of $187,000, and I am sure his locality is one of the places to be taken care of under that item.

Mr. CRUICKSHANK: I am afraid the $187,000 represents money spent last year.

Mr. MACDONALD (Kingston City): Oh, no. This is for the next year.

Mr. MARSHALL: May I refer to the question of camps for sea cadets. Did I understand the minister to say that such a camp was located at Wabamun, near the city of Edmonton? Would the minister tell the committee the size of the camp, when it was located there, and whether there are any other camps in Alberta?

Mr. MACDONALD (Kingston City): The Wabamun camp was under the supervision of Edmonton. There was another camp, the Chestermere lake camp, fourteen miles from Calgary. These are the only two in Alberta. The number of boys attending Wabamun camp was 119, and those attending Chestermere lake camp, 462.

Mr. CRUICKSHANK: If the minister would be considerate enough to lower his voice we might hear what is being said behind the curtains.

Mr. MACDONALD (Kingston City): I thank my hon. friend.

Mr. BLACK (Cumberland): May I ask a question with regard to the gymnasium at Wellington barracks? The cost of this gymnasium would appear to the ordinary person to be extravagant, most excessive. I do not want to be interpreted as criticizing expenditures for giving all the equipment, facilities and comfort necessary to the men in the navy. I think it is the view of the people of Canada that there is nothing too good for the navy. They have the good will of everybody, particularly the women all over Canada. On the other hand, when there is an expenditure of $645,000 or thereabouts for a gymnasium and swimming-pool in connection with Wellington barracks a great many people in my province wonder if this very large expenditure is really necessary. Many people who subscribe according to their means to bonds and pay heavy taxes have serious misgivings about some of those excessive expenditures or what they interpret as excessive expenditures in connection with the minister's department. The department has expanded greatly since the outbreak of the war. At that time it had only 1,774 men in the service, and the whole Canadian navy, big and small, was represented by fifteen vessels. I do not hold the minister to account for that. But I say the figures which were given as the basis of the growth of the navy are a most serious reflection on the government and those who had the responsibility of preparing Canada to defend itself and its shipping when war broke out. The minister was not in his present position at that time, and I do not hold him responsible. On the other hand, I consider it to the discredit of those who had the responsibility in the years leading up to the war.

I should like to ask the minister what is the justification for this very large expenditure on the gymnasium built at Wellington barracks, Halifax, which I think has the special name of Stadacona?

Mr. MACDONALD (Kingston City): I can only say to my hon. friend that it is a very large physical training building. The estimate is considerably less now than the original estimate. The original estimate was cut down quite drastically. There is a swimming-pool in the building, but I think that is an absolute necessity for men who are taking on duties at sea; and to show that there is no extravagance I received not long since a letter from a citizen of Halifax who urged that the swimming-pool should be, as most swimming-pools are, tiled instead of lined with cement. He pointed out that tile was much more sanitary, that men were likely to contract athlete's foot one from another if cement were used. We have not agreed even to spend the extra five or six thousand dollars that it would cost to tile that swimming-pool and the adjacent floor.

This is a physical training building. It is very large. It is well fitted out but not extravagantly fitted out. I can get my hon. friend more details by to-morrow; but I think I can assure him that every economy which could be reasonably practised was practised there.

Mr. BLACK (Cumberland): This expenditure may be justified, but a great many of the taxpayers do not appreciate that it is. That expenditure would build practically the entire equipment of some of the smaller universities that we have down east. What composes the whole set-up of Wellington barracks? I understand that one part of it is called Stadacona No. 1 and another part Stadacona No. 2, and perhaps there are other sections of the naval establishment at Wellington barracks. Could the minister give the committee this information?

Mr. MACDONALD (Kingston City): Stadacona No. 2 is what used to be called the "Y" depot, the building used by the air force. Stadacona proper, that is, the old Stadacona, is the original site. My hon. friend is familiar with it. I may say with regard to the physical training building that a great many men would rely on this physical training building for physical training and exercise. For instance, at Stadacona there are roughly 12,000 men. That does not take in men who might be visiting the port in ships.

Mr. FRASER (Peterborough West): They are all allowed to go into the swimming-pool?

Mr. MACDONALD (Kingston City): Oh, yes, it is for all naval personnel. They are allowed not merely to go into the swimming-pool but to use the parallel bars and all the physical training appliances in this building. No university in this country has anything like 12,000 men or men and women put together. No university here has half that number, so that there is, I think, a great need for a proper physical training building.

Mr. POTTIER: May I suggest to the minister that if there is any question about giving them tile, give them the tile.

Mr. BLACK (Cumberland): I should like to ask the minister what interest his department has in connection with the old exhibition grounds and the exhibition equipment at Halifax? I am not sure whether it is under the control of the army or the navy. I understand that the navy has an interest in part of it at least. This property was taken over from the province of Nova Scotia, as I understand it, for

the sum of $225,000, or thereabouts. I am not sure whether that includes the entire property. Large expenditures were made on it, the contractors being the Fundy Construction company, $262,606; R. & A. Parsons, $323,293; W. G. Foley, $59,778, and nearly $70,000 in furnishings and equipment. Then there are the grandstand and the outer building. I should like to know what part of this building is used by the Department of National Defence for Naval Services and whether the minister's department is responsible for this additional building or works constructed on the property?

Mr. MACDONALD (Kingston City): I think I can say to my hon. friend that the army now has control of all the exhibition building and grounds. We were there for a time, and we may now have a small storehouse on one corner of it for the storage of mine-sweeping gear, but I think the army is exclusively in control there.

Mr. BLACK (Cumberland): Were these new structures built by the army or by the minister's department?

Mr. MACDONALD (Kingston City): I do not think we built any new structures, certainly no large ones. We had to do some building there because men were sleeping under the grandstand for a time. We had to put in bunks and we had to put in heating and so on. Inevitably what would be suitable as an exhibition building would not be suitable as a barracks, and therefore we had some repair work to do on the building. Now the whole matter is under the army.

Mr. BLACK (Cumberland): I understand the King Edward hotel has been purchased by the Department of National Defence for Naval Services. For what purpose is it being used, and was due consideration given by the department to the inconvenience of the other users of this property when they were displaced, in view of the great scarcity of hotel accommodation in the city of Halifax?

Mr. MACDONALD (Kingston City): At the moment I cannot give my hon. friend the cost to us of the King Edward hotel, but my recollection is that this building had not been used as a hotel for a great number of years. We took over the King Edward hotel and certain other adjacent property, and are using it now as a canteen, cafeteria, restaurant and that sort of thing.

Mr. BLACK (Cumberland): I see by a return which was brought down that the property was purchased for $26,500.

Mr. MACDONALD (Kingston City): It was a very good buy.

Mr. BLACK (Cumberland): Then I should like to ask the minister about the construction of the wireless and telegraph station at Dartmouth. A fairly considerable expenditure has been made there to the Fundy Construction company, amounting to $129,751. What is that used for?

Mr. MACDONALD (Kingston City): I presume my hon. friend refers to Albro lake, outside Dartmouth. If my hon. friend wishes to know the total cost I shall have to get that information for him, but the work there is for a wireless station.

Mr. BLACK (Cumberland): Then I should like to ask with regard to the very large expenditure on the navy armament depot at Dartmouth, which appears to have cost nearly $3,000,000. For what purpose is that required?

Mr. MACDONALD (Kingston City): That will be for the storage and repair of guns of all kinds.

Mr. BLACK (Cumberland): If repairs are carried on there, is it equipped with a machine-shop capable of doing general overhaul work?

Mr. MACDONALD (Kingston City): Yes; storage and repair.

Mr. BLACK (Cumberland): What is the policy of the department with respect to the searching of titles and other legal services? In this return brought down some time ago I notice there are about sixty properties owned or controlled by the department, and two or three names appear constantly in this report as those of men who have rendered legal service. Mr. J. E. Rutledge has many accounts in, though in connection with some of them his charges are not known. I see the name of Mr. J. W. Godfrey, and there are several others. Has it been the policy of the department to engage different law firms or solicitors in connection with titles, or has the department some official on its own staff who is doing this work?

Mr. MACDONALD (Kingston City): There is no official in the department of naval services to do that work, unless we took men who are doing other work and sent them there. In any event, the common practice would be to get in touch with a local lawyer who would be familiar with the methods of searching in the province concerned. Furthermore, when we wish to have any legal work of that kind done we consult the Department of Justice and ask them to see that it is looked after.

Mr. BLACK (Cumberland): Have Mr. R. M. Fielding, Mr. J. W. Godfrey and Mr.

J. E. Rutledge any special qualifications beyond those possessed by scores of other solicitors in the city of Halifax for doing this work for the department?

Mr. MACDONALD (Kingston City): I told my hon. friend a moment ago that I do not appoint any of these men. These matters are handed to the Department of Justice, which selects the men who are to act for it in the various localities. As to Mr. Rutledge, Mr. Godfrey and Mr. Fielding, I think any of them would be quite competent to search titles.

Mr. BLACK (Cumberland): I think they have been very carefully selected by some standard or another.

Then I should like to get some information with respect to the naval set-up at Point Edward, I think, in Westmount, at Sydney harbour on Cape Breton island. What has been the total expenditure there; what is the equipment, and for what purpose is it used? While the minister is dealing with this, I should like to know the loss that was entailed in the fire which occurred a few months ago and whether he has any information as to the cause of the fire at that establishment, as well as the causes of fires at various other defence establishments not only in Nova Scotia but elsewhere throughout Canada. A great deal of uneasiness has been caused among people generally by these fires which have destroyed establishments either under the control of the department or erected for the convenience and comfort of men in the services. Great losses have been caused to those who for patriotic reasons have made personal contributions in order to see that the enlisted men should have all possible advantages and comforts.

Mr. MACDONALD (Kingston City): The amount expended at Sydney to December 31 last was $9,662,000, and it is estimated that it will cost $840,000 to complete the work. My hon. friend asked as to the purpose of this institution. There is at Sydney a complete naval base consisting of barracks, officers' quarters, canteens, mess halls, wardrooms, schools, training accommodation, store buildings, recreation facilities, shops, laundry, bakery, post office, a marine railway, fire station, pump station, chapel, hospital and so on. It is a fairly complete naval base.

Mr. BLACK (Cumberland): Would the minister give information as to the cause of the fire at Point Edward or Westmount, and other points in Nova Scotia, with particular reference to his department?

Mr. MACDONALD (Kingston City): The fire which destroyed the Sydney pier was caused by certain welding operations carried on there, which ignited the oil carried in a fuel pipe running under the wharf. The fuel pipe ran through a tunnel inside the wharf, or under the wharf. That made it very difficult, of course, to get at the seat of the fire to extinguish it.

The great difficulty is that now and again we have complaints as to the cost of building. However, when we start to put up a proper type of building, that is a fireproof one, we are criticized for spending too much. As we see now, the wharf at Sydney undoubtedly would have been better had it been concrete, in the beginning. It would have cost more initially, of course, but in the long run we would have saved money. But we tried to get along and hoped we might get by with a wooden wharf. We did not succeed, unfortunately, in this instance.

The fire at Shelburne was caused by an overheated boiler in a building on the wharf.

Mr. BLACK (Cumberland): There is no suspicion of sabotage in connection with any of the fires which occurred on the department's property?

Mr. MACDONALD (Kingston City): No.

Mr. BROOKS: Was there any insurance on any of these buildings, or is that in line with the department's policy?

Mr. MACDONALD (Kingston City): There was no insurance. The policy of the dominion government is not to insure buildings, on the theory that by spreading the risk among a great many buildings they save money by not insuring.

Item agreed to.

5. Personnel supplies and services: Food, medical and dental stores, clothing and personal equipment, $27,846,280.

Mr. NICHOLSON: I have before me the recommendations made by the national health survey and tabled by the Minister of National Defence a few days ago. It is stated here that the ratio for medical officers per 1,000 troops in the army in Canada is 4·98, whereas overseas it is 3·83. In the entire service in the army, in Canada and overseas, the ratio is 4·5 per 1,000.

In the navy the ratio is 4·9, and in the air force it is 3·66. The report says:

> In order to properly assess these ratios, it is necessary to study carefully the factors appearing in the appended tables. The air force has perhaps the least complex organization; it has also the lowest ratio. Many medical officers in all the services find their work less onerous than work which they had been accustomed to in civil practice. In the short time at the disposal of the committee it was not possible to study this subject exhaustively, and we did not feel competent to make any arbitrary

recommendation. The committee is, however, of the opinion that a ratio of 3·5 to 3·7 per thousand should provide ample room for all medical needs. This statement, however, must be interpreted broadly in the light of indeterminate overseas requirements.

Would the minister be in a position to illuminate this statement? We find that in the air force the ratio is 3·66, and it is pointed out that they have the least complex organization. Could the minister give some explanation as to why the ratio in the navy and the army appears to be a good deal higher than in the other service?

Mr. MACDONALD (Kingston City): What is my hon. friend quoting from?

Mr. NICHOLSON: From the report tabled on Monday by the Minister of National Defence, containing the recommendations of the Canadian medical procurement and assignment board.

Mr. MACDONALD (Kingston City): I would have to consult the medical people about that. I should think, however, that one factor which would serve to bring up the navy's average would be this: If you send a doctor to sea on a corvette, a frigate or a destroyer, with a personnel of 100, or 200 at the most, obviously the average would be raised. But we have to do that in many cases. If all our men were on land, as they are in the air force and the army, it would be a different story. But we have small detachments at sea, in small ships. While all ships do not have doctors, yet a good many of them have. I fancy that would put the navy in a somewhat different position. However, that is just my own view, and I shall have to consult the medical people to see if there is any further statement to be made.

Mr. NICHOLSON: Another paragraph states:

> Army tables indicate the small amount of inter-service hospitalization which exists as between the navy, army and air force. It is felt that inter-service hospitalization should be encouraged wherever possible. This would relieve the burden carried by Department of Pensions and National Health hospitals and would promote interlocking of service medical facilities.

I have not had an opportunity to study in detail this very long and interesting report. Could the minister make a statement as to the possibility of having more extensive co-operation between the medical services of the army, the air force and the navy. For example, in large centres like Halifax, Montreal, Toronto and Vancouver it seems to me, a layman, that greater cooperation might result in the conservation of medical personnel, and also in providing a more complete hospital service for those who are admitted.

Mr. MACDONALD (Kingston City): I shall look into that again, along with the other question my hon. friend raised. But I may say there is a great deal of cooperation now. We are building a hospital at St. Hyacinthe, where we have a large naval establishment. But from there to the west coast we have no hospitals of our own. We have to use either civilian hospitals or hospitals of the other services. Where we have a hospital, such as that at Halifax, I think we do work for the other services, as well. They possibly do the same for us. Similarly, at St. John's, Newfoundland, where we have a large naval hospital, the same would apply. However, I shall be glad to get the opinion of the medical branch on that point, and give my hon. friend an answer later.

Mr. NICHOLSON: I have one further question I should like to ask. Section 32 in the report states:

> The whole picture presented as a result of this survey would have been more complete if information as to medical organization and the utilization of medical personnel overseas had been before us. The committee has not had time to secure information on the latest medical organization plans of the united nations. It is thought that these nations must have learned much by experience that would be of value in Canadian training and administrative arrangements. It would be useful if someone acting on behalf of the medical services in Canada could make an active endeavour to secure full information as to the medical organization in the united nations and their programmes and procedures.

It seems to me a pity that this matter did not receive consideration before the report came in. I wonder if the minister would consult his officers and see whether in the near future this recommendation might be given consideration.

Mr. MACDONALD (Kingston City): I would rather do that.

Mr. McCANN: The matter about which I have to speak, very briefly, has to do with the medical services not only of the navy but of all the armed forces of Canada. On previous occasions when the resolutions with reference to the war appropriations of the armed services were up for consideration I made observations with reference to promoting an amalgamation of the medical services in the three divisions. For reasons best known to the government, the recommendations which were made were not followed. But in the very document from which the last speaker has been quoting, namely, the report of the procurement and assignment board, the position which I took has been vindicated. I bring that to the attention of the minister in the hope that

the recommendation which I make at this time may receive more favourable consideration than did former recommendations.

I have no doubt that when the European war is over and Canada is called upon to take part in the Pacific war, our naval services will be engaged in the southern Pacific. Our air forces and our land forces may also be engaged there. I wonder if information could be secured with reference to what tropical diseases any force which we might send to the Pacific theatre of war might face. The suggestion I am going to make is that we have sufficient personnel in the medical services of the armed forces of this country, and some of them might take time now to become somewhat proficient in the treatment of tropical diseases. The information which I have been able to gather, both through medical journals and through newspapers, is to the effect that the Japanese in the present war are suffering more casualties by virtue of tropical diseases than they actually are from bullets. If such be the case, one can easily visualize the difficulties which any Canadian forces might have if they go to that particular theatre of war.

In any of the medical schools in this country tropical diseases are not studied to any extent. It might be of interest to the minister to know that the British government maintains a school in London for the study of tropical diseases. The United States government also maintains a school, which I think is at present situated at New Orleans, for the study of tropical diseases. Men who study medicine in this country and practise here have no occasion to come in contact with any of these diseases, and by virtue of that fact they are not conversant either with the diagnosis or with the treatment of tropical diseases.

The suggestion which I have to make to the minister is this, that he confer with his colleagues the Minister of National Defence for Air and the Minister of National Defence proper, with a view to taking fifty men from each of these services and making arrangements with the authorities either in the United States or in Great Britain that these men could go and take a four or a six months course in the study of tropical diseases, so that when our armed forces come to operate in the Pacific we shall have men in our navy, army and air medical services who will be conversant with tropical diseases, as to both diagnosis and treatment. It would be money and time well spent, and if it is a fact that there are some casualties from these diseases what I have suggested would certainly be of great benefit to the men in the armed forces.

[Mr. McCann.]

Tropical diseases are treated by specific types of drugs. I wonder if provision has been made for obtaining as much as possible of these drugs. For instance, there is only one specific drug—quinine—and a new synthetic drug, made for the treatment of malaria. I had occasion a year ago last fall to be in St. Louis at the convention of the American Public Health Association. St. Louis is the distributing centre for all the services of the United States as far as ordnance and supplies go. I was shown there $50,000,000 worth of quinine and opium which had been bought up by the United States government and stored there. While we have nothing like that amount, I wonder if there has been any bank of drugs procured and stored to be used for the forces in the event that these drugs are needed.

I would ask the minister to take up this suggestion with his colleagues, particularly with the directing forces of the medical forces in the various departments, and to give at least some consideration to a suggestion which I feel will prove of practical value in the event of Canada entering the Pacific war.

Mr. MACDONALD (Kingston City): I am glad to hear my hon. friend speak on that subject, and I am happy to be able to tell him and the committee that for some time certain naval medical officers have been giving study to the matter of tropical diseases. As a matter of fact, one of the naval medical officers to join early in the war was a man from western Canada who was in London at the outbreak of the war, studying tropical diseases. He attached himself to the Canadian navy then, and is still with us. Since then a good many others—I do not know just how many, but I will look into it—have taken up the study of tropical diseases. I should be very glad to carry out my hon. friend's suggestion of talking over this whole matter with the other two service ministers and cooperating with them in what is and what will be, I am sure, a very important branch of medical work.

Mr. STIRLING: Now that the public is taking so much more intelligent a view with regard to the prevention of venereal disease, would the minister tell the committee what steps are being taken in the navy to battle with it, and to what extent they have been attended by success?

Mr. MACDONALD (Kingston City): In a general way I can only tell my hon. friend that I think every effort is being made, but perhaps I should let that question stand and get a more detailed answer from the medical authorities to-morrow. I know that they, in

common with all service medical authorities, are bending every effort to prevent the occurrence of this disease, but as to the exact details of what they are doing, I should like to get information from the doctors themselves.

Mr. STIRLING: I should be glad if the minister would do that; and also, perhaps, he could describe how many of the Canadian ships carry medical officers and how treatment is carried on where necessary in the smaller ships on which there are no medical officers.

Mr. MACDONALD (Kingston City): Yes.

Mr. BLACK (Cumberland): I should like to ask the minister with respect to facilities at the different naval stations regarding testing for night vision, whether these facilities are available at different training bases, such as Stadacona, Cornwallis, Sydney and so on.

Mr. MACDONALD (Kingston City): I should assume that they are. I know that the navy is one of the pioneers, and that, under the direction of Doctor Best and others, great attention has been given to this matter of night blindness and night vision. I should assume that every establishment has adequate facilities. But that is another matter which I shall look up and get a story on from the medical officers.

Mr. BLACK (Cumberland): I wish the minister would pay particular attention to the checking of Stadacona before long. I would also ask him with respect to the milk supply at Deep Brook. I understand that the milk requirements are largely obtained from condensed milk, canned milk, rather than milk in bulk. If that is correct, will the minister give the explanation?

Mr. MACDONALD (Kingston City): It is correct. For the moment at any rate I understand that there is not enough milk available in that locality to supply the requirements of the camp, which is a large camp of nearly 7,000 men. Consequently it has been found necessary to resort to milk powder, and machines have been installed which reconstitute this powder into milk at the camp.

Mr. BLACK (Cumberland): That would be much more expensive, I presume, than obtaining milk from the producers?

Mr. MACDONALD (Kingston City): It is impossible to obtain it from the producers.

Mr. BLACK (Cumberland): I understand that preference is given to producers if they are able to provide the milk?

Mr. MACDONALD (Kingston City): If they could provide whole milk we would be glad to take it, but Deep Brook is midway between two relatively small towns, Digby and Annapolis, Annapolis with a population of about 1,200 and Digby with perhaps a few hundred more. There is no large city near at hand, and the only milk supply there, as I see it, would be from the farmers in the country around, and that has not proved at all adequate for the purpose.

Mr. CRUICKSHANK: Move the camp to British Columbia.

Mr. BROOKS: I have heard it reported that the Wrens do not get a new uniform until the old uniform has been worn almost threadbare. What is the policy on refitting and providing the Wrens with new uniforms?

Mr. MACDONALD (Kingston City): I should hardly think my hon. friend's information would be correct. The policy with regard to clothing for men and women is that they are given a complete outfit of clothing when they join. Then the Wrens are given a special allowance of $15 when they join to provide themselves with knick-knacks of one kind or another; also $44 a year to provide themselves with clothing, and an additional allowance of $3 a quarter or $12 a year to provide themselves with toilet necessities and—

Mr. MACKENZIE (Vancouver Centre): Accessories.

Mr. MACDONALD (Kingston City): — other articles of feminine apparel.

Mr. BROOKS: The men in the army get two uniforms when they enlist, and I was wondering if the Wrens are treated the same.

Mr. MACDONALD (Kingston City): The men in the navy are treated not quite so well as the Wrens. The government does not issue clothing to the men, except in the first instance. After that, the man has to buy his own clothing. But he is given the money, $44 a year, with which to buy it. The Wrens are also given the $44 a year and the other sums I mentioned, $15 at the start, and $3 a quarter.

Mr. ROSS (St. Paul's): What about clothing when they are discharged? Is the policy the same as for the army and the air force? Do they take their clothes with them?

Mr. MACDONALD (Kingston City): We let them keep a uniform.

Mr. ROSS (St. Paul's): Is there any difference between the clothing allowance given to men in the navy and that given to men in the army and the air force?

Mr. MACDONALD (Kingston City): The clothing allowance on discharge is the same amount.

Mr. ROSS (St. Paul's): The same all the way through?

Mr. MACDONALD (Kingston City): Yes.

Item agreed to.

6. Signal and wireless equipment, line construction, et cetera, $19,759,334.

Mr. STIRLING: This item is three times as great as last year. Would the minister explain the reason for that? With regard to signal and wireless equipment, does the navy do as the other two services, request Munitions and Supply to do their purchasing, or does the navy buy their own equipment direct? Which ever case it is, will the minister tell the committee how much is obtained from Canadian manufacturers and how much is brought in from equipment manufacturers in other countries?

Mr. MACDONALD (Kingston City): I do not know that I can answer all my hon. friend's questions, but I can answer some. First of all, all this equipment is bought through Munitions and Supply, who do all the purchasing for the navy, as for the other departments. The reason for the increase is as follows: In the first place, orders which were placed a considerable time ago will come in for payment this year. Orders for this equipment have to be placed far in advance sometimes. Then, of course, new signalling and wireless equipment is constantly coming into use. More ships will be in service next year and that will add to the total cost.

Mr. STIRLING: Is the principal part of this amount for instruments?

Mr. MACDONALD (Kingston City): The greater part of it would be for instruments of one kind and another on ships. To give my hon. friend one or two items, let us take corvettes. We estimate that the total cost will be $3,500,000 or thereabouts. That will include new wireless telegraph equipment and so on —R.D.F. as it is called—and maintenance thereof.

Mr. STIRLING: Does the minister mean all corvettes at present building?

Mr. MACDONALD (Kingston City): All our corvettes in commission. And so with other ships, minesweepers, cruisers, destroyers. The greater part of this item is, therefore, expenditures on ships.

[Mr. Douglas G. Ross.]

Mr. STIRLING: Does the minister mean that the $3,500,000 is locked up in instruments in all the corvettes we possess?

Mr. MACDONALD: (Kingston City): That is right. That is what we estimate for this year.

Mr. STIRLING: For this year?

Mr. MACDONALD (Kingston City): That is what we estimate it will cost this year for this purpose. All this signal wireless, R.D.F., on corvettes alone will amount to nearly $3,500,000, and other ships proportionately. Then, of course, there is some of this, a relatively minor amount, for use at bases, radio stations, and training establishments.

Mr. NOSEWORTHY: Will the minister tell us more definitely the reasons why this item is nearly five times as much this year as last year? It was $4,500,000 last year and this year $19,759,000, which is between four and five times as much, while the requisition for purchase and construction of ships is only about half as much.

Mr. MACDONALD (Kingston City): This does not apply merely to new ships. I may say that there is probably no field of naval warfare to-day in which there are so many changes as in this very matter of wireless equipment of one kind or another. It is not merely the sending of messages from one ship to another or from ship to shore; there is a great variety of ways in which radio and wireless can be used for detection purposes and purposes of communication. It is not simply new ships coming into commission this year that have to be equipped. Old ships have to have their equipment renewed or modern equipment installed; and, as I pointed out to the hon. member for Yale, we find this year that a considerable number of orders, placed some time ago, are coming for payment. Goods are being delivered this year and payment must be made. In connection with some of it, a relatively minor amount, the increase is on account of increased facilities at bases where we have training establishments. Generally, I think I can say that the great bulk of the increase is owing to the necessity of having modern equipment on both old and new ships.

Mr. CRUICKSHANK: May I ask the minister whether the land line being constructed at Aldergrove by a private company is being built by the company on behalf of the Department of National Defence for Naval Services? My impression is that it was being built under contract by a private company for the minister's department. Second, in regard

to the changing over of these miniature carriers, in connection with signalling equipment, is that under the minister's department or under the Department of Munitions and Supply? There are several carriers at Vancouver.

Mr. MACDONALD (Kingston City): That is a British commitment.

Mr. CRUICKSHANK: Will the minister look up the question to-morrow with reference to the line construction to ascertain whether it belongs to his department or the private company?

Mr. MACDONALD (Kingston City): Perhaps my hon. friend means that the construction work was undertaken by a private company for us.

Mr. CRUICKSHANK: That is what I wish to know.

Mr. MACDONALD (Kingston City): I should think that is almost certainly the case.

Mr. CRUICKSHANK: The line will belong to the minister's department?

Mr. MACDONALD (Kingston City): Yes.

Mr. NOSEWORTHY: Will the minister tell us what part of this item is wanted for land-line construction and where this work is being done?

Mr. MACDONALD (Kingston City): Land-line and teletype and morse contracts amount to about $1,000,000. There is another item of about $1,000,000 for new land-line construction.

Mr. BLACK (Cumberland): Are any of the land lines being built on Cape Breton island, where they have had antiquated services?

Mr. MACDONALD (Kingston City): This deals with lines between, for instance, Ottawa and New York, or Halifax and Louisburg. What my hon. friend refers to is covered under a joint service arrangement with the army and the air force. That is, the provision of telephone lines in remote parts of the country. That is under another item.

Mr. BLACK (Cumberland): Under another item in the minister's estimates?

Mr. MACDONALD (Kingston City): There is an item here for the Atlantic command project, $250,000. I fancy the land lines my hon. friend has in mind would be covered by that.

Mr. BLACK (Cumberland): Does the minister care to give information as to whether the lines serving the northern part of New Brunswick, going into the gulf of St. Lawrence, and performing a very useful function, are being renovated? Perhaps he would give us that information later?

Mr. MACDONALD (Kingston City): Yes.

Mr. ROSS (St. Paul's): I have a few questions I should like to ask.

Item stands.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, March 17, 1944

The house met at three o'clock.

PRIVILEGE

MR. BLACKMORE — REFERENCE TO STATEMENT MADE BY THE PRIME MINISTER ON FRIDAY MARCH 10

Mr. J. H. BLACKMORE (Lethbridge): I rise to a question of privilege. Last Friday the Prime Minister rose on a question of privilege and attacked me for certain remarks I had made on Tuesday, March 7, as recorded on pages 1278-79 of *Hansard*. The Prime Minister's speech filled almost four columns of *Hansard*. Whoever prepared the speech the Prime Minister made, it caused him—

Right Hon. W. L. MACKENZIE KING (Prime Minister): What is the point of privilege?

Mr. BLACKMORE: —to make statements which he should never have uttered. The speech is full of untruths—

Mr. MACKENZIE (Vancouver Centre): Order.

Mr. BLACKMORE: —half truths—

Some hon. MEMBERS: Order.

Mr. MACKENZIE KING: I rise on a point of order. The hon. member has no right to say statements of mine are untrue at least before he states his question of privilege.

Mr. BLACKMORE: I do not think the Prime Minister heard what I said. I said, "whoever wrote his speech—"

Mr. MACKENZIE KING: I think my hon. friend is quite forgetting himself. However, I shall wait and hear what he has to say; but I assure him any statement or speech to which he may refer was my own.

Mr. BLACKMORE: I am sorry to hear the Prime Minister made this speech. There were a great many misrepresentations or instances of—

Mr. MACKENZIE (Vancouver Centre): Order.

Mr. SPEAKER: The hon. member cannot make such statements with regard to another hon. member.

Mr. MACKENZIE KING: May I draw Your Honour's attention to the fact that on a question of privilege an hon. member is supposed to raise his question as soon as possible. The hon. member has raised a question of privilege on some matter that took place a week or two ago.

Mr. BLACKMORE: At one point in his speech the Prime Minister said; as reported at page 1345 of *Hansard*:

> It is irresponsible and unwarranted utterances such as these, both inside and outside the house, which tend to destroy the faith of the people alike in government and parliament....

I had suggested to him that he tell the house whether or not the Liberal party had received campaign funds from the sugar interests, particularly the St. Lawrence Sugar Refineries and Mr. J. W. McConnell. He could have answered this question, but it has not been answered.

Mr. SPEAKER: The hon. member must state his question of privilege without argument.

Mr. BLACKMORE: Then, Mr. Speaker, may I point out that as a result of the Prime Minister's remarks many people in the country were deceived, and among them several prominent newspapers. I have in my hand an editorial—

Mr. MACKENZIE (Vancouver Centre): Order.

Mr. BLACKMORE: —from the *Globe and Mail*—

Mr. MACKENZIE KING: I submit Your Honour should rule on this procedure and have the hon. member obey the rules of the house.

Mr. SPEAKER: The hon. member—

Mr. BLACKMORE: I cannot hear Your Honour.

Mr. SPEAKER: The hon. member must state his question of privilege as shortly and concisely as possible without reference to what other people or the newspaper said.

[Mr. Mackenzie King.]

Mr. BLACKMORE: Mr. Speaker, in order to indicate the degree of deprivation of privilege which this editorial has inflicted upon me, it is necessary for me to read several passages; in fact I see no way of avoiding it. There are many instances of hon. members rising in this house to read statements from newspapers as evidence that their privileges had been violated, and I ask the same privilege to-day.

The editorial in question is contained in the Toronto *Globe and Mail* of March 13, 1944. It says in part as follows:

> Mr. Blackmore, who represents a constituency interested in beet sugar, had announced his suspicion that both the available quantity and price of sugar had been influenced by the operations of a sugar trust or combine, dominated by the St. Lawrence Sugar Refineries, of which Mr. McConnell is president. He also suggested that these operations might have been helped by governmental policy under the stimulus of contributions to the Liberal campaign fund made by Mr. McConnell.
>
> Mr. King made a categorical denial of these allegations.

Then farther down the editorial it says:

> In making such ill-founded charges, Mr. Blackmore is not the only sinner. Not a few radical demagogues are addicted to the habit of singling out for unfair attacks and imputing dishonest motives to all men who have managed by industry, initiative and foresight to acquire substantial fortunes.

Then still farther down:

> The Prime Minister's defence of Mr. McConnell will be applauded by many people...

I have no particular objection to that.

Mr. SPEAKER: Order. I have listened to the hon. member read the entire editorial in question. I assume what he is referring to is the last sentence, which he has just read. There may be a question of privilege in that, and I would ask the hon. member to confine his remarks to it.

Mr. BLACKMORE: It seems to me, Mr. Speaker, that if an hon. member makes a statement in this house, and another hon. member practically calls it a lie, a newspaper which makes a statement to that effect certainly is violating the privilege of that hon. member. The statement is here; "there was a categorical denial of every one of these allegations." However, I shall just pass that by. I should like to point out that the Toronto *Globe and Mail*, in effect and by implication, called me a sinner, a demagogue and an imputer of dishonest motives, and suggested that I classified as malefactors or public enemies those who had reaped great rewards by their ability and enterprise,

through perfectly honest means. I hereby challenge the *Globe and Mail* to justify its statement that I have merited any of those offensive remarks, by reference to my record either in this house or outside of it.

Now, Mr. Speaker, may I go on and refer once more to the remarks of the Prime Minister, which I think also violated my privilege. Under the rules of this house, as far as I can judge, it has been impossible for me to answer the right hon. gentleman. I had expected to do it the following day, but there were a great many things which took up the time of the house; the next day was Wednesday, and the following day was completely occupied with other business, so that I am taking the earliest opportunity of telling the Prime Minister and this country that the right hon. gentleman was altogether unjustified in characterizing my remarks as irresponsible utterances. I intend at the earliest opportunity to bring evidence before this house to indicate that I had ample justification for all the allegations I made on the evening of March 7.

While I am on my feet may I refer to the speech of the hon. member for St. Antoine-Westmount (Mr. Abbott), in closing the debate on the industrial development bank, again at a time when I could not answer him. The hon. gentleman took time off to refer to me in a way which was not justified.

Mr. ABBOTT: You took time off to discuss matters which were not relevant to the debate.

Mr. BLACKMORE: Very good. I wish to point out that on that occasion the hon. gentleman used the following words about me, as recorded in *Hansard*—

Mr. SPEAKER: The hon. member has stated his point of privilege, and I would ask him to conclude his remarks.

Mr. BLACKMORE: I could not hear what you said, Mr. Speaker.

Mr. SPEAKER: I think the hon. member has now stated his question of privilege as far as the reference to the Prime Minister is concerned; his other remarks, in reference to the parliamentary assistant to the Minister of Finance, are not relevant at the moment.

Mr. BLACKMORE: In closing, Mr. Speaker, I just wish to warn the two hon. gentlemen to be in their seats, because there is plenty of evidence that will require the most accurate—

Mr. MACDONALD (Kingston City): Surely it is not a question of privilege for the hon. gentleman to rise and warn people as to what he intends to do. There cannot be any privilege in that.

Mr. SPEAKER: The hon. member has concluded his remarks on the subject.

MR. HANSELL — SOCIAL CREDIT PARTY — RADIO TIME

Mr. E. G. HANSELL (Macleod): I rise to a question of privilege, which affects every Social Credit member of parliament, based on the report that the Canadian Broadcasting Corporation has allotted free time to the Liberal, the Progressive Conservative and the C.C.F. parties. My point of privilege is that the Social Credit organization in Canada, of which the Social Credit members of parliament form part, has been seriously discriminated against in the allotment of radio time—

Mr. SPEAKER: Order. That is not a question of privilege.

Mr. HANSELL: I shall have something more to say on this at another time.

BUSINESS OF THE HOUSE

REPORT OF COMMITTEE ON REVISION OF STANDING ORDERS

On the order for motions:

Mr. JEAN-FRANÇOIS POULIOT (Temiscouata): On the orders of the day, under the subtitle of motions, I read this:

March 7—Further consideration in committee of the whole of the report of the special committee on the revision of standing orders.

On a point of order, sir, I hope this item will be struck off the orders of the day, for the reason that the preamble of the report of the special committee was cremated by the Prime Minister on March 7, and its ashes have gone with the wind. But there is more to it, sir. I do not see how the committee of the whole house could consider the report without first having it sent back to the special committee to strike off the preamble and to number each suggested amendment. What appears now on the orders of the day reminds me of the metal coffin handles that are kept in some houses—

Mr. SPEAKER: We are now on routine proceedings. This matter can be dealt with when the debate in question is resumed. At the moment it is not in order.

DOMINION ELECTIONS

REFERENCE TO REMARKS OF MINISTER OF NATIONAL REVENUE IN HAMILTON ON MARCH 16

On the orders of the day:

Hon. GROTE STIRLING (Yale): May I ask the Prime Minister whether the statement reported to have been made last evening in Hamilton by the Minister of National Revenue (Mr. Gibson), with regard to a federal election, can be taken as a government statement?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I noticed the statement made by the Minister of National Revenue, but I did not read it with any degree of care. The statement with respect to the time of a general election will be made by myself. I have already indicated in the house my view on it, and I think the views expressed by my colleagues have been in accordance with what I have said.

LABOUR CONDITIONS

POSSIBLE CLOSING OF EDMONTON COAL MINES

On the orders of the day:

Mr. C. E. JOHNSTON (Bow River): I have received several air mail letters and telegrams concerning a situation which is reported also in the Ottawa *Citizen* of March 16, in these words:

> Edmonton coal mines will dismiss 250 employees March 23 and the pits will close March 31 unless the federal government subsidy of 50 cents a ton is continued, mine officials said here to-day.

I should like to ask the Minister of Labour if he is doing anything to see that these two hundred and fifty men are kept on the job, or that they will be placed in other occupations if these mines are allowed to close. This matter is causing a great deal of concern out west.

Hon. HUMPHREY MITCHELL (Minister of Labour): The matter of subsidies to coal mines does not come within the jurisdiction of my department, but I can assure my hon. friend that we are quite capable of meeting that situation through the instrumentality of selective service.

Mr. JOHNSTON (Bow River): Probably the question would be more properly directed to the acting Minister of Finance (Mr. Ralston), or the parliamentary assistant, as to whether that subsidy will be continued.

Mr. ABBOTT: I was not listening to my hon. friend's question very closely. Would he repeat it?

[Mr. Speaker.]

Mr. JOHNSTON (Bow River): Will the subsidy of 50 cents a ton be continued on coal, so that these mines in Alberta may continue operating?

Mr. ABBOTT: I shall have to get that information. I had no notice of the question, and I shall answer my hon. friend on Monday.

PROVISIONS FOR FARM HELP IN BRITISH COLUMBIA

On the orders of the day:

Mr. THOMAS REID (New Westminster): Mr. Speaker, I should like to ask a question of the Minister of Labour. Since farming operations have been in effect in British Columbia for some time, and strong representations have come from that province regarding farm labour help, may I ask the minister if any plans have been made or any steps taken looking to the supplying of farm labour, which has been represented as urgently required?

Hon. HUMPHREY MITCHELL (Minister of Labour): Last year we had a very satisfactory agreement with the government of British Columbia, as was indicated by the resolutions passed by some of the farm organizations in that province. Conversations have been going on since last December between the British Columbia Department of Agriculture and the federal Department of Labour with regard to the plans and policies for the forthcoming season.

I might say that one of the methods we adopted was the movement of people from Alberta, particularly during the berry season, into the Fraser valley—I think that is what it is called—in British Columbia. And we expect—

Mr. CRUICKSHANK: To where?

Mr. MITCHELL: They may not grow fruit there; my geography may be at fault. Possibly it is the Okanagan valley, represented by the hon. member for Yale (Mr. Stirling). But I can say to my hon. friend that at this very moment officials of my department are leaving for western Canada to make the necessary plans and to negotiate the necessary agreements which we feel will make possible a measuring up of the situation just as successfully as was done last year.

I must say this, however, that as the war progresses it is inevitable that the labour situation in this country will be tight. I think hon. members will agree with me that if we do as well in every province in the present year as we did last year, we shall be successful indeed.

WHEAT

DELIVERIES STILL TO BE MADE FROM 1943-44 CROP

On the orders of the day:

Mr. G. H. CASTLEDEN (Yorkton): Mr. Speaker, I should like to ask a question of the Minister of Trade and Commerce. Large quantities of grain in western Canada are lying in open bins or out in the fields, and it is in danger of being spoiled. Will the minister inform the house what steps, if any, are being made to permit delivery of such grain, so that we may save this food and avoid severe loss to the farmer?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Mr. Speaker, the hon. member gave notice of his question this morning. The matter is one of considerable importance to producers in western Canada at the present time, and I am glad to give the house this information.

According to information recently secured by a survey throughout the west, there were 276 million bushels of wheat, 143 million bushels of oats and 87 million bushels of barley, a total of 506 million bushels, to be delivered from farms within the crop year 1943-44. In addition there are 75 million bushels of wheat over and above the quota of 18 bushels per authorized acre. Up to March 10 the grain already received into elevators has amounted to 179 million bushels of wheat, 77 millions of oats and 59 millions of barley or 62·3 per cent of the total shown by the survey just mentioned. These deliveries leave 97 million bushels of wheat, 66 millions of oats and 28 millions of barley still to come forward. It is the view of the Canadian wheat board that transportation will be available so that the remaining amounts of oats and barley, together with about 100 million bushels of wheat, will be taken into country elevators before the end of this crop year.

The board provided last December that damp wheat may be delivered up to 18 bushels per authorized acre and that damp oats, barley and rye up to 20 bushels per acre may be delivered over the existing quota of 10 or 15 bushels per acre. Arrangements are now being made to apply the same delivery privilege to tough grain that has previously been applied to damp grain. There is also an exchange privilege in effect whereby producers may deliver tough and/or damp grain at an elevator for dry grain, paying the difference in value. The board has constantly kept in mind the necessity of saving as much grain as possible and states that no significant losses will occur. The grain remaining to be marketed this year is much smaller than at the same date a year ago and in much better condition.

PAYMENTS ON PARTICIPATION CERTIFICATES, 1943 CROP

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): Some little while ago the minister made an announcement that payments would be made on participation certificates for the 1943 crop during the month of May. Can he state now whether any payments have been made, or will they be made before the end of the month?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): I am informed that these payments will be started this month.

PENSIONS

ARREARS DUE TO OLD AGE PENSIONERS AND CERTAIN WAR VETERANS

On the orders of the day:

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health): Mr. Speaker, the hon. member for St. Paul's (Mr. Ross) raised a question regarding certain delays in reviewing new allowances by the war veterans' allowance board. I have looked up the matter, and I find that new allowances are paid out with all possible expedition and dispatch, and the hon. member was so informed.

CANADIAN ARMY

AWARDS FOR GALLANTRY—ACTING RANKS

On the orders of the day:

Mr. G. A. CRUICKSHANK (Fraser Valley): Mr. Speaker, I should like to ask a question of the Minister of National Defence. I did not have a chance to give him notice of it, because I read the paper only as I was coming into the house. However as a gallant ex-soldier, and as the present minister, he will be able to answer me now. In view of the announcement made yesterday by the Department of National Defence on awards for valour, may I ask the minister whether the acting ranks will be confirmed, or, as in so many cases in the last war, will these ranks be held for reinforcing officers?

Hon. J. L. RALSTON (Minister of National Defence): I do not know the announcement to to which my hon. friend refers. If he will let me take what he has said as a notice of question, I shall answer on Monday.

Mr. CRUICKSHANK: May I amplify my question for the benefit of the minister? The awards for valour—

Mr. SPEAKER: Order.

ALUMINUM

REFERENCE TO ANSWER TO QUESTION ON MARCH 16

On the orders of the day:

Mr. S. H. KNOWLES (Winnipeg North Centre): Mr. Speaker, may I direct the attention of the Minister of Munitions and Supply to what I believe to be a series of errors in an answer to a question of mine as found at pages 1508 and 1509 of *Hansard* for yesterday. Those answers had to do with the price of aluminum. They read, in part:

To the United Kingdom: Base price, ·16 cents per pound; Escalator price, first quarter, 1943, ·055 cents per pound.

I am sure the minister will agree that what was intended was 16 cents per pound and—

Mr. HOWE: Make it read dollars instead of cents, and it will be all right.

Mr. KNOWLES: I checked the matter, and I find the error is to be attributed neither to *Hansard* nor to the King's Printer, because what is printed in *Hansard* corresponds with the typewritten copy given to me yesterday. Then, when the minister is checking that answer I wonder if he would compare it with the material he placed on *Hansard* on March 10, at page 1346, where he tabled the correspondence with the Aluminum Company of Canada, Limited, with regard to the reduction in the price of aluminum. In the correspondence it was indicated that information was in the possession of the Department of Munitions and Supply regarding prices to the United States and Australia. In the answer given yesterday the statement is made that no such information is in the possession of the department. Will the minister reconsider the answer to the question?

Hon. C. D. HOWE (Minister of Munitions and Supply): Obviously my hon. friend has all the information there is on the subject. There was evidently a mistake of a decimal point in preparing the answer. My hon. friend knows that this should be sixteen cents, not one-sixteenth of a cent per pound. As far as the price of the metal to the United States and Australia is concerned, we know the base price but invoices are sent direct from the company to the purchaser and we do not know the operation of the escalator clause which is determined by the offices that purchase the aluminum.

ST. PATRICK'S DAY

On the orders of the day:

Mr. DANIEL McIVOR (Fort William): Mr. Speaker, I am sure it is with mingled feelings of regret that we who are away from the land of our birth join with other Irishmen in celebrating the passing of that great missionary, Saint Patrick. When I think of how the former leader of the opposition, the late Doctor Manion, cabled de Valera to open up bases to assist the allies in their struggle for peace and fair play; when I think of how our own Prime Minister refused to enter into negotiations with de Valera and politely told him, according to the interpretation I put upon it, that he should tell the Germans and the Japanese to go home out of there; when I think of the golden opportunity Eire had—

Some hon. MEMBERS: Order.

Mr. McIVOR:—to tell the world that they supported the cause of freedom and fair play.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, March 16, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF MUNITIONS AND SUPPLY

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Chairman, in presenting the war estimates of the air services branch, it is appropriate that I give hon. members a statement of the views of the government on civil aviation, both domestic and international. At this time the subject is one of unusual interest to the house and to the country. It is well known that the necessities of war, during the past four years, have brought about more in the advancement of the science of aviation than would have been accomplished in a generation of normal progress. The exploits of our airmen overseas and our vast air training plan have contributed much toward making our people air minded. Our accomplishments in the building of military aircraft also have contributed to that end. The need for maintaining rapid communication with our troops overseas has forced us to undertake a transport service across the oceans and to improvise equipment for that purpose. The urgency of war production has caused many business men who were formerly unfamiliar with air travel, to become new customers of our commercial air lines.

During this period of great activity of air travel, we have been devoting our manufacturing capacity to building war planes, as have all other allied countries. We have been wholly unable to provide new equipment for our air lines, such as would satisfy the increasing de-

mands for travel accommodation. Trans-Canada Air Lines had been operating for some two years prior to the outbreak of war, and had only sufficient equipment to meet the then very limited demands of the travelling public. To-day, Trans-Canada Air Lines has but little more equipment than when the war began, and is unable to purchase suitable new equipment. When Canada was called upon to provide a mail and an official passenger service across the Atlantic ocean, it could obtain planes for that purpose only by taking Lancaster bombers from our own production line, and converting the bombers for transport use. The result is that the demand for air travel, both inside Canada and across the oceans, greatly exceeds the supply.

To lay a foundation for the present discussion, it may be well to trace, very briefly, the history of civil aviation in Canada.

In the early 1920's, pilots who had received their training in the last war obtained planes, and commenced services into areas of the north country that were then difficult of access, except by air. These services were supported, for the most part, by the mining and petroleum industries. Through the years, these services were extended into air lines, each serving a series of isolated communities. A substantial part of their revenue was derived from the carriage of mail, and in this period our Post Office Department took an active part in supporting and encouraging so-called "bush operations".

In 1927 a movement was sponsored by the government to encourage the more rapid development of transport by air. Flying schools were organized, across Canada, for the training of pilots, and municipalities were encouraged, and assisted, in the development of local aerodromes. Direct government support was given to flying clubs, and the Post Office Department continued to provide mail revenue for those who were pioneering air transport routes.

In 1930 a change of government occurred, and the attitude of the government toward civil aviation was altered. In the early 1930's many air mail contracts were cancelled. Appropriations for government assistance to civil flying were cut, and civil aviation received a severe setback. However, in 1933, for the purpose of relieving an acute unemployment situation, the government commenced a project of building a series of airports across Canada, by day labour, to form a transcontinental route for military planes. For reasons that I could never understand, the aerodromes were located at thirty-mile intervals and, although civil aviation in the United States was then highly developed, the plans called for airfields suitable only for small, single-engine planes.

In 1935 the present government came into office, and was confronted with a situation that demanded a clear definition of policy toward civil aviation. Work was in progress on the government's chain of airfields. Municipal airfields, that had been built in the late twenties were not being used. Two alternatives were open; the government could undertake a programme for developing a comprehensive system of transport by air, to serve all parts of Canada, or it could confine government activities in this field to regulation, and let private enterprise plan its own expansion. The former alternative was chosen.

Plans were under way to merge the Department of Railways and Canals with the Department of Marine, to form the Department of Transport, and, with the consent of the then minister of national defence, those plans were enlarged to provide for moving the control of civil aviation from the Department of National Defence into the newly formed Department of Transport. Accordingly, a bill creating the Department of Transport was approved by parliament at the session of 1936.

On being appointed Minister of Transport, I lost no time in laying plans for an expansion of civil aviation in Canada. To acquire a background for doing so, I visited the United States, and travelled over its airlines for the purpose of making a study of air transport, and the facilities required in that connection. To provide a grouping of services directly related to transport by air, the air services branch of the Department of Transport was created, to include the newly acquired civil aviation division, and the meteorological division and the radio division of the former department of marine. The new branch was placed under the direction of a capable officer of the department, who was instructed to expand all three services to meet the requirements of a coast to coast interurban air transport service, following the latest American practice.

The Trans-Canada Air Lines Act was presented to parliament in the session of 1937. The intention of the government had been to unite the strongest transportation interests in Canada to undertake this new venture in transportation, and with that in view I approached the Canadian National Railways, the Canadian Pacific Railway company, and Canadian Airways, Ltd., the latter being by far the strongest of the air transport companies then operating. These companies were invited to provide the needed capital for, and assume the ownership of, the airline company, the government to assume responsibility for building adequate airports and the necessary communication system. Each of the three

component companies was to share equally in the ownership of the air line, and each was to have two directors on a board of nine, the government to appoint three directors on account of its investment in airports and communications. The financial provisions were the same as those finally adopted and now in force, which made the company a non-profit organization that was also protected against loss of its capital.

The Canadian Pacific Railway Company and Canadian Airways objected to having three government directors on the board, and at the last moment these two companies withdrew their support, with the result that the Trans-Canada Air Lines Act provided for full ownership of the enterprise by Canadian National Railways. It is worth while stressing the fact, at this time, that the Canadian Pacific Railway Company and Canadian Airways were each offered one-third participation in the Trans-Canada Air Lines enterprise, and that both refused to participate in a company with the identical financial arrangements that now apply to Trans-Canada Air Lines.

The newly-formed Trans-Canada Air Lines lost no time in organizing for operation. The president of Canadian National Railways was made president of the company; three other directors of the railway were appointed directors of the new company; and three directors were appointed from the government service, two from the Department of Transport, and one from the Post Office Department. The directors chose a general manager in the person of Phillip G. Johnson, now president of Boeing Aircraft Company, and one of the leading business men in the United States. Mr. Johnson had been a pioneer in transport by air in the United States, and was perhaps the man best qualified by ability and experience to plan the new system.. He came to Canada, at what was for him a very nominal salary, and spent two years here as operating vice-president. His ambition was to make Trans-Canada Air Lines the finest air transportation system in North America, and although he returned to the United States in 1940, his influence on the management is still very noticeable.

The work of building a chain of modern airports and of gathering and training an operating personnel was pressed forward vigorously, with the result that Trans-Canada Air Lines was placed in operation early in 1938. Traffic built up very rapidly, and Trans-Canada grew until at the outbreak of war its services extended eastward from Vancouver to Moncton, southward from Toronto to New York and from Vancouver to Seattle, and northward from Lethbridge to Edmonton. In the early war years, military requirements made it necessary to extend the service eastward to Halifax, and from Moncton to Sydney and on to Newfoundland, and westward to Victoria. Increasing traffic has made the line an outstanding financial success. Its safety record is the best of any air line operating anywhere. Had it been possible during the war years to provide equipment to meet travel demands, the financial position of the company would have been still further improved. At the moment, if we could double our equipment, indications are that we would have every seat occupied.

While the development of Trans-Canada Air Lines was in progress, an effort was made to improve the position of the bush lines, which had been left in a greatly weakened position by government action in the period from 1930 to 1935. While these lines were supported by renewed postal subsidies, they operated under conditions of unrestricted competition, with the result that, as soon as an operation was profitable, a second, and perhaps a third, operation would be undertaken by other owners over the same route. In an effort to protect the lines against cut-throat competition, an amendment to the Railway Act was introduced in the Senate in 1937, when it failed to pass, and in the House of Commons in 1938, when it duly became law. The effect of this legislation was to allocate routes to companies then in the field, and to prevent competition on these routes from newly-formed companies. At this time, sixteen separate transportation companies were licensed for commercial operation in Canada, using 244 commercial aircraft, of which a large number were flown and operated by their owners.

The first year of the war saw a sharp curtailment in gold mining operations, particularly those in remote areas, with the result that traffic for these independent airlines was sharply curtailed. I think I can say that the operation of these air lines, many of which were financed by public subscription, had never been profitable. With the curtailment of traffic before mentioned, these small operators were faced with the necessity of either finding a buyer, or of closing down. At this stage, the Canadian Pacific Railway company entered the field of transportation by air, and bought the stock of all the independent operators, thus obtaining by the end of 1941 a monopoly in the field of transportation by air except for Trans-Canada Air Lines. Since then, one new company has entered the field in the maritime provinces, namely, Maritime Central Airways, this being the only operation not owned either by Trans-Canada or by Canadian Pacific Air Lines.

The building of the Alaska highway was the cause of great activity in air transport in a territory that was being served by Canadian Pacific Air Lines, and that company was assisted by the United States Army in obtaining new and modern airplanes, from United States sources, with the result that the equipment of the company was augmented considerably at a time when all other air lines on this continent found it impossible to buy new equipment. Canadian Pacific Air Lines has continued to give service to the points formerly served by its component companies.

The preceding statement brings us up to date on the position of transport by air within Canada.

It had been contemplated that Trans-Canada Air Lines would be a non-competitive, non-profit system of transportation by air, planned to avoid the duplication of services that were the outgrowth of competitive building for profit in the field of surface transportation. The Trans-Canada Air Lines Act contemplated that Trans-Canada Air Lines would operate all the principal routes parallel to the international boundary, as well as Canada's interest in all international routes, and these on a non-competitive basis. The field of routes into Canada's northland, as well as the field of air service in the settled areas complementary to the Trans-Canada operation, was left to private enterprise. The reason for this is not hard to explain. Trans-Canada was to be a high standard operation, competitive with paralleling transcontinental air transport services in the United States. Canada, having one-twelfth the population of the United States, could support one service of this type, as against three similar parallel services in the United States, but, obviously, to have a second coast to coast service in Canada would be wasteful and unjustifiable. Service to the public must be the paramount consideration, and it seemed obvious that the cost of a non-competitive, non-profit service was the lowest that could be offered the public. An impartial analysis of the situation to-day leads to no other conclusion. However, the newly formed Canadian Pacific Air Lines lost no time in challenging the non-competitive position of Trans-Canada Air Lines, and in reaching out for new franchises; this at a time when it alone seemed to be able to buy new and modern equipment.

To clarify the situation, the Prime Minister made a statement with respect to policy as to domestic and international aviation in this House of Commons, which is reported in *Hansard* of April 2, 1943. The statement sets out with great clarity the views of this government, with respect to future development of both domestic and international aviation. The policy then enunciated continues to be the policy of this government.

This statement of policy, I regret to say, failed to bring about confirmation to government policy in the development of privately owned air services within Canada, nor did it end intervention of private interests in the international field. It is becoming obvious that ownership of airways by our two competing railway systems implies extension of railway competition into transport by air, regardless of the government's desire to avoid competition between air services. In the old days, competitive railway building developed pressure methods for obtaining new franchises. Such methods must not have a place in the development of our airways.

The government desires the rapid development of air transport services in order, among other reasons, to offer post-war employment to Royal Canadian Air Force personnel. Canada's northland was pioneered by small operators, who were content to enlarge their operations only as warranted by the development of the area they served. The government believes that feeder line operations, and pioneer lines into our northland, can best be developed as small operations. Our returning airmen will not be satisfied, in entering this new field of employment, to serve only as salaried employees. In this new medium of transportation, there must be a place reserved for small business enterprise.

Accordingly, after full consideration, the government has decided that the railways shall not exercise any monopoly of air services. Steps will be taken to require our railways to divest themselves of ownership of air lines, to the end that, within a period of one year from the ending of the European war, transport by air will be entirely separate from surface transportation. In the meantime, no new air routes other than government operated routes will be allocated to airlines owned by any railway or other operator of surface transportation. The term "surface transportation" includes railways, shipping companies, and highway transport companies.

The United States Civil Aeronautics Act of 1938 provides that no common carrier (that is, surface carrier) shall own, manage, or operate any air carrier, unless specific provision has been given by the civil aeronautics board. Apparently, the principle is well established in the United States that surface carriers are not permitted to engage in air transport business. I mention this to indicate that the problem which has arisen in Canada is not new on this continent.

In speaking in the House of Commons in the debate on the Trans-Canada Air Lines bill, reported on pages 2216 and 2217 of *Hansard* of 1937, I gave the following reason for making Trans-Canada Air Lines a subsidiary of Canadian National Railways:

"After the consideration of these matters, the government has decided that its agency for transportation, the Canadian National Railways, should be the means of organizing this company, just as it was used as the means for operating such shipping as the government owned and the means of operating other government transportation facilities. . . .

I think we are getting the best features of government ownership without the obligation of direct government operation which in the past has been troublesome."

While I have had no cause to regret the step taken at that time, the entry of a privately owned railway into the field of air transport has made it apparent that the advantage of government ownership "without the obligation of direct government operation" does not compensate for the disadvantage of introducing into air transport the competitive methods of the railways. Therefore, it will be necessary to divorce Trans-Canada Air Lines from Canadian National Railways and operate the former as a government company. Canadian National Railways have given splendid administration to Trans-Canada Air Lines, and personally I regret the necessity for the separation.

At the moment any expansion of Canada's civil aviation, except to meet urgent war requirements, is unwarranted, if for no other reason than that all available equipment is now required to operate existing services, and new equipment is impossible to obtain without diversion of effort from the war. A paramount reason for halting expansion at this time is that the young men, who should have a prominent part in any such expansion, are overseas on combat duty. We can all picture the resentment of these men if, on their return to Canada, they found that all profitable air routes had been preempted in their absence.

However, even though immediate expansion is not possible, it is not too early to plan for an orderly and rapid expansion of our domestic aviation when the proper time comes. To this end, the air services branch has been studying traffic possibilities in all areas of Canada, for the purpose of planning new air routes that will justify airline operation. Alternative plans are now being studied to determine a method of allocating these valuable franchises, in the best interests of Canada, and of our returning airmen. I am confident that the proper moment for undertaking expansion of our air services will find us not unprepared.

[Mr. Howe.]

Prior to the war, Canada had a small, but active, airplane construction industry. The need for providing training planes for our air training plan, and later, the need for building combat planes, has expanded this industry enormously. The industry is now devoting some attention to post-war transport airplanes. One airplane, of pre-war Canadian design, the Noorduyn Norseman, is still the outstanding single-engine transport plane of the present period, and is now being manufactured in large quantities for war transport purposes. Several units of the industry are at work on designs for transport planes of larger size. We have come to the conclusion that the task of designing a four-engined plane, suitable for both post-war domestic traffic on transcontinental routes, and for international traffic, is beyond the present capacity of our industry, having in mind probable limitations of time. Therefore, we have acquired the rights to build a plane that is considered by our experts to be the probable best plane of the next five years at least. While the building of this airplane will be undertaken immediately, the plane will not be released to our airlines until new planes of similar type are released to domestic airlines in the United States. Therefore, I think I can say that needed steps have been taken to protect Canadian air transport against its post-war airplane requirements, and this by planes to be built in Canada. A vigorous airplane construction industry is an essential complement to Canada's post-war aviation plans.

The present machinery for allocating new air routes, and for regulating rates and schedules on these routes, is being studied in the light of the experience of the past several years. The government believes that the present machinery can be improved as an instrument for dealing with the developments of the post-war period. It is proposed to establish a new board, to be called the air transport board, which will confine all its activities to air traffic, and which, in addition to performing the regulatory duties now lodged with the board of transport commissioners, will be charged with the responsibility for advising the government on ways and means of bringing about a rapid and well-planned expansion of transport by air. The proposed board will examine the needs for new commercial services, and make recommendations for their establishment and expansion, in both the domestic and international fields; receive applications for new services and issue commercial licences; establish tariffs and regulate rates; examine the ownership, financial structure, operations, and financial position of car-

riers; make recommendations for needed financial assistance; advise the government on matters affecting the operation of existing aerodromes; report on the need for new aerodromes; and perform such other allied duties as may be determined.

It is felt that the creation of a board, to be concerned solely with transport by air will ensure prompt attention to all matters, affecting air transport, that may call for consideration by the government, and be of great assistance to government, and to private enterprise, in the post-war period.

The end of the war will find Canada with some 200 airfields, built to modern standards, and of dimensions ample for serving domestic and international traffic. These aerodromes are, for the most part, adjacent to our centres of population, and many of them are now interconnected by communication services of the type necessary for day and night operation of airplanes. New airfields will be required from time to time, but lack of suitable airfields will not interfere unduly with the establishment of new air services. A chain of modern airfields extends from coast to coast, serving practically all our larger centres of population. Another chain of airports extends northward to Alaska, while still another extends eastward to Labrador and Newfoundland. We are in a happy position in the matter of airfields for our post-war civil aviation.

I now pass on to a discussion of international aviation.

In the field of international aviation, the geographical position of Canada is one that demands that Canada be given an important place among the nations of the world. The short international routes between the centres of population of the northern hemisphere, almost without exception, pass over Canadian territory. My colleague the Minister of National Defence for Air (Mr. Power) has given hon. members a graphic statement of the part that Canadian airmen are taking in the war against the axis, in many combat areas. The young men so engaged will be internationally minded. In the post-war period, an aggressive air policy can provide an occupation for many of those pilots, navigators, radio electricians and airplane mechanics who are now carrying the war into enemy countries.

Surely this is a field that can offer opportunity, adventure, and a new challenge to the energies and minds of our fighting airmen.

Hon. members may wish to know exactly what Canada's position is with regard to international air transport agreements binding upon Canada. For this reason I will include a brief resume of the present position in this respect.

Canada was a signatory in 1919 of the multilateral convention on the regulation of aerial navigation which came into force in 33 states, and of various protocols amending or supplementing this convention from 1920 to 1929. These agreements dealt largely with air regulations, and there appears now to be general agreement that this whole field must be brought under the control of a new and expanded international authority.

The first major agreement regarding the actual operation of international air services, however, in which Canada participated, was the agreement between the United Kingdom, Canada, Ireland and Newfoundland, in 1935 and 1936, providing for the initiation of trans-Atlantic air services. Under this arrangement, the British company, Imperial Airways, now known as British Overseas Airways, was to carry out experimental flights on the north Atlantic route, to Canada by way of Ireland and Newfoundland. Subsequently a joint operating company, owned by the United Kingdom, Canada and Ireland, was to be established to carry on a regular air service. Imperial Airways was to be the majority shareholder in this joint company, and was to control commercial, technical and operating matters.

While the United States was not a party to the arrangement, the four governments concerned agreed that in return for landing and transit rights in the United States for Imperial Airways, or for the joint company, each government would grant transit and landing rights to Pan-American Airways for a north Atlantic service. Each government also agreed that it would not, without the consent of the others, grant similar rights on this route to any other companies over a period of 15 years.

The facilities required under this agreement, which includes airports, radio and meteorological services, and other aids to navigation, have been provided by the countries concerned. Canada, by special wartime arrangement with Newfoundland, has taken over Newfoundland's responsibilities in this connection. The service envisaged by Pan-American at that time is in operation, and permits have been granted to Pan-American Airways by the governments concerned.

On the other hand, while certain experimental flights were undertaken, after some delay, by Imperial Airways, no regular British services were established on the north Atlantic prior to the war and the joint operating company was never set up. Meanwhile, various other transatlantic services have been, and are being, established outside the agreement, to meet wartime exigencies. American Export Airlines is operating a regular commercial air transport service, under temporary wartime

permits from the governments concerned. The air transport commands of the United Kingdom, and the United States, are operating frequent non-commercial services. Trans-Canada Air Lines, after extending its transcontinental commercial service to Newfoundland in 1942 by agreement with the Newfoundland government, later proceeded to initiate a regular non-commercial service across the north Atlantic, in accordance with notes exchanged between the Canadian and British governments on July 15 and 16, 1943, and the Canadian and Newfoundland governments on July 19 and 30, 1943. This service has been established solely for war purposes, and the arrangements for it apply for the duration of the war and six months thereafter. It carries only official passengers and freight,—particularly mail for the troops—and is, of course, providing valuable experience for Canada in the operation of trans-oceanic air services. The R.C.A.F. has also established a direct mail service from Canada to the United Kingdom and to the Mediterranean theatre of operation.

In view of the fact that the joint-operating company envisaged in the 1935-36 agreement was never set up and in view of the material changes in circumstances which have already taken place since the agreement was drawn up, the Canadian government is of the opinion that the agreement can no longer be considered applicable to present conditions. The other parties to the agreement have been notified of our views.

Subsequently in 1938 and 1939, as the air links between Canada and the United States began to assume increasing importance, certain technical agreements were concluded between the two countries dealing with air navigation, certificates of competency, certificates of airworthiness and the use of radio. These agreements established certain standardized practices to facilitate the movement of cross-border air traffic.

More important, however, was the agreement between Canada and the United States on air transport services effected by exchange of notes on August 18, 1939. Under this agreement, each party agreed that air carriers of the other would be permitted to operate non-stop over the territory of the other between two domestic points. (Non-stop services between United States and Alaska were to be dealt with in a separate understanding.) It is under this clause, for example, that Canada posseses rights to fly from Quebec to New Brunswick over the territory of Maine, and that United States air lines fly from Buffalo to Detroit over Canadian territory.

In addition, each party agreed to grant operating rights to the air carrier enterprises of the other for services between Canada and the United States as decided between the aeronautical authorities of the two countries, the purpose being to maintain a fair balance between operations of each country. Transportation of mail was to be subject to direct agreement between the postal officials of both countries. This exchange of notes was to remain in force for two years, and thereafter until terminated on six months' notice given by either government.

The implementation of arrangements provided for in this exchange of notes was covered in a further exchange of notes on November 22 and December 2, 1940, between the two countries. Under this second exchange, cross-border routes between Canada and the United States were divided between the two countries.

This agreement, which did not cover services between Canada and Alaska, was to remain in effect until December 31, 1942. Subsequently, since neither government felt that war time was the proper time for reconsideration or alteration of the agreement, it was renewed by an exchange of notes on March 4, 1943, for the duration of the war subject to cancellation by either party on six months' notice after a period of sixty days consultation.

The arrangements of 1940 which are still in force provide the over-all framework for the operation of air services between Canada and the United States. Under this arrangement, the through service from Toronto to New York is operated by Trans-Canada Air Lines; while the following United States companies operate into Canada: Northeast Airlines from Moncton to Bangor; Colonial Airlines from New York to Montreal; American Airlines from Buffalo to Toronto, and from Buffalo to Windsor en route to Detroit; Northwest Airlines from Fargo to Winnipeg; Western Airlines from Great Falls to Lethbridge; United Airlines from Seattle to Vancouver; and Pan-American Airways from Fairbanks and Juneau, Alaska, to Whitehorse.

Some persons have suggested that Canada came out of this bargain badly. To this, I would answer that having in mind the availability of planes and air facilities, it was a fair arrangement to meet the circumstances at the time. We can look forward to the further development and expansion of trans-frontier services between the two countries and may expect to see both Canadian and United States lines participating in this expansion in accordance with whatever arrangements may be agreed upon by the two governments.

A number of war-time agreements have been concluded between Canada and other countries for the operation of special war-time transportation services. For example, Pan-

American Airways has been given a temporary permit to operate over Canadian territory between Seattle, and Juneau, Alaska. In granting this permission, on January 26, 1944, the Canadian government informed the United States government that it proposed at a future date to take up the question of permission for a Canadian service to operate into Alaska. These agreements are numerous and reasons of military security make it impossible for me to go into detail regarding them. They have been concluded in order to provide rapid transportation and communication by air for the more effective prosecution of the war. They are, generally speaking, valid for the duration of the war and six months thereafter and operations carried out under them will create no vested rights for the post-war period. As these agreements affect the United States, licences have been granted only to the United States army and navy for non-revenue operations.

The civil aeronautics board in the United States has recently announced that it is considering the opening of hearings on applications for new air services from the United States to Canada. So that there will be no misunderstanding, I wish to make it clear that the existing framework of air services between Canada and the United States is fixed in accordance with the exchanges of notes to which I have referred. While the civil aeronautics board may receive applications for new air services to Canada from various American airlines and may find it expedient to decide which of these it would be desirable and necessary in the United States' interest to grant, any new services on a commercial basis between the two countries cannot be initiated without the consent of the two governments and any development of such new services will involve a reconsideration of the existing arrangements between the two. Canada does not consider applications from airlines of another country unless forwarded by the government of that country through diplomatic channels.

Canada has carried out certain construction and development work in connection with aviation in Newfoundland and Labrador. Here the agreements involved have been of a military nature dealing with military problems related to the defence of this continent and assistance in the battle of the north Atlantic.

The briefest fashion in which I can describe the situation which will exist at the end of the war is that the position and sovereignty of the Canadian government have been protected completely in all arrangements that have been made; that special wartime arrangements will come to an end at or shortly after the conclusion of hostilities and developments during the war will create no vested interest in air transport or air facilities in Canada for any other government.

We believe that in the field of international air transport our interest lies in a liberal course of cooperation with other nations. This decision has been reached in view of the great importance of air transport in the future. Air transport is more than just the latest and fastest method of transporting passengers and goods. It is a revolutionary development which has already profoundly affected the civilization of the world. No one can predict with any degree of certainty or precision the nature and extent of the contribution which it may make to the future security and prosperity of the peoples of the world. It is our intention to make every effort to ensure that the framework within which the international air transport of the future functions, will be designed to promote international cooperation and not to foster international bitterness.

The demands of war have telescoped into four or five years the growth that might normally have taken air transport a generation to achieve. Canada's size is shrinking, while our long 3,000-mile frame is filling out, as air transport opens up the Canadian north. All Canadians are becoming neighbours and Canada is being given a new basis for unity. What is true of relations between the various parts of Canada is true also of relations between the nations of the world. These too are being brought closer together. Moreover, new regional connections are being developed and the boundaries of old regions washed away. Because of the geographical location of the land masses of the earth, that section of the globe stretching out from the north pole to a degree of latitude roughly equivalent to the Mediterranean and the southern border of the United States will probably be the most important for the air transport of the future. In this northern region, Canada occupies a strategic position, for it stands athwart most of the air routes linking North America with Europe and Asia. This position carries with it great responsibilities and great opportunities.

As I have already mentioned, on April 2nd last year the Prime Minister gave a statement of the government's position with regard to international air transport, making it clear that our policy would be one of international cooperation and collaboration and that we would support whatever policy seemed best calculated to serve not only the immediate national interests of Canada, but our overriding interest in the establishment of an international order which will prevent the outbreak of another world war.

Behind this statement lies a recognition of the duty of the Canadian government to do what it can to avoid the two chief weaknesses in the pre-war organization of international air transport. In the first place, it was a cause of serious rivalries and disputes between nations. In the second place, and closely connected to the first weakness, lines were run at an uneconomic cost, necessitating large national subsidies. Some countries refused to permit airlines to cross the air space above their territory, necessitating costly detours. Others refused landing rights, as well as transit rights. The necessity for hard and persistent bilateral bargaining resulted, especially in Europe, in the establishment of so many competing national services that air transport became highly uneconomic, and lines were heavily subsidized at the expense of national taxpayers.

Behind much of this friction lay considerations of national prestige, but more especially of national security. Civil air transport fleets, and civil aircraft industries, represent a war potential, a reserve both of personnel and of industrial capacity which is all-important in time of war. The truth of this has been obvious in the present conflict. The emphasis in the pre-war period upon security aspects of civil air transport was, therefore, natural, and goes far to explain the failure of nations at that time to agree upon a method of effective international control of international air services. Because of the rapid development of aviation since the outbreak of war the international rivalries which would develop in the future after the conclusion of hostilities would be even sharper than those of the past, unless some improvement is effected.

The decision which the united nations must make in the near future in the post-war organization of air transport thus is vital. An enlightened settlement will go a long way toward establishing a lasting peace, and a new world order of security. It can constitute a model for the settlement of other difficult international problems, and create an atmosphere in which the settlement of these other problems will become easier. Failure to devise a working system of cooperation and collaboration will not only lead to endless friction in the field of air transport, but will prejudice the establishment of an effective world security organization.

From the point of view of practical politics, the problem is to find some method of international control which will serve the desired objectives, and yet be generally acceptable to all. The task is not an easy one. For many months it has been the subject of exhaustive study by Canadian officials and of active consideration by the government. I think that a policy which is designed to meet these ends has been worked out, and that the Canadian representatives in future international discussions on air transport will enter those discussions well prepared, and with a clear view of the type of arrangement best designed to meet the needs of Canada for the development of international air services and provide for a fair share of international air transport, and at the same time establish an atmosphere of working cooperation among all other interested nations.

It is obvious that air regulations dealing with such matters as traffic rules, safety and navigational aids should be, as nearly as possible, uniform throughout the world, and that an international authority must be set up and given the power to prepare regulations which would be accepted as standards by the members of that authority. This alone, however, is not enough. I have already stated that the difficulties, in the pre-war period, arose because certain nations exercised their sovereignty over the air, above their countries, in a fashion designed to hinder the development of air transport, and foster ill will. Accordingly, I think that we must be prepared to subscribe to the granting of general freedom of transit for international air services, on a universal basis, so that national air services will automatically possess the right to cross the territory of other nations, en route to their destinations, and to land in other countries for refuelling and reservicing, without having to request the specific permission of each government concerned. However, in order to prevent misuse of this freedom, it would appear necessary to grant, to some international authority, power to supervise the manner in which it is carried out. Moreover, in thus establishing freedom of transit, countries such as Canada, which are strategically placed, will be making a very great contribution to an effective international system, particularly when, like Canada, their population is not great, and the amount of traffic which they have to offer for international carriage would consequently not be large. On the other hand, this right of transit would be of particular benefit to those nations, which have a great deal of potential traffic for international air services, but are less strategically located.

It would seem reasonable, therefore, to suggest that freedom of air transit should be extended to cover, as well, a certain amount of freedom of carriage of goods and passengers, in order to enable all nations to share in a proportion of the international traffic

available, without having to go in for all the bilateral bargaining which so confused the pre-war situation. It would seem necessary, accordingly, that each nation should at least possess the right to carry passengers and cargo from its own territory to other countries, and to bring back from those other countries passengers and cargo which are intended for its own territory. This would mean that the nations of the world, operating international air services, would not only be unhampered in the movement of their aircraft across the territories of other countries, but would also have a certain amount of traffic available to their own air services, without the necessity of bilateral bargaining, thus increasing the chances of reasonable economic operation. In order to prevent a helter-skelter of airways developing, each country would, of course, designate the routes across its territory which the airlines of other countries must follow, just as it does for its own domestic services.

While international air transport will be a great and important factor in the future, nevertheless one airplane can do a great deal of work, and, in the post-war period, all the air traffic available may be carried by a comparatively small number of aircraft. It would not seem desirable that each nation should be allowed to establish as many international services, in as many areas, as it wished, thus bringing about a useless, uneconomic and competitive situation which could only lead to trouble. Not only should some international air transport authority supervise the administration of the freedoms, and rights, suggested above, but the authority should also have power to regulate international air services, in order to prevent the dangers of unnecessary and uneconomic duplication. Some such method might be used as control of rates and schedules, and licensing. Because an authority, established on a universal basis, might have difficulty in giving due consideration to the special needs of particular regions, it would be desirable that it work through regional groupings or councils.

If any such framework for international cooperation in the field of air transport should be developed, and I think it desirable that it should, it would seem that cross-border services, such as those between Canada and the United States, should be considered in a special category, and dealt with specially by the two countries concerned, since services originating in the one country and terminating in the other are primarily trans-frontier extensions of domestic air services.

The Canadian government is of the opinion that some form of organization along the lines suggested above would go far toward meeting the needs of the world for the establishment of effective international co-operation, in the provision of efficient and economical air services, and, at the same time, provide for the fair and equitable participation of Canada in these air services.

One year ago the Prime Minister said, "The government sees no good reason for changing its policy that Trans-Canada air lines is the sole Canadian agency which may operate international air services." This is a matter of purely domestic concern, and this decision is, in the opinion of the government, the one best calculated to serve the interests and needs of the Canadian people. It has, however, no bearing upon any decision of this type that may be made by other governments. The choice of instruments for the operation of international air services by the countries concerned is, and must remain, a matter of purely domestic decision. Each country must decide for itself whether its airline companies operating international air services are to be privately owned, or state owned, whether there is to be one single national company or several.

I should like to say a word at this point regarding international discussions on air transport policy. As members of this house are aware, there was a preliminary exchange of views in London last October among the members of the commonwealth, in which a Canadian delegation under my chairmanship participated. A complete airing of ideas and opinions, with regard to international air transport after the war took place, and provided a useful introduction to the broader discussion which will take place in due course. Canada, of course, expects to participate in these further discussions also, and is at the moment taking part in discussions with the United Kingdom and the United States regarding the holding of further exploratory conversations. No final decisions were taken in London, but I may say that it was evident from the outset that all participants had the same general objectives in view—the objectives which I have described earlier in this statement—and that there was a broad basis of general agreement as to the way these objectives might best be attained. All the participants were desirous of improving the air services between their territories, and agreed that such development must take place within an international framework, and that closed discriminatory systems could only promote disharmony, and endanger the chances of reaching that broad agreement which is necessary.

Following the conversations in London, a statement was issued to the press, reading as follows:

"The conference with the dominions and India on civil air transport, which has been meeting in London since Monday last, concluded its sessions this morning. The conversations were informal and exploratory, and the conclusions reached are subject to confirmation by the governments represented at the conference. Unanimous agreement was reached as to the recommendations which should be made regarding the lines on which civil aviation should be developed after the war, and as to the contribution which the governments of the commonwealth and empire could make towards international cooperation in this field."

The chairman of the London meeting was Lord Beaverbrook, who is a member of the United Kingdom government charged by Mr. Churchill with responsibility for the coordination of post-war civil air transport policy. Speaking in the House of Lords a week after the conclusion of the London meetings, Lord Beaverbrook emphasized the unanimous agreement which the conference had reached on every issue presented to it. He said that those isues were "adequate for testing immediate opinion in relation to civil aviation." He added that it had been agreed that "the international air transport authority should be intimately associated with and responsible to any united nations security organization which might be established."

In summary, I may say that the Canadian government is determined that Canada, by its participation in the framing of the general settlement of air transport, will make as great a contribution as possible to the successful solution of this problem. Our representatives in the international discussions, therefore, will be authorized to support or initiate such proposals as, in the government's opinion, will be likely to result in the establishment of an international air transport authority, with effective powers, supported by all governments concerned, which will further international cooperation and goodwill, ensure that international air routes and services are divided fairly and equitably among all member nations, meet the needs of the peoples of the world for efficient and economical air transport, and contribute to the establishment and maintenance of a permanent system of general security.

Before taking my seat I wish to table a copy of a tentative and preliminary draft of an international air transport convention. I have referred to the work of the officials of the government and the government itself in the preparation of this as a basis for further study at international discussions. Since portions of this have been made public in another country and have been printed in the press, it has been thought wise to table the document here. As there will be a great deal of interest in this document I ask the unanimous consent of the committee to have it published in *Hansard*.

The CHAIRMAN: By unanimous consent of the committee.

DRAFT INTERNATIONAL AIR TRANSPORT CONVENTION

XII Amendments, ratification, etc	1632
XIII Definitions	1632
XIV Provisional article	1632
Annex	1633

It is assumed that an overriding treaty of peace will determine the obligations and rights of the defeated powers under this convention.

Summary

1. The convention establishes an international air transport authority, gives it a constitution and endows it with powers. The authority has the normal structure of an international organization: an assembly representing all the member states and a small executive committee which is called a Board of Directors. In each region a regional council is set up to deal with matters of regional concern.

2. The authority is charged with the duty of planning and fostering the organization of international air services so as

(a) to make the most effective contribution to the establishment and maintenance of a permanent system of general security,

(b) to meet the needs of the peoples of the world for efficient and economical air transport, and

(c) to ensure that, so far as possible, international air routes and services are divided fairly and equitably between the various member states.

3. The convention is an agreement between states and is not concerned with such domestic questions as whether the international air services of the various member states should be government-owned or privately-owned or whether a state should have more than one government-owned or privately-owned airline company engaged in international air transport. These are matters of domestic policy which each individual member state decides for itself. They are, therefore, outside the scope of the international convention.

4. The number of votes which each member state can cast in the international air transport assembly varies from one to six depending on its importance in international air transport. The board of twelve members, which is elected by the assembly, must include at least one national of each of the eight member states of chief importance in international air transport.

5. A company wishing to operate an international air service makes application first to its own government. The goverrnment, if it approves of the application, forwards it to the appropriate regional council. The regional council holds formal hearings on the application before deciding whether the applicant should receive a licence and, if so, under what conditions.

6. The regional council has power to issue a licence entitling a company not only to

(a) freedom of air transit over the airways of all the member states of the region but also to

(b) the right to land at airports in the region for refuelling, repairs and in emergency,

(c) the right to carry passengers, mail and cargo from the home state to any other member state and

(d) the right to bring back passengers, mails and cargo to the home state from any other member state.

7. A state which considers that a decision by a regional council is unfair has the right to appeal to the board of directors and the board can set aside or modify the decision.

8. The application for a licence from an airline which wishes to operate a service passing over territory under the jurisdiction of two or more regional councils does not go to all the regional councils concerned but goes to the board.

9. The authority, acting through either the board or a regional council is given power to determine frequencies of service on each route, to allocate quotas between the various member states and to determine rates of carriage for passengers and cargo.

10. On questions affecting world security the international air transport authority is made subject to the international security organization which is to be set up by the united nations. That organization may, in the interests of world security, order the international air transport board to withdraw, suspend or modify a licence, take certain measures concerning technical services, operating facilities and bases or set up one or more operating organizations to operate the air services on certain routes or in certain regions.

11. Two or more member states may decide that the best way of operating all or some of the air services between them is not by rival companies each carrying a national flag but by a joint organization. The member states are not prevented from establishing such joint operating organizations. Indeed the board or a regional council may recommend to the member states concerned that they pool the air services on certain routes or in certain regions or constitute joint operating organizations to perform certain air services. A state has the right to participate in a joint operating organization either through its government or through an airline company or companies designated by its government. The companies may, at the sole discretion of the state concerned, be state-owned or partly state-owned or privately-owned.

12. Services between two contiguous states, such as Canada and the United States, are excepted from the provisions of the convention and are left to be dealt with by agreements between the two states concerned. Contiguous states may, however, by mutual consent, give the international air transport authority jurisdiction over the services between them.

13. In order that the air regulations throughout the world should be as uniform as possible, an agreed set of regulations will be drawn up by the international air transport assembly and brought into force by each member state. These regulations will cover such matters as air safety, rules of the air, competency of air crew, ground signals, meteorological procedure, navigational aids, communications, airworthiness, national registration and identification of aircraft, carriage of dangerous goods and salvage.

14. The aircraft licensed by the board or the regional councils will be assured wherever they go in the world of being able to use adequate airports and other ground facilities on payment of reasonable fees and charges. Member states may elect to bear all or a portion of the costs of constructing and maintaining the necessary facilities. If a member state does not so elect, the costs are advanced by the board and borne by the board or apportioned among states using the facilities. The board may require, in return for advancement of costs a reasonable share in the supervision of the construction work and in the control of the airports and other facilities. If a member state so requests the board may itself provide, man and maintain any or all the airports and other facilities which it requires on the territory of that state and may impose reasonable fees and charges for their use.

15. The expenses of the international air transport authority will be borne by the member states in proportion to the number of votes at their disposal in the assembly, provided that those expenses of a regional air transport council which are properly chargeable to the states participating in that council, will be borne by those states.

16. Some time will be required after the coming into force of the convention before the international air transport authority is in full working order. The assembly must meet, the board must be elected, the regional councils constituted, their rules of procedure agreed upon. Certain temporary arrangements are therefore contemplated to cover the inital period of existence of the authority. The convention does not terminate the rights of companies now engaged in international air transport. These companies are given two years to secure licenses from the authority. Furthermore, airline companies designated in a schedule to the convention are deemed to possess licences issued by the authority to operate routes designated in the schedule and these licences remain valid until modified or withdrawn by the board or the competent regional council.

Preamble

The governments signatory hereto agree to the establishment of an international air transport authority.

Article I
The Authority

Section 1

An authority is hereby established to be known as the international air transport authority and to consist of an assembly, a board of directors, regional air transport councils and such other units as may be created pursuant to the provisions of this convention.

Section 2

The authority shall plan and foster the organization of international air services so as

(a) to make the most effective contribution to the establishment and maintenance of a permanent system of general security,

(b) to meet the needs of the peoples of the world for efficient and economical air transport, and

(c) to ensure that, so far as possible, international air routes and services are divided fairly and equitably between the various member states.

Section 3

The authority shall have exclusive jurisdiction, pursuant to the provisions of this convention, over international air services between two contiguous member states, provided that any two contiguous member states may agree that services between them shall come under the exclusive jurisdiction of the authority. When such an agreement has been notified by both states to the board, and until such agreement has been terminated, the authority shall have exclusive jurisdiction, pursuant to the provisions of this convention, over the services between the two states.

Article II
Obligations of member states

Section 1

Each member state recognizes that every state has complete exclusive sovereignty over the air space above its territory.

Section 2

Each member state undertakes to give the following freedoms of the air to the international air services operating under the provisions of this convention to the extent allowed by the licence issued to the services:

(1) The right of innocent passage,

(2) The right to land for non-traffic purposes (e.g. refuelling, repair, emergency),

(3) The right to discharge passengers, mails and freight embarked in the territory of the state or states whose nationality the aircraft possesses, and

(4) The right to take on passengers, mails and freight destined for the territory of the state or states whose nationality the aircraft possesses.

Section 3

Each member state may

(a) designate the route to be followed within its territory by any international air service and the air ports which any international air service may use, and

(b) impose or permit to be imposed on any international air service just and reasonable charges for the use of the air ports and other facilities on its territory, which shall not be higher than would be paid by national aircraft engaged in comparable international services,

provided that, upon complaint by an interested air carrier through the government or governments of which it is a national, the designation of routes and use of air ports, and the charges imposed for the use of air ports and other facilities shall be subject to review by the licensing authority.

Section 4

Each member state undertakes to make available such radio frequencies and to provide such meteorological services as may from time to time be required by the licensing authority for the safety, efficiency and regularity of the air services licensed by it.

Section 5

Each member state undertakes to perform the obligations imposed on it by this convention and to enact legislation necessary to carry out its terms including

(a) legislation to ensure that no air carrier may operate international air services unless that carrier is in possession of a valid licence authorizing such services, issued under the provisions of article VI of this convention, and

(b) legislation to bring its national laws into conformity with the regulations approved by the assembly under the provisions of subsection 5 of section 2 of article III of this convention. This action shall be taken within the period of one year from the date of approval by the assembly or, if it is impossible owing to exceptional circumstances to do so within the period of one year, then at the earliest practicable moment and in no case later than eighteen months from the date of approval by the assembly.

Section 6

Each member state undertakes to permit the operation within its territory of operating organizations constituted under the provisions of section 3 of article IX of this convention, provided that permission to an operating organization to engage in domestic air transport within its territory shall be in the discretion of the state.

Article III
The assembly

Section 1

The international air transport assembly shall be composed of representatives of the member states. Each state shall be entitled to the number of votes [one to six] in the assembly provided in the annex to this convention and may appoint as many representatives to the assembly as it has votes and may replace them from time to time. Each state may cast all of the votes allotted to it regardless of the number of its representatives present at any meeting. Decisions of the assembly shall be taken by a majority of the votes cast except where otherwise provided in this convention. There shall be deemed to be a quorum if the representatives present can cast one-half of the possible votes.

Section 2

The duties of the assembly shall be:

(1) To elect the international air transport board.

(2) To elect the president of the board. The president shall hold office for a period of six years.

(3) To meet from time to time as occasion may require and at least once a year.

(4) To examine and approve the annual report of the board, and to decide any matter referred to it by the board.

(5) To draw up and maintain regulations governing such matters as air safety, rules of the air, competency of aircrew, ground signals, meteorological procedure, navigational aids, communications, airworthiness, national registration and identification of aircraft, carriage of dangerous goods, salvage.

(6) To make regulations governing the preparation of budgets and financial statements by the board and to approve the annual budget and the financial arrangements made by the board.

Section 3

The assembly shall have power:

(1) To determine its rules of procedure.

(2) To fix the salaries of the president and the other members of the board.

(3) To refer to subsidiary commissions, the board or any other appropriate agency any matter within the sphere of its jurisdiction.

(4) To deal with any matter within the sphere of action of the international air transport authority not specifically assigned to the board or the regional councils.

Article IV

The Board

Section 1

The international air transport board shall be elected by the international air transport assembly. The board shall be a permanent body responsible to the assembly and composed of twelve members in addition to the president. They shall not be members of the assembly. They shall hold office for a period of six years. Two members of the board shall retire annually and in rotation but shall be eligible for reelection. The assembly shall have the right to dismiss any member of the board at any time. In the event of the dismissal or death of a member of the board, the assembly shall elect a successor who shall hold office for the unexpired portion of his predecessor's term of office. The board shall include at least one national of each of the eight member states of chief importance in international air transport.

Section 2

The duties of the board shall be:

(1) To constitute, subject to the approval of the assembly, the following regional air transport councils: (for example, European, North Atlantic, North Pacific, Inter-American). In constituting a regional council the board shall designate as participating states those member states which are principally concerned in the international airlines of the region. The board shall also define the boundaries of the region or designate the routes over which the regional council shall have jurisdiction. The board may from time to time revise the lists of participating states and alter the boundaries of the regions or change the designations of the routes.

(2) To decide, subject to the approval of the assembly, the method of appointment, the salaries and conditions of service of its employees, including those members of the regional councils who are appointed by the board.

(3) To establish the rules of procedure of subsidiary commissions and of regional councils.

(4) To administer, subject to the approval of the assembly, the finances of the international air transport authority.

(5) To grant licences over routes coming within the jurisdiction of two or more regional councils or of no regional council; and in these cases to exercise the duties of a regional council.

(6) To conduct research into all aspects of air transport which are of international concern, to make the results of its research known to all the member states and to facilitate the exchange of information on air transport matters between the member states.

Section 3

The board shall have power:

(1) To revoke or alter, after public notice or hearing, any decision of a regional air transport council including any decision to grant, withhold, alter, amend, modify, revoke or suspend a licence and any decision determining frequencies of service, allocation of quotas, or rates of carriage.

(2) To carry out the provisions of article VII of this convention (airports and other ground facilities).

(3) To establish, subject to the approval of the assembly, subsidiary commissions responsible to it.

(4) To institute such training facilities for its employees as it may consider necessary.

Section 4

Decisions of the board shall be taken by a majority of the votes cast. One-half the members of the board shall form a quorum. The president shall have a casting vote. The board shall determine its rules of procedure but the place of its permanent seat shall be decided by the assembly.

Article V

Regional Councils

Section 1

A regional air transport council shall be composed of not less than six nor more than nine members. One-third of the members shall be appointed by the international air transport board and hold office at the pleasure of the board; they shall possess special knowledge of problems of air transport and shall be nationals of states other than those which are designated by the board as being principally concerned in the international airlines of the region. The other members shall be appointed by the designated states. The number of members to be appointed by each of the designated states shall be, from time to time, determined by the board, having regard to the relative importance to each state of the international air transport services under the regional council's jurisdiction and to

the relative importance of each state in air transport. The members appointed by designated states shall hold office at the pleasure of the government appointing them.

Section 2

Decisions of a regional council shall be taken by a majority of the votes cast. One-half the members of a council shall form a quorum.

Section 3

Each regional council shall appoint a managing director who shall hold office for a period of four years.

Section 4

The duties of a regional council shall be:

(1) To grant licences to operate international air services within the region; to withhold licences; to attach to the exercise of the privileges granted by a licence such reasonable terms, conditions and limitations as the public interest may require and as are consistent with the terms of this convention; to alter, amend, modify or suspend any licence, in whole or in part, or revoke any licence, in whole or in part, for deliberate failure to comply with any provision of this convention or ot any order, rule or regulation issued under this convention or any term, condition or limitation of the licence.

(2) To determine rates of carriage for passengers and cargo, having regard, among other things, to standards of speed and of accommodation, and to consult with the postal administrations regarding rates of carriage for mail.

(3) To collect and publish information and cost statistics relating to the operation of international air services within the region.

Section 5

If the airline companies of more than one state are operating on a route a regional council shall have power to determine frequencies of service on the route and to allocate quotas*.

Article VI

Licences

Section 1

(1) Applications for licences can be submitted only by governments of member states. An application by a person or corporation shall be submitted through the intermediary of the government of the member state of which the person or corporation is a national.

(2) An application shall normally be made to the competent regional air transport council. If the application, however, is for a service which falls within the jurisdiction of two or more regional councils or of no regional council, the application shall be made to the international air transport board which may refer it to one or more regional councils for their opinion.

Section 2

(1) The board or a regional council shall not grant, renew, alter, amend, modify, suspend or revoke a licence except after reasonable notice to all member states in the region or regions concerned and after a formal hearing at which all these member states shall have the right to be heard except in case of emergency or under the provisions of article IX of this convention (relationship to the international security organization).

(2) The board or a regional council shall not grant a licence unless it is satisfied:

(a) that the person or corporation applying for the licence is able properly to provide the proposed air services, and to conform to the provisions of this convention and the rules, regulations and requirements of the international air transport authority and the competent regional councils, and

(b) that the proposed services and their performance by the applicant would serve public convenience and necessity.

Section 3

(1) The holder of a licence granted by the board or a regional council shall have the right to operate to, within, over and away from the territory of any member state to the extent allowed by the licence. The licence may allow the holder to make stops in the territory of any member state for refuelling, repairs, taking on or discharging of passengers, cargo and mail and for any other purpose and member states shall allow such stops, provided that no licence shall grant permission to a person or corporation possessing the nationality of one state to take on passengers, cargo or mail within the territory of any other state for discharge within contiguous territory of the latter or within the territory of a third state except with the consent of the member state or member states concerned.

(2) No licence shall be granted for a period of more than ... years but licences may be renewed on application. Any licence may be revoked, altered, amended, modified or suspended by the board or by the regional council which granted the licence.

Article VII

Airports and Other Ground Facilities

Section 1

If an air carrier licensed by the board or a regional council is of the opinion that the airports or other ground facilities on the territory of a member state are not reasonably adequate for the safe, regular, efficient and economical operation of the air services which it is permitted by its licence to perform, it may so inform the government or governments of which it is a national. Such government or governments may, if the complaint is considered to be valid, transmit it to the appropriate regional council, or if more than one regional council or no regional council is concerned, to the board. After reasonable notice to all member states concerned and after one or more hearings at which these member states shall have the right to be heard, the board or regional council may request the member state to expand its existing facilities or to construct new ones or to man and maintain its existing or new facilities in accordance with standards set by the board or regional council. The board shall, at the instance of an interested member state, review any request made by a regional

*The term "frequencies of service" means the number of trips on the route per day or per week. The term "quotas" means the number of trips which the airline companies of any one member state may operate on the route.

council and after public notice or hearing may suspend, withdraw, alter, amend or modify its terms. Each member state undertakes, at the earliest practicable moment, to give effect to the requests of the board or regional council.

Section 2

The expenses involved in carrying out any such request shall be apportioned as follows:

(a) The member state may elect to bear all or a portion of the costs,

(b) If the member state bears none of the costs or bear only a portion thereof, the costs (or the remaining portion of them, as the case may be) shall be advanced by the board to the member state and shall be borne by the board or be apportioned by the board, over a reasonable period of time, between the states (including the member state constructing the facilities) whose air carriers or services use the facilities.

In cases where the board advances costs it may require a reasonable share in the supervision of the construction work, in the control of the airports and other facilities, and in the revenues derived from charges levied.

Section 3

If a member state so requests the board may provide, man, maintain and control any or all of the airports and other ground facilities which it requires in the territory of that member state for the safe, regular, efficient and economical operation of the air services which it or a regional council has licensed and may impose just and reasonable charges for the use of the facilities. The member state shall either provide the land itself or facilitate the acquisition of the necessary land by the board on just and reasonable terms.

Section 4

A member state may at any time acquire and obtain complete control over facilities on its territory for which the board has advanced costs under section 2 of this article, or which the board has provided under section 3 of this article, by paying to the board an amount which in the opinion of the board is reasonable in the circumstances.

Article VIII

Finance

The expenses of the international air transport authority shall be borne by the member states in proportion to the number of votes at their disposal in the assembly, provided that those expenses of a regional air transport council which are, in the opinion of the board, properly chargeable to the states participating in that council shall be borne by those states in such proportions as the board may determine.

Article IX

Relationship to the International Security Organization

Section 1

The international air transport authority shall be subject, so far as questions involving world security are concerned, to the general organization which may be established among the nations of the world for the maintenance of peace and international security.

Section 2

The board, when informed by the international security organization that such action is required in the interest of world security, shall immediately and without formal hearing grant, withhold, alter, amend, modify, suspend or revoke any licence in whole or in part and take the measures concerning technical services, operating facilities and bases which the international security organization has directed should be taken.

Section 3

The board shall, when informed by the international security organization that such action is required in the interest of world security, constitute, supervise and control one or more operating organizations to operate air services on routes or in regions designated from time to time by the international security organization, provided that such operating organizations shall not engage in domestic air transport within any state without the permission of that state. The board may place operating organizations under the supervision and control of the appropriate regional air transport council.

Article X

Joint Operating Organizations and Pooling

Section 1

Nothing in this convention shall prevent two or more states from constituting joint air transport operating organizations but such organizations shall be subject to all the provisions of this convention including those relating to licences and to the registration of agreements with the board.

Section 2

Nothing in this convention shall prevent two or more states from pooling their air services on certain routes or in certain regions but such pooled services shall be subject to all the provisions of this convention including those relating to licences and to the registration of agreements with the board.

Section 3

The board, or a regional air transport council, may recommend to the member states concerned that they pool the air services on certain routes or in certain regions or that they constitute joint operating organizations to perform some or all the air services on certain routes or in certain regions.

Section 4

A state shall have the right to participate in joint operating organizations either through its government or through an air line company or companies designated by it. The companies may, at the sole discretion of the state concerned, be state-owned or partly state-owned or privately owned.

Article XI

Other agreements and arrangements

Section 1

This convention shall replace the international aerial navigation convention signed at Paris in 1919, the Ibero-American convention on aerial navigation signed at Madrid in 1926, the Pan-American convention on commercial aviation

signed at Habana in 1928, the convention for the unification of certain rules relating to international transportation by air signed at Warsaw in 1929, and the convention relating to sanitary measures to be applied in international air navigation signed at The Hague in 1933.

Section 2

The member states severally agree that this convention is accepted as abrogating all obligations or understandings inter se which are inconsistent with its terms, and undertake not to enter into any engagements inconsistent with its terms. In case any member state shall, before becoming a member of the international air transport authority, have undertaken any obligations toward a non-member state or a national of a member state or a non-member state inconsistent with the terms of this convention, it shall be the duty of such member state to take immediate steps to procure its release from such obligations.

Section 3

The right of any member state to enter into any convention or special agreement with any other member state or member states concerning international air transport is recognized, provided that the convention or agreement shall not impair any rights or obligations of any of the member states arising out of this convention. Every such convention or agreement shall be forthwith registered with the board and shall as soon as possible be published by it. No such convention or agreement shall be binding until so registered.

Section 4

All agreements or working arrangements between operating companies regarding international air services shall be forthwith registered with the board and shall not be binding until so registered.

Article XII

Amendments, ratification, etc.

Amendments to this convention can be proposed by either the assembly or the board. An amendment shall be binding on the member states as soon as it is approved of by the assembly by at least two-thirds of the total possible votes.

Section 2

In case of a disagreement between two or more member states or between one or more member states and the board relating to the interpretation of this convention, the question in dispute shall, at the request of any one of the interested member states or of the board, be referred to the permanent court of international justice.

Section 3

This convention shall be ratified. Ratifications shall be deposited with ... who shall notify the other signatory states.

Section 4

The convention shall come into force, in respect of ratifying states, when it has been ratified by ... of the signatory states including ... of the following: ... The date of coming into force shall be notified to all signatory states by ...

[Mr. Howe.]

Section 5

This convention may not be denounced until it has been in force for five years. At the end of this period and at the end of each six-year period thereafter any member state may denounce it. Denunciations shall be addressed to ... and shall be effective one year after delivery.

Section 6

Any non-signatory state may adhere to this convention at any time after it has come into force. Adherence shall be notified to ... who shall inform all signatory states.

Article XIII

Definitions

For the purposes of this convention the expression:

(a) "air service" means any air service performed by an airship, aircraft or towed glider for public use such as the transport of passengers, mails or cargo, including services under charter such as "air taxis";

(b) "international air service" means.....
.....
.....
provided that an air service between two contiguous member states shall be deemed not to be an international air service unless the two states, pursuant to section 3 of article I of this convention, have agreed that the service come under the exclusive jurisdiction of the authority;

(c) "member states of chief importance in international air transport" means the eight member states which, under the provisions of the annex to this convention, are entitled to the largest number of votes in the assembly;

(d) "nationality of aircraft" means the nationality of the state in which the aircraft is registered provided that the aircraft of an operating organization owned by two or more states or by the airline companies designated by two or more states is deemed for the purposes of this convention to possess the nationality of each of the participating states or companies;

(e) "territory" of a state means the territory of a state and its colonies, possessions, protectorates, mandates or territory abroad.

Article XIV

Provisional Article

Section 1

After this convention has come into force the member states shall observe the following rules governing the temporary continuation of existing international air transport:

(1) Such of their nationals as are engaged in international air transport shall discontinue their activities within two years unless they obtain licences under the provisions of this convention.

(2) If a member state has previously granted to a national of a non-member state any rights of international air transport such rights shall be revoked within two years provided that, if revocation would involve breach of an agreement made with the non-member state, the period of two years may be extended by the board.

Section 2

Until the international air transport board shall decide otherwise the jurisdiction of the regional air transport councils shall extend as follows:

(1) European air transport council: Europe not including the U.S.S.R., the United Kingdom and Ireland.

(2) North Atlantic air transport council: all routes between any point in North America which is north of 40° north latitude and any point north of 40° north latitude in Europe including the United Kingdom, Ireland and the European portions of the U.S.S.R.

(3) .....

Section 3

Until the international air transport board or the competent regional air transport council shall decide otherwise the aircraft companies designated in the attached schedule shall be deemed to possess licences issued by the international air transport authority to operate the routes designated in the schedule.

Schedule to Section 3

Part A. The North Atlantic.

(1) State A. A company or companies to be designated by state A to operate not more than ... round trips a week between any point in State A and any point in the British Isles or Europe north of 40° North latitude...

(2) State B. A company or companies to be designated by state B to operate not more than ... round trips a week between any point in state B and any point in...

(3) State C. A company .....

.....

Part B. The middle Atlantic .....
Part C. The south Atlantic .....
Part D. The north Atlantic .....
Part E. Inter-American .....
Part F. Europe .....
Part G. The middle East .....

Section 4

(This section should provide for an equitable allocation of transport aircraft between the member states during the period of scarcity following the cessation of hostilities.)

Section 5

The first meeting of the assembly shall be summoned by ... as soon as the convention has come into force to meet at ... two months after the date of coming into force of the convention.

Section 6

The following procedure shall govern the election of the international air transport board at the first meeting of the international air transport assembly. Each of the eight member states of chief importance in air transport shall, as soon as possible and not later than six weeks after the date of coming into force of the convention, nominate one of its nationals for membership on the board and the eight persons so nominated shall be deemed to have been elected by the assembly. Each national delegation may nominate one person to fill one of the remaining four seats on the board. The chairman of the assembly shall prepare a list in alphabetical order of all the persons thus nominated and shall submit this list to the assembly which shall vote by secret ballot. Those four candidates who obtain the highest number of votes shall be considered as elected. At the first meeting of the board lots shall be drawn to determine which two members shall serve for six years, which two for five years, which for four, which for three, which for two and which for one.

Section 7

Until the international air transport assembly shall decide otherwise the regulations governing such matters as air safety, rules of the air, competency of aircrew, ground signals, meteorological procedure, navigational aids, communications, air-worthiness, national registration and identification of aircraft, carriage of dangerous goods and salvage which are set forth in the attached schedule shall be deemed to have received the approval of the assembly under the provisions of subsection 5 of section 2 of article III of this convention (the assembly) and each member state undertakes to enact or modify its national laws to bring them into conformity with these regulations at the earliest practicable moment and in no case later than twelve months from the date of the coming into force of this convention.*

Annex to Convention

Section 1

For the first three years after the coming into force of this convention, the member states shall be entitled to votes in the assembly as follows:

(Then will follow a list of states with the number of votes to which each is entitled.)

Section 2

After the end of the period covered by section 1 of this annex the number of votes in the assembly to which each member state shall be entitled shall be determined as follows:

(Then will follow a formula.)

It is suggested that the functional principle as outlined by the Prime Minister of Canada in the House of Commons on July 9, 1943, be followed in deciding the number of votes to which each state is entitled in the assembly. The Prime Minister's statement of July 9 reads in part as follows:

"A number of new international institutions are likely to be set up as a result of the war. In the view of the government, effective representation on these bodies should neither be restricted to the largest states nor necessarily extended to all states. Representation should be determined on a functional basis which will admit to full membership those countries, large or small, which have the greatest contribution to make to the particular object in question."

* The schedule to section 7 would set forth provisional regulations which would among other things embody some of the rules and regulations contained in the conventions listed in section 1 of article XI.

Mr. STIRLING: The understanding was that this matter would be set aside to a future date so that it could be digested before the discussion continued.

Mr. MACKENZIE KING: That is correct.

DEPARTMENT OF NATIONAL DEFENCE FOR NAVAL SERVICES

6. Signal and wireless equipment, line construction, etc., $19,759,334.

Mr. ROY: I understand that a telephone line has been built on the north coast of the Gaspe peninsula by a crown company. I should like to know if this could be taken up under this item.

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): Yes.

Mr. ROY: Is it the intention of the department to sell this telephone line to a private concern?

Mr. MACDONALD (Kingston City): The line to which my hon. friend refers, and other similar lines, are under the charge of a crown company known as Defence Communications Limited. Like other crown companies, this company is made up mainly of men from private business, from existing telegraph and telephone companies. They supervise the work of lines such as my hon. friend has in mind, and endeavour to see that existing lines are improved and certain new lines built.

Mr. ROY: What was the cost of this telephone line?

Mr. MACDONALD (Kingston City): The army, navy and air force all shared the cost of these lines, and the work is in charge of this crown company. Our share for the work carried on in eastern Canada is, $250,000.

Mr. ROY: Where could I apply to find out the cost of this line?

Mr. MACDONALD (Kingston City): Defence Communications Limited is under the jurisdiction of the Department of Munitions and Supply. I have no doubt that if my hon. friend addressed his communication to the president of Defence Communications Limited, care of Department of Munitions and Supply, he would get the information he desires.

Mr. MARSHALL: In 1940 there was established a naval services equipment division for the purpose of securing the production of certain equipment and assembly components, particularly in connection with shipbuilding. I think it operated for two years, and then I understand that on July 10, 1942, authority was obtained to dissolve the division. It seems to me that it has done some very valuable work and I was wondering what objects were achieved by dissolving it in 1942.

Mr. MACDONALD (Kingston City): The work has not ceased at all. It is now being done by the Department of Munitions and Supply. In the earlier days the experimental work which was a necessary preliminary to the manufacture of the items was done by the department of naval services with some assistance from other sources. But the experimental stage having now passed, the actual work of manufacture has been taken over by the Department of Munitions and Supply.

Mr. McGARRY: Has the department contributed to the building of the line between Pleasant Bay and Cheticamp?

Mr. MACDONALD (Kingston City): I should say, without looking up the details, that we did. That would be part of the Atlantic coast programme to which we contributed.

Mr. BLACK (Cumberland): At page 1565 of *Hansard* of yesterday I asked about land lines on Cape Breton island. The minister was to give more detailed information later with respect to that matter, in which the hon. member for Inverness-Richmond was interested. What construction work has been done the better to serve the needs of the three departments in the northern part of Cape Breton isalnd, and incidentally serve also the needs of the people resident in that part of Nova Scotia and having business or personal relations with the northern part of Cape Breton island?

Item agreed to.

7. Ammunition and bombs, $23,835,200.

Mr. FRASER (Peterborough West): Are the different ships allowed sufficient ammunition for plenty of target practice?

Mr. MACDONALD (Kingston City): Oh, yes; I do not think there is any shortage of ammunition.

Mr. FRASER (Peterborough West): There was, I believe, a year or a year and a half ago. Have they plenty now?

Mr. MACDONALD (Kingston City): I do not recall that there ever was a shortage; there may have been. Certainly at the present, as for some time past, there are large reserves of practice ammunition available.

Item agreed to.

8. Armament, including rifles, machine guns, naval guns, et cetera, $26,458,650.

Mr. STIRLING: Will the minister explain this considerable decrease?

Mr. MACDONALD (Kingston City): This item is to provide for guns and mountings—that means low-angle and anti-aircraft guns; also to provide small arms, depth charges, fire control apparatus and the like. It also includes the programme for modernization and an increase in armament of some of our ships now in commission to meet the need for more fire power, particularly against aircraft. Finally it includes a certain amount of armament for the training of recruits. I am glad to be able to say that in Canada sufficient guns are being produced and in sufficient variety so that the complete programme of fitting Royal Canadian Navy ships can be met without any difficulty whatever.

Mr. STIRLING: Is the armament already provided for the destroyers built and in course of building?

Mr. MACDONALD (Kingston City): For the destroyers already built armament was provided in Great Britain.

Mr. STIRLING: And one was launched.

Mr. MACDONALD (Kingston City): The Tribals built in Great Britain were provided with armament there, and of course the destroyers that we acquired from Great Britain were fully equipped when we got them.

Mr. STIRLING: But the one now building?

Mr. MACDONALD (Kingston City): I think some guns for the destroyer which is being built at Halifax are coming from Great Britain.

Mr. BLACK (Cumberland): Is the minister free to give the sizes and the number of the guns on these new Tribal boats which are being built in Canada?

Mr. MACDONALD (Kingston City): I do not know that I want to particularize in too much detail, but they run from 4·7 inch guns down to the Lewis and Bren guns.

Mr. BLACK (Cumberland): The 4·7 inch guns—guns of that size—are built in Canada, are they not?

Mr. MACDONALD (Kingston City): We are making some 4 inch guns. I am not sure about 4·7 inch guns, but I can find that out. The destroyers built in Great Britain are equipped with guns at the British yards there. I think 4·7 inch guns are also coming from Great Britain for the destroyers building in Halifax, but I am not quite sure on that point.

Mr. BLACK (Cumberland): Would the minister care to make a statement as to the progress being made in the building of these Tribal destroyers? One was launched some months ago, and I understand that another is about ready to be launched. I would like to know, if the minister thinks it is all right to give the information, when the balance of the programme will be completed and when these destroyers will be in service. There are some misgivings as to the length of time required to build them and get them equipped and into actual service. We are all anxious to see this class of construction undertaken and carried out successfully in Canada. On the other hand, it is the feeling of everybody that the justification for building them is to have them fully equipped and ready for active service at the earliest possible date.

Mr. MACDONALD (Kingston City): It is inevitable, I think, that the building of the first of these destroyers should take longer in this country than it would take in a country where more experience had been acquired in this type of work. It is inevitable that the building of the hull should take a little longer, and that there should be a delay in connection with the installation of the machinery, which is of a new type so far as this country is concerned, as compared with what might have been done in the yards of Great Britain and the United States, where long experience has been gained in that type of work. But, all things considered, I think progress is reasonably satisfactory. The destroyers will take somewhat longer to build and will cost a little more than if they had been constructed in Great Britain. On the whole, however, I think that if, as I said the other day, we are to have a navy in this country we should build in Canada as many ships for that navy as we possibly can, and we have to acquire experience in our own yards. Destroyers are vital constituent parts in any navy. I believe that in future years it will be said that, all things considered, we did wisely in undertaking the construction of these ships at the time we did. Further, when we formed our plans for the building of destroyers in Canada, there was continually in our minds the possibility that English yards would be bombed and that it might be difficult to carry on work there. Happily, in the last year or so that condition has pretty well passed away, and the British yards are doing their usual fine work. But in 1941, when we took this decision, there was a strong possibility that some of the British shipyards would find it very difficult indeed to carry on. So, that all in all, I think the decision was wise. While I should like to see the

work proceed a little more rapidly, I understand the difficulties and delays, the labour problems and the problems connected with getting the machinery. Everything is being done, of course, that we can do from this end to speed up this work.

Mr. BLACK (Cumberland): I thank the minister for the answer he has given, but he has hardly answered my question as to the number included in this programme for the construction of Tribal destroyers, and when it is expected that the programme will be completed and each unit will be ready for service. One ship was launched some time ago and another one is nearly ready to be launched. It should be pretty well known by now when that will be equipped and ready for service. I should also like information with respect to the others.

The minister also admits that construction here costs more than it does in the older yards, in Great Britain and other places, and I appreciate that that is necessarily so. He informed the committee that the cost will be a little larger than in these older yards. I should like to know what he means by "a little."

Mr. MACDONALD (Kingston City): Oh, well, I cannot give my hon. friend that information. As a matter of fact, I do not know how much more it will be. The destroyers are not yet completed. The work is being done on the first destroyer on the basis of cost plus a fixed fee. What the final cost will be I cannot tell my hon. friend at this moment. It is inevitable that it will be greater than in Great Britain. Our rates of labour are higher here than in Great Britain; our cost of material is somewhat higher. What the ultimate cost of that first destroyer will be I could not say at the moment. It will be greater—more than "a little". I am afraid it will be substantially greater than it would be in Great Britain.

Mr. BLACK (Cumberland): Fifty per cent more, may I ask the minister?

Mr. MACDONALD (Kingston City): I should think probably it would, on the first destroyer.

Mr. BLACK (Cumberland): But no more than 50 per cent?

Mr. MACDONALD (Kingston City): Well, I do not know. It may be more.

Mr. BLACK (Cumberland): Would the minister care to give the committee the information as to the number of ships in the present programme, and when it is expected they will be completed, ready for active service?

[Mr. A. L. Macdonald.]

Mr. MACDONALD (Kingston City): My hon. friend is referring to the Tribal destroyers?

Mr. BLACK (Cumberland): Yes.

Mr. MACDONALD (Kingston City): We already have four of these ships in commission.

Mr. BLACK (Cumberland): But I mean the ones which are being built in the yards at Halifax.

Mr. MACDONALD (Kingston City): The programme involves four ships there. We anticipate now that the last ship will be launched in May of next year. My hon. friend understands, of course, that when you have launched a ship of war you still have a great deal of work ahead of you. The installation of machinery, the trials of the ship, and all the rest are a problem in themselves just as great as, and in some cases perhaps greater than, the hull work. But it is anticipated now that the last destroyer will be launched in May, 1945.

Mr. BLACK (Cumberland): I am not able to get the information from the minister; I will not press him if he informs the committee that it is not in the public interest to disclose it. The information I am asking for is, when will these ships be fully completed and equipped and ready for active service—the first of the programme of four Tribal destroyers, and the last of the four?

Mr. MACDONALD (Kingston City): I should say to my hon. friend, although it can be only a guess, that the first ship, the one which has already been launched, the *Micmac,* will be commissioned next spring or early summer, a year or a little more than a year from now. The last one ought to be commissioned about a year after she is launched. She will be launched, we hope, next May; she should be commissioned in the following summer. I think we ought to make more rapid progress as we go along, and I should hope the last ship would be commissioned by the summer of 1946—not 1950, as someone suggested here the other day.

Mr. ISNOR: I recall very well the launching of the *Micmac,* the Tribal destroyer, in Halifax, at which the Minister of National Defence for Naval Services was present, and Mrs. Macdonald, the wife of the minister, had the honour of christening that splendid ship. I also remember when the construction of destroyers in Canada was first mooted; there were many who thought it was impossible for Canada to undertake the building of this type of craft. But I recall travelling from Montreal to Halifax with a Mr. Mariner,

who was connected with one of the Scottish shipbuilding concerns, and had been in Canada for a period of about a year or a year and one-half when the war broke out. He made the statement then that there was no reason why Canada should not be able to build its own destroyers. I was pleased, as I think was the country at large, when announcement was made by the navy department that this type of ship would be constructed in Canada.

I am surprised that the hon. member for Cumberland, with his knowledge of the difficulties experienced in his own town of Amherst with respect to aeroplane construction, would be critical of the time taken to bring to successful conclusion a new undertaking such as the one to which he referred. It is almost impossible in a country like Canada to build ships in the same time as in the shipyards of the old country. We did not have the facilities at the time, although the Halifax shipyards are well equipped now. We were without the skilled labour and material. It was not thought possible that the material would be available in this country. But all those obstacles were overcome and we were very happy on the occasion of the launching of the *Micmac*. I do not think it is a question of time, although we are all anxious to see those boats completed and launched at the earliest possible moment. What we should bear in mind is that Canadian workmen were able to build boats, something which we thought three years ago was impossible.

I think the Halifax shipyards have done exceptionally well in regard to the handling of those two contracts. One ship is afloat and the other one is about to be launched. It is a matter of finishing up the fittings. I am looking forward to the day when we shall have not only those two in commission but many others built by Canadians in Canadian shipyards.

Mr. BLACK (Cumberland): I commended this policy and the minister for having undertaken the construction of those ships in Canada and in Nova Scotia. This is in line with the policy that was proposed by other governments in previous years, although unfortunately not carried out. I recognize also that it is to be expected that the initial ships would take longer to build than they have in other yards. On the other hand, I think it is perfectly proper, in seeking information covering this enormous expenditure for a very worthy purpose, to ask for information as to the time it takes to build those vital ships and as to the cost and the justification for the additional cost. If this committee is not to get that information we might as well adjourn. We are here for the purpose of getting information.

I do not wish to press the minister unduly, but I should have liked to have from him a statement as to whether he considers that the construction programme has proceeded with the expedition that we should reasonably expect to be the case in a time of war and at a time when we are in desperate need of having those ships commissioned for active service. I am not critical of the programme, but I do want information as to the cost in Canada in comparison with the cost elsewhere. I want information as to the time it takes to build those ships in this country as compared with the time taken in other countries. I am glad this programme has been undertaken. I regret it was not undertaken by the government much earlier. I hope that it will be a success and that it will be an established programme in the years that lie ahead, although we all recognize that the building of ships of war after the successful termination of the war will be extremely limited in comparison with the needs at the present time.

Item agreed to.

9. Fuel cost of ships, $27,806,604.

Mr. STIRLING: What part of this is coal and what part oil?

Mr. MACDONALD (Kingston City): By far the greater amount of it would be for oil. The amount of coal for steaming is estimated at 35,600 tons, and coal for heating ships, 3,182 tons. In value that forms about two per cent of the total fuel requirements.

Mr. NOSEWORTHY: Has the minister a break-down of the amount allowed for the purchase of oil, showing the companies from which these quantities are to be obtained?

Mr. MACDONALD (Kingston City): I have not the break-down by companies. We would requisition the Department of Munitions and Supply to get the oil for us and some of it would be purchased here, some purchased in Newfoundland, some purchased in Great Britain and some in United States ports and elsewhere.

Mr. FRASER (Peterborough West): I understand that there is some trouble on the diesel-powered ships in regard to seawater getting into the oil tanks. Has the water been allowed to get in after the oil is on the ship or when it is being loaded, or is it oil that comes up from South America?

Mr. MACDONALD (Kingston City): Is my hon. friend speaking of oil carried in bulk?

Mr. FRASER (Peterborough West): Yes, and supplied to the ships. I understand that salt water is allowed to get into some of the ship tanks causing the nozzles of the metal burners on the diesels to corrode.

Mr. MACDONALD (Kingston City): Rust?

Mr. FRASER (Peterborough West): Corrode.

Mr. MACDONALD (Kingston City): I would have to look into that. Of course my hon. friend knows there are always problems connected with the ships that burn oil fuel; in fact, any kind of fuel, but as to the particular point he raises I cannot speak at the moment with accuracy. I shall have it looked into and give my hon. friend the information later.

Mr. MacNICOL: This item refers to fuel for ships. Where is the item that refers to fuel for the heating of the barracks and the yards?

Mr. MACDONALD (Kingston City): That would be under maintenance of properties.

Item agreed to.

10. Acquisition, construction, charter, repair and upkeep of ships, $82,282,000.

Mr. MacNICOL: I observe that the total estimate of the department has been reduced by approximately $79,000,000. This particular item has been reduced by about $85,000,000, as against a reduction of $79,000,000 on the total estimate for this department. From that I would take it that the department is under the impression that the shipbuilding programme is reaching its objective. I should like to ask if that is the case.

Mr. MACDONALD (Kingston City): My hon. friend is using the figure of $167,000,000, which was the estimated expenditure for the present year. I may tell him, however, that we did not spend that sum. The year is not quite over yet and consequently I have not the exact figure, but I should think it would be somewhat less than the figure of $167,000,000. It is true, as my hon. friend points out, that the estimate for this year is considerably less, but we are still building a good many ships in this country. As I indicated in my statement the other day, we propose to add a very considerable number of ships to the navy during the present year, so that our shipbuilding programme is by no means completed.

[Mr. G. K. Fraser.]

Mr. FRASER (Peterborough West): Could the minister give us the kind of ships that have been built during the past year, and what kind of craft are being built now, such as landing craft, seeps and small craft of that kind? This item deals with acquisition, construction and charter. How many has the department bought; how many has it constructed and how many has it chartered during the past year, with the cost in each case if that can be given?

Mr. MACDONALD (Kingston City): To mention some of the ships we are building there are destroyers, frigates, corvettes—

Mr. FRASER (Peterborough West): Could the minister give the number of each?

Mr. MACDONALD (Kingston City): Well, if I did so, it would have to be very approximate: destroyers, frigates, corvettes, Algerine mine-sweepers, Bangor mine-sweepers, Bassett mine-sweepers, wooden mine-sweepers of 105 feet and 126 feet; some motor launches, which means Fairmiles; some patrol vessels and various types of auxiliary vessels such as harbour vessels, gate vessels, examination vessels and so on. That would be a rough description of the ships we are building.

Mr. FRASER (Peterborough West): What about landing craft and seeps?

Mr. MACDONALD (Kingston City): No, not for our navy.

Mr. NOSEWORTHY: How is this item of $82,000,000 divided or broken down under these four headings? What is the amount of each?

Mr. MACDONALD (Kingston City): Acquisition and construction would be about $47,000,000; charters would be about $1,000,000; the repair and upkeep of ships would be about $33,000,000, all in round figures, making a total of $82,000,000.

Mr. FRASER (Peterborough West): There would appear to be a misleading article in the copy of the Toronto *Star Weekly* I have in my hand, if the government is not buying craft of this kind. This article refers to amphibious jeeps, amphibious ducks, and seeps.

Mr. MACDONALD (Kingston City): Of course some craft are being built in this country, but not for the Canadian navy; probably that is what the article refers to.

Mr. FRASER (Peterborough West): Then who would have control of these; the army?

Mr. MACDONALD (Kingston City): Some ships of that kind are being used by the army and some are being built for Great Britain.

There are many types of ships being built in this country for Great Britain. I am speaking now of ships being built for the Canadian navy, and none of those landing craft are for the navy.

Mr. FRASER (Peterborough West): Is there a plan on foot to build any of them?

Mr. MACDONALD (Kingston City): No.

Mr. FRASER (Peterborough West): Then, if there is an invasion of Europe by the allies, Canadians will have to ride in the landing craft of other nations; is that true? They will have to be carried in the craft of other countries; the Canadian navy will not carry them; it will be other allied countries which will supply the boats?

Mr. MACDONALD (Kingston City): There is nothing unusual about that. We are using guns which were produced in other countries, while some other countries are using guns made here. We might be using the ships of another country and at the same time be building ships here for Great Britain and the United States. There is nothing abnormal or unusual about that. Certain craft of that type have been built in Canada, but I say that none has been built for the Canadian navy. I believe the Canadian army had some, and perhaps some were built in this country for the United Kingdom, while of course a great many were built in the United States and some are built in England. We are not building any in this country for the Canadian navy as such.

Mr. FRASER (Peterborough West): In case of an emergency, if Canada needed some of these craft in a hurry, she would have to go to other allied countries to get them; is that right?

Mr. MACDONALD (Kingston City): I do not know that my hon. friend should put it in that way. I do not think hon. gentlemen should always try to put the worst possible construction on everything.

Mr. FRASER (Peterborough West): I did not mean it in that way.

Mr. MACDONALD (Kingston City): Then I will say, Mr. Chairman, that it sounds very much like it; that we will have to go to somebody else, virtually with our hat in our hands, saying, "Please give us ships." I do not think this country has to apologize for what it has done in the matter of providing ships, guns or anything else. It is a common thing for one country to undertake a certain line of work and give its surplus to another country. We have built a hundred ships here for Great Britain. We have built a few ships for the United States. We do not say, because of that, that the British navy is falling to pieces, or that England has to come begging us for ships. We were able to help Britain in the case of ships, and we were able to do so in connection with guns, ammunition and depth charges. We were able to give some of these to other countries, and they were glad to accept them. In return we took some things from those other countries. It is an exchange that is honourable, reasonable and fair on all sides. As to landing craft, we have not built any for the Canadian navy, but such craft have been built in the country and I have no doubt that there will be a sufficient number of those craft to deal with the situation when it arises.

Mr. FRASER (Peterborough West): I am just as proud of the Canadian navy as the minister is, and I was not casting any reflection upon it or upon the building programme. But I know how the boys feel; they like to be carried in their own Canadian boats, and that was why I rose and said what I did. I make no apology for doing so, and I know the minister understands how I feel about the matter.

Mr. NOSEWORTHY: In the case of boats that are chartered, what is the relation of the minister's department to the Department of Transport? To what extent is the Department of Transport involved in the charter of these boats; on what basis is the charter hire decided, and by whom?

Mr. MACDONALD (Kingston City): The director of marine services, who is an official of the Department of Transport, acts as our agent in this matter. With respect to the basis upon which boats are chartered, there is at the coast a committee known as an advisory board, which examines the vessel and determines what it thinks a fair charter would be. I believe that the committee on the east coast consists of three, and that there is on the west coast a similar committee which carries out those duties. They work pretty well along certain formulae; they look at the ship, allowing so much for depreciation, so much for administration expenses and the like. Then they fix what they regard as a fair charter to pay for that ship.

Mr. BROOKS: We understand, of course, that the navy is operating in the Mediterranean, and in all the seven seas. Do those ships come back to Canada for repairs, or are they repaired in the ports of the different united nations? If they return to Canada, what places in this country are being used for that purpose?

Mr. MACDONALD (Kingston City): Some of the ships would be repaired here, and some

might be repaired in Great Britain or elsewhere. I should assume that if ships were in the Mediterranean area they might be repaired there. Others might be repaired in the United States. In this country, starting at Newfoundland, the repair yards would be at St. John's, and at Bay Bulls one is under construction. There are several places in Nova Scotia where repairs can be made. Then, there is, of course, the Saint John dry dock at Saint John, New Brunswick, where repairs might be carried out. In the summer months repairs can be done at Quebec and Montreal. On the west coast repairs can be undertaken at Vancouver or Victoria.

Mr. BROOKS: The policy is to make repairs at the most convenient point.

Mr. MACDONALD (Kingston City): It has to be done in that way, yes.

Mr. MARSHALL: The people of Stettler, a thriving little town in my constituency, would like me to express to the minister their deep and sincere appreciation for the department's having named one of the corvettes after that town. This seems to be an unusual procedure, but it was done because the people of Edmonton made it possible, as was explained to the house a few evenings ago by the hon. member for Edmonton West. Stettler suffered severely from the battle of Dieppe, and I have no doubt that the naming of the corvette after that town will perpetuate the memory of the heroism of the men who came from that community.

I thank the minister, too, for having sent me an invitation to attend the launching ceremonies last summer. Unfortunately his invitation arrived about two days before the launching, so that it was quite impossible for me to be present on that occasion. Could the minister give some information as to the operations of this corvette?

Mrs. CASSELMAN: I made inquiries about the *Stettler* just the other day, and I find that it is to be commissioned probably next month, and will then be called for duty. If the minister will let us know when it is to be commissioned we would appreciate it. I am sure the hon. member for Camrose, as well as the hon. member for Edmonton West, would appreciate having that information.

Mr. MACDONALD (Kingston City): I shall be very glad to do that. I believe it should take place before many more months. The tentative date was next month, I believe, but whether or not that date can be met, I cannot say. However, we will give the hon. members for Edmonton East and Camrose due notice of the commissioning date.

[Mr. A. L. Macdonald.]

Mr. BROOKS: We are interested to hear hon. members from different constituencies say that ships have been named after two or three places in those constituencies. It would seem to me that, when there are 245 constituencies in Canada, the names might be passed around, so that each constituency might name a ship. For instance, my own constituency could provide some satisfactory names. We have towns with good English names such as Hampton, Norton, and Sussex. Then, if you wish Indian names we have Penobsquis, Quispamsis, Nauwigewauk and Apohaqui. It might be wise to have these names passed around to the different constituencies. Could the minister give the committee some idea as to how these names are selected, and by whom?

Mr. MACDONALD (Kingston City): At first I must say that the names were selected rather at random.

Mr. BROOKS: I am afraid so.

Mr. MACDONALD (Kingston City): But eventually the practice was developed of having the ships named after cities and towns, in order of their size. That seemed to be the only fair way of doing it.

Mr. BROOKS: Stettler is not a very big place.

Mr. MACDONALD (Kingston City): No, Stettler is not. But the city of Edmonton, which would have been entitled to the naming of a ship, was unable to accept that honour because of possible confusion with the name of a ship already existing. They were then asked to suggest an alternative name, and I believe they suggested the name of Stettler. I must say, however, there were several New Brunswick names.

Mr. BROOKS: I know.

Mr. MACDONALD (Kingston City): There is a new frigate named the *Saint John,* which will be commissioned shortly. Then we have the *Buctouche,* the *Moncton,* the *Fredericton,* the *Edmundston,* the *Sackville* and the *Shediac.* It seems to me that the name of Sussex might not be used, because I am almost certain there is a British ship of that name, in which event we would not use it for a Canadian ship.

Mr. BROOKS: I can supply a substitute, if the minister wishes?

Mr. MACDONALD (Kingston City): Very well.

Mr. DOUGLAS (Weyburn): The minister will recall that a corvette was named after

the city of Weyburn. The people of that city took a keen interest in the ship, sending comforts to the men and keeping in touch with the crew. After the corvette *Weyburn* went down, with her guns blazing, the minister said that an attempt would be made to name another corvette after that city. Has it been possible to do so, or is that within the realm of possibility?

Mr. MACDONALD (Kingston City): I do not think that name has yet been assigned. It is a common practice to reassign, after a certain time, names of ships which have been sunk in action. I doubt whether the name Weyburn has been reassigned to any other ship, but I shall keep my hon. friend's representations in mind.

Mr. MacNICOL: Has the department considered naming ships after historic areas in cities? For instance, in my own end of the city of Toronto there is an historic area known as Earlscourt, named after Earlscourt in London where Buckingham palace is located. Down through the years this part of the city has been settled mainly by old country people, perhaps to a greater extent than any other part. During the last war and during this war the people enlisted almost en masse, many of them in the navy, many in the air force and many in the army. If the department considers adopting this practice I suggest that perhaps Earlscourt may be considered a name of a fighting ship. Another historic area in Toronto is Trinity where the famous Robert Baldwin lived. Another area is High Park, which was donated by one of our great philanthropists. Another is Danforth in the east end of the city, and my desk-mate suggests that perhaps you could name one after the hon. member for Broadview, who was seven times mayor of Toronto—Church.

Mrs. CASSELMAN: You might even name one after the Minister of National Defence for Naval Services.

Mr. NOSEWORTHY: Do I understand the minister to say that his department depends upon the inspection and report by the Department of Transport in connection with the value and charter price of boats?

Mr. MACDONALD (Kingston City): What I told my hon. friend was that the director of marine services in the Department of Transport handles these requisitions for us. He in turn has an advisory board on both the east coast and the west coast which estimates the value of a ship and the proper amount of charter money which should be paid.

Mr. NOSEWORTHY: Some weeks ago I asked the minister to check up on a small boat which had been requisitioned and then returned to the owner. Has he had time to gather any information?

Mr. MACDONALD (Kingston City): An investigation into that has started and I hope to bring down the return shortly for my hon. friend.

Mr. NOSEWORTHY: I have before me a return, sessional paper 253, which was brought down for another member in April, 1942. From a study of these papers I have come to the conclusion that in these matters there is anything but cooperation between the Department of Transport and the Department of National Defence for Naval Services. There is certainly an undue amount of red tape which causes inconvenience to citizens whose properties have been requisitioned.

For instance, I find that this particular boat was taken over by the naval department on December 7. The Department of Transport had the boat inspected on December 9 by a marine surveyor, and then on December 13 by a steamship inspector, at which time a valuation was placed on the boat. On January 3, after a considerable length of time, the advisory board, to which the minister referred, placed on the boat a valuation which was incidentally less than that of the marine inspector. This report was not sent to the naval department by the Department of Transport until September 21; seven months passed before the findings of this board were reported to the minister's department. The result was that this citizen whose boat had been chartered had to wait seven months for his first cheque, and he received this only after making a special trip to Ottawa.

As another illustration of the lack of cooperation, this citizen was notified on September 9, by the engineer in charge of Halifax harbour, working under the minister's department, that the charter was to be cancelled or that the department desired to cancel the charter which had been entered into, and the citizen was requested to come and get his boat. On October 18, nearly six weeks later, the Department of Transport executed a new charter with the citizen.

There are a couple of other points I should like to call to the minister's attention. The marine inspector of the Department of Transport valued this boat at $16,500, but the board, to which the minister has referred, reduced this valuation by twenty-five per cent to $13,200, on the ground that the surveyor had allowed a twenty-five per cent war appreciation over the actual value of the boat.

I assume that the minister's department is responsible for the examination of boats placed in dry dock. This boat was placed in a dry dock the latter part of February, 1941, and was there for fourteen days. The evidence here shows that ceiling planks were removed; conditions were found to be good, and so forth. As a result of this examination a requisition was made for the expenditure of $844 on the boat, and apparently this was approved and spent toward the end of February on an annual overhaul. On April 8, after the boat had been in dry dock for two weeks and had been given this outfitting costing $844, she comes back into dry dock again for two days to get a coat of paint. Then a month later she comes back into dry dock again for another coat of paint. There is no evidence in the return to show what these two extra coats of paint cost. The interesting part is that a few weeks after these expenditures on the boat the minister's own engineers discovered that the boat was rotten and would require approximately $5,000 to make it seaworthy. On the strength of that they notified the owner to take his boat back.

The confusing situation is that two inspectors of the transport department set an appraisal value on the boat of $16,500, and then $13,200; that the minister's own engineers considered the boat worth overhauling to the tune of $1,000 of the ratepayers' money, and then a couple of weeks later they discover that the boat is rotten and unfit for service. When the owner was asked to take the boat back, there is a copy of a telegram here in which he offered the department the free loan of the boat for the rest of the season, and the department replies that the boat simply cannot be used at all. Somebody in one or other of those departments is grossly inefficient and wasteful of the public's money. If you are going to put a boat that is rotten, that cannot be used, that must be discarded, into dry dock and spend nearly a thousand dollars on it—and incidentally there was another five hundred dollars of the taxpayers' money spent before the boat was returned—I should like to know who is at fault, who does not know his job. I think the taxpayer has a right to know why we should spend one thousand or fifteen hundred dollars on a boat which two weeks later is declared to be rotten.

Mr. MACDONALD (Kingston City): My hon. friend took this matter up with me before, and I am looking into it. I do not think his interpretation of the return is accurate in all respects, but I will look into the matter again and see if further information can be brought down as he requested in his motion for a return some time ago.

[Mr. Noseworthy.]

Mr. BLACK (Cumberland): This item of $82,282,000, the largest except one in the minister's whole estimates, involves the repair and upkeep of ships. I would ask if he could now or later provide the committee with a statement showing the repairs for the current fiscal year that have been made on one class of ships, say corvettes, showing the repairs to each corvette for the current fiscal year. We all recognize that these ships, which have done such splendid service during the war, are subject to very hard usage and sometimes require extensive repairs, especially those that have been in touch with the enemy and suffered damage in action. On the other hand, there is the feeling in some parts of the maritime provinces that at least some of these ships are tied up for too long a period at wharves and at repair yards, and there is a reflection in some cases upon the concerns that constructed these ships; in other cases it is a reflection upon the yards doing the repairs, and in other cases a reflection upon the crews, that they encourage long delays in port and do not want the repairs completed earlier. I think that is a very unfair reflection. There are also rumours that some of these ships have been subjected to sabotage. I have even heard that some of the corvettes in active service have had sand or some other abrasive in their lubricating oil, involving extensive lay-ups and overhaul. I should be glad if the minister would give the committee a statement covering the total expenditures for repairs on each of the corvettes for the current fiscal year and also if he could give me information with respect to my other inquiries.

Mr. MACDONALD (Kingston City): It will take some considerable time to get the figures of these expenditures. I cannot hope to do so to-day or tomorrow. There are a great many of these ships and repairs have been carried out, I was going to say, in practically every port of the world, but that would not be accurate. There is great difficulty sometimes in distinguishing between repairs to a ship and alterations that are made by virtue of new discoveries, new guns, or new types of equipment installed in the ship. Often it is very difficult to say where a repair job ends and where what is called an alteration or addition begins. I will do the best I can for my hon. friend. I cannot guarantee to get the information before these estimates are finally passed.

As to the other statements of sabotage, I know of no such case. It is a common thing for people to shout "sabotage" any time anything happens in the service by way of fire or otherwise. There was one case of fuel

trouble, I recall, that was very suspicious. That was examined by our engineers, who went right to the spot, took the oil out, analysed it and came definitely to the conclusion that there was no sabotage whatever. There was some defect in the pipes, which produced a fine steel dust, but there was no evidence of sand or any other element having been thrown into the oil deliberately.

Item agreed to.

11. Naval stores and harbour defences: small boats, minesweeping, degaussing, anti-submarine, fire-fighting and training equipment, et cetera, $34,678,967.

Mr. MacNICOL: I was going to ask for an explanation of the significance of "harbour defences." I was under the impression that the Department of National Defence provided for the defence of harbours. What does this mean?

Mr. MACDONALD (Kingston City): I can tell my hon. friend what we mean by that. The Department of National Defence (Army) does, of course, have some hand in the defence of ports, having guns at some of the ports, and so on. But when we speak of harbour defences we mean boom defences, for instance; we mean mine fields; we mean instruments that detect by sound the approach of hostile ships and things of that kind.

Mr. MacNICOL: Has the department its own fire-fighting brigades, using their own pumps and fire-fighting equipment? If so, what is the reason for so many fires having taken place in barracks and buildings of one kind and another?

Mr. MACDONALD (Kingston City): There have not been so many fires. On a wharf at Sydney there was a fire which was very difficult to control because it ran through an oil pipe, which in turn ran through a tunnel, which in turn ran under a wharf. This oil was burning and the fire was extremely difficult to control. There was another fire at Shelburne shortly afterwards, but not a very serious one. Nearly all these buildings are wooden buildings and there is a danger in that regard. We have a fire-fighting organization of our own which is being developed, in fact, has been under development for some time at all these bases.

Mr. MacNICOL: I would not ask this question if I knew the answer, but I do not. It may be an insignificant question. But what is the meaning of "degaussing"?

Mr. MACDONALD (Kingston City): That is an arrangement by which the effect of mines is neutralized by running a certain cable around the ship, so that the magnetic mine has no effect. It is called "degaussing", because the engineer who designed the thing was named de Gausse.

Mr. FRASER (Peterborough West): Have any steps been taken to try to protect the various harbours against the oil which is dumped from boats? The minister himself knows that in some of the harbours the docks are just covered with the oil. Is there any chance of checking on that?

Mr. MACDONALD (Kingston City): That is a matter for the national harbours board. Inasmuch as the harbour of Halifax is concerned, this was taken up with them at one time and another. It is not a matter which is under the control of the navy.

Mr. FRASER (Peterborough West): It is not under the navy?

Mr. MACDONALD (Kingston City): No.

Mr. FRASER (Peterborough West): Is it not the navy boats which would partly be responsible for that condition? Would it arise from the boats in convoys?

Mr. MACDONALD (Kingston City): I suppose so. You always have oil when you have a large number of ships. Probably some of the oil comes from navy ships and some from merchant ships.

Mr. FRASER (Peterborough West): That is being checked, is it?

Mr. MACDONALD (Kingston City): I know that some time ago, a year or so ago, the citizens of Halifax were appealing to the national harbours board to see what it could do to lessen this flow of oil into the waters of the harbour; but it is very difficult to prevent it when there are so many ships in the harbour.

The CHAIRMAN: Is the item carried?

Mr. MACDONALD (Kingston City): I think one hon. member wanted item 11 to stand over.

Mr. ISNOR: It would be quite satisfactory if I could speak on item 12 or 13 upon a matter which pertains to item 11.

Item agreed to.

12. Miscellaneous stores and services: printing, stationery, laundry, office machinery, teletype rental, et cetera, $8,873,210.

Mr. ADAMSON: Is there such a body as the Royal Canadian Navy Film society, showing films on board ship?

Mr. MACDONALD (Kingston City): Yes.

Mr. ADAMSON: And that is distinct from all the auxiliary services? Could the minister explain that? I have had some inquiries concerning its operation.

Mr. MACDONALD (Kingston City): I should be glad to send my hon. friend the first annual report. Probably that would be the best way of answering his question. I am sure he would be interested in it. It is called the Royal Canadian Navy Film Society, and consists of a committee, mostly of naval officers. Associated with them is the dominion film commissioner. The report indicates what they have done during the year.

Mr. ADAMSON: Thank you very much for offering to send me a copy of the report. Who is the motion-picture officer? There is a motion-picture officer, I understand, is there not?

Mr. MACDONALD (Kingston City): I myself am the honorary president of the society, but I regret to say that I have been of very little assistance.

Mr. GOLDING: Clark Gable Macdonald!

Mr. MACDONALD (Kingston City): The chairman of the committee is Captain Brand, of the navy; and the manager, who might be called the film officer, is Lieutenant D. S. Rubin, R.C.N.V.R.

Mr. ADAMSON: I understand the operation is that they buy films from the United States—first-run films or other sorts—and show them at a fixed fee, the ratings paying five cents and the officers twenty-five cents. However, it will all be in the report. Are those the general principles?

Mr. MACDONALD (Kingston City): I am not sure that there is a charge for each particular performance. I notice that the society obtains a revenue from showing its programmes in ships and making a charge of twenty-five cents per officer and five cents per man.

Mr. ADAMSON: Per performance?

Mr. MACDONALD (Kingston City): Yes; I thought there was a net fee covering, say, a year, but it is a fee for each performance.

Mr. ADAMSON: And that money goes for the purchase of films and equipment?

Mr. MACDONALD (Kingston City): That is right.

Mr. ADAMSON: And presumably it is done through the motion-picture officer, Lieutenant Rubin?

Mr. MACDONALD (Kingston City): Lieutenant Rubin is the manager, yes.

[Mr. A. L. Macdonald.]

Mr. MARSHALL: Could the minister put on *Hansard* the amount which his department spends for rentals? I am only interested in the one item of teletype rental, but it would be appreciated if the minister would place on *Hansard* a statement of the amount his department spends from year to year in connection with the rental of office machines such as typewriters. The amount which the government as a whole spends for the renting of these machines runs into millions of dollars a year.

Mr. MACDONALD (Kingston City): My hon. friend is speaking of typewriters and other types of office machines? I do not think we rent any typewriters. I shall look into the matter and see if there is any other type of office equipment that we rent.

Mr. MARSHALL: How much has the minister set aside for this particular item this year?

Mr. MACDONALD (Kingston City): For new typewriters and office machines we have $110,071; repairs to machines, $42,947.

Mr. MARSHALL: Are these rental fees?

Mr. MACDONALD (Kingston City): No, these are machines which we own. I think we own all our typewriters. Perhaps there are some machines such as the Hollerith, and perhaps some of the teletype machines, which we rent, but I will look into that and get the information for the hon. member.

Mr. MACKENZIE (Vancouver Centre): Last night I announced that we would finish with these estimates at six o'clock and go on with agriculture estimates at eight o'clock. Would there be any objection to finishing the last item at eight o'clock?

Mr. STIRLING: There are a great many answers to questions which the minister, when he is ready, is to bring down.

Mr. MACDONALD (Kingston City): I am going to bring down answers to all which were asked me yesterday, but some of the questions asked this afternoon I am afraid I could not answer to-night.

Mr. MACKENZIE (Vancouver Centre): Is the committee in agreement that we proceed with this at eight o'clock?

Mr. STIRLING: I wish the minister's intimation had been given to us rather earlier, so that we might have got in touch with those who expect the agriculture estimates at eight o'clock; but I do not think we should raise objection under the circumstances.

Item stands.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. MACDONALD (Kingston City): Mr. Chairman, I might be allowed now to put on *Hansard* answers to certain questions which were asked during the course of the discussion on these estimates. The hon. member for Vancouver South asked a question about the defence of the Pacific coast and the fishermen's reserve. I may tell him that the fishermen's reserve is being disbanded as a reserve. Instructions to that effect have been issued. Members of the reserve are now given the opportunity of joining either the Royal Canadian Naval Reserve or the Royal Canadian Naval Volunteer Reserve or of returning to their pursuit of fishing. The fishermen's reserve was organized before the war, I think in 1937 or 1938, for, as I understand, one particular purpose, and that was based on the knowledge which these men had of the coast. They were to serve in their own boats on the west coast. Later I think that term of service was extended to apply to service anywhere in their own boats. The main purpose for which they were organized they have discharged and discharged, I believe, very satisfactorily. They had charge of rounding up the Japanese fishing boats on the British Columbia coast, and they did that, I believe, very successfully, taking into their charge in all some one thousand boats. The situation is different now from what it was in the early days of the war. The menace from Japanese boats on that coast has disappeared. The boats have all been taken. We ourselves have a stronger naval force there than we had in the beginning. In all the circumstances it was felt that the fishermen's reserve might be disbanded, and that has been done.

I should like to say a word of appreciation to these men for what they did and how effectively and loyally they carried out their duties. I understand that some of the fishermen's reserve craft are being returned to their owners, but approximately thirty boats are being retained by the navy, and most of them will be employed on patrol work.

Mr. STIRLING: And paid for on an agreed sum? What about the condition of the boats that have been in service these seven years? Will they be refitted if they are to be in need of refitting?

Mr. MACDONALD (Kingston City): I should assume that would be the case, although I am not quite sure on that point. I should assume that we shall endeavour to refit the boats, but I shall have that point looked into.

Mr. GREEN: Is the minister through with his statement in regard to the fishermen's reserve?

Mr. MACDONALD (Kingston City): Yes, unless my hon. friend wants to amplify it.

Mr. GREEN: Has a provision been made whereby the fishermen will still be considered as a naval reserve of some kind? I think such a reserve would be of great value even in peace time, and if the Japanese were to attempt a raid on the Pacific coast now such a reserve would also be a great help. Would it not be possible to make some provision whereby these fishermen would still be a reserve of the Canadian navy?

Mr. MACDONALD (Kingston City): I do not know that my hon. friend was in at the beginning when I stated that these men who belonged to the fishermen's reserve had the choice of joining the R.C.N.R. or the R.C.N.V.R. or of going back to their regular pursuit of fishing. They can do any one of those three things. The man who goes back to fishing will be out of the navy. The man who stays in the R.C.N.R. or the R.C.N.V.R. will be in the navy.

Mr. NEILL: What will become of the boat of the fisherman who decides to go into the navy?

Mr. MACDONALD (Kingston City): I said that about thirty of those boats are being retained and I assume they would be manned by those members of the reserve who go into the regular navy.

Mr. NEILL: They would still stay on the Pacific coast?

Mr. MACDONALD (Kingston City): Oh, yes.

Mr. GREEN: Personally I regret very much that the force has been disbanded. Would it not be possible to set them up as a reserve similar to the reserve army? In other words, the men might go back to their fishing but still constitute a fishermen's reserve of the Royal Canadian Navy. I suggest that some such arrangement would be very beneficial on the Pacific coast.

Mr. MACDONALD (Kingston City): The navy has no reserve as such in war time similar to the reserve army. I have no doubt that after the war, however, these men would be welcomed in either the naval reserve or the naval volunteer reserve; but to-day every man in the navy is on active service, and consequently I do not see how we can very well begin to set up a reserve force which is not on active service at this time.

Mr. GREEN: I thought that was the position when the fishermen's reserve was first established. If I remember correctly, it was

established before the war. The Minister of Pensions and National Health can correct me if I am wrong.

Mr. MACDONALD (Kingston City): Yes.

Mr. GREEN: Why could these fishermen not revert to the same status; in other words, why could we not have a fishermen's reserve? There is not one on the Atlantic coast, I know. But on the west coast they would serve a very useful purpose.

Mr. MACDONALD (Kingston City): As I have intimated, the great purpose—I am given to understand so by the personnel officers of my department—in forming the fishermen's reserve was that which they have already carried out. My hon. friend will understand that their boats are small. They are fishing boats. They are really not combat boats but they are very useful for patrol purposes. These men know the British Columbia coast. They were able, consequently, to seize many of those Japanese boats which were on the coast at the outbreak of war with Japan. I believe that was one of the greatest purposes in having them formed, to deal with any danger which might arise from the outbreak of war with Japan. They discharged that duty. They did seize a thousand Japanese boats, acquired them, rounded them up.

Mr. GREEN: That was all done in a few days.

Mr. MACDONALD (Kingston City): I know, but if these men had not been there some of those boats might have been prowling around for months. The fishermen's reserve knew where to go to get the boats and they got them. The danger from Japanese coastal boats operating to-day has now disappeared through the efforts of these men.

Mr. GREEN: It disappeared right after Japan struck.

Mr. MACDONALD (Kingston City): Yes, it disappeared, and therefore the need for continuing the reserve did not appear to the officers of the department to be as great as it used to be, and the course which I have outlined was decided upon and is now being carried out. The terms of their enlistment were limited. At first the terms were that they would be used only on the west coast and only in their own boats. That was later extended to a provision that they would go anywhere, provided they went in their own boats. That is not full active service as we understand it in the navy. Consequently it was considered better at this time to make a clear demarcation and say to them "If you wish to go fishing, you may do so Fishing is a very important industry, and you may return to it; or if you prefer you may remain in the navy." That is the choice we have given them, and they are now acting according to their own desires.

Mr. GREEN: I would ask the minister to give some further consideration to the whole question. On the Pacific coast the army has units known as the Pacific coast militia rangers, whose work is really reconnaissance the same as the work of the fishermen. The rangers are still carrying on, and doing very good work; and I think some similar scheme could be worked out for the fishermen.

Mr. MACDONALD (Kingston City): I shall be very glad to consider that.

Mr. REID: I think a little more should be said on behalf of the fishermen's reserve, in support of the remarks of the hon. member for Vancouver South. I would say that the fishermen's reserve did much more work on the Pacific coast than merely taking in the Japanese boats.

Mr. GREEN: Very much more.

Mr. REID: It is all very well to look at the situation now, but remember what we were faced with in 1939, 1940 and 1941. No one knew what the Japanese would do, and these fishermen performed a splendid service. I believe more should be said about them. I will say this to the minister. I have discussed this matter with men in the fishermen's reserve, and they say, "There is no use in our attempting to go into the navy, because we have not been to college. If we do join the navy we are looked down upon by the naval man who has been at college." But they add, "We can take any of the boats and go into any bay in British Columbia, or take it to any town or village on the coast, which these men who have been to college cannot do." Most of the men to whom I have spoken say that there is no use in their going into the navy, and they are going back into industrial life. I rose particularly to tell the minister that these men served a much more useful purpose than merely seizing the Japanese boats. Now these men have been discarded, and I should like to know if they will get any consideration in connection with the granting of pensions. We considered these men extremely valuable two years ago, and we do not know when they may be needed again, because we have very little in the way of a navy on the Pacific coast.

Mr. MACDONALD (Kingston City): My hon. friend must realize that one cannot defend a coast with fishing boats.

Mr. REID: We do not intend to.

Mr. MACDONALD (Kingston City): Then what is the point? The fishermen's reserve performed a very useful service in capturing these Japanese boats and in reconnoitering the bays and harbours along the British Columbia coast; but to say that any such reserve is capable of dealing with anything in the nature of an attack is simply to lose all sense of proportion. They cannot do it, and it was never contemplated that they should do it. It was contemplated that they would do certain reconnaissance work and take over the Japanese fishing boats should any trouble arise with Japan, as trouble did arise; and they performed a very useful and valuable function. As to these men saying that they have no chance in the navy because they are not college men, I cannot understand that attitude. To-day in the Royal Canadian Navy there are a thousand officers from the naval reserve; that is, from the merchant service. How many of those were college men? Very few, I should think; they are practical seamen, but they are holding various positions in the navy from skipper to skipper-lieutenant, to lieutenant, up to lieutenant commander and commander, and some of them have the rank of captain. These men are in very much the same position as members of the fishermen's reserve; they are practical seamen, and one thousand of them have obtained commissioned rank. So that I think it is unfair to assume that because a man does not have a college education he cannot get anywhere in the navy.

Mr. REID: How many from the fishermen's reserve have joined the navy?

Mr. MACDONALD (Kingston City): I can give my hon. friend that figure.

Mr. ISNOR: Many hon. members have already paid tribute in glowing terms to the minister, the officers and men of the Royal Canadian Navy and the officials of the Department of National Defence for Naval Services. I have in mind particularly the contribution that has been made by hon. members from Nova Scotia. The hon. member for Queens-Lunenburg referred to the splendid facilities at Deep Brook, if not the largest, one of the largest, training centres in the British empire. The hon. member for Shelburne-Yarmouth-Clare referred to the naval repair facilities, and expressed the hope that in the post-war period these shipyard facilities would continue to operate as they are doing at the present time. Then my colleague from Halifax referred to our city, dealing more particularly with housing and other related conditions as applied to the naval service. I should like to support the remarks of my colleague from Halifax, and ask the minister to give these matters his most favourable attention. Having been premier of Nova Scotia for many years, the minister is familiar with conditions not only in the city of Halifax but throughout the province. He knows it is necessary to prepare post-war plans that will keep Nova Scotia in its present favourable position, if we are to satisfy the fishermen and other elements in that province. A great many men of Nova Scotia have entered the naval service; in fact it is well known that there has always been a waiting list of men desiring to join the navy, particularly from the fishing districts, where the young men are very anxious to take part in the activities of the naval service.

My colleague made a very strong case on behalf of the port of Halifax. We all remember that in the last war Halifax played a very important part in connection with the handling of munitions, the assembling of convoys and the transportation of troops from Canada to England, and it has played an equally important part in this war. Our thought in Nova Scotia, and perhaps more particularly in Halifax, has been expressed by the hon. member for Cumberland; that is, we do not want to be forgotten when the war is over. We want Halifax to continue to be the main artery for goods entering and leaving Canada from and to overseas. We believe the eastern ports should be used to their full capacity in connection with overseas trade. In the past we have seen shipments of grain, cattle and other supplies sent through United States ports because it is alleged that the shorter rail haul to those ports makes it more economical to ship that way. I trust that the minister, with his knowledge of the requirements of Nova Scotia, realizing the important part that Halifax has played in the war effort, will not permit that condition to exist following this war, when victory will have crowned the efforts of the united nations.

I should like to endorse the very fine tributes that have been paid to the activities of the Royal Canadian Navy. I do not propose at this late hour to make any extended remarks in that connection, but there are one or two items I wish to bring to the attention of the minister. While we in Nova Scotia, each and every one of us, as has been stated by other hon. members, place the winning of the war as first and foremost in our thoughts, we do feel that members of this committee should give some thought to post-war plans. We consider that these plans are necessary in the far east coast perhaps to a greater extent

than in central Canada. There are in this section of Canada industrial activities which will carry on for many years, probably for fifteen or twenty or more years, but we in the extreme east—and I believe the same applies to the extreme west—have not enjoyed that development to the same extent. I say we must make plans which will include all parts of Canada and more particularly have I in mind my native province of Nova Scotia.

No one can say how soon or how suddenly this war may end. It is anyone's guess as to just how long or how brief a time may pass before victory will be ours. No one can foretell. But one thing is sure, namely, that we cannot begin too early to plan for the post-war period. Long before the ink is dry on the peace treaty we must be ready to deal with the problems of peace. It is because of that I place before the minister the necessity of carrying on shipbuilding, and more particularly ship repairing in Nova Scotia.

My main thought in rising to take part in the debate is to deal with activities which will come directly under the item before the committee. I refer to the work carried on by the smaller craft. Other hon. members have spoken about the great work of the destroyers and the corvettes. I have in mind particularly the work being done at the port of Halifax and along the shore by smaller craft such as auxiliary vessels, armed yachts, Fairmiles and mine-sweepers.

I pause to speak about mine-sweepers. If any hon. member were to visit the city of Halifax or the town of Dartmouth early in the morning at any time of the year, perhaps as early as five o'clock, and in any kind of weather—possibly a stormy winter morning—he would see mine-sweepers nosing out toward the head of the harbour. There the mine-sweepers clear the path for the convoys. The minister outlined in detail what took place off the head of Halifax harbour last June when a large number of mines—I do not care to mention the number, because the minister did not do so—were sown in the path of the outgoing ships. It is this type of work, carried on by the men who serve on these mine-sweepers, that has made possible for us the shipping overseas of great cargoes with a minimum of loss, so that our men over there may be fed, so that supplies may go to England, and munitions be supplied to our troops, who are helping to fight the battle for freedom.

Therefore I say that Halifax, and the men who serve in that port, have played a very important part in this war. I pay my tribute to those men who daily face hardships in their task of keeping clear and making safe the passage to and from the port of Halifax.

I hold in my hand a booklet in which appear views of Halifax harbour, depicting more particularly some of the large ships which sail into that port, unassisted, without the use of tugs. To illustrate that, one need only think of the *Empress of Britain,* a ship of 42,348 tons, sailing in, without tugs towing her, as it did in June, 1939, when carrying the King and Queen. She made a complete turn in our harbour and sailed out to sea. Remembering that, hon. members will have some idea of the type of harbour we have in the extreme east at the Atlantic coast port of Halifax.

I listened with interest and attention to the hon. member for Vancouver South and the hon. member for Victoria, British Columbia, tell us about the harbours on the Pacific coast. I do not wish to make any attempt to detract from Vancouver harbour, or any other harbour on the west coast; but I do point out that at Halifax we have one of the grandest, finest and most natural harbours in the world to-day.

I refer now to the second picture in this booklet, showing three large liners.

An hon. MEMBER: What about Saint John.

Mr. ISNOR: What about Saint John? I hesitate to make a comparison betwen Saint John and Halifax. One who knows the real facts seldom does. I am reminded of a story I heard some years ago about a number of visitors who were spending some time in Saint John—and I hope the hon. member for Royal will not take exception to the story. These visitors who were in Saint John one evening were wondering what they might do to fill in an hour's time. One of them had a bright idea, and said, "Let us go down, wait around and see the tide come in." We have no tides in Halifax harbour, so that we do not have to wait for them. We have no ice there in the winter. It is a port which can be used 365 days in the year. Ships sail in at all times, without the least trouble so far as tides are concerned. Not a single dollar has been spent on dredging in that port as long as I can remember—and I am getting up in years. To my knowledge, for at least thirty-five or forty years, not one dollar has been spent for that reason. So that the excellence of our harbour, for the use not only of our own Royal Canadian Navy, but of those of allied nations, must be apparent to all.

May I refer again to the service being rendered by the men who sail on small craft. The night of Wednesday, February 24, was exceptionally stormy at Halifax. Eighteen inches of snow fell that night, and the velocity of the wind was said to be fifty miles an hour. Had any of you hon. gentlemen been at

Halifax on that night, with your coat collars turned up, your gloves on, wearing your overshoes, and with your hat pulled down over your ears, you would have still felt the effect of the wind. I wonder if you can visualize these small craft sent out that night to carry on patrol work. Would the minister give this matter some thought? Would he consider whether it is necessary to send out the small Fairmile craft on such stormy nights? I realize fully that the work must be done, but I am just a little concerned as to whether it is altogether necessary to send out these small boats on nights such as I have described.

I bring this matter to the attention of the minister because of a front-page article which appeared in one of the Halifax papers at that time. Quite naturally the article states:

> Six tiny Fairmile launches push their sleek noses into the teeth of the worst maritime blizzard in years, February 24, on sudden orders to supply patrol protection, presumably for a convoy.

There is another type of man in whom I am interested, the man who is wounded or who, because of the type of service he has rendered, is not able to continue in active duty. I do not desire to take up much time in discussing this matter. When I was in Halifax a short time ago I visited the military hospital. I saw one man who had been returned from overseas with twelve wounds in his arms and head. I saw another Halifax man who, I regret to say, is not likely ever to leave that hospital. Many of these men require rest, and it is to them I direct the attention of the minister. A man may have served his country well overseas, or in the navy on shore patrol or on the high seas. At times he requires rest, and I suggest to the minister that there should be a rest or convalescent home in Nova Scotia situated close to Halifax where these men could regain their health in order to be able once more to take up their dangerous tasks. I have no particular place in mind and I know the minister is familiar with the beauty spots along our rugged shore. There are a number of places, such as beautiful St. Margaret or Queensland or Hubbard or many other such places. Any one of those would be an ideal place in which to locate a rest home such as I have in mind. Not only would such a home serve the navy, but it could be used to bring others back to a normal state of health. When you have something good to sell, you have a fairly easy task; when you have something nice to talk about, you can go on for any length of time, but I shall not say anything further about the port of Halifax. I do hope the minister will give consideration to this suggestion of having a convalescent home close to the naval base of Halifax.

Mr. McGARRY: I should like to say just a word on this matter. It was my intention to make some complimentary references to the port of Halifax. The senior hon. member for Halifax has said quite a bit about that port, and since the rules of the house will not permit needless repetition there is perhaps nothing more I can say on that subject at this time. The eloquent and informative address made by the minister when introducing his estimates outlined an amazing achievement. The lucid outline of the growth of our navy, the wonderful service it has performed in this global war and the bravery of our boys who man our ships is a story that should incite pardonable pride in the hearts of all Canadians. It is only another instance of what a resourceful country with a patriotic people can achieve in cooperation with a ministry well manned, well planned and possessing the wisdom to select the executive and key men capable of initiating, developing and bringing to a successful conclusion the most amazing job that has been done by our navy.

I am sure we were all pleased and encouraged with the prospectus of the future submitted by the minister. I think from what he said we can hope that our navy will be maintained at sufficient strength to keep our sea lanes open and to protect and give freedom of the seas to our merchant marine which we expect to be plying the seven seas, carrying to other countries those commodities which they need and which they cannot produce and returning to Canada laden with the products of those countries. If it is the hope of our government that our navy is to be kept to that strength; if our merchant marine is to be maintained, then may we hope that the means of repairing and rebuilding these ships will also be maintained. When the time of peace comes and when rehabilitation is taking place in every phase of the life of this country, if shipyards are found to be necessary; if naval bases are found to be necessary, we hope that they will be maintained in the locations they now occupy and that we shall not be subjected to a programme of centralization which would destroy rather than enhance our prospects so far as our commercial life is concerned.

Mr. MAYHEW: I am not rising to extol the virtues of Esquimalt harbour; I rise to pay a just compliment to the fishermen's reserve and the Vancouver island motor-boat squadron which served us so faithfully in British Columbia, particularly on Vancouver island, at a time when we were a little nervous as to what was going to happen. After December, 1942, the Japs began to come closer to our Canadian shores by way of the Aleutian islands.

Many of us were concerned about how far they would come and we were anxious to get all the protection possible, not only from the fishermen in that part of British Columbia but also from the Vancouver island motor-boat squadron. The latter were serving entirely voluntarily. They were prepared to move troops at any time from one part of the island to the other or to evacuate the citizens of the island should that become necessary. I do not think that I as the member for Victoria, B.C., and speaking also for the district of Nanaimo—Captain Chambers is on duty—should let this occasion pass without saying "Thank you" to these people.

Further, I should like publicly to thank the private owners of motor-boats in Seattle. They invited a committee from Vancouver and Victoria to confer with a similar committee in Seattle to discuss the possibility of evacuating the citizens of Vancouver island. At the conclusion of a short meeting they offered to look after all the people on the southern end of the island, leaving the responsibility of the evacuation of the northern end to the Vancouver island motor-boat squadron. I think now is the time, Mr. Chairman, that we should recognize that service.

If the minister feels that the time has come when he can dispense with the services of the fishermen, I think they, too, should be duly thanked. We are, of course, delighted that the building of boats has progressed to such a point that the minister can afford to do that and that the fortunes of war have so changed that the danger is not now so apparent as it was then. I rise on this occasion to thank those three classes of people, the fishermen, the Vancouver island motor-boat squadron, and the private owners of motor-boats in Seattle and northern Washington.

Mr. BROOKS: Mr. Chairman, it is not my intention to make any extended remarks, but I must say I was surprised that the senior hon. member for Halifax (Mr. Isnor) went out of his way a few moments ago to abuse the port of Saint John, New Brunswick. I am sorry that the hon. member who represents Saint John is not here to-night because of illness. I am quite sure that he would have taken up the cudgels on behalf of his native city had he been here.

When I was speaking the other night I mentioned the fact that the ports of Saint John and Halifax should not be forgotten after the war is over. No one recognizes more clearly than I what a splendid asset this country has in the great port of Halifax, but I also recognize, as I am sure do the people of Canada, we have also a splendid port in Saint John, which is to-day and has been for a great many years, one of the great winter ports of this country, and whose worth to the Dominion of Canada cannot be overestimated. In the city of Saint John, as the minister mentioned to-day, we have one of the largest dry docks in existence in the British empire; as a matter of fact, I think it was the largest dry dock in the empire until just a few years ago. In that dry dock during this war a great many naval vessels and a great many merchant ships have been repaired.

I just wanted to take this opportunity, as one who lives in the province of New Brunswick and close to the port of Saint John, to say that we are very proud indeed of the port of Saint John, and also to express the opinion that the Dominion of Canada as a whole owes a great debt to this port, as I think all Canadians whether they come from Halifax or any other part of this country should recognize freely and fully.

Mr. MUTCH: I should like to say, as one coming from the maritime province of Manitoba, that we have been forgotten in that capacity. I wish to join this testimonial meeting to-night with respect to the merits and possibilities for after-the-war development of various parts of this country, to draw again to the attention of the government and of this House of Commons the too often forgotten port of Churchill. Those of us who live in the west and fought for a considerable period of time to have that port established have viewed with some disquietude its almost complete lack of use and the complete lack of consideration for it during the war period, and I am now just giving notice that in the days to come, when our thoughts will be turned more to the internal development of Canada than they are to-day, more will be heard of the port of Churchill and the maritime province of Manitoba.

Mr. FRASER (Peterborough West): I was very glad to hear the hon. members representing Saint John and Halifax speak on behalf of those great ports, and I quite agree with what they said. I think, however, when they were speaking of these great ports, they should have given thanks and praise to the women of the women's naval auxiliaries of Canada for supplying the men who go out on ships from these ports with warm clothing and many other comforts. I think these women deserve a great deal of credit.

Item agreed to.

13. Sundries: postage, pilotage, prize funds and other costs not included in items, $2,748,101.

Mr. MACDONALD (Kingston City): Before we proceed with this item perhaps I

might give the answers to questions that have been asked by various members. To answer, first, questions that were asked with regard to the medical side of the naval service, the figure of 4·9 doctors per thousand personnel which was referred to includes forty doctors who were serving with the British navy and who took no part whatever in caring for Royal Canadian Navy personnel. If you excluded that figure, and it should properly be excluded, the number of medical officers in the Royal Canadian Navy would be four per thousand.

I was also asked how many ships carry medical officers. The number of our ships carrying medical officers is forty-seven.

I was also asked what happened on ships that had no medical officer aboard. In that case, ships of the corvette class, which do not ordinarily carry a medical officer, carry a sick-berth rating. These are ratings specially trained in first aid and the treatment of minor illnesses. Many of them are graduate male nurses. Ships of still smaller types such as motor torpedo-boats and Fairmiles and similar craft usually operate from a base or depot ship where adequate medical facilities exist, so that the need of having somebody skilled in medicine aboard is not so great. In escort or convoy work there is always one and there are usually two medical officers in each group of escort ships, whose services are available to any ship in the group. In addition, ten per cent of the crews of all ships have had instruction in first aid.

I was asked by the hon. member for Yale what steps had been taken to control venereal disease. At the larger bases, venereal disease control officers have been appointed, whose duty it is to check the ravages and the spread of this disease. There is also a veneral disease control officer at naval service headquarters. All medical officers and all commanding officers have been advised as to the most effective measures which can be taken to control the disease. All naval personnel are given lectures from time to time, beginning as soon as they enter the service, on how this disease can be avoided.

My hon. friend the member for Cumberland asked about night vision. I am able to tell him that facilities for testing night vision are available at Cornwallis, at Halifax, Esquimalt and at St. John's, Newfoundland. The majority of officers and ratings of the seaman and signal branch have been tested for night vision, and the testing is still going on as rapidly as conditions permit.

The hon. member for Peterborough West asked as to the number of civilian personnel in Newfoundland. On January 31 of this year we had 253 civilian personnel in Newfoundland. I do not include in that figure hourly-paid workers but just civil servants properly so-called, and they numbered 253.

I was asked by the hon. member for Vancouver South something about the training at Cornwallis and Kings. I was asked to endeavour to find out what the exact percentage of failures was. I think somebody suggested that I take the last ten classes. I have here the total number of naval personnel who were officer candidates at Cornwallis during the period from August 10 to February 8 last. I find that the number of failures is just under thirty-three per cent. That is the number over that period of seven months.

Mr. FRASER (Peterborough West): Was there any month when the failures were extremely high?

Mr. MACDONALD (Kingston City): The numbers vary. Usually these men come up every week before the selection board, and the number who appear before the board varies. Sometimes it is as low as nine; at other times as many as twenty-seven appear in one week, and the number of failures consequently varies. Some weeks it has been two; some weeks, 12; some weeks, four; other weeks, nine, and so on. What particular week had my hon. friend in mind?

Mr. FRASER (Peterborough West): I believe that last night the month of December was mentioned. It was either the latter part of November or the first part of December when, according to these boys, so many of them failed.

Mr. MACDONALD (Kingston City): Yes; in one week of December the percentage was thirty per cent; another week, twenty-seven per cent; another week, thirty per cent; another week, sixty per cent.

Mr. FRASER (Peterborough West): Sixty per cent?

Mr. MACDONALD (Kingston City): Sixty per cent in one week in December, yes.

Mr. FRASER (Peterborough West): Probably that is the week.

Mr. MACDONALD (Kingston City): That may be the particular week, but it is difficult to draw any general conclusions from the figures for one week. I think the best test would be to take the whole period of the operation of the school at Cornwallis, for which, as I say, the number of failures is just about thirty-three per cent.

Mr. FRASER (Peterborough West): I think the reason why these boys brought the matter up is that, on the examination before they tried, there had been very few failures, and then in their week practically all failed.

Mr. MACDONALD (Kingston City): As I say, it varies from time to time. That is the general story so far as Cornwallis is concerned.

I was asked something about the depth of the water at the end of the wharf at Cornwallis. I have not been there for some time, but I am informed that it varies from six to ten feet at the head of the wharf at low water. There is about a 29-foot tide, so that at high water there would be a considerable depth at the end of the pier.

The hon. member for Yale wanted to know about the sea cadet camp at Comox. I understand that that camp will not be used in the coming summer, and that instead, a camp at a place called Whitecliff park, some fifteen miles from Vancouver, will be used by the sea cadets of British Columbia.

Mr. CRUICKSHANK: Where is that?

Mr. MACDONALD (Kingston City): Whitecliff park is near Vancouver. I am told by the sea cadet authorities that this will be one of the best camp locations in all Canada.

Mr. NEILL: Do I understand the minister to say that they are closing down that camp near Comox? If so, can he give us any idea of how much money has been spent in putting that camp there? They put extensive buildings there last year and the year before, and it is a thoroughly equipped camp. After all that expense, what is the idea of shutting it down?

Mr. MACDONALD (Kingston City): As I said last night, the naval service does not provide those camps; they are provided by the Navy League of Canada, or by other non-government bodies. I understand that the site near Comox is being used for other purposes, for training of army personnel, and that that is why the sea cadets cannot use that locality in the coming summer. It is solely a matter for the Navy League. We do not build those camps or pay for them.

Mr. NEILL: The navy use the Comox one anyway. They used it all summer.

Mr. MACDONALD (Kingston City): The sea cadets.

Mr. CRUICKSHANK: What is Whitecliff camp used for?

Mr. MACDONALD (Kingston City): As a sea cadet camp during the coming summer.

[Mr. A. L. Macdonald.]

Mr. CRUICKSHANK: Might I ask on whose recommendation that is to be used, and who owns it now?

Mr. MACDONALD (Kingston City): As I said, I have no particular reason for giving this information, because the matter does not come under my jurisdiction in any way. I have nothing to do with the provision of camps for sea cadets. That is done by the Navy League of Canada mainly, and while I do not know this definitely, I assume that the British Columbia branch of the Navy League are the people who arranged for this site.

I believe the hon. member for Yale also asked how much of our wireless equipment was made in Canada. As far as we can estimate up to date, Canada supplied 47·6 per cent; the United States, 33·2 per cent, and the United Kingdom, 19·2 per cent.

The hon. member for Cumberland asked about the cost of repairs to ships. I told him it would take some time to get the individual cost of each ship or of any particular ship, and that it would be very difficult to separate repairs from alterations and additions, which, strictly speaking, are not repairs at all but which are usually carried on at the same time as repairs. The total cost of repairing corvettes during the year was $3,984,000; that is an average of roughly $50,000 per ship. The average cost of repairs, alterations and additions to destroyers was in the neighbourhood of $170,000 per ship. The cost for minesweepers was about $25,000 per ship.

The hon. member for Camrose asked about office machines. We estimate that for the present fiscal year the cost of all rentals of that kind will be about $10,500. That includes every type of office machine—duplicators, adding machines and so on.

Mr. CRUICKSHANK: I asked the minister last night in connection wtih the barracks at Aldergrove; and I should like also to ask who recommended Whitecliff.

Mr. MACDONALD (Kingston City): I am telling my hon. friend that he knows as much about that as I do.

Mr. CRUICKSHANK: No, I do not.

Mr. MACDONALD (Kingston City): Well, I know nothing about it. I went out of my way to get information about the sea cadets, but I do not select camps for the sea cadets, nor do I pay for the construction of camps. We cooperate with the Navy League of Canada, which has general supervision over sea cadets, to this extent, that we send some officers there to supervise the training. But we have nothing whatever to do with selecting

the site, building the camp, or paying for it. That is done by the Navy League and I should assume that in this case it was dealt with by the British Columbia branch of the league.

Mr. CRUICKSHANK: I asked a question yesterday in connection with the barracks at Aldergrove. First of all, may I thank the minister for his revelation. I should like him to give me a reply to my question of yesterday.

Mr. MACDONALD (Kingston City): The matter about which the hon. member for Fraser Valley inquired may be answered in this way: There are two stations in the locality, one a receiving station and the other a sending station. I do not know a great deal about the technical side of this, but I am informed that the stations have to be some distance apart for technical reasons. Consequently in this case they are some fifteen miles apart. Both stations will be completed shortly. The permanent accommodation for the personnel is being provided at one station only, which will take care of about fifty persons, two officers and a little over forty men, but it will be all at one place. The men who go from one station to the other will be transported by panel truck and they will be returned to their barracks at night.

Mr. CRUICKSHANK: It will be a permanent barracks?

Mr. MACDONALD (Kingston City): I do not know that it will be permanent, but it will be good for the war at any rate.

Mr. GILLIS: In the course of my remarks on the minister's estimates I endeavoured to focus his attention on the position of medical doctors in the merchant navy. Has the minister done any thinking about that? While he correctly points out that his department has no jurisdiction over the merchant marine, that it comes under the Department of Transport, yet the port medical examining officers of the merchant navy are called up. The Department of Transport has no power to call up men; therefore some defence department institutes the call in the first instance.

Mr. MACDONALD (Kingston City): Not the navy. I may tell my hon. friend that we do not call anybody up. It must be selective service.

Mr. GILLIS: It is pretty much the one organization.

Mr. MACDONALD (Kingston City): No.

Mr. GILLIS: The naval examining board has the say as to who is accepted. Selective service is merely one of the cogs in the machine.

Mr. MACDONALD (Kingston City). Oh, no.

Mr. GILLIS: What I am trying to do is to point out the injustice that is done to the medical officer who is obliged to accept a position—and it is a very important one—in one of our ports across Canada, without the right to wear a uniform, with a great differential in income, without any assignment of pay to his family. Many of these men are of military age and desire transfer to one of the other branches of the service; but they are denied that right. I am wondering what the attitude of the department is with respect to correcting what I consider to be a great injustice to that particular classification. I mentioned it a few days ago. The minister in the course of his remarks pointed out, and, as I said, correctly, that his department had no jurisdiction over the merchant marine. I think someone should accept responsibility for that situation. These men are doing a very important job. They are on call at all hours of the night. This particular matter more properly belongs to the naval department. It is a job that requires a qualified medical practitioner. He is requisitioned for service. I think he should have all of the rights and privileges that go to those in the service, because he has no choice as to what he shall do.

Mr. MACDONALD (Kingston City): May I ask my hon. friend a question? Is he sure that those doctors are called up by some department of government and compulsorily assigned to these posts? I do not know of any doctors being called up in this country up to the present. There may be, but I thought the medical doctors had an association or branch called the medical procurement and assignment board that looked after all that, looked after the rights of all doctors. It is rather a surprise to hear that doctors have been called up under some compulsory arrangement and made to serve at ports, as my hon. friend describes.

Mr. GILLIS: I am not any more sure of the mechanics than the minister is. I am mentioning the possibilities and I think the minister should know.

Mr. MACDONALD (Kingston City): Why should I? I have nothing whatever to do with the doctors. I am not the Minister of Transport, the Minister of Pensions and National Health or the Minister of Labour. I am trying to run one department. I am not trying to run five or six. I have no more to do with that than I have to do with the call-up of men under the National Resources Mobilization Act.

Mr. GILLIS: Every port in Canada is under the jurisdiction of the navy to-day.

Mr. MACDONALD (Kingston City): Not in that respect.

Mr. GILLIS: A naval commander is in charge of each port. I consider and will hold responsible the Department of National Defence for Naval Services for any matter that occurs in or around those ports.

Mr. CHAIRMAN: Order. I believe the minister has answered the question.

Mr. GILLIS: He has not answered the question.

Mr. CHAIRMAN: I believe it is out of order to discuss this question under item 13. I believe it is the duty of the hon. member to speak on the item now under discussion. The minister has given an answer to the questions that come within the confines of his department.

Mr. GILLIS: A few minutes ago the minister undertook to change the order of business in order to answer questions that had been asked previously. The question I am now discussing is one that I asked on a previous occasion. I want an answer to it.

Mr. MACDONALD (Kingston City): Will my hon. friend state his question then?

Mr. GILLIS: My question was stated clearly. I wish to know the attitude of the Department of National Defence for Naval Services with respect to correcting what I consider to be a great injustice to medical men serving as examining officers at the different ports across Canada. These men are classified as serving with the merchant marine.

Mr. MACKENZIE (Vancouver Centre): What is the injustice?

Mr. GILLIS: They are obliged to serve without uniform and without the regular pay and allowances that men in the naval services receive. They are not granted the right of transfer. The minister asked me if I knew what the mechanics were. I know this much about it. I discussed the matter with one doctor, a man of about thirty-five years of age. He tried in every way he could to transfer to one of the other services and was not able to do so. That man would not be in that position voluntarily. I assume that the medical procurement board must have assigned him to that position.

Mr. MACDONALD (Kingston City): My hon. friend is stating a totally different proposition now. He began by indicating that this was my responsibility. I suspect that my hon. friend has not the facts of his case correctly. I am not talking about the mechanics or anything of that sort. I am asking if he is sure that certain medical doctors in this country are taken by some government department and placed in a position in which they do not want to serve. If they are, this is the first I have ever heard of it and I do not think it is so. I do not think my hon. friend has the facts. This man may be employed by the Department of Transport or by the immigration branch or by the Department of Pensions and National Health; I do not know. There is no compulsion about those departments, as I understand it; none at all.

Mr. GILLIS: My argument is that these doctors should be given the same rights as the medical doctors in the navy. If the Department of Pensions and National Health is employing them I am very much surprised.

Mr. MACKENZIE (Vancouver Centre): I am sorry to intervene in this argument. We have several doctors in the various ports of Canada who are employed mostly for the inspection of sick personnel on ships that come into the harbours. We have tenders, launches. We go out and inspect the ship and we provide hospitalization for the personnel on the ship through our doctors. There is no compulsion whatsoever, so far as I am aware.

Mr. DONNELLY: These men are civil servants?

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. CRUICKSHANK: I should like to ask another question. To the minister's knowledge has any of the cost in connection with Whitecliff been charged the federal government?

Mr. MACDONALD (Kingston City): I know nothing of any cost. I did not know of the name Whitecliff until I received a memorandum a few moments ago saying that this was to be the site of that camp. So far as I know there is no cost to this department or this government.

Mr. CASTLEDEN: I have been looking through the list as we have gone along, to see if I could get the figures in regard to the cost of maintaining the Wrens; that is, the women's auxiliary of the naval force. Has the minister the cost of establishing and maintaining the Wrens, as separate from the navy itself? While he is answering that, would he inform the committee whether it is the intention of the department to maintain the Wrens as part of the permanent naval service.

Mr. MACDONALD (Kingston City): As to the first question, I have no separate figures for the cost of the women's division, and I am afraid it would take some considerable time to get them. In a place like Halifax,

for example, the cost of food for the Wrens and the cost of food for the male personnel would come under one item, but I could make a fairly accurate shot at it. As to the second question, whether it is intended to maintain these services after the war, there has been no decision on that point. I should suppose that the Wrens and the other women's services are pretty much war-time institutions, and that they would likely be disbanded at the end of the war.

Mr. CASTLEDEN: At some future time would the minister give us some estimate of the cost of establishing and maintaining the Wrens to date?

Mr. MACDONALD (Kingston City): That would be the cost of pay, clothing, food, and all allowances for the women's service?

Mr. CASTLEDEN: Yes. There is also the cost of establishing the whole Wren arm, the barracks, and so on.

Mr. MACDONALD (Kingston City): Yes, I will try to get that, but it will take a little time.

Mr. CASTLEDEN: Then perhaps the minister will take this as notice of the question.

Mr. MACDONALD (Kingston City): Very well.

Mr. GILLIS: I should like the minister to clarify certain naval personnel set out as T124X. The wives of men in this classification do not receive dependents' allowance, and I am at a loss to understand just what that means.

Mr. MACDONALD (Kingston City): That is a Royal Navy term. These men are taken out of the merchant service and used on certain naval vessels; I think it is a temporary arrangement. They are called T124X, but they are Royal Navy.

Mr. CRUICKSHANK: Would the minister tell me under what item I can get some information in connection with what I think are called baby carriers; I am very much interested in those.

Mr. MACDONALD (Kingston City): Aircraft carriers?

Mr. CRUICKSHANK: Yes, small ones, that were remodeled in Vancouver. Under what department would that come?

Mr. MACDONALD (Kingston City): We do not own any of those carriers in the Canadian navy. I think that would properly come under Munitions and Supply. Some of those carriers were taken to the west coast of Canada, where certain alterations were made in them. That was done for the British navy, not for the Canadian navy.

Mr. CRUICKSHANK: Then with whom should I take that up?

Mr. MACDONALD (Kingston City): Munitions and Supply would have the information; they carried on the work.

Mr. GILLIS: I am still wondering about the personnel to whom I referred a moment ago. Could the minister explain why these men are not entitled to dependents' allowance for their wives?

Mr. MACDONALD (Kingston City): I am sorry, but since they are not Canadian naval personnel I cannot give my hon. friend that information. He would have to take up the matter with some of the Royal Navy people here, I am afraid; some of them probably could tell him.

Mr. GILLIS: They are Canadian nationals attached to the Royal Navy, but according to a letter I have received they are not given the Royal Navy marriage allowance.

Mr. MACDONALD (Kingston City): If I had the letter I would be glad to look into the matter, though if they were Canadians who joined the Royal Navy directly, without going through the Canadian navy, they would be out of my control and I would have no record of them. If my hon. friend would send me the letter I should be glad to look into the matter and try to get the information for him either from our own service or from some of the British naval officers here in Ottawa.

Mr. GILLIS: I have had it up with the British people, but I did not get much satisfaction.

Mr. FAIR: Under item 13 what is meant by "prize funds"?

Mr. MACDONALD (Kingston City): That is a small amount to provide prizes for proficiency in gunnery, torpedo work, rifle work, pistol shooting and so on. I think the amount is only about $2,000 under that item.

Mr. CRUICKSHANK: Would the minister tell me with what department I should take up matters in connection with the merchant marine?

Mr. MACDONALD (Kingston City): That would be the Department of Transport, in which there is a director of merchant seamen, Mr. Arthur Randles, who is in charge of all merchant seamen in the country.

Mr. CRUICKSHANK: I appreciate the minister's answer; I am not trying to hold up his estimates, but I want this information for my constituents. He tells me that I should take it up with—

Mr. MACDONALD (Kingston City): With Mr. Arthur Randles, director of merchant seamen, care of the Department of Transport.

Item agreed to.

Progress reported.

SUPPLY

The house in committee of supply, Mr. Bradette in the chair.

DEPARTMENT OF AGRICULTURE

Science service—

8. Botany and plant pathology, $328,101.

Mr. DOUGLAS (Weyburn): The other evening, when the minister's estimates were before the committee, I asked what progress was being made in the experiments with the Russian dandelion, from which the Russians are apparently extracting synthetic rubber with some degree of success. I notice, from page 20 of the minister's report, that some experimentation has been going on. Would he care to avail himself of this opportunity to tell, first of all, what progress has been made, and second, what plans his department has for a more extensive use of this Russian dandelion, with a view to using it for the production of synthetic rubber?

Hon. J. G. GARDINER (Minister of Agriculture): As I said the other night, the experiments being carried on in connection with dandelions are being carried on at the experimental farms. I would ask the hon. member to withhold his questions until we reach the experimental farm vote, which is only two or three down the list.

Mr. DOUGLAS (Weyburn): Except that the minister, himself, discussed it in his report for the year ended March 31, 1943. At page 20 the minister devotes almost a whole page to a discussion of the different developments respecting a substitute for rubber, and one for kapok.

Mr. GARDINER: The only thing I can say is that my hon. friend apparently has read the report, and he has read all I can give him about it. I have in my hand some material which I can read, if it is thought desirable.

Mr. JOHNSTON (Bow River): Is it not true that these dandelions are being raised on farms, in addition to the experimental farms?

[Mr. A. L. Macdonald.]

Mr. GARDINER: I understand they are not; in any event, any information we have with regard to them is gained from the growing of them on the experimental farms. If there is any seed out anywhere it will be as a result of the farm activities. I can give that information much better when we get to the item for experimental farms.

Mr. DOUGLAS (Weyburn): I had in mind what appears in the minister's report, and I thought he might be able to tell us the result of the experiments carried on under this item respecting botany and plant pathology. The hon. member for Mackenzie points out to me that the report ends March 31, 1943, almost a year ago. I would imagine that the department would have gained some further information, first as to the percentage of latex they are getting from this dandelion plant—if I remember correctly the Russian scientists found they were getting about twenty per cent latex. What success have we had with those experiments? Second, does the government plan to make seed available in any large quantities to farmers, or to set up any facilities for the use of latex, when produced for the manufacture of finished rubber products?

Mr. GARDINER: The research in this connection is continuing at the present time. Returns obtained are all the way from three per cent to ten per cent. But the experiments have not gone sufficiently far for us to be able to give final information with regard to it. Again I say that this matter can be discussed much more readily and to much better satisfaction when I have before me the officials who are directing those experiments on the farms. Some of the work, naturally, is being done by research people, and some is being done by our own chemists, in connection with examinations into the results from certain plants. But the experimental work is being done on the experimental farms, and when the time comes to distribute the seed they will be the agencies which will make that distribution, just as they make it in connection with wheat, and every other product.

Mr. DOUGLAS (Weyburn): If the minister prefers to leave it to the experimental farm item, I shall have no objection, except that we would not want to be shut off when we reach that item.

Mr. GARDINER: No, the discussion will not be shut off. We shall discuss it fully.

Mr. DOUGLAS (Weyburn): Will the minister, under the item for plant pathology, make a statement about the research carried on by his chemists and plant pathologists with regard

to flax rust. The minister will remember that last year, particularly in Saskatchewan, almost all varieties of flax, with the exception of royal flax, were badly affected with rust. The royal variety seemed to be more rust-resistant than the others. A good many thousands of acres of flax were almost competely destroyed by the rust. I believe it is the first time in my experience in Canada that I have ever seen flax rust. I remember the minister saying last year that some experiments were being carried on with a view to dealing with it.

Mr. GARDINER: I am sorry to have to say again that that is experimental farm work, and that it is being carried on there. There was considerable rust on flax last year; that is, in 1942. In 1943 I do not think the rust did the same damage. Of course the reason for the difference in the amount of rust lies in the type of season. There was more moisture in 1942 than in 1943, and the more moisture there is, the more rust of all kinds will be found. But again, I could discuss this item to better advantage when the experimental farm item is before the committee.

Mr. CASTLEDEN: I understand that experiments have been carried on in connection with finding a substitute for kapok. What success has there been in that connection? At the same time he might tell the committee what success we have had in Canada with regard to raising medicinal plants, such as digitalis, belladonna and henbane? What has the department been able to do in connection with supplying Canada with medicinal plants of that kind?

Mr. GARDINER: The only information we have, in addition to what appears in the report which, I would judge, hon. members have been reading, is a statement to the effect that, in connection with kapok, in 1942 large quantities of milkweed floss and cat-tail floss were collected for tests being carried out in a search for a substitute for kapok, in cooperation with the national research council and the Royal Canadian Navy. It was shown that floss has a high value for the purpose for which it is being used.

With regard to the other matter in connection with medicinal plants, the division provides information on medicinal and related plants from many sources from coast to coast. On account of a war-time shortage of drugs and the closing-off of some sources of supply, attention has been given to possible production in Canada. Experimental work has been initiated to provide necessary information. Close contacts have been maintained with the ministries of agriculture and health in the United Kingdom, the Departments of Trade and Commerce and Pensions and National Health, the medicinal plants committee of British Columbia, and manufacturing chemists. Considerable quantites of digitalis, belladonna and henbane have been grown to increase the available seed supplies. Most of that work is being carried on in British Columbia.

Mr. CASTLEDEN: Has the minister the figures as to the actual supply obtained in 1943?

Mr. GARDINER: No; we have no figures with regard to that. It is practically all being carried on in cooperation with the department of agriculture of British Columbia.

Mr. MARSHALL: During the last two years there has been a considerable increase in this item. Last year there was an increase of $25,938 and this year there is an increase of $15,581, approximately $45,000 for the two years. Such an increase requires an explanation and I should like to have it from the minister.

Mr. GARDINER: The total increase is $15,581, and of this $15,015 is for increases in temporary pay. The cost of living bonus and other items amount to $4,493. Miscellaneous items amount to $293. Then there is a decrease in the payments to the permanent staff amounting to $4,195 and a decrease in rents of $95. When these two are balanced we get a net increase of $15,581.

Mr. DOUGLAS (Weyburn): Is that for extra temporary help taken on or increases in pay for the present temporary staff?

Mr. GARDINER: Part of it is for extra help taken on and part is to cover statutory increases in pay.

Mr. MARSHALL: What type of work is the minister contemplating to warrant an increase of $15,000?

Mr. GARDINER: It should be remembered that in connection with the civil service the term "temporary" is not used in the sense one would expect it to be. For example, in Saskatchewan, where I had some experience, a person went on the temporary list for six months. If he were kept on for six months, he became permanent. In the dominion service a person may be temporary for twenty years, or even fifty years as my colleague suggests. These temporary people may have been on the staff for a considerable length of time and they get their increases as we go along. Much of this increase is to cover increases in pay of a very considerable staff which has been on from year to year.

Mr. PERLEY: Perhaps the minister could explain these increases a little more fully. The details of these three items are given on pages 57, 58 and 59 of the estimates. According to these particulars the increases in travelling expenses would seem to account for more than half the increases in the items. In one item there is an increase of $500, and in the item covering entomology there is an increase of over $9,000. In the item covering plant protection there is an increase of $2,000 for travelling expenses. These increases in travelling expenses amount to about $12,000.

Mr. GARDINER: The greater part of the increases in travelling expenses are brought about by our having to drive old cars. These cars are getting older and older and we have to drive them greater distances. The result is the repairs bills are higher and these bills appear under travelling expenses.

Mr. PERLEY: Why should they be so much in connection with entomology? Could not two or three of these branches use the same car, such as botany and plant pathology, entomology and plant protection?

Mr. GARDINER: We have not reached entomology as yet and I would rather discuss that matter when we get to it.

Mr. DONNELLY: Has the department had any success in discovering a wheat that will resist the sawfly?

Mr. GARDINER: There have been no notable results as yet that would be of any use to any one. Studies are being carried on in connection with the campaign against the sawfly, but as yet nothing has been discovered that will help us.

Mr. NICHOLSON: I am not going to complain about the minister spending too much; I am going to complain about his not spending enough. When we consider what has been done over a period of years by these branches, the small vote being asked for is really quite insignificant. The discovery of rust resistant wheat has meant millions of dollars to the farmers of this country; yet the salaries being paid to some of the scientists at work in our laboratories reflects no credit upon the department or the country. When the minister's estimates were before us the other night I complained about two veterinaries who were receiving $2,520 a year each. The minister stated that they had been with the department for fifteen or twenty years. These men had a college training which cost nearly as much as the training required by a medical doctor.

I have a list taken from the public accounts of the personnel in this botany and plant pathology branch who are receiving over $2,400. There are forty-three in the list, but only two receive more than $4,000 a year. Sixteen receive over $3,000, but the great number run $2,400, $2,700, $2,800, and so on. I see the names of some of my classmates in university twenty years ago. These were among the brightest and most promising students in the university. Many of them went to the United States to take post-graduate courses and had a remarkable sense of loyalty when they returned to this country to start in at a salary of $2,000 a year. Now, after nearly twenty years of service some of these men receive salaries below $3,000.

It has been suggested that under a Cooperative Commonwealth Federation government there would be regimentation and no rewards for private initiative. Some of the brighest students in the university of Saskatchewan have turned down offers from private industry and are now working for $2,400 a year. Many of them would have been receiving $10,000 had they remained in the United States. It is not good enough for the Minister of Agriculture to say that because farm products have been selling at low prices the people who are doing research work should be poorly paid. If that is a sound principle, then I suggest that we carry it out in regard to the minister himself. If, when butter is selling at ten cents a pound and eggs at three cents a dozen, the Minister of Agriculture is paid in butter and eggs, then I think we shall quickly have some adjustment in the machinery that determines what returns should come to our farming people.

These scientific people are paid either too much or too little, and in my opinion it is too little. If they had been paid more I feel sure that there would have been better morale among the large staff of the Department of Agriculture and we would have had better leadership from this department during the times when everyone was facing such a difficult situation. Could the minister give the committee any information as to the possibility of these people in his department who are in the $2,400 salary range being able to look forward to getting enough to permit them to own homes in Ottawa or to be able to rent suitable quarters? The cost of living in the capital city of the country is very high, and I do not see how the department can hold at these salaries honour graduates and those who have taken post-graduate courses in United States universities. What are the prospects of having the salaries increased and having promotions made to higher positions?

Mr. GARDINER: On the general question as to why our expenditures are as low as they are in the different branches, I call attention

to the fact that in 1940 the appropriations were $13,000,000 for ordinary expenditures in this department. That had decreased to $9,000,000 in 1941 and to $8,887,000 in 1942, and in 1943 the figure was $8,996,000. The only reason for the decreased appropriations is the fact that we are at war, and after we had entered the war our expenditures were reduced. In 1940 the expenditure was, in round figures, $11,800,000; in 1941, $8,500,000; in 1942, $8,400,000, and in 1943, $8,492,000. The figure in the estimates this year for ordinary expenditure is $9,296,000, which is a little higher than it has been for the last two years. As I have said, the only reason for the expenditure being down is the fact that we are at war, and we have not yet got back to the level that prevailed before the war. But if you go back a few more years to the time when I first became Minister of Agriculture in 1935 or 1936, you will find that the estimates were not quite as high then as they are now. They amounted then to between $7,000,000 and $8,000,000; I have not the exact figures before me. We were successful in having the appropriations on ordinary account increased, so that in 1940 they stood at $13,000,000, but since that time we have cut them down because of the war, and I imagine that they will not be greatly increased before the end of the war.

So far as the salaries are concerned, I think every minister in the government believes that his staff is underpaid and from time to time he puts forth an argument in favour of increasing the pay of certain members of his staff. That always results in an examination being made into the salaries paid for comparable positions in other departments. The civil service commission examines into the salaries and classifies the employees of the different departments, and when a man accepts a certain position in the Department of Agriculture or any other department, it does not matter what his university or other qualifications may be, he is paid the salary attached to that particular position. He accepts a position in the civil service in preference to entering the realm of private competition or doing some other work, and he is paid the salary that pertains to his position. The positions are filled as a result of persons making application for vacancies that are advertised by the civil service commission in the press and at post offices throughout the country.

As I said the other night, every employee in a particular branch is a veterinary, and while it is true that two of them are receiving $2,400 a year, others are receiving between $4,000 and $5,000 a year. So that just the fact that they are veterinaries does not explain the whole thing. It is the particular job the individual is doing that fixes his compensation. I do not know that there is anything more I can add. We all would like to see pay increases for the staff, but that would mean collecting more taxes with which to pay the higher salaries. If salaries throughout the whole civil service were increased, they would naturally be increased in the Department of Agriculture.

Mr. NICHOLSON: The minister has had a number of men and women working on the wheat rust problem for a period of years. Would he give the committee the names of those who have been working on rust-resistant wheat and the salaries we are paying them, and state how long we are to have to wait before the employees receive more reasonable compensation?

Mr. GARDINER: The list of those persons will be found partly under botany and partly under experimental farms, but from the list we have here I could not state who are working full time and who are working only part-time on rust, because many individuals are working on different problems as well as rust. I am afraid I would have to give that information later. I have a long list of names here, but until they were sorted out they would not mean much to the committee or to me.

Mr. BURTON: Do these employees receive superannuation, and, if so, how large a pension would they receive?

Mr. GARDINER: The Civil Service Superannuation Act is much the same as the Saskatchewan act with which my hon. friend is familiar. As a matter of fact, when I put through the act in the Saskatchewan legislature it was based on the principles of the federal act so far as pension payments are concerned. The pension is based on the number of years of service, up to a maximum of thirty-five years service. After ten years of service the civil servant who is retired is paid one-fiftieth of his average salary for each year of service he has put in. If, for instance, he had put in thirty-five years of service he could draw thirty-five-fiftieths of his salary. Contributions are made by salary deductions from the employee's monthly salary, and an equal amount is contributed by the federal treasury into the superannuation fund.

Mr. BURTON: Do the temporary employees also come under the superannuation act?

Mr. GARDINER: The temporary employees do not come under the superannuation act, but on retirement a payment is made to them which is I think, roughly one month's pay for each year of service.

Mr. DOUGLAS (Weyburn): So that an employee who had been working for twenty-four years would receive two years salary as a retiring allowance? Is that it?

Mr. GARDINER: There is a certain limit set. Retiring allowances come under the finance department rather than agriculture, and I would not like to discuss them in too much detail without being sure of the facts.

My understanding is that there is a limit, and I take it that that limit is six years. I am not certain of that.

Mr. PERLEY: The hon. member for Mackenzie asked a question with respect to certain rust-resisting grain. As I understand it, that would come under the item for experimental farms.

Mr. GARDINER: That is right.

Mr. PERLEY: That is why I refrained from asking a question or two at this time.

Mr. GARDINER: Yes, it comes under experimental farms, except that there are some officials in this department who do work on rust.

Mr. FAIR: Before the minister gets away from the question of superannuation, would he tell the committee at what age the farmer gets his superannuation, and what the amount is? I ask this because I do not believe there is anyone in Canada who works harder or longer hours.

Mr. GARDINER: The hon. member, being a "fair" farmer himself, can give us that information, I think, better than anyone else.

Mr. WOOD: That is a very important question which was raised by the hon. member for Battle River—where does the farmer come in as regards superannuation? I should like to tell the hon. member that if he would put aside the price of a package of cigarettes every day from the time he was twenty-one years of age and apply it to the purchase of a government annuity such as we enjoy to-day by virtue of the social legislation brought down by a Liberal government in 1908, he could have superannuation at the rate of $100 a month at the age of sixty-five.

Mr. DOUGLAS (Weyburn): Have you tried it?

Mr. WOOD: That is a Canadian government annuity. And that is my answer to a farmer or any other person who—

Mr. DOUGLAS (Weyburn): Have you tried it?

Mr. WOOD: Will the hon. member let me finish? The question which has been raised is rather important, although it is probably out of order as far as the agriculture estimates are concerned, but why not settle it? We are always asking for new legislation to provide new privileges and new ways of doing things. Why not use the things we already have? We have that annuity system, and it has been on the statute books for twenty-five years. Yet an hon. member who takes credit for suggesting to the people of this country a new method of making life easier has overlooked this opportunity of setting aside something for his own security.

Mr. FAIR: Before getting away from this question—

The CHAIRMAN: Order. I really think this whole discussion is out of order.

Mr. FAIR: The hon. member for Brant was allowed to speak, and I think I should have the right of reply.

The CHAIRMAN: I cannot approve this discussion under the present item. It certainly has nothing to do with farmers' superannuation.

Mr. FAIR: This is the seventeenth of old Ireland, and I should like to have just one more word. I want to advise the hon. gentleman that I do not smoke; also, that the easiest way to get rid of some of the mentality we have in connection with the farmers is to clear the dead-wood out of their organizations.

Mr. DOUGLAS (Weyburn): The hon. member for Brant has supplied us with all the answers except, that to where the farmer is to get money to buy a package of cigarettes every day.

I wish to support the plea of the hon. member for Mackenzie. It seems to me that the whole picture with reference to agriculture is changing very rapidly.

Mr. DONNELLY: It has changed.

Mr. DOUGLAS (Weyburn): In Great Britain, the United States, and the Soviet Union there seem to have been tremendous changes going on, envisaging new uses for agricultural products, interesting farmers in new methods of production, and bringing forward scientific methods which were not dreamed of even a few years ago. Part of the reason for the advancement made along these lines is the painstaking work which has been carried on by scientists, not only agricultural research workers but scientists in other fields. I believe the minister is sympathetic to the point of view we are now expressing, and may I say to him that I believe the committee would support him if he came here and pointed out that in the period following the war there will have to be tremendous readjustment in agriculture, and that that readjustment can be made only

if there are well-trained scientists and if there is scientific data available to the farmer to begin to meet the post-war problems which will face Canada as one of the great agricultural exporting countries of the world. I feel certain that the minister would get the support of the committee if he would ask for a larger appropriation so as to make it possible not only to pay these scientists well but to get the necessary equipment to set up other laboratories for further research into scientific agriculture.

Mr. CASTLEDEN: Under this item, I believe, is carried on the dominion government weed survey. Could the minister tell us whether or not the following weeds are on the increase or decrease in the provinces of Manitoba, Saskatchewan and Alberta: sow-thistle, Canadian thistle, wild oats, pigweed and mustard seed?

Mr. GARDINER: We have not the data as to the general increase or decrease of the weeds mentioned. I can only tell the hon. member that wild oats are decreasing on my farm, that French weed is increasing, and that we did not have any sow-thistle ten years ago but the wind has blown a little in, and we see the occasional one. One could go over the whole province in that way and perhaps, if he examined all the different farms, come to a conclusion whether this or that weed is increasing or decreasing.

Generally speaking, the older the area becomes, the more weeds are to be found there. I think weeds generally have been on the increase in western Canada ever since I went there, forty-two years ago. At that time you could scarcely find weeds in wheat. Now you can find almost any weed you like to look for without travelling very far in western Canada.

One thing, probably, is not very well understood. There are insects that sometimes combat weeds. The grasshopper, for example, did a very good job in certain parts of Manitoba a few years ago in destroying sow-thistle, and farmers who live on the Portage la Prairie plains area tell me that you could go out in the fields and see grasshoppers standing on their heads sucking the last drop of juice out of the roots of the sow-thistle. So that what we call pests, and are pests in one direction, help us in another. That, I think, is true all through the vegetable field. Sometimes we get help where we least expect it. One of the reasons why my farm has less wild oats on it to-day than it had at one time is that—

An hon. MEMBER: You have been too busy to sow wild oats.

Mr. GARDINER: Yes, they were sown before I got there. But there is a particular grub known as the cutworm, which cleans wild oats out of a field more completely than I have ever been able to do with my summer-fallowing.

Mr. NICHOLSON: Since the minister has not readily available the information with regard to work on rust, I would say that I recognize here the names of four or five men who were outstanding honour students of the university. Will the minister tell us what they have been doing in the department? I refer to W. C. Broadfoot, J. E. Machacek, H. W. Mead, and R. C. Russell, whose names appear in the public accounts in the section relating to botany and plant pathology. I might say that the minister's explanation that it is difficult to get additional funds for personnel in a particular department should not hold good now. I have here the public accounts for the Department of Finance, and I find, under the wartime prices and trade board, several pages of salaries including amounts of seven, eight and ten thousand dollars, which amounts do not seem to be of any great concern to the Minister of Finance when it is important to get a job done. Men have been brought in to Ottawa from private industry. I am of the opinion that some of the men from private industry who are getting $6,000 and $8,000 a year are not as capable as men the minister has working for him at $2,400 to $2,600. Could the minister tell us something of the work that is being done by the four men whom I have mentioned?

Mr. GARDINER: The first two men mentioned are working in our laboratory at Edmonton. The laboratory is located on the campus of the university there. The other two are working in our laboratory at Saskatoon. They are doing similar work, general pathological work in connection with the studies that are being made there.

Mr. NICHOLSON: How many years have they been there?

Mr. GARDINER: About seven or eight years.

Mr. NICHOLSON: Would the minister be more specific? Were these men not with the department prior to 1935 or 1936?

Mr. GARDINER: Well, that is about eight years. They were there when I started.

Mr. NICHOLSON: Where have they been since they finished college in 1923 or 1924?

Mr. GARDINER: I do not follow the history of everyone who leaves college until he reaches the department.

Mr. NICHOLSON: My recollection is that these men have been doing the same type of work ever since leaving university. I wish the minister would check more carefully.

Mr. GARDINER: I have not the date here when they came, but I know they have been there since I came on myself, which is about six or eight years ago. They have been there all that time. As to what date they actually came, I am not in a position to say.

Mr. NICHOLSON: Will the minister find out and let us know?

Mr. GARDINER: I can find out, yes. What was the other part of the question?

Mr. NICHOLSON: I wondered exactly what type of work these men were doing.

Mr. GARDINER: General pathological work in connection with plant study. Anything connected with cereal crops that are grown on farms.

Mr. CASTLEDEN: May I ask a further question in connection with the weed survey. Are the results of those surveys available in any publication of the department and could they be made available to farm publications in the west?

Mr. GARDINER: They are not published in printed form but are in mimeograph form and are distributed on request.

Mr. BLACK (Cumberland): In connection with the weed seeds, is it true that a tolerance of three per cent, or thereabouts, of weed seeds was allowed in feed grain shipped from the prairie provinces to eastern Canada?

Mr. GARDINER: There was a tolerance of one per cent until last fall. It was then found impossible to get grain for feed moved here under that regulation. That was a regulation entered into as a result of cooperation between the provincial governments in the east and the federal government; but last fall the provinces and the federal authorities got together and agreed that a tolerance of three per cent would be allowed in order to permit of grain coming by Fort William without having to be unloaded and cleaned. Labour could not be secured with which to unload and clean the grain sufficiently fast to move it. That slowed up the loading and unloading of cars, and therefore in order to take care of the feed situation here the grain was allowed to come down with a seed allowance of anything up to three per cent. Up to that amount it was allowed to go by. Of course that was widely advertised at the time. The farmers were warned that the grain was coming down with a possible three per cent of weed seeds in it. They were warned that they should examine this grain and either have it cleaned in the east or clean it themselves after it arrived.

Mr. BURTON: The minister mentioned the shipping of grain to the east and the provincial departments of agriculture. I should like to know how his department and the provincial departments work in so far as weed control is concerned. In that connection I do not want the hon. members from eastern Canada to think that we raise a great deal of weedy crops out west. We raise a considerable amount of grain comparatively free from weeds. As the hon. minister pointed out, as time goes on and land gets older there is an increase in weeds. By different tillage operations, different methods of cultivating, it is possible to combat the weeds to a great extent. In the west we have different climatic conditions in certain years. Those conditions may sometimes cause a farmer to have a weedy crop in a certain year on land that he thought he had fairly well cleaned out of weeds in the preceding years of cultivation. Because of that I wish to warn the minister that while he may think his land is freer from wild oats now than it was in earlier years it is possible that in another year he may be surprised to find that there is a decided increase in wild oats. He may think he had not sowed any, but the wild oats may grow from seed sowed years ago. I have known wild oats to lie in the ground for seven years, land that had been sowed down to grass. When it was ploughed it was found that there were still wild oats there that had not been destroyed during that length of time. On the whole, whenever the farmers in the west have an opportunity to farm their land under favourable weather conditions they try to produce grain with as few weeds as possible. I should like to know how the provincial departments of agriculture work in with the Department of Agriculture here?

Mr. GARDINER: Of course we do study ways and means of controlling weeds through the work at our experimental farms and in other ways. As the hon. member for Humboldt knows, the actual control of weeds or the putting down of weeds is under the provincial authorities, and usually they have legislation which calls upon the municipal authorities to assist in the keeping down of weeds. That is done in both eastern and western provinces. There is cooperation in the studying of ways and means of controlling weeds. Sometimes what is looked upon as a weed in one area is looked upon as a useful plant in others, because of the use that is made of it. All that

work is carried on in a cooperative way between the two jurisdictions. Most of the control work on the ground is done provincially or municipally.

Mr. BURTON: May I follow up that statement? The Department of Agriculture here acts in an advisory capacity to the other departments in assisting experiments?

Mr. GARDINER: That is right.

Mr. BURTON: An endeavour is made to prevent overlapping in the work?

Mr. GARDINER: That is right.

Mr. BLACK (Cumberland): I should like to ask another question with respect to the tolerance of three per cent of weed seed in feed grain shipped to the eastern provinces. Did I understand that this has the approval of the minister's department and the approval of the departments of agriculture in the eastern provinces where this feed grain is shipped?

Mr. GARDINER: Yes; it was all discussed with them at the time. As a matter of fact, we received a lot of criticism at the time because we did not act until we received the permission of the eastern provinces to act. We did not take action until they were consulted. I might say that all this discussion on weed seed really comes under the item of plant products farther down. This item has to do with pathology, the study of diseases, really.

Mr. QUELCH: While the control of weeds may be largely under the provincial governments, nevertheless would the minister not say that the operation of the wheat acreage reduction measure had brought about an appreciable reduction of weeds in some areas? Would the minister give some information as to the results that have been obtained in that direction during the past year's operation of the wheat acreage reduction? Inspectors are going around inspecting the land. Have they not noticed whether there has been a better control of weeds?

Mr. GARDINER: I wish members of the committee would allow me to discuss this matter when we get to that item; otherwise I shall have to discuss it half a dozen times. What we are discussing here really is the matter of studying diseases in connection with plant life and that kind of thing. I would rather discuss the other matter when we get to it. Anything in connection with wheat acreage reduction ought to be discussed under that item.

Mr. CASTLEDEN: But weed surveys are made under this item, are they not?

Mr. GARDINER: Yes, weed surveys of a kind are made under this item. That question was all right, and I answered it.

Mr. PERLEY: The men in the department who are carrying on experiments in connection with the killing of weeds may be doing a good job, but no matter what the department does, the great part of this killing of weeds has to be done by the farmer himself. The minister says that weeds are more prevalent in certain districts. In the district south of the Qu'Appelle valley, just opposite the minister's own farm, in the early days the stinkweed was a blessing in disguise, because the farmers had to get down to real farming to kill it and there is hardly any of it there now. On the other hand, we are being cursed with certain other weeds, though we will handle them in due course. We had a lot of sowthistle; we have mastered that. We had some mustard; we have pretty well mastered that. In some districts, however, certain weeds are allowed to grow in order to overcome the effects of dry weather, and in our country we are now getting Russian thistle. What has been the experience of the department in controlling that weed? In the Wood Mountain district they allow that plant to grow in order to control the dry weather, and in the winter they leave it on the land. In the spring it rolls, and now it is rolling up into our country, where it is becoming a curse with us because we do not need it for the same purpose. Could the minister give us a little information in regard to the control of the Russian thistle?

Mr. GARDINER: As my hon. friend knows, the Russian thistle was really imported in to this continent. I understand it was brought here from Russia, or at least from some place on the continent of Europe, and planted by someone in the northern United States, I think in Montana or one of the neighbouring states. It is a plant that grows in dry seasons; it is more or less liked by animals if they are short of other feed, and mixed with straw it makes a fodder on which live stock can get by in difficult seasons. Whoever brought in the thistle certainly brought it to an area where it would spread, because it rolls; and in the prairie country, where there is nothing to stop tumbling mustard or a weed of this kind it rolls over the country, seeding itself as it rolls, so that it spreads very rapidly. This plant really was not known in western Canada twenty or twenty-five years ago, but now it covers practically the whole west. It changes the appearance of the prairie country in a dry season; it becomes a sort of a brown colour, which is not at all inviting, but the plant itself is perhaps helpful in a dry year, when nothing

else is growing. My experience is that it grows very little in a year when you have plenty of moisture; you just see a very small plant at the bottom of the crop, enough to reseed for another year. I assume those who brought it in did so for that very reason, and I do not know that a great deal of effort has been made to control it up to date, even by farmers cultivating the land. They make use of it when the season is such as to make that necessary; they stack it and feed it.

Mr. DONNELLY: There is no doubt that the Russian thistle came to the United States first, and from there it spread into the southern part of western Canada which I have the honour to represent. Russian thistle grows very thickly in dry weather; it prevents soil drifting and is very helpful in that respect. In wet weather it does not grow to any size at all. It does not interfere with crops; it is not injurious in any way, and we rather favour it because it helps in dry weather and can be used to a certain extent for feed.

Mr. FRASER (Peterborough West): A number of hon. members in the group to my left have been asking that the salaries of certain officials in the Department of Agriculture be increased, and I dare say there are many who deserve such increases. On July 18, 1940, however, the hon. member for Yorkton had this to say as reported at page 1762 of *Hansard*:

> I note at page 73 of the estimates that ten officials of the department are described as agricultural economists. These men are receiving something over $32,900, and despite the fact that this is a war year some of them are receiving increases in salary.

I do not think hon. members to my left are very consistent in what they are trying to do.

Mr. CASTLEDEN: I would point out that 1940 was a year in which the government was curtailing salaries. The matter brought up to-day was in connection with men who have been in the government for long periods, something in the neighbourhood of twenty years, and who have received no increases at all.

Mr. FRASER (Peterborough West): I would not put it in that way; I would say you are one way one day and the other way the next.

Item agreed to.

Science service—
9. Agricultural chemistry, $107,572.

Mr. CASTLEDEN: I understand that some experimental work has been carried on to ascertain the fertilizing value of open hearth slag received from the Dominion Steel and Coal Company in Sydney, Nova Scotia. Is this experimental work paid for by that company, or does the government carry it on gratis?

Mr. GARDINER: It is being studied thoroughly, but as yet there is no final report on it.

Mr. CASTLEDEN: My question was whether the company is paying anything toward the cost of this work, or if the government is doing it for them.

Mr. GARDINER: A study is being made under the experimental farms, and I think I shall have to wait until I reach that item in order to give the information.

Mr. CASTLEDEN: There is another matter in connection with animal nutrition. What has been the result of experiments carried on to ascertain the value of the mash which is one of the by-products of the manufacture of alcohol from wheat? Have experiments been carried on in that connection under this item?

Mr. GARDINER: There has been nothing done in that line up to date.

Item agreed to.

Science service—
10. Entomology, $502,247.

Mr. ROSS (Souris): I understand that this department makes a survey every fall with respect to grasshopper eggs that have been laid in various parts of the country, and also in connection with sawfly infestation. Since it would appear that this may be a dry season in some parts of the west, could we get some information as to what we may expect this year in connection with grasshopper and sawfly infestation, so that the producers may have some guidance as to the sort of crops they should plant. Certain types of crops are more resistant under these circumstances, and perhaps the minister could give us some information along that line.

Mr. GARDINER: The report we have on grasshoppers in 1943 is this. Grasshoppers were relatively of little importance on the Canadian prairies in 1943. In Manitoba the insects were present in such small numbers that provincial authorities made no provision for the setting up of mixing stations or the preparation and distribution of poison bait. It will be understood by all hon. members, particularly those from the west, that the provincial governments carry on the campaign against grasshoppers. In Saskatchewan baiting was carried out on an extremely restricted scale, and only in two or three localized areas where grasshoppers were abundant. Mixing

stations were operated in certain areas of Alberta, but the amount of bait used was abnormally small. The grasshopper population has been diminishing on the prairies for a number of years, this condition having been brought about by natural causes, chiefly the weather.

Services carried out in 1943 indicated that although there might be a slight increase in certain sections, these insects are not expected to be of great importance during 1944.

In British Columbia the situation is entirely different. A serious outbreak occurred in the range country, and in some parts of the province grasshoppers were more abundant in 1943 than has been the case for many years. Not only were range grasses destroyed over extensive areas, but gardens were invaded and vegetable crops severely damaged. Services indicate that grasshoppers will be present in large numbers again in 1944. This is a general report for the western provinces.

Mr. QUELCH: How far have the experiments gone in connection with creating spring wheat resistant to attacks by sawfly? I understand there is a variety of wheat that has that quality. Can the minister say how much seed is available, and what quality the wheat is?

Mr. GARDINER: That comes under experimental farms. If we hurry along and get down to that item, we may discuss many of these matters.

Mr. PERLEY: There is quite a considerable increase in this vote. Would the minister tell us in what province most of this money is spent? I notice there is an increase in travelling expenses amounting to $9,000. Surely that should be explained. In what province is most of the money spent?

Mr. GARDINER: The increase in travelling is explained in the following manner: $5,600 of this increase is owing to an amount required in lieu of funds made available under the Prairie Farm Rehabilitation Act in 1943-44 for carrying on work of prairie laboratories. Then $3,200 is to meet increased requirements for travel connected with wheat-stem sawfly, and the investigation and control of insects and mites, in tough and damp store grain on prairie farms. Then $598 is required to meet an accumulation of minor deficiencies in travel allotment in several of the smaller field laboratories.

Mr. PERLEY: The minister has mentioned mites. Has there been very much loss from mites? I do not think there is much of that on the farms, is there? It is mostly in the elevators.

Mr. GARDINER: There has not been very much of it anywhere during the last year. It has been pretty well under control, probably on account of the fact that there has not been as much wheat stored in temporary storage during the last year, and weather conditions have been somewhat different from what they were in the preceding year. The matter is kept under survey all the time in order to see that no considerable amount of grain is destroyed by mites.

Mr. PERLEY: On the farms?

Mr. GARDINER: There is a certain amount of investigation on the farms, but most of it is in connection with the elevators.

Mr. CRUICKSHANK: I understood the minister to say that there has been an increase in grasshopper danger in British Columbia. What steps are being taken to prevent that increase?

Mr. GARDINER: The work of fighting grasshoppers is done by provincial governments; it is not done by the government here. I am not familiar with what they are doing in British Columbia this year. In Saskatchewan and Alberta, as I read from the reports, there was not much activity required from the provincial governments in 1943. That activity was not carried on by us; it was carried on by the provincial governments. They spread the poison.

Mr. CRUICKSHANK: I understood the minister to say there has been an expansion of grasshopper danger in British Columbia.

Mr. GARDINER: Yes. Our duty is to warn the province that that is so. We make studies from time to time, and get reports as well. Any studies we make we pass on. I imagine all this is known to the government of British Columbia.

Mr. CRUICKSHANK: Am I to understand that this immense sum of money is to be expended on this item, and that the federal government is taking no steps to prevent the expansion of that particular disaster to British Columbia? Are they passing the buck to British Columbia?

Mr. GARDINER: No; we are not passing the buck to British Columbia. If we did the work they would be passing the buck to us. This work has always been done by the provincial governments. We do assist in making surveys, in order that they may know that this movement of grasshoppers is on the way. It starts in the United States, as a rule, in the state of Minnesota, then across to Manitoba, then into Saskatchewan. The next year they will be in Alberta. It has passed over those

provinces, and this year it is in British Columbia. We make the surveys because, first, it is international, and, second, it is interprovincial. But the matter of fighting grasshoppers is done by the provinces, assisted by the municipalities. They are right on the ground where the fighting is to be done. The provinces have been following the practice of accumulating poisons, and having storage space for those poisons in the areas where infestations are threatened. Then the poison is spread by the farmer, himself, about the fields where his crops are. As a rule it is spread by ploughing a furrow around the field, putting the poison in the furrow; then the grasshoppers are presumed to hop into that furrow, eat some of that poison—and they do not hop out again. Then they may destroy some of the crop in a strip roundabout; poison is spread there, and when they eat the poison they are destroyed. There are many ways of spreading the poison to combat the grasshopper. That is all done by the provincial authorities, or under their direction.

Mr. CRUICKSHANK: I understand that the federal government contributes to that cost.

Mr. GARDINER: We do not contribute at all to the control. We do research work, but we do not contribute toward the cost of control.

Mr. CRUICKSHANK: Does the federal government contribute to the cost of control in the prairie provinces?

Mr. GARDINER: No, nowhere.

Mr. ROSS (Souris): I should like to ask another question to clarify this situation. I believe the minister's department have technical men located in every province, and those men make surveys.

Mr. GARDINER: That is correct.

Mr. ROSS (Souris): They make surveys in connection with these parasites, or whatever they are called, and they cooperate with the provincial departments of agriculture. Their advice is available at all times. I just wish to know if that is correct?

Mr. GARDINER: Yes; that is correct.

Mr. ROSS (Souris): And the provinces pay all the costs of fighting plagues of this kind. But the minister's staff are always available to give advice, and they cooperate through the provincial governments and the municipalities; is that correct?

Mr. GARDINER: Yes; there is most complete cooperation between provincial authority and ours, and our activity is explained on the ground that it is international and interprovincial . We make the surveys and we warn the province ahead that an infestation is approaching their way. They get ready for it, and they will fight the grasshopper in that way.

Mr. PERLEY: There is likely to be an infestation in Saskatchewan, in June, is there not? I understand that the provincial government is taking care of it. There will be a lot of grasshoppers out there then.

Mr. GARDINER: There may be.

Mr. CRUICKSHANK: I presume I may ask a question on this item with respect to disease in potatoes from Alberta being brought to British Columbia?

Mr. GARDINER: That would come under the item for plant protection, the next item.

Mr. FRASER (Peterborough West): The hon. member for Dufferin-Simcoe referred to forests and forest products, when another item was under discussion, and I believe the minister told him to bring it up again under the item for entomology. The hon. member is conversant with our forests, and in regard to the budworm infestation I feel the same as he does. I understand that this year about 40,000 square miles are affected. Our forest products are very important to our internal and external trade, and particularly to our tourist trade. In fact agriculture in Canada could not exist if it were not for our forests. The accessible forests of Canada have been destroyed ten per cent during the past six or seven years.

This budworm, or bud-caterpillar, does considerable damage. It really is a caterpillar which eats the buds and destroys the tree. After it is dry, it is very susceptible to forest fires. Could not the dominion government get together with the provinces to work out some scheme to protect our forests? In cutting a fire-break a province can carry it only to its border when it must quit. Unless the other province continues on from that point, part of the work may be wasted. The dominion government should step in to supervise the cutting of fire-breaks and to see that they are kept clean. Proper watersheds should be provided. There was an article in the press of March 13, to the effect that the budworm infested balsam and fir principally, and if fir and balsam ran over forty per cent in an area, the budworm became very prevalent. This work would have to be carried out in cooperation not only with the provincial governments but with the United States because they are having the same trouble with the

budworm. Can the minister tell us what his department is doing on this? I know it is quite a problem, but it means life or death to the tourist trade and also to the lumber trade of Canada, because I have seen districts where hundreds of acres have been absolutely dried out by this worm.

Mr. GARDINER: The position in relation to battling the budworm is much the same as in relation to battling grasshoppers. We do the research and make surveys and give out advice to those who have the responsibility of caring for the resources of their province. The fact that there is an international aspect to the surveys and to the information given out makes it necessary that that particular end of the work should be done by this department. I have in my hand a memorandum on spruce budworm outbreaks which I think will give the committee full information.

The present spruce budworm outbreak in Ontario covers a very large area of forest lands, including some forty-five thousand square miles. About 18,000,000 cords of balsam fir and white spruce have been killed or injured beyond hope of recovery. There is no artificial method of control for a forest insect outbreak of this kind that can be applied over such a great area of forest lands. Aeroplane dusting with poisoned dusts was studied carefully by this department during the former spruce budworm outbreak some twenty years ago. The technique of application was perfected, but with the insecticides available at that time only partial control of the spruce budworm could be obtained, although other defoliating forest insects were readily destroyed. New and more effective insecticides are now available, and tests with them will be carried out next summer in Ontario forests. The application of insecticides from aeroplanes may eventually be utilized for the control of defoliating forest insects on areas of specially valuable timber, but the high cost of the operation will prevent its use over very large areas of pulpwood lands.

During the former spruce budworm outbreak, forest entomologists of this department made an intensive study of all methods of controlling the insect that seemed possible of application, and their report clearly stated that, although an outbreak by the spruce budworm extending over enormous areas could not be controlled by artificial means, it should be possible so to manage a pulpwood forest that in the future spruce budworm outbreaks would not develop therein. The recommendation in brief was that pulpwood lands should be managed so that over-mature stands of balsam fir would be utilized as rapidly as possible, and the balsam fir cut thereafter on a short rotation, leaving only rapidly growing stands on the ground, and also that the reproduction of spruce and mixed stands should be encouraged by every practicable means.

That recommendation still stands, and it is maintained by our entomologists that, if destructive outbreaks of this insect are to be avoided in the pulpwood forests of eastern Canada in the future, extensive areas of over-mature balsam fir must not be permitted to accumulate. Intensive studies of the present outbreak are in progress, and our forest entomologists are prepared to assist the companies in carrying out recommendations for salvage, control and prevention, whenever and wherever such assistance may be required.

Unfortunately, economic conditions were such that the recommendations of our entomologists were not followed in our pulpwood forests, and the present outbreak in northwestern Ontario is duplicating the former great outbreak that spread through Quebec and the maritime provinces. There is now some evidence that the operators of large areas of our pulpwood forests are becoming interested in the recommendations of the entomologists and have expressed their willingness to cooperate. It is to be hoped that management plans along the lines that are recommended will soon be put into operation. A definite effort is being made to join forces with the United States forest authorities in studying this problem, and an international committee of experts has been organized for this purpose.

The problem of appropriate forest management for the prevention of future outbreaks has many ramifications extending into fields of activity other than that of forest entomology, such as forestry and industrial chemistry. Limitations imposed by war-time conditions are unavoidable in the execution of a full programme of action. This situation can be dealt with more completely in our plans for post-war rehabilitation, but preliminary management plans should be prepared and applied without delay on several large areas in territory as yet unaffected by the present outbreak. In other words, preventive activities ought to be carried on in areas that are not yet infested.

Mr. FRASER (Peterborough West): I am glad the minister mentioned post-war work because fire-breaks would be one thing that could be done after the war. It would take a great number of men to carry on that work.

Mr. NICHOLSON: The statement just read by the minister demonstrates the importance of this work, and a vote of half a million dollars is quite small when we consider the large investments at stake. The minister's report states that the total estimation of monetary loss for Saskatchewan consisted of $11,230,000

owing to wheat-stem sawfly, $1,490,000 to cutworms, $10,140,000 to wireworms and $3,865,000 to grasshoppers. If this branch could do effective work in reducing this very large loss I am sure the appropriation would be very well spent. I want to repeat what I said regarding the botany and plant pathology staffs. In the public accounts there are fifty-nine listed in that branch who are receiving $2,400 or over. Only one receives over $5,000; four, over $4,000; four, more than $3,500, and eighteen are right down in the cellar, getting $2,400. Apparently there is a small ceiling at the top. How many university graduates are included in the fifty-nine? How many have their master's degree; how many have a Ph.D., and how many Ph.D.'s are receiving $3,000 or less.

Mr. GARDINER: I shall have that information when my estimates come up again.

Mr. CRUICKSHANK: I wish to register my protest through you, Mr. Chairman, to the minister against agriculture estimates being brought up on a Friday night when members representing Ontario rural constituencies are not present. Agriculture is the most important industry we have in Canada, and there are many agricultural matters that concern my riding as well as Ontario ridings that I wish to bring up; but I ask you, Mr. Chairman, what possible support I could get to-night in the present house from Ontario members in matters that particularly concern my riding? I realize that the hon. member for Fraser Valley is a very minor member; but I wish to quote from the Vancouver *Daily Province* of November 17, 1943, what a man who is fairly well known both in agriculture and in other circles has to say. I refer to ex-President Hoover of the United States. Here is the heading on the article, "Hoover urges farm control". The article goes on to quote former President Herbert Hoover as follows:

> The lack of cooperation and the conflict between government bureaus are now limiting and will even reduce, rather than increase, our animal products.

The reason why I bring this up is that I think it is very unfair that the agriculture estimates should be brought up on Friday night when there are no members present in the house representing agricultural districts other than members from the west.

Mr. FRASER (Peterborough West): Here is an Ontario member.

Mr. CRUICKSHANK: How many are here from Ontario? I feel bitterly about this practice, and I wish to register my protest against it. The minister has given his explanation of this item before the committee, item 10, but I would ask him what steps are being taken in connection with the eradication of weeds, particularly couch-grass, which particularly affects my riding.

Mr. GARDINER: The control of couch-grass is directed by the provincial authorities in all the provinces.

Mr. FRASER (Peterborough West): At Belleville there is a parasite laboratory. Would the minister tell us how the extra staff is taken on in the spring or early summer? I believe there is quite a large staff taken on there at that time. Who has the say as to who comes on?

Mr. GARDINER: As a rule, in ordinary times the extra staff is taken on by the civil service commission. At present they are taken on by national selective service.

Mr. FRASER (Peterborough West): Do they have to have a knowledge of entomology or parasite control or anything like that?

Mr. GARDINER: An intimate knowledge of entomology is not required for the summer work.

Mr. CASTLEDEN: What is being done with regard to making serums and other treatments available in the western provinces to combat encephalomyelitis, and has the disease been on the increase in 1943 as compared with 1942?

Mr. GARDINER: We discussed that the other night under animal and poultry pathology. We are on entomology at present.

Mr. CASTLEDEN: According to the minister's report, at page 57, an officer from Kamloops laboratory was brought to Saskatchewan to organize a survey of encephalomyelitis is that province. I wonder what the results of the survey have been.

Mr. GARDINER: There was very little of the disease last year.

Item agreed to.

Science service—

11. Plant protection, $288,740.

Mr. DOUGLAS (Weyburn): Would the minister care to say something about the work of this branch?

Mr. GARDINER: The purpose of this vote is (1) for the inspection and treatment if required of importations and exports of plants and plant products for insect pests and plant diseases in accordance with the Destructive Insect and Pest Act and regulations thereunder; in cooperation with the British Ministry of Food, the inspection of ships at maritime ports for insect infestations and the supervision of treatment, when required, prior to loading of food and plant products; in

cooperation with the division of entomology, the inspection of grain elevators, warehouses, dehydration plants, and grain storage ships in the great lakes ports, for insect pests, and the supervision of treatment when necessary: (2) to maintain essential seed supplies, the inspection in the field, in storage, and at shipping point of potatoes entered for certification as seed potatoes; in cooperation with the Department of Trade and Commerce and with the marketing service, Department of Agriculture, the promotion of the export trade in seed potatoes; potato tuber indexing in greenhouses during winter to assist growers in the development of disease-free seed potato stock; (3) the issuance of certificates of health for plants and plant products to meet requirements of importing countries; (4) the maintenance of quarantines under the Destructive Insect and Pest Act; (5) the eradication or control of foreign insects and plant diseases established in Canada, including the Japanese beetle.

Mr. BURTON: Why is there a reduction in this vote this year?

Mr. GARDINER: There is a decrease of $4,395 for permanent employees and an increase of $5,120 for temporary employees, which gives a balance of increase of $725. On wages there is a decrease of $1,000; cost of living bonus and other pay list items, increase, $2,372; buildings and lands, decrease, $9,700; equipment, increase, $2,160; miscellaneous supplies, war risk insurance, increase, $110; printing and stationery, increase, $1,000; supplies and materials, increase, $282; telephones, telegrams and postage, increase $200; travelling expenses, increase, $2,000; making total decreases of $10,700 and total increases of $8,849, or a net decrease of $1,851.

Mr. MARSHALL: The previous year the vote was $290,591, and the money actually expended was $276,170.77. The amount which actually was not used was $12,420. Is the minister in a position to tell the committee how much of this $290,591 was actually used?

Mr. GARDINER: We are not yet to the end of the financial year for which the $290,000 was provided. I have not, therefore, the final expenditures on that.

Mr. MARSHALL: Has the minister got them up to the present?

Mr. GARDINER: We have not them with us. As a matter of fact, we are not able to give the final figures even at the end of the financial year, because there is a thirty-day period allowed before we clean up with those accounts, and then, after that, the accounting has to be done, so that it would be some months before we could give that information.

Mr. DOUGLAS (Weyburn): I notice that this branch made some investigation of grain storage and that they work in conjunction with the branch responsible for entomology. What has the department's experience been with respect to mites? I know there has been some trouble with mites in farmers' granaries, especially during the damp season. Has there been any loss on account of mites in the terminal elevators or in any of the grain ships, or is it confined entirely to grain stored on farms?

Mr. GARDINER: I have here two circulars: they are rather long to read, but I just call hon. members' attention to them. This one is called, "Grain Storage Problems on Farms in Western Canada", by H. E. Gray, division of entomology, Department of Agriculture, Ottawa, and B. M. Smallman, board of grain commissioners, Winnipeg, Manitoba. This is put out by the department, and if hon. members get it and read it they will have the final information on the subject. Generally speaking, there has not been very much destruction of grain by mites during the year we have just come through. There was considerable destruction of grain during the previous year, but I have not the figures as to the number of bushels involved or anything of that kind. Most of the difficulty a year ago was in these special storages which were put up beside elevators at Fort William. The difficulties on the farm have not been so widespread.

Mr. DOUGLAS (Weyburn): The minister said that there had been some loss at Fort William. Does he mean in the terminal elevators?

Mr. GARDINER: Yes, there was, in the year before. There have been some slight losses this year, but not very much loss, in the terminal elevators.

Mr. DOUGLAS (Weyburn): I wondered whether the loss the year before was mainly because of poor storage or whether it was also prevalent in places where there was good storage. Would that be because damp wheat or tough wheat was put in, or is there some other explanation?

Mr. GARDINER: Most of the trouble was in the annexes. In elevators, of course, when you have any trouble you can move the grain by running it out of one bin into another, but in the annexes that is almost impossible, and there were losses in some of them.

Mr. DOUGLAS (Weyburn): The minister mentioned pamphlets. Every once in a while one comes across, almost by accident, some good pamphlet which has been put out by the

department. Would it be possible to have a copy of every pamphlet which comes out sent to each member, particularly to members for rural constituencies? If they found some pamphlet which they thought was of particular interest to their constituents they could ask the department to send out some more, or notify the agricultural organizations within their constituencies of the existence of this particular pamphlet and suggest that application be made to the department for a copy.

Mr. STIRLING: We get an index every year.

Mr. GARDINER: I will ask the officials to see that a copy is sent to every hon. member. It is a practice to send them out, and I think hon. members are on these lists.

Mr. STIRLING: The index is sent to them every year. We can watch them in that way.

Mr. GARDINER: As the hon. member for Yale points out, the index is sent out every year, and a member can get any particular publication that he wants. Some pamphlets are sent direct to members.

Mr. BURTON: I understood the minister to say there was considerable destruction of grain. Was there actually a great amount of grain destroyed, or was it just that much of it was infested with mites?

Mr. GARDINER: It was infested and had to be treated. When one takes the whole crop of 560,000,000 bushels two years ago it cannot be said that a very large proportion was destroyed by mites.

Mr. PERLEY: It was up to the elevators. The grain was in their annexes and they had to turn it over, sometimes taking it out of the annexes and putting it in the elevators and then putting it back.

Mr. GARDINER: There were warnings sent out. For instance, "Canada, Department of Agriculture," signed "Services, Division of Entomology: Protect Farm Stored Grain." This was sent out throughout the country, posted up, and mailed to individuals, giving warnings in connection with these matters. The farmers look after their own bins to a considerable extent.

Mr. BURTON: I should like to ask about a different kind of mite which may not be so small. Would the warble-fly menace come under this discussion? What has the department done to assist in trying to stamp out this pest, which is causing a considerable amount of damage to hides where we have animals on the farms?

[Mr. Douglas.] (Weyburn)

Mr. GARDINER: It really comes under the item we just passed, "entomology." But a very active campaign has been carried on in cooperation with the provincial departments of agriculture in order to fight the warble.

Mr. BURTON: The minister's department, I assume, works in cooperation with the provincial departments?

Mr. GARDINER: Yes.

Mr. QUELCH: Can the minister say if there will be any difficulty in obtaining supplies of arsenic in the event of a serious outbreak of grasshoppers? A year or two ago there was considerable difficulty in this matter in some municipalities.

Mr. GARDINER: It is not thought that there will be any difficulty in providing for any outbreaks which are anticipated in the coming year.

The ACTING CHAIRMAN (Mr. Golding): Shall the item carry?

Mr. CRUICKSHANK: No.

Mr. STIRLING: It is not carried, and it is eleven o'clock.

Item stands.

Progress reported.

BUSINESS OF THE HOUSE

Mr. MACKENZIE (Vancouver Centre): On Monday we shall take up first of all the resolution on the war appropriation and the estimates of the Minister of Munitions and Supply, and we may call two items in order of supply during the day. If we do call them, they are on the Department of the Secretary of State and civil estimates of munitions and supply. Possibly we may have to discuss further the civil estimates of agriculture, and the house must be prepared to take into consideration at any time Mr. Speaker's report on standing orders.

Mr. STIRLING: May I ask what the minister means by saying that we might have to discuss two further items of munitions and supply?

Mr. MACKENZIE (Vancouver Centre): It is the intention to call two new items.

Mr. STIRLING: Apart from that, we are going into committee on war appropriations and take up munitions and supply?

Mr. MACKENZIE (Vancouver Centre): That is correct.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Monday, March 20, 1944

The house met at three o'clock.

CANADIAN ARMY

APPOINTMENT OF LIEUTENANT-GENERAL H. D. G. CRERAR TO COMMAND FIRST CANADIAN ARMY

On the order of motions:

Hon. J. L. RALSTON (Minister of National Defence): Mr. Speaker, I have an announcement with regard to the army which I consider sufficiently important to make at this time. I have to inform the house that Lieutenant-General H. D. G. Crerar, C.B., D.S.O., has been appointed to command the First Canadian Army. General Crerar took over this morning from Lieutenant-General Kenneth Stuart, C.B., D.S.O., M.C. Lieutenant-General Stuart is chief of staff at Canadian military headquarters, and has also been holding temporarily the post of army commander, in which he has given exceptionally fine service. General Stuart will continue in his substantive post as chief of staff at Canadian military headquarters. General Crerar, along with his own wide experience and his high qualities as a soldier, becomes heir to the results of the labours of General McNaughton and the tens of thousands of officers and men who, like him, have worked unselfishly to bring the army organization to effective battle worthiness.

I have already placed on record in *Hansard* the recognition and deep appreciation of the government and the people of Canada, as expressed by the Prime Minister (Mr. Mackenzie King) himself, of the outstanding service which General McNaughton has rendered to the army and to Canada as commander of the First Division, the Canadian Corps, and then the First Canadian Army.

I cabled General Crerar last night expressing every confidence in his leadership, and in the determination and fighting qualities of the army under his command. At the same time I sent to him and to them the heartfelt wishes of all Canadians for great success. I am sure that the house and the country will join very heartily in that expression of confidence and sincere good wishes.

TRANS-CANADA AIR LINES

TABLING OF ANNUAL REPORT AND REFERENCE TO RAILWAYS AND SHIPPING COMMITTEE

Hon. C. D. HOWE (Minister of Munitions and Supply): I desire to lay on the table the annual report of Trans-Canada Air Lines for the year ending December 31, 1943. I move:

That this report be referred to the standing committee on railways and shipping owned, operated and controlled by the government.

Copies of the report are being distributed to hon. members this afternoon.

Motion agreed to.

BUSINESS OF THE HOUSE

REPORT OF STANDING COMMITTEE ON REVISION OF STANDING ORDERS

On the order for motions:

Mr. JEAN-FRANÇOIS POULIOT (Temiscouata): Mr. Speaker, under the item for motions we find this paragraph:

Further consideration in committee of the whole of the report of the special committee on the revision of standing orders.

As this item constitutes an amendment to the statute of the House of Commons, will it be possible for the government to give sufficient notice to members to be present when this whole matter with regard to the rules of the house is discussed? At the last sitting the senior minister told us that the amendments to the rules may be taken up at any time. That does not seem reasonable, and I hope the Prime Minister will give ample opportunity to all members so that we may know when the matter will be referred again to committee of the whole.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I am as anxious as can be to meet the wishes of hon. members. But it is obviously quite impossible to attempt to satisfy everyone in the matter of the time at which certain measures may be taken up. As my hon. friend knows, members are expected to be in the house at all times. The government must proceed on that basis. Notice is given in advance, where it is possible to do so, in order to further the convenience of hon. members. But that is wholly a matter of accommodation, so far as it can reasonably be carried out. There may be many occasions when this cannot be done. Beyond that I do not think the government should be expected to go in seeking to indicate the hour or day at which particular measures may be taken up.

EXCHEQUER COURT ACT

AMENDMENT TO PROVIDE FOR APPOINTMENT OF THIRD JUDGE

Hon. L. S. ST. LAURENT (Minister of Justice) moved for leave to introduce bill No. 35, to amend the Exchequer Court Act.

He said: This is a proposal that, if the business makes it necessary, the governor in council be authorized to appoint an additional judge of the exchequer court. For the last couple of years the work of the court has been unusually heavy, and it is contemplated that the problem of adjudicating upon relations between companies that have received capital assistance, and others engaged in war work, will be a heavy task. It was thought it would be wise to propose to parliament

that provision be made for the appointment of a third judge if the work of the court appears to make that necessary.

Mr. GRAYDON: Is there any suggestion that the divorce jurisdiction now exercised by parliament is likely to be transferred to the exchequer court?

Mr. ST. LAURENT: No such suggestion s contained in this bill.

Motion agreed to and bill read the first time.

WATER METERS INSPECTION

REPEAL OF ACT ASSENTED TO IN 1905

Hon. C. W. G. GIBSON (Minister of National Revenue) moved for leave to introduce bill No. 36, to repeal the Water Meters Inspection Act.

Mr. GRAYDON: We had better have an explanation of this.

Mr. GIBSON: The act to be repealed was assented to in 1905, but was not to be effective until proclaimed by the governor general. In 1927, when the committee was preparing the revision of the statutes, it dropped the clause requiring proclamation, and so by error the act became law. It has remained on the statute book ever since, although it has never been actually administered.

Motion agreed to and bill read the first time.

CRIMINAL CODE

DEFAMATION OF PERSONS OR GROUPS ON ACCOUNT OF RACE OR RELIGION

Mr. ANGUS MacINNIS (Vancouver East) moved for leave to introduce bill No. 37, to amend the criminal code.

He said: This bill proposes an amendment to the criminal code by adding a new section, 318-A, to come after section 318, to prevent public utterances or the dissemination of material calculated or likely to cause discrimination or disharmony on account of race or religion. The utterance for publication of such statements tends to set race against race and religious groups against religious groups. The intention is to make such action illegal in the interest of unity and harmony among the people of Canada, irrespective of race or religion.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk)

J. L. COHEN, K.C.

Mr. MACKENZIE (Lambton-Kent):

1. Has J. L. Cohen, K.C., of Toronto, been engaged in an official capacity by the government of Canada or any agency thereof since the beginning of the present war?

[Mr. St. Laurent.]

2. If so, what were his duties?

3. What did he receive from the public treasury in, (a) salary and/or per diem allowances; (b) living expenses and/or travelling expenses?

4. Were any accounts rendered by the said J. L. Cohen, K.C., considered excessive by the department of government concerned?

5. If so, were the accounts reduced from the total amounts submitted, and by how much?

6. If on salary for any particular government position, did the said J. L. Cohen, K.C., devote his full time to the position?

Mr. MARTIN:

1. (i) Mr. J. L. Cohen, K.C., served on various boards of conciliation and investigation under the Industrial Disputes Investigation Act during fiscal years 1940-41 and 1941-42.

(ii) Mr. Cohen also was a member of the National War Labour Board from February 11, 1943, to September 9, 1943.

2. (i) Mr. Cohen performed the normal functions of a member of boards of conciliation and investigation.

(ii) During the period Mr. Cohen served as a member, the National War Labour Board was charged with administration of the wartime wages control order, P.C. 5963 as amended by P.C.1141, of the order in council P.C. 7679 and of the Fair Wages and Hours of Labour Act, 1935, as well as the supervision of the regional war labour boards.

3. (i) As member of various boards of conciliation and investigation under Industrial Disputes Investigation Act during fiscal years 1940-41 and 1941-42: (a) Per diem allowances, $6,920.00; (b) Living expenses and/or travelling expenses, $2,918.57; (20 different boards).

(ii) As a member of the National War Labour Board: (a) Salary, $5,664.56; (b) Living expenses and/or travelling expenses, $3,176.09.

4. Yes.

5. Yes. Reduced as follows:

6. While serving as a member of the National War Labour Board Mr. Cohen occupied a salaried position and devoted his full time thereto.

*Excess due to an obvious error of which Mr. Cohen was unaware.

CANADIAN PACIFIC AIR LINES — LICENCES TO OPERATE AIR ROUTES

Mr. KNOWLES:

1. How many applications for licences to operate air routes have been received from Canadian Pacific Air Lines since January 1, 1943?
2. What routes are named in these applications?
3. Have any of these applications been granted? If so, which ones?
4. What is the status of any applications not yet granted?

Mr. CHEVRIER:

1. Twenty-eight.

2. A. Old routes applied for:

(i) Regina—North Battleford with points of call at Moose Jaw, Saskatoon and Prince Albert.

(ii) Vancouver—Victoria.

(iii) Senneterre—Waswanipi with points of call at Cameron Lake and Madeleine Lake.

(iv) Roberval—Mistassini with points of call at Chamouchouane Lake, Chigobiche Lake, Dolbeau, Lac aux Dores, Lake Bourdeau, Lake Chibougamau, Nikabau Lake, Opemiska Lake, Rush Lake, St. Felicien, Wakonichi Lake, P.Q.

(v) Prince Albert—Goldfields with points of call at Big River, Buffalo Narrows, Buffalo River, Clear Lake, Contact Lake, Cree Lake, Dore Lake, Fond du Lac, Foster Lakes, Ile a la Crosse, Lac la Ronge, La Loche, La Plonge-Beauval, Montreal Lake, Pine River, Souris, Stanley Mission, Stony Rapids, Sulphide Lake, Sask.

(vi) Vancouver—Zeballos with points of call at Ceepeecee, Chamiss Bay, Esparanza, McBride Bay (Port Tahsis), Nanaimo, Nootka, Port Alberni, Tofino, Ucluelet.

(vii) Prince George—Watson Lake with points of call at Finlay Forks, Fort Graham, Fort Ware, Lower Post, McLeod Lake.

(viii) Vancouver—Port Alice with points of call at Alert Bay, Campbell River, Coal Harbour, Englewood, Port Hardy, Port McNeill, Powell River, Quatsino, Rock Bay, Sayward.

(ix) Vancouver—Whitehorse—Dawson with points of call at Carmacks, Fort Nelson, Fort St. John, Lower Post, B.C., Mayo, Y.T., Prince George, B.C., Selkirk, Teslin, Y.T., Watson Lake, Williams Lake, B.C.

(x) Edmonton — Whitehorse — Dawson with points of call at Carmacks, Dawson Creek, B.C., Fort Nelson, Fort St. John, B.C., Grande Prairie, Alta., Lower Post, B.C., Mayo, Y.T., Peace River, Alta., Selkirk, Teslin, Watson Lake, Y.T.

(xi) Prince George—Takla Landing with points of call at Aiken Lake, Bear Lake, Fort St. James, Germansen Lake, Germansen Landing, Manson Creek, McConnell Creek, Pinchi Lake, Thutade Lake, Two Brothers Lake, Uslika, B.C.

(xii) Edmonton—Goldfields, Cameron Bay Aklavik with points of call at Arctic Red River, N.W.T., Bitumount, Alta., Blue Lake, B.C., (Port Radium) and/or Labine Point, N.W.T., Carcajou, Chipewyan, Alta., Coppermine, N.W.T., Embarrass, Fitzgerald, Alta., Fond du Lac. Sask., Fort Nelson, Fort St. John, B.C., Fort Smith, N.W.T., Fort Vermilion, Alta., Good Hope, Gordon Lake, Hay River, N.W.T., Keg River, Lac la Biche, Alta., Liard, N.W.T., McMurray, Alta., McPherson, N.W.T., Nelson Forks, B.C., Norman and/or Norman Wells, N.W.T., North Wabiskaw Lake, Alta., Outpost Island, N.W.T., Peace River, Alta., Providence, Rae, N.W.T., Red Fern Lake, B.C., Red River, Alta., Resolution, Rocher River, Simpson, South Nahanni, N.W.T., South Wabiskaw Lake, Alta., Stony Rapids, Sask., Taltson River, N.W.T., Tuchodi Lake, B.C., Waterways, Alta., Wrigley, Yellowknife, N.W.T.

(xiii) The Pas—Flin Flon—Brochet with points of call at Cormorant Lake, Cranberry Portage, Man., Cumberland House, Sask., Elbow Lake, Gurney Gold (Brune Lake), Man., Halfway Island, Sask., Herb Lake, Man., Island Falls, Sask., North Star Lake, Man., Pelican Narrows, Sask., Pukatawagan, Reed Lake, Sherridon, Man., South End, Sturgeon Landing, Sask.

(xiv) Winnipeg and/or Lac du Bonnet, Kenora—Pickle Lake, Norway House—Ilford with points of call at Berens River, Beresford Lake, Birk Lake, Blissett, Man., Casummit Lake, Cole, Ont., Cross Lake, Man., Deer Lake, Ont., Diana, Man., Doghole Bay, Favourable Lake, Ont., God's Lake, Man., Golden Arm, Gold Pines, Ont., Halfway Lake, Island Lake, Man., Jackson Manion, Ont., Knee Lake, Little Grand Rapids, Man., Madsen, Ont., Maskwa, Man., McKenzie Island, Minaki, Northwind Lake, Ont., Oxford House, Man., Red Lake, Sachigo, Sandy Lake, Sioux Lookout and/or Hudson, Swain Post, Uchi Lake and/or Lost Bay, Ont., Wadhope, Wallace Lake, Man.

(xv) Kenora—Straw Lake with points of call at Flint Lake, Populous Lake, Rowan Lake, Whitefish Bay, Witch Bay, Ont.

(xvi) Kenora—Red Lake with points of call at Minaki, Madson, McKenzie Island, Golden Arm, Cole.

(xvii) Winnipeg or Lac du Bonnet—Hudson with points of call at Sioux Lookout, Uchi Lake, Jackson Manion, Swain Post, Casummit Lake, Golden Pine, Red Lake, McKenzie Island, Golden Arm, Madsen Cole.

(xviii) Hudson—Pickle Lake with points of call at Sioux Lookout, Doghole Bay, Uchi Lake, Lost Bay.

B. New routes applied for:

(xix) Edmonton—North Battleford with point of call at Vermilion as an extension of the Regina-North Battleford route.

(xx) Saint John—Halifax.

(xxi) Toronto, Hamilton, St. Catharines, Niagara Falls, Fort Erie, Welland, St. Thomas, Chatham, Windsor, Sarnia, London, Woodstock, Galt, Brantford, Paris, Stratford, Waterloo, Kitchener, Guelph.

(xxii) Port Alice and Prince Rupert.

(xxiii) Toronto, Montreal, Cornwall, Brockville, Gananoque, Kingston, Belleville, Trenton, Peterborough, Lindsay and Oshawa.

(xxiv) Montreal, Ottawa and Rouyn.

(xxv) Toronto, Sudbury, North Bay, Haileybury, Kirkland Lake, Timmins, Porquis Junction and Rouyn/Noranda.

(xxvi) Port Arthur, Sioux Lookout.

(xxvii) The Pas and Winnipeg, Manitoba.

(xxviii) Sydney, New Glasgow, Truro, Halifax, Kentville, Yarmouth, Saint John, Fredericton, Edmundston, Mont Joli and Rimouski.

3. Yes. Licences have been issued for the following routes by the Department of Transport and the Board of Transport Commissioners: (1) Senneterre-Waswanipi; (2) Roberval-Mistassini; (3) Vancouver-Victoria; (4) Regina-North Battleford.

Licences have been issued for the following by the Board of Transport Commissioners only: (1) Prince Albert-Goldfields; (2) Vancouver-Zeballos; (3) Prince George-Watson Lake; (4) Vancouver-Port Alice.

4. All outstanding applications to operate air routes are being held on file for future consideration.

FATS FROM BEEF CATTLE

Mr. SENN:

1. Is it compulsory for wholesale butchers when slaughtering beef cattle to deliver up all the fat produced?

2. If so, to whom must such delivery be made, and at what price?

3. What use is made of such fat when delivered?

4. What is the price paid for fats resulting from the slaughter of beef cattle destined for use in the manufacture of explosives?

Mr. ABBOTT:

1. By order No. 231 of the wartime prices and trade board, slaughterers are required to remove certain fats from carcasses of beef at time of slaughter. Slaughterers have the option of selling such fats: (a) in the raw state at maximum prices fixed by administrator's order A-849 of the wartime prices and trade board; (b) in the rendered state at maximum prices fixed by administrator's order A-426 of the wartime prices and trade board.

[Mr. Chevrier.]

2. See answer to question No. 1. Prices of raw fats vary for the different kinds and for the different zones defined in administrator's order A-849; prices of rendered fats vary for the different kinds and grades and for the different zones defined in administrator's order A-426.

3. Raw or rendered fats may be sold through retail channels for household culinary purposes. If fats are produced under government inspection they may also be sold to manufacturers of shortening. If they are not produced under government inspection they can be sold for any of the following uses: (a) soap; (b) lubrication; (c) tanning; (d) fatty acids; (e) chemical oils and fats.

4. See answer to question No. 2.

BONUS ON WESTERN BEEF

Mr. SENN:

1. What is the amount per hundredweight paid by way of bonus on beef moving from Manitoba, Saskatchewan and Alberta?

2. Is there any bonus on movement of live cattle from western Canada?

3. Has any bonus been allotted or paid to eastern farmers who purchase western cattle for feeding in the east?

4. If so, to whom is the bonus on western beef paid?

5. Is the bonus paid only on beef from cattle killed in the west?

6. What is the total amount of bonus paid to date on western beef moving to the east?

Mr. ABBOTT:

1. The subsidy on movements of dressed beef from certain areas of Manitoba, Saskatchewan and Alberta to eastern destinations (zones 10, 11 and 12 to zones 1, 2, 3, 4, 5 and 6 as defined in Order 194 of the wartime prices and trade board) has been suspended on all shipments on and after March 18, 1944. The subsidy was not payable on the basis of a fixed rate per hundredweight. The subsidy payable has been the amount by which initial icing or insulating charges (not exceeding $15 per carload), icing charges en route and rail freight charges at carload rates exceed the difference between the value of the dressed beef moved calculated at the maximum selling price in the zone of delivery, and the value calculated at the maximum price in the zone in which the shipment originated. Where such beef is shipped in a mixed car, initial icing or insulating charges and icing charges en route have been recognized to the extent of the ratio between the amount of dressed beef to the total amount of goods carried in that car.

2. No.

3. No.

4. See answers to questions 1 and 3.

5. The subsidy on dressed beef is paid to shippers, on shipments from the areas described in section 1 above only.

6. The amount of subsidy paid on dressed beef to Feb. 29, 1944 was $293,506.20.

LABOUR CONDITIONS—RADIO COMMENTATORS

Mr. ROSS (St. Paul's):

1. Under the ruling of the national war labour board respecting wage and salary increase, do all radio commentators come within the class of the "uncontrolled and legally uncontrollable section of the community"?

2. If not, how many do?

3. What is the "uncontrolled and legally uncontrollable section of the community"?

Mr. MARTIN:

1, Decisions of the national war labour board respecting wage increases are arrived at on the basis of specific applications made to the board covering the employees of a particular employer. As the wartime wages control order applies only to employees of or below the rank of foreman or comparable rank and does not apply to individuals who may be independent contractors rather than engaged in an employee relationship, whether or not a particular radio commentator was subject to the wartime wages control order would depend upon his or her comparable rank and upon the conditions of service.

2. Answered by No. 1.

3. The expression mentioned has reference only to individuals such as doctors, lawyers and others who are neither "employees" nor "salaried officials" within the meaning of the wartime wages control order and the wartime salaries order respectively, and whose remuneration is not subject to the provisions of either the orders mentioned.

INDIAN AFFAIRS—DR. F. PORTH

Mr. KNOWLES:

1. Is Dr. F. Porth in the employ of the Indian Affairs branch of the government?

2. If so, (a) what was the date of his appointment; (b) what is his salary; (c) what are his duties?

3. Has Mrs. F. Porth been employed by the Indian Affairs branch at any time since January 1, 1940?

4. If so, what remuneration has she received, and for what services?

Mr. CRERAR:

1. Yes.

2. (a) Accounts paid since March, 1940; (b) Not on salary; paid for services rendered up to $250 a month; (c) To supply medical attention to the Brokenhead reserve, Clandeboye Agency; in charge of medical work at Fort Alexander reserve and Fort Alexander Hospital at Pine Falls, Manitoba.

3. No.

4. Answered by No. 3.

ORDERS IN COUNCIL

Mr. DIEFENBAKER:

How many orders in council have been passed, (a) since the beginning of the war; (b) since the present session of parliament has commenced?

Mr. MACKENZIE KING:

(a) Since the beginning of the war (September 10, 1939 to March 15, 1944), 42,398 orders in council and 23,287 minutes of treasury board have been passed.

(b) Since the present session of parliament has commenced (January 28, 1944 to March 15, 1944), 1,186 orders in council and 850 minutes of treasury board have been passed.

SOLDIER SETTLEMENT

Mr. WINKLER:

1. How many disabled veterans of the present war have applied for land under the Soldier Settlement Act?

2. How many disabled veterans have been allocated to other districts than their own locality in order to receive the benefits of climate in alleviating the disability?

Mr. CRERAR:

1. Veterans of the present war are not eligible for assistance under the Soldier Settlement Act but may apply for establishment under the Veterans' Land Act, 1942. Up to January 31, 1944, six hundred and seventy-one applications for qualification had been received under the Veterans' Land Act. Applicants with pensionable disabilities are not segregated from non-pensioners for statistical purposes, but under present administrative policy of limited establishments made necessary by the shortage of new machinery and of seasoned lumber for building purposes, pensioners or veterans who are otherwise confronted with exceptional circumstances are being given prior consideration.

2. Disabled veterans in common with other veterans who are qualified for establishment under the Veterans' Land Act are not allocated arbitrarily to properties or localities by the director of the act but have the right of choice subject to their being qualified for the enterprise in which they wish to engage and to the suitability of the land on which they wish to be settled.

KOOTENAY-FLORENCE MINE, B.C.

Mr. ESLING:

1. What price did the government pay for the Kootenay-Florence mine on Kootenay lake, B.C.?

2. From whom was the mine purchased?

3. What has been the expenditure for developing mine and mill to 31st December, 1943?

4. What was the production of concentrates to 31st December, 1943, (a) to what point were

these concentrates shipped; (b) what price was received for the lead and zinc contents; (c) what price was received for the silver content, if any?

Mr. CHEVRIER:

1. The government did not purchase the mine but is paying a royalty to Florence Mining Company, Limited, for metals produced.

2. Answered by one.

3. By the government, $181,681.

4. 861·5 tons of zinc concentrate containing 863,569 pounds of zinc; 387·4 tons of lead concentrate containing 462,974 pounds of lead; (a) The concentrates were shipped to the order of the United States government through its agent the Metals Reserve Company; (b) Final settlement includes cost of production plus a royalty; (c) No payment was received on account of the silver content.

CANADIAN FORCES—SKILLED TRADESMEN

Mr. BLACK (Cumberland):

1. How many skilled tradesmen have been enlisted in each of the armed services?

2. What is the percentage to the total enlistments in each service?

Mr. MACDONALD (Halifax): The information the hon. member desires is not available. Men are not enlisted as skilled tradesmen, they are enlisted as artillerymen or infantrymen, as the case may be. There is no record which enables us to give the hon. member the information that he has asked for so far as the army is concerned.

COAL PRODUCTION—NATIONAL EMERGENCY

Mr. HURTUBISE:

When did the government declare coal to be a national emergency?

Mr. CHEVRIER: On November 23, 1942, P.C. 10674 was passed establishing an emergency coal production board on the advice of the coal administrator that a national emergency in respect to the production of coal existed.

On May 17, 1943, P.C. 4091 was tabled authorizing the issue of a proclamation declaring that a state of national emergency in respect to the production of coal existed. (Page 2701, *Hansard,* 1943.)

COAL PRODUCTION—MAN-POWER

Mr. HURTUBISE:

What actions were taken by the government with a view to providing additional workers in the coal mines?

[Mr. Esling.]

Mr. MARTIN:

(a) Under arrangements between Department of National Defence and Department of Labour, coal miners receive special consideration for postponement of military service.

(b) Personnel of armed services in Canada with coal mining experience are granted leave of absence (without pay and allowances) if willing to return to the coal mines; in certain instances they are granted discharge from the armed forces. (Such personnel are encouraged by both national defence and selective service officers to return to the coal mines).

(c) Under instructions of national selective service, permits are not issued for coal miners to seek any other employment.

(d) Order in council P.C. 4092 issued in May 1943 requires ex-coal mine workers to return to the mines regardless of present civilian occupations. They are guaranteed full employment.

(e) Orders in council P.C. 4861, June 17, 1943 and P.C. 6077, July 29, 1943 give national selective service officers authority to direct any male person over 16 years and less than 65 years of age, to accept and enter specified employment in coal mining.

(f) Order in council P.C. 121, January 1944, provides that no person engaged as a coal mine worker will be accepted prior to August 1, 1944 for enlistment in any branch of the armed services, except under permit issued by a national selective service officer.

COAL PRODUCTION—MAN-POWER

Mr. HURTUBISE:

What have been the results of any actions taken by the government regarding increasing man-power in the mines?

Mr. MARTIN: The increases in the number of employees in the coal mines under the various government actions have been:

(a) Ex-coal miners returned from armed services to coal mines to February 15, 1,955.

(b) Ex-coal mine workers returned to mines under P.C. 4092 to January 15, 2,180.

(c) Persons directed to mines under P.C. 4861 and P.C. 6077 to January 15, 480.

(d) Others were employed by mine operators in the ordinary course, and certain employees were dropped from their payrolls for various reasons.

(e) Net Result: Number of coal mine workers on payrolls June 1, 1943, was 24,864 and at January 15, 1944, was 28,526, an increase of 3,662 workers or 14·7 per cent.

INDIANS—SERVICE IN ARMED FORCES

Mr. MacINNIS:

1. What is the total number of Indians serving in the armed forces of Canada?
2. What is the number according to province or military district?

Mr. CRERAR:

1. 2,383 enlisted Indians (as at February 15, 1944).

2. Enlisted Indians, by provinces (as at February 15, 1944): Prince Edward Island, 24; Nova Scotia, 92; New Brunswick, 166; Quebec, 164; Ontario, 1,062; Manitoba, 156; Saskatchewan, 382; Alberta, 87; British Columbia, 243; Northwest Territories, 0; Yukon Territory, 7.

WOOL PRICES SINCE 1930

Mr. FAIR:

What is the price for the best grade of wool in Canada each year since 1930?

Mr. MacKINNON (Edmonton West): Annual prices of wool in Canada, 1930-February, 1944:

Raw Wool, per pound in quantities of 20,000 pounds or more, f.o.b. Ontario points

	Eastern wool, bright low medium ¼ blood Staple or 50's	Western domestic semi-bright ⅜ blood Staple or 56's
1930	$0·179	$0·163
1931	0·143	0·126
1932	0·103	0·090
1933	0·137	0·145
1934	0·181	0·190
1935	0·153	0·151
1936	0·208	0·204
1937	0·292	0·258
1938	0·168	0·161
1939	0·193	0·191
1940	0·303	0·273
1941	0·310	0·280
1942	0·310	0·280
1943	0·310	0·280
1944		
January-February	0·310	0·280

Note.—These are the best grades of eastern and western wool for which prices are available since 1930. The price differential in favour of eastern quarter blood is related to its lower shrinkage. Under terms of order in council P.C. 1-2519 a bonus of 4 cents per pound was authorized on all standard grades of Canadian unwashed fleece wool from the 1943 clip. This amount is not included in the above prices. An extension of the bonus arrangement to cover 1944 has been authorized by order in council P.C. 2-1000.

In 1943 highest maximum price authorized for established grades was 33 cents per pound for eastern and 29 cents per pound for western wool.

FARM LOAN BOARD—LOANS, OPERATING COSTS, ETC.

Mr. WOOD:

1. How much money has the Canadian farm loan board loaned by provinces from its inception of operations in 1929 to March 31, 1943?

2. What is the source from which the Canadian farm loan board obtains such funds for loaning purposes?

3. What is the total amount of money borrowed by the board to March 31, 1943?

4. What rate of interest does the board pay on its borrowed moneys?

5. What is the present rate of interest charged by the Canadian farm loan board, (a) on first mortgages; (b) on second mortgages?

6. Has the board repaid any of the borrowed moneys? If so, how much?

7. (a) How many outstanding loans were on the books of the board in each province as of March 31 for each of the years 1939 to 1943; (b) what was the amount repaid on principal and interest by borrowers in each province in each of the fiscal years 1939 to 1943?

8. Does the provincial government of the province of Quebec pay any portion of interest due by its farmer borrowers to the Canadian farm loan board? If so, at what rate?

9. What were the total amounts of revenue producing assets under the board's administration for each of the last five fiscal years?

10. What were the total operating costs of the board in each of the last five fiscal years?

11. What were the board's reserves as of March 31, 1943?

12. How does the board provide for reserves and operating costs?

Mr. ABBOTT:

The following reply is furnished by the Canadian Farm Loan Board:

1. British Columbia	$ 2,618,144
Alberta	9,019,771
Saskatchewan	8,049,528
Manitoba	5,822,469
Ontario	6,025,110
Quebec	13,631,762
New Brunswick	1,188,769
Nova Scotia	1,580,627
Prince Edward Island	1,215,006
Total	$49,151,186

2. By proceeds of sale of Canadian Farm Loan Board bonds to the Dominion Government and from loan repayments.

3. $35,250,000.

4. 3½ per cent.
5. (a) 5 per cent; (b) 6 per cent.
6. Yes—$8,000,000.

7. (a) Number of outstanding first mortgage loans by provinces for the fiscal years ending as follows:—

Province	March 31/39	March 31/40	March 31/41	March 31/42	March 31/43
British Columbia.	750	839	870	874	846
Alberta	3,558	3,995	4,128	4,128	3,985
Saskatchewan	2,998	3,358	3,490	3,587	3,591
Manitoba	2,009	2,204	2,314	2,337	2,297
Ontario	1,845	2,239	2,473	2,569	2,530
Quebec	4,771	5,036	5,306	5,579	5,527
New Brunswick..	626	664	677	670	653

10.

Fiscal Year	Amount
1938-39	$360,860
1939-40	382,310
1940-41	377,829
1941-42	371,299
1942-43	335,468

11.

Statutory Reserve		$ 420,224.37
Unappropriated Surplus		36,049.87
Reserves for Losses on Outstanding Loans:		
First Mortgage	$770,753.02	
Second Mortgage	107,551.23	878,304.25
		$1,334,578.49
Less Deficit from Operations under the Canadian Fisherman's Loan Act		2,816.99
		$1,331,761.50

12. The spread between cost of moneys and revenue provides the margin for setting up reserves and paying cost of operations.

LIEUTENANT-GOVERNORS OF THE PROVINCES—EXPENSES ON ACCOUNT OF THE WAR

Mr. DORION:

1. Is any amount being paid to any lieutenant-governor other than the lieutenant-governor of the province of Quebec, to cover his additional expenses on account of the war?

2. If so, (a) to whom; (b) in what amount; (c) since when?

Mr. McLARTY:

1. Yes.

2. (a) The Lieutenant-Governor of Nova Scotia; (b) At the rate of $4,000 a year; (c) April 1, 1941.

EXPORTS OF FRESH AND FROZEN HALIBUT

Mr. HANSON (Skeena):

1. How many pounds of Canadian halibut were frozen in 1943, and where, showing monthly amounts?

2. How many pounds of fresh and frozen Canadian halibut were exported per month in 1943, and to what countries?

Mr. MacKINNON (Edmonton West):

QUESTIONS PASSED AS ORDERS FOR RETURNS

LEASE OF PROPERTY IN KINGSTON

Mr. CARDIFF:

1. Has the government leased the property known as St. Mary's of the Lake, 355 King St. West, Kingston, Ontario?
2. If so, when was it leased?
3. From whom is the property leased?
4. What rent is being paid for this property?
5. What is the total of expenditure made by the government since it was leased?

Mr. MARTIN: Return tabled.

MOBILIZATION REGULATIONS—PROSECUTIONS—CONSCIENTIOUS OBJECTORS

Mr. DOUGLAS (Weyburn):

1. What are the names, home addresses and ages of all persons imprisoned to January 31, 1944, as a result of prosecutions arising from their failure to comply with mobilization regulations?
2. Which of these individuals claim to have conscientious objections to military service?
3. Where are each of the individuals located at the present time, and what length of prison terms are they serving?

ALTERNATIVE SERVICE REGULATIONS—PROSECUTIONS

Mr. DOUGLAS (Weyburn):

1. What are the names, home addresses and ages of all persons imprisoned or sent to alternative service work camps from the beginning of the present war to January 31, 1944, as a result of prosecutions arising from their failure to comply with alternative service regulations?
2. Where are each of these individuals located at the present time, and what length of prison terms are they serving?

CONSCIENTIOUS OBJECTORS

Mr. DOUGLAS (Weyburn):

1. How many individuals who made application to mobilization boards for postponement as conscientious objectors were granted this status by the boards up to January 31, 1944?

[Mr. Hanson (Skeena).]

2. How many of these individuals were sent to alternative service camps?
3. How many individuals were refused status as conscientious objectors?

UNEMPLOYMENT, MONTREAL—NOBEL DEFENCE INDUSTRIES PLANT

Mr. FOURNIER (Maisonneuve-Rosemont):

1. According to the most recent official information, how many persons residing within the limits of the city of Montreal have been registered as unemployed, (a) men; (b) women?
2. Are there, within the limits of the city of Montreal, any industries which have hired persons previously employed at the Nobel plant in Ontario?
3. If so, how many persons have been so transferred?
4. Have such transfers been made through the selective service? If not, how have they been made?
5. Are the persons so transferred sure of finding living accommodation in Montreal?

DEPARTMENT OF LABOUR—MEMBERSHIP OF PERSONNEL IN TRADE UNIONS

Mr. CORMAN:

1. How many are employed by the Department of Labour who are or were members of a trade union?
2. How many persons have been appointed to boards or committees, etc., after consultation with trade unions?
3. What number allocated to each board, committee, etc., were recommended by trade unions?
4. What are the names of those holding official positions in the Department of Labour who are or were members of trade unions?

BOUCHARD, STE. THERESE, AND NOBEL DEFENCE INDUSTRIES PLANTS

Mr. BERTRAND (Terrebonne):

1. Who ordered the transfer to the Defence Industries plant at Bouchard, Ste. Thérèse, of some fifty employees from Defence Industries at Nobel?

2. Were such transfers approved by the selective service or made by the company itself?
3. Has the selective service office at Ste. Thérèse been notified of such transfers?
4. How long did each of such employees work for Defence Industries at Nobel?
5. How many among them have previously worked for Canadian Industries Limited?
6. Will the government take the necessary steps to reinstate in their former occupation some fifty persons laid off or placed with less pay in secondary positions?

PURCHASE OR RENTAL OF QUEBEC PROPERTIES

Mr. ROY:

1. Since 1939, has the dominion government bought or rented real estate or property, (a) in the county of Quebec West and South; (b) in the county of Quebec East; (c) in the county of Quebec South; (d) in the county of Quebec-Montmorency; (e) in the county of Lévis; (f) in the county of Bellechasse; (g) in the county of Montmagny, in the province of Quebec?
2. If so, (a) in what years, from whom, and at what price has such property or real estate been bought or rented; (b) where is it located, and what use is being made of it?
3. Has the government cancelled the rental or resold any of such real estate or property?
4. If so, at what price, and on what conditions?

JOHN GRIERSON

Mr. FRASER (Peterborough West):

1. Having reference to sessional paper No. 175, is John Grierson still on loan from the national film board to the wartime information board?
2. What salary is now being paid to John Grierson, on what authority, and for what service?
3. Is John Grierson engaged in any employment or engagements other than the government service?
4. What amount has been paid to John Grierson in travelling or other expenses during the past twelve months?

ST. LAWRENCE NORTH SHORE MAIL SERVICE

Mr. DORION:

1. Is there a contract between the government and the Clarke Steamship Limited for carrying mail to the north shore of the St. Lawrence river?
2. If so, what are the terms of such contract?

Mr. MacKINNON (Edmonton West): Return tabled.

CUSTOMS DUTIES ON ARTICLES SENT TO OVERSEAS SERVICE PERSONNEL

Mr. JOHNSTON (Bow River):

1. Is there a customs duty on cigarettes sent from Canada to the R.C.A.F. stationed at Malta?
2. If so, what is the duty on 300 Sweet Caporal cigarettes?
3. Is there a duty on other articles sent to our fighting forces who are on active service and stationed in Europe?

MOTIONS FOR PAPERS

TUNNEL BETWEEN P.E.I. AND THE MAINLAND

Mr. BLACK (Cumberland):

For a copy of all correspondence since the entrance of Prince Edward Island into confederation exchanged between the government of Prince Edward Island and the federal government, in connection with the proposed building of a tunnel or causeway from Cape Tormentine, New Brunswick to Prince Edward Island.

Also for a copy of all plans, surveys and estimates of cost with dates of each survey and estimate and by whom made.

Mr. BLACK (Cumberland): Through the courtesy of the Minister of Transport I conferred with the officials of his department and we have agreed as to what information should be brought down.

Mr. SPEAKER: Dropped.

Mr. BLACK (Cumberland): I should like it to be passed. I am not asking for all the correspondence or all the plans; we have agreed upon what should be brought down and what can be brought down.

Motion agreed to.

NELSON, B.C., EMERGENCY AIRPORT

Mr. ESLING:

For a copy of all letters, telegrams, correspondence, reports and other documents in the possession of the Department of Transport, exchanged between the said department and the city of Nelson, British Columbia, or any official thereof, including any correspondence and reports of Mr. W. S. Lawson regarding an emergency airport on the waterfront of the city of Nelson.

SELECTIVE SERVICE—CONVICTIONS AT COCHRANE, ONT., FOR EVASION OF REGULATIONS

Mr. McGREGOR:

For a statement showing a list of the names of men convicted during the months of January and February, 1944, in the court of Magistrate Tucker at Cochrane, Ontario, for evasion of selective service regulations; also showing age of each one convicted, his home address, the selective service office from which these men were sent to northern Ontario, together with the name and position of the official signing the documents involved; also a record showing where these men were employed before going to northern Ontario; and also the reports of the R.C.M.P. on these cases.

Mr. ST. LAURENT: I must object to the latter part of this motion, which asks for the production of reports of the Royal Canadian Mounted Police. These are reports by officers of the R.C.M.P. to their superior officers and they are confidential in nature. I am informed in the department that the house has never ordered the production of any of this confidential information which is on the files of the Royal Canadian Mounted Police.

ACQUIREMENT BY CANADA OF UNITED KINGDOM CAPITAL INVESTMENTS

Mr. FRASER (Peterborough West):

For a copy of order in council P.C. 1/3233, April 19, 1943, together with a statement describing the "capital investments" of the government of the United Kingdom acquired by the government of Canada and referred to in the above order; also for a statement giving amounts of refunds of duties and/or taxes granted to contractors in amounts not under $100, as referred to in paragraph (1) of the said order; and for a statement of what government-owned plants or incorporated crown companies received the benefit of remission of customs duties and/or taxes, referred to in paragraph (4) of said order; also amount of refunds or remission of duties and/or taxes paid to or granted to contractors, or increases in contract prices made under paragraph (7) of the said order.

MOBILIZATION ACT—DOUKHOBORS

Mr. DIEFENBAKER:

For a copy of all orders in council respecting liability of Doukhobors for military service, and all rules and regulations and instructions issued by the Department of National Defence or the Department of National War Services in connection with the calling up of Doukhobors for service, or alternative work or service, under the National Resources Mobilization Act; and for a copy of all correspondence, telegrams and other documents passing between the Doukhobors and any department of government from the outbreak of the war to date with regard thereto.

STATUTES AMENDED OR ALTERED BY ORDER IN COUNCIL

Mr. DIEFENBAKER:

For a copy of all orders in council passed since the 15th of July, 1943, which amend, suspend or otherwise alter the operation of any statute or statutes passed by the parliament of Canada, and a list of all statutes so affected.

SYNTHETIC RUBBER—POLYMER CORPORATION

Mr. KNOWLES:

For a copy of all contracts and/or letters or other documents in lieu of contracts, written or entered into at any time since January 1, 1942, relating to the operation of the respective units of the Polymer plant at Sarnia, between Polymer Corporation Limited and Imperial Oil Limited, St. Clair Processing Corporation Limited, Dow Chemical Company of Canada Limited, and Canadian Synthetic Rubber Limited, as referred to in clause 3 (b) of order in council P.C. 2799, of April 8, 1943.

Also, for a copy of all orders in council relating to Polymer Corporation Limited, dated since April 8, 1943.

INTERNMENTS—ALOIS N. SCHNEIDER

Mrs. NIELSEN:

For a copy of all correspondence, reports, representations and other documents exchanged between any person, persons or organization and any department of government, including the R.C.M.P., with regard to the internment and release of Alois N. Schneider, of St. Walburg, Saskatchewan, from 1939 to date.

[Mr. St. Laurent.]

Mr. ST. LAURENT: I must object to this motion, which calls for the production of papers, including those of the R.C.M.P., with respect to the release of a person interned under the defence of Canada regulations. Up to the present time the house has never insisted upon the production of such documents, because it has been felt that their publication would be detrimental to the proper administration of the defence of Canada regulations. It has been explained to the house several times that much of the information respecting the internment of persons or the release of persons who have been interned is of a highly confidential nature, whether coming from persons within the country or from representatives of allied governments, and that it would be contrary to the proper administration of these regulations to have it made public.

Mrs. NIELSEN: My motion was seconded, not by the hon. member for Laval-Two Mountains (Mr. Lacombe) as Your Honour put the motion, but the hon. member for Cartier (Mr. Rose). May I be permitted to reply to the Minister of Justice? I was not able to hear everything he said, but I believe the minister said that reports from the R.C.M.P. could not be produced. I understand that the R.C.M.P. is a force for the protection of the Canadian people. Where a person has a record such as that of the man in question I think the people of this country should have information regarding his release, particularly when it so happens that for a number of years he was an organizer for the Liberal party and we are now expecting an election in the province of Saskatchewan.

Mr. SPEAKER: Dropped.

Mr. COLDWELL: Before the motion is dropped may I say my reading of it indicates that it does not call for a report from the mounted police. What it asks for is correspondence between persons and the Royal Canadian Mounted Police, not confidential reports from the Royal Canadian Mounted Police. It seems to me it is in a different position from the other motion to which the minister objected a few moments ago. Are we to take it that correspondence between persons and any department of government and the Royal Canadian Mounted Police should not be divulged in the house? This motion does not ask for a report.

Some hon. MEMBERS: Dropped.

Mr. SPEAKER: Dropped. The minister has made his explanation, with his objections

to the fulfilment of this order, and I must take it; otherwise the question can be put to a vote.

The house divided on the motion (Mrs. Nielsen) which was negatived on the following division:

YEAS

Mr. ST. LAURENT: I was paired with the hon. member for York-Sunbury (Mr. Hanson). Had I voted, I would have voted against the motion.

FARM LOAN BOARD—SASKATCHEWAN—J. L. DOUGANS

Mr. NICHOLSON:

For a copy of all letters, telegrams and other documents in possession of the government in connection with the resignation and reappointment of J. L. Dougans in 1940, employed by the Saskatchewan branch of the Canadian farm loan board.

ROYAL COMMISSION ON COMPLAINTS OF JAPANESE IN BRITISH COLUMBIA

Mr. FRASER (Peterborough West):

For a copy of the report of the royal commission on complaints of Japanese in British Columbia and which report was made to the Honourable the Minister of Labour.

Mr. MITCHELL: Copies of report in French and English are now tabled.

DEPARTMENTAL ORGANIZATION

ESTABLISHMENT OF DEPARTMENT OF RECONSTRUCTION

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved that the house go into committee at the next sitting to consider the following resolution:

That it is expedient to introduce a measure to establish a department of reconstruction with authority to formulate and coordinate reconstruction plans and carry out such plans during a certain number of years following the cessation of hostilities; to provide for the em-

ployment of officers, clerks and servants necessary for the proper conduct of the department; and to provide for the proper and efficient administration of the act.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

PROVISION FOR DEPARTMENT OF VETERANS' AFFAIRS

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved that the house go into committee at the next sitting to consider the following resolution:

That it is expedient to provide for a Department of Veterans' Affairs to replace in part the Department of Pensions and National Health and to assume the management and control of and to consolidate in such department all matters not by law assigned to any other department relating to the care, treatment, training or reestablishment of members and former members of the armed forces and other persons and all such other matters as may from time to time be assigned; and to provide further for the appointment of such officers, clerks and employees as are necessary for the proper and efficient administration of the act.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

PROVISION FOR DEPARTMENT OF SOCIAL WELFARE

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved that the house go into committee at the next sitting to consider the following resolution:

That it is expedient to provide for a Department of Social Welfare to include that part of the Department of Pensions and National Health not to be included in the Department of Veterans' Affairs and to assume the management and control of and to consolidate in such department matters relating to the social security and welfare of the people of Canada as may from time to time be assigned to it; and to provide further for the appointment of such officers, clerks and employees as are necessary for the proper and efficient administration of the act.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

[Mr. Mackenzie King.]

UNITED NATIONS

RELIEF AND REHABILITATION ADMINISTRATION—IMPLEMENTATION OF AGREEMENT OF NOVEMBER 9, 1943

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved that the house go into committee at the next sitting to consider the following resolution:

That it is expedient to bring in a measure for carrying into effect the agreement for the establishment of a united nations relief and rehabilitation administration, signed on the 9th day of November, 1943, and to provide that interim expenditures not exceeding $10,000,000 for carrying out the said agreement be defrayed out of moneys provided under the War Appropriation (United Nations Mutual Aid) Act, 1943, and that all other expenditures incurred in carrying out the said agreement be defrayed out of moneys to be voted by parliament.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

TECHNICAL EDUCATION ACT

AMENDMENT TO PROVIDE FOR APPROPRIATION OF UNEXPENDED FUNDS

Hon. HUMPHREY MITCHELL (Minister of Labour) moved that the house go into committee at the next sitting to consider the following resolution:

That it is expedient to introduce a measure to amend the Technical Education Act to make available, for the purposes of the act, any portion of the unexpended appropriation during the period of five years succeeding the fiscal year ending March 31, 1944.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

JUDGES' ACT

AMENDMENT TO PROVIDE FOR SALARY OF THIRD JUDGE OF EXCHEQUER COURT OF CANADA

Hon. L. S. ST. LAURENT (Minister of Justice) moved that the house go into committee at the next sitting to consider the following resolution:

That it is expedient to introduce a measure to amend the Judges' Act to provide for the salary of an additional puisne judge of the Exchequer Court of Canada.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

CANADIAN NATIONAL RAILWAYS

PROVISION TO MEET CERTAIN EXPENDITURES AND GUARANTEE OF SECURITIES AND INDEBTEDNESS

Hon. J. L. RALSTON (Acting Minister of Finance) moved that the house go into committee at the next sitting to consider the following resolution:

That it is expedient to bring in a measure to provide for the refunding of matured, maturing and callable financial obligations of the Canadian National Railways and for the issue of securities guaranteed by the Dominion of Canada in respect of such refunding to an aggregate principal amount not exceeding $200,000,000.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

CITY OF OTTAWA AGREEMENT

AUTHORIZATION OF PAYMENT OF $100,000 FOR THE YEAR ENDING JULY 1, 1944

Hon. ALPHONSE FOURNIER (Minister of Public Works) moved that the house go into committee at the next sitting to consider the following resolution:

Resolved, that it is expedient to introduce a measure to authorize the Minister of Public Works on behalf of His Majesty to enter into an agreement to pay to the Corporation of the City of Ottawa the sum of $100,000 for the year ending July 1, 1944.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

LABOUR CONDITIONS

APPOINTMENT OF MR. JUSTICE ARCHIBALD AS CHAIRMAN OF NATIONAL WAR LABOUR BOARD

Hon. HUMPHREY MITCHELL (Minister of Labour): On Thursday last the Prime Minister informed the house that the Hon. Mr. Justice C. P. McTague, of the Supreme Court of Ontario, had felt it necessary, for personal reasons, to tender his resignation as chairman of the national war labour board. I now have pleasure in announcing the appointment of Mr. Justice Maynard B. Archibald, of the Supreme Court of Nova Scotia, as the new chairman of the board. Mr. Justice Archibald has acted on a number of occasions on commissions and boards set up by the Department of Labour to deal with problems of industrial relations. It is expected that he will arrive in Ottawa to take over his duties immediately after the Easter parliamentary recess; he finds it impossible to come any earlier. In the meantime, however, the house may rest assured that the board will continue to function, dealing with the cases before it.

I now table a copy of order in council P.C. 1986, providing for the appointment of Mr. Justice Archibald.

WARTIME LABOUR RELATIONS REGULATIONS EFFECTIVE AS OF THIS DAY

Hon. HUMPHREY MITCHELL (Minister of Labour): I wish to inform the house that order in council P.C. 1982 was approved to-day, bringing into force the wartime labour relations regulations covered by order in council P.C. 1003 of February 17 last. In announcing the new regulations I had stated that they would be put into force on a date to be fixed by the governor in council. They are in effect as from to-day. I now table copy of order in council P.C. 1982.

BOUCHARD DEFENCE INDUSTRIES LIMITED PLANT

On the orders of the day:

Mr. FRED ROSE (Cartier): May I ask a question of the government. What are the real facts regarding a story widely circulated in the province of Quebec to the effect that French-Canadian workers have been laid off from the Bouchard plant and replaced by English-speaking workers.

Mr. SPEAKER: That is a question that must be placed on the order paper.

PROPOSED LAY-OFF OF AIRCRAFT WORKERS AT MACDONALD BROS., WINNIPEG, PLANT

On the orders of the day:

Mr. S. H. KNOWLES (Winnipeg North Centre): I wish to direct a question to the Minister of Munitions and Supply. I shall respect Your Honour's view against the reading of telegrams, but may I say that I ask this question because I received, an hour or so ago, a telegram from the secretary of the Winnipeg and district trades and labour council. The question is this. Is the government aware of a proposed lay-off of 800 aircraft workers at the plant of Macdonald Brothers in Winnipeg? If so, will consideration be given to reducing the hours of labour if no other way can be found of avoiding such a lay-off?

Hon. C. D. HOWE (Minister of Munitions and Supply): I received notice of this ques-

tion only a few moments ago. I know of no lay-off at the plant of Macdonald Brothers, but I shall be glad to look into the situation and answer the question later.

POSSIBLE CLOSING OF WESTERN COAL MINES

On the orders of the day:

Mr. C. E. JOHNSTON (Bow River): The other day I asked the parliamentary assistant to the Minister of Finance whether the subsidies would be continued to western coal mines in order that they might continue operating after the end of this month and the hon. gentleman said he would give an answer to-day.

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): I had hoped to have the information to-day, but I have not received it. I confidently anticipate that I shall have it to-morrow.

INCOME TAX

POSSIBILITY OF EXTENSION OF TIME FOR FINAL PAYMENT

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Before the orders of the day are called, I wish to address a question to the Minister of National Revenue. Will the government give favourable consideration to allowing the final payment of the 1943 income tax to be spread over a period beyond April 30 next?

Hon. C. W. G. GIBSON (Minister of National Revenue): The hon. member was kind enough to send me a copy of the question. I answered substantially the same question on March 10, and he now asks whether there is likely to be any change in the policy of the government in connection with the final payment of income tax. All I can say is that should there be any changes in government policy, they will be announced in due course.

ROYAL CANADIAN AIR FORCE

STATUS OF PERSONNEL EMPLOYED ON TRANS-CANADA AIR LINES AS TO UNION MEMBERSHIP

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I have another question which I think should be directed to the Minister of Munitions and Supply. In any event, I have sent a copy of the question both to the Minister of National Defence for Air (Mr. Power) and to the Minister of Munitions and Supply. In cases where Royal Canadian Air Force pilot personnel have been released for active employment with Trans-Canada Air Lines, are these pilots allowed to become members of a trade union and enjoy the provisions of collective bargaining under the new labour code?

Hon. C. D. HOWE (Minister of Munitions and Supply): If the pilots in question have received their discharge from the Royal Canadian Air Force they are of course at liberty to join trade unions. If they are still members of the armed forces, the regulations of the forces do not permit their joining trade unions.

Mr. GRAYDON: In other words, it is a question of whether they are on leave of absence or have been discharged.

Mr. HOWE: Quite.

FOREIGN EXCHANGE

REPORTED AGREEMENT ON POST-WAR DOLLAR GOLD-BASED STABILIZATION FUND

On the orders of the day:

Mr. VICTOR QUELCH (Acadia): I should like to direct a question to the government. In the evening *Citizen* of March 15, there appeared a statement to the effect that early and complete agreement among British, American, Russian and Canadian treasury experts, on a multibillion dollar gold based fund to stabilize post-war foreign exchange "was believed imminent to-day". Will the Prime Minister assure the house that no such agreement will be entered into by Canada without first of all referring the matter to parliament?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Any assurance I have given the house will be implemented in so far as it is in my power to have this done.

CANADIAN ARMY

CONDITIONS FOR GRANTING OF FARM SPRING LEAVE, 1944

On the orders of the day:

Mr. W. C. MACDONALD (Parliamentary Assistant to the Minister of National Defence): Several members have made inquiries of the Minister of National Defence (Mr. Ralston) with regard to the terms upon which farm spring leave is to be granted by his department. I wish now to make a statement with reference to the matter.

When informing the house last year of the terms upon which leave for this work was

being granted to army personnel, the minister suggested that the hopes of members of the house and of those engaged in farming should not be raised too high.

Mr. HOMUTH: He was quite right about that.

Mr. MACDONALD (Halifax): In announcing the terms of farm leave for the present spring season, I repeat the minister's remarks, although, as I shall explain in a moment, leave this year is in some respects upon a more generous scale.

Following the conclusion of spring leave granted in 1943, an order (R.O. 3456) was issued providing for assistance to agriculture in two ways, (1) by granting compassionate farm leave to enable soldiers to return to their own or to the farm of their immediate family, where hardship would otherwise ensue, and (2) by detailing soldiers for farm duty in circumstances of emergency. It was decided to amend this order and to provide, in addition to the leave which may now be granted under it, for the granting of spring and harvest leave at appropriate seasons.

In the spring of 1943, seeding leave might be granted to the following:

(a) Personnel on strength of home war establishments of district depots, i.e., the members of the administrative and training staffs.

(b) Other personnel on strength of district depots, excluding those awaiting dispatch to basic training centres or awaiting allocation after completion of advanced or trades training.

(c) Personnel of the Veterans Guard of Canada who had completed their training.

(d) Personnel of operational units up to a limit of 5 per cent of the strength of such units and where the soldier applying had completed his individual training.

The order now provides that general service personnel who by age and pulhems profile are suitable for overseas service will not be eligible for spring leave.

Subject to this exception, spring leave may be granted not only to those on strength of the home war establishments of district depots, but also to those on the home war establishment of any unit. Other personnel on the strength of district depots, except those awaiting dispatch to training centres or schools, will be eligible, as well as will also personnel of the Veterans Guard of Canada and personnel on strength of operational units, as was the case last year, but the restriction to five per cent of those on strength of operational units to whom leave may be granted has been removed.

The period for which leave may be granted has been increased from six weeks to two months.

As was the case in 1943, applications for spring leave will be submitted by the soldier to his commanding officer and by him, in turn, to the general or district officer commanding concerned, who has been authorized to grant the leave in appropriate cases. It should, however, be distinctly understood that the leave to be granted under this order, as in every other type of leave, is subject to the exigencies of the service and can be granted by general or district officers commanding only if, in their opinion, essential army activities will not be substantially interfered with.

I have indicated that routine order No. 3456 has been amended in order to set out the terms upon which farm spring leave for 1944 is to be granted. I have here an office consolidation of the order with all amendments to date and, in order that hon. members interested may have available in convenient form information with regard not only to the granting of spring leave, harvest leave, and compassionate farm leave but also information as to the circumstances in which soldiers may be required to perform farm duty, I would ask leave of the house to table order No. 3456 as amended and to have it printed in *Votes and Proceedings*.

Mr. DOUGLAS (Weyburn): Will the government pay all or any part of the transportation expenses of these men, to enable them to return home to do farm work? If a man has to go from one end of Canada to the other he cannot earn enough in two months to compensate him for the journey.

Mr. MACDONALD (Halifax): There is provision in the order with respect to transportation. The soldier must pay his own transportation.

Mr. GRAYDON: The cost of transportation is to be borne by the soldier?

Mr. MACDONALD (Halifax): Yes.

Mr. GRAYDON: Will there be any provision for extension of the leave given under this new policy? I am not sure whether it was last year or the year before, but I remember that one year farm operations were retarded because of weather, and as a result a good deal of difficulty was experienced in

this connection. I was wondering if there was any provision with respect to the extension of the leave, or if this is a rigid regulation.

Mr. MACDONALD (Halifax): Although there was no express provision in the order, last year extensions were granted in certain cases. In the present order there is no express provision dealing with that point; in that respect it is exactly the same as the order of a year ago. If in a special case a soldier applies for an extension of leave, and can show a good case, I presume his application would be granted; but the order authorizes only the specific leave of two months, which is considered ample in ordinary circumstances.

Mr. GRAYDON: But there is nothing to prevent an application for extension?

Mr. MACDONALD (Halifax): No.

Mr. HATFIELD: Is the soldier allowed to retain his uniform and other clothing?

Mr. SPEAKER: The parliamentary assistant mentioned his desire to have the order appear in the *Votes and Proceedings*. If it would serve the purpose I think it would be better if it appeared in *Hansard*.

Mr. MACDONALD (Halifax): There is a provision in the order with respect to the matter mentioned by the hon. member for Victoria-Carleton (Mr. Hatfield). Perhaps it would save time if he read it himself.

Mr. WRIGHT: When the soldier makes application to his commanding officer, has that officer the authority to turn down the application without submitting it to the district officer commanding?

Mr. MACDONALD (Halifax): No; as I understand it the application is submitted to the commanding officer, who forwards it to the district officer commanding or the general officer commanding, as the case may be.

Mr. DOUGLAS (Weyburn): With his recommendation attached?

Mr. MACDONALD (Halifax): Yes. This is the provision:

> Application for compassionate farm leave will be submitted in writing by the soldier to his commanding officer who will, after investigating, forward it, with his recommendation, to the G.O.C. or D.O.C. concerned.

Mr. DOUGLAS (Weyburn): I would ask the parliamentary assistant if the department will give consideration to making some contribution toward the cost of transportation of men who are a long distance from home. Otherwise this may not be of much value in many cases.

[Mr. Graydon.]

Canadian Army Routine Orders
No. 3456

APPLICABLE TO ACTIVE FORMATIONS, UNITS, AND PERSONNEL OF THE CANADIAN ARMY

Headquarters, Ottawa,
27th July, 1943.

3456—Compassionate Farm Leave, Spring Leave, Harvest Leave and Ordering Soldiers to Perform Farm Duty.

1. This Order supersedes all previous orders and instructions dealing with the subject of army assistance to agriculture. This Order is effective as from 31st July, 1943, and will remain in effect until further notice.

2. Seasonal conditions have created unusual difficulties in connection with agriculture. It is desired in cases of genuine merit that the army give such assistance as is possible consistent with army responsibilties.

3. Such help as can be given is made much more effective if given promptly and it is, therefore, desired to make the procedure as simple and direct as possible. Heretofore, frequent references have had to be made to N.D.H.Q. in order to ensure uniformity of treatment across the country. It is felt, however, that the G.O's. C.-in-C. and the D.O's.C., being on the ground and having now had good experience in connection with requests for agricultural help are in a position to appraise the circumstances.

4. It has, therefore, been decided to put the matter in the hands of the G.O's. C.-in-C. and the D.O's.C., subject to certain necessary general principles. They are relied on to exercise sound judgment so as to help meet the immediate situation created by abnormal seasonal conditions whenever and wherever that can be done without substantial interference with essential army activities.

5. Types of aid:

Assistance to agriculture will be given in the following ways:—

(a) By granting of leave (known as Compassionate Farm Leave) to certain personnel under administrative provisions as outlined in Appendix "A" to this Order;

(b) By the detailing for duty on farms (to be known as Farm Duty) of certain designated personnel under the authority of P.C. 5931, and under administrative provisions as outlined in Appendix "B" to this Order.

(c) By granting of leave (known as Spring Leave or Harvest Leave, whichever may be applicable) to certain personnel under the administrative provisions outlined in the Appendix to this Order.

6. Principles Governing Grant of Aid:

There are certain principles which obtain in both the aforementioned cases:—

(a) It is not possible to allow personnel to help in farm work if such action would, in the opinion of the G.O.C. or D.O.C.,

result in substantial intereference with essential army activities. The G.O's.C. and D.O's.C., should, however, endeavour to adjust and re-arrange personnel and duties so that such essential activities can be carried on for the period of the absence of personnel on farm work;

(b) The farm must be a farm which contributes substantially to the national production over and above what is necessary for the occupants of the farm itself;

(c) It is not possible at this time, which is the best training season of the year, to release men who are actually in training from Training Centres, except in special cases of compassionate grounds as mentioned in Appendix "A" hereto.

7. Personnel Available:

Subject to the foregoing, the personnel from which assistance may be provided, are therefore:—

(a) Personnel in disposal wings of Depots;

(b) Personnel in home war establishments whom, by re-adjustment and re-arrangement, it may be possible to release for the time being. Regard shall be had to the continuing withdrawal of general service personnel for overseas duty;

(c) Personnel in operational units also, having regard to the continuing withdrawal of general service personnel for overseas duty;

(d) Personnel of the Veterans Guard of Canada.

8. Personnel Not Available:

The following, although elegible for Compassionate Farm Leave, shall not be available for Spring Leave, Harvest Leave or Farm Duty:—

(a) G.S. personnel who, by age and Pulhems Profile, are suitable for overseas service;

(b) G.S. or N.R.M.A. personnel who are in training stream at Training Centres or Schools.

9. Limitation as to number who may be granted Compassionate Farm Leave, Spring Leave, Harvest Leave and/or Detailed for Farm Duty.

Such numbers as G.O's.C. and D.O's.C. decide can be made available from any units in their command having regard to the exigencies of the service.

10. G.O's.C.-in-C. and D.O's.C. will detail suitable members of their staffs to consult with the director, Dominion-provincial farm labour committee of the province concerned with a view of arranging to carry out the letter and spirit of this Order.

11. The effective provisions of Order in Council, P.C. 5931 of 1943, are published for information as Appendix "D" to this Order.

(Effective 31st July, 1943.)

(H.Q. 54-27-55-4)

H. F. G. LETSON,
Major-General.
Adjutant-General.

Appendix "A"

COMPASSIONATE FARM LEAVE

1. To Whom Granted:

This leave may be granted to men for the purpose of working on farms owned by members of their immediate family where there would be undue hardship if the leave were not granted. This leave is applicable where the relative working the farm is, because of old age or disability, incapable of continuing to do so and, by reason of their enlistment or enrolment, there is no other member of the family available to assist.

2. Method of Application:

Application for Compassionate Farm Leave will be submitted in writing by the soldier to his Commanding Officer who will, after investigating, forward it, with his recommendation, to the G.O.C. or D.O.C. concerned. Such applications will not be referred to National Defence Headquarters. For the sake of uniformity, applications will be completed on M.F.M. 312 as amended to suit the circumstances.

3. Duration and Renewal of Compassionate Farm Leave:

The G.O.C. or D.O.C. may authorize leave for period applied for or such period as he deems advisable, but not to exceed six months. Subject to the exigencies of the Service, the same officers may grant extensions for such periods not exceeding six months as they may consider advisable.

4. Investigation of Necessity for Leave:

The facilities of the N.S.S. Mob. Board, D.B.T., R.C.M.P., Auxiliary Services, or any Provincial, Municipal or Civic Organization may be used to investigate statements submitted on behalf of the applicant whenever the G.O.C. or D.O.C. considers it to be necessary or desirable.

5. Transportation and Clothing:

The Department of National Defence will supply a suit of overalls and free transportation and meal tickets to all soldiers proceeding on Compassionate Farm Leave. Free return transportation shall be limited to destinations not more than 500 miles distant from the soldier's station and if the destination is more than 500 miles from the soldier's station, he shall furnish his own transportation in excess of the 500 miles distance. The Department of Labour will pay the Department of National Defence the cost thereof on demand.

6. Pay and Allowances:

Compassionate Farm Leave will be without pay of any kind or allowances of any kind, or subsistence, and soldiers will not be entitled to medical or dental attention, hospitalization, or compensation due to illness, injury or death while on Compassionate Farm Leave.

7. Transfer to Depot in Certain Cases:

Personnel granted leave in excess of thirty-one days will be transferred to the District Depot of the Military District in which such leave is to be spent provided, however, that such transfer will be made effective the day following the commencement of leave. On such transfer the documents and other correspondence pertaining to the leave will be despatched

immediately to the appropriate District Depot, to which Depot the soldier will report on the expiration of his leave when he will be medically examined and if found fit, will be completed with clothing and equipment and will be either despatched with his documents to his former unit or otherwise disposed of by the District Officer Commanding.

8. Clothing, Equipment, etc., on Proceeding on Compassionate Farm Leave:

Where a soldier is granted leave up to but not exceeding 60 days under the provisions of this Order, he will be permitted to take with him necessary clothing and uniform. Except when specially authorized otherwise by the G.O.C. or D.O.C. concerned, he will only be authorized to wear his uniform while travelling to the place where he will reside during leave, and while returning from such place on the expiration of his leave. The cost of making good any deficiency in clothing or equipment issued to the man as shown on his M.F.C. 800, before proceeding on leave, or found to be deficient on his return from leave, will be recovered in the usual manner. Where leave for any period exceeding 60 days is granted, uniform and clothing will be worn only when authorized by the G.O.C. or D.O.C. When not so authorized, the man's uniform and clothing, and in all cases his equipment, will be returned to stores before the man proceeds on leave. The man will be responsible for providing any civilian clothing he may require when proceeding on leave.

9. Furlough Form to be Furnished Soldier Proceeding on Compassionate Farm Leave:

Before proceeding on leave the soldier will be given Furlough Form M.F.B. 322, with those portions of instructions on reverse side thereof which deal with dress and medical attention while on leave, struck out and initialled by the officer authorized to issue same. The soldier will be given explicit instructions in writing from his Officer Commanding which will include:

(a) Conditions governing wearing of uniform;
(b) Cessation of pay and allowances;
(c) His being subject to recall at any time on 48 hours' notice;
(d) His non-entitlement to dental and medical care during leave;
(e) When and to whom, and how to apply if extension of leave required;
(f) When, where, and to whom to report on expiration of leave required;
(g) The necessity of obtaining his Commanding Officer's permission (under Routine Order No. 2242) to marry to be eligible for Dependents' Allowance on return from leave.

10. Medical Examination of Soldier Proceeding on Compassionate Farm Leave:

If the period of leave exceeds 60 days, the soldier must be medically examined before proceeding on, and again after return from such leave. Should a soldier die, or be killed while on leave, either during or as a direct result of his employment but not otherwise, he will be entitled to a military funeral as a soldier in accordance with Article 220 of F.R. & I. (Canada).

[Mr. Graydon.]

Appendix "B"

1. Reason for Detailing:

In order to meet the present emergency and in addition to the granting of Compassionate Farm Leave, men may be directed to work on farms under arrangements to be made by G.O.'s.C. and D.O's.C. with Director, Dominion-Provincial Farm Labour Plan.

2. Method of Requesting Soldier for Farm Duty:

Requests for soldiers for Farm Duty will be made in writing by the Director, Dominion-Provincial Farm Labour Plan, to the G.O.C. or D.O.C. concerned. The requests will outline clearly the number of men required, the nature of the work and the rate of pay. They will also indicate clearly to what destination return transportation is required. Upon receipt of the aforesaid, the G.O.C. or D.O.C. may detail the soldier for the duty as requested in accordance with P.C. 5931 dated 24th July, 1943, and will supply the soldier with return transportation to the destination named and meal tickets while travelling, without charge to the soldier.

He will also supply the soldier with a suit of overalls without charge to the soldier. The G.O.C. or D.O.C. will supply the said Director with information from time to time as to the names, units, etc., of personnel detailed for Farm Duty. The said Director will keep the G.O.C. or D.O.C. informed at all times as to the address of the soldier and with the name of the farmer on whose farm the soldier is performing Farm Duty.

3. Priority of Employment:

Questions on priority of employment as between individuals or groups of individuals seeking to obtain soldiers for Farm Duty, as aforesaid, shall be settled by the Director, Dominion-Provincial Farm Labour Plan.

4. Who May be Detailed for Farm Duty:

The personnel from which assistance may be provided are:—

(a) Personnel in disposal wings of Depots;
(b) Personnel in Home War Establishments whom by readjustment and rearrangements, it may be possible to release for the time being. Regard shall be had to the continuing withdrawal of General Service personnel for overseas duty;
(c) Personnel in Operational Units, also having regard to the continuing withdrawal of General Service personnel for overseas duty;
(d) Personnel of the Veterans Guard of Canada.

5. Who May Not be Detailed for Farm Duty:

The following, although eligible for Compassionate Farm Leave, shall not be available for Farm Duty:

(a) G.S. personnel who, by age and Pulhems Profile, are suitable for overseas service;
(b) G.S. or N.R.M.A. personnel who are in the training stream at Training Centres or Schools.

6. Period of Duty and Renewals:

Normally the period of absence of such personnel from their Units will not exceed 30 days, but in exceptional cases, the G.O.C.-in-C. or D.O.C. may authoribe such reasonable extension as they may see fit.

7. Provision of Transportation and Clothing:

As above stated, the Department of National Defence will supply free return transportation, meal tickets and a suit of overalls to all soldiers proceeding on Farm Duty, but the farmer will supply his board and lodging for the period of employment. The Department of Labour will pay to the Department of National Defence the cost of transportation, meal tickets, and suit of overalls on demand.

8. What the Farmer Will Pay:

The Department of Labour will pay to the Department of National Defence for each day a soldier is employed the minimum daily rate per soldier hereinafter set forth:—

(a) Western Canada, to include Military Districts No.'s. 10, 12, 13, and Pacific Command—$4 per diem;
(b) That portion of Ontario which is not included in Military District No. 10—$3.50 per diem;
(c) Quebec, and the Maritime Provinces—$3 per diem.

These rates are subject to any justifiable revision upwards depending on the local circumstances to be determined by an agreement between the Director, Dominion-Provincial Farm Labour Plan, and the G.O.C.-in-C. or D.O.C. concerned. Ordinarily soldiers will not work on Sunday. If, however, it is necessary to work on Sunday, soldiers so working shall receive the same remuneration as for any other day. The Department of Labour will arrange with the farmer to supply board and lodging to the soldier without expense to the soldier.

9. Pay and Allowances of the Soldier:

Personnel detailed for Farm Duty shall continue to be credited with their normal pay and allowances including trades pay and Dependents' Allowance, if payable, but not including subsistence allowance. Upon the termination of such employment, if the amount payable by the farmer to the Department of Labour in respect of the services performed by the soldier exceeds the amount of the aforesaid pay and allowances, the amount of such excess shall be payable to such soldier. This excess will be credited through the Paymaster's accounts of the soldier concerned at the termination of the period of employment under arrangements to be made by the Paymaster-General.

10. Method and Responsibility of Accounting:

It shall be the duty of the Director, Dominion-Provincial Farm Labour Plan, to keep regular time sheets on a pro-forma in quintuplicate to be supplied by the D.O.C. and at the expiration of the employment to obtain the signature of the farmer and the soldier certifying as to the accuracy of the time, rates, etc. These time sheets shall be certified as correct by the said Director and three copies shall be forwarded to the District Paymaster of the District to which the personnel belong, one copy being left with the farmer and the other copy being retained by the Director. The District Paymaster shall make the following distribution of the three copies of the time sheets:—one copy to the Unit Paymaster, two copies to the District Treasury Officer for transmission to the Chief Treasury Officer at N.D.H.Q. The Paymaster-General will issue appropriate accounting instructions and will attach thereto the pro-forma and the time sheet to be taken into use as referred to above.

11. Collection of Accounts from Farmers:

Collection of accounts from the farmers will be made under arrangements to be formulated by the Department of Labour and are not to be collected by the soldier or by any other member of the Department of National Defence.

12. Medical and Dental Treatment, etc.:

Personnel detailed for Farm Duty shall continue to be entitled to medical and dental treatment, hospitalization and all benefits on the same basis as though they were performing ordinary military duty. In the event of illness or injury of the soldier the Director above referred to shall immediately get in touch with the G.O.C. or D.O.C. and arrange for medical attention or hospitalization. In emergency cases the nearest medical assistance will be called. It is of importance however that Medical Officers shall be called and that Military Hospitals shall be used where possible.

Appendix "C"

SPRING LEAVE AND HARVEST LEAVE

1. To Whom Granted:

This leave may be granted to such personnel of the army as can be spared for the purpose of sowing crops, harvesting and seeding in spring or harvest operations, provided, however, that only soldiers having actual experience in farm work will be eligible and such leave will be limited strictly for the purposes its name implies.

2. Method of Application:

Application for spring or harvest leave will be submitted in writing by the soldier to his commanding officer, who will, after investigating, forward it with his recommendation to the G.O.C.-in-C. or D.O.C. concerned. Such applications will not be referred to N.D.H.Q. For the sake of uniformity, applications will be completed on M.F.M. 312, as amended to suit the circumstances.

3. Duration of Spring or Harvest Leave:

The G.O.C.-in-C. or D.O.C. concerned may authorize leave for a period not exceeding two months and may make such investigations as he may deem necessary before approving the same.

4. Transportation:

The cost of transportation will be borne by the soldier.

5. Pay and Allowances:

Spring or harvest leave will be without pay of any kind or allowances of any kind or subsistence and soldiers will not be entitled to medical or dental attention, hospitalization or compensation due to illness, injury or death while on Spring or Harvest Leave.

6. Transfer to District Depots in Certain Cases:

Personnel granted leave in excess of thirty-one days will be transferred to the District Depot of the Military District in which such leave is to be spent provided, however, that such transfer will be made effective the day following the commencement of leave. On such transfer the documents and other correspondence pertaining to the leave will be despatched immediately to the appropriate District Depot, to which depot the soldier will report on the expiration of his leave when he will be medically examined and if found fit, will be

completed with clothing and equipment and will be either despatched with his documents to his former unit or otherwise disposed of by the District Officer Commanding.

7. Clothing, Equipment, etc., on Proceeding on Spring or Harvest Leave:

Where a soldier is granted spring or harvest leave under the provisions of this Order, he will be permitted to take with him necessary clothing and uniform. Except when specially authorized otherwise by the G.O.C.-in-C. or D.O.C. concerned, he will only be authorized to wear his uniform while travelling to the place where he will reside during leave and while returning from such place on the expiration of his leave. The cost of making good any deficiency in clothing or equipment issued to the soldier, as shown on his M.F.C. 800, before proceeding on leave, or found to be deficient upon his return from leave, will be recovered in the usual manner.

8. Furlough Form to be Furnished Soldier on Proceeding on Spring or Harvest Leave:

Before proceeding on leave the soldier will be given Furlough Form M.F.B. 322, with those portions of instructions on reverse side thereof which deal with dress and medical attention while on leave, struck out and initialled by the officer authorized to issue same. The soldier will be given explicit instructions in writing from his officer commanding which will include:—

(a) Conditions governing wearing of uniform;
(b) Cessation of pay and allowances;
(c) His being subject to recall at any time on 48 hours' notice;
(d) His non-entitlement to dental and medical care during leave;
(e) When and to whom, and how to apply if extension of leave required;
(f) When, where, and to whom to report on expiration of leave required;
(g) The necessity of obtaining his commanding officer's permission (under C.A.R.O. 2242) to marry to be eligible for dependents' allowance on return from leave.

9. Medical Examination of Soldier Proceeding on Spring or Harvest Leave:

As the period of spring or harvest leave authorized does not exceed sixty days, no medical examination will be necessary before proceeding on such leave. Should a soldier die or be killed while on leave, either during or as a direct result of his employment, but not otherwise, he will be entitled to a military funeral as a soldier, in accordance with Article 220, F.R. & I. (Canada).

Appendix "D"

ORDER MADE UNDER P.C. 5931 OF 1943

(Referred to in para. 5 (b) of R.O. 3456)

1. All members of active units and formations of the military forces of Canada including persons who pursuant to the provisions of the National Resources Mobilization Act are attached thereto or are serving therewith may, on the order of the appropriate military authorities, be required to perform services and duties relating or in any way pertaining to the development, operation and maintentance of ranches, farms and gardens and the stock, buildings and equipment thereof.

2. All orders given or issued by the appropriate military authorities pursuant to the provisions of this Order shall be deemed to be lawful orders given by a superior officer, disobedience of which shall constitute an offence under Section 9 of the Army Act and said Section shall, as a part of the law of Canada, be construed accordingly.

3. All members of the Military Forces of Canada performing services or duties relating or in any way pertaining to the development, operation or maintenance of ranches, farms or gardens and the stock and equipment thereof, pursuant to the provisions of this Order shall for the purposes of the Pension Act, The National Resources Mobilization Act, the Militia Act, the War Measures Act and all Regulations and Orders made thereunder, be deemed to be performing military training, service and duty as prescribed therein.

4. The Minister of National Defence and the Minister of Labour are hereby authorized and directed to make all necessary financial arrangements relating to the employment of members of the Military Forces of Canada on ranches, farms or in gardens pursuant to the provisions of this Order including the charges to be made therefor and the disposal of the funds realized thereby. Each member of the Military Forces of Canada, while performing such services or duties as are mentioned in this Order shall continue to receive his military pay and allowances, including Dependents' Allowance. Upon the termination of such services or duties, if the amount of the charges so arranged by the Ministers of National Defence and Labour as being payable in respect of his performing such services or duties exceeds the amount of the aforesaid military pay and allowances, the amount of such excess shall be payable to such members.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, March 17, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF TRANSPORT

Mr. HOWE: Mr. Chairman, having given the committee a statement on civil aviation I now desire to place before it the war estimates of the air services branch of the Department of Transport, for which I am responsible. The estimates this year for this branch total $6,501,735 as against last year's estimates which totalled $6,885,085. These estimates are broken down into three items, one for radio services, the second for meteorological services, and the third for civil aviation. I will now table these and ask that they be printed in *Hansard*, with copies distributed to hon. members for the purposes of this discussion.

The CHAIRMAN: By unanimous consent.

The items follow:

Air Services Branch—Department of Transport
War Expenditures and Estimates

	(1) Estimated requirements 1943-44	(2) Estimated expenditure 1943-44	(3) Estimated requirements 1944-45
1. Radio services	$2,458,925	$2,086,000	$2,666,045 (Revote 97,000)
2. Meteorological services	1,432,860	1,432,860	1,670,480
3. Civil aviation:			
Extra airport traffic control systems	680,000	680,000	736,450
Operation and maintenance of municipal (terminal) airports	336,600	336,600	398,260
Additional facilities—Moncton to Newfoundland airline	976,700	976,700	130,500 (Revote 78,500)
Improvements to airports	800,000	800,000	500,000
Canadian government transatlantic air service	200,000	200,000	400,000
	$6,885,085	$6,512,160	$6,501,735

Mr. STIRLING: Is this a portion of what appeared under Munitions and Supply in the statement of the Minister of Finance on February 11? Is this part of the $183,000,000 which is the share of the Minister of Munitions and Supply of the large total?

Mr. HOWE: No; there is a separate item under the Department of Transport dealing with the war estimates of that department, and these are the items included in that estimate.

Mr. KNOWLES: The subject with which we are dealing at the present time is recognized by all hon. members as of great importance—

Mr. GRAYDON: On a point of order, Mr. Chairman, I take it that the hon. member for Winnipeg North Centre is about to commence a discussion with respect to the air services branch of the Department of Transport. Before that is done I should like to make clear the position of the opposition as to the matter of procedure, and the sequence in which the departments are taken up under the war appropriation bill. I want to raise objection to what is being done, having in mind the statement of the government on Friday in connection with this matter. It was my understanding that the Department of Munitions and Supply would go on to-day, and I took it for granted that the minister would make his ordinary statement in connection with his department. As a matter of fact I think I am supported in that by the exchange which took place between the hon. member for Yale (Mr. Stirling) and the Prime Minister (Mr. Mackenzie King). At the conclusion of the statement of the Minister of Munitions and Supply I find this, as reported at page 1587 of *Hansard:*

Mr. Stirling: The understanding was that this matter would be set aside to a future date so that it could be digested before the discussion continued.

The Prime Minister then indicated that that was a correct interpretation of the situation. Then when the business of the house was under discussion the whole question with respect to the ministry of munitions and supply was indicated as the procedure for to-day. Upon that basis our arrangements were made. To say the least I think it is unfair to ask us to go on with the discussion with respect to civil aviation, and I say that for one or two reasons which I believe will at once be understood and appreciated. First of all, this is the next sitting day after the day on which one of the major statements of the whole session was made. That statement involves one of the most important pieces of government policy so far announced. In addition to that, the report of Trans-Canada Air Lines was tabled to-day and referred to one of the committees of the house, but we have not yet seen it. Besides, we have now before us, for the first time, placed upon *Hansard* by the minister himself, the estimates for the air services branch of the Department of Transport.

I believe the committee will see clearly that to ask us to go on without any notice having been given is not fair. I would ask the government to review the position in order that at least there might be an opportunity to give closer study to one of the major matters being brought forward by the government. The Prime Minister will perhaps be the first to recognize the justice and wisdom of my suggestion. We do not ask for any lengthy period of time, because I do not think that would be proper. The matter should be discussed as early as possible. On the other hand I ask the Prime Minister if he will not consent to have the matter laid over, so that we may have an opportunity to give it some study before we are asked to take part in the debate.

Mr. MACKENZIE KING: My recollection as to what was discussed with my colleagues

in the matter of procedure was that it would be advisable to have the statement by the minister with respect to civil aviation made one week, and have the debate thereon the following week. In that way we would be sure to give the opposition over the week-end time to go carefully into the statement the minister might make. All hon. members will have assumed that at some time during the session there would be a debate on civil aviation. We had in mind that in addition to what they might have intended to say, hon members would wish to review carefully the minister's statement. For that reason it was decided not to go on with the debate in one week, but to leave it over until the following week.

I notice, in looking at *Hansard* for March 16, that I said as reported at page 1514:

If I may, I would change that order now,—

Referring to something that had been arranged.

—and say that to-morrow the Minister of Munitions and Supply will make a statement with respect to civil aviation, and that he will not follow either this afternoon or this evening the Minister of National Defence for Naval Services.

At the conclusion of that discussion the minister said:

No. The intention was to give the statement on Friday, and the debate may go on on Monday, or later.

So that the minister had mentioned that the debate would go on on Monday.

Mr. GRAYDON: "Or later."

Mr. MACKENZIE KING: Yes, or later. That is always a proviso. We were not committed to any particular order of procedure. Something might have prevented the debate from going on to-day—for example, moving into supply, if it had been decided to go into supply first of all.

On Friday, March 17, the hon. member for Yale is reported to have said:

The understanding was that this matter would be set aside to a future date so that it could be digested before the discussion continued.

Mr. Mackenzie King: That is correct.

That was on Friday. On Friday evening, the Minister of Pensions and National Health (Mr. Mackenzie) said:

On Monday we shall take up first of all the resolution on the war appropriation and the estimates of the Minister of Munitions and Supply, and we may call two items in order of supply during the day.

So that really there has been an effort to anticipate the point my hon. friend is now raising, namely that of not proceeding with the debate without giving ample opportunity for careful consideration of the minister's statement. Earlier to-day, replying to the hon. member for Temiscouata (Mr. Pouliot), I pointed out that it is very difficult so to plan as to suit the convenience of hon. members at all times. I have in mind, in connection with proceeding to-day, what I think hon. members will realize is an important aspect of the situation, namely that we have only two more weeks of sittings of the house before the adjournment for Easter recess. I am sure that if at all possible it would be advisable to have assent given to the war appropriation bill and one or two other measures before that adjournment. That is the reason the government is anxious to hold to the order of procedure as announced. Perhaps it would suit the convenience of my hon. friend and his friends if we allowed the debate to proceed for a time. It might be adjourned at six o'clock, and we could take up something else this evening, and later continue the discussion on civil aviation—say to-morrow.

Mr. GRAYDON: I would not have raised the matter at all had it not been for the fact that there was a good deal of confusion with respect to the business of the house, as indicated on Friday night. It was not clear to me, and I think perhaps it would not be clear to the Prime Minister, either, because it is not indicated that the Department of Transport, which covers the civil air services, would be before us to-day. The very fact that the Minister of Munitions and Supply said that it would be Monday, or later, indicated that the procedure would be through agreement with us. We assumed the minister would go on on Thursday with his statement. Then the Prime Minister changed the order of business, and we raised no objection at that time because we expected we would have a somewhat longer time to study the matter. However we are cramped in the attention we wish to give to this important matter of civil aviation. Were there any possibility of delaying the war appropriation measure, I would not have made the suggestion; but there is no possibility of such delay, because it only involves the minister's going on with another item.

Mr. MACKENZIE KING: I believe the minister intends making an important statement—I do not know whether it will be lengthy or not—with regard to munitions and supply generally. I understand he would prefer to make that statement to-morrow. We might make it the first order of business at that time. I have suggested that this debate be allowed to proceed, because there are some

hon. members who are prepared to discuss the matter this afternoon. Discussion might be continued until six o'clock, and then this evening we could take up something else, thereby giving my hon. friend and his friends the opportunity they wish to have.

Mr. GRAYDON: Yes.

Mr. CRUICKSHANK: I wonder if the leader of the opposition—

Mr. KNOWLES: I would remind the committee that this is my speech.

Mr. CRUICKSHANK: Will the leader of the opposition inform the committee where he got his instructions as to the stand he is to take in this matter?

Mr. GRAYDON: I suggest that was somewhat uncalled for. My hon. friend is always fairly charitable toward me. I was called away on a rather sad mission on Friday, and it was not possible for me to be here. I am sorry he did not see fit to be a little more charitable in the observations he has just made.

The CHAIRMAN: If I may be allowed to make a statement: We have before us a summary of the air services branch, in which there are three items. I would ask the minister if we are to have the general discussion on the first item, or would it be on item 3, which has special reference to civil aviation?

Mr. HOWE: I think we could have a general discussion on item No. 1.

1. Radio services, $2,666,045.

Mr. KNOWLES: Mr. Chairman, I trust you will time me from this moment rather than from the moment I actually started, in view of the rather prolonged interruption. In this parliament we are dealing with a great many matters of extreme importance. Time will sort them out as to their relative significance. When that process has been completed I believe that the manner in which we deal with this question of air transport will loom large in the history of our time. it is only a few decades since the parliament of Canada was called upon to deal with matters pertaining to the rapid expansion of our railroad transportation facilities. I hope that we will avoid some of the mistakes that were made in those days and possess the imagination to sense what air transport will mean to civilization in Canada and throughout the world. I hope also that we will take the necessary steps to see to it that the full benefit of air transport is secured to the people of this country.

I should like to make a few remarks about the importance of air transport, dealing both with the domestic and the international fields. Domestically it is obvious that travel by air is revolutionary, but there are some other things we should not lose sight of. Travel by air to the extent to which it is now possible will add tremendously to the sum total of the goods and services we shall be able to produce in this country. In a real sense air transport adds to the wealth of Canada. If we properly develop our facilities for air transport it should make possible greater travel on the part of our people between the various sections of our country, and should aid us in our desire to increase the knowledge of our people about Canada as a whole and develop our sense of nationhood and national unity.

Air transport properly developed should bring to remote areas in our country medical and hospital services and facilities of the kind which have been denied to the people in those areas. With a little imagination we should be able to realize that the full development of air transport may have an important bearing upon industry and upon the housing situation in this country. In due course air transport may make it possible to decentralize industry to an extent not hitherto possible. It introduces a new factor into the economic picture so far as industry is concerned. It is possible that a different civilization may grow up because of this revolutionary development.

In this industrial age thus far it has been the practice to crowd people together in urban areas, with the resultant development of many bad features such as slum conditions and so on. We recognize the desirability of people being able to spread out into rural areas and get more fresh air and sunshine, and I think we should let our imagination bring home to us the fact that the proper development of air transport may make possible better housing and living conditions for our people right across the country.

Another feature of our life which will be affected by the full development of air transport is life in the north country. Up to the present Canada has been thought of as strip of country running across the northern border of the country to the south. It is only in recent years that we have begun to realize the potentialities of our north country, and I submit that the development of air travel will change those potentialities into realities.

On the international front it is recognized that this modern means of transport is of great importance. We can readily realize what air transport, if not properly controlled, may bring about in the way of unspeakable

horrors in future wars. On the other hand, air transport, properly controlled, can aid in the establishment of permanent peace. On the one hand, it can do that by increasing the sum total of goods and services, increasing the wealth available in the world and in that positive way helping to bring about a better world in which war may not have to take place.

On the other hand, in attacking this problem of international air transport there is the possibility of developing cooperation among the nations. This cooperation can be built up in a functional way, as has already been referred to, as well as by the development of realistic organizations for the establishment and maintenance of world peace. I submit, therefore, that on every count this subject is one of great importance.

On behalf of the group with which I am associated I wish to say without hesitation that we welcome the statement made on Friday by the Minister of Munitions and Supply. I shall have some things to say about it in a few minutes which are critical, but in the main my criticism will be that it does not go far enough. Before making that criticism I want to say again that we welcome the statement and commend the government for having made known its position. I shall deal first with the international aspect of the statement.

May I first voice the hope that on this issue parliament will indicate that it stands behind the government as far as it has gone in preparing a draft international agreement. When the government sends its representatives to any international conference they should know that they can press for the implementation of everything in this proposed international convention. They should know that if everything therein is adopted it will be supported by any succeeding government. As I have already indicated, my point is that the draft convention should go further but to the extent it does go it should have the support of all groups in this house.

Having made the statement that in my view the proposed draft convention does not go far enough, it becomes my responsibility to indicate wherein I think it falls short. May I say first that when one approaches the whole problem of international control of air transport there are some basic matters that have to be agreed to. I feel that the minister stated those basic matters quite clearly, particularly when he referred to the necessity of agreeing to the right of innocent passage, and freedom of transit, and also his further statement with reference to freedom of commercial outlet within the limitations of certain regulations.

It might not be amiss to take a moment to look at the alternatives to international control of air transport. As I see it, there are two alternatives, and they are both extreme. On the one hand there is the possibility of what is miscalled the freedom of the air, the proposed right of companies anywhere and everywhere to fly anywhere and everywhere. I submit that if that were the case not only would we in Canada suffer materially but it would lead to all sorts of exploitation and rivalry and would be the basis for further disastrous wars. The other extreme from what I have said is miscalled the freedom of the air is the concept of narrow nationalism, the idea, for example, that each nation should set up boundaries around its own territory and refuse to allow planes in from other countries. One can see on that basis that we should soon be sidetracked in Canada. We should lose the advantage of our otherwise favourable position; and here too you will have not only the restricting of the people of the world with regard to the advantages of air transport but a development of ill-feeling and again a basis for international ill-will. Therefore I think we should recognize at the outset that either one of those extremes is out, and certainly should be out so far as Canada is concerned. Our representatives should go into any discussion on this question pledged to the idea of the international control of air transport.

As I see it, when one starts to discuss international control of air transport there are various matters that have to be considered. I see those matters falling on three different levels. On the first level there are such matters as safety regulations, rules of flying, standards of aircraft, standards of competency of the crews, ground equipment, meteorlogical services, navigational aids, and so on. On the second level are matters relating to the licensing of air routes, the arranging for quotas, frequencies and rates, and also the whole concept of planning and fostering the development of various air routes in different parts of the world. I pause for a moment to suggest that because one uses the word "licensing" in that connection it does not mean that the second level function is merely a restrictive function. I emphasize the fact that on this level initiative can be taken for the fostering and the developing of lines for the good of the whole world. But in addition to these two levels there is a third, namely, the level of operation of international air trunk routes, and seeing to it that the operation of such trunk routes will secure not to the owners of one

company in one country but to the people of the world as a whole the full advantage of international air transport.

I think my criticism of the government's statement is obvious now that I have indicated these three levels. As I see the picture, the government has taken a fairly clear stand with respect to the matters which I say fall on the first and second levels. There are some details in the draft international air transport convention about which I shall make comments in a moment or two; but first of all I want to deal with the failure of the convention to refer to any of the matters which I have placed on the third level, namely, the level of international operation of international air transport. I should like to point out in that connection that my idea that this phase of the subject should be considered is not only ours but is contained in the statement which was issued by Australia and New Zealand on January 21, 1944. I should like to place on *Hansard* again one or two sections of the Australia-New Zealand agreement. Section 18 under civil aviation reads as follows:

18. The two governments declare that the air services using the international air trunk routes should be operated by an international air transport authority.

19. The two governments support the principles that

(a) full control of the international air trunk routes and the ownership of all aircraft and ancillary equipment should be vested in the international air transport authority; and

(b) the international air trunk routes should themselves be specified in the international agreement referred to in the next succeeding clause.

The point I wish to make in urging that this other phase of the subject should be considered is that I do not altogether agree with the statement of the minister, or with the parts that express the same thought in paragraph 3 of the summary or in article X, section 4 of the proposed convention, that it is of no concern to us who owns the lines from other countries which are participating in international air services. My contention is that if you have large private corporations from other countries participating in those international air services without an international air transport authority operating it, that authority merely licensing them, you have all the pressure of private ownership on rates to make all possible profit out of international air transport, and to that extent you have deprived the people of the world of some of the benefits of this modern means of travel which we feel should be secured to them.

I would point out also that under the terms of the draft convention we in this country would be putting public money into the providing of air fields and ground services of one kind or another for those international lines. I think it is of concern to us whether that is to result in increased private profit to privately owned companies in other countries, operating into Canada, or whether it is to result in increased benefit to the people of other countries and to the whole world. In other words, I want to urge upon the government that it should consider going a step further than it has in the agreement that has been tabled.

There are one or two points of detail in the draft convention that I should like to comment on briefly. For example, I feel that we should be given more detail as to the basis for determining the relative importance to each state of international air services and of each state to international air services. This matter is referred to in paragraph 4 of the summary, and also in article IV, section 1, of the convention, and article V, section 1 of the convention. On the basis of this relative importance will be determined the membership in the proposed assembly, the membership of the board, and the membership of the regional council. It should be readily seen that this is a matter of great importance, and I feel that more detail should have been given. Obviously the basis cannot be determined solely with respect to population, solely with respect to geographical size or geographical location. A great many factors enter into the picture. I repeat that some detail should have been given; that we should know just what the view of the Canadian government is on this matter.

Then with respect to trans-frontier services, or services between two contiguous countries, I feel that the convention leaves the matter not as clear as it might be. In some sections it says that services between two contiguous countries will be excepted from the provisions of this convention; in others it says that services between any two countries may be worked out by themselves subject to the provisions of this convention, including specifically the provisions with respect to licences. I am making two points in that connection: first, that the matter should be made clearer than it is; second, that two contiguous countries such as the United States and Canada should have a certain amount of latitude in making agreements for what are called trans-frontier services; at the same time they should be subject to review by regional councils such as are provided for in the convention. While it may seem logical for two

countries such as the United States and Canada not to be subject to such a review, if you allow these bilateral agreements all over the world you can very soon weaken the position of the regional councils and of the whole attempt to establish uniformity of service and standards throughout the world. If private firms in some countries are stumbling blocks in this matter and represent the reason why the government is a bit timid, I would urge that into a gathering of this kind governmental representatives should go, not with the compromise that they hope to come out with, but with the most desirable position, and if they have to compromise at least they will not have had to give away too much as a result of that situation.

I would therefore urge these points on the government with respect to the international aspect of this whole situation. Nevertheless I repeat what I said earlier, that as far as the draft convention goes—and I have not only digested it over the weekend but have enjoyed studying it—it seems to me it should have the support of this parliament.

May I now turn to the domestic side of the picture. I should like first of all to say that the pride which the minister expressed the other day in Trans-Canada Air Lines, especially his pride in its splendid record of safety, is one that is shared by the people of Canada from coast to coast. We are all very proud of our own Trans-Canada Air Lines.

With respect to the announcement that the minister made the other day to the effect that railway companies must within a year after the conclusion of the European war divest themselves of their air lines, I want to say that although I am no defender of the present government, the Minister of Munitions and Supply is to be congratulated on at last having lost patience with the Canadian Pacific in this matter. He put on *Hansard* facts which are the basis of his having lost his patience, if I may put it that way. First of all, the position which Canadian Pacific Air Lines now holds in this country has been made possible, not by the Canadian Pacific Air Lines, but in the first instance by the pioneering which was done by bush pilots down through the years. The minister pointed out that the Canadian Pacific was not in the picture for a great many years. It came along with its huge financial resources and was able to buy up all but one of the private companies in the field. As a matter of fact, I believe, the one which they did not buy up was not organized at the time Canadian Pacific Air Lines came into the field, less than three years ago.

The minister also pointed out the other day, although in this instance I do not know whether he was condemning Canadian Pacific Air Lines or condemning himself, that whereas Trans-Canada Air Lines has been unable to get additional transport planes during the course of the war, somehow or other it has been possible for the Canadian Pacific Air Lines to get additional planes because of the work that it was doing on the northwest staging route. I am still puzzled about that. I feel that the minister not only should condemn Canadian Pacific Air Lines for what they have done in this connection, but should answer the question why it was possible for them to get extra planes and at the same time not possible for Trans-Canada Air Lines to do so. I understand they now have more planes than Trans-Canada Air Lines has, and this at a time when the United States commercial air lines are operating their present services with little more than half the number of planes they had at the outbreak of the war. This is an example of the special privilege which this company has enjoyed, and it is on the basis of this special privilege that they have been able to build up the huge monopoly they have at the present time. Not only have they exploited the war situation in this way, but Canadian Pacific Air Lines is playing on sectional interests in various parts of the country, getting municipalities and councils to send in resolutions of one kind and another, and doing everything it can be threaten the position of our own publicly owned Trans-Canada Air Lines.

The Minister of Munitions and Supply has had long experience of this kind of thing. He did not lose his patience overnight. I was interested in reading the other day some of the debate in 1937, to find this from the minister, as reported in *Hansard* of that year, pages 2216 and 2217. The Minister of Munitions and Supply is speaking:

> The question now arises: Have we invited the private interests to participate? That question was asked. May I say we did not need to invite them. They came from every part of Canada and the United States, and put on the most persistent lobby in Ottawa that I have ever seen. The only way we could make progress was to absolutely refuse to talk to them. We said, "Go back home...."

I am glad, in view of the intervening experiences which the minister has had with private enterprise endeavouring to build up, on the basis of the efforts of little people, a huge monopoly, that the minister has taken the strong stand he has in this matter. Not only has Canadian Pacific Air Lines built up its strong position at the present time on the basis of the factors which I have laid down,

but it has done so with considerable government assistance. The minister mentioned the other day the part which air mail contracts have played in the development of air service down through the years, and not many days ago he gave figures as to the amount of government money which is going into the building of routes such as that from Edmonton to Whitehorse. He gave the figure at that time as about $46,000,000. In addition to that $46,000,000 of capital cost, I have here information which was given in sessional paper No. 213 of this year when I asked for the annual operating cost of the Edmonton to Whitehorse route and also the annual revenues from companies flying over that route. In 1943 it cost the government, to maintain that route, $337,835.63. The total amount of revenue which the government received from the only private company flying over that route, which was the Yukon Southern Air Transport Limited, fully owned by the Canadian Pacific, was only $30,276.05. In other words, there simply is no such thing as private enterprise in the field of air transport; what you have is the government providing the air fields, the air routes, the meteorological services and the other things which are necessary to make possible the flying of these planes, at almost no cost to the private company; you have the bush pilots of the early days developing these routes; and then you have private finance in the hands of the Canadian Pacific coming along at the last minute and cashing in on the whole works.

It is quite interesting to note, in a Gallup poll which was published just a day or two ago, some figures with respect to this whole question. I know that if the hon. member for Broadview hears me mention "Gallup poll" he will put in his crack about it. Nevertheless the figures are interesting. A vote was taken by these people as to what the Canadian public wants in regard to the ownership of airlines, and these were the figures: Government ownership, forty-four per cent; private ownership, eighteen per cent; a combination of both, twenty-eight per cent; undecided, ten per cent. If you take these figures, eliminating the ten per cent who do not know what they want and consider the rest, you find that only twenty per cent want unadulterated private ownership while the other eighty per cent want either government ownership or a combination of the two.

I suggest, therefore, to the Minister of Munitions and Supply and the government that they are moving in the direction of the thought of the Canadian people when they look away from private monopoly in air transport and toward the strengthening of the people's position as expressed in government ownership. But now, in spite of the fact that the minister has taken the stand he has, namely, that the principle of non-profit and non-competitive operation should rule in air transport, I am afraid that the proposal he made the other day, although we welcome it, does not go far enough. I refer to his statement that within a year after the war the Canadian Pacific Railway, for example, must divest itself of its ownership of airlines, and also his statement that from now on no licences to operate new routes will be given to any railway operating airlines.

That is good, but I cannot help reminding the committee of the fact that once upon a time the Aluminum Company of America found it necessary to divest itself of ownership of the Aluminum Company of Canada, and what did that mean? Simply, that it was transferred to Aluminium Limited, so that we still have the same people in the background operating what has become a world cartel and drawing to themselves the profits from that operation.

I suggest that this is the question to be looked at here. It is not good enough merely to tell the Canadian Pacific Railway that they must divest themselves of ownership of Canadian Pacific Air Lines. It will still be possible, under a separate name, for a private monopoly to be built up comprising the tremendous hold that Canadian Pacific Air Lines now have, which not only will challenge the position of Trans-Canada Air Lines but will interfere with the principle which I have said is important, namely, that we should secure for the people of Canada the full benefit of this modern development of air transport.

I say, therefore, that on this domestic front the government should go considerably further, and I would suggest at least two or three steps which in my opinion should be taken. I believe, for example, that the northwest staging route from Edmonton to White Horse and on into Alaska should be taken over and made part of Trans-Canada Air Lines because of the importance of that route in flying to Asia. Similarly, I feel that the route down the Mackenzie, because of its importance in the development of Canada's northland, where so much mineral wealth is located, which by the way is largely under the control of the Consolidated Mining and Smelting Company, with its Canadian Pacific Railway connection, should be nationalized and made part of Trans-Canada Air Lines. I would say the same about the route being developed to Labrador, which may become very important in the services to Europe.

If I had time I would make further suggestions along this line, but certainly I suggest that the government should take further steps toward nationalizing these sections of the present Canadian Pacific Air Lines.

There are other matters I should like to discuss but my time will not permit. However, I would express concurrence in the idea of setting up an air transport board, and I am particularly pleased at the fact that it is to be not just a judicial body, but one that is to act as an instrument of government policy, and that its purpose will be to develop and foster the extension of air services, air fields, air routes, research into new kinds of planes, construction and so on. That should be the function of such a body. It should not be just a judicial or restrictive organization but a body which in the name of the people of Canada takes the initiative to develop these modern means of transportation to see to it that its full and richest benefits shall come to and be secured to the people of Canada as a whole.

My time is just about up and I shall draw to a close, but before I do so I should like to quote from a gentleman who was a member of this house some years ago and who had some views on this subject. I refer to the then Right Hon. R. B. Bennett. Speaking in 1937 in the debate on the Trans-Canada Air Lines bill, as reported at pages 2210, 2211 and 2212, of *Hansard* of that year, these are some of the things that Mr. Bennett said:

> I submit that in the light of the experience we have had in this country, if we are going into this air line business, we should own it from the start and not later.

Mr. Woodsworth: Hear, hear.

Later on, Mr. Bennett had this to say:

> But I do now implore the minister not to part with this property. To-night the field is clear. To-night no franchise encumbers the ground. To-night we stand in a position to create by act of this parliament an enterprise that will have complete control of aerial navigation between the Atlantic and the Pacific. We have that right to-night. If we pass this measure—

That is, the bill in the form in which it stood at that time.

> —and hand this right over, not to the crown, but to a body of shareholders and provide that the crown may buy it back sometime in the future if it so desires, we shall be going in the wrong direction. I plead with the minister to reverse the process, to own the enterprise now, and sell it later, if he so desires. That is the difference between the minister's view and mine of the principles that underlie this measure. I make this suggestion to the minister not because I can be said to be one of those who believe in public ownership and control, for I have not that reputation, but because I have found by grim experience that the condition

> that now exists in Canada with respect to railroads has arisen in consequence of the blunder we made.

That was Mr. Bennett speaking.

> We cannot make a blunder if we keep what we have got, and what we have got to-night is control of the whole matter. It seems to me, therefore, wise to take initial steps to ensure that that control shall be retained by the action of this parliament and if we desire later to terminate it or to part with it, we may do so through an act of this house and as a result of the intelligent expression of opinion by members of parliament.
>
> I have no desire to go into the matter at greater length, nor do I wish at this moment to go into details, because that will have to be done in committee. But I do hope that the minister will not part with control as this bill provides—control which in my judgment is so essential to our success in view of all the difficulties that will confront us—and we shall then be in a position to cope with the situation in a manner that will be denied us if we adopt the principle of this measure.

As I understand it, Mr. Bennett was stating an obvious fact, that it is a great deal easier to hold on to what you have than it is to try to get it back afterwards, and I suggest to the minister and to the government that they have learned this from bitter experience even in the last year. It is less than a year since the Prime Minister made his very important statement of the government's policy with respect to civil aviation, at which time he made it clear that Trans-Canada Air Lines was to have the exclusive operation of Canada's main line services and also our international connections, but also at which time he said to private enterprise, "The whole north country is yours". In less than a year this private company has taken advantage of that position to build up this huge monopoly which challenges the position of the government to the point where, even against his will, the Minister of Munitions—I am assuming that it is against his will, although I cannot presume to know what goes on in his mind—has had to take this somewhat drastic action. I suggest that this shows what can happen in a very short time with these powerful monopolies. At the present time we have not lost it all. We own the route from Edmonton to Alaska and in certain other sections. There are areas where final franchises have not been given, where the whole question of what lines are to fly these international routes has not been finally settled. We have not lost this as yet; but if we carry on the policy of saying to private enterprise, whatever monopoly it may be, Canadian Pacific Air Lines or under some other name, "That field is yours," the day will come when we shall regret not having held on to what we have at this time. Therefore I plead with the government, in the domestic field as

on the international front, to look again at this whole programme as laid down in the statement made on Friday. It is good as far as it goes, and I hope we shall not hear from any part of this house any suggestion that the government should take any less of a step than it proposes. But I would urge that it consider going further, both internationally and domestically, along the lines I have suggested.

The CHAIRMAN: Shall the item carry?

Mr. GRAYDON: No, Mr. Chairman. The arrangement which came out of the exchange which took place a short time ago between the Prime Minister and myself was that this debate would be held over to give us an opportunity of continuing at a later date the general discussion in regard to civil aviation. As far as we are concerned that arrangement still holds; perhaps the minister would care to make some statement in that connection. That being so, I should like the opportunity of adjourning this debate, if that is the wish of the government at this time. I had rather thought some other hon. members would want to speak, but if not this would appear to be the only course open at the moment.

Mr. HOWE: I should like to make as much progress as I can without closing the debate on this item. Would my hon. friend object to going on with the war estimates, with the understanding that the last item will not be passed until the discussion has been concluded?

Mr. GRAYDON: I would have no objection, provided that our rights were reserved as far as a general discussion is concerned Perhaps that would take care of the situation. All we are anxious for is an opportunity to give some study to the general situation, but the items may be discussed, I suppose, as far as we are concerned.

Mr. COLDWELL: I think it is regrettable that we cannot go on with this discussion to-day, in order that the matter may be thoroughly considered by the committee. This matter of civil aviation has been before the house since February 11, on which date the statement was placed on *Hansard,* at page 400, and it seems to us that hon. members who wished to speak for particular parties in the house at least should have given the matter a good deal of consideration prior to this. I know we did.

Mr. GRAYDON: Is this a lecture the hon gentleman is giving us?

Mr. COLDWELL: No, I am not giving a lecture, but often I have to listen to lectures from the leader of the opposition, and I see no reason why I, as a member of this house, should not express my regret that the official opposition apparently has been unable to arrive at a decision regarding this particular matter.

Mr. GRAYDON: On a question of privilege, Mr. Chairman, I have seen the leader of the C.C.F. party play this old game of politics quite often, but I have never seen him in quite as good form as he is in to-day. When he suggests that the leader of the opposition or this group has not come to a decision with respect to this matter, I want him to withdraw that remark. As far as we are concerned I thought we had placed our position before the committee so clearly that even the hon. member would not be able to play politics with it. I ask him to go through *Hansard* for last Friday and see if he or anyone else in this house can find the slightest hint or indication that this debate was to be proceeded with this afternoon. If he can do so I might be prepared to accept some of his other statements, but in all fairness I think he must admit that there was tremendous confusion and conflict with respect to the matter.

Mr. COLDWELL: Like the leader of the opposition, I was not present when the statements were made on Friday evening. However, I do recall the statement on Thursday evening. As a result of that statement our party got together on Friday morning and discussed civil aviation, though we did not know what the minister was going to say that afternoon. The matter has been further discussed since that time, as should be quite evident from the comprehensive statement that has been made in behalf of this party, and before we came into the house this afternoon we discussed the matter further. I wish to say to the leader of the opposition that it seems to me unfortunate that we cannot proceed with this matter to-day as we had expected to be able to do. I must accept the word of the hon. gentleman that this is not because his party has been unable to arrive at a decision, but I think I have a right to draw my own conclusions as to what that reason may be, and I shall do so.

I just want to add that I think the hon. member for Winnipeg North Centre (Mr. Knowles) has placed our position before the committee clearly and ably. We do welcome this step. For a long time we have felt that future generations might regret it if we allowed the present situation in this country with regard to aviation to continue. This is a

new mode of transportation. Many of us in this house have done a good deal of flying at one time or another, and we realize perhaps more fully than a great many of the general public that to-day the safety, rapidity and comfort of air transport are bound to have a tremendous effect on the future development of transportation generally.

Another consideration I have in mind is that in this country we have a railway system owned by the people and another owned by a great corporation, the shareholders of which are very largely beyond our borders and the shares and securities of which may come into our hands at the conclusion of the war, thus giving us control of that other great transportation system. I have believed for a long time that while perhaps two well-established organizations within the same transportation field might engage, not in competition in the usual sense but in friendly rivalry, so that one form or one organization may become a yardstick for another form or another organization, yet in a country like this, with its great distances, with the necessity of transportation to join one part of the country to the other, it is essential that we should have a closely integrated and well-knit transportation system. I am pleased to see that the government intends to retain control of this great new facility. I was present the night the former leader of the opposition in this house, the Right Hon. R. B. Bennett, gave the warning which we can say to-day as we look back ought to have been heeded to a greater extent than has been the case. I am glad, therefore, to see that we have an opportunity now of controlling this great new form of transportation. Perchance, when the war is over, in the development of our country we shall have to consider ways and means of integrating all our transportation systems. I recall the years before the war when some hon. members talked about railway deficits, and when proposals were made to tear up railway lines, mostly lines operating under the Canadian National Railways system. We were asked then to relieve ourselves of the financial burden those lines involved when, at the same time, we saw growing up in this country other and unregulated forms of public transportation.

These were, of course, the buses and trucks. We now have transportation by air. My view has always been that our transportation system, in a country like Canada, ought to be intelligently operated and intelligently integrated. For example, trucks and buses ought to be feeders to the railways upon which, to a great extent, because of the heavy freight we must carry long distances, the economic life of this country must depend. That ought to be the situation, rather than have trucks and buses in disastrous competition with our railway systems. That means, of course, that if we are to have a desirable condition we must have the entire system under public rather than private control. The air arm, that great new field of transportation, most assuredly should be under national ownership and control now.

My colleague the hon. member for Winnipeg North Centre has spoken of the international importance of air transportation. I believe we have to consider it not only from the point of view of domestic convenience but also from that of national security and world peace. In the last generation we have had an opportunity to see how civil air transportation has assisted great nations to lay the foundations of military air power. Particularly was that developed in Germany. So that when the war came we found that through her civil air transportation system and the civil training of her young men in the operation of aeroplanes and gliders, she had a potential air force ready and willing to destroy the rest of the world.

Accordingly in the field of international air transportation it becomes apparent and, I think, important, that only public control should function. International cooperation does not mean, in reality, a diminution of national sovereignty. What it really means is, sometimes, the transfer—

Mr. MARTIN: The expansion of it.

Mr. COLDWELL: —of national sovereignty between nations, and an expansion of it into a larger and wider field, so that a nation may have a voice in something greater and larger than its own narrow domestic affairs. I think in the field of civil aviation we must have international understanding, international operation and international control. I should like to see the world go beyond where I think it can go to-day. I should like to see an international system owned internationally; but I realize that under present world conditions not only is that improbable but it is quite out of the question. Hence I believe we must have an intergovernmental regulatory body, one which will license and regulate and enter into arrangements with the nations, so that we may achieve the results we desire, namely efficient transportation, rapid transportation, comfortable transportation, safe transportation—and peace at the end of it all.

I am glad, too, that the minister spoke as he did on Friday. I believe he made the position clear in that regard—because Canada is in a strategic position. The airways of the world cross our country—the airways to Europe,

northeast and over the top of the world, or to the northwest, as we sometimes call it, again going near the cap of the world to Asia and into India. Those of us who have studied the new maps made in recent years showing the air routes of the world over the polar or arctic regions realize that instead of going in the direction in which we thought we should go, namely east or west, we went northwest, northeast, and sometimes even north to get to the places which seemed east or west of us.

As I say, Canada is in a strategic position. The airways to many parts of the world, from the great centres of population in North America to the continents of Europe and Asia, pass over this country. It is well, therefore, that an early start has been made by the government and by parliament in placing before other nations for their consideration the viewpoint—at least, I hope it is the viewpoint—of this entire country, regardless of our political affiliations. I should like to see our government extend air transportation as rapidly as possible into other parts of the world. As soon as we are able to do so, I should like to see Canada establish an air route to South America as well as to Europe and Asia. After all, we have much in common with the progressive peoples to be found in at least some of the South American countries, and there are advantageous trade relationships to be made between us. Therefore I welcome this step forward. I agree also with the criticisms which have already been made, but I think it is well that at this time we should face this great problem and let other nations of the world know where we stand.

In conclusion, may I say that Canada, as far as her population is concerned, is a small nation. But in the field of aviation she is a great nation—one of the three or four leading nations of the world. A great deal of pioneering has been done in Canada, and probably when the history of the war is written it will show that our greatest contribution will have been made in the air. Whether that be so or not, we have in Canada, I believe, a people who are air conscious to an extent greater than applies to people in most countries. We have tremendous opportunity in this field to wield an influence for good out of all proportion to our population or to our size. I hope we shall be able to make that position clear, and to maintain it when the time comes to negotiate agreements with other countries.

Mr. DOUGLAS (Weyburn): I understood the leader of the opposition to say that no arrangement had been made to discuss these items to-day. I find this at page 1624 of *Hansard* for Friday:

> On Monday we shall take up first of all the resolution on the war appropriation and the estimates of the Minister of Munitions and Supply, and we may call two items in order of supply during the day. If we do call them, they are on the Department of the Secretary of the State and civil estimates of munitions and supply. Possibly we may have to discuss further the civil estimates of agriculture, and the house must be prepared to take into consideration at any time Mr. Speaker's report on standing orders.

Mr. Stirling: May I ask what the minister means by saying that we might have to discuss two further items of munitions and supply?

Mr. Mackenzie (Vancouver Centre): It is the intention to call two new items.

Mr. Stirling: Apart from that, we are going into committee on war appropriations and take up munitions and supply?

Mr. Mackenzie (Vancouver Centre): That is correct.

Mr. GRAYDON: That is what we thought.

Mr. HOWE: Perhaps I can clarify this. I am rather surprised at the turn the debate has taken. I had regarded the hon. member for Lake Centre as the specialist on this particular subject. We have been corresponding since early last week, the last correspondence having passed on Thursday. I wrote to him on Wednesday and Tuesday, stating that I hoped to go on on Thursday; I wrote him on Thursday saying that I intended to make my statement on Friday and that the debate would take place on Monday. I understood that that arrangement was satisfactory to him because I received no reply. There was no doubt in my mind that hon. members would be prepared to carry on this debate to-day. Since they are not, perhaps we had better straighten out the future programme. I am willing to meet almost any request that is made, but I think we shall arrange it in this way: to-morrow when the orders of the day are called I shall make my statement on the Department of Munitions and Supply having to do with war supplies. We shall then discuss the items under that heading and when those are finished we shall return to the unfinished items under the present heading. I cannot say when that will be, but I hope no one asks me to change the programme again.

Mr. DOUGLAS (Weyburn): May I finish the suggestion I was making? This is transport, but the whole business of transport has been placed under the care of the Minister of Munitions and Supply. It was generally understood that we could discuss civil aviation which comes under his care, and then discuss the general aspects of the Department of Munitions and Supply after this discussion had been completed.

Mr. GRAYDON: It is not munitions and supply.

Mr. DOUGLAS (Weyburn): Certainly it is.

Mr. GRAYDON: It certainly is not. That is the problem; it should be transport.

Mr. DOUGLAS (Weyburn): It is the part of transport that has been transferred to the Department of Munitions and Supply.

Mr. GRAYDON: You do not transfer departments like that.

Mr. DOUGLAS (Weyburn): I do not think it would be wise to drop this discussion now and have the minister go into the general aspect of his department to-morrow after which we would have a general melee made up of both aspects of the programme. One hon. member will be discussing transport and another will be discussing munitions and supply. I suggest that we should let item No. 1, radio services, stand and then take up the other items. That would leave the leader of the opposition or whoever else is to speak for the official opposition an opportunity to come back to item No. 1. I think it would be better to discuss the other items and get them approved rather than to mix up civil aviation and munitions and supply.

Mr. GRAYDON: I think the minister and I are at one with respect to this. I agreed to go on with the items proposed, but the hon. member to my left says that that was not the arrangement. We are prepared to go on with the items as long as one is left so that there can be a general discussion later on. I do not think there is any disagreement on that.

Mr. HOWE: There is no particular reason why any particular item should be left. We can go on and pass No. 1, pass No. 2 and then discuss No. 3. There is no reason why this discussion should come under item No. 1, which is radio services; it might just as well come under item No. 3, which is civil aviation.

Mr. COLDWELL: It is understood then that civil aviation will be discussed separately from the other items?

Mr. HOWE: Yes.

Mr. COLDWELL: If we are to discuss other items and then come back to civil aviation and have them all mixed up, it will be most unsatisfactory.

Mr. HOWE: It is the place of the government to decide the order of business. At six o'clock we shall drop civil aviation and then go on with the discussion of munitions production. When we finish the munitions production discussion, we shall go back to civil aviation.

Mr. STIRLING: Now we are getting back to what was my understanding on Friday evening. Perhaps I may be allowed to run over the facts as I see them. Last fall the minister returned from the United Kingdom after holding important conferences there. I remember distinctly reading in the press that he had not brought back a draft agreement on this matter but that he would make a statement in the house, obviously after the house opened. Eight weeks have passed and at last we have had the minister's statement. When that statement was delivered we understood clearly that the debate would not then ensue. On Friday night the minister who was speaking for the government explained what the business to-day would be in such a way that I, who had taken it up with him, understood that we were going into other portions of the statement of the Minister of Munitions and Supply. It was not until just before I came into the house this afternoon that I heard that the government had changed its decision and wanted to proceed with civil aviation and permit a debate on the minister's important statement to take place. That change was not entirely convenient to members of the opposition. The arrangement to which the minister is now ready to agree is entirely in accordance with our understanding Friday night and I think it satisfactorily solves the whole matter.

Mr. KNOWLES: If the proposal made a moment ago by the minister is carried out, does it mean that at eight o'clock he will make a statement on other aspects of munitions and supply?

Mr. HOWE: No, to-morrow at three o'clock.

Mr. KNOWLES: What shall we do at eight o'clock tonight?

Mr. HOWE: I cannot say just what the exact programme will be.

Mr. MICHAUD: Possibly item No. 5 on the order paper, which is a resolution standing in the name of the Minister of Finance to raise money by way of loan. Then we shall possibly take up the estimates of the Department of Public Works.

Mr. KNOWLES: Civil supply.

Mr. MICHAUD: And then two items of supply, as announced on Friday night.

The CHAIRMAN: I agree with the statement made by the Minister of Munitions and Supply that we should discuss items No. 1 and 2 and then leave item No. 3, which is civil aviation. Shall I call item No. 1 for discussion?

Mr. KNOWLES: Just before you do that, I think someone should make it more clear what we are to take up at eight o'clock. I still do not understand the situation.

Mr. MICHAUD: I have stated that we shall take up item No. 5 on the order paper and then supply.

Mr. KNOWLES: What supply?

Mr. MICHAUD: Public works and then two items in departments not called yet, Secretary of State and Munitions and Supply civil estimates. That was announced Friday evening.

The CHAIRMAN: Item No. 1:

1. Radio services, $2,666,045.

Mr. GRAYDON: Does this item cover services supplementary to the general radio services?

Mr. HOWE: Yes, these estimates arise wholly out of the war. Many radio beams have been installed between military airports and to provide defence services on the coasts. These are operated by the Department of Transport for the military services. All the items under this heading will disappear when the war is over; they are for purely war services.

Mr. GRAYDON: There would be nothing under this item which would have to do with the short-wave system that is proposed?

Mr. HOWE: No; these are purely war estimates.

Mr. BENCE: Under what item could I discuss the radio service between Winnipeg and Edmonton?

Mr. HOWE: That is a civil item which will be introduced later.

Mr. ROSS (St. Paul's): The minister cannot say very much about these amounts, because they are secret?

Mr. HOWE: Yes; they cannot be discussed in detail, I am afraid.

Item agreed to.

2. Meteorological services, $1,670,480.

Mr. STIRLING: Is there any relationship between this and the meteorological service already carried on throughout Canada for purposes other than war?

Mr. HOWE: The situation is exactly the same. These are items that will disappear when the war ends. The services are installed wholly for war purposes.

Mr. STIRLING: They are not set up as separate stations from those in many instances already in existence and furnishing meteorological service, or are they entirely new stations set up for purposes of war?

Mr. HOWE: They are really expansions of that service for war purposes. When I said that all meteorological stations installed for war purposes would disappear as peace-time services I should qualify that, because we have extended the range of activities in that field and we might wish to retain the extended range. For instance, we have stations along the arctic.

Mr. JOHNSTON (Bow River): Would some of those be taken over by the Trans-Canada service?

Mr. HOWE: I might read what it covers: Meteorological services for (a) Trans-Atlantic ferry service with Dorval as the main centre. There is no civilian Trans-Atlantic line. The item includes teletype installed from Dorval to Newfoundland; (b) Eastern and western air commands and the fleet; (c) Northwest staging route from Edmonton or Vancouver through White Horse to the Alaskan boundary; (d) R.C.A.F. and R.A.F. transport command; (e) R.C.A.F. aeroplane ferry from Kapuskasing. These are services which may be replaced with services for other purposes, but at the moment they are part of the war service. For instance, the ferry command to the United Kingdom is a war service, and the meteorological service that accompanies it is also a war service.

Mr. FRASER (Peterborough West): These stations are built so that they can be taken over later on?

Mr. HOWE: Yes. They are civilian stations, operated by civilians. They are stations that would not be operated had the war not happened. As I say, we might operate them for another purpose after the war, such as the Atlantic ferry service. The only Atlantic ferry service Canada has to-day is a war service.

Mr. FRASER (Peterborough West): The minister mentioned the Edmonton-Alaska staging route. If that service is to be taken over by civil aviation you would need the stations, would you not?

Mr. HOWE: Yes. If there is a civilian plane service after the war, as I presume there will be, then this vote will be transferred to the civil vote and continued as civil aviation.

Mr. FRASER (Peterborough West): Would not a service like that help your navy and navigation generally after the war, especially if a new route is opened up and you have planes not only inside the coast but on the coast?

Mr. HOWE: I presume there will be a civilian service after the war. The point I am making is that there are no civilian services there to-day and therefore this comes under the war vote and not a civil vote.

Mr. FRASER (Peterborough West): The thought I had in mind was this: Have you in mind all the time that some of these stations will be taken over on a permanent basis?

Mr. HOWE: Yes. We are working with a single purpose in mind at the moment; we are working for war.

Mr. FRASER (Peterborough West): I know that.

Mr. HOWE: We are mindful of the fact that facilities installed for war will undoubtedly be required for peace.

Mr. NICHOLSON: Has the minister a break-down showing the cost of the service in the northwest staging route, and how much the Canadian Pacific Air Lines pay for the meteorological services supplied by the Department of Transport?

Mr. HOWE: The estimate for the meteorological work included in this item on the northwest staging route is $317,000. I may say that no one pays for weather service. Weather service is paid for by the government as a service to all aviation.

Mr. GILLIS: With respect to the minister's statement that the meteorological services would disappear after the war, may I say that I cannot see it in that way. I am interested in the Trans-Canada Air Lines plane service made available to Sydney since the war. That service serves the whole area around that section of the country. They land on a R.C.A.F. field which is a large well-developed field for war purposes. In effect the minister's statement is that that service would disappear when the war is over. That would mean a discontinuation of the Trans-Canada Air Lines plane service now available in that area because of the war.

Mr. HOWE: May I clarify that? My hon. friend is speaking of a service that is not included in this vote. That is a civil aviation service and it is paid for out of the civil vote. This is a war vote.

Mr. STIRLING: Does the item of $1,670,480 cover the purchase of a considerable number of instruments for this purpose?

Mr. HOWE: This is primarily the cost of operating.

Mr. STIRLING: Where would the instruments come in?

Mr. HOWE: Material, supplies and equipment, $157,000, are included in this item.

Mr. STIRLING: Is there a vote elsewhere for more instruments than the minister has just mentioned?

[Mr. Howe.]

Mr. HOWE: That is all. I can read the break-down of the item: salaries, $784,723; war duty supplement—I may say that applies to the war vote—$244,860; cost of living bonuses, $64,000; living allowances, $55,360; contributions to unemployment insurance fund, $5,000; weather observer contracts, $21,490; telephone and telegrams, $31,000; teletype, $110,000; travelling expenses, $32,000; printing and stationery, $28,000; materials, supplies and equipment, $157,000; construction, $59,000; freight, express and cartage, $62,000; sundries, $16,047. That makes a total of $1,670,480.

Mr. KNOWLES: In reply to the question asked by the hon. member for Mackenzie a little while ago the minister said that private air lines did not pay for meteorological services. May I ask on what basis payment is made to the government by private air lines over such a route as the northwest staging route? What services do they pay for in the figure that I gave earlier this afternoon? The figure I referred to for 1943 was roughly $30,000.

Mr. HOWE: Payment is made on the basis of a fee for each landing. Each time a plane lands at an airport it pays a fee for doing so. It also pays for the communication services from the plane to the ground; that is the telephone and telegraph services from the plane to the ground. Where the government owns the ground station, each message which it receives from a plane carries with it a fee. These are a means of obtaining revenue from privately-owned planes or Trans-Canada planes. All planes flying pay the same scale of fees.

Mr. STIRLING: I suppose one can say that the whole of the meteorological services in connection with such fields as Gander and Goose come under this vote?

Mr. HOWE: Yes.

Mr. STIRLING: What about those which were carried on for Hudson bay and Hudson bay strait and localities up there? Are they still carried on, and come under this?

Mr. HOWE: No; they come under a civil vote. If they were established before the early days of the war they come under a civil vote. It has been thought wise not to increase the civil vote by purely war expenditures. The purpose is, after the war is over, to consider what is then required as a permanent service and then to establish the civil vote. But the services which were in operation prior to the war are all charged to the civil vote.

Mr. ROSS (St. Paul's): Is all the information collected by the meteorological service—I mean from all over the place, civil facilities, the army, and the air force—gathered together and the results tabulated?

Mr. HOWE: Yes; all the meteorological data is gathered and supplied to one source and distributed from the one source. There is no division of the meteorological service.

Mr. GRAYDON: Perhaps under this item the question might be discussed as to the publication of weather forecasts across Canada. If my memory serves me correctly, at the beginning of the war weather forecasts were not made. Then some change was instituted which permitted certain localities to provide forecasts. I notice weather forecasts appear as a matter of course in practically every newspaper, at least newspapers which I happen to get in this district. Are weather forecasts made public generally throughout the country?

Mr. HOWE: Whether the weather forecasts can be made public is a security matter which is determined by the chiefs of staff of the armed forces. Weather forecasts in certain areas, particularly in the Atlantic, are of importance to the enemy.

Mr. NOSEWORTHY: I understand that some of the services included in this item are available to Trans-Canada Air Lines and to the Canadian Pacific as well as to the armed forces.

Mr. HOWE: Yes; they are available to anyone. All the information collected on weather is available not only to Canadians but to everyone in the United States. Similarly all the weather information which is gathered in the United States is made available to Canada. There is a constant stream of weather information going out to every air field in the country.

Mr. FRASER (Peterborough West): This is treated exactly the same as in the case of water navigation?

Mr. HOWE: Yes.

Mr. GILLIS: What percentage of the operating personnel included in this vote is civilian and what is in the services?

Mr. HOWE: All those under this vote are civilians.

Item agreed to.

8. Civil aviation:

Extra airport traffic control systems, $736,450; operation and maintenance of municipal (terminal) airports, $398,260; additional facilities, Moncton to Newfoundland airline, $130,500 (revote $78,500); improvements to airports, $500,000; Canadian government transatlantic air service, $400,000; total, $2,243,710.

Mr. STIRLING: Does the first of these items cover certain airports, traffic in certain airports, remembering always that it is the war expenditure portion of traffic control?

Mr. HOWE: The following is the estimate of the funds required for the operation of three airway traffic control centres and fourteen airport control towers and an interphone and teletype service to control and direct the movement of aircraft on the airways and on approaches to landing of the various terminal airports in Canada.

This service was inaugurated in 1939 as a protective measure for airline and Royal Canadian Air Force aircraft, but during the past years has been greatly extended to meet the increased requirements made necessary by: the enlarged training programme of the R.C.A.F.; the expansion of the ferry command services of the Royal Air Force, the Royal Canadian Air Force, and the United States Army Air Force; the increased activity of the air transport command of the United States Army Air Force; the operation of traffic control centres and airport control towers on a twenty-four hour basis; the extension of interphone and teletype installations to provide a continuous service covering approximately 5,500 miles of airways from Vancouver, British Columbia to Torbay, Newfoundland; from Edmonton to Lethbridge, Alberta; from Montreal to Quebec; from North Bay, Ontario to Winnipeg, Manitoba; from Winnipeg, Manitoba, via Saskatoon to Edmonton; from Toronto via Sault Ste. Marie to Winnipeg; also to points in the United States, to connect with circuits provided by the civil aeronautics division of the United States. Such teletype facilities to include service between Winnipeg, Manitoba, and Pembina, Minnesota; Edmonton, Alberta, and Coutts, Alberta; Vancouver, B.C. and Blaine, Washington. Airway and airport traffic control stations are located as follows: airway traffic control centres, Winnipeg, Toronto and Montreal; air traffic control towers, Vancouver, Lethbridge, Edmonton, Calgary, Regina, Saskatoon, Winnipeg, Windsor, North Bay, Toronto, London, Ottawa, Montreal and Moncton.

Mr. KNOWLES: Are you dealing with these subclause by subclause?

Mr. HOWE: Yes.

Mr. KNOWLES: I am waiting for No. 4.

The CHAIRMAN: I called the whole item, thinking the discussion would be general.

Mr. HOWE: Subclause 1 is carried, Mr. Chairman?

The CHAIRMAN: Subclause 1 is carried. We shall now deal with subclause 2, operation and maintenance of municipal airports, $398,260.

Mr. STIRLING: Would the minister explain this one?

Mr. HOWE: Yes. This item is for the operation and maintenance of fourteen municipal and other airports owned or leased by the Department of Transport for the duration of the war, all of which are being utilized by the air forces of Canada, the United Kingdom and the United States for training operations, namely, Vancouver, Lethbridge, Winnipeg, London, Charlottetown, Edmonton, Medicine Hat, Fort William, Malton, Buchan, Calgary, Regina, Windsor, New Glasgow. This service was taken over by the Department of Transport from the Department of National Defence air services on April 1, 1942, and has since been maintained with funds provided by allotment from war appropriation.

Mr. HOMUTH: In view of the fact that a great many districts are planning now for after the war business, in the way of developing district airports—I have in mind now the counties of Waterloo, Perth, Wellington and, I think, Huron, with some of the surrounding counties, the idea being to develop an airport which will take in the towns within a radius of thirty-five or forty miles, and will prove important in the development of these districts—is the department now making any plans? I realize that some will come under reconstruction and the repatriation of our men coming back, giving them work and so on; but is the department making plans whereby these developments, with government assistance, can be coordinated into the general scheme which undoubtedly we shall have when the war is over.

Mr. HOWE: The government is not encouraging new development of airports at this time.

Mr. HOMUTH: I do not mean now.

Mr. HOWE: We are willing, at the request of a municipality, to survey a site and report on it to the municipality, and then advise the municipality whether or not it is wise to purchase the land. But we are not prepared to make a commitment to any municipality about the nature of government assistance that will follow.

Mr. HOMUTH: The department has been of great assistance to us in our district. It has sent a man there who has made surveys and helped us in every possible way; he is a very able fellow. We do think, however, that perhaps it is not too early to start on a plan for that work, because the big industrial centres such as we have in Waterloo, Perth, Wellington and that district dare not be off the air line. When the war is over we must be on the air line if we are to continue the development that has been built up over the last fifty or sixty years. Possibly it might be a good idea to have this whole picture coordinated with the efforts of the Department of Labour and other departments of government so that they may look after the post-war development of the country. I do not think it is too early to start and make some of these plans and have a general survey by the department.

Mr. HOWE: The department is studying the situation, but municipal airports are usually started by the efforts of the municipality, and usually it is the municipality that puts the steam in the particular problems. The department either helps or vetoes as arrangements work into the general plan. I must say that until the war is further advanced we shall have to ask the municipality to do the pushing, requesting the government for such help as it requires from time to time which does not involve help in the actual construction of the airport.

Mr. PERLEY: Can the minister interpret the term "municipal"? He mentioned Regina. Does the city of Regina own that airport?

Mr. HOWE: Yes.

Mr. PERLEY: On what terms does the government take over an airport and operate it?

Mr. HOWE: At the beginning of the war we made an arrangement that all municipal airports required by the government for war purposes would be rented from the municipality at one dollar a year, the government undertaking to pay all operating expenses and make such improvements in the airports as might be required for war purposes. The municipalities that entered into that arrangement have profited by it considerably, because all airports have been materially extended to meet the requirements of the air training plan.

Mr. JOHNSTON (Bow River): Will these improvements be turned back to the municipality?

Mr. HOWE: The question is being considered. I may say that the land belongs to the municipality.

Mr. JOHNSTON (Bow River): But the improvements belong to the dominion government?

Mr. HOWE: The improvements usually go with the land.

Mr. GRAYDON: If I may say a word touching the point raised by the hon. member for Waterloo South (Mr. Homuth), I appreciate the minister's position with regard to the war coming first, and I think we all agree with that. But he also qualified that in one of his remarks, when he said that he is not unmindful of what comes afterwards. That is the proper attitude to take. The whole problem of transportation by air will be a very serious matter for many of the centres throughout Canada, because what happened when the railways went through the country may very well happen in connection with air lines. Those places which were on the railway lines were the ones that afterwards became great cities or important centres in Canada. The same situation may develop in connection with air lines; we may have a parallel here. In those days when the railways were pioneering their way through the dominion, the places which the roads did not go through gradually subsided in influence, in population and in business, and other centres which were on the main line of transportation took their place. Most of us envisage in the years that lie ahead the magnificent development that will take place in connection with air lines, and I think the minister might give further consideration to the whole question of integrating, by way of survey and plan across Canada, the efforts of the government with respect to air lines in the days after the war.

I have been greatly impressed by the suggestion of the hon. member for Waterloo South in that particular respect. It is important that the minister give special consideration to it, because some of these towns and other places which to-day are thriving business sections may perhaps, if they are not properly integrated into an air line system, find that the present system of transportation may not meet the requirements of business which will come in another decade. They may find the whole situation changed. I add my word to what the hon. member has said.

Mr. HOWE: I covered that phase of the matter fully in my statement on Friday. When my hon. friend recovers from his long week-end he will read the statement and find that the point is covered.

Mr. CASTLEDEN: A number of air force stations are being closed at the present time. This year, I believe, the plans are that some twenty-eight are to be closed. The people are concerned about the use that is to be made of these airports, the buildings and other facilities.

Mr. HOWE: I wish to apologize to the leader of the opposition (Mr. Graydon). I have some information and I realize that my remark was very much out of place and very rude. I apologize to him. I was trying to be amusing without any knowledge of the facts, and I hope he will forgive me.

Mr. GRAYDON: I did not think twice of that because I know my hon. friend would not have been rude intentionally.

Mr. CASTLEDEN: There are about twenty-eight airports that are being closed out by the Royal Canadian Air Force this year across Canada. People are somewhat concerned as to the best use that can be made of equipment and so on and would like to see those places continued as airports in peace time if possible. They have not the full knowledge of the facts, and I would urge on the minister and the government the importance of letting them know at the earliest moment whether or not there is any possibility of the present facilities and equipment being put to civilian use in aviation. It would be a tragedy if they were informed that it was not likely that a port could be used and then later on found that it would have been very valuable. I should like to see the government come forward with a long range plan to help these communities in the great job of reconstruction.

Mr. HOWE: I assure my hon. friend that airports that are being declared surplus to the air training plan will be maintained until the end of the war, and then as many of them as can be will be incorporated into the civil air services. As I stated on Friday, it is quite impossible to undertake new air services at this time. In the first place we have not the equipment, and in the second place we wish to wait and make the expansion of civil aviation part of the demobilization plans. I can assure my hon. friend, however, that the airports will not be allowed to deteriorate.

Progress reported.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

LOAN OF $1,000,000,000

TO MEET LOANS OR OBLIGATIONS, TO PURCHASE UNMATURED SECURITIES AND FOR PUBLIC WORKS AND GENERAL PURPOSES

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance) moved that the house go into committee to consider the following resolution:

Resolved, that the governor in council be authorized to raise by way of loan under the provisions of the Consolidated Revenue and Audit Act, 1931, an amount not to exceed in the whole the sum of one thousand million dollars for paying or redeeming the whole or any portion of loans or obligations of Canada and also for purchasing unmatured securities of Canada and for public works and general purposes.

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, I do not know whether the parliamentary assistant desires to make a statement explaining this resolution now, or when we go into committee. I think, however, it might more properly be done now.

Mr. ABBOTT: I am prepared to do that. This resolution is to renew the general borrowing authority of the government. The last loan act was passed in the 1942 session of parliament, and of the amount so authorized there remains unborrowed and negotiable $92,413,058. To December 31, 1944, there matures or is callable a total of $1,032,240,470.85, which is exclusive of the deposit certificate and treasury bills. Therefore, as the house appreciates, the bill following this resolution is to authorize borrowing power to enable the government, if necessary, to renew the various loans to which I have referred, totalling something in excess of a billion dollars.

Motion agreed to and the house went into committee, Mr. Bradette in the chair.

Mr. STIRLING: I did not catch any reference by the parliamentary assistant to the last words of the resolution, namely "for public works and general purposes". What does the government propose to do with regard to that?

Mr. ABBOTT: No, I did not refer to that. This resolution is in the same form as the resolution introducing a similiar bill in 1942. The money is borrowed under authority to be given under this measure, and can also be used for public works and general purposes of the government of Canada. It is to be noted, however, that the proceeds from sale of securities issued under this authority have to be paid into the consolidated revenue fund, and they can be paid out of the consolidated revenue fund only under some parliamentary authority. This means that the money borrowed under this measure can be used only for public works and general purposes if the moneys for those purposes have been voted or authorized by parliament. In previous loan acts, those of 1942, 1940, 1939, 1936, 1935, 1933 and 1931 there was provision that money borrowed could be used for public works and general purposes. There is no change in principle in this measure with regard to that matter.

[Mr. Abbott.]

Mr. POULIOT: Would the hon. member for St. Antoine-Westmount be kind enough to tell me if the Bank of Canada will have anything to do with it?

Mr. ABBOTT: Well, the Bank of Canada acts as fiscal agent for the government. With that exception, however, I must say I do not quite understand what my hon. friend's question means. But except to the extent that the Bank of Canada acts as fiscal agent for the government in connection with the issue, registration and so on of government loans, I would say no.

Mr. POULIOT: With regard to loans, no, when the loans are sold to the public. But here it is asked:—

That the governor in council be authorized to raise by way of loan under the provisions of the Consolidated Revenue and Audit Act, 1931, an amount not to exceed in the whole the sum of one thousand million dollars for paying or redeeming the whole or any portion of loans or obligations of Canada and also for purchasing unmatured securities of Canada and for public works and general purposes.

In the first place there is the paying of loans or obligations; second, the redeeming; third, the purchasing of unmatured securities of Canada, and then public works and general purposes. There are five different things, and "general purposes" may comprise a lot. Is the hon. member serious when he says that the Bank of Canada will have nothing at all to do with it, and that it will be done only through the Department of Finance?

Mr. ABBOTT: As I said a moment ago, that is the language used in these acts. If the moneys are raised by way of loans under the authority of this measure, they must be paid out of the consolidated revenue fund, and they can be paid out of that fund only in virtue of parliamentary authority. So that I do not quite follow what my hon. friend has in mind when he asks whether the Bank of Canada will have some control over money which may be borrowed in virtue of the proposed resolution.

Mr. POULIOT: It is not exactly a matter of control. I asked if the Bank of Canada would have anything to do with it?

Mr. ABBOTT: I can answer only in this way, that the actual purpose of the bill to be founded upon the resolution is to provide for maturing obligations of the Dominion of Canada which will mature during this year—in other words, the refunding of loans. The language of the bill is, I am advised, identical in terms with the language of similar measures which have been passed by the house for

some ten or twelve years. I assume that the same procedure will be followed as has been followed in the past.

Mr. POULIOT: My hon. friend is a lawyer whom I would recommend to those who require a skilled jurist and a man who can make subtle distinctions. I wish to know if the Bank of Canada or the governor of the Bank of Canada will have anything to do with it. I should like to know if the Bank of Canada or the governor of the Bank of Canada advised such a step as this.

Mr. ABBOTT: I find that question difficult to answer because I am afraid I do not clearly understand it. I said a moment ago that the Bank of Canada acts as fiscal agent for the government of Canada in connection with the registration and recording of government loans. Any proceeds of a loan made by virtue of the power conferred under this measure will be paid into the consolidated revenue fund and, as I said a moment ago, it can be paid out of the consolidated revenue fund only by virtue of the authority of this parliament. Therefore I would say in answer to my hon. friend's question that I do not see how the Bank of Canada would have anything to do with the paying out of the proceeds of that loan other than as agents for the government.

Mr. POULIOT: I do not want to know if the money will be deposited in the Bank of Canada; I want to know if the transaction has been recommended by the Bank of Canada or by the governor of the Bank of Canada.

Mr. ABBOTT: I have no knowledge as to that. The government of Canada is obliged to take care of its maturing obligations or securities. Whether the Minister of Finance has consulted the governor of the Bank of Canada as to this particular legislation, I am not in a position to say. I think it is extremely doubtful that he has because this is the usual and ordinary loan bill which has been passed by this parliament for many years to make statutory provision for the refunding of maturing obligations of the dominion. I am not in a position to answer my hon. friend.

Mr. POULIOT: I shall tell my hon. friend how it works. When an issue of victory bonds is sold to the Canadian people and any of those bonds are negotiated at a bank, they are sent to the Bank of Canada. The Bank of Canada pays cash for the bonds but they are not put into the market again. If the sale does not pass through the Bank of Canada in the first place, it does in the second place.

Mr. HOMUTH: Not necessarily.

Mr. POULIOT: It does when people exchange their bonds instead of keeping them at home. I am greatly concerned over this because of an answer that was given by the governor of the Bank of Canada to the hon. member for Vancouver-Burrard (Mr. McGeer) at a meeting of the banking and commerce committee on March 31, 1939, as reported at page 80 of the proceedings. This answer has been quoted already by the financial critic of the New Democracy group. The question and answer are as follows:

> Mr. McGeer: Is it possible for you to imagine any way by which we are ever going to pay the debt we have got?
>
> Mr. Towers: As the debts of the government are an asset of the Canadian people, I do not see much point in the thing.

The governor of the Bank of Canada did not see much point in paying the debt or in the redemption of the bonds. He then added:

> Except in so far as there is maldistribution.

To quote his own words, the governor of the Bank of Canada said that he did not see much point in the payment of the debt.

Mr. ABBOTT: Is that a fair inference to draw?

Mr. POULIOT: I shall read it again:

> Mr. McGeer: Is it possible for you to imagine any way by which we are ever going to pay the debt we have got?
>
> Mr. Towers: As the debts of the government are an asset of the Canadian people, I do not see much point in the thing . . . except in so far as there is maldistribution.

That is why I object formally to the governor of the Bank of Canada being in charge of the victory loans.

Mr. QUELCH: I should like to put a question to the parliamentary assistant to the minister. Just exactly where is it proposed to obtain this money? Is it intended to obtain the money by floating bonds, or is it to be obtained from the chartered banks or from the Bank of Canada? I ask that question for this reason. We in this group have always advocated that to the extent that money obtained by taxation and by borrowing the legitimate savings of the people fails to meet government expenditures, the government should obtain funds from the Bank of Canada instead of borrowing from the chartered banks. Whether you obtain money from the Bank of Canada or from the chartered banks, in either case it means expansion of money and to that extent it may be inflationary.

The argument of the Minister of Finance in the past has been that while you can

obtain money from the chartered banks without causing inflation, the obtaining of money from the Bank of Canada would be more inflationary. When money is borrowed from the Bank of Canada and paid out into circulation, eventually it finds its way to the chartered banks and thereby increases the cash reserves of the banks, making it possible for them to expand their loans by ten times the amount. When the parliamentary assistant spoke on the Industrial Development bank bill the other day he contradicted that statement. He said that there was no danger of inflation because the Bank of Canada would be able to control that situation. He referred to the statement made by the hon. member for Vancouver-Burrard who had referred to the fact that if a certain amount of money was obtained from the Bank of Canada and paid out in circulation, apparently that would be increasing the cash reserves of the banks and thereby make it possible for them to expand their loans. The parliamentary assistant took the stand that that was not necessarily so because the Bank of Canada could take the necessary action to control the chartered banks in expanding their loans.

Mr. ABBOTT: I said that the amount of loanable funds involved in the proposed Industrial Development bank was not of such a magnitude that the central bank could not control the reserves of the chartered banks, even if the full amount went out into the commercial banking system. It is all a question of degree.

Mr. QUELCH: You are dealing with the amount rather than the question of whether or not the Bank of Canada could control the situation?

Mr. ABBOTT: Right.

Mr. HOMUTH: The principle.

Mr. ABBOTT: The principle.

Mr. QUELCH: We have pointed out time and again the way in which that situation can be controlled. I think the parliamentary assistant is quite familiar with the system advocated by Professor Irving Fisher and earlier by Professor Soddy. The Minister of Finance has suggested that in reality such action would be a tax upon the bank. On the other hand, in the March 29, 1939 issue of Babson's reports inc. an alternative was pointed out. It was suggested that the money used by the government to increase the cash reserves of the chartered banks, instead of being used to purchase securities held by the chartered banks, could merely be a loan to the chartered banks against their securities. In that case the chartered banks would still be obtaining their revenue from the interest on these securities. By that means you would place the chartered banks on a hundred per cent system without in any way taxing their profits and in that way you would have absolute control over the expansion of loans by the chartered banks. I think it is high time the government gave consideration to other ways and means of obtaining money without continually borrowing from the people or from the chartered banks, because our debt situation is getting to be a very serious one. The national debt has risen from $3,500,000,000 to around $11,300,000,000, and I do not think the parliamentary assistant to the minister would suggest that we are ever going to be in a position to pay that debt. I am not suggesting that people who hold bonds will not get their money for them, because it will just be a question of refunding. But refunding does not reduce the amount of the debt. It just means you transfer the ownership of the debt from one place to another.

I was very much interested in a return, sessional paper No. 377, which was brought down in the house last year. A question was asked as follows:

4. What provision is being made to satisfy the above indebtedness?

The above indebtedness was the national debt.

5. If present policy is continued, can this debt ever be repaid?

This is the reply that was given in the sessional paper:

The Dominion of Canada has always paid the full face amount of the principal of and interest on every direct obligation issued by it, all promptly when due in the lawful currency of the country where payable at the time of payment thereof.

In the budget speech delivered in the House of Commons on February 25, 1937, the Minister of Finance, in referring to an issue of perpetual bonds, stated "It was intended as the initial step in a programme which is designed to provide for the consolidation and simplification of our public debt structure. Another purpose which we had in mind was to facilitate the setting-up, as soon as the condition of our national finances make it practicable, of a general sinking fund to provide for the gradual amortization of our long term debt on scientific lines."

During the war period and for some years before the dominion government has been operating at a deficit and it has not been possible to provide for the paying off of indebtedness out of revenue. However, the government plans in this respect will be made known at the appropriate time.

Then, in reply to the question:

If present policy is continued, can this debt ever be repaid?

The reply is: "Yes".

What surprised me was that the minister should see fit to quote a statement made by a former minister of finance, Mr. Dunning, because if there was one man's policy in this country thoroughly discredited, it was the policy of that former minister of finance. It was during his regime in this house that the resources of this country day by day and year by year were systematically sabotaged, not only the industrial resources but the manpower resources. We saw the effect of that when men were called up under the mobilization act. Thousands of men were discharged because they were medically unfit, and in many cases on account of malnutrition. Yet, in spite of that fact, in spite of the fact that that minister was responsible for sabotaging the resources of the nation we are now asked to believe the statement made by him back in 1937, that a scientific scheme would be introduced whereby the national debt could be paid off.

In the seventy-seven years since confederation we have had only fifteen balanced budgets. In pre-war days the national debt never exceeded the figure of $3,500,000,000. If in the days when the national debt was under $3,500,000,000 we were able to have only fifteen balanced budgets, is it likely we are ever to have a balanced budget or a surplus in the years to come when the national debt will have risen to a figure of $14,000,000,000? I think it is asking hon. members to believe something that is very unlikely to happen.

Mr. NICHOLSON: A lot of eye-wash.

Mr. QUELCH: In order to have a balanced budget and a surplus in the post-war years there must be very heavy taxation. The purpose of taxation in the war years has been to reduce spending. We have been told that time and time again. For exactly the same reason taxation will have to be reduced after the war, in order that spending may be increased. That statement was made recently in a speech by the deputy minister of finance. If taxation is to be reduced after the war in order to increase the spending of the people I should like to know how we are to have a balanced budget.

Mr. ABBOTT: It all depends on the size of the national income.

Mr. QUELCH: I think the statement made by the former chairman of the advisory committee on post-war reconstruction was far more practical in this regard. I should like to quote from the report of the special committee of the Senate in the session of 1943. The quotation will be found at page 29 of proceedings of the special committee, No. 1. This is what Doctor James had to say:

> I wanted to add one further point there, namely, that the recognition of that policy of public investment as a marginal factor to take up the slack of private investment at any period implies the necessity of a complete change in our budget philosophy. We should still have an annual budget for probable revenues and expenditures; but so far as public investment expenditures are concerned for the construction of all kinds of projects, it would obviously be necessary to have a budget which extends over a period of years. Mr. Churchill two Sundays ago suggested four years as a period for a plan. That may be perfectly right, politically thinking, but economically I prefer a period of seven or ten years. It may also be true—I mention this because somebody may think of it—that the adoption of that policy will mean a slight but continuous increase in the total public debt of Canada over the next hundred years.

The only exception I take to that statement is this: Why say one hundred years? Why not say "forever as long as we continue on the present system"? If under a policy of that kind whereby you can maintain the full development of the resources of the nation you will have a continued debt for the next one hundred years, I should like to know how you are going to pay off the national debt in the manner suggested in the quotation from the predecessor of the present Minister of Finance? I think we should adopt a practical attitude toward this whole thing. Come out frankly and say that we are going to continue under the present system, which means a continuous increase in debt forever and when the debt gets so large we can no longer service it we will borrow money and pay interest on it. Let us be frank about it. If we are to carry on under such a system it will mean a continued increase in the borrowing until the system will become so absurd that the people will realize there must be a change. On the other hand, if we are really sincere in wanting to bring about a reduction in the national debt, let us recognize that the only possible way by which we can ever bring it about is by the issue of debt-free money, because you cannot pay debt with debt.

Mr. DOUGLAS (Weyburn): In the resolution which precedes the bill to give the government power to borrow $1,000,000,000 I would have thought the parliamentary assistant to the Minister of Finance would probably have taken the opportunity to give the committee some information with regard to the fiscal picture as it affects the Dominion of Canada. I would ask that at some time in the course of this debate some information be given to us, so that when the bill comes down we can discuss it more intelligently. I remember in the first year of the war the then Minister of Fin-

ance said that the government was pledging itself to the policy of a pay-as-you-go war. I think we should know something about the extent to which the government has been able to maintain that principle. Would the parliamentary assistant to the minister tell us what is the national debt to-day as compared with September 1, 1939 and 1919, which was the close of the first great war? Would the hon. gentleman tell us how much money has been borrowed by the federal government in each year during the present war? How much of that borrowing was from the chartered banks; how much was from the general public by the sale of victory bonds, and how much by the sale of government bonds on the investment market? Would he tell us to what extent, if at all, we have used our own Bank of Canada in financing operations and to what extent? Would he tell us what the annual interest bill of the government is now as compared with the beginning of the war and as compared with 1919? I think he should give us a general picture of those bonds which will be maturing during the present year. What amount of bonds will mature? Would he tell us if at any time in the last twenty-five years the federal government has ever paid off a maturing bond obligation, or whether it has merely refunded those bonds as they matured? If the parliamentary assistant could give us some of that information I think we should be in a better position to discuss this resolution. Certainly we shall have to have it before we can discuss the bill.

Mr. HOMUTH: Under the Conservative regime we paid off some debts.

Mr. ABBOTT: I can give my hon. friend some of the information he asked for.

First, as to the national debt to-day as compared with 1939 and 1919, the total unmatured funded debt as at January 31, 1944, amounted to $10,561,454,023.79, and the annual interest charges on that amounted to $268,312,935.81. I have not at my hand the comparable figures for 1939 and 1919, but I can get that information and perhaps give it on the second reading of the bill.

My hon. friend asked for the borrowing each year during the present war. The first war loan was for an amount of $250,000,000, $200,000,000 of which was issued for cash and $50,000,000 was issued in conversion of three per cent bonds which matured March 1, 1940 by the Bank of Canada through banks, brokers and investment dealers. The second war loan was issued in the amount of $324,945,700, $300,000,000 for cash, and $24,945,700 in conversion of 4½ per cent bonds due September 1, 1940. The 1941 victory loan was $836,820,250, $579,286,250 for cash and $64,248,000 in conversion. The second victory loan was $997,503,300, $845,360,300 for cash and $152,143,000 in conversion of maturing loans. The third victory loan was $991,389,050, all issued for cash. The fourth victory loan, $1,308,716,650 was all sold for cash. The fifth victory loan was $1,571,311,550, of which $1,383,275,250 was sold for cash; $188,036,300, conversion. The sixth victory loan is coming on at the end of April.

Those loans represented loans issued to the public. My hon. friend asked the amount sold to the chartered banks and to the Bank of Canada. I assume he would be satisfied with the totals.

Mr. DOUGLAS (Weyburn): Yes.

Mr. ABBOTT: The total amount sold to the chartered banks since the beginning of the war including deposit certificates and short-term loans, $1,697,660,000, and to the Bank of Canada, $1,415,171,000. These figures are all as of January 31, 1944, and the total is $3,112,831,000.

Mr. QUELCH: What was the main purpose of the borrowings from the Bank of Canada? It was, I assume, chiefly for the purpose of buying gold and refunding.

Mr. ABBOTT: I believe that is correct; and in connection with the taking over by the foreign exchange control board of the gold holdings of the Bank of Canada.

Mr. DOUGLAS (Weyburn): Were there any borrowings outside Canada, on the New York market?

Mr. ABBOTT: No bonds for new money have been issued on the New York market, as far as I recall. All these are domestic issues.

My hon. friend asked as to the interest. I am afraid I have not in dollars the interest paid on government securities. I have the average rates of interest paid on the funded debt of Canada, including treasury bills and deposit certificates, from 1913 to 1944. Perhaps I might give the rates as of 1913, 1919, 1939 and 1944.

On March 31, 1913, the average interest rate paid on Dominion of Canada borrowings was 3·44 per cent; March 31, 1919, 5·02 per cent; March 31, 1939, 3·52 per cent; January 31, 1944, 2·54 per cent—the lowest, as my hon. friend will see, at any time during the period of 1913 to 1944.

Mr. HOMUTH: The picture might be much better if you read off every year instead of taking certain years.

Mr. DOUGLAS (Weyburn): Has the hon. gentleman the total amount paid in interest?

Mr. ABBOTT: I would be glad to give the hon. member the figures for each year. I did not want to take up the time. As of March 31 the interest rates are as follows:—

Year	Per cent
1913	3·44
1914	3·58
1915	3·65
1916	4·04
1917	4·38
1918	4·83
1919	5·02
1920	5·18
1921	5·17
1922	5·20

That is where it reached the peak; that was the maximum.

I have not the figures for the period 1923 to 1929.

1930	5·02
1934	4·63
1935	4·15
1936	3·94
1937	3·75
1938	3·53
1939	3·52
1940	3·40
1941	3·06
1942	2·90
1943	2·60
January 31, 1944	2·54

Mr. DOUGLAS (Weyburn): Has the hon. member the amounts of interest in addition to the rates for those years?

Mr. ABBOTT: I am afraid I have not those figures before me.

Mr. DOUGLAS (Weyburn): The hon. gentleman can get them?

Mr. ABBOTT: I can get them.

Mr. HOMUTH: But those figures would not be comparable, because of the changing interest rates.

Mr. ABBOTT: I gave my hon. friend the gross figure of interest paid. The annual interest charge to-day on our total funded debt, including treasury bills and certificates, at January 31, is $268,312,935.81.

Mr. DOUGLAS (Weyburn): The hon. gentleman has given the victory loans and the money borrowed from the chartered banks. Would there not be bonds sold on the investment market either for refunding purposes or for state borrowing? Has he any estimate of these?

Mr. ABBOTT: Perhaps I would need to check this, but I have given, I think, all the issues of government securities which have been made since the beginning of the war.

Mr. COLDWELL: If the figure the parliamentary assistant has given is correct, showing that the gross amount of interest is $268,000,000—

Mr. ABBOTT: It is $268,000,000 a year, roughly.

Mr. COLDWELL: Is that not double what it was in 1939?

Mr. ABBOTT: I cannot give that from memory but I can get that information.

Mr. COLDWELL: I thought it was about $130,000,000.

Mr. ABBOTT: It is nothing like double. I am sorry I did not understand the question. I would not want to give the figure from memory, but I would say that it is not more than $100,000,000 at the outside. I do not think it is that high.

Mr. DOUGLAS (Weyburn): $142,000,000.

Mr. NICHOLSON: On February 17 the minister answered a question I had asked. For the fiscal year ended March 31, 1939, the interest on the public debt was $127,995,616.75. I notice a discrepancy between the amount which the parliamentary assistant has just given, $268,000,000, for the end of the calendar year, and the figure given in the answer that was tabled on February 17. The figure then given was $188,556,249.39. Do I understand that to indicate the rate at which the snowball is accumulating in size?

Mr. ABBOTT: My hon. friend will realize that the $188,000,000 represents interest actually paid up in a certain period. Is that not correct?

Mr. NICHOLSON: For the previous year.

Mr. ABBOTT: Of course there have been two victory loans since the date of those figures and the figure which I have given of $268,000,000 odd represents the annual interest charges on unmatured funded debts, including treasury bills, as at January 31, 1944.

Mr. HOMUTH: It is much more than double.

Mr. ABBOTT: I am not prepared to answer that question.

Mr. DOUGLAS (Weyburn): Since this money is for the purpose of refunding debt, how many of these maturing obligations have been met outright, or have we always refunded during the last twenty or twenty-five years?

Mr. ABBOTT: I would hesitate to answer that offhand. I am almost certain we have met some maturities out of existing funds. I shall have to take note of the question and answer it later.

Mr. COLDWELL: Is this the gross debt including the railway debt, or is it the debt excluding the debt of the Canadian National Railways?

Mr. ABBOTT: That, I think, includes only the government debt, excluding the Canadian National Railways.

Mr. MacNICOL: In giving his statement of the amount of the victory loans sold, the minister stated that such and such an amount was sold for cash. During the last victory loan I was in the bank one day and the banker had just made a sale to a customer. He said to me, "This is what is happening. A lot of this is going on." I said, "What is that?" Then he said to me, "That party just sold me five bonds to the extent of $5,000 and bought new bonds to the extent of $2,000." Would the parliamentary assistant call that a sale for cash, where a customer sold bonds from a previous loan for $5,000 and bought bonds of the new loan for $2,000?

Mr. ABBOTT: Certainly the purchase of $2,000 is a purchase for cash. The purchaser obtained that cash by selling other bonds, I gather from what my hon. friend has said, and someone else has bought those bonds. But on balance, as I say, someone has provided the cash to the purchasers or the purchasers have obtained cash, whether by borrowing or otherwise, to purchase the amounts mentioned.

Mr. MacNICOL: Has the parliamentary assistant any record of the number of bonds returned in such circumstances during the last victory loan?

Mr. ABBOTT: We would not have those figures. I certainly do not have them here.

Mr. MacNICOL: What would the bank do with the bonds they had just purchased from the customer?

Mr. ABBOTT: I suppose they would either keep them in their own investment portfolio, if they were anxious to invest in that particular maturity, or they would sell to another customer who wished to buy that particular maturity of bonds. As my hon. friend knows, the banks are continually buying and selling government bonds.

Mr. MacNICOL: I was under the impression that the Bank of Canada would have to buy them.

Mr. ABBOTT: Not necessarily.

Mr. NOSEWORTHY: Will the parliamentary assistant tell us how much of this one thousand million he estimates will be used for redeeming matured loans, how much for the purchase of those loans that are not matured and how much for public works? In the second place, will he tell us just what is the nature of these unmatured loans? Will any of this money be available for the purchase of victory bonds that have not yet matured? I am thinking of the debate we had in the house some days ago and of those who will be required undoubtedly to sell victory bonds at less than par. Will any of this money be available for the purchase of these unmatured victory bonds, or just what is the nature of the unmatured securities the hon. gentleman has in mind? There was a question asked that has not yet been answered: How much of this one thousand million will be borrowed from the Bank of Canada?

Mr. ABBOTT: That last question I am not in a position to answer. That is a matter that will be determined in due course, but I assume that these refunding issues, as was the case in the past, will be issued to the public. As to the maturities to December 31, 1944, which include callable issues, the figures are these:

Date	Interest rate	Where payable	Amount
	Per cent		
April 15, 1944	1	Canada	$250,000,000 00
April 15, 1944	1½	Canada	100,000,000 00
June 1, 1944	2	Canada	90,625,000 00
July 1, 1944	4	Canada	33,293,470 85
September 1, 1944	1½	Canada	150,000,000 00
October 15, 1944	4½	Canada	50,000,000 00
Callable October 15, 1944 (due October 15, 1949)	3½	Canada	138,322,000 00
October 16, 1944	1½	Canada	200,000,000 00
November 15, 1944	2½	Canada	20,000,000 00
			$1,032,240,470 85

If we break that down, the maturities in 1944 amount to $893,918,470.85, and the one issue to which I referred as being callable, which is due in 1949, amounts to $138,322,000.

In addition there are treasury bills and deposit certificates outstanding which, I take it, do not interest the hon. gentleman at the moment.

Mr. QUELCH: Is it not quite true to say that in the past the policy of the government has been to borrow money from the Bank of Canada, to buy gold which it turns over to the foreign exchange authorities, to refund a debt owed to the Bank of Canada; it has not been the practice of the government to borrow money from the Bank of Canada for the purpose of putting that money into circulation?

Mr. ABBOTT: That is true, generally speaking; but the hon. gentleman will recall that in the early stages of the war, I think either in the fall of 1939 or early in 1940, the government borrowed about $200,000,000—I am speaking from memory—from the Bank of Canada.

Mr. QUELCH: That was from the chartered banks.

Mr. ABBOTT: Oh, I see.

Mr. NICHOLSON: The parliamentary assistant was asked to give the total debt as of the end of December, and he gave a figure of something over $10,000,000,000. In a return he brought down recently he gave the debt as at the end of March, 1943, as $6,182,000,000. I wonder if he could account for the difference between those figures, which seems a very large increase to take place in the course of a few months.

Mr. ABBOTT: As my hon. friend will recall, since March 31, 1943, there have been two victory loans totalling some $2,600,000,000.

Mr. NICHOLSON: But the difference is $4,000,000,000.

Mr. ABBOTT: I have not before me the return to which my hon. friend is referring, and offhand I cannot reconcile these figures, but I am informed that what I have before me represents the net unmatured funded debt as at the date given. The figure given by my hon. friend may not include treasury bills or deposit certificates. I am inclined to think that may be the explanation.

Mr. JACKMAN: In view of the fact that the forthcoming victory loan is to be for $1,200,000,000, I am a little curious to know why the resolution here calls for only $1,000,000,000 in connection with the raising of new money or for refunding. Where is the authority to raise the other $200,000,000?

Mr. ABBOTTT: My hon. friend has probably overlooked the fact that the authority to borrow in connection with the victory loans is contained in the war appropriation bills. The hon. gentleman will remember that each war appropriation bill, whatever amount it is for, includes the necessary statutory authority to borrow; and the borrowing authority asked for here has no relation to the borrowings we make in connection with our victory loans. That borrowing authority is contained in the war appropriation bill.

Mr. KUHL: Has the parliamentary assistant any figures to indicate the amount of money the people of Canada borrowed from the chartered banks with which to purchase victory bonds?

Mr. ABBOTT, No, I have not.

Mr. HANSELL: We have been talking a good deal about the details of facts and figures, but one big question remains when this is all boiled down. How much are the people of Canada in debt? After all, that is the great question that has to be answered. What is the per capita debt of the people of Canada, and how is that debt to be retired? It seems to me that sums up the whole thing. I am not so much concerned about where the Canadian National Railways debt is placed, or how many bond issues there have been in past years. As the representatives of the people we want to know how far our people are in debt; we want to know when the debt is to be paid off, and how. The parliamentary assistant to the Minister of Finance is standing up to it well to-night; perhaps he will be Minister of Finance one of these days if he keeps going, and I hope this question does not embarrass him; but we should like to know how the government, if it remains in power, is to retire the debt. If the government cannot answer that question, let them tell the country so; let them get out of the saddle, and let somebody get in who knows how. That is the position. Perhaps we shall have an opportunity to challenge the Progressive Conservative party with the same question. If the parliamentary assistant will answer that he is going to settle everything.

Mr. ABBOTT: That is a tall order. This matter has been discussed previously. The method which I know my hon. friends in the far corner would suggest does not commend itself to me. My hon. friend asked if the question was embarrassing. No, it is not particularly embarrassing, but he and I both know that this debt will not be paid off this year, next year or the year after. However, if he will tell me how soon the war will be over, or how long we shall be obliged to continue to make these large war expenditures, I may be able to give him some idea as to when I think we may start reducing this debt.

Mr. HANSELL: I should like the committee to get that answer, for that is the very best the government can give us as to how this debt is to be retired. If I shall tell the hon. gentleman when the war will end he will tell us something else. That is a great answer, is it not? We are asking that question of the men who are in the saddle, the authority in Canada; they should know.

Mr. ROSS (St. Paul's): There are so many figures being mentioned, and some of them do not gibe with some others. In connection wth paying off or redeeming the whole or any portion of a loan or obligation, or purchasing unmatured securities, the government does not require any further authority, as I understand it; but before the money can be used for public works or other purposes, authority has to be obtained from parliament?

Mr. ABBOTT: That is correct.

Mr. ROSS (St. Paul's): Then the parliamentary assistant mentioned that the amount paid in interest was $268,000,000.

Mr. ABBOTT: If my hon. friend will allow me, that is not the interest paid; that is the annual interest charge on the debt as it stands at January 31, 1944.

Mr. ROSS (St. Paul's): In the estimates for this year the amount is given as $273,000,000. It was $200,000,000 last year, so that there has been an increase of something over $72,000,000. I do not understand where the hon. gentleman gets this figure of $268,000,000.

Mr. ABBOTT: My hon. friend will recall that we have two months to go to the end of the current fiscal year, as of the date I mentioned in connection with that figure. I was giving the annual interest charges on the total national debt as it stood on January 31 of this year. I take it we must assume that the debt will increase in the two months subsequent to January 31, before the end of the fiscal year.

Mr. ROSS (St. Paul's): But the parliamentary assistant said that the interest charge is $268,000,000. Yet, the estimated interest charge for the next year is only $273,000,000. We have two victory loans we shall have to go through.

Mr. ABBOTT: No, that is a difference of some $3,000,000. I suggest to my hon. friend—and I am making this answer offhand—that that $3,000,000, or $5,000,000, whatever the figure is, will represent the interest on money which will be borrowed between January 31, and March 31, the end of the current fiscal year. I refer to the fiscal year which will close at the end of this month.

[Mr. Abbott.]

Mr. ROSS (St. Paul's): Yes, all right. What I am getting at is this: Your estimate for next year is only $273,000,000, and the amount increased by $73,000,000 over the year before. I cannot see how you get that charge at all. Then there is one other question I would ask in connection with these interest rates. We have noticed that the rates have come down from 5·20 per cent to 2·50 per cent, I believe it is.

Mr. ABBOTT: Yes, 2·50 per cent.

Mr. ROSS (St. Paul's): Yes. Could the government borrow that money at two per cent? Could the victory loan be put over at two per cent, under the mechanism we have at the present time?

Mr. ABBOTT: My hon. friend's opinion on that is probably more valuable than mine. Previous victory loans have sold on a basis of approximately three per cent and, as my hon. friend knows, that is the basis for the forthcoming sixth victory loan.

Mr. ROSS (St. Paul's): Is it not so that there are two reasons for the rate we have today? One is that we have a mechanism which we did not have in the last war, and the other is that the public are asked to buy it, and the Bank of Canada pretty well controls what rate we shall give. Is that not so?

Mr. QUELCH: The assistant to the minister apparently feels that when the war is over the government will be in a better position to answer the question as to when the national debt can be paid. I draw his attention to a question asked of the governor of the Bank of Canada in 1939, before this war started.

Mr. ABBOTT: That matter was raised a little earlier, if I remember correctly.

Mr. QUELCH: This is found at page 80 of report No. 1 of the banking and commerce committee. The question was asked:

> Is it possible for you to imagine any way by which we are ever going to pay the debt we have got?

The debt at that time was only about three and a half billion dollars. This is what I find in the report:

> Mr. Towers: As the debts of the government are an asset of the Canadian people, I do not see much point in the thing; except that, to the extent that the government thinks that the distribution of those assets of the Canadian people—which are its debt—is unsatisfactory, it may take steps to remedy that distribution in any way that lies within the legislative power; in fact, in any way, I suppose—by income tax or succession duties or any other action it cares to take.

Then, further on in the report he said that the national debt, to a large extent, is a sign of a nation's prosperity. Take central Africa,

with no debt, and no prosperity. We should, therefore, be getting very prosperous in the future, because now our national debt has gone up to around eleven billions. It is increasing by about two and a half billions this year. If the war goes on for another two years our national debt will be around fourteen or sixteen billions.

The governor of the Bank of Canada could not tell us how we were to pay off the national debt of three and a half billions of dollars, so that I do not think he will know how we shall pay off a national debt of fourteen or sixteen billions. Yet, according to the sessional paper tabled in the house and referred to by me a few minutes ago, a scientific scheme is to be brought down by which this debt can be paid.

The point I wish to raise is this: I notice that the national resources planning board of the United States, quoted by Stuart Chase in his book "Where Will the Money Come From," stresses the fact that there is no immediate danger until the national debt is equal to double the national income. Well, we shall be pretty near that in another two years, if our national debt gets up around fourteen or fifteen billions of dollars, and the national income falls to about seven billions.

Then they go on to say, and this is an interesting point, that when the national debt rises to double the national income we shall probably have to use interest-free money in the future. Why wait until we reach a crisis to use interest-free money? Why not use it before that? If it is possible to use interest-free money when we reach a crisis, in which the national debt is double the national income, then surely we can start to do so now and avoid this great interest-bearing debt.

Mr. Towers poinst out that the dangerous feature is not so much the size of the debt as the distribution of it. Are we bringing about a better distribution? The parliamentary assistant will probably say that to-day we are having a very wide distribution of bonds. But are we bringing about an equitable distribution of bonds? In respect of the third, fourth and fifth victory loans one-third of one per cent of the subscribers purchased sixty per cent of the total loan. This shows what a very inequitable distribution of debt we have to-day. So that in the future you will have to tax the whole population in order to pay tribute to a comparatively small number of people. Since the war we have greatly aggravated the problem to which the governor of the Bank of Canada referred. I am not referring to the size of the debt, but to the distribution of it, in which there is a more inequitable distribution of debt from day to day, as the war goes on. It is high time some action was taken.

Mr. HLYNKA: The parliamentary assistant blames the war for the rise in debt. May I point out that in 1934, for instance, the national debt of Canada was $3,141,042,097. At that time 44·11 per cent of our total revenue was used to pay interest on our national debt. That was in 1934. There was no war at that time, and I say that the parliamentary assistant to the Minister of Finance is on the spot when he is asked to tell us how this debt is to be paid off.

If governments in the past were unable to meet their debt obligations, except by piling up more debt, then we doubt that this government, following the policy it has followed, will be able to pay off the debt, when it has already reached over ten billions of dollars. The people of Canada, and hon. members are entitled to a definite answer. The people want to know how the government is to retire this debt, because our children will have to bear the burden. If after the war the people have to spend seventy-five cents out of every dollar collected in taxes to pay the interest on our national debt, how in the world is the government to pay for all the social services, and all the promises which are being made during this session? Although it may be quite a job for the parliamentary assistant to the Minister of Finance to answer this question he should, however, tell this committee and the people how the government intends to pay off the debt which the people will have to meet.

Mr. HOMUTH: They will not be here to do it anyway.

Mr. NICHOLSON: On February 17 the parliamentary assistant to the minister gave some information in connection with the public debt. His answer at that time showed that every baby born in Canada in 1914 started out with a debt of $42.64. By 1919 this had increased to $189.45; in 1939, to $278.62 and by March 31, 1943, to $523.44. The question may be asked if this has anything to do with family allowance. Something will have to be done about the interest charges. In 1914 the per capita expenditure on interest on public debt was $1.64; in 1919 it had increased to $9.32; in 1939 to $11.31 and in 1943 to $15.96. Every man, woman and child has an interest bill of $15.96 to pay each year. Could the parliamentary assistant give us some statement to indicate the percentage of the debt owing to ourselves, the percentage owing in the United States and the percentage owing in Great Britain and in other countries.

Mr. ABBOTT: The great portion, of course, is owing to ourselves. Of the total funded debt of $10,561,454,023, $10,216,028,133 is

payable in Canada; $333,000,000 is payable in New York and $12,425,890 is payable in London.

Mr. BLACKMORE: Could the minister tell us to what percentage of the Canadian people that $10 billion is owing? Is it fifteen per cent or ten per cent or what?

Mr. ABBOTT: I am afraid I cannot answer that question.

Mr. BLACKMORE: That is an all-important question. If the money is owing to ten per cent of the population then it would seem that ninety per cent of the population are going to be hewers of wood and drawers of water for the other ten per cent.

Mr. HOMUTH: In Waterloo county everybody took his share.

Mr. ABBOTT: My hon. friend will recall that in the fifth victory loan there were over 3,000,000 individual subscriptions, which would indicate that one in three and a half or four Canadians was a purchaser of government securities. Other than that I am not in position to give my hon. friend any figures as to what percentage is held by how many people.

Mr. BLACKMORE: It would be interesting to know what percentage of those people still hold their bonds and what percentage will still be holding their bonds in another five years. I think we shall find that the same thing will happen as happened in the past, the bonds will all gravitate into the hands of a few people.

Mr. ABBOTT: That is my hon. friend's opinion, but I hold a different opinion.

Mr. BLACKMORE: History supports my view.

Mr. McNEVIN: I should like to direct the attention of the committee to the statement made by the hon. member for Acadia with regard to the number of people who have invested in victory loans. He was referring to the fact that a few people held a large portion of the investment in these government securities, people such as trust companies and life and fire insurance companies. They are very heavy investors, but after all they are investing trust funds for the people and therefore I do not think the hon. member's statement gives a true picture of the situation.

Mr. QUELCH: On the other hand there are great masses of the Canadian people who have no interest in trust or insurance companies.

Mr. GRAYDON: I rise to my feet at this time largely because of a remark made by the hon. member for York South who referred to the possibility of victory bonds being worth less than par at some time in the future. This matter was discussed during a previous debate, and I thought it was made fairly clear that the only real danger so far as these bonds were concerned was the possibility, remote though it may be, that the party of which the hon. member was a member would at some time get into power. I should like to give what I think is perhaps the most recent evidence on this point so that the committee may be fortified in its desire to see that our bonds remain where they are. I think the best evidence we can offer at the moment that the Cooperative Commonwealth Federation is not likely to come into power is the results just handed to me of the Ontario by-election in Haldimand-Norfolk. The Progressive Conservative candidate has been conceded election by a clear majority over all, and then a good deal, with the Cooperative Commonwealth Federation candidate running a very bad second. I think we can be charitable and say that the Liberal candidate was also in the field.

Mr. WRIGHT: The leader of the opposition has introduced another note into this matter.

Mr. HOMUTH: It is the same old note but with a clearer tone.

Mr. WRIGHT: In connection with the guarantee of government bonds I should like to refer to the statement of the governor of the Bank of Canada who said that the amount of debt did not matter as much as the distribution. I wish to ask the parliamentary assistant some questions in connection with that. I do not suppose the figures are available for the last victory loan, but I should like to know how many bonds sold on time in the second to the last victory loan were paid for before the next loan was floated. How many of those bonds were disposed of within a year from the time the final payment was completed? I have been given to understand that large numbers of the smaller bonds are being turned in each year, and in order to have some idea of the distribution we should have these figures.

In connection with the guaranteeing of bonds I should like to ask another question. When men return from overseas and take up land under the Veterans' Land Act or buy homes under a housing scheme and have to pay ten per cent down, will the government accept at par the bonds which those boys are buying to-day out of their meagre earnings?

Mr. ABBOTT: I think my hon. friend has asked me three questions. First of all, how many bonds which were purchased on the

instalment plan in the fourth victory loan were paid for before the next loan came along; is that correct?

Mr. WRIGHT: Yes.

Mr. ABBOTT: That information may be available. I did not anticipate that it would be asked for to-night and I am afraid I have not it here. As to the second question, how many were sold, the government would not have that information. It is perfectly open to the holder of a bond who has received delivery of it to sell it through a bank, an investment banker, or any of the security dealers, and the government would have no record of those successive transactions. Therefore any information which the government might have on that could only be an estimate.

Mr. WRIGHT: Does the parliamentary assistant not think it is a very important thing to know?

Mr. ABBOTT: It may be important.

Mr. WRIGHT: How many of the small holders are retaining them?

Mr. ABBOTT: It may be an important thing to know, I agree. The government would be very much interested and I would be very much interested to know, but I do not know how we are to get the information as long as there is a free market for the sale of bonds. Those securities are bearer securities. They may be transferred from hand to hand. They are being bought and sold every day and the government has no record of those transactions and could not possibly have any record of them. Therefore any information the government may have on it would be a pure estimate, a pure guess.

Mr. WRIGHT: Would the government not have any idea of the numbers that are sold to the banks?

Mr. ABBOTT: I have no information here, and I do not know that the government has any definite information as to just how many bonds are handled by the banks. I should think they would not have.

Mr. WRIGHT: With respect to the government accepting those bonds—

Mr. ABBOTT: Mr. Chairman, I dealt with that the other day when my hon. friend raised it on the motion to go into supply. My hon. friend has cited the case of a returned man who wants to make a payment on a house or a farm and he has government securities which he wishes to use in order to make the payment. If he wished to do that he could dispose of his securities and use the money for the purpose of making his payment. I answered my hon. friend the other day and now he is trying to get me to give a different answer from the back-door.

Mr. WRIGHT: No; I beg your pardon. The parliamentary assistant to the Minister of Finance cannot put words into my mouth. I did not try to get an answer from the back-door. I am trying to get some statement from the government that they would accept the bonds at par.

Mr. ABBOTT: I did not mean to offend my hon. friend when I said that. I shall answer the last part of it. It is a matter of government policy which will be announced in due course if any such decision is made; but I answered my hon. friend the other day as to whether the government was prepared to guarantee a market for bonds of any and all maturities at par. I pointed out to him that this would mean in effect that all government borrowings would be demand loans, and I gave that as one reason why the government was not prepared to give any such guarantee.

Mr. WRIGHT: My suggestion was that a floor be placed under them.

Resolution reported, read the second time and concurred in. Mr. Abbott thereupon moved for leave to introduce bill No. 38, to authorize the raising, by way of loan, of certain sums of money for the public service.

Motion agreed to and bill read the first time.

SUPPLY

BEET SUGAR INDUSTRY IN CANADA—STATEMENT OF MR. BLACKMORE

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance) moved that the house go into committee of supply.

Mr. J. H. BLACKMORE (Lethbridge): On Friday, March 18, I promised that at the earliest opportunity I would reply to the Prime Minister's attack of March 10 upon certain remarks of mine of March 7, in which I said I believed that the quality and price of sugar in Canada had been manipulated by a trust or combine. I have no doubt the vested interests of Canada are highly gratified with the Prime Minister's vigorous defence of their prerogatives, and the reputedly richest man in Canada, J. W. McConnell, of Montreal, must be indebted to the Prime Minister for his eloquent testimonial of that gentleman's patriotism. I raised no question as to Mr. McConnell's patriotism. I raised a question

which the Prime Minister could have answered "yes" or "no"; but he did not answer that question. I did ask several other questions. The question which the people of Canada have a right to have answered is the one which I did submit to the Prime Minister. May I repeat the questions which I asked? I turn to page 1278 of *Hansard* and I find this is the question I asked:

> What is the relationship existing between the government and this great sugar combine, and between the government and the head of this corporation, one John W. McConnell?

That is the first question. The second question is:

> Why has the government condoned this manipulation in the sugar industry? It would allay considerable suspicion in this house and throughout the country if the Prime Minister would rise and categorically state that the Liberal party has never received, directly or indirectly, from the St. Lawrence Sugar Refining Company, from J. W. McConnell, or from anyone representing either or both of these, or any other Canadian sugar interest any contribution of money for the campaign funds of the Liberal party.

The answer to that question could have been given as either "yes" or "no". The Prime Minister must have known the answer. He did not choose to give the answer. I am sorry he is not in his seat at the present time.

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Speaker, I can assure my hon. friend that the Prime Minister did not know and I do not know. The members of the government do not handle campaign funds.

Mr. DOUGLAS (Weyburn): They know where they come from.

Mr. HOMUTH: Who does?

Mr. HOWE: No.

Mr. DOUGLAS (Weyburn): They ought to know.

Mr. BLACKMORE: We have that much at least, whatever it means. The question arose out of my expression of belief that efforts were successfully made before and during the present war to restrict artificially the production of beet sugar in Canada so that the cane sugar interests might prosper at the expense of the people, prosper not only through prices but through having the Canadian market reserved for their cane sugar. It is a fact which is perhaps not as well known throughout Canada as it might be that the cane sugar interests are desperately anxious to reserve the Canadian market for their own product; and consequently they will go to almost any limit in order to avoid having beet sugar production increased in the Dominion of Canada, and from that very fact we are suffering to-day.

[Mr. Blackmore.]

May I give some evidence upon which I base my suspicion that the production of beet sugar in Canada has been deliberately restricted by the Liberal government ever since that government came into power. First of all I wish to read into the record a statement which perhaps is almost forgotten by a good many, showing that the Liberals had no excuse for neglecting the beet sugar industry in Canada. In 1932, in this house, under the administration of the Right Hon. R. B. Bennett, there was appointed a select standing committee on agriculture to conduct an investigation into the beet sugar industry. These men, among whom were a good many Liberals, did a thorough job. They called many reputable witnesses. After having conducted what they considered to be a thorough probe, they submitted a report in which the following words appear: I quote from *Hansard*, 1932, pages 1606 and 1607:

> Your committee therefore recommend that in view of the existing tariff on sugar and in consideration of the substantial payments being made to agriculture and labour by the beet sugar factories at present in operation, the cane sugar refineries should undertake to provide for a gradual increase in factory facilities for the refining of beet sugar in Canada, and that, with the additional advantages in freight rates to points in the middle west, heretofore described, factory facilities should now be steadily increased in western areas where beets are grown, and thereby make it possible to produce from beets a more substantial percentage of the sugar consumption of Canada.
>
> Your committee further recommends that if no successful attempt be made in the immediate future by the refineries to increase the facilities for the manufacture of beet sugar, the government should take into consideration steps to accomplish that end.

I had thought that it should be worth while to bring in the names of the Liberals who were on that committee. However, I will omit to mention them to-night. But there were a number of hon. members in this house in 1932, before the many labour-saving devices which have been brought into the beet sugar industry had been introduced, and therefore before beet sugar could be manufactured nearly as cheaply as can be done nowadays, who were advocating an increase in the production of beet sugar.

I have in my hand a brief which was prepared by the present parliamentary assistant to the Minister of Labour (Mr. Martin). That parliamentary assistant prepared a very fine brief; it did him credit. He was in favour of increasing the beet sugar production in Canada. Unfortunately his labours, since I have been here, have been so arduous that they have prevented him from getting round to the point of making a speech in support of beet sugar, although several times, while I have been speaking, he has kindly interjected remarks

which indicated that he was sympathetic with my point of view, and I am sure he continues to be sympathetic.

Mr. MARTIN: Undoubtedly most of the information in the hon. gentleman's speech comes from my brief.

Mr. BLACKMORE: Undoubtedly; I seek knowledge wherever I can find it. I wish the Liberals would do the same. The trouble with the Liberals is that they think that anything which does not come from Liberals is not worth listening to.

I find on page 41 of that brief the following words:

> It is not too much to ask of the federal government a definite consideration of the problem that will bring about a heavier consumption of beet sugar in Canada, thereby providing Canadian farmers with a greater income resulting from readier cash crops...
>
> Furthermore, the government might well consider an advertising campaign to stimulate the use of beet sugar. In this way the unfair prejudice against beet sugar would gradually, but effectively, be eliminated.

These words do the hon. member great honour. This brief was submitted to the Hon. C. A. Dunning, then Minister of Finance, and to the present Minister of Agriculture (Mr. Gardiner), at a conference held in the office of the Minister of Finance (Mr. Ilsley) on Thursday, March 5, 1936, at eleven o'clock. I was present at that time. I think the Liberals cannot beg that they just did not know how important the beet sugar industry was in Canada: they cannot offer that plea in excuse. The Minister of Agriculture in the spring of 1937 sent Doctor E. S. Archibald out west to examine the beet sugar industry in Alberta. Whether the minister did that merely in order to make a fine gesture or whether he really wanted to find out what were the conditions in the industry, no one is able to say. But Doctor Archibald went out, conducted an examination and came back and submitted, on October 28, 1937, a thorough and comprehensive report, in which he showed the great value of the beet sugar industry to Canada. He did not make any definite recommendation. I have often wondered why. I have often wondered whether the reason he made no recommendation was that a certain thing had occurred in the spring of 1937, to which I shall refer by and by.

The Alberta Cooperative Sugar Beet Growers' Association made a submission to the Rowell-Sirois commission, exhaustive and unanswerable in its arguments. Anyone who read that brief would realize that the beet sugar industry, at least in the west, was one which could not possibly be with impunity disregarded. It proves that the industry is economic and a success in every way. From page two of the report I read the following quotation:

> To indicate the value of this industry to the agriculture of our district, the community in general and the Dominion of Canada, we submit the following figures relating to the 1937 beet crop:
>
> 235,481 tons of beets were produced from 19,829 acres of irrigated land—an average of 11·88 tons per acre.
>
> 75,603,700 pounds of sugar were manufactured.
>
> 3,813 pounds was the per acre yield of refined sugar.
>
> $3,040,000 worth of sugar was manufactured.
>
> $155 was the total gross return per acre.
>
> $77.50 was the gross return to the manufacturer.
>
> $77.50 was the gross return per acre to the farmer.
>
> The farmers' costs approximated $60 per acre which includes $25 per acre for hand labour by the farmer. These figures were given in a speech made by T. George Wood, Manager, Canadian Sugar Factories Limited, at Lethbridge, Wednesday, March 23, 1938. We believe that this land is producing more food value per acre than any other land in the dominion.
>
> Sugar beets of the highest quality can be grown, harvested and manufactured into refined sugar on all of our irrigated lands in Alberta. This industry has, in the districts where it is established, made a tremendous contribution toward the prosperity of both the urban and rural sections and to our national economy.
>
> The annual returns from the Lethbridge northern irrigation district rose from $761,000 in 1935 to $1,057,000 in 1936, the first year the new sugar factory operated in that territory.

If that year is in any way an indication of the ordinary performance of the beet sugar industry in Alberta, it is to be seen that the statement that the beet sugar industry is an economic success cannot possibly be refuted.

Something comes into the picture which is astonishing and which, I think, reflects great discredit upon the Liberal government and opens the way for the suggestion which I made the other day. In London, between April 5 and May 6, 1937, was held an international sugar conference. In that conference someone—and I have never been able to find out who it was—is quoted as having said the following:

> At the same time the government of Canada reiterates the assurance already given, that they do not propose to stimulate the production of sugar in Canada during the term of this agreement—

I interpolate here the remark that five years was the length of the agreement.

> —by subsidy, increased protection, special remission of taxes, or by any other similar measure.

Mr. MacNICOL: Whom is the agreement between?

Mr. BLACKMORE: Apparently it was a world agreement for the restriction of the production of sugar.

Mr. MARTIN: Who was the author of that statement?

Mr. BLACKMORE: That is what we all want to know. We have been trying to find that out since the statement was made and we cannot find out. Canada, astonishing as it may seem, the government of Canada, has held itself bound by that statement, as though the statement were its bond. Who made that statement for Canada? That is an important question.

Mr. HOMUTH: Who represented Canada at the meeting?

Mr. BLACKMORE: We cannot find that out. I have tried to find out and I have put a question on the order paper. Who gave him the authority? We want to know that. Was the consent of the cabinet given in any resolution? Was any province consulted? Was this statement submitted to the cabinet after it was made? Was it passed? Was it submitted to any province? Was it submitted to parliament? As far as I can judge, the answer to every one of these questions would be no. Now, who is this individual, who sent him there, and under whose influence did he agree to that convention? That is the question that has to be answered.

Mr. HOMUTH: He is the little man who wasn't there.

Mr. BLACKMORE: Well, his works remain; his tracks are there. If the answers to each of those questions must be no, then what? I think when the Prime Minister (Mr. Mackenzie King) and the hon. member for St. Antoine-Westmount (Mr. Abbott) finish explaining that matter they will remove a lot of suspicion in this country, and I think the Prime Minister will not be so eager to rush into parliament and accuse me of irresponsible utterances.

What did the United States do with respect to that agreement? The representative of the United States signed the agreement, and then the house of representatives and the senate of the United States repudiated it, refused to ratify it. Can anyone give me any reason why the United States, after signing the agreement, should refuse to ratify it, while Canada, without having signed it, would hold herself bound by the thing? If there was not some secret influence at work it is going to be pretty hard to make any hard-headed man believe it. It is astonishing.

Let it be borne in mind that in that year the war clouds were already threatening. Any man of vision could see that war was coming; any man with judgment could see it. Furthermore, any man of vision, with any kind of information, would know that the war which was coming would be a war of bombs, of surface raiders, a war of submarines, and that consequently the sugar supply of Canada would be seriously threatened and that the sugar supply of the world would be destroyed. And anyone who reflected on Canada's happy position would realize that this country was in an admirable position to become the sugar-bowl for the needy world. Yet what was done?

The question springs into my mind: Was the government in its sugar policy, with respect to beet sugar, accommodating friends, or was it placating potential enemies? When I asked whether or not the Liberal party had received campaign funds from these gentlemen I was not insinuating that the Liberal party would necessarily be doing a reprehensible thing if it had received campaign funds.

Mr. HOMUTH: Oh, they would never do that.

Mr. BLACKMORE: I was not implying that. What I was indicating was simply this—what the Prime Minister apparently failed to get. I wondered whether he was doing what he did with respect to beet sugar in this country because he wanted to help his friends or because these interests were so powerful that he did not dare do otherwise.

Mr. HOWE: On a point of order, my hon. friend is suggesting that the Liberal party has entered into an agreement with persons unknown not to extend the sugar industry. I would point out to him that there has been more expansion of the sugar industry in the last five years than in any other five years.

Mr. MACKENZIE (Vancouver Centre): On a point of order, I also wish to point out to the hon. member that under section 158 of the criminal code, if he is making allegations of this kind he should proceed in the customary fashion, according to that section of the code; otherwise he has said too much or too little.

Mr. BLACKMORE: Yes; I know the Minister of Pensions and National Health (Mr. Mackenzie) is a champion bluffer, but he does not bluff me, and I am perfectly aware of the protection I have in this house. I would point out to the hon. member that a man, in order to attack interests so powerful as the ones I am trying to move, needs all the protection he can get because they, the interests, have plenty of it.

Mr. SPEAKER: I am not so much concerned with the remarks the hon. member

made against the government, but I did think he stated that the Prime Minister was responsible for this reprehensible practice.

Mr. BLACKMORE: I think you will find, Mr. Speaker, that the record will show that is not the case.

Mr. SPEAKER: If the hon. member tells me that I am wrong in my impression I will take his word, but that was what I understood him to say.

Mr. BLACKMORE: I am endeavouring to speak loudly enough so that Your Honour will hear, but perhaps it is difficult at that. I did not say anything to reflect on the Prime Minister's honour.

Now I will deal shortly with the remarks of the Minister of Munitions and Supply (Mr. Howe). Suppose the industry has expanded; it has not expanded in my area to any great extent. I have some other things which it would do the Liberals good to contemplate.

Mr. HOMUTH: They will have a lot of time to do it after the next election.

Mr. HOWE: I suggest that it has expanded in the hon. gentleman's area in the last few years.

Mr. BLACKMORE: We shall leave the records to show it.

Mr. HOWE: One of the last jobs I did was to design the extension of that plant.

Mr. BLACKMORE: I know just what has happened out there; I did not have to come here to learn it. What has happened since that agreement was signed or arranged or made or condoned or acquiesced in, or whatever is the word, in London? What has Britain done? Has she held herself bound by that agreement? Let me read from the report of the Alberta Cooperative Sugar Beet Growers. It am quoting from the 16th Annual Report, page 24:

> Action has also been taken to increase beet sugar production—

That was in 1940.

> —in Britain. The price to be paid for beets has been raised by three shillings and nine pence the ton. The farmers have been told that they could count on further subsidies if this price should not guarantee them a sufficient return. A subsidy of £2 per acre is also being granted for ploughing up grass lands for beets and certain other crops. The government hopes that these measures will bring the beet area for 1940 to 400,000 acres; the area in 1939 was 336,441 acres.

That indicates how mother Britain found it necessary to deal with this agreement when the war came on; but did it make any difference to Canada? Oh, no; she never changes once she gets on a wrong path. You never find Canada deviating at all.

Mr. LaFLECHE: Don't sell Canada short; it doesn't pay.

Mr. BLACKMORE: It would be nearly impossible to sell her much shorter than the Liberals have done already; she is short of nearly everything. What happened in Canada? I have in my hand a statement issued by the wartime prices and trade board on May 2, 1940, in reply to a statement given to the press on May 1, 1940, by the chairman of a committee representing the Southern Alberta Beet Growers association; this will be found in the Ottawa *Citizen* of May 2, 1940:

> At the conclusion of the interview the chairman—

That is the chairman of the wartime prices and trade board.

> —stated explicitly to the delegation that the "wartime prices and trade board, as a federal authority, was not in a position to do anything whatsoever to assist the expansion of the sugar beet industry in Canada."

And further on:

> "At no time was any suggestion made," said the chairman, "that the wartime prices and trade board would proceed either directly or indirectly to encourage the expansion of the beet sugar industry."

Oh, what immaculate honour! At that time was not Hitler's power apparent? Had not most of the nations of western Europe fallen? Had not people everywhere awakened from their idiotic dream that Hitler would not last? Then why could nothing be done to assist in preparing this country against the dangers that yet lay ahead?

But we have not yet reached the climax. In the spring of 1941 word came out from Canadian Sugar Factories Limited—page the Minister of Munitions and Supply!—at Raymond that 1,300 acres of beets must be taken out of cultivation that year. In that area 1,300 acres of beets under normal conditions would produce 5,569,200 pounds of sugar. The reason given by the factories was that they had 200,000 hundredweight of sugar in their warehouses which they could not sell. Who was at fault because they were unable to sell? Let me read a statement from order in council P.C. 1983 dated May 15, 1940, setting forth the powers of the sugar controller. Hon. members will notice that he started his work in May of 1940, while the incident to which I have been referring took place in 1941, so that he had had time to find his way around. These are the words:

> All sugar refiners in Canada shall sell to the sugar administrator as and when required by him, all raw sugar, and all refined sugar, syrups, liquid sugar and molasses manufactured from beets or cane now or hereafter in their possession at such prices as the sugar administrator, under the direction of the wartime

prices and trade board, from time to time may prescribe and, to effectuate such power, the sugar administrator, under the direction of the board, shall have power to take possession of all or any such sugars accordingly.

Who appointed the sugar administrator? The Liberal party. At whose instigation? Well, you tell me. Whose business was he doing when he would have allowed these 1,300 acres to be taken out of cultivation? Let someone supply the answer; I have been trying to find out. Certainly he was not looking after the welfare of the people of Canada. Undoubtedly it was that man's fault that 200,000 hundredweight of sugar remained unsold in the storehouses of these factories. Whose fault was it that 1,300 acres were to be taken out of cultivation? It was the fault of no one but the sugar controller. Whoever appointed him, whoever instigated his appointment, was responsible for the decision to take that land out of cultivation. Fortunately, because of the pressure of public opinion, the unwise decision was rescinded and the 1,300 acres were put back into cultivation. Let us remember that this was in 1941. In those days there was no doubt about the terrific power of the enemy we were fighting; yet there were men in this country who could toy with an industry upon which the very lives of the people depended. For whose benefit? Well, we are all trying to find out. I suggested an answer.

Then we had rationing, and now we have scarcity. I am going to call upon the Toronto *Globe and Mail* to consider the array of evidence which I have submitted, and I wish to ask them to take a little time off to explain, in the light of that evidence, how they justify themselves in characterizing my remarks as irresponsible utterances. Someone in this parliament, Mr. Chairman, must rise and defend the cause of the common man; but he who stands in this House of Commons and undertakes to battle for the truth finds all the terrible powers of this country dead against him, and that he must labour under every handicap. Then, if he endeavours to use the rules as a means of strengthening himself, he must be abused by what should be a responsible newspaper and by those who should be responsible men. It does not hurt me; I came here to defend the cause of the common man and I am going to defend it. Now I invite the Prime Minister and the Toronto *Globe and Mail* to spend any necessary amount of time to prepare a satisfying explanation.

Mr. MARTIN: You would not have them together?

[Mr. Blackmore.]

Mr. BLACKMORE: No; they had better work separately, though apparently they did not do so in the last instance; the one copied from the other. Let them prepare an explanation that will satisfy any hard-headed, common-sense man, an explanation that will justify the government in following the questionable policy with respect to sugar which has prevailed in this country. I shall be told, as one of the stock reasons why it is necessary to avoid any expansion of the beet sugar industry during wartime, that we must not have too much beet sugar producing capacity at the end of the war because we have to sell abroad and therefore we must buy abroad. That is the stock argument. May I ask those who would bring forward such a foolish argument if we ought to stop manufacturing agricultural machinery in Canada in order that we might buy from Britain or Germany. Should we stop manufacturing shoes and clothing in Canada in order that we might buy from the United States, in order that we might sell our wheat? Should we stop manufacturing lumber in order that we might trade with Russia, or stop manufacturing cheese and butter in order that we might trade with our sister dominion, New Zealand? Those sound like intelligent proposals, do they not? Or should we stop producing oil in order that we might trade with Roumania?

Mr. MacNICOL: That is one thing of which we are producing very little in Canada.

Mr. BLACKMORE: But should we stop even that little production? Well, if we would not stop producing these commodities we have mentioned, why stop producing sugar from beets?

Mr. HOWE: When did we stop?

Mr. BLACKMORE: When limiting production.

Mr. HOWE: When did we do that?

Mr. BLACKMORE: In 1941, and ever since the signing of or the acquiescence in the international trade agreement, as I have abundantly proved. I think the minister will find, when he reads my remarks in *Hansard,* that it will be hard to find an answer to them.

Some will say: "Is the sugar from the beets as good?" Yes, it is exactly the same kind of sugar. It is the same, chemically, as sugar wherever you find it, or whatever it is made from.

Then they will say: "Is it cheap enough?" I point out only this fact, that according to the report which I have here from Canadian Sugar Factories Limited, for 1938—and I am speaking

from memory, although I am sure I have it right—they sold their sugar for a net price of $3.94 a hundredweight in 1937.

Mr. MacNICOL: F.O.B. mill?

Mr. BLACKMORE: That is the year they made $155, to which I refer. I say that $3.94 a hundredweight is pretty cheap sugar.

Mr. MacNICOL: At what point?

Mr. BLACKMORE: At the refinery. All this manoeuvring of the Liberal party in connection with the restriction of the production of beet sugar I think we must characterize as the most effective government cooperation with somebody—and if not the sugar interests, then with whom?

Mr. ABBOTT: There has never been any restriction of the production of beet sugar.

Mr. HOWE: There has been an expansion in every year of the war.

Mr. BLACKMORE: Some men looking at sunlight in broad day would declare it was dark. This is cooperation with these interests in what appears to be an international conspiracy to impose either scarcity or high prices or both upon the people of Canada, through an agreement on Canada's part to refuse to assist in any way the expansion of the beet sugar industry in Canada—the beet sugar industry, for which Canada is extraordinarily well adapted. I see no way in which one can explain that in any other way.

Now, another serious thing: This participation, in the international sugar agreement appears to be not only a conspiracy to foist high prices upon the Canadian people but, perhaps worse still, and yet more sinister, it appears also to be an agreement, or complacency, or conscious if not wilful acquiescence on the part of the King government, in an international plan to rob Canada of her economic independence.

Sugar is one of the most vital needs of the Canadian people. In fact it is practically indispensable to them. Imagine how helpless might be the condition of the Canadian people if an international organization, desiring to brow-beat Canada into some policy repugnant to Canadians were to threaten to withhold from Canada the sugar her people needs! In such a condition the threat of withholding sugar would be a fearful weapon, through the use of which an international organization could destroy Canada's independence. It would be a weapon even more potent than an international police force. I repeat: it looks as though the King government had been at least cooperating with interests definitely aiming at the destruction of Canada's sovereignty.

There are some who smile. I will tell you that if some of the schemes which these supranational government artists are trying to have fixed on this country succeed, the smile will be on the other side of the face. This method of food control is exactly the strategy and technique by which they seem to intend to work.

Let the people of Canada know, and I hereby declare to them that, except for the opposition of the sugar interests and the government's acquiescence in that opposition, the domestic production of sugar in Canada could now be meeting the domestic non-rationed requirements not only of Canada but of a very considerable portion of the English-speaking world. Let me give the house just a few figures to indicate the truth of what I say. The hon. member for Essex East (Mr. Martin) in his brief points out that the county of Lambton alone could produce twenty five per cent of all Canada's sugar needs in peacetime. They could support four factories of 1,200-ton slicing capacity. And he points out that Kent, Essex, Middlesex and Huron are all counties admirably adapted to the production of sugar beets, and that they could produce the sugar which Canada requires. Why is that not being done?

Now, in Doctor Archibald's report, to which I referred earlier, with respect to the Alberta sugar beet situation, published on October 28, 1937, he points out that only 20,000 acres were being used in Alberta for the production of sugar beets, and that 200,000 acres of irrigated land of just as fine quality were available for sugar beet production in that province. May I point out that in my constituency by the expenditure of $15,000,000 in the construction of the Lethbridge south-east water conservation project 350,000 more acres of as fine quality as are now producing sugar beets could be brought into cultivation. There is no doubt in the world that Canada can produce all the sugar she needs.

I turn now to the hon. member for St. Antoine-Westmount. I wish I had time to deal with his speech categorically, but I shall be able to make only a few comments with respect to it. As for his contribution to the debate I would say that as one who comes from the citadel of high finance the faults in his argument can be explained. Any man who undertakes to talk about matters concerning which he has little information and less understanding will naturally blunder at every turn, as did the hon. member for St. Antoine-Westmount.

Mr. ABBOTT: What is the hon. member reading from?

Mr. BLACKMORE: Does the hon. member wish me to read the article?

Mr. ABBOTT: I am glad to see he has committed it to writing.

Mr. BLACKMORE: I am referring to the speech which he delivered, with respect to my speech. Of course he thought my remarks were full of inconsistencies. It requires a well-informed man to follow the reasoning of another well-informed man. The hon. member for St. Antoine-Westmount appears to argue that even if Canada had been committed to beet sugar industry of no matter how great an extent, her domestic sugar production could have made no difference to the quantity of supplies available for war-time consumption in Canada.

Suppose, Mr. Speaker, that Canada had thirty sugar factories of 1,200-ton slicing capacity, which she could easily have in Alberta and Ontario alone, and producing one and a half times the amount of sugar she needs, are we to be told in all seriousness that that production would make no difference to the sugar which the Canadian people would have? If that is the case, then I ask what foolhardy policy it was that dictated the signing of an agreement which rendered such a thing as that possible?

Mr. MacNICOL: The hon. member left out Manitoba in his list of provinces which could produce beet sugar. They are growing sugar beets out there, and also have a sugar beet factory.

Mr. BLACKMORE: I knew that the Manitoba people would not mind. The point I wished to make was that two provinces alone in Canada could produce one and a half times the sugar we need. And if you bring in the other provinces there is no reason in the world why this country should be without sugar. This thing of trying to argue the Canadian people into the idea that it is the war which brought on the shortage of sugar is simply deluding the people. There must be a complete change in the whole outlook in respect of many commodities produced in this country. We must stop the restricted, short-sighted, narrow-minded point of view, or using the point of view we have had up to the present time. We must reach out in a generous way, we must use the resources of our country and distribute them so that the Canadian people may have abundance.

In closing, I again make an offer to anyone in the Liberal party who thinks he can explain away the arguments I have advanced, and upon which I base my suspicion that secret influence has been brought to bear upon the government to bring about a policy of restriction with respect to the production of beet sugar in Canada since the beginning of the war; to attempt to do so. I have not said anything about prices, although I mentioned prices in my speech. I have an array of figures which would be quite as impressive, and perhaps if the opportunity offers at some time I shall give particulars of the prices to indicate that there has been manipulation resulting in the Canadian people having to pay more for their sugar than they should have had to pay.

Mr. E. E. PERLEY (Qu'Appelle): Mr. Speaker, I am not very anxious to get into this debate, but several references have been made to the party of which I happen to be a member. There are at present in the house four members who were members of the agriculture committee which sat in 1932. The hon. member for Haldimand (Mr. Senn) was the chairman; the hon. member for Wood Mountain (Mr. Donnelly) was a member, as well as the hon. member for Yale (Mr. Stirling) and myself. The question of encouraging the production of sugar from beets in Canada was referred to that committee. I have before me the report of the committee which was presented to the house on April 1, 1932, and I should like to read one or two paragraphs from the report, as follows:

> The evidence submitted established the following facts regarding the industry:
>
> 1. That the production of sugar beets has been carried on very profitably in certain districts of Ontario and Alberta; that the area under cultivation has increased from 25,000 acres in 1921 with a yield of 200,000 tons to 42,000 acres in 1931, with a yield of approximately 435,000 tons, and that the production of refined beet sugar has increased from 53,000,000 pounds in 1921 to approximately 100,000,000 pounds in 1931.

That is in ten years. The report goes on:

> 2. That large additional areas, suitable for the growth of sugar beets, are available in Canada.

And again:

> 5. That the sugar beet factories at Chatham, Wallaceburg and Raymond are now operating at full capacity, and that no further development of the beet sugar industry in Canada is possible until manufacturing capacity is increased.

The final paragraphs of the report read:

> Your committee therefore recommends that in view of the existing tariff on sugar and in consideration of the substantial payments being made to agriculture and labour by the beet sugar factories at present in operation, the cane sugar refineries should undertake to provide for a gradual increase in factory facilities for the refining of beet sugar in Canada, and that, with the additional advantages in freight rates to points in the middle west, heretofore described, factory facilities should now be steadily increased in western areas where beets are grown, and thereby make it possible to produce from beets a more substantial percentage of the sugar consumption of Canada.

Your committee further recommends, that if no successful attempt be made in the immediate future by the refineries to increase the facilities for the manufacture of beet sugar, the government should take into consideration steps to accomplish that end.

I read from that report to show that the government of that day and the agriculture committee of that day were ready to encourage the production of beet sugar in Canada. Since that time there has been a considerable increase in the production of beet sugar in Manitoba. There is a splendid refinery located there and I suggest to all hon. members that they visit it. It is one of the best in Canada and it has great possibilities. I say these few words to show that the party of that day was interested in increasing the beet sugar industry of Canada.

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Speaker, the sugar agreement of 1938 was wholly to increase the supplies of sugar and to divide them equally among the people who were preparing for war. During every one of the last five or six years there has been an expansion in the sugar beet industry. The sugar beet refinery in Winnipeg which was referred to was completed within the last three or four years, and recently a new industry has been started in Quebec. I can assure my hon. friend that if any other interest wishes to increase the production of beet sugar in any area of this country they will have the support of the government, as has every other beet sugar project that has come along.

In connection with the project in Quebec there was an acute shortage of building materials, and it was difficult to justify the use of the materials for that purpose when they were needed for direct war projects. Nevertheless the government decided that the project was of such importance that an exception must be made and the beet sugar plant in Quebec was classed as a war project.

I can say categorically that this government has taken no action that would in any way limit the production of sugar in Canada. I can give evidence of the fact that we have given every assistance to those interests that wished to expand the production of beet sugar in this country.

Mr. BLACKMORE: How about the 1,300 acres in 1941?

Mr. HOWE: That is absolute nonsense.

Mr. BLACKMORE: It is not nonsense. My hon. friend has just forgotten, that is all; he does not know.

Mr. P. C. BLACK (Cumberland): What about the old and well established sugar refinery in Halifax which was closed down recently because of war conditions. The conditions that forced the closing of that refinery have pretty well rectified themselves. Cane sugar is now coming into Halifax harbour and going to other parts of Canada. Can the minister give the house any information as to when the Acadia sugar refinery will reopen and again be producing sugar?

Mr. HOWE: The house is not in committee. My hon. friend is standing up for the sugar barons who use cane sugar. I may say that no action of the government closed the refinery in Halifax. It is my understanding that it was bought by private interests who decided that it was better closed than open.

Mr. BLACK (Cumberland): The government had no authority to keep it open?

Mr. HOWE: The government has plenty of authority.

WAR EXPENDITURES COMMITTEE—IN CAMERA SITTINGS—MR. HOMUTH

Mr. KARL K. HOMUTH (Waterloo South): Mr. Speaker, now that we have finished a sweet subject, perhaps I may be pardoned for interjecting something sour into the debate. I do this because I feel the matter I have in mind is of considerable public importance and is directly associated with the activities of the Department of Munitions and Supply. I know of no other time to take up this matter than on the motion to go into supply. I refer to the matter of whether the war expenditures committee should sit in camera or in public and to the question which I had with Mr. Speaker with regard to it.

Mr. SPEAKER: I think the hon. member has given me sufficient indication of what he intends to speak on. He is proposing to deal with an opinion which I gave to him personally regarding the secrecy of the meetings of the war expenditures committee and I must rule that on the motion to go into supply the hon. member cannot discuss that matter. The rule is perfectly clear according to citation 568 of Beauchesne's Parliamentary Rules and Forms, third edition, which reads as follows:

> Until the report and evidence have been laid upon the table, it is irregular to refer to them in debate, or to put questions in reference to the proceedings of the committee.

The reference is to select committees. That rule is also borne out by Bourinot's Parliamentary Procedure, at page 474, wherein it is stated:

> Until a committee report, it is irregular to refer to its proceedings in debate in the house.

For instance, in the session of 1873, Mr. Huntington was proceeding to refer to certain papers and letters relative to an important matter under the consideration of a select committee; but the speaker decided in accordance with English precedents that they could not be read in the house (a). Neither can a committee report the evidence taken before a similar committee in a previous session. . . .

The matter that the hon. member has referred to is a matter under discussion in the committee. It is not before the house. It is not a grievance in the sense that the hon. member for Lethbridge (Mr. Blackmore) spoke of this evening. It is a matter purely of proceeding, which is within the hands of the committee. It is not before the house and therefore I must rule that the hon. member cannot bring it up.

Mr. HOMUTH: But is a grievance. It is one of those grievances that we cannot bring before the house and the hon. members are stymied.

Mr. SPEAKER: The hon. member will have opportunities in the proceedings of the house but I cannot now indicate them. At the moment we are on the motion to go into supply. It is not a grievance in the sense that is intended when the committee of supply is being set up. As I have already said, it is a matter that is before the committee. It is a proceeding which they are dealing with. It is a matter which cannot be brought before the house in the manner in which the hon. member is now trying.

Mr. GRAYDON: May I crave Your Honour's indulgence for a word in this matter?

Mr. SPEAKER: I am always ready to listen to the leader of the opposition, but in this instance my position is perfectly clear. I have no doubt in my mind as to the soundness of the rule I am now propounding and it must be taken without argument.

Mr. GRAYDON: I am sorry Your Honour made that ruling because this is the situation in which we find ourselves. The committee has ruled in a certain direction. We have an appeal to Your Honour but we are not allowed to exercise that appeal. In a few words, that is what it means.

Mr. SPEAKER: There will be opportunities in this house when the matter can be brought to the attention of the Chair.

Mr. GRAYDON: What are they?

Mr. SPEAKER: At the moment there is, in my judgment, nothing before the Chair which would justify the hon. member in bringing up this question when going into supply.

[Mr. Speaker.]

Mr. GRAYDON: He can never bring it up then.

Mr. SPEAKER: I have ruled.

CASE OF DESERTER AT LONGUEUIL—MR. POULIOT

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): Mr. Speaker, in accordance with your ruling I shall not speak about that matter. I wonder if the leader of the opposition has something more to say. I have another case that I shall bring to the attention of the Minister of National Defence (Mr. Ralston). I shall summarize in a few words what it is. There was a fellow who deserted for about a month or two. He was sentenced to the clink in Longueuil, and I am informed that he suffers from sinus trouble. The parliamentary assistant to the Minister of National Defence (Mr. Macdonald) told me that I could have a copy of his examination with a letter from the man authorizing the department to give it to me. I sent a draft letter of two or three lines to his brother and asked him to go to Longueuil and have it signed by the man. The brother could not see him that day, and then I wrote a letter to the man with that draft letter of two or three lines. The letter was along these lines:

I hereby authorize the department to give a copy of my medical examination to J. F. Pouliot.

That letter was registered. The commanding officer said to that man:

If you sign that letter you will be punished for that or if you send that letter.

I am informed that the letter has been signed, has been sent to me and has been held by the officer because I have not received it. Since that time the man has been condemned to bread and water and the restrictions upon him have been more severe. Naturally I do not blame headquarters for that treatment, but there is something wrong there. That man had a most unsatisfactory medical examination. In Longueuil a young man who had heart trouble was ordered to shovel sand in a cart for a whole day. There is something wrong there. I shall ask the minister kindly to send someone from Ottawa, someone who has nothing to do with the garrison at Longueuil and have a report made on that case. It seems to be a reasonable request to make. If the situation is as I am informed it is, it reminds me of the dark ages of long ago. That man cannot be treated like that. I have a right to his examination upon the conditions set by the parliamentary assistant to the minister. He said to me:

Let us have a letter from that man; let us be authorized by that man and I shall give you a copy of the examination.

That man cannot write me. The medical doctors of the army at Longueuil have already, to my knowledge, freed some men. When I complain of this case I know whereof I speak. I know also that these men have been freed after I directed the attention of headquarters to the case. It is time it should finish; whoever is in charge in Longueuil should be severely punished if the facts that I have given are true, and I presume they are because up until now they have been.

Hon. J. L. RALSTON (Minister of National Defence): I want to say to my hon. friend that I have the greatest confidence in the officer who is in charge at Longueuil. I shall be very glad to look into the matter to which he has referred. As he has said himself, it is not a matter for headquarters, but a matter of administration in the district. I shall have an examination made. If he had referred the matter to me I can assure him I would have been very glad to have had it looked into without taking up the time of the house.

Mr. POULIOT: Thank you. I will notify the minister.

TREATMENT OF GERMAN PRISONERS OF WAR IN CANADA—MR. ROSS (SOURIS)

Mr. J. A. ROSS (Souris): On this occasion I should like to raise a question in regard to enemy prisoners in this country. It is not only to-day that the press has carried stories across the country with regard to German prisoners, but on other occasions in my province that has happened for some months past now. To-day the press has carried a report concerning hun prisoners being given free rein at Buckingham. The press states that they drink in taverns and go out with local girls. The ire of townspeople is aroused. This is a quotation from a local paper:

> The prisoners allegedly getting this favoured treatment are engaged in work for the Singer Company in timber limits near Thurso.

The article points out that these prisoners had been taken into Buckingham for dental treatment, I think, by a guard. Following that, the guard took them to the tavern where they drank beer freely. Then he took them in an automobile, and they went to some other place and picked up the other guard along with four girls or young ladies and went carousing around the country that evening. It is quite a lengthy article and it points out the disgust of those people, the relatives of young people serving in the armed services. Certainly it is not a very nice situation. There is a lengthy article which may be found in various papers to-day. The minister will find it there. As I say, had this been the only case I would not have raised the issue right now, but in the Dauphin *Herald*, of Manitoba of February 24 there was a very strong protest, as follows:

> For the second time within two months a German officer from the prison camp on the Riding Mountain has been seen on the streets of Dauphin under very loose courtesy custody.
>
> Doctor and professional man though he may be, he is still a captive German and must be regarded as an enemy of the country.
>
> Shortly before Christmas this same officer was taken in broad daylight and with a full view of everything right into No. 10 service flying training school, R.C.A.F., at Dauphin. The excuse then was that he had to accompany another German prisoner to the air school to have his teeth fixed.
>
> On the same occasion the enemy officer asked if he might visit the medical clinic at Dauphin and permission was readily accorded by the pliant guard.
>
> In the name of the parents of this country whose boys at this very moment are fighting for their lives in Italy we protest against this preferred treatment and we warn the Department of National Defence, that the next time we see this German prisoner on the streets of Dauphin we shall proclaim the fact in three-inch headlines and send a copy to every newspaper in Canada.
>
> This is a war to the death we are now engaged in as many of us already know to our sorrow.

That will indicate that this practice has been prevalent, apparently, in these camps. We have a report to-day from this town in Quebec and these other reports from the area in my native province to the west.

The minister during his own war appropriation bill rather took me to task when I asked a question about recruiting at this time. He said he thought he was getting splendid results following these recruiting parties and dances being held throughout the country. Well, that is going on, on the one hand, and this laxity on the other, and it does not create a very good feeling among the parents and relatives of the boys who are serving overseas to-day. It is a very bad situation.

I maintain that we have not to this day national selective service in operation as we should have for the armed services, for agriculture and for industry. Anybody knows that the system of recruiting to-day is far from satisfactory.

Mr. RALSTON: Mr. Speaker, is this a grievance or is this anything which can be discussed on this motion? I am rising to a point of order. My hon. friend may have been within his rights in discussing German prisoners of war, but I submit he is not within his rights in discussing what has already been discussed on the war appropriation resolution, which was before the committee for three weeks: I myself was here at that time for a

week. I made my answer to my hon. friend. He could answer or not just as he liked. But I say that he cannot take the opportunity now, on a motion to go into supply, to raise a matter which has already been discussed on what in effect were estimates under the war appropriation resolution.

Mr. ROSS (Souris): I shall not deal any further with that phase of the matter. Had I been able to raise the question on the orders of the day I would have preferred to have done it at that time, but I realize how far I could have gone on the orders of the day in this matter.

To many thousands of relatives of our men throughout the country this will appear a very serious situation. To permit such unreasonable conduct by enemy prisoners in our midst is an insult to the relatives of those who are serving overseas to-day on our behalf. The present camp in Riding Mountain was built last fall under a wartime housing scheme. I personally visited it upon its completion, and I say that it is the most up-to-date camp I have ever been in. There are conveniences and comforts there which very few of the pioneers of this country are able to afford to-day. I think our prisoners should have proper treatment, but they should be properly guarded, and insults such as have been allowed in the last few days and few months should not be tolerated in this country. I cannot think of anything more insulting to the relatives of the boys in the armed services. A statement from the responsible minister with regard to this very serious and nasty occurrence is due to this house and to the citizens of Canada.

Mr. G. S. WHITE (Hastings-Peterborough): Before the minister replies I should like to add a word to what has been said by the hon. member for Souris (Mr. Ross) regarding the treatment of German prisoners in Canada. Hon. members will recall that last session the Prime Minister (Mr. Mackenzie King) read a statement in the house regarding the treatment accorded to British and Canadian prisoners held by the Japanese. It was a copy of the statement given in the British House of Commons by Mr. Anthony Eden. Hon. members will recall that almost unheard-of savage and barbarian treatment inflicted by the Japanese on British and Canadian soldiers. I am vitally interested in these Canadian boys because fifty-two of the soldiers from the district in which I reside were at Hong Kong and are now prisoners of the Japanese. I wonder what the parents and the families of the boys who are now in Japanese hands must think when they hear over the radio and read in the press to-day of the de luxe treatment accorded to German prisoners in this country. If any hon. members took the trouble to read the article which appeared in the February 7 issue of the United States magazine *Life*, they will recall the very full statements by American officers and men who escaped from the Japanese in which they give first-hand, accurate information as to the manner in which their prisoners are treated. I protest strongly against the fashion in which these German prisoners are treated in Canada. The hon. member for Souris says it is an insult. To me "insult" is not an adequate description of the feelings of the parents and beloved ones of Canadian boys who languish in Japanese prison camps when they read of the way we are treating German prisoners in this country. I concur in everything the hon. member for Souris has said, and I think it is the minister's duty to make a very full statement on this matter.

Mr. RALSTON: I do not know how many times I am allowed to take part in this debate. I have already spoken once. But I am not going to let the remarks which have been made by hon. members to pass unless you, Mr. Speaker, consider that I am not in order in discussing them.

In regard to the Thurso incident, I, like my hon. friends, first saw it in this evening's papers. My hon. friend does not suppose that I have a personal check on these matters or know all that is going on. But I immediately called up the adjutant general to find out what he knew about it, and I was informed that he was getting a report on the matter and that, as a matter of fact, the director of prisoners of war had already sent someone to Thurso to ascertain what the situation was.

Let me say first of all that, with regard to this matter of prisoners of war in working camps, I warned this house last session that we were having great pressure to allow prisoners of war to work, and I told the house that so far as the Department of National Defence was concerned, we must point out that there were some risks involved, because we could not exercise strict supervision when they were outside the internment camps. We felt, however, in view of the strong pressure which was being brought to bear, that we should do the very best we could to make prisoners of war available for work.

We have not a veteran's guard sufficiently numerous to guard all these prisoners; that is to say, to accompany the individuals. They have to have some leeway. But they are working in camps at the insistence of the public of this country, and I warned them that a certain number of these prisoners would pro-

bably escape. The house seemed to take it as quite all right so long as that labour was provided.

At Thurso, as I understand from the very little I have learned, these men came down to have some dentistry done. There was a corporal with them. I do not want to misjudge his case. I may say that as a result of the incident he is under close arrest. Apparently there were some irregularities, and the irregularities will be looked into. While it is not something which occurs every day, these things do happen from time to time. However, the matter will be gone into thoroughly.

I wish to point out to my hon. friends that when prisoners of war are sent outside the internment camps to do work it is not possible to have a guard for each one of them. When they are brought to a centre they are brought in as small numbers as possible, and it is thought that the guard provided is sufficient under the circumstances. We cannot possibly send guards to the lumber woods to guard these prisoners of war to the extent of having a guard for each prisoner, and the result, therefore, sometimes is that these irregularities take place. But the matter will be investigated and whatever disciplinary action is necessary will be taken.

With regard to the Dauphin case, I never heard of it before. That was the case of a prisoner of war working in one of the labour camps, not in one of the internment camps.

As regards prisoners in internment camps my hon. friend will not have much to complain about. They are dealt with under close guard, and I think the public have reason to be pretty well satsified with the way in which the internment camps have been conducted in this country, considering the number of men we have and the fact that these men from day to day have nothing to do but to sit and plan how to escape. I pay tribute to the veterans' guard of Canada for the splendid way in which they have carried on in seeing that these prisoners are properly guarded.

Mr. ROSS (Souris): So do I.

Mr. RALSTON: The record cannot be excelled anywhere of the way in which they have been handled.

Coming back to prisoners like the one in the Dauphin case who are working, there is a different situation existing there and there cannot be the same strict and complete supervision. There are not the same number of guards provided. I have an arrangement with the Minister of Labour (Mr. Mitchell) whereby we are responsible for guards up to a certain point, and after that my hon. friend takes over. We supply a nucleus to help with the discipline in the labour camp, but as regards security generally the responsibility is that of the Department of Labour. Having regard to all they have to do in that respect, they have done an excellent job and have provided a great many prisoners of war to do work. They have done a great deal of work with little trouble to the citizens.

With regard to the treatment of prisoners of war, I do not know what either of my hon. friends is talking about when he speaks of de luxe treatment. They are treated in accordance with the Geneva convention, and regardless of what some barbarous nation does as regards prisoners of war, so far as I am concerned, prisoners of war will be treated according to the terms of that convention, and we will live up to it. From the point of view of the citizens of Canada, their boys are either in Hong Kong or in German prison camps and if we treated prisoners of war here contrary to the terms of that convention, their mothers and fathers here would be the first to say, and say rightly, that the Dominion of Canada, through the Department of National Defence, had brought on their boys in the prison camps of Germany and Japan persecution and hardship by reason of the fact that we treated German or Japanese prisoners of war improperly here. I have seen the representative of the protecting power and have had him go over all the camps and report to me personally to see that they were living up to the terms of the Geneva convention, and I assure this house that nothing more than that is done. I propose to follow that policy straight through so long as the Department of National Defence has the responsibility.

The house can see that we are in a difficult situation. We do not want to treat them better than we are required to do according to the letter of the law. At the same time, however, reports do get back, and if anything goes wrong reports will immediately reach the powers detaining our boys, with the result that hardships are imposed on them and then the families in this country feel that the action we have taken against German prisoners has been visited upon their boys overseas. We have to hew to the line and that is what we are endeavouring to do.

I assure hon. members that if there is any case in which the line is overstepped I do not know of it. I shall look into the case of Thurso. That is a case where apparently some men got liquor and perhaps those in charge engaged in irregularities. Disciplinary action will be taken. The Dauphin case I will look into. I understand from my hon. friend that somebody wanted the attention of

a dental officer and went to an air force camp in order to get it. I do not see anything wrong about that at first blush, though there may be. I will say that they were not in the custody of the Department of National Defence at the time but in a labour camp, which is authorized by the government and the house, and which has been urged by the people of the country in order that they may get the advantage of the prisoner of war labour available for that purpose.

I have nothing more to say except that I shall look into both cases, and if there is any cause for complaint I assure the house it will be rectified.

Mr. ROSS (Souris): After the investigation, will the minister tell the house what the regulations are with respect to taking these prisoners into centres of population?

Mr. RALSTON: I do not know that there are any regulations particularly. Both these cases, I believe, as a matter of fact were men from labour camps and not from internment camps. The Minister of Labour will tell the hon. gentleman if there are special regulations about them. I have no doubt they are taken to centres of population when it is necessary to take them for treatment. The only question is as to the adequacy of the guard provided for that purpose.

Hon. HUMPHREY MITCHELL (Minister of Labour): In view of the fact that my department is probably involved, I should like to say a few words. I had not known anything about the matter. The first I knew about it was what I found in the newspapers this evening; in fact I had not read it until my hon. friend mentioned it.

There is nothing novel about the employment of prisoners of war outside internment camps.

Mr. ROSS (Souris): I am not objecting to that.

Mr. MITCHELL: Many members have approached me in an effort to get prisoners of war to work on farms and in other industries in the country in view of the severe manpower situation. In South Africa there are 60,000 prisoners of war working outside internment camps. They have them in Great Britain and in the United States and it is a question of man-power. As the Minister of National Defence has said, if you have to have as many guards as you have prisoners, you might as well use the guards and not bother about the prisoners. May I say to the hon. member for Hastings-Peterborough (Mr. White) that I do not think the Anglo-Saxons have reached the level where we should endeavour to match brutality with brutality.

[Mr. Ralston.]

Mr. WHITE: I never suggested that we should match the Japanese at all, but I do not think we should adopt a continual appeasement policy.

Mr. MITCHELL: There is no appeasement about it, but I say this to my hon. friend. As long as I am in charge of prisoners of war I am going to maintain that same dignity of treatment afforded human beings which has made the British people what they are. I know it is the easiest thing in the world to raise this kind of question, to set passions aflame, and no one regrets more than I do the treatment of prisoners of war in Japan. But I think this will readily be understood, that after all, in that part of the world, they have just a veneer of civilization and that is all. It would not, however, redound to our credit if we varied in any detail from the international law laid down in the Geneva convention for the treatment of prisoners of war in this country.

I join with the Minister of National Defence in the assurance that we will look into the matter. I am frank to admit that in the employment of prisoners of war some risk is run. We often read in the newspapers that our young fellows manage to escape from Germany and other parts of the continent, and that is one of the inevitable risks which those people who desire such assistance at this time, in the way of man-power, have to take. It has to be taken in every country where prisoners of war are employed outside the regular internment camps. I would go so far as to say that there have been actually more escapes from internment camps in this country than there have been from what we might call the work camps under the jurisdiction of my department.

I shall be glad to look into the matter as far as it affects my department and give my hon. friend the information he desires.

INCOME TAX—POSSIBILITY OF EXTENSION OF TIME FOR FINAL PAYMENT—MR. KNOWLES

Mr. S. H. KNOWLES (Winnipeg North Centre): There is another matter I should like to bring to the attention of the government before Your Honour leaves the Chair. It is a matter about which questions have been asked, but as yet hon. members have had no opportunity to discuss it or to express the views of their constituents. I refer to the problem created for a great many people by the necessity of paying the entire balance due on their 1943 income tax by April 30. As I say, questions have been asked in the house about this matter, and the Minister of National Revenue (Mr. Gibson) in reply has simply stated the terms of the statute as it stands.

As hon. members are aware, it is a matter of considerable urgency for a great many people. We hope the government may give some consideration to this matter, and that such consideration might be given soon, so that if any change in policy is to be made an announcement to that effect might be given at an early date. Following many letters which I have received on this matter, I wrote the Minister of Finance (Mr. Ilsley)—

Mr. HOWE: On a point of order, Mr. Speaker, surely this does not come within the rules on going into supply. The hon. member is talking about a matter which will not eventuate until April 30 of this year, and this is now only the middle of March.

Mr. KNOWLES: If I may speak to the point of order, in my reading of the rule with respect to the right of private members to raise grievances on going into supply I do not see anything about urgency. The rule refers to grievances; I submit that this is a grievance of my constitutents, and also that there is in it an element of urgency. The Minister of Munitions and Supply (Mr. Howe) suggests that April 30 is a long way off. It really is not very far off when one considers the plans that people must make to take care, in many cases, of quite large sums that must be paid by way of balances of their income tax. I submit that it is in order, that it is a matter which should be brought to the attention of the government and a matter on which hon. members should have an opportunity to express their views at this time.

Mr. SPEAKER: I would refer hon. members to citation 345 of Beauchesne's Rules and Forms:

> The ancient doctrine that the redress of grievances should be considered before the grant of supplies is maintained in the House of Commons of Canada by the provision of standing order 49 that the motion for the Speaker to leave the chair can be amended; and the amendments need not be relevant but may relate to every question connected with public administration.

And further:

> Matters of detail which should be discussed in committee cannot be debated on these occasions, nor can debate be permitted relating to grants already agreed to, or to resolutions which will be proposed in the committee, or to items in the estimates.

The other day I ruled that a matter which was being discussed could be taken up when the estimates were before the committee, but I know of no item, though I may be informed to the contrary, on which the matter to which the hon. member is now referring could be discussed.

Mr. MACKENZIE (Vancouver Centre): Item 189, covering the general administration of the income tax division.

Mr. KNOWLES: This is in reference to a statute passed last year, and no item covering it appears anywhere in this year's estimates.

Mr. ABBOTT: If I may interject a word, this collection of income tax comes about by virtue of a statute which has been on the statute books for some twenty years, during which time income tax has been payable on April 30 of each year. One-third of the total had to be paid by April 30 and the remaining two-thirds, bearing an interest rate of five per cent, I think, must be paid by September 1. That has been the law. Last year an exception was made because of the change-over to the pay-as-you-go policy, but with that exception that date of April 30 has been fixed for some twenty years.

Mr. SPEAKER: I am rather inclined to think the hon. member is in order. Item 189 reads:

> Income tax division: general administration, including authority to create positions and make appointments—

The matter being discussed by the hon. member has to do with the date of payment of the income tax, and I am rather inclined to believe that the hon. member is in order in discussing it.

Mr. KNOWLES: If I may continue, I believe I had referred to the fact that I wrote the Minister of Finance about this matter under date of March 9. He replied under date of March 11, and I should like to quote part of that letter:

> As you know, the Minister of National Revenue stated in the house on Friday—

That would be on March 10, and that statement appears at page 1347 of *Hansard*:

> —that no extension is at present contemplated. Your suggestion will, however, be kept in mind.

On the basis of that last short sentence, I felt there was some point in raising the matter in this way and pressing the government to give consideration to it. I was further encouraged by the reply given on the orders of the day to-day when the question was asked of the Minister of National Revenue; I felt that his answer at that time was not quite so final and categorical as the one he made on March 10. The parliamentary assistant to the Minister of Finance has just made reference to the situation that has prevailed in years gone by, and has indicated that there has been no basic change. I should like to point out to him that there is considerable confusion

over this matter, and I should like also to call his attention to information that can be found by looking at the income tax form for various years. I have a number of them here in my hand. First I have the forms on which taxpayers are now working, the T-1 special, 1943, $3,000 or under; and also T-1 general, 1943. On each of these forms it is indicated that payment is to be made in full on April 30, and there is nothing anywhere in the form to indicate that any postponement or deferment is possible. If the house will permit me to move the adjournment of the debate, when I come back to the matter I shall refer, by way of contrast, to the information contained on the forms for 1942 and 1941.

Mr. SPEAKER: Is the hon. gentleman moving the adjournment of the debate?

Mr. KNOWLES: Yes; I move the adjournment of the debate.

Motion agreed to and debate adjourned.

At eleven o'clock the house adjourned without question put, pursuant to standing order.

Tuesday, March 21, 1944

The house met at three o'clock.

BANKING AND COMMERCE

FIRST AND SECOND REPORTS OF STANDING COMMITTEE

Mr. W. H. MOORE (Ontario) presented the first and second reports of the standing committee on banking and commerce, and moved that the reports be concurred in.

Mr. RALSTON: I would ask my hon friend if he will allow the motion to stand for to-day.

Motion stands.

LABOUR CONDITIONS

TABLING OF ORDER IN COUNCIL APPOINTING CHAIRMAN OF WESTERN LABOUR BOARD

Hon. HUMPHREY MITCHELL (Minister of Labour): I table herewith copy of order in council P.C. 1902 appointing Mr. George B. Henwood, K.C., of Edmonton, as chairman of the western labour board succeeding Mr. Justice George B. O'Connor.

CANADIAN NATIONAL RAILWAYS

REFERENCE OF ANNUAL REPORTS AND CERTAIN ESTIMATES TO RAILWAYS AND SHIPPING COMMITTEE

Hon. J. E. MICHAUD (Minister of Transport): Mr. Speaker, I desire to lay on the table the annual report of the Canadian National Railway System for the year ended December 31, 1943; the annual report of the Canadian National (West Indies) Steamships Limited for the year ended December 31, 1943; the annual report of the Canadian National Securities Trust for the year ended December 31, 1943. I move:

That these reports be referred to the standing committee on railways and shipping owned, operated and controlled by the government, together with the following items of estimates for 1944-45:

387. Maritime Freight Rates Act, Canadian National Railways;

388. Maritime Freight Rates Act, railways other than Canadian National;

408. Canadian National (West Indies) Steamships Limited, capital advances;

409. Prince Edward Island car ferry and terminals deficit, 1944.

And that the resolution passed by the house on the 11th February, 1944, referring certain estimates to the committee of supply, be rescinded in so far as the said resolution relates to votes Nos. 387, 388, 408 and 409.

Copies of the annual reports now tabled will be distributed to hon. members this afternoon.

Motion agreed to.

LABOUR CONDITIONS

POSSIBLE CLOSING OF EDMONTON COAL MINES—AUTHORIZED PRICE INCREASES

On the orders of the day:

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): On Friday last, the hon. member for Bow River (Mr. Johnston) quoted an item appearing in the Ottawa *Citizen* of March 16, as follows:

Edmonton coal mines will dismiss 250 employees March 23 and the pits will close March 31 unless the federal government subsidy of 50 cents a ton is continued, mine officials said here to-day.

The hon. member asked whether the subsidy of 50 cents per ton would be continued on coal so that these mines in Alberta will continue to operate. There is no subsidy paid to any mine in Canada on a flat basis of 50 cents per ton. Therefore, I assume that the hon. member was speaking about the price increase which was authorized under wartime prices and trade board administrator's order No. A-1008 of December 1, 1943. The price increases authorized under this order were made to compensate the mine operators for the increased wages they were instructed to pay their men by the regional war labour board under the chairmanship of Mr. Justice O'Connor of Edmonton.

The authorized increase on Edmonton coal was 65 cents per ton on lump, egg and domestic mine run. It was 50 cents on regular mine

run coal, 25 cents per ton on stoker, nut and pea slack, and 10 cents on slack. The 65 cent increase has to be reduced to 50 cents as of April 1; the 50 cent increase of mine run has to be reduced to 40 cents as of April 1. No reductions have been ordered on the other sizes.

FARM PRODUCTS

FLOOR PRICES ON FEED GRAIN AND WHEAT

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): I should like to direct a question to the Minister of Agriculture. Will he be able to make an announcement with respect to floor prices on staple farm products before the Easter recess? As he is well aware, farmers are now laying plans and preparing for 1944 seeding, and after the Easter recess will be too late to allow for any changes that may be made. If there are to be changes, the farmers should know before seeding time.

Hon. J. G. GARDINER (Minister of Agriculture): As I understand it, floor prices on feed grain are now established until July 31, 1944, and on wheat until July 31, 1945.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, March 20, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF MUNITIONS AND SUPPLY

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Chairman, when the committee rose we were dealing with air services of the Department of Transport, but I announced that the consideration of that item would be deferred until the estimates of the Department of Munitions and Supply had been dealt with. Therefore I would ask your leave to proceed now with my statement on the work of the Department of Munitions and Supply.

The estimates of the Department of Munitions and Supply for the current fiscal year total 183 million dollars, as compared with estimates for the last fiscal year of 166 million 300 thousand dollars. I would point out to hon. members, as I did last year, that the amount of the estimate for the Department of Munitions and Supply has no relation to the total sum of money to be expended by the department. The Department of Munitions and Supply is the procurement agency for the armed services of Canada and her allies. The funds necessary to finance all purchases are supplied by those from whom requisitions are received.

The estimates of the Department of Munitions and Supply have been broken down under eight items, which breakdown I shall now place on *Hansard*.

Department of Munitions and Supply
Draft Estimates 1943-44, 1944-45

	Estimated Requirements 1943-44	Estimated Expenditures 1943-44	Estimated Requirements 1944-45
1. Additions and Extensions to Plants.	$195,000,000 00	$149,033,690 74	$ 60,000,000 00
2. Cargo Vessels—Operated by Park Steamships Limited.....	45,000,000 00	111,450,000 00	75,000,000 00
3. Housing Development.....	30,000,000 00	15,563,538 15	11,000,000 00
4. Land and Other Miscellaneous Physical Property	7,000,000 00	6,054,846 92	3,000,000 00
5. Production Subsidies and Other Miscellaneous War Expenses....	15,000,000 00	30,995,435 35	25,000,000 00
6. Loans to Commodity Companies....	15,000,000 00	7,909,427 87	.....
7. Departmental Administration.....	9,300,000 00	10,000,000 00	9,000,000 00
Total Departmental Expenditures..	$316,300,000 00	$331,006,939 03	$183,000,000 00
8. Revolving Funds for Working Capital (Recoverable Advances)....	—150,000,000 00	+662,500,000 00	.....
Total Funds Administered.....	$166,300,000 00	$993,506,939 03	$183,000,000 00

In making my report to the house on the production programme in this, the fifth year of the war, I would like to cite the following significant figures: The total dollar value of the contracts awarded by the Department of Munitions and Supply and its predecessors, the defence purchasing commission and the war supplies board, is now approximately 9 billion 450 million dollars. Capital expenditures by the government for war production purposes are in excess of 850 million dollars. I have had prepared a statement showing such capital expenditures up to December 31, 1943. I would ask that this be printed as a supplement to the votes and proceedings for the information of the members during the discussion of the munitions programme. It is important to note that the assets created by the government's capital expenditure, whether they be land, buildings or equipment, have remained in the ownership of the crown. The estimated total value of war production, including the value of deliveries on orders placed abroad, war construction and capital expenditures, in the fiscal year 1943-44, is 3 billion 435 million dollars, as compared with 2 billion 900 million dollars in the fiscal year 1942-43. We estimate that the number of persons engaged in direct and indirect war employment is in excess of a million, of whom about 800,000 are actually engaged in manufacturing war equipment. The fourth quarter of 1943 saw the highest level of employment in the history of Canada.

It is interesting to note that the value of war production proper, excluding capital expenditures, construction projects, and orders placed abroad, showed an increase of more than 150 per cent in 1942 over 1941, and an increase of about 35 per cent in 1943 over 1942. The value of war production proper for 1944 will show an increase of approximately 3 per cent over 1943. However, we are still in the early months of 1944, and our experience in the past indicates that the programme is usually stepped up beyond what we plan in the early part of the year. If we include capital expenditures, construction projects, and orders placed abroad, the estimate of expenditures for 1944 shows a decrease of approximately 7 per cent as compared with 1943. The rate of production in terms of dollar values reaches its peak in the first quarter of 1944.

In my last report, which was submitted to the house in June last, I pointed out that certain of our production targets had been attained. In the intervening months we have reached more of these objectives. I also stated in my last report that this did not necessarily mean any slackening of the overall effort. It did, of course, involve considerable programme revision, with some items reduced and others expanded. The house will understand that we must always allow for cancellations and changes in type when we attempt a long-range forecast of a production programme in time of war. It is possible to sketch the broad outlines of the programme, but there are bound to be variations, due to the changing character of the war, which cannot be anticipated. The changing strategy of war makes obsolete certain types of equipment, and creates the need for entirely new types of equipment. Generally speaking, the forecast of programme changes which I made last June has been realized in fact. I make this comment because I find a tendency on the part of some to express great alarm that in recent months there should have been changes in programme which have necessitated the transfer of employees to other places of employment. I wish to record that I told the house last June that certain changes in programme would occur. It can hardly be suggested now that they come as a complete surprise. Unfortunately, these changes are inevitable in a war production programme. For the most part, our manufacturing capacity is sufficiently flexible to meet the constant need for programme revision. In many cases, when orders have been cancelled we have been able to convert the manufacturing capacity to other uses. But there will always be certain capacity which is single-purpose, and is not suitable for other types of manufacture. Reductions or cancellations of programme in such single-purpose plants mean reductions in personnel. We cannot justify the employment of men and the use of materials in the production of equipment for which there is no longer any need. The Department of Munitions and Supply is working in close cooperation with national selective service in finding other useful employment for any personnel affected by lay-offs.

Before giving the house the details of each of the major programmes, I shall give the highlights of each programme, showing the accomplishment to date and the general trend of the programme in the next twelve months.

In 1943 we produced 4,133 aircraft, as against 3,811 in 1942, for a total production as at March 1 of 11,390 aircraft. The value of planes produced in 1943 was 50 per cent higher than in 1942, due to the predominance of larger types of more intricate design. The aircraft production programme will continue to expand with a transfer of effort from trainer aircraft to combat aircraft.

Armoured fighting vehicles produced last year number 15,500, as against 12,500 in 1942, for a total production to March 1 of 34,000

units. The production of self-propelled mounts, and of other armoured fighting vehicles, will continue at a high rate in 1944.

The production of mechanical transport dropped from 192,000 units in 1942 to 175,000 units in 1943, but we manufactured heavier and more costly equipment in 1943 than in 1942. The total production to March 1 is 593,000 units. This continues to be a major programme, and although we will produce fewer units in 1944 than in 1943, they will be of a heavier type.

The production of artillery gun barrels, carriages, and mountings, both army and navy, considered as separate units, totalled 45,000 in 1943, as compared with 31,000 in 1942, for a total production to date of 84,000 units. There will be a further cut in the production of army guns and a slight increase in the production of naval guns.

The output of machine guns, rifles and other small arms, jumped from 325,000 in 1942 to 580,000 in 1943, for a total production of 1,000,000 units. Production in 1944 will be slightly greater than in 1943, but this is weighted by the production of several new stores which can be produced at a higher rate.

In 1943 we produced 30 million rounds of gun ammunition, as against 28 million rounds in 1942. The total production since war began is 62 million rounds. Production in 1944 will carry on at approximately the same rate as in 1943.

The production of small arms ammunition increased from 1·2 billion rounds in 1942 to 1·5 billion rounds in 1943, for a total production to date of 3·3 billion rounds. This programme will be reduced somewhat during 1944.

Our total net production of chemicals and explosives in 1943 was 1 billion pounds, as against 860 million pounds in 1942, for a total production to March 1 of 2·3 billion pounds. This programme also will be reduced, and we have already had to close down one major explosives plant.

We produced 150 cargo vessels, or 1 million 478 thousand deadweight tons, in 1943, as against 81 cargo vessels, or 838 thousand deadweight tons, in 1942. The total production to March 1, is 249 vessels. There will be a slight reduction in the programme during 1944.

In 1943 we produced 100 naval vessels, as against 117 in 1942. However, the programme in 1943 was of a much more difficult and costly nature, so that a comparison by number is hardly accurate. The total production of escort vessels since war began is 336. There will be some revisions in this programme, with reductions of certain types and the production of new types. Actual deliveries of escort vessels and other types of new naval craft will be higher in 1944 than in 1943.

Of a total of 4,300 orders placed for small craft, we have delivered 3,600. Deliveries on this programme will continue in 1944 at approximately the same level as in 1943.

The production of instruments and communication equipment in dollar cost was 180 million in 1943, as compared with 84 million dollars in 1942. The total value of production since the beginning of the war is 320 million dollars. This continues to be an expanding programme.

There was a slight decline in defence and other construction projects undertaken by the Department of Munitions and Supply in 1943, when the total amount spent was 194 million dollars, as against 219 million dollars in 1942. We have spent on construction since war began, including housing, 675 million dollars. There will be a sharp reduction in defence building during 1944.

Purchases of personal equipment, foodstuffs, fuel, hardware and miscellaneous stores, totalled at December 31, 1943, 2 billion 988 million dollars.

Mr. HANSON (York-Sunbury): That is, since the war.

Mr. HOWE: Yes, the total from the beginning of the war.

I will now review each of the major programmes.

Aircraft: Of the 11,390 planes produced since the beginning of the war, over 2,000 have been first-line service aircraft. The balance of the programme is made up of trainer types, and one service type which is no longer used in front-line combat. Plane production in March, April, and May, 1943, totalled 971 craft, or an average of 324 planes a month. Production for the three months ending February 29 last was 1,309 planes, or an average of 436 monthly. This shows an increase in units of production of one-third, but the actual increase in poundage production is 50 per cent. Since the beginning of the war we have produced some twenty different types of aircraft. Despite the fact that we have had many programme changes, the general curve of production has been upward each year. There have been ups and downs in the number of planes produced, but the trend has been upward both in number and in weight.

Mr. HANSON (York-Sunbury): Will the minister permit a question?

Mr. HOWE: Yes.

Mr. HANSON (York-Sunbury): Will he make it clear how much, in percentage or otherwise, of this production is Canadian-made and how much is imported? I think that would be useful information.

Mr. HOWE: Well, Mr. Chairman, the airframe is almost completely Canadian made, but we do not make engines.

Mr. HANSON (York-Sunbury): I just wanted to find out how much Canadian content there was.

Mr. HOWE: Practically all the instruments are now made in Canada, and I think very little is imported except the engines.

Mr. ADAMSON: Are the propellers made in Canada?

Mr. HOWE: Yes.

Mr. STIRLING: Would the minister explain how the statement he is making connects with this schedule? For instance, he is referring to aircraft construction. I do not know what item of this that could be connected with.

Mr. HOWE: I might point out that the function of the department is to do purchasing for the various branches of the government and the foreign governments, and they supply the money. We do not vote money for purchases of this kind. No. 7 would be the item it ties in with. But I assume that, in discussing the department, hon. members will want to know what the department is doing.

To illustrate this trend, I should like to place on *Hansard* a table which shows the number and the weight, ex-engines, of aircraft produced in Canada each year since the beginning of the war:—

Year	Number of aircraft	Poundage
1940.....	846	1,628,118
1941.....	1,697	6,358,442
1942.....	3,811	17,578,309
1943.....	4,133	20,088,864

We expect to produce 4,312 aircraft in 1944, for a total poundage of 21,430,000. In the number of planes produced per month, we reached our peak last January, with a total output of 455 aircraft. The shift in programme from trainer to service types tends to reduce the output in terms of numbers, since one service type may involve fifty times the man-hours employed on the production of a primary trainer.

Including the overhaul plants, the primary contractors and the sub-contractors, there are now 122,000 persons employed in aircraft manufacture, of whom 39,000 are women. The overhaul of aircraft in operation, in Canada, has become a major industry. We are now overhauling some 200 planes and approximately 1,000 engines each month.

I shall now give the house some details of the individual programmes, dealing first with the trainer programme.

[Mr. R. B. Hanson.]

We are building three trainer craft, the Cornell, a primary trainer, the Harvard, a secondary trainer, and the Anson, a twin-engined trainer. We are also producing the Norseman, which was used formerly as a service craft, and is now used for military transport. Because the trainer programme is tied in closely with the British commonwealth air training plan, there has been a marked falling-off in requirements for trainer aircraft in recent months, and consequently we plan to produce in 1944 considerably fewer trainer planes than in 1943. Production of Cornells in 1943 was at the rate of 125 per month, for a total production to March 1 of 1,579. The rate of production in 1944 will be 50 per month. During 1943 Harvard production was scheduled at 100 per month. This rate of production will continue until the end of 1944. We have delivered to date 1,849 Harvards. The house will recall that the Anson, the most important item in the trainer programme, was one of our most difficult production jobs in the early years of the war. Federal Aircraft Limited, a crown company, was set up to administer this programme. During 1943 deliveries were made at the rate of 70 per month, total deliveries to March 1 being 2,413 aircraft. Of that number 560 have been of a new type, which is equipped with moulded veneer fuselage and a more powerful engine. In keeping with the current needs of the air training plan, the Anson production schedule has been curtailed very sharply, and production during 1944 will be at the rate of 35 per month.

There is a tendency on the part of some of our critics to make light of the trainer programme. I would remind the house that we could not have maintained the output of aircrew which is needed for combat service overseas if we had not had a plentiful supply of trainer aircraft. One of the main objectives of the aircraft production programme from its very inception was to supply all the trainer aircraft needed for the operation of the British commonwealth air training plan. I am glad to say that we have succeeded in that objective.

Our production of service aircraft is now confined to four world-famous types, each of which is unsurpassed in its class. These are the Lancaster, the Mosquito, the PBY Catalina and the Curtis dive bomber. I say at once that each of these programmes has taxed the skill and ingenuity of our aircraft industry. In each case very elaborate tooling was required, and one of the most difficult bottlenecks has been the need to absorb and train large numbers of personnel concurrently

with production. I make no excuse for the time required to reach production forecasts. Anyone who had had any association with the aircraft industry in this country, in the United States or in the United Kingdom knows that it is extremely difficult, if not impossible, to forecast with any degree of accuracy the time required to bring into full production a plane of complicated design which has not been produced in large numbers elsewhere. More problems have arisen in connection with the production of the Mosquito than of any other plane manufactured in Canada. We have maintained close touch with the manufacturer of this aircraft in the United Kingdom, and I may tell the house that the English producer has experienced the same difficulties that have been met here. In this connection, I think it may be of value to place on Hansard a table showing the comparative statistics on the production of the Mosquito in the De Havilland Plant in the United Kingdom and in the De Havilland Plant in Canada. In giving these figures I ask you to remember that the design originated with the English company.

Period after commencement of manufacture	Cumulative totals of aircraft accepted	
	Canada	England
19 months.....	9	5
20 "	18	8
21 "	23	13
22 "	34	17
23 "	44	20
24 "	57	30
25 "	62	47
26 "	68	62
27 "	82	76
28 "	92	101

In monthly production, we reached our highest figure in February, with an output of 33 planes. Total production to date is 183 planes. We hope to reach a production of 52 per month by June next.

The plant producing Mosquitos is now under direct government control, and I am satisfied that the management is doing everything possible to accelerate the rate of production.

Turning now to the Lancaster programme, this, as hon. members know, is the largest four-engined bomber of this war to date. Considering the fact that our aircraft industry is but five years old, I think we may take some satisfaction from the knowledge that we are now producing one of the finest types of heavy bomber aircraft in existence. Here again there have been exceptional technical difficulties arising from the complexity of the design and elaborate tooling and engineering. Up to March 20, we had delivered 39 Lancasters. Of the two planes delivered to Trans-Canada Air Lines, one has established a transatlantic flying record. Regarding the quality of Lancasters produced in Canada, I should like to quote from a letter which I have received from Sir Stafford Cripps, the British minister of aircraft production. The excerpt reads as follows:

> I have just heard how well the first production Canadian Lancaster fared at the arrival conference held last week. My experts tell me that this is the best first production aircraft out of all the north American ones that they have ever seen. Since we have dealt with some 90 of them, this is indeed a high compliment, and I should like to offer my warmest congratulations to everybody concerned on an outstanding piece of work.

Our largest monthly production was in February, with an output of 9 aircraft. We hope to reach a monthly output of 17 by May and 30 by December. Victory Aircraft Limited, a crown company, is in charge of the Lancaster programme.

The PBY Catalina flying boat is one of the largest and most intricate aircraft produced on this continent. To date, we have delivered 273 Catalinas, with peak production in December, 1943, when we turned out 37 planes. This programme will continue until the end of 1944, with monthly production rising to the rate of 50.

The Curtis dive bomber did not come into production as early as we had anticipated, because of a great many modifications of design in the early stages of the programme. The design of this plane has now been frozen. Current monthly production is at the rate of 20 per month, and we hope to reach a production rate of 70 per month by midsummer and 130 per month by December, 1944. There are two plants engaged on this programme, one of which came into production in September, 1943; the other in October of that year.

In closing my remarks on aircraft production, may I repeat what I have said in this house on previous occasions. When the war began, we had an aircraft industry with some 1,000 employees. The industry had produced only very simple types of aircraft and these in small numbers. We now have an industry which employs 122,000 people and which is producing combat aircraft of the latest and finest types. I do not pretend that I am satisfied with current rates of production, but I do say that, considering our small beginnings and the magnitude and complexity of the programme we have undertaken, the performance to date is a creditable one.

Military vehicles.—Canada has established a very fine reputation for the quality of its mechanical transport. As the house is aware, a large part of the transport used by the 8th Army in the African campaign was manu-

factured in Canada. When the enemy was driven out of Africa, a number of military documents were seized. Among them was found a German reconnaissance order, which when translated reads as follows:

For the reconnaissance, as indeed for every desert reconnaissance, only captured Canadian trucks are to be employed, since German trucks stick in the sand too often.

Military transport from Canadian plants is in demand in every combat zone. Because of this, volume of production will continue at the highest possible level. There will, however, be some reduction in the number of units produced, since the emphasis is shifting from the 2-wheel drive chassis to the 4-wheel drive chassis, which requires more man-hours per unit. The current rate of wheeled vehicle production is 13,000 monthly. In addition to the production of complete units, the automotive industry and component manufacturers are devoting a large part of their capacity to the production of spare parts. The maintenance of transport in the field is possible only with adequate supplies of parts. During 1943 our spare parts production averaged in cost 7½ million dollars per month. During 1944 we expect to reach a figure of 11½ million dollars per month. The production of armoured cars and reconnaissance cars was discontinued in 1943. The production of scout cars also stopped for a brief time, but will begin again this quarter, following the introduction of new designs. We also expect to produce some hundreds of armoured trucks during 1944. The programme in 1944 will include the manufacture of workshop lorries at the rate of 200 per month. In 1943 we completed all our orders for tanks. The capacity which was created for the manufacture of tanks is being used to produce self-propelled gun mounts, tank turrets and railway equipment. Our production of self-propelled gun-mounts, which operate on tank chassis, amounted to 1,928 in 1943. The current rate of production of this equipment is 150 per month. We have large orders under way for locomotives and other railway equipment for the combat areas. Locomotives for shipment overseas are now being produced at the rate of 24 per month. Our railway equipment manufacturers are working to full capacity on the production of freight cars and other types of rolling stock for home and overseas use. The universal carrier will continue to be produced in 1944 at a rate of 900 per month. To date, we have delivered 24,000 universal carriers.

Mr. HANSON (York-Sunbury): Before the minister leaves that point, is there any reasonable expectation of some automotive power being released for civilian purposes in Canada?

[Mr. Howe.]

He knows, as I do, that there is a tremendous demand now for that sort of thing for essential services.

Mr. HOWE: We are producing a limited number of trucks, the fewest we think will meet essential demands. We are being pressed for the greatest possible output of military vehicles, there being a shortage on all fronts.

Mr. HANSON (York-Sunbury): The minister recognizes there is a need.

Mr. HOWE: Yes. We are maintaining that. As far as passenger cars are concerned I am afraid we cannot do anything.

Mr. HANSON (York-Sunbury): I am not suggesting that.

Mr. HOWE: We are, however, building trucks for civilian purposes.

Mr. ADAMSON: Has there been any easing on purely military transport?

Mr. HOWE: No.

Communications.—It is difficult to speak of the communications and signals programme without burdening the house with excessive details. However, I shall give some round figures on the value of our production and a few highlights of the programme. The value of our production in communications in 1940 was one million dollars, in 1942 60 million dollars; and in 1943 136 million dollars. The radio and communications industry is now operating at a level some eighteen times greater than in 1939. We have orders on our books to the value of 400 million dollars, and we do not expect to reach peak production until the second quarter of 1944. To illustrate the diversity of the programme, I might point out that there are approximately 4,500 different items in current production by some fifty prime contractors and several hundred subcontractors. The items include: Amplifiers, antennæ, cable, radio compasses, remote control units, radio direction finders, signalling lamps, power generators, quartz crystals, 25 types of radio receivers, 23 types of radio transmitters, 19 types of transmitting and receiving sets, 6 types of telephones, radio tubes, and switchboards, to mention but a few.

Some twenty major types of radar equipment have been developed for a variety of applications, ranging from one type for anti-aircraft defence having 60,000 components, and 270 radio tubes, mounted in several large trucks, to small compact airborne units used for submarine detection at sea and target location on land.

Obviously, this is a type of equipment in which there must be constant and rapid

improvement if we are to maintain our superiority over the enemy. This means frequent change in design, which in turn requires great flexibility in production methods. A major factor in the production of communications equipment has been the contribution of Research Enterprises Limited, a crown company which was set up in the early months of the war. In 1943 the total value of the communications equipment produced by the company was 60 million dollars. The company also has produced optical equipment and instruments to the value of 10 million dollars. From its optical glass, Research manufactures binoculars, range finders, and a wide variety of other instruments.

In addition to these programmes, the communication industry is also producing fire control boxes and other sonic devices of many types, including torpedo components and a wide variety of gun-laying instruments. The entire communication programme is coordinated by the signals production branch of the Department of Munitions and Supply. This has resulted in the elimination of waste through the simplification of manufacturing practices and the more efficient use of manufacturing capacity.

Defence Communications Limited.—In addition to the production of communication equipment, the department is also building an extensive communication system for the armed services, through the agency of Defence Communications Limited, a crown company.

This company was set up early in 1943, to coordinate existing communication services, and to establish new services in eastern Canada. The communication system utilizes existing wire, telegraph and wireless facilities of the three armed services and of commercial operators. These services have been supplemented by the building of new facilities to the value of some three million dollars.

Guns. There have been drastic reductions in the production of army guns during 1943, as forecast in my statement of June last. The downward trend in gun production has been offset to a degree by the programming of certain new types of guns and new mountings. There will be further downward revisions during 1944. I am asked frequently why plant capacity which was created to manufacture army guns should not now be in full use. The reason is that we now have supplied the current and prospective needs of the armed services. Where it is possible, we are converting this plant capacity to other uses, but in many cases we think it necessary to maintain plants and equipment in working condition for stand-by purposes.

The current army gun production programme includes five types of barrels and several types of mountings, together with detector and fuse setting equipment required for the 3·7 inch anti-aircraft gun. Some of the manufacturing capacity which otherwise would have been idle is working on orders for China. We are now shipping to China two types of anti-aircraft guns, as well as 6-pounder guns.

While the need for army guns is declining, we are continuing in full production of naval guns and mountings. This programme includes three types of naval gun barrels and eight types of mountings. We will come into production of another type of gun and mounting in the immediate future. Among the various companies engaged in naval gun production is National Railways Munitions Limited, a crown company, which has been a most efficient contractor.

Small Arms. In the small arms field, we discontinued, in 1943, the production of four types, the Boys anti-tank rifle, two types of machine guns and the 3-inch mortar. We have just come into production with the 9mm. pistol, the 20mm. universal mounting, and the Polsten 20mm. automatic gun, a most modern and effective weapon. We have also begun producing a modified version of the Bren gun. Total production of Bren guns to date is 155,000. Rifle production from the plant of Small Arms Limited, a crown company, was at a rate of 35,000 per month in 1943, for a total production of 530,000 to the end of 1943.

Mr. ADAMSON: All weapons?

Mr. HOWE: Five hundred and thirty thousand, all rifles.

Mr. ADAMSON: That does not include Stens?

Mr. HOWE: No. The current rate of production is 25,000 per month. The reduction is due to lower requirements of this store. Sten gun production by Small Arms Limited, which reached a peak of 8,500 per month in 1943, will continue in production at 5,000 a month during 1944. Here again the reduced output is due to smaller requirements. There will be some increase in the production of 2-inch mortars, which will increase from 400 a month in 1943 to 600 a month during 1944. The production of bomb throwers will continue at a rate of 3,000 per month. In general, there will not be any great shrinkage in the small arms programme during the first half of 1944, but there may be considerable curtailment in the programme during the latter part of the year, when many contracts run out. Nevertheless, the small arms orders now on hand will mean a production in 1944 slightly in excess of that of 1943.

Ammunition. The output of gun ammunition during 1943 was 30 million rounds. In addition to this, there was produced a total of 40 million cartridge cases and many millions of fuses and other components. A substantial proportion of these components are filled in Canadian shell-filling plants before being shipped abroad. In 1944 we shall fill some 33 types, including bombs and grenades. Among them is the projectile for the new Piat, an anti-tank weapon; an anti-aircraft shell; two new grenades, and anti-submarine ammunition. There are in all more than 130 plants now engaged in manufacturing gun ammunition and components. In all, the programme involves the production of 154 varieties of shell, or other ammunition components. This programme will be curtailed somewhat, with operation during the balance of 1944 at approximately 75 per cent of peak capacity. Curtailment in the ammunition programme will also result in a decline in the output of fuses, primers, gaines, and cartridge cases.

Small Arms Ammunition. During the last half of 1943, production of small arms ammunition totalled 775 million rounds, ranging in calibre from ·22 inch to 1 inch. This output included more than thirty different types. The major part of the production is carried on in two government arsenals. In the summer of 1943 the programmes were revised, with a shift to heavy calibre types. The current production rate is 118 million rounds per month. The new programme is scheduled to reach a rate of 122 million rounds per month.

Chemicals and Explosives. We reached peak production on chemicals and explosives during 1943. Curtailments in the ammunition programme will require about a 20 per cent reduction in the output of explosives. The only explosive for which the demand has increased is RDX. In line with declining requirements, rifle cordite production has been discontinued at two plants. TNT production and other explosives produced in the plant at Nobel, Ontario, have also been discontinued. The demand for chemicals such as ammonium nitrate, hexachlorethane, and some other chemicals, will continue at about the same level in 1944 as in 1943. The chemicals and explosives programme is tied in very closely with the shell-filling programme . The whole operation, which is administered by Allied War Supplies Corporation, a crown company, involves approximately fifty chemical, explosive, and shell-filling projects.

I would like to say a word here about the contribution of Canadian science in the development of chemicals and explosives. Canadian chemists have discovered the most effective method of manufacturing RDX, the new super-explosive. They have devised improved and important changes in the manufacture of TNT. Canadian scientists have developed a process for large-scale manufacture of fuse powders. Hitherto, this had been considered more of a craft than a manufacturing process.

Shipbuilding.—Our shipbuilding programme from its inception was divided into two parts, the naval vessel programme, under the direction of the naval shipbuilding branch of the department, and the cargo vessel programme, which has been administered by Wartime Merchant Shipping Limited, a crown company. We have also had two crown companies actually engaged in the production of naval ships, the Toronto Shipbuilding Company, which operates a yard and fitting out berth, and Quebec Shipyards Limited, operating two shipyards and a fitting out berth. In December last it was decided to consolidate the naval and cargo vessel programmes. The whole programme is now under the general direction of the director general of shipbuilding of the Department of Munitions and Supply. Wartime Merchant Shipping Limited, which now becomes Wartime Shipbuilding Limited, will assume responsibility for the supervision of the larger naval vessel programme as well as the cargo vessel programme. The small boat programme, including wooden minesweepers, tugs and other miscellaneous craft, will continue to be under the immediate direction of the shipbuilding branch. This consolidation will eliminate certain duplication in servicing, and will make for more efficient operation. Late in 1943, a change in management was made in the Toronto Shipbuilding Company, with very satisfactory results. As a part of the recent change in the administration of the programme, the Toronto Shipbuilding Company has surrendered its charter and will now operate as a crown plant under the supervision of Wartime Shipbuilding Limited.

I should like now to give some details of the two programmes, dealing first with naval vessels.

Naval Shipbuilding.—To the end of February we had delivered 336 escort and patrol vessels, including 28 frigates, 104 single screw corvettes, 92 steel minesweepers, 34 wooden minesweepers, and 78 Fairmile patrol boats. In addition to these deliveries, we launched 75 vessels of these types which are now being fitted out.

Under the naval vessel programme, we have also delivered three types of landing craft, the 52-foot ramped cargo lighter, the 72-foot Minca barge, and the 51-foot landing vessel. Total deliveries of this type of vessel at the

end of February amounted to 925. In 1943 our naval yards produced 45 tugs and two auxiliary tankers.

In addition to these major items in the programme, we have had orders for some 4,300 small craft. Of these, 3,600 have been delivered. The naval yards have also constructed a wide variety of special purpose vessels, including base and supply ships, concrete and wooden gate vessels, a floating dry dock, railway barges, steel and wooden derrick scows, ammunition and stores lighters, transport and salvage barges, tenders, target towing vessels, and 24 motor torpedo boats.

Late in 1943 we were advised of reduced requirements for certain types of escort vessels. The scheduled deliveries for 1944 will be 44 frigates, 18 single screw corvettes, 29 steel minesweepers, 45 wooden minesweepers, and 11 Fairmiles. This programme, although it is considerably less in volume than we had originally planned, will still represent in dollar cost our highest actual delivery of escort vessels. Deliveries of landing craft, small craft, and miscellaneous vessels, will be at a slightly higher level in 1944 than in 1943.

Some of the shipbuilding capacity which has been released through reductions in orders for escort vessels will be taken up with orders for a new type of landing vessel. We have also placed contracts for six 3,600-ton oil tankers in two of our naval yards. At the present time, ten of our shipyards and three outfitting yards are engaged on the naval programme. Five small yards are building other steel vessels such as tugs, lighters and auxiliary oil tankers and 62 smaller yards are engaged on the small boat programme.

In addition to the plants actually engaged in ship construction, there are the many plants turning out ship fittings and components.

Employment in the yards and in allied industries working on the naval shipbuilding programme is now running at 50,000 persons.

Cargo vessels: Our deliveries of cargo vessels at the end of February of this year amounted to two hundred and thirty-four 10,000-ton vessels and fifteen 4,700-tonners, making in all a delivery of 2,600,000 tons of shipping. We have planned for the delivery in 1944 of one hundred and two 10,000-ton vessels, including six which will be of a special type, and eighteen 4,700-ton vessels. At the present time, seven of our shipyards are engaged on the 10,000-ton programme and three of the smaller yards are producing 4,700-ton ships.

A word about the types of vessels we build:

First there is the North Sands, the original design for which came from England. We have made several modifications in this vessel, increasing its deadweight tonnage from 9,300 to 10,350, and generally adapting it to Canadian construction methods.

Then there is the Victory Ship, which differs from the coal-burning North Sands type in that it is an oil burner, with water tube boilers instead of Scotch marine boilers. It has more elaborate fittings and better living accommodation for the crew.

The third class, the Canadian type, uses the same basic hull as the North Sands and Victory types but can burn either coal or oil. This type was designed in Canada to provide an efficient general cargo ship for Canadian operations.

We are also building the Victory Tanker, which is a Victory freighter converted into an oil-carrying vessel.

Of the 10,000-ton ships scheduled for delivery in 1944, the majority are of the Victory type, but all of the 10,000-ton cargo vessel orders placed in recent months are for ships of the Canadian type.

The 4,700-ton vessels are all of the William Gray class. I might point out that these are by no means small ships. They are 328 feet long, carry a substantial payload, and are ideal for coastal trading. We have orders on hand for this ship which will carry over well into 1945. I would point out to the house that it is not the policy to freeze ship designs. Many modifications in design have been made, and a special technical committee is now studying this question with a view to improving the operating economy of cargo vessels.

In addition to the construction of cargo vessels, certain of our west coast yards are engaged on alterations to aircraft carriers for the British Admiralty.

Of our total production of cargo vessels to March 1, fifty-four 10,000-tonners, including 10 tankers and thirteen 4,700-tonners, are in Canadian service. These vessels have been delivered to Park Steamship Company, Limited, the crown company which arranges for and supervises the operation of cargo vessels under Canadian registry. The balance of the output has gone to the maritime commission of the United States, the British Ministry of War Transport, and one 4700-ton vessel recently was turned over to the Government of Australia under the mutual aid agreement. It is anticipated that thirty 10,000-ton vessels, including 3 tankers, will be added to the Canadian merchant fleet by the end of August.

As the house is aware, vessels for Canadian service are requisitioned by the Canadian shipping board, which has first call on our output of cargo vessels. The route over which

the ships will operate is also determined by the Canadian shipping board. The selection of the operating company is made by Park Steamship Company, which signs the operating agreement on behalf of the government, and maintains close supervision over operating costs. The operating agreements are basically the same as used by the British Ministry of War Transport with the various British shipping companies. The operating fees are modest, and all profits after the payment of fees accrue to the Park Steamship Company. I may say that operating results to date have been most satisfactory.

Ship repairs and salvage: As I have reported to the house in previous years, a large part of our shipbuilding capacity has been devoted exclusively to ship repairs. We have had to expend 10 million dollars in the expansion of ship repair facilities. Since the Royal Canadian Navy assumed complete responsibility for the north Atlantic convoy, the burden on our ship repair facilities has increased tremendously. In addition to the repairing and outfitting of naval vessels, the major part of the servicing of the merchant fleet has been done on this side of the Atlantic. Bare figures hardly give a real picture of the magnitude of this undertaking. However, since January 1940 to December 1943 there have been repaired in Canada 25,000 vessels, naval and merchant. Five thousand of these were dry-docked for major overhaul.

Salvage operations have been carried on in conjunction with the control of ship repairs, resulting in the recovery of many valuable cargoes.

The destroyer programme is also under the direction of the controller of ship repairs and salvage. The boilers have been installed in our first destroyer, and the turbine units will be installed this summer. A second destroyer will be launched early this spring; the keel of a third destroyer has been laid and a fourth will be laid shortly. This programme has challenged the best that Canada can offer in the way of technical skill. I am glad to say that our Canadian engineering firms and workmen are measuring up to the test.

Construction.—Since the beginning of the war, the Department of Munitions and Supply has awarded construction contracts totalling some 455 million dollars. Practically all of this outlay has been for the construction of facilities for the armed services, such as air training schools, operational airports, naval establishments and army barracks. Up to 1943, the cost of construction projects averaged 100 million dollars per year. There will be a sharp reduction during 1944, when we expect to spend 40 million dollars on construction projects. This programme has been in part under the direction of the director general of construction of the Department of Munitions and Supply and in part under the civil aviation division of the Department of Transport, which reports to the Minister of Munitions and Supply.

Housing.—Early in the war, it became apparent that emergency housing would have to be provided in areas where there was a heavy concentration of new war industry, or where new munitions plants were being established in locations remote from centres of population. This war emergency housing programme has been in charge of Wartime Housing Limited, a crown company. To date, the company has constructed 17,700 houses, 13 hostels, 69 staff houses, 15 bunk houses, 19 dining halls, 30 schools and 22 community buildings. Occupancy is currently about 98 per cent. Each housing unit is in charge of an administrator, who is responsible for the collection of rents and for other matters incidental to the operation of the unit. In 1943, the gross revenue of Wartime Housing Limited from rentals was slightly in excess of 6 million dollars. As those of you who have visited these housing units know, we have tried to make each of them a self-contained community unit, with all the services that a modern community requires. I think we have been particularly fortunate in our tenant relations. Under the guidance of Wartime Housing Limited, more than 80 social and educational programmes are in progress in these communities. These include child care and baby centres, supervised recreation for children and adolescents, nutrition courses, libraries, handicrafts, home improvement and garden clubs, and group health schemes. The objective always has been to minimize the dislocation in family and community life which is a by-product of war.

Now that our production programme has reached its peak, the need for the provision of emergency housing has passed. The responsibility of Wartime Housing Limited will now be to administer and maintain its properties. In this connection, I would remind the house that Wartime Housing Limited was established for a specific purpose—to provide housing where and when a shortage of accommodation was likely to interfere with a munitions programme. The company has no jurisdiction in the field of general housing, which has continued to be the responsibility of the national housing administration.

General Purchases. The general purchasing division of the Department of Munitions and Supply is responsible for the procurement of personal equipment and the many items of service stores, such as food, fuel, medical supplies, hardware, etc. Total purchases to the end of 1943 amount to 2 billion 988 million dollars. We anticipate some reduction in the volume of purchases of this kind, but so long as the war lasts, and we continue to have hundreds of thousands of men and women under arms, the purchase of clothing, foodstuffs and medical supplies will continue to be a major factor in our budget. For example, we are now working on orders for 800,000 complete battle dress suits and 560,000 pairs of boots. Speaking of medical supplies, on the requisition of the Department of National Defence we have created recently facilities for the production of penicillin. We expect to obtain this very important medical store in volume supply at an early date.

Early in 1943, a crown company, known as North West Purchasing Limited, was set up to purchase requirements of the Canadian armed forces and the United States armed forces in northwestern Canada. During the height of construction activities in that area, the expenditures of North West Purchasing Limited were running at the rate of 1 million dollars per month. With the completion of certain of the larger construction projects, we anticipate a considerable falling off in the volume of purchases.

The Plateau Company, a crown company established in 1940 to purchase and stockpile raw silk, was abolished in 1943. The functions of this company, which also include the handling of limited quantities of raw cotton, kapok and nylon, have been absorbed by Melbourne Merchandising Limited, another crown company which has been responsible for the purchase of bulk wool required by the government for war purposes, and for the allocation of yarn for certain types of production.

The house will remember that under the terms of the Hyde Park agreement, Canada and the United States agreed to exchange materials and equipment required in their respective war programmes. War Supplies Limited, the crown company which was set up in 1941 to act as the agency in placing orders in Canada for delivery to the United States, has had a busy year.

Controls. I have been speaking of the various production programmes under the direction of the Department of Munitions and Supply. Each of these programmes is dependent on adequate supplies of raw and primary materials. This brings me to the second phase of the department's activities, the work of the wartime industries control board. The board consists of seventeen controllers and a chairman, who is responsible for coordinating their activities. I shall preface my remarks on the individual controls by pointing out, as I have done before, that we have established controls only where conservation of a particular material was indispensable to the success of the production programme.

Mr. HANSON (York-Sunbury): That is almost everywhere.

Mr. HOWE: No; only seventeen. By the same token, we relax controls whenever there is an easing of the supply position. This may be due in some cases to the building up of stocks of materials to the point where current and anticipated requirements have been satisfied, or it may be due to the falling off of a demand for a particular material due to changes in the requirements of the war services.

Coal. In normal times, we consume annually in this country approximately 26 million tons of coal, of which 14 million tons are produced in Canada and the balance imported from the United States. By 1943, our consumption had increased to 46 million tons, of which over 28 million tons have been imported. These figures will give the house some idea of our coal problem. Despite some improvement in the over-all production picture, there is no doubt that we shall have a serious coal problem on our hands for the duration of the war. As the house is aware, the problem of coal supply, like many other Canadian problems, differs from area to area. The output of domestic coals and lignites in western Canada has increased sufficiently to provide for home needs and to permit some export to the United States. In the maritimes, labour shortages and transportation problems have created shortages. We must have increased production if this area is to be self-contained. Central Canada is dependent to a large extent on coal imported from the United States. Our arrangements with the United States for the supply of bituminous and anthracite have been most satisfactory. While supplies of bituminous coal have been ample, we have not been able to obtain sufficient anthracite to meet our demands. Because of this, we have had to ask the householder in central Canada to use a certain proportion of bituminous coal. Some increase in the production of coke has helped to ease the situation.

Various measures have been adopted in an endeavour to stimulate Canadian production. The emergency coal production board, which operates under the coal controller, has provided financial assistance to mine operators in

various forms, especially in cases where the operation normally would be uneconomic. The board has also financed extensive stripping operations in western Canada. Late last summer, a fuel conservation programme was inaugurated for the industrial and commercial user and the householder; this has resulted in great savings in annual consumption. There was a time, early in the fall, when it seemed unlikely that we could fill our coal requirements. At that time, certain steps were taken by the coal controller to prevent hardship during the winter months. Regional offices were set up across Canada, with regional administrators to supervise the distribution of coal in the region. I am glad to say that some increase in production, the effects of the conservation programme, plus the great blessing of a mild winter, have dissipated our fears. However, we must not forget that we cannot count on an equally mild winter in the heating season of 1944-45.

Mr. HANSON (York-Sunbury): Another winter coming!

Mr. HOWE: The coal which is mined today, and in the next few months, will be marketed for next winter's supply. If we are to meet all of our requirements, industrial and domestic, we must continue a policy of strict conservation, and we must raise the level of production in those areas where production is now falling behind the demand.

Wood Fuel: Our annual consumption of wood fuel is 10 million cords, and about 90 per cent of this is produced by the farmer. The farmer also accounts for the consumption of about 60 per cent of our wood fuel cut. The balance of the cut is marketed in our cities and towns. Because of the severity of the winter 1942-43, stocks in hand fell off to an alarming degree. Wood Fuel Control was established to stimulate production, and to supervise the distribution of wood, in order that there might be no hardship during the present winter. The policy of subsidies, which was initiated last spring and extended through the winter months, did much to improve production. In addition to the production subsidy, transportation subsidies have also been paid, in order to facilitate the movement of wood to probable distressed areas. The wood fuel controller also initiated a number of special cutting projects, as a means of building up Government-owned banks of wood fuel, which could be held in reserve and shipped to any areas where distress was imminent. Studies of the consumption of wood fuel made it possible to determine the areas of high consumption. In these areas a special effort was made to have the cities and smaller municipalities undertake their own wood cutting, wood storing and wood distribution programmes. I am glad to report that most of the municipalities responded in splendid fashion to this proposal. These various measures, coupled with the extremely mild winter, have enabled us to meet all wood fuel requirements. We are hopeful that the fine weather we have had this winter will bring about a return to normal production on the farms. However, to ensure the building up of adequate stocks for the next heating season, the policy of paying production and transportation subsidies will continue in effect until June 1st. At that time we will review the policy in the light of the then existing supply of fuel wood.

Mr. HANSON (York-Sunbury): If the minister will permit me, will he have compiled and laid on the table or produced in some form a statement showing the amounts paid in subsidies for wood fuel, and to whom they were paid? I think this information ought to be given to the public, because the feeling is that the wrong people got the subsidies—the middle man, not the producer.

Mr. HOWE: I do not think it is the practice to table in the house payments to individuals.

Mr. HANSON (York-Sunbury): They should be in the auditor general's report.

Mr. HOWE: Perhaps. In any case I think the amount of the subsidies has been tabled in the house. However I shall be very glad to produce the information when the time comes. The intention was to pay the subsidy to dealers, and payments have been made to dealers.

Mr. HANSON (York-Sunbury): I thought it was to producers.

Mr. HOWE: The producer gets it through the dealer. The purpose is to allow the dealer to finance and to function.

Mr. HANSON (York-Sunbury): But the producer does not get it under this scheme.

Mr. HOWE: In any case the scheme produced the wood, and we were not getting it until we put the dealers in business.

Timber.—Our annual peace-time production of lumber is slightly below 4 billion board feet, of which we export 2 billion, 2 hundred million board feet. Our home requirements, plus very high commitments to the United Kingdom and the U.S.A., now outstrip the available supply. Despite very severe labour shortages, we were able, in 1943, to reach a production of 4 billion, 640 million board feet.

We did this largely because of the cooperation of national selective service in making available larger numbers of men for employment in bush operations

Our 1943 cut was distributed as follows:

In Canada for direct war use..	1,400 million ft.
For indirect war use and for essential civilian use, including railways, agriculture, housing and industry.....	1,340 million ft.
Shipped to Britain for war use.	1 billion ft.
Shipped to United States for war use	800 million ft.
Shipped to British empire countries other than Britain for direct war use.....	100 million ft.
Total.....	4,340 million ft.

I might point out that shipments to the United Kingdom and to the United States are exclusively for war uses. This war demand, added to the requirements of the armed services in Canada, has created a scarcity of dry lumber for the civilian user.

In 1944, overseas requirements for Britain and other combat areas will increase greatly. Requirements of the United States for war purposes will also continue at a high level. We anticipate some falling off in war requirements in Canada, due to the completion of a major part of the military construction programme. So far as we can estimate at this time, our total production for 1944 will be 4 billion 350 million board feet. Of this amount we will export 1 billion 980 million board feet, leaving for consumption in Canada 2 billion 370 million board feet. The larger supply which will be available for use in Canada will permit considerable easing of the restrictions in the use of lumber.

There are two crown companies operating in conjunction with timber control: Aero Timber Products Limited and Veneer Log Supply Limited. Aero Timber Products Limited is responsible for procuring supplies of Sitka spruce for the manufacture of aircraft in Canada and in the United Kingdom. Through extensive logging operations undertaken on the Pacific Coast, the company has been able to supplement the supply produced by private operators. Because of its very successful programme, we have been able to keep abreast of aircraft spruce requirements. Veneer Log Supply Limited is responsible for procuring supplies of logs for the manufacture of plywood and veneers for aircraft and other war uses. The company has been able to meet its supply quotas and to satisfy all requirements of Canadian mills and the British Ministry of Supply. All logs of a quality suitable for the manufacture of aircraft plywood must be sold to Veneer Log Supply. Logs of lower grades, which are used in the manufacture of commercial plywoods, may be disposed of through the normal business channels.

Power. Due to the expansion of our Canadian power resources and the various conservation measures which have been initiated by the power controller, Canada passed through the peak of all power demands at the turn of the year without serious shortage or inconvenience. However, the situation is still extremely tight, and we can look for no immediate relaxation of the various control orders which have been brought into effect to conserve power. Shortages of gas have occurred in western Ontario, but the new gas plant in Hamilton is now in complete operation, and it is hoped that the essential needs of this area can be met.

Machine Tools. This was one of our most important controls in the early stages of the production programme. To date, Citadel Merchandising Company Limited, the crown company which operates under the Machine Tools Controller, has procured and placed in war plants some 45,000 machine tools. The control still has a vital part to play in the production programme, but the nature of its work has changed considerably. To-day the problem is chiefly to allocate existing machine tool capacity in accordance with changing production needs. A special organization known as the Machine Tool War Service Committee has been set up to act as a clearing agency in the reallocation of tools.

A large number of machine tools which have been procured by the machine tools controller have remained in the ownership of the crown. The controller has maintained a complete inventory of these tools, with a full catalogue of sizes, types and working condition. In this way, the machine tools controller has a com plete day-to-day record of all government owned tools.

Cutting Tools and Gauges Limited, the crown company which was set up to procure gauges and to salvage and recondition cutting tools, has had a very successful year. The company has met all requirements for gauges and cutting tools.

Metals Control. As the house is aware, Canada is the main source of supply for the United Nations for many non-ferrous metals. We supply practically all of the nickel for the United Nations and 40 per cent of the aluminum requirements. As an indication of the expansion of production that has taken place since war began, I will place on *Hansard* a table showing the production figures of the

leading items in the non-ferrous metal group, using for purposes of comparison production in 1939 and in 1943:

	1939 Tons	1943 Tons
Aluminum	82,000	492,000
Refined copper	231,000	254,000
Lead	139,000	224,000
Nickel	63,000	102,000
Zinc	197,000	300,000

I would point out that this expansion has occurred in the face of very severe labour shortages, which have affected base metal mining operations perhaps more than any other of the heavy industries. The policy of promoting intensive exploration programmes for new deposits has brought rich rewards.

Our position with respect to certain of these metals is much better than at this time last year. Due to expanded production in Canada, we are now in fairly easy supply of aluminum, molybdenum, magnesium, tungsten, zinc, chrome, lead and copper. As a result, we have been able to release some quantity of these metals for civilian manufacture. In allocating supplies of non-ferrous metals for civilian use, the Wartime Industries Control Board works in cooperation with the Wartime Prices and Trade Board, which has jurisdiction in the field of civilian supply. The falling-off in the requirements of certain non-ferrous metals will result in the closing down of certain mining operations initiated by the Metals Controller. There remain only two or three metals, of which the chief is tin, for which the demand still exceeds the supply. Generally speaking, the stock position is such that we can meet that portion of the united nations' requirements of base metals for which Canada is committed. We will continue to build up stock piles as a protection against urgent demands which cannot now be estimated.

Wartime Metals Corporation, a crown company, which was established to administer the development of certain mining operations, has had a successful year. The company is now supervising the operation of eight projects, two for the Metals Controller and six for the Metals Reserve Board of the United States. Certain of the operations under the direction of the company will be closed down, due to the falling-off in requirements. The government-owned magnesium plant at Haley's Corners, Ontario, is also operated under the supervision of Wartime Metals Corporation. The plant now has a daily output of thirteen tons. There has been a gradual reduction in the cost of production each month since the plant went into operation.

[Mr. Howe.]

Oil. I have recently made a statement with regard to gasoline and oil products. Our position continues to be serious. Improvement in the transportation of crude has been more than offset by the ever-increasing demands for gasoline and oil products in the combat areas. As the tempo of the offensive mounts, the demand for aviation gasoline and other oil products also increases. This means that we cannot hope for any relaxation in the present conservation programme. As already announced, the rationing plan for the motorist will continue without important change. While we are unable to obtain as large quantities of the light grades of crude as formerly, we have been able to increase our imports of the heavy grades. Because of this, we have a surplus of heavy fuel oils and asphalt. This will permit considerable relaxation in the use of heavy fuel oils, and asphalt is now on the free list. It should be noted that light fuel oil, used for domestic heating, is in the same position as gasoline, in very short supply.

There was some misunderstanding after the statement I made a month ago. Many householders thought I was indicating a better situation for light fuel oil. That is not the case. Light fuel oil, of course, is in the same class as gasoline, because it can be made into gasoline by a different process of refining; so that we must have the same conservation programme in the homes for fuel oil as we have in the motor cars for gasoline.

Mr. ADAMSON: Is the difference in specific gravity?

Mr. HOWE: Yes.

Mr. ADAMSON: It is purely a matter of specific gravity of the oil?

Mr. HOWE: Pretty well, yes.

During the past year, a new Canadian refinery, and a new alkylate plant, came into production. This new production will increase substantially the supply of aviation gasoline for the use of the British Commonwealth Air Training plan. Nevertheless, we are still in very short supply of aviation gasoline.

In May, 1943, Wartime Oils Limited, a crown company, was established to develop submarginal areas in the Alberta oil fields. Twelve wells have been financed to date. Of these, six have been completed and are now producing oil. We expect the balance of the wells to be in production by the end of June.

I had hoped to be able to give final reports on the results of the investigation of the production of oil from bituminous sands in northern Alberta. This work is being carried out under the direction of the Department of Mines and Resources. There is no technical

data available as yet, which would warrant any forecast as to what can be expected from this development in the way of oil production.

I may say that, as requested by the hon. member for Danforth (Mr. Harris), I shall give a statement later as to the position at this time in connection with Abasand.

Rubber.—I have explained to the house in previous reports that Canada has had to depend for her supplies of raw rubber on quotas which are allocated from the united nations' stock pile. This stock pile has been a dwindling asset, and our problem has been to bring in production of synthetic rubber in time to avoid a shortage, which would have crippled our production programme. We have reached the point where I am able to say that we have won the race. The government-owned plant at Sarnia, which is administered by the Polymer Corporation, a crown company, is now in production. The estimated annual output of the plant, operating at full capacity, will be 34,000 long tons of buna-S and 4,000 long tons of butyl. The plant is a self-contained unit, producing butyl rubber, and styrene and butadiene, which are combined to produce buna-S rubber. The styrene plant came into production last July, the butadiene plant in February of this year. The production of buna-S rubber began at half capacity last September, with the use of styrene produced at the plant, and butadiene imported from the United States. Now that the butadiene unit is in production, imports from the United States will terminate. Production of buna-S is currently at the rate of 2500 tons per month, and butyl rubber at 150 tons per month. Production of buna-S should reach full capacity by May, and production of butyl by July. It is worth noting that the Polymer plant has no counterpart anywhere. Some plants produce one or more ingredients of synthetic, others produce finished synthetic. The Polymer plant produces all of the ingredients of synthetic rubber and manufactures two finished synthetics.

The production of synthetic rubber on this continent in commercial quantities is a new venture. The process which has been used by Polymer is similar to that adopted in the synthetic rubber programme in the United States. I may tell the house that Polymer has come into production in as short a space of time as any of the synthetic rubber projects with which it can be compared. With the Polymer plant in full production, we will be able to meet war and strictly essential requirements. We will not be able to give any great relief to the ordinary civilian user. It is expected that 900,000 tires will be manufactured from synthetic rubber in 1944. A large part of these will go on military vehicles. The balance will be distributed to the public in accordance with the regulations of the tire rationing plan.

A word about the quality of these tires. It is not possible yet to say that a synthetic tire matches the quality of a raw rubber tire. This department is conducting very extensive tests of synthetic tires, in conjunction with the United States army. The data obtained from these tests will, we hope, help to improve the quality of synthetic tires. So far as we can now estimate, the synthetic tire is about 80 per cent as efficient as a raw rubber tire. It is still necessary to use a certain proportion of natural rubber in the fabrication of tires for heavy duty and high speed operation.

We are now in a very easy position on rubber scrap. There are very large stock piles in Canada and in the United States.

The Fairmont Company, a crown company, continues to be the government agency for the purchase, sale and stock-piling of natural and synthetic rubber. The company works in close conjunction with the rubber controller and with the Polymer Corporation.

Mr. ADAMSON: Do I understand the minister to say that Polymer is a completely integrated organization?

Mr. HOWE: Yes.

Mr. ADAMSON: And the only one of its kind?

Mr. HOWE: Yes, that is true.

Supplies Control. The supplies of cork are now adequate, and restrictions respecting its use have been lifted except for the manufacture of linoleum, where shortage of other materials is the real limiting factor. While increased supplies of kapok have been forthcoming from India, our existing stocks must still be held exclusively for use in life-saving equipment of all types.

While the demand from Canadian war industry for nylon has declined, the restrictions on this fibre are still in effect, as our output is required overseas.

We have adequate supplies of the hard fibre for the manufacture of rope, but demands for the fishing industry are in excess of present productive capacity. Although the supply situation has improved somewhat, the demands from our ever-growing navy, and our fishermen, do not indicate any immediate relaxation of the controls affecting manila, sisal and henequen fibres.

As recently announced, this control has been transferred to the Wartime Prices and Trade Board, since the problems with which it is concerned now have to do with civilian supply.

Steel. Our production of steel for 1943, amounting to 2 million 528 thousand tons, approximately doubled our production in 1939. Our total consumption in 1943 was 3 million 620 thousand tons, which means that we had to import from the United States, roughly, 1 million 92 thousand tons, or one-third of our requirements. During most of 1943, the steel position continued to be tight. We were able to meet war and essential needs only by the strictest conservation. The situation has changed very materially in recent months. Changes in the production programme, with the shift to lighter items, and the completion of the industrial expansion incidental to the war programme have been the principal factors. Therefore, it has been possible to lift some of the steel restrictions, and seven of the control orders which were in effect in 1941, 1942 and 1943 have been lifted. Certain types of steel continue to be in short supply, mainly plates, sheets and strips. These will be subject to control until such time as the supply position improves. Sheets are extremely tight, both in Canada and in the United States, and I am unable to offer any hope that an increased supply will be available for the manufacture of roofing.

Motor Vehicle Control. This control was established to distribute the very small supply of trucks and passenger automobiles which are available for civilian use, and to maintain the necessary flow of parts for the servicing of trucks and passenger automobiles. We have not manufactured any passenger automobiles in Canada since April 1942. At that time, a number of passenger automobiles were placed in a government bank. These are allowed to be sold only under the regulations of the Motor Vehicle Controller, and in cases of the higest essentiality. So long as the demand for military vehicles and parts continues at its present level, there is no prospect of our being able to manufacture passenger automobiles.

Studies recently compiled for allied nations show a severe world shortage of trucks for military and civil needs during 1944. Because it is necessary that we maintain essential trucking services, we have manufactured each year a small quota of trucks. While we hope to increase the number that will be manufactured in 1944, we cannot begin to make available sufficient trucks to meet the normal demands. For this reason, a strict control of distribution must be maintained. We are dependent on the United States for our supply of heavy-duty trucks, an agreed quota of imports being fixed in co-operation with the War Production Board of the United States. Here again the number that can be obtained is considerably below the demand.

Mr. HANSON (York-Sunbury): Will the minister say what the quota will be, or did he give the number?

Mr. HOWE: Does the hon. member mean the total of domestic trucks? I shall be glad to give the figures later.

Chemicals.—Changes in war programmes have permitted some relaxation of controls in this field. Glycerine, formerly in very short supply, is now available for certain commercial uses. We are also now able to release coal tar for civilian purposes.

Mr. FRASER (Peterborough West): I understood that glycerine was released for anti-freeze purposes, but from what I can make out among the garage men it was released for only a day or so and taken off the market again.

Mr. HOWE: I shall be glad to look that up. Possibly another shortage developed and it was taken off. I know the control was taken off for a time.

Canada is an important source of supply of sulphuric acid and ethyl alcohol, for the United States. Our distilling capacity is now devoted entirely to the production of ethyl alcohol. Approximately one-half of our production is consumed in Canada. The balance is exported to the United States. Soda ash, a most important war chemical, is in very short supply, and we are dependent on importations from the United Kingdom and from the United States. In this control, as in others, supplies for civilian use will be released as circumstances permit.

Construction. The purpose of Construction Control is to conserve strategic materials, such as steel, lumber and other builders' supplies, by restricting non-essential building projects. In the early years of the war, the demands of military construction projects and of war industry for steel, lumber and other builders' supplies was very great. That demand has fallen off to a considerable extent, and is reflected in the easing of Construction Control regulations, particularly as they affect the construction of private dwelling houses. There has been some increase in the amount of money that can be expended on new building or repairs without a permit from the Controller of

Construction. The issuance of licences is still dependent to some extent on the labour situation in the area in which the building is located. The supply position has not yet improved sufficiently to permit the issuance of permits for public buildings, churches, places of amusement, etc., unless the circumstances are very exceptional. It is estimated that as of the 1st of February, 1944, there is a backlog of construction projects of 300 million dollars.

Transit control. Our urban transit facilities continue to carry a very heavy burden. So far as we can estimate, transit systems are now carrying twice as many passengers as in 1938. I do not think it is any exaggeration to say that many of these systems would have bogged down had we not established transit control.

Staggered hours arrangements have provided considerable relief. Under the Wartime Industrial Transit Plan, 54,000 private automobiles are now mobilized to transport war workers to and from their work. In addition to these measures, which were designed to relieve overburdening of transit facilities, we have made further curtailments of certain interurban bus services. Bus equipment is in very short supply, and these curtailments have enabled us to transfer buses to more essential routes. This control is tied in closely with rubber and gasoline conservation plans. The object of the rigid control of taxicabs, which is now being maintained, is to assist in the conservation of these very vital supplies. There has been a considerable reduction in the number of taxicabs in service without, I think, any undue inconvenience to the public.

Priorities. Our priorities system continues to operate most satisfactorily. As the priorities office works in intimate association with the various production divisions, we have not found it necessary to institute a formal priorities procedure for deliveries of equipment and components produced in Canada. We thus have been able to arrange deliveries without recourse to an elaborate procedure, with its inevitable confusion and delay.

As we are dependent on the United States for much of our equipment, and many of our components, the Priorities Office has had to maintain a close working arrangement with the priorities division of the War Production Board of the United States. In the case of importations of equipment and components from the United States, we have conformed to the priority procedure laid down by the priorities division of the War Production Board. This will explain why a manufacturer, jobber or dealer who is importing equipment or components from the United States must submit certain application forms to the Canadian priorities office. These applications are screened in the Canadian priorities office, but the final decision on the priority rests with the Priorities Division of the War Production Board.

Similarly, with importations from the United Kingdom, we have worked out an arrangement with the British Board of Trade whereby imports are kept at the minimum dictated by necessity. This has helped to conserve vital shipping space.

Before leaving the subject of controllers, I would point out that the duty of each controller has been to organize his industry for maximum production and to arrange distribution of his product in such a way that essential war needs can be met in full and the surplus distributed fairly among civilian users. Throughout a period of world scarcity of products essential to war production, Canadian production has never been seriously delayed for lack of raw materials. Under the direction of our controllers, our basic industries have been expanded greatly, always in time to meet the anticipated demand. Even materials which must be imported into Canada have been kept in supply. To me, the distribution of materials brought about by our controllers has been a miracle; certainly our record in that respect has not been equalled in any allied country. Now that the supply situation is easing, I am glad to pay this tribute to the work of our controllers, throughout a period of acute world scarcity.

War production in Canada has reached its peak, but the work of my Department has not lessened on that account. The termination of contracts, as dictated by the strategy of the war, is no easy task. Machinery for termination has been provided, which will, I believe, permit prompt conversion by the manufacturer of peacetime production, while fully protecting the government's interest in the cancelled contract.

There is also the problem of disposing of surplus materials, and surplus and obsolete equipment, purchased by the government for war purposes. A crown company, War Assets Corporation Limited, has been formed to deal with this problem, and parliament will be asked to consider legislation bearing on this problem.

Canada's great volume of war production has been made possible by full-out cooperation with the government, on the part of private industry, the producer, and the worker. My Department has called on each for a great effort, directed toward the winning of the war, and each has responded in full measure.

This war is responsible for the destruction of life and property on an unprecedented scale, but we in Canada will receive some compensation through enlargements of our productive capacity which can later be directed into peacetime production. Reconversion of industry must wait until the demands of war are satisfied, but active steps are being taken to prepare for rapid reconversion when the time comes. Whether that time will be near, or distant, must depend on the progress of the war, but until the time comes, there must be neither slackening off in war production, nor diversion of productive capacity away from war requirements. Let us concentrate on winning the war, while looking forward with confidence in our ability to meet the problems of conversion, when our paramount job is behind us.

Mr. HARRIS (Danforth): The committee will understand that of necessity my observations will be of a general character, inasmuch as we have not the information that the minister was to give us, and shall not have it until such time as it is produced.

In the criticism I have to offer I shall try to be as constructive as possible. I am not anxious to get the minister into one of those moods into which he slips so easily and so often. My first criticism is in regard to the presentation of the estimates on February 11. Why can the department not furnish us with a break-down as other departments have done? If the advance information would be of comfort to the enemy, then I could understand it; but I cannot see why on that account the minister should be restrained from producing a proper break-down of the appropriation so that we should know of any radical changes that were made in certain of the many activities he found it necessary to review in his annual statement. We are given two lines in the estimates of the Depatment of Munitions and Supply, and page after page in all the other departments.

My next criticism is this. While it may be quite true that the function of the Department of Munitions and Supply is to purchase on order what is requisitioned by other branches of the services, not only in Canada but abroad, now that we are in the fifth year of the war does the committee really think that is sufficient at this stage? Do you really think, Mr. Chairman, that we are taking a sufficiently long-range view in having this department responsible for all munitions and supply, construction and so on, without some definite planning for the future? I realize at once that the task of the minister is of great magnitude; but to my mind it is not planning for the future with respect to many branches of the services, some of which I shall recite in a few moments. In the meantime the general criticism I have to make is that the minister's statement seems to resolve itself into an historical review of what has been done. We have that review in the press from day to day, from week to week, and from month to month; we have it in the publications of the wartime information board and in other sources of information. They tell us of the increase in production here and there when it is all gathered together. It should not be necessary for the minister to occupy the time of the committee in giving us another historical review of what is happening.

The assets held by the crown are now very large. With the holding of the assets there comes the responsibility of keeping them at work, particularly the capital assets. If there is not sufficient work for those plants in supplying munitions, then some department of government should be responsible for seeing to it that the capital expenditure is kept operating on peace-time needs, if not on war-time needs. It may be said that it is quite easy to shut down a few plants and transfer the employees, but you cannot transfer the fixed assets. Someone should be giving consideration to that particular part of our programme. The war targets have been attained, and in attaining them, considerable programme revision has been found necessary. That is inevitable. But in the revision which is necessary on account of change in types and kinds of war machines, the shutting-down of plants is something which should be given more consideration.

Single-purpose plants have been referred to. I can realize the difficulty of transforming them into something which is necessary on a larger scale. The probability is that the single-purpose plants are small and perhaps located in small communities where labour conditions are such that there is not sufficient labour to justify any other course. Yet there is a crying need in Canada to-day for peace-time industries in small communities where industries are now working partly on war production. These industries are necessary to the economic life of Canada. They are necessary to keep the population in the small towns. Small single-purpose plants should be kept in operation so that the small centres across Canada will not be disorganized. Through the enthusiasm and encouragement of the munitions industry in days gone by, many of these small industries have become established. They are no longer necessary. They find that they will have to leave the town, and when peace is declared we are apt to have the spectacle of ghost towns springing up

all across Canada. Up to a short time ago there were thriving munitions industries in those towns. Let us take time by the forelock. Let some department of government take the responsibility of planning now with regard to the single-purpose plants referred to by the minister, and keep them in some kind of production.

It is not enough to cooperate with national selective service and move the population from point to point. Consideration must be given to the plants themselves. The increase of fifty per cent in aircraft production is something which I think ought to arouse the Canadian people who are now air-minded, and I would say that it is in the interests of Canada. The export production that we have had—"L for lanky", I think they call it over the radio—all helps, it is quite true, to build up the morale of the Canadian people. Congratulations were extended to the minister on this production, and they were quite in order, but let us have all sides of the picture as we go along. I did not hear very much said about the casualties in Ortona being taken to hospital in jeeps because no ambulances were available. It is a great tribute to the Canadian people that our trucks and ambulances can get through the sands of Africa, but there are other places where matters could be improved considerably. It is very nice to hear the minister tell us of these tributes that have been paid to us, but I should like him to present something more forward looking.

In the matter of mechanical transport we learn that our production has been 593,000 units, but now we find that this department has also gone into the business of supplying freight cars and engines for domestic use. If that is just a case of helping out because the Department of Munitions and Supply has under its control the equipment and tools necessary to make these things, well and good, but let that production go back into its natural channels, and let those who are able to build that equipment do so, as soon as possible.

Then I understand that the production of explosives has been reduced to some extent, and that one plant has been shut down. I wonder why that should be the case. I am trying to follow the minister's remarks seriatim, but he mentioned explosives in the early part of his remarks and dealt with chemicals later on, while the hon. member for Peterborough West raised the question of glycerine. I wonder why within the last month the glycerine market should have slumped. I wonder why there should be no sale for crude glycerine in Canada to-day. I congratulate the government upon holding the ceiling price of glycerine at 12½ cents a pound, in contrast with the situation in the last war when, because of world conditions, it soared to three or four times that price. The market price now, however, is down to around nine cents, with no sales. I think the parliamentary assistant should give the committee the story of that commodity, which is a natural product of Canada, because I am sure the present price will have far-reaching effects in connection with the raw material which goes to make up that product. In this country, which has very few plants able to handle crude glycerine, I wonder if there is not something going on between those plants, just to hold down the market, or if there is some other reason. I think in fairness to Canada the minister or his parliamentary assistant should give a frank statement as to the reserve supply of this commodity.

We were told that gun production has seen some conversion carried out, but we have no details. Probably the minister has not time in one statement to go into everything, but we are interested in details. I am sure Canada would be greatly interested to learn that we are working on orders for China, and also that there is another type of naval gun coming. Similarly in connection with small arms we have a modified version of the Bren gun. The minister mentioned that two cordite plants had been closed and that the plant at Nobel had been discontinued, so that the remarks I made previously in that regard are borne out by this part of the minister's statement. Tribute was paid to our chemists, chemical engineers and engineers. I join in that tribute modestly, perhaps, because I happen to be one of them, though I do not work at that profession, which has been long neglected. It is not recognized as a profession as we understand them, but I should like to take advantage of this occasion to say that it should be so recognized. No other country in the world has the opportunity Canada has for the development of chemical and engineering research, owing to the natural resources with which this dominion is blessed; and nothing that can be done to raise the standard of that profession should be left undone. Anything that will tend to increase the research carried on in Canada will work to the benefit of this country. The minister mentioned that he had fifty units working on explosives of one kind and another. It is hardly enough to say just that. How many of these units are operating; how many are closed down, and where are they located? Has the manufacturing industry of Canada been advised through the proper channels that it is not likely some of these institutions will commence operations again? Has any survey been made to ascertain what might be done with the units that are closed down?

I come now to the portion of the minister's remarks dealing with construction, including that in connection with air training schools and barracks. If I heard the minister aright, $100,000,000 is to be devoted to this type of construction during the coming year. I wonder whether we are looking forward to what will happen when the war is over, and whether we we are taking any care to see that these undertakings, which represent a tremendous investment, are located near centres where they will be of some use after the war. I think too many heavy expenditures have been made on construction, and fairly good construction at that, in remote parts of Canada when it was not absolutely necessary to have these buildings so far removed from centres of population. This country is now filled with the idea that we are to raise a new brand of youth, that we are to have youth training centres, and that many of these buildings will be used for cadet training centres and physical culture centres of one kind or another. Many of these buildings would come in very handy and be very useful in connection with the housing and training of our youth when peace returns. We cannot stop this youth movement; they are going to demand the use of these facilities, and in the expenditures made from now on consideration should be given to these factors when deciding where these buildings should be located. A good many of us are of the opinion that this war will end in two or three years, if not before, and that then we shall have a great surge of boys returning, with a great demand for facilities of this kind.

I am thinking of one instance which comes forcefully to mind at the moment, and perhaps I might pass it on to the minister. We have about eight sea cadet corps training in the basements and gymnasiums of schools in the city of Toronto. There are no facilities for what they call a deck, on which these boys can train as sea cadets. When the war is over we shall still be training sea cadets, not only in Ontario but in other parts of Canada. In Malvern collegiate institute we are training air cadets. There are no proper facilities at that school for the training of these boys. When the war is over we shall still be training air cadets. If we had some centre that could be used for that particular purpose we would avoid interfering with the school curriculum and would build up a centre of training to which the youth of this country might go. Pupils do not like to go back to school after hours; if they do, when they are there they do not feel that they have a home of their own. So that in the construction programme in all parts of Canada I hope consideration will be given to having these buildings erected in or near centres of population.

[Mr. J. H. Harris.]

For the first time I realized more of what the Department of Munitions and Supply was doing when I found that it was asked to provide, I presume for war and other plants, social, educational and health schemes, and I think the minister said baby clinics and other things that might come under a health programme. My general criticism of a programme of this kind is based on the fact that we have permanent health programmes, carried on in permanent structures in the municipalities. We have permanent programmes and permanent construction fostered by the provinces. We have another set of temporary structures or temporary services for these plants. Some department of government should be charged with the responsibility of synchronizing these particular efforts. A great difficulty with our form of government is that Jones does not know what Smith is doing. I venture the opinion that in the carrying out of the social and health and educational schemes recited by the minister there is very little coordination or coalescence between the present set-up and the different organizations set up in the provinces to render these services.

The same thing can be said about the handling of medical stores. In Ottawa there is a medical stores branch for the army and I understand they indent upon Munitions and Supply. The Minister of Pensions and National Health has a very good centre for the dispensing of standard medicines, a centre which has been built up over the last twenty years, a centre which is functioning very well. The navy, the senior service, has its own orders of the day with regard to these supplies, but I cannot say whether they indent upon Munitions and Supply. However, they do their own distributing in their own way. The air force has another system set up. The result is that there are four or five systems with four or five sets of personnel. The army, the air force and the navy have men mixing up pharmaceuticals of one kind or another and receiving army, air force or navy pay. The Department of Pensions and National Health have a civilian staff doing the same thing and receiving civilian pay. The difference between the rates of pay is such that proper cooperation in this work is not obtained. To a large extent the men charged with the responsibility of doing this work in the army, the navy or the air force are lieutenants or other commissioned officers who have a smattering of the subject, perhaps learned in a back-country drugstore. They are not trained in the manufacturing of pharmaceuticals, with the result that there is not the

efficiency there would be if a proper plan were adopted and there were more coordination of these efforts.

There is a point I should like to make in connection with the health centre programme being sponsored by the minister's department. Take Kingston, for instance, where I understand a centre is located. I think it will be found that the government centre is competing with other like establishments for the necessary labour. I notice the parliamentary assistant is making a note. If Kingston is not the right place, then these remarks will apply to other places. As I say, I believe it will be found that the government centre is competing with other organizations for the personnel to carry on electro-therapy work and other work needed in the centre.

I come now to the matter of controls. The minister says that there are seventeen controllers. That may be right, but there must be about 1,700 deputy controllers. According to the correspondence I have had the privilege of looking over, there seems to be a different signature on every letter. I note with interest the statement of the minister that some of these controls are not now necessary. These controllers should be released as quickly as possible, because I think it will be found that while perhaps they have not irritated industry in general, they have made it quite difficult for industry to carry on. Now that inventories are piling up in Munitions and Supply, more and more consideration should be given to relaxing these controls. I do not want to take the responsibility for this, should there be a substantial relaxing of these controls and then by some misadventure election time comes along and this be taken as another plank in the platform of my hon. friends who sit opposite. That plank is already in the platform of the party it is my pleasure to support.

We are still importing tremendous quantities of coal. The minister stated that providence was kind to us this year but conditions may be serious next year. We must take the long-range view of this and build up a reserve stock of fuel for next year. Reference has been made to the tendency of industry to centralize itself. Some long-range scheme should be adopted whereby industry could be transferred closer to the supply of coal, particularly to points in western Canada. As the hon. member for Davenport (Mr. MacNicol) has said at different times, more industries should be established where coal is available. Not only would that help in the distribution of fuel, but the effect upon the labour supply would be considerable. This year industry in Winnipeg was able to get labour. This year industry in Toronto was not able to get labour. We all know that labour is available during the winter months in western Canada and, as I say, plans should be made to transfer as much industry as possible to this part of Canada.

The minister referred to anthracite coal and substitutes for anthracite coal. Pocahontas coal is the principal substitute for anthracite coal. It has done a good job in this last winter which has been quite mild, but what has happened is that fifty-seven varieties of Pocahontas coal are being offered to the consumers. The quality depends upon the amount of other grades, mostly lower, of coal that are mixed in.

I come now to the question of lumber. Four or five billion board feet have been produced and the exports have amounted to one billion board feet. Referring particularly to planks and boards, I wonder if the crown companies need to exercise as much control? Do they need to go into this business as intensely as they are doing? I do not know and I ask the minister to have his parliamentary assistant answer this question: Can we not do away with much of the control exercised over this particular industry and let it carry on naturally?

I should like to say a word about plywoods and veneers. As time goes on there will be a tremendous increase in the use of these woods in all parts of the world. I ask whatever minister has the responsibility in this matter to give a close study to the possible development of plywoods and veneers. These woods have made tremendous strides during the war and I am sure they will make greater strides after the war is over. They are replacing steel and aluminum and many other lighter metals in a great many ways.

I come now to the base metals. Perhaps we have heard enough about aluminum and we have a fairly good idea about the amount of production. On the whole Canada is doing a good job in producing aluminum. Whether or not the structure which makes it possible for the plant to operate is properly organized is a question upon which I am not going to touch. But I wonder why we are not producing more magnesium. This metal is lighter than aluminum. In many ways it is better than aluminum, but in other ways it has certain handicaps to overcome. I ask the minister or the parliamentary assistant to give the committee a frank statement on the magnesium situation. Why are we producing only thirteen tons a day? While the hon member is making a note, perhaps he will permit me to make another comment. Is

the reason for this small production of magnesium the fact that we have such a tremendous productive capacity of aluminum? Is it that we do not want to interfere in any way with the sale of aluminum or with the position of this metal after the war? My comments are based on general observations.

At Thetford Mines, asbestos mines, I imagine I would be safe in saying that there are lying at the pit-head and not being used thousands of tons of semi-dressed magnesium ores, bereft of their mica and asbestos and broken into sizes which could readily be handled by steam shovel or otherwise, with perhaps one-third of the work of dressing already done on them. This is not being used and there is no particular development of any consequence apart from the thirteen tons a day which the minister mentioned. I should like to have a statement from the minister, if it is within the ambit of his department, as to why we are not using more magnesium and why more development work is not being done on this natural resource which we have in our country in such abundance.

As to molybdenum, copper and the other base metals, my understanding is that we have a tremendous backlog of copper and I think that should be maintained.

Mr. HOWE: While copper is in an easy position, there is no great stock-pile.

Mr. HARRIS (Danforth): There is no great stock-pile, the minister says. Then now is the time to get a stock-pile, because we are having some difficulty in holding the price of copper in world markets. If that is the case, it must be in production at a substantial profit, and certainly we should have on hand a fair supply of this essential material.

We are all disappointed that over the last twenty years there has been no definite or positive development of the tar sands, and I hope the hon. member for Davenport will pursue his quest with the department with regard to this particular development.

The interesting statement given by the minister on the rubber situation will be pleasing to the Canadian people. I should like to know whether the men who are responsible for that development, the engineers, chemists and what-not, are being given proper recognition. It is interesting to know that our production of steel in Canada has progressed in the proportions it has during the last decade. We are still importing one-third of our requirements. That strikes me as a very small figure, because I was of the opinion that we were importing more. I should like the minister to put on record the figures of our imports of steel. At the same time I wish to emphasize this warning to those hon. members who have the idea that the tape on the border between the United States and Canada is going to be rolled up—the tape being the duties at present in being and not now being applied—what will happen to the steel industry when the war is over if their policy is followed right through? How long should we be in the position of importing only one-third of our requirements and producing the other two-thirds? That is something which should give Canada serious concern, when we think of all the employees who are now engaged in the manufacture of steel in this country. I should like the minister or his parliamentary assistant to put on the record the number of workers now engaged in the steel industry in Canada.

Then I come to trucks. We are not producing them. The transit controller has put a control on trucks so that they will not be worn out too fast. As long as trucks are needed in the European theatre of war, let us do without them and devote our production of trucks to war purposes. But if the transit controller, working in harmony with other branches of the Department of Munitions and Supply, finds it necessary to restrict the use of trucks in this country, let me just bring to the attention of hon. members one little problem in that connection. The trucking hours have been staggered. Those of us who are operating trucks will put up with any inconvenience that may be necessary because there is a war on; but when the controller goes farther and passes regulations that trucks shall not operate on a certain day of the week, shall be off the highway one day in five—and with Saturday afternoon off, that brings the number of days operations to four —I want to say that the industry finds great difficulty in providing other work for the truck drivers to do on the day when they cannot take out their machines. Someone might say, put them in some other line of production. But truck drivers get a premium of from five to six or ten cents an hour over the average factory labourer. Moreover, the truck driver is out in the weather four days in the week, and he does not like going into the shop on the fifth day and then having to go back out into the weather the next day. His constitution will not stand it. When he does go into the shop he will not accept the pay which the ordinary labourer is drawing, and the ordinary labourer —and the truck driver may not be as efficient because he is working inside only one day a week—is not satisfied to work alongside him for from five to ten cents an hour less.

Mr. HOWE: The official who controls trucking is not in the Department of Munitions and Supply, but in the wartime prices and trade board.

Mr. HARRIS (Danforth): But the minister mentioned the transit controller and staggered hours.

Mr. HOWE: The transit controller has to do with transporting people in buses and street-cars.

Mr. HARRIS (Danforth): That is on the record anyway, and he that hath charge and responsibility therefor, let him note and pay heed to that I have said.

In the main my criticism is that there is no department of government that is forward-looking with regard to this tremendous industrial asset which we have found it necessary to build up to produce munitions of war, not only with regard to the asset in its capital sense but with regard to the future vocations for men and women engaged in this industry across the country. What are you going to do with them when hostilities cease? What are you going to do now with the people engaged in those portions of the industry which are closing down, with consequent moving from place to place? What are you going to do with the municipalities who find that these war industries have left them? That is something which is the responsibility of this house and something to which considerable thought should be given. When I say that, I am not anxious that the Department of Munitions and Supply should assume the whole responsibility for the future of that great personnel now earning their living from this war-time necessity. But these workers do need to be guided and to be told that something is likely to happen to the industry in which they are engaged, and some lead should be given to them as to where they are to be able to earn their living. It is easy enough to say that the housewives can go back to their homes and the schoolboys and schoolgirls go back to school, but that is not enough. Many of the housewives will never go back to domestic duties. A great number of the schoolboys and schoolgirls will not go back to school. Something more has to be done, and when that something more is being done for them I should like to see them guided by these ten good points which I ran across in a newspaper to-day, reprinted from the Land o' Lakes News, in the San Francisco *Argonaut:*

1. You cannot bring about prosperity by discouraging thrift.
2. You cannot strengthen the weak by weakening the strong.
3. You cannot help small men by tearing down big men.
4. You cannot help the poor by destroying the rich.
5. You cannot lift the wage-earner by pulling down the wage-payer.
6. You cannot keep out of trouble by spending more than your income.
7. You cannot further the brotherhood of man by inciting class hatred.
8. You cannot establish sound security on borrowed money.
9. You cannot build character and courage by taking away a man's initiative and independence.
10. You cannot help men permanently by doing for them what they could and should do for themselves.

But we can guide them and make a frank statement to them of the position into which we are drifting, and some department of government, in cooperation with the Department of Munitions and Supply, should be charged with the responsibility of taking a forward-looking view in the position in which we now find ourselves.

Mr. LACOMBE (Translation): In entering upon a discussion of the estimates of the Department of Munitions and Supply, I have in mind the numerous restrictions placed on the manufacture of articles of which the civilian population of this country has an essential need. At a time when farmers must renew their agricultural implements the all-essential farming industry is deprived of indispensable machines. The producers of maple sugar and syrup are in a similarly deplorable situation as regards their maple groves. We are told that metals are reserved for the prosecution of war. When it is obvious that war profiteers have exported thousands of tons of Canadian metal to the enemy since the declaration of war and a few days only before the outbreak of the conflict, is it surprising that our essential civilian industries should be deprived of articles necessary for their production? We are told again and again by the government that metals are reserved for the prosecution of war. Then, why did they authorize the export of our metals to Japan, a few weeks before war started between that country and the United States and Canada hastened to declare war on her? Is it conceivable that the government of Canada should have shown so little foresight as to let the enemy use our metals for building up a war machine which has already caused deaths within the ranks of our army, our navy and our air force? Those who have been responsible for such a dire situation shall be required by the people to account for their rank carelessness. I cannot find words strong enough to stigmatize such an attitude. I may be told that "such a situation could not have been anticipated". That is a poor excuse. The premonitory signs of Japan's warlike intentions could not

have escaped the attention of the government. Their connection with the Rome-Berlin axis was obvious. Reference to *Hansard* will show the concern of the government about the action of Japan, many months before her attack against Pearl Harbor. Once again, criminal purveyors had succeeded in cheating the authorities in order to increase their wealth. A small number of profiteers were waxing rich in betraying their country and laying our soldiers, airmen and sailors open to the attacks of the warships, bombers, guns and machine guns built by the enemy out of our metals. Such is the treacherous work of loathsome exporters and manufacturers who should be treated as the worst felons and brought before the courts of justice to answer for their crime.

I shall now deal with the rationing of oils and gasoline. It was indeed worth while to resort to it. It has been and is still disastrous. We have seen holders of the lowest category of ration books travel by motor car during the summer, the fall and even the winter. The black market was rampant for gasoline as well as for all rationed goods, meats, foodstuffs, sugar, alcohol, and so forth.

In a country like ours, endowed with enormous natural resources, rationing is not only a nonsense but an utter folly. As evidence, I need only mention the wasting of millions of pounds of meat, recently revealed, the hoarding, by thousands of families, of foodstuffs definitely wasted because they have become unfit for consumption and the failure of the government to carry out their now famous planned economy programme. That is a meaningless term.

In fact, the government, panic-stricken before the condition it has brought about, has just lifted restrictions on meat and beer. Believe me, it will not stop at that, all the more since it is now vainly trying to coax itself back into the favour of the people before appealing to the country, which step is required by public censure and the constitution.

The Minister of Munitions and Supply (Mr. Howe) remarked last Friday, in the course of the debate, on the ruinous competition maintained by our railways with regard to transportation all over the country. This is a well-known fact. The Canadian National Railways, however, are ready to build a new elevated railroad in the northern part of Montreal instead of using the Canadian Pacific track over a long stretch of the new branch-line. Elevated railroads in 1944! Are they so little conscious of progress and reality that they must cut up six of the lovliest parishes of Montreal to make them reek with evil smells?

[Mr. Lacombe.]

Let the government reject such a proposal. If new railroads are to be built, let them be underground. If this should cost ten or fifteen million dollars extra, little does it matter. A country which subscribes bounteous gifts and billion dollar presents annually can afford to spend a few million dollars on constructive and permanent works.

Let us think of the post-war period and save the northern part of Montreal from the calamity of elevated railroads which would shame the present government and disgrace the metropolis of Canada.

(Text)

Mr. Chairman, in concluding my remarks I wish to call the attention of the government and of parliament to a grievance of a very serious character. I wish to speak of the disastrous situation that is overtaking the producers of maple syrup and maple sugar—

The CHAIRMAN: Order. I have allowed the hon. member a great deal of latitude while he has been speaking in French, but he will realize that maple syrup and maple sugar have nothing to do with the item before the Chair.

Mr. MacNICOL: It is about time he was called to order.

Mr. LACOMBE (Translation): Mr. Chairman, we are considering the estimates of the Minister of Munitions and Supply (Mr. Howe) and I would point out to you that maple sugar and syrup are national supplies. Shall I keep on?

Mr. CHEVRIER (Translation): Maple sugar and syrup come under the wartime prices and trade board and not under item 1 which we are now considering.

Mr. LACOMBE (Translation): Mr. Chairman, speaking to the point of order raised by the hon. member for Stormont (Mr. Chevrier) I wish to state that the whole matter of rationing comes under the Department of Munitions and Supply and that maple sugar and syrup are rationed in this country. Am I entitled or not to speak on this matter?

The CHAIRMAN (Translation): The hon. member for Laval-Two Mountains will please abide by the standing orders. A discussion of maple sugar and syrup positively does not come under the item under consideration at the present time.

Mr. CHEVRIER (Translation): Nor does rationing.

Mr. LACOMBE (Translation): Again, Mr. Chairman, I wish to draw your attention to the fact that we are discussing the estimates of the Minister of Munitions and Supply. Do not maple sugar and syrup. . .

Some hon. MEMBERS (Translation): Order! Order!

The CHAIRMAN (Translation): I have given my ruling and I would ask the hon. member for Laval-Two Mountains to be kind enough to accept it and resume his seat. I know he realizes that he is out of order.

Mr. LACOMBE (Translation): I accept your ruling, Mr. Chairman, but I shall speak on this subject at some future date.

Mr. DIEFENBAKER: First I wish to refer to the sale of surpluses of equipment from barracks, camps and so on, and surpluses of raw materials, by the War Assets Corporation. This is a very important matter and one upon which the people of Canada have, I believe, the right to an assurance from the government that in the operation of the War Assets Corporation the sales that take place shall be open to inspection by the public as a whole. To date we have had no assurance in this regard. Tens if not hundreds of millions of dollars of surplus goods, war goods and the like, will be available for sale. There will be sales from time to time as surpluses accumulate and these will continue until the end of the war and after.

A committee has been set up in order to ascertain the materials, and a corporation has been set up in order to dispose of those materials. In order to reassure all the people of the country that there will be equality of opportunity and of consideration, the transactions should be conducted in the open. In that, I have support in the stand that is being taken in the United States.

The minister is aware of the steps that are being taken there. Two outstanding members were appointed by the administration to look into the matter and make recommendations, and they did so. I could deal with these particular points individually, but instead of doing so I am going to quote from the records of the War and Post-war Adjustment Policy report to the United States congress in order to ascertain whether or not similar principles are to be applied in Canada.

The basic principles accepted there, and applicable to Canada by reason of the similarity of conditions under which we live and the fact that we are joined together in common defence, are these. First, sell as much as can be early, without unduly disrupting normal trade; and second, no sales and no rentals to speculators, and none to promoters.

If this corporation is to operate fairly and squarely, that principle above all must be applied; otherwise we shall find ourselves in the position where speculators will take advantage of the fact that the government is in the market for the disposal of surplus goods, and the speculator rather than the government will reap the benefit.

Sell as in a gold-fish bowl, with records always open to public inspection. That to me is a most important recommendation. It is, I believe, one on which the minister should give his assurance at this time, the assurance in other words that what is to be done shall not be done behind closed doors or under the provisions of orders in council. Up to the present time, in the production of these goods and in the investigation into their costs, the people of Canada have not been able to secure full information. In the investigation of these matters in the war expenditures committee the people have been denied information. The same excuses for secrecy do not apply to the sales of such surpluses.

Next:

> As far as practicable, use the same regular channels of trade that private business would in disposing of the particular properties.
>
> No government operation of surplus war plants in competition with private industry.

I know there has been an exception made to that in Canada. There will be after the war in the rubber corporation at Sarnia, Ontario.

Mr. HOWE: With what does that compete?

Mr. DIEFENBAKER: It is a government operation.

Mr. HOWE: With what private industry does it compete?

Mr. DIEFENBAKER: It does not compete in the matter of manufacture, true enough, but it is actually the first move along the road to socialization.

Mr. HOWE: It is a wholly non-competitive industry.

Mr. DIEFENBAKER: That is true.

Mr. GRAYDON: Its product will compete.

Mr. HOWE: With what?

Mr. GRAYDON: Other manufacturers.

Mr. HOWE: There is no manufacturer of rubber in this country.

Mr. GRAYDON: The production of rubber that goes on the market.

Mr. HOWE: They do not manufacture rubber.

Mr. DIEFENBAKER: This is one industry that we know about to-day that is to be operated by the government after the war.

Its course will be that of public ownership, something that the government has invariably stood opposed to. I should like to ask the minister whether it is the intention, after the war is over, to operate surplus war plants in Canada in opposition to private business. The minister says that so far as the Polymer Corporation is concerned, for the time being it is not operating in opposition to private business in the manufacture of rubber. That is true; but will he give the assurance that after the war it is not the intention of the government to operate any of the surplus industries in opposition to private industry?

Mr. HOWE: I might answer that now. This government has, as far as I know since I have been a member of it, never entered into the manufacture of anything competitive with private industry.

Mr. DIEFENBAKER: That is not the question. Is it the intention in so far as surplus war plants are concerned, or any of them, to operate them by the state in competition with private industry?

Mr. HOWE: The government's policy will be made known in due course.

Mr. DIEFENBAKER: That is exactly the point. The minister was very quick to answer that the government had not done it before the war, but he is not so fast on the trigger in so far as the post-war plans of the government are concerned in this connection.

Mr. HOWE: According to my hon. friend his party is most hopeful of operating the government immediately after the war. Did he ever announce a plan for that purpose? If he has it has been to the Kiwanis club or some stock-breeders' association, not to the house.

Mr. DIEFENBAKER: Speaking about stock-breeders' associations and the like, I think the minister had better get together with other ministers over there. In November or December of last year the minister announced that in the post-war period there was one matter that we must all be sure about, namely that we must take a definite stand that there shall be no unnecessary public works in order to guard against unemployment. On the same day that the minister was making his speech in Toronto the Minister of Pensions and National Health said that one thing we must do after the war in order to ensure that there will not be unemployment is to engage in a very wide public works programme. The ministers did not agree during the same day that they were enunciating a post-war programme. I would point out that I have not yet received an answer to the question as to whether or not it is the intention of this government to operate any industries after the war in opposition to private enterprise.

With regard to the disposal of surplus the United States have adopted as a recommended principle that there shall be:

> No monopoly; equal access to surpluses for all businesses; preference to local ownership, but no subsidizing of one part of the country against another.

That, too, is an important matter, and one upon which the committee and the country have the right to expect the assurance of the minister. We who come from the prairie provinces and the maritimes realize that during the period of the war no real and fair opportunity has been given to the building up of industries that could have been built up in those sections. In the disposal of those surpluses are those parts of Canada that were neglected during the war to receive an equality of opportunity in the securing of the surpluses that are disposed of between now and the end of the war and following the end of the war?

May I go on from there with something else upon which we require information in regard to surpluses? We should like a statement from the minister now or at some time during this debate as to the value of the tremendous amounts of supplies that lie piled up along the right of way between Ontario and the maritimes, much of which has been there for a very long period of time.

Mr. HOWE: No.

Mr. DIEFENBAKER: That is what we want information on. How many million dollars worth of stuff—

Mr. HOWE: Why does the hon. member not ask a question instead of making statements that are not correct?

Mr. DIEFENBAKER: The statements I make are correct, and I am asking for information as to particulars of the amount. I ask the minister how many million dollars worth of stuff has been on the right of way for a period of three years? How many million dollars worth of stuff has been there for two years? What is being done in connection with the salvaging of this stuff piled along the right of way?

Mr. HOWE: I can answer that question now. No millions have been there for three years and no millions have been there for two years.

Mr. DIEFENBAKER: Has the minister the figures as to the value of the stuff that has been on the right of way for three years?

Mr. HOWE: Yes. There has been none.

Mr. DIEFENBAKER: The minister makes that statement; therefore he must have the particulars. I am asking the minister to produce the particulars showing the value of the stuff on the right of way that has fallen into poor condition and is unusable because it has been there for such a long time. The minister says that there is none.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. DIEFENBAKER: Mr. Chairman, I had just about concluded the question I desired to ask the minister. What I have asked in connection with the War Assets Corporation might be epitomized in one question, namely: is the principle of the goldfish bowl to be applied as far as the disposal of surpluses is concerned? The matter is of very great interest in the business world in general. In the disposal of office equipment, kitchen equipment, stoves and the like, for instance, when the various air schools are closed up, will the general public have an opportunity to purchase needed supplies? Will the sales be made openly, so that all may have an opportunity to replenish their own requirements, which have been reduced to a minimum during the period of war?

I mentioned the situation with regard to the supplies that were piled up along the right of way of the various railways of this country. A portion of those supplies has been moved during the past year. Has that portion been moved overseas, or has it been transferred elsewhere for storage or disposal?

In that connection I should like to ask a question in reference to certain types of armoured equipment and the like. Have many of these vehicles been found no longer necessary and not required for overseas use by reason of changed war conditions and, if so, what disposition has been made of them? In particular, were any of the four-wheel drive vehicles known as "quads" not required overseas, or found unfit for service; if so, how many were involved and what disposition has been made of them. Also in reference to the production of Heath-Robinson lorries, how many of those were produced; were they found unfit for service and, if so, what was done with them after that was ascertained? I ask for information for the purpose of finding out what disposition is being made of these armaments or supplies which are not to be shipped overseas by reason of changed conditions.

I should like to request some information in regard to the demobilization of war industry. I think the minister should now be in a position to give the country a picture of what is in mind in that regard. To-day he pointed out the changes that have taken place, the manner in which the production of certain munitions and implements of war has been reduced, and so on. When that production finally ceases, naturally some factories will be closed down. What are the plans for the use of those factories in the transition period between war and peace? What are the plans for the sale or disposal of those plants? For instance, during the past three and a half to four years a phenomenal record has been made under the empire air training scheme. Some of those schools are now being closed. What does the government propose to do with the buildings located at those schools? Does it intend to turn them over to the municipalities to be used as hospitals and similar institutions? As yet no plan has been placed before this house, and I should like to have from the minister something of the general design or pattern the government has in mind, not the details but the general scheme for demobilization of war industry, both during the period of war as changing conditions make that necessary and after the war is over.

There is one other matter, and I think the minister would be the one through whom that information should be made available. What is the plan of the government in regard to the demobilization of economic controls, under the planned economy which has been in effect during the war? To what extent is it intended gradually to remove these uneconomic controls, or at least a portion of them? In the United States, in the United Kingdom, plans are being made and announced; parliament is being taken into the confidence of the ministry. So far as we in this house are concerned, however, plans of that kind have not been placed before us. I mentioned economic controls; I would add the departure from parliamentary government. It is time that we knew how long it is intended to continue the present trend. Only yesterday I received an answer to a question which indicates how parliament is being by-passed by those who to-day in the main control the economy of this country. I refer to the matter of orders in council. It is an amazing record that from the beginning of the war until March 15, 1944, there should be 42,398 orders in council passed, as well as 23,287 minutes of treasury board. I do not object to orders in council between

sessions, in the interests of efficiency, effectiveness and immediate action. This session commenced on January 27 and from that date to March 15 a total of 1,186 orders in council and 850 minutes of treasury board were passed. While parliament has sat, parliament has not legislated. That function has been performed outside of this chamber.

These are matters removed from partisan consideration although, when they are brought before parliament, too often the attitude is taken that they are partisan matters. I ask the minister to take parliament and the country into his confidence. We have had in the course of the last few weeks a general picture of the demobilization of man-power after the war. We should now have revealed to us the story of the plans for the demobilization of war industry. Parliament and the people are entitled to a better answer than the one I got from the minister this afternoon when I asked him whether the government intended to operate industry in opposition to private enterprise after the war; the answer being that the government policy would be revealed in due course. We get answers in this parliament such as, "Government policy will be revealed in due course," and, "It is not in the public interest," and that sort of thing. We are entitled to the fullest information and we should not be given answers of that kind. The other day, when a question was asked as to what salaries are paid to officials of the Canadian Broadcasting Corporation, the answer was given that it would not be in the public interest to give this information because it would reveal to private industry details with regard to government. Answers like that are not good enough.

Unless plans are made now, unless we know the scheme, there will be chaos when peace comes. We are not asking the minister to give the picture in detail; all we want is an outline of what the government intends to act on. I have not overlooked the fact that there does not seem to be agreement as to post-war plans, even among the ministry. One said that he believed in the principle of public works during the transition period and the other stated in effect that the principle of public works is something that should be frowned upon. There seems to be disagreement in the government, disagreement among the ministers as to post-war planning. Let us have the picture, let us know what the post-war plans are for the demobilization of industry to which $800,000,000 have been advanced in the way of capital assistance for unless plans are made now there will be complete chaos in carrying out this demobilization.

[Mr. Diefenbaker.]

Mr. McIVOR: Mr. Chairman, I am not going to make a speech but I wish to state a couple of facts. I always enjoy listening to the hon. member (Mr. Diefenbaker) who has just taken his seat, but I do not look at things just in the way he does. He has stated that over 1,100 orders in council have been passed, but we must not forget that if each one of those orders had been brought before this house and all the members of the Social Credit and the Cooperative Commonwealth Federation and a good percentage of the Conservative members had spoken, we would not be out of here in twelve months. Those orders in council were authorized by parliament and they were absolutely necessary. I know that special information has been withheld, but when the general public are not asking for it I do not just see why we should give special information that may not be good for them.

When I was a young lad I read about the pioneers who settled in Ontario, in Manitoba and throughout the west. I do not think there has been a truer pioneer in Canada, either in the past or present, than the Minister of Munitions and Supply (Mr. Howe). It would not be hard to prove that statement. All we have to do is to consider what he has done, the new things he has introduced, sometimes against opposition. Tanks were never made in Canada before. Just consider the programme that was outlined on Friday last in connection with Trans-Canada Air Lines. He is one of the greatest pioneers that have ever occupied a seat in this house or in any provincial house in Canada.

As I listened to the minister this afternoon my imagination began to work and I could see hundreds of thousands of workers doing the things that have been planned by the minister to be done. The minister held out for collective bargaining long before that was considered by the general public; also holidays with pay. He was a real pioneer. Another things that stands out is the fact that there has not been one dollar of graft in connection with the war effort. If any one says that that is not a real achievement when one is dealing with human nature of all kinds, then he had better go back and think again. Let us look at what happened. I know we have a committee on war expenditures; I know what their duties are; but when any one has been suspected of padding a payroll or carrying on any funny work the Minister of Munitions and Supply has immediately called in the Department of Justice; the mounted police investigate and a court action may follow. The minister does not get any-

thing out of these things except criticism. That is very poor politics, but is doughty statesmanship on his part and he is becoming more popular than ever.

We at the head of the lakes think there are few men like the Minister of Munitions and Supply. This week I received a number of letters asking why I did not rise in my place and state that the minister is above reproach. He is above reproach. Whether you belong to our group or to any other I am sure you will agree with me when I express the hope that he may be long spared to us. He learned to use the square and compass when he was a boy, and he is still using them. No matter what happens, under his control there will be neither chaos nor tumult.

Mr. BERTRAND (Terrebonne): The war has caused an expansion in our national industry which might be termed magical. In this conflict which has lasted for almost five years Canada has become the arsenal of the united nations. In order to attain this end the Department of Munitions and Supply has had, since its inception in September, 1939, to organize a vast system of production, create the necessary factories and spend many millions of dollars for these purposes.

The county of Terrebonne has had the privilege of cooperating very closely with this war production. The towns of Terrebonne, Ste. Jerome and St. Therese have been almost exclusively engaged in war production and they have cooperated in a sustained and loyal effort. The Bouchard plants, located at Ste. Therese, were built for the purpose of filling shells and other essential purposes, and they are rated among the most important war industries, not only in Canada but in the whole empire. The municipal councils, the public bodies and the chamber of commerce of Ste. Therese, together with the municipal councils of Terrebonne and of Ste. Anne des Plaines, gave the Allied War Supplies Corporation in the foundation of Bouchard and its branches a support which could be used as a model for the rest of the country. The working class of my county—one of the most industrious of the country—even if it insisted upon its right of belonging to unions in order to protect its privileges, has nevertheless always shown a will to cooperate which denotes its social sense and its progressive spirit. There were no strikes in my county and in its factories. I wish to point that out because it honours my constituents.

Nobody was more closely related than myself to the creation and development of the Bouchard plants. I gave my best cooperation because I was conscious that in so doing I was, as a member, serving the interests of my country. I sometimes objected to the wastefulness of Defence Industries Limited, because I knew I was right. The companies entrusted with the war production are often seriously to blame; they believe they are authorized to spend freely and without general planning; they form, in the midst of their directorates, family compacts which are rejected and hated by the working classes; they are often unfair when they choose their labourers. Quite often it happens that simply because a skilled worker does not speak English well enough, he is replaced by another who speaks English only. This is very inconsistent, since most of the workers in the Quebec war factories are French Canadians. It also happens too often that employees are fired, forsooth, because they are suddenly found inefficient after two or three years' service, and they are replaced by people from Nobel or Winnipeg, who speak only one language and whose evident inefficiency is, in many cases, a cause for laughter and dissatisfaction among other employees.

I wish in particular to protest, as member for Terrebonne, against the unfairness of Defence Industries Limited, the company in charge of the plants known as Bouchard, and located at Ste. Therese, in my constituency.

My remarks on this will be short. I consider this statement important, both for the information of this house and for the protection of the working classes of my province.

During the last three or four weeks Defence Industries Limited, at Bouchard, hired about fifty employees from its Nobel plant, in Ontario, to fill, not labourers' positions, but a number of controlling posts which had been occupied with efficiency for two or three years by French- and English-speaking Canadians residing in my county, in the Montreal district, and even throughout the province of Quebec. These employees were dismissed or were compelled to accept secondary jobs. Who hired the employees at Nobel? Who ordered their transfer?

I have reason to believe that this transfer was effected without the knowledge of the Department of Munitions and Supply, even without the knowledge of the Department of Labour, which controls man-power. I am convinced, however, that Defence Industries Limited took advantage of the authorization which might be granted by the laws, or even granted to itself the right of transferring from one of its plants to another a certain group of employees, thus avoiding going through local or regional offices of the selective service, and thus attaining more easily its purposes of partisanship. If this authorization is provided

for by the selective service regulations, it should be withdrawn immediately, not only so far as Defence Industries Limited is concerned, but also from any company operating chain plants. Otherwise, these companies assume the full control of man-power and are free to commit gross unfairness. If such an authorization is not provided for, and if Defence Industries Limited assumed a right contrary to the law, then selective service should hold it responsible and impose upon the guilty party or parties the penalties provided for in the regulations. Since last Thursday, government representatives have been conducting a local investigation into these dismissals. I must congratulate the government upon this action. But I ask it not to circumscribe this investigation to the doings of the last few weeks, but to investigate also certain group transfers effected from Winnipeg to Bouchard during 1943.

For the information of this committee, I wish to state that Defence Industries Limited always laughed at selective service, and the latter's local office at Ste. Therese had plenty of trouble with this company. It is time that it should be told where to stop.

I am setting forth, Mr. Chairman, a question of justice and fair play—justice for the employees who were dismissed or subjected to humiliations after two or three years' services, and who were suddenly found inefficient; fair play for my province which has contributed as much as other provinces to the war effort of my country and which does not deserve such haughty treatment from companies which are spending its money as well as money from other provinces. As member for Terrebonne, I cannot leave my own people victims of the unfairness of Defence Industries Limited. I am confident that the government will take the necessary steps and measures to redress this injustice and to prevent such a state of affairs from happening elsewhere. As far as I am concerned, I do not hesitate to state that I am willing to put everything at stake, if necessary, to teach Defence Industries Limited respect, in Quebec, for the most elementary laws of politeness, decency and fair play.

However, I must congratulate the inspection board, which has used fair play toward the employees, and I congratulate also Allied War Supplies. The wonderful way in which Mr. Harold Crabtree managed this crown company adds to his already established reputation as a sound business man and an expert manager. Knowing the Quebec mentality, he chose an excellent French technical personnel; and although it was limited in number, it gave satisfactory deals to the parties concerned, especially in expropriation cases. I pay tribute to these officers for their courtesy, their politeness, and their frank and honest ways. The creation of Bouchard and its branches necessitated more than 250 cases of expropriation. This is an indication of all the work which had to be done, and which was done successfully.

I should also like to draw the attention of the minister to the cooperation given by certain municipalities, and to point out some of their legitimate claims. The municipalities within whose limits war factories were built had to face many financial and administrative problems. The increase in population was one of them. One might say that such an increase created in these municipalities an additional power of buying, that these war factories brought prosperity upon the municipalities in which they were located and indirectly upon the neighbouring districts. Nobody will deny this so far as the working and commercial classes are concerned. The municipality directly concerned, however, was compelled to make immediate disbursements which were quite considerable, and which sometimes increased to a great extent its normal expenditures, in order to give water and sewer services, to provide adequate fire and police protection, and all the other general services. Furthermore, the municipality directly concerned had to build new streets and spend important amounts toward the upkeep of winter roads within its limits—and this in order to provide transportation facilities for neighbouring municipalities. I quite understand the general policy of the government in not giving grants to municipalities; but in certain cases it should depart from this policy, or at least take into consideration, when the war is over, the cooperation which it received.

In certain cases, the department shared the expenses incurred in maintaining winter roads in districts where war plants are located. In my opinion, the federal government should pay the total costs of clearing the snow off roads leading to crown factories, or share those costs with the provinces. It is only fair that municipalities should be exempted from financial charges in which they are only partly interested. Winter roads permit an easy transportation to war plants, not only of workers from the municipality concerned or from adjacent municipalities, but also of workers from larger centres which are not assessed for this winter upkeep, altogether paid for by the municipalities. It is only

logical that winter maintenance should be paid entirely by the federal government to the provincial government, or entered as operation costs by the companies who operate these war plants.

The government should pay special attention to districts where wartime housing erected residential centres. The government does not pay municipal taxes, and I believe this is an error; it pays only service taxes, and even then, in order to accommodate the government, the municipalities had to suffer considerable expenditures.

It would be fitting, I believe, that those municipalities which have granted their cooperation, should receive, after the war, special attention from the government. The transition period may be disastrous for them, since, part of the additional population living within their limits, these municipalities will be compelled, if civil production is slow in getting going, to undergo an outlay of capital in order to provide work. In my opinion, these towns or municipalities should be among the first invited by the government to submit, through their municipal councils or other public bodies, suggestions concerning work projects to be effected in the immediate post-war period. As far as my constituency is concerned, various associations are busy on projects which will be submitted at the proper time and place.

It is the intention of the government to do away, after the war, with war factories and their equipment, and to transform these war plants into peace plants. This is all very well. The bill concerning an industrial development bank, which recently received its second reading in the commons, is, in my opinion, an excellent measure. It will indeed take some time before the post-war readjustment can be effected; this is why I believe that the government, when it created the War Assets Corporation, made a noble attempt at solving the post-war problems. This corporation will have jurisdiction over twenty-seven crown industries, including Bouchard. If I am not mistaken, it was created in order to avoid the flooding of the Canadian market with all the available war material, to prevent unemployment which might result from a sudden disposal of this equipment, and also to help transforming war plants into peace factories. How this company will deal with war plants like Bouchard, at what price and for what terms it will sell them, I do not know. When the war is over, it will not be the best policy to haggle over a matter of a few dollars; we shall have to balance our national economy as quickly as possible. Sound industries, with a guarantee of success, will undoubtedly be interested in converting these war plants for civilian industrial purposes. Improvements and capital expenditures will be necessary; but the starting point will be indeed quite interesting. Let these factories be disposed of under the best terms. It is important to provide for work. The people who have undergone sacrifices in order to finance a really gigantic war effort will want work, and they will be right in demanding it. These war plants, especially the larger ones, would be very well adapted for the purposes of railway companies; in the case of the Bouchard plant, where a large network of water and sewer services, of roads and railways were created, a great number of smaller industries could be accommodated and thus form a very important manufacturing centre. At any rate, too many millions were spent on these factories, and they cannot be closed down or abandoned.

The dwellings erected by wartime housing were built only for war needs; unless I am mistaken, I do not think the government has any definite plans for utilizing these houses after the war. In my opinion, these dwellings, together with the underground works, should be handed back to the municipalities, who could use them according to their needs, provided that they would not enter into unfair competition with their ratepayers. They could also be utilized for tourist or other purposes. Whatever be the plans of the government, the municipalities are entitled to be consulted by the government concerning these houses, first as a simple measure of municipal protection for themselves, and second, because of the financial sacrifices to which they were submitted in order to accommodate the government.

These were the few remarks I intended to make on the estimates of the Department of Munitions and Supply, which amount, this year, to $183,000,000.

There is no doubt that the Department of Munitions and Supply, whose powers are tremendous, has done a wonderful job. I wish to congratulate the minister upon having set up such a powerful organization in such a short time. He deserves all the credit. But the good reputation of his department should not be tampered with on account of the unfairness of companies interested in war production. These companies expend the Canadian people's money; the least they can do is to give the Canadian population the fair play to which they are entitled.

Mr. MacNICOL: I always like to listen to the hon. member for Fort William (Mr. McIvor), lauding the Minister of Munitions and Supply (Mr. Howe). On occasions I have heard the hon. member place the minister in a rank seemingly higher than the hosts of heaven, so that I have had to tell him, "Be careful, Dan, you are almost sacrilegious." I am sure the minister often says to himself, "May the Lord save me from my friends."

I am going to try to give him this evening a picture of something to which he referred very briefly this afternoon—the oil sand area of Fort McMurray, and let me, in turn, say, "O Lord, save the minister from his friends in connection with what is going on up at Fort McMurray."

I have been in contact for quite some time with the situation at Fort McMurray. I did not go up last summer, for I did not want to be there when the initial programme was being entered into, but from what I have heard I am satisfied that it will be necessary to go next summer to see just how little has been done.

A few days ago the Edmonton *Journal* quoted a speech made in the Alberta legislature on March 14 by the Hon. Mr. Fallow, who is undoubtedly a responsible, conscientious gentleman—at least I believe him to be—and in the course of his remarks he made some very strong statements. I am not sure how much the Minister of Munitions and Supply has to do with what is going on at Fort McMurray. I hope it is little—

Mr. HOWE: I may settle that now. I have nothing to do with it. The vote is in the Department of Mines and Resources. However, I like to hear my hon. friend explain these matters and I hope he will go ahead.

Mr. MacNICOL: I was going to say I hope the minister had nothing to do with it because I think too much of him and I know his ability is too great to permit any such situation as is going on at Fort McMurray to-day. Certainly the progress has not lived up to any of his expectations when he introduced the agreement approximately a year ago.

What did the hon. Mr. Fallow say? I will quote a few of his statements—and, I repeat, they are very strong statements coming from a minister of the crown:

> Mr. Fallow charged that the northern undertaking has been a "colossal farce." War requirements for petroleum are so urgent that the dominion government has spent $1,700,000 in the past eighteen months to investigate the possibilities of extracting oil from the sand, and so far as the actual investigation is concerned, all they have to show for it is a hole in the ground.

I know that hole in the ground was there before the contractors went north.

> Out of the north came an endless procession of weird, incredulous stories of criminal incompetence and scandalous waste of public funds, and charges of sabotage were heard on every hand.

That is in keeping with correspondence I have had from Fort McMurray, from people who would have no reason to state anything but the facts. Hon. Mr. Fallow goes on:

> The stories I got from men who were working on the project made me wonder if the dominion government had borrowed some of the inmates of an insane asylum to handle the work.

And further:

> No construction work was done that was not changed at least once, said the minister. Changes three to five times were not uncommon. It will perhaps be conservative to say that 25 per cent of the workmen were continuously engaged in tearing down some of what the other 75 per cent put up.

Further:

> In summing up, Mr. Speaker, may I say that the pathetic flounderings of this gang of pussy-footing amateurs is beyond description.

That is very strong language. It is not my language, but it largely bears out what has been sent to me from Fort McMurray.

Mr. HOWE: Perhaps we had better straighten that out now.

Mr. MacNICOL: Will the minister allow me to continue my argument?

Mr. HOWE: The hon. gentleman made a serious allegation.

Mr. MacNICOL: I made no allegation; I quoted what a responsible minister said.

Mr. HOWE: The hon. gentleman quoted it and therefore evidently endorsed it. It is strong language. He talks about amateurs; I want to give the pedigree of the people on both sides, including Mr. Fallow.

Mr. MacNICOL: Will the minister take his seat and let me continue.

Mr. HOWE: The hon. member is slandering my associates.

Mr. MacNICOL: The minister can say anything he likes afterwards. I want to tell the minister he is altogether too combatant. He is too fond of arguing with anyone who says anything about his department. A few moments ago he said it was not his business but the business of the mines and resources department. Why then does he want to rise and interrupt my remarks?

May I continue where I left off a moment ago when I said that similar stories had come

to me. In January last I wrote to a friend in Edmonton to go to Fort McMurray and take photographs panoramic and I have in my hand the panoramic pictures he sent to me. They are dated January 25, 1944. I also have in my hand a photograph I took in 1942, for I have been to Fort McMurray on three different occasions. I do not talk about anything I do not see, and I am one of the few members who have been there. Last fall when certain gentlemen appeared before the reconstruction committee to testify in connection with this matter of the tar sands, I did not know at the time that two of them had never been there, as I am informed, or I believe I would have asked that they retire. I am not sure that the third one was there. I am told that he was not, but he informed me that he was and so I will take his word. There is too much long-distance talk with regard to a plant that is a long way off about which some who discuss it actually know little. I have here a picture of the plant which I took myself. It is a picture of the 1942 Abasand plant. That company should never have been displaced. That is my judgment and I will stack my judgment against anyone else's. I was in big business for many years, associated with engineers for a considerable time, and I will stack my business experience against anyone else's. Twenty-five years' experience of big business is not picked up in a few minutes.

This picture shows the oil sand mine. It shows the second or 1942 plant and I saw the plant operating, so that I know what it did, notwithstanding what anyone else may say. The 1944 picture does not show the big building to which the sand was taken out of the mine for separation. That building has been pulled down. The 1944 panoramic view shows that the 1942 separation building has been pulled down and it discloses the end of the first pulper. There were two. I am told on reliable authority—the officials of the Department of Mines and Resources can check up on this information—that that new building was started on a grade fifteen feet lower than it is to be. The foundations have been raised fifteen feet, the reason given being the fear that the Horse river would overflow and interfere with the pulping in the new building. I am told, what the Hon. Mr. Fallow said, that there have been numerous changes in construction. Every time a new manager comes, there is a change, and the minister knows there have been several of them. He shakes his head; then he does not know.

Mr. HOWE: That is right; I have nothing to do with it.

Mr. MacNICOL: I am glad to hear that. I think too much of the minister to have him charged with such a mess as is reported there. It was about last May, I believe, that the first operators, or those who were directed to produce oil or asphalt at Fort McMurray, went there. Well, here is a picture taken in January, 1944. It shows the separator building is pulled down and some of the tanks have been moved across the river. The separating plant is down, not a thing done to the refinery. Nothing taken out of the pit in a year's time. What was done? A line of water-pipe is said to have been run all the way from that supposed townsite to the Athabaska river. It makes me laugh. It is being called a townsite. Apparently those who are in there expect to be able to build a town without proving anything as the minister intended should be done. Without anything being proved, a water-line has been run all the way to the Athabaska river. I am told that pipe was put into a trench eight feet deep and then taken out and laid on top of the ground. When the frost came along the pipe was put back in the trench again and covered with dirt. What a comedy! I just cannot find the right language to describe it. I am sure the minister would not have tolerated it for two seconds when he was in business building big elevators all over the country.

I have a number of little pictures here which show some fifteen or twenty bunkhouses or small houses being started. According to my information, of that number three perhaps are fit for occupation. No. 1 plumbing fixtures and a No. 1 heating plant have been put in the bunkhouse I slept in. When I was there, there was neither steam heat nor plumbing in it. I should have thought that the man on that job would have first followed out what the minister had planned. I am going to give the minister credit for this. The first thing he proposed to do was to make all the investigation possible and for that purpose $300,000 were appropriated. The first thing that should have been done was to prove something to the satisfaction of whoever was in charge there. That was not done. Money has, in my judgment, been squandered, wasted. That is borne out by what Mr. Fallow said. They are constructing buildings and there is nothing for anyone to do, because the mill is not up and will not be up soon. That is the last information I have and it is in accordance with the speech delivered by Mr. Fallow. The mill is not expected to be in operation before next fall.

The minister will remember that a year ago, in reading the agreement and giving the

talk on the production of the oil sands, he said that he expected that by the fall of 1943 the plant into which this country had poured a barrel of money would be in operation and making asphalt for the Alaska highway. Was that not right? Not a single, solitary thing has been made, not a drop of oil, not a pound of asphalt, because there is nothing in which to make it. I wish to protest as strongly as I can, as a Canadian taxpayer, against such lack of business as is going on at Fort McMurray. I wish to protest as strongly as I can against the waste, what appears to be the utter waste of public money. This is not Mr. Fallow saying that. I am saying it, and I am saying it on the basis of these pictures that I am looking at, which were taken on January 25, 1944, and if any of the press would like to have them I should like them to take them and publish them. For the expenditure of a barrel of money not a worthwhile thing has been done toward producing oil or asphalt. A few houses have been erected and a ditch or two dug. Some plumbing has been installed and perhaps a roadway patched up, but not a thing done for which the money was voted, namely, the production of oil and asphalt.

I feel keenly about this; I really do, because, rightly or wrongly, perhaps wrongly, I felt that in the speech I made in 1941, after having made a trip up to Fort McMurray and after having investigated the plant carefully, after having seen what they were doing there—and in my judgment they were doing a good job considering that they had every conceivable piece of pioneering work to do; I know the minister from Edmonton will bear me out that they had to discover everything—I had given a lead. It is quite true, as has been said before, that they had difficulties in discovering a method of taking the sand out of the pit. It was all pioneer work. There was nobody in America who knew how to do it better. But the Abasand company did overcome that, at the report submitted by the Consolidated Mining and Smelting Company stated. I have the report here and I shall read what they say about it. May I first deal with separation? This is the report of the Consolidated Mining and Smelting company. They say:

> We are of the opinion that the process of Abasand Oils Limited for separating the bitumen from the sands is a practical one which could be used in a large scale plant and which would yield reasonable results. Recoveries in the separation plant were consistently over ninety per cent.

They afterwards stated that the Chicago refining company, to which the Consolidated Mining and Smelting company engineers had sent quite a number of barrels, I believe, eighty barrels, reported that they got as high as ninety-seven per cent of oil. The Consolidated Mining and Smelting company were reliable. The minister sent them up there because they were reliable engineers. Their report to the minister stated that the refining was satisfactory. Then, Mr. Chairman, why in the name of heaven did the men not carry on? There have been so many different managers up there that I imagine each one will blame it on the other; the men who are there now I believe are called the General Engineering Company or some other name; I am not passing any comment on them. Apparently they are starting all over again. What did the others do who went ahead of them with it? I shall go back to where I started. The minister tells us he had nothing to do with it. I am sorry he has not had anything to do with it. I am convinced that if he had anything to do with it, it would not be in the mess it is in to-day. I make that kind statement to the minister because he has done things.

Mr. HOWE: I am beginning to think the hon. member is the man who got us into all this trouble.

Mr. MacNICOL: That is why I am interested in it now. I like to go and see things. I like to devote my time and effort and the best I have toward developing this country. That is the joy I have out of life, to serve my country. Just as soon as I cannot render some service in this House of Commons to my native country I am going to retire from the House of Commons. There is nothing in public life for me except service. What I do I do for the country. I try to do something for the country, and I repeat, I am glad that the minister is not responsible for the mess up there. I am sorry he did not have something to do with the matter. I am sure if he had had something to do with it, it would not be in the mess it is to-day.

The Consolidated Mining and Smelting company said that outside of the separation being satisfactory, the Abasand company had overcome the difficulties of mining. I know what the difficulties are; I was there. I was there several days on different occasions. I saw their planers operate. It was a good idea, but it did not work because when the planers come up against sand like that the sand wears the planers out. The Abasand people did not know that when they started to use planers instead of digging or picking the sand out the planers proved unsatisfactory. The Abasand

people did not think sand would wear the planers out, but they had to abandon them and then they went into blasting, which they found satisfactory. I saw that myself. I saw them blast many, many tons at a time. I saw how the sand disintegrated. I saw them use steam shovels and take it to the mill.

What was the trouble? What was the difficulty that the Abasand company had not overcome? They had built a separation plant big enough to separate four hundred or more tons of sand a day. My 1942 picture shows the mill there and the refinery at the back of the mill. I have the picture of them here. The refinery was not big enough to take care of much more than half what the mill separated. If the Minister of Mines and Resources could have taken the time in 1943 to go up there before anything was done and could have talked to the Abasand men who were there and who had overcome many of the difficulties, and who were doing a good job, I do not believe he would have sent anybody up there but the people who were there. I hold no brief for them. They are nothing to me. I am a stranger to them, but they were doing a good job. They had a new mill which they operated in 1942 when I was there. They turned out that summer from the 19th day of May to the 30th day of September, 17,000 barrels of oil. They could have turned out much more if the refinery plant had been of the same capacity as the separation plant. As I say, if the minister had had time to have gone there himself, I am satisfied that he would have done just as good a job there as he has done elsewhere, and we would now be producing oil up there in a big way, as it should be produced. Last fall when one of the engineers of the department, I believe it was Doctor Haanel, was before the committee, he told us of the necessity of producing oil; he explained that since 1930 the oil wells being tapped in the United States or blown in or coming into production had not been sufficient to keep up with the demand for oil, and how necessary it was that Canada should produce oil. Then at page 923 of the proceedings of the committee for November 30, 1943, he went on to make this significant and more or less alarming statement as to what may be the ultimate outcome in connection with these oil sands:

> I may say in passing there are various stories written about the anxiety which the United States is showing regarding their oil supplies. She lays great stress on the bituminous sands of Alberta but says that is a problem for us to take care of.

And so it is a problem for us Canadians. No one knows better than the minister how necessary it is for Canada to produce oil in a big way. I quite agree that under present conditions there may be limitations to what we can do. I was on the spot; I went up and down the river for some fifty or sixty miles. I know also that in their report to the minister the Consolidated Mining and Smelting company stated that by open-cut operations 50,000,000 barrels of oil could be taken out of that sand. That is something; it is much better than nothing. If the minister had just taken hold of this whole business right after he received the report of the Consolidated Mining and Smelting company; if he had undertaken to carry on that business there, perhaps to-day a good part of those 50,000,000 barrels of oil would have been taken out.

Of course for the last thirty years engineers of the Department of Mines and Resources have been telling the world that we have the greatest and richest oil deposit in the world. Everyone knows how many wells you have to drill before you get one that will flow oil; I think only about one out of every ten is of real use. There at Fort McMurray, in the immediate area right around that little plant, according to the evidence submitted in these reports we have approximately 5,000,000 barrels. I believe that is the richest oil sand in the world, capable of producing one barrel of oil for each cubic yard of sand. Of course, as everyone knows, if you could get a well that would flow all the time that would be fine, but how do we get it? I do not want to say anything but the kindest about Turner valley, but look at the number of wells that have been drilled there. It has a production of perhaps 10,000,000 barrels a year, and that is not big oil. When I was last at Fort McMurray I met one of the most celebrated geologists in the world, a high official of the United States government. He said to me, "Mr. MacNicol, if you can get $10,000,000 out of the government at Ottawa I will get $10,000,000 at Washington and we could build a plant here, because this is the greatest deposit that I know of." That man goes all over the world for the United States government. Recently he was away down in South America; I had a letter from him, from Chile. I do not think he would make statements like this haphazardly, and it was a pity that in my speech in 1942 I could not persuade this government to put up $10,000,000 and the government at Washington to put up another $10,000,000, for maybe we would be producing perhaps 20,000 barrels of oil a day from these sands, and that is a good deal of oil to start with.

Now I want to show what the government has done. In this I am not finding fault with the minister; I think he made an honest attempt, but I should like to know how it got out of his hands. I am told now that the matter rests with the Department of Mines and Resources. The minister having started it, I now wish he had kept on with it; I am sure we would have had much better results than we have had so far. What did the minister hope for after he took over the plant? I quote from *Hansard* for April 14, 1943, at page 2153:

We hope to have a small commercial operation, as a by-product of the research this summer, producing bituminous material for the Alaska highway, so that there will be some revenue to offset the expenditure.

We all hoped there would be revenue from it. Now the Alaska highway has been built, and still we are not producing oil there. I do not know how far the minister can interfere with the Department of Mines and Resources, but I am sorry to say that the evidence given by officials of that department last fall before the reconstruction committee shocked me very much. It seemed to me that something was wrong. I always hoped, and so stated, that the mines and resources department would be completely in earnest in connection with the production of oil there, but just read the evidence given to the committee on November 30 last year. I do not like to refer to it; it did not show very much in the way of cooperation in connection with the production of oil at Fort McMurray. Did I understand the minister to say that the company operating the plant is a crown company?

Mr. HOWE: No.

Mr. MacNICOL: It belongs to the government?

Mr. HOWE: No.

Mr. MacNICOL: Then who owns it?

Mr. HOWE: It is owned by the same owners as before. We took over the plant in order to carry on certain explorations. I am not very familiar with the agreement, but I think the ownership remains as it was.

Mr. MacNICOL: I have the agreement here, and I think it is worth quoting:

Whereas the oil controller, Department of Munitions and Supply, has recommended to the government that for the purpose of more effectively prosecuting the war—

That was an extremely fine purpose.

—in which His Majesty is presently engaged, all possible sources of new oil supplies in Canada should be investigated and put into production if such is found feasible;

And whereas the government during the past thirty years has investigated the extent and quality of northern Alberta bituminous (or tar) sand deposits and the most conclusive result to date is that the Horse river reserve, near McMurray, is known to contain substantial deposits which because of their grade, location, and volume have the most immediate potential importance for petroleum production;

And whereas the contractor has carried on investigations since 1930 into machinery and processes for mining the Alberta tar sands, extracting the bitumen, and refining petroleum products therefrom. . . .

Then a little later on it states:

And whereas the oil controller, Department of Munitions and Supply, and the director of mines and geology branch, Department of Mines and Resources, recognizing the necessity of exploring all possibilities of producing petroleum products, greatly needed in this emergency and afterwards, have recommended that a test or pilot plant should be developed for the purpose of proving what can be produced from the Alberta bituminous or tar sands, and that an agreement should be entered into with the contractor under which its plant would be remodelled and enlarged, if necessary, to serve as such test or pilot plant to carry out the investigations referred to in the preceding paragraph, and also to produce needed asphalt and roadoils.

Then the government displaced the Abasand company management and sent in Mr. Smith, Mr. Irwin and others to operate the plant. If that is not a crown company why should the government make the first initial payment of $300,000. It is a crown company because the minister said that the crown was taking it over. Then a controller was appointed, and the evidence I have is that the controller either has not carried out his duties or has been displaced. Much is going on up there that he appears to know nothing about, and yet the agreement states emphatically that the controller must approve all plans and changes. I am sure that if the government accedes to the request of the provincial government of Alberta to appoint a royal commission it will be found that many changes have been made without the consent of the controller. I am told that evidence is available to prove that to be the case.

If this matter does not come under the minister's department, then he cannot answer and I shall have another opportunity to bring it up when the Minister of Mines and Resources comes before us. I want to know exactly what amount of money has been spent to date. According to these figures we have received little for the expenditures made. I am told that to-day there are approximately 150 employees. I am told also that there are three women there. What in the name of heaven are women doing in that part of the country, away in the backwoods? They must

be stenographers, but I do not think the Abasand company would require any women stenographers. When I was there the Abasand company had a staff of about seventy, but it is said there are 150 to-day falling over one another doing little, pulling down a building and sticking it up again somewhere else, going from post to pillar and hither to yon.

According to the minister's statement about a million dollars has been spent. The Minister of Mines and Resources should be able to tell us just how much has been spent. When he does I will venture the Minister of Munitions and Supply will say, "Oh, if I had only had that money, what a job I could have done!" I am sure I could have done a much better job myself. I bet anything I would be producing oil to-day. I would gladly have given my time free of charge and paid my own expenses to do so for the sake of this country, my land.

A few minutes ago the minister said that I am responsible for this. I feel somewhat responsible for having made a speech which seemingly conveyed to the Minister of Munitions and Supplies the idea that I was right. I feel pleased that he is convinced that there are great resources there, but I am sorry that there has been a waste of a million or more dollars, whatever it is, without a drop of oil or one pound of asphalt having been produced. Some one will have to give an account of where that money has gone. We shall have to have the name and address of each individual in that staff of 100 or 150 people. We want to know what they are doing. We want to know where all the lumber has gone that was brought in there, where all the tools are.

I am told that there is no one keeping track of the spades, wrenches and things of that sort being used. That is not the way to run a business. The minister would not run a business in that way, nor would I. When I was in business we had a tool department, and when any tool went out the man in charge kept a record. The man who took it out had to bring it back or pay for it. It is alleged that no one has kept track of the tools here. I know there has been considerable trouble in getting men, and I am told also that there are nearly as many bosses as there are men.

Max Ball in his day was usually on the job in Edmonton and there were three or four members of the executive at Fort McMurray when I was there. I want a full report of what was done with every dollar that went into this plant. I want to know how many times the different employees went back and forth between Edmonton and the plant. Why were people moved up there? What was the cost of moving their furniture up there or bringing it out again. The country is entitled to know what was done with this million or a million and a half dollars. That is a lot of money when everyone is digging down into his pockets for the last dollar he can pinch in order to pay his income tax. That is a lot of money when every workman in our Canadian plants is having an income tax deduction made from his pay envelope. Some one will have to give an account for this apparent waste of money. Some one will have to explain why there is no oil or asphalt to show for this expenditure. I support the request made by the Alberta government that a royal commission be appointed to go into this whole matter in order that we may know where we stand.

Mr. HOWE: I realize that this discussion is quite irregular, because this matter comes under another department, but since my hon. friend has made a statement I should like to say a few words. I think he is mistaken about what we are trying to do at Abasand. We are trying to get information to see whether that deposit can be made into a large source of petroleum which can be sold at commercial prices. If it is a source of petroleum commercially obtainable it will warrant the expenditure of anywhere from $20 million to $50 million. If it is not a commercial source the government will not be warranted in spending any more money on the project. A small source of petroleum is of no value in that locality. The limited market there can be filled by the plant already there.

Mr. MacNICOL: And which has been wiped out.

Mr. HOWE: We could have stopped at any time and said, "No, it is not good enough; we are not warranted in exploring for further possibilities." We have made changes in the process from time to time, but that is the purpose of a plant of that kind, when being operated to get information. I sincerely hope that by June we shall know whether or not we have anything. In the meantime tests are going on in Chicago to see what process must be used to get rid of the high sulphur content. Other tests are being made by means of refinery runs to see what can be made of the product by using different processes.

As an engineer, I would say that all that is necessary before the government should be asked to commit itself for a huge sum of money. The money being spent to-day, largely for exploration work, is not too much, because we have been spending money, as

my hon. friend says, for the last thirty years. We should find out whether we are warranted in spending money to get production, or whether we are not warranted in spending money. If we are not, we should pull out. Within the next several months, I sincerely hope that we shall find out whether we are justified in going on. We are trying to exhaust every possibility. We have spent something less than $900,000 up to this moment.

Mr. MacNICOL: Including the Consolidated?

Mr. HOWE: Including everything. That amount of money is not excessive for explorations of that kind. We can go on spending two or three hundred thousand dollars a year, as we have for many years, and get nowhere, or we can spend a good deal of money and either arrive somewhere, or decide that there is no possibility of arriving anywhere. Therefore I suggest that my hon. friend do not look for immediate results in the way of profits. There are no profits coming out of the exploration that is going on to-day, but we hope to get information on which to base our future course.

The CHAIRMAN: I was undoubtedly remiss in my duty a few moments ago. I did not want to stop the hon. member for Davenport from making his statement on the tar sands, but when the minister stated that the matter did not come within his department I should then have stopped the discussion, because we are always inclined in committee to have discussions that are repetitions. As the hon. member for Davenport said at the end of his remarks, there will be an opportunity for full discussion of this matter when the appropriate item in the estimates is reached, and I must therefore rule the discussion out of order.

Mr. McNEVIN: I hesitate to discuss a matter that is entirely irrelevant to the estimates now under discussion, Mr. Chairman, but in fairness to the gentleman who is now general manager of Abasand Limited, I want to say that he is a prominent Toronto business man whose integrity and ability are not questioned. This gentleman, Mr. George B. Webster, has been in the office of the oil controller for some considerable time doing excellent work, and so far as I am concerned I think he will give a good account of himself not only with Abasand Limited, but in anything else which he undertakes to supervise.

Mr. JOHNSTON (Bow River): Mr. Chairman, in the remarks I have to make on this question I wish to make it absolutely clear that I have nothing to say reflecting on the honesty or integrity of anybody, though it may reflect on their business ability. But the main concern I have in this matter is that we should either get results or know the reason why. I was amazed at the remarks just made by the Minister of Munitions and Supply. I was under the impression that this matter was under his department, but when I got answers to questions I had put on the order paper the other day I noticed that they were brought down by the Minister of Mines and Resources. Nevertheless the Minister of Munitions and Supply has on every occasion dealt with this question of the development of the tar sands, and even to-day in making his presentation he dealt in part with the tar sands and said that he would make a further statement in regard to them in the near future. Last year it was the Minister of Munitions and Supply who was the only one to deal with this question on the government side of the house. I do not recall the Minister of Mines and Resources ever dealing with the tar sands. Certainly he has not done very much in that regard since the war started.

The Minister of Munitions and Supply said a moment ago that the main concern of his department in this matter was to get information. That is commendable. Information is essential.

The CHAIRMAN: Order. I am convinced that a discussion of the tar sands is absolutely out of order after the answer just given by the minister, who stated clearly that there will be ample opportunity to discuss this problem when the estimates of the Department of Mines and Resources are before the committee. I trust that the hon. member will respect the ruling of the Chair.

Mr. JOHNSTON (Bow River): But the question has been under discussion, Mr. Chairman, and while it is up I should like to say a few words upon it. The minister was dealing with the question of getting information in regard to the Athabaska tar sands. That is probably one of the first essentials. But the minister should also understand that the Department of Mines and Resources, through its research branch, has been working on this problem for over thirty years. Last year in the house, when the Minister of Munitions and Supply was speaking on this subject, he said that to his own knowledge they had been working on the tar sands for about thirty years, and the same evidence was given before the reconstruction committee last year.

The CHAIRMAN: Order. I have always received marvellous cooperation from every member of the house. This applies forcibly

to the hon. member for Bow River, and I trust that the hon. member will abide by the ruling I gave a few moments ago. There will be ample opportunity to discuss this question when the estimates of the Department of Mines and Resources are before the committee, when full information can be given much more easily than at the present time.

Mr. HANSELL: Might I discuss the point of order for a moment, Mr. Chairman? We recognize your desire to be fair and to conduct the business of the house in the best interests of all. But the position at this time is that the tar sands have been discussed. The tar sands are of particular interest to members of parliament from Alberta. We appreciate the fact that the hon. member for Davenport is coming to our assistance; but the attitude that the public will take, and I think it is obvious, is that somebody from outside Alberta discussed the tar sands in the House of Commons, while the members from Alberta sat silent in their seats. I think on that basis alone it would be only fair that some speaker from Alberta should be permitted to follow the hon. member for Davenport in discussing this vital issue, and I can assure you, Mr. Chairman, that if the hon. member for Bow River discusses it, we shall be quite satisfied, so far as our group is concerned, not to repeat what he has said.

Mr. MACKENZIE (Vancouver Centre): On the point of order, Mr. Chairman, it is quite true that under the Department of Mines and Resources there in an item dealing specifically with geology and the development of the tar sands, but I suggest that, strictly speaking, these are not ordinary estimates where each department is called separately, and that there is no power in the Chair to limit the discussion except by agreement upon all sides. That is not the case with the ordinary civil estimates. But here it is done by agreement by the committee, and I think by cooperation we can reach the same result as we do in committee of supply.

Mr. HANSELL: I think we shall all agree, Mr. Chairman, to let the hon. member for Bow River proceed.

The CHAIRMAN: I believe that the request is a reasonable one since the hon. member has assured the committee that there will be no repetition by members of his group; repetition has, of course, been criticized in the press several times, and I may also be criticized if I allowed them to go unnoticed.

Mr. JOHNSTON (Bow River): Thank you, Mr. Chairman. I shall take no longer than is necessary. I was discussing the part which the Minister of Munitions and Supply had played in this matter every year, and it is surprising to me at least that the Minister of Munitions and Supply has been the only minister on the government benches who has seen fit to deal with this question. Some of the letters which I have in regard to the development of the tar sand, and particularly the experimental work that was carried on are letters written and signed by the Minister of Munitions and Supply, so that whether or not the matter comes directly under his department, it is certainly one in which he is directing the progress of development, and therefore he must share to a degree the responsibility for its progress.

Mr. CHEVRIER: But he has just said he is not.

Mr. JOHNSTON (Bow River): I have letters here signed by the minister, written to the province of Alberta, and dealing with this question, so that he must have something to do with this development. It may be only the experimental work with which he is concerned. But certainly the letter which the Minister of Munitions and Supply wrote to the premier of Alberta on June 23, 1942, deals with this very problem. Let me read part of it:

> War requirements for petroleum are so urgent, particularly in connection with the activities in northern Alberta, that the federal government wish to explore the possibilities for a large-scale development in the vicinity of the Abasand operation.
>
> Tentative arrangements have been made to have the exploratory work carried out under the direction of officers of Consolidated Mining and Smelting Company. The deposits will be drilled to determine the quantities. The Abasand refinery runs will be checked and studied in an effort to determine refining costs. Laboratory tests, and possibly a full scale refinery run, will be carried out to determine whether the sulphur content can be dealt with in order that aviation gasoline can be obtained as one of the products.
>
> This work is, of course, contingent on the approval and cooperation of your government. If the work is to be undertaken it is our desire that no more crown leases be granted in this area until a decision can be reached as to whether a large-scale development is warranted.
>
> I would appreciate the favour of an early reply which will, I hope, offer the cooperation of your government in the studies which we propose to undertake.

This letter is signed by the minister. Therefore, definitely, he has something to do with it, because it was he who communicated with the government of Alberta to secure their cooperation, which they most readily agreed to give, as is evidenced in a letter which I have here dated July 3, 1942, in reply to the minister's letter, and signed by the then premier, the late Mr. Aberhart.

One of the things which astonishes me in the minister's letter is the statement:

It is our desire that no more crown leases be granted in this area until a decision can be reached as to whether a large-scale development is warranted.

It is the only case of which I have recollection wherein any other enterprise has been asked to stay out of the development field. In almost every other field of prospecting for minerals, everybody has been encouraged to go in and assist the government in discovering and developing these natural resources. But here is one area, in the northern part of Alberta, which has the largest potential supply of gasoline in the world. It has been estimated at 250 billion barrels, and our own government experts estimate it at over 100 billion barrels. Yet the dominion government request that nobody else be allowed to go in there and do anything in the line of development until this government has had a chance to see whether it is worth while or not.

That is a peculiar attitude to take. I have studied the report of the reconstruction and reestablishment committee with regard to this development of the Abasand tars by the Abasand oil company, and the vagueness of the evidence is amazing. The issue is continually evaded. In almost every instance there is contradiction. One cannot but get the impression of a design to stall the operations and development of that Abasand company. I believe such an attitude would be unwarranted even in peace time. How clearly it is exemplified I shall endeavour to point out in greater detail as we go on.

Let us look at the research plant here at Ottawa which is concerned with this matter. The Department of Munitions and Supply has something to do with it; there is no getting away from that. It is clearly indicated by letters which I have here.

May I interpose at this point that I think the Minister of Munitions and Supply has done a wonderful job as far as developing our war effort is concerned. I have said so before. But this is one place, or I should say, this is one more place where the government has definitely fallen down on its responsibility. I should like to see the whole thing put under the Department of Munitions and Supply, because I think the minister is capable, and I was agreeably surprised to learn to-day that he has not anything actively to do with it.

This plant in Ottawa has spent, in one instance that I know of, in the development of tar sands, over $500,000. It is recorded in *Hansard* in a statement of the Minister of Munitions and Supply last year that the plant has been engaged for thirty years on research in the development of tar sands. But we are not even yet at the place where we know where they are going. Let us turn to some of the evidence in this regard. On page 921 of the evidence given before the reconstruction committee, Mr. W. B. Timm, director of the mines and geology branch, Department of Mines and Resources, says:

While the results of this research work—

That is, research carried on here at Ottawa.

—will be of real value to any research work carried out in a larger plant, they will not serve to guide engineers in the design of a commercial plant.

Well, now what in the world have we been doing for the last four years, ever since the war started? According to the minister's own words this is an urgent matter. He appealed to the province of Alberta for co-operation. Its urgency was stressed on the ground that we were short of gasoline. If that is so, this report is not very encouraging.

Let me cite some more evidence. On page 923 Mr. Timm says:

We therefore recommend that the unit best adapted for our investigations should be of the dimensions that can be termed semi-technical.

For thirty years they have been doing research work on this problem. The war has now lasted for over four years. Gasoline is one of our most precious and vital supplies. We have spent about a million dollars on development work. Now they say they want a larger unit because "the unit best adapted for our investigations would be one that can be termed semi-technical." The plant they have now is not, they say, suitable for their investigations.

The functions of the proposed new laboratory and plant are to investigate various processes involving hydrogenation applied to Canadian raw materials such as coals, bitumen, heavy crude oils, and residuums from petroleum refining that can be utilized as sources of gasoline or other liquid fuels.

It is amazing that after thirty years of research, after spending around a million dollars, they have finally decided that the plant which they have been using for experimental purposes is of no use whatever for the design of a commercial plant, and now they want a larger one.

May I quote a little further from this evidence, on page 922:

As stated previously, a small experimental hydrogenation plant for studying the manufacture of synthetic liquid fuels from such sources as coal, bitumen, et cetera, has been established.

That is the one here in Ottawa on Booth street.

This is as far as Canada has gone to provide substitute fuels for such a contingency.

So that the evidence given before that committee is that that is as far as they have gone, though over a million dollars has been expended on this development, in research.

This effort while of considerable value in providing scientific information can in no sense be considered as a major contributing factor to the solution of the problem under discussion.

Here in the statements which I have read is the evidence that the progress made to date is anything but satisfactory and they do not even know yet what the prospects are for these Abasand deposits. Let us see more of the evidence. Asked the question, before the committee:

What success have you had?

They state:

We believe the results are encouraging but we cannot go nearly far enough with the small help we have.

The further question was asked:

What would you require in the way of an enlarged plant to make your researches more effective?

The answer was:

That is really the plan now that is being presented here.

Up to date they have not had facilities to make their researches effective and what efforts they have been making have consisted in playing around with the subject. Is there any wonder then that the provincial government of Alberta has come to the point where it says that it looks as if there had been a deliberate effort to sabotage these tar sands?

The plant at Fort McMurray has been referred to, and the progress there has been apparently anything but satisfactory. In this evidence, at page 930, they make a further statement with reference to the plant in the north. Let me read one question:

Q. You spoke about having a plant in mind there with a volume of 200 gallons a day?
A. That is what we would like to have.
Q. Presuming the funds were available, how long do you think it would take to erect that plant and equip it with the necessary machinery?
A. That is very hard to say under present conditions.
Q. But you could give us an estimate?
A. A very rough guess would be a year and a half.

The minister said that they would have sufficient knowledge to know whether they would go on with it around June. Here the request of this geological research committee is for a new plant to go ahead with an order to obtain further knowledge in regard to these sands. They want sufficient money to build the new plant and they figure it will take about a year or a year and a half. That does not coincide with what the minister said a moment ago. There is a discrepancy between these statements, and I submit that a thorough investigation should be made to ascertain what progress is being achieved there. I am sure that the Minister of Munitions and Supply would be one of the first men to put his hand to that task and to say, "We will go ahead with this thing properly," because I have enough confidence in him to know that this would be the stand he would take.

Now may I read, with reference to this plant, something that was said in the Alberta legislature the other day. In the provincial legislature in Edmonton this question was being discussed and the provincial minister of public works, the Hon. Mr. Fallow, made reference to it. This is what he said in regard to the construction of that plant in Athabaska. I take it, as stated by the hon. member who spoke before me, that the provincial minister of public works, holding the position he does, must have a sense of responsibility. He has visited the plant on several occasions; he is minister of public works of Alberta; it is to their credit to see that the work is carried on, and if it is not being properly carried on to the extent that the provincial government thinks it should go, it is to their interest to proceed on their own and to carry out some development in this regard. I make these observations to indicate that the minister of public works of Alberta must have a sense of responsibility, and when he comments upon that development of the Athabaska tar sands, he must have something serious in mind. Well, this is what he said:

The $500,000 which had been appropriated by the dominion government to investigate the possibilities of large-scale production from the oil sands had all been spent in building modern dwellings, dormitories and workshops, sufficient to accommodate a much greater number of people than the plant required. This modern town was equipped with an up-to-date waterworks and sewage system; a modern electric light plant, buildings steam heated, a modern sawmill installed which cut the 400,000 feet of lumber used in the buildings, and not a dollar spent on the construction of a separation plant or to instal a piece of refinery equipment, and we were told that operations were going to be closed down because the money had all been spent.

That bears out the statement which was made by the hon. member for Davenport (Mr. MacNicol), who personally visited the ground. If we take the two statements together—and these gentlemen have probably never seen each other—there must be some truth in what has been said when they make the same assertions. Here is a town employing approximately 155 people, according to the return that was given me; yet it is modern

in almost every sense, with waterworks, electric lights and everything else, $500,000 having been already spent on modern buildings, and yet not one dollar has been spent on refinery equipment or a separation plant. If that is not a colossal waste of public money, and, I would also say, a deliberate attempt at sabotaging that development for years to come, I should like to know what to call it.

The speech goes on:

The stories I got from men who were working on the project made me wonder if the dominion government had borrowed some of the inmates of an insane asylum to handle the work. Some of the men who left the job told me they could stand it no longer. They thought everybody was crazy. They told me that trenches were dug and forms were put in to run the concrete foundations and the next day a gang of men would start digging other trenches close by and throw the earth into the hole they had dug the day before. Buildings were started and then torn down or moved to temporary foundations and finally they started putting the buildings on skids instead of foundations so that they could move them around with tractors to suit everybody's convenience. Trenches were dug for sewer and waterlines and the waterlines laid and backfilled without testing pipes for leaks. Later, when the water was turned on, the lines leaked so badly that the trenches had to be reopened and the lines taken up.

Then he states that this was done in the winter when the ground was frozen. The evidence is quite clear that there was a colossal waste of public money and it does warrant investigation.

Later on he says:

I want to assure you, Mr. Speaker, that on the two occasions when I visited this plant there was certainly no evidence of a shortage of manpower or machinery.

Apparently, therefore, that excuse could not be given, that there was a shortage of manpower, or machinery, which was the excuse given in the return brought down to me.

There was enough machinery and man-power to handle half a dozen plants of this size, most of which was idle.

I am quoting all this so that the committee will see that there must be some grounds for the statement in regard to the laxity of the dominion government in developing these sands.

Farther on in his speech he had this to say:

No construction work was done that it was not changed at least once. Changes three to five times were not uncommon. It will perhaps be conservative to say twenty-five per cent of the workmen were continuously engaged in tearing down some of what the other seventy-five per cent had put up.

This condition continued until the end of January and at that time no work whatever, either on the separation plant or refinery had been done since the General Engineering Company took over. During the last few days of January some men were started on the boiler-room building, but at the end of this month no more than one per cent of the work had been done there—this in spite of the following facts. . . .

Then he goes on and reports a lot of facts.

I received a return to a motion of mine in which I asked the following questions:

Has the pilot plant been started yet? If so, how long before it will be completed?

The answer to the first part of the question is: "Yes." The pilot plant has been started; but according to the speech which Mr. Fallow made in the legislature just a boiler-room had been started and very little work was done on that. The answer given here is correct although it may be misleading. Then the following answer is given to the second part of the question dealing with the time in which the plant will be completed:

. . . date of completion depends on delivery of equipment and materials, and availability of labour.

According to the minister of public works of Alberta who visited that plant on two different occasions, there was no shortage of manpower and there was no shortage of equipment, because the Abasand company at least had been producing—I am now speaking from memory—about four hundred barrels of crude oil a day. Surely we can do as good as that. The amazing thing is that although we spent thirty years in investigating these tar sands, yet to-day we have no information that would lead to the construction of a large commercial plant. We find to-day these things are continually being deferred as time goes on. The evidence produced indicates clearly to me that something drastic should be done in this connection.

In the course of my remarks I said that on one occasion the research department had spent $500,000. I should like to read a little of the evidence to show what a disgraceful performance the whole thing has been. Mr. Ells appeared as a witness before the reconstruction and reestablishment committee. Mr. Ells is the engineer in the fuels division of the Department of Mines and Resources. He was asked this question:

Is it not true that some years ago two carloads of these tar sands were sent over to England for experimental purposes?

I wish to read what he said to show how evasive his evidence was. Some investigation should be made into this matter. On page 964 of the evidence contained in the minutes of proceedings and evidence No. 33, the hon. member for Davenport asked the following question:

May I ask Doctor Ells one further question; Doctor, I said this morning that I had read sometime prior to 1936 or 1935 that a con-

siderable quantity of tar sands had been sent to England for testing under the Freeman process of extraction of oil from the sand; have you ever heard of that; or, have you any recollection in regard to that having been done?

Doctor Ells: I have heard of it but I think the results have not been given out.

He does not know for sure. He says: "I have heard of it." That is a vague recollection. Mind you, two carloads of Athabaska tar sands were sent clear to England at an expense of $500,000, and Mr. Ells, who was giving evidence said:

I have heard of it but I think the results have not been given out.

He was then further questioned about this matter and on the next page he says:

No, I have not any definite recollection.

That is, he has no definite recollection of its having been sent to England. I think I should go back to the next page and read the question of the hon. member for Davenport, which was as follows:

Have you any recollection of the sand having been sent to England?

The answer is:

No, I have not any definite recollection.

If anybody sent two carloads of Athabaska tar sands over to England at an expense of—with the investigation which was carried out—$500,000, there is something wrong with his memory if he does not even remember it. His answer goes on:

I do recall that some years before that there were two carloads went over to England, to Cardiff, Wales, and a rather large amount of money spent in testing a method—I think about $500,000.

Mr. MacNicol: It was sent over to Cardiff?

Doctor Ells: Yes, two carloads; I shipped them myself.

Mr. MacNicol: What was the process used?

Doctor Ells: It was a secret process; it was so secret that the work was all done under the surveillance of the metropolitan police and nobody was allowed near the plant. They did not give anything out. The two men working on it, as I recall, died, and nothing was given out.

Just a few moments before that he said he did not remember the tar-sand being sent to England. There is something fishy about this, Mr. Chairman. You cannot tell me that that would not be a vivid recollection in one's mind. If that is the kind of men we have developing or carrying on the investigation work in Athabaska tar sands, heaven help us if we have to depend upon them for our war supplies. I am not trying to insinuate that Mr. Ells is not a reliable man, because I have read some of the articles he has written on the tar sands and they are excellent and give a glowing picture of the prospects in that area. But why does he come before a committee, such as the reconstruction and reestablishment committee, and throw cold water on the whole thing? There is something sinister behind it.

The Minister of Munitions and Supply wrote to the government of Alberta and said that it is an urgent matter. We are told it is a necessity. We even have to ration gasoline to the people. I could say something about that, which I shall do some day. I have spoken on that question before in the house. I have some personal knowledge in that regard, but I do not intend to bring it up just now. Is it any wonder that the provincial government passed a resolution the other day in the Alberta legislature? I shall read the resolution. On page 4 of No. 22 votes and proceedings of the legislative assembly of the province of Alberta, the following appears:

Whereas, on June 23, 1942, the dominion government advised the Alberta government that "war requirements for petroleum are so urgent that the dominion government wish to explore the possibilities for a large-scale development in the vicinity of the Abasand operation," and requested the cooperation of the Alberta government in withholding the granting of any more crown leases until a decision can be reached as to whether a large-scale development is warranted; and

Whereas, large sums of money have been appropriated . . .

Mr. HOWE: On a point of order, is it permissible to read the proceedings of a provincial legislature in this committee?

Mr. DOUGLAS (Weyburn): Yes.

Mr. COLDWELL: I think so.

Mr. JOHNSTON (Bow River): It is merely a statement of something that is already passed. It is in the press, Mr. Chairman, and is public information.

Mr. CHAIRMAN: If it is not derogatory to the activities of the House of Commons I believe it may be read.

Mr. JOHNSTON (Bow River): I shall continue:

Whereas, large sums of money have been appropriated by the dominion government and spent on the construction of fully modern dwellings, dormitories, workshops, construction machinery, etc., far in excess of reasonable requirements, but no plant has yet been erected and no actual steps have been taken to demonstrate the possibilities for a large-scale development of the Athabaska oil sands.

Mr. HOWE: Mr. Chairman, I say that this is definitely derogatory to this House of Commons, and I ask for your ruling.

Mr. JOHNSTON (Bow River): Where is the point of order?

Mr. HOWE: The hon. member is reading a statement made in the provincial legislature which I think is derogatory to this House of Commons.

The CHAIRMAN: While I believe it is not in order to read from a previous debate in the House of Commons during the present session, after all the document being quoted by the hon. member is a public document dealing with what took place in a provincial legislature, and I think it may be quoted.

Mr. JOHNSTON (Bow River): I understand that it becomes a public document when I read it, and I am quite prepared to table it when I am through.

Mr. CHEVRIER: The point the minister was making is that any document which is derogatory or which attempts to attack anything done by a department of government should not be read in the House of Commons. It was on that point that the minister rose, and I do not think a statement to that effect should be read in this chamber.

Mr. GRAYDON: On the point of order, I think the minister and his parliamentary assistant are confusing a reflection on parliament with a reflection on the government, and the two are entirely different. My understanding of the remarks of the hon. member is that this resolution has already appeared in a large section of the press of Canada.

Mr. CHEVRIER: The hon. member is reading from a statement made in the Alberta legislature.

Mr. GRAYDON: Surely if the press of Canada have a right to report it, there is nothing to hinder anyone from reading it in this House of Commons. I think we are carrying this matter of "not in the public interest" a little far if we stretch it to cover this point. As far as this party is concerned, Mr. Chairman, I am going to ask you to rule in favour of the hon. member who has been reading the document, because I do not see a question of privilege there.

Mr. COLDWELL: This resolution is published in the votes and proceedings of a provincial legislature. It is a resolution of the legislature, which expresses the point of view of a provincial government. If it is critical of the federal government that is not to say it is critical of or derogatory to this parliament as a whole.

Mr. GRAYDON: It might even reflect the views of a majority in this house.

Mr. COLDWELL: That is conceivable, given time, but I am not going to discuss that. Surely a resolution passed in a provincial legislature, dealing with intergovernmental matters, may be read in this house, particularly since it is part of the public records of that province, which has appeared in the press and is included in the votes and proceedings of that legislature. I think the minister and his parliamentary assistant are taking a wrong view of this.

Mr. HOWE: Then I would be very much interested if my hon. friend could carry on and explain to me what item of the estimates is now being discussed. The entire evening has been spent in discussing a matter which does not come in any way under the Department of Munitions and Supply, and which does not involve one dollar appropriated to this department. I suggest that you have given sufficient latitude, Mr. Chairman, and I should like a ruling on that point.

Mr. JOHNSTON (Bow River): That is an entirely different question.

The CHAIRMAN: In setting forth the position of the Chair earlier in the evening I stated that probably I was at fault in this matter when I allowed the hon. member for Davenport to go on with his speech, in view of the objection taken by the Minister of Munitions and Supply that the matter came under the Department of Mines and Resources. Later, however, when I attempted to express a ruling on the point, I believe unanimous consent was given to the hon. member for Bow River to continue with his remarks. I have already given my ruling on the point of order raised in connection with the reading of a resolution passed by the Alberta legislature. I believe it is in order as long as no reflection is cast upon the procedure or activities of the House of Commons.

Mr. DOUGLAS (Weyburn): Before the hon. member goes on I think we should get one point of procedure straight. Several times a question has been raised as to whether or not the hon. member was in order in continuing this discussion. May I point out that we are discussing the war appropriation resolution, which relates to the defence of this country and to national security. The estimates now before the committee are presented in this way purely by arrangement and for the convenience of the committee. As far as the rules of this house are concerned there is nothing to prevent any hon. member from conducting a discussion on the army, or on naval affairs, or on the air force; no one can stop him. These items are before us in this way purely for our convenience. I am quite in agreement that we should keep to the arrangement we have made; otherwise the

discussion would wander all over the place. However, no one can rule the hon. member out of order for discussing anything relating to the prosecution of the war or the welfare of the country.

The CHAIRMAN: We are dealing with the war appropriation resolution which, as the hon. member has stated, would permit a very wide discussion to be carried on. The Minister of Munitions and Supply, however, has stated to the committee definitely that the matter of the Alberta tar sands under discussion this evening does not come under his department, so that I suggest that we should allow the hon. member for Bow River to go on and that will be the end of that discussion. Many times we are accused by hon. members, and even in the press, of having a great deal of repetition in this chamber. I am sure hon. members can readily see that when the estimates of the Department of Mines and Resources are before the committee we are likely to have repeated what we have heard so far this evening. That is the position as I see it.

Mr. FAIR: I should like to point out that apparently we have wasted about thirty years, as far as this matter is concerned, under the Department of Mines and Resources. It is about time that jurisdiction was given to another department, preferably Munitions and Supply, so that we may make some headway. Would that be in order?

Mr. JOHNSTON (Bow River): The resolution continues:

> Whereas, this apparent waste of public funds and the lamentable loss of valuable time in tearing down the Abasand plant, constructing dwellings, dormitories and workshops and in other activities which are only incidental to the demonstration of an economic process for the commercial extraction of oil products has created grave fears and misgivings in the minds of the public that the whole development of the Athabaska oil sands is being systematically sabotaged; now, therefore,
>
> Be it resolved, that this legislature petition the dominion government to set up immediately a royal commission of inquiry, with specific instructions to investigate all activities on and in connection with the Abasand oil properties since June 23, 1942, to ascertain why, despite the large sums of public funds which have been spent, no plant has been erected or equipment installed and no actual experimental work carried on to determine the possibilities of extracting oil products in commercial quantities from the Athabaska oil sands.

It might be of interest to note further that when the vote was taken on this resolution all the Liberals and Conservatives, who in Alberta are known as independents, voted against any inquiry to find out why this situation existed in Athabaska. They were solidly of the opinion that the laxity, indifference and jeopardy to our war effort should continue. The votes and proceeedings records their names, as follows:

> Messieurs MacLachlan, Bowlen, Mahaffy, Walker, Martin, Macdonald, Jackson, O'Brien (Dr.), Campbell (Dr.), Tellier, Brown, Laut, Broomfield, McKinnon.

The CHAIRMAN: Order. The hon. member has spoken for forty minutes.

Mr. JOHNSTON (Bow River): Since I have been interrupted so often—

The CHAIRMAN: I have allowed six minutes for interruptions.

Mr. DECHENE: As the member for Athabaska I desire to voice a most strenuous protest against the proceedings to-night. I have not been in a position to take part in this debate because my documents were not available. This debate has been allowed to proceed entirely out of order and I protest as strongly and strenuously as I can.

The CHAIRMAN: That is rather a reflection upon the Chair. I do not know whether the hon. member was in the committee when I made the ruling, but I took the Minister of Munitions and Supply and the committee into my confidence before I gave the ruling. When the minister made his presentation this afternoon, tar sands were mentioned, so that it was rather hard for the Chair to rule against this debate, and the minister felt the same way on that subject.

Mr. BLACKMORE: In my judgment you are entirely in order.

Mr. STIRLING: Mr. Chairman, I do not propose to carry on the discussion on tar sands. In his lengthy address this afternoon the minister made reference to various forms of fuel which are made use of in carrying out our war effort. He referred to coal, wood, gas and oil, and I wish to ask him to be good enough to inform the committee as to what developments have taken place in connection with the processing of coal at the mine. Experiments have been going on in this country, and it is quite evident that considerable benefit would be derived from a more economical use of the coal we have. I am given to understand that in the United Kingdom about one-sixth of the coal mined is put through a process immediately which produces not only fuel but various by-products. Before the war a great deal of work was done in Germany, both in an experimental and in a commercial way, with regard to brown coal. It is the belief of many to-day that the German scientists have solved the question that baffled scientists in past years and are

able to produce lubricating as well as fuel oil. We believe that in Russia the coal mined at several fields is processed at the mine to produce a gas which can be carried to other parts of the country.

Canada is a country of great spaces; our coal is mined at places far distant from the centres of population, and for purposes of economy it may become necessary to produce the fuel and the by-products at the mine. What we do now is to mine the coal and spend tens of thousands of dollars in carrying it elsewhere where it is burned most wastefully. It is computed that something like two-thirds of its intrinsic value goes up the chimney to the detriment of our health and property. If we could produce fuel and by-products at the mine we could provide employment for men and could make a more economical use of this natural resource. This would prove of great benefit to the transportation companies which would carry goods to the communities in the mining areas and then carry out the products of the mines. I have no doubt that in considering fuel matters the minister has given due thought to the experiments which have been going on, and I should like him to give us the benefit of his opinion as to the prospect of using coal in this more economical fashion.

Mr. HOWE: I should like time to examine the statements and obtain the opinions of my experts. I shall try to make a statement on this matter before the debate ends.

Mr. FRASER (Peterborough West): I should like to ask a few questions, but first I wish to offer a suggestion to the Minister of Munitions and Supply. He has under his control many plants employing thousands of workers. A few weeks ago most of these workers were handed income tax forms to be returned by April 30. The majority of these workers are very much troubled at the present time. While these income tax forms are supposed to be easy to make out, the fact is that they are extremely difficult. I understand that in each of these plants there is a munitions and supply office, and I suggest to the minister that he arrange to have one, two or three people placed at the service of the workers to assist in making out their income tax forms. I would suggest also that the Minister of Munitions and Supply take up with the Minister of National Revenue, who unfortunately is not present this evening, to see if these workers—many of these plants are many miles from an income tax office—cannot be permitted to pay their income taxes at offices in the plants in which they work. In many instances these workers thought all their income tax had been deducted for 1943 and they are now finding that they have paid only half the tax. I feel, and I imagine the minister may feel the same way, that it would assist in keeping up the morale in these plants if this suggestion were carried out.

During the last year something else has cropped up which has not helped the morale of our workers. When many of these men go home at nights they are unable to have the benefit of their radios, because at the present time it is almost impossible to buy new radio tubes. One of the many controls exercised by the minister is in connection with the manufacture of radio tubes and his department issues releases to these manufacturers. I suggest that he see to it that proper materials are released so that tubes may be manufactured and these workers again given the benefit of their radios. This matter may rightly belong to another department, but I have talked to the minister and I know he is anxious to have these workers in the best of spirits. I think this would help considerably.

I have a few questions to ask on the first item. I should like to know just what plants have stopped work, where they are situated, and what munitions they were making. When a contract is given for the making of a boat or something of that kind, are wages allowed to be bulked instead of details being given to the minister's department? I should also like to know what large machines are rented by the minister's department for his different plants, such as travelling cranes and large machines for handling work in the plant.

There have been complaints that machine tools have been left idle in plants for many months and the workers, of course, feel that these machine tools should be working on something. I appreciate the fact that the munitions or guns these machine tools were turning out have perhaps reached their production peak for the present, but I was wondering whether there was not something that these idle machines could be put to work on.

The minister mentioned this afternoon that sales were being made to the United States. Would he tell us just what the United States are buying from us at the present time and have been during the past year, and to what amount? Could the minister also tell us if there is any chance of the Nobel plant being opened again, and just why was that plant closed?

There is another matter I will mention now since the minister in his speech mentioned wartime housing and staff houses. I bring the

question up now because in Peterborough, Ontario, in the riding I represent, I know one staff house which has so few persons in it that I feel it could be put to better use if it were turned into a hospital for the army, the navy or the air force, or for them all, instead of being left as a staff house. It is well equipped, has large dining-rooms, good bathrooms and every facility, and with very little trouble ramps could be made to take the place of the few steps leading up to the different floors, in order that the chairs and beds could be moved from floor to floor easily. Will the minister answer now or later?

Mr. HOWE: I shall attempt to answer now. So far as income tax goes, I have to have the help of the Minister of National Revenue to make out mine, so that I am afraid I would not be of much help to the man in Peterborough in making out his income tax return. But I will call the attention of my colleague the Minister of National Revenue to the remarks of my hon. friend.

Mr. DOUGLAS (Weyburn): Perhaps you help the Minister of National Revenue to make his out?

Mr. FRASER (Peterborough West): But does not the minister think it is a good idea?

Mr. HOWE: I think it would be a great idea—wonderful.

Mr. FRASER (Peterborough West): It is past a laughing matter with the worker. I know that some of these workers are simply at their wits' end as to what they can do. On top of that, they have to go to the post office and get a money order to send their money in. They are put to great expense in order to look after something I really believe the government should do. In order to carry on his department the Minister of Munitions and Supply must have the income tax from these workers; that is where the minister comes in; he needs the money to carry on his department, and I feel that he should do everything possible for these workers.

Mr. HOWE: I am not disagreeing with my hon. friend in the least. I think every man should have expert advice in making out his income tax. No one needs it more than I do, and no one dreads the job more than I do, so that I feel for the workers. I will take the matter up with the Minister of National Revenue.

As to radio tubes, the difficulty is not materials but manufacturing capacity. There is nothing more urgently required for war purposes than radio tubes, and there is no field in which we have made a greater attempt to expand capacity. We have made a certain number of radio tubes that have gone to the retail trade. They have not been too well distributed, and we are checking on that. To-day we are making about what we used to make in pre-war years, and we feel that we are going a long way in invading war capacity in doing that. It has been suggested recently that we should have distribution of radio tubes under control, and we may make them a controlled item shortly. That is usually effective in straightening out distribution troubles. I assure my hon. friend that we are doing the best we can on that item.

Mr. FRASER (Peterborough West): There is a definite black market in radio tubes, and if there were some check on distribution it might help a great deal.

Mr. HOWE: I am not sure about the black market, but I do know that distribution is not very satisfactory. It is a tight supply and demand situation.

As to plants that have been closed, I cannot give my hon. friend offhand the plants that have been closed. The only one I can think of at the moment is Nobel, and the reason was that the demand for explosives from Canada dropped sharply. Part of our capacity was stand-by capacity, built at a time when British plants were being bombed very heavily. Later there was a demand for that capacity from the United States. But when the plants in the United States came into production the demand dropped. In order to carry out our production here in three plants with some degree of economy it was necessary to close one, and there were certain reasons why the Nobel plant seemed to be the obvious one to close. My hon. friend asked if there is a chance that it will be needed again. Certainly there is a chance. To-day bombs are dropping in Britain, and if a bomb dropped on a large explosive plant there, Britain would no doubt require extra production from Canada. For that reason it is very difficult to dismantle any plant. We are never sure that it will not be needed again. Part of our capacity was built as stand-by capacity, and we must use it as such until the war ends.

Mr. COLDWELL: Are we importing at the present time any explosives of the type we made at Nobel?

Mr. HOWE: No.

Mr. COLDWELL: Not propellents?

Mr. HOWE: We did for a short time. We had a T.N.T. line that was being run at a very small capacity; we wanted to convert

that line to something else, and for a time we did import a small amount of T.N.T. It was a dropping requirement. We did it to tide us over a temporary situation.

Mr. HATFIELD: Have all the men who were employed at Nobel been given other employment?

Mr. HOWE: Yes.

Mr. STIRLING: Has no dismantling been done at Nobel?

Mr. HOWE: We took out a small chemical unit, moved it to Calgary and installed it there. If we again need full capacity at Nobel we could easily move it back. It is one of three duplicate units

Mr. STIRLING: The premises are now in the hands of caretakers?

Mr. HOWE: Yes.

Did I finish answering the questions of the hon. member for Peterborough West? He said something about the staff house, I believe.

Mr. FRASER (Peterborough West): Yes.

Mr. HOWE: That staff house is not operating with occupancy sufficient to warrant keeping it open, and we have offered it to the Department of Pensions and National Health. I know the officers of that department have examined it. I am not just sure what the report was. In any event I quite agree with my hon. friend that under the circumstances we should not keep it open.

Mr. FRASER (Peterborough West): I might add that these staff houses are built in such a way that during the winter months, and especially in the spring, they have to be heated; otherwise the plywood which is inside would warp and the buildings would deteriorate in no time. All of them will have to be kept heated.

Mr. HOWE: Yes.

Mr. HANSELL: I should like to ask the minister a question, following the question which was asked him last night, with respect to the air training schools which are likely to fall victims to the decision that many of them have to be closed. The minister, replying to a question last evening, said that these schools would not be allowed to depreciate. Perhaps that is not the answer which we were looking for.

Mr. HOWE: I said that the runways would not be allowed to deteriorate.

Mr. HANSELL: The minister could put a few watchmen on there and perhaps that would do the trick. But what I would ask the minister is this. As the basis of my question, may I remind him that when these air training schools were built and manned by the staff, and were operating, where they were built in small communities, perhaps adjacent to a town or village, the population of those communities increased to the extent in some cases of being nearly doubled. I understand that the government has now in mind putting something else into these schools, so that instead of being run by air personnel they will be applied to some other use. The complaint which begins to come to us is this. Many people have invested money, perhaps in small businesses, perhaps in remodelling their homes, because these air schools have acute housing difficulties; sometimes town councils have asked the residents to do all they could to accommodate the additional people coming in. After having run for, perhaps, not more than three years, some of these schools are to be closed, and the local town is simply going back to the position it was in before the war. In some cases people will lose money on their investments. I realize, of course, that if the war were to end to-morrow, that would be the end of the schools, and the inevitable will come, but some of us have received a good many communications from these communities—from individuals, from boards of trade and other organizations—with respect to this matter. Would the minister amplify his answer of last evening and tell us if the government has any plan whereby the schools can be operated in some other way, so that these communities will not be set back commercially, financially and otherwise.

Mr. HOWE: The disposal of the fields will be handled in this way. In due course they will be declared surplus to Royal Canadian Air Force requirements. I may say that up to this time none has been so declared. When they are, they will pass to the war assets disposal committee. The committee will inquire of all government departments whether any department has use for any portion of the assets of that field. The Department of Transport will take over the field itself and such buildings as it believes to be useful for an airport to meet civil aviation requirements. The other buildings, as I have said, will be offered to other departments. If there are no claimants they will pass to the War Assets Corporation, which will dispose of them in a manner which will bring about the greatest good to the greatest number; a decision that will require very careful study.

That, I understand, is the procedure. I think that people in the towns concerned must have realized that the school was there for a longer or shorter period depending upon the requirements of the air training programme. It

would have been hardly reasonable to suppose that so tremendous a programme would go on indefinitely. Naturally, pilots have to be trained before they can be used, and logically the training would not continue to the end of the war. There comes a time when all reasonable requirements for number of pilots have been met. That is about the best answer I can give my hon. friend.

Mr. DIEFENBAKER: Is the minister now in a position to answer the several questions I asked him, in particular with regard to the plan for the liquidation of war-time industry or its translation into civilian production? What is the plan the minister has in mind in that regard? Several months ago, I think it was last November, an article appeared in the press to the effect that the government had decided to free as far as possible, within the limitations of the safety of the state, many unnecessary economic controls which had prevailed since the outbreak of war. Demobilization of a war industry to change from war-time into civilian industry, to the end that civilian wants may be satisfied without detriment to the war effort, and also the liquidation of unnecessary war-time controls, are matters within the knowledge of the minister and in respect of which I asked certain questions this evening.

Mr. HOWE: My hon. friend has given me a good deal of territory to cover. He seems to press me for plans. He pressed me very hard for the government's plan for civil aviation. I gave it to him last Friday, and apparently he does not know what to do with it now he has it. I believe that if he will think back he will realize that, since this parliament opened, we have given out our plans to a considerable extent. I think that in the matter of planning for post-war development we have announced our plans step by step in advance of any other country. My hon. friend referred to the Baruch report on the disposal of surplus war assets. I might point out that our plan of disposal was announced some months before that plan came out. As far as disposal goes, we are almost exactly parallel with the proposals of the Baruch report. I would point out, however, that our plan is in operation, while the other at the moment is only a plan although the personnel has been appointed in the last two or three weeks.

Mr. DIEFENBAKER: Will the minister explain the plan that is in operation? That is what we want to know. What is the plan?

Mr. HOWE: The plan has been explained. There will be legislation covering it. At the moment it is in operation under the War Measures Act and it was set up before parliament met. We are getting all the experience we can to enable us to bring in the best bill possible, and before parliament rises there will be a bill to cover the disposal situation.

The procedure is this. There are two bodies. One is the Crown Assets Disposal Committee. That committee is made up of representatives of all war services and two or three departments outside that which have special interest in disposal problems, and it also includes a representative of labour, a representative of the farming industry and a representative of householders. Any item that is declared surplus to government requirements first goes before the committee. It is really a policy committee, or at least it is a committee to advise the minister and the government on policy in connection with various items. If an item declared surplus by one department can be useful to another department, that fact is noted in the report to the minister. In any event, the committee recommends a procedure. If it recommends that the item should be disposed of, it is so reported to the government, and the government by order in council turns the item over to the War Assets Corporation for disposal. The policy of disposal as advised by the committee is passed on to the War Assets Corporation as an instruction. The War Assets Corporation then studies the disposal of the item in the best interests of the greatest number of people. If it is an item of common purchase it will be put into retail channels in such a way that every part of the country will have a fair opportunity of purchasing the article.

I might point out that at this stage the items being dealt with by the corporation are not items of that class. They are usually surplus materials left from the cancellation of a contract, or they may be obsolete aeroplanes or an overage battleship. The disposal is studied by experts who make up the board of directors of the War Assets Corporation, and the War Assets Corporation may find that it is possible to dispose of the article in one of a number of ways. The company advises the government of the price that can be obtained, and the recommendation is either accepted by the government and the sale made, or it is rejected and the corporation is asked to find some other means of disposal.

That, I think, is a brief outline of the work of the committee and the company. It has taken some time to put the various items through the procedure. Great care is taken, both by the committee and by the corporation, in working out its procedure. In fact, no sale has finally been completed by the corporation at this date. It will be the policy of the corporation to make frequent reports. Parliament

will be kept well advised, and I can assure my hon. friend that it is the purpose of this plan to work inside the goldfish bowl, as recommended by the Baruch report.

Mr. GILLIS: Mr. Chairman—

Mr. HOWE: Does my hon. friend mind if I finish with this list of questions first?

Mr. FRASER (Peterborough West): How do you advertise that you have something for sale?

Mr. HOWE: I do not advertise that I have anything for sale. It is the work of the corporation, and the corporation has sold nothing yet. Therefore let us leave the corporation to work until it has actually made some sales and we shall then report to the house.

I am answering now the question asked by the hon. member for Lake Centre (Mr. Diefenbaker). About the plan for the demobilization of economic controls, which is rather an elaborate way of saying, how do you get rid of controls once you have them, if my hon. friend notices the control orders advertised from week to week he will find that we are dropping them every week. The purpose of the control is to take charge of an article in short supply and increase supply to meet needs, or, failing that, to distribute the article to meet war needs as the first priority and civilian needs after war needs have been filled. That is the purpose of the control and it is the only purpose.

The only basis of any control in the department is to regulate supply. When the article gets in ample supply the control is lifted. We have lifted a great number of controls in the past three or four months. We have taken the control off practically all steel items and many of the metals. I believe there are only three metals to-day that are controlled. I could go through a long list of items, where controls have been relaxed to some extent. We are not in sufficient supply to be able to remove all of them, but they are coming off as fast as the supply situation will allow. Supply is the only thing that receives consideration in the question whether an article shall be controlled or not, and when the supply situation is easy we take off the control.

Mr. BROOKS: Who comprise the War Assets Corporation?

Mr. HOWE: Just a moment. The question was asked, what does the government intend to do with the air schools? I have covered that. My hon. friend spoke of obsolete armoured vehicles overseas. I am not aware of any; none has been declared surplus to us. My hon. friend will understand that we are the contractors for the armed services. If the armed services requisition for a certain item we furnish that item; then it passes into the hands of the service, and it is theirs until it is declared surplus. If they declare it surplus it passes back to the department through the disposal branch. I may say that no items overseas have passed back to us, and therefore I assume that none is surplus.

Mr. DIEFENBAKER: That does not exactly cover the situation. One frequently hears criticism of the fact that piled up along the right of way of the railways are large amounts of supplies.

Mr. HOWE: I was referring to my hon. friend's remarks about overseas.

Mr. DIEFENBAKER: I did not refer to overseas.

Mr. HOWE: I thought the hon. member did.

Mr. DIEFENBAKER: No.

Mr. HOWE: I might explain about the piles along the railways. Materials such as motor trucks and some other items move overseas in very large volume, and they move from a number of ports. For example, there may be coming into New York boats that have considerable surplus space which may be made available for Canadian equipment. They may come to Philadelphia or Baltimore, or on the Canadian side they may come to Halifax, or they may come to Saint John, or in the summer time they may come to one of the ports on the St. Lawrence river. To take advantage of that space—and space is very difficult to come by, and all of those concerned with shipping are very anxious that no boat shall go out without a full load—it is necessary to have a stock-pile of material. Experience has shown that that stock-pile should cover six weeks' output of the store. If it gets down to a month we are certain that boats will go without a full load; therefore we try to keep not less than one month's supply and not more than two months' supply, averaging, as I say, about six weeks' supply in locations where it is readily available for shipment to any one of a number of ports. These stock-piles go up and down. There was a time several months ago when we had practically no stock-piles. The boat situation was easy and we cleaned out practically everything that we had. But ordinarily goods move out of stock-piles and other goods move into stock-piles.

My hon. friend has asked me what goods were in stock-piles three years and what goods were there two years. I can assure him that stock-piles are not operated in that way. The first goods in are the first goods out; and while the stock-pile may be there larger or

smaller as he passes through from time to time, the items in that stock-pile are not the items that he saw there five or six months ago. They may look the same externally, because all motorcars are boxed in pretty much the same way and all tires and wheels for motorcars look alike. However, I can assure him that these stock-piles are carefully operated by the controller of transport and his staff; every item in them is listed, and care is taken to see that no items in the stock-piles remain there for any considerable period. That is a necessary feature of the transport of munitions overseas. It is carefully operated. I can asure my hon. friend that the spoilage is surprisingly small. I do not think it is any more than the spoilage that takes place in handling vehicles at any point. Of course, there is a certain amount in loading at the seaboard, and there is a certain amount of spoilage in landing at the other end. But I know something about the spoilage of materials in dumps because these bills come back to the department. I can assure my hon. friend that they are very much smaller than I anticipated they would be when it was found that it was necessary to have recourse to stock-piles in order to take care of the shipping situation. Does that finish the question?

Mr. DIEFENBAKER: I asked the minister about two types of material, the quads and the Heath Robinson lorries.

Mr. HOWE: I can assure my hon. friend that everything that has been furnished has been used so far as I know; at least, we have had no rejections. I do not recall the two types. We make only one type of lorry that we call a lorry. It is made by the Chrysler Corporation, and all I can say is that we are making them and the army seems to be accepting them. They are going overseas. That is all I can tell him about that. I do not recall the quad vehicles, but I shall be glad to look the matter up and see if we are making anything in that connection.

Mr. ADAMSON: The minister mentioned spoilage. Has he any idea of the percentage of the spoilage? What articles are spoiled more than others?

Mr. HOWE: It is not exactly spoilage. It does not spoil. If you drop a box on one corner when you are loading you are likely to spoil the box.

Mr. ADAMSON: That is damage in transit. When he spoke of spoilage I thought he had in mind articles that are destroyed by weathering in those dumps.

Mr. HOWE: No, none of that, not while it is in our possession. It passes out of our possession at the seaport. I do not know what happens after that. We have had no claims for spoilage of that kind. We have had the odd breakage, of course, but very little of that.

Mr. DIEFENBAKER: In conclusion, I wish to thank the minister for his explanation of the activities of the Crown Assets Corporation. He has told the committee and the country that the activities of this corporation will be open to parliament. Does he give parliament the assurance that the members of the house will be given such information as they ask in respect of the activities of the corporation regarding the disposal of surpluses or any other disposal that they may make? That is the one point, Mr. Chairman, that I make in connection with the adoption of the fishbowl principle; that parliament shall have the right to the information. That is of the essence of the whole thing. What I am trying to secure from the minister—and he has been very frank in his explanations—is this: Is parliament to receive the information of the activities of this corporation once it begins to function, or is it to be denied that information?

Mr. HOWE: The present order in council provides that frequent reports shall be made to parliament, and they will be detailed reports. The hon. gentleman asks if members of parliament will be permitted to come in and interfere with the transactions. Of course not.

Mr. DIEFENBAKER: No, no.

Mr. HOWE: After the transaction is made, the House of Commons will be entitled to full details of the transaction.

Mr. CASTLEDEN: Is it not true that order in council 9108 provides that the minister shall submit to parliament, within fifteen days of the commencement of the session, a report on the operations of the allocation committee and the company which is set up?

Mr. HOWE: I submitted a report in due course and said that no transaction had taken place. My hon. friend will notice I did that. However, legislation will come forward. This is a temporary measure. There was an immediate situation to take care of. Surpluses were arising in munition plants with cancellation of contracts. We wanted to get the procedure going. We are all feeling our way a bit in this, and I had hoped that before this parliament concluded its work we would bring in a bill which we could support with

some experience and perhaps give hon. members a better idea and perhaps have a clearer thought ourselves as to just what the proceeding should be. I think the better place to discuss the disposal company is on the bill that will be introduced into the house this session, instead of attempting to do so on my estimates. I shall certainly be better briefed at that time.

Mr. GILLIS: I have a good deal to say with regard to the war allocations committee. I am not going to do so now because it is rather late. However, I should like to make this observation for the benefit of the minister. This group are definitely interested in the war allocations committee and the Crown Assets Corporation for perhaps a different reason from that of the hon. member for Lake Centre.

There is one thing I am convinced of with regard to our post-war plans. If we are to take care of the boys that some of our friends are so vocal in talking about, when they return after the conflict is over, then our post-war plans will largely depend on that corporation as to whether there is to be employment in this country for those who return. In that connection, when there is time there are some pertinent questions I wish to ask with respect to the disposal of plants and equipment under that set-up.

Progress reported.

At eleven o'clock the house adjourned until Thursday at three o'clock p.m., pursuant to special order made Monday, February 21, 1944.

Thursday, March 23, 1944

The house met at three o'clock.

BANKING AND COMMERCE

CONCURRENCE IN FIRST AND SECOND REPORTS

Mr. W. H. MOORE (Ontario) moved:

That the first report of the standing committee on banking and commerce presented to the house on Tuesday, March 21, be concurred in.

Motion agreed to.

That the second report of the standing committee on banking and commerce presented to the house on Tuesday, March 21, be concurred in.

Motion agreed to.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

PENSIONS—OLD AGE AND BLIND—FILING OF LIENS

Mr. KNOWLES:

1. In what provinces are liens filed against the property of old age and blind pensioners?

Mr. Howe.]

2. Is the filing of such liens the subject of any arrangement or agreement between the provinces and federal government?

Mr. ABBOTT:

1. The provinces of Prince Edward Island, Quebec, Ontario, Manitoba and Saskatchewan have the power to control property owned by old age pensioners and blind pensioners under the authority of provincial legislation. At the time of the last dominion examination of the provincial pension accounts, these provinces appeared to be following the general practice of filing liens or registration notices as authorized by their legislation.

2. There is no agreement and no regulation regarding the filing of such liens, other than the general agreement of each pension authority to administer pensions in accordance with the act and the regulations. Subsection 3 of section 9 of the Old Age Pensions Act provides as follows:

> A pension authority shall be entitled to recover out of the estate of any deceased pensioner, as a debt due by the pensioner to such authority, the sum of the pension payments made to such pensioner from time to time, together with interest at the rate of five per cent per annum, compounded annually, but no claim shall be made by a pension authority for the recovery of such debt directly or indirectly out of any part of the pensioner's estate which passes by will or on an intestacy to any other pensioner or to any person who has, since the grant of such pension or for the last three years during which such pension has continued to be paid, regularly contributed to the support of the pensioner by the payment of money or otherwise to an extent which, having regard to the means of the person so having contributed, is considered by the pension authority to be reasonable.

There has been some legal doubt as to whether this clause was mandatory or permissive in its effect. For some time the dominion has followed the legal opinion that the section indicated an intention on the part of parliament that recoveries should be made and that as a matter of sound administration, it should be regarded as a statutory direction to the pension authorities to make recoveries in the ordinary course. More recently we have been advised that while the drafting may leave some legal doubt, nevertheless the subsection is, strictly speaking, permissive. The provincial pension authorities have, as indicated in the answer to question 1, followed different policies, some have refused to follow the administrative requirement of making claims against the estates of deceased pensioners, others have suggested that it might be desirable either to discontinue making claims in all cases or to limit claims to the larger estates. In view of this situation, the provincial pension authorities are being

advised that whether or not recovery should be made from estates where the net value does not exceed two thousand dollars will be left entirely to their discretion.

INTERNATIONAL EXCHANGE UNION

Mr. QUELCH:

1. What are the names of the Canadian officials who drafted the proposals for an international exchange union?
2. What were the terms of reference under which these proposals were drafted?
3. Have these proposals been endorsed by, (a) the Department of Finance; (b) the government of Canada; (c) any other body?

Mr. ABBOTT:

1. The following officials of the Department of Finance, Department of External Affairs, the Bank of Canada and foreign exchange control board took part in the drafting of the "Tentative draft proposals of Canadian experts for an international exchange union": R. B. Bryce, W. C. Clark, J. J. Deutsch, W. A. Mackintosh, L. Rasminsky, N. A. Robertson, G. F. Towers.

2 and 3. The proposals were drafted to serve as a basis for the comments and suggestions to be made in regard to the American and British currency proposals by the Canadian experts who were to attend the discussions on this subject in Washington. Several of these Canadian officials participated in these discussions as a result of an invitation which the Minister of Finance, as he explained to the house on July 12 last year, had received from the Secretary of the United States Treasury to send technical experts to Washington for an informal discussion of the proposals for an international stabilization fund prepared by officials in the United States treasury. Those who took part in the drafting of the "tentative draft proposals" did not receive any instructions or terms of reference, as it was definitely understood that the experts in discussing this question, were to do so solely on their own responsibility with a view to exploring the possibility of reaching agreements on proposals that could be recommended to governments in order to solve the problem of post-war monetary instability.

CANADIAN PACIFIC AIR LINES—AIR ROUTES INTO UNITED STATES

Mr. KNOWLES:

1. Has the government been advised of any applications made by Canadian Pacific Air Lines to the United States government or any department or branch thereof dated since January 1, 1943, for permission to operate civil air routes into the United States (including Alaska)?
2. If so, when was the government so advised, and what routes have been named in such applications?

Mr. CHEVRIER:

1. Neither the Departmet of Transport nor the board of transport commissioners has received advice of any such applications.
2. See answer to No. 1.

TORONTO-PORT DALHOUSIE STEAMSHIP SERVICE

Mr. CHURCH:

1. Will the government railways operate a steamboat passenger service during the coming season of transportation between Toronto and Port Dalhousie? If so, with what steamers?
2. Will an improved type of steamer be provided this year for passenger and freight, and an improved service be given?
3. Will reduced fares be considered for holidays and weekends?

Mr. MICHAUD:

1. The Canadian National Railways proposes to operate its Toronto-Port Dalhousie freight and passenger service again this year during the period of navigation with the steamers *Northumberland* and *Dalhousie City*.
2. The same steamers will be operated as last year, on approximately the same schedules.
3. The same fares will be in effect for holidays and week-ends as effective last year.

INDIANS—TRUST FUNDS

Mr. MacINNIS:

1. What is the Indian population of Canada in, (a) each province; (b) Northwest Territories; (c) the Yukon?
2. What is the total amount of money held in trust for the benefit of Indians by the Department of Indian Affairs?
3. Is the trust fund apportioned so much to each province?
4. If so, what amount is allocated to each province?

Mr. CRERAR:

1. Indian population, 1939:

(a)	Alberta	12,163
	British Columbia	24,276
	Manitoba	14,561
	New Brunswick	1,922
	Nova Scotia	2,165
	Ontario	30,145
	Prince Edward Island	274
	Quebec	14,578
	Saskatchewan	13 020
(b)	Northwest Territories	3,724
(c)	Yukon	1,550

2. $15,692,988.06 (as at February 29, 1944).

3. The Indian trust fund is made up of some 450 individual band accounts, savings of more than 2,000 individual Indians and other special accounts for the benefit of Indians and Indian administration. Bands of Indians are grouped by agencies a number of which overlap pro-

vincial lines. The fund is composite in character and there is no apportionment by provinces.

4. Answered by No. 3.

PENSIONS FOR THE BLIND

Mr. KNOWLES:

1. How many persons in each of the provinces and in the Northwest Territories were receiving blind pensions as at December 31, 1943?
2. What was the average monthly payment in each province at the above date?
3. In which of the provinces does the monthly average indicated in the answer to question (2) include the increase provided by order in council P.C. 6367 dated August 10, 1943?
4. In which of the provinces does the monthly average indicated in the answer to question (2) include any supplementary amounts paid by the province?

Mr. ABBOTT:

1.	Alberta	240
	British Columbia	326
	Manitoba	344
	New Brunswick	720
	Nova Scotia	639
	Ontario	1,481
	Prince Edward Island	113
	Quebec	2,251
	Saskatchewan	321
	Northwest Territories	—
2.	Alberta	$23 99
	British Columbia	24 26
	Manitoba	24 23
	New Brunswick	22 98
	Nova Scotia	20 75
	Ontario	23 88
	Prince Edward Island	22 41
	Quebec	24 35
	Saskatchewan	24 45
	Northwest Territories	—

3. In all provinces.

4. In no province.

Note: The information in answers 1 and 2 has been furnished by the provinces in their statements for the quarter ended Dec. 31, 1943.

OLD AGE PENSIONS

Mr. KNOWLES:

1. How many persons in each of the provinces and in the Northwest Territories were receiving old age pensions as at December 31, 1943?
2. What was the average monthly payment in each province at the above date?
3. In which of the provinces does the monthly average indicated in the answer to question (2) include the increase provided by order in council P.C. 6367 dated August 10, 1943?
4. In which of the provinces does the monthly average indicated in the answer to question (2) include any supplementary amounts paid by the province?

[Mr. Crerar.]

Mr. ABBOTT:

1.	Alberta	11,073
	British Columbia	14,544
	Manitoba	12,294
	New Brunswick	11,876
	Nova Scotia	14,093
	Ontario	56,364
	Prince Edward Island	1,902
	Quebec	47,336
	Saskatchewan	12,863
	Northwest Territories	8
2.	Alberta	$ 22 66
	British Columbia	23 56
	Manitoba	23 33
	New Brunswick	17 03
	Nova Scotia	17 63
	Ontario	22 80
	Prince Edward Island	18 51
	Quebec	22 38
	Saskatchewan	22 90
	Northwest Territories	25 00

3. In all provinces.

4. In no province.

Note.—The information in answers 1 and 2 has been furnished by the provinces in their statements for the quarter ended December 31, 1943.

AIR TRAINING PLAN—CLOSING OF FLYING SCHOOLS —CIVILIAN PERSONNEL

Mr. BREITHAUPT:

What is being done by the government to place civil personnel laid off on account of closing of flying schools of the Commonwealth Air Training Plan?

Mr. MARTIN: Special services and attention will be given to the placement of all civilian personnel released on account of the closing of flying schools of the commonwealth air training plan. The established procedures in respect to lay-offs in war industries will be applied to these lay-offs.

Information is being obtained from the Department of National Defence indicating the schools that are to be closed down and the order in which the lay-offs are to take place.

A report has now been received in reference to the lay-off at the R.C.A.F. training school No. 4, Quebec city. Thirty-two civilian personnel are involved as follows: 4 stationary

engineers; 2 carpenters; 1 painter; 19 general duty messmen; 1 plumber; 4 cooks; 1 electrician.

The lay-off became effective March 22. Vacancies exist in the Quebec area for all being laid off except general duty messmen and stationary engineers. The Quebec regional office at Montreal will endeavour to find suitable employment for the latter.

There will be no other schools closed until the middle of May.

EXPORTS OF BEER AND SPIRITS

Mr. JOHNSTON (Bow River):

1. How many gallons of spirits have been sold outside of Canada, (a) to the United States; (b) to the United Kingdom; (c) to others, during each of the years 1939, 1940, 1941, 1942, 1943?

2. How many gallons of beer have been sold outside of Canada, (a) to the United States; (b) to the United Kingdom; (c) to others, during each of the years 1939, 1940, 1941, 1942, 1943?

Mr. MacKINNON (Edmonton West):

1 and 2.

Exports of beer and spirits from Canada during the calendar years 1939 to 1943

Item and country	1939	1940	1941	1942	1943

*Of the 2,322,108 gallons of beer exported to the United States in 1943 we are informed that at least two-thirds of this amount were re-exported from that country.

MARKETING OF WESTERN GRAIN—PARITY PRICES

Mr. FAIR:

1. How many bushels of, (a) wheat; (b) oats; (c) barley; (d) rye; (e) flax, were marketed each year from 1930 to 1943 inclusive by farmers in the prairie provinces?

2. What was the average price per bushel at the farm for each of the above grains each year from 1930 to 1943 inclusive?

3. What is the net amount received by the farmers of the prairie provinces each year for each kind of grain from 1930 to 1943 inclusive?

4. Using the period 1915 to 1919 as a base for arriving at parity prices at the farm, what amount should have been received by the farmers of the three prairie provinces for each kind of grain each year, 1930 to 1943 inclusive?

Mr. MacKINNON (Edmonton West):

1.	Wheat bu.	Oats bu.	Barley bu.	Rye bu.	Flax bu.
1930	282,714,951	24,979,271	19,466,578	8,082,564	4,412,392

4. Not applicable.

* Preliminary.
1 Payments on participation certificates not included.
2 Prairie farm assistance payments not included.
3 Prairie farm income payments not included.
4 Wheat acreage reduction payments not included.
5 Advance equalization payments included, but final distribution from equalization funds not included.

[Mr. J. A. MacKinnon.]

PERMITS FOR EXPORTS TO JAPAN

Mr. COLDWELL:

How many permits were issued by or on behalf of the government, for the export of each of the following articles to Japan, from September 1, 1939, and on what dates, and for what amounts: asbestos, including asbestos sand and waste; bauxite, alumina and aluminum; cadmium; cobalt, in ore, refined, salts and stellite; copper, in ore, concentrates and refined; ferromanganese; ferrosilicon; lead, in ore, concentrates and refined; nickel, in ore, matte and refined; nickel oxide; zinc, in ore, concentrates and refined; scrap metals of all kinds?

Mr. MacKINNON (Edmonton West):

BOUCHARD, STE. THERESE, AND NOBEL DEFENCE INDUSTRIES PLANTS

Mr. BERTRAND (Terrebonne):

1. Is there an employee by the name of Hazelton in the Defence Industries plant at Bouchard, Ste. Thérèse?
2. If so, how long has he been in the employ of the D.I.L. at Bouchard?
3. What positions has he held since his arrival at Bouchard?
4. What are his present occupation and salary?
5. Before his arrival at the Defence Industries, what was his occupation, and what was his salary?
6. Was he sent to the Nobel plant of Defence Industries for the purpose of selecting labour and, if so, at what dates?

Mr. CHEVRIER:

1. Yes.
2. Since the plant was put in operation. Mr. Hazelton was transferred to the Bouchard plant from the engineering department of Defence Industries Limited, Montreal, on a full time basis October 1, 1941.
3. As works engineer—from October 1, 1941, to April 13, 1942; As production superintendent—from April 13, 1942, to present.
4. (a) Production superintendent; (b) $500 per month.
5. (a) Engineer, Department of Justice, Engineering Division, Penitentiaries Branch, Winnipeg, Manitoba. (b) Salary—no information.
6. No.

Mr. BERTRAND (Terrebonne):

1. Did the Defence Industries Limited, at Bouchard, Ste. Thérèse, delegate any officials to its Nobel plant for the purpose of recruiting labour?
2. If so, what are the names of the persons so delegated?

Mr. CHEVRIER:

1. No labour was recruited from the Nobel plant but certain staff transfers were made from the Nobel to the Bouchard plant as the result of a survey made at Nobel by W. S. Miller, works manager of the Bouchard plant. The transfer involved the following staff:

(a) Six experienced graduate engineers to fill positions in the newly formed technical department, the formation of which had been planned several months ago but had been delayed due to lack of staff.

(b) Two experienced graduate engineers to fill existing vacancies caused, in one case, by resignation of the incumbent to rejoin his previous employer and in the other case, by plant expansion.

(c) Twelve clerical employees, experienced in Defence Industries Limited systems and the nature of whose duties at Nobel fitted them for immediate service at Bouchard.

2. Answered by No. 1.

[Mr. J. A. MacKinnon.]

WHEAT DELIVERY PERMIT BOOKS

Mr. FAIR:

How many wheat delivery permit books were taken out at, (a) wheat pool elevators; (b) line company elevators, in each of the prairie provinces in 1942 and 1943?

Mr. MacKINNON (Edmonton West): (a) Pool elevators: 1942-43, 81,895; 1943-44 to date, 82,724. (b) Line company elevators: 1942-43, 124,232; 1943-44 to date, 121,888. N.B. "Line company elevators" include certain small companies. The United Grain Growers Company, Limited, is not included in the above.

LABOUR CONDITIONS—EQUAL WAGES TO MEN AND WOMEN

Mrs. NIELSEN:

In the data collected by the national war labour board on wage rates, at various times and in various ways—1. How many industrial establishments in Canada employing more than one hundred workers each have been shown to be paying equal wages to men and women on similar jobs?

2. How many women, in total, are employed in these establishments paying equal wages to men and women for equal work?

Mr. MARTIN: Mr. Speaker, I have spoken to the hon. member about this question and I think she is disposed to have it dropped for rewording.

Question dropped.

AIRCRAFT REPAIR LIMITED, EDMONTON

Mr. QUELCH:

1. What is the total amount of capital assistance granted by the federal government to Aircraft Repair Limited, Edmonton, Alberta?
2. What is the total amount of war contracts let out to this firm by the Department of Munitions and Supply?

Mr. CHEVRIER:

1. No capital assistance has been granted by the federal government to Aircraft Repair Limited, of Edmonton, Alberta. The government built and equipped a plant for overhaul and repair at Edmonton, at a cost of $1,970,787.64. This plant and equipment is wholly owned by the Canadian government. Aircraft Repair Limited have been given a contract for the repair and overhaul of aircraft, and the facilities of this plant have been made available to them to carry out the work.

2. The amount that has been paid to date to Aircraft Repair Limited for work done under the overhaul and repair contract is $10,149,788.01.

The amount of war contracts let to this firm is indeterminable because the amount is not known until the work is completed.

AIR TRAINING PLAN—LIVING-OUT ALLOWANCES

Mr. HANSELL:

1. Is there a blanket rate of living-out allowances granted each rank in all the air training schools under the Commonwealth air training plan in Canada?

2. If so, what are the rates granted each rank, and when were the present rates established?

3. If not, what are the rates granted each rank in each air training school in Canada, and when were these rates established?

Mr. MACMILLAN:

1. Yes.

2. Officers, $1.70 a day effective 1 September, 1939; other ranks—$1.25 a day effective 1 October, 1942.

3. Not applicable.

JAPANESE NATIONALS IN BRITISH COLUMBIA

Mr. ESLING:

Will the Japanese settled by the British Columbia security commission in West Kootenay localities be removed at the conclusion of the war?

Mr. MARTIN: Mr. Speaker, the content of this question involves a matter of future policy in relation to persons of the Japanese race in Canada, on which the government is not in a position to make a declaration at this time.

QUESTIONS PASSED AS ORDERS FOR RETURNS

R.C.A.F.—RETIREMENT OF PERMANENT FORCE OFFICERS

Mr. BENCE:

1. What are the names of the nine permanent force officers of the Royal Canadian Air Force who have been either retired or whose retirements have been authorized since September 10, 1939?

2. What were the, (a) temporary; (b) acting; (c) substantive ranks of the said officers on September 10, 1939?

3. What were the, (a) temporary; (b) acting; (c) substantive ranks of the said officers on the date on which their retirements became or will become effective?

4. On what rank, (a) temporary; (b) acting, or (c) substantive, is the amount of the pension of each officer determined?

5. Were the pension regulations with respect to such retirements complied with as far as granting pension with relation to rank is concerned?

6. What would have been the retirement pension of each officer if he had been retired on September 10, 1939?

7. What is the actual retirement pension of each officer?

8. What is the age of each such officer?

9. How many officers now with the R.C.A.F. of the rank of air commodore and over have attained the age of 50 years?

10. How many of such officers are, (a) of the permanent force; (b) of the auxiliary force; (c) of the special reserve?

LABOUR CONDITIONS—TEXTILE WAGE RATES

Mr. ROSE:

1. Has the national war labour board obtained from selected industrial establishments schedules of wage rates for different occupations in their establishments?

2. From how many primary cotton textile manufacturing establishments were the schedules of wage rates obtained in, (a) Quebec; (b) Ontario?

3. What periods do these textile schedules cover?

4. For each of these establishments, what are the hourly or weekly wage rates, straight time and overtime, reported for each occupation listed in the schedules?

ST. LAWRENCE NORTH SHORE MAIL SERVICE

Mr. DORION:

1. What is the name of the company carrying mail. by airplane, on the north shore of the St. Lawrence river?

2. What places are directly served by such company?

3. What amount is received from the Post Office Department by that company for such service?

4. Has the company the right to carry passengers while carrying mail?

5. What is the schedule of such service?

6. What post offices are being served by dropping mail from the air?

7. (a) What are the landing places of the plane carrying mail; (b) what post offices are served directly from these places?

Mr. MULOCK: Return tabled.

CANADIAN SYNTHETIC RUBBER LIMITED

Mr. DOUGLAS (Weyburn):

1. Who are the directors of Canadian Synthetic Rubber Limited, and what remuneration do they receive?

2. In the case of each of those named in answer to question (1), with what other firms or corporations are they now employed, and of what other firms or corporations are they directors or officers?

3. Who are the owners of Canadian Synthetic Rubber Limited?

LAKEHEAD TERMINAL ELEVATORS

Mr. ROSS (St. Paul's):

1. How many grain elevators have been constructed, or additions made to existing elevators in Fort William and Port Arthur area since the outbreak of war, (a) by the government; (b) by private interests?

2. What is the capacity of each new construction?

3. What was the cost in each case?

4. Under whose control or administration does each additional elevator come?

5. Has the government, or the board of grain commissioners leased any government-owned elevators at Fort William or Port Arthur to private interests since July 31, 1939? If so, on what terms?

6. What conditions, if any, have been made permitting a private owner to write off as depreciation during war period the cost of extensions to existing plant, or cost of a new plant, and what are the names of persons or companies receiving such privileges?

CANADIAN FORCES—CANNED FISH

Mr. DOUGLAS (Queens):

1. How many cases of canned fish were supplied to the Canadian armed forces in the year 1943?

2. How many cases of each variety, and at what price per case?

3. What was the total cost of same?

WAR EXCHANGE TAX

Mr. TUCKER:

1. How much income has been received from the war exchange tax in each year since it was imposed?

2. What imports, if any, are exempt from said tax?

3. Is a licence or permission necessary to mport goods into Canada or to pay for same?

4. Is the war exchange tax still necessary to conserve our foreign exchange position?

5. Will consideration be given to the removal of this tax?

PRINCE EDWARD ISLAND

COMMUNICATIONS WITH MAINLAND—CAR FERRY SERVICE—LOSS OF SS. "CHARLOTTETOWN"

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, I want to call attention to a major emergency with respect to the tie-up in water transportation between Prince Edward Island and the mainland, and to seek information from the Minister of Transport in connection therewith. I have already given the minister a copy of the question to enable him to answer me to-day if possible.

I am informed that hundreds of cars of freight, mainly farm products, are awaiting transfer out of Prince Edward Island, and that a great many cars are awaiting transfer into Prince Edward Island. Some of the cars awaiting transfer out of the island are said to be loaded with a special early variety of seed potatoes, and if they are not moved it will mean a loss of approximately $500 per car. Added to this I am told that the seed is needed very badly at once in other parts of Canada. During this season the Prince Edward Island ferry service has suffered serious and continuous interruptions of service, to the point that at least one prominent public man in the province has declared that hundreds of thousands, perhaps millions of dollars, were due that province by reason of transportation tie-ups.

Some hon. MEMBERS: Order.

Mr. GRANT: Go ahead.

Mr. HANSON (York-Sunbury): The leader of the opposition is allowed a little leeway.

Mr. GRAYDON: I may say, Mr. Speaker, that I debated with myself whether I should bring this up on a motion to adjourn the house. The situation is very serious, and I see there is some support from the other side. I am just coming to my question. What steps is the government taking to meet this emergency?

Hon. J. E. MICHAUD (Minister of Transport): Mr. Speaker, the hon. leader of the opposition was kind enough to send me advance notice of the question. It is true that on account of severe weather and ice conditions it has been difficult to maintain regular ferry communications across the strait of Northumberland with the only combined ice breaker and car ferry that we have at our disposal. During the latter part of January and for the better part of February it has been very difficult to maintain regular operation of the service. On some days it has taken between twelve and fourteen hours to make a single crossing of nine miles. However, lately conditions have changed for the better, and I am informed that yesterday there were twelve crossings between Cape Tormentine and the island and eleven crossings the day before. To relieve the situation with respect to the potatoes it has been decided to transfer merchandise from box cars to refrigerator cars at Cape Tormentine, thus adding to the supply of cars available for the winter shipment of potatoes. Until ice conditions are improved it is impossible to remedy the situation because there is only one combined ice breaker and car ferry in the whole service. When there is a change in the weather and ice conditions we will transfer one other car ferry from another section of the maritimes to help relieve the situation between Cape Tormentine and Prince Edward Island.

Mr. GRAYDON: Is it not true that last fall representations were made to the government by officials in the island asking that a ferry or ice breaker be transferred from some other

part of Canada to operate in the Prince Edward Island service to avoid the very situation which has developed?

Mr. MICHAUD: In the whole service there is only one combined ice breaker and car ferry. The possibility of using ice breakers to help open the channel for the Prince Edward Island ferry has been suggested, but the engineers have reported that it would be useless, because the *Prince Edward Island* is just as good as any other ice breaker that could be used in that locality.

Mr. LECLERC: How many cars can that ferry take on each trip?

Mr. MICHAUD: The ferry would take twelve cars, I think.

Mr. GRAYDON: Last week 500 cars were supposed to have been tied up.

Hon. R. B. HANSON (York-Sunbury): I desire to direct a question to the Minister of Transport of which I have given him notice. A press report from Halifax, under date of March 20, indicates that the inquiry into the loss of the car ferry *Charlottetown* off Nova Scotia in 1941 is to be reopened. Is the report correct, and if so, what is the reason for this action? Has any new evidence been made available?

Mr. MICHAUD: A rehearing of the inquiry is to take place on petition of the captain of the former *Charlottetown,* as authorized under section 569 of the Canada Shipping Act. In the petition it is stated that new and important evidence which it had been impossible to disclose at the first inquiry has been discovered, and that the captain felt that on that account a miscarriage of justice had taken place with respect to himself.

Mr. HANSON (York-Sunbury): Is the captain not asking for an increase in his pension? Is that not the main objective?

Mr. MICHAUD: I do not know what is the objective. I can only judge by what is stated in the petition.

BOMBING OF ROME

REQUEST FOR STATEMENT OF GOVERNMENT POLICY

On the orders of the day:

Mr. FREDERIC DORION (Charlevoix-Saguenay): Considering the decision taken by our enemies to declare Rome an open city as reported to-day in a Canadian Press dispatch, does the government intend to give instructions to our forces in Italy to spare Rome from any attack on land or from the air?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, my hon. friend gave me notice of his question. As it is one which refers to a matter that is being commented on in the press, perhaps I might be permitted to answer it.

Some hon. MEMBERS: Oh, oh.

Mr. MACKENZIE KING: What I am saying is that my hon. friend was kind enough to give me notice of the question, and inasmuch as the subject may become one of discussion it might be treated as a question which should be answered at the moment.

I would direct the hon. member's attention to the fact that his question is based on what he states is a decision of our enemies. I do not know what credence can be attached to an announcement of any decision, by our enemies. I doubt the wisdom of making any statement based on such an announcement. I have no information whatever other than what has appeared in the press as to the alleged intention of the Germans to remove their military forces and installations from Rome. Whether that statement has been put out as an advertisement for our enemies or an evidence of their kindness of heart and deep religious feeling, I cannot say. I would say however, that I do not think it is advisable at this time to make any statement whatever in reference to what they are alleged to have said.

PARLIAMENTARY RESTAURANT

STAFF—STATEMENT ON BEHALF OF JOINT COMMITTEE AS TO CONDITIONS OF EMPLOYMENT

On the orders of the day:

Mr. R. W. MAYHEW (Victoria, B.C.): Mr. Speaker, I desire to make a statement on behalf of the joint committee on the parliamentary restaurant with respect to certain assertions made in local newspapers of recent date. The public must not be led to believe that the whole staff is kept on and paid when the house is not in session and the restaurant is closed. There are in that place employees doing a kind of work which requires experience and special qualifications. A competent manager and chef cannot be found and are not efficient unless they are given continuous employment. They will not accept positions for five months of the year.

There is something to do in the restaurant after the session, such as inventories, repairs and the settlement of accounts, et cetera, which necessitates the employment of a couple of clerks. The manager has kept two and sometimes three persons for that purpose. It is a small proportion when we consider that there is a staff of fifty employees for the service of the kitchen, main dining-room and cafeteria.

The joint committee on the restaurant held meetings on March 4, 8 and 21 and is exercising close supervision on the management. A subcommittee has been appointed to inquire into conditions and report as soon as possible. The committee realizes that the restaurant is a necessity in our parliamentary life and must be managed economically. A serious effort is being made to reduce the expenses without impairing the service.

A strong protest ought to be raised against insinuations that there is something wrong with bookkeeping in the restaurant, that members are not paying their bills regularly. The last report, received this week, shows that the outstanding accounts receivable amounted to only $7.40.

The allegation that the restaurant operates with a profit of $11,000 during the session, wasted by paying salaries during recess, is inaccurate, because it is based on a partial financial statement covering only a part of the year and does not show the actual receipts and expenses for the year 1943-44 which will only be completed at the end of this month.

TUBERCULOSIS

LABOUR SHORTAGE IN SANATORIA IN ONTARIO

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, I would like, with your permission to answer questions of the hon. member for Parkdale (Mr. Bruce) with reference to staff help for sanatoria, as reported in *Hansard* on March 16, at page 1514:

The hon. member merely mentioned two sanatoria. I later learned he was referring to the sanatoria at Weston and Gravenhurst.

Some weeks ago, national selective service was notified that an expansion in services was to take place at both Weston and Gravenhurst and that an additional number of nurses and sub-staff would be needed. Our officers called at these sanatoria and secured detailed information concerning the number needed in the professional and non-professional classifications for the immediate and longer range staff requirements.

Later, a meeting was held and attended by representatives of the registered nurses' association, provincial department of health, the management of the sanatoria and selective service to plan for the special efforts which would be required to meet the need. The nurses' association was to assist in securing nurses; the sanatoria were to make certain adjustments in conditions of employment in order to make the employment more acceptable; selective service was to secure sub-staff and to canvass the registration of nurses on file in the local office; special publicity was to be undertaken.

I have received the following report on the Weston and Gravenhurst sanatoria, for the period January 15 to March 18:

Weston

Orders placed for men	20
Referrals to work	16
Orders placed for women	39
Referrals to work	26
Orders placed for nurses	30
Referrals to work	16

Additional nurses were secured from the nurses' registry. Remaining requirements to allow for full expansion are for 30 nurses and 12 men and 32 women for substaff.

Gravenhurst

Orders placed for men	12
Placements in work	11
Orders placed for women	21
Placements in work	16

Remaining requirements to allow for full expansion are for 18 nurses, ten of whom might be practical nurses, and 24 men and women for substaff.

I should like to take this opportunity to express my appreciation of the willingness of these institutions to make use of voluntary and employed nurses and substaff on a part-time basis. Unfortunately the sanatoria cannot, for reasons beyond their control, accept many part-time workers.

One of the most important and most difficult tasks of national selective service has been to meet the staff requirements of hospitals and institutions of a like character. This situation is not peculiar to Canada. It is also one of the most severe problems in Great Britain and the United States. At the present moment, notwithstanding the calls for the army, the navy and the air force, more help is engaged in the care of the sick in institutions—hospitals, sanatoria and the like—than ever before in the history of this country. That, I think, is an indication of the interest taken by the government in supplying this very necessary help. I should like to quote these figures for the record:

Student Nurses Enrolled in Hospitals	
1939	8,500
1944	11,300

Graduate Nurses Employed in General Hospitals	
1939	10,837
1944	14,100..

This number of graduate nurses does not include supervisory nursing personnel.

Mr. GRAYDON: Has the minister also the figures as to the number of patients at the same periods?

Mr. MITCHELL: I can get them for my hon. friend if he requires them. But I do not bother about the patients; I bother about the help.

Mr. GRAYDON: After all, the help has to bother about the patients.

Mr. MITCHELL: My hon. friend will understand that my chief job is to find the help. No doubt the Minister of Pensions and National Health could give my hon. friend the number of patients.

Mr. GRAYDON: I think the minister missed my point. My inquiry was whether the number of patients had risen or not; because the rise in the number of employees could not be regarded in the same light if the number of patients has risen correspondingly.

Mr. MITCHELL: Speaking offhand and from my own experience as governor of a hospital in Hamilton for a good many years, I would say there has been a considerable increase in the number of patients being treated.

Mr. GRAYDON: The minister will get the figures?

Mr. MITCHELL: I will try to get the figures.

Hospitals have been given highest labour priority rating and instructions sent to local selective service and employment offices to give immediate consideration to all orders from these institutions and to appoint one or more members of the staff to deal with hospital requirements. Hospitals also have the right to advertise for help and to interview applicants directly.

In several centres special recruiting campaigns have been conducted in order to secure full and part-time workers at times when shortages became acute.

It will be recognized that certain conditions of employment regarding hours, salaries and the type of work, make it difficult for selective service to recruit workers for hospitals at a time when other lines of employment offer much greater inducement. We have appreciated the efforts many hospitals have made to improve conditions of employment and thus assist in the recruitment of employees.

It has been pointed out to me that it is more difficult to secure help for tubercular sanatoria than for general hospitals. The situation in Toronto bears out this statement. The general hospitals in that area are quite well supplied with staff. Statements from Mr. A. J. Swanson, president, Toronto hospital council, and Mr. R. W. Longmore, assistant superintendent, Toronto general hospital, as published in the Toronto press on March 16 corroborate these reports from selective service officers.

CANCER RESEARCH

APPLICATION OF DOCTOR DAVIDSON FOR FINANCIAL ASSISTANCE

On the orders of the day:

Mr. HARRY LEADER (Portage la Prairie): Before the orders of the day are proceeded with I should like to direct a question to the Minister of Pensions and National Health. I hold in my hand a telegram, signed by Doctor J. R. Davidson of Winnipeg, which conveys the information that his application for financial aid to further his efforts in cancer research has been refused. Does the government concur in the decision rendered by the associate committee on medical research? If not, will the government sponsor a more comprehensive investigation?

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health): I have been unofficially informed that the report of the associate committee on medical research of the national research council did make an unfavourable report in regard to the case mentioned by my hon. friend. The committee does not submit its report to me, inasmuch as it is a committee of the national research council, and therefore I have not seen the report. Until I have seen it I am not in a position to answer the second part of the question.

CANADIAN ARMY

REVERSION OF ACTIVE SERVICE OFFICERS TO RESERVE FORCE STATUS

On the orders of the day:

Mr. H. C. GREEN (Vancouver South): I wish to direct a question to the Minister of National Defence. In Pacific coast papers reaching here yesterday there are dispatches

to the effect that five hundred officers of the Canadian active army within the Pacific command are being reverted in small groups to reserve force status, which means that they are being discharged from the active army. The dispatches state that these officers are receiving letters informing them of recommendations for their reversion, and they are asked to furnish a statement within fourteen days setting forth reasons why they should not be so reverted. Further, it is stated, if the officer does not wish to submit reasons why he should not be reverted he is asked to sign the following statement:

I do not wish to make any statement against the recommendation that I cease to be on active service (returned to reserve force status).

Will the minister tell us whether or not these dispatches are correct and, if so, what provision is being made for giving these officers rehabilitation grants and any other allowances that would be given if they were discharged in the ordinary way.

Hon. J. L. RALSTON (Minister of National Defence): I do not think that on the orders of the day it is proper to submit a question which deals with the whole matter of procedure with regard to the reversion of officers to reserve status. If the hon. gentleman asks me how many officers are being reverted, I will endeavour to get that information. I make these observations now because, I submit, this question is quite out of order. What I should have to do would be to put on the record the full procedure with regard to the return of officers to reserve status. This newspaper report deals with some features of it, and I do not think my hon. friend has any objection to them—

Mr. GREEN: Mr. Speaker—

Mr. RALSTON: Just a moment, please. I do not know why he is including them in his question.

Mr. GREEN: The reason why I am asking the question on the orders of the day is that these men have only fourteen days within which to answer the letter. I do not know whether the report is correct and I would ask the minister to tell us the facts. If he cannot do so to-day, to-morrow will be satisfactory.

Mr. RALSTON: That is my point. I find that what my hon. friend wants to know is whether that length of time is the time given under the regulations. He will find in *Hansard*, at pages 437 and 566, a full statement with regard to the matter; but in view of the fact that he has seen fit to put on the record a dispatch appearing in the papers purporting to state the detailed procedure which is not complete, I prefer to answer the question to-morrow.

[Mr. Green.]

MAPLE PRODUCTS

RATIONING—USE FOR PRESERVING PURPOSES

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): May I direct a question to the Acting Minister of Finance, of which I have given him notice? Will the minister consider the immediate removal of the restrictions on the purchase of maple syrup and maple sugar so that the ration coupons will not be necessary, since they will be urgently needed later on for preserving purposes, the limitation of which would seriously interfere with an essential food product?

Hon. J. L. RALSTON (Acting Minister of Finance): I will treat the question as a notice.

PENSIONS

WIDOWS OF VETERANS OF FIRST WORLD WAR

On the orders of the day:

Mr. S. H. KNOWLES (Winnipeg North Centre): In view of the representations made last week to the Minister of Pensions and National Health by the national executive of the association of non-pensioned widows of veterans of the last war, may I ask the minister if consideration is being given to a further revision of the regulations under which, in certain cases, allowances are paid to these widows? If so, may we expect an announcement soon?

Mr. SPEAKER: The question will be taken as notice.

HOUSE OF COMMONS

RIGHT OF PRIVATE MEMBERS TO APPEAR BEFORE WAR EXPENDITURES COMMITTEE

On the orders of the day:

Mr. T. L. CHURCH (Broadview): I wish to call the attention of the house to the rights of a private member before a select committee. Some years ago, when the committee on railways and shipping was set up, it was decided by the rules of the house and as a matter of principle that a private member, not a member of the committee, could appear before the committee and ask questions with reference to any matter in which he was interested. On that principle I would like to ask either you, sir,—I have not given you notice of the question and I would ask your pardon for the omission—or the chairman of the war expenditures committee, this question: Will the principle I have enunciated regarding the select committee mentioned apply to the war expenditures committee? After all, the

house as a whole is responsible for these war expenditures. We are being held responsible, and as private members we should have the right therefore to appear before the committee and ask questions. May I ask further when any of the reports of the committee will be presented—this is the thirty-sixth day now—so that it can be discussed. I would ask the chairman of the war expenditures committee that question, or I would ask any member of the government, or have this taken as notice of a question.

Mr. SPEAKER: I do not know whether the hon. member is asking me a question with regard to procedure. If so, I am not in a position to advise him at the moment. When his question appears in *Hansard* I shall read it and if it is proper for me to do so I shall answer it.

Mr. CHURCH: Might I point out, sir, with great respect that you are the custodian of the rights and privileges of members. I would like to have some reply therefore, either to-morrow or the next day.

Mr. SPEAKER: If I understand the hon. member correctly, he is asking me to reply to a question with regard to the proceedings of a committee. I know of no method by which that can be done, and I cannot advise him from the Chair unless the matter with which he is dealing comes before me in proper form.

Mr. CHURCH: The committee should be abolished.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, March 21, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war —Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF MUNITIONS AND SUPPLY

Mr. LIONEL CHEVRIER (Parliamentary Assistant to the Minister of Munitions and Supply): I should like this afternoon, with the permission of the committee, to deal with two subject matters which have to do with the war appropriation bill, which we are discussing at the moment. The first relates to the purchasing policy of the Department of Munitions and Supply, and the second to the renegotiation of contracts.

Before I go on to these I may be permitted, Mr. Chairman, to express to the hon. member for Greenwood (Mr. Massey) the pleasure of the committee in his return to our midst. He has just come back from important duties overseas, and I know I express the feelings of the committee when I say that we are all delighted to find him in such excellent health.

(Translation): Mr. Chairman, I am happy to welcome back the hon. member for Richelieu-Verchères (Mr. Cardin) whom I see occupying his seat. Some time ago, the house expressed sympathy in the deep loss which he experienced; to-day, we are happy to see him in good health and so well recovered.

(Text) Last year when I was reporting on the purchasing policy of the Department of Munitions and Supply I referred to the manner in which contracts were awarded in the department, the methods adopted to reduce costs and control profits, the controls exercised over munitions contracts generally, and the reduction in prices consequent upon these controls. At that time I emphasized the fact that the department sought always to obtain fixed prices. The department was interested in asking for tenders in order that competitive bidding might be set up, and by that method contracts obtained of a fixed price type. The department then felt, and still feels, that the cheapest method of obtaining production, from the standpoint both of costs and of profits, is through negotiation of short term contracts on a fixed price basis. I gave the reasons for that at the time: First, because many of those contracts were for equipment never made before in this country. Obviously in such cases it was impossible to obtain fixed prices until production was well under way. Second, because of the frequent changes in the design of equipment while it was in production; and third, because the department is not always able to obtain full, accurate and up-to-date knowledge of the contractor's costs. For these and other reasons it is not always possible to obtain fixed prices; hence we have to get variations and modifications, such as the ceiling price, the contract price, the cost plus percentage, and the unit fee arrangement. I said that these were temporary devices only which were being used pending the day when it would be found possible to negotiate fixed price contracts. I explained how, because of the checks and controls exercised on costs, it was possible to make substantial reduction in prices. I am happy to report to-day that in the department we have made much progress towards fixed price contracts, and away from variations and modifications of them.

In the Department of Munitions and Supply there are five large purchasing branches. These, of course, are not all-inclusive; but in these five branches the vast majority of war equipment is purchased through the channels of Munitions and Supply. These five branches are: (1) the general purchasing branch; (2) the defence projects construction branch; (3) the munitions contracts branch; (4) the aircraft division, and (5) the shipbuilding division.

The general purchasing branch has to do with general purchases, such as the purchases of personal equipment, medical stores, food supplies, miscellaneous goods of that type. With but very few exceptions all the purchases in that branch are on the fixed price basis. I believe I am safe in saying that over ninety-nine per cent of the purchases made in the general purchasing branch are for fixed prices.

The same thing can be said of all contracts awarded in recent months by the defence projects construction branch. I hold in my hand a report from that branch which shows the comparison of cost plus contracts to total contracts awarded there and their value, from the first quarter of 1940 to the last quarter of 1943. During the four quarters of 1942 the percentage of cost plus contracts to the total was thirty-two per cent, and during the four quarters of 1943 the percentage of cost plus contracts to the total was 9·75 per cent, a substantial reduction.

The automotive contracts have now been converted entirely to fixed prices. The committee will remember that last year when I reported I stated that most of these contracts were on the ceiling price basis. To-day I am able to report that practically all contracts with the automotive companies are on the fixed price basis. The same conversion to fixed prices obtains in the munitions contracts branch where our knowledge of costs and manufacturing technique has enabled us to change over in great part.

A report covering this branch, which I have before me and which is as at January 31, 1944, shows that of a total of 15,267 contracts granted in this branch only 8·94 per cent were on a cost plus contracts basis. During the year 1943 of a total amount of contracts of $1,200,000,000, the estimated value of cost plus contracts was $379,825,806. The same position does not obtain in the aircraft division. It is not possible to put aircraft contracts on the fixed price basis, because of the constant and everlasting change in design. There is no known way of determining the efficiency of aircraft except by use in combat; hence we must ask our manufacturers to make frequent changes in design of equipment. For these reasons aircraft contracts must be on the cost plus basis, and they will in all probability remain that way.

Changes with reference to ship contracts have also had to be made. Originally, as the committee knows—

Mr. DIEFENBAKER: Would the hon. member permit a question?

Mr. CHEVRIER: Yes.

Mr. DIEFENBAKER: What is the basis of the cost plus in the production of aircraft? What is the percentage of profit allowed to the operating companies?

Mr. CHEVRIER: I must say I have not the facts before me. I have not a report of that branch as I have of the other branches, but I shall be glad to get my hon. friend an answer.

I was saying that originally all ship contracts were let at fixed prices with allowances for wage and freight differentials all across the country. It was found, however, that there were wide differences in the efficiencies of the yards for a variety of reasons. Accordingly a price on which one yard might make a slight profit or another might sustain a loss might yield an undue profit to a third yard.

Apart from this, our engineers were faced with a constant stream of extras and modifications to original designs, and the problems of adjusting prices to cover these changes became involved and difficult. Accordingly, it was decided late in 1942 to readjust all contracts from a certain date either to cost plus a fixed fee or to a basis of cost plus a fixed fee per ship, plus a bonus for reduction of cost below a target. The fixed-fee plan no doubt penalized the two or three yards of highest efficiency, but the view was taken that looking at their operations as a whole, their efficiency had been given due but not excessive recognition. The committee will realize that placing ships on the basis of cost plus a fixed fee, plus a bonus for reducing costs below a target, is the next best thing to a fixed price contract, in that it preserves an incentive to cost reduction even if in a modified form.

The checks and controls which we have exercised over contracts have a marked effect on prices. I am able to report that on a number of articles prices have been reduced substantially. Here are a few examples taken at random:

		Price reduced From	To
1.	3·7-inch A.A. gun barrels—forging	$ 1,650 00	$ 850 00
2.	3·7-inch A.A. gun barrels—machining	1,733 00	290 00
3.	Bren machine gun	230 00	160 00
4.	Bren magazine 100 rounds	38 58	13 38
5.	No. 4 rifle	62 30	32 00
6.	25-pdr. gun and carriage	21,288 31	9,075 11
7.	40-mm. H.E. shell (empty round)	4 12	2 10
8.	75-mm. H.E. shell (empty round)	5 69	4 67
9.	3·7-inch A.A. shell (empty round)	15 08	9 66
10.	5·5-inch how. shell (empty round)	22 45	11 78

Item 3.—Bren machine gun. Figures shown were taken as at December, 1941, and December, 1943. Cost at December, 1942, was $195.

Item 6.—25-pdr. gun. Figures shown are production costs and were taken as at January, 1942, and September, 1943. Figure as at September, 1942, was $14,398.78.

On the whole, the purchasing policy of the department has been carried out along sound businesslike lines. It has led to substantial reductions in the prices of war materiel.

Let me for a moment turn to another angle of this policy. We have heard a lot about the Labour government in Australia. We have been told frequently in this house and outside that the policies of the party led by the hon. member for Rosetown-Biggar are similar to those governing the commonwealth of Australia.

Mr. MacNICOL: But that is not a fact.

Mr. CHEVRIER: I think the hon. member for Rosetown-Biggar says it is a fact. I do not believe I am misquoting him when I say that. In any event I should like to examine for a moment the purchasing methods adopted in the commonwealth in order to see how they deal with contractors and manufacturers.

Some months ago, I believe it was in June, 1943, the government of Australia set up a contracts advisory panel. It was created to investigate the cost plus profit system of the commonwealth contracts. The report has recently been published and its recommendations have been adopted by the government, as announced in a statement by Prime Minister Curtin in November of 1943. An examination of this report will show that the purchasing methods of the commonwealth are similar to ours and, in fact, in many instances, they are much more generous to the manufacturer than we in Canada are.

The report contains three outstanding features: the cost plus profit contract, the target price contract, and the fixed price contract.

It recommends that the cost plus system whilst essential during the initial period of great urgency and cost uncertainty, should be abandoned in favour of fixed price contracts for all items for which an opportunity has been given of establishing costs. Let us examine these three features:

1. On a cost plus profit contract:

The Australians have decided the profit should be 2½ per cent on materials plus 7½ per cent on labour and overhead. This averages about 5·6 per cent in ordinary run of war materiel.

In Canada, our view is that on ordinary cost plus contracts the profit should be 5 per cent, with something better in exceptional cases where unusual skill or services are provided, and somewhat less where production is of a very routine character.

This relates only to the manufacture of items in which materials employed are purchased. It does not apply in the case of, say, a mining company which produces everything from the underground operation through the extraction, refining and working up into a highly finished production.

In the management of government-owned plants such as, for instance, Defence Industries Limited, Canadian Car Munitions, the fee is very much less.

2. Target price:

Our usual basis on a target price contract is cost plus a 5 per cent fixed fee plus 25 per cent of the saving below the target—although we have some in which a lesser percentage is allowed and a very few in which a graded profit sharing allowance in excess of 25 per cent is provided. In Australia, they use a 4 per cent fixed fee, plus a graded scale as follows:

Extent of saving on target cost	Contractor Per cent	Commonwealth Per cent
First 10% below target	20	80
Next 5% below target	33⅓	66⅔
Balance	50	50

Australians give their contractors a lower fee, but a larger participation than we ordinarily grant.

3. Fixed prices:

On fixed prices, the Australians come to the same conclusion as we do, and they strongly recommend that these be used wherever possible.

The Prime Minister of Australia in November of 1943 had this to say on the subject:

> The war cabinet to-day considered the first report submitted by the contracts advisory panel in respect of the cost-plus profit and other methods of contracting. All departments engaged in the purchase of government supplies, or undertaking government works, will be instructed to move away from the cost-plus system of contracting in as many cases as possible.
>
> It was impossible to avoid the adoption of cost-plus contracting in the early stages of the war, because a great proportion of the supplies, particularly of munitions, were entirely new to Australian manufacturers, and it would have been unreasonable to expect contractors to give firm prices. If that had been done, the contractors would quite justifiably have allowed for unknown contingencies, and to the extent to which these failed to occur unduly high profits would have resulted. Now, however, both the buying departments and the suppliers have the experience necessary to determine fair and reasonable prices, and when these have been fixed they will not be disturbed.
>
> I consider that the time has come when the government should secure fixed prices whenever it can, and that the suspicion inherent in all cost-plus profit contracts, that the more a job costs, the more the contractor makes should be removed.
>
> The government realizes, moreover, that even now some classes of work, such as the overhaul of aircraft and the repair of ships, will need to be done on the basis of actual cost, plus some form of remuneration. The remuneration will be based on a percentage of cost only where no better method of determining the profit margin can be fixed.

From this it will be seen that the methods adopted in Australia are very similar to our own, in fact, the Australians are far more generous to the contractor than we in Canada are.

I need hardly add that the Australian purchasing policy is predicated on the assumption that the munitions programme should be carried out by private industry, and that private industry is entitled to a fair and reasonable profit for its effort.

I would suggest to the leader of the C.C.F. party that the similarity between the policies of his party and those of the government of Australia are not as apparent as he would lead us to believe.

I should like to deal for a moment with the subject of renegotiation, but before doing so I should like to table, with the permission of the committee, a manual on termination of contracts. We in the Department of Munitions and Supply have had our attention directed chiefly toward the war programme, but we have realized that there will be a post-war period and with that in mind we have reviewed the termination clauses of our contracts and have set up a procedure in the department which has to do with the claims of contractors and subcontractors. I am sure that this document will be of interest to the members of the committee.

The important thing in the fixed price type of contract is that there should be a sound basis for arriving at a fixed price. A prematurely fixed price based on inadequate data, is just as much a danger to be avoided as a cost plus percentage type.

It sometimes happens that with the best of information as to the costs, the best of intentions and the keenest negotiations, a fixed price ends up by yielding an undue profit to the manufacturer.

Such a profit may be due to the discovery by the manufacturer of some new type of material, or the development of other economies not previously visualized. It may also be due to the subsequent addition of new business from various sources leading to the spreading of the fixed overhead of the business over a much larger volume of output. Whenever this occurs, the department takes the view that the contractor in wartime should be content to give to the taxpayer the greater part of the benefit of the improved techniques, rather than retain them for himself. While the department appreciates the principle of the sanctity of contracts entered into between itself and its contractors, still it realizes that in wartime, there is a responsibility placed upon the minister to protect the taxpayer's money. For this reason, where it is shown that profits are unreasonable, the department renegotiates contracts.

Renegotiation is a retroactive price reduction after the contracts have been let and the goods purchased. This practice may be voluntary or compulsory. Its object is twofold: To lower the costs of war goods, and to prevent unreasonable profits on them.

Where the department becomes aware of an undue profit, and its officers are instructed to be constantly on the watch for such profits, it is the practice of the negotiating officers to seek price adjustments in order to bring the profit down to a fair and reasonable figure. In this regard, however, the view is held that some reasonable share of the products of the efficiency of the contractor should be left with him. In other words, on a renegotiation, whether entirely voluntary or taken on the initiative of the department, it is the practice to allow a reasonably larger profit margin than would be the case on a straight

cost-plus-percentage contract. It is obvious that if this is not done, we would be taking away all incentive to cost reduction and all incentive to the assumption of manufacturing risks. In this connection, the report of the panel which investigated the contract policy of the Commonwealth of Australia has this to say:

> Where the contract is substantial, the order placed should be for a quantity or for a period which will permit a review of the price after reasonable experience; or, alternatively, the order should be for the full quantity required with a condition that the price will be reviewed after the production of a stipulated quantity. The review of the price, however, should not be retrospective. When made, the revised price should not be so reduced as to deprive a contractor of the fruits of his efficiency or of the incentive to further reduce costs.

Two things should be noted here. The first is that renegotiation in Australia is never retroactive; that is to say, it never starts from the original date of the contract but rather from the date of the renegotiation. In Canada it is always retroactive. When we in Canada renegotiatiate a contract, the renegotiation price dates back to the original contract. Hence, on renegotiation also, the Australians are more generous with their contractors than we are. The next point to note is that renegotiation should always take care not to deprive the contractor of the incentive to further reduce costs.

This informal method of renegotiation has proved entirely effective and in no case has it been necessary for us to exercise the powers given by this house in section 13 of the Department of Munitions and Supply Act, to compel a contractor to return profits deemed to be unreasonable. The fact that these powers exists has been an influence in reaching a settlement in some cases, and we anticipate that in some instances we shall have to resort to them. I believe the committee will agree, however, that we should be as careful and as sparing in employing extraordinary measures as we possibly can. In the main we have met with excellent cooperation from the manufacturing community who fully realize the anti-social aspects of excessive profits on war contracts.

It is difficult to draw an exact line between various types of renegotiation. Circumstances vary in the individual instances and in many cases, an over-all readjustment in relation to a company's annual war business is made, even though the contracts for the year may include some cost-plus, some ceiling price, some target price, and some fixed-price contracts. We have made an attempt, however, to estimate the savings arising out of renegotiation of various types and are able to point to a total of $119,107,000, of which $66,691,000 covers instances of direct renegotiation and $52,416,000 arises chiefly out of price adjustments on ceiling price contracts.

These figures are undoubtedly conservative and do not take into account cases in which downward adjustments of prices have been made during the course of a contract, due to the efforts of our negotiating offices or to the voluntary action of the manufacturer concerned.

These figures are not to be compared with the American figures for renegotiating which have been recorded as exceeding the five billion dollar mark. Our whole method of purchasing is different from that of the United States. In that country a great volume of contracts in excess of $100,000 are subject to being renegotiated, but, so far as we can ascertain, very much less attention is paid to the problems of setting the original price than we are accustomed to pay. The United States system appears to rely principally upon the powers of recapture of excessive profits, while in Canada, Australia, and the United Kingdom the attempt is made to arrive at fair prices in the first place and to use the right of recapture very sparingly, as above indicated. It is believed that this is the preferable method because no incentive exists for a manufacturer to cut costs and avoid wastages of materials and labour, if, under renegotiation powers, there will be left with him only the same amount of profit as would be the case were he to adopt a more easy-going attitude as regards cost reduction and cost control.

The problems of purchasing are not simple. They involve the exercise of a great deal of care and discriminating judgment.

One of the main jobs of the Department of Munitions and Supply is to get the maximum possible value for the taxpayer's dollar which involves not only seeing that profits are fair and reasonable, but that costs are driven down in every way possible.

The best proof of the wisdom of our policy is that to-day there exists a group of war contractors who are definitely cost conscious. Their interest in reducing costs is second only to their interest in production.

Since the outset of the war, there are three things which we have sought to do:

1. To secure the maximum of output in the minimum of time.

2. To secure all benefits of modern production and cost reduction technique.

3. To keep profits under strict control.

I do not pretend that we have attained 100 per cent efficiency in all these, but all in all,

we are doing a good job in spending the taxpayer's money. We have tried to negotiate our contracts on a proper business-like basis. We maintain a close check on costs and profits through the audit system. We seek to improve manufacturing technique by daily contact between our production officers and our contractors, and we renegotiate our contracts when there is evidence of undue profit.

Our negotiating officers cannot always be right, but I can assure the house, from my personal knowledge, that there is in the department a group of able and hard-working men attempting honestly and without fear or favor, to administer their responsibilities in a way which should merit the favor of this house.

These men have succeeded in elaborating a purchasing policy that compares favorably with that of any of the united nations. These men are determined to stop war profiteering.

The minister in reporting to the house on Tuesday stated that from the inception, contracts awarded in the department amounted to $9,450,000,000.

With such an unprecedented outlay of public funds, after four and a half years of war, we in Canada have every reason to be proud of the fact that there have been few charges of graft and almost no charges of war profiteering. In the few cases where waste and dishonesty have been discovered, the department has moved quickly and effectively.

The department has one thing in view and that is to maintain a reputation for efficiency and honesty. I submit, sir, that it has established that reputation, and if it has succeeded in doing so, it is due not only to the purchasing methods to which I have referred a moment ago but also to the high and excellent calibre of the men in the department who administer these policies.

Mr. COLDWELL: Mr. Chairman, I think we can all congratulate the hon. member who has just taken his seat upon the clarity with which he has expressed the point of view of the department.

I have not taken very much part in the debates on the war appropriation because the work has been apportioned among the various members of our group and it did not fall to my lot to engage in the discussions earlier. I wish, however, to take this opportunity of saying that I am fully in accord with all the praise which has been given to the men in the armed forces, in the navy, the army, and the air force, and to the men and women who have contributed so largely and generously to Canada's industrial war effort.

[Mr. Chevrier.]

The hon. member for Stormont (Mr. Chevrier) spoke a few moments ago of Australia, and pointed out that from time to time we have had occasion to refer to Australia, New Zealand and the Labour party of Great Britain. He tried to draw some inferences from that regarding support for government policies. But I wish to point out that the government of Australia, under Mr. John Curtin, took office in November or late October, 1941, when the pattern of the war effort and of war contracts was already laid, and therefore that pattern had very largely to be followed no matter what the philosophic point of view of the members of that government happened to be. Besides, Australia had relatively little established industry when this war began compared with the very highly developed industry we had in Canada. Since then Australia, like ourselves, has established many new government owned and operated industries. Indeed, one of them was largely established before the war, the aeroplane industry, which also included, I believe, the manufacture of some aeroplane engines, but I am not sure of that. I do know that some new industries were established by the government as public enterprises, and I have read from time to time that the Australian government is carefully guarding the properties of the Australian people and is determined that when the war ends they shall be used for the production of civilian goods. In that respect the point of view of the Australian government, no matter what it may be as to the immediate question of making contracts, is radically different from the point of view that has been expressed in this house on behalf of the government.

As to generosity in the making of contracts, let me say this. They have a lower management fee and a greater participation, if costs are reduced, in the amount of the surplus attained, and it seems to me that is an incentive which under private business practice any government might well consider. I agree with the hon. member for Stormont that individuals engaged in a public service, whether in the employ of the government or as contractors making an essential commodity for war purposes, whether in public or in private enterprise, are entitled to fair remuneration for the services so rendered, whether in war or peace. I do not dispute that. But I do point out that from time to time concessions are made great industries and corporations which certainly go for beyond that point.

I agree with those who have said that as long as this war lasts we cannot emphasize the production of civilian goods, that we must continue to manufacture to the full extent of

our capacity, war material for the armed forces, and that production of civilian goods may be considered only when all our obligations to the armed services have been met.

When I heard the Minister of Munitions and Supply the other day outlining the work of his department I was struck by the references to the enormous undertakings that Canada has engaged upon since the war began. When we compare what we have done in these four and one-half years of war with the condition of this country in the ten years prior to the war, under both a Conservative government and a Liberal government, we are appalled to think that the country was allowed to drift into the condition in which we knew it economically during the ten dreadful years before the war broke out.

To the end of 1943, for example, we have spent on various phases of the war effort the enormous sum of $10,824 millions, or, as I may refer to it a little later, nearly $11,000 millions. This includes—and I am going to speak in round numbers—$4,000 millions for munitions, $2,750 millions for strategic materials and foodstuffs, $2,250 millions in production of material and equipment for Canada's armed forces at home and abroad, $1,500 millions in Canada for capital assistance to industry and defence construction. I take these figures as at December, 1943, from the government publication entitled "Canada at War." Almost $11,000 millions have been expended in war material, war industries, and other facilities and equipment of all kinds in connection with our war effort. Much of this has been destroyed or worn out, but many assets remain and will remain when the war ends.

As I say, although our concentration must be upon the conduct of the war, yet the pattern of the post-war world will be decided by what we do now. This afternoon I am going to ask what we are doing now and what is to be done when the war is over with the tremendous assets which we have built up in this country? To a very large extent, as we heard from the minister and from the hon. member for Lake Centre (Mr. Diefenbaker) yesterday, this will be decided by the new War Assets Corporation under order in council P.C. 9108. There is also a crown assets allocation committee consisting of interdepartmental officials and a representative of labour and of agriculture. But I understand it to be a purely advisory committee. The real power of disposal will be in the hands of this new corporation. To quote from the order in council, the actual business of the War Assets Corporation will be as follows: It is empowered to hold, manage, operate, dispose of or deal in and with any surplus crown assets consigned or transferred to it. It will also, according to the order in council, withhold from Canadian or world markets, for such time as it may decide, all or any portion of any surplus crown assets consigned or transferred to it. Further, it is empowered to effect sales of surplus crown assets consigned or transferred to it, in such manner and upon such terms as the company may determine. When we look at the statements which have already been made by some of the persons connected with this new crown assets corporation, we realize that parliament must closely supervise its operation.

The personnel of the War Assets Corporation includes, of course, as president, Mr. J. B. Carswell, a well-known steel manufacturer of this country. As *Saturday Night* well said in its issue of January 29:

> The business community must be gratified that Mr. Howe (Minister of Munitions and Supply) has placed the disposal of surplus war assets in the hands of business men and set them up in trade, not in political and official Ottawa, but in metropolitan Montreal.

In a speech before the Canadian Construction Association the president of the corporation, Mr. Carswell, made some interesting remarks which were quoted in the *Financial Post* of January 29 of this year. This is what he said:

> Since the key job of the corporation is to protect the going economy against impingement of war surpluses, it stands to reason the corporation should never get into competition with industry—which is another way of saying it should not sell direct to the consumer but rather to those whose legitimate business it is to deal with the article concerned and on a basis that, within the corporation's powers, will ensure reasonable profit to dealer and reasonable price to consumer.

Three years ago a prominent business man told a committee of this house that in his opinion at that time there should be set up a committee of business men whose duty it would be to consider ways and means of disposing of crown property and of material in such a manner as not to interfere in any way with established industry. If that policy is carried out we shall find that the War Assets Corporation, instead of being of assistance to the people of Canada, will further strengthen some of the vested industrial and financial interests in this country. I say to the minister and to the hon. member for Stormont that, because of the manner in which the government established some parts of Canada's industrial war effort, we as a nation have increased the power of some of our most powerful monopolies and cartels. I shall refer to one of them this afternoon. I shall refer to Canadian Industries Limited, the great chemical concern which is the Canadian part of the international cartel of which two of the most

powerful chemical organizations in the world, du Pont De Nemours Company and Imperial Chemical Industries Limited are the owners or the major interests.

Throughout the war the members of this group have drawn to the attention of the house and of the country the alarming growth in power of some of these powerful industrial and financial corporations, I may say quite frankly that for some months we have been making a study of Canadian Industries Limited; and while this afternoon, because of the limitations of the time at my disposal, I shall refer but briefly to the corporation, one of my colleagues, the member for York South (Mr. Noseworthy), will supplement what I have to say.

When the war broke out, Canadian Industries Limited, an organization which at that time had assets of some $75,000,000, established a wholly owned subsidiary company known as Defence Industries Limited, in order of course to separate entirely their war business from their civilian and ordinary commercial enterprises. Since 1939 Defence Industries Limited has directed and operated, on a management-fee basis, government-owned plant and other facilities costing some $260,000,000, so far as I can gather, judging from reports issued in this house from time to time, this capital of $260,000,000 was advanced partly on Canadian account and partly on British account; and last year, as we know, an agreement was entered into between Great Britain and Canada, whereby this country took over the British obligations and properties.

This sum of $260,000,000 represents approximately thirty per cent of all Canadian government assistance to private industry. The total expenditure incurred to this company through the Department of Munitions and Supply in the undertaking of Defence Industries Limited since the war, for construction, equipment and operation, has amounted, so far as I can gather, to some $600,000,000. I have said from time to time in this house that the policy of the government—and if other governments adopt the same policy, of those governments too—has strenghtened monopolistic industry and the cartels of which they form a part and will make it infinitely more difficult when this war ends to emancipate our people and the people of the world generally from the control of these great national and international organizations.

Mr. HOWE: May I interrupt my hon. friend? I am sure he would wish to make it clear at this time that all the expenditure he mentions, in capital, is still the property of the crown. The assets created are the property of the crown, and the company has acted only in the capacity of manager in every case.

[Mr. Coldwell.]

Mr. COLDWELL: I was going to deal with that in a few minutes. I had a return brought down last May, which contains some interesting clauses, and I had intended to deal with that point. First of all, the concentration of war business in this company has certainly been enormous, and I may say that if similar businesses of that type had wished to enter into the supply of these materials they would have found it at least very difficult to do so. Thirty per cent of all our capital assistance has gone to this corporation, and the expenses incurred by Defence Industries Limited for all war purposes I believe amounted to $611,525,000.

When the minister interrupted me a minute ago I was about to refer to a sessional paper, No. 360, tabled in this house on May 28 of last year. This return indicated the manner in which the capital facilities paid for by the government may in part at least pass to the ownership in some cases, or in other cases to the control, of this corporation. In my opinion the optional purchasing clauses in some of these agreements have the effect of depriving the government in advance of all bargaining power, and in some instances appear to commit the government to a policy by which Canadian Industries Limited may acquire, without adequate and proper remuneration, properties paid for by the people. I say, some of the clauses in the contracts make that possible. Moreover, the contracts may have the effect—and this I regard as one of the gravest features of the whole situation—of perpetuating a monopoly which the operator of Defence Industries Limited, Canadian Industries Limited, has already acquired.

If we look at return No. 360, to which I have already referred, the contracts with Defence Industries Limited—some of them, that is, not all—are shown to contain the following clause in respect to plants engaged in the manufacturing of certain explosives and munitions of war. I quote:

> The government shall give Defence Industries Limited a sixty-day option to purchase the plant or any part thereof, at a price it is willing to accept from any other party. If the offer is not accepted, the government is free to sell the same to any other party at a price not less than that offered to Defence Industries Limited.

At first glance this may appear to be fairly reasonable, but in some of these contracts there are restrictions on the use of properties, and these restrictions are of such a nature that only Defence Industries Limited would be interested in the purchase of the plant. Let me quote one of the restrictive clauses:

> The plant is not to be used for production of product or other explosives, or any constituent elements thereof, for other than military purposes.

The plant is not to be used for the manufacture of the present product or of any constituent thereof except for military purposes. In other words, when the war is over the plant obviously would either be operated by Canadian Industries Limited or would have to be closed down. It should be noted that this condition is imposed on all purchasers and the restriction does not apply—I say this because I think it has some bearing in the opposite direction—to the machinery and equipment if the plant is demolished or dismantled. Other plants are bound by the same restrictive clauses. What are the effects of those clauses which have quite evidently been inserted at the request of the company? They clearly envisage the possibility of the plants as at present constituted producing commodities other than those they are now producing, perhaps civilian requirements, after the war, and they completely prevent that possibility from arising. The effect, of course, is to perpetuate the monopoly enjoyed by Canadian Industries Limited in regard to certain products.

In view of this, Mr. Chairman, I urge that parliament should take some note of the restrictive practices of the monopoly and the cartel of which Canadian Industries Limited is a part. We feel there is a grave risk that while we win the war on the battlefronts of the world we shall actually lose it to the great cartels which now embody the nazi idea and hold themselves above parliaments and governments.

Canadian Industries Limited is not a Canadian enterprise. It is jointly owned and controlled by the du Pont De Nemours company of the United States and Imperial Chemical Industries Limited of the United Kingdom.

Mr. HOWE: And others.

Mr. COLDWELL: Who between them hold, I understand, between eighty-five and ninety-five per cent of its share capital. The others have a very small interest in the corporation. These two companies are part of a world-wide international cartel which has divided and still divides the world into markets and concludes exclusive licensing and patent agreements. They also divide the territories of the world amongst themselves. Canada is exploited by this cartel through the jointly owned Canadian Industries Limited, just as South America is exploited by other companies which are similarly owned by the corporations I have named. It is true that politically Canada is a sovereign nation, but economically this international cartel treats her as a colonial area or a colonial possession.

The foreign capital, so far as I have been able to discover, invested in Canadian Industries Limited throughout its existence has amounted to not more than $7,000,000. An analysis of its profits and their disposition show that since 1910 dividends on capital have amounted to $75,000,000. In addition all assets in Canada exclusive of Defence Industries Limited amount to another $75,000,000, and the original foreign capital invested in the company in Canada seems to have amounted to less than $7,000,000.

Through Canadian Industries Limited this international cartel has exercised monopoly control of many vital products. They include, of course, types of ammunition, explosives, ammonia, chlorine, hydrochloric acid, sodium sulphate, carbon disulphide, caustic soda, many kinds of dyestuffs, specialized paints, lacquers and varnishes. It holds the patent for cellophane, and is, I believe,—I am not positive of this—in exclusive control of nylon production in this country. Furthermore there is a widespread belief that agreements existed with other firms that eliminated competition in certain important fertilizers before the war.

I say the monopoly has made enormous profits. To illustrate—

Mr. TRIPP: Did the hon. member suggest that this company holds a monopoly of the sodium sulphate industry in Canada?

Mr. COLDWELL: No, I did not suggest quite that.

Mr. TRIPP: I think he did.

Mr. COLDWELL: I said it holds the monopoly on many of those vital products, and among them I named sodium sulphate. Is that what the hon. member said?

Mr. TRIPP: Yes.

Mr. COLDWELL: Yes, sodium sulphate.

Mr. TRIPP: We have millions of tons of it in Saskatchewan undeveloped.

Mr. COLDWELL: We have millions of tons of the raw material undeveloped, but I am going to show these people have developed and controlled the market for it.

Mr. TRIPP: They could not get a monopoly on an article of that kind.

Mr. COLDWELL: They have a monopoly on the manufacturing and refining of it. You can have all kinds of raw materials in the ground. We have large amounts of raw material, but where you have one group in control of the machinery, and particularly of the market, there you have the control of the product.

I said that this monopoly had made enormous profits. I could not illustrate it better than in this way. The holder of a $100 par value common share in 1910 now holds eighteen common shares of no par value which sell on to-day's markets for over $150 each. In addition, the holder will have received dividends in those years totalling $2,322 in respect of an investment of $100.

Recently the Department of Justice of the United States charged du Pont De Nemours Co. and Imperial Chemical Industries Limited with constituting a cartel in restraint of trade, and Canadian Industries Limited was named as a co-conspirator. This cartel, by the way, included agreements with I. G. Farbenindustrie, the German nazi-controlled chemical trust, and the Mitsui interests in Japan. However, I shall confine my remarks to the effect of this cartel on Canadian living standards.

The agreements between du Pont, Imperial Chemical Industries Limited and the jointly owned subsidiary, Canadian Industries Limited, by ingenious methods eliminated competition in countless products in Canada. They provided for the exchange of patents, and for exclusive licensing arrangements; they provided that no one cartel partner should export into territory assigned to another partner; they provided for the sale of all du Pont and Imperial Chemical Industries products in Canada through Canadian Industries Limited only. No other company could handle their products. In particular Imperial Chemical Industries and du Pont have eliminated competition in strategic materials in Canada by entering into agreements with potential competitors. For example, in 1928 du Pont and Imperial Chemical Industries caused Canadian Industries Limited to enter into contracts with the Atlas Powder Company of Delaware, U.S.A., whereby Atlas was prevented from exporting explosives to Canada, or participating in the explosive business in Canada. That is one example. Another example is that in 1936 du Pont and Imperial Chemical Industries Limited caused Canadian Industries Limited to enter into an agreement with the National Lead Company of the United States in order to eliminate competition in titanium pigments in Canada. This agreement provided for the setting up of a new company, Canadian Titanium Pigments Limited.

Mr. EDWARDS: Will the hon. member permit a question?

Mr. COLDWELL: I would prefer to make my speech; then the hon. member could ask questions.

Mr. EDWARDS: What is his authority for that statement?

[Mr. Coldwell.]

Mr. COLDWELL: I am quoting directly from a report tabled, in this particular instance, in Washington, by the committee which inquired into the chemical industry. Du Pont de Nemours Co. and Imperial Chemicals Limited are part of the cartel of which Canadian Industries Limited is a part and a subsidiary.

Mr. EDWARDS: The hon. member is saying so, but I am asking for his authority.

Mr. COLDWELL: If my hon. friend will read these reports for himself, he will get the information I am now giving. They are available in the library.

This agreement provides for the setting up of a new company, Canadian Titanium Pigments Limited, in which Canadian Industries Limited holds fifty-one per cent of the share capital, and the National Lead Company forty-nine per cent. Now, the new company has exclusive control in Titanium Pigments in Canada, but must not export from Canada. That is the agreement, and it is accessible to anyone who cares to read it. The hon. member for York South will probably place on record the clauses from the agreement, since the agreement has been questioned. I have merely cited two examples of this kind of practice; others can be developed.

But far more dangerous to the welfare of the Canadian people are the agreements preventing Canadian Industries Limited from exporting from Canada. We talk about restrictions on imports. These people have restricted exports from Canada, and thus cut down the amount of employment for Canadian citizens. These restrictions are not new, but have existed in various forms since the formation of Canadian Industries Limited in 1910. They are an affront to the Canadian people, and a flagrant instance of private interests placing themselves above the authority of parliament. As I have said before, it is not too much to say that Canada has been treated by these interests as a mere colony.

Here is an example. In 1928 Canadian Industries Limited attempted to export to the United States a new waterproof finish they had developed, but du Pont prevented this, and later took the patents of this Canadian developed process for itself.

In 1933 du Pont and Imperial Chemicals Limited prevented Canadian Industries Limited from exporting pyralin toilet articles, manufactured in Canada, to Australia. These things are on record. Where, on rare occasions, Canadian Industries Limited was

allowed to export—and this is interesting—the profit on the sale went to du Pont or Imperial Chemical Industries, depending on the territory concerned, or the territory to which the product was exported.

I gave two examples only of direct restraint of Canadian export trade, but my colleague will develop others. The understanding among these firms, that there should be no exports from Canada, was clearly expressed in a letter which Lamont du Pont, chairman of du Pont De Nemours Company, addressed to Lord McGown, chairman of Imperial Chemical Industries, on December 11, 1933:

> If the above is correct, it seems to us to follow directly and as a matter of course that Canadian Industries Limited shall stay in Canada, and not spread out into other countries, either by laying down plants—

And note this:

> —exporting their products, or licensing under their processes, unless both Imperial Chemical Industries and du Pont believe it is advantageous to so spread out and then only to the extent and for the time and under the conditions that Imperial Chemical Industries and du Pont agree upon.

Note that it is not to the extent to which Canada may agree it is advantageous to this country, but to the extent to which du Pont and Imperial Chemical Industries agree it is advantageous, not to this country but to themselves.

Following these instructions Canadian Industries Limited has not, in point of fact, exported from Canada, with the rare exceptions I have noted. In 1939, however, du Pont, as a special concession to Canadian Industries Limited, allowed—and note that word "allowed"—Canadian Industries Limited to export some products for a temporary period in view of the war emergency. A resolution of the du Pont executive committee, of October, a month after war broke out, 1939, sets this forth:

> Resolved further, that the foreign relations department be advised it is the feeling of the executive committee—

That is, of du Pont—

> —that Canadian Industries Limited has no right to export any products embodying shareholders' inventions, except that during the present emergency Canadian Industries Limited may be permitted to supply Imperial Chemical Industries such goods for sale in the British Empire at prices returning a satisfactory profit to Canadian Industries Limited.

Thus we have an United States board of directors deciding that a vital Canadian industry, in wartime, with assets of $75,000,000, shall not be allowed to export after the war—because the permission extends only during the war crisis. Note the words used, that Canadian Industries Limited "has no right" to export. These words are an unpardonable affront to the Canadian people. In my opinion the time has arrived when we should consider this whole question of cartels and monopolies.

Let me add this, in case someone should question what a cartel is. Some people seem to imagine that agreements between governments in connection with raw materials and food supplies are in the nature of cartels. A few days ago I looked up a number of definitions, and I could find nothing to substantiate that point of view. I did, however, copy from the Encyclopaedia of Social Sciences, a standard work not only in North America but in the English-speaking world, these definitions:

> The term cartel designates an association based upon a contractual agreement between enterprises in the same field of business which, while retaining their legal independence, associate themselves with a view to exerting a monopolistic influence upon the market. . . .
>
> Cartels may be divided into three basic types, according to methods by which they exert their influence upon the market. There are cartels whose direct object is price-fixing, cartels which aim at limitation of production or supply, cartels which operate through division of territory. . . .
>
> In general, only associations of the larger, independent enterprises are designated as cartels.

To-day the world is faced with a revival of some of these great international cartels. They are not dead; they are only sleeping. This organization had the very closest contacts with the German chemical industry. Indeed, if one went into the whole cartel set-up—and I have not the time this afternoon to do it—of its history, he would find that before and during the last war, while apparently it slept, and in the days of peace, I believe right up to the present time, the cartel's assets were carried by these organizations as assets on the right side of the ledger. They will be ready to act when the war ends because of their control of patents and other assets.

My time is up, but I should like to add just a word. We in this house ought to take action regarding the problem of patents. Through the control of patents some of these great international cartels have built up monopolies and have thwarted the progress of industry and the safety of our people. The time is long past when we should have tackled this problem, and the last thing parliament should have done is what I believe it has done, namely, strengthened the power of monopolies and cartels in the midst of the present war emergency.

Mr. HOWE: Mr. Chairman, I think I should make a few remarks at this time about the statement of my hon. friend. He has discussed the activities of Canadian Industries Limited and has tried to associate them with the Department of Munitions and Supply and Canada's war effort. He made the statement that we dealt not only with Canadian Industries Limited but with Defence Industries Limited, and I should like to make clear just why that was done.

The firms which make a business of producing explosives and certain chemicals allied with the manufacture of explosives have been through a war. They were bitterly attacked after the last war as being war profiteers. I did not want war profiteers in this country and I may say in all fairness that Canadian Industries Limited did not want to be classified as war profiteers. Therefore we had a discussion before any contracts were entered into with Canadian Industries Limited, and by mutual agreement it was decided that the government would have the benefit of the engineers and other personnel of Canadian Industries Limited, of the many patents and industrial processes owned by the company and of the knowledge accumulated by the company over the years, without involving the affairs of the department in any way with the peace-time business of the company.

Therefore a corporation was formed called Defence Industries Limited. This corporation was given, by Canadian Industries Limited, a capital of $1,000,000 which was thought to be sufficient to pay its running expenses. It was agreed that any business undertaken by my department would be with Defence Industries Limited, and that the profits of contracts with Munitions and Supply would be segregated and thus be subject to taxation, examination and investigation. I intend to deal with the remarks of my hon. friend about the cartel to which he referred, but I wish to make it clear first that this department has had no business with any cartel. It has dealt purely with Defence Industries Limited, which is a management company. I saw a statement in the newspapers a few weeks ago giving the profits and balance sheet of Defence Industries Limited. When I thought of the vast volume of business handled for the department by that management company, I was amazed at the modesty of the profits shown. I shall produce the statement in the committee and be glad to discuss this later on. I may say that I did not expect this discussion and therefore have not the proper data in hand to carry it through.

My hon. friend spoke of handling expenditures of $600,000,000. I am not sure that he saw the document which was tabled recently in the house, namely the report on the expansion of industrial capacity in Canada. This shows that Defence Industries Limited has handled the engineering, supervised the construction and is directing the operation of plants to the equivalent of approximately $100,000,000. The engineering skill required to build these plants was not available elsewhere. Not to have used the skill of this company would have prevented the production of explosives in this country. There was just no other skill to turn to for that experience.

All the patents of the company were turned in at cost. The only concession was that where special skills were used and where plants were built in expansion of this industry, which in peace time is rather small, the patents and the plants would be used only for the production of military explosives. My department was not interested in anything else, and we saw no objection to including a provision—I think it is in one or two contracts—to the effect that the plant would be used only for the production of military explosives. This does not prevent units of equipment from being used for any other purpose, when removed from the plant, and it does not interfere in any way with ownership by the government of the plant and its equipment.

So much for explosives. I judge from the expressions of horror used by my hon. friend in connection with Canadian Industries Limited and its affiliates that if he had been in my place he would not have done as I did. I think he is agreeing with that now. There was no option, and I think the procedure adopted was perfectly legitimate and proper.

There were certain chemicals needed in connection with which Canadian Industries Limited controlled the existing patents. Therefore again we called on Defence Industries Limited to furnish the engineering, supervise the construction and act as operators for the government. The only concession for the use of the patents was that, if and when the government wishes to sell the plant, it would be offered to Canadian Industries Limited, at a price at which the government was willing to sell, for a period of sixty days. That concession does not interfere in any way with the government getting full value for the plant, or a value which it believes is reasonable. The offer is made to Canadian Industries Limited, and is kept open for sixty days. If Canadian Industries Limited do not wish to purchase at the price asked, the government is then free to sell to anyone else at the same or a higher price. I might

point out that the government is not under any obligation to sell the plant to any one. That is the only compensation given to Canadian Industries Limited for the free use of all the patents of that company applying to that particular industry. I do not think any undertaking will be found in those contracts which will not commend itself to hon. members of this house at this time.

Our chemical programme was very important. We did not turn to Canadian Industries Limited where other sources of information were available. It will be noted on page 3 that we dealt with other chemical firms in manner similar to that with which we dealt with Dominion Industries Limited. There was McDonald chemicals, Miner Rubber Company, Naugatuck Chemicals Limited, Nichols Chemical Company, Limited, St. Maurice Chemicals Company, Limited, Shawinigan Chemicals, Limited, Shell Oil Company of Canada, Stormont Chemicals, Limited, and the Welland Chemical Works Limited. The combined dealings with other chemical companies were probably more extensive than our dealings in the chemical field with Defence Industries Limited. We got help where we could. We in no way favoured Defence Industries Limited because we wished to contribute in any way to the concentration of industries, or to the promotion of cartels. The urgency was great. We went to the firms best able to do a job for the department, in putting up a plant to produce a product needed for the war and to do it as efficiently as possible. If any money of the department has been well spent, I think the money spent in chemicals and explosives has been well spent. I think the price of our product, and its quality, and the surety with which it was brought into production, have not been equalled in any other country of the world. We have a grand story to tell of our output of chemicals and explosives to meet urgent war needs.

I might point out that Canadian Industries Limited is a Canadian corporation subject to Canadian laws. Its balance sheets are published for all to read. It has many Canadian shareholders. The prices of all its securities are quoted on Canadian markets every day. My hon. friend says that from eighty-five to ninety per cent of the company is owned by two firms. I think he is mistaken there. I think his proportion is much too high. I am not sure about that, because I have never interested myself in that phase of the company for, as I say, we have had practically no direct dealings with C.I.L. in the course of the war.

I do not favour cartels. I believe that the cartel is a relic of the past that is rapidly disappearing. I wholly agree with its disappearance. I believe that the disappearance of the cartel will be a benefit to industry as a whole. Canada has been singularly free from cartels. But let me say this. My hon. friend has attacked in this house two companies by name, one the Aluminum Company of Canada, and the other Defence Industries—

Mr. COLDWELL: Canadian Industries Limited.

Mr. HOWE: I am speaking more particularly of its subsidiary which has worked for the department. I wish to say this, that without those two firms in this country Canada's war effort would have been a very pale and insignificant thing. I suggest to my hon. friend that there is a time and place for all things. I have no objection to his attacks on cartels, but it seems to me that the time for those attacks should be a time when the defence of the country and perhaps the future of Canada and of its people are not so greatly dependent upon their skills. I read with amazement that, in the United States, in the middle of the war, time has been taken out to undertake a prosecution of firms there which are playing such a tremendous part in the war and the crippling of which would have such a tremendously damaging effect on the war effort.

Mr. DOUGLAS (Weyburn): Perhaps they are fighting for democracy over there.

Mr. HOWE: Perhaps they are. But one battle at a time. My hon. friends fight every battle in this house except the battle that Canada is fighting on the fronts abroad.

Mr. DOUGLAS (Weyburn): Nobody knows better than the minister that that is not true.

Mr. HOWE: Perhaps that was an overstatement. Nevertheless I am fighting only one battle at a time, and everything I do is directed toward one objective, namely, to obtain the munitions of war that are required in this struggle and to obtain them as efficiently and in as good quantity as Canada is capable of providing them.

Mr. COLDWELL: We believe that.

Mr. HOWE: I am sure you do. I have used the instruments at hand and I think our choice of instruments on the whole has been very satisfactory. We have had very few disappointments in our munitions programme. We had these two instruments at hand, and whatever their history has been in the past, Canada has been very fortunate in having at her disposal the wealth of information, and the wealth of skills, of these two instruments in a time of great peril.

Mrs. NIELSEN: Mr. Chairman, the report which was made by the minister covered so many things—the aircraft programme, communications, oil, rubber, explosives and many other matters—that I realize his report had to be a lengthy one. But even so he did not cover in great detail the various items which he mentioned. It was not possible for him to do so; it would have taken perhaps days if he had. But as it is a year now since we had a discussion in this house on the production of synthetic rubber, perhaps it would be permissible to ask the minister to give us a little more information on this subject than he did in his report.

I am one of those who realize the tremendous urgency and the dire necessity which faced the minister at the beginning of this war when suddenly our supplies of raw rubber were cut off and it became necessary for him at any cost to produce this essential part of our war equipment. I understand perfectly well, in the conflict of ideas which were presented to the minister, the difficulty he must have had in making up his mind at that time as to which might be the better source from which to obtain rubber. But it is some time since we had a discussion on this question, and I believe the minister is now in a position to tell us a little more about this whole matter.

Synthetic rubber and the making of synthetic rubber are of importance to us as a country. I speak as a western member interested in the making of synthetic rubber from grain alcohol, but I do not consider that I am speaking for any sectional interest because it would be to the benefit of the nation at large if we were able to keep up with the rest of the world in the production of cheap rubber for all the various uses to which it will be put after the war is over.

The minister said the other day that we had won the race so far as the production of rubber is concerned. That is a fine statement and I am glad to know that that is true, but I believe that the minister could tell us more about the possibility of rubber production in the future. Western people, the farming people of the prairies, have had enough information given to them so far to make them feel that there are vast possibilities in the production of alcohol from grain to be used for the production of synthetic rubber. There is also the possibility that in certain areas of Canada we could produce a type of dandelion similar to the Russian type for the production of latex, from which we would obtain real rubber to be used in conjunction with synthetic rubber in making tires and other rubber articles of a very fine type.

[Mr. Howe.]

I was sent recently a copy of a report from the Saskatchewan industrial development board, containing a speech by Doctor Paul Kolachov, technical counsellor of Joseph E. Seagram and Sons, Inc., at the fourth mid-American chemurgic conference at Cincinnati, Ohio, on September 29, 1943. Doctor Kolachov is recognized as one of the most renowned experts in this particular field of scientific research, and what he says is listened to with great attention. Here is a short paragraph from his speech:

> The fermentation industry shows unusual possibilities, mainly for two reasons. First, as we have already mentioned, many different compounds can be produced; alcohol, ethyl and butyl, 2,3 butylene glycol, acids, non-nitrogenous organic compounds; second, by utilizing farm products it draws its raw materials from an inexhaustible source. This second advantage has great significance for those of us who are interested in bettering the position of the farmer by utilizing his raw materials in industry. Industries based on the fermentation process have unlimited possibilities of growth; to further this growth will bring prosperity to the farmer such as he has never seen before, for he will be cooperating with the factory in furnishing essential raw materials. With industry playing such a large part in the activities of every leading nation the farmer's position has descended to that of an unrewarded house servant of the people, one who fills the icebox and the cupboard with the food staples. Unless he begins to take his place in the industrial life of these nations, his position will lessen in importance in the ratio to which industry's position increases in importance.

When Doctor Kolachov was lecturing in this country early this year he predicted that one of the products which would be obtained from the distillation of wheat alcohol was motor fuel, and that quite soon in the United States they would be using one hundred per cent wheat alcohol as motor fuel.

These things are of intense interest to our western people. Opinions expressed by authorities in the United States and in this country indicate that the minister has to-day further information which he is capable of giving us and that it is quite possible he may have to revise the opinion which he expressed last year during the discussion of this same subject. At that time he said that it would not be feasible to use grain unless the grain could be had at a price of around twenty-five cents a bushel, which all western members will readily agree is far too low to be considered by our farmers. Some hon. members may remember that in the debate last year I quoted from one Canadian scientist who had written for popular consumption a pamphlet in which he stated quite a little of interest to western grain producers. It was entitled "That Man May Prosper," by Mr. Dyson Carter, M.Sc., A.C.I.C., F.C.A.S.—to give him his full title. Recently

Mr. Carter has been speaking again in western Canada. I have here an address delivered by him to the annual convention of the Consumers' Cooperative Refineries Limited, on January 12, 1944. He urges in the speech which he delivered before that cooperative society that we do more to investigate the possibilities of the chemurgic industry, and he places as one of the first considerations the production of alcohol from grain. Toward the end of this speech he says:

Let me point out that if we mix farm alcohol—

That is alcohol produced from grain.

—with our gasoline, to an extent of only 15 per cent of the total fuel, this would create an industrial market for 75,000,000 bushels of industrial wheat per year! And at the same time, using the new processes, it would give us a large quantity of the highest quality protein, as a by-product for stock or human feeding.

The minister did indicate, when he made his report, that the rubber which was being produced in the plant at Sarnia had not yet produced a tire which was completely satisfactory. I quote from the report of his speech in *Hansard*, page 1705:

A word about the quality of these tires. It is not possible yet to say that a synthetic tire matches the quality of a raw rubber tire. This department is conducting very extensive tests of synthetic tires, in conjunction with the United States army. The data obtained from these tests will, we hope, help to improve the quality of synthetic tires. So far as we can now estimate, the synthetic tire is about 80 per cent as efficient as a raw rubber tire. It is still necessary to use a certain proportion of natural rubber in the fabrication of tires for heavy duty and high speed operation.

This would indicate that there is still need of a great deal of research in this particular matter and that the minister himself is far from satisfied with the type of rubber which is being produced by the plant at Sarnia.

It does seem that, since the war has been going on for such a while, we should by this time have taken advantage of any and all information we could get from our allies who have been able to produce sufficient good rubber for their use and who have to all intents and purposes, so far as we can see, made very good use of it. As is already known, the Soviet Union is producing rubber to fill all its needs and is not dependent upon supplies of raw rubber from any source other than its own production, that is from grain and the Russian dandelion. We have often in the past spoken of our "good neighbour to the south". To-day we are in a position also to speak about " our good neighbour to the north," who has been ready and willing to give us such assistance as we need in learning the technique of producing for ourselves good rubber from both the dandelion plant and our grains. There are some people who seem to have circulated the idea that the Soviet Union is not willing to give away her secrets. That, I believe, is incorrect. As soon as the United States of America wished to have some seed of the Russian dandelion for experimental purposes, the Soviet Union flew the seed to the United States immediately in one of its biggest bomber planes. That does not indicate an anxiety to hide secrets of rubber production. I am inclined to think we have not taken full advantage of the assistance the Soviet Union is able to give us on this question. The minister will be in a position to explain more about this, but the fact remains that in the Soviet Union they have been so satisfied with the result of experiments with the production of real rubber from the latex which is derived from the roots of the dandelion that they have at present over two and one-half million acres devoted to the growing of this root. From that, together with synthetic rubber, they have produced enough rubber tires for the tanks and guns which are rolling the Red army on to victory.

I remember that last year, when the minister was speaking about the production of rubber from the latex of the dandelion root, he remarked that he would hesitate to say how many hundreds of square miles would be needed to produce a ton of rubber. I am a little surprised at a statement like that; I was at the time; and I think the minister should tell us why he suggested that hundreds of square miles of land would be needed to produce a ton of rubber, even under Canadian conditions. It seems to me that, to say the least, he rather overstated the position. It is not necessary to devote hundreds of square miles to the production of a ton of rubber if we engage, as we can do, in the production of the Russian dandelion.

According to the statement of Mr. Carter, in the Soviet Union roughly 8,000 pounds of roots are obtained from one acre of land, and the rubber content of these roots is roughly about twelve per cent, while some of it goes as high as twenty per cent. This is not my argument; it is Mr. Carter's. He says that, if we were to take full advantage of all the information which the Soviet Union could give us, he believes it would be possible for us, with thorough cultivation, to get at least an average of about 6,000 lbs. of roots from one acre of good Canadian soil, and that it might be possible for us, by careful cultivation and a full understanding of what is needed for the growing of the plant, to produce a root which would have at least ten per cent of rubber content. He then explains that 600 pounds of

rubber to one acre would be produced, and even if we gave the farmers as low as ten cents a pound it would give them roughly $60 an acre, which is equal to thirty bushels of wheat at $2 a bushel, something which they have not had for a long time.

Now that we are to have an industrial bank which will lend money to enterprises, co-operative enterprises, it would appear that such an enterprise as this would be like a blood transfusion to western Canada.

I would quote again from Mr. Dyson Carter's address. Continuing on the question with reference to the price that might be obtained, he says:

> Now synthetic rubber being produced to-day from petroleum costs about 30 cents per pound to manufacture. Therefore the factories which brought the rubber dandelion root and extracted the rubber latex from it (one factory or several which would be built up in the west) would get the equivalent of $180 per acre for the rubber crop. (30 cents a pound for 600 pounds is $180.) This is a very large "spread" between the price of 10 cents paid to the farmer and 30 cents paid to the manufacturer. It means $60 an acre to the farmer, $180 to the manufacturer.

That surely should be a good enough profit for any cooperative or even small private industry in which to invest its money.

> But we might as well be realistic. What farmer would complain about getting $60 an acre for any crop? And remember, if we could raise this crop as farmers do, we would get over 8,000 pounds per acre of 12 per cent rubber, or about 1,000 pounds of rubber per acre. At 10 cents a pound that would amount to $100 an acre. With the manufacturer getting $300 per acre for the finished rubber.

I hope that when the minister answers me, as I trust he will, he will criticize any statement made by Mr. Carter if it is not correct, because I am not in a position to know.

These figures may be a little more of guesswork than perhaps the minister would care to indulge in, but if he is not satisfied with them, I should like him to give us something more realistic, because I know our western people are following this question. They want to know and they have a right to know. It seems that there are unlimited possibilities with natural rubber so produced in this country to be used together with synthetic rubber, which would make a tire far more satisfactory than the type now produced.

I understand that some of the interests in the country already in control of rubber supplies might be a little alarmed at this new production, but we cannot sacrifice the interests of the nation at large to any sectional interest. The claims of those who control the rubber industry must be subordinated to the claims of the nation if it is possible for us to produce rubber in these other ways. I believe

[Mrs. Nielsen.]

that some startling new methods are now known as a result of research in producing alcohol from wheat, and the statement made by the minister last year, in which he said that a price of twenty-five cents a bushel was all that could be paid for wheat to be used in the process, might be revised. To-day, owing to the new technique in producing alcohol from grain, which has shortened the process and made it quite different from what it was a year ago, when we had the minister's last report, he might consider raising the price for grain to be paid to the farmer for industrial processes such as this.

Let me quote once more from Mr. Carter's speech delivered on January 4.

> Still something more is to be said in regard to alcohol from wheat. Every farmer knows that there are two principal constituents in wheat, the starch and the protein. In the old alcohol processes, only the starch was used to make alcohol. The protein passed through the process, coming out in the end as waste product known as "distiller's slops". This material caused foaming in the stills, the tanks, and other equipment. It led to waste and to increased cost of production. But now chemists of the United States department of agriculture have developed a new process to take care of the wheat protein. This process extracts the protein from the mash before it is converted into alcohol. The process is extremely cheap. The protein is extracted in a very pure form, which is of highest nutritional value even for human beings. Experts say that it can be sold at prices from 10 to 30 cents a pound. It has become of considerable importance in the feeding problem after the war, and will be of greater importance after the war, because here we have a source of very concentrated protein food.

I wish the minister would tell us whether in the experiments carried out in this country in the growing of dandelion root and in the direction of obtaining alcohol from grain we have solicited all the help which the Soviet Union is willing to give us in this direction, or whether we have merely gone on our own and allowed our own research departments to go over the same ground which had been travelled several years previously by the experts of the Soviet Union, when we might have had the benefit of their researches to help us to speed up the process in Canada. Will the minister tell us whether the new discoveries with regard to the hastening and cheapening of the process in obtaining alcohol from wheat do not now make it a feasible way of obtaining alcohol, and therefore is it not feasible for us in western Canada to start industries to obtain industrial alcohol?

Third, will the minister tell us how the rubber made in the Sarnia plant compares with the rubber which is made in the United States from grain alcohol? I should also like to know if it is the government's intention

to set up any plant in our wheat growing areas as a government project, or whether the government would prefer to leave this project to some of the western cooperatives.

I have no quarrel with what the minister has done in trying to supply the nation with rubber. Indeed, I can only compliment him upon the way in which he has tried to tackle a problem which at the beginning of the war seemed a colossus, something terrific which we had to face when we were left practically without supplies of this valuable commodity. I do feel that to-day, in view of the fact that new discoveries have been made, we should not, merely because we have a plant in Sarnia which is making synthetic rubber, refuse to investigate the full possibilities of these other new ways of producing rubber. After all, our job in the future is to produce rubber as cheaply as possible. Not only that, but if we can produce it from the grains we have, the possibility from the various by-products, which in turn would enrich the soil and give our farmers a chance to produce in western Canada an industry which would be of value to the whole nation and also enrich the land, would place agriculture in all its other phases in a far better position to carry on in the future. It would give new life to western industry. It would open up a new era, and the hopes of our western farmers would begin to soar as they saw the possibilities opening up before them when industrial raw materials as well as food could be the product of our western farms.

I have brought this matter to the attention of the committee because I feel sincerely and honestly about it. As I stated at the beginning, it is not a sectional interest of the western people, although it does affect us considerably. As a nation we cannot afford to fall behind other nations. Both the Soviet Union and the United States, our neighbours to the south and to the north, are far ahead of us in the production of rubber; and I should like the minister to give the committee a more detailed report of what is being done and what he hopes to do in this field.

Mr. HOWE: I wish to compliment my hon. friend upon the very fair way in which she has placed before the committee the questions that people are asking with respect to the production of rubber from grains, as compared with its production from a petroleum base. I have considerably more experience now than when I spoke last time with reference to producing alcohol from grain. From the commencement of the manufacture of artificial rubber I think fifty per cent of all the alcohol produced at our distilleries has been exported to the United States for the manufacture of butadiene. For a time we were making our rubber from butadiene manufactured from alcohol, for the reason that it took much longer to bring in the plants based on petroleum than the plants based on alcohol. To-day we are making rubber from our own butadiene made from petroleum. The situation is very much the same as I stated when I spoke last in this committee. It costs about three and one-third times more to make butadiene from wheat than from petroleum. To-day alcohol made from wheat costs about ninety cents a gallon. Alcohol made from petroleum costs about twenty cents a gallon. These are approximate figures.

Mr. DOUGLAS (Weyburn): They are based on what grade of wheat?

Mr. HOWE: It is wheat that is bought to-day by the distillers for the purpose of making industrial alcohol for conversion into rubber. I am not sure what grade of wheat they use, but I am certain that they are trying to make it as cheaply as they can. However, that is the situation.

My hon. friend has referred to improvements in the process of distilling alcohol from grain; but I think we must revert to the fundamental fact, namely, that no one has discovered a way of getting more than two gallons of alcohol from one bushel of wheat. That is the basic difficulty. On top of that, of course, is the conversion cost. While the conversion cost may be cut, I would point out that if wheat at the distillery costs $1.40 a bushel, we have a basic cost of seventy cents for a gallon of alcohol. That is fixed and unchangeable, as far as I can find out, and on top of that, of course, is the cost of conversion. I said that if wheat cost $1.40 a bushel at the distillery, that in itself would mean seventy cents a gallon for the alcohol. It actually costs ninety cents; therefore there is a conversion charge of around twenty cents a gallon involved. Perhaps by better methods that could be cut to ten cents a gallon, but my hon. friend will appreciate that even then the cost of alcohol from wheat is vastly greater than the cost of alcohol from petroleum products. Now, what about the quality of the product?

Mr. DOUGLAS (Weyburn): Before the minister leaves that point may I ask him a question? As I understood the minister, he gave a figure for making alcohol from wheat and from petroleum products. Would he have the figures as to what the final rubber costs are from wheat and from petroleum products?

Mr. HOWE: I shall trace that through if my hon. friend wishes. I cannot give him the costs of butadiene because I have not them at my finger-tips. The costs of butadiene, which is one of the two basic products of rubber is about one-third of the cost of butadiene made from wheat alcohol. I may say that wheat is not used in the United States. Corn is the base there, if it is available. It makes a cheaper alcohol. Ordinarily a still cheaper alcohol can be made from molasses. Alcohol is alcohol and butadiene is butadiene. It does not make any difference what you make butadiene from. Butadiene is a chemical, and when it has the same degree of purity it is exactly the same regardless of the source of the manufacture.

Mr. DOUGLAS (Weyburn): I understand that at Sarnia they made synthetic rubber from wheat in the early stages. I wondered if the minister had the figures with him.

Mr. HOWE: Yes, they made it from alcohol, but in starting up a plant it is very difficult to get costs that mean very much. Rubber made at Sarnia to-day is slightly below the cost of the imported rubber. The import price of rubber is about forty-one cents a pound. According to the last report I received, our costs are running around forty cents a pound to-day; but they are dropping very rapidly and we expect within a matter of weeks to get down to a cost of approximately twenty cents a pound. We hope ultimately to arrive at a cost of around sixteen to seventeen cents a pound.

Mr. DOUGLAS (Weyburn): That is less than the price of raw rubber before the war?

Mr. HOWE: Yes, and much less than raw rubber to-day. The average price of raw rubber before the war was roughly fifteen cents a pound. Frequently it went as high as twenty-five cents a pound. Of course, that is rubber at the seaboard. We expect our rubber to compete freely with natural rubber and perhaps have a price advantage, if we can read the cost of rubber from the past as the cost of rubber in the future.

As I say, one ingredient of rubber is butadiene. The other is styrene. We make both products on the same property. We make butadiene at our Sarnia plant; on the same property we make our styrene, and on the same property we combine the two together into rubber through a process known as polymerization. In that we used a certain amount of dandelion. As my hon. friend may know, through the Department of Agriculture we encouraged the planting of dandelions for that purpose at about the time that we started the synthetic rubber plant, and we are using dandelions in our process to-day. Unfortunately we have not enough to be much of a factor, but the use of dandelions is helpful in the polymerization process. It is said to help the process of converting the basic materials into the finished rubber. However, I do not think anyone has made rubber wholly from dandelions commercially. I asked our experts what the costs would be and they estimated about $10 a pound. They admitted it could be done, but they said that the cost of making rubber from dandelions alone would amount to about $10 a pound in the finished product, which, of course, puts it out of the way as a commercially feasible process.

Mr. FRASER (Peterborough West): What about milkweed?

Mr. HOWE: From the point of view of use in making rubber the two products are very much the same. I may say that we are having some difficulty in getting our farmers to cultivate milkweed. We paid them for their crop and I think they found it was not a very attractive element in farming. Perhaps the Minister of Agriculture can give more data on that than I can from the point of view of milkweed and dandelions as a crop.

As to the quality of the rubber, I think our rubber is as good as any made on this continent, and perhaps as good as any made anywhere. It is recognized everywhere as a first-class grade of synthetic rubber. The difficulty we are having in manufacturing tires is that of processing the rubber that we have. I suppose it took ten or twelve years for the industry to make, from natural rubber, the tires that were being sold just before the war. As many of us will remember, the tires we used to buy ten years ago were guaranteed for perhaps only 1,000 or 2,000 miles, but just before the war we expected a tire to last for 20,000 or 25,000 miles.

We have been going through that process with tires made from synthetic rubber. Great strides have been made. I said in my report that to-day tires could be guaranteed as eighty per cent as good, as respects wearing qualities, as tires made from crude rubber. That is a marked advance in only a matter of months. Perhaps I was a little conservative in my statement as it would apply to the type of tires used on ordinary passenger cars. Many of our tests show that the same mileage can be obtained from that type of tire, using synthetic rubber, as can be obtained from the same tire built of natural rubber.

The difficulty is in connection with the heavy-duty tire the big truck tire and particularly those very large tires used in connection with mobile artillery.

Mr. STIRLING: How do costs compare?

Mr. HOWE: I shall talk about quality first. The difficulty is that for the early tires built, it was found that in driving at high speed and with heavy loads, the tires heated, and deteriorated through the action of the heat on the rubber. Even to-day, we are using about twenty per cent natural rubber in the biggest artillery tires, and only eighty per cent synthetic rubber.

Mr. ADAMSON: That is, virgin rubber.

Mr. HOWE: Twenty per cent natural rubber, and eighty per cent synthetic.

Mr. ADAMSON: Not reclaimed rubber?

Mr. HOWE: No; reclaimed is not used in tires at all. Tires, however, have been greatly improved. The natural rubber tire used cotton fabric, but to-day in the heavy-duty synthetic tire we are using a celanese fabric which is stronger than cotton, and permits us to carry the same loads with thinner tires. This has the effect of reducing heating.

So that I believe it can be said that we are well on the road to having a satisfactory solution of our rubber problem. I have never undertaken a war project which has caused me as much worry and concern as did that of synthetic rubber. At the time we undertook the project, no synthetic rubber had been made on this continent, outside of laboratories. We were very much in the dark as to costs, and we were not at all sure that sufficient engineering data was available to allow us to work out the process. I went to my colleagues and asked for an appropriation of $45,000,000 to undertake this project. I had to point out that our stock-pile of crude rubber at that time could last for only a matter of months, that the chances of getting more were not good, and that the world stock-pile of rubber would run out in a matter of months. I put it to them as a race against time, with the possibility of disaster if the project did not turn out well.

The plant is now completed, and getting close to full operation. We have had no serious disappointments in connection with it. Even though it was rushed through in winter months, the cost was within ten per cent of the estimate I placed before my colleagues. It was brought in pretty much at the estimated time, and the product is first class. It happens that ours is the only wholly integrated rubber plant built on this continent, where all the products are made, and the rubber completed, on the same lot. That has had the effect of cutting down our costs and, from a comparison of data supplied by officers in charge of operations in the United States, I find that our costs are favourable. I believe we have a splendid industry and, for the chemists, a tremendously interesting one. At some stage in the process, simply by turning a petcock one can draw off almost every element of petroleum. The various elements of petroleum are the basic substances from which a great variety of products is made. I believe that not only will this plant continue in the future to make rubber, but it will be the centre of a great industry and the source of the production of a great variety of other products.

I believe it has been perhaps the most interesting project of the war, and one which will make a contribution to Canada's future industrial progress as great as that of any we have undertaken. I would hope that any hon. member who finds himself in the vicinity of Sarnia would take the opportunity of visiting the plant. I am sure he would find it an interesting and inspiring experience.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. DIEFENBAKER: Mr. Chairman, there are certain matters about which I should like some information and which were referred to this afternoon by the parliamentary assistant to the minister. The first is in connection with the renegotiation of contracts and I wish to know the number of contracts that have been renegotiated and the amount of the savings thereby affected. There is a further matter in connection with the cancellation of war contracts. The minister dealt with this matter and he is reported on page 1692 of *Hansard* as follows:

> In many cases, when orders have been cancelled we have been able to convert the manufacturing capacity to other uses. But there will always be certain capacity which is single purpose, and is not suitable for other types of manufacture. Reductions or cancellations of programme in such single-purpose plants mean reductions in personnel.

What factories have been closed down as result of the cancellation of agreements, and what has been done with the employees of those factories?

I come now to the general position in regard to controls and controllers. The minister dealt

with the production of instruments and communication equipment, and, as reported on page 1693 of *Hansard,* he said:

> The production of instruments and communication equipment in dollar cost was 180 million in 1943, as compared with 84 million dollars in 1942.

And again:

> This continues to be an expanding programme.

Last Saturday I had an opportunity of visiting certain aircraft and instrument factories in Toronto, and I was able to see the development that has taken pace during the past year. I wish to refer particularly to the Sutton-Horsley Company Limited, in connection with which a controller was appointed on March 12, 1943. The preamble of P.C. 1980 with reference to this company states:

> The Sutton-Horsley Company Limited, which operates a plant in the city of Toronto, is engaged in the manufacture of special types of aircraft parts and accessories required for use in the production of aircraft for His Majesty.

It states that a preliminary investigation of this plant was made when it was ascertained that the production of aircraft parts and accessories was being seriously handicapped and that such production might be seriously interrupted or entirely stopped unless financial and managerial assistance was given to the company. The order in council goes on to point out that a controller is being appointed to look after the business in the interests of increasing the production of that firm and that Robert James Pinchin of Midland, Ontario, was being appointed as controller. Apparently the production of this factory is needed or the minister would not have stated that the production of instruments and the like is an expanding programme.

If my information is correct the conditions at this plant have not been any too good since the controller was appointed. I understand that the number of employees has decreased from 1,200 to less than 400 and that lay-offs are continuing from day to day. A rumour is being circulated that the place is to be closed down within a period of time. What is the situation with regard to the Sutton-Horsley Company? I should also like to know how much money was advanced by the government by way of capital assistance or otherwise in order to encourage the production of aircraft accessories which were regarded as being so necessary in March last that a change was brought about in the set-up of the company. Why has there been this reduction in the number of employees? Has the production of this plant increased or decreased since March, 1943? What course does the government intend to take in order to ensure production of these articles which are so necessary in connection with our aircraft production?

I pass now to another matter dealt with by the minister, the production of wood fuel, and I intend to submit an example of what I consider gross inefficiency on the part of those in charge. The minister dealt with this matter on page 1702 of *Hansard,* when he said:

> Wood fuel control was established to stimulate production, and to supervise the distribution of wood, in order that there might be no hardship during the present winter.

And again:

> In addition to the production subsidy, transportation subsidies have also been paid, in order to facilitate the movement of wood to probable distressed areas. The wood fuel controller also initiated a number of special cutting projects, as a means of building up government-owned banks of wood fuel, which could be held in reserve and shipped to any areas where distress was imminent.

I ask the minister to explain this set-up. I know the circumstances under which wood fuel control was established. I am going to give one example and then I shall ask the minister to explain the whole position, giving the number of camps established, the results that flowed therefrom and the cost of producing the wood fuel in each area.

I deal now with the situation particularly at the head of the lakes. There, after the appointment of a controller, plans were proceeded with for taking out 75,000 cords of fuel wood. Directives were given to those who were to take out this wood, and ceiling prices were established. There was a ceiling price at the lakes, a different ceiling price at Winnipeg, and further west still another ceiling price. The government, through the controller, directed these firms at the head of the lakes to get out fuel wood, the prices paid to the operators being as follows: for poplar, $7.50; pine, $8.25; tamarack and birch, $10.50. Strangely enough, the Manitoba ceiling price for the same wood, including the one dollar subsidy, was $5.50 for poplar, $6.25 for pine and $7.25 for tamarack.

The freight rate on this wood to the city of Winnipeg was from sixteen to twenty-one cents per 100 pounds. This wood could not be used until it was reasonably dry. A cord of green poplar weighs 5,400 pounds and, when dry, about 2,500 pounds. A cord of birch weighs 5,000 to 6,000 pounds when green, and about half that when it is dried out.

Winnipeg had sufficient fuel. In the province of Manitoba fuel was available at a shipping rate of 4½ to 7 cents per 100 pounds. But what happened a few weeks ago? An order came from the controller that wood

shall be taken from the head of the lakes production. So what did they do? They shipped the wood to Winnipeg. I have given the initial price of the wood. Take poplar, for instance. They did not wait to ship it until it was dry in order to save freight rates. The wood was not needed in Winnipeg and it could have been kept in a stock-pile at the head of the lakes until it could be used. The fuel dealers of Winnipeg informed the controller that there was no market there for the wood. But that did not matter. The wood had to be sold in Winnipeg. Poplar cost $7.50 a cord to produce, and they shipped it to Winnipeg and paid an $8 freight rate. It cost $15.50 a cord to produce and deliver in Winnipeg. That does not take into account administrative costs, and then the government sold it in Winnipeg at $5.15 a cord.

Mr. HOWE: Does my hon. friend recall the day when a motion was made to adjourn the house to discuss a matter of great public emergency, when we were told that the people of the country would freeze for lack of fuel? May I tell him that this last winter no one in Canada went cold for lack of fuel. Does he think that just the usual means were required to overcome this great national emergency which was painted by his party, or is his party in the habit of moving to adjourn the house in a great national emergency when there is no emergency at all?

Mr. DIEFENBAKER: I do not criticize the minister for getting the wood out.

Mr. HOWE: Thank God for that.

Mr. DIEFENBAKER: But I do not thank the Deity that this wood was shipped to Winnipeg, paying an $8 freight rate, when it could have been stored at the head of the lakes until needed. That is why I criticize the government. If they had left the wood at the head of the lakes, all that it would have cost would have been $7.50 stored, until it was needed and was dry. Instead of so much moisture being hauled to Winnipeg, the wood could have been left at the head of the lakes until it was needed.

Mr. HOWE: It seemed important to my hon. friend, when he moved to adjourn the house, that there be enough wood to keep the people from freezing. A lot of the wood was left at the head of the lakes, but we shipped a fair amount to Winnipeg in case the weather turned cold. We are not judges of the weather; we cannot tell what the weather will be next month. Let him remember that, and let him tell me how much surplus fuel there is in Winnipeg to-day. He is the greatest second guesser in the house.

Mr. DIEFENBAKER: After all, when the minister speaks I listen to him, and he can answer me afterwards, as I do him. Just because the minister realizes that $800,000 or thereabouts was thrown away, naturally he becomes annoyed. He was warned about this, and his controller was warned that the wood was not needed in Winnipeg, that wood could have been obtained in Manitoba at a freight rate at 4½ to 7 cents. But the order of the controller to the people of Winnipeg was: You have to take 12,500 cords from the head of the lakes, regardless of your wishes or your needs. I do not criticize the government or the minister for any efforts that were made to get out the wood. But the department had it stored at the head of the lakes, and it was not needed in Winnipeg at that time. The freight rate to Winnipeg would have been just exactly one-half if the wood had been left until dry in the stock-pile at the head of the lakes to meet emergencies. But for some reason best known to the controller, and acting against the advice of those he consulted with, against the advice he received from those with whom he came in contact in the trade, he went ahead as controllers sometimes do, regardless of the treasury of Canada, and in that one small item the people of Canada have lost a matter of from $600,000 to $900,000.

Mr. HOWE: All right; that is a charge we will investigate and see whether $600,000 to $900,000 was lost in the Winnipeg situation. All the wood involved was not worth that much. My hon. friend is making a definite charge.

Mr. DIEFENBAKER: I am speaking of the controller.

Mr. HOWE: The hon. member is just speaking. He does not want to be taken seriously. I suggest a royal commission or a committee to inquire whether $600,000 to $900,000 was lost.

Mr. DIEFENBAKER: The minister, as ever, when faced with facts seeks refuge in truculence.

Mr. HOWE: When serious allegations are made, I ask that they be investigated. My hon. friend has made his statement and I expect him to go before a committee and prove it.

Mr. DIEFENBAKER: I am asking for information, and I am asking as to the wood situation elsewhere in Canada, for I know that if the minister will give information with regard to the cost of getting out the wood in Saskatchewan it will reveal that the

cost was very high. I do not criticize that. But I do criticize this, that instead of the wood being left in a stock-pile, it was shipped into Winnipeg at a freight rate of $8—12,500 cords—wood that cost $7.50 to produce and an $8 freight rate—and the government sells it in Winnipeg at $5.15 a cord.

Mr. ROWE: Less than the cost of production.

Mr. DIEFENBAKER: And I do not take into consideration the original cost. All this is because the controller decided not to take the advice of those who told him of the conditions that existed.

Mr. HOWE: The controller himself was a Winnipeg man incidentally, and knew the Winnipeg situation as well as anyone.

Mr. DIEFENBAKER: Yes, controllers always know more than anyone else. He knew more than the entire trade, and that is what this parliament should object to.

I will deal with another matter, which possibly the minister will also explain, in connection with the production of timber. I am just running over these matters because at the moment I am asking for information. He deals with it and, as reported in *Hansard*, at page 1703, he sets out the circumstances connected with the requirements of Great Britain and elsewhere for timber.

Last October notice came to a forestry corps unit overseas that it was to go back to Canada. These men enlisted for overseas service or service anywhere, and they were ordered to come back to Canada to produce timber. I quote from a return, sessional paper 171A, brought down in answer to a question of the hon. member for Peterborough West. Here are the questions:

1. Was the Canadian forestry corps dispatched for service in Great Britain? If so, for how long did it remain overseas?

The answer is "yes", and there is some further information.

2. How many officers and how many men received orders during September and October, 1943, to return to Canada?

The answer was:

Forty-seven officers and 1,906 other ranks. . . .

Another question:

4. Were these men of the Canadian forestry corps interviewed at Debert by selective service officials? If so, to what purpose?

Mr. HOWE: Mr. Chairman, I suggest that this has nothing to do with the estimates before us and nothing to do with my department.

Mr. GRAYDON: Is the minister going to rise continually on some point? It is not a point of order, as far as I can see.

Mr. HOWE: I rise to a point of order.

Mr. GRAYDON: The minister has risen and made a speech every two or three minutes while the hon. member for Lake Centre has been making his speech.

Mr. HOWE: He is not making a speech; he is asking a question.

Mr. GRAYDON: He is making a speech, and he is making the kind of speech that the minister finds it necessary to interrupt.

The CHAIRMAN: The minister has raised the point that the remarks made by the hon. member for Lake Centre have nothing to do with his department. I hope the committee will realize that it is impossible for the minister to answer such a question at the present time.

Mr. GRAYDON: The minister has not raised any point of order at all.

Mr. HOWE: Yes.

Mr. GRAYDON: Well, he did not make any reference to a point of order. He rose out of the blue and made some statement about the hon. member for Lake Centre. If the subject has nothing to do with his estimate he has a perfect right to raise a point of order, but he cannot rise in his place every other moment and interrupt the hon. member while he is making a statement.

Mr. HOWE: I believe any hon. member, according to the rules, has the right to make a point of order.

Mr. GRAYDON: But the minister did not do so.

Mr. HOWE: The point I make is that I have nothing to do with the forestry corps, and nothing to do with selective service. This incident of the forestry corps has nothing to do with the Department of Munitions and Supply.

Mr. DIEFENBAKER: On the point of order, Mr. Chairman, the minister set out at page 1703 of *Hansard* the circumstances connected with timber and his encouragement of the production of timber in Canada. I am proceeding to show that a certain number of forestry men, some 2,000, were brought back from England—

Some hon. MEMBERS: Order.

Mr. DIEFENBAKER: —in order to assist in timber production, and the cost of their passage was paid. Fifteen per cent found their

way into forestry; the rest either went overseas or to some other units, or were not utilized by selective service. I am pointing that out as a wasteful example in connection with the encouragement of timber production in this country. To support my argument I have to refer to the best information I can get, which is a return that was brought down to this house.

Mr. GOLDING: What department?

Mr. DIEFENBAKER: It says this:

9. How many of the Canadian forestry corps—

Mr. CHEVRIER: Mr. Chairman, on a point of order, the hon. gentleman is referring to the activities of the forestry corps. The minister has risen and said that he is not concerned with that branch nor has he had anything to do with it. My submission to you is that that part of the hon. gentleman's speech is out of order. I ask you to rule accordingly.

The CHAIRMAN: On the point of order, I state again that we must realize that we have before the committee a certain proposed resolution providing for a sum of money not exceeding $3,650 millions. The hon. member for Lake Centre is making some argument dealing with the production of lumber, which I believe can be discussed at the present time because it has been mentioned by the minister, and timber production comes under the present resolution.

Mr. HOWE: Let me say this, that no forestry corps—

Mr. GRAYDON: The Chairman has given his ruling.

Mr. ROWE: The point of order is decided. The minister is out of order.

Mr. HOWE: Certainly not.

The CHAIRMAN: The minister has the floor and I wish to hear him.

Mr. HOWE: I say that no forestry corps was ever involved in any operation of the Department of Munitions and Supply.

Mr. ROSS (Souris): Whom is the timber controller under?

Mr. HANSON (York-Sunbury): The Chairman has ruled. On the resolution the hon. member can talk about anything.

The CHAIRMAN: The minister had the right to rise and explain, as he has done.

Mr. HANSON (York-Sunbury): Not after the ruling.

Mr. GRAYDON: He can explain himself, of course; but this is after the Chairman has ruled.

Mr. CHEVRIER: The Chairman is on his feet; the hon. gentleman should sit down.

The CHAIRMAN: Of course we must realize that I am in the hands of the committee, but we are bound by the rules of discussion of the committee of the house. I was taken to task a day or two ago because I allowed the hon. member for Davenport to deal with the subject of tar sands, because the committee realized that it was absolutely out of order. I think the hon. member for Lake Centre should be allowed to proceed, keeping within the limits of the discussion at the present time.

An hon. MEMBER: Anything on the resolution.

Mr. CHEVRIER: Anything on anything.

Mr. DIEFENBAKER: Thank you, Mr. Chairman.

This just illustrates the lack of cooperation between the departments, because in the orders which were given to these men to come back to Canada it is stated:

You have returned to Canada to assist in increasing production and export to the United Kingdom of vitally needed timber.

And timber control is under the Department of Munitions and Supply. For that reason I am dealing with this matter. The minister dealt with it, and spoke in such glowing terms of the success of the production of timber that I am referring to an incident which occurred in the last three or four months and which does not do credit to the degree of cooperation that one expects between government departments. I pointed out that nearly 2,000 officers and men were brought back from overseas. Of these men there were, in category "A" 37 officers and 1,206 other ranks. These men arrived in this country in November for the purpose of increasing our timber supply, and this is how the authorities went about it. The men were interviewed by Colonel Ferguson and a representative of the timber control board, which is under the control of the minister, as well as a representative of the Department of Labour. They were advised that they were to be put to work on forestry duty. They stayed where they were for several days. Then some of them were moved out to the far west, and in the final event only fifteen per cent or thereabouts of the 2,000 men brought back to Canada found their way into forestry and the production of timber.

Mr. HOWE: Where did the rest of them go?

Mr. DIEFENBAKER: Some of them went back overseas because they did not want to be back in this country under the orders of the Department of Labour, or the timber controller either. It is a very serious matter that in time of war 2,000 men, approximately 1,300 of whom are category "A," should be brought back to assist in timber production and not be so employed. Some of the officers were placed on the reserve of officers and some of the men went overseas in other units.

These are matters as to which I want an explanation from the minister.

Mr. HOWE: Will my hon. friend explain to me what this has to do with the production of lumber in Canada?

Mr. HANSON (York-Sunbury): Everything to do with it.

Mr. DIEFENBAKER: That is what we are trying to find out, why the department should have these men brought back and their services not utilized when it was so necessary to secure an increase in forestry production in this country. Therefore, on three matters, regarding the three controllers under the minister's department—

Mr. CHEVRIER: May I ask what the hon. gentleman was reading from a moment ago?

Mr. DIEFENBAKER: I was reading from my notes.

Mr. MACKENZIE (Vancouver Centre): Pretty extensive, aren't they?

Mr. DIEFENBAKER: Here are three controllers under the minister. First, the controller—

Mr. CHEVRIER: On a point of order, the hon. gentleman, in making the statement which he did a while ago, was referring to a debate which took place in this house during this session.

Mr. HANSON (York-Sunbury): What debate?

Mr. CHEVRIER: A debate on the estimates of the Minister of National Defence.

Mr. HANSON (York-Sunbury): It is the same debate we are on now.

Mr. CHEVRIER: I refer you, Mr. Chairman, to page 95 of Beauchesne's Parliamentary Rules and Forms, citation 293, from which it appears that it is not permitted to refer to any debate of the same session on any question not then under discussion.

Mr. HANSON (York-Sunbury): It is the same debate now.

[Mr. Diefenbaker.]

Mr. CHEVRIER: Will the hon. member allow me to complete my statement? My submission to you, Mr. Chairman, is that the statement and the discussion so far are out of order.

Mr. GRAYDON: On the point of order, the parliamentary assistant, of course, has risen perhaps a little too hastily, because had he thought twice he would realize that the debate to which he refers is the same debate we are on now, namely, the war appropriation resolution debate. It is unfortunate that he rose at this time because I am afraid he himself is out of order in rising on a point of order.

Mr. ROWE: He just stuck his chin out a little.

Mr. MACKENZIE (Vancouver Centre): Not much cooperation from over there.

Mr. HANSON (York-Sunbury): What are you talking about cooperation for?

Mr. DIEFENBAKER: On the point of order, this is the same debate, the consideration of the war appropriation; and while we agreed, in the interests of convenience, as the hon. member for Weyburn (Mr. Douglas), said the other evening, to a division of the subject matter, nevertheless it is the same debate.

Mr. MACKENZIE (Vancouver Centre): An agreement which is not being observed.

Mr. HANSON (York-Sunbury): What are you talking about?

The CHAIRMAN: The committee must realize that we are dealing with matters pertaining to the war and war expenditures which parliament did not have to face prior to the war. At the present time we are dealing with the war appropriation bill under which these items come.

Mr. GRAYDON: We are not dealing with the bill, if I may say so.

Some hon. MEMBERS: Sit down.

The CHAIRMAN: It is a part of the bill; it comes under the war appropriation resolution. It is the resolution preceding the bill.

Mr. GRAYDON: It is the resolution but not the bill.

The CHAIRMAN: The discussion must of necessity be generalized in a way, although it was understood—I am in the hands of the committee and have no power to dictate to it—that members of the committee, in their discussion, would keep very closely to the items and department before the chair. So far this line of conduct or understanding has been

pretty well followed, and it should be fairly easy for the members of the committee to follow this precedent so as to keep within the limits of the item as much as possible. I must also make this statement. You must realize how hard it is for the chair not to rule in favour of the minister—

Some hon. MEMBERS: Oh, oh.

The CHAIRMAN: Let me finish my statement, please. I hope the hon. member for York-Sunbury (Mr. Hanson) will listen to me. My situation is difficult to the extent that when the minister says it is not possible to answer certain questions that have to be answered by another minister I must rule those discussions or questions are out of order under such conditions, and the answers can be given, when the proper items or department come before the committee.

Mr. DIEFENBAKER: Is it in order to go on, Mr. Chairman? It is rather difficult to know just where I was. I was dealing with the controls, and I was asking the minister—

Mr. HOWE: You were telling the minister.

Mr. DIEFENBAKER: —about the success of the controller appointed to improve conditions at Sutton-Horsley Company Limited at Leaside; second, about the success attained by the controller in charge of firewood; and third, the controller in charge of lumber production. I would point out in connection with the latter that in the instructions given to these men after they came back from overseas, brought back for the purpose of assisting in improving timber production, paragraph 6 reads:

> In the event that you do not apply for forestry leave you will remain in a military camp or depot until detailed for duty in the woods on army pay and allowances or until you are otherwise disposed of. It is not possible at the present time to give you much information as to employment on duty in woods operations as details of this have not yet been worked out fully with other government departments concerned. It may be noted that it is very unlikely that it will be possible to employ you with units of the Canadian forestry corps. It is more likely that you will be sent as one of a group to an existing civilian operation.

Bringing these men back from overseas and not knowing what to do with them when brought back for the purposes of timber production is a very serious matter and deserves to be explained by the minister and the other departments concerned.

Mr. NOSEWORTHY: The minister's statement, in which he reviewed his department, and his reply to the member for Rosetown-Biggar (Mr. Coldwell) earlier in the day, indicate, I think, certain things: First of all, the extent to which we were industrially unprepared for this war, as we were unprepared in the military sense; second, the extent to which the minister, as he claimed, was forced to take the enterprises that were at hand, the organizations that were at hand, in order to get the job done. It appears quite evident that he was pretty much at the mercy of enterprise as it was organized in the country. I think his speech also indicates the extent to which private industry in this country had failed to meet the demands of war and how necessary it became for the government to come to the assistance of private industry in that endeavour.

We learn that the government had to come to the assistance of enterprise to the extent now of somewhere about $900,000,000 of capital investment; that the planning of production that was needed had to be done by the government, and that priorities and controls were established by the government and crown companies were set up. Numerous private enterprises which had failed to deliver the goods were of necessity placed under government ownership in order to do the greatest production job that this country has ever undertaken. I wish to say at this point that those hon. gentlemen in this chamber who place their faith so unequivocally in private enterprise, who still believe that private enterprise is responsible for the production of war essentials and who want to depend so exclusively on private enterprise for our post-war reconstruction, would do well to consider the part that the government has been called upon to play in our war effort .

There are those in this committee who have been quite loud in their protestations about our lack of military preparedness when the war began, and who have been loud in adopting the attitude of "I told you so," and accusing others of being responsible for that lack of preparation. These same hon. gentlemen have been silent regarding the industrial handicaps that we suffered and slow to observe that many of those handicaps were deliberately imposed upon the country by privately owned monopolies and cartels. Only now are we beginning to learn the extent to which Germany had succeeded in the pre-war days in her twofold policy of arming herself and disarming the democracies. Germany's war preparation was just as effective in the field of science and industry as it was in the field of military preparation. Through her international cartels and agreements, her monopoly and restrictions on the use of patents, she was able to restrict the production of many essentials of the democracies to a point that required many years to overtake. Only by

an examination of our situation and its causes at the outbreak of the war, the hamstringing of our war effort, can we plan for our future security or learn how to avoid world war number three.

Almost every shortage that has impeded our war effort can be attributed to a cartel. When men died of malaria in Bataan it was for lack of quinine made unavailable because of the cartel which administered the affairs of the producers of that product.

When we tried to expand our factories and needed tools we were hamstrung by agreements which had been made between Carboloy Incorporated and Krupps. When we needed cobalt for its hardening qualities of steel in order to make our machine tools we found the Canadian field comparatively undeveloped because of international agreements and cartels. When scientific instruments were scarce and optical instruments were not to be found, and civilians were asked to volunteer their binoculars and high-powered cameras, it was because of agreements signed in 1921 for a term of twenty-one years between Bausch and Lomb of the United States and the Zeiss interests of Germany. When we were desperately in need of tin we found a shortage on account of similar tactics by the British-controlled cartel, the international tin committee. Just how far these huge corporations, enjoying the protection and freedom of our institutions and the legal protection which they enjoy under our patent laws, will be permitted to continue to exercise treaty-making powers in our essential commodities and strategic materials without supervision by the government and responsibility to governmental authority, will be one of the principal questions that we shall have to decide in all our post-war planning.

This afternoon the minister denied any association of his department with Canadian Industries Limited, a member, as the leader of this group has already shown, of an international cartel. I think in making his statement the minister must have had in mind his department's dealing with the matter of explosives; for I cannot think that this company which operates fifteen important divisions and on its own account supplies essential material for forty-five distinct war uses, has had no dealings with the government. I cannot think that company has had no dealings with the government through the minister's department.

I wish to deal with the question of the plant at Nobel, but before doing so I should like to give a brief resume of some of the activities of the parent company of Defence Industries Limited. Canadian Industries Limited, the company that is the sole owner of Defence Industries Limited. Canadian Industries Limited, as was pointed out this afternoon, is in its turn almost completely owned by du Pont and Imperial Chemical Industries, the first of the United States, and the second of Great Britain. This company was organized first in 1910 as Canadian Explosives Limited. It was organized by du Pont and Imperial Chemical Industries for the purpose of buying controlling interests in five or six small Canadian companies in which they were interested, five or six companies at that time engaged in the production of explosives. The company flourished during the first great war. The minister went to great pains to show that no great profits were made or that no one has yet shown that great profits, or profiteering, as he called it, has been shown by those engaged in the explosives industry during this war. I think we can say for his benefit that so far there has been no evidence of any profiteering on the same scale as that which took place during the last great war. This particular company, Canadian Industries Limited, flourished during the last war. In 1917 it paid on its invested capital dividends of 256 per cent. In 1918 its stockholders received a dividend of 56 per cent, plus 100 per cent stock dividend. In 1920 another 50 per cent stock dividend was paid to its shareholders. Probably not until somebody is capable of bringing to the light of day the hidden costs and the real profits that will be made in this war shall we know really to what extent profiteering has been going on.

In 1927 this company changed its name to Canadian Industries Limited. Shareholders were given six shares in the new company for each one in the old. So that when we estimate the profits which this company has made in this war, these profits must be multiplied by eighteen, if you are to relate those profits to the original capital investment; because the holders of the original stocks now hold eighteen shares for every one of their original holdings. Since the beginning of this war the net profits per share on the common stock of this company have ranged from $7.50 in 1919 down to $5.25 a share in 1943. This is quite a different picture from that of 1917, 1918 and 1919.

Already the statement has been made that this particular company, like other cartels, is above the regulations and laws of the country in which it operates, and that this particular company, through its agreement with du Pont and its other parent company, has restricted again and again both imports into and exports out of this country.

I have quite a few examples, and shall mention again one or two already mentioned. In

1928 Canadian Industries Limited attempted to export a new waterproof finish for shot shells to the United States. Du Pont, one of the parent companies, prevented this, and later took the patents of the new process for itself. In 1929 Imperial Chemicals and du Pont prohibited Canadian Industries Limited from exporting to the West Indies. At that time the Canadian government was subsidizing the steamship companies for transportation to the West Indies, and was anxious to increase our export.

There is a letter in existence from an officer of Canadian Industries Limited, written in 1939, in which he said he felt that the position of Canadian Industries Limited with its government would be strengthened if his company were free to quote on certain products in the West Indies, while at the same time protecting Imperial Chemical's prices, since the refusal to quote had led to complaints to the government.

Again in 1930 du Pont prevented this Canadian, or so-called Canadian Company, from selling finishes of the duco type for shipment to South America. In 1932 and 1934 du Pont prevented this Canadian company from exporting a product known as pontan, a coated textile product, because it would conflict with the parent company's product in Great Britain.

The story regarding imports is similar. In 1928 du Pont and Imperial Chemicals caused Canadian Industries Limited to enter into a contract with the Atlas Powder Company, and this is one of the reasons why, when war came, the explosives industry in this country was a monopoly in the hands of Canadian Industries Limited. Another United States company which had sought to export its products to this country was prevented from doing so by a contract under which it agreed not to export explosives to Canada, or to participate in any such business in Canada, leaving Canadian Industries Limited a clear field.

Prior to 1936 du Pont, Imperial Chemical Industries and Canadian Industries Limited, in order to eliminate competition between themselves and the Shawinigan Chemical Company entered into a contract with the Shawinigan company which provided that Shawinigan would restrict its activities in the chemical field to products made from acetylene, and that Canadian Industries Limited would refrain from manufacturing such products. Then, in 1936 a similar arrangement was made with the International Paper Company, which prevented the latter from entering the manufacturing of chemical products, and prevented Canadian Industries Limited from entering pulp and paper production.

In 1936 a similar arrangement was made with Courtaulds Limited whereby Canadian Industries Limited agreed to refrain from manufacturing rayons and Courtaulds from manufacturing chemical products in Canada. Similarly in 1939 Canadian Industries Limited and the Sauffer Chemical Company of California organized the Cornwall Chemical Company, to be the sole manufacturer of carbon disulphide in Canada, so that all competition in this commodity in Canada could be eliminated. I quote these as examples of monopoly and cartel control, in restricting both import and export trades into and out of this country respectively.

Mr. FULFORD: On a point of order, is there not a rule in committee stating that hon. members are not allowed to read their speeches?

Mr. NOSEWORTHY: I am referring to my notes, as numerous others have done.

The hon. member for Rosetown-Biggar this afternoon called attention to an instance where a board of directors of a United States company by resolution prevented Canadian Industries Limited, a major Canadian company, from engaging in export trade. That agreement actually prevented Canadian Industries Limited or any of its subsidiaries from exporting explosives to Great Britain or to any country in which the British Imperial Chemicals operated. It was only by special arrangement, and by the special permission of these parent companies, that Canadian Industries Limited was able or permitted to set up its subsidiary companies, and to export the product of its factories to Great Britain and to the other allied nations during the war.

I wish to read from a letter written by the president of the British company to the president of the United States du Pont company dated May 29, 1933, which indicates the extent to which these international monopolies interfere with the policies of government. This letter states:

> With a large organization such as we have I find it a good thing to issue warnings from time to time—one went out at the time of the Ottawa conference—so that everything possible is done to ensure that no prospective political or legislative action on the part of governments is permitted to influence relations between du Pont and I.C.I.

Du Pont replied June 17, 1933, as follows:

> If any legislation or any international agreements are brought about which affect these I.C.I. du Pont relations, I am sure we will be able to adjust ourselves so as to get the continued benefit of our agreements.

The hon. member for Rosetown-Biggar referred to the terms of a contract entered into in 1936, and I should also like to refer to

certain of those terms. First, the contract provided for the exploitation in Canada and Newfoundland of the products of Imperial Chemical Industries and du Pont through Canadian Industries Limited. That is, they eliminated any possible competition between the two parent companies. All the products of those companies not manufactured by Canadian Industries Limited were to be sold to them at prices fixed by the United States and British companies.

Second, du Pont and Imperial Chemical Industries agreed to grant C.I.L. exclusive licences under respective patents, inventions and processes which they owned or might acquire for the territories of Canada and Newfoundland. Canada agreed to grant du Pont and I.C.L. similar licences for use in the rest of the world outside Canada and Newfoundland.

Canadian Industries Limited was not to export from Canada and Newfoundland and du Pont and I.C.L. were not to export to Canada or Newfoundland any product manufactured by C.I.L. This is important because according to the agreements and the correspondence it is quite evident that the parent companies of Canadian Industries Limited never intended that Canadian Industries Limited or any of its subsidiaries should export from Canada any product made by either du Pont or Imperial Chemical Industries, and that only in the emergency of war, or in the event of an emergency arising which the British and United States companies were not able to meet, would they agree to permit the Canadian company to enter that field.

I have a question to raise, but I do not intend to do so in the way of criticism. I have visited a great number of factories and talked with a great many managers and workers; I have heard a great deal of criticism about production—I do not think any department spending such sums of public money as the minister's can expect to escape criticism and scrutiny—but I have not yet heard anyone criticize the minister on the ground that he had not done his job. I wish to say for his benefit that he took the conditions that prevailed, whether they were monopolistic, cartels or what they were, and he delivered the goods.

However, that should not blind us to the extent that we do not feel free to criticize the details of that administration. I want to admit publicly that I have no criticism of the extent to which the minister maintained production in this country during the dark days of the war, but I do think many of these monopolies were able to extract from the minister and his department agreements and conditions which he could not help granting because of the position which these concerns held in this country.

I wish to refer for a moment to the C.I.L. plant at Nobel. The minister told us a few days ago that this plant had been closed down for the time being because the bombed out plants in Great Britain were again in production. To what extent did that pre-war agreement between the parent companies of C.I.L. affect the closing of the plant at Nobel? To what extent was it true that just as soon as the English and the United States parent companies were able to meet the emergency, the agreement preventing C.I.L. from exporting came into effect? The minister probably knows the position better than I do.

Mr. HOWE: No agreement had anything to do with the situation at Nobel. The Nobel plant belongs to the Dominion of Canada, and the production was used to meet the requirements of the Dominion of Canada. The plant operated at full capacity as long as Canadian requirements called for that production. The falling off of requirements here, in the United States, and in England has caused the closing down of plants in all three countries.

Mr. NOSEWORTHY: I thank the minister for his assurance. Does the minister know whether plants of a size comparable with that of the one at Nobel and belonging to the du Pont interests have been closed in the United States?

Mr. HOWE: I do not think the du Ponts own any large explosive plants there, but I can assure my hon. friend that at least two of the largest explosive plants in the United States have been closed for the same reasons that closed this one, namely overproduction.

Mr. NOSEWORTHY: The minister assured us in his speech that the plant at Nobel would be kept intact for the time being. Citizens of Parry Sound and of Canada generally are much concerned about whether this plant can be used for peace-time production. I understand that some weeks ago a citizens' meeting was called at Parry Sound, but no satisfactory answer was given to the people. It might be interesting to recall a few of the facts about this plant. I placed a series of questions on the order paper on February 28, and I had hoped to have replies before this debate took place. I understand that the government has spent more than $20,000,000 on this plant and that it is equipped with a complete hydro system as well as a pumping system capable of pumping approximately 15,000,000 gallons of water a day. Both the

plant and the village are equipped with a sewage disposal plant and there are some three or four hundred war-time houses, a large machine shop, a carpenter shop, a welding shop, with a hospital and a modern school, staff houses, cookhouses and bunkhouses. The industry is the only industry between Orillia and Sudbury, a distance of from 175 to 180 miles, the only one from Georgian bay to Pembroke, a strategic position for a peace-time industry. Engineers who know that plant and its equipment—I can only quote them because I make no pretence at being an authority on the subject—have assured me that this plant could be readily converted to the production of plastics, an industry which will probably feature in future Canadian industrial life. I wish to ask the minister this question. Is it not true that the restrictive clauses in the agreement which this company was able to extract from the government because of its strategic position in the explosives industry preclude any possible use of that plant for peace-time production of any kind?

The plant is not to be used—

I am quoting from the sessional paper:

—for production of product or other explosives or any constituent elements thereof for other than military purposes.

Mr. HOWE: That would not interfere with a plant making plastics. The clause is restrictive as to making explosives, but as I said in making my statement, the plant can be used for other purposes than making explosives.

Mr. NOSEWORTHY: I presume that the chief difficulty in using this plant for the making of plastics is that only Canadian Industries Limited can use it, since I understand they have a monopoly in that field.

Mr. HOWE: Oh, no, there are dozens of firms making plastics using a great number of raw products. My guess would be that C.I.L. is one firm that does not make plastics, although I may be wrong.

Mr. NOSEWORTHY: Plastics is listed in the company's own literature as one of the products of its factories. Here is another clause in the agreement:

Defence Industries Limited is to make an offer if it desires to purchase the plant or any part thereof. If an agreement is not reached in sixty days, the government shall have a reasonable period to dispose of the plant to any other party on condition that it must be removed within ninety days from sale. If it is not sold to other party, the government shall remove the plant and level the site, or surrender ownership to the company without payment. The land is to be resold to the company for $1.

I find that restrictive clause in some of the contracts or agreements with Defence Industries Limited. It looks very much to me as though this company, because of its strategic position in this particular field, was able to extract from the government terms and conditions in the agreement which in effect will leave the government very little choice, when the war ends, except to demolish or remove those plants. That, of course, is a convenient arrangement for C.I.L. It leaves them entirely free to expand their peace-time production, and they have expanded enormously during the war. They can scrap the D.I.L. plants; their peace-time plants remain intact. They have no commitments; they have no plant; they have no expansions such as have been made for war purposes to worry about when the war is over, and of course they have no funded debt.

As I stated earlier, one of the great problems of any government that seeks to achieve maximum production when the war is over, or to use the productive enterprises of this country, will be the existence of these monopoly enterprises in this country, many of them with international interlocking directorates and cartel arrangements; and these monopolies will be emerging from this war—let us make no mistake about it—much more strongly entrenched than they were at the beginning of the war. The ineffectiveness of legislation or legislative control has been demonstrated, I think, in the United States. We find that notwithstanding our Combines Investigation Act, notwithstanding the glaring revelations before our price spreads committee some years ago, notwithstanding certain prosecutions which have taken place under the Combines Investigation Act, no effective control has yet been applied to these concerns. Hon. gentlemen may disagree with our plans or our policies for dealing with these concerns; but let me say that the future of any political body in this house—any political party, whether it be Liberal, Conservative, Cooperative Commonwealth Federation, or anything else—is not of paramount concern to this country. The future of Canada is the thing that is of paramount concern to this country, and whatever party seeks to govern this country when the war is over must face this question of cartels and cartel agreements, and must find some way of making these enterprises serve the interests of the common people.

Mr. HANSON (York-Sunbury): Mr. Chairman, I have taken very little time of the committee since the army estimates were before us. I listened with the greatest care to the minister's statement of two days ago, and since then have had an opportunity of

reading some of the documents which were then tabled and have now been circulated in pamphlet form among the membership of the house. Among these pamphlets is the printed report of the minister on "Government-Financed Expansion of Industrial Capacity in Canada as at December 31, 1943". It is based on and forms part of the minister's statement to the house on the 21st of this month and is intended for the consideration of this committee.

I was intrigued in looking over this booklet. I was astounded to observe that of a grand total of $714,000,000 invested by this department in fixed assets relating to war production facilities, general munitions, aircraft, shipping and other investments and fixed assets, less than a fraction of one per cent has been made in communities outside the central provinces. That is the position to which I desire hon. gentlemen to give their attention for a few minutes to-night. We have, according to the summary on page 2 of this pamphlet, a statement that for general munitions the commitment was $626,000,000—I am leaving out the odd thousands—and that the expenditure as of December 31, 1943, was $535 millions; that on aircraft production, including manufacture, overhaul and repair, and miscellaneous, the total commitment was $88 millions and the expenditures $70 millions; on shipping, total commitments of $40,500,000 and expenditures of $32,950,000; or a total for war production facilities of $639 millions of the taxpayers' money spent, as against a commitment of $755 millions which was permissible to the department.

If hon. members will follow along at the foot of page 2 of this pamphlet they will observe that the total of "other investments", under the expenditures heading is $75 millions, with commitments of $101 millions.

I ask hon. gentlemen to turn now to page 3 of this pamphlet, headed "Investment in war production facilities: chemicals, explosives and pyrotechnics", and observe that there is not a dollar of expenditure or of commitment for a single plant in the maritime provinces or the western provinces, so far as I have been able to observe.

Mr. HOWE: Oh, yes.

Mr. HANSON (York-Sunbury): All right, now; just point out where they are.

Mr. HOWE: Alberta, Manitoba, British Columbia.

Mr. HANSON (York-Sunbury): Well, I have gone over these, and I cannot recognize them by name as to geography, but I suggest to the minister that the great bulk of them are in central Canada and in the province of Ontario. Here you have part A, crown plants, government operated, Department of National Defence, $1,764,000 expended, and of course we do not know where that expenditure has taken place. I suppose it must be in some of the government arsenals, and certainly none of these is located outside the province of Quebec or the province of Ontario; at least none was in peace time. Under "crown companies, government operated", we have "nil". Then, "crown plants, operated by private corporation", which show a total expenditure net of $141 millions, and not a cent expended in the maritime provinces.

Mr. HOWE: Oh, what are you talking about?

Mr. HANSON: Well, all right. Does the minister deny that not a cent has been expended there? I am not going over the list seriatim. I said that not one cent has been expended in the maritime provinces in the category headed "C. crown plants, operated by private corporations." You have Alberta Nitrogen Products Limited; that was a plant erected in the province of Alberta. Then, Canada Cement Company, Canada Car Munitions Limited, again Canada Car Munitions Limited, Consolidated Mining and Smelting Company Limited, and then a long list of allocations to Defence Industries Limited. I could go right down the line and state with truthfulness that there is not one company on page 3 which operates in the maritime provinces. I challenge the minister to name them. If he will look at the page he will agree with me.

Mr. HOWE: Yes, that is right.

Mr. HANSON (York-Sunbury): I do not want to overstate the position.

Mr. HOWE: We tried to induce Fraser, of which my hon. friend is a director, to build, but they would not do so.

Mr. HANSON (York-Sunbury): No, and I will tell the minister why they would not do so; I will be perfectly honest about it. The directors of that company were exceedingly anxious to build that plant; and a company of which we have heard a good deal to-night came along and made such an attractive offer to Fraser's that it would have been foolish to have built the plant.

Mr. HOWE: In other words, Fraser's wanted to help the war, but they thought it would be cheaper not to.

Mr. HANSON (York-Sunbury): Fraser's have helped with the war. Believe me, they have helped. Their bits and pieces' record is the best of any plant in Canada—the Restigouche company.

Mr. HOWE: But my hon. friend is talking about chemical plants in the maritime provinces.

Mr. HANSON (York-Sunbury): I do not want my friend to throw any mud at the Fraser company.

Mr. HOWE: I am not throwing mud at the company; far from it.

Mr. HANSON (York-Sunbury): They have done a magnificent job, within their capacity.

Mr. HOWE: I know it.

Mr. HANSON (York-Sunbury): And I will tell you this: they have contributed millions in taxation to this war effort.

Mr. HOWE: But I am explaining why there was not a chemical plant in the maritime provinces.

Mr. HANSON (York-Sunbury): Well, it was a chlorine plant which would have cost a few thousand dollars and given very little employment. Much as I desired to have that plant built, mine was only one voice on a board of ten directors. So that the minister cannot get very much comfort out of that.

Mr. HOWE: I was hoping to comfort my hon. friend.

Mr. HANSON (York-Sunbury): But the main part of my charge against the location of these war plants is—and I do not think the minister will dispute it—that there has not been a fair geographical division in their location. I am going through this pamphlet, not seriatim—I promise the committee that—but page by page, and I will try to analyse it.

Page 4 covers crown plants, raw materials and other basic. With the exception of what may have been allocated under "D. privately owned and operated plants", Dominion Steel and Coal Corporation, amounting to a little over two and one-half million dollars, on that page there is not a single cent for any plant in the maritime provinces.

Mr. HOWE: What about Dosco? That is quite a sum.

Mr. HANSON (York-Sunbury): I said, two and one-half million dollars. I gave the minister credit for that.

Mr. HOWE: It is much more than that.

Mr. HANSON (York-Sunbury): That is under this one item, "raw materials and other basic"; it is divided up under the headings of materials and plants and that sort of thing. I am taking the table as I find it.

Mr. HOWE: Yes, but there is a sum of $2,980,000 plus $95,000.

Mr. HANSON (York-Sunbury): The minister can explain that when he comes to it. I cannot see the item he is talking about.

Mr. HOWE: That is under "D".

Mr. HANSON (York-Sunbury): Dominion Steel and Coal Corporation; I said that.

Mr. HOWE: You said, two and one-half million dollars.

Mr. HANSON (York-Sunbury): I said $2,527,000, and I suppose that was expended on the plate mill at Sydney which they put into condition in order to forward the government's shipbuilding programme—and very properly; I am not criticizing the expenditure. What I am trying to point out is that so little was done there compared with other parts of Canada. That is what our people are talking about and thinking about, and that is what they will be voting about some day.

Mr. HOWE: Well, let us go on through.

Mr. HANSON (York-Sunbury): All right, I will. But the minister might allow me to proceed; one at a time is enough. If you turn to page 5, table 1A—3, army and navy guns. The first one is "crown companies, government operated—National Railways Munitions Limited," $5,000,000 odd; none of that in the maritime provinces; "C. crown plants, operated by private corporations"; the only one I see there out of a total of $61 millions actually expended is the sum of $636,685 for Trenton Steel Works Limited, which is a subsidiary of Dominion Iron and Steel.

Then if you will turn to "D. privately owned and operated plants", the Eastern Car Company Limited got $2,022,000 out of a grand net total of $83,462,000, or about three per cent of the total under this heading.

Mr. HOWE: Oh, well now—

Mr. HANSON (York-Sunbury): Perhaps my mathematics is a little out. It may be four per cent.

Mr. HOWE: The total of D is $16,000,000.

Mr. HANSON (York-Sunbury): Yes, but it is the whole table I am talking about. For the whole table that I am referring to, which covers a net expenditure of $83,462,508, the actual total expenditure in the maritimes was $2,022,671. That is the only one in the whole page. Coming then to machine guns and small arms—

Mr. HOWE: None.

Mr. HANSON (York-Sunbury): None, not a dollar. While we are on that page I am going to ask the minister to be good enough to explain the position of the investment in the

Ottawa Car and Aircraft Company Limited. Once upon a time I undertook to investigate something in connection with that expenditure because my attention was called to it in the auditor general's report. I think that if the whole story were told it would be rather a sad one, not that people did not mean well. I am not attributing any particular fault to anybody except that perhaps the company was too ambitious. But the company could not perform, and I want to say this. It is my understanding that the department did everything it could within its power to help the company to perform. What the net result has been I do not know, but I understood that the requisition was withdrawn, and I suppose somebody is going to take a heavy loss there. I am not suggesting to the committee or to the minister that there was any fault or negligence on the part of the department. I wish to make that quite clear. And I am not making charges against anybody; but the operation, I am sure, fell down. Somebody took a substantial loss.

Mr. HOWE: I might explain that it was a complicated naval job—

Mr. HANSON (York-Sunbury): I know it was.

Mr. HOWE: —and there was great difficulty in getting into production. Shortly after it was in production we were notified that the gun was now regarded as obsolete and no longer required. I know it looks bad.

Mr. HANSON (York-Sunbury): I accept the minister's statement 100 per cent, but there was a loss.

That brings me to the consideration of another matter. The minister made a great statement the other day with regard to production of which this country ought to be proud. I am going to say that, and I have no doubt that Canada has done a good job in production. But the minister never told us about the failures that his department met with, and he must have had a good many headaches.

Mr. HOWE: Very few.

Mr. HANSON (York-Sunbury): I beg your pardon.

Mr. HOWE: I said, very few failures. I think the opposition touched on them all.

Mr. HANSON (York-Sunbury): I would just like to remark, in reply to that, that I do not believe the opposition has scratched the surface of the failures and extravagances. We have not scratched the surface of the failures and extravagances because we cannot get the information. It is denied to us on the ground that it is not in the public interest.

An hon. MEMBER: You scratched enough for all you found.

Mr. HANSON (York-Sunbury): I have not scratched much, my hon. friend, and if you will just keep quiet I will proceed with my remarks.

Mr. MACKENZIE (Vancouver Centre): Go on scratching.

Mr. HANSON (York-Sunbury): I am speaking for the part of the country I come from, and if the hon. gentleman comes to the maritime provinces he will find out what the people are thinking and saying there. If the minister comes down he will find out, too, about the allocation of these plants. I say that, with respect to the table to which I have so far referred, there is not one-tenth of one per cent of industry allocated to the maritime provinces.

I come now to table 1A—5 on page 7. The net total expenditure in that table is $75,854,000, and there has not been a dollar spent in the maritime provinces. Why could not some of these plants have been built in those provinces, so close to the seaboard, where the products could have been shipped overseas, and from which most of it was shipped overseas. Where was the Minister of Finance (Mr. Ilsley)? Where was the Minister of National Defence (Mr. Ralston)? Where was the Minister for Naval Services (Mr. Macdonald)? Where was the Minister of Transport (Mr. Michaud)? Are there any others of them from the maritime provinces? Why were they not doing something to allocate some of these plants to the maritime provinces? They were asleep at the switch; that is the reason why we did not get anything—and the people have memories. Make no mistake about that. The first head that shows itself in the maritime provinces is going to be shot off.

Mr. MACKENZIE (Vancouver Centre): The first Tory head.

Mr. HANSON (York-Sunbury): No; it will be a Liberal head in New Brunswick, in June. Just watch us go, and watch them go too.

Coming back to these plants, may I say that there was no reason in the world why we could not have made small arms ammunition in the maritime provinces just as well as it is made in central Canada, just as well as in the privately owned and operated plants that got so much capital assistance. I come now to table 1A—6, heavy ammunition. There is not a dollar there.

Mr. HOWE: What about T. S. Simms and Company?

Mr. HANSON (York-Sunbury): I am coming to that. I have it all marked here. I am glad the minister refers to that, because in the net total expenditure under this table, heavy ammunition, amounting to $36,881,700, T. S. Simms and Company got $96,972.

Mr. HOWE: What about Trenton Steel?

Mr. HANSON (York-Sunbury): I am coming to that, because there was a little there. There is a little plant in my own community, making certain kinds of practice shells, which got $50,001.

An hon. MEMBER: Made a good job of it?

Mr. HANSON (York-Sunbury): I think they did. I know we had hard enough work to get the plant started. It took us six months to beg the department to give us a little work. I went with the owners myself; I will say this, that they have kept that plant going pretty well, and we are grateful for what they did. It is a small plant making practice shells and things like that.

Mr. HOWE: There are engineering works.

Mr. HANSON (York-Sunbury): Wait a minute. The minister should not anticipate me because I am going to give him plenty before I am through. On page 8 will be found two plants in New Brunswick making shells. Creighton and Smith Motors Limited got $50,001, and the McLennan Foundry and Machine Works at Campbelltown got $203,694. May I tell the minister that the proprietors of the McLennan Foundry and Machine Works made thousands upon thousands of shells in the last war, and the Smith Foundry Company, predecessors of Smith Motors, also made thousands upon thousands of shells at that time and had an extremely fine record, and were only too anxious to go into the business again. There are two in New Brunswick.

Mr. NOSEWORTHY: They must have been Conservatives.

Mr. HANSON (York-Sunbury): It does not matter what they were. It is the country I am thinking about. The hon. member for York South closed his speech a little while ago on a very high and mighty plane. He was going to talk about Canada. The fate of political parties did not mean anything.

Then I come to page 9, Robb Engineering Works Limited of Amherst. They did pretty well. They have had an enviable record in days gone by. It is one of those plants that was bought up by the big corporations in central Canada and closed down. That is how we have suffered in the maritimes there in days gone by. Then there was Simms. I have already referred to them. Mr. Simms got the magnificent sum of $96,972 out of a total of $36,881,700. Let us go on. I turn to page 10, table 1A—7.

Mr. HOWE: On page 9 you will find the Trenton Steel Works. They are down there, too.

Mr. HANSON (York-Sunbury): Yes. I stand corrected. I am obliged to the minister for the correction. They received $746,000. The whole thing is nothing but chicken feed; when you add it all together it hardly makes chicken feed.

Mr. MACKENZIE (Vancouver Centre): That was carefully marked.

Mr. HANSON (York-Sunbury): I did it rather hurriedly, I will say that. But, as a matter of fact, what I am contending is true, that we have not had anything in relation to our strategic position as part of this dominion qua the other side, where all the stuff had to be shipped and where large savings in transportation facilities could have been made. Chicken feed is right.

Then, let us go to the table on mechanical transport. Well, we did not have any factories equipped for mechanical transport, and we could hardly expect to get any of the $10,000,000 that were expended under that table. I am not making any particular complaint about that. Then I come along to the table on tanks and armoured vehicles. This was all new work and I assume that it required big plants and a lot of expense, but we did not get any of that. No crown plants were built. No crown companies were operated. No crown plants were operated by the government, but there were crown plants operated by private enterprise and I suggest that we might have got a share of that. Then there were privately owned and operated plants. The total expenditure under that heading was $9,444,000, but nothing was spent in the maritime provinces.

I come now to signals, communications and instruments on page 12, table 1A—9. Total expenditure under that heading was $12,569,900 and not a cent spent in the maritimes. The bulk of that, of course, was Research Enterprises Limited, and, that had to be located near Ottawa somewhere. It would be unthinkable to put that down in the province of New Brunswick. That sort of thing just is not done.

Then we come to machine tools and gauges. A large number of more or less small companies participated in the government largess. The total expenditure was $5,050,427, and not a cent went to the maritimes. I do not understand why that work could not have been

done down there. It is said that the people down there did not have initiative. The people down there never had a chance to show initiative. They never were encouraged to show initiative.

Mr. KINLEY: The national policy.

Mr. HANSON (York-Sunbury): That is the policy. I am glad the hon. member for Lunenburg agrees with me that it is true, because he operates a machine shop himself. That ought to hold him for a while.

Then there is table 1A—11, general purchasing and miscellaneous, purchases of merchandise. Crown plants government operated, nil; crown companies government operated, nil; crown plants operated by private corporations, $5,000; privately owned and operated plants, general merchandising; Trenton Steel Works is the only one and it received $23,268 out of a total of $530,972,648.

Then I come to section B, aircraft manufacturing. I have failed to find anything that is specifically allocated to the maritime provinces except it may be the Canadian Car and Foundry Company Limited at Amherst, and I am not at all sure that any part of this sum was spent in the maritimes, although I am willing to assume that some portion, perhaps a substantial portion of the $4,144,000, was spent there, but outside of that there is no evidence of any part of the total of $53,000,000 odd spent in the maritime provinces.

Then there is aircraft overhaul and repair. There is a total of $13,828,833, and again I fail to find the names of any maritime province concerns except possibly it may be Canadian Car and Foundry which, I believe, operates a plant or does some repair work at its Amherst plant.

Then we have Clark-Ruse. I want to call attention to this about Clark-Ruse. They operate a plant over in Dartmouth. I was there the other day and I want the country to listen to this. They have seven or eight hundred employees.

Mr. MACKENZIE (Vancouver Centre): Poor old country!

Mr. HANSON (York-Sunbury): They have seven or eight hundred employees, and at five o'clock one evening a notice was posted on the board that the services of five hundred of these men would no longer be required. That is the notice they got.

Mr. HOWE: From when? These men are still working there. A notice was put up that after a certain date—

Mr. HANSON (York-Sunbury): Does the minister know that himself?

Mr. HOWE: Absolutely; I saw the notice.

Mr. HANSON (York-Sunbury): I will take the minister's word.

Mr. HOWE: Why make the statement?

Mr. HANSON (York-Sunbury): Where are they to be placed?

Mr. HOWE: Two thousand men are required in the same city for a similar class of work in the shipyard there.

Mr. HANSON (York-Sunbury): For aircraft repairs?

Mr. HOWE: No. We repair aircraft when they are damaged, and when they are not damaged we have no repairs.

Mr. HANSON (York-Sunbury): I am not questioning the fact.

Mr. HOWE: Then why are you—

Mr. HANSON (York-Sunbury): I wonder what the minister is going to do with them. I suppose he will fall back—

Mr. HOWE: Does the hon. gentleman suggest that this helps the employees in their—

Mr. HANSON (York-Sunbury): No; I imagine that is probably true. Five hundred men are going to lose their jobs and I ask the minister what is to become of them. I suppose he will fall back on the usual stereotyped answer that national selective service will look after them. I wish to tell him something about national selective service as told to me by an employer of labour going down on the train the other night. The government knows; I do not know whether it is the minister's department.

Mr. HOWE: It is a smoking-car story, I take it?

Mr. HANSON (York-Sunbury): No; it is right from the horse's mouth. The minister can take it from me, it is Simon-pure, and right out of the horse's mouth.

Mr. HOWE: It took place on the train; I presumed it was a smoking-car story.

Mr. HANSON (York-Sunbury): And that is a respectable place to talk about things; at least I hope so. This is about the Pennfield airport. We have heard something about the Pennfield airport; the hon. member for Charlotte knows something about it. The Pennfield airport was condemned by the Department of Transport. I was glad to see it built. I thought it was a proper place to have an airport. However its fortunes have been varied. Schools have been moved in and schools have been moved out. And we had it among the list of twenty-eight schools that were being closed down the other day,

the operational school at Pennfield airport. I do not know what they are going to do with the airport, but I will tell you what the government is doing. They have doubled the capacities of the runways, at a cost of $500,000, and the work is still going on. I should like the minister to explain what use they intend to make out of that airport when they have spent this additional amount of money in doubling the surface of the airport.

But that is not the point I wish to make. The contractor wanted a hundred men. He applied to national selective service in Saint John. He got fifteen men in two months—and only six of them stayed.

Mr. FACTOR: You are not blaming the Minister of Munitions and Supply for that?

Mr. HANSON (York-Sunbury): No; I am just passing out a bouquet to national selective service. They got fifteen men in two months, and six of them stuck. When the contractor complained they said they could not get them. Then they said to the contractor, "Can you?" "Yes", he said, "I can get them." And he got them. They said, "Go ahead and get them and report the names to us, and we will put them through as if we had got them." That is the wonderful performance of national selective service. They confessed their inability to get them, but the private enterprise got them.

Mr. FACTOR: Let us get back to the maritimes.

Mr. MACKENZIE (Vancouver Centre): Maritime rights!

Mr. HANSON (York-Sunbury): You bet. Then, Clark-Ruse has had an advance of about two and a half million dollars. I should like to ask the minister is that is recoverable, or if it is a dead loss. I would ask if that plant is closed down because of lack of work, and what is to become of it.

Mr. HOWE: My hon. friend has been complaining about no plants built in the maritimes. Now he has a very decent industry that has done a fine job and he asks if the money is recoverable.

Mr. HANSON (York-Sunbury): I have asked if that money is recoverable.

Mr. HOWE: Those buildings are owned by the crown.

Mr. HANSON (York-Sunbury): What are they going to be used for, if the work is to be closed down?

Mr. HOWE: If the maritimes keep yapping about them—

Mr. HANSON (York-Sunbury): "Yapping"?—I resent that.

Mr. HOWE: Yes, yapping; that is all.

Mr. HANSON (York-Sunbury): I never yap at anything. The minister is doing all the yapping now. And I say, too, that that is a very rude statement and he ought to take it back. If he is a gentleman he will take it back—and I know he is a gentleman, and I know he will take it back.

I now come to table 1B—3, at page 17, and turn to the heading "Aircraft miscellaneous", and notice that there has been some contribution by maritime provinces in shipbuilding. I turn particularly to part I, section C, table 1C—1, which refers specifically to naval shipbuilding, and shows an expenditure of $1,186,918 in connection with crown plants, government-operated. In the list there is the Princess Louise berth, wherever that is. Then under the heading "crown companies, government operated", we find Quebec Shipyards Limited and Toronto Shipbuilding Company Limited. Someone else can deal with the Toronto Shipbuilding Company. I understand the minister is not too proud of it.

Mr. HOWE: Part of that is in the province of New Brunswick.

Mr. HANSON (York-Sunbury): I would not think so. They had a little assembling plant at Indian Town. They brought them down, put them together and shipped them overseas, when they might have done a lot of things there.

I come now to privately owned and operated plants, and I find the Halifax Shipyards Limited got $579,160. Then there is another item for J. D. Irving Company Limited which, I suppose, was in connection with the landing barge programme, and they did not take up any amount. Of the $9,731,888 in connection with this table for naval shipbuilding, the maritime provinces got only a little over half a million.

We come now to cargo shipbuilding, and I call the minister's attention to table 1C—2 at page 19. Under this heading I find the Pictou berth, with a commitment of $388,300, and an expenditure of $301,054. I understand that that was for the building of a wharf at Pictou harbour. Was it done by the Fundy Construction company. I wonder if that has a familiar ring to the ears of any hon. members from the province of Nova Scotia. They will tell us who the Fundy Construction company is. They were paid a little over $140,000 for the work they did on that wharf, and then the wharf slid into the harbour.

Mr. MACKENZIE (Vancouver Centre): Is the harbour all right?

Mr. HANSON (York-Sunbury): You cannot laugh this off in that way. It may have been on account of faulty engineering, I do not know. But I suggest to the minister that some explanation is due the committee in connection with that expenditure. I am just trying to point out one or two of the headaches the minister must have had. I am not holding him responsible for this loss.

The CHAIRMAN: The hon. member has taken forty minutes.

Mr. HANSON (York-Sunbury): That is very good; I have done pretty well.

Mr. BENCE: Mr. Chairman, I believe the hon. member who has just taken his seat has considerable justification for the remarks he has made in connection with the allocating of war industries. But I do not think he has as much cause for complaint as those of us who come from Saskatchewan, because we have received absolutely nothing.

Mr. MACKENZIE (Vancouver Centre): He said that when he started.

Mr. BENCE: I started complaining over three years ago about that, and—

Mr. HOWE: Would my hon. friend let me make a comment?

Mr. BENCE: Yes.

Mr. HOWE: The greatest proportional increase in industrial activity in the Dominion of Canada during war time has taken place in Saskatchewan. Let him think that over.

Mr. HANSON (York-Sunbury): If there was nothing before, and you spend a dollar, what is the percentage of that?

Mr. BENCE: The minister knows that as far as our province is concerned it is still practically nil. However, I made my complaints and offered suggestions a number of years ago in connection with this matter, and I realize that we are now at a stage of the war where there is no particular use in dwelling upon things unless you think there is a possibility you may be able to get somewhere. I believe any hon. member from Saskatchewan, no matter from what party he might come, would be willing to put forth an effort if he thought he could obtain results.

The matter I should like to raise is in connection with synthetic rubber. Last year I spoke at some length in connection with this matter and made special reference to the production of rubber from surplus agricultural products. At that time the minister informed us that after due consideration it had been determined that the best process to produce rubber was by the use of petroleum. He stated that they had embarked on the programme and were going to see it through. At the same time he held out some hope that possibly in the future, if circumstances warranted, investigations might be continued into the production of alcohol from agricultural products. Last year the minister stated that the process they were using to produce synthetic rubber from petroleum had been obtained from the United States. He is reported at page 3700 of *Hansard* of June 16, 1943, as follows:

> Extensive development work in the processes involved in the production of butadiene from a petroleum base had been made in the United States, and Canada was offered the use of all information obtained on the same basis as similar projects in the United States.

And on page 3701:

> The problems of developing organizations to produce synthetic rubber in satisfactory amounts and qualities and of procuring or training the necessary operating personnel for the various plants in the Canadian project could, for obvious reasons, best be met and solved by following the main lines of the United States programme.

He went on to state that even though they had embarked on that programme it did not necessarily preclude the use of industrial alcohol made from agricultural products. If, as the minister stated the other day, this programme is a complete success, if it is the most economical means of producing synthetic rubber, then I and those of us who come from western Canada will have to be content for the time being. There are one or two points, however, I should like to draw to the attention of the administration before I ask one or two questions in connection with the operations of the plant at Sarnia.

As far as the use of surplus agricultural products are concerned, it is not so much a question of the cost per bushel of the wheat or the cost per unit of the agricultural product involved; it is more that we on the prairies felt that, because our agricultural production was so great that at times we produced more than could be used in Canada for food purposes or exported for the same purposes, therefore some of this production should be used in the manufacture of synthetic rubber. Last year the minister stated that the plant at Sarnia would be in full porduction by November. He stated also that they would be making in this plant 37,000 tons of buna-S rubber and 8,000 tons of butyl rubber when they were in full production. The plant was to be in full production by November of last year, but the other day the minister stated, as reported on page 1705 of *Hansard*, that it would not be in full production until May of

this year, as far as the buna-S plant was concerned, and until July, as far as the butyl plant was concerned.

I think the committee is entitled to an explanation for that delay. It is true it is only a matter of months, but there must have been some bottle-necks or mistakes encountered by those in charge of production, and possibly these might be worth following up in order that similar mistakes might be corrected in the future. The minister stated last year that the production of butyl rubber, which I understand is used for inner tubes, was to be 9,000 tons, but he now states that they are obtaining only 150 tons per month, or 1,800 tons a year. In other words, in order to meet that figure the increase in production between now and next July will have to be over fourfold.

My attention has been directed to certain newspaper and magazine reports in the United States to the effect that the synthetic rubber programme on this continent has not been quite as successful as those who devised the plants thought it would be. If the plant in this country is such a success and they are going on without much difficulty, perhaps the minister will explain why the United States, with whom we are collaborating, have not taken advantage of the wisdom which was apparently used by the Canadian authorities to obtain such a success in their programme? I was interested in reading in *Time* of February 14 of this year an article on rubber, where it is stated that they are using more alcohol to produce synthetic rubber than they anticipated using, whereas the petroleum end of it was bogging down. I should like to quote from page 33 of this magazine as follows:

> When "Bull Bill" Jeffers bowed out of Washington as rubber czar last September, he flatly announced: "The big job is done." In the long months that followed, optimism flowed from the rubber director's office; full-page, breast-beating advertisements of many an oil company happily assured the United States that the battle of rubber had been won. But last week, a sheaf of ominous straws fluttered out of Washington:
>
> The allotment of synthetic rubber previously scheduled for civilian tires in the next five months has been halved.
>
> OPA drastically screwed down tire rationing, shifted the rationing basis from mileage to essential occupations.
>
> Rubber boss Bradley Dewey slapped a ban on the use of synthetic rubber in many a civilian item, even nipped plans for girdle manufacture.

And further on:

> Out of alcohol. The famed Baruch rubber report handed oilmen the big job of butadiene production for buna-S (75 per cent butadiene plus 25 per cent styrene equals buna-S). Oilmen were to turn out 65 per cent of all United States butadiene production. The remainder was to come from the alcohol process, which was loudly damned as a farm-bloc plot to use up surplus grain.
>
> But by last week the alcohol process was the brightest spot in the picture. Paced by Carbide and Carbon's plants at Institute, West Virginia, and Louiseville, Kentucky, butadiene from alcohol is now actually furnishing 75 per cent of all butadiene. Built last year to produce only 220,000 tons, the plants have been geared up to 150 per cent of capacity, and can turn out an unbelievable 330,000 tons a year. Thus, the alcohol process has shouldered in to take over the big job. Even by the end of the year, when all petroleum butadiene plants will presumably be in production, alcohol will still furnish half the butadiene.

The article goes on to refer to the difficulty of obtaining enough grain to produce the alcohol, and I understand from what I have seen in the press that they are importing grain from this country for the purpose and also importing industrial alcohol. The article goes on to say:

> But Rubber Boss Dewey calmly points to the glowing alcohol-production record to prove that the programme was right, the oilmen wrong. The hard fact is that the much simpler alcohol process ran into fewer production kinks than those which knotted up petroleum butadiene production, split as it is among 13 companies, tinkering with five different processes. What worked like a dream in the laboratory is turning out to have some nightmarish bursts in big-scale production.

There is another statement in the article which interested me because we are producing butyl in the plant at Sarnia. It says:

> But the biggest "if" of all in the rubber programme is butyl, the synthetic from which inner tubes were to come. Ex-Trust-Buster Thurman Arnold once hailed butyl as the king of all rubber synthetics, and roundly denounced Standard Oil (N.J.) for not putting it on the market. Standard's prompt protests that butyl was not perfected went unheard. But butyl, which was once programmed to supply 75,000 tons a year, proved Standard right, Arnold wrong. It is strangled in the intricacies of manufacture.

It seems to me that these are very interesting points. The article, of course, may not be accurate; I do not know about that; but it seems to be well posted, and so far as I know its accuracy has not been challenged, or, if it has, this has not been brought to my attention. I should like to know from the minister whether or not the plant at Sarnia has been proven to be a complete success, and that while in the United States they are having difficulty with synthetic rubber production, nevertheless in this country we are completely successful. I should also like to know that in connection with butyl rubber, which is the only kind that can be used for inner tubes, we have nothing to worry about. I sincerely hope

that the belief of the minister that the difficulties have been completely overcome will be justified by the facts, because this is a most important matter for the Canadian people and for Canadian economy, and it seems to me from the reports we get from the United States that there is sufficient doubt about the process to warrant the administration continuing actively to canvass the question of a more intensive production of industrial alcohol from agricultural products to supplement, if necessary, the present programme, and at the same time give the agricultural areas of the west a use for their surplus products which cannot find their way into foodstuffs.

Mr. ADAMSON: I should like to ask the minister a question which was raised this afternoon but to which I do not think an answer was given. I refer to the Sutton-Horsley plant, where the minister put in a controller by the name of Pinchin. The International Association of Machinists has complained that this controller has cut the number of workers from 1,200 to 400, and the rumour is that the entire plant is going to close down. I understand that they are making gauges for aircraft and for other purposes. Naturally a considerable amount of concern is felt by the workers in that plant.

The minister has not said anything about the effectiveness or otherwise of the utilization of machine shops, particularly in the mines, in making war material. There was quite a programme at one time to have the machine shops of the various mining companies making certain types of equipment as subcontractors for war industry. Has this programme been carried out; if so, to what extent, and has it been successful?

The parliamentary assistant to the mniister spoke this afternoon of the audit of fixed price contracts and said that when it was found upon investigation of a fixed price contract that a large or unnecessary profit was being made, after an audit of the company's operations a new price was agreed upon and made retroactive. I think the committee would like to have a little more detail of the methods of that process. Let us say that a base price of 100 units is fixed, and that at the end of the first three months operations the company produces material for eighty units of cost, making a profit of twenty units. Assuming that we consider that five per cent is a sufficient profit; there is a fifteen per cent excess profit, shall we say, over the fixed price. What is the machinery set up? Does the government go into that factory and say: We want the fifteen units of profit that you have made over the last three months? Or does it say: You can keep that excess profit and we will now allow you eighty-five units of cost? I think the committee would be interested to have that information with regard to the revampnig of the fixed price contracts.

I believe the committee would also be interested in having information with regard to the cost of production of aircraft. We know it is impossible in the early stages to give any idea of the cost of production of aircraft. It is very difficult even to set a target price for aircraft when you are starting on the manufacture of a complicated air frame such as the Lancaster or the Mosquito. What I should like to know, however, and what I think the committee would like to know, is what is done as to a reduction in price for the manufacture of the Lancaster and the Mosquito as the programme has proceeded. I think the minister said that forty-nine Lancasters have been built—

Mr. HOWE: I said thirty-nine.

Mr. ADAMSON: Probably the base cost can now be obtained and some estimate of future cost arrived at. I think that is information which it is legitimate for the committee and the country to have.

With regard to the re-negotiation of cost-plus contracts. The cost-plus contract is, I suppose, a necessary evil in war time. It must happen when you are dealing with new operation, new factories on which no base rate can possibly be known. But when a base rate is known in the operation and a reasonable estimate can be made of the cost of the operation, even one as complicated as the building of aircraft or the operation at Research Enterprise Limited, what is the machinery here again for re-negotiation of these cost-plus contracts?

I have one suggestion to make to the minister. During the war we have developed a number of strategic minerals. I shall not go through the list; they are well known to the committee. Ore bodies were delimited and discovered, and actual production took place in many instances. We now find that because of the easing of the supply, or because of the bringing in of supplies from elsewhere, these operations are no longer economically feasible for the country to carry out. I speak in particular of the Emerald mine, the tungsten deposit in British Columbia. Apparently the mine is now closed down. We have developed an operation which, because tungsten can be produced cheaper, in greater volume, or for other reasons in the United States, is now closed down. With all metals, their use depends upon the amount of research that goes into the work on them. It is well known that after the last war the International Nickel company found itself with a terrific production of nickel and no market. They

went and carried out by themselves one of the most intensive research programmes ever known on this continent. In consequence, not only did the demand for nickel come back to where it was in the last war, but it tremendously increased. I believe there were developed something like 250 separate alloys containing nickel, and to-day there is hardly an industry, hardly a machine, which does not contain this vitally important metal. Now, it seems to me that we, having developed these strategic metals, unless we can provide through research a use and a market for them, shall find ourselves with a development which is closed down and in which our investment as a country is lost. I suggest to the minister that one of the first priorities is to see to it that adequate research is carried out now so that new uses for these strategic minerals and metals can be found. That is an essential and important move at this stage of the war.

There has been a considerable discussion this afternoon on cartels. I was interested to note that the leader of the Cooperative Commonwealth Federation mentioned Canadian Industries—the I. G. Farbenindustrie—Imperial Chemical and du Pont. I brought this matter up in the house early in February. I think that, when we are dealing with something as abstract as cartels something which can be so misrepresented, and as to which so much misinformation can be injected, some statement might be forthcoming in this chamber concerning international cartels. I wish to quote two paragraphs from a paper delivered at the annual meeting of the Canadian Institute of Mining and Metallurgy this month by Professor George B. Langford, professor of mining geology, University of Toronto. Dealing with cartels in the mineral industry, he has this to say:

> Cartels and monopolies have existed, and now exist, in the mineral industries. Some have been outstandingly successful and others equally unsuccessful. When the time comes to put into effect the mineral industry policy advanced here, the history of the international metal cartels will be a useful guide in working out details, and also in pointing out pitfalls to be avoided. For the purpose of this discussion, only the briefest mention will be made of some of the features of such organizations that are of interest in formulating a post-war mineral control policy.
>
> Outstanding is the International Nickel Company of Canada, a virtual monopoly controlling 80 to 90 per cent of the world's supply of the metal. Since 1926, this company has found it advantageous to maintain a fixed price for the metal, irrespective of violent fluctuations in general economic conditions. It has also adjusted its production to meet market demands and thus has prevented over-production.
>
> The tin cartel, an association of individual companies brought together by international agreements, was sponsored by the governments of the several producing nations. It has been referred to as the most successful metal cartel. It was formed in 1933 as the only logical cure for a badly disorganized and over-produced industry. Previous to its formation there had been several other curative methods tried without success. The object of the tin cartel was stated in the first clause of the agreement for the international tin control scheme: "The scheme is intended to secure a fair and reasonable relation between production and consumption with a view to prevent rapid and severe oscillations of prices and to ensure the absorption of surplus stock."
>
> The operations of this cartel proved the feasibility of international political control in mineral industries.
>
> The aluminum industry in North America has operated as a monopoly because of cartel agreements with European producers. This monopoly has not always operated in the best interests of the consumers, and demonstrates the inadvisability of leaving the operations of such organizations without suitable controls.

Professor Langford goes on to mention copper cartels and other cartels which have failed. I merely mention this to show that cartels, as a method of regulating mineral production and as a method of preventing violent swings of price and instability of employment, and for other reasons, are not always a bad and vicious thing, and I mention here the tin cartel as an example.

I had not intended to speak at such length, but in view of what has been said this afternoon I brought this up.

Mr. BURTON: It is not my intention to make a speech, but I would ask the minister a question or two. First, I should like to ask him whether any cooperative organizations, especially Cooperative Implements Limited, made any representations or request to his department or to the government with a view to obtaining from the government those surpluses he referred to the other day when he was speaking, or possibly even the disposing of those surpluses after the close of hostilities. If they have made representations, I would ask him whether his department or the government are prepared to give any consideration to these requests at the present time.

Many of us farmers feel keenly about this, because for quite a number of years now we have found ourselves severely handicapped in carrying on our farming operations, first through inability to purchase the new machinery we required owing to the prices we were receiving for our products; and later on, now that we do have a little money to buy the necessary machines, we find ourselves unable to get them because the machines are not there or there are not enough to go around. To make matters worse, after we had become quite adapted to the repairing of our machines out of our scrap-heaps, along came an order

from one of the boards under the minister compelling us to dispose of our scrap metal which we had on our farms, leaving us only a very limited amount of scrap with which to continue repairing our machines.

Some of us felt rather hot under the collar when we were forced to deliver our scrap for $7 a ton, much of which we had to pay $700 a ton for when we bought it.

Mr. HOWE: Who used the force that made the hon. gentleman deliver the scrap?

Mr. BURTON: There were different advertisements in the newspapers, in my part of the country at any rate, that gave us up to a certain time to have that scrap delivered at certain places, failing which there would be penalties if we were found with more scrap than a certain number of pounds on our farms. I am sorry I have not the advertisements here, but I am sure the minister must know something about it.

Mr. WARD: Did you deliver the scrap iron?

Mr. BURTON: I certainly did. It cost me more in time gathering the stuff and hauling it than I got out of it on top of all the other misery, and then we had not what we needed to keep on repairing our machinery. Incidentally, some of these scrap heaps were lying around the railway sidings for quite a time. But I am not arguing about that. I realize that, under the circumstances, the boards may have justification in calling in that scrap, and in spite of the fact that we delivered scrap for $7 a ton, which cost in some instances $700 a ton when we bought the implements, nevertheless we were prepared to do that. We consider, however, that some of this surplus equipment, it may be in the line of trucks, or jeeps or other equipment; it may be even in some of the plants in which the government is interested, might be made available to the farmers so that they might get the necessary material at reasonable cost.

If the minister would rather discuss this question when he is before the house with the bill to which he referred the other day, dealing with the Assets Disposal Corporation, I am prepared to let the matter stand until then. In the meantime, I would impress upon him that the farmers in the west expect that as soon as possible their cooperative organizations shall be given an opportunity to take part in handling some of that equipment, at least so far as it is adaptable to agricultural purposes.

Mr. FRASER (Peterborough West): I am suspicious of people who say they are not going to make a speech, like the hon. gentleman, who made a good job of it. In regard to scrap metal on the farms, I know that in our section of the country there were notices in the newspapers, but our farmers never figured on anything for the scrap. They gave it to the Red Cross Society.

In the minister's speech it appears that of small craft, 3,600 were delivered out of a total of 4,300 orders placed, and the rate of deliveries in 1944 will be about the same as 1943. I should like to know from the minister where those small craft were delivered. In one newspaper item the statement is made "Landing craft a big item now in shipbuilding". I asked the Minister of National Defence for Naval Services (Mr. Macdonald) on March 17 a question in regard to small craft. I said:

What about landing craft and seeps?

The minister replied:

No, not for our navy.

Where did those go to? Did Canada get any of those delivered, or were they all for the United States and Great Britain?

Mr. HOWE: Is the hon. member speaking of landing craft?

Mr. FRASER (Peterborough West): Landing craft, jeeps, seeps, ducks and other small boats of that kind.

Mr. HOWE: Quite a number were delivered to the Canadian navy. All landing craft were delivered in the United Kingdom, but I believe all our small boats programme was divided between the Canadian navy and the British navy.

Mr. FRASER (Peterborough West): Why would the Minister for Naval Services make that statement? I asked, "What about landing craft and seeps?" and he distinctly said, "No, not for our navy".

Mr. HOWE: Did the hon. member mean the assault craft?

Mr. FRASER (Peterborough West): The seeps are the ones that can go on land and water.

Mr. HOWE: We are not building any. Perhaps my hon. friend is referring to the landing craft.

Mr. FRASER (Peterborough West): The ones with open bow?

Mr. HOWE: L.S.T. type.

Mr. FRASER (Peterborough West): A large type or a small type?

Mr. HOWE: We are building the large type at the moment. We are building the type called the L.S.T., which is a very large type.

Mr. FRASER (Peterborough West): What tonnage would that be?

Mr. HOWE: Quite large, perhaps eight or ten thousand tons.

Mr. BENCE: Could I obtain under this item answers to my questions in connection with synthetic rubber plants?

Mr. HOWE: I think I made a statement this afternoon that covered the entire field of the questions asked by my hon. friend.

Mr. BENCE: No. I should like to ask the minister the reason why last year he stated he anticipated that the plant would come into full production by November, and now he says it will not come into full production until July after the butyl production is brought up a considerable amount. Was there any particular reason why there was that delay?

Mr. HOWE: The plant was in production last November.

Mr. BENCE: Yes, I know.

Mr. HOWE: In production before that. Full production means, of course, every unit operating at capacity, and it is not up to that now. As *Time* magazine stated—and it was quite correct with regard to one feature—butyl production turned out to be a very difficult process. As I stated this afternoon, we planned these plants before buna-S or butyl rubber had ever been produced on this continent outside of a laboratory. It was believed in the early stages that it would be easier to make butyl than buna-S. It turned out in practice that there were difficulties in large scale operation in connection with butyl, but those have been overcome and butyl production is stepping up very satisfactorily.

Mr. BENCE: Last year the minister stated that he anticipated the production of butyl would be eight thousand tons. The other day he said four thousand tons. Is that because of the difficulty that we have run into in connection with the production?

Mr. HOWE: No, I do not think so. I am not sure whether the figure is four thousand or eight thousand. Perhaps the eight thousand figure was wrong. Whatever we planned originally will be produced.

Mr. BENCE: According to the minister's statement of last year eight thousand tons were planned originally. I was wondering why four thousand tons were mentioned in the statement the other day.

Mr. HOWE: I do not think the unit was dropped. It may have been dropped, but I do not think so. I shall get the answer and give it to my hon. friend. I think I was correct in the first statement that we shall eventually have eight thousand tons of butyl, but sometimes changes are made. I do not recall a change in that particular capacity. Sometimes we slip from one product to another while we are building the plant, but I shall look into the facts of the matter as to butyl.

Mr. ADAMSON: Has the minister any information about the plant at Sutton-Horsley?

Mr. HOWE: Yes, Sutton-Horsley was a small operation stepped up into a very large operation. We had a need for a large number of instruments for trainer aircraft and a contract was given to Sutton-Horsley. Considerable advances of working capital were made and it was found that the finances of the company were being badly handled. The inventory on hand did not represent the advances made. We therefore put in a controller in the person of Mr. Pinchin to straighten out the operation, and particularly the finances of the company. He succeeded in doing that. All the operating capital put in by the government was recovered and the receivership was ended. The fact that the work has dropped off recently is on account of the falling off in the production of trainer planes. They have dropped sharply as a result of the curtailment of the air training programme, and the future of the existing contracts depends entirely on the future production of trainer aircraft in this country.

Mr. BURTON: Would the minister care to discuss the question to which I referred?

Mr. HOWE: Yes. We had representations from this cooperative. The representations were turned over to the crown assets allocation committee. The difficulty at the moment is that no department of government has declared agricultural implements or anything resembling them a surplus; therefore we have nothing to send to the cooperative at the moment. Their request is on file, and as soon as we have the type of implement in which they are interested we shall be glad to have their help and the help of other cooperatives in distributing the production in the area in which they operate.

Mr. NICHOLSON: On page 5 of the report made available to members to-day appears an item for Frost and Wood of $281,146. I understand that this company at Smiths Falls has recently received an order for a thousand reapers and some work has been done on retooling. I wonder if an order of that kind would come through Munitions and Supply and, if so, what country at this stage of the world's history is going back to the reaper? Are we to make it possible for tight materials

to be made available for the making of reapers? Has the minister any information about that?

Mr. HOWE: I may say that Frost and Wood had a contract through my department for making gun carriages, I think it was. I believe that contract has been completed. I am sure that if they have a contract for reapers it is a contract they received through the ordinary channels of trade. My department does not buy reapers.

Mr. NICHOLSON: Is there not a department concerned about the releasing of tight materials for the manufacture of an article like the reaper? Surely it should be a matter of government concern as to whether or not Canadian workmen and Canadian materials are to be used for the manufacture of reapers?

Mr. HOWE: There is no tight material situation associated with that type of production.

Mr. NICHOLSON: Farmers across the country are being told that there is a serious shortage of all the materials used in the manufacture of farm implements. If we can release materials for the manufacture of reapers I should imagine that those materials should be made available for other much more necessary instruments of production. I have not seen a reaper in operation during my lifetime. It seems a pity that workmen and materials should be used, if my information is right, in the manufacture of reapers.

Mr. HOWE: I really cannot say. That contract was not placed by the Department of Munitions and Supply. I do not know the story.

Mr. ADAMSON: Has the minister any information about the cost of aircraft?

Mr. FAIR: Are we to understand that there is no longer a shortage of material used in farm implements?

Mr. HOWE: That is correct.

Mr. FAIR: Are we to have all the instruments we need?

Mr. HOWE: I did not say that. If you cannot get them it is not a matter of materials being in short supply.

Mr. FAIR: I notice farm implements are rationed and we have quite a few complaints coming in of people not being able to buy the implements. If the materials are there, it would be a good idea to put the workmen to work.

Mr. HOWE: If my hon. friend can find any spare manufacturing capacity I am sure we shall be glad to use it for that purpose. The industry is working at full capacity at the moment.

The price of aeroplanes is not a subject to discuss in five minutes. If my hon. friend is interested in the price of aircraft I shall take fifteen minutes to-morrow and give a lecture on the subject.

Mr. ADAMSON: I think it would be interesting in view of the policy the minister has brought down in regard to post-war civil aviation. It might be a complementary subject which would be of interest to the hon. members.

Mr. HOWE: I shall be very glad to do that, but it is not a subject on which you can say, what does this plane cost? To take a figure and compare it with the cost of another plane somewhere else, and then to decide that one plant is doing much better than another. I will show how the manufacturing costs of aeroplanes vary with the size of the contract and the range of the run, the number of units produced. After that I shall be glad to discuss costs, but I think it is important to have a background.

Mr. ADAMSON: That is what I hoped the minister would do, and in the same way I should like to get some information from the parliamentary assistant with reference to the methods of reallocating contracts.

Mr. CHEVRIER: I think I can give my hon. friend that now. He spoke first of all of the cost-plus contract, which he said was a necessary evil. That is true; but it is a fact also that we have tried in the department to get away from cost-plus percentage contracts, and we have done very well over a period of time. I went on to discuss this afternoon the main purchasing branches of the department, and I think I showed how, in each of those, the percentage had gone down tremendously. Last year I was able to say that four-sevenths, in point of number, of contracts granted in the department were on a fixed price basis. This year there are substantially more than that. I do not know what they are, in point of numbers, but there are certainly five-sevenths, if not six-sevenths.

Then, with reference to re-negotiation, re-negotiation is brought about by our cost accountants, who are stationed in plants and who, when they have evidence of undue profits, re-negotiate immediately. The re-negotiation in the department is a retroactive re-negotiation. That is, it is one which dates back to the original date of the contract. In other words, if a re-negotiation begins now—to-day—and we find there is undue profit, the price will

revert to the date of the original contract. This afternoon I compared our system with that in Australia, where re-negotiation is not retrospective, and dates from the time of re-negotiation. I believe those are the two questions which were asked.

Mr. ADAMSON: That is the question in which I am interested. If, because of increased efficiency in a plant, the manufacturing cost comes down, and undue profit is being made, it might be that undue profit was not being made at the beginning of the contract because the operation was not handled as efficiently as it was six months later. Then the department re-negotiates at the beginning of the contract, and reduces the price of the article from that time. It seems to me that the department is going to cause considerable loss, if it does that, because the first period of production might have been nearer the fixed price allotted by the department. Only after six months, or a period of time has elapsed, and because of increased efficiency is an undue profit being made. It seems to me that if they are made retroactive, the department will be paying less than the article actually cost during the first period of the contract. It appears to me that there is that danger.

Mr. CHEVRIER: That is exactly what we have done, that is, we re-negotiate them as of the date of the original contract.

While I am on my feet perhaps I can answer before eleven o'clock some of the questions asked this afternoon and this evening. The hon. member for Lake Centre asked for some particulars with respect to re-negotiation. He wanted to know the numbers. There are eighty-three re-negotiations which have taken place. The value of those re-negotiations amounts to $119,107,000. Then, with reference to the number of cancellations of contracts, my hon. friend will appreciate that cancellations have to do not only with prime contractors but also with subcontractors, and therefore it is impossible to obtain the information. I cannot give him the number of those.

While I was speaking he asked me to give the percentage of profit allowed to aircraft operating companies. In the department we aim at five per cent. Sometimes it is under that, and sometimes over. But the profit is in the order of five per cent, with something better in certain cases where unusual skill has been shown, and something less in other cases. There are also some occasions where the fee is fixed. For instance, there is the cost plus a fixed fee.

Mr. DIEFENBAKER: How much does "something more" amount to?

Mr. CHEVRIER: It depends upon the circumstances, and I am not in a position to give any further details. As I said before, the target is five per cent. We aim at cost plus five per cent. There are cases where it is under that amount, and other cases where it is over.

The hon. member for York-Sunbury asked some questions yesterday with respect to the subsidy on wood fuel. The total production subsidy is $757,664.15. This represents a payment of one dollar a cord on all commercial wood fuel cut on or before March 1, 1944, and delivered to a dealer or held to his account after March 5, 1943. In addition to the production subsidy, transportation subsidies amounting to $257,639.71 have been paid. These payments cover such portion of the transportation costs incurred by wood-fuel dealers in the transportation of wood fuel. Both of these subsidies are paid by the Commodity Prices Stabilization Corporation on receipt of a certification by the wood-fuel controller.

The hon. member for York-Sunbury also asked what quota of heavy-duty trucks are being imported into Canada.

Mr. TUSTIN: How is the subsidy on transportation arrived at?

Mr. HOWE: If wood is required in an area, and must be brought in from outside the normal sources, the transportation bonus is paid, representing the difference between the normal cost of transportation and the actual cost paid from the greater distance. We had a situation that represented, among other things, a very bad distribution of wood. The normal sources could not be developed sufficiently to produce the required supplies and, as I say, we went outside the area. For instance, at the head of the lakes we cut 75,000 cords of wood as a reserve supply for points both east and west of the head of the lakes. That is not a normal operation; it was an emergency. And moving wood from that emergency store, either to Winnipeg or to the east, involved an abnormal cost that was covered by the transportation bonus.

Mr. CHEVRIER: Perhaps I might continue. I had referred to the question by the hon. member for York-Sunbury as to the quota of heavy-duty trucks being imported into Canada. The answer is that heavy-duty trucks of 16,000 pounds or over, gross vehicle weight rating, are not produced in Canada. The quota of imports from the United States is fixed by the motor vehicles controller in consultation with the director of the automotive division of the war production board in the United States. The quota in 1943 was seventy-four; the quota in 1944 is 207.

Then the hon. member for Peterborough West asked a question with respect to glycerine. The answer is that glycerine is now on the free list, by virtue of order CC-2-B-3 of December 31, 1943. At that time all restrictions on glycerine were lifted.

Mr. STIRLING: The minister will remember that he undertook to bring down a statement with regard to the processing of coal at the mine. Will he be good enough to make a statement to-morrow?

Mr. HOWE: My hon. friend spoke about processing coal at the mine head. We are doing no processing of that type in Canada at this time. But the Department of Mines and Resources are continuing studies on the hydrogenation of coal at this time. In fact a special laboratory has been built for that purpose. The subject matter will be considered very carefully. It is appreciated that it would be a favourable way to deal with some of the western mines, particularly if it turns out to be an economical process. We are hoping that some progress may be made.

Mr. STIRLING: It has not got beyond the experimental stage?

Mr. HOWE: No.

Item stands.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, March 24, 1944

The house met at three o'clock.

CANADIAN WHEAT BOARD

ANNUAL REPORT FOR CROP YEAR 1942-43

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Mr. Speaker, I wish to table the annual report of the Canadian Wheat Board for the crop year 1942-43. I suggest that the report be referred to the committee on agriculture.

INTERNATIONAL AGREEMENTS

CANADA-CHINA—MUTUAL AID—WAR SUPPLIES

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I desire to table three copies in English and three copies in French of the Mutual Aid agreement between Canada and China on the principles applying to the provision by Canada of Canadian war supplies to China under the War Appropriation (United Nations Mutual Aid) Act of Canada, 1943, signed at Ottawa, March 22, 1944. The principles embodied in this agreement between China and Canada are similar to those that are embodied in the agreements I tabled last week between Canada and the United Kingdom and Canada and Russia. The text of this agreement is to all intents and purposes the same as that of the United Kingdom agreement.

Mr. GRAYDON: Are there any more agreements to be tabled?

Mr. MACKENZIE KING: There will be, at least, one more, yes.

CANADIAN NATIONAL RAILWAYS

REFERENCE OF BUDGET AND REPORT OF AUDITORS TO RAILWAYS AND SHIPPING COMMITTEE

Hon. J. E. MICHAUD (Minister of Transport): Mr. Speaker, I wish to table the report to parliament of George A. Touche and Company, auditors of the Canadian National Railway system, for the year ended December 31, 1943, and the financial budget of the Canadian National Railways and Canadian National (West Indies) Steamships Limited for the calendar year 1944. I move:

That this report and the financial budget be referred to the standing committee on railways and shipping owned, operated and controlled by the government.

Mr. HANSON (York-Sunbury): Does the motion include the auditor's report?

Mr. MICHAUD: Yes.

Mr. HANSON (York-Sunbury): It should be in the motion.

Mr. MICHAUD: The auditor's report is to parliament.

Mr. HANSON (York-Sunbury): It ought to be referred to the committee as well.

Mr. SPEAKER: The motion will read:

That the financial budget of the Canadian National Railways and Canadian National (West Indies) Steamships Limited for the calendar year 1944, also copy of the auditor's report, be referred to the standing committee on railways and shipping owned, operated and controlled by the government.

Motion agreed to.

RADIO BROADCASTING

APPOINTMENT OF B. K. SANDWELL AS A GOVERNOR OF C.B.C.

Hon. L. R. LaFLECHE (Minister of National War Services): Mr. Speaker, may I table copy of order in council P.C. 2120 of March 24, 1944, appointing Mr. Bernard Keble Sandwell a governor of the Canadian Broadcasting Corporation.

Mr. GRAYDON: Is Mr. Sandwell to be the new chairman of the board of governors?

Mr. LaFLECHE: I cannot answer that question.

PRIVATE BILLS

FIRST READINGS—SENATE BILLS

Bill No. 39, respecting the New Brunswick Railway Company.—Mr. Emmerson.

Bill No. 40, respecting Gore District Mutual Fire Insurance Company.—Mr. Homuth.

PENSIONS

WIDOWS OF VETERANS OF FIRST WORLD WAR

On the orders of the day:

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health): Yesterday the hon. member for Winnipeg North Centre (Mr. Knowles) asked me a question in regard to certain resolutions passed at a recent conference of war widows. I understand these were meant for preliminary discussion, and are to be forwarded to me by the secretary.

In regard to the second part of my hon. friend's question, I may state that all representations made receive careful consideration, and government policies in regard to them are being and will be announced from time to time.

CONFERENCE WITH PROVINCES

ACCEPTANCES OF INVITATION—INQUIRY AS TO PROBABLE DATE

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I desire to direct this question to the Prime Minister: have all nine provinces accepted the invitation of the government to attend the projected dominion-provincial conference at Ottawa, and, if so, when does the Prime Minister expect to be in a position to announce the date of the conference?

Right Hon. W. L. MACKENZIE KING (Prime Minister): All the provinces have accepted the invitation of the dominion government for a dominion-provincial conference. I am not able at the moment to say at what particular date the conference will be held. There is a good deal of preparatory work to be done, and it is proceeding at the present time. Up to the present it has not been possible to find a date which would be acceptable to all the provinces. But the government is doing its best to have the conference brought into being at the earliest convenience of the provinces generally.

UNITED NATIONS

RELIEF AND REHABILITATION—INQUIRY AS TO THE DATE AND PLACE OF MEETING OF COUNCIL

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Reports in the press yesterday would appear to indicate that Canada is to be the second meeting place of the united nations relief and rehabilitation administration and that the meeting is to take place in the month of June. Will the Prime Minister inform the house as to whether or not Canada is to be honoured with such a meeting and, if so, when and where it is likely to be convened?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The government has cordially welcomed the proposal that the council of the united nations relief and rehabilitation administration should hold its next meeting in Canada. I understand that the next meeting is to be held in the month of June, but I am not in a position to say at the moment at what particular date or place the meeting will be held. The council itself will decide that and would be, I think, the appropriate body to make the announcement.

CANADIAN ARMY

REVERSION OF ACTIVE SERVICE OFFICERS TO RESERVE FORCE STATUS

On the orders of the day:

Hon. J. L. RALSTON (Minister of National Defence): I desire now to answer the question of the hon. member for Vancouver South (Mr. Green), who inquired yesterday with regard to the retirement of officers in the Pacific command.

The statement that "500 officers are being retired from the active force in the Pacific command" is not accurate. The number from October 1 to February 29 was 115, and the number pending at that time was 35.

Officers are not being returned in groups to reserve force status. Each case is dealt with individually and on its merits.

There have, from October 1 to February 29, been retired 639 officers. That does not include 225 officers who have been retired since July 1943 as being over 60 years of age. The house will understand that this includes those retired from the Pacific command and all others as well. Some have been returned to reserve status at their own request; some have been returned as over age for overseas service, some as below medical category for overseas service. Others are returned to reserve status because no suitable employment can be found for them in the Canadian army.

Officers' survey and classification boards have been set up to deal with the disposal of officers. Each officer to be returned to reserve status —except those returned at their own request— gets notice of the intention to return him to reserve status, with the reasons upon which the recommendation is based. The notice is given to him by his commanding officer. He is advised that he may, if he so wishes, submit a statement within a period of 14 days from the notice, setting forth any reasons he might have why such recommendation should not be carried into effect. He is also advised by the notice that, if no such statement is received from him by his commanding officer within the 14 days, his commanding officer will forward his recommendation through the usual channels to national defence headquarters. It is also stated in the notice that, if the officer does not wish to submit any reasons against the recommendation, he should state so in writing.

Before notice of the intention to recommend return to reserve status is sent to the particular officer, he will probably have been interviewed by the officers' survey and classification board. If he has not, and expresses the wish to appear before them, he is given an opportunity of doing so and of giving the board all the reasons he can to show why he should not be returned to reserve status. The board has no authority to dispose of an officer. The board simply puts in a recommendation to the district officer commanding or the general officer commanding concerned.

All officers who are returned to reserve status under the procedure by notice which has just been described are paid rehabilitation grant.

MAPLE PRODUCTS

RATIONING—USE FOR PRESERVING PURPOSES

On the orders of the day:

Hon. J. L. RALSTON (Acting Minister of Finance): May I make an answer to the hon. member for Parkdale (Mr. Bruce), who in a question he asked yesterday inquired whether consideration would be given to the immediate removal of restrictions on the purchase of maple syrup and maple sugar.

The answer is that when rationing became necessary for preserves and sweeteners because of greatly increased demands and definite shortages of some items such as canned fruits, it was necessary that the general pool of sweeteners be dealt with as a whole and that each consumer be given an equal claim upon it. It would have been discrimination in favour of consumers of maple syrup if they had been able to purchase their maple syrup without coupons and still have all their coupons to purchase other sweeteners or the alternative of sugar. In dealing with rationed commodities it is the policy of the wartime prices and trade board to treat all parts of Canada equally and to avoid discrimination in favour of any particular section or group of consumers. Accordingly as at present advised it is not the intention to remove maple syrup or maple sugar from the preserves ration.

Hon. R. B. HANSON (York-Sunbury): If I am in order, I should like to address a question to the minister in connection with the statement he has just made. It is represented to me from my constituency, which is a substantial producer of maple sugar products, that the rationing has had the effect of reducing production because people are not willing to give up their sugar coupons for maple sugar. I should like to have that situation investigated. I may say that I took it up with the wartime prices and trade board and they tried to laugh me out of court, but I cannot be laughed out of court so easily.

HOSPITALS

NUMBERS OF PATIENTS, 1939-42

On the orders of the day:

Hon. HUMPHREY MITCHELL (Minister of Labour): Yesterday the Leader of the Opposition (Mr. Graydon) asked me if I could give figures of the number of patients in the hospital institutions of this country. I have broken down the statement into four divisions: public hospitals; mental hospitals; private hospitals; tubercular sanatoria. The figures are for the years 1939, 1940, 1941 and 1942, and are as follow:

	1939	1940	1941	1942
Public hospitals	885,819	985,897	1,057,553	1,116,602
Mental hospitals	56,657	56,823	58,341	59,943
Private hospitals	36,766	42,479	47,361	48,225
Tubercular sanatoria	19,425	21,002	21,847	21,997

The figures for 1943 are not available yet, and those I have given do not include dominion government hospitals.

It will be noted that the increase in the three years from 1939 was: for public hospitals, 230,783, or 27 per cent; for mental institutions,

3,286; or slightly under 6 per cent; for private hospitals, 11,459, or 31 per cent; and for tubercular sanatoria 2,572 or about 13 per cent.

With regard to days' stay, the average for the public hospitals is 12·2 days, but owing to more scientifc care of patients and generally improved accommodation this average is showing a gradual drop. The averages for the other hospitals are: mental, 5 to 6 years; private, 16·6 days; tubercular, 226 days.

Mr. GRAYDON: That explains the increase in personnel.

Mr. MITCHELL: That is what I tried to point out to my hon. friend.

Mr. GRAYDON: Of course you did not do anything of the kind.

LABOUR CONDITIONS

CLARK RUSE AIRCRAFT, DARTMOUTH, N.S.

On the orders of the day:

Mr. A. R. ADAMSON (York West): I wish to direct a question to the Minister of Labour, notice of which I sent him. The question arises from a telegram received from the secretary of Local 129 of the United Automobile Workers, C.I.O., which states that trained aircraft workers are being laid off at Clark Ruse Aircraft Limited, Dartmouth, N.S., and that the operations of the local selective service officials are extremely inefficient; further, that inadequate provision is being made for the proper reemployment of skilled workers who are being given unskilled work. The question I would like to ask the minister is this: Are aircraft workers being laid off at Clark Ruse Aircraft Limited? If so, how many, and further, what steps are being made to reemploy these skilled workers at their specialized trade?

Some hon. MEMBERS: Order.

Mr. ADAMSON: Secondly, would it be possible, if the operation in question is closing down, to send these men to plants in Ontario where a shortage of skilled labour currently exists?

Mr. SPEAKER: Order. The question is one that should be placed on the order paper.

Mr. MITCHELL: I am not taking the hon. gentleman's word that the selective service is inefficient in this particular case.

Mr. GRAYDON: The question asked by the hon. member for York West remains unanswered by the Minister of Labour. I was rising to ask the minister why it is not answered.

Some hon. MEMBERS: Order.

Mr. SPEAKER: The question must be placed on the order paper.

EDMONTON COAL MINES—QUESTION AS TO CONTINUANCE OF SUBSIDY

On the orders of the day:

Mr. C. E. JOHNSTON (Bow River): I wish to direct a question to the Minister of Labour. In this morning's *Journal* it is reported that 500 miners have been dismissed from the Edmonton coal mines because the dominion government has given no definite assurance that the coal subsidy will be continued after March 31.

Some hon. MEMBERS: Order.

Mr. JOHNSTON (Bow River): Is the government prepared to give immediate employment to these miners?

Mr. SPEAKER: I have already called attention to the fact that questions arising out of editorials or statements in newspapers are not such as should be asked on the orders of the day. They should be put on the order paper so that answers can be given properly.

Mr. JOHNSTON (Bow River): I am not quoting anything from a newspaper. I am stating facts.

Mr. SPEAKER: The question is one that should be put on the order paper.

WHEAT BOARD

QUESTION AS TO ACTION IN COURTS FOR ACCOUNTING

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): May I direct a question to the Minister of Trade and Commerce? Has any action been brought in the courts against the Canadian wheat board for an accounting? If so, by whom was such action brought, on what date and in what province? If action has been brought, has any judgment been rendered, and what is the effect of that judgment?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): The question may stand as notice.

POSTAL SERVICE

AIR MAIL RATES TO THE UNITED STATES

On the orders of the day:

Mr. G. K. FRASER (Peterborough West): May I ask the Postmaster General a question. As air mail rates from the United States to Canada are being increased from six to eight cents per ounce, starting Saturday night, will there be a change in the rates from Canada to the United States?

Hon. W. P. MULOCK (Postmaster General): That is a question of government policy. If any change is contemplated the house will be so advised in due course.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, March 23, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsely—Mr. Bradette in the chair.

DEPARTMENT OF MUNITIONS AND SUPPLY

Mr. ESLING: At the sitting of yesterday the member for York West referred to tungsten. I would like to ask the minister a few questions for the purpose of general information on the subject. I do not expect the replies to-day but I hope he will note the questions and bring down the answers at his convenience. Tungsten has been a mineral of very great importance, particularly in the early part of 1942, so much so that there was general publicity in all mining papers as well as in all newspapers advising prospectors and miners to be on the lookout for scheelite ore from which tungsten is taken.

I speak on this matter for the reason that the Emerald mine in my district was looked upon as one of the most promising tungsten properties in the dominion. The owner was a resident of the United States. Negotiations for the purchase of this mine were entered into, with the result that the owner asked the government $1,750,000. I suppose that was what one might call wet weight, because the government expropriated the property and took it over at dry weight of $424,000 payable in United States funds. That is quite a difference.

The metals reserve corporation apparently proceeded to develop the property, although the property is in the name of the government. That property produced 132 tons of high-grade tungsten and 267 tons of low-grade tungsten concentrates.

I wanted to ask the minister first of all: Does the property remain in the name of the Canadian government? Has it been fully paid for, and in view of the fact that the mine has closed, that operations have ceased, that there is no more demand for tungsten, will the minister first note the question as to why this lack of need for tungsten has come about in such a short time? Was there not sufficient research work to determine whether there would be an oversupply in the United States, or was there not sufficient research work to tell whether there would be any specific amount required in Canada? I ask this because the advertisements in the public press encouraged everybody to go after scheelite ore. I asked what expenditures had been made on the Emerald mine, and the reply was $829,000 for development. I took it for granted that $424,000 would be added to that for the expropriation of the mine. I wish to ask the minister if the $829,000 includes the cost of erecting the mill, because the development of the mine could not be proceeded with unless there was a mill. It is a very up-to-date mill.

We now have $829,000 and $424,000 of United States funds in the property while 267 tons of low grade concentrates, which yielded $70,000, have been shipped out. There are 132 tons of high grade concentrates left. What is the assay of the high grade concentrates? What will be the approximate value of them? What is the government going to do with these high grade concentrates, and what is the government going to do with the high grade concentrates from the various mines across the country which have been producing tungsten? They all went to considerable expense to get production under way.

In September last all operations at this Emerald mine ceased and the mill closed in October. Can the government not arrange to use that mill as a customs mill for prospectors of lead and zinc ores in the West Kootenay district? It may be necessary to have some alterations made, but as development cost $829,000 and the property $424,000, plus the cost of the mill, which is unknown, it represents a very large investment.

I should like to turn to the matter of publicity and the encouraging of prospectors to make a thorough search for the then much-needed tungsten, which to-day is not needed at all. Is that situation brought about because the production in the United States is so great, or the price of mining so much less. I wish to cite to the minister the case of a local prospector. A letter in reference to that case went to the Department of Mines four or five days ago, to which there has been no reply. I stress the Department of Mines because all the newspaper publicity urged prospectors to be on the lookout for scheelite and to send their samples to the Department of Mines. They were told if they did that they would get full information not only as to procedure but as to the names of the firms in the United States to which the tungsten concentrates could be shipped. I cite this case purely as a matter of justice in view of the publicity given.

This man was employed during the day. He had a property on which he thought there were scheelite indications. At his own expense he bought a mineral lamp and proceeded to mine his scheelite ore with the result

that he took out four tons of concentrates containing tungsten. He sent samples to the Department of Mines at Victoria. Apparently the provincial government and the federal government were acting in unison; however, most of his correspondence had been with the Department of Mines at Ottawa. As I say, he sent his samples to Victoria. He had them assayed and sent to the Minister of Mines. Apparently he did not get very much general information from Ottawa, but he directed another letter to the Minister of Mines in January, after information was received that there was no use for tungsten in Canada; that the Emerald mine had closed along with the mill. He asked the Minister of Mines where he could ship his concentrates. He had been told in those printed advertisements and publications from the Department of Mines—I suppose it applied to the federal and provincial departments—that when a man had tungsten concentrates which reached a specific assay the department would advise him to what firm in the United States to ship them, and he would be paid fifty per cent cash and the balance upon receipt of the concentrates and an assay by the United States firm to which they had been shipped. However, the Department of Mines told him there was no longer any use for concentrates. After the first of January he wrote to the Minister of Mines and asked whether it was worth while to proceed with the purchase of additional mining equipment in order that he might locate the main body of ore on his property. The Minister of Mines replied that a tungsten property is always of great value but at the present time there is no place to ship the concentrates.

Visualize a man putting in an eight hour shift and responding to the plea of the government to hunt for scheelite to produce tungsten concentrates. He puts in an eight hour shift at his everyday work. He was employed in the smelter. He wrote to the management of the mill of the Emerald mine, which is not over thirty or forty miles away, and the mill manager replied that he was unable to mill his concentrates unless he could secure the permission of the Minister of Mines. He must have meant the federal Minister of Mines, because the property belongs to the federal government. Before he could get a reply the mill had closed. He then proceeded to break up the four tons of ore himself. It is a very hard job to break up four tons of ore. He put in his time in the evenings and on Sundays, and, as I said, he got out the high grade concentrates and the low grade concentrates. He did not ask the government to accept the low grade concentrates, but he wanted to get some reimbursement for his high grade concentrates. Unfortunately there is no place to which he can ship. My contention, my plea and my suggestion is that it is only a matter of justice for the government to take that man's two tons of concentrates and pay him for them. They undertook to pay him fifty per cent cash as soon as he got an assay, the balance to be paid upon analysis by the firm to whom it was shipped. It is only a matter of justice that that prospector, who has gone the whole way, done everything that the government asked him to do, should be repaid for his effort or a market found for his concentrates. They have a million and a half in this Emerald property, and the government would not know what to do with it to-day any more than they would know how to fly. Why could they not compensate that prospector for two tons of concentrates?

I want to come now to the Kootenay-Florence mine, which is on Kootenay lake, and belongs to a Canadian firm. The metals reserve corporation, through the metals control board, entered into an agreement with that company. I want to ask the minister the terms under which that property is being operated. I know the owners are receiving a royalty, but I want to know also the price they receive per ton for the lead and zinc concentrates being shipped to the United States. My main purpose, however, is to ask the minister if he will not make use of that mill. It is a lead and zinc mill. The Emerald mill is a tungsten mill which could be altered to accommodate lead and zinc concentrates, but the Florence mill is being operated already. I ask the minister if arrangements cannot be made for the use of the Florence mill by local mines. There must be a customs mill in the West Kootenay district; otherwise you will discourage, as you have been discouraging, the production and shipment of lead and zinc, which is urgently required.

What did the Consolidated Mining and Smelting company do? They entered into an agreement with the British government to sell all their lead and zinc during the period of the war, and they are receiving 3·6 cents per pound for zinc. To-day the quotation in St. Louis for lead is 6·35 cents and for zinc 8·25 cents. I mention these quotations particularly because I want to appeal to hon. members to my left, who never seem to have a kindly word for the Consolidated Mining and Smelting company, which they look upon as a corporation which has no regard for industrial relations. I can assure them that the industrial relations of this company are not equalled by those of any other concern in the Dominion of Canada. Further I want to say to hon. members to my left that by

selling to the British government for about 3·6 cents per pound instead of at the prices quoted in the United States, which prices are received by any producers who ship their concentrates to the United States, this company has saved the British government about $22,000,000 annually ever since the outbreak of the war. I would ask my hon. friends to have a generous thought for one company which does not seem to operate purely for the exploitation of the country.

Mr. HOWE: I shall be very glad at the next sitting to answer the questions which have been asked by the hon. member for Kootenay West.

While I am on my feet I should like to refer to two matters which were discussed last evening. The first was in connection with the ownership of Clark Ruse Aircraft Limited. The reason I mention this is that certain statements made in the house last evening were quoted in the press to-day. The directors of the company are: J. Clark Ruse, president; Ewart Angus, vice-president; Mel Angus, secretary; Harold Jeffries; Hon. J. Earl Lawson.

The directors, with the single exception of the estate of Alfred R. Caldwell, are all the shareholders and own the total share capital. The estate of Alfred R. Caldwell is represented by Hon. J. Earl Lawson, who is the solicitor for the company; and it was through Mr. Lawson that the capital invested in the company was raised. I suggest that the hon. member for York-Sunbury might be a little careful in talking unjustly about the officers of my department.

Mr. HANSON (York-Sunbury): I did not make any attack; what I asked—

Mr. HOWE: You did not ask; you stated.

Mr. HANSON (York-Sunbury): Just a moment; the minister has referred to me and I am rising to a question of privilege. I asked whether the capital investment in the plant was to be a loss to the country, or how it was to be treated.

Mr. HOWE: You made a statement.

Mr. HANSON (York-Sunbury): Perhaps the minister misunderstood the purport of my question.

Mr. HOWE: There was no question. You made a statement about a member of my department which you asked to have expunged from *Hansard,* and I agreed to have it expunged.

Mr. HANSON (York-Sunbury): I never asked to have it expunged. Someone else asked to have it expunged, and I agreed to it, if you want the bald truth.

[Mr. Esling.]

Mr. HOWE: Not myself.

Mr. HANSON (York-Sunbury): Not myself, either. I did not ask for it, but I agreed to it. The minister is on the wrong track. I was asking about the capital expenditure in the plant at Dartmouth, and now that operations there are being reduced I wanted to know if that was to be a capital loss to the country, or what use it was to be put to. I said nothing about the ownership of the company. The minister has sought to bring that in, and I welcome the information but I did not ask for it.

Mr. HOWE: You certainly made a statement about it, and I was answering that statement which, had it been true, would have caused a very serious situation in the department and in the country.

Mr. HANSON (York-Sunbury): I will look it up in *Hansard.*

Mr. HOWE: You will not find it in *Hansard,* but you can find it in the typewritten sheets from which it was expunged.

Mr. HANSON (York-Sunbury): I understood you agreed to have that done, and I agreed to it.

Mr. HOWE: Nevertheless it appeared in the press, and I thought it deserved an answer.

Mr. HANSON (York-Sunbury): I did not put it in the press, and I am not responsible for what was there.

Mr. HOWE: You are responsible for what you say in the house, I think.

Mr. HANSON (York-Sunbury): That is right, and I take full responsibility for it.

Mr. HOWE: With regard to Defence Industries Limited, I think in fairness all the fees collected by the company should be placed upon *Hansard.* I have a statement here which, with the unanimous consent of the committee, I will ask to have printed in *Hansard.* It is as follows:

Defence Industries Limited

Operating Fees

Chemicals and explosives

Plant	Paid to Dec. 31, 1943	Value of production	Per cent of fee to production value
Nobel	$ 796,000	$36,005,000	2·21
de Salaberry	831,000	34,962,000	2·3
Shawinigan .	42,000	3,268,000	1·28
Winnipeg ..	585,000	25,006,000	2·34
Beloeil	9,600	388,000	2·47
Windsor	41,000	2,705,000	1·52
	$2,304,600	$102,343,000	2·2

Ammunition filling

Plant	Paid to Dec. 31, 1943	Value of production	Percent of fee to production value
Bouchard ...	$ 180,000	$114,603,000	0·16
Pickering ..	248,000	228,230,000	0·11
Villeray	25,000	4,408,000	0·57
	$ 453,000	$347,241,000	0·13

Small arms and sundry

Verdun	$ 922,000	$ 41,446,000	2·2
Brownsburg.	348,000	12,160,000	1·35
Montreal Works	147,000	10,375,000	1·42
Westmount .	nil	3,785,000	nil
	$1,417,000	$ 67,766,000	2·09
Total Operating ..	$4,174,600	$517,350,000	0·8

Construction Fees

Chemicals and explosives

Plant	Paid to Dec. 31, 1943	Construction cost	Percent of fee to cost
Nobel	$ 363,000	$ 11,278,000	3·2
de Salaberry	137,000	14,323,000	0·96
Shawinigan..	15,000	585,000	2·6
Winnipeg ...	91,000	10,276,000	0·9
Windsor	15,000	866,000	1·8
Beloeil	8,700	310,000	2·8
Stormont ...	nil	2,944,000	nil
	$ 629,700	$ 40,582,000	1·55

Ammunition filling

Bouchard ...	$ 106,000	$ 13,277,000	0·8
Pickering ..	86,000	11,489,000	0·75
Villeray	25,000	2,244,000	1·1
	$ 217,000	$ 27,010,000	0·8

Small arms and sundry

Verdun	$ 168,000	$ 15,593,000	1·1
Montreal Works ...	101,000	9,529,000	1·1
Westmount .	17,000	1,461,000	1·2
	$ 286,000	$ 26,583,000	1·08
Total Construction.	$1,132,700	$ 94,175,000	1·2

Summary

Operating ..	$4,174,600	$517,350,000	0·8
Construction.	1,132,700	94,175,000	1·2
	$5,307,300	$611,525,000	0·86

Mr. COLDWELL: Do those fees include the salaries of officers engaged in operating the plant?

Mr. HOWE: It includes the services of the company and its head office expense. The men actually engaged in the plants, are paid as part of the plants' expense. In connection with construction fees, my hon. friend will recall that Defence Industries Limited were also designers of the plants, and experts in the process involved.

Mr. HANSON (York-Sunbury): What would be the average fee in commercial life as compared with the 1·2 per cent the minister has indicated?

Mr. HOWE: I believe the standard fee is five per cent, but in a large work of this kind it would not be that much.

Mr. COLDWELL: What I said may have been obscure. The figure the minister has given is the one I had in mind. I took it from a newspaper report that it was around the $600,000,000 mark. That is where the figure crept in.

Mr. HOWE: I see. While, as I pointed out, the average fee was ·86, all this work was segregated in a corporation with a million dollar capitalization. This of course made its earnings subject to heavy taxation. That fee, after taxation, amounted not to ·86 per cent but to ·2 per cent, or one-fifth of one per cent.

Mr. GILLIS: I understand it is the intention to go along with the estimates of the Minister of Munitions and Supply, as we did with those of the army, the navy and the air force. While the estimates set out specifically items covering almost everything one could discuss, there are some observations of a general nature I should like to make.

The hon. member for Rosetown-Biggar (Mr. Coldwell) stated in a general way the opinions held by this group respecting the minister's report to the committee. My own opinion is that under difficult conditions the minister has done an excellent job, from the inception of his department. When one stops to examine the record back to the outbreak of war, and realizes the position in which the minister was placed in a country totally unprepared for war, with the responsibility thrown into the minister's lap of putting Canada on a war-time basis, he can see that this was a big order to hand to any one man. The surprising feature is the success he has had, particularly in view of the lack of cooperation from the beginning on the part of those who were in a position to give him perhaps the only available assistance

at that time. I refer to those organizations to which he handed so much power, a procedure for which I believe he has been justifiably criticized. When he first approached those organizations and asked for their cooperation in putting Canada on a war-time basis industrially, we remember that their only gesture of cooperation was that unless the clause providing for a limitation of profits to five per cent were removed, they would not be prepared to produce war materials.

The point I make is this: in examining the record of the Department of Munitions and Supply one must remember that the only machinery the department had to work with at that time was the then existing industrial establishment of the country. Any man who took that industrial machine and built from it the organization we now have must be handed a compliment, and it is one which I think he has justly earned. He had a terrific job, and received very little cooperation in the first instance from those who were in a position to give him real assistance.

The scene has changed, however, and a real organization has been built up. I agree with many hon. members who have said that to-day too much power rests in the hands of that group who are concerned about profits only. We do not quarrel with the controls, but rather with those who control, and what they control for. If the only desire in their minds is profits for themselves, that is a motive which the Canadian people, and particularly the members of this house, will have to watch very closely.

With respect to the industrial war machine that has been built up, the minister I think has proven that we have reached the peak of war production. The emphasis is changing; there is a slackening off, and a tendency on the part of those who are dominant in these controls, men from the larger industries, to create the opinion in the minds of the public generally that the war is near its end, and that the huge organization that has been built up for the purpose of prosecuting the war can now be unscrambled. I notice that many of the key people are resigning the positions which they have occupied for the past two years in the controls and are going back to their own private companies. When I say "going back", I should add that they are going back in name only, because they have never really left their own concerns. I think they reason this way: Controls have been developed, and certain legislation and orders in council have been passed, which make it unnecessary for us to remain in these controls any longer, because under the existing legislation and orders in council there is practically a guarantee to us that the emergency machine that was built up for war purposes will not be utilized in the aftermath of the war in competition with those of us who believe in private enterprise—whatever private enterprise may mean. I have lived under so-called private enterprise for forty-five years or so, and it has been so private, so mysterious, that most of the citizens of this country have not yet had an introduction to it. I could not give a definition of it; it is something really mysterious to me. But if by private enterprise they mean the concentration of wealth and power in the hands of a few men like Sir Herbert Holt and the Royal bank, I can understand that.

Mr. JACKMAN: He is dead.

Mr. GILLIS: But he left footprints on the sands of time. If that is to be the motive in the future with respect to the utilization of this industrial war machine that has been built up, the Canadian people are in for a very unhappy experience.

I said a few nights ago that I consider the war supplies allocation board and the War Assets Corporation which have been set up under the Department of Munitions and Supply perhaps the most important post-war organizations that have been instituted by the government. I have served on the reconstruction committee for the past two and a half years. The committee has heard many briefs and recommendations with regard to planning for the post-war period and creating jobs for those in the armed services when they return. But the only jobs that you will have in the post-war period which did not exist in 1939, when there were one million and a half people on relief in this country—and to-day many of those boys are in Sicily or Italy—will be the jobs created by this industrial war machine that has been built up under the Department of Munitions and Supply. But if that organization is not used for that purpose; if these industries are not converted to peace-time needs, you are not going to have any jobs for our boys to come back to from overseas. We have placed in the hands of the war supplies allocation board and the War Assets Corporation the power of utilizing, in such a way as they see fit, the great industrial organization that has been built up by the taxpayers of this country and from the very slight experience we have had with it so far I am sceptical as to how that power is going to be used. For instance, here is a statement in Toronto *Saturday Night* of a few weeks ago, "Canada far ahead on disposal of surplus war supplies." The thing that gives me concern in this article is that the manufacturers' association emphatically state that

in their opinion industry which has been created for war purposes must under no circumstances when the war ends be given to newcomers in the industrial set-up, to be used on a competitive basis with industries now in existence. In effect that means to me that those who dominated the industrial set-up in the field of private enterprise in 1939 before the war are of the opinion that this whole war machine should be scrapped now, that under no circumstances should the industrial organization that has been built up during the war be used for the purpose of creating peace-time necessities and come into competition with the existing industrial organizations. That is the opinion of your manufacturers' association and your chamber of commerce; there is no doubt about that. The chamber of commerce in making their presentation to the reconstruction committee not so long ago stated emphatically that one of the basic principles they were advocating was that immediately on the cessation of hostilities the whole industrial machine that had been built up during the war must be scrapped and the field left open to private enterprise. The point I wish to make there is this, and I have no ulterior motive at all; I do not care what kind of tag you hang on to your order of society, but unless that order of society takes care of the needs of the people it has no right to exist.

Mr. JACKMAN: We are all agreed on that.

Mr. GILLIS: Then we must be in disagreement with the manufacturers' association and the chamber of commerce who advocate a return to 1939 conditions in the field of industry in Canada. That is their policy, and it is one with which I and those of us in this group disagree. I am glad to hear the hon. member for Rosedale say that we are all agreed on the principle of establishing an order of society that will take care of the needs of the people regardless of any particular group that may be injured in the process.

In the matter of utilizing the existing wartime industrial organization, I have had one or two little experiences which indicate to me that those who have the authority to dispose of surplus war materials and supplies have a certain definite policy that they are going to follow. Let me give the minister one example, a very small one perhaps.

An ex-service man who had been overseas for a couple of years came back and took work at a shipyard. He had previously been a miner. When the emergency fuel order came out he was directed by national selective service to go back to his old employment as a miner. He did so, going to the section to which he was allocated by the selective service. His family was in another part of the country, and he desired to move them so that they could be together, but he could not find a place to live. There are barracks located in that town comprising some forty buildings. The barracks are new. They had been used for a short time, but were then unoccupied. He suggested to me that I get in touch with national defence with a view to his buying one of these buildings and convert it into a dwelling for himself and his family. I wrote several departments, not knowing exactly who or what this war allocations committee or corporation was. I was advised, after some considerable delay that, as far as selling any of these buildings was concerned, by virtue of the buildings having been put on land owned or leased by Dominion Steel and Coal Corporation Limited, that company had first option on them and it was believed that they would utilize them as homes for miners who might be directed from other industries into that section. Nothing has been done in that matter so far. The ex-service man who was directed to come back to that particular occupation still lives apart from his family.

I tried again. One of the larger credit unions in that area, desirous of obtaining more office space, wanted to purchase one of the buildings. Upon writing about the matter I received exactly the same information.

These are small illustrations of a point which I wish to leave with the minister. My conception of the principle upon which this corporation and committee are going to work is this. Much of the money which through the minister's department has been put into industry for the purpose of expanding existing industry and developing new production has gone into plant and equipment on land held by private companies. Presumably the decision rendered by the board in the case I have mentioned is that upon which the whole industrial machine built by the minister's department will be disposed of.

Mr. HOWE: I did not just follow the hon. member. May I ask, did he get his information from the disposal board in the case of the barracks at New Glasgow?

Mr. GILLIS: The barracks were at Glace Bay, Nova Scotia.

Mr. HOWE: Well, did he get his information from the army or the disposal board? Who told him?

Mr. GILLIS: In the one case, national defence secured it through the board; in the second case I myself secured it through the board.

Mr. HOWE: Through the disposal board?

Mr. GILLIS: Through the allocation committee.

Mr. HOWE: Ordinarily land acquired by the army for barracks purposes has been purchased by the army. I am not familiar with the arrangements. But as to buildings paid for by the Department of Munitions and Supply, in practically all cases the land is owned in fee by the crown.

Mr. GILLIS: I cited those two cases merely to indicate the opinion I had formed because of this particular incident. Several orders in council I have seen appear to bear that out. For instance, you have investments in the plants of Canada Car and Foundry and Dominion Steel and Coal. Plants have been created, and when the war is over they will no longer be needed for war purposes and the committee has the right to tear the plant down or move it somewhere else. But if it is not removed it reverts to the company on whose property it was built. I am not blaming the minister for this. As I said at the opening of my remarks, he was faced with the responsibility of having to organize an industrial machine and had to use everybody and everything that he could use, and he did under those circumstances exactly as I would have done, or anyone else would have done; he built the machine without quibbling over details or technicalities. But that period is past. The time has now arrived when the minister, the members of this house, and everyone who is interested in ensuring the maintenance of full employment after the war, should see to it that legislation is enacted which will protect the investments the Canadian people have in our industrial set-up, so that they may be utilized when the war is over to do the job that everyone here agrees should be done, namely, provide employment for every last man and woman who is in the services and for those in war industries who have made it possible for the allied nations to put on an offensive to-day in Europe.

There is another matter I should like to bring to the minister's attention. I may have a little difficulty in proving to the chairman that it belongs exactly here; I think it does, but I am giving him fair warning. First, however, I want to compliment the hon. member for Caribou (Mr. Turgeon). He pretty much agrees with what I have said, for according to a report in one of the Toronto newspapers he stated in a speech he made in that city that "free enterprise may not survive the end of the war." I am very glad to hear that statement from the chairman of the reconstruction committee. I have worked with him on that committee, and I find him very broad-minded and farsighted.

Mr. HOWE: Non-survival is what he was afraid of.

Mr. ROWE: Broader-minded than he is farsighted.

Mr. GILLIS: He sees the handwriting on the wall.

Mr. JACKMAN: Read the context.

Mr. GILLIS: I have read it. It is a very good statement. He visualizes the utilization of the war machine in the aftermath of the war pretty much as I have tried to describe it this afternoon?

Mr. KNOWLES: Does he ever talk that way in the house?

Mr. GILLIS: He has not much latitude on that committee. As the chairman he has to do all the listening.

The other matter I should like to bring to the minister's attention is one on which we may not see eye to eye. A few months ago the Prime Minister tabled in this chamber an order declaring a national emergency in fuel. After having that particular branch of our industry in many hands in the past several years, he centred the emergency organization of the fuel industry in the Department of Munitions and Supply. Of course Munitions and Supply was merely delegated authority under that order to get an increased production in fuel, necessary to the war effort. That organization has not worked out as well as I should have liked. Fortunately this winter has been very mild, and as a result we managed to get through without any great difficulty.

I notice according to the press and from consultations with union officials from Nova Scotia that in both the coal sections of Canada to-day there is considerable unrest in the mining industry. In the Alberta field, as pointed out by the hon. member for Bow River (Mr. Johnston), there is actual unemployment, because of some faulty fuel policy in that particular area. In Nova Scotia there is a different situation. Their fears are for the future. But what I want to impress on the mind of the minister is that from both sections of Canada to-day come proposals, from operators and from miners' unions, to meet in Ottawa with government officials for the purpose of deciding on a national fuel policy. The operators in this country are not in a position to decide from day to day where they are going.

The markets are very uncertain, and as I see it in Nova Scotia, if the war were to terminate to-morrow, with the market arrangement that exists at the present time you would not have markets to guarantee a two days a week operation in the mining industry in that

province. I am not going to say what the situation is in Alberta, because I do not know, but our people in Nova Scotia are very much concerned about it. There are many angles to the problem, but I will not go into all of them.

One thing in the emergency arrangement that I think is unjust is that in Alberta, New Brunswick and Nova Scotia, in the matter of domestic fuel, because of the increase in wages to the miners a substantial increase in the price of domestic fuel was permitted by the government. In other words, the consuming public of Nova Scotia, New Brunswick, Alberta and Saskatchewan have had to pay for the increases in wages given the miners in those provinces. On the other hand, the consuming public in central Canada, Quebec and Ontario, are in the reverse position. When you had to supply the domestic market in those two provinces, the small tariff that was against American coal was removed, something like 50 cents a ton—35 cents on some and 50 cents on others. In addition, importers of coal in central Canada were subsidized in order to hold the price ceiling. So that taxpayers generally across Canada are maintaining the price ceiling and absorbing the increased cost in domestic fuel in the two central provinces. While in the eastern and western provinces there has been some increase in the wages of those who dig the coal, the consuming public in those provinces have had to take on an additional burden in the way of an increased cost of domestic coal. Therefore, they are paying for the maintenance of the price ceiling in Ontario through taxation, and they are paying for the fact that there were increased wages in that industry, both east and west, when the government permitted a slight upward revision.

Mr. HOWE: I should correct my hon. friend. There is no bonus on coal imported into the central provinces—that is, on steam coal. There may be a small bonus on anthracite, but there is no bonus on steam coal.

Mr. GILLIS: I agree with the minister. I was speaking of domestic fuel. It is anthracite that is mostly used in the central provinces for domestic purposes, but my whole argument is based on domestic fuel.

Mr. HOWE: You use anthracite in the maritime provinces, and it is bonused. You were talking of steam coal in the maritimes and domestic in the western provinces.

Mr. GILLIS: We use very little anthracite in the maritime provinces, and American coal imported for metallurgical purposes is bonused to a certain extent. There is a drawback of 35 cents a ton. All coal used for metallurgical purposes is subject to that provision. It is a long story which I will not go into. But both east and west the domestic consumer of fuel has a legitimate grievance in that he is contributing to the whole national set-up in the maintenance of the price ceiling as it exists in the two central provinces; and in addition he has a direct levy because of the increase given the miners in those provinces. It is something that should receive the consideration of those who are responsible for the fuel policy.

The other angle is this. In the house on several occasions I have suggested that in the field of fuel Canada definitely lacks a policy. There is no doubt about that, and for the past twenty years there has been enough money spent in delegations, in briefs, and in royal commissions to reorganize the whole industry. As I pointed out a moment ago, the fear in Nova Scotia is that we are facing a repetition of what happened in the last war. In the last war we lost the Quebec market completely, and that is the only economic market for Nova Scotia coal in Canada. United States coal to-day is going clear through to Riviere du Loup. That market has been completely handed over to the United States operators.

In the reconstruction committee when this subject was under consideration I specifically questioned those who represented both the companies and the fuel board. I asked if they were taking care this time, when handing over markets for emergency purposes, not to repeat the mistake of 1917 and 1918 and give away those markets without any understanding or agreement safeguarding the Canadian taxpayers against repurchase over a period of years at a cost of millions of dollars, as actually happened after the last war. I was informed then by the representatives of the fuel board that, as far as markets were concerned, there was no agreement or understanding and that it was a matter of getting that coal in during the emergency as quickly as possible without any regard to what was going to happen in the future.

In view of the fact that the miners themselves, their unions and the provincial governments are taking the initiative at this time in trying to head off something that may be very serious, should the war end within the next year or two, the minister should now inaugurate some kind of organization in Ottawa, or give instructions to those, under his charge, operating in that field, to see to it that this delegation is received and that a definite policy is mapped out for the Canadian industry in order to avoid what I can see

coming, in Nova Scotia at any rate, immediately on the cessation of hostilities if the situation remains as it is at the present time.

The industry in Nova Scotia requires a complete overhauling. Some people say, you cannot compete with American industries because they are mechanized and electrified. That is true. I can tell the minister that the industry in Nova Scotia is as fully mechanized as it can be. The mines there are old, and they cannot be further mechanized; and what is more, you cannot electrify them. You cannot put in electric cutting and loading machines because the mines are submarine and very gaseous. Someone said to me, "You fellows fought mechanization a few years ago", and I replied, "Yes, we did in one colliery, one of the most gaseous on the north American continent." It was new, with a very gaseous seam of coal, and if you installed an electric cutting and loading machine, throwing sparks four hundred yards, you would blow the cover off the mine in a short time. We were right in fighting it. It cannot be done in those old mines, and that is something that must be considered.

The minister is an engineer, and I think he has a fair conception of the sort of problem with which we are faced. I should like to see that department, now that it is responsible in that field, institute an examination of that whole industry in Nova Scotia from the operating standpoint. I know there is one man in the fuel set-up, Mr. Frank Neate, secretary of the fuel control board, who has a thorough knowledge of the industry. I believe that if he were permitted to sit in with a miner's committee and the operators who are desirous of framing some kind of workable fuel policy for Canada, he has both the technical and the practical knowledge to do a really good job. I believe he could map out something that would be workable. It is a post-war problem which means a lot to Nova Scotia. The whole economy of that province is based on the coal industry, which at this time requires a thorough and solid examination. Something has been done; I do not know whether it was through the minister's department or not. Substantial increases in wages were given the miners of that province, and for the first time in the history of that industry in Canada a week's vacation with pay was granted in the last agreement. That was something the miners used to dream about, but they never imagined it would happen.

Without going into all the ramifications and technicalities and the many things that one could talk about hour after hour I want to emphasize the necessity of examining that industry in Nova Scotia with the end in view of reorganizing and stabilizing it. I could tell the minister a long story about the machinery he set up to go down there to get emergency production and all that kind of thing. You cannot get production in offices. You cannot sit in Moncton and imagine that the industry is going to be improved. It is a job that has to be done where the coal is produced. It was not done in that way. Divine Providence was kind to the minister this winter in helping him out in the coal situation; otherwise I think he would have have had more headaches. I should like seriously to advise him to do something about examining the whole set-up of that industry for the future.

Mr. RAYMOND (Translation): Mr. Chairman, the Minister of Munitions and Supply (Mr. Howe) has given us quite a comprehensive picture of the tremendous production achieved by war plants during the last year and even since the beginning of the war. He has, moreover, outlined the programme he proposes to carry out during the current year and he requests us to vote considerable amounts for those purposes. But if such a result has been achieved, it was through the cooperation of the worker who is an essential element of production, and it is imperative that he should be treated with fairness. Unfortunately, according to some statements I have received, in certain industries under government control, and especially at the nitro munition plant operated by the Defence Industries on Salaberry island, at Valleyfield, and at the Bouchard plant, near Saint Thérèse, the workers are victims of glaring injustice.

On March 9 last, I gave notice of a certain number of questions relating to the laying-off of some employees in those industries, that is to say, at the Bouchard plant or at the nitro plant on Salaberry island, Valleyfield, and to the replacement of those workers by people from other provinces and particularly from Nobel, in the province of Ontario. I had hoped that I could obtain answers to those questions before making my present remarks. Unfortunately I fear that the debate may come to an end before my questions are answered. Besides, the hon. member for Terrebonne (Mr. Bertrand) following some newspaper comments, has referred this week to such cases of injustice which I mean to bring before the committee. As a matter of fact, employees with a long record of service, men who have worked in those plants for one, two and three years are laid off and replaced by men from other provinces and especially from the Nobel plant which has been closed. Such is the glaring injustice done to those men. They have lived in the locality for many years as

permanent residents, they own their homes, and have families to support; they have worked almost since the beginning at the nitro plant in Valleyfield, and to-day they are laid off and replaced by people from other provinces. That is an intolerable injustice against which I must strongly protest. It cannot be claimed that those men are not competent because the fact that they were kept for two and even three years shows that they were considered as efficient, but to-day they are dismissed. Sometimes, another procedure is followed; the man is called and offered a lower position, with a greatly reduced salary, so that he is placed in the alternative of leaving or remaining at a lower salary with which he cannot support his family. That is a devious means of dismissing him to make room for others. I admit that production has decreased, but if so, why does the management hire men from other provinces, such as those who have come from the Nobel plant? If there has been a reduction in the number of workers needed, why are outsiders hired? That is a lame excuse.

The government have some responsibility in that respect because those industries are under their control, inasmuch as the government have themselves established institutions such as the Allied War Supplies, which later on have entrusted to other companies the operation of some plants. But those institutions, organizations, or companies have been established with the taxpayer's money and this afternoon the Minister of Munitions and Supply has told us how much the government had to pay for the Nitro plant, on Salaberry island, at Valleyfield. Consequently, the taxpayers, the workers from whose weekly salary a deduction is made for war taxes, are entitled to some consideration and they have, in preference to others, a right to earn their living in the locality where they have always lived.

May I point out one case. The other day I received from a worker a letter in which he said: "I have two sons in the air force; one of them has recently been repatriated on account of illness; two other sons of mine have just been called for training in the army. I have a family to support and I have been laid off. How was it done? I have been offered a greatly reduced salary with which I could not support my family."

Those are facts which I wanted to bring to the attention of the committee, and particularly of the Minister of Munitions and Supply.

There is another fact which I also wish to emphasize. Ever since the plant on Salaberry island has begun its operations, local workers have been treated like neglected members of the family. All main positions have been given to outsiders, and the positions left for local workers have always been minor ones. Let no one claim that competent men could not be found. I could mention particular cases, but I do not want to name any one, not because an injustice might be done but because the workers might thereby suffer unpleasant consequences. I know that, in some cases, a man in a minor position has had to teach a man of higher rank how the work was to be done, the salary of that lower man being much smaller and the man who outranked him having been brought from outside to be placed above him.

I hope the Minister of Munitions and Supply will give careful consideration to the few remarks I made not only in the interest of the working class but also in the interest of peace in the post-war period. We hear a great deal about the post-war era, but if we really want to prepare it and avoid perhaps a number of calamities and a certain amount of ill feeling, we must give fair treatment to all citizens, and the working man should be included among them.

Mr. CHEVRIER (Translation): Mr. Chairman, I am sure the hon. member for Beauharnois-Laprairie (Mr. Raymond) expects me to reply to a number of questions which he has asked. I agree with a part of his remarks. I fully concur in his views when he speaks of the cooperation of the worker in war production. Indeed, the hon. Minister of Munitions and Supply (Mr. Howe) has on several occasions expressed his satisfaction with the magnificent war production to which all the workers of the country had contributed. However, I find that the facts that he mentioned a moment ago are not borne out by the documents which I have on hand at the moment. He referred to the alleged unfair treatment of a number of employees of a plant at Salaberry. I have before me a report which shows that 89 per cent of the employees of the Salaberry plant were of French Canadian origin; 11 per cent of British stock and 4 per cent of foreign extraction. I have been informed also from the same source that the lay-offs which he mentioned have been inevitable in some industries due to the curtailment of production. Then when it became necessary to dismiss some of the employees of the Nitro plant, they were laid off in the same proportions in which they had been hired. For instance, in September, the ratio of French Canadian employees showed an increase of 2 per cent in comparison with the other nationalities. The report I have before me, Mr. Chairman, shows that the discrimination, if there was any, was in favour of the French Canadians

The hon. member has spoken of the inferior jobs held there by our fellow citizens. I am not in a position to say what the jobs are, but I may state that the general manager of this industrial concern is a French Canadian by the name of Débarats.

Mr. RAYMOND (Translation): Would the hon. member permit me. In the course of my speech, I did not refer to French Canadians, but to people of the Nobel plant who had come to take away the jobs of local people.

Mr. CHEVRIER (Translation): The hon. member has spoken of people from the province of Ontario who had been brought over to replace citizens of Quebec—

Mr. RAYMOND (Translation): People from the Nobel plant.

Mr. CHEVRIER (Translation):—and I am convinced he was referring to statements made in the press—one paper in particular has put forth this claim, as I shall point out later—he has also spoken of the minister's responsibility concerning these plants. There is one thing which a lot of people do not seem to realize, and that is that Defence Industries Limited is not a crown company, as many seem to think. Defence Industries Limited is a private firm, a subsidiary of Canadian Industries Limited. It has not been set up by the Department of Munitions and Supply as has been alleged. Then, being a private enterprise, it is entitled to offer employment to anyone it deems fit.

Mr. RAYMOND (Translation): Has this company no tie whatever with the government?

Mr. CHEVRIER (Translation): None whatever. And the operating company is the Allied War Supplies Limited, a firm with which the government has an agreement for the supervision of all these plants manufacturing explosives.

Mr. RAYMOND (Translation): Is the Allied War Supplies firm not connected with the government?

Mr. CHEVRIER (Translation): I have just stated that Allied War Supplies Limited is connected with the government. This firm controls the operation of explosives factories, and so forth. However, Defence Industries Limited and Canadian Industries Limited are private enterprises. It seems to me that these private firms are entitled to hire anyone they wish.

While on this subject, the hon. member will perhaps allow me to refer to a news sheet which he will recognize, no doubt. It is entitled *Le Bloc*. I believe it to be the organ of the party of which the hon. member is the leader. In its March 15 issue, this news sheet contains a number of inaccuracies, not to say numerous falsehoods. I have just stated the first one. It starts by asserting that Defence Industries Limited is a crown company. It follows on with a claim that the workers of the Bouchard plant, at Ste. Therese, have often been discriminated against. I have here a report from the president of Allied War Supplies stating that no worker from the province of Ontario has been hired by or transferred to the Bouchard plant. The news sheet *Le Bloc* claims further that these persons have all had their expenses paid by the government. This report has it that in no case the expenses connected with transferring and hiring the men have been borne by Allied War Supplies Limited but that, on the contrary, the workers themselves have always paid their own expenses.

To conclude, I wish to point out to the hon. member that 1,665 citizens of Quebec have gone to work in war factories of the province of Ontario. Three or four hundred of them are located in Sarnia, a considerable number have secured jobs in Kingston, others in the Niagara peninsula, and others still in Kitchener. The hon. member may perhaps allow me to mention a report, just handed to me, published in a Kitchener newspaper of March 21, 1944. It is, therefore, of very recent date. The report points out that 300 Canadians from the province of Quebec have reached that town seeking employment in war factories, but could not secure living accommodation. Nevertheless, the mayor of the town issued a public statement requesting his fellow citizens to welcome them, to find accommodation, whether rooms or lodgings, for them and the local people have responded to his appeal. I fail to see why my hon. friend has brought this matter up, for it must not be forgotten that if, at times, our people seem to be discriminated against, there are, on the other hand, in the province of Ontario, a large number of them who secure employment in similar circumstances. From the newspaper report I was referring to a while ago, I shall now quote the words of Mayor Meinzinger of Kitchener:

> Kitchener is fortunate in having to receive some 300 French Canadians which are come to this place to help relieve the labour shortage in local plants. We all appreciate the seriousness of the war, and therefore must feel that it is the duty of each and every one to assist in the problem. I appeal to every home-owner and property-owner in Kitchener, Waterloo, Centreville and Bridgeport, and other centres in which we have bus and street car facilities, to open their homes to these men.

In short, room was made to accommodate these workers. As I said before, a good number of them had come to Ontario and I cannot believe the hon. member for Beauharnois-

Laprairie would wish that any attitude different from that adopted by the mayor of this Ontario town would have been taken toward these people.

Mr. RAYMOND (Translation): The reason may well be that they were not replacing their own people.

The CHAIRMAN (Text): The committee will realize it is a problem to keep the debate in order. However, I saw the hon. member for Chambly-Rouville.

Mr DUPUIS: I beg the indulgence of hon. members who have risen to speak. However, I hope they will permit me to proceed, because the debate is continuing in the other official language at the present time. This is a question of local interest. I think the hon. member for Yukon will not blame me.

(Translation): Mr. Chairman I intervene in the discussion, but this does not mean that I no longer have for my hon. successor in the county of Laprairie, the genial member for Beauharnois-Laprairie (Mr. Raymond) all the sympathy deserved by a member who rises above the petty jibes of politics to deal with a matter of public interest. The distinguished parliamentary assistant to the hon. the Minister of Munitions and Supply (Mr. Howe), the hon. member for Stormont (Mr. Chevrier), has replied to the hon. member for Beauharnois-Laprairie and I might say that his replies have relieved my conscience to some extent. If it were true that, as stated by the hon. member for Beauharnois-Laprairie, citizens of the constituency of Beauharnois-Laprairie and of the county of Terrebonne had been dismissed and replaced by outsiders, regardless of my political allegiance, I would join with the hon. member for Beauharnois-Laprairie in protesting against such a discrimination. And I am sure that the hon. the Minister of Munitions and Supply (Mr. Howe) and the hon. member for Stormont would support us, as no one wishes to commit an injustice. However the hon. member for Stormont declared, on the strength of written information in his possession, that no citizen of Ontario went to Beauharnois or to the Bouchard plant . . .

Mr. CHEVRIER (Translation): No worker.

Mr. DUPUIS (Translation): . . . to take the place of persons who had been dismissed. In my opinion, the matter is settled to the satisfaction of the committee. But while I was listening to my hon. friend from Beauharnois-Laprairie defending as always the rights of the working man, my thoughts dwelt upon the general policy of the party which he has deemed advisable to create. To give a rather mild explanation of the policy of my hon. friend, I might say that if his party's policy is not one of non-participation it is at least one of limited nationalism—I would not call it extreme nationalism, as this would be too strong a term. On the basis of this policy, my hon. friend and all those who honour him with their confidence, find that we have no justification for taking part in the war; they claim that England has treated the French-Canadians unfairly and for this reason has forfeited any right to our sympathy; they hold that all that we have accomplished since the outbreak of the war has involved useless expenditures of money and wholly unjustified sacrifices of human lives. Is this not, Mr. Chairman, the attitude of my hon. friend from Beauharnois-Laprairie?

In my student days, I had the opportunity of attending a meeting in Montreal where Sir Wilfrid Laurier was to speak in favour of voluntary enlistment. At this point, I shall indulge in a digression to tell my hon. friends of the Bloc Populaire they are mistaken when they claim that they have always been opposed to war. The hon. member for Beauharnois-Laprairie was himself a Liberal in those days and I, though quite young at the time, followed the example set by Sir Wilfrid Laurier and favoured participation in the war of 1918 though, like the hon. member for Beauharnois-Laprairie, I objected to conscription.

Mr. RAYMOND (Translation): I never favoured participation in the war, neither in 1914 nor at the present time.

Mr. DUPUIS (Translation): If my hon. friend states he was then opposed to participation, it does not speak well for him since he was as mute as a fish.

Mr. RAYMOND (Translation): That is of no consequence. You want to credit me with opinions I never held.

Mr. DUPUIS (Translation): My hon. friend asserts he was not in favour of participation in war and he admits not having said a word about it at that time. Truth did not come to him in a flash or in some sort of vagary and he did not suddenly decide to declare himself opposed to participation in war.

Mr. RAYMOND (Translation): I was not in politics.

Mr. DUPUIS (Translation): The hon. member for Beauharnois-Laprairie only minimizes his own merit and intellect when he claims he was not interested in politics. No intelligent man ever takes that attitude.

Mr. Chairman, let us get back to our onions, —I beg your pardon, I mean the Bloc Populaire. This party, and I speak without a trace

of sarcasm, stands against all participation and, above all, against the billion dollar gift. What nightmares this has given them! They have lost sleep over it. Just think, to sacrifice our sons is a great deal, to take part in the war is far too much, but to raise one billion dollars a year from Canada's public funds and give it to England, a wealthier country, is truly scandalous!

When I hear my hon. friend complain that the workers of Beauharnois-Laprairie or some other district of the province of Quebec are not treated fairly, I can't help thinking: What a paradox! In fact, my hon. friend is opposed to participation in the war, he objects to any grant that might help those who held the fort in England. When France, our former beloved motherland lay crushed in June 1940, and one country alone could repulse the enemy, the hon. member for Beauharnois-Laprairie and his followers deemed that nothing should be done. The house of our next-door neighbour but one is burning down and the wind blows towards the home of the hon. member for Beauharnois-Laprairie. He says to his children and his employees: "Never mind, I have a grudge against that fellow, let the fire destroy his property". But he is not far-sighted enough to think that before the house of his third neighbour has stopped burning, the flames will have reached the roof of his own house and it will then be too late to do anything. That thought has not occurred to him.

How inconsistent is the stand taken by my hon. friend! He claims that work should be given to those people, but how could they have had it had we not participated in this war, had we followed his advice and done nothing? Let my hon. friend rise in a few moments and tell us how many unemployed there would be in Valleyfield and everywhere in the country if we had done nothing.

Mr. RAYMOND (Translation): Will the hon. member permit me to ask him a question?

Mr. DUPUIS (Translation): I would ask my hon. friend to let me proceed with my remarks. I have not interrupted him.

Mr. Chairman, as far as I am concerned, while respecting the opinions of those who do not support my views, I find it strange that we should be considered as blind followers of a party which has betrayed the country and the French Canadians. For months and months, Mr. Chairman, ever since the outbreak of war, we have been charged with having betrayed our race. However, we have said nothing because what was most urgent, what had to be done regardless of any revilement, was to help England. Even those who had no love for that country before the war, because of the prejudice that had been spread by so-called historians, even those who had no love for that country realized the situation. Like our leader, the Prime Minister of this country, we had at first hoped that because of the Maginot line, which gave us such great hopes before 1939, Canada's participation would only be moderate. But when all countries of the European continent had, one after the other—France, our former motherland being the last one to succumb—been overwhelmed by the enemy, who would have been stupid enough, for the petty satisfaction of saying that he had not changed his mind, to refuse to give all he had, to devote all his energy, his work and his efforts to help England? And when the outstanding man who now leads the government of England said, at a time when the whole European continent was under Hitler's heel: "We shall fight on the beaches and the landing grounds, in the fields, in the streets and on the hills. We shall never surrender," could we have abandoned to their fate such men, whom some of us, without any reason, do not like? Could we have refrained from going to their help? Only a lack of knowledge of our own history could have prompted us to do that. Every school boy has a sufficient knowledge of history to recall especially the Treaty of Paris, signed in 1763, after our former motherland had been defeated on the Plains of Abraham, in 1759, and in Europe in 1763.

What was the first of the peace conditions laid down by the victor? It was the cession of Canada to England. Anyone with a knowledge of history knows that history repeats itself and he realizes that if, in 1940, following the collapse of France, England had been overwhelmed, the first peace term would have been the surrender to Germany of all the rights of the British crown over Canadian territory. Is this what my hon. friend wanted? I know that it is not so. For our part, we did not remain idle; we did not imitate the ancient Greeks, as reported by the glorious history of Greece. While Phillip, by resorting to the same method as is being used to-day by Hitler, was trying by every available means to seize neighbouring countries, the Greeks who should have heeded the advice of Demosthenes who was urging them to prepare to defend themselves against the common enemy, remained complacent and formed "blocs" such as we have to-day. My hon. friend from Beauharnois-Laprairie knows what happened to Greece. She was subjugated by Phillip and invaded by his son, Alexander the Great.

But, thanks to the foresight and vision of our leaders and particularly of the Prime

Minister of Canada, we decided not to wait until England, the next country on Hitler's time-table after France, was brought to her knees. All the colonies, all the Dominions, all freedom-loving and democratic countries rallied one after another to England's assistance, and the rest is history. Thanks to the unanimous contribution of all freedom-loving peoples, we may now hope that before long, Hitler the tyrant—I trust I do not displease the hon. member for Beauharnois-Laprairie in calling him so—Hitler the tyrant of modern times will have reached the end of his rope.

Mr. Chairman, at an appropriate moment, and with all good faith and sincerity, with malice towards none but with an understanding of truth as I see it, I wished to state why we, the Liberal party, in spite of the insults that have been and still will be heaped upon us, will continue to fight for democracy and will keep up the struggle until we have triumphed. The history of a later age will record that we protected not only those who understood the situation as we do, but also those who refused to see daylight, like our friends of the Bloc Populaire.

(Text)

Mr. ROSS (Souris): Last evening the minister said that there is no longer a shortage of material used in farm implements. This statement is at variance with the finding of the war expenditures committee which reported on January 26 of this year, after a thorough inquiry into the possibility of an immediate increase in the supply of farm implements. The committee stated that they had been assisted by farm implement companies; representatives of the Canadian Federation of Agriculture; Mr. Cruickshank, the metals coordinator; Mr. Bloom, administrator for agricultural implements; Mr. Hoey, associate steel controller of munitions and supply; Mr. Fowler, secretary to general counsel, wartime prices and trade board; Mr. Gavsie, assistant counsel, Department of Munitions and Supply.

Mr. HOWE: May I ask my hon. friend on what date the evidence was taken?

Mr. ROSS (Souris): I am not sure about that.

Mr. HOWE: It makes quite a difference, because the situation has eased greatly in the last few months. I was speaking of the position to-day.

Mr. CHEVRIER: It is over a year old, is it not?

Mr. REID: No; some time in January.

Mr. ROSS (Souris): I understand it is January of this year. The report is dated January 26, 1944. The finding is as follows:

> Shortages which still exist and which will retard production of ample quantities of farm implements:
>
> There is ample factory productive capacity in Canada to handle a much greater volume of implement production than we now have. The major problems now facing the industry are as follows: (a) shortage of malleable castings, due to volume of war production work; (b) shortage of ball and roller bearings; (c) shortage of seasoned fir and oak required for the production of certain types of farm machinery; (d) shortage of experienced manpower.

In 1939, at the time of the declaration of war, there were 53,000 tractors in Britain. In 1942 they had 150,000 tractors. The number of implements used in connection with these tractors has jumped from 200,000 in 1939 to well over a million in 1942.

In Canada, for 1944, production of essential farm machinery will be brought up to 80 per cent of the 1940-41 output, and spare parts to 150 per cent of that output. Under this control, only 10,000 of the 26,000 tractor orders can be filled during 1944. In Britain to-day, with less than one-third of the cultivated acreage of Canada, there are more tractors in use than we have available in Canada.

In more normal times, some years ago, farmers of western Canada spent approximately $50,000,000 annually upon farm implements. On account of depreciation and as a result of lessened purchasing power for a number of years prior to the outbreak of war in 1939, it was estimated at that time by implement manufacturers that it would require approximately $200,000,000 to bring our farm implement equipment up to date.

Agriculture is an industry engaged in the production of foodstuffs, an industry with approximately 735,000 branch factories across Canada. Approximately 450,000 men and women have left the farms of Canada for service in the armed forces or in war industries.

The point I should like to make is that, with our farm labour shortages, tractors and especially combines along with other essential implements should be made available to as great an extent as is reasonably possible in order to assist in solving our labour problems.

The statement of the minister last evening, as I pointed out, is a contradiction of the report of the war expenditures committee in the past few weeks, and I trust that he will clarify this situation. I think he will realize that this is a very important matter and that our farmers need as soon as possible a much

greater output of farm implements, provided that it does not interfere with the production of essential equipment for the battlefield.

It was pointed out in a return brought down the other day that there have been issued from September 10, 1939, to March 15, 1944, 42,398 orders in council and 23,287 minutes of treasury board; that, since the present session of parliament commenced on January 28, 1944, to March 15, 1944, 1,186 orders in council and 850 minutes of treasury board have been passed. Therefore, I think, one may realize how difficult it is to follow all the various orders which are issued, not only orders in council but orders of these various controllers.

I should appreciate it if the minister could clarify this situation. The controllers in his department sat in with and gave evidence to the war expenditures committee. As a result we have their report, and for the sake of the producers from coast to coast the minister should make a statement to clear up this matter.

Mr. HOWE: I should like to answer the hon. member immediately. I was reporting on the position in my own department as regards controls. In the years 1941, 1942 and the first eight or nine months of 1943 there was a very tight steel situation in this country; it was necessary to ration every use of steel outside of direct war use; but in that period certain allocations of steel were made to the agricultural industry. The industry is administered by the wartime prices and trade board; nevertheless, since we control the use of war materials, the allocation in these years was made by agreement between the steel controller of my department and the agricultural implements administrator of the wartime prices and trade board.

During the last few months we have had sufficient steel for all reasonable purposes and the restrictions on use of steel in agricultural implements have been removed.

My hon. friend spoke of other situations. One was the supply of malleable castings. There is sufficient capacity, I think, for the manufacture of malleable castings in this country. The difficulty there is that malleable castings have in the past been largely imported into this country, owing to the fact that malleable castings made in large volume cost considerably less than the volume which was made in that time in Canada. The result is that the malleable castings business must be built up if it is immediately to take the whole load of the agricultural industry. However, we have that capacity in Canada, and the situation will be met as rapidly as the output can be built up.

[Mr. J. A. Ross.]

As regards ball bearings, of course we in Canada do not make ball bearings, and that is a situation which would not come within the jurisdiction of my department. That may be a bottle-neck, so far as I know; but there is no regulation of my department, at least—and when I speak of "my department", I refer to the administration of the controls of the raw material—which would interfere with the manufacture of implements.

Mr. FRASER (Peterborough West): What is the position with regard to metal roofing?

Mr. HOWE: There is no immediate hope for the release of metal roofing. Productive capacity for the manufacture of thin sheet is very badly overloaded, and plants are working to capacity on uses of much higher priority than thin sheets for roofing, to which my hon. friend refers.

Mr. FRASER (Peterborough West): Metal roofing for barns.

Mr. HOWE: There is no possibility of obtaining this for a few months yet.

Mr. FRASER (Peterborough West): Even for patching?

Mr. HOWE: Yes, for patching there will be sufficient under certain conditions.

Mr. KINLEY: Last evening the hon. member for York-Sunbury made what I thought was a rather provoking criticism of the Minister of Munitions and Supply, wherein he alleged that there was geographical discrimination in the distributing of war industries across Canada. In that he was referring to the report on the government's financial expansion of the industrial capacity of Canada. I think the criticism of the hon. member was unfair, distorted and incorrect, and I will deal with one or two items to show how misleading it was and how unfairly it would present the matter to the house.

Mr. GRAYDON: Does the hon. member think the maritimes are getting a square deal?

Mr. KINLEY: I will come to that. On page 1790 of *Hansard* the hon. member for York-Sunbury is reported as follows:

> Then there is a table 1A-11, general purchasing and miscellaneous, purchases of merchandise. Crown plants government operated, nil; crown companies government operated, nil; crown plants operated by private corporations, $5,000; privately owned and operated plants, general merchandising; Trenton Steel Works is the only one and it received $23,268 out of a total of $530,972,648.

The hon member had exhausted his time and he was stopped by the Chairman at a very opportune place, because he skipped over part of the report. He left out the last pages

altogether; perhaps the reason was that he was obliged to sit down. In the last part of the report the majority of the items were for the maritime provinces. Trenton Steel Works received $23,371, which he accounts for as above. But on page 20 they are shown as having received $2,465,944, while on page 5 Trenton again received $636,685.

The hon. member led the committee to believe that this firm received the sum of $23,371, omitting the fact that they had received three amounts, totalling over $3,000,000. At page 1787 of *Hansard* the hon. member is reported as saying:

> . . . it is the whole table I am talking about. For the whole table that I am referring to, which covers a net expenditure of $83,462,508, the actual total expenditure in the maritimes was $2,022,671. That is the only one in the whole page. Coming then to machine guns and small arms—

As a matter of fact, the item to which he refers was the Eastern Car Company Limited, the amount being $2,022,671. On the same page we find Trenton Steel Works with $636,685; the Canadian Car and Foundry with $351,294, and the Canadian Car and Foundry again with $57,988. So that he was grossly unfair in his presentation of the figures, leading us to believe that the amounts he mentioned as having been given to the maritime provinces, while we admit they were small for the purpose of assisting industry, represented the whole picture. They were not given correctly.

Mr. BROOKS: You are too easily satisfied.

Mr. KINLEY: I believe in the truth, and in keeping the record straight. He was presenting to the house a picture of war-time industry, conveying to the people what they were receiving in the war industrial endeavour of the nation. But this is only a very small part of the industrial endeavour of Canada. We have the estimates of the army, navy and the air force, and surely, in computing what goes to any section of the country in our war expenditures, we must include the whole picture; otherwise we get something which is dislocated and distorted.

Mr. BROOKS: The people of the maritimes know the picture.

Mr. KINLEY: He might have mentioned the great development in Shelburne, the great naval base there. He said nothing about the great naval training depot at Deep Brook. He said nothing about the development at Sydney or the developments at Halifax.

Mr. HANSON (York-Sunbury): Sydney; was that the place where another dock fell into the harbour?

Mr. KINLEY: He said nothing about the training camp at Debert. He said nothing about the marine railways on the coast of Nova Scotia at Shelburne, Lunenburg, Louisburg and Liverpool.

Mr. CASTLEDEN: And all points east.

Mr. KINLEY: There is a picture of war-time development that is in keeping with maritime industry and it is something we should naturally look forward to, part of our endeavour, part of the work we can do best in the interests of the war. Then there was the rolling mill at Sydney for rolling steel plate. It is true it was not financed except by loan, but I am sure that one development alone at Sydney ran into millions.

The hon. member says that we are too easily satisfied. I want to tell him as a business man that there is nothing that concerns me more than the overdevelopment of uneconomic industry, and if we get ephemeral industry in any part of the country for the purpose solely of mushroom war-time development, it will create a condition, after the war, disturbing the economic situation in that section to such an extent that we shall be sorry it was ever started.

Mr. BROOKS: Is the hon. member satisfied with the industrial development there has been in the maritime provinces and with the attention the government has given to the maritime provinces?

Mr. KINLEY: No, I am not.

Mr. BROOKS: No.

Mr. KINLEY: And I have not been for many years. But it does not lie in the mouths of the Progressive Conservative party to talk about development in the maritime provinces. The hon. gentleman has asked a question and I will answer it. The Liberal government once was in power in Nova Scotia for forty years.

Mr. HANSON (York Sunbury): Too long.

Mr. BRUCE: Forty years too long.

Mr. KINLEY: I admit it was too long, longer than a government in any other part of the British empire. They were dying of old age, and a friend of mine, who was also a friend of these gentlemen, the late Hon. E. N. Rhodes, undertook to bring the boys back home. He said that Nova Scotia would prosper if the people elected him and put the Liberal government out of power there. He said that we would have our rights in the dominion. Well, they were in for two years, and when they had an election they came back with a majority of three and kept

on for another term when they were defeated, bringing back only a remnant of the men they elected when they went into power.

It is the industrial tariff and concentration of industry that has ruined Nova Scotia, the tariff that has built up big industries in central Canada. The idea of the men who created this situation in this country now coming to us in war time and saying, "You should have more in Nova Scotia because you have been neglected in years gone by," looks like a Daniel come to judgment. At the present time I believe that Nova Scotia has a degree of development which is better than we have had in many years. If we increase our development beyond the labour that we can supply to industry we should be creating a condition that is not good. At the present time labour is coming into Nova Scotia from other parts of Canada and I am greatly concerned about it because it is creating confusion. I wish to tell the Minister of Labour that we shall hold him to account if labour that has come in from other parts of the country continues to be employed and Nova Scotians are discharged.

Last night the Minister of Munitions and Supply told the hon. member for York South that when he took hold of that department it was his job to create an industrial machine to carry on the war, and in doing that he had to survey the situation and build where he could get the support naturally from those who could give it to him quickly. With the foundation of industry in Canada, as it was, centralized in the central provinces, they would get the major portion of the financial assistance to expand. We in the maritimes looked for that part of the development for which we were particularly suited and where we could do the job that was required at tidewater by men who serviced the sea activities.

There were plants in the smaller towns along the south coast of Nova Scotia which had survived since the last war. I know that during the last war one plant in Lunenburg had a trade all over this country and in foreign lands. They shipped equipment for ships to Greece, British Columbia, South America and the West Indies. When this war broke out, those plants were particularly suitable for marine work; and the minister, by providing new marine railway equipment, and by helping some of them that needed it to get the proper machinery, made a good move. This created a situation which has enabled Nova Scotia to make a contribution to the navy which has been so much praised in this committee and which is a credit to the shipbuilders and the ship repair plants and personnel of Nova Scotia.

My chief object for the future is to hold what we have in Nova Scotia. If we can hold what we have, and if we can keep employed the number of people that we have employed there, I shall be satisfied. That is much better than if we had, say a hundred thousand more men in Nova Scotia, because they of necessity must lose their jobs when the war is over.

Mr. HANSON (York-Sunbury): That does not need to happen.

Mr. KINLEY: I think there will be some disillusionment.

Mr. HANSON (York-Sunbury): So do I.

Mr. KINLEY: But I wish to tell my hon. friend that I do not think it will be as bad as it was in the last war because—

Mr. HANSON (York-Sunbury): That is a matter of opinion.

Mr. KINLEY: This time labour is earning more money. More money is being distributed among the people. There is a degree of saving, a degree of investment, which will make purchasing power for the people that they did not have in the last war. In the last war money was concentrated in the hands of the few who made a deal of money out of the war. They had tax-free bonds that do not exist at this time. I think our economic position will be much better than it was at that time.

Mr. BROOKS: You had better wait and see.

Mr. KINLEY: I wish to touch on another subject. We are at war. Nova Scotia was very vulnerable at the start of the war. There were many people who thought Nova Scotia might be in an invasion district. Many people thought our shores might be visited by the fleets and armies of our enemies. I wish to tell the committee that within sight of the shore of Nova Scotia merchant ships were sunk by submarines and the crews brought into our ports. We had the enemy right at our door. What kind of minister would it be who had regard for the national safety of this country who would put key industries such as munition factories and that kind of thing on the coast unless it was necessary for him to do so? One of the things we are told about Canada is that you can do things in comparative safety. The air force is in Canada because of its comparative safety owing to vast distances. In so far as some of the industries are concerned I am sure that the safety feature and the element of hazard were some of the things that came into play and should have come into play

with regard to the placing of war-time industry where it could do the most good with the utmost safety.

Mr. HANSON (York-Sunbury): That may apply to Nova Scotia; but what about New Brunswick, which got nothing?

Mr. KINLEY: I am going to let my hon. friend speak for New Brunswick. I represent an intelligent community on the south shore of Nova Scotia.

Mr. HANSON (York-Sunbury): I have often wondered why.

Mr. KINLEY: I am satisfied to speak for them.

I should like to return for a moment to the report on the expansion of industrial capacity in Canada. When I turn to page 21 I see that in Nova Scotia the following firms were assisted in their finances, I suppose some in buildings and some in buying machinery: Thompson Bros., Machinery Company Limited, Liverpool. That is in my own riding. Starr Manufacturing Works Limited; St. John Machine Shop; St. John Iron Works Limited; St. John Drydock and Shipbuilding Company Limited.

Mr. HANSON (York-Sunbury): All chicken feed.

Mr. KINLEY: Pushle's Machine Shop; Purdy Bros., Limited; Pictou Foundry and Machine Works Limited; R. Musgrave and Sons Limited; Mersey Paper Company Limited; Margaree Steamship Company Limited; T. Hogan and Company Limited; Hillis and Sons Limited; Halifax Shipyards Limited; Atlantic Spring and Machine Company Limited; L. H. Cann, Limited. I shall not give amounts.

An hon. MEMBER: I would not, if I were you.

Mr. KINLEY: Rhodes Curry wharf; wharf extension (Acadia Sugar Refinery).

Mr. HANSON (York-Sunbury): The Acadia Sugar Refinery is shut down.

Mr. KINLEY: The hon. member talks about chicken feed. The Robb Engineering Works Limited received an expenditure of $59,543. The Trenton Steel Works received $2,465,944. The Canadian Car and Foundry Company received $179,729, and the Foundation Maritime Limited, $2,249,553. Is that chicken feed? Then we come to the Clare Shipbuilding Company Limited, the Eastern Woodworkers, Foundation Maritime Limited, Halifax Shipyards, $579,160; Industrial Shipping Company, and J. D. Irving Company Limited.

Mr. HANSON (York-Sunbury): They dic not take it.

Mr. KINLEY: Irving had the commitment but did not use it. The hon. member was not in his place when I started, but I wish to say that he did not give a complete report in the pages he covered when he was speaking last night. He omitted to give the parts in which Nova Scotia was especially interested.

Mr. HANSON (York-Sunbury): The Chairman stopped me. I would have been going yet, if I had a chance.

Mr. KINLEY: The minister must feel gratified with the way in which he has been complimented by hon. members on all sides of this chamber. I think Canada was particularly fortunate in securing a man of his ability and attainments to head this department at a critical time in our history.

Mr. HANSON (York-Sunbury): Might I ask the hon. member a question?

Mr. KINLEY: The minister has intimate knowledge of Nova Scotia; I believe he is a descendant of the great Joe Howe, still the greatest of all Nova Scotians. He bears an illustrious name, and I am sure he will look after the interests of Nova Scotia in connection with war-time industry in a way that will appeal to sensible men who have a knowledge of current affairs. When the minister was a young man he taught engineering at Dalhousie university, and I have no doubt that at that time he learned a great deal about the needs of that province. Since then his horizon has extended greatly; he has travelled and built all over the world; and it does seem to me that at this time, when any man has to carry such terrible burdens in connection with our war-time industry, we should at least be gracious enough to offer fair criticism, and not invoke the technique of legal confusion in order to present to the committee a picture that is not in keeping with the facts of the matter under discussion. Now, if my hon. friend would like to ask a question, I am prepared to answer it.

Mr. HANSON (York-Sunbury): I just wish to ask the hon. gentleman if he is quite satisfied with the allocation of war industries under this government, in respect of the maritime provinces; yes or no.

Mr. KINLEY: Some years ago a little book called "The Liberal Way" was published, which contained a statement something to this effect: that a Liberal was one who was never satisfied, who always advanced and never arrived. That is the way I feel. We want to go on from one thing to another. We think we are doing fairly well; we consider that this war is being

run in a way that will commend itself to the thinking people of Canada; and we believe that these criticisms which are intended to disturb public opinion for political purposes are not worthy of men who have served for a long time in this House of Commons. That is a compliment to the hon. member for York-Sunbury. He is an able member of this house, who I believe could be, if he so desired, of great help to the minister. If anything is really wrong, let us hear about it and let us deal with it; but please let us not see the spirit which is sometimes manifest during the confusion of an election, when Canada is facing such severe conditions and when men should be doing their best in order that our industrial effort may be the utmost of which this country is capable.

Mr. HOWE: I should like to clear up one or two matters which were referred to yesterday. Before doing so, however, I wish to thank the hon. member for Queens-Lunenburg for his eulogy. I am sorry to say that I am not a descendant of Joe Howe, but I am very proud of the fact that Joe Howe and I come from common ancestors. I think that is the most I can claim in that connection.

Mr. DOUGLAS (Weyburn): Joe Howe is silent on the question.

Mr. HOWE: I did not hear that; I am sure I missed a choice remark.

Last evening the hon. member for Lake Centre offered some comments on the wood fuel situation in Manitoba. I think his statement is pretty well summed up on page 1777 of *Hansard*, where he is reported as follows:

> After all, when the minister speaks I listen to him, and he can answer me afterwards, as I do him. Just because the minister realizes that $800,000 or thereabouts was thrown away, naturally he becomes annoyed. He was warned about this, and his controller was warned that the wood was not needed in Winnipeg, that wood could have been obtained in Manitoba at a freight rate of 4½ to 7 cents.

As I stated yesterday, the fact of the matter is that the situation last autumn was considered so serious that leave was sought to move the adjournment of the house to call the attention of the government to an alarming situation. The hon. J. S. McDiarmid, Minister of Mines and Natural Resources of Manitoba, predicted a wood fuel shortage of from 100,000 to 125,000 cords in that province for the winter of 1943-44. My department was responsible for the fuel situation, and took steps to provide 500,000 cords of emergency fuel wood, cut in such locations as could be arranged, and available to move into distressed areas. Fortunately we have had a mild winter, but the fact that we have had these reserve stock-piles has saved a good many situations during the winter. If the winter had been severe I feel certain that we still would have met the need, but owing to the mild winter we have a considerable quantity of emergency wood available. As regards the Winnipeg situation, naturally if there was to be a shortage it would be at the end of the winter. The movement of 500,000 cords of wood involves the movement of about 350 cars of wood every day of the season, and that is a fair job for the railways. Naturally the wood had to be moved into strategic positions gradually; we could not wait until the actual shortage developed and then hope to get cars overnight to carry out the movement. Therefore in the early part of the winter we were moving certain quantities of wood into centres where we believed it would be required. Actually we moved 8,733 cords of poplar from the head of the lakes to Winnipeg. This wood was purchased at a cost of $7.50 a cord f.o.b. freight cars. The freight charges have averaged $5.18 a cord, based on an average rate of thirteen cents per 100 pounds. Sales have been made to dealers at $5.15 a cord, which has resulted in a loss to the government on the sale of this wood of approximately $65,700. I compare that figure with the figure mentioned by the hon. member for Lake Centre, namely, $800,000. I believe his earlier figure was from $600,000 to $900,000, but apparently in the latter part of his remarks he compromised on $800,000, which is an exaggeration by some twelve or fourteen times.

My hon. friend says that he has no objection to wood being moved. He thinks it is quite proper to arrange for these emergency supplies, and to move them. But he said we should have waited until the wood had dried out, because we could have moved it at a lower freight rate. I point out to him that this wood was cut in the autumn, and it does not dry very well when it is frozen. Therefore to have moved it at the cheaper freight rate would have meant waiting twelve months, and moving it for the next year. Had the winter been cold, that would not have helped the situation in the city of Winnipeg during the present winter.

I think that covers the corrections. The hon. member for Lake Centre is an industrious member of parliament. But it seems to me that he spends too much time in speaking in the house, and too little time in acquiring the facts. I would suggest for his future guidance that he do a little more research, so that—

Mr. GRAYDON: He does not need a lecture from the minister.

Mr. HOWE: I am speaking now. I took a lecture from him last night, and now I will give him one, if he does not mind. Of course, if he minds I will stop.

Mr. DIEFENBAKER: Now that we have had the statement from the minister the facts have been revealed. The minister has referred to the 8,733 cords of the 75,000 cords that were cut at the head of the lakes. If the same proportion on the 75,000 cords was loss, then the loss would actually be about $600,000. Would the minister now tell us as to the disposal of the remaining 67,000 cords; where they were sold; how much was the cost, and what the freight rate was? If the computation is made in connection with the 75,000 cords, it will be found to be very close to my estimate. The figure I gave in regard to cost was correct, and in regard to the sale price of the wood—I said 12,500 cords—I was correct.

Now I ask him to give us the figure with reference to the other 67,000 cords. I do not think the suggestion made by the minister will be borne out by the facts. When I make a statement, and take a stand such as I have done from such information as I am able to gather, it is correct. I have not in any way made statements which are incorrect. In that connection let me say this, that one of the great difficulties hon. members have is that they must go outside the house to get information that should be readily available in the house. This can be secured only by members who are industrious enough to spend their time in investigating these matters. If any question were asked regarding this matter the same answer might very well have been given, one which has been given too often in the past, that it is not in the public interest. The investigation I made disclosed, and it is borne out by the figures submitted, that on the basis of 8,733 cords, the loss suffered by the government would be over $600,000.

Let me add this now, that the government sold this wood at $5.15 a cord. My figure of 12,500 cords was wrong. The government sold this, and there is no denial of the fact that the controller, and the fuel controller in Winnipeg, were not discouraged in making the sale, but went ahead with it. The individuals who purchased it for $5.15 a cord immediately turned it over in the ordinary course of events to the city of Winnipeg at $6 a cord.

Mr. HOWE: Nothing of the kind.

Mr. DIEFENBAKER: I beg your pardon?

Mr. HOWE: Absolute denial.

Mr. DIEFENBAKER: All right.

Mr. HOWE: My hon. friend had better stop talking and let me tell him the facts.

Mr. DIEFENBAKER: Will the minister give us the facts as to what disposal was made of the 67,000 cords of wood, to account for the 75,000 cords?

Mr. HOWE: A considerable part of the 75,000, when it was found that the requirements for fuel would not be as large as had been expected, was sold for pulp, and sold at a profit.

Mr. DIEFENBAKER: I thought the minister said last night that some part of it was shipped east.

Mr. HOWE: Probably some of it was; I will get the exact figure. A very considerable part of it is there, and will be moved by barge into the Toronto area during the summer months when, as suggested by the hon. member, it will be dried out. But my hon. friend is trying to dodge, very artfully. Last night he confined his remarks entirely to the scandal of moving wood into Winnipeg. If it is not worth that amount to make the city of Winnipeg secure against any eventuality in the matter of fuel wood, then perhaps we acted extravagantly in that matter. But, knowing what we do know, and having the alarming statements not only in this house, but from the provincial authorities in Winnipeg, I think we were justified in doing what we did do.

Progress reported.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

TECHNICAL EDUCATION ACT

AMENDMENT TO PROVIDE FOR APPROPRIATION OF UNEXPENDED FUNDS

Hon. HUMPHREY MITCHELL (Minister of Labour) moved that the house go into committee to consider the following resolution:

That it is expedient to introduce a measure to amend the Technical Education Act to make available, for the purposes of the act, any portion of the unexpended appropriation during the period of five years succeeding the fiscal year ending March 31, 1944.

Mr. GRAYDON: Mr. Speaker, perhaps, before we go into committee, the minister might like to give some explanation to the house as to the reasons and necessity for the bill to be founded on this resolution. I would ask him if he is in a position to do so at this stage.

Mr. MITCHELL: Mr. Speaker, this resolution is precedent to the introduction of a bill to provide for the continuation of the provisions

of the Technical Education Act of 1919, as amended by the Technical Education Act of 1929 and again of 1934.

The scope of the proposed amendment is fully set out in the resolution. Similar resolutions were considered and similar bills passed by parliament in 1929, 1934 and 1939, in order to effect the continuance of the original act of 1919. Hon. members will remember that under the act the dominion government provided $10,000,000 for purposes of technical education throughout the dominion, $10,000 being provided yearly for each province and the remainder of the $10,000,000 being apportioned on the basis of population. Under the original act and subsequent amendments, twenty-five per cent of the money provided by the dominion and the provinces goes into building construction.

Mr. GRAYDON: Twenty-five per cent?

Mr. MITCHELL: Yes, and seventy-five per cent to provide the necessary technical education. Every province with the exception of Manitoba has taken up its allotment of the $10,000,000, and at the moment there is $147,430.42 left in the allotment for Manitoba. All that this amendment does is to make possible the expenditure by the dominion of that amount in conjunction with the province of Manitoba.

I should like to point out to the house that the Department of Justice has indicated that the bill founded on this resolution must receive royal assent before the 31st of this month or else the original bill will lapse. That is the reason for the urgency of the passage of this amendment to the act of 1919 at this time.

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, this resolution affords an opportunity to the house to discuss one of the most important and, indeed, urgent questions facing the people of Canada at this time, a question which will become more important and more urgent perhaps as the days roll by. Apart altogether from the divisions into which the educational programmes of the provinces and the dominion fall, whether it be technical, vocational or some other branch of the educational field, this whole problem of education is one to which the house and the country should give urgent consideration.

One must, of course, approach the problem of education first of all from the point of view of the respective jurisdictions of the provinces and the dominion. Under the British North America Act, by section 93, education rests primarily with the provinces, and with that none of us will quarrel, because primarily it is a provincial matter and must remain with the provinces. But that does not presuppose that there is not a responsibility for education resting also upon this dominion parliament within the jurisdiction in which it operates. Technical education particularly, and if one wishes to describe it, adult education and vocational training is not only of provincial but of federal concern, it being always borne in mind that the primary jurisdiction for education rests and must rest with the provinces.

The Technical Education Act passed, as the minister indicated, in 1919, was the beginning of that movement which indicated the importance of technical education in a country like Canada, and more than that, it emphasized its importance from the dominion point of view. The importance of education and vocational training, if you like, is coming to be more and more clearly recognized as time goes on. We have made great strides in the educational field in the various provinces, but that does not mean that there is not still much to be done. The skills of the mind are important, but we must never lose sight of the importance of the training of the hand, and in this country in the days to come I hope that we shall always maintain a good balance as between the skills of the mind and the skills of the hand.

The problem of education has been tackled by the provinces, and by some of them very courageously. In Ontario from which I come there has been a recognition of the need for reforms in the educational system. The government of the Hon. George Drew has already during its short regime in this province recognized and will continue to recognize the importance of the educational system to the people of Ontario, and education is featured in the programme which that government is now attempting to carry out with great celerity and dispatch. Education is one of the planks on which that government was elected, clearly indicating the importance of the whole problem of education in the provincial sphere. Here is the programme of the province so far as education is concerned:

> Our educational system will be completely revised so that every child in this province will have an opportunity to be educated to the full extent of their mental capacity, no matter where they live or what the financial circumstances of their parents may be. Vocational training will be made a much more important part of the school work, so that children may be prepared to earn a living by practical vocational instruction. The important place of our teachers in each community will be fully recognized.

I believe that to be a reflection of the general thought concerning educational affairs. Perhaps this is not the time or the place to discuss a subject which comes within the jurisdiction of the provinces; but we must recognize that it will be a responsibility within

the competence of the dominion to tackle, and fairly soon, those aspects of education which relate to matters of geography and ability to pay; to see to it that a student's location or his financial position shall not, as in the past, prejudice his right to a proper education. That is one of the ways in which the dominion and the dominion government can play an important part in the reform of our educational system. The question of ability to pay affects the whole problem of equal opportunity for our children. I am one who believes that the potential value to Canada of the boy or the girl in the far hinterlands is just as great as that of children who live in areas of greater opportunity, larger wealth, and more closely concentrated population. Having that definitely in mind, realizing the great differences of income which prevail in the different geographical locations and sections of Canada, I am frank to say that it does not seem right that because a child is born in one particular part of the country he should be denied full and equal opportunity so far as education goes. Attention must be given to the removal of the bars of geographical isolation and financial incapacity, so that the fullest measure of education shall be available to those who have the capacity and the desire to profit by it.

I hope that the government will also consider and review the whole matter of national scholarships. I realize that moves have been made in this respect. National scholarships would go far to meet a very real problem connected with education. I suppose there is not one hon. member but can call to mind boys and girls who were brilliant and industrious and who desired to obtain an adequate education, but who, because of their parents' lack of means, or for other reasons beyond their control, were denied that opportunity. It seems to me that this nation cannot risk the loss of many bright minds merely because of such obstacles as I have mentioned, and which it is within the power of this parliament to remove.

Therefore, if the matter comes within the purview of the minister's department, I suggest to him that he enlarge the scheme and increase the amounts of national scholarships to enable students of this class to pursue their courses to the limits of their mental capacity rather than to the limits of their material resources.

The whole question of technical and vocational training assumes special importance because of the great job which will have to be done when our armed forces are demobilized. Under particularly good leadership—I refer to the Canadian Legion—a great move has been made in the interests of the men of the armed forces while they are in the service. In addition, men benefit by the trades which they are enabled to learn while under enlistment. But I believe the government will have to consider enlarging the possibilities of giving young Canadians of both sexes, when they cease to wear the uniform, an education which will enable them not merely to become equal in earning capacity but to have even some preference over their civilian contemporaries and others who have not borne the brunt of battle through these years. In the matter of both technical and vocational education it is the dominion government which must give the lead and provide funds.

Adult education through the radio and the motion picture affords an important subject for consideration. In this field the federal government could properly take a heavy measure of responsibility. The air waves and the screen provide media particularly suited to this type of national education.

In passing, let me point out that in the rural communities there has not yet been developed, to the extent that we could wish, a proper system of education on agricultural lines, a system which through the primary and the secondary schools will train and equip our youth for agricultural activities. It is not impossible that many men in this chamber would now be engaged in agriculture instead of some other calling had it not been fashionable in the old days in the secondary schools for men—and women too—to drift into the professions. That trend, observable all over Canada, has not been a good thing for agriculture although it has enriched the larger centres. If agriculture is to continue to be a great industry and to develop as we hope, it is not too much to expect that our educational system shall direct and guide pupils from their early days into lines of agricultural activity and instil in them pride in the agricultural vocation. That is one of the things which must come in this land.

We have had debates in this house on the question of agricultural research, which, as most members who took part in those debates pointed out, is an important departure in that industry. In the competitive days to come no stone must be left unturned to ensure that farm life in Canada shall be raised to a position of importance so that it may take its place alongside other lines of endeavour and find its level of equality with other industries. The workers of Canada, too, are entitled to a broader and more abundant scheme which will be of benefit to their children, enabling them to obtain proper technical education and vocational training generally.

I merely wanted to point out on this occasion the importance of the whole problem of which this is but a very small part. Technical education, vocational training and education generally will, I hope, provide a means whereby this parliament, and the government, whatever government may succeed this one, shall make sure that the people are not neglected as in the past. We must see to that.

Mr. NICHOLSON: We will.

Mr. GRAYDON: Of course, you are the only one who has ever suggested such a possibility. I am trying to be modest in the rather boastful air to the left of me. My hon. friend used to teach school, but after all he will not choose to regard me as a pupil at the moment. During the past in Canada education has been regarded by the dominion as an orphan. That must no longer be so. While we must respect and preserve and maintain at all times full provincial jurisdiction in this matter, still there are many fields in which we as a federal parliament can assist the various parts of the dominion financially as they need assistance. I am not one who believes that simply by giving grants to the provinces we as a dominion should hold a bludgeon over the provincial legislatures to make them do what we would like to have them do. That must never be the policy of the government. Rather, it must be the policy of this government and parliament to see that financial assistance is given to the provinces so as to provide a more uniform opportunity to pupils across Canada, regardless of the financial condition into which they were born or in which perhaps their parents may find themselves.

I would urge the minister to regard this measure as simply one of those factors, small as it may be, in the general scheme which I hope the government is planning in the way of assistance to education throughout the dominion. The challenge to this parliament and to this government, the challenge to all the provinces, is imperative. The education of the new generation which is coming up is of such vast importance as almost to stagger one sometimes when one stops to contemplate the possibilities. In Europe and in other parts of the world education has been directed along certain lines which we think are undemocratic and which have led to bitter trouble throughout the world. The new generation now growing up are our citizens of to-morrow and are the most valuable asset that Canada possesses. There is no asset that can equal our pupils, and we must recognize this fact. Moreover, we must treat with equal consideration those charged with the responsibility of teaching those pupils. They also are valuable national assets. The teaching profession, however, has not been paid as it should have been. We have money for other lines of endeavour but there has been too niggardly treatment of our teachers. I hope, therefore, that in the days which lie ahead there will be something better for those who teach and those who would learn, and that a giant structure, erected with a greater Canada in view, will make for that progress and development to which we all look forward.

I have pleasure, therefore, in supporting tonight the minister's resolution upon which a bill respecting technical education is to be founded. I regard it as a channel whereby we can bring to the government's attention the important problem of education, which must no longer be ignored or disregarded.

Mr. ANGUS MacINNIS (Vancouver East): I am not going to hold up the passage of this resolution or the bill that will be based upon it; nevertheless I do not believe that this is a step in our progress toward better education for everyone. Indeed, it is only a small part of a plan that was put into effect many years ago. One of the provinces has failed to take advantage of its share of the assistance granted, but I see no reason why the house should not pass the bill so as to give the province concerned an opportunity to take advantage of such assistance if it wishes to do so. I should like to impress upon the Minister of Labour (Mr. Mitchell) my belief that the time is opportune for the government, of which he is a member, to bring before the house a comprehensive scheme of federal assistance to education.

I am sure the minister and hon. members generally will agree with me that such assistance is badly needed in Canada. The mere fact that of the nine provinces that had the opportunity of benefiting under this legislation, which was passed in 1919, eight have long ago taken advantage of the assistance offered to further technical education in their respective areas, indicates to me that the provinces would welcome additional assistance. I agree with the leader of the opposition (Mr. Graydon) that there is no reason why the dominion, in giving assistance, should seek more supervision than would be necessary to make sure that the grant was properly used. It was not found difficult to accept the grant and to satisfy both the provinces and the dominion under the old plan. I believe that many of the technical schools in the country are benefiting to-day from government assistance given for the purpose of training boys and girls in war work. I submit to you. Mr.

Speaker, that if it is important—and we agree it is important—to train boys and girls for war, it is equally important, nay, more important, to train boys and girls for peace as soon as the war is over. The problems of peace, as the years preceding the war brought home to us so definitely, are no less important than the problems of war.

There is another reason why the government should be ready with a comprehensive scheme of federal assistance for education once peace comes. But may I repeat, I see no reason why it should not be put into effect before peace comes. This war has taken an enormous toll of the better educated young men of this and of every other nation engaged in it. Possibly there has been no other war in history where the flower of the intelligence of our young people, if I am using the correct term, has been sacrificed to the same extent as in this war. Unfortunately in the past only a very small number of our people were able, to any extent, to take advantage of advanced educational training. I had the figures for British Columbia a few years ago. The figures that I shall give may not be absolutely accurate, but I think they will be found to be very close to the mark. It is doubtful if seventy-five per cent of the pupils who begin school at the age of five or six go through the elementary schools, and not more than thirty-five or forty per cent enter high school. Only a percentage of the number entering high school continue to matriculation. In British Columbia statistics show that only four per cent of the pupils who go to school reached university and a still smaller percentage than that passed through university. Surely we are not on that low intellectual level that only four per cent of our people can benefit by a university education?

There are various reasons why we have made such a poor showing in our schools. The reasons are largely economic. First of all, there is the poverty of some of the provinces. Then there is the poverty of certain districts within the province where, under our provincial educational system, the school districts pay for the elementary education with, of course, a certain amount of provincial assistance. Then there is the greatest drawback of all, the poverty in the home. Until we raise the economic level of our people by increasing wages, or in some other way, poverty will continue to be a bar to the education of the families of the poor. I do not think that difficulty can be met by scholarships. I believe that scholarships are of value; but the capacity of the pupil to benefit by advanced education cannot be measured until that pupil has a least reached high school and has possibly had some years in high school. Therefore there must be something more than scholarships. Some means must be provided by which the children of the poor can be continued in school until it can be discerned whether or not they can benefit by further education.

As I said at the beginning, I see no reason why this measure should not be allowed to pass without any great amount of discussion, but I believe this house should impress upon the minister the urgent necessity of the government doing something to give assistance to the provinces to further technical and other advanced education. This would in turn take some of the load off the provinces and more could be spent on elementary education. But there is a whole field here that will have to be covered in some way if we are to do some of the things that the leader of the opposition said should be done, but which were never done, regardless of what party was in power in Canada.

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): I have listened with great pleasure to the speeches made by the Leader of the Opposition (Mr. Graydon) and the hon. member for Vancouver East (Mr. MacInnis).

This resolution precedes a measure to amend the Technical Education Act. There is not an hon. member who will not agree that education, especially technical education, is an important thing for youth. But while I was listening to the speeches I was thinking of something, namely, that it is very good to boost education on paper and even in legislation, but on the other hand we must be more practical than that. We must not take it for granted that the men who will indulge in technical work shall be men who are physically unfit. At the present time those who work as technical tradesmen are considered as making an inferior contribution to the war effort. They are not put on the same footing as the men and women in the army. If all that has been said before is true, it must be acknowledged that those men who work in technical trades do something that is just as vital to the war effort as that done by those who are in the army.

That is my first contention. Now it is the fashion to give the cold shoulder to the man in overalls. Many people are under the impression that sick boys from sanatoria, boys who have been undernourished and who are weak physically, can do the work of able-bodied men. I do not agree; probably no one does in private, but when the time comes

to express an opinion everyone seems afraid to say so. There is no shame in wearing overalls; there is no shame in having spots of grease on overalls. The beautiful and expensive limousines in which landlords ride among the crowds of pedestrians are built by men who have greasy spots on their overalls; the landlords have none. The man who sweats tailoring fine uniforms for those who occupy high posts in the army is unknown. It reminds me of a reception; it is not the cook or chef who is complimented, it is the host. A caterer told me that every time he saw a fine cake he thought of the perspiration of the man who had looked after the baking of that cake.

It seems to me, sir, that in times like these people express views which are not exactly those they hold in the bottom of their hearts. Because I speak like this I may be told that I am opposed to the education of youth, that I am opposed to a federal grant to aid technical education. I want to respect the constitution and the law. In the Sirois report I saw a lengthy memorandum about federal gifts to the provinces in aid of education. According to the British North America Act, which is considered by some of my hon. friends of the Cooperative Commonwealth Federation party to be an obstacle to progress, education is under the exclusive jurisdiction of the provinces. Why? The reason is obvious; it is that education needs an immediate rather than a remote control. I give every credit to the Minister of Labour (Mr. Mitchell), but how can he possibly supervise the education of young Canadian boys and girls throughout this country? It is hard for a provincial minister of education to do that within his own province; so how would it be possible for the minister to do it for all of Canada?

That is my second point. My third point is that the best help the Minister of Labour can give to youth in technical trades is to keep in those trades the young men who are doing well at the present time, making armaments, making munitions, making clothes for the soldiers, working on the farms, on the railways and in the railway shops. Not long ago the railways decided to make an agreement with the Department of National Defence, in virtue of which young men with experience in technical trades, who have filled positions requiring experience both on the railways and in the shops, could not have any further postponement of military service. Though they had years of experience as tradesmen and only a few months of experience as soldiers, they were told, "You are soldiers first. We will not ask you to continue at the trade in which you have acquired special skill. Go into the army." Well, sir, before voting money to encourage the training of young men in technical trades, I think first we should acknowledge the importance of those trades, and not give the cold shoulder to tradesmen and men in overalls. We should recognize officially that in war time these men do not help the country only by subscribing to war bonds; they help by their work, by their sweat, and by their activities in the various fields in which they are engaged. That is my point of view; and if this resolution is timely, there is no excuse whatever for not paying a special tribute of admiration to those men who work day and night in order to clothe the army, to arm those who are in it, to furnish them with munitions, food and transportation.

I remember very well that not long ago, following a suggestion by an old doctor friend of mine who is a member of parliament in Canberra that each school boy should have a glass of milk in class at midday, I asked why there was no subsidy for the purpose of giving that glass of milk to each schoolboy and schoolgirl in this country. I was told by one of my esteemed colleagues that the suggestion was out of order because that matter came under the jurisdiction of the provinces. It is most timely that we should see about the health of the youth who are studying the technical trades, and especially the health of the young boys and girls who are going to school, who are undernourished and who cannot work so well because they are hungry.

And, sir, there is something else also. Why is it impossible—

Mr. SPEAKER: Order; the debate has broadened far beyond what was ever anticipated, and I must call the attention of the house to the terms of the resolution. It states:

> That it is expedient to introduce a measure to amend the Technical Education Act to make available, for the purposes of the act, any portion of the unexpended appropriation during the period of five years succeeding the fiscal year ending March 31, 1944.

The minister in his opening statement referred to the fact that there is an unexpended appropriation now in their hands, and that this measure will have to be passed in order that that amount may be given to Manitoba.

The present discussion is going into the broad field of education, entirely beyond the provisions of the resolution, and I must ask the hon. member to confine himself to the terms of the resolution.

Mr. POULIOT: Yes, and what I said applies especially to the children of Manitoba.

Now, with all respect I was expressing my personal view about education. I shall act in accordance with the suggestion which has just come from the Chair. However, I hope Your Honour will have no objection to my making a few other remarks about technical education, although I am convinced that before considering this resolution we should consider other more pressing matters. I tell the house why I say that; I say it because at the present time there are many young boys in Manitoba, as well as in other provinces in Canada, who have had no technical training, or a technical training of only two or three months' duration. I have known many skilled tradesmen who can scarcely write their names; yet those men are experts at their own jobs. I am sure we could find many such men in the big industrial shops, not only in those where automobiles and trucks are made, but also in those shops from which guns, rifles and ammunition are being turned out. This is work calling for precision. Of course it is necessary for those who make calculation to have a degree of instruction sufficient to enable them to make their point.

Mr. MITCHELL: Mr. Speaker, I rise to a point of order. The hon. member comes from Quebec; this resolution deals with only one province. Every other province has taken up its allotment. This resolution only asks permission of the house to amend the present law so that it may be extended for another five years in order to enable Manitoba to take up its allotment. That is all that is before the house.

If we are to wander all over the lot and discuss the whole broad question of education, we could stay here for another year. I suggest that we stick to the terms of the resolution which asks the house to extend the act for another five years. All the other provinces have had their share of the $10,000,000, and we are merely asking that the provision be extended so that Manitoba may have its allotment.

Mr. POULIOT: Mr. Speaker, the point of order the minister has raised, if I understood him correctly, was this: He states that this affects Manitoba, and that no member outside that province can speak about it.

Mr. MITCHELL: Oh, no.

Mr. POULIOT: What I have said applies as much to Manitoba as to any other province. I have been talking about the technical trades, and I do not see why the minister would object to that. I have said that at times men without education are more skilled tradesmen than men with education—

An hon. MEMBER: Oh, no.

Mr. POULIOT:—in certain cases. For instance, what success would the governor of the Bank of Canada have in making shells? He is a great banker, I am told. But what would be his success, if he were working alongside a man who had been making shells for years? I am not condemning education. But what I say—and I insist upon it, just as much for Manitoba as for the Yukon, the maritime provinces, Quebec or anywhere else—is that it is not only education that counts in the technical trades. It is skill; it is experience.

The Minister of Labour is himself a tradesman, and has acquired experience as such. He will admit, I am sure, that his experience as a tradesman counts more than education. The education received respecting technical trades from tradesmen themselves is of great importance. The education I have received in agriculture has been from farmers with whom I live—and I know of what I speak. I do not snub them. I do not think there is any fence between the provinces, nor do I believe that because I come from Quebec—or if I came from Cape Breton—I should be forbidden by the Minister of Labour to speak about technical education in Manitoba or in British Columbia or the Yukon.

Speaking broadly about education, I say there should be no snobbery about it. Every member of parliament shall be the friend of the working man, the friend of labour. And not only that, in Manitoba, as anywhere, the teaching of education shall be supervised by those it may concern. I insist upon that, so that every bit of money spent on education shall serve its purpose. Let us have men who will be worthy of those who have gone before.

In England I was struck by what tradesmen in some families have been doing generation after generation. The young man whose father is a railwayman succeeds his father because he has learned to love that trade. He has been told, within his family circle, about the general rules pertaining to it and the way things should be done. These things interest him, and he expects to be able to succeed his father and continue to find work in the same trade. I would hope that in Canada we would have the same condition where tradesmen would be trained by their fathers. Nothing could be finer than that. That would

be my wish. I often regret that young men, the sons of labourers, are ashamed to be labouring men and try to get into the so-called liberal professions. There is more future for the labouring man in his own field than there is for those who belong to the liberal professions in this country, except perhaps chemists and civil engineers. Therefore, when education is considered in this house, we should be extremely careful because it is not the business of this government to touch it, and we must see to it that we do not infringe at all upon provincial rights. We must be very careful to respect them.

My last word, sir, will be this. I hope that there will be no divisions between the citizens of any parts of this country over what is for the common welfare of all, and while distinctions were necessarily made by the British North America Act with regard to the power to legislate, that is an entirely different matter from the common effort of all citizens of good will working together for the welfare of the whole country.

Mr. G. H. CASTLEDEN (Yorkton): Mr. Speaker, I am pleased to hear any hon. member from the province of Quebec speak in favour of improved educational systems. I was pleased this evening also to hear the leader of the Progressive Conservative party express some fine ideals and aims and objectives of education. But the outside leader of the party who wanders about the country has not quite such a good record in the matter of technical education, because for twenty years he was premier of that province which failed to take up its share of this $10,000,000 grant for technical education.

Mr. GRAYDON: I rise to a question of privilege, Mr. Speaker. If the hon. member for Yorkton would only acquaint himself with the facts he would find that the minister in charge of labour for the province of Manitoba for three years was a gentleman by the name of Farmer, a member of the Cooperative Commonwealth Federation party.

Mr. CASTLEDEN: Was not Mr. Bracken premier of that province for about twenty years? But perhaps we can excuse him because in those days he may have been a Liberal-Progressive or something else.

Canada has a long way to go in the field of education. It is too bad that higher education has to be considered in this country as a sort of monopoly of the rich. Another regrettable thing was our failure as a nation to provide those who had an education with an opportunity to make a living in the years from 1930 to 1939. Only three per cent of our students graduate from universities. Many of these had to leave this country and go elsewhere to receive a reward for their labours.

Very rapid changes are taking place in other countries in the educational field. If one wished to place his finger on one of the basic reasons why our great ally Russia is making such a splendid contribution in the winning of this war and saving democracy for the world to-day, he could point to what Russia has done in the field of education for the rank and file of her people. And we in the so-called advanced nations, if we wish to hold our place anywhere near the top of the scale of peoples, must awake. We must demand as a nation a very high standard of educational opportunity for every Canadian.

I believe that some fundamental changes are required in our curricula. I agree with the hon. member for Temiscouata (Mr. Pouliot) that certain people with technical education can do better work than those who have had an academic education.

There must also be greater progress made in work of helping the students who enter our schools to find out what their latent and inherent talents, abilities and skills are. Then we must provide them with an opportunity to use those skills and talents to the best possible advantage. Every person differs, of course, and what is an education for one is not suitable as an education for another. But each has capacities which must be developed, and our educational system in this country has failed to find within our people their respective talents and capacities. There are people who can take tremendous advantage of a technical education, and there are others to whom it would be worthless. There must be an opportunity provided throughout all our nation for every person who has ability and talents to discover and use them.

The second point I wish to make is that there must exist in the minds of those who are getting an education the thought that when they have completed their education and training an opportunity will exist for them. They must have a feeling of security; there must be freedom from fear. We watched the youth of our nation graduate from our schools and colleges in 1930 to 1939 and go into the ranks of the unemployed, and then into the bread-line asking for relief. That must never happen again.

Canada can never fulfill her destiny until every child knows what his or her capacities and abilities are and has an opportunity to use them, not entirely for his or her own

particular gain or to make it possible for him or her to take advantage of his or her fellowmen to exploit them, but their capacities and ability and training must be used in the light of service which he and she can perform for their fellowmen. It is time that Canada realized that one of the greatest natural resources of this country or that any nation can have is the brains and ability of its youth.

Mr. CRERAR: I rise to a point of order, Mr. Speaker. While the discussion of my hon. friend is very interesting I submit that it is not germane to the resolution which the house is considering. May I respectfully suggest that if such latitude is to be permitted, we may be here for days and days debating this simple resolution.

Mr. SPEAKER: I have already called attention to the terms of the resolution. I have been listening carefully to the hon. member, and while I do not think at the moment he is entirely irrelevant he is coming very close to it.

Mr. CASTLEDEN: Then may I close, Mr. Speaker, with this one very relevant remark. I support this bill wholeheartedly, and my only regret is that it is not another bill being introduced to make available $100,000,000 for education in Canada.

Mr. REID: Why not $200,000,000? Why limit it?

Mr. CASTLEDEN: You are on the government side. You introduce it. I cannot introduce a money bill.

Mr. REID: You are kind of cheap in suggesting only $100,000,000. Don't be a piker. One hundred million dollars forsooth!

Mr. CASTLEDEN: Make it $290,000,000, if you like. It is needed.

Mr. A. R. ADAMSON (York West): Mr. Speaker, I am not going to raise the ante, as somebody says, on the $100,000,000. I merely wish to point out the great urgency that exists to-day for technical education, and so that I may be in order, Mr. Speaker, I say that the urgency exists probably to a greater extent in Manitoba than in any other province. We have this problem to face, and it is a very real one. We have the immediate problem of training the section leaders who will be doing the development work in the immediate post-war period. That is a very important matter. Unless we have the trained technical men, and unless we train them now, we shall find ourselves when the war is over with a problem on our hands and no skilled workmen to cope with it. So far, some fifty or sixty thousand men have been discharged from our armed forces. When the war is over we shall be faced with the problem of employment for three-quarters of a million in the armed forces and, as the Minister of Munitions and Supply (Mr. Howe) said, eight hundred thousand directly employed in war industry. And that will be an immediate problem; it will not be something that will wait; it is of urgent and vital importance.

Mr. SPEAKER: I must call to the hon. member's attention that he is not in order in dealing on this debate with the general question of education. This resolution deals only with the unexpended portion of an amount of money which the government wishes to hand over to the province of Manitoba, with regard to technical education. The hon. member must confine himself to the terms of that resolution much more strictly than he has been doing.

Mr. ADAMSON: Mr. Speaker, I naturally bow to your ruling. But I wish to point out that practically nowhere are we going to be faced with this problem of technical education more than in the riding of the Minister of Mines and Resources (Mr. Crerar). In that riding are some of the greatest mineral deposits known in this country, and they will not be developed unless we train and prepare technically equipped prospectors, and train them now. This resolution speaks of Manitoba. This is a question which should have been brought to the attention of this government long ago. We found ourselves in 1941 with 107,000 people in the mining industry supporting a population of approximately 1,200,000. Less than five per cent of our production is derived from properties which have been discovered since 1930. If that does not indicate that we need technical men trained to do prospecting in the mining business, I do not know what it does mean. The position is nowhere more serious than in the province of Manitoba and in the district represented by the minister himself. I will not transgress, Mr. Speaker, since I see you objecting. I see the minister waiting for the passage of this resolution, and I sympathize with him, but I wish to reiterate that unless steps are taken, and taken now, to train technically the troops in our district depots, so that, when general demobilization takes place, we shall have a skilled group of technicians who can do their part in bringing about the discovery and development of the natural resources of this country, the end will be chaos. Here is our

one hope of preventing a depression, and technical training is the most important element in preventive action.

Mr. S. H. KNOWLES (Winnipeg North Centre): Manitoba has been mentioned so often this evening in the course of this debate that perhaps someone from that province should rise and say a few words. Perhaps, coming as I do from that province, it may not be so difficult for me to stay in order.

As I understand it, the money which is to be made available for Manitoba if we pass this bill before the 31st of March—

Mr. MACKENZIE (Vancouver Centre): It does not look like it.

Mr. KNOWLES: —is for the purpose of enabling that province to carry on with the kind of technical education which was originally provided by the act many years ago. I express some shame that my province failed to make use of this money earlier, as it should have done. But I rose in my place principally to say that I happen to know that very good use is being made at the present time of money provided by this grant. Perhaps in passing I should say to the leader of the opposition (Mr. Graydon) that this matter did not come, at any time during the period that Mr. Farmer was minister of labour of Manitoba, under that department. As a matter of fact, it was shuttled between the department of education, headed by the Hon. Ivan Schultz, and the department of public works and labour, now under the leadership of the Hon. Errick F. Willis, who is the leader of the Progressive Conservative group in that province and was the leader of the Conservative party when Mr. Bracken was on the other side.

Mr. GRAYDON: Farmer cannot escape responsibility as easily as that.

Mr. SPEAKER: Order.

Mr. KNOWLES: As I was saying before the interruption, lately it has been discovered that this money is available, and I happen to know that good use is being made of it. I have had occasion to become acquainted with the work which in Manitoba comes under the direction of Mr. R. J. Johns. If my information is correct, his work comes under two or three different votes. Some of it is strictly technical education in the sense of training people to do war jobs, and some of it is education of the technical kind that is provided for students as part of their regular high school education. Last fall, during the course of a visit to the city of Brandon, I saw the work being done there under the direction of Mr. Johns, and more particularly under the supervision of Mr. K. A. McKillop, who was in charge of this work at one of the high schools in Brandon. If it were not for the desire of the house to hasten the passage of this resolution, I am sure I could tell a story which would interest hon. members as to the kind of work being done there in an endeavour, as a part of the education of high school pupils, to make them acquainted with electrical work, sheet metal work, cooking, sewing, weaving, and a number of things of that kind. An interesting experiment has been developed there in terms of self-government and of cooperation which really did my heart good. I am only sorry that it has taken so long for the province of Manitoba to get started on this kind of thing. I wish at the same time to endorse the general remarks on education which have been made by my colleagues of this group. I am satisfied that this money, now that these progressive people whom I have named are on the job, will be put to good use in Manitoba, and I hope we shall forgive that province for having failed to take it up before this, and that we shall pass this legislation to-night.

Mr. A. J. BROOKS (Royal): I am not going to take very much time, but it seems to me that the question of education should not be hurried through this house. The debate to-night indicates the interest which hon. members are taking, and I am sure they reflect the interest of the people back in their constituencies. I do not think the discussion should be wholly confined to the matter in which the province of Manitoba is concerned. As I understand the resolution, it is to amend the Technical Education Act, an act passed in 1919 which affected every province, and I think every province is interested in this amendment. As a matter of fact, in my own province of New Brunswick after their portion of the $10,000,000 was expended they came to Ottawa time and time again, as did every other province, asking that provision might be made whereby they would receive more money to carry on technical education which had commenced under the act. Frankly, I think the dominion government should have assisted the provinces in furthering technical education.

It is not necessary for me to point out the needs of technical education. I have heard hon. members speak to-night, and there is not a member of this house, and there are very few public men or women in the dominion who do not realize that the system of education throughout the country needs a thorough overhauling. Associated with the military

forces as I am, I have had it forcibly brought to my attention. It would surprise hon. members if they knew of the thousands of young men across Canada who, on account of lack of education had to be turned down for military purposes.

These are things that make the people think, and it is one reason why the people to-day are not only looking to their provinces for better education acts, but hoping that the dominion will see that something is done to make sure that our young men are better educated. That, I believe, indicates the need and I hope that, while education is a matter for provincial jurisdiction, the dominion will realize the great asset which Canada is losing when it fails to see that our youth has suitable education.

I was surprised this afternoon to hear the hon. member for Queens-Lunenburg (Mr. Kinley) say that he was quite satisfied with the industry we had received in the maritime provinces.

Mr. KINLEY: I did not say any such thing.

Mr. BROOKS: I am not going to transgress the rules, Mr. Speaker, but I would point out that industry, as far as our province or any other for that matter is concerned, requires men who are educated along technical lines. One reason why we have not had more men educated technically in New Brunswick is that we have not had the industries for which to train them. If we were training young men in Nova Scotia or New Brunswick to-day in our technical schools in any numbers, they would not be able to find employment in those provinces but would have to go to other parts of Canada or to the United States. There is no question about that.

Mr. SPEAKER: Order.

Mr. KINLEY: May I point out, Mr. Speaker—

Mr. SPEAKER: The hon. member for Royal is out of order. He must confine himself to the terms of the resolution which does not deal with the question of unemployment in New Brunswick.

Mr. BROOKS: I bow to your ruling, Mr. Speaker. I was going to say that technical education and industry should go hand in hand, but I will not transgress your ruling. My point is, however, that if we are to have our young men educated as they should be, the poorer provinces, which in the past have been robbed because they have not had industry, will have to receive support from the dominion government. Therefore I should like to see this act amended not merely to assist Manitoba so that that province may spend its portion, but to enable every province to carry on education technically in connection with farming or any other industry that needs it.

Mr. E. G. HANSELL (Macleod): We in this corner have not spoken to the resolution for the reason that we did not want to traverse the universe of education in talking to it. The resolution is very simple. As I understand it, the purpose is to extend the privilege to Manitoba to accept funds which were available to that province within a certain specified time. Because they did not accept those funds within that time a resolution was introduced to extend the time. That is my understanding of the matter.

I recall not so long ago when the premier of Manitoba was the champion of what was known as the Sirois report which, if it had been adopted, would have given Manitoba some financial advantage. I mention that only because, since he championed that report in order to get that financial advantage, which of course was something that was within his power and his right, it should be observed that we have here a sum of money which the province of Manitoba did not take advantage of. I do not speak in these terms to show any meanness or anything of that kind. I think the fund should be made available to them, but at the same time the minister must be prepared to answer questions in committee and to indicate why these funds were not used within that specified time.

I would make another observation because I believe that in this resolution there is involved a principle which may or may not be a good one. That principle is that when a province does not take advantage of that which is offered to it within a specified time, then the principle of the resolution makes the offer still good. I wonder now if that principle would go for the provinces in any other line. Suppose it had been two or three other provinces and not Manitoba alone; would the same thing have happened? I fancy it would. We will give the minister and the government credit for being fair.

Mr. MITCHELL: One extension was made for the province from which my hon. friend comes.

Mr. HANSELL: I am glad to hear that; nevertheless I am dealing with that one principle. If the principle is true in this case, in respect of technological education, it should be true in all cases, whether it be relief schemes or anything else.

An hon. MEMBER: Or housing.

Mr. HANSELL: Yes, housing or anything else. I say that because we may have an opportunity at some time in the future of reminding the government that here they accepted a principle, whereas perhaps later on they will reject the same principle.

There is one other observation I would make and it is this. I appreciate what the hon. member who preceded me (Mr. Brooks) has said with regard to giving aid to the provinces for educational purposes. I am in favour of that, provided there are no strings whatsoever attached to the aid given. Education is a matter that comes within provincial autonomy and, while I am not voicing the view of my group, since I have not discussed the question with them, personally I am against any type of centralization of power or anything else, and centralization of education is just as dangerous as centralization of anything else. I am against any interference by the federal government with those things which are related to provincial autonomy, and education is one of them. With these observations, Mr. Speaker, I am willing to support the bill.

Mr. T. C. DOUGLAS (Weyburn): I do not wish to hold up this resolution. I know the minister wants to get it through. I have only one observation to make, namely, that while this resolution precedes the bill to allow the province of Manitoba to use up the remainder of its grant, nevertheless it does open up the whole question of technical education. While I do not wish to discuss the broad aspect of technical education I should like to say that instead of this measure I should like to have seen the government bring down a general technical education bill which would have provided Manitoba with the $147,000, plus a grant for each of the provinces to begin the training of men who are already coming out of the services and to provide training for men and women who are being moved out of war industries as we find that we have sufficient of certain war materials.

I am hoping that if the minister has nothing to say about this matter now he will have something to say about it before the session is very much older. A few weeks ago, when the estimates of the Minister of National Defence for Air (Mr. Power) were before the house, I made some proposals in which I asked that the government should consider doing two things which they should do on a large scale, namely, set up the necessary facilities for training large numbers of men, and then use those men in socially useful projects such as house building, rural electrification, and the opening up of new industries such as synthetics and plastics. I am not going to discuss that—

Mr. SPEAKER: I must again call the attention of the house to the resolution. This resolution precedes a bill to make available, for the purposes of the act, any portion of the unexpended appropriation during the period of five years succeeding the fiscal year ending March 31, 1944. The hon. member is permitted, of course, to make any argument he wishes dealing with that particular subject; but he cannot deal with the whole question of technical education or any other issue in that connection. The resolution simply deals with the unexpended portion of money which is provided for in the bill that will be introduced. I have already given considerable latitude. I must ask the hon. members to confine themselves solely to the terms of the resolution, and I ask the hon. member to do that.

Mr. DOUGLAS (Weyburn): I must point out to Your Honour that this is a resolution preceding the bill to amend the Technical Education Act. Under the resolution I have the right to discuss the general principle underlying the act which we are to amend. As a matter of fact, the bill opens up the whole act and would allow me to discuss the act and how the act would be affected by this amendment. I do not wish to do that, Mr. Speaker. All I want to point out is that when I was talking about technical education the other day the Minister of Pensions and National Health (Mr. Mackenzie) interrupted me to say that the government was now doing that for thousands of men. I asked him if he would mind outlining to the committee just what plans the government had to train, let us say, half a million of three quarters of a million men who will be coming back from the war services and who will be coming out of war industry. The minister said, "I shall be glad to do that at the earliest opportunity."

Mr. MACKENZIE (Vancouver Centre): No. My hon. friend is misquoting me again. If you read *Hansard* you will find that I said, "At the proper time". My memory is better than his.

Mr. SPEAKER: The hon. member is now discussing the policy of the government which has no relevancy to the resolution that is before the house.

Mr. DOUGLAS (Weyburn): I feel it has everything to do with it. I am suggesting—

Mr. SPEAKER: Order.

Mr. DOUGLAS (Weyburn): I am suggesting, now that the government has brought down the resolution—

Mr. MACKENZIE (Vancouver Centre): Order.

Mr. DOUGLAS (Weyburn): I think the Speaker will be able to keep order without the Minister of Pensions and National Health making a lot of noises.

Mr. MACKENZIE (Vancouver Centre): My hon. friend is disobeying the Speaker's ruling.

Mr. DOUGLAS (Weyburn): No, I am not. If I am, the Speaker will bring me to order. I do not require the Minister of Pensions and National Health to tell me what to do. I can take care of myself much better than the minister can take care of himself or me.

Mr. SPEAKER: Order.

Mr. GRAYDON: It is like the blind leading the blind.

Mr. DOUGLAS (Weyburn): I could have said all I had to say in three minutes if I had been left alone. I rose for the purpose of saying that I hope some time during the present session, and very soon, that instead of a measure merely to pay out the remainder of the grant to Manitoba, the government will bring down a general measure of technical education for the post-war period. It is not enough merely to pay out the remainder of the grant which is now twenty-five years old; the government ought in the very near future to bring down legislation to cover the whole field of technical education, because men are already coming back from overseas and men and women coming out of war factories, and the programme of technical education should be under way now to deal with the post-war period before it is too late.

Mr. F. D. SHAW (Red Deer): While I agree wholeheartedly with the view of the previous speaker (Mr. Douglas, Weyburn) with respect to the effect which this resolution has upon the act itself, I shall not endeavour to go beyond the limitations which you, sir, have set.

We realize that this resolution has been brought forward with the express purpose of making available to Manitoba certain moneys which it has not used heretofore. I hope that Manitoba will recognize in the action which parliament is taking in this regard the fact that in that province, as a consequence of war, many establishments have been set up which, following their usefulness for war purposes, may well be utilized in connection with technical education. Moreover, I hope that Manitoba will recognize that as a result of the specialized type of training which we are giving to-day to many of our service personnel, we shall before very long have an abundance of fully qualified instructors to carry on technical educational work in that province. What I say of Manitoba in that regard applies equally well to the other Canadian provinces.

I trust that Manitoba will recognize, together with all the other provinces, that in order to maintain fully qualified and competent technical instructors it must be prepared to recognize the importance of that type of work and to pay salaries which will induce these people to take a more intense interest in that type of instruction work and, therefore, add greatly to technical education in that province.

There is a good deal that I could say, but let me just add this: Not only must we concentrate upon providing technical education for the purpose of enabling young people to earn a living, but we must so educate them as to enable them to make profitable use of their spare time. I think we have almost entirely overlooked that in connection with our techincal education in the past. I agree with this resolution wholeheartedly, Mr. Speaker, as do the other members of this group.

Mr. J. S. ROY (Gaspe): Mr. Speaker, the purpose of this resolution is to make available to the province of Manitoba money provided by the federal government to encourage technical education, which offer Manitoba did not accept in years gone by. I shall certainly support the principle of this resolution, because I think it is a good thing to help technical education throughout Canada.

There is another reason why I am supporting this resolution. It is that it will create a precedent which may be very beneficial to my own province of Quebec, where the same situation exists in connection with old age pensions. For nearly ten years sums were provided by the federal government to help pay the cost of old age pensions throughout Canada, but the province of Quebec did not take advantage of that offer. Perhaps, following this precedent, Quebec may be able to ask this government for the share of the money provided for all provinces for that purpose which it did not claim in previous years, and that, of course, would be of great benefit to the province of Quebec.

Hon. HUMPHREY MITCHELL (Minister of Labour): After listening to many hon. members this evening, one would almost wonder whether we had any educational system at all in this country. Let me say

that I entirely agree with the leader of the opposition (Mr. Graydon) and the other hon. members who spoke in regard to jurisdiction. I believe the strength of any nation the size of this dominion is predicated upon a federal constitution under which such things as education come within the jurisdiction of the provinces, and I do not believe any political party in this country has a first mortgage on the will to see to it that our boys and girls are properly educated.

Some hon. MEMBERS: Order.

Mr. MITCHELL: That is all right; I am going to get in my answer. My hon. friend the leader of the opposition made a fairly good propaganda speech earlier this evening. I wish to say very frankly that in my judgment those who framed the technical education legislation in this country planned better than they knew. Had it not been for the foundation laid by the government in 1919, following the action taken some years previously in setting up a royal commission to study the question, we would not have had an industrial structure that could have accomplished what has been done during the present war. I should like to pay tribute to the provinces. The dominion government has had complete cooperation from every province, from the Atlantic to the Pacific, in the war training programme undertaken since the beginning of the war. To listen to some hon. members, one would think almost no money had been spent on this sort of training in recent years. Let me tell hon. members that the federal government, in conjunction with the provinces, have spent over $18,000,000 since war broke out and have trained over 300,000 people in the technical and plant schools of this country.

Mr. DOUGLAS (Weyburn): Mr. Speaker, I rise to a point of order. I wanted to discuss technical education and the need for technical training both during and after the war. You, Mr. Speaker, decided that I should not do so under this resolution. Now the minister is proceeding to give the house a report on the training that has been undertaken by the government during the war and the preparation that is being made for the post-war period.

Mr. MITCHELL: There is a time and place for that, but I should like to say to some hon. members—

Mr. DOUGLAS (Weyburn): I should like a ruling, Mr. Speaker, on the point of order I have raised. If the minister wishes to speak to the point of order, that is all right.

Mr. SPEAKER: The point of order raised has been dealt with by the Chair several times to-night. This resolution deals with the unexpended portion of an appropriation, and I would ask all hon. members to adhere to the terms of the resolution.

Mr. MITCHELL: It has been said that this government has no policy in regard to education, or something to that effect.

Mr. DOUGLAS (Weyburn): That is not dealt with in this resolution.

Mr. MITCHELL: May I remind the hon. member for Weyburn (Mr. Douglas) that two sessions ago we passed a bill concerning vocational education which had a much wider coverage than the resolution we are discussing this evening. This question has been raised, and I think these things should be answered. It has been stated that in this country education is a monopoly of the rich. I disagree with that statement. That is the sort of thing that inflames public opinion from one end of this country to the other. I suggest to the hon. member for Yorkton that it would be just too bad for the Cooperative Commonwealth Federation party if education had been the monopoly of the rich, for I understand that the leader of his party is a university graduate, and a good scholar too. I do not think a statement like the one I have mentioned is warranted, particularly when one looks around the benches of this House of Commons.

I just wanted to answer those points while I was on my feet, Mr. Speaker; I am not going to detain the house longer. I should have been glad to give an historical review of technical education in this country, in which I have taken some interest and in the establishment of which I have played some small part. I hope this measure will pass quickly, for the province of Manitoba needs the money. I would say to the hon. member for Gaspe (Mr. Roy) that his province availed itself of its full quota under the legislation, and the only province that still has to make use of its allocation is Manitoba. I hope hon. members will grant the request of that province with due expedition this evening.

Mr. KNOWLES: Will the minister answer the question as to why—

Mr. SPEAKER: In committee.

Motion agreed to and the house went into committee, Mr. Bradette in the chair.

Mr. KNOWLES: Will the minister explain, if he can, why Manitoba did not use its portion of this money; and while he is answering that will he say whether he has any assurance that Manitoba will now take this money and make good use of it?

Mr. MITCHELL: I am sorry I cannot speak for the province. I think my hon. friend had better ask Manitoba that question.

Mr. STIRLING: Can the minister place on record the division of the $10,000,000 as between the provinces, and can he give the committee an idea of the rapidity with which the provinces claimed their portion of it, so that we may have an idea as to how popular this training was province by province?

Mr. MITCHELL: I have it all before me; it covers a period of twenty-five years, and probably it would take ten minutes to read, but I think it would be all to the good to have it on record, and with the permission of the committee I should be glad to do so.

Mr. STIRLING: That would be satisfactory.

Mr. DOUGLAS (Weyburn): I think the hon. member for Winnipeg North Centre asked the minister a perfectly civil question.

Mr. MITCHELL: I thought I gave a civil answer.

Mr. DOUGLAS (Weyburn): The answer was civil, but no one expected the minister to speak for the province of Manitoba. I think the committee has a perfect right to know that the province of Manitoba asked that this unexpended portion be revoted, and surely they must have given the minister some asssurance that they intend to make good and proper use of it.

Mr. MITCHELL: The only request we received was that they anticipated they might spend it. That is the usual request one gets under such circumstances.

Mr. JOHNSTON (Bow River): Is there not some way in which the federal government can check up on the provinces, to see whether this money is being properly spent? After all, when the federal government grants money it should have some means of checking up to see whether or not it is being properly spent. In respect of Manitoba, has any check been made to see whether they have made a proper expenditure?

Mr. MITCHELL: I can assure my hon. friend that the federal government spends no money without a proper check. The legislation provides for the manner in which the money shall be spent, and I touched upon that point this evening. If my hon. friend would read the act I think he would find that every precaution is taken that the money shall be spent properly in the various provinces.

Resolution reported, read the second time and concurred in. Mr. Mitchell thereupon moved for leave to introduce bill No. 41, to amend the Technical Education Act.

Motion agreed to, bill read the first and second times, and the house went into committee thereon, Mr. Bradette in the chair.

Section 1 agreed to.

On section 2—disposition of unexpended balances.

Mr. GRAYDON: I have not had an opportunity to check the phraseology of the bill with previous bills passed with respect to this subject. Can the minister assure the committee that this bill is in exactly the same form as previous bills, with the exception of the years involved?

Mr. MITCHELL: I cannot answer that: I assume it is the same. The same principle is involved.

Mr. MACKENZIE (Vancouver Centre): The explanatory note indicates that.

Mr. MITCHELL: There is no explanation on the other page.

Mr. POULIOT: I wonder how this section could apply only to Manitoba, because Manitoba is not mentioned in the bill?

Mr. MITCHELL: I do not think it need be mentioned. The only unexpended balance in the $10,000,000 affects Manitoba, and it does not affect any other province. The amendment stipulates that power shall be given to spend that money.

Mr. JOHNSTON (Bow River): I think we should know how much of this $10,000,000 was spent, and how much we are still to appropriate.

Mr. STIRLING: The minister has told us.

Mr. MITCHELL: When we were in the resolution stage the hon. member for Yale asked the same question.

Mr. STIRLING: No, not the same.

Mr. MITCHELL: He asked a somewhat similar question, and at that time I volunteered to put the complete data on record. I could read it, but it would take fifteen minutes to do so. However, if the hon. member just wishes to know the unexpended balance for Manitoba, I can say to him that it is $147,430.42.

Mr. GILLIS: I think even if it takes ten minutes for the minister to read it, it should be read.

Some hon. MEMBERS: Oh, oh.

Mr. GILLIS: Some of those smart fellows who know all about it—and who perhaps do not actually know any more about it than we do—laugh at that suggestion. Personally, I should like to know if my figuring of the problem is correct. Twenty-five years ago the federal government passed an act in which it made $10,000,000 available. That was for the development of technical education in this country. Most of my hon. friends must accept their share of responsibility for the administration of that act. Well, there is no wonder technical education has been neglected, because we find that Manitoba did not use even the small portion made available to her. I say that before this amendment is accepted, and we give effect to the same old act—one which certainly did not serve a very useful purpose in the past—the committee should take at least ten minutes, and listen to the Minister of Labour tell most members something they know very little about—although they are not big enough to admit it. I should like to hear the minister put the whole thing on record.

Mr. MITCHELL: If the house wishes, I am prepared to put it on the record. It is as follows:

TECHNICAL EDUCATION ACT

Statement showing disposition of funds under the Technical Education Act as at the end of November, 1943

	Amount available during period of act	Amounts paid by federal government as at Nov. 30, 1943	Balance
Prince Edward Island	$ 198,187 86	$ 198,187 86	.....
Nova Scotia	662,113 94	662,113 94	.....

Totals	$10,000,000 00	$7,964,600 48	$186,500 49	$580,675 43	$720,336 07	$648,227 03	$888,391 62

Province	1924-25	1925-26	1926-27	1927-28	1928-29
P. E. Island	$ 1,950 76	$ 7,254 66	$ 7,757 33	$ 11,981 85	$ 20,369 79
Nova Scotia	34,623 67	30,999 96	31,494 87	29,224 77	47,083 50
New Brunswick	43,040 51	93,874 50	76,208 59	70,107 03	48,637 81
Quebec	263,399 70	299,143 78	403,944 35	329,072 14	372,890 80
Ontario	347,636 30	347,636 30	347,636 30	347,636 30	347,636 30
Manitoba	19,500 37	19,488 77	20,056 34	27,529 51	28,527 44
Saskatchewan	17,249 37	20,083 89	18,021 83	17,048 13	25,159 90
Alberta	62,215 61	72,731 78	85,789 16	74,000 10	92,222 30
British Columbia	40,860 48	53,123 05	56,627 03	59,355 49	169,637 42
Totals	$ 830,476 77	$ 944,336 69	$1,047,535 80	$ 965,955 32	$1,152,165 26

As will be noted from the foregoing table, the total payments from the Technical Education fund to the provinces during the ten-year period amounted to $7,964,600.48, leaving a balance of $2,035,399.00 remaining unexpended, which amount was carried forward by the extension act of 1929 and made available for a period of five years among the provinces which had not received their entire allotment.

During this five-year extension period the following provinces exhausted their respective allotments: Prince Edward Island, New Brunswick, Quebec, Alberta and British Columbia, leaving still three provinces with balances to their credit, namely, Nova Scotia, Manitoba and Saskatchewan. The following statement sets out a summary of the amounts available at the 1st April, 1929, by provinces, and the grants to the eight provinces during the five-year period by fiscal years.

Summary of Amounts Available and Amounts Paid to Provinces under 1929 Extension to Technical Education Act of 1919 (to March 31, 1934)

Province	Amounts available to provinces 1929-34	Grants paid to provinces to Mar. 31, 1934, under extension	Paid in 1929-30	Paid in 1930-31	Paid in 1931-32	Paid in 1932-33	Paid in 1933-34
P.E.I. ...	$ 126,522 07	$ 126,522 07	$ 22,117 30	$ 30,790 34	$ 31,898 89	$ 29,370 71	$ 12,344 83
N.S.	363,067 89	242,214 89	21,525 08	73,669 61	48,699 87	50,628 81	47,691 52
N.B.	106,768 60	106,768 60	51,951 21	50,025 71	4,791 68	.....	.....
Que.	125,302 35	125,302 35	125,302 35	.....	.....	.....	.....
Man.	528,340 07	176,884 81	41,541 51	38,621 44	27,488 24	46,169 12	23,064 50
Sask.	695,054 99	550,428 89	60,505 89	198,289 95	170,094 89	75,567 61	45,970 55
Alta.	21,779 82	21,779 82	21,779 82	.....	.....	.....	.....
B.C.	68,563 73	68,563 73	68,563 73	.....	.....	.....	.....
Totals..	$ 2,035,399 52	$1,418,465 16	$413,286 89	$391,397 05	$282,973 57	$201,736 25	$129,071 40

The following recapitulation shows the disposition of funds during the fifteen-year period, ending March 31, 1934.

It will be noted from this statement that the total payments to the provinces during the fifteen-year period amounted to $9,383,065.64, leaving a balance of $616,934.36. As there still remained available to the provinces of Nova Scotia, Manitoba and Saskatchewan $616,934.36 and as these provinces were anxious to avail themselves of these benefits a bill to extend the life of the act for a further five years from April 1, 1934, was introduced and passed by parliament. (Chap. 9, 24-25 Geo. V).

	Amounts available during 15-year period ending March 31, 1934	Amounts paid during 15-year period to March 31, 1934	Balance
Prince Edward Island	$ 198,187 86	$ 198,187 86	.....
Nova Scotia	662,113 94	541,260 94	$120,853 00
New Brunswick	512,461 28	512,461 28	.....
Quebec	2,569,655 53	2,569,655 53	.....
Ontario	3,178,608 97	3,178,608 97	.....
Manitoba	719,746 56	368,291 30	351,455 26
Saskatchewan	847,620 91	702,994 81	144,626 10
Alberta	678,524 40	678,524 40	.....
British Columbia	633,080 55	633,080 55	.....
	$10,000,000 00	$9,383,065 64	$616,934 36

The next statement shows by provinces the amounts available on the 1st April, 1934, and the amounts paid up to March 31, 1939.

Summary of Amounts Available and Amounts Paid to Provinces Under 1934 Extension to Technical Education Act of 1919

Province	Amounts available to provinces 1934-39	Grants paid to provinces to March 31, 1939, under extension	Paid in 1934-35	Paid in 1935-36	Paid in 1936-37	Paid in 1937-38	Paid in 1938-39
Nova Scotia	$120,853 00	$120,853 00	$39,615 64	$48,765 99	$32,471 37	—	—
Manitoba ..	351,455 26	76,232 13	9,430 97	2,654 96	22,216 54	$14,813 56	$27,116 10
Saskatchewan	144,626 10	144,626 10	41,673 38	47,363 09	21,533 73	34,055 90	—
	$616,934 36	$341,711 23	$90,719 99	$98,784 04	$76,221 64	$48,869 46	$27,116 10

The followng statement shows amount available to Province of Manitoba on 1st April, 1939, and the amounts paid up to November 30, 1943.

Summary of Amounts Available and Amounts Paid to Provinces Under 1939 Extension to Technical Education Act of 1919. (To Nov. 30, 1943)

Province	Amounts available to provinces 1939-44	Grants paid to provinces to Nov. 30, 1943, under extension	Paid in 1939-40	Paid in 1940-41	Paid in 1941-42	Paid in 1942-43	Paid in 1943-44 to Nov. 30, 1943
Manitoba ..	$275,223 13	$127,792 71	$30,732 70	$18,340 82	$40,727 15	$18,703 59	$19,288 45

Mr. CASTLEDEN: In what year did Saskatchewan receive its $800,000?

Mr. MITCHELL: In 1934 Saskatchewan had a balance of $134,000. That has been used up since then.

Mr. POULIOT: Mr. Chairman, I bring to the attention of the committee the fact that there is something wrong with the printing of the bill. When a section is substituted for another section, and only a few words are changed, those words should be in italics in the bill, so that the members may see the change made. Section 8 of the act states:

Any portion of the ten million dollars appropriated under the act which may remain unexpended at the expiration of the fiscal year one thousand nine hundred and thirty-nine, whether previously carried forward or not, shall be carried forward and remain available according to its apportionments for the purposes of this act during any one or more of the five succeeding fiscal years, and no portion of the said ten million dollars shall be paid to any province after the thirty-fist day of March, one thousand nine hundred and forty-four.

As I say, section 8 of the act at present reads:

Any portion of the ten million dollars appropriated under the act which may remain unexpended at the expiration of the fiscal year one thousand nine hundred and thirty-nine. . . .

That is five years ago. We are to revive an amount that was spent five years ago. Why not make a grant in the usual fashion or have a new bill? The present act has almost expired, and now on the 24th of March, just one week before the expiration of the last one of the five years after 1939, the minister brings in this legislation. The minister understands the situation very well, and he should give instructions to the legal officers of his department that labour legislation be drafted otherwise; it must be clear. In order to perpetuate the grant to one particular province, the minister tries to clean up the rusty wheels of past legislation to make it work in a fashion that is quite obsolete. I am not objecting because I complain of the principle of the legislation; what I complain about is bad legislation. It is enough to have rottenly drafted orders passed by dollar a year men. Let us not follow their example. The only thing I ask is that we shall have clear legislation, legislation that reaches its objective, legislation that can be understood by a man who is not a lawyer but who will have to deal with it.

Section agreed to.

Bill reported, read the third time and passed.

EXCHEQUER COURT ACT

AMENDMENT TO PROVIDE FOR APPOINTMENT OF THIRD JUDGE

Hon. L. S. ST. LAURENT (Minister of Justice) moved the second reading of bill No. 35, to amend the Exchequer Court Act.

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, before this bill is read a second time I have one or two observations to make.

First of all, I should like to bring to the minister's attention the situation in connection with the Exchequer Court of Canada. At the present time I think there will be few who will disagree with the proposal in this bill to increase the membership of the court. I am hopeful that the minister, when he closes the debate on the second reading or during the committee stage, will indicate to the house whether there is not more behind the passing of this legislation perhaps than appears on the surface. I wish to raise my voice to-night in protest against what I think is fairly close to what the public believe is almost a national disgrace. I refer to a certain type of legislation that sometimes finds its way into the Senate and House of Commons. I refer to the time-honoured subject of divorce. I am not going to deal with it in any detail to-night. Suggestions have been made from time to time seeking to rid the two chambers of parliament of the scourge of having to deal with this type of legislation from year to year. I think most hon. members are agreed that if there is some sensible, sane way of having divorce dealt

with other than by a private bill in parliament, it is our duty and bounden obligation to find that better means and method.

It seems to me that the best method would be to refer the question of divorce to the Exchequer Court of Canada. That has been suggested already by my colleague, the hon. member for York-Sunbury (Mr. Hanson), at a previous stage of this session. I repeat, with all the emphasis at my command, that I am hopeful that the government will delay no longer with respect to this matter, because not only is this house but, I suggest, the other place, too, sick and tired, if I may use an expression of the street, of dealing with divorce legislation in parliament. There is no justification, to my way of thinking, for continuing the present situation any longer. Perhaps this increase in the membership of the exchequer court is proposed for the reason that the court may deal with this very subject. I hope that the minister will give due consideration to that suggestion and that an end will speedily be put to parliament having to deal with this type of legislation. I think most decent people who are sent here by their constituents rebel against the hearing of evidence and all that is involved in this type of legislation. That is all I shall say at the moment, but there is so much to be said that perhaps on some other occasion, when the government sees fit, the matter may be further discussed.

There is a second point I wish to raise in the brief observations I have to make, namely, with reference to the way in which the exchequer court works. I can quite see that the minister may have been forced into the position of proposing an increase in the membership of the court largely because of the situation which has grown up in the court wherein there are delays with respect to legislation and the delivery of judgment. I do not want to make any criticism of those who are operating under the present system. I think that would be grossly unfair. I should not like any member of the house or any member of the public to think I was reflecting in any way upon any member of the exchequer court. What I have to say is with respect to the system, for which the government must, I think, take a heavy responsibility. I am told that there are many cases which have been argued and in which judgment has been outstanding for over a year. I do not know how many, but I am informed that they run into much larger numbers than is good for the general benefit and welfare of litigants before the court.

Further, for some reason which does not seem to me a very good one, the president of the exchequer court has been required to sit as an ad hoc judge in the supreme court, leaving only a puisne judge to do the work of the exchequer court. The whole matter is in a position which has become a sort of bedlam as far as litigants and the general set-up are concerned. It is so serious that I deem it my duty in the interests of justice to bring it before parliament. Responsibility does not rest upon the judiciary but upon the government which permitted this situation to arise and to continue.

I also draw to the minister's attention that, because of accidents in which are involved members of the armed forces and certain jurisdictional questions, the exchequer court not infrequently has to deal with automobile damage cases, and that in some actions witnesses are brought from the far ends of the country at heavy expense to the parties. In addition to these matters, the congestion of business has put the court in an obviously unsatisfactory position. I should like to know why it is necessary to attach the president of the exchequer court to the supreme court as an ad hoc judge.

Mr. ST. LAURENT: I think it has happened once.

Mr. GRAYDON: The minister says he thinks it has happened once. The information I have is that it has happened more than once, but if the minister is definite upon the point I should not like to challenge his statement.

Mr. ST. LAURENT: I do not think it has happened more than once in the last couple of years. I was informed by the president of the exchequer court that he had sat recently as ad hoc judge in the supreme court, but he mentioned it as being the first occasion on which it had happened since he became president of the exchequer court.

Mr. GRAYDON: I am glad that the minister has given that explanation, but may I point out that, in the face of so many undelivered judgments, this movement occurred at a time of exceptional congestion in the exchequer court, and I hope that it will not be repeated. The fact that the judge was called in on only one occasion does not dispose of the question of how long the particular sittings occupied in which he was concerned.

I do not wish to take up any more time on this matter, but I would stress the point of expense and inconvenience imposed on litigants who have to come from all parts of

Canada on cases connected with automobile damages. It has been drawn to my attention from time to time that the expenses involved in such proceedings may amount to more than the whole damage claim.

Mr. McILRAITH: Would the leader of the opposition permit a question?

Mr. GRAYDON: Yes.

Mr. McILRAITH: Do I understand him to say that the litigants have to come to Ottawa to these trials in the exchequer court?

Mr. GRAYDON: I am told that in some cases they have had to come long distances to the exchequer court. For that reason I made the statement I did and I stand by the statement I made. May I add that if the facts are as stated, the situation amounts to a denial of justice to litigants.

In conclusion, I hope that the appointment of the puisne judge envisaged by this legislation will not be used as a reward to someone who has been active in the political field. I believe that we in this country have been fairly fortunate in this regard. I am not going to raise the question at this moment, but I warn the minister that if there ever was a time when it was important to maintain and preserve the high prestige of the judiciary, and, indeed, to enhance it, it is in the perilous times through which we are passing. I plead with the minister to keep this high judicial appointment above any influences which might reflect upon the importance of the position. I like to see the Canadian judiciary preserved upon a plane in keeping with the kind of democracy for which so many of our men and women to-day are fighting.

Mr. FREDERIC DORION (Charlevoix-Saguenay): I should like to make a few remarks on this bill, not to oppose it, because I believe it is an opportune measure, and I cannot refrain from congratulating the Minister of Justice (Mr. St. Laurent) upon having presented it, because it will help the administration of justice.

The other day, when this bill was read for the first time, a suggestion was made by the hon. member for York-Sunbury (Mr. Hanson), which, I think, deserves special attention, and this suggestion has been repeated to-night by the leader of the opposition (Mr. Graydon).

Since 1930, divorce cases in all provinces except Quebec and Prince Edward Island have been decided by the local courts. I must state right away that, whatever one might think or say about the province of Quebec, we will never consent to have divorce cases decided by our provincial courts. But, instead of having cases come before parliament, I wonder whether, with the nomination of one more judge to the exchequer court, this is not the proper time to study the question of extending the jurisdiction of this court to divorce cases.

It would be necessary to make special provisions regarding this kind of cases, and I think we Catholics would be ready to accept such a suggestion, provided—and I must insist on this point—a case could not be heard when the petitioner is a Catholic unless he can produce leave to proceed which has been granted him by the bishop of the diocese in which he has his domicile.

This suggestion would not interfere in any way with the rights of those who are not of the Catholic faith, and it could not then be opposed by anyone, because the only effect would be to restrain divorces of Catholics and help them to respect their faith, their religion.

I believe, Mr. Speaker, that if the Minister of Justice, who is a fervent Catholic, would discuss this matter with the religious and civil authorities of our province, something along that line might be done to enable the House of Commons to get rid of these bills which constitute a shameful burden in our statutes.

(Translation): Mr. Speaker, I wish to add a few words on this bill, and the appointment of an additional judge of the exchequer court. My remarks will, in a certain measure, support those made by the leader of the opposition (Mr. Graydon). As this hon. gentleman has stated a few moments ago, we have been fortunate so far in avoiding most of the dangers with which our method of appointing judges is fraught. The few mistakes we have made, in spite of all the precautions inherent with these nominations, are working to the prejudice of those who avail themselves of our courts of justice. Consequently, I believe we should attempt to prevent the appointment of judges who would not prove equal to the task. In my opinion we can never be too careful in this connection. One method would offer some guarantee in this matter. The government could ask the bar associations of the various provinces to supply, at the beginning of each judicial year, a list of lawyers whom they consider as competent to sit on the bench of the superior court or any other provincial or federal courts including the exchequer court. I feel this is about the only way to prevent unqualified persons from being appointed and I claim that this would help, as nothing else could, to restore the coat of arms of our courts of justice to its former lustre and give our citizens the guarantee to which they are entitled in connection with the dispensation of justice.

Mr. T. C. DOUGLAS (Weyburn): Like most laymen, I hesitate to say anything about this because it is the special preserve of members of the legal profession, but I support the view taken by previous speakers with reference to the matter of divorce. Every year I have heard members on all sides of the house protesting against the fact that we were still cumbered with the business of passing divorce legislation. I do not think any of us like it. We are all conscious of the fact that we are called upon to discharge a responsibility for which we are not fitted and to decide on matters to which we have not been able to give thorough and searching investigation.

Whether or not the exchequer court would be the proper judicial body to have the matter referred to, I am not in a position to say; but I say to the Minister of Justice (Mr. St. Laurent) that if he could persuade the government to set up some judicial machinery to take care of divorce cases instead of having them come to this parliament, I believe he would be doing a great service to the country as well as to the members of the house.

The second point I should like to make is this. From my limited knowledge of the function of the exchequer court, I think this bill is essential. During the war, and in the immediate years following the war, there will be a great many things for the exchequer court to do, such as the valuating of property, in some cases the restoration of property to people from whom it was taken over for war purposes, the disposal of war plants, which will mean reference to this judicial body of matters for adjudication as to the value of property and the amount that ought to be paid for it. I can well understand, therefore, that there ought to be an extra judge on the court.

I would point out to the Minister of Justice, however, that a few years after the war, when we return to normal peace time tempo, there may not be the need for this judge, and one of the things I have always noticed is that, in government and judicial appointments, while you may add to, you seldom subtract from the machinery of government, with the result that often appointments are made and positions kept open for years, long after the need for them has entirely disappeared. Consequently, I should like to have seen in this legislation provision for a return to the old number, a president and a puisne judge, at some distant date. I should like to see some provision whereby the appointment would be temporary, five or three years after the cessation of hostilities, or some fixed period; otherwise I feel that when we return to the peacetime tempo it may be that these judges will not have sufficient to keep them employed and will be building up a judicial machinery out of all proportion to the needs.

Mr. JEAN-FRANCOIS POULIOT (Temiscouata): Taking into consideration what has been said by my esteemed colleagues who have spoken on the matter, I must say that the hon. member for Charlevoix-Saguenay (Mr. Dorion) has made a suggestion that well deserves consideration. It is one which it would be worth while for the government to discuss with the proper authorities so as to come to some understanding. It is to my knowledge the first constructive suggestion that has been made to relieve us of the plague of divorce legislation in this house, and for that reason it is most valuable and deserves special consideration.

I am sure the Minister of Justice (Mr. St. Laurent) will make a good selection of judges, and there the hon. member for Charlevoix-Saguenay has made another practical suggestion which it is superfluous to repeat. A man of the calibre of the Minister of Justice needs no warning about the qualification of men whom he will recommend to the bench. But the suggestion made by the hon. member for Charlevoix-Saguenay would make his task easier and would save him a lot of useless correspondence answering those who are unfit for the bench but who think they would be great legal minds on high courts.

Here comes a practical question. Is there enough space in the present quarters of the supreme court and the exchequer court for another judge? I do not think so. You know, sir, these buildings are quite immemorial, built years ago when the old parliament was constructed. They served as a workshop and the sanitary conditions were very bad. I do not want to see judges as badly located as they are now in that building. I understand that the building which is to serve now for the supreme court and the exchequer court, the finest building in Canada, is used for recuperation and salvage, while the judges of the supreme court and the exchequer court are in that old shop. There is no sense in that. Why not move the recuperation and salvage into the old building and transfer the judges to the building that belongs to them, a building that is worthy of the administration of justice in Canada?

There is another practical reason. In years gone by I fought to have fireproof libraries. A library is indispensable to the judges of the exchequer court as well as to the judges of the supreme court. The new building has that. I know there are treasures in the

present library. That library is not fireproof. I fought to have a fireproof library. It exists in the sumptuous new building. The old one is just a place where rats eat books. They are not bookworms; they are book rats. There are judges who have died on account of the unhealthy and unsanitary conditions of that building. They complained to me. I fought their case with success and the new building was built. It was so much my case that I was given a copy of the inspection report which was made by an official from the Department of Pensions and National Health. I fought their case under the old regime and under this government.

There is no other country in the world where a beautiful and sumptuous building built for the Supreme and Exchequer Courts of Canada is serving as offices for recuperation and salvage bodies, while the old building that would be fit for the recuperation and salvage body is serving as the location of the highest court in this country and the exchequer court. It is only in Canada that things like that happen. It is only in Canada that things like that are looked upon as a natural matter of course. Nobody will complain about it. It is supposed to be the right thing. Judge, you go to the kitchen. Well, sir, it does not make sense. Everybody laughs. It is ridiculous. I again bring it to the attention of my good friend, the Minister of Public Works (Mr. Fournier), who is in charge of all the buildings of this country. I ask him if he will not give the order to tell recuperation and salvage bodies to go from there and to tell the judges that they should go to the quarters that are fit for them, that are worthy of their dignity and where they will have room enough to breathe. Apart from that, there are treasures there in the form of books that cannot be replaced with any amount of money. They are most valuable; yet they are exposed to fire, rats and vermin. They will be protected against loss if they are moved to the already fireproof library of the new supreme court building. I do not want the justices to die. I do not want the gentlemen who will be appointed by the Minister of Justice to these high functions in virtue of this bill to be exposed to the contracting of deadly illnesses in the present premises where the court sits. They should move somewhere else. Give the order which should be given, and which I hope will be given.

Mr. J. G. DIEFENBAKER (Lake Centre): I listened to what my leader said with regard to the delays in the handing down of judgments by the exchequer court, as it is now constituted. I had not heard that feature raised before. I think it is a matter upon which the minister should give information to the house and to the country. I think he should tell us whether or not judgments are outstanding and whether or not that is one of the reasons why this court is to be increased in number. I can very well understand that by reason of the exigencies of war there is a necessity to-day to increase the number of judges of the exchequer court. I favour an increase in that court, for the reason that if there is delay in the handing down of judgments it is a matter which more than anything else has been responsible for the very great increase in recent years in the trend to the establishment of administrative bodies which not only create the law, interpret the law, but enforce the law as well.

I believe that is one of the matters which should receive the attention of the minister, a most distinguished member of the bar, a man whose services to the legal profession of Canada may be measured by the fact that he has been president of the Canadian Bar Association. I look to him to make certain changes in the general set-up of the judiciary in Canada to ensure that not only will justice be assured by the quality of men appointed to the bench, but the independence of the judiciary shall be maintained.

If there is one thing that is necessary it is the maintenance of the public esteem of the judiciary. That esteem is not as high to-day as it was some years ago. I think the reason for that can be found in the fact that too often the members of the judiciary have been utilized and their services secured in connection with royal commissions set up for the investigation of various matters. If there is one matter more than any other that would improve the judiciary of this country it would be a declaration by the Minister of Justice that from now on no judge in this country would be appointed as a member of a royal commission investigating any matter that savours in any way of a political nature.

I have every regard for the judiciary of this country and for the high standards that they have maintained, but all too frequently the idea is held throughout the country that a predominant prerequisite to an appointment is not always eminence at the bar or judicial merit but political considerations. I am not arguing that political considerations do not enter into the matter, but I suggest that in appointing judges the minister should first and foremost take into consideration the leadership at the bar of the gentlemen who are candidates for the position. Good men can be found in his own party, and I do not believe in placing specious arguments before the house and say that he must necessarily go outside of it. The

aim should be to place in positions of judicial responsibility the best men that can be secured. I heard the minister enunciate that principle more than once while he occupied the highest position in the bar association of this dominion.

In making that statement I am not suggesting that any appointments have been made recently or since he occupied his present position that savour of political considerations having been paramount. But I do think, at this time when democracy is being challenged, that above all we must maintain the independence, integrity and security of the bench.

Most of the legislation affecting the people of this country at this time has never seen parliament. Most of it is a product of administrative boards, controllers and other persons holding similar positions. I realize that in time of war there must be a tendency in that direction to a certain extent. I consider that it is unfair to the individual that in almost all, if not all, of the legislation passed by administrative bodies to-day there is a denial of the right of the individual to seek recourse to the courts. Equality before the law and equal access to the courts are denied individuals to-day under some of the legislation that has been passed by administrative bodies, and I suggest to the minister that the exchequer court, which is national in character, might be one court to which powers should be given to enable individuals affected by orders in council or administrative orders, not as members of a class but as individuals, to have the right of appeal to that court. As far as orders in council and administrative orders are concerned which affect all the individuals within a class, I do not ask for the right of appeal; but when boards or administrators single out one individual and direct him to do that which other individuals within his own class are not required to do, then I submit that in the interests of justice and fairness, there should be a right of appeal, to the end that the private rights of the individual should not be made subject to the dictation or the caprice of an administrative body.

Therefore I ask the minister to take into consideration at a later date extending the powers of the exchequer court in order to protect the rights of individuals subject to individual orders made by administrative bodies, to the end that the first right of a British seaman, equality of access to the courts and the right of appeal, shall be assured to all who are so affected. Personally I can understand why there has been delay in the handing down of judgments on the part of the exchequer court during the last two years. I might say that hon. members were pleased with the appointment of a former member of this house, a distinguished member of the bar, as a judge of this court two years ago. It is impossible for two judges, however eminent and diligent they may be, to hand down judgments in the order in which they should be handed down, having regard to the increasing numbers of cases that have been heard since the beginning of the war. I support the principle of the bill, increasing the number of judges of the exchequer court, and I submit for the consideration of the minister the suggestions I have made.

Mr. A. H. BENCE (Saskatoon City): Mr. Speaker, I should like to take this opportunity of suggesting to the minister and to the administration the advisability of revising the Judges' Act in at least one particular, namely, in connection with a matter which has been a subject of discussion in this country lately, particularly in the press. I refer to the anomalous situation that exists as far as the compulsory retirement of members of the judiciary is concerned. In 1913 a provision was placed in the Judges' Act under which county and district court judges were retired compulsorily upon attaining the age of seventy-five. Then in 1935 the Judges' Act was amended to provide that judges of the supreme court—

Mr. ST. LAURENT: Mr. Speaker, I regret to have to raise a point of order, because this is a very interesting subject and one which I think will require at the proper time to be considered and discussed in the house, but it does not seem to me that it arises under this bill. This is merely a bill to amend the Exchequer Court Act to provide for an additional puisne judge. The Judges' Act does contain a section with respect to the retirement of judges of the Supreme Court of Canada and of the exchequer court, so that the matter is not germane to this subject at all.

Mr. BENCE: If I may speak to the point of order, it is true that this bill has to do with the amendment of the Exchequer Court Act, but it also contains this provision:

> Whenever in any act of the parliament of Canada reference is made to the judge or a judge of the Exchequer Court of Canada for the purpose of conferring any power, authority or jurisdiction upon such judge, the same shall be taken to confer the said power, authority or jurisdiction severally and respectively upon the president and the puisne judges of the court.

That directly refers to the Judges' Act, and I would point out also that the minister is providing for the appointment of another

puisne judge to the exchequer court, but as far as I can see he does not provide for the payment of that judge. The only authority for the payment of the puisne judge is under the Judges' Act, and certainly if a discussion of the Judges' Act with respect to the payment of that salary and with respect to retirement is not germane, then I do not know what is.

Mr. ST. LAURENT: There is on the order paper a resolution providing for the introduction of a bill to amend the Judges' Act precisely for the purpose of providing a salary for this additional puisne judge; but the bill now before the house merely amends the Exchequer Court Act to provide that there shall be two puisne judges instead of one. It is not that I do not find the subject interesting, or that I shall not be glad to have the views of hon. members upon it to assist me in the administration of my office, but I suggest that this is not the time when such a discussion is in order.

Mr. SPEAKER: The hon. member refers to section 1 of the bill, which contains these words:

. . . the same shall be taken to confer the said power, authority, or jurisdiction severally and respectively upon the president and the puisne judges of the court.

On the strength of that he suggests that he is entitled to discuss the Judges' Act. While on second reading a good deal of latitude is allowed as to the subjects that may be introduced, I must say I hardly think it would be relevant to discuss the Judges' Act under a bill such as this, which simply provides for the appointment of another puisne judge of the exchequer court. I do not think the hon. gentleman would be entitled to proceed. It has been pointed out that a discussion of the Judges' Act might be more relevant on the resolution on the order paper standing in the name of the Minister of Justice, to amend the Judges' Act.

Mr. BENCE: I must bow to your ruling, of course, Mr. Speaker. If I may, I would point out that the puisne judge appointed under this legislation will be subject to the Judges' Act, but if as a result I may not discuss the Judges' Act I shall not do so. The minister suggests that I shall have an opportunity to discuss the matter when the amendment to the Judges' Act is under consideration, so that I shall wait until that occasion.

The other point I wished to raise was the point so ably dealt with by the hon. member for Lake Centre (Mr. Diefenbaker), namely, the policy of this administration, and of some prior administrations, of using the judiciary for purposes other than those for which they were appointed. At the present time we know of at least three cases where judges of superior courts have been appointed to boards in this country. We also know that one hon. justice from the province from which I come is, and for some years has been, high commissioner to Australia. It does seem to me that when it comes to a question of appointing judges, if the act provides for the setting up of a court, and for the appointing to that court of a certain number of judges, they must be appointed for the purpose of considering judicial matters, and that the administration should avoid the appointment of them for any other purpose. If they are to be judges, then let them be judges. If they are to be chairmen of boards or high commissioners to other countries, then let them be chairmen of boards and high commissioners to other countries. But so far as their position in the judiciary is concerned, I suggest that as long as they are judges they should confine themselves to their judicial duties.

I think it is extremely unfair that the administration has seen fit to appoint a number of these judges—and I do not for one moment criticize the judges; I am criticizing the administration for appointing them—to posts where they remain for months or years, and at the same time hold their appointments in what I would call cold storage.

I should like to make a suggestion to the administration in connection with the matter of vacancies. It seems to me that vacancies in judicial bodies in Canada should not be allowed to remain for any length of time. I suggest that in proper time an amendment should be brought in to the Exchequer Court Act, and the other acts which would be applicable, providing that no vacancy in connection with the Exchequer Court Act or the Judges' Act shall remain for longer than three months.

At present in Saskatchewan we have a situation where there is a vacancy on the court of king's bench. That vacancy has existed for some months, and I suggest that to meet the ends of justice it should be filled as quickly as possible. I am sure that many eminent men are available for the position and would be quite willing to accept it. The feeling is that too much point is made of the holding up of these vacancies for political considerations. The feeling in the part of the country from which I come is that the vacancies are allowed to continue, and that the judgeships are dangled in front of the noses of prospective appointees until the eve of an election, on the basis or presumption that possibly they will be able to render a

greater and more effective service to their particular political party, and their adherents in the interim. It seems to me that this is a very bad practice, and that when these vacancies occur, in the interests of justice, in the interest of the bar and particularly in the interests of prospective litigants, such vacancies should not be allowed to continue in that fashion.

So far as the addition of a puisne judge in this instance is concerned, I presume, from the information which has been given rather briefly by the minister, that undoubtedly one is required. I believe it would be interesting if the house were given more information on the matter. It may have been asked for earlier, because I was not in the house during the whole of the discussion. Perhaps the minister might advise us as to the increase in litigation, and the number of judgments which have not yet been handed down. He might tell us how the situation compares with that of two or three, or perhaps five years ago. So far as I am concerned, as a lawyer I welcome the opening up of any additional positions like this. But as a representative of the people I wish to make certain that such additional judgeship is absolutely required in the interests of the people, and that it is the economically sound thing to do in the long run.

The minister mentioned that the salary of the judge would be discussed under the amendment to the Judges' Act. I have some observations to make in that connection, but I shall defer them until that time.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. Bradette in the chair.

On section 1—Constitution of court.

Mr. GRAYDON: I believe the minister is going to make a statement.

Mr. ST. LAURENT: Mr. Chairman, I just wish to state most emphatically, in answer to the remarks of the leader of the opposition, that there is nothing behind this bill which would be in line with his suggestion that the government might be contemplating the creation of a court to administer the law of divorce for those provinces which at the present time do not have such a court.

I do not wish to discuss the matter of divorce. The only two provinces which have no divorce courts at the present time are those of Quebec and Prince Edward Island. In Prince Edward Island I do not know whether divorce jurisdiction is exercised by the governor in council. But I see from a very interesting book on parliamentary divorce by Gemmill that there was jurisdiction in the governor in council to deal with divorce cases.

In Quebec not only is there no jurisdiction to deal with divorce, but there is a pre-confederation law, which was continued in force by the British North America Act, and which will remain in force until this parliament chooses to deal with it, as it has jurisdiction to do under section 91 of the British North America Act. This pre-confederation law declares that marriage is dissolved only by the natural death of one of the spouses. No matter what jurisdiction you set up, so long as that is the law of the province, no divorce could be granted by any court.

There are applications for legislation which come before this parliament, and where divorces are enacted. This is not as a matter of right; no one has any right to a parliamentary divorce. That is a special legislative grant that is made under special circumstances revealed by the investigation carried on before a committee. I do not wish to enter into any controversial discussion of the matter, but for those who admit the supreme authority of the Scriptures, the natural inquiry is, as stated in Gemmill: what law has the Saviour propounded on the subject?

Many Christian people believe that the law He has propounded on the subject was that divorce could be granted for adultery. Many other Christians believe that that exception in the Scriptures about adultery does not authorize the granting of a divorce, even for that cause. The latter view is that held by the Roman Catholics; the former is the view held by the other Christians who also take their law from the Scriptures, because of their reading of the Scriptures.

But for a great many years there has been the tendency in many countries to disregard that as the fundamental law, and to provide for divorces for causes other than adultery. I do not wish to discuss the merits or demerits of the case; but there is one province in which there is no right to a divorce under any condition—because of a positive statutory enactment existing prior to confederation, and confirmed by the British North America Act, which constitutes the law of that province until it is otherwise dealt with by the proper authority, which, in this instance, would be this parliament, and which denies absolutely that there can be any divorce or any dissolution of marriage otherwise than by the natural death of one of the parties. This bill has nothing to do with what some might consider advisable and others consider inadvisable, namely, to establish divorce as an institution where under certain conditions parties in the

province of Quebec would be entitled as of right to obtain a judgment of divorce. That matter is not intended to be dealt with at all by this bill.

The only other point with which I wish to deal is the suggestion that there have been serious delays in the handing down of judgments in the exchequer court. Only one case has been brought to my attention. That was some time in January. I inquired about it and found that the hon. justice required, for the purpose of his judgment, a transcription of the evidence which had been taken; the stenographer had been prevented from transcribing his notes, and the judge was waiting for them. This information was transmitted to the litigant who had complained of the delay. He wrote again about a fortnight ago, and I made a further inquiry and found that just a week before I made the further inquiry the transcription of the evidence had been filed and that the judge hoped to be able to dispose of the case within a very short time afterwards. I have no doubt that there are cases in that court, as there are cases in all courts, where judgments are reserved for a period which seems unduly long not only to the litigants but to the lawyers who represent the litigants. I practised at the bar too long not to have found that to arise all too frequently, I thought, but I have not heard any serious complaint of undue delay in the exchequer court.

Mr. GRAYDON: Have there been any complaints of delays by any representative of the Ontario bar to the minister?

Mr. ST. LAURENT: No, the only complaint I got was from a litigant who complained that his judgment had not been handed down. I have no recollection of receiving, over the last several months, any other complaint with respect to delay in any case in the exchequer court. The president of the exchequer court informed me when I inquired about the matter generally some weeks ago, that very satisfactory progress is being made in getting rid of the reserved cases both by himself and by his colleagues. But the number of cases has increased, and increased quite substantially. For instance, informations filed by the crown in 1935 amounted to twenty-five in number; in 1939 to sixteen; in 1943 to seventy-two. Petitions of right in 1935 were fifteen in number; in 1940, eleven; in 1943, fifty-three. Patent cases are not as numerous as they were before the war, because of the special situation arising out of the war, but it is anticipated that as soon as that special situation ceases to exist, the number of patent cases will very probably increase. There has been a substantial increase in the amount of work to be done, and I am glad to know that all those who have taken part in the debate consider that it will be proper to have another judge there to carry on the work of the court expeditiously, because I admit that good justice must be expeditious justice. Otherwise, it is not really sound justice.

Mr. GRAYDON: There is too much work for the court to do at the present moment.

Mr. ST. LAURENT: I think there is. I see my colleague the Minister of Public Works (Mr. Fournier) is not here at the moment. He was listening attentively to what one hon. member had to say about the place where that court and the supreme court are housed. I am afraid the hon. member exaggerated a bit, because I have visited from time to time the premises in Downing street where the judicial committee of the privy council sat, and though I am not as a lawyer satisfied with the premises now occupied by our supreme court or by our exchequer court, they do have something of an age-old respectability that also pervades the premises where the judicial committee of the privy council used to sit.

Mr. GRAYDON: They certainly have an age-old atmosphere.

Mr. ST. LAURENT: With respect to the appointment of judges I have tried to make satisfactory appointments, and quite frankly I have been rather proud of the comments I have received about most of the appointments to the high courts in the several provinces that it has been my privilege to recommend. I may say to the hon. member for Lake Centre (Mr. Diefenbaker) that a large number of the recommendations it has been my privilege to sign were in respect of gentlemen—but this did not have any effect upon it—who, I am told, were at one time or another connected with another party than that of the present administration.

Mr. GRAYDON: There are an awful lot of people who are not connected with that party any longer.

Mr. ST. LAURENT: A number of excellent judges have been appointed who, I am told, were not at any time members of the party of this administration.

Mr. BENCE: Was the minister referring to the elevation of judges already appointed or to brand-new members of the judiciary?

Mr. ST. LAURENT: To both, but I must say that there were more of the former category, the elevation to chief justiceships, or to another court of gentlemen already on the bench. I am sorry that any member of the

bar would suggest in this house that I would be dangling judgeships before anybody's eyes. I do not feel that that is quite fair.

Mr. BENCE: Will the minister expedite the appointment in the province of Saskatchewan?

Mr. ST. LAURENT: Does the hon. member suggest that there has been any undue delay in the administration of justice in Saskatchewan?

Mr. BENCE: If five judges are required on the bench as provided by the act, then five ought to be appointed.

Mr. ST. LAURENT: I have very much sympathy with the hon. member who, I understand, is a member of the bar of that province, but the information that I have is that the amount of litigation prosecuted in that province is not such that there has been any undue delay resulting from the fact that one of the judges of the court of appeal has been serving his country in another capacity since the beginning of the war, or because since December another vacancy has occurred in the high court of that province.

Mr. DOUGLAS (Weyburn): I would point out, Mr. Chairman, that it is eleven o'clock, if the minister wants to discuss the bill further. Is my voice getting so weak that I cannot be heard? I am suggesting that it is eleven o'clock, Mr. Chairman.

Mr. ST. LAURENT: I have no other observations to offer on this point, unless there are other questions it is felt I should answer.

Section agreed to.

On section 2—Power to appoint a deputy judge.

Mr. DOUGLAS (Weyburn): There are a number of questions we have to ask and it is now past eleven o'clock, Mr. Chairman.

Section stands.

Progress reported.

On motion of Mr. Mackenzie (Vancouver Centre) the house adjourned at 11:10 p.m.

Monday, March 27, 1944

The house met at three o'clock.

STANDING COMMITTEES

RAILWAYS AND SHIPPING—FIRST REPORT OF STANDING COMMITTEE—CHANGE OF PERSONNEL

Mr. J. P. HOWDEN (St. Boniface) presented the first report of the standing committee on railways and shipping owned, operated and controlled by the government, and moved that the report be concurred in.

Motion agreed to.

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That the name of Mr. Hanson (York-Sunbury) be substituted for that of Mr. Hazen on the standing committee on railways and shipping.

Motion agreed to.

COAL

REVISED SUBSIDY POLICY AFFECTING WESTERN DOMESTIC FIELD

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Speaker, I desire to make a statement on production subsidies on coal.

During the period of acute shortage of domestic coal in western Canada, subsidies were paid to certain high cost producers of coal, to stimulate production. The subsidies paid covered all losses, plus an item of profit, and were justified as a basis of assistance when coal had to be obtained at any reasonable cost, but left no incentive on the part of the operator to reduce his cost to a minimum.

The situation in western Canada has now completely changed. Domestic coal is in surplus supply and it has been necessary for the government to consider a more equitable method of assisting those mines that might collapse if all government assistance were withdrawn. On the recommendation of the emergency coal production board, the following revised subsidy policy affecting the western domestic field has been adopted:

Effective April 1, 1944, coal mine operators who have been operating at a loss will be paid a maximum subsidy as follows:

Sixty-five cents per net ton for mines operating in the Edmonton area.

Thirty cents per net ton for mines operating in the Drumheller area.

Thirty cents per net ton for mines operating in the Camrose area.

Thirty-five cents per net ton for mines operating in the Lethbridge area.

Thirty-five cents per net ton on shaft mines in the Coalspur area.

Thirty-five cents per net ton for mines operating in the Saunders area.

Fifteen cents per net ton on shaft mines operating in the Saskatchewan field.

The above subsidies represent the average increased cost incurred by operators in the various fields due to wage increases and the cost-of-living bonus.

In cases where the operator has been able to absorb part of the increase in cost, an alternative subsidy of a flat rate per ton equivalent

to the average subsidy approved during the months of October, November, and December, 1943, plus cost-of-living bonus, will be paid, provided such bonus is not greater than the maximum subsidy per ton named above for the various fields.

The revised subsidy will be paid for the government fiscal year 1944-45, but subject to review at the end of each three months.

Subsidy may be reduced if the review shows that a profit greater than the company's standard profits is earned.

The foregoing is an attempt to meet the present situation of coal production in western Canada. It is recognized that the war has had the effect of changing and disturbing pre-war arrangements for the production and marketing of coal in all parts of Canada. It seems probable that the dominion coal policy will require revision as it will apply to post-war years.

Therefore, the government will appoint a royal commission, charged with the duty of studying all aspects of the production and distribution of coal in Canada, to report to the government with recommendations for such alterations of the pre-war coal policy as its findings may indicate as necessary or desirable.

Mr. HANSON (York-Sunbury): Do I understand that this applies only to the western coal field, and that there is to be no change of policy with respect to the maritime field? I understood this change was coming, but that it was to apply also to, say, the Minto field. It should, because the present policy puts a premium on inefficiency and a penalty on the efficient operation of that mining area.

Mr. HOWE: I expect to be able to announce a policy for eastern Canada within a few days. The situation in the Minto field has been studied, but I was not ready to make an announcement to-day.

Mr. GRAYDON: Will the minister be in a position soon to announce the personnel of the inquiry board?

Mr. CRERAR: Give us a little time.

Mr. HOWE: I presume that will be announced shortly.

Mr. DOUGLAS (Weyburn): Will the minister explain the low subsidy in the Saskatchewan coal fields as compared with Alberta?

Mr. HOWE: I cannot say. It is the recommendation of the emergency coal production board.

BUSINESS OF THE HOUSE

SUSPENSION OF SPECIAL ORDER WITH RESPECT TO SITTING OF WEDNESDAY NEXT

Right Hon. W. L. MACKENZIE KING (Prime Minister): I should like to say a word to the house about the proceedings of the present week. As the house will be adjourning on Friday for the Easter vacation, I think it would probably suit the convenience of members generally if instead of sitting on Friday night we were to sit on Wednesday afternoon. If that is agreeable, I would move:

That the resolution passed by the house on February 21 last with respect to Wednesday sittings be suspended in relation to Wednesday next.

On Friday night it was announced that this afternoon we would continue with the munitions and supply items under the war appropriation resolution and this evening take up some minor bills. I feel, however, that we should, before adjourning for Easter, make as much headway as possible with the war appropriation measure. The government therefore would prefer to continue this evening with the discussion of the war appropriation estimates on munitions and supply, and if they are not concluded to-night continue with those estimates to-morrow; the only exception being that in the last part of the evening, between half past ten and eleven, we would seek again to get an item or two into supply.

Mr. GRAYDON: That is to-night.

Mr. MACKENZIE KING: That will be to-night, and if we do not succeed to-night we shall try again to-morrow night.

It might assist hon. members were I to indicate what perhaps could be taken up on Wednesday afternoon. The house has already considered one or two financial measures. Item 14 on the order paper is the second reading of bill No. 38, to authorize the raising by way of loan of certain sums of money for the public service. This might be the first item on Wednesday, and the second, the resolution that it is expedient to bring in a measure to provide for the refunding of certain obligations of the Canadian National Railways. There are two or three other measures that have been considered in part, one respecting the Exchequer Court Act, one with respect to an amendment to the Judge's Act to provide an additional judge, and a very small measure with respect to the Water Meters Inspection Act. These might also be taken up on Wednesday and, if an opportunity should be afforded, item 13 on the order paper which is the resolution respecting the city of Ottawa.

The Acting Minister of Finance (Mr. Ralston) has an announcement which he wishes to make. My reason for my preceding him was that I thought I should clear the way for a statement he intends to make regarding interim supply.

Mr. GORDON GRAYDON (Leader of the Opposition): I think it is wise to go as far as we can in expediting the war appropriation resolution debate, and I simply want to say this to the Prime Minister. I should like very much if the government, during the Easter recess, would consider the advisability of restoring Wednesday afternoon sittings.

I do not bring this up in any desire to quarrel with the government over this matter; I did so once before, and I think perhaps one quarrel is enough. In my opinion, however, members generally have found that the suspension of the Wednesday afternoon sittings has not worked out in the best interests of parliament, although I must confess that the argument which the Prime Minister put on record before, from the point of view of the work of the war committee of the cabinet, is one which of course should also have serious consideration. I am prepared to give that consideration to the right hon. gentleman and his cabinet.

The fact is, however, that from the point of view of committee work, I have checked the work that has been done by the committees, and I find that of the standing committees, up to date, only three out of fifteen have met at all and only one of these met for part of one Wednesday. The situation with regard to the other special committees is that the majority of them have met on Wednesdays, but very few of them have worked on either Monday or Friday and very few on Tuesdays. That means, as I think most members will agree, that we have not been utilizing Wednesday afternoons in the manner anticipated by the government.

I suggest to the Prime Minister that there must surely be some way by which the cabinet's work can be arranged to provide that neither the members of the war committee nor the Prime Minister need be in the house on Wednesday afternoon. We would be prepared to facilitate that arrangement as far as possible, and perhaps some of the cabinet ministers whose work is possibly not so important, or at any rate so heavy, could be utilized for that purpose, so that we might have Wednesday afternoon for ordinary house work.

We have felt that it retarded the work of the session to have Wednesday taken out of the week, and that has been borne out by the experience we have had in the last few weeks during which the new practice has prevailed. I would ask the Prime Minister to give serious consideration to the suggestion, because with the tremendously heavy agenda I think it would be of great help in getting the work under way and the business of the house coming up in proper sequence.

Hon. R. B. HANSON (York-Sunbury): I desire to take this opportunity of asking the Prime Minister whether consideration cannot be given to facilitating the second reading of some bills that are on the order paper. I am not referring to divorce bills, but to bill No. 39, and I assume bill No. 40, listed on page 21 of the order paper. These two bills are of some importance to the companies concerned, especially bill No. 39, with which I am very familiar. I would ask that the government give consideration to facilitating the calling of these two private bills. They are of some importance or they would not be here. Perhaps it could be done before the Easter recess.

Mr. MACKENZIE KING: Replying first to the hon. member for York-Sunbury, I would say at once that the government will be pleased to consider the request which he has just made. It may involve giving consideration to other bills as well as those he has mentioned. I can assure him the matter will be carefully considered, but I cannot promise more than that.

May I say to my hon. friend the leader of the opposition that we on this side are just as anxious as, if not more anxious than, he is to expedite the business of the session. I can assure him that if I did not believe that what has taken place thus far had had that effect, I would not press for a continuation of the practice. If one compares what has been accomplished on Friday evenings with what would have been accomplished by sitting on Wednesday afternoons, I believe one would come to the conclusion that thus far in the present session we have accomplished more work by substituting Friday night for Wednesday afternoon.

Mr. GRAYDON: Perhaps the Prime Minister misunderstood my point. We are anxious to work Friday nights as well.

Mr. MACKENZIE KING: That may be perfectly true, but my hon. friend has not the responsibility that those of us who are members of the government have. It is quite easy to say that the opposition can get along without the ministers of the crown, particularly those belonging to the war committee of the cabinet, but I would remind my hon. friend that there are very few questions that come up this session that do not in one way or another touch some aspect of the war, and I have grave doubts as to the wisdom of all members of the war committee of the cabinet being wholly absent from the house at any time. However, do not let my hon. friend imagine that Wednesdays are reserved simply for meetings of the war committee of the cabinet. There are meetings of the entire

cabinet as well that have to be held, and have been held on Wednesdays, as well as the meetings of the war committee of the cabinet. It is a little difficult to have hon. members realize that at a time of war, and particularly at this stage of the war, there is a tremendous amount of business which can be done only by the executive, and which has to be done only by the executive in comparison with what is the case at any other time.

I mention the present stage of the war. The cabinet to-day is giving almost as much consideration to matters that pertain to post-war affairs as it is giving to matters actually related to the war itself. In the very nature of things many of these matters cannot be disclosed because they involve a careful consideration of what is being proposed by other countries as well as by Canada. We receive from time to time, almost daily in fact, communications which set forth representations on different matters that come to us, some from the government of the United Kingdom, some from the United States, some from the other dominions, on such all-important questions as those related to what will come up immediately after the war is over, or when there is an armistice. These post-war problems have to be considered. They are very important. If a mistake is made in a matter of policy on something that affects the whole future of the relations between nations, it is a very serious mistake indeed. I am not assuming that we are going to make mistakes, but we certainly wish to avoid them and so far as Canada is concerned to give our mature judgment to these questions and to give as wise decisions as it is possible to give.

I do say that it is not humanly possible for members of the cabinet to deal, with a full sense of responsibility, with the class of questions we have now before us and also attend in this House of Commons on Monday, Tuesday, Thursday, Friday afternoon and night and Wednesday afternoon. That is just not possible, and I think it better to speak plainly in this way in order that the matter may be definitely understood. I am perfectly sure that in the United Kingdom, for example, they have much more business to transact than we have, and that parliament there is as anxious as we are to sit and get through its business as rapidly as possible, but they have found it necesary, notwithstanding that they do not sit in the evenings at all, to cut down the normal sittings of the House of Commons and reduce them very considerably. It is for the reason that the subjects that have to be considered are so involved, yet so important, and the implications arising out of them so vast, that they do require more than ordinary consideration.

[Mr. Mackenzie King.]

I need not say to my hon. friend that one cannot leave everything to Saturday and Sunday. Human endurance does reach its limits. I believe every minister is working most of seven days as it is, but the fact that he may not be obliged to work at high pressure every day of the week does make a little difference. Let me say to my hon. friend that the government will consider what he has suggested and do what we have done, for example, this afternoon—arrange for a Wednesday sitting where it seems desirable to have it. But I do not wish to make any promise as to any change in the procedure at as early a stage in the session as this.

Mr. GRAYDON: May I suggest that the Prime Minister also give consideration to using the services of the parliamentary assistants in a more comprehensive way in connection with the business of the house?

Mr. MACKENZIE KING: There again may I say to my hon. friend that I do not think it is realized what an amount of work is being done by the parliamentary assistants. Their work is not to be judged by the number of times they speak in this house, any more than any member's ability or his contribution to the well-being of Canada is to be judged by the frequency with which we hear his voice. The assistants to the ministers are assisting the ministers all the time. They are assisting them in connection with the work of their departments, not merely in connection with what is said on the floor of this house, but in connection with the many matters to which the ministers have to give consideration. Ministers are obliged because of different circumstances to leave matters to their parliamentary assistants instead of trying to attend to them themselves. The parliamenary assistants have been invaluable. I assure my hon. friend that they are being given just about as much work as can be expected of them.

Hon. J. L. RALSTON (Acting Minister of Finance): Mr. Speaker, following up what the Prime Minister has said, I propose that there be included in the rather long programme which he has indicated for Wednesday afternoon by asking for interim supply on the main estimates, one-sixth or two months' supply, and also for an interim war appropriation in the amount of $850,000,000. For that purpose I shall propose on Wednesday, with the consent of the house, that we give first, second and third readings to the appropriate bills.

Mr. GEORGE BLACK (Yukon): Pursuant to what has been said in regard to the desirability of considering certain private bills on

the order paper, surely the house and the government will agree that it is more important in the public interest that we should consider public bills. Private bills concern but very few people, whereas public bills are of interest to all the people of Canada. Most private bills deal with divorce, and they are merely a nuisance to parliament. If there is to be a change in the procedure we have followed since the beginning of the war I do ask that public bills be given the preference over private bills.

Motion agreed to.

FURTHER SUPPLEMENTARY ESTIMATES, 1943-44

A message from His Excellency the Governor General transmitting further supplementary estimates for the financial year ending March 31, 1944, was presented by Hon. J. L. Ralston (Acting Minister of Finance), read by Mr. Speaker to the house, and referred to the committee of supply.

INCOME TAX

POSTPONEMENT UNTIL AUGUST 31 OF FINAL PAYMENT ON 1943 INCOME

Hon. C. W. G. GIBSON (Minister of National Revenue): I desire to make a statement concerning the payment of 1943 income tax. Owing to an unusual combination of circumstances, which is not likely to occur again, the government has decided to postpone the payment of any balance of unpaid income tax falling due on the 30th of April, from that date to the 31st of August, without interest.

Taxpayers are advised that this announcement is in respect of the payment of the balance of taxes falling due on the 30th of April, and does not refer to the time of filing income tax returns. Income tax returns must still be filed on or before the 30th of April.

It will be observed that this announcement falls into two parts—one, postponing the time of payment to the 31st of August, and the other confirming that the filing of returns must be made by the 30th of April as required by law.

Perhaps a comment on the postponed payment should be made. It remains open for any individual to make payment of the unpaid balance of 1943 tax falling due on the 30th of April at any time between now and the 31st of August without any interest being added. After the 31st of August interest at five per cent, as provided by law, will become payable.

The income tax returns, as the law at present requires, must be filed on the 30th of April. The reason for requiring these returns to be filed on the present due date is to enable the income tax division to proceed with the assessing of returns, to avoid delay in making refunds and the issuing of compulsory saving certificates.

Mr. GORDON GRAYDON (Leader of the Opposition): I suggest that the minister might very properly amend his statement to read, not in view of the exceptional circumstances but in view of the pressure which came from many quarters, including this side of the house.

PRIVATE BILLS

FIRST READINGS—SENATE BILLS

Bill No. 42, for the relief of Charlotte Muriel Wright.—Mr. Stokes.

Bill No. 43, for the relief of Sarah Carmichael Hay Johnston.—Mr. Emmerson.

Bill No. 44, for the relief of Margaret Georgina Isabel Townsend Mansfield.—Mr. Emmerson.

Bill No. 45, for the relief of Pasquale Di Guglielmo.—Mr. Hazen.

Bill No. 46, for the relief of Theodora B. Ostlund Fruitier.—Mr. Fulford.

Bill No. 47, for the relief of Erna Warthold Langlois.—Mr. Hill.

Bill No. 48, for the relief of Ruth Steinwold Lauer.—Mr. MacInnis.

Bill No. 49, for the relief of George Hodgson Fisher.—Mr. McIlraith.

Bill No. 50, for the relief of Molly Gurevitch Gladman.—Mr. Factor.

Bill No. 51, for the relief of Goldie Anker Lazanik.—Mr. Boucher.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

*INCOME TAX—VARIOUS CATEGORIES

Mr. NICHOLSON:

1. How many individuals in Canada received incomes, as shown by the income tax returns for each of the last five years for which returns are available, in the following categories: (a) under $2,500; (b) $2,500 to $5,000; (c) $10,000 to $25,000; (d) $25,000 to $50,000; (e) and in excess of $50,000?

2. What were the total incomes received in each of the above groups?

Mr. GIBSON: The income tax division is not in a position to supply the information in the form in which it is requested by the hon. member. Such information as is available has been furnished to the hon. gentleman, and I understand that he is agreeable to having the question dropped.

Question dropped.

NATIONAL DEFENCE—RENTAL OF PROPERTY IN SYDNEY, CAPE BRETON

Mr. GILLIS:

1. Has the Department of National Defence any property in the city of Sydney, county of Cape Breton, rented from Lillian Elman or Gordon Elman or Elman Motors?

2. If so, what rental is paid for the said property?

3. What is the assessed value of the said property?

4. Was said property rented directly by the department or on the recommendation of some person or persons?

5. If the latter, what are the names of those making such recommendations?

Mr. MACDONALD (Halifax):

1. Yes. Garage located at 475-79 George St., Sydney, N.S., which is rented from Lillian B. Elman. (Approximately 16,500 sq. ft.)

2. $400 per month. This is approximately 30 cents per square foot.

3. Land $2,500, building $7,000. Total assessment for tax purposes $9,500. Building is insured by owner for $25,000.

4. Property was rented directly by the Department of National Defence.

5. See answer to question No. 4.

DUNDURN, SASK., MILITARY HOSPITAL

Mr. DIEFENBAKER:

1. How many, (a) doctors; (b) nursing sisters; (c) dental officers; (d) other ranks, are on the staff of the military hospital at Dundurn, Saskatchewan?

2. What has been the average number of patients per day in the said hospital during the past six months?

3. What has been the maximum and minimum number of patients in the hospital in any one day?

Mr. MACDONALD (Halifax):

1. As of the 21st March, 1944:

(a) Five. Of the five, one is the O.C. of the hospital, one is a specialist in medicine, one is a specialist in surgery and the other two are general duty medical officers. Dundurn military hospital was in January, 1944, classified as a class "A" hospital to provide all facilities for special treatment. It is the only class "A" hospital within M.D. No. 12 and has been set up to care for all cases within the district requiring special treatment and investigation in addition to caring for the personnel at Dundurn proper. It is also prepared for infectious disease cases.

Dundurn military hospital is responsible for the training and qualification of nursing sisters appointed to the nursing service in M.D. No. 12, as well as for certain young reinforcement medical officers preparatory to despatch overseas.

(b) Seventeen on staff of whom only eleven are on duty at Dundurn military hospital; others are attached elsewhere for duty.

(c) None, but three dental officers are stationed at Dundurn camp and are available for duty at Dundurn military hospital.

(d) Male, 38; C.W.A.C., 30; Total 68.

[Mr. Gillis.]

2. September, 1943, 61; October, 1943, 57; November, 1943, 91; December 1943, 58; January, 1944, 43; February, 1944, 75.

3. From September 1, 1943, to end of February, 1944: Maximum, 169; minimum, 18.

OFFICIAL WAR HISTORY

Mr. BENCE:

1. Has the preparation of an official history of the 1914-1918 war been authorized by the Canadian government?

2. When was such authorization granted?

3. To whom was it granted?

4. To what stage in the said war has the history been completed?

5. How many volumes of such history have been prepared?

6. What has been the cost to the Canadian government to date of such preparation?

Mr. MACDONALD (Halifax):

1. Yes.

2. May, 1921.

3. Department of National Defence.

4. September, 1915.

5. Volume I has been completed and published. There has also been completed and published a volume containing appendices which covers the period covered by volume I. When fully completed there will be eight volumes exclusive of appendices. Volumes II to VIII inclusive have been completed in part and at least 50 per cent of the total work required for their completion has been done.

6. Printing and publication $16,784; translation to date $705. In addition there would be included in the cost a proportion of the pay and allowance and salaries of the officers, other ranks, civilian employees of the directorate historical section (general staff), Department of National Defence, during the writing of the book and some proportion of the overhead running expenses of the directorate. The preparation of the history is tied up with other work of the directorate and no segregation of the costs has been made.

SOFT DRINKS AND FOUNTAIN SYRUPS—MANITOBA

Mr. ROSS (Souris):

1. How many firms are engaged in the manufacture of soft drinks and fountain syrups in the province of Manitoba?

2. What is the total amount of sugar used by said firms during each of the years 1942 and 1943?

Mr. ABBOTT:

1. 27.

2. 1942, 6,218,100 lbs.; 1943, 6,420,860 lbs.

LUMBER INDUSTRY—LOAN GUARANTEES

Mr. NOSEWORTHY:

1. What firms or individuals engaged in the production of logs or lumber have secured the guarantee of the Commodity Prices Stabilization Corporation for the repayment of money borrowed, under authority of P.C. 9242?

2. What is the amount borrowed by each, and on what proportion of each is repayment guaranteed by the corporations?

3. From what banks were these borrowings made?

4. For what length of time was each loan made?

5. What interest rate was charged in each case by the bank?

6. How much of each loan, the repayment of which is, in whole or in part, protected by the corporation's guarantee, has been repaid to date?

7. Were all these loans made directly by a bank to the producer of logs or lumber?

8. If not, what individual corporation or company borrowed the money from the bank and in turn lent it to the producer?

9. In any such cases what was the spread between the interest rate charged by the bank and that paid by the producer?

10. In the event of deficits under these guarantees, what steps are taken by the corporation to recover same?

11. What time is allowed for the final liquidation of these deficits?

Mr. ABBOTT:

1, 2, 3, 4, 5 and 6. It is not the policy of the government to give information regarding the business of individual companies.

7. Yes.

8. Answered by No. 7.

9. There are no such cases.

10 and 11. Question of loss has been raised in connection with only one loan. The general arrangement with the banks is that collection of advances is left entirely to them unless question of loss arises.

The guarantees were undertaken with the idea of stimulating the production of lumber and were extended only in cases where the credit position of the borrower was not such that the banks would have made the loans. In the 1942-43 plan the limit of guarantee was 15 per cent of the maximum amount of advances, and for this guarantee the banks paid to Commodity Prices Stabilization Corporation an amount equal to 1 per cent of the interest on the loan for the time it was outstanding. Total credits authorized in the 1942-43 season were $765,000, of which there was outstanding on February 29, 1944, only $34,128. In connection with one of these loans, which on February 29, 1944, amounted to $16,755, it is probable that the corporation will have to make good their guarantee to the extent of $3,900. This amount, however, will be fully offset by the aggregate fees paid by the banks in consideration of the guarantee. Under the 1943-44 plan the corporations's guarantee was increased from 15 per cent to 25 per cent; total credits authorized under this plan amounted to $877,600 of which $520,456 was outstanding on February 29, 1944.

NORWAY HOUSE—WINNIPEG AIR SERVICE

Mr. BRYCE:

1. Does the Canadian Pacific Air Lines hold the franchise for air passenger service from Norway House to Winnipeg?

2. Can residents of Norway House area obtain air passenger service at advertised rates?

3. Can residents of Norway House area obtain air passenger service other than chartering a special plane?

4. What are the rates charged for chartering plane for above distance?

Mr. CHEVRIER:

1. No.

2. Yes.

3. Yes.

4. The total of the charges for passengers and goods carried, but not less than $239 via air to Lac du Bonnet, thence via motor vehicle service; or $229 via air to Lac du Bonnet only. If necessary to move an aircraft from another point to accommodate the special flight an additional charge is made for the ferry service involved.

WHEAT—BROKERAGE FEES, ETC.

Mr. PERLEY:

1. What amount did the Canadian wheat board pay in pit brokerage on the Winnipeg grain exchange during the calendar year 1943?

2. What proportion of the business of the Canadian wheat board in 1943 was handled by the Reliance Grain Company, and how much brokerage or commission fees was paid to the Reliance Grain Company on the 1943-44 crop to date?

3. How many employees of the Canadian wheat board are other than Canadian citizens?

4. How many of the grain export companies handling Canadian wheat board grain have their head office other than in Canada, and where is such head office located?

Mr. MacKINNON (Edmonton West):

1. The board figures are compiled on a crop year basis and the 1942-43 brokerage figures appear in the annual report for 1942-43.

2. It is not the policy of the government to release the brokerage payments to individual firms.

3. All Canadian citizens, except two United States citizens, as far as the board is aware.

4. One, with head office in New York.

WHEAT BOARD—PAYMENTS ON PARTICIPATION CERTIFICATES

Mr. EVANS:

1. How much wheat was purchased by the Canadian wheat board in each of the crop years, 1940-1941, 1941-1942 and 1942-1943?

2. What was the number of bushels carried by the wheat board at the end of each crop year, 1940-1941, 1941-1942 and 1942-1943?

3. How much wheat was marketed to other than the wheat board in each of the crop years, 1940-1941, 1941-1942, 1942-1943 and 1943-1944?

4. When will payment be made on participation certificates on crop years, 1940-1941, 1941-1942 and 1942-1943?

Mr. MacKINNON (Edmonton West):

1. Wheat purchased from producers: 1940-1941, 395,355,522 bushels; 1941-1942, 99,540,491 bushels; 1942-1943, 167,506,531 bushels.

Wheat and wheat futures contracts purchased—Special account P.C. 1803: 1941-1942, 39,052,780 bushels; 1942-1943, 13,067,213 bushels.

2. Unsold stocks carried at end of crop years—in bushels:

	1939-40	1940-41	1941-42	1942-43	Spec. Acct. P.C. 1803	Total
1940-41	114,831,569	253,713,363	(14,933,000)	—	—	353,611,932
1941-42	55,728,222	121,966,362	43,683,089	(59,400,000)	23,097,050	185,074,723
1942-43	—	85,954,425	30,467,267	89,296,266	—	205,717,958

Note: Bracketed figures represent advance sales to new season's crop.

3. Not ascertainable. Based on primary receipts, figures would be approximately: 1940-1941, 61,000,000 bushels; 1941-1942, 127,900,000 bushels; 1942-1943, 105,000,000 bushels (unrevised figure); 1943-1944, not available.

4. Requisition forms are now being received and the issue of 1940 cheques should commence by the end of March and go out in volume in April, and when payment for that crop is completed the other payments will follow.

RIDEAU HEALTH AND OCCUPATIONAL CENTRE, OTTAWA

Mr. JAQUES:

1. How many acres of land were purchased in connection with the Rideau health and occupational centre on the Rideau river?

2. From whom was this land acquired?

3. What was the purchase price?

4. What was the assessment value at time of purchase?

Mr. MACKENZIE (Vancouver Centre):

1. Approximately 42 acres.

2. Corporation of the township of Gloucester, county of Carleton, Ont.; E. J. Billings, Ottawa, Ont.; L. M. M. Greene and L. J. Greene, Medicine Hat, Alta.

3. $13,750; negotiated and recommended by the real estate adviser, Department of National Defence, acting for the Department of Pensions and National Health.

4. $9,550. It is pointed out that the largest of the properties acquired was operated as a truck garden farm and the assessment value for properties, in the township, situated near the city does not take into consideration the future potential value of the property. In a case tried recently before the Exchequer Court, the judge made the following remarks as to assessment in comparison with real estate property value:

"There may be cases where a municipal assessment might afford some check against an exorbitant claim but, generally speaking, evidence of a municipal assessment is not of itself to be relied upon as evidence of market value for expropriation purposes."

The real estate adviser aforesaid considers that the amounts paid for the properties were fair and reasonable and in accordance with the merits of each parcel as to value.

Note.—Expropriation proceedings are now pending in respect of an additional area of approximately 230 acres, as the real estate adviser has been unable to come to an agreement with the owners as to price.

*BOUCHARD, STE. THERESE, PLANT OF DEFENCE INDUSTRIES LIMITED

Mr. BERTRAND (Terrebonne):

1. What were the 150 most important positions in the Defence Industries plant at Bouchard, Ste. Thérèse, on March 17, 1944?

2. What are the names, addresses and salaries of the persons holding such positions?

3. How long has each one of them been in the employ of the company at Ste. Thérèse?

Mr. CHEVRIER: While information with respect to the positions, names and salaries of the employees of Defence Industries Limited in the plant at Bouchard in so far as they are a direct charge to operation are available to the Department of Munitions and Supply, the company itself is a privately owned corporation and its employees therefore are not employees engaged in the public service. It would be unfair to such employees and to the company to make public such information.

MEAT BOARD ADVISORY COMMITTEE

Mr. BLACKMORE:

1. Is there an advisory committee to the meat board?

2. If so, what is the name of each member, and what position did he occupy before being appointed as a member of the advisory committee?

3. What remuneration, if any, is provided for each member of the advisory committee?

4. How many times has the advisory committee met since January 1, 1943?

5. How many times has the meat board acted upon the recommendation of the advisory committee since January 1, 1943?

6. Has the advisory committee any power whatsoever?

Mr. GARDINER:

1. Yes.

2. K. N. M. Morrison, general manager, First Cooperative Packers, Barrie, Ontario; F. H. Downing, manager, Canadian Live Stock Cooperative (Western) Winnipeg, Manitoba; Joseph Bisson, manager, Canadian Live Stock Cooperative (Quebec) Montreal, Quebec; William J. Reid, Department of Agriculture, Charlottetown, Prince Edward Island; Harry Wilson, farmer, Charing Cross, Ontario; R. McCrimmon, farmer, Fort Saskatchewan, Alberta; J. H. Tapley, president, Swift Canadian Company, Toronto, Ontario; John Burns, president, Burns & Company, Calgary, Alberta.

3. Actual travelling expenses.

4. Once.

5. The advisory committee has not followed the practice of making specific recommendations with respect to operations of the meat board. The committee is kept informed of the board's operations so that they may be in a position to offer advice with respect to matters that affect the operation of the board.

6. The advisory committee has no administrative or executive authority. The committee as its name implies is purely an advisory body.

MOBILIZATION ACT—CALL-UP AND NOTICE

Mr. RAYMOND:

1. How many persons were called for their medical examination under the mobilization act, (a) during the month of January, 1944; (b) during the month of February, 1944; (c) from March 1 to March 15, 1944?

2. How many persons received a notice to report for military training under the mobilization act, (a) during the month of January, 1944; (b) during the month of February, 1944; (c) from March 1 to March 15, 1944?

Mr. MARTIN:

1. January, 1944, 26,007; February, 1944, 23,119; March 1-15, 1944, 8,174.

2. January, 1944, 14,766; February, 1944, 12,172; March 1-15, 1944, 6,950.

CANADIAN ARMY—ORDNANCE SHOEMAKER

Mr. NOSEWORTHY:

1. What is the basic wages and the cost-of-living bonus per month paid by the ordnance department of national defence to shoemakers at Pembroke, Kingston and Ottawa?

2. Is there any difference in the basic wages? If so, on what ground are these differences justified?

Mr. MACDONALD (Halifax):

1. Pembroke—None employed. Kingston—$110 per month, plus 17 per cent C.L.B. Ottawa—$100 per month, plus 17 per cent C.L.B.

2. Yes. The higher rate at Kingston was approved by the National War Labour Board on December 28, 1943, on representation being made that the rate of $100 per month was considerably less than the prevailing rate in the Kingston area.

GRAND FALLS, N.B., PUBLIC BUILDING—CARETAKER

Mr. HATFIELD:

1. Who was the caretaker of the federal public building at Grand Falls, New Brunswick, during April, May and June, 1943?

2. What remuneration did he receive for his services?

3. Is he now holding the same position? If not, why not?

4. What is the name of the present caretaker, and what remuneration does he receive?

Mr. FOURNIER (Hull):

1. D. J. Collins (temporarily employed to replace the regular caretaker who was granted military leave of absence from March 3, 1943).

2. $510 per annum.

3. He is not now holding the position, having resigned August 19, 1943, as he was dissatisfied with the remuneration he received.

4. The present caretaker is Mr. J. O. Gagnon, regular incumbent of the position, who returned to his duties as caretaker on November 1, 1943, after being discharged from the Military Forces. His remuneration is $1,260 per annum less $300 per annum for the use of living quarters.

NOTE: The position of caretaker of the public building at Grand Falls, N.B., was reclassified in 1941 by the civil service commission at a remuneration of $510 per annum. This new classification will not be applied to Mr. Gagnon who was appointed prior to the above reclassification of caretakers' positions, but will be applied to any temporary appointee in the position or to a new regular appointee at some future date.

COLD STORAGE—SUBSIDIES

Mr. HANSON (Skeena):

1. How many government-subsidized cold storages are there in Canada?
2. What is the total subsidy paid to such cold storages by the dominion government?
3. What is the number of government-subsidized cold storages in each province, and the names of places where located?
4. What are the names of firms and individuals, if any, to whom subsidies have been granted, giving each province separately?
5. Are there any applications for new grants at the present time? If so, from whom?

Mr. GARDINER:

1. 107.
2. $3,083,773.03.
3. See lists below.
4. See lists below.

5. New Brunswick: Saint John, Municipality of city and county.

Ontario: Aldershot, Aldershot Distributing Cooperative Co. Ltd. (3); Blenheim, Kent Fruit Growers Cooperative Ltd. (2); Dixie, Dixie Growers Cooperative Ltd.; St. Thomas, Elgin Growers Cooperative Ltd. (3).

Manitoba: Winnipeg, Winnipeg Cold Storage Co. Ltd. (2).

Alberta: Edmonton, Edmonton Cold Storage Co. Ltd.

British Columbia: Kelowna, Okanagan Packers Coop. Union (2); Okanagan Centre, Okanagan Valley Land Co. Ltd. (2); Oliver, Southern Cooperative Exchange; Westbank, Westbank Cooperative Growers Assn.; Westbank, Westbank Orchards.

CONSCIENTIOUS OBJECTORS—RED CROSS

Mr. WINKLER:

1. Has an arrangement been made whereby conscientious objectors to service in the armed forces are required to sign a contract to pay certain amounts monthly to the Red Cross?

2. If so, when, and how many are paying into this fund?

3. What are the maximum and minimum amounts paid monthly by conscientious objectors?

4. Has any accounting been given to the Red Cross? If so, when?

5. By months, how much has been paid in the past three months?

Mr. MARTIN:

1. Postponed conscientious objectors, other than those directed to alternative service work camps for employment, may be required to enter into an arrangement whereby a portion of their earnings is deposited in a chartered bank by their employers to the credit of the Canadian Red Cross Society. No alternative service worker, unless he be self-employed, undertakes to deposit any amount directly to the credit of the Canadian Red Cross Society. The normal procedure is that the employer is selected by the alternative service officer. This employer is then asked to enter into an undertaking to which the alternative service worker must agree unless he is prepared to accept employment in an alternative service work camp. The arrangement regarding employment is that the earnings of the alternative service worker shall be at the rate of the going wages for the work done. From the earnings certain statutory wages, living allowances and deductions are made and, at the discretion of the alternative service officer, dependents' allowances may be granted. The amount the Canadian Red Cross Society receives is that balance which the employer undertakes to deposit at a chartered bank after a district treasury officer has certified that the earnings and deductions are proper and in accordance with the agreement.

2. 3,906 as of February 29, 1944. Payments are made monthly.

3. Neither maximum nor minimum payments have been fixed. The amount payable to the Canadian Red Cross Society is a balance of earnings after certain deductions have been made. In the case of industrial workers earnings vary from month to month. Where a fixed monthly amount represents earnings, the balance paid is more regular but again depends

on special allowances or deductions for the maintenance and health of the postponed conscientious objector.

4. Chartered banks advise the Canadian Red Cross Society as each payment is received.

5. December, 1943, $58,701.11; January, 1944, $66,444.46; February, 1944, $62,758.82.

PURCHASE OF FLOUR BY DISTRIBUTORS OF FEED

Mr. LACOMBE:

1. Is there a wartime prices and trade board order No. 302?

2. Has this order dispensed with the obligation on the part of distributors of feed, such as bran and groats, to purchase, together with such by-products, a certain quantity of flour from flour mills?

3. If so, is such order complied with?

Mr. ABBOTT:

1. Yes. Wartime prices and trade board Order No. 302 as amended by board order No. 359 prohibits any seller selling goods and services from imposing on a buyer an obligation to buy more goods or services than he wishes to buy or to buy other goods and services in addition to those he wishes to buy, unless the seller had established a similar trade practice during the basic period. The amended order also gives an administrator of the board the power to issue an order, countersigned by the chairman of the board, requiring any seller to vary or discontinue any trade practice established during the basic period. On January 21, 1944, the administrator of flour and cereal products formally ordered flour millers selling mill feeds, commercial feeds, grain or chops, to discontinue, as condition of selling such feeds, imposing any obligation on a buyer to purchase other goods.

2. No. 1 answers No. 2.

3. The order of the administrator of flour and cereal products is being enforced in the same manner that all other regulations of the board are enforced.

CORONATION OF H.M. THE KING—CANADIAN REPRESENTATIVES

Mr. ROY:

1. How many persons attended the coronation of His Majesty King George VI at the expense of the Canadian government?

2. Who were these persons, and in what capacity did they attend?

3. What amount was paid by the state for each of them?

Mr. MACKENZIE KING: Inquiries for the information sought in this question were made on several occasions during the session of 1938 and the first session of 1939. The details which are requested can be found in the following sessional papers: No. 171, March 7, 1938; No. 171A, April 6, 1938; No. 171B, May 3, 1938; No. 171C, May 10, 1938; No. 124, February 3, 1939.

CENSORSHIP—MEETING AT QUEBEC ON MARCH 12, 1944

Mr. LaCROIX (Quebec-Montmorency):

1. Has the dominion censorship silenced the press as to the report of a letter read and speeches delivered at a meeting held in the Palais Montcalm, Quebec, on March 12, 1944?

2. If so, for what reasons?

Mr. LaFLECHE: No.

*IMMIGRATION

Mr. DORION:

How many municipal corporations and public bodies have forwarded to the Prime Minister resolutions requesting the full application of the provisions of the Immigration Act with regard to any individual who wishes to enter this country?

Mr. MACKENZIE KING: Mr. Speaker, I am informed that there have been forwarded to my office a large number of resolutions on the subject referred to. The resolutions are similarly worded. It is perfectly evident some one or more persons have been circulating communications with a view to having them forwarded to my office. The question is of the kind which, were it to be answered literally, might convey a wholly erroneous impression. For example, I might say I have received thousands of communications identically worded concerning some things—the postage being free. Were I asked to recall how many of these had been received, and were to say that thousands had come in, such an answer would be wholly misleading. For the most part they would represent the opinions of a mere handful of persons. There have not been thousands in this case, but an answer as to the number that have come in would be misleading the public as to the significance of the reply given. I think therefore that the question should not be answered.

Question dropped.

DUNDURN, SASK., MILITARY CAMP

Mr. BENCE:

How many officers and men were stationed at Dundurn military camp, Saskatchewan, on the 1st day of March, A.D. 1944?

Mr. MACDONALD (Halifax): As at March 8, 1944, the nearest date to March 1, 1944, on which a strength return was rendered to National Defence headquarters: Officers, including nursing sisters, 154; other ranks, including C.W.A.C., 1,525.

QUESTIONS PASSED AS ORDERS FOR RETURNS

CONSCIENTIOUS OBJECTORS

Mr. DOUGLAS (Weyburn):

1. What are the names, home addresses and ages of all persons held in detention under military authority for refusing to bear arms on grounds of conscientious objections up to January 31, 1944?

2. Where are each of these individuals located at the present time, and for what period of time are they to be under detention?

3. How many of these individuals applied to the mobilization board for status as conscientious objectors?

Mr. MACDONALD (Halifax): Return tabled.

SELECTIVE SERVICE—UNEMPLOYMENT INSURANCE

Mr. MacINNIS:

1. How many selective service and unemployment insurance offices are there in the province of British Columbia?

2. Where are they located?

3. What is the grade of each of these offices?

4. What are the names and position of each employee?

5. What are the salary ranges and other remuneration, if any, for each of the positions or class of positions?

6. How many of the employees are returned soldiers, (a) of the last war; (b) of the present war?

7. How many of said employees were appointed to their positions by the civil service commission?

8. How many were appointed by governor in council?

Mr. MITCHELL: Return tabled.

AGRICULTURE DEPARTMENT—UNIVERSITY GRADUATES

Mr. NICHOLSON:

1. How many university graduates employed by the Department of Agriculture, receiving salaries from $2,000 to $2,400, have been engaged by the department, (a) less than 5 years; (b) 5 to 10 years; (c) 10 to 20 years; (d) more than 20 years?

2. How many university graduates employed by the Department of Agriculture, receiving salaries less than $2,000, have been engaged by the department, (a) less than 5 years; (b) 5 to 10 years; (c) 10 to 20 years; (d) more than 20 years?

FLUID MILK SUBSIDY

Mr. CASTLEDEN:

1. What districts in Canada have been receiving the 25 cents per hundred pounds subsidy for fluid milk?

2. What was the total amount paid out in subsidies for fluid milk in each month from May 1, 1943, to December 31, 1943?

3. In how many cases has action been taken to insure to the producer the receipt of this bonus?

[Mr. W. C. MacDonald.]

INDIANS

Mr. NICHOLSON:

1. What is the total Indian population in Canada according to the 1941 census?

2. How many Indians are paid treaty money?

3. What is the annual payment to each Indian receiving treaty money?

4. How many medical doctors have been assigned to serve Indian communities exclusively?

5. What were the total expenditures made for Indian education by the federal government for the last fiscal year?

6. What was the death rate from tuberculosis per hundred thousand among the Indians for the last year for which statistics are available?

7. What was the death rate from tuberculosis per hundred thousand in Canada, excluding the Indian population, for the same year?

MOUNT PLEASANT, P.E.I., AIRFIELD

Mr. NOSEWORTHY:

1. From whom did the government acquire the property on which the Prince Edward Island, Mount Pleasant airfield is built?

2. What was the purchase price of the property?

3. Did the government at the time it purchased this property own or hold a lease on other property in the vicinity of Mount Pleasant?

4. If so, what disposition has been made of said property?

5. What is the total construction cost of Mount Pleasant airfield?

6. What quantity of gravel has been used in preparing the site, and at what cost?

PATTERSON STEAMSHIP COMPANY—ACQUISITION OF SHIPS

Mr. ROSS (Souris):

1. Having reference to the acquisition of the following six ships from the Patterson Steamship Company, viz., *Coteaudoc, Farrandoc, Ganandoc, Lachinedoc, Soreldoc,* and the *Wellandoc,* how was the valuation arrived at?

2. Was it by arbitration? If so, who was the arbitrator?

3. If by direct negotiations, who acted, (a) for the Patterson Steamship Company; (b) for the government of Canada?

4. Having reference to return No. 210, were the following seven Canadian ships, viz., the *Mondoc, Novadoc, Portadoc, Prescodoc, Sarniadoc, Torondoc,* and the *Troisdoc,* reported as lost by enemy action, under charter to the government of Canada or to the government of any of the united nations? If so, to whom were they chartered, and by whom was such chartering negotiated ?

5. Having reference to return No. 210, (a) was the rate of hire of $125 per day for each vessel, viz., the *Collingdoc, Kenordoc,* and the *Portadoc,* fixed on a "bare boat" basis? If not, on what basis; (b) what was the insurable value placed on each ship in the event of loss; and (c) in the negotiations for the requisitioning of said ships, what was the agreed value of each ship?

LEGAL SERVICES—WESTERN PROVINCES

Mr. BENCE:

What legal counsel or solicitors in Manitoba, Saskatchewan and Alberta have received payment for legal services rendered to the federal government, and what sum has been paid to each during the year 1943?

MOTIONS FOR PAPERS

JACQUES CARTIER INDIAN RESERVE

Mr. GAUTHIER:

For a copy of all letters and telegrams exchanged between the Department of Mines and Resources and any person or persons from February 1, 1936, to this date, pertaining to the lease and sale of Jacques-Cartier reserve, Pont-Rouge, county of Portneuf.

TOBACCO CROP OF 1942 AND 1943

Mr. NOSEWORTHY:

1. For a copy of all letters, communications, reports or other documents between the wartime prices and trade board, or any other government board or department and any association of tobacco growers or official thereof, pertaining to the sale of the 1942 and 1943 Ontario tobacco crop.

2. A copy of all orders in council or any orders or regulations issued by the wartime prices and trade board pertaining to the sale of the 1942 and 1943 Ontario tobacco crop or any portion thereof.

3. A copy of all letters, communications, reports or other documents between the Imperial Tobacco Company or any subsidiary or official thereof and the wartime prices and trade board or any other government board or department pertaining to the disposal of the 1942 and 1943 tobacco crop or any portion thereof.

4. A copy of all letters, communications, reports or other documents between the wartime prices and trade board or any other government board or department and the tobacco marketing board pertaining to the disposal of the 1942 and 1943 tobacco crop or any portion thereof.

Mr. GIBSON: Mr. Speaker, this motion would require the copying of a very large number of routine returns filed with the excise division of the Department of National Revenue. I have arranged with my hon. friend to make these returns available to him so that he may indicate what returns, if any, he desires to have filed. I understand that is satisfactory to him.

Mr. SPEAKER: Stand?

Mr. GIBSON: No, carried with that provision.

GEOLOGICAL SURVEYS IN QUEBEC

Mr. DORION:

For a copy of all telegrams, letters, correspondence, reports, petitions and other documents exchanged between the government of the province of Quebec and the dominion government since 1920 concerning geological surveys, (a) in the province of Quebec; (b) in the county of Charlevoix-Saguenay; (c) in the Gaspe peninsula.

ALCOHOLIC BEVERAGES

Mr. ROSS (St. Paul's):

For a copy of all letters, telegrams or communications between the government of Canada, its ministers or officials and the governments of each of the nine provinces of Canada, their ministers or officials, during the period from September, 1942, and March 16, 1944, having reference to, (a) dominion-provincial conference, and (b) the limiting of release for sale of beer and other alcoholic beverages, as set forth in the order in council of December 16, 1942, and known as the wartime alcoholic beverages order.

CAMP HILL HOSPITAL, HALIFAX

Mr. ISNOR:

For a copy of all correspondence, letters, telegrams, reports and other documents in the possession of the Department of Pensions and National Health, exchanged during the past twelve months between the city of Halifax, Nova Scotia, and the said department or any other department of the government, respecting the acquiring of land, either by transfer or purchase, to be used in connection with a proposed addition to Camp Hill hospital.

Mr. MACKENZIE (Vancouver-Centre): Return tabled.

INTERNMENTS—CAMILLIEN HOUDE

Mr. LACOMBE:

For a copy of all correspondence, telegrams, reports of enquiry before any advisory committee, evidence and letters exchanged between any individual or groups of individuals and the government in relation to the internment of Mr. Camillien Houde, and all petitions for the release of Mr. Houde, since the 4th of August, 1940.

Mr. ST. LAURENT: This is a motion calling for the production of papers relating to the internment of a person who is being detained under the Defence of Canada regulations. Since those regulations have been in force it has been the invariable practice to treat all such documents as confidential, and it is for that reason, and for reasons similar to those given just a week ago when a similar motion was before the house, that I must object to the production of these documents.

Motion dropped.

PENSIONS—OLD AGE AND BLIND

Mr. KNOWLES:

For a copy of all correspondence dated since January 1, 1943, between the federal government and the governments of the several provinces and/or the provincial pension authorities, relating to the filing of liens against the property of old age and blind pensioners; also

for a copy of all correspondence between the same dated since January 1, 1943, relating to the interpretation of subsections (2) and (3) of section 9 of the Old Age Pension Act.

Mr. RALSTON (Acting Minister of Finance): I would ask the hon. member to allow this motion to stand. I have noticed it only now, and I have not had an opportunity to have a word with the officials of the department about it.

Motion stands.

CANADIAN FORCES—CHAPELS

Mr. POULIOT:

For a copy of all correspondence exchanged between the national Catholic lay committee and the government for the purpose of pushing forward at the earliest possible date the building of chapels for the spiritual ministrations of our armed forces whether of the army, the navy or the air force.

OFFICIAL CUSTODIAN OF ENEMY PROPERTIES—RECOMMENDATIONS OF MCPHEE COMMITTEE

Mr. BENCE:

For a copy of the recommendations of the advisory committee, headed by Judge G. W. McPhee, appointed to recommend the mode and manner of release by the official custodian of properties disposed of by the official custodian.

MILK

PROTESTS AGAINST REDUCTION IN BONUS ON FLUID MILK

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): Mr. Speaker, I should like to ask a question of the Minister of Agriculture. I have received two letters, which I hold in my hand, from the fluid milk shippers in the district east of Regina, along the main line of the Canadian Pacific Railway.

These letters report that meetings have been held protesting against the action of the minister in February last in reducing the bonus on fluid milk from 55 to 35 cents. I understand also that a delegation has awaited on the minister. Will the minister state whether any consideration will be given to these requests?

Mr. SPEAKER: That is a question that should be placed upon the order paper.

Mr. PERLEY: I consider it urgent because it affects the producers in the west of a very important product. They want to know what is going to happen.

[Mr. Knowles.]

WHEAT

PARTICIPATION CERTIFICATES, 1940-41 AND 1942 CROP DELIVERY

On the orders of the day:

Mr. J. A. ROSS (Souris): Mr. Speaker, further to the reply given to my question on February 11, 1944, as reported on page 377 of *Hansard*, that payments on the 1940 wheat participation certificates will be started in March, I should like to ask the Minister of Trade and Commerce if he is now able to say how much per bushel will be paid on participation certificates, 1940-41 and 1942.

Mr. SPEAKER: I think that is a question that should be placed upon the order paper.

Mr. ROSS (Souris): The matter of participation certificates is of urgent importance to many producers in making financial arrangements for their spring operations. I sent notice of this question to the minister, and I believe he is prepared to make a statement, if Your Honour will permit.

Mr. SPEAKER: Ordinarily a question of this kind should be placed on the order paper. Hon. members seem to be of the opinion that a notice to a minister is sufficient to take the question out of the rule which I have been endeavouring to uphold.

Mr. ROSS (Souris): It is rather important just now.

Mr. SPEAKER: I would point out to the minister that the practice which has obtained in asking questions may be abused also in respect of answers. However, he may reply on this occasion if he so wishes.

Hon. J. A. MacKINNON (Minister of Trade and Commerce): The information asked for is partly included in the answer filed by me this afternoon in reply to a question asked by the hon. member for Maple Creek (Mr. Evans).

WHEAT BOARD—QUESTION AS TO ACTION IN COURTS FOR ACCOUNTING

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): On Friday last I directed a question to the Minister of Trade and Commerce asking whether any action has been brought in the courts against the Canadian wheat board for an accounting. The minister stated that he would take the question as notice.

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Yes.

Mr. PERLEY: Will the minister say when he will report on it?

Mr. MacKINNON (Edmonton West): I expect to file a reply within a day or two, or very shortly.

HOUSING

EVICTIONS ON MAY 1 NEXT—RIGHTS OF OWNER AND TENANT

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): I should like to direct a question to the acting Minister of Finance or to his parliamentary assistant, to whom I sent notice of the question this morning. Have any steps been taken to protect families faced with eviction from their homes on May 1 next, particularly some 1,200 families in the city of Montreal where the situation is very bad and where, I am told, over 2,000 families are already living in empty stores and insanitary buildings, including converted stables?

Mr. SPEAKER: The parliamentary assistant may desire to have an opportunity to reply later.

Mr. COLDWELL: This matter is urgent. There is only one month to go before these people must get accommodation.

Mr. SPEAKER: The question should be placed upon the order paper, but if the parliamentary assistant thinks it should be answered and he desires to answer now, he may do so.

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): My hon. friend was good enough to give me notice of his question and I am prepared to answer it.

Mr. SPEAKER: I would point out that the giving of a notice of a question does not necessarily mean that it should be answered on the orders of the day.

Mr. ABBOTT: Mr. Speaker, I think at the outset in answering my hon. friend's question I should make it clear that Canada has gone very far in restricting the rights of landlords to get possession of their own property, possibly farther than any other united nation. Six months' notice is now the general rule, eviction being impossible during the winter months. Owners may obtain possession only for their own use or for their immediate family. In multiple family dwellings, tenure is even more secure, an owner being unable to get possession unless he is now living in rented accommodation elsewhere or is living in a single dwelling, and then he may obtain possession only for his personal use.

In greater Montreal, which is the area to which my hon. friend referred in his question, the leasehold regulations of the wartime prices and trade board have had the effect of giving security of tenure to a very high proportion of tenants. It is estimated that 86 per cent of the population, or 220,000 families, live in multiple family dwellings in the Montreal area. I might point out that in normal times, something like 50,000 of these flats change hands on May 1 in each year. Last year, largely as a result of the regulations, this large movement was reduced to about 12,000, and this year, by reason of the order relating to multiple family dwellings to which I have already referred, eviction notices have been received by only 1,258 tenants in multiple family dwellings.

In spite of all that has been done, it is regrettably true that there will be cases of individual hardship. This seems unavoidable when people are shifting about in great numbers and labour and materials are in short supply. Moreover, the imposition of further restrictions would not eliminate hardship. Indeed, it is certain that further restrictions, such as, for example, the freezing of all leases, which has been suggested, would create new hardships though perhaps for different individuals. Many owners have acted in good faith on the strength of the present regulations and have made arrangements to vacate their present accommodation in the expectation of being able to get possession of their own homes on May 1 next. The house will realize that each of these transactions is a link in a chain of other arrangements which would be disturbed by further changes in the regulations.

It is inevitable that under conditions of wartime congestion a certain number of citizens of Montreal, as well as elsewhere, may find it necessary to make temporary or emergency arrangements for accommodation. On the whole, however, by the various regulations to which I have referred the scope of the problems has been reduced until it is now in reality a local condition which concerns a comparatively limited number of citizens. The wartime prices and trade board has had the situation under review at all times and has come to the conclusion that it would be inadvisable at this time to impose further restrictions on owners of property in order to meet local conditions. After care-

ful consideration and consultation with the board, the government agrees with the board's decision.

The house will appreciate that in the restrictive orders already in effect, the dominion government has gone far in interfering with ordinary rights as between owner and tenant, which, except for wartime emergency powers, would be beyond its constitutional authority.

A delegation representing a group of Montreal tenants was in Ottawa last week and submitted certain recommendations, and the Acting Minister of Finance has to-day written to the head of this delegation along the lines which I have indicated in answering my hon. friend's question.

LABOUR CONDITIONS

CLARK RUSE AIRCRAFT, LAKEBURN, N.B., AND DARTMOUTH, N.S.

On the orders of the day:

Mr. CLARENCE GILLIS (Cape Breton South): Mr. Speaker, I should like to address a question to the Minister of Munitions and Supply. Over the week-end I have received telegrams from the unions which function in the Clark Ruse aircraft plants in Lakeburn, New Brunswick and Dartmouth, Nova Scotia. It would appear that general lay-offs are taking place at these plants, to such an extent that it would lead one to believe that the plants are being closed. The telegrams protest that discrimination is being shown in the lay-offs in that ex-service men of the present war are being laid off while those eligible for military service but who have obtained deferments are being retained. There have been a number of protests and the telegrams are quite long. Has the minister any knowledge of the situation and what are the prospects of these plants continuing in full production?

Hon. C. D. HOWE (Minister of Munitions and Supply): The Clark Ruse plants were built for the overhaul of damaged aircraft and are not suitable for any other type of work. The level of work in the plants is proportionate to the number of planes damaged, and I am happy to say that that number is not as great under present operating conditions as it was at one time. There have been lay-offs in personnel as the volume of work has dropped. The Minister of Labour will be able to give my hon. friend the facts.

[Mr. Abbott.]

Hon. HUMPHREY MITCHELL (Minister of Labour): I do not know whether my hon. friend received the same telegrams that I and many other members of the house received, but possibly they are all from the same individuals. On Friday last this same question was asked by the hon. member for York West (Mr. Adamson). May I say in reply to the hon. member for York West that if the wide ramifications of selective service and the other agencies under the Department of Labour were made use of it would be unnecessary for many questions to be answered on the orders of the day. Requests for information are sometimes received from individuals who have no particular standing in the organization concerned or who, in this case, may have nothing to do with the particular lay-offs. I want to say frankly to my hon. friend that I have no objection to answering any question, even of the awkward type, provided that we have been given notice. It may be shown that the department is at fault, and this is the place where we should be put right.

On March 16 the Department of Munitions and Supply notified the Department of Labour that approximately 500 men would be laid off beginning March 20. Arrangements immediately were made to deal with the situation. Men who have been postponed from military service and do not have special skills will be called up for the army.

A survey already has been completed in this connection. As a result it has been ascertained that 111 men will be called for army service, of whom it is anticipated most will be acceptable. Postponement of 18 will be continued because they have special skills, and 109 others are in designated age groups but are not acceptable for army service on medical grounds. The lunch room at the plant has been taken over by the manager of the Halifax national selective service office and 15 of his staff, and they are interviewing those laid off and placing them in other jobs. Up to March 25, 376 had been laid off, but 174 have already been placed in new jobs, six have gone back to their farms, ten married women have returned to their homes. I stated that approximately 111 will be called to the army. This leaves 75 who are in the process of being placed. The manager of our Halifax office anticipates no difficulty in placing men almost as quickly as they are laid off.

A representative of the Victory Aircraft company of Toronto is at the plant, and men or women who are specially skilled and who wish to transfer are being assigned to this company and transportation provided.

In explanation of the telegram sent to members of parliament and to my department by J. C. Sim, recording secretary of the U.A.W. union, I am informed that none of the other executives of the union supports Mr. Sim in his views. This is the telegram which my hon. friend read in the house last week. In fact all of the arrangements in regard to placing men have been worked out in cooperation with union officials. It is passing strange that Mr. Sim is one of the men who is on postponement from military duty.

Yesterday I received a wire from the New Brunswick council of labour from Moncton, dated March 25, which I am mentioning because it may be that a similar wire was sent to hon. members of this house. This wire was to the effect that employees who belong to other parts of Canada are being retained by the Clark Ruse company while maritime people are laid off and offered positions in Ontario.

Following a telephone call to Halifax, advice was received that seniority was being followed in so far as the lay-off was concerned. Those who were going to Ontario were persons who because of their special skills had been offered work by Victory Aircraft company and accepted the offer because the terms were good and the work would give them an opportunity to gain further knowledge and skills.

The general plan being followed is that seven days' notice of lay-off has been given, during which period employees are paid by the company but do not work. It is during this period that placement in other jobs is made.

Personally, I think selective service is doing well in this particular placement work, and I welcome the opportunity of making this explanation to the house.

Mr. HANSON (York-Sunbury): I want to make one inquiry of the minister, if he will be good enough to go a little further than he has with respect to the Lakeburn situation. Is it true that the men who are being laid off are local residents of Moncton who own their homes there and who object to going to Ontario while Ontario men are retained at Lakeburn? These men have their domiciles and their homes there.

Mr. CRUICKSHANK: I thought the hon. member wanted total war.

Mr. HANSON (York-Sunbury): That is all right; I want total war, but I have to put forward the point of view which they put forward to me. I do not know anything about the facts. Probably the minister can ascertain them.

Mr. MITCHELL: I shall be glad to do so.

Mr. GILLIS: I have no intention of quarrelling with the minister concerning the administration of the regulations, but Sim, who represents the organization, makes the definite observation in that telegram that the text of his telegram is concurred in by national selective service officials in that area. The point I am concerned about—

Some hon. MEMBERS: Order.

Mr. GILLIS: I have just about finished. The point I am concerned about is, I question the Minister of Munitions and Supply—

Mr. SPEAKER: Order. The hon. member cannot discuss the terms of the telegram.

Mr. GILLIS: That is democracy!

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, March 24, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF MUNITIONS AND SUPPLY

The CHAIRMAN: Shall item 1 carry?

Mr. KNOWLES: I should like to revert to the question of synthetic rubber, particularly the set-up of the plant of Polymer Corporation at Sarnia. This is a matter in which there is considerable public interest and concerning which a great deal of information has been made available. Last year we had quite a discussion on it in the house, during which the Minister of Munitions and Supply spoke on Wednesday, June 16. Also last year a number of sessional papers were tabled which provided information on the subject. I refer in particular to sessional papers Nos. 388 and 303A. A number of orders in council respecting this plant have been tabled. There were four in 1942—P.C. 2369, P.C. 3177, P.C. 4252, and P.C. 10008, and there was also P.C. 2799 of April 8, 1943.

In addition to the information which has been brought down in the house, a great deal of publicity has been given the Polymer

plant by the press and by magazines. On Thursday, March 23, the matter was discussed again in this chamber and the minister contributed to the debate.

I believe the people of Canada as they get to know some of the facts of the situation will share the pride which the minister has in the Polymer plant. I enjoy the pride which the Minister of Munitions and Supply expresses from time to time in government owned projects. He is sometimes referred to, both by his friends and by his enemies, as the Tory of the present government; yet I know of no one who expresses greater pride in certain projects that are publicly owned. Take for example his attitude towards Trans-Canada Air Lines, which we all share, and his attitude towards the fact that this Polymer plant is owned by the Canadian people.

There is reason for that pride, first of all in the fact that the plant has been completed in rather a short time, considering the difficulties of construction in war time. There is also the fact that the Canadian people, through their government, have found a way to build a plant that will operate on a brand new process. This was not something that could simply be copied; a real pioneering job had to be done. We can also be proud of the fact that when the country was faced with dwindling supplies of rubber it was possible to get this plant into operation speedily enough to make up for the shortages of crude rubber.

I would add my congratulations to those already expressed to the engineers and technicians who designed this thoroughly integrated plant, and brought it into production in such a short time. Through the medium of this plant we have been able to make this very vital contribution to the war effort. Nevertheless I have certain misgivings for the future growing out of the set-up of the plant at Sarnia. I would call the attention of the minister and the committee to these circumstances. Before expressing any misgivings, however, I have tried to convey my feelings of pride, and to voice my commendation with regard to the building of the plant, in the hope that there will be no misunderstanding on that point.

My misgivings relate principally to the post-war period and in particular to the set-up of the plant in so far as it is being operated by private firms brought in by the government for this work. Publicity has been given to the fact that the plant is being operated in this way by the terms of order in council P.C. 2799 of April 8, 1943, and also by the remarks which the minister has made in the house. When I express my misgivings as to what is going to happen in the post-war period I want to make it clear that these misgivings are not those of the hon. member for Lake Centre (Mr. Diefenbaker). If I understood him correctly, the member for Lake Centre on Thursday of last week, and also in the remarks he made last year, was afraid that in the post-war period it would be against the interests of private enterprise for this plant to be continued as a government-owned project.

If I may say so, I feel that the hon. member does not fully understand the set-up. I cannot see that it is one that is in any way against the interests of private enterprise in the post-war period. On the contrary, my fear is that the set-up we have at the present time, if it is continued into the post-war period, is one that will result in the benefit of this government-financed, government-owned project accruing principally to private enterprise. I shall have something to say as I go along with regard to that set-up, as I see it from a study of the documents to which I have referred, and I should be glad if, some time during the debate, the member for Lake Centre would make clear what it is he would like to have done with the plant to make it more beneficial to private enterprise than it will be as it is now arranged.

As I have said, my fear with regard to the post-war period is that the benefit of the plant, in spite of the fact that it has been financed with public funds and is owned by the people, will accrue to private enterprise. The set-up, as the documents indicate, and as the minister has outlined, involves government ownership of the company known as Polymer Corporation Limited. The company to which I have referred has built the plant with government funds. The amount of money is between $45,000,000 and $50,000,000. The government took all the risks in connection with building of the plant in a field in which it was not possible to copy other plants in operation.

My own feeling about it is that the cost of construction has probably been kept down as well as it could under the circumstances. It is inevitable that the building of the first plant of this kind would cost more than the building of any subsequent plant. If there is any such greater cost in connection with the building of the first plant, the govern-

ment, on behalf of the people, has incurred this greater cost and in that sense has taken the risks of pioneering.

The total cost of the plant is being paid for out of the war appropriation. I do not find anywhere the suggestion that it is to be paid back out of some kind of depreciation later on. It is simply a charge against the war appropriation bill. Having built the plant with public funds and having taken all these risks, the government has then to consider the problem of operating it and producing synthetic rubber, the product for which it was set up. According to the order in council to which I have already referred, P.C. 2799 of April 8, 1943, the plant is being operated by three companies. First of all there is the St. Clair Processing Corporation. I understand that this company operates that part of the plant where butadiene is made from petroleum and also looks after miscellaneous services around the property. Secondly, there is the Dow Chemical Company of Canada Limited, which looks after that part of the plant which produces styrene from petroleum. The third company involved is the Canadian Synthetic Rubber Company, Limited, which, as the minister said the other day, operates the polymerization plant where the two principal elements, butadiene and styrene, are combined into buna-S rubber.

As hon. members know, these three companies, although they are incorporated specifically for the purposes I have indicated, namely, the operation of sections of the Polymer Corporation plant at Sarnia, are subsidiaries of other companies. The St. Clair Processing Corporation is a subsidiary of Imperial Oil Limited. Dow Chemical Company of Canada Limited is a subsidiary of the Dow Chemical Company of the United States, and Canadian Synthetic Rubber Company is a subsidiary owned by four Canadian rubber companies, sometimes referred to as the Big Four in the rubber industry—Goodyear, Goodrich, Firestone and the Dominion Rubber Company. It is these private corporations that have been called in to operate this government-financed and government-owned plant.

I should like to make a point here about our atittude towards this procedure. It is perfectly clear that the men connected with these private companies are the men who have had the experience and some knowledge of the processes involved. They were the men who should be called in to do this work. That is particularly true at a time such as this when we are calling on all our people to devote whatever abilities they may have to the tasks that must be performed in connection with the war. We are calling upon thousands of our young men to give of their services in the armed forces and in many cases to give their lives. It is only right and proper, therefore, that the men with the ability and the experience in the lines related to the production of synthetic rubber should be called in to do that particular job. The government would have been remiss had it not called them in. Let that be perfectly clear, so far as our attitude is concerned.

But, Mr. Chairman, here is where our viewpoint differs. We feel that the calling in of these men to give of their brains and ability and experience where they could most usefully contribute to the national service should not mean that the corporations with which they are connected should in the period of the war, or in the post-war period, be given any special privileges or special advantages as a result of the war-time necessities of the situation. Yet it is my contention that that is exactly what will happen under the present set-up if it is continued over into the post-war period. Let us look at the situation as it arises out of the procedure which has been followed.

Petroleum is the principal raw material that goes into the production of synthetic rubber at Sarnia. The petroleum from which the gases are taken off for the manufacture of butadiene and styrene comes from Imperial Oil Company, and a subsidiary of the Imperial Oil Company known as the St. Clair Processing Corporation has been called in to operate the part of the plant which does this work. In other words, a private corporation with a particular interest in petroleum is right in there operating that part of the plant.

Similarly, chemicals go into the manufacture of synthetic rubber to a considerable extent. The Dow Chemical Company, through its subsidiary, Dow Chemical Company of Canada Limited, is in there operating that part of the plant where chemicals are most deeply involved. They are naturally interested in chemicals that are used in the production of synthetic rubber, and they are also interested in the new processes by means of which different chemicals can be taken off from petroleum. In other words they are interested in the scientific developments which will be taking place right along as the production of synthetic rubber continues, and, as the minister himself said on Thursday of last week, that is one of the interesting and important phases in the manufacture of synthetic rubber at Sarnia. But what we have done is to put a private corporation with a particular interest in chemicals right inside operating the chemical end of the plant.

Then there is the Canadian Synthetic Rubber Company, which, as the minister has pointed out, is wholly owned by four Canadian rubber

companies. The main purpose of the plant is the production of synthetic rubber, and making that rubber available to rubber manufacturing companies so that they can produce the materials that are necessary in time of war. But when the war is over these same private rubber companies will continue to be interested in the availablility of synthetic rubber for the production of tires and rubber goods of all kinds. In other words, they have a special and a very particular interest in the production of synthetic rubber. They will also have an interest in the quality of that rubber, whether it is kept as high as possible so that tires will last a long time, or whether the grade should be kept down a little so that the consumers will have to buy more tires as time goes on. My point is that in the post-war period the private firms that have the greatest interest in what will be going on at the Sarnia plant, both at the end where the raw materials are taken in and at the other end where the final product is turned out, are right there now doing the operating.

I say again that the government would have been remiss had it not called in the people with the ability to do this sort of job. That does not mean, however, that at the expense of the public you should give special privileges to the corporations behind these men and to the financial interests behind those corporations. I do not relish the idea of attacking individuals in connection with a matter of this kind; yet I think it should be pointed out that along with the taking into the plant of the men who were equipped to do this work, we find that men of high standing in the rubber industry have been called in and placed in positions of high authority. For example, the general manager of the Goodyear Tire and Rubber Company is president of the Polymer Corporation. I find also that the vice-president of the Dominion Rubber Company is the deputy rubber controller in the Department of Munitions and Supply. I have met both these gentlemen, as I have met others in similar positions. They are fine gentlemen; they know their business, and I have nothing against them personally. What does get under my skin, however, is that because their abilities are needed in time of war we put ourselves in the position that we give special profit and special privilege to the corporations behind them, and to the power of finance behind those corporations. These men are interested, as we all are, in the best possible prosecution of the war effort; but also, inevitably, they are interested in the welfare and profits of the companies on whose payrolls they remain, and with which presumably they will continue to be associated in the post-war period. It is these men who are in a position to operate this synthetic rubber plant at Sarnia, if they so desire, in such a manner as to make the best possible use of the raw materials that come in at one end, and at the other end to make synthetic rubber available to private rubber companies on terms which will be to the greatest possible advantage of those rubber companies.

If I may elaborate what I said a moment ago in referring to the hon. member for Lake Centre, surely this should make it clear that the set-up is not in any way inimical to the interests of private enterprise; on the contrary it will be of great advantage to them. When people give the benefit of their brains, their ability and their experience, they should receive all praise and full reward; but beyond that, the benefit which accrues from the application of brains, ability and experience in a plant like this, financed by public funds, should go not to private corporations, privately financed, but to the people as a whole.

In time of war, we find ourselves in this position, that at times we have to disregard cost and see to it that the materials necessary for the war are produced. To that extent the benefit of this procedure in connection with Polymer accrues to the people as a whole; for we are getting materials of war for our common defence. I want to see that the benefit of this new scientific development, this new project at Sarnia, will continue to accrue to the people of Canada as a whole after the war is over.

Let me repeat the picture as I see it in the post-war period. We shall find that we have at Sarnia a modern synthetic rubber plant, as the minister has said, integrated to a greater extent than any other synthetic rubber plant in North America. I think the minister's invitation to hon. members to visit that plant should be accepted by all who can possibly do so, so that we may share the pride of the minister in the fact that this is our plant, that it belongs to the people of Canada. But in spite of the fact that it will be our plant this product will be available in the first instance to the private rubber manufacturers; and before it gets to the Canadian people for civilian use in the post-war period it will go through not only the manufacturing but also the economic processes of a private enterprise system, so that the first benefit of this new plant will accrue to these private corporations and to the financial interests behind them. My desire is that the total benefit of this new idea, the plant having been financed by the people of Canada, should accrue to the Cana-

dian people as a whole, making allowance for a just reward to the engineers, technicians and workmen who built the plant.

We should take note of the fact that we have paid for this plant in full out of the money provided in the war appropriations. By contrast—perhaps, as a matter of fact, it is not by contrast; perhaps it is the same story in the long run—when the Aluminum Company of Canada, a private corporation, needed to expand its facilities for war-time production, the government decided that it should be given special depreciation so that it could take care of the total cost of that plant during the period of the war. I need not go into that argument again, but we have pointed out that in our view this means that after the war that private company will have increased facilities and increased productive capacity that have been paid for by the people. There is no suggestion of depreciation as far as this government-owned plant is concerned; the argument is that the government owns it anyway, so why depreciate it. I point out, however, that the net result is the same. You allow depreciation in the one instance, which means that the people pay for the plant though it is still in private hands. In the other instance you do not allow depreciation because the people are paying for the plant anyway.

Mr. HOWE: May I ask my hon. friend what people paid for the aluminum plant?

Mr. COLDWELL: The people of the united nations.

Mr. KNOWLES: I do not know that we want to go into that debate again, but our point in that connection has been that when the price for aluminum was set, it was set at a figure high enough to include depreciation allowances which would take care of the cost of the plant during the three, four or five years of the war. I believe that at the end of 1945 the aluminum plant extensions will be fully paid for. The point I make now is that while one method is followed in one case, that of special depreciation, the method of government ownership without special depreciation is followed in the other, and the net result is the same. At the end of the war both plants are fully paid for. The aluminum company plant is owned by a private corporation, and the Polymer Corporation plant, although owned by the people, is being operated by these private concerns, using their raw materials and turning out products for their use.

There is another way in which it seems to me the government is strengthening the control of private interests in the rubber industry, as a result of, shall I say war-time necessity. Let me make it clear to the minister that when he came up against the problem of the cutting off of the supply of crude rubber, after Pearl Harbor, he faced the necessity of getting the synthetic plant built and into operation. He called in the people who could help him in that job, and we have no complaint about that. Our contention is, however, that he, the house and country should look at the results of that procedure, so far as the post-war period is concerned. Along with the government money which has gone into the building of the Polymer plant we have also had the expenditure of a considerable sum of government money to enlarge the plants of rubber manufacturing companies.

In the last two or three days we have had circulated among us a little booklet containing a report on the government financed expansion of industrial capacity in Canada as at December 31, 1943. Quotations have been made from it by a number of hon. members. I have gone through it looking for those amounts of money made available by way of capital assistance to private rubber companies. I understand there are fifty or sixty rubber companies manufacturing rubber goods in Canada. Naturally, when there are that many of them a few will be large and many will be small. I have gone through this report to find out what assistance is being given to private rubber companies, and I find that although there are fifty or sixty of those companies manufacturing rubber goods in Canada, the names of only eight such companies appear in this report.

Let me make it clear that I do not know the kind of work in which every company listed in the booklet is engaged. Some hon. members may be able to point out that some companies, the names of which do not so indicate, are rubber manufacturing companies. However I have been able to find only eight. The total amount of capital assistance made available to those eight is, according to this report, $4,861,699. First of all there are the Big Four, the owners of The Canadian Synthetic Rubber Company Limited. I refer to Goodyear, Goodrich, Firestone and Dominion. The other four are Dunlop, Seiberling, Gutta Percha and Miner. Of that $4,861,699 made available to only eight out of sixty rubber companies in Canada, $3,900,179, or 80 per cent, is made available to the Big Four. If we add in one more, namely Dunlop, and make it the Big Five, we find that they received 86 per cent of the total made available to these companies.

I know the argument is that these were the big companies, and that they were the

ones that could expand their plants and take on additional orders for the war effort. I shall not take time to deal with it in detail, but I have before me a most interesting sessional paper, No. 139, tabled Friday, January 28, 1944, which sets out the figures respecting contracts let by the Department of Munitions and Supply to firms from which it has taken in dollar-a-year men. I find in there some figures as to the size of contracts given to some of the companies I have named as being among the Big Four.

The CHAIRMAN: Order; the hon. member has spoken forty minutes.

Mr. ADAMSON: Last week I asked the Minister of Munitions and Supply whether it would be possible to give us an estimate as to the cost of aircraft. I see that he has produced what appears to be a most excellent graph, showing the ratio between man-hours per pound of airframe produced, and the cumulative aircraft delivered. Would it be possible for him to give that statement to the committee this afternoon?

Mr. HOWE: Hon. members are aware that I have always objected to giving costs in the House of Commons, and I believe it might be well at this time to state my reason for so objecting. The graph I have asked to have distributed to members shows the man-hour performance curve, of good performance, and used to check the performance of our plants. The elements of cost in an aircraft are, largely, material and labour, the latter being translated into the number of men multiplied by the number of hours they work, expressed by the term man-hours. Materials are fairly constant. It does not matter whether we produce one aircraft, or one hundred, or five thousand; generally speaking material costs are not a variable factor. Aluminum costs the same, and other materials cost about the same.

I would point out, however, that the productions of planes, per man working one hour, changes very rapidly as production continues. If my hon. freind will look at the top curve, he will find that it is a curve showing good performance for a plant making fifteen aircraft a month, while the lower curve is the good-performance curve for a plant making 150 aircraft a month. We have other curves fitting the particular situation we find in any of our plants. If hon. members will look at the bottom curve, showing good performance for 150 aircraft a month, they will see that the cost of man-hours in the one-hundredth aircraft is just about twice the cost of man-hours used in producing the one-thousandth aircraft. And the cost of man-hours used in producing the two-thousandth aircraft is lower still. The contrast is even sharper on the curve above, which applies for smaller production.

My hon. friend may ask me, as he did, as to the cost of producing an aircraft at Victory Aircraft plant. As he will see that cost depends on the particular aircraft that he may select. Each aircraft produced costs less than the preceding one, and that goes on for a considerable time. After the two-hundredth aircraft the man-hour curve begins to level off, and the difference will be less. Therefore it is very unfair to compare performance at one plant, with performance at another, by comparing the cost of current output at each plant. We must know the background; we must know how many units have been produced by one plant, against the number that have been produced by another. We must know the rate of production at one plant as compared with the rate of production at another. I might say that the man-hour factor illustrated on the graph is not confined to aircraft production; it applies pretty well to any sort of production that is repetitive in character. It would apply to ships—there is the same progressive reduction in man-hours for the production of ships. The curve also explains why, in ordinary times, we pay more for automobiles in Canada than is paid in the United States. Their production lines are dealing with vastly larger quantities and their man-hour costs per unit usually are much lower than can be obtained with the limited output of our own production lines.

Therefore I hope hon. members will not ask me for the costs per unit of output at our various plants. It would be wholly unfair to give them. Plotted here on this graph are several curves of our own actual performance. I may say that these are kept up to date in our office, and comparisons are made with the curve of good performance. This curve of good performance is used all over this continent for aeroplane mass production work. I may say that our production in terms of man-hours, is very good indeed. Generally speaking, our actual performance is better than the curve of good performance.

Mr. ADAMSON: Better than?

Mr. HOWE: Better than the curve which has been agreed upon as the curve of good performance. Usually we are below that curve. My hon. friend will see that curve F is the longest of the lot, and he will see at one stage that there is quite a jump in the curve. These jumps are caused by major modifications, or substantial changes in the aircraft,

which slowed down the rate of output, and temporarily shot up the man-hours per plane. My hon. friend will see that our performance curves follow fairly well the standard curves of good performance. Generally speaking, our costs are very satisfactory when measured with performance and costs in the United States or in the United Kingdom.

Mr. ADAMSON: Could the minister give the formula for working out these curves?

Mr. HOWE: I cannot.

Mr. ADAMSON: It is empirical?

Mr. HOWE: It is empirical. The plants which are known to be good performers are taken. A study of the industry was made in order to see what should be expected from established plants when bringing new types of aircraft into production.

Mr. ADAMSON: I thought the committee would be interested in getting some idea of whether we could continue to have an aircraft industry in Canada after the war is over. I think it is important that steps should be taken now in order that the aircraft industry may be perpetuated in Canada. The information that we now have may give a lead as to the possibility of that happening. I understand that the commercial type of aircraft to be produced is the DC-4, which is approximately a 40-place job for commercial transportation. These figures give us some idea of what it is going to mean to the country to maintain an aircraft industry.

An old quarrel between the minister and myself is in connection with the production of aircraft engines. As yet no aircraft engines have been produced in Canada. Do the costs of producing aircraft engines follow these curves if produced elsewhere? In other words, are we now buying Allison engines or Rolls Royce Merlin engines or Packard engines cheaper to-day than we were eighteen months ago? If so, our engine costs must have been reduced very considerably.

I agree with the minister when he says that it is unfair to make comparisons between costs, particularly in connection with experimental types of aircraft. I imagine that a year ago the cost of producing the first two or three Mosquitos was a fabulous sum, and I realize that it would be unfair to compare present costs. But I realize also that we must have some idea of our ability to produce aircraft in competition with other united nations. That is why I asked this question. Is the minister going to place this information on *Hansard*?

Mr. HOWE: I shall be glad to ask that the graph be placed on *Hansard*, if I can get unanimous consent.

(The graph referred to—aircraft man-hour performance curves—was published separately.)

Mr. DIEFENBAKER: A week or so ago I had an opportunity of visiting once more the Victory and de Havilland plants. This was the first visit I had made in about nine or ten months, and I must say that the conditions in both plants seemed to have improved materially over what they were when I was last there. There are some questions I should like to ask in connection with aircraft production and arising out of the questions asked by the hon. member for York West. The minister has indicated that his opinion is that the performance record in Canada is generally lower than the best performance records in other countries, and I wish to know from the minister if he considers that after the war Canada will be able to produce aircraft in competition with other countries? I noticed that when he spoke the other day in connection with post-war aviation he stated that a vigorous aeroplane construction industry was an essential complement to Canada's post-war aviation plans. I take it from that that when the war is over Canada will continue to produce planes in competition with other countries. On page 1695 of *Hansard* the minister placed comparative statistics on the production of Mosquitos in the United Kingdom and the United States and he said:

> In this connection, I think it may be of value to place on *Hansard* a table showing the comparative statistics on the production of the Mosquito in the United Kingdom and in Canada. In giving these figures I ask you to remember that the design originated with the English company.

Then he gave figures to show that in nineteen months after commencement of manufacture the cumulative totals of aircraft accepted in Canada and England were nine and five respectively.

Mr. HOWE: I thought I attempted to make it clear when I spoke last time that those figures were for one plant in England, as against one plant here, apparently the de Havilland parent plant in England as against the de Havilland plant in Canada. There are other plants in England producing this machine.

Mr. DIEFENBAKER: I took it as a comparison between the best plant in England and the Canadian production; is that correct?

Mr. HOWE: I would not say for sure, but it is probably the best plant. It is the plant that started as we did to produce the first Mosquito plane.

Mr. DIEFENBAKER: The comparison does not give the picture. If the choice of the English factory is not the choice of the best factory in production over there—

Mr. HOWE: It may be. I do not know. It is the one which has been operating the longest.

Mr. DIEFENBAKER: How many employees are there in the United Kingdom plant as compared with the number in the Canadian plant? That is a matter which must be known before these statistics become worth while at all. Has the minister that information?

Mr. HOWE: I think we have it. In any event, the de Havilland plant is one of the biggest plants in England. It has been in production since the beginning of the war. I dare say it would have the more employees. But I think you would have to go farther and say how many employees were working on the Mosquito, just as at the Toronto de Havilland it is a question of how many employees are working on the Mosquito. We were on other planes when we were starting production of the Mosquito. I think the hon. member is getting into pretty deep water when he asks for that information.

Mr. DIEFENBAKER: These statistics mean nothing as they stand on the record unless it is known how many men in the United Kingdom factory were employed on Mosquitos when compared with the numbers in Canada. That is the point I make in connection with these particular figures which are given, that they may provide a fair comparison; they may be entirely meaningless unless we have information as to the numbers.

Mr. HOWE: Let me put it to my hon. friend in this way. The Mosquito, when it was accepted, was an exceedingly important plane. I think both put on all the men they could use, but how many they put on I do not know. I would find it difficult to ascertain that here in Canada.

Mr. DIEFENBAKER: I am not entering into an argument at the moment, but I am pointing out that statistics like those on page 1695 are as meaningless as some of the promises of production which were made by the minister in 1942.

Mr. HOWE: Let us be a little sensible about that. I put the table on *Hansard* as a matter of information. It means exactly what is said. It says the performance in the British plant was so much and the performance of the Canadian plant—not my predictions of performance—was so much. I gave the best information I could. Let my hon. friend make the best out of it. If he suggests that anyone connected with the production of aeroplanes in this country is not doing the best he can, let him give us the name and we will consider the situation. This snarling around and trying to make points out of nothing is getting rather tiresome.

Mr. DIEFENBAKER: Let me tell the minister this, that in so far as certain types of production are concerned there can be no argument that his predictions made each successive year have not been borne out at all by the performance; and naturally he becomes annoyed.

Mr. HOWE: Give me the predictions I made last year, and see if they have been borne out or not.

Mr. DIEFENBAKER: I will refer to that in a moment. Naturally he becomes annoyed. That is always the refuge of the minister in this regard. In November, 1942, he made the statement that three Mosquitos a day would be produced in 1943.

Mr. HOWE: Can the hon. member read that statement to me?

Mr. DIEFENBAKER: The minister to Australia at the same time made the statement that "In 1943 we will be producing five per day." These predictions did not come true. Then the minister comes along on March 21 and places on record the performance in England and the performance in Canada, but does not give the man-power in each engaged on the production of one aeroplane or more, so that the comparison is not helpful to this committee.

I pass on to a matter connected with the improvement of performance and production. Two or three years ago a committee was set up under Mr. Hirst to encourage production and performance. During the past two years another committee has been in operation engaged in encouraging production. It was set up on December 10, 1941. The order creating it states that it was desirable to carry on a campaign of publicity and public education designed to promote and develop a full realization of the gravity of the existing emergency and the necessity of individual and united effort, cooperation and responsibility in order that Canada's participation in the war might be of maximum effectiveness. In that year, Cockfield, Brown and Company Limited

were placed in charge of the advertising campaign, and they accepted that position without remuneration. During the first year the expenditure amounted, I believe, to around $150,000. I ask the minister now, how was that expenditure justified? In 1942 it was extended for a further year, and on March 30, 1943, it was extended for another year. The order in council extending it for the further year stated that the expenditure upon the campaign from its inception to March 31, 1943, will amount to $237,000. What is the idea, I should like to ask the minister, after we have already set up a war information board designed to improve morale, to set up a further organization in the minister's department on which the expenditure to the end of March, 1943, was $237,000, and to which a further amount of $125,000 was allotted for the last year. I ask the minister to explain what has been done with a sum of approximately $360,000 expended under order in council P.C. 9635 and subsequent ones. Who has been in charge of this? Why has it been necessary to make this expenditure under the Department of Munitions and Supply instead of through the war information board or one of the other boards connected with wartime information? It seems to me that that is a very considerable sum to be expended on the improvement of morale in one department when we already have the war information board and other instruments of information engaged in that connection.

I pass on now to post-war aircraft production. It was referred to by the hon. member for York West. The minister made a speech in Washington in December last—

Mr. HOWE: I have never made a speech in Washington in my life.

Mr. DIEFENBAKER: The minister was talking to reporters, and the report indicates that it has all the appearances of a speech. He said that the business of transforming from war-time to peace-time manufacture should not be long and would be carried out in stages. Canadian aircraft production could easily be transformed to meet the demands of commercial passenger and freight carrying needs. Mr. Bell, director of aircraft production, in a statement of February 11, 1944, stated that our aircraft industry has conclusively demonstrated that it is capable of building the largest and most complicated types of operational aircraft in the world. He stressed the necessity of building now in order to ensure the permanent future of this nationally important industry. He says that in order to build up the industry it is necessary that design staffs capable of competing with the world be set up and that manufacturing costs competitive with those of Britain and the United States be established.

I would ask the minister to give the committee and the country a picture with regard to the continuance of these aircraft factories after the war is over. Some 122,000 men and women are engaged in production. Starting almost from scratch, the training of these workers has been a remarkable piece of work. I have visited nearly all of the aircraft plants in the country, and one thing that amazes me is the way in which the men have been trained to do the precision work they do to-day, considering the fact that many of them had never been connected with industry before.

When the war is over, what is to be done to ensure the continuance of the industry? I was rather disturbed by the statement made in November 1943, by Frederick Smye, executive assistant to the director general of aircraft production. When referring to the post-war period he was far from hopeful as to the condition of affairs. The hon. member for York West mentioned that we were not producing engines in Canada. Well, in the post-war period, according to Sir Archibald Sinclair, air minister in Great Britain, one of the most important developments in connection with air craft production will be the production of jet-propelled planes. He says it will revolutionize industry.

I would ask the minister whether consideration is now being given to the post-war period in the production of jet-propelled planes, which, it is believed, will in a large measure take the place of planes of the present types. To what extent can any of these factories be turned to the production of helicopters? According to an aeronautics board in the United States, when the war is over they will be used more than any other type of aeroplane in inter-urban traffic. These are matters that interest the workers in these factories, and it is necessary that they be considered in determining whether or not this great industry that has been built up in war time will in fact be utilized, when peace comes, as a means of ensuring employment and also of establishing Canada's position in the post-war air world.

The minister, in his address on post-war aviation, averred that it was the policy of the government to ensure the production of civilian planes in Canada. I would ask him to enlarge on that and indicate what the plans are. I do not expect them in detail, but I do expect some indication from all the planning committees that have been set up

with regard to the post-war period so that we may know the numbers the minister believes may reasonably be employed in the aircraft industry when the war is over.

In connection with civil aviation in Canada I would also ask to what extent expansion will take place so as to employ the 25,000 referred to by Doctor George Weir in his report on the post-war.

All of us are pleased with the increase in production of aircraft, and most of us feel that the use of trained personnel in the post-war should not be lost sight of by lack of planning now.

Mr. HOWE: Apparently there are two outstanding questions, one of which is: Why did the department interest itself in personnel work? Every production organization in every allied country has carried on programmes of the type that has been carried on by the Department of Munitions and Supply. The programme to which the hon. member referred was not confined to aircraft production. It covered the entire field of war production. The expenditure was not great in proportion to the size of our programme, measured by similar expenditures in any other country. It had nothing in particular to do with the work of the war information board except that it was coordinated with the work of that body. The purpose of our expenditure was intended to reach the personnel of war plants, whereas the purpose of the war information board is to reach all the people of Canada and of countries outside Canada.

The money has been well spent. Most plants have a plant publication put out by the employees, and part of the service is to provide up-to-date news for plant publications and to encourage their production. Another object has been to bring information home from the front lines regarding the use of a particular product. When a submarine is sunk it is a matter of interest to the men and women who were engaged in building the corvette that sank that submarine, or in building components of that corvette, to have that news in pictorial form.

Then there is the matter of plant entertainment in plants in more isolated communities. A good deal has been done in the making and distribution of moving pictures and providing projection equipment for the plants. Also, it has been found that for many types of production music in the plant during working hours has a stimulating effect on the workers and prevents fatigue. That has been introduced into plants.

That covers generally the scope of the work. It is well established to-day, and expenditures are dropping materially. Expenditures will be much less for the current year than previously.

The results are wholly intangible. One man could argue that there have been no results, while another could argue that the results have been excellent. I do not care to enter into that sort of argument. I am always a sceptic in matters I do not understand, and I should not like to appear as a witness as to whether the results obtained in the morale building campaign were worth the money or not. That will have to remain a matter of opinion.

As far as the future of the aircraft industry is concerned, that of course is a very large question indeed. If my hon. friend, or anyone else, could tell me when the problem will arise and what the conditions at that time will be, it would be very much easier to forecast the future. If I were sure that the war would stop in July of this year, I might be able to give an answer. If the war should go on for two more years the answer I gave to-day would certainly be used against me by the hon. member if he and I were both in the house at the time, because the situation then would be so different that my answer then would probably be different.

We are paying some attention to the post-war situation. We have a cargo plane in production here, and have had for some two years. It was an excellent cargo plane before the war, is still the best of its type, and will certainly continue to be produced to meet post-war requirements.

Mr. ADAMSON: Is that the Norseman?

Mr. HOWE: Yes. We have taken what we believe to be the plane most likely to succeed in the next five years, the Douglas DC-4. We have obtained manufacturing rights for that plane, and manufacturing has been started at the government-owned plant operated by Canadian Vickers at Montreal. That will certainly be a post-war project. Two intermediate types of planes are required as between those two, a small transport plane and a medium transport plane. Several designs are being studied, and out of them will come two or three types which should have substantial use in this country, and which can be put into production quickly.

We are also interested in a transatlantic type of plane. The design for that is well advanced, and it is probable that that may be added to the types of planes which will be produced post-war.

Mr. ADAMSON: Is it of Canadian design?

Mr. HOWE: Combination, Canadian and British. So much for types of planes.

As far as engines are concerned we are in a happy position. Up to this time, we have never had an airframe awaiting an engine. We have always been able to obtain the engines we have required during a very tight period of supply. We are now coming to a period where engine production will be well ahead of requirements, and, not being tied to any particular engine of Canadian manufacture, we can go out and buy any engine in the world, and buy it on favourable terms. So that the necessity for using one particular engine is not a problem to our designers. It would be unfortunate if it were so, because aeroplane engines are subject to frequent changes. It takes three or four years of experiments to bring out a new type of engine, and by the time manufacture is started the designers would know of a better engine that could be built. Large expenditures are devoted to development work. Production is in great quantity when the new type arrives. We in Canada have the choice of the production of both the United States and Great Britain. As my hon. friend has stated, it is quite likely that aeroplane engines as we know them to-day are becoming obsolescent. We are not sure of that, but there is a suspicion that that is so.

For the past two years Canada has been actively associated with the development of the new type engine, the jet-propulsion engine. We have had a strong team in England working with the designers of the engine, and with three or four plants which are engaged in development work. Part of the development work has been moved to Canada. We are conducting cold-weather experiments on the various types of jet-propulsion engines as they are produced, to determine the relative merits of each type under conditions of extreme weather. I can assure hon. members that we shall be in a position to start from scratch in the development of jet-propulsion engines. We are capable of starting on even terms with other countries and since no one will have any particular advantage in the building of jet-propulsion engines, I think we should be warranted in undertaking engine-building with some prospect of success.

Mr. NOSEWORTHY: There are several questions I wish to ask the minister. I think he will realize that when the estimates of the war ministers were under review it was understood that much of the money they were asking the house to vote was to be spent by the Department of Munitions and Supply, so that we have to direct our questions to the minister of that department.

The first question I wish to raise is this: What provision has the government made for ensuring accuracy as to the cost of planes and other goods produced on the cost-plus type of contract? I am told by engineers in many plants that in estimating the cost of this production the government is obliged to depend on the records and books of the companies engaged in this business; that the only inspectors the government has of costs are the accountants and bookkeepers who check the records of the firms producing these goods, that there are not in many plants engineers or technical men who are capable of telling how many machines are required for the production of a special job, how much of machine tools is require, and what number of man-hours should go into the job, and that the government is pretty much at the mercy of the records of private companies in this matter. Would the minister make a statement on that?

Second is the question of subcontracts. Has the government any check on the letting of subcontracts, either with reference to the efficiency of the firm that received the contract, or with reference to the costs charged for these contracts? Here again I am hearing continually that subcontracts are passed on from two or three individuals. I heard of one instance where a subcontract had changed hands seven times and only the seventh man received the contract and produced the goods, and that in each instance there was a profit of some kind charged.

Mr. HOWE: I think that is information which my hon. friend is in duty bound to give the government. If that happened; if there were six rake-offs in subcontracts, the government should certainly know it and be in a position to prosecute. Is my hon. friend prepared to give the names?

Mr. NOSEWORTHY: I can give the minister the name of the plant in which the contract was let. The difficulty is that the men in those plants are under oath not to give information.

An hon. MEMBER: Then how do you know?

Mr. HOWE: My hon. friend is mistaken. He has been dragging his line into deep water unless he can prove his statement that a contract has passed through six hands before the goods were finally produced. It is his duty as a member to give his proof of that statement.

Mr. NOSEWORTHY: I am simply asking—

Mr. HOWE: The hon. member said he knew of his own knowledge what happened. Let him not shift his ground. There must be some sense of responsibility on the part of a member speaking in this house. The hon. member has made a statement and I have asked for the names.

Mr. NOSEWORTHY: My statement is that I was told by a responsible man of contracts—this is common information around the town—

Mr. HOWE: Let us make it common information here. If you have information it is your duty to give it to this committee. Unless you are prepared to give the name of the man from whom you obtained the information, or unless you are prepared to give the hands through which it passed, you are not giving information but just spreading mud. I think that is what you are doing. You have made a definite charge on that point. Now give us the information.
