House of Commons Debates

OFFICIAL REPORT

Thursday, March 2, 1944

The house met at three o'clock.

WAR EXPENDITURES

CHANGE IN PERSONNEL OF SPECIAL COMMITTEE

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That the name of Mr. Factor be substituted for that of Mr. Gladstone on the war expenditures committee.

Motion agreed to.

IMMIGRATION

PETITION FROM "LA SOCIÉTÉ SAINT-JEAN BAPTISTE DE QUÉBEC" PROTESTING AGAINST ANY IMMIGRATION

On the order for motions:

Mr. WILFRID LaCROIX (Quebec-Montmorency) (Translation): Mr. Speaker, I wish to submit to the House of Commons a petition from the "Société Saint-Jean Baptiste de Québec", bearing a total of 162,889 signatures and directed to the honourable members of the House of Commons in parliament assembled. The said petition strongly protests against any immigration, demands that the strict enforcement of immigration bans be continued, opposes the issuing of special or discretionary permits for admission into this country, and lastly, urges the Canadian government to take whatever action may be necessary with a view to preventing any immigration into this country.

Here is one set of petitions from the city of Quebec, bearing 42,421 signatures; one from the county of Kamouraska with 9,006 signatures; one from the county of Montmagny with 7,049 signatures; one from the county of Megantic with 9,147 signatures; one from the county of L'Islet with 7,654 signatures; one from the county of Quebec with 11,084 signatures; one from the county of Beauce with 18,976 signatures; one from the county of Montmorency with 4,279 signatures; one from the county of Dorchester with 9,282 signatures; one from the county of Lotbinière with 6,190 signatures; one from the county of Lévis with 11,555 signatures; one from the county of Portneuf with 11,410 signatures; one from the county of Rivière du Loup with 5,141 signatures; one from the county represented by the genial member for Bellechasse (Mr. Picard) with 7,168 signatures, and many others.

DOMINION ELECTIONS ACT

INMATES OF INSTITUTIONS FOR THE POOR

Mr. ROBERT FAIR (Battle River) moved for leave to introduce Bill No. 8, to amend the Dominion Elections Act, 1938.

He said: Paragraph (k) subsection 2 of section 14 of the Dominion Elections Act, 1938, reads as follows:

(k) in any province, every person who is an inmate of an institution which is maintained by any government or municipality for the housing and maintenance of the poor, if such person is by the law of that province disqualified from voting at an election of a member of the legislative assembly of that province, and did not serve in the military, naval or air forces of Canada in the war of 1914-1918.

I contend that this disqualification should not be in the elections act of any democratic country, and the purpose of this bill is to have that particular clause removed before the next election.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk)

SHIPBUILDING—COSTS IN GOVERNMENT AND PRIVATELY-OWNED PLANTS

Mr. FRASER (Peterborough West):

1. What are the names and addresses of the 14 major steel yards, as mentioned in *Votes and Proceedings*, Wednesday, 26th January, 1944, page 776, building ships in Canada?

2. What are the names and addresses of the five smaller steel yards, as mentioned in *Votes and Proceedings*, Wednesday, 26th January, 1944, page 776, building ships in Canada?

3. What are the names and addresses of the 62 shipyards building wooden ships in Canada, as mentioned in *Votes and Proceedings*, Wednesday, 26th January, 1944, page 776?

4. What are the names and addresses of the outfitting yards, as mentioned in *Votes and Proceedings*, Wednesday, 26th January, 1944, page 776?
5. How many of these companies are government owned?
6. If privately owned, what are the names of the companies, and what are the names of the directorates of each company?
7. Does it cost more to build a ship of the 10,350-ton class in a government-owned plant than in a privately-owned plant?
8. Does it cost more to build a ship of the 4,700-ton class in a government-owned shipbuilding plant than in a privately-owned plant?
9. What is the differential in total cost (including extras) between ships constructed in government-owned yards or plants and in privately-owned yards or plants for ships, (a) of 10,350-ton class; (b) of 4,700-ton class?

Mr. CHEVRIER:

1. It is not in the public interest to give the specific location of Canada's shipyards. The answers to this question denote the province only where such shipyards are located:

Yarrows Limited, British Columbia.
Canadian Vickers Limited, province of Quebec.
Davie Shipbuilding & Repairing Co. Ltd., province of Quebec.
Geo. T. Davie & Sons Ltd., province of Quebec.
Morton Engineering & Drydock Co. Ltd., province of Quebec.
Port Arthur Shipbuilding Co. Ltd., Ontario.
The Collingwood Shipyards Limited, Ontario.
Midland Shipyards Limited, Ontario.
Toronto Shipbuilding Co. Ltd., Ontario.
Kingston Shipbuilding Co. Ltd., Ontario.
Halifax Shipyards Limited, Nova Scotia.
Government-owned outfitting yard operated by Anglo-Canadian Pulp & Paper Mills Ltd., Shipbuilding Division, province of Quebec.
Government-owned outfitting yard operated by Carter-Halls Aldinger Co. Limited, Ontario.
Government-owned outfitting yard operated by Canadian Comstock Co. Limited, New Brunswick.

Note: A government-owned company, Quebec Shipyards Limited, supervises the Morton Engineering & Drydock Company, Geo. T. Davie & Sons Limited, and the government-owned outfitting yard operated by Anglo-Canadian Pulp & Paper Mills Ltd., shipbuilding division, in the province of Quebec.

2. Canadian Dredge & Dock Co. Ltd., Ontario.
Canadian Bridge Co. Ltd., Ontario.
Central Bridge Co. Ltd., Ontario.
Russel Bros. Ltd., Ontario.
Montreal Drydock Co. Ltd., province of Quebec.

[Mr. G. K. Fraser.]

3. Canadian Fairbanks-Morse Co. Ltd., Nova Scotia.
M. R. Chappell, Nova Scotia.
Clare Shipbuilding Co. Ltd., Nova Scotia.
H. Clarke, Prince Edward Island.
Eastern Woodworkers, Nova Scotia.
J. Etherington, Nova Scotia.
Foundation Maritime Limited, Nova Scotia.
Industrial Shipping Ltd., Nova Scotia.
J. D. Irving & Co., New Brunswick.
Leblanc Shipbuilding Co. Ltd., Nova Scotia.
K. MacAlpine & Sons, Nova Scotia.
W. C. McKay & Sons, Nova Scotia.
S. G. Mason, Nova Scotia.
McMulkin & Sons & Ashley Coulter, New Brunswick.
Palmer & Williams, Prince Edward Island.
Walter Pinaud, Nova Scotia.
S. S. Rafuse, Nova Scotia.
Shelburne Shipbuilding Co. Ltd., Nova Scotia.
Silver's Agencies Ltd., Nova Scotia.
Smith & Rhuland, Nova Scotia.
J. A. Urquhart, Nova Scotia.
Vaughan Shipbuilding Co. Ltd., New Brunswick.
Wagstaff & Hatfield, Nova Scotia.
Laurent Berger, province of Quebec.
Canada Plycraft, province of Quebec.
Chantier Maritime du St. Laurent Ltee., province of Quebec.
J. A. Doucet, province of Quebec.
F. X. Lachance, province of Quebec.
Les Canots Cadorettes, province of Quebec.
Bordeur Bros. & Gould, Ontario.
Dawson Boat Works, Ontario.
Duke Boats, Ontario.
Gordon Boat Works, Ontario.
J. A. Grant & Sons, Ontario.
Greavette Boats Ltd., Ontario.
Grew Boats Ltd., Ontario.
Howard Furnace & Foundries Ltd., Ontario.
Hunter Boats, Ontario.
W. J. Johnson, Ontario.
MacCraft Co. Limited, Ontario.
McCall & Company, Ontario.
Midland Boat Works, Ontario.
Minett Shields, Ontario.
Morris Boat Works, Ontario.
Norse Boat & Ski, Ontario.
S. H. Perry & Son, Ontario.
Port Carling Boat Works, Ontario.
Peterborough Canoe Co., Ontario.
Rice Lake Boat Works, Ontario.
C. Richardson, Ontario.
J. J. Taylor & Sons, Ontario.
Armstrong Bros. Ltd., British Columbia.
Beach Avenue Shipyards, British Columbia.
A. C. Benson, British Columbia.
Dominion Construction Co., British Columbia.

McKenzie Barge & Derrick Co. Ltd., British Columbia.
Newcastle Shipbuilding Co. Ltd., British Columbia.
Prince Rupert Drydock Co. Ltd., British Columbia.
Star Shipyard (Mercer's) Ltd., British Columbia.
Vancouver Shipyards Ltd., British Columbia.
Victoria Motor Boat Co. Ltd., British Columbia.
A. J. Jones Ltd., British Columbia.

4. Government-owned outfitting yard operated by Anglo-Canadian Pulp & Paper Mills Ltd., Shipbuilding Division, province of Quebec.
Government-owned outfitting yard operated by Carter-Halls Aldinger Co. Limited, Ontario.
Government-owned outfitting yard operated by Canadian Comstock Co. Limited, New Brunswick.

5. Assuming that "these" refers to the yards spoken of in Question 1, the answer is:
Four, as follows:
Toronto Shipbuilding Company Limited, Ontario.
Quebec Shipyards Limited, province of Quebec, supervising the operations of Morton Engineering & Drydock Company, Geo. T. Davie & Sons Ltd., and the outfitting yard operated by Anglo-Canadian Pulp & Paper Mills Limited, Shipbuilding Division.
Government-owned outfitting yard operated by Carter-Halls Aldinger Co. Limited, Ontario.
Government-owned outfitting yard operated by Canadian Comstock Co. Limited, New Brunswick.

6. All other companies are privately owned. Names of directorates of each company are not known.

7. From such tentative figures as are available, it appears that the most expensive ship at United Shipyards Limited exceeded the cost of the most expensive ship in any of the privately-owned yards. Also it appears that later ships at United Shipyards Limited are not costing more than the cost in some privately-owned yards. See also the minister's statement on ship costs, pages 759, 760 and 761, daily *Hansard* of February 22, 1944.

8. Three yards have been building 4,700-ton ships. Two of these are privately-owned and operated and in the case of the third, the plant is owned by the government but operated by a private company on a fee basis. From tentative figures available it appears that the costs in the government-owned plant are higher than in the other two yards. We have reason to believe that later ships in the government-owned yard will not cost more than ships built at the same date in the privately-owned yards. It should be considered that the company operating the government-owned plant on a fee basis is producing these 4,700-ton ships in about one-half the number of days taken by the other two yards. See also the minister's statement on ship costs, pages 759, 760 and 761, daily *Hansard,* February 22, 1944.

9. The differential cannot now be determined. See answers to questions 7 and 8.

Note: It should be noted that the first six questions asked refer to *Votes and Proceedings,* page 776, dated the 26th of January, 1944, and have reference to yards employed on naval work only, and do not include any of the yards employed on cargo work. In the *Votes and Proceedings* the 14 yards are specifically mentioned as presently engaged on naval ships.

Questions 7, 8 and 9 refer to cargo ships being built in other yards, some of which are government-owned.

WHEAT USED BY MILLERS

Mr. ROSS (Souris):

1. How many bushels of wheat were used by millers of Canada during each of the years 1942 and 1943?
2. What was the actual cost per bushel to the miller?
3. What amount per bushel was taken care of by government subsidy in each year?
4. What is the government subsidy at present allowed per bushel for wheat used by millers?

Mr. MacKINNON (Edmonton West):

1. 1942—93,134,762 bushels; 1943—108,448,431 bushels.
2. No information.
3. Per bushel amount by months:

	Crop year 1942-43	
	Spring wheat Cents per bu.	Durum wheat Cents per bu.
August	11⅝	11⅝
September	12¼	14¼
October	12⅝	17⅝
November	13⅛	18⅜
December	13⅛	13⅝
January	13⅛	18⅝
February	13¼	26⅛
March	19⅞	37⅞
April	21⅝	31⅛
May	21⅝	32⅝
June	24⅛	32⅝
July	31⅞	36⅛

	Crop year 1943-44	
	Spring wheat Cents per bu.	Durum wheat Cents per bu.
August	33⅜	41¼
September	38½	46⅝
October	46⅝	52¼
November	47⅝	52⅝
December	47⅝	52⅝
January	47⅝	52⅝

N.B.—The above per bushel amounts are based upon the excess of the monthly average prices of No. 1 northern and No. 1 C. W. durum wheat in store Fort William-Port Arthur over the domestic ceiling price of 77⅜ cents per bushel. Payments have been made on 35,559,570 bushels of spring wheat and on 1,064,489 bushels of durum wheat in the 1942-43 crop year, and on 25,752,384 bushels of spring wheat and on 510,956 bushels of durum wheat to date in the 1943-44 crop year, with the January, 1944, payments still incomplete.

4. For spring wheat—47⅝ cents per bushel. For durum wheat—52⅝ cents per bushel.

HONEY

Mr. TUSTIN:

1. On what date did the wartime prices and trade board freeze the price of honey?
2. At what price was a ceiling placed on honey?
3. On what date did the wartime prices and trade board raise the price of honey by three cents?
4. Was the importation of bees prohibited, and if so, during what period, and what was the date of the order of prohibition?
5. By whose order and on whose advice were containers of rationed honey fixed at six ounces?
6. Has it been the custom of producers of honey to use 16-ounce containers, or multiples thereof?
7. Is it the intention of administrators of the wartime prices and trade board to discourage the sale of honey to consumers by producers?

Mr. ABBOTT:

1. Ceiling prices were established for honey:

(a) on December 1, 1941, except for sales made by primary producers to dealers, which sales were exempt from this ceiling.

(b) on September 14, 1942, by an order of the board, maximum prices were established covering all sales of honey.

This order was replaced by a subsequent order effective June 21, 1943.

2. Board orders No. 182 and No. 286 established a maximum wholesale price of:

(a) 12½ cents per lb. on extracted honey sold in bulk, and

(b) 14 cents per lb. on pasteurized honey.

3. There has been no increase in the price of honey in bulk as set out in the board's orders. Under the board's order, the maximum retail price to be charged by primary producers of bulk honey is the maximum wholesale price plus a mark-up of not more than 3 cents per lb.

4. No.

5. Extracted honey was included in the preserves ration by the wartime prices and trade board at 6 fluid ounces per coupon effective September 2, 1943.

Effective September 20, 1943, this coupon value was raised by the board to 12 fluid ounces, a level which was regarded as being satisfactory to move the balance of the crop available to be sold. (A substantial part of the crop had been sold before rationing began.) For the coming year when all of the honey crop will be subject to rationing, the coupon value has been established at 24 fluid ounces.

6. Yes.

7. No. Both the ceiling price regulations and the rationing regulations established by the Board have made adequate provision for direct producer-consumer sales. (See answers to questions 3 and 5).

CANADIAN WAR RECORDS OFFICE

Mr. ROSS (Souris):

1. Who was O.C. Canadian war records at Ottawa, January 1, 1940?
2. Who is now O.C. Canadian war records at Ottawa?
3. What was his previous address?
4. What was his previous war record?
5. How many men are employed on war record staff?
6. How many of this staff enrolled under National Resources Mobilization Act?
7. How many of these have been overseas on active service?

Mr. MACDONALD (Halifax):

1. A/Lieutenant-Colonel (now Colonel) W. E. L. Coleman, M.C., V.D.

2. A/Colonel C. L. Laurin, O.B.E., E.D.

3. A/Colonel C. L. Laurin, O.B.E., E.D., O.C., 1st Airfield Defence Battalion, Canada.

4. District Record Officer, M.D. 4, 5-9-39 to 30-3-40.
D.A.A.G., M.D. 4, 31-3-40 to 15-12-40.
D.A.A.G., N.D.H.Q., 16-12-40 to 7-7-41.
A.A.G., N.D.H.Q., 8-7-41 to 13-7-42.
O.C., Regiment de Chateauguay, 14-7-42 to 18-7-43.
Awarded O.B.E., June, 1943.
O.C., 1st Airfield Defence Bn., 19-7-43 to 13-10-43.
Director of Records, 15-10-43 to date.

5. Officers 25
Other ranks..... 295
Civilians (male)..... 39
359

6. 36 Other ranks.

7.

	War 1914-18	Present war
Officers	13	9
Other ranks.....	48	10
Civilians	..	1
	61	20

Note—Of the total, 5 Officers and 1 Other rank have served overseas in both wars.

ESQUIMALT DOCK YARD—POLE LINE DISTRIBUTION SYSTEM

Mr. MacINNIS:

1. Is there a pole line distribution system being installed in the naval dockyard at Esquimalt, British Columbia?

2. If so, when was the work commenced?

3. What is the cost of the work done, (a) material; (b) wages, from time of commencement to date?

Mr. MACDONALD (Kingston City):

1. Yes. A contract was arranged by the Department of Munitions and Supply with the B.C. Electric Company to bring a power line to the dockyard together with the supply of necessary transformers. The dockyard authorities are completing the necessary distribution system in the dockyard with dockyard employees and material purchased through Munitions and Supply.

2. 10th March, 1943.

3. (a) $47,933.51; (b) $6,945.60 (these figures include the contract above mentioned).

WHEAT BOARD—ADVISORY COMMITTEE

Mr. PERLEY:

1. How many meetings did the advisory committee to the Canadian wheat board hold during the year 1943, and where?

2. What remuneration and expense allowance was paid to each member for such meetings?

3. How often did the said committee meet with the Canadian wheat board officers during the year 1943?

Mr. MacKINNON (Edmonton West):

1. Four; two meetings in Winnipeg, one meeting in Regina and one meeting in Ottawa.

2.

	Honorarium	Subsistence	Travelling	Total
R. C. Brown	$ 160	$ 160	$ 141.05	$ 461.05
D. A. Campbell	—	110	345.89	455.89
F. A. Clendenning	190	190	182.30	562.30
Paul L. Farnalls	220	220	256.45	696.45
Lew Hutchinson	260	260	342.30	862.30
Jas. A. McCowan	180	180	200.95	560.95
Fred Pettypiece	190	190	293.74	673.74
R. C. Reece	100	60	126.70	286.70
J. Theo. Roy	60	60	142.43	262.43
A. C. Reid	—	80	158.45	238.45
J. H. Wesson	130	110	191.70	431.70
	$1,490	$1,620	$2,381.96	$5,491.96

3. On the occasion of each meeting.

AUDITOR GENERAL'S REPORT—REMISSIONS TO INSURANCE COMPANIES

Mr. KNOWLES:

For what reasons were amounts totalling $3,400 remitted to insurance companies, as indicated in item 29, on page 11 of the auditor general's report for 1942-43?

Mr. ABBOTT: Under the insurance acts of the dominion, annual statements are required to be filed by registered companies with the Department of Insurance not later than March first in each year, and a penalty of ten dollars is incurred for each day's default in compliance.

Since the outbreak of war, many companies, principally those with head offices overseas, have found it impossible, by reason of interrupted communication systems and shortage of man-power, to file their statements on time and penalties incurred have been remitted by order in council.

The amount of $3,400 was remitted to twenty-six companies.

AUDITOR GENERAL'S REPORT—PROFIT OF 40 PER CENT ON CONTRACT

Mr. KNOWLES:

Has adjustment or explanation been made with reference to a profit of 40 per cent on cost as disclosed by the cost audit on the contract referred to in item 163 on page 50 of the auditor general's report for the year 1942-43?

Mr. CHEVRIER: Yes.

OIL CONTROL—RENTAL OF SPACE IN SAINT JOHN

Mr. HANSON (York-Sunbury):

1. What space, if any, has been rented by the oil control, Department of Munitions and Supply, from J. Clark & Son, Limited, in the city of Saint John or elsewhere in the province of New Brunswick?

2. What rent is being paid for each such space, and what are the rental terms with respect to area, time, termination of rental contracts, improvements, heating, alterations and other like conditions?

3. Specifically, have the premises at 28 Germain street, Saint John, been rented from this company? If so, give full particulars of all material points of this contract.

Mr. FOURNIER (Hull):

1. The Department of Public Works leases from J. Clark & Son, Limited, for the oil controller of the Department of Munitions and Supply, space on the ground floor of building at 28-32 Germain street, Saint John, N.B.

2. Rent—$1,860 per annum. Floor area—2,500 sq. ft. Term: From April 1, 1943, until cessation of hostilities and thereafter on a monthly basis. Lessor attends to all repairs, taxes, water rates, and provides heating, cleaning of windows and toilet accommodation. Crown pays for lighting and cleaning.

3. See answers to Nos. 1 and 2.

RAILWAYS—USE OF SOLDIERS IN OPERATION AND MAINTENANCE

Mr. POULIOT:

How many soldiers have been used, (a) by the Canadian National Railways; (b) by the Canadian Pacific Railway, for the development, operation and maintenance of said railways, by virtue of an order in council made public in November, 1943?

Mr. MICHAUD: (a) 246; (b) 282.

MOTOR VEHICLES—LICENCES AND GASOLINE RATIONING

Mr. REID:

1. What was the number of motor licences issued in each province for the fiscal year 1943, for, (a) passenger cars; (b) commercial vehicles; (c) farmer's trucks?

2. What number of ration cards for gasoline have been issued during the present fiscal year and up to December 31, 1943, in each province, giving the number issued in categories A, B, C, D, E?

Mr. CHEVRIER:

1. The issuance of motor licences is a provincial jurisdiction and the number is not known to the department.

2. To December 31, 1943, gasoline ration books had been issued for the fiscal year 1943-44 in each province in the following categories.

	AA	A	B	C	D	E	A.R.P.	Cars on W.I.T.*	Commercial
Alberta	37,064	42,445	11,736	1,083	237	173	...	...	35,346

* Wartime Industrial Transit.

WELLINGTON BARRACKS, HALIFAX—GYMNASIUM

Mr. BLACK (Cumberland):

1. Has a gymnasium been provided at Stadacona, Wellington barracks, Halifax, Nova Scotia?

2. If so, (a) what are the names of those who tendered for this work; (b) to whom was contract let, and for what amount; (c) what is the size of the building and type of construction; (d) time for completion; (e) estimated cost complete with equipment?

[Mr. Abbott.]

Mr. MACDONALD (Halifax):

1. Yes, a building for physical training, gymnasium and swimming pool.

2. (a) Anglin Norcross Maritime Limited, Montreal, P.Q. Following is an extract from P.C. 10774 dated 26th November, 1942, "that in view of the close relation of this additional work to the work already being carried out at the site by the present contractor, it is

considered that such additional work can best be performed by the present contractor and that it is not practicable to call for tenders; that the contractor has accordingly been asked to quote on the additional work, and has submitted prices as follows." Copy of P.C. 10774 appears below.

(b) Anglin Norcross Maritime Limited, Montreal, P.Q., in the amount of $638,000 to be considered as a ceiling price as per P.C. 10774.

(c) Size of the building is 130' x 207' on side of which is swimming pool building 84' x 154'. Type of construction—concrete base with full brick wall which conforms with standard of building codes of Canada.

(4) Commencement date 1st March, 1943, estimated completion date 1st June, 1944, 76 per cent complete as at 15th February, 1944.

(e) Estimated cost complete without equipment $638,000. Cost of equipment, $7,582. Total estimated cost complete including the equipment, $645,582. The estimated cost of the equipment has not been approved and is subject to further review.

P.C. 10774

Certified to be a true copy of a Minute of a Meeting of the Committee of the Privy Council, approved by His Excellency the Governor General on the 26th November 1942.

The Committee of the Privy Council have had before them a report dated 26th November, 1942, from the Minister of Munitions and Supply representing that Order in Council P.C. 5051 of July 9, 1941 and subsequent amendments thereto, authorized entry into a contract, at a ceiling price of $5,342,015.00, with Anglin-Norcross Maritime Limited, Montreal, P.Q., covering the construction of certain buildings at the Naval Training Centre, Nelson Barracks, Halifax, N.S., required by the Department of National Defence (Naval Services);

That the Department of National Defence (Naval Services) has now requested the department to arrange for additional construction work necessary as a result of a decision to expand the said training centre, consisting of: (1) alterations to signals and asdic building; (2) guard house; (3) workmen's camps; (4) changes in power substation; (5) C.P. & P.O. building; (6) physical training centre; (7) additional sewer, water and road facilities; (8) additions to Block "A".

That in view of the close relation of this additional work to the work already being carried out at the site by the present contractor it is considered that such additional work can best be performed by the present contractor and that it is not practicable to call for tenders;

That the contractor has accordingly been asked to quote on the additional work, and has submitted prices as follows:

(1) Alterations to signals and asdic building	$ 80,743 00
(2) Guard house	106,088 00
(3) Workmen's camps	225,000 00
(4) Changes in power substation	8,250 00
(8) Additions to Block "A"..	3,000 00

That it is proposed to award the work for the above listed items on the basis of the prices quoted subject, however, to the provision that such prices are to be considered as ceiling prices and that in no event will the contractor be paid an amount greater than the actual cost of the work plus 5% of such cost. The actual cost will be determined in accordance with the terms of the original contract;

That the plans for the three remaining items are not yet complete so that it is not possible to obtain quotations for them. The estimated cost of such items is as follows:

(5) C.P. & P.O. Building	$621,887 00
(6) Physical training centre..	638,000 00
(7) Additional sewer, water and road facilities	300,000 00

That it is proposed to award the work for these three items on the understanding that the contractor will quote prices for them as soon as possible, which prices will then be considered as ceiling price, subject to the provision above described;

That it is proposed to cover the above additional work by an amendment to the existing contract;

That funds to cover the estimated additional expenditure of $1,982,968, are provided by Department of National Defence (Navy) Financial Encumbrance No. 5721 as amended October 27, 1942.

The committee, therefore, on the recommendation of the Minister of Munitions and Supply advise that authority be granted for an amendment to the said contract with Anglin-Norcross Limited in accordance with the foregoing.

A. D. P. Heeney,
Clerk of the Privy Council.

The Honourable
The Minister of National Defence.

TRAIL SMELTER—FERTILIZER—SUBSIDIES AND FREIGHT RATES

Mr. CRUICKSHANK:

1. How much fertilizer was sold during the year 1943 from the Trail plant of the Consolidated Mining & Smelting Company to firms in British Columbia?

2. What amount to each firm?

3. (a) What is the freight rate between Trail and Chilliwack on this product; (b) what freight subsidy is paid per ton between Trail and Chilliwack ?

4. What amount of subsidy was paid on fertilizer in federal ridings in British Columbia of last year?

Mr. GARDINER:

1. The details of business of individual companies are treated as confidential.

2. See answer to question No. 1.

3. (a) 27 cents per 100 lbs. or $5.40 per ton; (b) None, the freight subsidies on shipments to points west of the Cascades are based on Vancouver freights.

4. The records of subsidies paid in 1943 were not based on federal ridings. The breakdown of fertilizer subsidies paid in British Columbia in 1943 by provincial districts, was as follows:

	Tons	
Lower Mainland	1,785·6	$8,679 32
Vancouver Island	284·2	1,258 95
Cariboo	72·9	446 53
Kootenay	18·4	108 77
Interior	83·5	501 96
Central	1·9	14 34
	2,246·5	$11,009 87

UNEMPLOYMENT—BUILDING TRADES

Mr. NICHOLSON:

How many men in the building trades in each of the provinces of Canada were registered as unemployed on the most recent date for which statistics have been compiled?

Mr. MARTIN:

"Unemployed Men in the Building Trades as at February 11, 1944"

Skilled and Semiskilled Construction Trades

	1	2	3	4
	Registrants not yet referred to jobs	Referred to jobs but confirmation of placement not yet received	Total registered 1 plus 2	Requests for employees on hand and in process of being filled
Prince Edward Island..	21	4	25	4
Nova Scotia	184	41	225	345
New Brunswick	46	47	93	112
Quebec	1,426	587	2,013	1,039
Ontario	992	259	1,251	925
Manitoba	375	20	395	39
Saskatchewan	112	4	116	38

British Columbia	329	177	506	439
Canada	3,698	1,235	4,933	3,223

DEPARTMENT OF LABOUR—ANNUITIES—ACTUARIAL ASSISTANTS

Mr. KNOWLES:

1. What employees are now doing the work formerly done by the actuarial assistants in the annuities branch of the Department of Labour?

2. What are the duties of the actuarial clerks now in the employ of the annuities branch?

3. What are their qualifications?

4. What salary do they receive?

Mr. MARTIN:

1. Mr. C. D. Allen and Mrs. F. C. Davidson.

2. The duties of Mr. C. D. Allen consist of the immediate supervision of: The making of actuarial calculations, involving the costs of both past and future service and interviewing employers relative to proposed retirement annuity plans for employees; the annual valuations of retirement plans in force; actuarial calculations concerning withdrawals, deaths and retirements under group contracts and the issuing of individual contracts in connection therewith; correspondence on all matters affecting retirement annuity plans, office work and routine in connection with the foregoing.

The duties of Mrs. F. C. Davidson involve the making of actuarial calculations under individual contracts with respect to new or changing contracts, assisting in year-end valuation, the preparation of annual reports, financial statements and carrying on statistical and mortality investigations; assisting with actuarial calculations involving the cost of both past and future service respecting proposed retirement annuity plans for employees; assisting with the annual valuations of retirement annuity plans in force; actuarial calculations concerning withdrawals, deaths and retirements under group contracts.

3. Qualifications: Mr. C. D. Allen. (1) Graduation from Dalhousie university (B.A.) in mathematics and economics, (2) Passed three examinations of Actuarial Society of America, (3) Passed civil service grade four examination for university graduates, (4) First on eligible list, civil service competition for actuarial assistants (1943), (5) Five years experience in Annuities branch.

Qualifications: Mrs. F. C. Davidson. (1) Graduate of university of Manitoba (B.A.), specialization in Actuarial Science and Economics, (2) Three years experience in a division of the Actuarial department of the Great West Life Assurance Company, Winnipeg, (3) Passed three Life Underwriter examinations, 1940, (4) Three years experience with the government Annuities branch, (5) Placed on civil service grade 4 list, 1942, (6) Second in civil service competition for actuarial assistants, 1943.

4. Salary: Mr. C. D. Allen, $1,440 per year. War Duty Supplement, $120 per year. Cost of living bonus, $221.94 per year.

Salary: Mrs. F. C. Davidson, $1,320 per year. War Duty Supplement, $240 per year. Cost of living bonus, $221.04 per year.

E. P. TAYLOR

Mr. NICHOLSON:

1. What positions have been occupied by Mr. E. P. Taylor with the British, American and Canadian governments since the outbreak of war?

2. What are his present duties?

Mr. CHEVRIER:

1. Since the outbreak of war Mr. E. P. Taylor has occupied the following positions:

Canadian Government—Member, Executive Committee, Department of Munitions & Supply; Joint Director General, Munitions Production, Munitions & Supply; Executive Assistant to the Minister of Munitions & Supply; President, War Supplies Limited; Deputy Member for Canada, Combined Production and Resources Board; Canadian Chairman, Joint War Aid Committee, United States-Canada.

British Government—President and Vice Chairman, British Supply Council in North America; Director General, British Ministry of Supply Mission (formerly British Purchasing Commission).

2. None.

SELECTIVE SERVICE ADVISORY BOARDS—E. N. GRIGGS

Mr. KNOWLES:

1. Is there a set of employment and selective service advisory boards, national, regional and local, in operation on a voluntary basis? If so, when were these boards established?

2. Has there been established recently another set of selective service advisory boards on a salary basis? If so, under what date and by what authority?

3. In what way do the functions of the boards referred to in question (2) differ from those of boards referred to in question (1)?

4. What position does Mr. E. N. Griggs occupy in the government service? What salary is he paid by the government?

5. How many selective service regional advisory directors have been appointed, and what are their salaries?

Mr. MARTIN:

1. There are national and regional selective service advisory boards, also national, regional and local employment committees, all on a voluntary basis.

The national selective service advisory board was established by P.C. 2254, March 21, 1942.

The regional selective service advisory boards were established by P.C. 512, January 28, 1944.

The national employment committee was established September 23, 1941.

Five regional committees have been established by the unemployment insurance commission throughout the dominion.

Local employment committees, of which there are now forty-five, are established whenever the regional committee recommends their establishment or the local employment situation indicates that they are necessary.

2. & 3. See reply to question 1.

4. Mr. E. N. Griggs is regional director, national selective service, prairie region. His salary is $1,800 per annum.

5. Four regional directors, national selective service, have been appointed. Their salaries are as follows: Pacific regional director, $4,500 per annum; Prairie regional director, $1,800 per annum; Ontario regional director, $4,800 per annum; Quebec regional director, $4,800 per annum.

WINNIPEG STOCK MARKET—PRICES

Mr. DONNELLY:

1. What was the price for No. 1 choice butcher steers on the Winnipeg stock market on December 16, 1929; December 16, 1932, and December 16, 1943?
2. What was the price for calves, good and choice veal, on the Winnipeg stock market on December 16, 1929; December 16, 1932, and December 16, 1943?
3. What was the price of lambs, good handyweights, on the Winnipeg stock market on December 16, 1929; December 16, 1932, and December 16, 1943?
4. What was the price of sheep, good handyweights, on the Winnipeg stock market on December 16, 1929; December 16, 1932, and December 16, 1943?
5. What was the price of grade A hogs, dressed basis, delivered off trucks at yards and plants, on the Winnipeg stock market on December 16, 1929; December 16, 1932, and December 16, 1943?

Mr. MacKINNON (Edmonton West):

1. $9.25 to $9.50 per cwt.; $3.00 to $4.00 per cwt.; $11.50 to $11.75 per cwt.
2. $12.00 to $13.00 per cwt.; $5.00 to $6.00 per cwt.; $13.00 to $14.50 per cwt.
3. $8.00 to $10.50 per cwt.; $3.50 to $3.75 per cwt.; $10.75 to $11.00 per cwt.
4. $5.00 to $6.50 per cwt.; $1.75 to $2.00 per cwt.; $5.00 to $6.00 per cwt.
5. $14.00* per cwt.; $4.13* per cwt.; $16.30† per cwt.

*Bacon hogs converted to dressed basis.

†B-1 Grade A $1.00 per head additional at each date.

WARTIME HOUSING LIMITED—KINGSTON

Mr. CARDIFF:

1. What is the total of expenditure to date made by the government on the Wartime Housing Limited project at Kingston, Ontario?
2. How many houses have been built?
3. How many are now employed on the administrative staff?
4. Who are they, and what salary does each receive?

Mr. CHEVRIER:

1. $1,466,633.80, which covers the cost of 325 houses, a women's hostel and community buildings.
2. 325 houses.
3. There are eight employees on the administrative staff.
4.

	Per month
Mr. H. C. Nickle	$200 00
Miss M. Cook	117 50
Miss B. Miller	90 00
Miss E. Cleland	50 00
Miss M. Stringer	90 00
Miss J. Vey	80 00
Miss R. Reynolds	80 00
Miss E. Lamoreux	80 00

ESTEVAN R.A.F. FLYING SCHOOL

Mr. TRIPP:

1. What was the average number of men stationed at Estevan Royal Air Force service flying school during each month of 1943?
2. How much water was used at this school during the year 1943; at what cost, and was there any shortage?
3. How much electricity was used at this school during the year 1943, and at what cost?
4. How much coal was used during 1943, and at what cost?

Mr. MACMILLAN:

1. The average number of men stationed at No. 38 S.F.T.S., Estevan, during each month of 1943, was as follows:—

	Officers	Airmen	Total
January	99	1,165	1,264
February	95	1,158	1,253
March	96	1,176	1,272
April	99	1,199	1,298
May	97	1,172	1,269
June	96	1,110	1,206
July	95	1,094	1,189
August	111	1,089	1,200
September	126	1,082	1,208
October	129	1,070	1,199
November	129	1,067	1,196
December	124	1,083	1,207

2. 32,867,870 gallons of water were used at the school during the year 1943 at a cost of $5,916.23 and there was no water shortage during the year.
3. The consumption of electrical energy during the year was 1,340,671 k.w.h., at a cost of $21,708.90.
4. Estevan, 8,692 tons coal, cost, $33,546.25; R. I. Outram, 335 tons coal, cost $1,457.75. Total, 9,027 tons coal, cost $35,004.

REGIONAL OIL CONTROLLER—VANCOUVER

Mr. SINCLAIR:

1. Who is the regional oil controller in Vancouver?
2. What salary is he paid?
3. On whose recommendation was he appointed?
4. What previous experience had he, (a) in the oil business; (b) in any capacity which entailed serving the public in a tactful and courteous manner?

Mr. CHEVRIER:

1. Major Phillip A. Curry.
2. $5,000 per annum.
3. Appointed by order in council P.C. 26/1038, February 9, 1942, on the recommendation of the oil controller, The Deputy Minister and the Minister of Munitions and Supply.
4. (a) None; (b) Major Curry's business experience is as follows: 1907-1910, White Star Line, London, England; 1910-1914, White Star

Line, New York, U.S.A.; 1914-1916, the British army: (Wounded at Ypres and decorated with the Mons Star, British O.B.E., and the United States D.S.M.); 1917-1919, The British Ministry of Shipping, New York, U.S.A.; 1919-1938, the White Star Line, Montreal, P.Q. (general manager); 1938-1941, British Pacific Properties and First Narrows Bridge Co., Vancouver, B.C. (general manager); May to December, 1941, North American Life Assurance Co.

ALCOHOLIC LIQUORS

Mr. NICHOLSON:

What were the estimated quantities produced and consumed in Canada in the years 1933, 1939 and 1943 of, (a) spirits; (b) malt liquors; (c) beer; (d) wine?

Mr. MacKINNON (Edmonton West): Quantities of spirits, malt liquors and wines produced and consumed in Canada in the years 1933, 1939 and 1943:

	1933	1939	1943
Production—		(Fiscal years)	
(a) Spirits ..... proof gal.	4,345,834	9,642,830	19,657,698*
(b) Malt liquors ..... gal.	40,664,625	63,331,620	108,980,613
(c) Beer (included in malt liquors—separate data not available).			
	1933	1939	1943
(d) Wine—		(Calendar years)	
1. Produced during the year but placed in storage for maturing ..... gal.	1,920,587	3,998,232	4,352,403
2. Ferment wine bottled or sold in bulk..... gal.	2,718,530	3,424,668	4,612,892
	1933	1939	1943
Apparent consumption (estimated)—		(Fiscal years)	
(a) Spirits ..... proof gal.	1,497,669	3,433,664	4,903,023
(b) Malt liquors ..... gal.	40,814,971	63,302,752	97,610,326
(c) Beer (included in malt liquors—separate data not available).			
(d) Wine ..... gal.	3,148,191	3,461,867	4,627,567

* This includes industrial alcohol produced for war purposes.

PURCHASE OF PROPERTY IN PORTSMOUTH, ONT.

Mr. CARDIFF:

1. Has the government acquired the property known as Calderwood, at Union St., in the village of Portsmouth, Ontario?
2. If so, when, and what was the purchase price?
3. To whom is the property leased at the present time?
4. What is the period or term of the present lease?
5. Who is occupying the property at the present time?
6. What rent is being paid per month for this property?
7. Is this property suitable for government purposes?
8. If not, why?

Mr. FOURNIER (Hull):

1. Yes.

2. Property purchased in 1919 for $15,000.

3. 10·24 acres of property with building thereon leased to and occupied by W. Rupert Davies, remainder used by Department of Justice for quarry purposes in connection with penitentiary.

4. Five years from September 1, 1943.

5. Answered by No. 3.

6. $25 a month, lessee to pay all repairs and upkeep of property, as well as taxes and local improvements.

7 and 8. Property was purchased for military hospital purposes and used for approximately one year, after which it was occupied by the Department of National Defence until 1926. Since then the property has not been found suitable for any existing government purpose.

COLD STORAGE—KINGSTON

Mr. CARDIFF:

1. What is the total amount paid by the dominion government for cold storage purposes in the city of Kingston, Ontario?
2. To whom were these grants paid?
3. On what dates were they paid?

Mr. GARDINER:

1. $3,921.55.

2. Kingston Cold Storage, Kingston, Ontario.

3. August 29, 1940; June 26, 1941; August 24, 1942; October 4, 1943.

NATIONAL INCOME—PROFITS OF INCORPORATED COMPANIES, ETC.

Mr. MacINNIS:

For each of the years 1938 to 1943 inclusive, what was: 1. (a) national income at factor cost; (b) gross national product; (c) total of income payments to individuals?

2. (a) Total of income paid out in salaries and wages; (b) total of payments to men and women in the services, and whether same is included in 2 (a); (c) total net income of enterprises, (i) agricultural; (ii) other?

3. Total investment income?

4. Total profits of incorporated companies?

5. (a) Total of undistributed profits of said companies; (b) total of depreciation and other reserves of said companies?

Mr. MacKINNON (Edmonton West):

1. (a)

1938	$4,291,158,000
1939	4,553,662,000
1940	5,404,154,000
1941	6,500,000,000
1942	7,500,000,000
1943 (Estimated)	8,800,000,000

(b)

1938	$5,226,816,000
1939	5,498,997,000
1940	6,383,022,000
1941	7,585,919,000
1942	8,694,578,000
1943 (Estimated at)	10,140,000,000

(c)

1938	$4,133,618,000
1939	4,344,216,000
1940	4,944,284,000
1941	5,873,429,000
1942	7,090,068,000
1943	Unavailable

2. (a)

1938	$2,454,348,000
1939	2,604,519,000
1940	3,081,980,000
1941	3,812,884,000
1942	4,806,326,000
1943	Unavailable.

(b)

Pay and allowances, clothing, personal equipment and rations of armed forces serving in Canada. Fiscal year ended March 31, 1940; $50,120,000. Fiscal year ended March 31, 1941, $199,883,000. Fiscal year ended March 31, 1942, $306,480,000. Fiscal year ended March 31, 1943, unavailable. These computations are included in 2 (a).

[Mr. Gardiner.]

(c) Computation in course of revision.

3.

1938	$622,873,000
1939	644,939,000
1940	660,742,000
1941	749,929,000
1942	Unavailable
1943	Unavailable

4. Profits of 628 large incorporated companies as published in October-November number 1943, of statistical summary of the Bank of Canada:

1938	$268,700,000
1939	327,800,000
1940	337,000,000
1941	379,900,000
1942	379,400,000
1943	Unavailable

5. (a) Undistributed profits of said companies as published in October-November number 1943, of statistical summary of the Bank of Canada:

1938	$ 19,000,000
1939	88,000,000
1940	98,000,000
1941	141,000,000
1942	127,000,000

5. (b) Total of depreciation, deferred development and patent write-offs as published in October-November number 1943, of statistical summary of the Bank of Canada:

1938	$124,000,000
1939	135,000,000
1940	162,000,000
1941	206,000,000
1942	264,000,000
1943	Unavailable

METALS CONTROL—ALUMINUM

Mr. ROSS (St. Paul's):

1. How many permits or releases have been issued or granted by the metals controller, under "Order No. M.C. 44, Aluminum", for the use, delivery, transfer or sale of basic aluminum, or wrought aluminum, or aluminum products, between March 6, 1943, and January 31, 1944; and to whom were such permits and releases issued?

2. How many reports have been filed with the metals controller under the provisions of section 6 of Order No. M.C. 44?

Mr. CHEVRIER:

1. (a) Number of releases, 6,175; (b) Number of users, 642. It is not the policy of the Department to give names of citizens or firms to whom permits or releases have been issued.

2. 3,711.

FIFTH PAN-AMERICAN HIGHWAYS CONFERENCE—PERU

Mr. FRASER (Peterborough West):

1. Has Canada accepted the invitation of Peru to send representatives to the fifth Pan-American highways congress to be held July 15-25?

2. If so, who will represent Canada at this congress?

Mr. MACKENZIE KING:

1. To date no official invitation has been received.

2. Answered by No. 1.

JAPANESE NATIONALS IN BRITISH COLUMBIA—EMPLOYMENT IN FORESTS ON CROWN LANDS

Mr. ROSS (St. Paul's):

1. Does order in council P.C. 1422, dated 23rd day of February, 1943, override the authority of the statutes of the province of British Columbia?

2. Does the said order P.C. 1422 of 1943 authorize the employment of persons of Japanese origin in the forests on crown lands held in the right of the province of British Columbia?

3. If so, how many persons of Japanese origin have been so employed?

Mr. MARTIN:

1 and 2. Order in council P.C. 1422 provides: "From and after the date of this order and for the duration of the emergency created by the present war no statute of the province of British Columbia and no order in council made pursuant to any such statute or otherwise and no term or condition contained in any contract, lease, licence or concession or other instrument shall operate to disqualify or prohibit any person of Asiatic racial origin, wherever born, from employment in any capacity in the timber industry in the province of British Columbia and no one employing any such person in any such capacity in the timber industry in the said province shall, by reason of any provision in any such statute, order in council, contract, lease, licence, concession or other instrument, be subject to any penalty, forfeiture or other liability."

3. Approximately 1,200 persons of Japanese origin are employed in British Columbia woods operations on production of lumber, fuelwood, etc. The department has no means of knowing how many of these are working for employers carrying on operations on crown lands as distinct from privately-owned lands.

SELECTIVE SERVICE—FARM WORKERS

Mr. REID:

What steps have been taken by the Department of Labour to ensure a more effective application of the national selective service regulations designed to retain workers on the farm?

Mr. MARTIN: Changes have been made in both the civilian and mobilization regulations for making more effective the policy of stabilizing employment in agriculture and steps have been taken to ensure improvement in the administration of this policy.

The original national selective service civilian regulations (order in council P.C. 7595, August 28, 1942), permitted men from farms to work outside of agriculture for not more than 30 consecutive days without securing a permit from an employment and selective service office. This meant that a farmer could accept non-agricultural employment for several periods during the year not exceeding thirty days each without having to obtain a permit.

An improvement in this regulation was effected in the amendment to the national selective service civilian regulations (order in council P.C. 246, January 19, 1943). This amendment dropped the 30 consecutive day provision and replaced it with a clause, stating that farm workers could not accept employment outside of agriculture without securing a permit if that employment were taken in an urban centre of over 5,000 population. They were allowed to take employment outside of agriculture for 60 days in a calendar year without obtaining a permit when such employment was not in an urban centre of over 5,000 population, but only at such periods when they could be spared from the farms.

Several circulars have gone out to employment offices emphasizing the necessity for keeping men on the farms, containing specific instructions that regulations designed to accomplish this were to be rigidly enforced.

In the spring of 1943 men with practical experience and training in agriculture were appointed as agricultural employment advisers in the different regions. One of their jobs is to keep the local employment offices constantly informed of farm labour requirements and to see that regulations governing employment in agriculture are fully understood and effectively carried out by the local offices.

When the national selective service policy was introduced in March, 1942, an important change was made in the mobilization regulations so that these regulations would conform to the general policy of retaining essential man power on farms. This change included a special provision for the postponement of military training for farm workers, as distinct from the method to be used in granting postponements for men in all other industries.

Reference has already been made in the house to the interpretative letter which was sent in February, 1943, by the director of national selective service to the chairmen of all the mobilization boards. This letter dealt exclusively with the problems of farm labour. The letter emphasized the shortage of labour

for the farms, the urgent need for retaining essential man power on the farms, and the special status of farm workers under the regulations. The including of a special provision for postponing farm workers followed by the letter to the boards has resulted in more favourable consideration by all boards of farmers' applications for postponements. The percentage of applications which are not granted is now very small.

All mobilization boards make use of information collected on a farm questionnaire for each man applying for a postponement. This information provides full details of the extent of his farming operations, and any special circumstances which may influence the decisions of the boards.

The mobilization boards are using to an increasing degree, provincial departments of agriculture field staffs and local committees for securing reports on the essentiality of farm workers who apply for postponement. This coordination was given an added impetus this past summer when meetings organized by the Department of Labour were held with the different mobilization boards and the interested provincial and regional selective service officials. The object of these meetings was to discuss all aspects of the farm labour problem with a view to determining where the farm labour organizations might be helpful to the boards and the boards might be helpful to the farm labour organizations, and to secure the most effective use of men postponed as essential agricultural workers. This has resulted in a considerable transfer of farm workers to other farms requiring help, when after investigation, of their applications for postponement, such men were not found to be needed on their own farms.

DOMINION-PROVINCIAL FARM LABOUR AGREEMENTS —LABOUR TRANSFERS

Mr. BLANCHETTE:

In the detailed arrangements developed for the large scale transfers of farm labour organized under the dominion-provincial farm labour programme, were any provisions included for, (a) the dominion and the province concerned paying medical and hospital expenses incidental to sickness or accident suffered by an individual as a direct result of his participation in the labour transfer; (b) refunding a portion of the railway fares of men who, having failed to obtain transportation warrants which would have enabled them to travel largely at government expense, paid their own way, and later made application to be reimbursed?

Mr. MARTIN: (a) In the dominion-provincial farm labour agreements a provision was included for defraying the costs by equal contributions of the province concerned and the dominion of medical and hospital expenses incidental to accidents suffered by workers specially recruited for employment on farms.

The provision was to apply to workers not normally employed in agriculture and where the accidents occurred as a direct result of their farm employment or while travelling to or from such employment.

This provision is being extended to pay the costs of medical and hospital expenses for certain cases of accidents or sickness incurred by men who participated in the organized farm labour excursions, even though such men were normally employed in agriculture. Such accidents or sickness must have occurred while the men were engaged in farm employment for which the labour transfer was organized, or while in transit to or from the place of employment. All cases were fully investigated by the province before recommending that the expenses should be paid. Requests for payments of medical or hospital expenses were made by the individuals concerned to the government of the province where they were employed.

(b) A number of applications for refunds have been received from men who claimed to have participated in an organized labour transfer, but paid their own transportation expenses when, through some misunderstanding or other reason, they failed to secure transportation warrants. Each application was considered on its own merit.

Wherever the circumstances showed a genuine misunderstanding of the procedure to secure a transportation warrant or other reasonable explanation, arrangements are being made for refunds to be paid. A few cases have been refused which showed an obvious disregard of the procedure or regulations governing the labour transfer.

MOBILIZATION ACT—FARM WORKERS

Mr. HENDERSON:

When farm workers apply for postponement of military training, what is done by the mobilization boards to satisfy themselves that such men are or are not essential to agriculture?

Mr. MARTIN: Questionnaire forms are sent to the man in order to ascertain his essentiality to agriculture. The registrar also uses the services of the provincial agricultural representatives and R.C.M.P. He also requests the advice of the representative of agriculture attached to the mobilization board.

FARM WORKERS IN ESSENTIAL INDUSTRIES

Mr. McIVOR:

In the recruiting campaign organized last fall to encourage farm workers to accept winter employment in other essential industries, what was done, (a) to prevent men leaving live stock and dairy farms where they were needed during the winter; (b) to ensure that all farm workers would return to agriculture in time for spring work?

Mr. MARTIN: (a) In the campaign conducted last fall to encourage farm workers who could leave the farms for the winter, to accept employment in other essential industries specific steps were taken to see that only those left who could be spared. This recruiting was carried out in cooperation with provincial agricultural fieldmen and local committees. Local employment and selective service offices were asked to clear with these provincial people as to whether farm workers for whom permits were being requested could be spared from their farms, before issuing these permits to work outside of agriculture.

We recognize that this procedure did not prevent some from leaving agriculture who should have remained, but during the past winter hundreds of farm workers who would like to have left the farms for the winter, were prevented because it was learned that they were needed on the farms the year round.

(b) All permits issued to farm workers recruited in the campaign were marked to expire April 1. It was agreed with the provinces that this date might be extended for those farm workers from areas where spring work might be backward owing to weather conditions. Regional superintendents have now been sent general instructions regarding the development of procedure in their respective regions for a systematic cancelling of these permits when men are needed back in agriculture. They have been asked to consult with provincial agricultural authorities as to the dates when men should be back in specific areas. Action will then be taken to cancel the permits of farm workers so that they will be released from their temporary employment to return to the farms on those dates. Definite instructions are being issued to local employment offices for a rigorous checking to see that farm workers are released on the dates when permits are cancelled. Provincial government representatives are being asked to advise when men return to agriculture in the areas from which they were recruited. This will act as a double check on men getting back to the farms.

PENSIONS AND NATIONAL HEALTH—WELFARE BRANCH, QUEBEC PROVINCE

Mr. GAUTHIER:

1. Since the 1st of November, 1941, how many persons have been appointed to the welfare branch of the Department of Pensions and National Health, in the province of Quebec to aid in the civil reestablishment of soldiers?

2. What are their names, place of residence and occupation?

3. Have they served, (a) in the war of 1914 to 1918; (b) in the present war?

Mr. MACKENZIE (Vancouver Centre):

1. Fifteen.

2 and 3:

Name—Address—Occupation—War Service

Desjardins, L. H., 1010 St. James W., Montreal, Que., Veterans' Welfare Officer, grade 3, 1914-1918.

Bell, H. M., 205 Gohier, Montreal, Que., Veterans' Welfare Officer, grade 3, 1914-1918.

Bourgault, J. A., St. Louis de Bonsecours, Que., Veterans' Welfare Officer, grade 2, 1914-1918.

Brown, J., 3469 Hutchinson, Montreal, Que., Clerk, grade 4, 1914-1918 and present war.

Driscoll, W. S., 3564 Hutchinson, Montreal, Que., Clerk, grade 3, 1914-1918.

Verdon, R., 21 Dufferin, Granby, Que., Clerk, grade 3, present war.

Bourque, R. L. J., 2 St. Marguerite Rd., Montreal, Que., Clerk, grade 2, present war.

Haig, D., Philipsburg, Que., Clerk, grade 2, present war.

Klein, Miss E., 5214 Hutchinson, Montreal, Que., Stenographer, grade 2.

Moquin, Miss H., 3464 St. Denis, Montreal, Que., Typist, grade 2.

Lebeau, Mrs. J. A., 7651 Lasalle Blvd., Lasalle, Que., Typist, grade 2.

Poirier, Miss G., 3298 Verdun Ave., Verdun, Que., Stenographer, grade 2.

Ferland, L., 12407 Notre Dame des Anges, Cartierville, Que., Veterans' Welfare Officer, grade 1, 1914-1918.

Guay, Miss R., 99 Bourlamaque, Quebec, Que., Stenographer, grade 2.

Piegay, Miss J., 44 Marguerite Bourgeois Ave., Quebec, Que., Stenographer, grade 2.

*ROSARIO MESSIER

Mr. LECLERC:

1. Is Mr. Rosario Messier an employee of the dominion government in Ottawa?

2. If so, what are his duties?

Mr. McLARTY:

1. No.

2. Answered by No. 1.

QUESTIONS PASSED AS ORDERS FOR RETURNS

NAVAL SERVICES—OFFICERS

Mr. GILLIS:

1. What is the present total number of permanent force naval officers in the Canadian navy?
2. What is the present total number of permanent force naval officers in the Canadian navy of the rank or lieutenant or over?
3. What percentage of the latter (2) have gone to sea in the present war for a period of six months or more?
4. What is the present total number of reserve naval officers in the Canadian navy of the rank of lieutenant or over?
5. What percentage of such officers have gone to sea in the present war for a period of six months or more?
6. What percentage of the total permanent naval officers have been decorated or cited?
7. What percentage of the total reserve officers have been decorated or cited?
8. Why is the outward distinction between permanent and reserve naval officers preserved?
9. What proportion of the total enlisted navy personnel are regularly at sea?

Mr. MACDONALD (Kingston City): Return tabled.

POSTER "COAL FIGHTS FOR CANADA"

Mr. BENCE:

1. How many copies of the poster "Coal Fights for Canada", issued by the Department of Labour, have been printed?
2. How many of such posters have been distributed?
3. What is the size of such poster?
4. How many photographs were used in the making up of such posters?
5. What was the total cost incurred in the preparation of the said poster?
6. What is the purpose of such poster?

DOMESTIC FUEL—IMPORTS AND SUBSIDIES

Mr. CASTLEDEN:

1. What was the total tonnage of domestic fuel imported from, (a) United States; (b) Great Britain, to Quebec and Ontario during 1942 and 1943?
2. What was the total amount paid in federal subsidies to the importers of domestic fuel from, (a) United States; (b) Great Britain, to Quebec and Ontario during each of the years 1942 and 1943?

DOMESTIC FUEL—PRICES, WAGES, ETC.

Mr. CASTLEDEN:

1. What was the total tonnage of production of domestic fuel in Nova Scotia, Saskatchewan and Alberta, during each of the years 1942 and 1943?
2. What was the total production subsidy paid on this domestic fuel during each of these years?
3. What per day wage increases were granted to coal miners in each of these provinces during 1942 and 1943?

4. What is the average man-day production in each of these provinces?
5. What increases in retail prices of domestic coal were permitted in Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and Alberta during each of the years 1942 and 1943?
6. What is the retail price per ton of each type of domestic coal in Halifax, Montreal, Toronto, Hamilton, Fort William, Winnipeg, Regina, Moose Jaw, Saskatoon, Yorkton, Calgary, Edmonton, as at February 29, 1944?

IMMIGRATION

REFERENCE TO ANSWER TO QUESTION ON FEBRUARY 11

On the orders of the day:

Mr. FREDERIC DORION (Charlevoix-Saguenay): I should like to direct a question to the Minister of Mines and Resources. On January 27 I asked the government a question, recorded in *Votes and Proceedings* of that day, which reads as follows:

How many immigrants entered Canada in each of the years 1940, 1941, 1942 and 1943?

An answer was given on February 11. I quote from *Hansard*, page 370.

Calendar year	Number
1940	11,324
1941	9,329
1942	7,576
1943	8,504

That is a total of 36,733. A few days ago I received the annual report of the Department of Mines and Resources. I see at page 177 some figures which are not in accordance with the ones given to me in answer to my question. The figures mentioned in this annual report as regards the number of immigrants who entered Canada during the same years are as follows:

1940	16,205
1941	11,496
1942	8,865
1943	7,445

That makes a total of 44,011; that is to say, a difference of 7,278. I should like to know which of these figures is the correct one and if necessary the figures in *Hansard* of February 11 should be corrected.

[*Later*]

Mr. CRERAR: As a matter of fact both the statements to which the hon. member refers were correct. His question was based on the calendar years and the answer was given accordingly. The departmental report deals with the fiscal years, from April 1 to March 31, and the figures disclosed there did not coincide with the basis upon which his question was framed. I simply wish to make this explanation for the information of the hon. gentleman.

WHEAT

AMENDMENT OF REGULATIONS RESPECTING DELIVERY QUOTAS

On the orders of the day:

Mr. T. F. DONNELLY (Wood Mountain): Some time ago the Minister of Trade and Commerce announced in the house that he expected to increase the quota for western wheat to eighteen bushels to the acre. When does he expect to do it?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Before coming into the house I received word that the raising of the quota from fourteen to eighteen bushels is going into effect as from to-day. That does not mean that the quota will be raised from fourteen to eighteen bushels at all points, but at those points where it is possible to raise it.

Mr. CASTLEDEN: Will cars be made available for taking out the fourteen-bushel quota before the moving of this new seventeen-bushel quota?

Mr. MacKINNON (Edmonton West): The matter of handling grain quotas is being dealt with from the point of view of the needs of the individual community. I cannot answer yes or no to this question, but cars are handled on the basis of placing them at those points where it is impossible to deliver the established quota.

LABOUR CONDITIONS

UNEMPLOYMENT IN ALBERTA COAL MINING AREAS

On the orders of the day:

Mr. C. E. JOHNSTON (Bow River): Last Tuesday I raised a question in regard to the unemployment situation in the west. Would the minister care to reply to-day?

Hon. HUMPHREY MITCHELL (Minister of Labour): I can do that. My hon. friend will appreciate that the time ran out at eleven o'clock when the hon. member for Macleod (Mr. Hansell) concluded his statement. The situation with regard to the coal industry in the west was brought to the attention of the house. It is quite true that we have had a difficult problem in the west, brought about largely by the unusual weather conditions prevailing on the prairies this past winter. I think that might be said generally throughout the country. I have a vivid recollection of the hon. member for Bow River rising in his place last session and saying that we had no organization to meet a possible shortage of fuel in the west this winter. In the light of what has taken place, I think it can be said that we were not only prepared but overprepared, having regard to weather conditions, to meet the fuel situation in western and eastern Canada this year.

Mr. JOHNSTON (Bow River): Providence helped you out that time.

Mr. MITCHELL: I will give Providence some credit but not my hon. friend. In June of last year an emergency existed in the production of an adequate supply of fuel and the government found it necessary to pass new regulations in an effort to direct back to employment in coal mining experienced miners who had taken up employment in other industries. Our efforts in that direction were largely successful. We arranged for the return to the mines of practically every experienced coal miner fit for such employment. We also had the full cooperation of the Department of National Defence in granting leave to ex-coal miners so that they could assist in the emergency. We planned on the basis of an average winter on the prairies and elsewhere, and the mild weather conditions prevailing during the past several months have changed completely the usual fuel requirements, especially the requirements for domestic fuel.

During the past several weeks a number of operators in the domestic fields have laid off men when they no longer had orders for their coal.

My hon. friends will understand why much of that coal, particularly Alberta coal, cannot be piled. It deteriorates, falls to pieces. It is not like Nova Scotia coal.

Mr. MacNICOL: It disintegrates.

Mr. JOHNSTON (Bow River): It is good coal.

Mr. MITCHELL: May I say to my hon. friend that he will need more than Providence when he comes to put some of his monetary theories into operation.

An hon. MEMBER: It is taking a long time.

Mr. MITCHELL: Exactly. Recently representatives of the fuel controller and national selective service met in Calgary in order to try to find a solution to the very real problems arising out of the reduced production of domestic fuel in Alberta. We are attempting, in so far as possible, to transfer men from the domestic fields to the bituminous fields, but the movement in that direction has not yet been large, because there is also a falling-off in the man-power requirements of the bituminous coal operators.

A limited number of the soldier miners will be returning to their army units. Very shortly a considerable number of men ordinarily engaged in agriculture, but temporarily employed in coal mining, will be returning to the farms. That is the normal shift from agriculture to coal mining in western Canada. Each of these factors will have their influence on alleviating the difficulties being encountered at present, but probably these steps alone will not be sufficient to solve the entire problem.

The member for Bow River was apparently given to understand that men receiving only part-time employment are not permitted to seek other employment. That information is not correct. Through our regional superintendent at Winnipeg we issued instructions, some weeks ago, which had the effect of relaxing the freeze of employment in coal mining in the domestic coal fields. Local selective service offices in the areas affected have been instructed that, on request of an applicant who is not receiving at least four days' work per week and for whom there is not a vacancy in the bituminous fields, a permit may be granted to enter other high priority employment. I can assure you, Mr. Speaker, that we do not propose to freeze a man in employment in coal mining if he is not getting at least four days' work each week.

It was pointed out that we are importing coal from the United States into eastern Canada. That is quite so, and I would say that there are real and practical difficulties in the matter of making western coal available for consumption in the east. The principal difficulty is, of course, transportation. Our transportation facilities are now heavily taxed. I assure my hon. friend that we realize the seriousness of the present situation and that we are taking every possible step to relieve the situation as quickly as possible. It should be understood that transfers of men from one place of employment to another, perhaps a considerable distance away, does require some time. There are special difficulties involved in attempting to effect transfers of married persons with dependents. I should like to say also that care must be taken to assure that there is not too great a dispersal of miners from the area in question. We must bear in mind that we must produce coal for the winter of 1944-45. It may be that we shall not be as lucky next winter so far as weather is concerned.

Mr. HANSON (York-Sunbury): May I call the minister's attention to one fact arising out of the use of miners in this way? Under the regulations of the Department of National Defence a soldier released for mining duty is, I am informed, obliged to report at the end of a certain period, say six months, to be boarded again, if that is the right expression. It takes two months to get him boarded in and boarded back, and in the meantime his production is lost. That is the experience in the Minto area. Will the minister look into that?

Mr. BLACKMORE: May I ask the minister a supplementary question? As he read rather rapidly I am not sure I followed what he said. I gathered that he conveyed to the house the information that any miner who was not able to receive at least four days' work per week in the mines would be granted permission to take employment in some other high priority industry. Suppose he had not the opportunity to take employment in a high priority industry, but had an opportunity to take employment in another kind of industry, what would be the position?

Mr. MITCHELL: That would depend on the conditions in the particular locality to which the miner wanted to move. I would say that as soon as the snow goes away in Alberta one of the highest priority industries will be farming. There has always been a swing from coal mining to farming in the spring months, and I assume a large number of these men who normally go into the mines in the winter will go on the farms in the summer season.

INDUSTRIAL DEVELOPMENT BANK

PROVISION OF ADDITIONAL CREDIT FACILITIES FOR FIXED AND WORKING CAPITAL

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance) moved the second reading of bill No. 7, to incorporate the Industrial Development bank.

He said: Mr. Speaker, I regret, and I am sure the house regrets, that the Minister of Finance is not able to be here on the second reading of this important bill. He has to be in Washington this week, and is not in Florida, as reported in certain newspapers. The government is anxious that this bill should receive second reading and be sent to the banking and commerce committee as soon as possible.

As I said on the first reading, the introduction of this bill to provide for the establishment of an industrial development bank represents one part of the government's programme to prepare the way for a high level of employment and income after the war. In considering the present bill I

hope that hon. members will keep in mind that in due course the government will be proposing other measures designed to provide financial assistance in other fields of activity such as agriculture and housing.

If we are to maintain employment and income after the war we must envisage a high level of industrial activity in Canada, employing many of those now engaged in war work or in the armed services. That objective will require considerable industrial development. There are war factories now turning out material for the destruction of the enemy to be converted to peacetime uses. There are existing plants producing civilian goods to be modernized and expanded to meet the demands which will exist for their products after the war. There are new industrial facilities to be provided to utilize the new products and techniques which have been developed during the war.

This industrial development must be financed. Undoubtedly the cash resources of industry, including refundable taxes, have risen in recent years and will be used to finance part of the expenditures I have just mentioned. But industry's own resources may be far short of the total amount of financing required. It is therefore in the national interest to ensure that such additional financing as may be necessary and desirable will be available to industrial enterprises.

A brief review of existing facilities to provide credit for Canadian industry will, I think, serve to show that in certain respects these facilities do not provide and cannot reasonably be expected to provide all the industrial financing which will be necessary in post-war years.

The chartered banks are one source of credit for industrial enterprises. But since the liabilities of these banks are mostly in the form of deposits withdrawable on demand or short notice, it has always been thought desirable that they should keep their assets in rather liquid form—easily realizable in case of need. The wisdom of following this policy has been amply demonstrated in the past by the experience of other countries which have pursued a different course. For the reason I have just mentioned, the chartered banks for the most part have made short term loans to industry—loans which in the ordinary course of business can be paid off in full at least once a year. Accordingly, they have been most important as a source of working capital for industry rather than as suppliers of long term funds which might only be repaid over a period of several years. This appears to be a sound policy and the government would not expect the chartered banks to embark on a large-scale programme of medium and long term credit to industry.

Industrial enterprises requiring funds which might not be appropriately provided by banks are at present pretty much dependent on the investment market. In other words they must seek to make a public issue of bonds or stock. The availability of funds from this source is subject to a number of limitations. The name and financial record of the issuer must be such as to attract the investing public. The amount of money required must be sufficient to justify the overhead expense of making any public issue of securities. Finally, the attitude of the public towards securities already on the market must indicate that a new issue would get a favourable reception. Small business is particularly affected by such limitations.

If an industrial enterprise requires financial assistance for more than a year or thereabouts and a public issue of security is not feasible for one or more of the reasons I have mentioned—then there is a good chance as things stand now that it will have considerable difficulty in raising money although the project itself may be basically sound. It is to fill this gap in our financial structure and to ensure that adequate financing is forthcoming for desirable projects that the government proposes to establish the Industrial Development Bank.

As to the bill itself, it is proposed that the bank will be a subsidiary corporation of the Bank of Canada having a board of fifteen directors composed of the members of the board of directors and the assistant deputy governor of the Bank of Canada, with the governor of the Bank of Canada as president. The capital stock of the bank is to be $25 millions all to be subscribed by the Bank of Canada, with $10 millions or more to be paid-up at the time this act comes into effect. In addition, the bank will be empowered to borrow up to three times the amount of its paid-up capital stock and reserve fund, by the issue of bonds and debentures, thus providing the bank with total resources of $100 millions.

I would draw the attention of hon. members to the fact that bonds and debentures issued by the bank will not be guaranteed by the government of Canada. They will, however, be made an eligible investment for the Bank of Canada and in view of the protection afforded by the substantial proportion of capital stock, it is anticipated that they will be marketable elsewhere as well.

The object of this bill being to provide financial resources for industrial enterprises, the bank will be given power to make or

guarantee loans to such businesses and to acquire their stock, bonds or debentures either by underwriting or purchasing direct from the issuing corporation. For the purposes of the bill an industrial enterprise has been defined as a business carrying on the manufacture, processing or refrigeration of any goods, wares and merchandise or the building of ships or vessels or the generating or distributing of electricity. The bank will be given power to lend to both new and existing industrial enterprises. To facilitate its operations the bank will be given broad general powers to take and, if necessary, realize upon any collateral security, including real property, in much the same manner as is provided by the Bank Act for other banks in Canada.

I want to make it clear that this bank is intended to supplement the activities of existing lending agencies rather than to displace them. If the credit requirements of a business are of such a nature that they can be obtained from a chartered bank or in the investment market, well and good. On the other hand, if such sources are not available then the industrial development bank will consider applications to assist projects which appear to be economically sound. The industrial development bank is not being set up to finance enterprises which are obviously doomed to end in failure. It would not be in the public interest to subsidize uneconomic activities in this concealed manner. On the other hand if the industrial development bank is to fill the gap I have described, it must operate on the assumption that there will be on the average a relatively high level of economic activity. It should decide whether or not a borrower is credit-worthy against such a background. If it appears likely that he will be successful under such conditions then he should be regarded as an eligible applicant for assistance.

The government believes that the existence of the industrial development bank will be of particular value to small business which has laboured under a certain handicap in obtaining medium and long term capital. These small industrial establishments are an essential part of our economy, an important source of employment and production, one which we must not overlook when planning to maintain a high level of employment and income in this country after the war.

As I stated at the outset, Mr. Speaker, the government is anxious that this bill should be given second reading and referred to the banking and commerce committee at as early a day as possible. I understand that the official opposition would like a little further opportunity to consider the provisions of the bill and the terms of the statement I have made to-day. If that is so, there would be no objection to the debate being adjourned until some time early next week, if that meets the wishes of the house.

Hon. R. B. HANSON (York-Sunbury): Mr. Speaker, the bill now under review is of more than ordinary significance and importance. I submitted to my hon. friend, and I now submit to the house and the country, that it is a radical departure from accepted government policy in this country for the government to enter the field of private enterprise, and that time should be given for further study of the bill. In support of that suggestion may I remind you that first reading was given only a day or two ago; I saw the bill for the first time on Tuesday; then yesterday intervened, and we are asked to give it second reading now. The request for some further time for consideration and study, I am glad to learn, meets with the approval of the hon. gentleman who is sponsoring the bill, and after a brief period I propose to move that the debate be adjourned, which I hope will meet with the approval of the house as I understand it now has the approval of the government.

There are one or two observations, however, which I desire to make, to direct the attention of hon. members to one or two provisions of the bill. In the first place I would point out that the bill is limited to aid to industry, and to industry alone. I had rather formed the opinion that there was enough risk money available in this country for post-war industrial development, if given proper encouragement by the government of the day through some let-up in taxation. That is the first observation I want to make. The second is this: if the government is seeking to increase the national income by expenditures and ventures of this kind, it should have a larger scope. Something has to be done for the farmer, and this measure falls far short in that regard. I throw out that suggestion to the membership of this house.

Mr. ABBOTT: I mentioned at the outset that consideration was being given to a similar measure for agriculture.

Mr. HANSON (York-Sunbury): Well, it is not in this bill; that is all I have to say on that point. The next observation I have to make is in reference to the statement of the hon member for St. Antoine (Mr. Abbott) that this proposal is supplementary to existing lending agencies, and he mentioned banks

and investment houses. I suggest, however, that he failed to make out a case against the adequacy of the facilities of the existing lending agencies, which is a subject matter I think this house might very well explore. All you have to do is look at the monthly statements of the chartered banks to understand what an immense amount of money is at present available for the extension of business if the opportunity offers.

The last observation I desire to make for the purpose of directing attention to matters which should be studied in connection with this bill—because I think it should be approached from the point of view of what is in the best interests of the country, and having in view the future of Canada—is that it is alleged that it holds out a hope for small industries. Having regard to the attitude of the Bank of Canada in days gone by, and the mentality and policies behind that bank, I am afraid there is not much hope in this bill for small industry.

I move the adjournment of the debate.

Motion agreed to and debate adjourned.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, February 29, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF NATIONAL DEFENCE FOR AIR

Hon. C. G. POWER (Minister of National Defence for Air): Mr. Chairman, when I addressed the committee on Tuesday I had completed a portion of my remarks but had not given all the information to which I think hon. members are entitled. I had given a review of the operations of the Royal Canadian Air Force during the past year. I should like now to take some of the time of the committee to develop our plans for the future, and, following a custom which seems to have met with favour, to give an account of what might be described as headaches which confront us in dealing with matters intimately connected with the Royal Canadian Air Force.

I propose to deal to-day with the questions of repatriation and demobilization, and, without entering upon the sphere of rehabilitation —which I hope to show is not within the jurisdiction of the defence departments—to give some idea of the plans and blueprints we have in mind, while at the same time explaining to the committee some of the difficulties we must make up our minds to meet. If I may, I would ask hon. members to consider these difficulties and blueprints and to criticize them as freely as they may desire. I shall welcome any criticism, however destructive it may be to the ideas I set forth.

Let us define the terms I purpose using. First, repatriation: To my mind repatriation means bringing a man back to his home, either from overseas or from some other point in Canada, and putting him in the location from which he enlisted, or where he desires to be. That in itself constitutes a serious problem, and, as I shall presently show, one which is particularly serious for the R.C.A.F.

The next term is demobilization. Taken broadly I suppose that term would mean the dispersing of the armed forces into their civilian components or constituents. But actually it means more than that. It means more than the disbanding of the units. It involves personal demobilization; and that is particularly true in Canada, where, as I have often pointed out, our men before joining the forces were in civilian life, and in the vast majority of instances they will return to civilian life.

On top of this comes the problem of predemobilization education, which on a former occasion was explained to the house by my colleague the Minister of National Defence (Mr. Ralston). When we use that term we are referring to such education and training as we can give members of the armed forces while they are still under our jurisdiction, and before they are discharged into civilian life.

Finally comes rehabilitation, the problem of putting the former civilian who has served as a soldier back into a position where he may take his part in the civilian life of our country.

These are the problems with which we have to deal, and, following what was said by my colleague the Minister of National Defence, I propose immediately to state that the last named, rehabilitation, is not a matter which should be undertaken by the armed services or by the departments which look after the armed services. These are matters which have been discussed before. They were considered after the last war by various committees and by the house. I refer back to the pension committee of 1917. I have not the names of all the members who served on that committee, but among them were such men as Hon. Doctor Beland, Lord Bennett and Hon. Charles Marcil, outstanding men of that day, each of whom had to do with first framing the policy dealing with returning soldiers.

At that time there was conflict between what might be called the military or service mentality, and the civilian mentality. This conflict arose largely out of the question of the medical treatment of soldiers, but was found in some degree through the whole programme.

The report of the committee is too long to read in full, but if hon. members are interested in this phase of the matter I commend to their attention the report of the pension committee of 1917, at page 466 of volume XIII. There is the military point of view, but I believe in what I shall read will be found sufficient of the alternative or civilian proposals to permit the committee to understand what was being discussed. This is what we find:

In dealing with the question of the enlisted soldier, the end immediately in view must be borne in mind. All agencies brought to bear upon the citizen recruit have but one object, namely, ultimately to place a trained, disciplined fighting man on the firing line. It is therefore unquestionably admitted that the preparation of the soldier for active service should be in the hands of experienced military men.

When, however, the citizen soldier has become unfitted for further military service, or when the need no longer exists, it is desirable that he be returned to civil life with the least possible friction or delay. His goal now is a normal civil life, and all measures taken on his behalf should be with the purpose of making him once again a producer and a self-supporting citizen. It is, therefore, reasonable to assume that his restoration to civilian status is an undertaking likely to be best accomplished under civilian guidance. That is to say, as men of military experience are judged most capable of making soldiers out of civilians, so men of civil experience may rightly be regarded as best adapted for remaking civilians out of returned soldiers.

Then they go on to deal with the civilian point of view in respect of wounded and disabled men in connection with the following matters:

Hospital care and treatment.
Functional restoration and artificial limbs.
Vocational training and reeducation.
Casualties' pay and allowances in Canada.
Soldiers' homes.
Cooperation with provincial employment bureaux.
Any relief or disablement fund which may be found necessary.

And in respect of fit men:

Cooperation with the military authorities, with provincial governments and other agencies upon all matters affecting their return to civil life.
Supervision of voluntary organizations of and on behalf of returned soldiers.

That was the civilian point of view. The report continues:

Your committee, unable to reconcile these two divergent views in such a manner as to secure agreeent, is reluctantly compelled to leave the question of the control of the agencies for the care and treatment of returned soldiers without a recommendation on its part, having endeavoured in the previous paragraphs to state, with fairness to both contentions, the arguments in support of each view.

That report was made in July, and in February, 1918, the government set up the Department of Soldiers' Civil Reestablishment to do the specific things that were laid down here as the things to be presented from the civil side of the argument. After that, veterans' affairs and soldier problems were dealt with by the Department of Soldiers' Civil Reestablishment.

It is easy for anyone to set out a theory and say that this can be done easily and rapidly. We hear the cliché that we should put our service machinery into reverse in order to solve our rehabilitation problems. It is easy to say, for instance, that one could take the recruiting officers, the men who went into industry to get the men to be put in the army, and use them to put the men back into industry. It may be said that we could use the recruiting offices with their selection boards and trade test boards for the purpose of selecting and trade testing men for a particular industry, and so on all down the line. This all looks well and I suppose it could be made the theme of an excellent speech. I realize that I may be subject to considerable criticism when I say that I do not think it will always work. It is quite possible that we may have to go beyond just simply putting our engines into reverse.

Then there is another cliché commonly used —that we should keep our men in the army until we find them jobs. I have no objection to that as a theory, but I fear that it will not work out in practice. For instance, I have been told that it would be a good idea to use the manning depot at Toronto, which is capable of taking care of from two to three thousand men. It is said that this depot could be used for the accommodation of young men attending Toronto university. They would be kept under our control until such time as they had finished their courses. Again I realize there may be a difference of opinion, but I suggest that this might not work out. You would have two or three thousand boys still in the air force. If they are still in the air force they would retain their uniforms. They would be drilled in order to justify their use of the uniform. After morning drill they would go up to Toronto university. The lowest man in the military heirarchy, the LAC, might be first in the class in law and he would be taking orders from his wing commander, who might be just barely getting by with his examinations.

Mr. HANSON (York-Sunbury): You think that there would be a lack of discipline?

Mr. GRAYDON: There is nothing especially unusual about that.

Mr. POWER: I am simply quoting the cliché that they should be kept in the army until jobs are found for them. As I say, in my opinion it would hardly work under those circumstances. If something else is meant; if it is meant that we should continue to give them the same pay, the same financial advantages or otherwise, as they would receive if they remained in the service, then that would be another question. I submit that that is a matter which has to be dealt with by the civilian agency which deals with the man and not by the military service agency. The point I am trying to make is that the service agencies are not the proper departments to look after the man in civil life, except to make such preparations for his future career in civilian life as can be made while he remains in the service while the war is on, or while demobilization is on—which may be a long period; or while the period of occupying Europe is on, or while the period of policing Europe is on, or while we are still at war with Japan, which may be long after the end of the war with Germany.

Some of my officers think that I am pigheaded when I cannot agree with the theory that the service should look after these men up until the time when they are fully established in civilian life. My recollection of the last war is that there was an eagerness, almost amounting to mutiny, to get out of the units as quickly as possible. I admit that in this war the mentality is different. I fully recognize that men are younger, that many of them never had any other job. They realize there is some security in the armed services where they get three meals a day. There is perhaps a different mentality in the boys of to-day than there was in those of twenty-five years ago, but when the incentive to drill in order to fight, when the incentive to undergo discipline in order to be better fighters to beat the enemy is gone, when they remain under those conditions for four, five or six months after hostilities have ceased, there is a possibility they will be bored to death and will no longer want to remain in their units.

Mr. GRAYDON: Will not a great deal depend upon the availability of jobs and other opportunities for these boys when they are ready to enter civilian life? If there are no opportunities available there would be an inducement for them to stay longer in the service. On the other hand, if there are opportunities available in civilian life the boys will want to get the best ones as quickly as possible.

Mr. POWER: I quite agree with my hon. friend. Whatever we have in the way of rehabilitation grants, in the way of service gratuities, or whatever we do in the way of finding them jobs, none of this will be any good if our national economy does not progress to the point where there will be opportunities for these men to work and earn a decent living.

Having perhaps lightly laid aside the responsibilities of the service with regard to rehabilitation, properly so-called, and again subject to any opposite viewpoints which may be expressed, I come now to matters under our jurisdiction.

Mr. GRAYDON: Are you and the pensions department in agreement on these matters?

Mr. POWER: I have explained how the Department of Soldiers' Civil Reestablishment was set up to deal with the rehabilitation of the returned soldier. The service has a responsibility in connection with repatriation. The civilians cannot do that; they cannot bring back our men. The service has a responsibility in connection with demobilization, and also in connection with the priorities of demobilization, as to both units and individuals. My colleague, the Minister of National Defence, has spoken of our plans and the set-up which in fact is working now. There shall be in each department a director of demobilization who will be charged with all the duties connected with repatriation and demobilization.

Mr. GRAYDON: That is in the three services?

Mr. POWER: Each service; there shall be one in each service. He will correlate his activities with those of the other services through a demobilization council of the three services. Then, in order to get in closer touch with the civilian agencies—because after all the services must know what plans are being made by the civilian agencies—there will be an interdepartmental board composed of representatives of the three services, representatives of the Department of Pensions and National Health, who are charged with the rehabilitation; representatives of the Department of Labour, which is charged with the actual placements; and representatives of the department of reconstruction when it comes to be constructed.

Now, in order to show the importance which in common with my colleagues I attach to the

quality of the person who must head up this demobilization—and I say right away that I have not found him yet, although I have had my eye on two or three likely ones—I should like to quote a letter which I have sent to the air officer commanding-in-chief overseas, Air-Marshal Breadner:

> I am looking for a man to head up a directorate of demobilization. He would not have a large staff. His job would be to coordinate all the work now going on along those lines in A.M.P. Division—

That is, the air member for personnel.

> —and elsewhere. His duties would be something like this: (a) to interview repatriated personnel and try to fit them into our organization here;

That is to say, when men are about to be repatriated from overseas and they desire to stay in the air force, to try to find what kind of jobs we shall have for them here.

> (b) to sit in with army and navy, with veterans' welfare department, Department of Labour, and with the new department of reconstruction; (c) he would do some organizing overseas; (d) to start pre-demobilization education, and he might be your representative on the new joint demobilization committee; (e) he would be charged with the explanation of rehabilitation proposals to R.C.A.F. personnel overseas and in Canada; (f) he would probably have to shuttle back and forth between here and the United Kingdom.
>
> His qualifications must be high. He must be an overseas man with actual fighting experience. He must have the imagination, organizing ability and possibly business experience. He must talk the overseas boys' language.
>
> This superman should be fairly high up, a wing commander or group captain, but if he measures up he deserves promotion anyway and he will get it. Give me the names of your recommendations.

I have had two or three recommendations. Unfortunately these lads who are recommended—I have had two or three in mind—almost invariably get a better job before I can lay my hands on them in actual operations, and they will not come back. One of them is now high up, connected with the tactical air force; another one was heading a squadron in England and has done marvellous work; he is now in charge of a wing in the proposed invasion. I am going to get a man sooner or later, but I do not want to take anybody to fill the job unless it is possible to get the very best.

This letter explains, as much as a speech would, just the type of man required, and I think the committee will agree with me that this is the type of man we want. It is proposed that he shall be directly under the minister and talk to the minister direct on all these matters. It is a matter of such importance that it becomes the minister's duty and responsibility to look after it himself.

[Mr. Power.]

In connection with that, there has been developed in the R.C.A.F., and to some extent in the army, plans for personnel counselling. I do not like the term; "personnel counselling" does not look like the kind of term I want to use, but I cannot find a better one.

Mr. GRAYDON: And it does not sound like your language, either.

Mr. POWER: Well, if I wanted to use high-flown language I could probably call him a "career consultant" or something of the kind.

Mr. GRAYDON: That is still less like you.

Mr. BRUCE: Better get a medical man for that job.

Mr. POWER: The intention—and we have a plan which is actually in operation—is to help R.C.A.F. men and women to help themselves. Our men and women are not the type who wish to become dependent on any paternalism; they want to stand on their own feet. The R.C.A.F. intends to provide them with information, advice and direction, so that they may be as self-reliant after the war as they have proved themselves to be in combat. We wish to sustain their confidence in us by letting them know that we are interested in them personally and intend to give them every assistance to make good on their own.

The plan is one of consultation and advice. In consultation with every man and woman in the air force, wherever located, advisers will provide facts upon which a career may be planned. Facts will be available on the interests, aptitudes and experience of the person, on the occupations for which he or she is suited, on the opportunities in those occupations, and on the assistance which can be provided right now for making progress toward a chosen objective. This is not job placement; it is career planning, so that those who take advantage of it may have something of value to offer, instead of being dependent on someone to give them a job.

Many of our airmen have endured the strains and hazards of a long tour of combat. Nothing will help them more to free themselves from the travail of war than a goal toward which they can plan and work. This goal we intend to provide.

The results of the R.C.A.F. plan of personnel selection have been reinterpreted in terms of civil occupations. This enables us to indicate to a man just where he stands, having regard to his ability, aptitudes and training, in relation to men already employed in various professions, occupations and trades. Thus in

choosing a career he can judge for himself the type of competition he will meet in various vocations.

Many employers have already been contacted, and representative professional, business and industrial groups have been consulted concerning the practical applications of the plan.

One group of consultants have already completed their training. These men and women have all had extensive service in the R.C.A.F., and were selected as having the necessary personal qualifications for this work. They are the vanguard of a larger group of officers who will spread out to R.C.A.F. units, both here and overseas, to aid men and women plan careers.

Educational and technical courses will be provided to suit the career plans. Thus any man or woman can utilize any available time in purposeful activity in keeping with his or her career plan. Many such courses are available; others will be added.

A record of consultation will be provided for each person which will give details concerning the planned career, as well as any progress the person makes while in the service.

Since this deals entirely with the personnel who are still in the service, it falls within the scope of R.C.A.F. responsibility. It is concerned with the welfare of personnel prior to their release to civil life, and hence does not encroach upon the activity of those government departments responsible for rehabilitation and occupational placement.

Mr. GRAYDON: Are the same privileges and opportunities to apply in equal measure to the army and the navy?

Mr. POWER: Oh, yes; I am quite sure they are. We hope that this service will enable R.C.A.F. personnel to take full advantage of the provisions already made for the purposes of demobilization and rehabilitation.

This looks like a good blueprint. I am not going to guarantee that it will always work. I am putting it forth as a plan and as a blueprint. It should work, if we can get the proper men to do the counselling or the advising or the consulting. But everything along these lines is dependent on the human factor. We might set to work now and during the demobilization period to train a boy to be a lawyer or a doctor. He falls in love with some girl, gets married and decides that he would rather live on his wife's relatives. Where are we then? We have wasted all our time and our money. But it is an attempt to assure these boys that at least we are going to try to do something for them.

All this is connected with pre-demobilization training. I am really putting the cart before the horse. Repatriation comes first, and in repatriation we have, as I think the committee will readily understand, a very special problem in the R.C.A.F.

First, it is in the character of our boys—which also applies to demobilization. They are young; a great many of them have never had any jobs; they have no real conception of what the struggle of life may be except from what they have learned in their homes; they have no real conception, from personal contacts, of the difficulties of making a living. Repatriation is our difficult point. As I have explained to the house on many occasions, many more of our boys are in R.A.F. squadrons than are in R.C.A.F. squadrons. We have to get our hands on them before we even think of bringing them home, and that is not so easy, particularly in the midst of operations. We must not interfere with the fellow on operations in order to get our hands on him so as to get him ready to come back to Canada when demobilization comes. We must to a certain extent make plans, though certain plans can be made which will be immediately helpful.

In correspondence with Sir Archibald Sinclair, the Secretary of State for Air in the United Kingdom, and in recent discussions with Captain Balfour, I have come to an agreement on the matter and, as I advised the house some time ago, as will be seen in *Hansard,* a joint committee of the R.A.F. and the R.C.A.F. has been set up. I did not advise the house at that time, however, of the terms of reference proposed by Canada, which have not yet been accepted, though I have reason to believe they will be. The terms are these:

(a) What methods and procedure should be followed in order to enable the Canadian government to proceed as rapidly and as efficiently as possible with R.C.A.F. repatriation and demobilization?

(b) What steps can be taken now, and generally during the period, which shall precede the termination of the war against Germany, to bring about a regrouping of R.C.A.F. personnel, so that Canadian demobilization priorities may be made effective at the earliest possible date without injury to the common war effort?

(c) What methods of procedure are to be followed so that R.C.A.F. personnel serving in R.A.F. units may have equal opportunity with R.C.A.F. personnel who are serving in Canada or in the R.C.A.F. personnel overseas, to take advantage of the Canadian government's plans for repatriation, demobilization and rehabilitation?

(d) What methods and procedure should be followed in order to give R.C.A.F. personnel attached to the R.A.F. the benefits of pre-demobilization training and instruction to fit such personnel for civil life in Canada while still attached to the R.A.F.?

We added:

The committee in their deliberation will be guided by the following principles:

(a) That there shall be no interference with the most effective prosecution of the war.

(b) That the highest consideration be given to ensuring to individual officers and airmen every possible opportunity for a successful post-war career.

(c) That the process of demobilization shall be such as will assist to the greatest extent possible the effective recovery of the domestic economy of each country.

In connection with that, a reciprocal arrangement was entered into with the R.A.F., whereby our boys attached to the R.A.F. would take advantage of such pre-demobilization training as the R.A.F. is giving, and we on the other hand would give their boys attached to the R.C.A.F. such pre-demobilization training and education as we give to our boys.

I can see that this may not always be appropriate or useful. For example, I can hardly conceive that the training in agricultural pursuits given to men intending to settle in Kent or Devonshire, say, would be useful to a Canadian who intends to settle on the prairies or the bushlands of Ontario. Such training would not be of much use to him in the career he expects to undertake in the wilder parts of Canada. However, the will is there, the agreement is there, and something is sure to be got out of it.

Having dealt as far as I can with repatriation, in order to give the committee some idea of the difficulties that confront us, let me deal with what really belongs to repatriation, the question of priorities on demobilization. That again should be divided into two parts, priorities by units or groups and priorities by individuals. Priorities by units would apply more readily to the army than to the air force. It is easy enough to say that the first division shall come back first, the second divisoin second, and so forth; but in the air force it is very much more difficult, since the men are so widely scattered. These matters have been and are being discussed, and on certain questions no definite decision has been reached.

On the question of priority there appeared to be two distinct problems: Should priority of discharge be given overseas personnel, and should a system of individual priorities be set up to apply to the service as a whole, with the locus of the individual concerned being only one factor out of many?

In considering the first of these questions, it is felt that priority of discharge should be given men serving overseas, but in view of the obstacles in the way of such a plan it is not always possible or feasible. The factors involved have been carefully reviewed and a number of them have been set out hereunder for consideration. I may say that this is a report of some of my officers on the subject. It is not a precedent, and I do not want it to create a precedent, whereby reports of officers are made public. But this is a matter in which the public is very widely interested. The public should be interested in the discussion as between different schools of thought before hard and fast rules are made of them, which will be so binding that it will be very difficult to retrace our steps. It is for that reason that I take the committee into my confidence and ask hon. members not to use this as a precedent against me if I say that I cannot produce a document inasmuch as it is a document from an officer of the department to the minister, made in confidence.

The reasons for priority of demobilization for personnel serving overseas are:

(a) Public opinion will undoubtedly clamour for preferential treatment for personnel serving overseas.

(b) Such personnel deserve priority on demobilization and in any plans for reestablishment which may be undertaken by the government or by industry.

(c) Since they have been separated from their families and generally have been unable to return on leave, they should be given the earliest possible opportunity of reunion.

(d) Since their lives and those of their families have been disturbed to a greater degree than is the case with personnel who serve in Canada only, it seems only fair that they be given the opportunity of returning to a normal civilian state. Pending the reorganization of the permanent forces after the war, certain installations and equipment in Canada must be manned and maintained by service personnel. This will have to be done in the first instance by personnel now discharged, but the troops overseas should be given the first opportunity of doing that work.

I come now to the reasons for demobilization of personnel as soon as available, which is the contrary view:

(a) Public opinion would be strongly against retaining longer than necessary men conscripted in Canada who have volunteered for overseas service.

(b) Personnel in excess of requirements would result in the following additional expense to the country:

Pay and allowances; gratuities or rehabilitation benefits which would increase with the length of service; amounts necessary for subsistence; medical care, et cetera; retention of buildings which should be released for civilian use.

The difficulty of maintaining the morale and discipline of these services in Canada is another matter to be considered. That would have to be considered if they had to wait demobilization of those serving overseas. And then man-power will be needed for civilian industry and there will be pressure from civilian industry to get at the nearest source of man-power. On the other hand it would be difficult to repatriate the personnel from overseas because it may be difficult to get transport. There would be the problem of shifting personnel from one theatre of war to another when we go toward the Japanese theatre and so on. It may cause innumerable difficulties in the supply of shipping. That is the general system. No matter what we do, we must aim at seeing to it that the man from overseas gets preferential treatment in demobilization and in repatriation, but always bearing in mind the fact that there may be difficulties in carrying out that principle as we have laid it down.

Then, with regard to individual priorities, there is a great diffierence of opinion. However, I believe two principles can be accepted by all. (a) No individual should be demobilized so long as his retention is essential to service requirements. (b) Personnel desiring delayed demobilization may be retained provided they can be usefully employed and fulfil certain conditions laid down. In connection with that there is, as hon. members know, the point system. The point system was elaborated by the central committee on post-war reconstruction set up by the Conservative and Unionist party in Great Britain in a pamphlet called "Looking Ahead". So far as I know, this point system has not as yet been definitely accepted by the armed services overseas; in fact there is a great deal of opposition to it. I shall quote from it:

> In their search for a solution to the many problems which arise from the definition of priorities, the committee has under review a scheme of "points" which is strongly recommended for favourable consideration.
>
> The scheme attaches a specified value to the presence or absence of certain factors influencing the individual case for demobilization. As an example of the working of the scheme, let us suppose it is decided that fifteen per cent of the personnel of a certain unit can be demobilized. The records offices, which would be given details not normally in their possession, would forward the names of those who had the highest "score" on some such basis as the following—

And here come the points:

> —so many points for service on or before certain dates, service overseas, steps of promotion, age group, marriage, number of children, employment immediately available, one-man business, demand for personnel in trade or profession, and interruption of education, with a subtraction of points for desirability of the man's retention in the services.
>
> To operate such a scheme there would have to be close liaison—

Then they go on to show where cooperation takes place. We have had a look at that in an endeavour to apply it to conditions here. Some of the officers have worked out a point system for the R.C.A.F., taking into consideration not all the points mentioned here, but such points as length of service, nature of service and dependent children. I may be boring the committee with all this, but somebody is going to put it on *Hansard* and it may as well be put there by me. I want the committee to know I am not laying this down as the law of the Medes and Persians. I am saying that these are plans which have been submitted in other parts of the world and are being considered by various departments.

Mr. GRAYDON: The committee will pay a great deal of attention to what the minister says.

Mr. POWER: I hope to get a lot of advice from the committee. It is recommended that value be given to the different factors as follows. We are taking only four of these factors: (a) length of service, one unit for each month of service; (b) age, one unit for each year of age; (c) nature of service (combat service), 25 units; (d) dependent children, five units for first child; ten units for more than one child. Attached is a table. I should like to lay it on the table.

Perhaps the committee will follow the details of one case. Let us take a married man, thirty-five years old, with two dependent children and two-year service. His score would be thirty-five for age, two-year service, one unit for each month, twenty-four; two children, ten units for more than one child, a total of sixty-nine. That is the priority score. Let us take a man thirty-five years old with two dependent children, two years overseas and combat service. You would add twenty-five points for combat service, and his score would be ninety-four. Let us take another example, a married man forty years old with three years' service and no dependent children. He would

have a score of forty for his age, plus thirty-six for his three-year service, giving him a total score of seventy-six. If the same man had combat service his score would be seventy-six plus twenty-five, or a total of a hundred and one. The scores have been worked out in a number of cases, and if the committee will permit me I shall table it.

Mr. COLDWELL: I thought the minister gave some points to a man who had a one-man business.

Mr. POWER: That is not the Conservative plan.

Mr. COLDWELL: You are not considering that?

Mr. POWER: My officers have worked it out only on the basis of four different factors. We might work it out on any number of factors. I brought this with me to show the committee how it would work. If the committee will permit me I shall give the views of the opponents of the point scheme.

Mr. JACKMAN: How long is the term of enlistment in the air force?

Mr. POWER: No term.

Mr. JACKMAN: They are in until they are discharged?

Mr. POWER: Yes.

Mr. JACKMAN: Not like the last war?

Mr. POWER: No.

There is some opposition which merits serious consideration before we embark on such a plan. The point system is considered unsatisfactory, (1) because it is complicated. Definitions are required for the factors involved. If we mention the factors involved in the Unionist system it will get more and more involved and more and more complicated. We shall need a lot of chartered accountants to add up the score before we get through.

Mr. GRAYDON: We are short of them now.

Mr. POWER: We are short of them now. (2) It is not altogether fair; 725,000 individuals could not be put into about a hundred priority groups without injustice being felt by a very great number. And in my opinion here is where it fails, unless we can find something to improve it. In the middle brackets many thousands of personnel would have about the same points, particularly if you take a large number of matters on which you can obtain a score. If you gave the long term people a sufficient number of points they would have an easy lead. You would get a number who would have about the same number of points and then the fighting would begin all over again as between the people in the middle brackets, but there is no provision for priorities among men with the same score. They would have to have pull with Laurier. (3) It discriminates against the veterans' guard and older soldiers, for whom accelerated demobilization would be harmful, in the main, because of special difficulties in rehabilitation, and against the younger personnel who have never had civilian employment, or who should complete his schooling without further delay. (4) It reduces speed in discharge, especially if discharge is to be delayed on account of vocational training and other rehabilitation measures. It is felt that the prime factor in demobilization is the successful employment of ex-service personnel. There would be a public outcry against keeping personnel in the services on pay and allowances if by earlier discharge they could get a job and become reestablished.

My own opinion is both points of view should be carefully examined, and I should like to hear from anyone who has any views on the subject. We know what we want to do, namely, to bring those who can be brought home as soon as possible after the hostilities are over. Then give them all the pre-demobilization training we can, in the most useful way, so as to do the individual the greatest amount of good in his future career. We have plans and blueprints to accomplish this, but, as I said, I will not guarantee that they will all be successful. We must be prepared—and I think this is something to which we should give the utmost consideration—for the immediate let-down, moral and mental, which will attack these boys. They will have been three or four years trained, taught and groomed to one objective, one purpose; and that purpose and objective will be gone. The enemy will have been defeated; they will have completely lost their orientation. Many of them never will have had any other orientation than fighting. An organized body of men solidly knit together to act for one common purpose in this war will, unless we are very careful, suddenly become a mob of individuals each seeking his own objective, if indeed he has any at the moment.

I do not want to be an alarmist, but with the history of developments after the last war imprinted in my mind I fear that we might have mutinies such as we had then. I fear the development of a state of mind which might colour and distort their whole future outlook, and we must try to develop

some new objective for them. As I said, if we discipline a body of men with a common purpose and objective, to defeat the enemy; then if we go to them and say that each individual will get so much in the way of dollars or so much in the way of treatment; if we develop their purely selfish instincts, the purely materialistic side, then we shall have a panic to see who will get first what is required, and the devil take the hindmost. In other words we cannot and should not promise each individual that everything he desires will be handed to him on a silver platter. Let there be a new order. It matters not what the new order is. It may be the new order of my hon. friends, on a socialistic pattern; it may be a new order on a free enterprise pattern; it may be a new order on the pattern of New Democracy or Social Credit, or it may be a combination of all three.

Mr. GRAYDON: Don't forget your own Bloc Populaire.

Mr. POWER: It may be on the order of the Bloc Populaire. I have no objection to the returning soldier becoming an adherent of any political creed; on the contrary I hope he will, for I want him to be thinking of the future of Canada. I want him to be thinking of the future along the lines of any one of the political parties represented in this house; for as long as he is thinking of the future of Canada he is doing what I think he should be doing rather than thinking of his own selfish and material interests. It is Canada he has to be working for when he comes back.

It is for this reason that, while I do not disagree with all this work in connection with demobilization and placing a value on each man's services, I think it has little to do with questions of repatriation, rehabilitation and so on. After all I am cynic enough, having been in the house for all these years, to know that he will pretty well get what he wants anyway, out of one political party or the other. If we teach him that he can only get what he wants by agitation, by thinking of himself and of his own interests, then we make a bad citizen of him.

I should like to try out on this committee some views on this subject which I have tried out elsewhere already, without any response whatever. We should explain to our men that the winning of the war was not the end of all things. I fear that after the last war most of us felt that this was the end, that this was what we had been struggling toward for three years, and that now the job was done. Let us tell our boys that the winning of the war was only the means to assure us and the world the right to continue unhampered and unimpeded in our peaceful pursuits, that it was only a means to an end, not the end itself. What is the greatest, the most pressing and most important pursuit we can have, if it is not to make our own country great; great in industry, great in agriculture, great in commerce, great in development, and great as a nation? During the course of the last war we were promised material things: "A land fit for heroes to live in," and "On your return Canada will be yours." I fear that we paid too much attention to those material things that were being promised to us and did not pay enough attention to the spiritual side of trying to become a good citizen, and I say that without casting any reflection at all upon those who returned from the last war.

Our boys must be given a new target, some task to look forward to, to soften the impact of the inevitable let-down; and that target must be attacked with all the ambition and all the patriotic fervour of their wartime activity. A great man promised victory in the war through blood, sweat and tears, and we can set another task; the making of Canada, through labour and perseverance and energy. Let the brawn and the brain and the courage of these thousands of young men be turned to the development of their own country, and no nation on God's green earth can equal us. Let us emphasize the spiritual side of the peace-time task at least as much as the material side. When these boys return to Canada this country will be theirs, but theirs to mould, to develop, to build and to make capable of fulfilling its great destiny as a nation. The true glamour of peace must be made to replace the transient glamour of war. We have told our boys what a noble and heroic thing it was to apply themselves to the science of war. Let us tell them what a noble thing it is to apply themselves to the arts of peace. We have taught them how to destroy; let us teach them how to build. They went forth to defend Canada; let them go forth to develop Canada. Let our boys understand that when the last gun has been fired and the last bomb dropped, their task will have only begun. Duties and responsibilities as heavy as those they now bear await them on their return; duties and responsibilities, and opportunities too, if we make them for them, limited only by the great extent of their country and by its vast potential resources, industrial, natural and commercial. They will have conquered a hard, bitter human enemy; they can and will conquer natural obstacles. Let them subjugate the land, exploit the waters and control the air of this country. They will not only have won a livelihood;

they will have served their country truly and well. Let them not believe for one instant that the end of the war is the end of all things for them. The great adventure of fighting, the hazard of dying for their country will be over, but the greatest adventure, the strenuous one of living for their country, will be only beginning.

Mr. ADAMSON: The truly excellent statement given by the minister last Tuesday and to-day should fill every member of this house and every Canadian with great pride. The minister mentioned "the effort of the Canadian people as a whole". The success of the air force in all its branches, right from the dull job of the radio mechanic through to that of the bomber pilot, has been due in part to the great spirit of the Canadian people, who know no bounds when they are aroused, and in part to the fact that as far as the air force goes we have yet to see the hand of politics. Unlike the army, an air force officer will seldom if ever tell you his politics. It is difficult to talk very long to an army officer before the subject of politics is discussed.

The staggering information the minister placed on record Tuesday night, showing that the Canadian air effort represented between twenty-two per cent and twenty-five per cent of the aircrew or of the total air effort of the joint British tactical air effort—

Mr. POWER: The hon. member should stick to his first expression—aircrew.

Mr. ADAMSON: Yes, aircrew—is, I say, remarkable.

Mr. MACDONALD (Brantford City): That is in Europe.

Mr. ADAMSON: Yes, that is in Europe. But it shows something more; it shows that Canada, with only 12,000,000 people, can produce in a short period of time an air force the equal of, if not superior to that of any other nation. The fact that our squadrons are used extensively on the very difficult job of pathfinding for the bomber squadrons, one requiring the highest degree of skill, shows the degree of technical excellence attained by Canadian aircrew.

The diversification of our air effort was emphasized by the minister. He referred to the radio mechanics, the personnel manning radio location stations, for the bomber command and the fighter command, the Atlantic patrol, the coastal command, the Atlantic air bases for the protection of our own sovereign air, and the bases for the protection of our Pacific coast. The vast variety in numbers and descriptions of our air effort has only begun to be appreciated, and I am glad that for the country's sake the minister has placed the statistics on record.

Our air effort imposes upon Canada a great responsibility, greater than many of us realize. It imposes, too, the responsibility of maintaining ourselves as a great peace-time air power. As the minister pointed out in his speech, as reported at page 1029 of *Hansard*, a post-war civil aviation committee has been set up. I shall not read the paragraph, but hon. members will find it at the point I have indicated.

Our air effort is a combined one. While we have forty-four squadrons of our own, yet the bulk of our effort is that which is combined with those of the British, Australian, and the other united nations who are operating against the common enemy. After the war is over, we cannot allow this effort to revert to a purely Canadian one. We shall have our responsibilities to help keep the air lanes of the world free and open. We have probably become, or shall be by the time the war is over, the third largest air power in the world. In point of geography we are located centrally, so far as future civil aviation is concerned. Yet we have attained our position only in conjunction and cooperation with the United Kingdom, Australia, New Zealand and the other nations of the commonwealth. Had we tried to run the show on our own, we might have met with some success, it would have been greatly reduced.

Our immediate responsibility is to see to it that, from the civilian point of view, our post-war air effort is mapped out in conjunction with the other nations of the commonwealth. We cannot afford not to cooperate with the United Kingdom to the fullest degree in peace time, as we are now doing in war time. If we fail to give this cooperation we shall be relegated to a place not third greatest among the air powers of the world, but to one comparable with our population, and standing away down the list of the world powers. Therefore our first responsibility, in the light of our great air effort in the war, is as I have stated.

The minister mentioned the ratio of casualties to decorations. It is interesting to note that one decoration has been received for every ten casualties inflicted. To my mind this more than anything else shows the efficiency and striking power of our air force. I believe it is much greater than we had expected. Let us remember that every bomber destroyed has carried a crew of from five to ten men, and sometimes more. Accordingly for every large bomber shot down we may say that one decoration has been given. Surely

this is some indication of the teamwork and heroism of the young men who are doing this magnificent job.

I do not believe the committee realizes the magnitude of a single raid against Germany. I shall not speak about groundcrew, but would confine what I have to say to the aircrew organization necessary for a thousand-bomber raid. The number employed equals approximately the number of a division of infantry. Within the space of a few hours that division must be taken into the air, flown 600 miles to within two vertical miles, probably less, of the target, and flown back to the home bases. The staggering cost and the amazing teamwork which goes into that effort cannot be emphasized too greatly.

I should like to make a suggestion to the minister in connection with what he said this afternoon. Up to now our air effort can be considered our major one. Hon. members will be called upon to look after and to provide for the future lives of all those young airmen who each night are risking their lives over Germany. Yet, with I believe one exception, hon. members have not had the actual experience which would give them an understanding of the problems involved. Newspaper men have been given this opportunity. I suggest that certain members be allowed to make an operational flight. We shall be called upon to look after these men when they come back and I think we might have some first-hand experience of the problems they meet daily.

The minister went on to discuss repatriation, demobilization and rehabilitation. He mentioned the difficulties of repatriation and they are probably greater than he intimated. We have members of the air force, such as radio mechanics, who have been located for years in distant outposts. These men being in isolated positions have had little opportunity of advancement and they have seen little service apart from their work as technicians. In many instances they are, to use the current expression, "browned off." These men should be among the first to be repatriated because their problem is an extremely difficult one. As the minister has pointed out, we have men in the operational groups of Royal Air Force. Some of the men, particularly those in the far east, may have to remain in the service for years before they are repatriated.

I agree entirely with what the minister said with regard to the problem of demobilization. There is nothing worse than to keep a soldier in the army with nothing to do after the actual fighting is over. His life becomes useless routine. Every parade, every fatigue, or every duty that he must undertake becomes an added irritation. Eventually morale decreases and rioting breaks out. I saw some of the rioting that took place in England after the last war because I was in a camp that actually did riot.

Mr. CRUICKSHANK: Shame!

Mr. ADAMSON: I expect that the hon. member for Fraser Valley was also in a camp that rioted. It is easy to be carried away by the desire to destroy things, particularly when one has nothing to do. There is the old saying that the devil finds work for idle hands, and that is particularly true in demobilization centres. Demobilization must take place as soon as possible.

There is one psychological angle I think the minister has overlooked. When this war is over, these men must be able to go into useful work. We must get over any idea that the work provided for the veterans of this war is to be provided in a spirit of gratitude. That is the wrong premise to adopt. The work they are to be called upon to do must be work that is useful and essential. If that is not done the same psychology will apply. The men will regard their work as something that has no value. This would prove to be one of the greatest causes of the destruction of the spirit of our service men and it must not happen. There are one or two matters I should like to take up with the Minister of Pensions and National Health (Mr. Mackenzie) when his bills are before him, but now I only want to emphasize that the work provided for these men must be useful and essential. That factor must take precedence over all others.

The young men of this war have been trained to take instant action to destroy. That has been their whole fighting training—to destroy the enemy. The question of cost or wastage of material never enters into the problem at all; it is simply a question of kill or be killed. The opposite rule applies to civilian and commercial life. No matter under what system we operate, cost governs the operation. Our difficulty will be much greater after this war because the personnel are more highly trained. The young man who has been flying a Lancaster bomber with 5,000 horse-power and with his bomb bays filled with weapons capable of creating acres of destruction will not be particularly interested in a repetitive job on an assembly line, or in, shall we say, selling soap retail or any other similar commodity. He will want a job where he can utilize his intellect and it is going to be extremely difficult to provide that job. I think

the minister was right in bringing up this question this afternoon. If we make promises to the people in the forces to-day and do not carry out those promises we are certainly taking the first step toward revolution.

The minister did not deal with one question, the size of the postwar air force. Naturally he cannot give any specific details, but I think some statement should be made to indicate that an opportunity will be provided for some of the men in the force to maintain themselves in the Royal Canadian Air Force after the war. There should be some statement that after the war we shall not again abandon the arts of war. That statement should be made now. I know it is axiomatic that we shall not do away with the air force, but it must be remembered that after the last war we abolished most of our naval, military and air force establishments. We abolished the Royal Naval College; we very nearly abolished the Royal Military College. There swept over the country a wave of pacificism which laid the seeds of our lack of preparation when this war began.

In conclusion, the minister mentioned what might be called the pragmatic philosophy.

Mr. HOWE: What is that?

Mr. ADAMSON: Merely this, that the individual looks after himself and is not interested in the welfare of the state. A purely selfish outlook was preached and practised after the end of the last war, and it led us into the greatest possible amount of difficulty. The old army saying, "So-and-so you, George, I'm all right," became almost the national spirit. We must be careful to avoid similar disillusionment after this war is over; because if at the end of this war we are at the opening of a better era of peace and good order among all nations, yet because we have preached the philosophy of selfishness our men will come out looking for something to get rather than something to serve, and we shall enter into another cycle which may go down into another war, a new depression and chaos even worse than the two we have already seen.

Mr. SINCLAIR: Mr. Chairman, in rising to speak on the estimates of the Department of National Defence for Air, I wish first to touch on the propriety of a member in uniform speaking on estimates of the department in which he serves.

In the British House of Commons the sharpest criticism and the most helpful suggestions on service matters have come from those who are in uniform. Members of parliament, of course, are expected to speak on subjects of which they have extensive knowledge; and who in this parliament have better opportunities of acquiring extensive knowledge of the services than those in uniform? In this country, however, there seems to be a desire to restrain or, as I believe the legal word is, to proscribe a member of parliament in uniform from speaking on service matters in this chamber. Actually the very delicate position of a member of parliament in uniform is covered by P.C. 3205, which in the air force becomes air force general order No. 21. The hon. member for Lake Centre, the hon. member for Weyburn, and the hon. member for York-Sunbury at the last sitting of the house discussed to some extent this order as it affects men who hope to be candidates in the next election. I would say that in this respect this order is more generous than the corresponding British order. It is rather with the effect of this order on a member of parliament that I am concerned. Provision is made for adequate and, indeed, very generous leave to attend parliament, provided, of course, the exigencies of the service permit. If the man is in uniform his first responsibility still must be to the service; otherwise he should resign his commission and return to parliament, if he finds that he has to put parliament ahead of his service when he is in the service. However, a member of parliament who is given this leave is subject to the following restriction, that a person granted leave for this purpose shall not disclose any information of a service nature which he has acquired in the course of his duties as a member of the armed forces. Well, quite frankly I will tell the committee that everything I know about the air force I have learned during the course of my duties in the air force. Quite frankly also I will say that as a member of parliament I do not intend to be restrained or proscribed by anyone outside the walls of this chamber. Therefore, despite this air force general order No. 21, I now propose to discuss the Department of National Defence for Air on the basis of things which I have learned while in the service.

I do not propose to speak on any operational matter in the service. After all, I am a very junior officer and am not qualified to discuss the purpose and the value of strategy which has been planned by the leaders of the service. I know that in this respect I am very much different from the hon. member for Weyburn. I got *Hansard* all the time I was overseas. Last year's *Hansard* I got in Sicily. I read it with interest because I was a member. The members of my squadron read it because there was nothing else to read. All of us, however, read with both,

I may say, amazement and amusement the fact that the hon. member for Weyburn criticized the Dieppe operation on the geographical knowledge which he had acquired in a one-day Cook's tour of Dieppe in 1936 and the military knowledge he had acquired through an honorary chaplain's commission in the militia in peace time. Everyone in the squadron I was with had waded ashore in the invasion of Sicily. None of us felt prepared to discuss even the invasion of Sicily with that operational background, so that the committee will understand what I mean when I say that we were amused and amazed.

I propose, however, to discuss certain of the administrative policies of the Royal Canadian Air Force, because that force is simply another branch of government as far as administration is concerned, and a member of parliament who can criticize, for example, the Department of Labour, as I have done, can criticize or praise the administration of the Royal Canadian Air Force or any other branch of the service.

First of all, I should like to commend the minister. I think I can truthfully say that the minister is the favourite minister of this house, because we know that he has been the driving power behind Canada's greatest single contribution to this war, the joint air training scheme. It is not only for his interest and activity in the operation of the R.C.A.F. that I commend him, but for the very intense personal interest which he takes in the welfare of every single man in the R.C.A.F. I cannot give a better example of that than the speech he has just made on the demobilization and rehabilitation of the men of his service.

The war is of course far from won, but planning ahead to give these young men in the R.C.A.F. some feeling of confidence in what is going to happen to them when the war does end is a very fine thing and most encouraging.

Since my return I have raised a number of issues with the minister and have not always met with success, naturally, but have always met with every consideration.

A week ago in this house I asked a question about the retirement of quite a number of very senior air officers. The minister made a forthright reply, in which he said that the retirement was in no way a slur on any of these officers, but merely to remove what he called a "bottle-neck" or ceiling on promotion for those who had fought in this war and, to use his own words, "who should shortly assume command if the air force is to be the young and virile force which Canada wishes it to be." I am quite sure we all agree with that sentiment. Most of these senior leaders of the air force, however, are veterans of the last war, with distinguished records, who belong to what is called the permanent force. The air force is their career. There are also senior officers who belong not to the permanent force but to the auxiliary force, which is the air force militia in peace time, and to the special reserve, citizen soldiers, as most of the air force are. I feel that if retirements are in order these men should be the first to be retired. They should be retired before those in the permanent force, and I say that for two reasons. The permanent force men have no civilian jobs to which they can go. The air force has been their career, whereas the special reserve senior officers must have left very good jobs to qualify for such a high rank at the beginning of the war.

The second reason is a monetary one. When you retire senior air force officers you retire them at a substantial pension, whereas the auxiliary officers go back to civilian life and civilian jobs, without pensions but with a generous gratuity, in their case, of one month's pay.

There is another point about retirements. Just under the ceiling of senior air officers who fought in the last war and have given wonderful leadership to the air force in this war is a layer of officers who were too young for the last war and whose rank was too high to justify sending them overseas in this war. In the rapidly expanding air force their ability and administrative training were of great use in this country. It will be a pity if the retirement of the veterans of the last war results in these men coming to the top. Tens of thousands of aircrew fighting overseas want to be led by men with real operational experience, if not experience in the last war, then experience gained in this one. To my knowledge, there is not an R.C.A.F. airman who has done a tour of operations overseas in this war who has yet achieved a rank higher than group captain. Generally we think of the air force as a keen, young, progressive service and the army is sometimes regarded as Tory—I withdraw that word; I will say as the slower or more reactionary of the services. However, I read with tremendous pride the statement by the Minister of National Defence (Mr. Ralston) on the recent appointment of men leading combatant soldiers overseas, and I wish to put this list on the record:

	Age
Major-General Kitching, D.S.O.	33
Brigadier Walsh, D.S.O.	34
" Ziegler	34
" Lane	34
" Booth	37
" Suttie	34

That is one of the finest tributes that can be paid to the army, to say that they are led

by men who are making it a "young, virile and dynamic force". I served with the desert air force for about a year, and I believe, as most people overseas believe, that it is the most efficient fighting force in this war. No little part of its success is due to the leadership of Air Vice-Marshal Broadhurst, D.S.O., D.F.C., aged thirty-seven, who has done two full operational tours in this war. Not only has he directed the air force from the control room, but he has led them in battle. He was the first pilot to land in Sicily and the first pilot to land in Italy.

With this in mind I again urge that when those veterans with distinguished records in the last war are retired they be succeeded by men who have done at least one operational tour in this war.

Unlike the army, the air force is an entirely voluntary service. Unlike the army, we do not have a horrid word bandied around in the house but never appearing in *Hansard*. Every man who joined the air force joined for the duration, to serve wherever the country's enemies are to be found. Every one of them when he enlisted thought he would get overseas and many are disappointed, because of the enormous training establishment which we had set up in the country to bring into fruition the empire air training plan. The minister has announced that the plan is pretty well stabilized, and I should think there is a better chance to get many of these men overseas. Those who have been overseas for a long time would also have a better opportunity to return home.

I commend the minister for the fact that he has kept the Canada badge of the airmen as a symbol of overseas service. Most airmen are prouder to wear "Canada" on their shoulders than the service decoration on their chest, and I hope that at the end of the war every man in the air force will be carrying the name of his country on his shoulder.

May I speak shortly on behalf of Canadians in the Royal Air Force. The minister explained the other night what their status was. These are Canadians who could not get into the R.C.A.F. in peace time because we were so small, and hon. members to the left were obstructing the present Minister of Pensions and National Health when he was trying to expand the war services. These men could not get in just after the war began because our rapidly expanding service set a very high standard. These are the men who went to England on cattle-boats, working their way there in order to join the R.A.F. No single group of Canadians in this war have so gallant a record. Whereas most of the R.C.A.F. did not start fighting in Europe until 1941, these men started on September 4, 1939, and they have fought in every battle in which the R.A.F. has been engaged—in France, Norway, Britain, Malta, the middle east and the far east. They have paid a very heavy price in casualties and have won great honour for our country.

The minister pointed out that Canada had no connection with them as far as finances are concerned. He went farther and stated that we were not identified with them in any other way. I think we are identified in another way. The early Canadian squadrons overseas were led by these Canadians in the R.A.F., because we did not possess men with that training at that time. The minister two years ago put on record the names of twenty-one men leading the Canadian squadrons. To my knowledge, ten of those twenty-one were Canadians in the R.A.F. I would remind him that his own son in Italy, serves in a Canadian squadron until recently led by one of the most gallant and dauntless of Canadians in the R.A.F., Wing Commander Stan Turner, D.F.C. and bar, of Toronto.

Very distinguished service has also been given to the R.C.A.F. by their present chief of air staff who for a long time served the R.C.A.F. as a Canadian in the R.A.F.

Mr. POWER: May I add to what my hon. friend has said. The first squadron that fought as a Canadian squadron, 406 squadron, was composed entirely of Canadians in the R.A.F. and it was called the Canadian R.A.F. squadron in the battle of Britain.

Mr. SINCLAIR: I thank the minister for his observation. These men are still Canadians, proud of Canada, and most of them want to serve in the air force of their country. I raised this matter with the minister immediately upon my return. At that time I told him that every Canadian in the R.C.A.F. wanted his brothers in the R.A.F. back in the R.C.A.F. He pointed out the difficulty to me and it was understandable. The R.A.F. did not want to lose these very brave and experienced pilots. I was pleased when he announced in the house that the transfer of Canadians in the R.A.F. back to the R.C.A.F. has now been arranged.

I can tell the committee, however, that not all these Canadians will choose to transfer back. A Canadian in the R.A.F. who has a permanent commission can naturally see a little bigger future after the war in the R.A.F. than in the smaller R.C.A.F., and there are other Canadians who will want to stay with the R.A.F. for sentimental reasons, because of

attachments formed, just as many gallant Americans who joined our R.C.A.F. before the war have chosen to stay with their comrades in the R,C.A.F.

This brings me to the matter of members of the R.C.A.F. attached to the R.A.F. squadrons. The minister brought out clearly that a man who joins the R.C.A.F. in Canada is always a member of the R.C.A.F., irrespective of whether he serves with the R.A.F., with the United States air force, the Australian air force or the South African air force, as some did. He is looked after by this country, promoted by this country and paid by this country. There is, however, a feeling throughout the dominion that the R.C.A.F. Canadians with the R.A.F. squadrons are not getting quite as good a deal as if they were in R.C.A.F. squadrons. That may be owing to the fact that the R.C.A.F. squadrons naturally have had a little more publicity in this country than the R.A.F. squadrons. However, it is very far from the case, I can assure the committee. I have served in both the R.C.A.F. and the R.A.F., and I think I do know a little about this. The young Canadian who is attached to an R.A.F. squadron does at first feel a little at a loss, perhaps a little strange, and he wishes he were with his own countrymen. If I may be permitted to use a parallel, they are very like the young Canadians who went across to Oxford in peace time as Rhodes scholars. The first year they held together in little groups, did not like the climate, or the English, very much, and were not at all backward about saying so. By the third year, however, they had grown to know and like the English. They yielded to none in their devotion to Oxford. The same is true with respect to these Canadians in the R.A.F. squadrons. Most of them have a very deep devotion for their squadrons, and I can tell hon. members of an incident that will prove it. The Canadian squadron I was with in Tunisia at one time had several casualties. There were no Canadians immediately available in the reserve pool. We were told we could get Canadians from the adjacent R.A.F. squadrons. It was only with the greatest difficulty that we could get those Canadians to come to the one Canadian squadron out there. I tell the committee and through the committee the mothers of the boys who are with R.A.F. squadrons that they are in the very best of hands.

Another point I should like to mention is the status of R.A.F. airmen in R.C.A.F. squadrons. We have heard all about the R.C.A.F. airmen in the R.A.F. squadrons, but the reverse situation also occurs. There are R.A.F. airmen, Englishmen, Scotsmen and Irishmen, in Canadian squadrons overseas. The reason for that is a simple one. Those hon. members who are soldiers from the last war know that the sergeant and the sergeant-major are the real backbone of the fighting forces. We undoubtedly had good men in these ranks in peace time, men with long experience; but with the great expansion that took place these men were naturally commissioned in Canada as officers, and therefore we are very short of long-experienced and tried senior non-commissioned officers and warrant officers. Such is not the case in the R.A.F., for in the R.A.F. many a good warrant officer cannot afford to take a commission. In the R.C.A.F. a man who takes a commission is financially better off. That is as it should be. In the R.A.F. he drops in financial status, and therefore they have a great number of very experienced senior non-commissioned officers and warrant officers who stay in those ranks. The Canadian squadrons overseas needed men like that. In the squadron I have just left there were two R.A.F. warrant officers, an armourer and a fitter, both with fifteen years in the service. They had served in Britain, in the middle east, and in the far east. One of them had gone to Russia with the Hurricane wing. These men were invaluable. They served with Canadian squadrons and they liked serving with Canadian squadrons, but they serve at R.A.F. rates of pay. In the case of a warrant officer that amounts to the pay of a Canadian corporal.

In the Canadian navy I think they do things better than that. They have the same situation. They have key men of the Royal Navy in our destroyers and corvettes, but they pay them Canadian rates of pay. I may be on the wrong wicket here because I notice the minister said that we pay the full cost of the R.C.A.F. squadrons. Does that include R.C.A.F. pay for those R.A.F. men serving in Canadian squadrons?

Mr. POWER: Frankly, I do not know; I do not think so, because at the time there were R.A.F. commanding officers with our squadrons, I know they were receiving lower pay than officers of a much lower rank.

Mr. SINCLAIR: That is quite true.

Mr. POWER: I do not think the non-commissioned officers are paid Canadian rates.

Mr. SINCLAIR: I certainly recommend that to him. The number is not large. There are only a few key men in each squadron.

Nothing in the air force has caused more heart-burning and misunderstanding than the commissioning of aircrew. Every member of the committee has heard from his constituents about the commissioning of aircrew. There

are many who believe that, because of the hazards involved, all aircrew should be commissioned. If you carry that to its logical conclusion then every man in a tank, every man in a submarine, every man in a destroyer, should be commissioned, if the hazard of the occupation is to be the governing factor. If it is to be on what might be called technical skill as a pilot, then every infantryman who is a good marksman should be commissioned. Actually, in the air force as in the navy or the army, the qualifications for commissioned rank are the same—the capacity for leadership and technical knowledge. The young pilot officer of to-day is the potential flight commander, the man who is going to lead a flight or a squadron or a wing, to lead the squadron or wing in battle and be responsible for the lives and the welfare of the fighting men under him.

The one objection of the Canadian air force has never been to commissioning on the basis of a difference of rank; it is rather the Canadian objection to a caste system. Let me explain. Two Lancasters fly side by side to Berlin, one captained by a sergeant-pilot, the other captained by an officer-pilot. They undergo the same hazards, the same strains and they return to the aerodrome. The sergeant-pilot goes to the sergeants' mess; the officer pilot goes to the officers' mess; to use an English cricket expression, a gentlemen's and players' arrangement. In the officers' mess the officer gets better food, better quarters, better opportunity for rest and recreation. There lies the injustice. These boys who are subject to the same strains and the same hazards are entitled to the same opportunities for rest, recreation and food. This was the feeling of Air-Marshal Sir Arthur Coningham, the distinguished New Zealander who led the air forces in the desert. Despite the objection of the British air ministry and, of course, the cult of the old school tie, he turned his officers' messes in the desert air force into aircrew messes, where all members of the aircrew lived. Not only did this break down the caste system, but it had the most helpful effect on the junior aircrew. The sergeant-pilot was not only fighting with the senior officer pilots but living with them and saw every day an example of how he should comport himself, what responsibility he should accept if he expected to be an officer. The best proof I can give of how successful it is, is the fact that of all but one of the N.C.O. pilots we had in our squadron when we left Egypt had been commissioned by the time we reached Tunis. That very high percentage simply goes to show that these boys learned in an aircrew mess what was expected of them as officers.

I would, therefore, most strongly urge on the minister that he institute a system of aircrew messes in the Canadian squadrons overseas in England and on the Canadian flying stations. I am not criticizing the wonderful job he has done in the commissioning of aircrews. I tell the committee that the Canadian aircrews have a higher percentage of commissioned men than the R.A.F., the United States air force, the Australian air force or the New Zealand air force. Every Canadian, of course, starts at the rank of sergeant. The aircrews of other countries start at much lower ranks. In Germany, they start in as privates or corporals. I would say, however, that the institution of aircrew messes would break down the last resentment against this caste system, and let every man subject to the strain and hazards of flying have the same opportunities for rest and recreation.

I intend to speak next on overseas leave. The minister has fairly well covered this. While members of the air force join for the duration of the war none of them wants to spend all his time overseas fighting the war without a break. The R.A.F. men do get to their homes between operational tours of flying. The minister announced last fall that after one operational tour and one tour of instruction aircrew would get one month's leave at home. It is not as easy as that. In the R.C.A.F. there is a tremendous backlog of men who have qualified on one tour of operational duty and one tour of instruction, and so the initial load is heavy. The plan is working well. There is a constant flow through Ottawa of men who have done their tour of instruction and are home on a month's leave. I would suggest, however, that the time has come when a tour should be laid down for groundcrew. A year or so ago it was suggested that this tour should be for two years, but that was later cancelled. I believe the groundcrew are entitled to some break in their service overseas, and a chance to come home for a month's furlough. Of all the groundcrew I think the most deserving are those mentioned by my hon. friend, the radio mechanics working in radio location stations in every part of the world; lonely little stations on headlands along the coast, three or four or five men, with a dull routine broken only by occasional attacks by enemy aircraft. These men have lost almost every association with Canada, and certainly they are deserving of the same opportunity for furlough at home as the ordinary groundcrew with R.C.A.F. squadrons.

I do not propose at this time to deal with the various suggestions in regard to the rehabilitation of aircrew. The minister has outlined very well to this committee some of the problems in that connection, and of course the problem of emotional adjustment is the greatest difficulty to be faced in connection with these men. I have, however, one or two suggestions to offer in regard to the employment of aircrew. There is no doubt that a large proportion of the aircrew want to remain in the R.C.A.F. To most of them it is the only job they have ever known. They like flying; they are keen about the air force, and they would like to stay in it. They know, however, that there is not very much hope for a career for many of them in the peace-time R.C.A.F. I think we all agree that our permanent force after the war will be at least as large as it was before the war, when it was very small indeed. Since the beginning of the war a number of vacancies have occurred in the permanent force through death, casualties and the retirements which have been instituted by the minister. I feel that these vacancies now should be filled, that our permanent force at least should be kept up to the peace-time strength of about 450 officers, and that vacancies should be filled from the ranks of those brave young men who have had one or two tours of operation overseas. That would relieve some of those young men of their anxiety as to what they are going to do, and would help to keep our permanent force the virile, dynamic unit the minister wants it to be.

My next suggestion has to do with the T.C.A. We have a civil service preference for overseas veterans. I believe that at present there should be a leading preference for employment with T.C.A., both in the air and on the ground, and further that the moment the war ends the preference should be complete, that only men who have flown overseas or served on the ground may qualify as pilots and groundcrew with T.C.A. There is, of course, the suggestion, which is carefully fostered, that these bomber boys are not qualified to be T.C.A. pilots. The T.C.A. pilot takes a twin-engined machine, with a good safe load, off a good safe aerodrome fully equipped with lights and all other aids to flying, with every meteorological aid and help, and lands it on another nicely laid out aerodrome, complete with lights, radio beams and all the rest of it. The bomber boy takes a heavily laden four-engine bomber off a dimly lit field, without any of the aids to be found on the fields in this country; the moment he crosses the Dutch coast he flies through zones of flak and rockets and searchlights and enemy fighters. He has almost no artificial navigation aids, no radio beam, no lights or anything else. He takes his aircraft to the target and returns, perhaps with his craft crippled and with injured crewmen; he fights every mile of the long way there and back again, finds that dimly lit aerodrome in England and lands his plane. Comparison of a T.C.A. pilot with a bomber boy puts the T.C.A. pilot pretty much on the level of a bus driver. My point is that those who carry the bombs in this war can carry the mail in peace time. I might go a little farther than that. After the war most of our first-class mail will be carried by air; and the private companies which get mail contracts should be bound by the same conditions, that their pilots and groundcrew, for at least a good period after the war, shall be men of the R.C.A.F.

I mentioned the preference given to overseas veterans as far as civil service employment is concerned. With regard to the women in our armed services, very few of them will have the chance to serve overseas, but they left comfortable lives and good homes to undergo barrack-room life in the services in order to relieve men for fighting jobs, and certainly these girls are deserving of civil service preference. I urge the minister to use his influence with the civil service commission to see that the women of the R.C.A.F. receive the civil service preference after the war, whether or not they served outside Canada.

In the course of a previous speech in this house I mentioned the special problems of rehabilitation in connection with aircrew, getting them to settle down after the intense excitement and hardship and to return to the dull and often monotonous civilian life in Canada. There is one group of aircrew, however, who deserve special consideration; I refer to those who are now prisoners of war in Germany. Of course the greatest percentage of all our prisoners are aircrew boys, shot down in bombers and fighters over Europe. These men were catapulted from a life of extreme excitement into one of deadliest monotony. The very dreariness of their present lives, the shortage of food and recreation, is undoubtedly deeply affecting them. Their hopes are kept alive by two things: first, by letters and parcels from home and, second, by the fact that to-night, and every night, in prison camps across Germany, in tents and in barracks, our Canadians are listening for just one thing, the distant thunder of our bombers coming back to blast Germany and speed their day of liberation. While Canadian airmen overseas know that the problem of rehabilitation is going to be difficult for aircrew, every man overseas feels that his comrades in the prison camps are entitled to the very best break this country can give them. Certainly they are a very special class.

I think every hon. member swelled with pride when the minister recounted in detail the very great achievements of our lads in the R.C.A.F. overseas. Our objective in this house should be to see to it that when these lads return they will swell with as much pride because of what we have done for the country in their absence.

Mr. FREDERIC DORION (Charlevoix-Saguenay): Of the three armed services the air force is the one in which I am particularly interested, because I have always had the keenest memories of my stay in that corps, in which I served overseas in 1918. At that time aviation was in its infancy, but even then the spirit of adventure, the companionship and the fine esprit de corps which existed among the men made it the finest corps in which one could serve. To-day, when I am asked to advise young people as to the choice they should make when they decide to enlist, I always recommend the air force.

While listening last evening with a great deal of interest to the speech delivered by the minister I was particularly impressed with the development of this service in the last three years. I could not refrain, however, from deploring the fact that notwithstanding such a brilliant achievement we as Canadians unfortunately cannot be too proud of the actual situation in regard to our air force overseas. We learn that thousands of our airmen are mingled in the great British melting-pot with Czechs, Poles, Belgians, Free French and so on. I quote from page 1034 of *Hansard* of last night:

> With regard to aircrew, that is men who fly, the situation is different, and our proportionate strength to that of the Royal Air Force is very much higher. I have not the exact figures for overseas. I know, however, that Canada is now, and has been for many months, the largest and principal producer of aircrew for all the commonwealth forces.

And further:

> But with the best information I can obtain, I should say that from 22 per cent to 25 per cent of all the aircrew in the European and Mediterranean areas under British tactical command—and this includes British, New Zealanders, Australians, Poles, Czechs, Norwegians, Belgians and Free French—are Canadian boys, enlisted in Canada, trained in Canada, paid for by Canadians. That proportion will tend to increase rather than decrease as the men whom we have overseas proceed through their final courses to the operational squadrons, until Canadians comprise about one-third of the total content of these British-dominion-allied aircrew strength.

What is the reason given by the minister for such a state of affairs? What is the explanation for not having all our airmen serving in the R.C.A.F. under a Canadian command and in Canadian squadrons? We find the answer in the minister's speech as it appears at page 1033 of *Hansard* as follows:

> With respect to the other category of Royal Canadian Air Force airmen attached to the Royal Air Force, namely aircrew, they are not in Royal Canadian Air Force squadrons because there are not now, nor likely ever will be, enough Royal Canadian Air Force squadrons to fit them into. These aircrew, flying men, are widely dispersed throughout Royal Air Force squadrons.

And then, further on:

> There are not nearly so many Canadian aircrew in Royal Canadian Air Force squadrons as there are scattered throughout the Royal Air Force. I have been asked many times why all Canadians are not in Canadian squadrons. The answer is that if all Canadian flying men were in Canadian squadrons we would require not thousands, as we have, but well over a hundred thousand groundcrew for the maintenance and service of these squadrons and their equipment.

And here comes the most amazing, and, I believe, the most important question the minister will have to answer to the people of Canada. If we have not as many squadrons as we could or should have, because of a lack of groundcrew, why is it the government has decided to stop the recruitment of groundcrew? This is what the minister is reported to have said at page 1027 of *Hansard!*

> We have reached a phase in our war-time existence, as far as the air force is concerned, which marks the end of one part, and an important part, of our work, namely the air training.

And again at page 1028

> This reduction from requirements of previous years, is largely due to the fact that groundcrew requirements have been stabilized.

And yet, Mr. Chairman, we see by some of the minister's words that he had to fight to get the forty-two squadrons we have overseas. Then, quoting again from page 1034 of *Hansard:*

> Besides, the joint air training plan was intended only for the purpose of producing aircrew. It was never intended under the original agreement that we should send any groundcrew over to the United Kingdom. It was considered that if Canada set up the ground establishment in Canada to train flyers, and that meant employment of over 150,000 people on the ground, it would have done its share in the air war effort by sending the trained flying personnel overseas to fight as member of the commonwealth air forces in any of the commonwealth units anywhere. But because we desired further identification of our forces, and because we had some of the best mechanics and groundcrews in the world, eager and ready to proceed overseas, we set up these overseas air squadrons, and personally I am exceedingly proud of the action we did take.

And I quite agree with the minister when he says this:

To judge by the paucity of public information carried in the British and American press, and in official statements and communiques with respect to the thousands of our men in the Royal Air Force, I should judge that if we had not had these squadrons of our own, even the people of Canada, not to speak of our allies and partners, would have been almost totally ignorant of the large and important part Canada is playing in the air war and the defeat of Germany.

But why not continue the same Canadian policy? Why stop sending groundcrew overseas? Why not endeavour to form as many Canadian squadrons as possible? Must we deduce that the government is satisfied with this situation? Must we believe that some new unknown agreement has taken place in virtue of which the British air force must keep its standing at the expense of Canadian airmen? Why always have Canadians in all the services performed the most difficult task, when others keep to their fireplaces? Why must we furnish the men to do the real fighting, when every day, from press dispatches throughout the world, we are told that it is the Britishers who do the job?

Why not incorporate British groundcrews in Canadian squadrons, instead of training Canadian airmen to form British squadrons? Does the answer not reside in the fact that we are always, and must always be the colonials, useful only to pay tribute to the mother country? Is this not the best evidence that we are coming back to the status of a colony, and that notwithstanding the many declarations made lately by members of the government, we are accomplishing exactly the wishes of those who, like Lord Halifax, want the dominions to disappear as independent units? Every Canadian is proud of being a Canadian, but I urge the government not to deceive the people, because I am afraid of the reactions which may follow.

(Translation): Mr. Chairman, I have but one word to add to what I have just said. I should like the Minister of National Defence for Air to explain how it is, and I deplore the fact—that Quebec has been chosen as the first city where air force training schools are to be closed. It is often reported in the press, and unfortunately all too often and unfairly in this house, that enlistments are not as numerous as they should be in the province of Quebec. But if young French Canadians are not afforded the opportunity to enlist in those services which they might like to enter—and as I said at the outset, the air force is the one which our young men prefer—if they are deprived of facilities for enlistment in that air force through the closing of schools operated in our province, there may still be more reasons for deploring the fact that voluntary enlistments are not as numerous as they should be. That is why I ask the Minister of National Defence for Air, before any decision is taken, whether some action might not be taken to prevent the closing of those schools and keep them open for the benefit of the people who live in the Quebec district.

(Text) Mr. BRUCE: I wish first of all to congratulate the Minister of National Defence for Air upon the brilliant presentation of his report respecting the activities of the air force both overseas and in Canada in this time of war. Hon. members will agree that the minister had a wonderful subject, but it will also be realized that he has taken full advantage of that subject to give us an extraordinarily interesting account of the exploits of our young men overseas, exploits which have filled all of us with pride and gratification.

For a moment I should like to speak about the medical service which he has established for the airmen. All hon. members will appreciate the fact that there are many conditions affecting airmen which are quite different from those which affect the ordinary soldier on the ground. Therefore it has been necessary to have men specially trained in the problems and requirements peculiar to our aircrew by work in laboratories and by taking special medical courses in universities in England and Canada. We know that Sir Frederick Banting did a great deal of valuable experimental work in the Banting institute in Toronto to determine the effect of high altitudes on the heart and blood pressure. The result of his investigations has proven of great advantage to members of the air force.

I disagree with the hon. member for Renfrew South who advocated having one medical service for the three branches of defence. I think it was a wise decision as far as the air force was concerned to have a medical service separate from the general medical service responsible for our army. The same comment could be made in connection with the naval medical service.

The minister was very fortunate in his selection some years ago of a head for his medical service. Perhaps I should not say that he was fortunate but rather that he showed a good deal of judgment and wisdom by selecting a gentleman by the name of Ryan to head that service here. I do not know what his rank was when he was serving in England,

where he had a large experience in the special problems associated with flying, but he was made an air commodore when he was put in charge of the air medical service in Canada. He laid the foundation for a medical service in Canada which is unsurpassed, if equalled in any part of the world.

He was followed by Doctor Tice who had been associated with him in the air medical service for some years. Air Commodore Tice, as he is now known, has continued the work and has given equally good service as head of the air medical department. I want to commend the minister also for a recent appointment he has made. I refer to Wing Commander or Group Captain Clark Noble. This gentleman served in the air establishments in Montreal, in the west and in other places. He has had a considerable experience in this work which has been superimposed upon an excellent education in medicine. He was one of the leading physicians in our city for some years after completing a distinguished post-graduate course in England. I commend the minister for his selection of Group Captain Noble as head of the air force medical service in England.

The minister referred to the desirability of having somebody to advise officers and men as to what their future work should be. He referred to these men as personnel consultants, and I am going to suggest that in selecting a head of this organization he could not do better than to pick out a medical man. The whole training in medicine is such as to qualify a man for such a post. The other evening we heard that there are sixty-three psychiatrists in the army, and I do not know how many there are in the air force. I suggest that one of these psychiatrists would do very well as an adviser to these young men as to their future professions or activities.

Some years ago I visited the dean of the medical faculty of Columbia university in New York city. I found him engaged in a job very similar to that which the minister indicates will have to be done on demobilization. The dean was interviewing prospective students. No matter how high his examination rating had been, each student was interrogated carefully by the dean of the medical faculty to see whether he should enter the profession of medicine. Everyone who thinks he would like to be a doctor is not qualified by training or aptitude for that profession, and I assume the same may be said of law and the other professions. It is quite clear that these young men will need advice, and I think the minister is quite wise in suggesting that there should be somebody to direct them on demobilization.

During the long period of waiting in England or elsewhere for demobilization will provision be made to educate these young men along the lines they hope to follow as their life work?

Mr. POWER: Yes.

Mr. BRUCE: That is very important. I have nothing but praise for the wonderful work of the air force. I should like also to say a word of praise for the admirable way in which the minister has presented the work of the Royal Canadian Air Force to this committee.

I have just one other word to say arising out of the report given a couple of nights ago by the Postmaster General (Mr. Mulock) as to the time it takes to get letters overseas. I have received a considerable number of letters from parents and others complaining about the length of time it takes a letter to get across to our forces in England and the Mediterranean. As a consequence, I went to the base post office to make my own investigation of how the mail was handled and whether they were doing their work properly. After a careful inspection lasting an hour and a half I concluded that the service was entirely efficient and that any delay in the mails was not the fault of the base post office in Ottawa.

I recollected having seen an item in the press on this subject some time before Christmas, and upon looking it up found that on December 4 the minister stated that it was planned to operate two flights a week from Ottawa to the United Kingdom and as many each week as might be necessary from the United Kingdom to the Mediterranean area or wherever routes might be justified. The minister stated:

> The service was set up because of the length of time it took ordinary mail to reach men on the active fronts. Mail to soldiers in Italy and the middle east was running as much as two months behind time. Realizing that letters from home provided the biggest kind of boost to morale, the R.C.A.F. undertook to get the service going.

I appreciate the difficulties faced by the minister, and I bring this up now simply to give him an opportunity of reassuring us that that service will soon be established.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. CHURCH: The statement which was made last Tuesday by the minister is one of the most comprehensive that we have had. I come here from the Toronto district, the most air-minded city, in two wars, in the

dominion. The minister has had a long connection with that city, covering two wars. I do not know whether he is looking for a seat, but I know that many airmen up there are with him. I wish also to compliment his deskmate and parliamentary assistant (Mr. Macmillan), who has shown great efficiency and has rendered splendid service, when the minister has been overseas, to private members of the house.

Starting from scratch on land, sea and in the air, after complete disarmament, Canada, with the air training plan and especially with lease-lend, has made a very real contribution in this war. There is no doubt about that. Many mistakes have been made, but they are made in every war. I was glad to hear the gracious reference to members of this house who have suffered the loss of their sons. In the British House of Commons fifty-six memebrs of parliament have made the supreme sacrifice so far in this war, and also many of their sons with them. What saved the world in 1940 were those glorious young men, some from Canada, who went up in the air in the battle of Britain by night and by day, from dawn to dusk, and sometimes for twenty-four hours a day. They saved the mother country, and we owe our very existence as an empire to those young airmen. Had it not been for them the war would have been over a few months afterwards, and for all we know both the United States and Canada would have been compelled to make peace with the axis powers. Not only were the losses of the air force in the battle of Britain very heavy in deaths, but those who are wounded will never be the same. How many of them will live tolerable lives again? It is the duty of the country to fulfil its obligations to these young men and not to allow a repetition of what happened after the last war.

In the period between the two wars that I have been a member of this house I have consistently supported, I am glad to say, rearmament on land, on sea, and in the air. In March, 1938, I pointed out to the house the very grave danger which this country, especially Quebec, the maritime provinces and the Pacific province, would be in if war came. We had ample notice of what was likely to happen. Speaking in this chamber on March 24, 1938, in support of an increased vote for air defence, I said, as reported in *Hansard* on pages 1662 and 1663:

> There is not only the possibility but a great probability that air raids will occur in the next war in which Canada is involved. The defence of our population from air raids should be considered. These raids will be the chief source of danger in all future wars, and we shall be living in a false paradise if we do not adopt measures to protect ourselves. Abyssinia was recently a theatre of war, and we all know the destruction of civilian population that occurred through this means of attack. Abyssinia is an open country with only a small density of population as compared with what there is on the island of Montreal and in other parts of Canada, and yet great damage resulted.
>
> Air raids can work great havoc in time of war, and the menace will be a very real one in Canada, especially to the people of Quebec, the maritimes and British Columbia.
>
> . . . An aerial bombardment is one of the dangers most to be apprehended in time of war, particularly in large cities with their dense populations; the protection of cities from aerial bombardment should be one of the chief objectives of the national defence department, and proper equipment for defence against this menace should be provided. . . .
>
> Large quantities of poisonous gas could easily be spread over a large area as was done in Abyssinia, and incendiary bombs dropped on our large cities, with great destruction and slaughter, and the enemy aircraft could get back to their base in practically no time. These attacks would not only bring ruin to our cities and towns but break the morale of our people and prevent us from developing a proper defence and mobilizing our man-power and armaments.

That happened to be true in this war in relation to the people of Canada. Since the minister this session presented his comprehensive statement last Tuesday there is very little which needs be said. It is a splendid statement, in respect of those who have enlisted, the tabulations which have been given, and the estimates for the coming year. We all realize that since the statement of last year there has been a vast improvement in the war situation. True it is that during the battle of the Atlantic a year ago we faced some critical periods, and the result wavered in the balance until we had the union of sea power, air power, and land forces. Sea power alone can never bring us victory. Sea power means the power to use the seas and to deny their use to our enemies. I do not suppose that commerce will ever entirely leave the sea and take to the air. The balance of power will continue to be a necessary policy, as it has been in Europe for the past three or four centuries. It is just as essential to our future well-being as it was in the days of Philip of Spain, of Napoleon; and in our generation, twice, under the menace of Emperor William and Hitler, it remains of supreme importance.

There are some principles which I think should be considered in connection with our air policy in the near future. The war is far from being won. We have not yet penetrated Germany's defences. There has been an improvement in the Mediterranean situation, thanks to the glorious advance across the desert for nearly three thousand miles

which was made under those great generals, Alexander and Montgomery, when air power came to the support of the army and helped to restore the supremacy of sea power in the Mediterranean. In the advance through Italy sea transport is needed and sea power is as necessary as ever, but sea power, which Britain has maintained since the time of Napoleon, cannot alone win the present war. The part taken by airmen and the army in the Mediterranean has been most important and gratifying and has given new courage and heart to the peoples of the world.

Since the minister presented his estimates last year we have seen not only on the Atlantic ocean but in the Mediterranean the union of sea and air power and land forces. Remember that the land forces are just as essential as they were in the first two or three years of the war, when all over the United States they were ridiculing the British Tommy in the early days of the war; but the British army saved the situation, not only in Africa, in the Mediterranean and in Italy but by taking possession of Iceland and other bases in the Atlantic, because there is no doubt that had Germany gained supremacy in the battle of the Atlantic, before we got some control over the U-boats, before we had an umbrella in the air over our sea power, the consequences would have been most disastrous to America. Thanks, however, to the glorious achievements of our airmen in aiding sea power and convoys, the battle of the Atlantic has turned in our favour and the U-boat has practically retired. Neither ships nor aeroplanes can operate without the possession of air bases, and these must be held by land forces. Their possession was a very fortunate circumstance for us during the Atlantic operations.

Air power cannot be a substitute for sea power until the air can replace the sea as a medium for the conveyance of the world's commerce. Air forces, like sea and land forces, are instruments of sea power, and so each finds its proper use.

I wish to refer in conclusion to one or two other matters. The last one is in regard to the necessity of utilizing the lessons of this war and applying them in the coming days of peace. If we do not, this magnificent body of young men of the air will suffer from unemployment after the war.

I wish to call the attention of the committee to the situation in the Pacific. I have here a map which I will send to the minister, showing the danger to which the empire is exposed, which danger will continue even after the German war is over. That danger lies in the Pacific. I find an interesting article and map in the *National Review* of February, 1944, in connection with air travel. It is pointed out that the war with Japan may go on for four years after hostilities have been concluded with Germany. The Japanese are hopping from island to island, and the Japanese fleet and air force are as yet an unknown quantity in this war.

There is one phase of the situation to which I should like to refer as I did on July 15 last. It may come only partly under the minister's department, but I submit that it is necessary to have an empire air policy after the war if we are not to surrender our privileges to our brave allies, friends and kinsmen to the south. There has been a long debate in the British House of Commons on the question of air travel and an all-red empire air policy, and the matter is also receiving close attention in New Zealand and Australia. On January 19 last, Mr. Curtin and Mr. Fraser, the two great prime ministers in the southern Pacific, representing the sister dominions of Australia and New Zealand, who met on a union defence screen policy in the air in the Pacific, made an appeal to Canada, and I suggest that it should not go unnoticed. I quote what Mr. Courtenay, special correspondent of the *Sunday Times*, said in his dispatch from Canberra on January 16 last:

> It is not generally realized at home that America has a Pacific air route which is marvellously well organized. On the day after war ends the same pilots, planes, aircrews, ground organization, wireless and meteorological services will be available to begin commercial air services between Canada, America, Australia, and New Zealand.
>
> The British empire will not be in this lucrative traffic because nowhere on the Pacific route during war is there one British plane, pilot, meteorological expert or radio operator. Unless Britain places aircrews on this route in 1944 she will be left at the post as far as experience and good will of services go, if peace comes in 1945.
>
> The Americans have not got this tremendous hold over Pacific air routes by accident. They have got it by enterprise and drive at a time when we were fighting for our lives against huge odds. They are backed by their government in this and in all other commercial expansion. They make every concession to would-be travellers on their air routes even to carrying them free.

He goes on to refer to the meeting on January 13 between the prime ministers of Australia and New Zealand on the question of defence in the Pacific, and the necessity of Canada also and Britain doing something immediately to solve this great problem of our era, not only for the benefit of the British empire but for the peace and security of the world.

The minister for the army last Tuesday brought down for me certain tables with regard to pay in the army, the navy and the air force. I would point out that there are many air inequalities in these tables, reading right across the list, from those at the top down to aircraftsmen or privates, in connection with subsistence allowance, dependents' allowance for wife and one child, quarters and so on. I appeal for better treatment of these low paid men in the air force and the navy. The cost of living is just as high for them and their families as it is for people in the higher brackets and something should be done to alleviate their condition. Nothing has been done for them, however, in the past twelve months except to move them from $1.30 to $1.50, and they did not all get that. The time has come when some committee should take this matter into consideration. There should be equality of pay, putting these people on an equal footing with those of corresponding status in the forces of the United States. Questions in regard to cost of living bonus for dependents and other matters of that kind—holidays and so on—will be discussed later on. In the meantime, I regret to see that nothing is being done with regard to a national system of soldier insurance I have been advocating since this war began.

We have heard a great deal about the wonderful bank that is being set up. Every one, I suppose, will get some assistance from it, but it seems that a great deal more has been said about this bank since some industrial ridings went against the government in August last in the Ontario elections. Heretofore these industrial workers were forgotten; now they are being considered. I would remind the government that a large number of these young air people come from the industrial ridings. They have joined the army, the air force and the navy, and they should, I submit to the minister, be given some consideration in the form of a national insurance policy for all soldiers and their dependents, and to provide for them for three years after the war. It was shown in the last war, so far as the United States is concerned, that large sums of money can be saved in pensions and other aids to soldiers by a national system of insurance for soldiers. I have referred to this matter, and to other questions such as cost of living bonus, for four or five years, but little progress has been made.

I wish to compliment the minister upon the wonderful record of achievement of our air force overseas. I am sorry to see the casualties it has suffered. Sometimes I think in Canada in training camps a civilian inquest would do a great deal of good in some of the cities and towns, because it would tend to clear up the inequalities that exist and to check the carelessness, if any, that now prevails. The Canadian army on land, on sea and in the air is a citizen's army, and I contend that when men join the forces they should not lose all their civilian status as a result of enlisting. Every man who enlists should retain all the rights and privileges which he enjoys as a citizen. For that reason I hope the minister will see his way clear next year, in urgent cases, to allow a civilian inquest to be held as in the past.

Mr. LACOMBE (Translation): Mr. Chairman, in his remarks the Minister of National Defence for Air (Mr. Power) has said how greatly important he considers the rehabilitation of our airmen. When the conflict comes to an end, our air heroes will have to be given the full measure of justice and assistance to which they, together with the members of our army and navy, shall be entitled. Canada, having been able to find money to train them for war, could not shirk the duty devolved upon her to equip those young men for civilian life. It is said that foresight is the essence of government. Let us foresee the post-war period, when countless difficulties will arise on all sides. We shall then have to find for the members of our armed forces occupations worthy of them. There are some who wish that demobilization might be held up until several months after the armistice. I am against such a suggestion. Any delay would be fatal to the spirit of enterprise and reconstruction which will have to be greatly stimulated. The future of Canada and her vital interests will then be our best guide. I wish to quote the following excerpt which I find in the February, 1944, issue of "Canada at War", page 23:

> So impressive has been the success of the plan that Canada has been referred to as "the airdrome of democracy". The R.C.A.F. is responsible for administration of the B.C.A.T.P. and for provision of its instructors.
>
> There were only 169 pupils in the first classes—50 pilots, 44 observers and 75 wireless operators. However, air schools and flying stations sprang up all over Canada until 154 were in operation, more than twice as many as the 74 originally estimated as being required for the programme.
>
> Ten thousand training planes flew an average of 2,000,000 miles daily to produce the still expanding force of 50,000 aircrew graduates—enough to man 15,000 combat aircraft. More than 80,000 men have had special training in groundcrew trades.

Mr. Chairman, is it not obvious that I was right in stating a few moments ago, that the demobilization of our army should be undergone as carefully and speedily as possible as

soon as the war is over. For that purpose, the government should immediately order the holding of an investigation about the equipment of our three armed services, the value and the capacity of the buildings taken over by them, the buildings used by war industries, so as to protect the nation's economy which is already threatened by war and its aftermath.

Mr. McIVOR: I am sure we were thrilled at hearing the narration which was given by the minister Tuesday night and to-day, telling us of the exploits of the airmen, not only in the air and over the sea, but in the training centres as well. We learned that they were capable of going up high and coming down heavy; that they were capable of doing the dangerous thing and the hard thing.

I should like to tell the minister to-night that I received a commission from two aunts to tell him that they were also capable of doing the kind thing in helping to bind up the broken spirit. Twice last year I asked that the silver cross be given to the next of kin; that when a young single man's mother died the next of kin should receive the silver cross. These relatives received the silver cross and they asked me to thank the minister and those associated with him for that.

I should also like to tell the minister that a number of young pilots from the head of the lakes asked me—they did not call him the minister, or the Hon. C. G.; they just called him plain Chubby Power—to tell him that we can trust him; that he is doing a great job, and let him take the bumps with the calms and we shall see that he gets a great ride after the war.

I have a question to ask with respect to the giving of the silver cross. How are they distributed; how are they sent out? If the minister cannot answer that, perhaps his parliamentary assistant can. On behalf of the recipients of these crosses I thank the minister for sending them out.

Mr. GRAYDON: I have no desire to take up much of the time of the committee at the moment, but one or two matters arising out of the minister's statement I think deserve an observation or two. One of the matters which struck me most forcibly in connection with his lucid and clear exposition with regard to the air force was that in his remarks he was very frank and very fair. I wish to say to the committee, to the minister and to the government that it is an indication of how a government can cooperate with an opposition. It is not a very easy thing—and I think most people recognize it— to carry on government in war time. On the other hand, it is not a very easy thing to carry on opposition in war time either, because both of them have difficulties, which the minister only too well knows. But cooperation, so far as governments and opposition are concerned, cannot be just a one-way street. In his frank and open statement the minister has shown a spirit of cooperation so far as the opposition is concerned. I think he has made it a little easier for us, because, after all, we are anxious to do a job for the people of Canada within the confines of our duty and obligation in this house.

The minister's clear references and frank statement have been of considerable help to us. His statement was, shall I say, not too long, but it was filled with the usual simplicity of language and clarity of expression that one associates with him. Having said that about the minister, I think perhaps that is all he can expect, and he may feel that is all he deserves.

Mr. POWER: It is a little more.

Mr. GRAYDON: In any event the story of the Royal Canadian Air Force, their daring exploits and the great successes which he chronicled in his statement on Tuesday night and to-day indicate, I think, that the young generation of Canada, as was the case with the previous war-time generations, is living up to the very best traditions of Canada. We used to hear it said that the new generation was not quite as good as the old. I think the minister's statement of Tuesday and to-day would indicate that if we of the previous generation, if you like to call us that, had measured up to the standards which those of the present generation are setting overseas and in every theatre of war we could look back with perhaps more pride and perhaps deserve more tributes than we have received.

When we speak of Canada's future in aviation and in the air generally, if the achievements to which the minister referred can be accomplished in time of war it would appear to me and to the members of the committee generally that when the war has been concluded there is no reason why, if Canada is standing on the top rung of the ladder in the air in war, she should not turn the tremendous assets that she has in man-power and material to achieving similar success on the air routes of the world in civil aviation in peace time. By the utilization of the man-power, both aircrew and groundcrew, we have seen what accomplishments we can bring about in war time. Those achievements indicate to us what is possible in time of peace. The transition from war to peace in so far as the air force is concerned constitutes an entirely different problem from that of the other two branches of the service, for this reason, that the utilization of the men and women, if you like, in

the air force by civil aviation will follow along perhaps with less interruption in many instances than the change from war to peace in the other two branches. I think we should utilize to the fullest possible degree the men who have been trained in aviation, the men who have by virtue of their experience in war so much to contribute to this nation in the development of our position in so far as civilization in an international way is concerned. Therefore I hope that during this discussion the minister may indicate the policy of the government in making that change from war to peace in regard to at least a good proportion of those who have accomplished so much in the air during this war-time period.

I should like to mention a matter which was dealt with also by the hon. member for Vancouver North, and which I bring up again only because perhaps it needs some emphasis. I hope the chairman of the committee will not ask me to lay on the table the document I propose to read, because I shall read it only in order to bring to the minister's attention one point. I am referring to a letter I received just the day before yesterday from a fine boy who lived in my constituency and whom I have watched grow up until now he is a mature man. He has been in the air force for a considerable time and has been overseas for I am not sure how long but at least for a good many months. This letter is dated February 17, and in it he says that he had hoped to get home some time this summer on the month's leave that aircrew are supposed to get after completing a tour of operations and six months of instructional duties. However, he says the system does not seem to be operating as well as it should and that this is causing quite a lot of dissatisfaction among the men. He says also that most of the boys feel that instead of doing their instructional work in England they should be allowed to perform that work in the schools at home. The letter concludes with a reference which makes me feel very proud. This boy speaks of his pride in belonging to an organization which in spite of terriffic handicaps has conquered the air lanes of this war, and whose members have marked "paid" on many outstanding nazi accounts. I have referred to this letter particularly to bring to the minister's attention this matter in regard to leave, which was so well put by the hon. member for Vancouver North this afternoon.

I also want to bring to the minister's attention the position of the women's division of the Royal Canadian Air Force. I have had brought to my attention on many occasions, particularly in correspondence both from this country and from overseas, the question of equality of pay for women in the services. I raised this question with regard to the Canadian Women's Army Corps when the army appropriations were under consideration, and I raise it again now in the hope that the minister, who has a full knowledge of the situation, will give the matter his serious consideration, so that in the air force, and perhaps in the other branches of the services as well, eventually we may have that equality to which people seem to render lip-service as far as civilian life is concerned, but which somehow never seems to quite materialize as far as our women go. I do not wish to be unduly critical of the minister, but I should like to have him give the situation his most careful attention so that we may have an approach to equality of pay.

There is another matter I should like to mention which I think peculiarly affects the air force and perhaps does not apply in the same way to the other branches of the armed services. I am told by members of the air force that in this branch, unlike some of the other services, allowance is not made for travelling time when leave is granted. To give an example, an airman in British Columbia is given leave for two or three weeks to visit his home in Ontario. Out of that leave he must spend four days coming and four days returning, making a total of eight days which should not be taken out of his three weeks' leave. It may be that there are reasons for this practice being followed, but I think this is one of the little things which might be corrected by the minister, who is so good at looking after details of this kind. I should like to leave that thought with him, together with the whole question of free transportation for our troops, which I mentioned when the Minister of National Defence had his estimates before the committee. I do not wish to urge that unduly year after year, but I mention it now for this reason. I fancy that the minister and most hon. members feel that we as civilians seem to make such a puny little contribution to the war effort. It may be that our contribution is greater than perhaps we realize, but still I think there is a feeling among civilians generally that unless one is in uniform one does not seem to be doing anything like the job the boys and girls are doing who have actually donned that uniform; and I think that is a proper feeling for us to have.

Having that in mind, it seems to me that as civilians we should try to do more for those who are in uniform, even if it means spending more money. After all, we are in this war to win it; and any little convenience or comfort, or anything which will advance the position of the men and women in our armed forces, should be the deep concern of each of

us. In connection with matters such as the cost of transportation, the allowance for travelling time in connection with leave and matters of that kind, if we are to err at all I think we should err on the side of generosity toward those in the armed forces.

At this time I do not desire to make any lengthy statement in connection with the air force appropriation, but I should like to say that I believe this committee might properly spend some considerable time—I am not suggesting this for the purpose of delaying the estimates—on the matters which the minister laid frankly before this committee this afternoon in connection with post-war and demobilization problems. These are matters to which I think we are in duty bound to give serious consideration and attention. These are not entirely government matters; they affect the life of this whole nation in the years that lie ahead. The manner in which we as a country receive back into civil life the men who have made the continuance of that civil life possible during these perilous and dangerous years will, in the final analysis, determine whether or not we as a people are able to meet the challenge which is squarely before us now. I want to say to the minister that as far as our party is concerned we are anxious to give every possible assistance in the solution of these very difficult and trying problems which from time to time come up for solution.

Mr. BLACKMORE: All hon. members are proud of the achievements of the air force, and all are thankful that our boys have risen so splendidly to the occasion thrust suddenly upon them. I do not purpose speaking at length at this time, but rise merely to place before the minister one question in connection with which I believe more can be done than is now being done. I refer to those men from Canada who have joined the R.A.F. and have desired to be transferred to the R.C.A.F., but who thus far have been unable to accomplish their object.

I hold in my hand a letter which reached me only to-day, an excerpt from which I believe the minister would be pleased to hear. These are the words in the letter:

> Whilst serving in France at the beginning of the war we were asked if we would transfer to a Canadian squadron, with the possible opportunity of transferring to the R.C.A.F. I put my name forward immediately, but that was the last we heard about the matter, partly I expect because of the turn of events at that time.
>
> After my return from France I tried almost every conceivable way of being transferred to the R.C.A.F. I have been to Canada House and also to the R.C.A.F. headquarters in London, but without receiving any satisfaction. Have put in application after application at every station where I have been, but the answer is always the same, that it is impossible. Have even finished my term of service with the R.A.F., but even that does not seem to matter.
>
> Since my return from France I was married to an English girl who is now a serving member of the Canadian Women's Army Corps. As you know my wife in the service receives Canadian status as regards pay, etc., and myself being a Canadian citizen will have to carry on in the R.A.F. never being able to receive the equivalent pay or promotion as members of the Canadian services enjoy, unless there is some remedy which I have not had brought to my notice.
>
> Should be very pleased if you could enlighten me as to a possible solution to my case.

This boy lives in an Ontario city, and states:

> My intentions are to return there after the war. My classification in the Royal Air Force is corporal, fitter II engines, group 1.

I believe no comment is necessary. The minister has already indicated that he is keenly aware of the existence of this problem, and in his remarks this afternoon he indicated that he has taken measures to deal with the matter. But I gather not only from the words but from the tone of his remarks that he is meeting with some sort of very difficult opposition.

Mr. POWER: No. I was hoping to allow the asking of a number of questions before undertaking to make a reply. May I say to my hon. friend, however, that the matter is now settled, in that we have reached an agreement with the air ministry, notification of which was given the house on February 16. The R.A.F. no longer has any objection to the transfer of their personnel to the R.C.A.F.

Mr. BLACKMORE: I shall have to get the details from the minister to-morrow, and I shall be happy to pass them on to this young man. He is about the third one in this predicament who has brought his case to my attention. There seem to be many of them. I was going to suggest that even if there are any difficulties in the way of actually transferring these splendid boys to the R.C.A.F., at least this parliament should make provision for making up to them the difference between the rate of pay in the R.A.F. and the rate in the R.C.A.F.

Mrs. NIELSEN: Mr. Chairman, I, too, have received information quite similar to that mentioned by the hon. member who has just taken his seat. I have in mind a young boy from my part of the country who went to England at the beginning of the war, and has been in the Royal Air Force ever since. His parents have been very much alarmed about the situation because they have felt for a long time

that their son, who was a capable boy with university training, should have been eligible for a commission. Owing, however, to the fact that he was in the R.A.F., all his appeals to the R.C.A.F. have been without avail. I thought if I brought this particular case to the minister's attention he might be able to give me some satisfaction to pass on to the parents.

Mr. POWER: I would be very glad to.

Mrs. NIELSEN: While I am on my feet I should like also to support what was said by the leader of the opposition respecting the question of equal pay for equal work. When this debate was before the chamber last year I made some reference to the need for recognition by the government not only of the splendid work being done by the women in the auxiliary services, but of the fact that they are entitled to the same pay when doing the same work. Knowing that the Minister of National Defence for Air is a man who holds realistic views, who is not afraid of innovation or new ideas, and who has always tackled things in a manner greatly to be admired, I felt that perhaps with him I would be able to press home my point to greater advantage than I might with some of the other ministers.

I do feel that all of us give lip-service to the idea of the wonderful work the women are doing in connection with our war effort. In the marvellous perspective now opening up before the people of the whole world, wherein we can see before us a pathway leading on to greater progress, I am of opinion that if we women do not take upon ourselves the necessary effort to convince you men of our rightful place in the world, and our right to have the same pay if we do the same kind of work, you men are just going to forget about it, the same as you have forgotten about other things in the past. Never was the time more ripe for women to press home their right to earn the same as the men earn, when doing the same kind of work, than it is now in the light of the marvellous and valuable contribution the women have made in the war effort.

Many of these women have in the past helped to support homes. Women, the same as men, have many responsibilities, such as looking after aged parents. And where the woman does the work, surely she is entitled to the pay. I heartily support the leader of the opposition in the plea he made, and I hope the minister will take cognizance of it.

Mr. FACTOR: I wish to say a word or two about a body of men in the Royal Canadian Air Force of whom no one has yet spoken. I refer to the thousands of administrative officers, who have been part of the scheme—those penguins, as the minister once called them, sitting in the Jackson building, in the Lisgar building, in command headquarters and in all units.

Perhaps I can speak with some authority on the subject, having been an administrative officer for over three years, and having had experience in units, at command headquarters and at air force headquarters. No one realizes better than I the vast contribution made by aircrew, the boys who fly the aircraft. I understand, too, that contribution made by the groundcrew, the boys who keep them flying. I say, too, that if the Dominion of Canada had done nothing more in this war than make the contribution it has made in the air force, we would have done a wonderful job, as far as our war effort is concerned.

I wish, however, to say a word or two about the forgotten men of the air force, the men whom I heard a flying boy once term the pen-pushers. These men in the different offices are making a contribution to the war effort. They rank from Air Vice-Marshal down to AC2's, and without their contribution this whole scheme would not be possible. Many of these men left lucrative positions in civil life and have made great financial sacrifices in order to do their bit in the great Royal Canadian Air Force. I should like to make one appeal to the minister on their behalf. The aircrew receive twenty-eight days annual leave, to which they are justly entitled; but I submit that men who sit at desks, men who are fighting the so-called paper war day in and day out, week in and week out, are entitled to the same consideration and should be given twenty-eight days leave. Their work is perhaps more tedious and more tiresome than any other; it exacts more in the way of physical strength than that of the boys who fly the planes. I say that without intending in any way to disparage the hazardous occupation of the boys who fly. But I do ask the minister to give some consideration to these men who are sitting in the offices day in and day out filling out these numerous forms. I would include the women, too, in this plea. They are doing a great job in administrative work. The occupy the positions of adjutant, assistant adjutant and many other administrative offices.

There are many men in the air force who are reaching the age of retirement, and there are also many men in administrative positions who are anxious to get overseas. We hear the criticism that the men in the Jackson building, in the Lisgar building or at command headquarters have soft jobs, but I would say to those critics that there is not one officer

in an administrative position in the R.C.A.F. who is not anxious to get overseas. Unfortunately, it is impossible to send them all overseas. In conclusion, I want again to pay my tribute to the men and women of the R.C.A.F. who are doing such a real job.

Mr. MacNICOL: There is one matter I should like to take up with the minister. I have communicated about this matter with the Department of National Defence for Naval Services and the Department of National Defence for Air, but I have not been able to get any satisfaction. Last year a number of men in Toronto who were matriculants about to enter university enlisted, I presume in the R.A.F. They were sent overseas where they received some training in flying off ships; then they were sent back to Canada and then to the United States where they are now being trained. I know quite a number of these boys, and I believe they are to be sent to some city in the southern states where they will complete their training.

This matter may not come under the Minister of National Defence for Naval Services, although I cannot see any difference in the authority of the two departments, that is naval services and air in this connection. I should like to know if the minister who is now before the committee is able to state just what the present status of these boys is. After they are trained they will probably be sent overseas to fly off British aircraft carriers. I should like to know their relationship to the Canadian service and how it was they were enlisted by the Royal Air Force.

Mr. POWER: I do not know.

Mr. MacNICOL: Somebody must have some control over them. They are some of the brightest boys in the land.

Mr. POWER: Were they enlisted last year?

Mr. MacNICOL: Yes.

Mr. POWER: I do not know why they did not come to the R.C.A.F. recruiting office. Offices were opened all over the place.

Mr. MacNICOL: I brought the matter up in the house last year, but I have forgotten just what reply the minister made.

Mr. POWER: Exactly the same, I take it.

Mr. MacNICOL: Both the minister for air and the minister for naval services have to do with flying, that is if we either build or purchase aircraft carriers, and somebody should be responsible for the enlistment of these young men. I wish to know how these men are going to fit into Canadian service, if and when we have our own aircraft carriers. I suppose, when that day comes, they will be brought back from the imperial to the Canadian service. I have spoken to quite a number of them and they told me they would like to fly off Canadian carriers. Apparently somebody came from England to recruit these boys, although I do not know. How was it they got into the British service instead of the Canadian service? They should be given all the rights and privileges of Canadians. They are Canadians, but it just happens that they are engaged in training with the R.A.F. I have not the right term for their service.

Mr. MACDONALD (Kingston City): The fleet air arm.

Mr. MacNICOL: This may not be under the minister's jurisdiction—I notice he shakes his head—so that there may not be much use in pursuing this any further now.

Mr. MACDONALD (Kingston City): I am going to make a statement on that point when my estimates are up.

Mr. MacNICOL: Thank you very much. This matter is important to the fathers and relatives of these young men. Apparently they have been enlisted in the fleet air arm without the knowledge of our own military officials. They are all young men; I doubt if any were over eighteen years of age. It may be that their university professors or their schoolteachers invited them to do this, but I do not know.

A lot has been said about the affairs of the minister's department. I wish to compliment the minister. I am always amused at the minister. If he is wrong, he is ready to make open confession. When he says "Well, I made a mistake", what can you do with him? When he admits he has made a mistake we just have to pass his estimates. That is one of the things that has enabled the minister to get his estimates through so easily. He is always frank with us. Even if he has not made an error and we think he has, he will rise in his place and say, "I did it". What can you do with a man like that? It is a happy disposition to have, and he deserves a great deal of praise for a disposition like that. He has been an excellent minister. May I also compliment the hon. member for Spadina, the hon. member for Greenwood, and others with whose names or constituencies I am not so familiar, upon the excellent service they have rendered in the positions in which they are placed during the present war. They have denied themselves the splendid company of this house, which they would probably much prefer to the hot

offices they occupy at Trenton and elsewhere. The hon. member for Spadina was generous in his tribute to the various branches of the air service, and I endorse every word he said in praise of the aircrews, groundcrews and all others engaged in the camps throughout the country. I would express my personal appreciation of the services he has rendered to the country, together with the hon. member for Greenwood and others who have given up a good deal to serve the common cause this year.

Mr. McIVOR: I have another question to ask. As I listened to the minister and to other speakers on this side of the house, I was wondering whether it would not be possible to send copies of *Hansard* containing their speeches to the men who are doing things "over there". I recognize the necessity of conserving shipping for food, but surely the *Hansard* which contains this debate can be classed as food for thought, and might very well be distributed to the various officers' and sergeants' messes and the dry canteens.

Mr. NOSEWORTHY: When the hon. member who has just taken his seat was speaking, someone suggested that if *Hansard* were to be sent overseas the Cooperative Commonwealth Federation should be mentioned in it.

Mr. MacNICOL: Well, that certainly will not improve *Hansard.*

Mr. CRUICKSHANK: The troops like to be amused.

Mr. NOSEWORTHY: I was especially interested in the minister's department, the Royal Canadian Air Force. For four years before coming to this house I watched each spring the very cream of our graduating class of the school from which I come joining the air force. That school has now one thousand of its graduates in the forces. By far the majority of them are in the air force; and as I hear from a considerable number of those boys from time to time, I am particularly delighted with the statements made by the minister this afternoon. I join with others in congratulating him upon the force which he has succeeded in building up and in the contribution which that force has made to the cause of democracy.

The minister is asking in these estimates for something more than one billion dollars for the air force. I am confident there is no hon. member who will criticize that expenditure on behalf of that force, particularly that part of the estimates pertaining to pay and allowances, to personnel supplies, or any other provision which touches the lives of the men and women in the force. As a matter of fact, I am sure the committee would be prepared to increase that amount had the minister asked for more and the country would support us in voting a still larger amount than that for which the minister asked. Had the minister asked for an additional amount to reduce the transportation costs of travelling expenses of the men going to and from leave, as hon. members have already suggested, I am confident that the money would have been voted. Had he chosen to increase the amount in order that the leave granted might be exclusive of the days occupied in travelling to and from home, I am confident we would have voted that amount. Had he chosen to provide in these estimates money which would permit those of the groundcrews serving in England and overseas and others to be given leave of absence to visit their homes after absence from home for years, that, too, would have been forthcoming.

I should like to refer for a moment to what the minister had to say regarding the question of rehabilitation. He very properly called attention to the difficulty which would arise and the problems which would have to be confronted after the war, particularly if those boys were to be kept in uniform and in barracks and given continued drill and training after they returned from the war. That may be true, but I wish to emphasize the fact that, regardless of when these men may be discharged, there should be no period between the time of their return and the time of their rehabilitation in civil life when they should receive less than they are now receiving in pay and allowances. I am quite confident that this country does not expect those men who have served so valiantly to spend a long interval between the time of their return to Canada and the time of their rehabilitation on a mere pittance or on any pay less than that which they are receiving for pay and allowance while in the service.

I was pleased to hear the reference of the minister to education. Certainly there is no branch of the service which would be more concerned with the educational opportunities that are offered them after the war than those who are in the air force. These young people—for the most part they are boys and girls—went into the air force, as I mentioned before, from high school, from college. Thousands of them had not completed their education. Thousands of them would have proceeded from high school to university had times been normal. Many of them found their studies interrupted in the midst of their university course. Others, probably, had just

begun their high school course, having been for various reasons late in getting through. I suggest that every possible means be taken to furnish these youth with education for whatever career they choose to follow on their return from the war. We should be particularly careful that the regulations are not too restrictive. The regulations must be so elastic and broad that any man—and the same applies to women—returning from the R.C.A.F. will receive assistance in making up for the time he has lost in gaining or completing his education. On that matter I am not yet quite clear whether the provisions we have made for educational opportunities for Canadians who have enlisted in the Canadian forces will be equally available to those serving in the British army and the Royal Air Force. I am thinking particularly of the boys who enlisted in the R.A.F. in days before the R.C.A.F. could take them, the days before the war, and I am not certain whether the educational opportunities we have provided for the men returning from the war will be available in all cases to those who enlisted earlier in the R.A.F. The minister himself was not quite certain a year ago when this question was under discussion, and it is one of the points on which I should like to have him make a statement at this time.

There are one or two other matters I would call to the minister's attention. I presume item No. 1 is the item on which they can be brought up. I am not sure whether the minister has any connection with the wartime bureau of technical personnel. I suppose all three branches of the force are concerned with that bureau. This is what I have in mind. I know personally a considerable number of young men who are science graduates of a year ago. These men are held responsible to that wartime bureau. They have tried to enlist and some of them have had preliminary training for the air force. They tried to enlist as aircrew. They are physically fit and in every way suitable, but they cannot be taken as aircrew except as technical personnel, and apparently there are no positions of that kind vacant. Consequently they are now serving around in various industrial plants at the beck and call of the bureau. The strange thing is that while these same men cannot enlist in either army, navy or air force, they are subject to draft and have been drafted, and they have had to apply, or their employers have had to apply for deferment for them. It seems a strange situation where men specially trained as graduates in science are willing or anxious to enlist in the air force or the army, are no permitted to enlist, and yet they are liable to draft and every six months must get deferment granted. Moreover, I am told that they must stay where they are. They dare not inquire about finding another position, no matter how small the pay may be in the job in which they are placed. There is a $500 fine, I am told, if they are caught looking for another job that may improve their position. There is a $500 fine, I am told, for the employer who tries to employ them. I have seen letters from the bureau to that effect. I presume the minister and his department are interested inasmuch as some of these are air force personnel or have had air force training.

There is one other matter. I have a letter from a boy whom I taught before he went into the air force and who is now in service with the R.A.F. in India. In his letter he tells me:

> We single Canadians now stationed in India are required to do four years out here and our service overseas in Britain does not count. The four years is the normal Indian tour of duty for all single R.A.F. personnel. This is not right, and we are very much dissatisfied about it. As far as we are concerned out here, any advantages except pay that may come from being a member of the Canadian forces are null and void.

I submit these suggestions to the minister and trust that when he has information he will make a statement.

Mr. GILLIS: My remarks will be brief because I understand it is the minister's intention to follow the same procedure with respect to his estimates that was followed by the Minister of National Defence for the army. In the estimates we have before us there is ample opportunity to question the minister on any specific matter we have in mind that requires an answer, and feeling that that is the most expeditious way of carrying on the debate I intend to refrain from mentioning a lot of matters about which we may later on question the minister.

I join with those who pay tribute to the minister for the efficient and effective way he placed his estimates before the committee.

The leader of the opposition a few moments ago thought the minister was very cooperative and complimented him along those lines. I believe the reverse is true. I think the minister anticipated about everything that the leader of the opposition or anyone else might have in mind by way of criticism and threw the ball over here for answer. That is exactly the way I see it. He posed every question that one might be thinking of and invited the opposition to give him the answers.

Mr. POWER: Is that the right or the wrong thing to do?

Mr. GILLIS: That is the right thing.

Mr. GRAYDON: He knew where to look for the right answer.

Mr. GILLIS: I appreciate the course followed by the minister. He quite frankly placed the matter in the hands of those who might have suggestions to offer.

I appreciate also his remarks with respect to the question of repatriation or rehabilitation, whichever one likes to call it, or demobilization. There are many questions that people will have to ask themselves and a great deal of serious thinking to be done. Two things struck me with regard to the minister's address. The first was his very frank approach to the question of what the boys should expect from Canada when the war is over. He emphasized, and rightly so, the fact that the war is not an end in itself. I, along with many others, hope that it is the end of something. I hope it is the end of unemployment, exploitation and misery such as we had in the years preceding the war. I hope it is the beginning, when the war is over, by the people of Canada, along with those who are overseas in the fighting forces, of building a better world on this continent. I trust that some members of the government are thinking along the lines of the expression of the minister with regard to that particular angle. I think he very rightly wound up his address on a note stressing the seriousness of the situation and the necessity for serious thinking.

When the estimates of the Minister of National Defence were up I expressed my opinions rather fully on matters pertaining to demobilization and rehabilitation. The mechanics that I outlined for the army would apply equally to the air force, and I am not going to take up the time of the committee by repeating them. I was pleased to hear the minister for air announce that the young Canadian personnel in the R.A.F. were to be given an opportunity of transferring to the R.C.A.F. He did not say how that was to be done or what one would have to go through in order to make that transfer possible. I suppose he will do so during the question period; but there is an angle to that particular group in the service to which no one has referred up to date, and I should like to focus the minister's attention on it. I think he stated that there were approximately 2,000 Canadian personnel in the R.A.F.

Mr. POWER: That is only a guess.

Mr. GILLIS: Yes, approximately. Many of those are boys who went to England in 1937, 1938 and 1939 because they could not get jobs in this country and therefore went into the R.A.F. as Canadians. During their period of service in the R.A.F. they are subject to income tax. A pilot officer, for example, is paid approximately $120 a month in Canadian money. Out of that he has to pay approximately $35 in income tax. These young men have been paying that all during their period of service with the R.A.F. United States personnel serving in the R.A.F. were also subject to that income tax for, I believe, a couple of years. They were successful in having it eliminated and in having returned to them all the money that they had paid in income tax up until such time as they received exemption. Before these young men are finally transferred to the R.C.A.F. I hope that that particular angle will be given consideration. I believe that these boys have a right to expect the same treatment in the matter of transfer and in the matter of return of income tax paid to the British government during their period of service as the Americans received.

There are many angles to the money side of it, but I am not going to go into them now, because I think every member of the committee is familiar with them. There is the matter of dependents' allowance. There is the matter of differential in rates. The one point I should like to focus the minister's attention on is income tax. I reiterate, I think these boys have a right to a return of the income tax that they paid during their period in the service. Another point that the minister made and that I should like to comment on briefly is the fear he stressed that when the war is over, boys returning from the services may come back with their minds focused on themselves individually, with the complex built up in their minds that the first back is the first on the job; get what you can for yourself regardless of what happens to the fellow who is coming behind. I believe the minister is quite correct in assuming that perhaps that will be the situation.

Under present conditions there are not many prospects for those in the service coming back, and the natural tendency is to recognize that and to try to do something for themselves. In connection with that very fear the minister expressed the opinion that it was wrong to keep them in uniform when they come back. He likened the situation to the last war, and of course made the observation that there was quite a difference in attitude and opinion to-day because of the changes made since the last war. I agree with him in most of his remarks, but I make one exception. I have expressed the opinion time and time again and I wish to reiterate it now. Because of the

situation that exists in Canada to-day, with the lack of planning to absorb the service personnel returning and the million of war workers in war industries that will be closed, and without any opportunity of finding employment for a large percentage of them, I think it would be wrong to take the army, the air force and the navy back and to discharge them to civilian life, route them through the channels of selective service, unemployment service and the civilian agencies that are being built up. Because of that situation the very fear that the minister expresses is the one we shall have to face. The proper thing to do in a situation that we all fear along with the minister is to guarantee to the returning personnel not the relief that is paid now—because $14.20 a week to a married man or $10.20 to a single person is relief in the final analysis; it lasts for only a certain number of months and the mechanics of getting it are not very easy through welfare agencies, selective service, unemployment insurance, and so forth; there is a lot of discontent wrapped up in these regulations, although they look all right on paper—but something more definite.

I stated in my remarks on the navy estimates that I thought the camps which are established in Canada should be fully utilized in the demobilization period. Instead of bringing the service personnel back to where there is no possibility of work for them, discharging them and sending them across the country, breaking up as it were the units that were formed overseas, units that fought together and will work cooperatively together as a unit if they are kept together, we should keep them together. If they are discharged and sent throughout the country an individualistic spirit will be bred among them, and they will be made the prey of any demagogue who comes along, waves a flag and tells them that he has a solution. I believe if they were brought back, placed in their camps and the educational machinery we have to-day utilized while they are in uniform in camps—and I would not have them drilled and booted around on the parade ground and required to salute every second officer they meet and all that kind of stuff—and routed back to gainful employment in teams in order that they might be able to work their way back to civil life, there would be no need to fear that which the minister expressed. I do not think the fear of the individualistic selfish spirit being bred can be avoided in any other way.

I merely leave this thought with the minister; I elaborated upon it when the army estimates were under consideration. Unless drastic changes are made in the structure of society in Canada; unless greater employment opportunity than we can see now is provided for those coming out of the service, we shall have discontent and strife and everything that goes with it. Every care will have to be taken in the demobilization period to see that those now in the services are at least kept on the same basis of pay that they are receiving at the present time. You cannot take a man who has an income of $130 or $150 a month, drop him down to $14.20 a week, give him a suit of civilian clothes, send him out to look for a job, and then expect him to be at all happy or proud of himself after the contribution he has made to the cause of his country. I think in all three branches of the service men are making their maximum contribution in the work for which they have the greatest aptitude. I believe that in rebuilding Canada, if we are to get the support of those now in the services we shall have to do everything in our power to make this period of reconstruction just as glamorous as we made the fighting during the war. Otherwise, we shall not be able to interest the boys who are in the service to-day and who will be coming back from the excitement of war and everything that goes with it, whom we shall expect to settle down to the humdrum job of just working out an existence in Canada. We have to start rebuilding Canada, making it the kind of country that those in the service believe they are fighting for, and it seems to me the best way to do that is to have the teams which are fighting the war together kept together for instructional purposes, educated and sent out to do jobs which will provide them with a livelihood for themselves and their families. And this must be done before they leave the service, before they are sent out into a hard, cruel world to look after themselves.

Another classification was mentioned by the minister; I refer to the radio mechanics. The minister emphasized their position, scattered all over the globe, working alone or in groups of two or three. In regard to these men there is a complaint I have heard, though I do not know whether it is justified; the minister should know. In his remarks he stated that these mechanics are largely isolated and are attached to the R.A.F., but that the responsibility for their pay, promotions and so on rests with the Canadian government. The complaint I hear in regard to these men is that in the matter of promotion, while a large number of them are classified as non-commissioned officers they are merely shadow N.C.O.'s, in that they merely receive the pay of a leading aircraftman even after years of

service. If that is so, I think the minister should try to rectify that situation, because these men are making quite a sacrifice in carrying on their work.

There are many other questions in which I am interested, but I think I shall reserve any further discussion until the specific items are under consideration.

Mr. DIEFENBAKER: I do not intend this evening to enter into a lengthy discussion of the various matters which were dealt with by the minister, since they can be discussed fully when the individual items are considered by the committee. Suffice it to say that all members of this house felt the same pride that was exhibited by the minister in his recital of the activities of the Royal Canadian Air Force. But while we are all appreciative of what is being done, more than ever it is necessary to keep in mind the things that have not been done, to the end that when the period of rehabilitation comes along we may assure those who have served that they will have a job and an opportunity in life. In other words, we as a nation must remember the sacrifices that have been made, and must be firm in our determination to see that those who served are assured of certainty of occupation when they return. As the minister spoke with pride of the work being done by the air force he mentioned three outstanding young men who were being considered to carry on the work of rehabilitation. At the time I thought of one young man from my own constituency who in less than one year of service rose from the rank of sergeant-pilot to that of wing commander, and who to-day commands one of the outstanding squadrons in Britain.

In considering what should be done in the post-war period we must bear in mind that many young men who are serving in the air force to-day look forward to an opportunity to take part in the greater air development that will take place after the war is over. If one asks air personnel what they intend to do after the war, invariably the reply is that if they have the opportunity they would like to continue in the air force or in civil aviation. If there is one thing in which we in this house and we in Canada have been remiss it has been in our failure to discuss, in regard to the rehabilitation of our men and the future position of Canada itself, the formation of a great international transport system which will give these men an opportunity to serve when the war is over. Only a few weeks ago Mr. Ralph P. Bell, director-general of aircraft production, stated that in relation to our population we shall come out of this war with the largest proportion of trained airmen of any allied nation. What are we to do with these men; what opportunity are they to have to serve in the great air transport systems of the future The other day the minister outlined something of the policy of this department with reference to the Alaska air lines. International air lines were referred to by the Prime Minister in an address he delivered about a year ago; but we in this country have no wide and comprehensive picture of the post-war air development that will take place, and what will be the position of Canada in regard thereto. Now that we are considering the rehabilitation of these airmen after the war, I think the time has come for a frank explanation by the minister in charge of that department, giving this committee and the country a recital of what took place at the great conference which was held in England last October and telling us something of Canada's plans for the future. Shall Canada's air scheme be an international one, under an international board? Shall Canada participate with the other nations of the empire in a vast empire air scheme, with the cooperation of the United States? These matters, more important than any others as far as the rehabilitation of the men in the air force is concerned, have remained the secret of the government, if the government has a policy with respect thereto. In order to give hon. members an opportunity to discuss the post-war rehabilitation of those discharged from the air force, the minister should at the earliest possible date, and before this debate on his estimates is concluded, make a statement as to what took place at the conference, in so far as it can be revealed, a picture of the stand Canada intends to take, a recital of such post-war plans as have been made with regard to aircraft production after the war, the continuation of the industry in Canada and the utilization of the man-power now in the air force, when discharged, so that we shall be in a position to discuss these matters.

The air future of Canada and the empire has been kept under lock and key by the government. We have had only piecemeal recitals. We had the statement of the Prime Minister, and a few days ago a further statement of the Minister of Munitions and Supply. But we have not yet had a picture of the stand Canada intends to take. By their agreements, Australia and New Zealand have indicated to the world the stand they intend to take. An opportunity is thereby given to men who serve in the air force to make plans now for a continuation in that service after the war.

I should like to secure from the minister—and I think the minister for air could give it—a statement showing the numbers to-day in the air force who may reasonably expect to be absorbed in civilian aviation after the war.

Mr. POWER: I do not know.

Mr. DIEFENBAKER: The minister says he does not know.

Mr. POWER: It is not my business. I am a war minister; I have nothing to do with civil aviation. The Minister of Transport is in charge of that. Ask the Minister of Transport, on his estimates—not me, on mine.

Mr. DIEFENBAKER: But I thought there would be cooperation between the ministers in the matter of rehabilitation?

Mr. POWER: But I do not speak for him.

Mr. HOWE: We are taking the departments one at a time. I shall be very glad to cover the point to which my hon. friend has referred, when we are discussing the estimates of my department.

Mr. DIEFENBAKER: While this matter does not come strictly within the department of the Minister of National Defence for Air, would he not consider giving a statement during the present discussion so that, in so far as the rehabilitation of men in the air force is concerned, we could discuss the matter as an entity? The minister for air discussed the matter of rehabilitation.

Mr. POWER: Saying that it was not his business and pointing out that rehabilitation was entirely the business of the Department of Pensions and National Health. It is not that of the minister for air.

Mr. DIEFENBAKER: I appreciate that. Nevertheless, interested as he is in the welfare of those who serve—and no one has exhibited a greater interest—I am sure the Minister of National Defence for Air would welcome a discussion of this subject so vitally in need of consideration at the present time.

With reference particularly to the minister's department, I should like to secure from him a statement respecting elementary flying training schools, and whether it is the intention of the government to continue that system. Will he tell the committee whether any changes have taken place in the past year with respect to the administration of the elementary flying training schools, and the matter of profits now being received by civilian shareholders and, generally, make a statement as to whether or not the present system will be continued after the war?

While the minister says that the matter of rehabilitation does not come strictly within his department, may I point out that I have received complaints from two or three young men, sergeant-pilots who have been invalided home to Canada, and have made requests for pensions based on the wounds they have received. One of their complaints is that if, upon discharge, their rank is that of sergeant, flight sergeant or warrant officer class 1, they are paid a pension on the basis of their original substantive rank, namely AC-2. I have heard that complaint raised several times, and it is generally believed that such is the condition.

Mr. POWER: Would my hon. friend repeat that? I am rather puzzled by what he has said.

Mr. DIEFENBAKER: It has been pointed out that in deciding the question of pension, pension is paid not on the basis of the rank held at the time of discharge but on the original substantive rank of AC-2, at which the airman entered the air force.

Mr. POWER: Then they must have changed the Pension Act since I had anything to do with it.

Mr. DIEFENBAKER: I mention the matter because it has been raised on two or three occasions.

Mr. POWER: I had something to do with the phrasing of the original section in the act, and I know that formerly it read that a pension would be paid on the rank or acting rank held by the applicant at the time the disability occurred. However, that may have been changed since I had anything to do with it.

Mr. DIEFENBAKER: That is perfectly true; these men raise the objection that that is not being carried out.

Mr. POWER: If my hon. friend will give me the names I shall pass them on to the Minister of Pensions and National Health.

Mr. GRAYDON: Perhaps the Minister of Pensions and National Health will answer now?

Mr. ISNOR: Before asking the minister to answer some questions I intend to ask, may I join with other hon. members who have paid tribute to him for his thorough and informative presentation of the activities of the Royal Canadian Air Force. He and those associated with him in the administration of his department have been paid high compliments.

Coming from Halifax on the Atlantic coast, and meeting large numbers of the personnel of the air force, instead of giving all credit to the minister and those associated with him in Ottawa may I pay tribute to those in charge of the eastern air command on the Atlantic coast. I include not only the officers, but also men of all ranks who comprise such units as

the eastern air command, eastern passage, Y depot and other units stationed along the east coast. We in Halifax appreciate the splendid conduct of the men carrying out their duties on our sea coast.

Would the minister advise the committee as to why it is necessary to transfer Y-1 depot from Halifax to Lachine, Quebec? I realize that there is a shortage of housing accommodation in Halifax. I understand that the reason given was that it was found necessary to provide quarters for the navy. However, I am somewhat doubtful whether the desired results were brought about by the transfer, and I am concerned as to whether the good accomplished equalled the inconvenience and loss to the R.C.A.F., as far as the quartering of men is concerned. The Y depot was an embarkation depot. Men were sent from all parts of Canada to Halifax so as to be ready, on short notice, to go aboard ships and sail overseas. I understand that many of these men are now being sent overseas through United States ports. If such is the case, I should like to know if the transportation facilities provided by those ports are as efficient as those provided under the former arrangement. Perhaps the minister can tell me if there is any truth in this. A most efficient organization, known as No. 1 post-transit unit, was set up, and the movement of R.C.A.F. personnel has been looked after in a most efficient way.

The hon. member for Cape Breton South referred to the lack of planning to take care of the members of the R.C.A.F. and other services on demobilization. I do not know whether the hon. member intended to, but he implied that in so far as the R.C.A.F. was concerned no steps were being taken to take care of its men when demobilized. If there is one branch of our defence services which has planned for rehabilitation, it is the R.C.A.F. It has what is known as an auxiliary service, which in turn has created service counsellors. These men have gathered something like 40,000 men together, and they are being given instruction in various trades in order to fit themselves for jobs when they are demobilized and enter civil life. I mention this to offset any misunderstanding which may be created by what has been said by the hon. member. It may not have been his intention to create any such impression, but so often members of the Cooperative Commonwealth Federation are ready to sow seeds of dissatisfaction and discontent. That does not help the government or the country in efforts to plan successfully for post-war needs.

Mr. GILLIS: We admit that the R.C.A.F. are doing what they can to fit their men for jobs when they leave the service, but can my hon. friend tell me where they are to get those jobs? That is what I had in mind.

Mr. ISNOR: Statements such as that create a feeling of distress in the minds of the men now in the service; that is what happens when they feel that no plans are being made to take care of them. I am hopeful, and I think the hon. member for Cape Breton South is hopeful, that every one of these men will be taken care of. As I say, elaborate plans are under way to provide jobs or places for them in our social economy, and this applies to men in all branches of the service. I should like the minister to advise us more fully as to what studies are being carried on and what instructions are being given to teach men various trades in order to fit them into civil life after they are demobilized. Perhaps the minister could tell us also what cooperation there is between his particular branch and the other two branches of the armed service, the navy and the army.

I have received a letter in connection with transatlantic and middle east airmail service. I do not know whether the statement made by the Postmaster General the other evening covers this matter, but apparently it did not satisfy this particular person who feels that the airmail service to R.C.A.F. overseas personnel is not as quick as it should be. I desire to join with other hon. members in offering my congratulations to the minister upon the able manner in which he has administered his department. I believe he will be able to answer to my satisfaction and to that of the hon. member for Cape Breton South any questions we may have as to plans that are under way to provide instruction to these men so that they may take their rightful places in our social economy at the end of the war.

Mr. HARRIS (Danforth): In common with other hon. members of this committee I appreciate the manner in which the minister has handled the many difficult problems of his department. However, as kindly as I can I must say to the minister that the Canadian people have not received from him the type of statement which would engender confidence in their minds as well as in the minds of our forces overseas. As I listened to the statements being made, I could not help contrasting what we get in this chamber and what emanates from the Prime Minister of Great Britain in that chamber which is so close to the scene of action.

I appreciate what the minister and his department are doing; but when he replies to the many suggestions which have been made I should like him to give us a few minutes of inspiration or guidance in order to lift the Canadian people out of a frame of mind into which they are slipping, namely, apathy, complacency and perhaps the thought that the war is won already when, in my opinion, we are a long way from winning the war. Many lives will be saved and less blood will be shed if we pursue the conduct of this war with more industry and diligence and attention instead of giving a major portion of our attention to worthwhile things such as rehabilitation, reconstruction and other matters which are so necessary. It is true that they have their place, but while this war is on let us prosecute it to the limit.

Let us have a few more Churchillian statements emanating from the minister who is to-day charged with the responsibility of one of the most important departments of war. He is able to do this, and by doing it he would inspire our own people and in turn inspire the boys who are serving us so valiantly. Abroad is the statement that recruiting has slackened down. That may give a little comfort here and there to our people, but the measure of comfort it will give to the enemy is, to my mind, a serious matter. I would not for a moment admit that we are slackening in any phase of our war effort. I would say that we are pursuing it more rigorously than we ever pursued it before, and that by so doing we shall reach victory that much more quickly than by any other means. Nothing will strike the fear of God into the hearts of the enemy more than—the old fashioned term of "an all-out war effort" is perhaps the best term we can use—a vigorous prosecution of our effort. Let there be no complacency, no apathy, no slackening of our recruiting, no less money spent on our war effort, but more and more, everything we can give to get this job over as quickly as possible. That is the policy on which I should like the minister to dilate when he comes to answer the questions which have been brought forward. We all admire his disarming methods when he introduces his estimates. We all admire the tact, the skill, the judgment with which he handles himself in this chamber. So much, so good.

But there is a war on; let us realize that. We are now in the south part of Italy, up on a beach-head. Let us search our hearts and seriously ponder what measure of success we have really had. A letter to which I am now replying said a few short weeks ago, "We will be in Rome in two weeks". We are not in Rome yet. God forbid that we should have another Dunkirk beach-head. We are certain there will not be another Dunkirk there. But a policy which spends the time of 245 men in this chamber and engages the attention of 11,000,000 people at this time on reconstruction and rehabilitation and all these issues which we are capable of taking care of in due course, is not the kind of thing which should now engage our attention. And I ask the minister, when he makes his reply and deals with this most important section of our war effort, to give us not only something which we can cheer for but something which will inspire us to do what we, the Canadian people, represented in twenty-five per cent of the air force, are willing to do on behalf of the allied nations to bring this war to a conclusion much more rapidly than it is being brought to a conclusion now. I entreat the Minister of Pensions and National Health, with whom the minister for air is now conferring, and who knows, from experience with citizens in Canada who are charged with responsibility of trying to do something for the rehabilitation of those who are brought back to us, in reconstruction, and in all these other matters, to recognize that the Canadian people will rise on the proper day in their might and look after these problems. In the meantime, however, I ask the cabinet, and particularly the minister who now has the floor, to address themselves to a problem from which I cannot shake myself free, namely, that we have not won this war and must give attention to its prosecution. Let them say things in this chamber which will echo across the civilized world, assuring the other nations that we, the virile Canadian people, are going "all out" to finish this job first, and that we may be depended upon to look after these other matters when the time comes.

Mr. MUTCH: If I have a word or two to address to the minister to-night, I would first wish to say that we who know something of his organizing ability and his humanity believe that if he will continue to devote his attention to his duties rather than compete with the Prime Minister of Great Britain with respect to oratory, as far as the services are concerned we shall feel just as comfortable.

Mr. FRASER (Peterborough West): That is a wonderful statement!

Mr. MUTCH: A sensible one, I think. That does not necessarily make it unique in this company. I am concerned to point out to the committee, and to the minister, that if the air force is showing a slackening in expenditures, or if there may be, or may have been, suggestions that there is some lessening of recruitment because they have now reached their general level and are thinking in terms

of replacements, this does not necessarily mean that either the youth of Canada or the government of Canada are slackening in their war effort.

All of us hope and some apparently believe that we are at least within two years of the end of the war. If so, I should like to suggest to the minister that it is important to consider, when a young man offers himself for service at this time, where he is most likely to be useful. If, as has been said, a man entering aircrew at the present time cannot hope to be ready for action in service before two years, then there are other branches of the service where he can be made effective in a very much shorter time, half that time, at any rate, and, under circumstances which might easily prevail, very much less.

There is danger in pointing to the size of an estimate or the position of enlistments in one branch of the service as though it indicated a slackening of the war effort of the people. I have seen something across this country and abroad, of the war effort of the people of Canada, and it ill becomes anyone in this chamber to suggest there is any slackening off because of such adjustments. The other branches of the service have suffered to some extent in personnel because it has been a matter of policy to encourage many of the very best youth of this country to go into one of the most difficult and courageous tasks there is. If at the present time or if at any time in the future the minister anticipates a period when his reserves are likely to exceed what he requires without what one might call a "scraping the barrel," the other services will be glad to have the services of those people and to avail themselves of their desire to serve.

I had an opportunity of spending a few days with some of the Canadians in the Royal Canadian Air Force who are flying and fighting in the British isles. There is no reason, other than admiration, why I should pay any particular compliment to them, except that, coming from another branch of the service, it has a note of sincerity and may have the merit of being a little unusual. All the time I was away I never ceased to be proud that I was a Canadian. I do not think I ever felt prouder of it than when I spent a few days with a bomber squadron of the Royal Canadian Air Force and saw the boys who are nightly doing the fighting, and realized the way they are regarded by the people of England. I do not think these boys will feel that they are being let down if the minister continues to support them with organization, with reinforcements and with supplies and leaves to others the oratorical effort.

Mr. BENCE: The minister spent some time in discussing the matter of rehabilitation, and I wish to say a few words in connection with one particular phase which I believe should receive more careful consideration than any other. It is true that our men of the aircrew who will be returning to civilian life will be faced with many difficult problems, and the minister and his colleague, the Minister of Pensions and National Health, will find that these problems will not be easy of solution. There are, however, a number of these young men who will be returning from the prison camps of Germany after peace has come, and who will be a much more difficult problem than those returning from active aircrew service. After all they will have spent two or three or four years in German camps, during which time they will not have been leading an active life, and they will have been almost completely out of contact with the world. They will, therefore, have developed an outlook on life which will tend to prevent them from making ready adjustments on their return. Those who have studied the position that ensued after the last war realize that these men will be particularly sensitive and will have to be carefully and delicately handled when they return. I suggest, therefore, that their position should receive special consideration and the attention of the best experts, psychologists, and psychiatrists who can be found in the country.

On the point of prisoners of war, I would also request that the strong support of the minister be given in an endeavour to see that the number of next-of-kin parcels for overseas is increased. I know that a limit was imposed owing to transportation difficulties, but that limit was imposed during the days when the battle of the Atlantic had been by no means won, when shipping losses were great, and when the means of sending parcels overseas were greatly restricted. Conditions are now improved so far as that phase is concerned, and this is one of the first things we should do with the extra transport facilities available, because it is a well known fact, not only from messages received from overseas but from information gathered from men who have been repatriated from prison camps, that the thing that is keeping our boys alive in those camps to-day and preventing them from suffering from bad nutritional deficiencies, is the receipt of Red Cross and next-of-kin parcels. That point, therefore, should receive far greater attention than it is receiving at the present time.

May I say a brief word about the matter of cutting down of training camps. The minister did not volunteer any information, at least

I did not notice any, as to why recruiting is being cut down. I noticed in the press that they are going to establish a new level of training. According to the Canadian Press of February 26 it was stated that the intake of aircrew had been temporarily slowed down but would shortly be reestablished at a new level. The minister should give more information in that regard. He should give us some indication as to the reasons why these training centres are being cut out; and if it is not transgressing on security policy, some indication should be given of the speed with which they will be closed.

In that connection, I make this suggestion to the minister. He gave some reasons on February 29 as to the factors that will be considered in the cutting down of schools. There is one factor which I would impress upon him, and it is one to which I referred the other day. I have been endeavouring in my own way to impress it on the ministry ever since I came here. More attention should be given the question of congestion. The point was raised in the house yesterday by the hon. member for York-Sunbury (Mr. Hanson), that in Ottawa there was no room for fifty aircrew who are here for the purpose of being trained, and that the conditions under which they are living are not satisfactory. Surely a city like Ottawa is the first place that should be cut out from the point of view of air training stations, because there are less congested areas particularly in the province from which I come.

Probably the minister will bear me out that it is one of the best provinces as far as the training of aircrew is concerned. They have ample space for flying, little difficulty as regards fog; there are no mountains in the way, and in addition to that we are in a position to accommodate aircrew better than some centres which are congested, such as Ottawa. I know it is easy to say these things, but it is a little difficult to impress this upon people in this part of Canada—and I do not say this in order to make any reflection. The attitude of mind I have run into, however, is this. Most of the permanent air force have lived here the greater part of their lives. They have lived in this part of the country; they have spent their time in Ottawa and in various large centres in the middle section of Canada, and they have not been in Saskatchewan or Alberta.

Mr. POWER: High River, Alberta, was one of the original stations for the permanent air force and I understand it was a very good one.

[Mr. Bence.]

Mr. BENCE: I am talking about the people who are guiding policy. Most of them come from this part of the country, and naturally they think of this part of the country when it comes to establishing stations. Let me give an example. I was discussing the matter with a friend of mine from western Canada. He is in the air force, and he was listening in on a conversation that had to do with the establishment of a place for storage in connection with the air force. The people who had the say canvassed the situation, and they said there was no room in Ottawa but they might try Windsor, Hamilton, Montreal or some other places. This man said to them, "Did you ever think there are places in the prairies?" It did not occur to these particular individuals to go that far.

Mr. POWER: You do not make enough noise, you people from the west.

Mr. BENCE: We are finding that it is necessary to bring these things to the attention of the house, and they are quite reasonable. I am going to keep plugging away at it until I get some satisfaction.

There is one point on which I think the committee and the country are entitled to a little more information in connection with the policy of the air force. It was recently announced that a number of high ranking air force officers were being retired. The minister referred to the matter the other day. Although I have no accurate information on the point, I believe that the ones being retired are practically all permanent air force men, and the impression was given the committee the other day that they are being retired because they are getting on in years and that they will be replaced by younger men. I would be the last to object to a policy of giving younger men an opportunity, but the information I have is that these men have been raised rapidly in rank in the last few years; that before they are retired they are advanced another rank, and that this has its influence on their pension. Many of them are being retired on a fairly substantial pension and some are as young as forty-eight and forty-nine. It seems to me that if they are available; if they are healthy and have the mental capacity and ability which enabled them to rise to the position they now occupy, they should not be retired on such pensions at this time when we need the services of all the trained men we have in the country. We simply cannot allow men of ability and men with their health and training to be retired at this particular time. I raise that point for

the minister's consideration, and I think that he should give us some information as to the number—I do not want particulars about individuals—of those men who have been retired and some idea of the ranks they hold, some idea of their capacity, their health, and an indication as to the amount of pensions they will be receiving in their respective ranks.

Mr. DOUGLAS (Weyburn): Most of the members of the committee have commended the minister for his very fine speech and commented on his happy facility of getting estimates through the committee.

Mr. MacNICOL: It is his good nature.

Mr. DOUGLAS (Weyburn): I think it is the minister's good nature and his very human approach. Because of his courtesy the minister has the faculty of making the committee feel that it is a joint effort; that this is not his war or the Liberal party's war. It is a national effort, and all the members and all the people of Canada have some part in discussing and putting forth their ideas with reference to it.

I wish to give an illustration of that. In my constituency there was a Royal Canadian Air Force flying station which was to be closed. At least, the rumour was that it was to be closed and many people were worried about it. As I say, there were all sorts of rumours going around. Some said it was going to be closed. Some said it was going to be torn down. I have never considered it to be my business to bother the minister about where he should build a flying station or whether he should close it or open it. I have considered that it was his business and that of the government. Entirely unsolicited from me the minister was kind enough to drop me a confidential letter telling me that the station was being disbanded but that another one was taking its place. That other station has since taken its place. It was a small matter.

Mr. POWER: I am afraid I spoke too quickly. There have been changes since.

Mr. DOUGLAS (Weyburn): May I point out to the minister that the station has been transferred. No. 8 service flying training school has taken the place of No. 41 service flying training school unless another change has taken place.

Mr. POWER: Another change has taken place since that letter was written, and it applies to a large number of places. I am not sure whether it applies to the one to which the hon. member has reference.

Mr. DOUGLAS (Weyburn): That does not alter the fact.

Mr. POWER: I will take my letter back now.

Mr. DOUGLAS (Weyburn): I do not want it taken back. I wish to express my appreciation of the minister's courtesy. It is something that some of the other ministers might well copy. In the early stage of the war, opposition members were somewhat in demand when victory loans came along and recruiting speeches had to be made; but as the war has progressed I have noticed that during victory loan campaigns and during some of the other campaigns that have been put on, opposition members have been left very severely alone. The government ministers get the very best kind of cooperation when they take the trouble to cooperate with the members of the different constituencies and give them the feeling that it is not a war effort on behalf of the Liberal party but a war effort on behalf of the Canadian people.

The minister has shown a very human and realistic approach to this problem of repatriation, demobilization and rehabilitation. I believe he does well to break that problem into three parts, because the parts are distinct and separate. First of all, there is the problem of bringing the men back to this country, the problem of repatriation; second, the problem of how and in what numbers and at what time they shall be returned to civil life, the problem of demobilization; and, third, the problem of reestablishing them in civil life.

The minister made at the end a stirring plea asking that we should not think entirely in materialistic terms but rather in the spiritual terms of national well-being. As we have trained these men to defend Canada we should now give them an opportunity to develop Canada. I should like to say to the minister that puts the ball right back on the government side of the house. After all, these men coming back cannot develop Canada unless those who control Canada, both in the business and in the political sense, give to these men the leadership which will be necessary if they are to develop Canada. Unless the government is prepared to lay down the plans which will be necessary and have them ready so that when these men come back there will be something definite for them to do, then we shall have a disillusioning experience indeed.

I cannot agree with the hon. member for Danforth who took the minister to task for dealing with this matter. I think we all believe that winning the war is most important and I think we all know the war is far from won. But I believe the minister is right when he recognizes that one of the fears that is

most dominant in the minds of the people of Canada and in the minds of the men and women in the service, is the fear of what will happen when the war is over. That is a totally different mental outlook from that of the last war. My father went to the last war. He went from a job into the army. Two days after he came out of the army he was back at his old job and in his old place again. As the minister stated, however, many of these men never had a job, or if they did have a job they still remember the periods when they walked the streets looking for a job. They have come out of a period of insecurity and unemployment and they are afraid of returning to it.

It seems to me that while the minister may say that you cannot solve this problem with a cliche, the government has the responsibility lying at its door. After repatriation and demobilization are dealt with the government has two responsibilities. The first is to train every one of these men to take his place in civilian life irrespective of what time that may take; second, to see to it that after he has been trained he is placed in a gainful occupation.

Mr. MACKENZIE (Vancouver Centre): We have been saying that for a year.

Mr. DOUGLAS (Weyburn): It has not been done for a year. It has not been done at all. The senior hon. member for Halifax said, when we were talking about having no plans, that there were extensive plans. Where are they? When we ask, "Where are they?", he says, "There are counselling committees set up." Of course, setting up committees to give counsel is not supplying jobs, but merely helping men to find the kind of job toward which they ought to go, and that is probably as far as the responsibility of this particular department of government goes; but it is not the full extent of the responsibility of the government. It has a much greater responsibility. The senior hon. member for Halifax should not confuse having employment offices with employment, no more than before the war setting up the unemployment insurance commission necessarily abolished unemployment. As I have already said, this government will have the responsibility of training these men, and of placing them either in private industry or, if there is no room in private industry, of having laid down careful plans for socially useful projects that will guarantee employment to every man whom they have trained.

Mr. MACKENZIE (Vancouver Centre): That is being done every day.

[Mr. T. C. Douglas.]

Mr. DOUGLAS (Weyburn): The minister says it is being done every day.

Mr. MACKENZIE (Vancouver Centre): Thousands and thousands.

Mr. DOUGLAS (Weyburn): In many instances it has not been done, as the minister knows very well. If it is being done every day, let me ask the minister what plans he is prepared to place before this house not to absorb a hundred men or five hundred men but to absorb half a million or three-quarters of a million men.

Mr. MACKENZIE (Vancouver Centre): I shall be glad to state them at the proper time.

Mr. DOUGLAS (Weyburn): I hope the minister will do so.

Mr. CRUICKSHANK: Will the hon. member understand it?

Mr. DOUGLAS (Weyburn): In connection with the task of training these men and placing them in gainful employment, I wish to ask the Minister of Defence for Air if any plans have yet been made as to the disposition of the airports? The minister knows there is talk of some of them being closed already. Are they to be sold? Are they to be leased or torn down? I wish to make a suggestion to the government that if they are going to train men—and they will probably have to train a quarter of a million or more men in this way—there is no better place to train them in various trades and occupations than in those airports. Many of them have dormitory accommodation for anywhere from a thousand to fifteen hundred men; they have workshops, hangars, recreation rooms and so on. Large groups of men could be placed in those airports on pay and allowances, as has been suggested already, there trained in various occupations and trades and later put into either private industry or the house building or rural electrification programmes sponsored by the federal, provincial and municipal governments. What disposition will be made of the airports, and what will be done with them in the rehabilitation period?

Mr. POWER: If the hon. gentleman will read my statement, at about page 1029 of *Hansard*, probably he will get the answer to his question. It is exactly along the line he has suggested.

Mr. DOUGLAS (Weyburn): Then I should like to support the suggestion advanced by the hon. member for Vancouver North in connection with groundcrew. I came into the chamber while the hon. member was speaking; I did not hear his statement, but I understand that he was considerably amazed and amused

by the comment I offered last year in regard to the Dieppe operation particularly, in view of the fact, he said, that my observations were based on a Cook's tour and some experience as a chaplain in the reserve army. I should like to tell the hon. gentleman that I have never been on a Cook's tour, and I have never been a chaplain in the reserve army or any other kind of chaplain. I only hope the rest of the information he gave the committee was more reliable than those two statements.

Mr. CRUICKSHANK: I shall be glad to convey the hon. member's message.

Mr. DOUGLAS (Weyburn): As a matter of fact, my observations on the Dieppe operation were the result of conversations with men who, like the hon. member for Vancouver North, have been overseas, men who were engaged in that operation.

Mr. CRUICKSHANK: The hon. member said he had been there.

Mr. DOUGLAS (Weyburn): I said I had visited there in 1936. My observations in 1943 were not based on my having been there in 1936; they were based on conversations with men who had been in the Dieppe operation. It may be interesting to the hon. member for Vancouver North—

Mr. WHITMAN: The hon. member is addressing the hon. member for Fraser Valley.

Mr. CRUICKSHANK: I am his parliamentary assistant.

Mr. DOUGLAS (Weyburn): I am not concerned with the remarks of the hon. member for Fraser Valley. It may interest the hon. member for Vancouver North to learn that the statement I made as a result of conversations with men who had been in the Dieppe operation coincided very closely with the statement made later by Lord Keyes, who had some slight knowledge of military operations when as Sir Roger Keyes he was in charge of the famous Zeebrugge operation.

However, I wanted to support the plea of the hon. member for Vancouver North with reference to R.C.A.F. men with R.A.F. squadrons, particularly men in groundcrew, in the matter of being given leave at the end of certain periods of time. I have received letters from men in Palestine, India, Ceylon and Africa, who have worked with R.A.F. squadrons and some of whom have been away for a considerable period of time. They have no immediate prospect of leave. Probably the minister knows better than anyone in this committee how much even the prospect of leave is a factor in maintaining a man's morale. Let me show the minister how it reacts on the civilian population. In the town in which I live, there was, as the minister knows, an R.A.F. station at which there were some twelve hundred R.A.F. men, a good many of them ground personnel. They were taken into the homes of the people of the community, who liked them very much. These men would say, "Well, as soon as my two years are up, of course I shall be sent back to England. We signed up here for two years." Our people would say, "Well, our boys are in England and in Africa, but we have no assurance that they will be back in two years." Many of them would ask me how it was that the R.A.F. boys could be so sure that they would go home in two years, while some of our boys had been over there since early in 1940 and we had no idea when they would be able to come back. So that I suggest to the minister that he has a real point there and that it would be a great thing if these men could know that after a definite period of service they would be allowed to return to Canada. I realize that there are all kinds of shipping difficulties which might make this impossible, but I would ask the minister to give this very serious consideration.

I wish to ask only one other question. As the minister knows, in other years I have raised the question of the extent to which the R.C.A.F. could be operated overseas as an individual unit. The minister told me two or three years ago that increasingly R.C.A.F. squadrons would be built up, and I am very glad that they have been set up. Last year the minister said that the reason why so many R.C.A.F. squadrons had to operate with the R.A.F. was that we could not supply them with groundcrew. Since then I have wondered if the minister has given any thought to the possibility of having R.C.A.F. squadrons operated by the R.C.A.F. with R.A.F. groundcrew. When the minister is answering these various questions I would ask him to give the committee some information as to whether or not it will be possible for the R.C.A.F. to operate under its own administrative staff and headquarters, or whether we shall continue to have a large number of R.C.A.F. squadrons operate under the R.A.F.

Item agreed to.

2. Pay and allowances, $323,315,744.

Mr. POWER: Perhaps I had better say now that on another occasion I shall be very glad to answer a large number of the questions which have been asked. I could answer some of them now if the committee so desires, but if the committee prefers to carry on I can wait until Monday, when my estimates will come up again.

Mr. CRUICKSHANK: Might I say a word just to keep the record straight in regard to the hon. member for Weyburn. I quote from *Hansard* of February 17, 1943, at page 505:

> In 1936 I spent a day in the town of Dieppe, and I would imagine that even aerial photographs would show the impossibility of scaling a sea wall unless it had first been partly demolished by aerial bombardment.

So that the hon .member for Vancouver North presumed that the hon. member for Weyburn was speaking from his military experience in regard to Dieppe.

Mr. GRAYDON: I think it would be preferable for the minister, if he is in a position to do so, to answer now what questions he can. That might keep the record straight.

Mr. JACKMAN: Perhaps the minister would accept another question or two before he begins to give his answers. He stated that the R.C.A.F. now had forty-two squadrons which were maintained and serviced by our own boys and at our own expense. In order to keep the record as straight as possible I should like to ask, since I suppose there are still great accounting difficulties, whether Canada is bearing the full cost of everything entailed in a bombing raid or a fighter sortie in connection with these forty-two squadrons.

Mr. POWER: The answer is yes, in connection with bombs, ammunition and so on.

Mr. JACKMAN: That is splendid. In other words, we are entirely independent and carrying the whole burden of the cost?

Mr. POWER: Yes.

Mr. JACKMAN: Then the minister stated the amazing fact that from twenty-two to twenty-five per cent of all aircrew under British tactical command is composed of Canadians. Could he say how many of these twenty-two per cent or twenty-five per cent represented aircrew in R.A.F. units? In other words, I want to know how many of our men, out of that twenty-two per cent or twenty-five per cent, are not in R.C.A.F. independent units. Do I make myself clear?

Mr. POWER: I have already said that about ten men are in R.A.F. units, to one in R.C.A.F. But let me give a figure. For example, if there are 5,000 pilots overseas, about 500 of them would be in R.C.A.F. squadrons. The remainder would be in R.A.F.—pilots, only. The same applies all the way down with regard to bombardiers, wireless operator air gunners, and so on.

Mr. JACKMAN: Of the twenty-two per cent to twenty-five per cent, about ten per cent, or one-tenth of that, which would be between two per cent and three per cent, are our aircrew?

Mr. POWER: I cannot follow my hon. friend in his percentages; but I shall let it go at that, if he thinks it is all right.

Mr. GRAYDON: The minister is very agreeable.

Mr. JACKMAN: Between two per cent and three per cent of the aircrew provided by Canada make up the forty-two squadrons. That is what actually happens. The minister said a moment ago it was ten to one.

Mr. POWER: I cannot understand my hon. friend. I would like to, but I do not quite understand what he is trying to say.

Mr. JACKMAN: I am trying to find out how much of the cost of the flying done by Canadians is borne. The minister says about ten per cent is self-contained in R.C.A.F. units. The other ninety per cent of aircrew are serving in R.A.F. units, and all the cost—

Mr. POWER: Oh, I know now what my hon. friend is getting at. I am beginning to have some comprehension. But I do not know whether his figures are correct, because I am not much good at mental arithmetic.

Mr. JACKMAN: The R.A.F., through the British, are paying for the total cost, apart from the payment of personnel, of the planes and ammunition used by ninety per cent of our aircrew. Is that not so?

Mr. POWER: We pay a per capita charge for dental and medical services, and things of that kind. But I do not think we pay for the bombs dropped on Berlin by R.A.F. squadrons, and I do not think anyone expects us to, either.

Mr. JACKMAN: Or for the aircraft flown by our boys in the R.A.F.? They pay all the costs, except as to personnel.

Mr. POWER: Except that a good many of the aircraft are supplied by my colleague the Minister of Munitions and Supply under mutual aid arrangements.

Mr. JACKMAN: In other words, the state of account between the R.A.F. and the R.C.A.F. is still in the hopeless tangle the minister mentioned a year ago. He does not know what share of the cost we are bearing, and what share Great Britain is bearing.

Mr. POWER: I know how much it costs for our expenditures overseas, because I have the figure right here.

Mr. JACKMAN: But the fact remains, nevertheless, that our boys—

Mr. POWER: Overseas expenditures this year, for 1944-45, will be $463,157,142. That is fourteen per cent higher than last year.

Mr. JACKMAN: The reason I asked for a break-down of the figures is simply this, that in Canada we take great credit to ourselves for the mutual aid given to Great Britain and the other allies. We also take credit, and quite properly so, for the tremendous contribution we are making by way of aircrew. But what I wish to find out from the minister, if I can, is how much financial burden is being assumed by Great Britain in providing the aircraft, the necessary bombs and so on, for that ninety per cent of R.C.A.F. aircrew which for the time being is attached to R.A.F. units. When we take credit for R.C.A.F. aircrew flying over some part of Germany, we must also remember there is a big expense entailed not only in the aircraft but in the bombs. So that I wish to be able to find out exactly the separate contributions by Great Britain and Canada. I do not suppose the minister can give it.

Mr. POWER: No, and I do not think the minister's job is to talk for any other nation than Canada—and he is talking for Canada. He is telling the committee what Canada has done, and he is going to continue to do so. The people on the other side of the ocean tell us often enough what they have done. My job is to talk for Canada. Churchill and Sinclair will talk for the Royal Air Force.

The CHAIRMAN: The present discussion would come more properly under an item. The minister has not his officials with him. I thought the discussion would be general.

Mr. MacKENZIE (Neepawa): In view of the statement in the *Globe and Mail* of Saturday, February 26, would the minister explain to the committee his policy with respect to recruiting in the women's division, and also with respect to ground forces?

Mr. POWER: I believe that matter was mentioned in my statement. This is found at page 1030 of *Hansard*:

> In addition to the men required by the Royal Canadian Air Force, we have enlisted and trained over 15,000 in the women's division. Here again we have reached our peak and no further personnel are needed to bring our establishments to full strength beyond what have already been enlisted and are awaiting training, and accordingly, enlistment for the women's division of the Royal Canadian Air Force has been curtailed to the comparatively small numbers required for replacements.

Mr. BENCE: I do not understand the procedure. Is the minister to answer the various questions asked, or are we to proceed item by item?

Mr. POWER: I had intended answering the various questions as we went along. My colleague, the parliamentary assistant, has already prepared the answers to some of the questions asked. If the committee will permit, he will proceed to give those answers, some of which are rather lengthy.

Mr. MACMILLAN: Several hon. members have asked questions with respect to air mail.

During the latter part of November, the Royal Canadian Air Force was asked to attempt to provide a supplementary air service from Canada to the United Kingdom, and from there to the Mediterranean theatres of war to assist in expediting mail to the troops overseas. This was a tremendous undertaking, considering the length of the route, the mileage of which is 3,100 miles from Ottawa to the United Kingdom, 2,850 miles from the United Kingdom to Italy, and 1,850 miles from Italy to Cairo. The total mileage is 7,450 miles one way, or approximately 15,000 miles for the round trip. One round trip per month to be made as far as Cairo and the remainder of the flights to finish in Italy.

The purpose of the service was to hasten mails for Canadian forces in the United Kingdom and Mediterranean war theatres, and also the return mail from troops to their families at home. It was also to help remove a large backlog of mail which had accumulated; some in Canada, and the majority in the United Kingdom, due to insufficient transportation facilities, and in addition, to attempt to get as much of the mail as possible through to the troops for the Christmas-New Year season. The service was, and is, planned to continue as long as such a service is necessary.

At the time the Post Office Department requested the R.C.A.F. to consider this service, aircraft of a type suitable for this operation were not available in Canada or Great Britain. It was therefore necessary to approach the United States authorities in order to get the necessary equipment. Through the kindness and cooperation of these authorities six fortress aircraft were to be made available as quickly as possible. The aircraft to be supplied were not new aircraft, but were aircraft which had seen, in some cases, a considerable amount of service and, therefore, maintenance difficulties were to be expected. It was impossible to procure new aircraft due to United States commitments in various war theatres,

and it was therefore necessary to accept what we could get and do the best that we could with them until we had sufficient time to overhaul and make the necessary modifications.

Great credit is most certainly due to every member of the mail squadron, both air and ground personnel, for the results achieved and the cheerful spirit maintained in spite of their many difficulties.

In spite of the difficulties encountered during the two months' period from the commencement of the service on December 15, 1943, until February 15, 1944, a considerable volume of mail has been carried. In actual figures, this is as follows:

	Pounds
Between Canada–United Kingdom and return	57,920
Between United Kingdom–Mediterranean theatres and return	89,918
Total	147,838

Of the total of 89,918 pounds carried to and from the Mediterranean area, 45,619 pounds of letter mail has been delivered to our troops. This represents a total of approximately two and one quarter million letters, and is the equivalent of well over twenty-five letters to every member of the Canadian expeditionary force in the Mediterranean area.

On the return flights from the Mediterranean area to the United Kingdom it has seldom been possible to fill the aircraft to capacity with Canadian outgoing mail. The balance of the load is then made up of British and United States outgoing troop mail, which enables us to reciprocate to some extent for assistance we have received in the past from the air transport services of these two countries. It is emphasized, however, that Canadian forces mail carries number one priority and that British and American mail is only carried on return flights from the Mediterranean areas to the United Kingdom and only when insufficient Canadian mail is available to make up a full load.

From the experience now gained it has been decided to place three twin-engined transportation aircraft already owned by the R.C.A.F. at a base near the entrance to the Mediterranean to take care of the mail service from that base to the theatres of war in the Mediterranean. These aircraft are considered entirely suitable for operations in that particular area. As a result of this, we shall then be able to concentrate our flying fortresses on the north Atlantic route, which should have a marked effect on the frequency of service.

[Mr. Macmillan.]

While no firm forecast can be made of the future frequency of operation, it is nevertheless felt that with the gradual improvement we are now experiencing in our maintenance difficulties and the expected improvement in the north Atlantic and Mediterranean weather conditions within the next month and a half the frequency of service will be improved.

The hon. member for Fort William asked a question with regard to the method of distribution of Memorial Crosses. Originally the crosses were delivered by registered mail from the records office. Later, for an extended period prior to February 7, 1944, the chaplains services undertook delivery, making personal calls wherever possible and sending the crosses by registered mail to outlying districts. It was found that the presentation of crosses by chaplains was delayed at times owing to the many and onerous duties of the chaplains' services. It was felt that since it was not possible for chaplains to make personal calls in outlying districts this method of delivery discriminated against the next-of-kin in those districts.

Accordingly, effective February 7, 1944, all Memorial Crosses are now delivered to next-of-kin from the records office. They are accompanied by an engraved card which states:

This Memorial Cross is forwarded to you by the Minister of National Defence for Air on behalf of the government of Canada in memory of one who died in the service of his country.

This method of delivery is proving satisfactory.

Mr. POWER: Several members have asked questions with regard to the transfer of Canadian nationals who are now members of the R.A.F. or the W.A.A.F. to the R.C.A.F. Perhaps I may be permitted to table the regulations which are three or four pages long and have them inserted in *Hansard*. I shall do so with the consent of the committee. They are as follows:

Regulations governing the transfer of Canadian Nationals who are members of the R.A.F. or W.A.A.F. to the R.C.A.F.

1. Up to the present time the policy respecting the transfer of Canadian nationals, who are members of the R.A.F., to the R.C.A.F., has been to consider only applications from personnel who are highly qualified, either from a technical standpoint or in some special phase of training operations in which the R.C.A.F. has a deficiency. Such transfers have been the exception rather than the rule, and the overriding principle has been that transfers will not ordinarily be made.

2. The question of such transfers was discussed during the B.C.A.T.P. conference at Ottawa in May-June, 1942, and appendix S to the minutes of the conference is as follows:

"It is agreed that United Kingdom and dominion partners will consider applications of individuals for transfer to the air forces of

their own nationality with a view to such transfers taking place wherever the circumstances make it desirable, and subject to its being found possible to make financial arrangements satisfactory to the individuals concerned."

3. A large number of applications to transfer have been made, both in Canada and overseas, and are pending, and it is considered the matter should be brought to a finality and a general policy laid down with respect to the same.

4. The policy and procedure with respect to such transfers was further discussed by the Minister of National Defence for Air and the under secretary of state for air at a conference at Ottawa, in February, 1944, and it was agreed, upon behalf of the governments concerned, that Canadian nationals, who are members of the R.A.F. or W.A.A.F., would be permitted to transfer to the R.C.A.F. upon the terms and conditions and in the circumstances hereinafter set forth.

5. A Canadian national for the purposes of such transfer shall be deemed to be either—

(a) a person not ordinarily resident in Great Britain who is, under the provisions of any act in force in the Dominion of Canada, a national or a citizen of the Dominion of Canada, within the meaning of that act, or is a person born or domiciled in the Dominion of Canada. For the purposes of this definition a person who is resident in Great Britain shall be deemed to be ordinarily resident there unless he has been resident in Great Britain for less than two years or has been or is residing there only for the purpose of attending a course of education or the circumstances of his residence in Great Britain are otherwise such as to show that he is residing there for a temporary purpose only;

(b) A British subject born or domiciled in the Dominion of Canada who departed from the Dominion of Canada for the purpose of joining the Royal Air Force and who in pursuance of such purpose has become a member of the Royal Air Force.

6. The following classes of personnel, who are Canadian nationals, may apply to transfer to the R.C.A.F.:

(a) Officers and airmen who joined the R.A.F.V.R. after the outbreak of the war.

(b) Regular officers and airmen, and officers holding short or medium service commissions who joined the R.A.F. on or after 1st January, 1935.

(c) Canadian-born women, not normally domiciled in the United Kingdom, who entered the United Kingdom to join the Women's Auxiliary Air Force before the establishment of the women's division of the R.C.A.F. in Canada.

(d) Canadian-born women, resident in the United Kingdom at the outbreak of the war, who joined the Women's Auxiliary Air Force, provided they were not permanently domiciled in the United Kingdom, and did not enter the United Kingdom for the purpose of establishing a domicile.

7. Procedure upon application

(a) Applications by such R.A.F. officers or airmen and W.A.A.F. officers or airwomen are to be submitted on an approved form through their commanding officers. Such applications will then be passed through the usual channels to air force headquarters or R.C.A.F. overseas headquarters, as appropriate, where they will be dealt with and considered in accordance with the administrative procedure laid down.

(b) Upon approval by the appropriate R.C.A.F. and R.A.F. authorities, officer applicants will be required to relinquish their commissions in the R.A.F. or W.A.A.F., and airmen and airwomen applicants will be required to be discharged from the R.A.F. or W.A.A.F., and will be appointed to commissions or enlisted in the R.C.A.F. or R.C.A.F. (W.D.), as hereinafter provided, the effective date of appointment or enlistment in each case to be the day following the date of relinquishment of commission or discharge.

8. No transfers are to be finally approved and carried into effect unless the appropriate R.A.F. authority concurs in the same and agrees to release the officer, airman or airwoman concerned with no financial adjustment by the government of Canada or by the R.C.A.F.—

(a) in regard to any gratuity paid or payable to Canadian-born short service commission officers, or

(b) in respect of reserve service in the R.A.F., or

(c) otherwise, howsoever, in the event of such transfer taking place.

9. R.A.F. officers (permanent force) on the general list, and R.A.F.V.R. officers on the general list, are to be transferred to and commissioned in the R.C.A.F. special reserve, general list, in their temporary, substantive or war substantive rank (whichever is the highest) in the R.A.F. or R.A.F.V.R., with seniority in the R.C.A.F., special reserve, as of the date such temporary, substantive or war substantive rank (whichever is the highest) was granted to them in the R.A.F. or R.A.F.V.R. All acting ranks held at the time of transfer are to be relinquished.

10. R.A.F. officers (permanent force) on the non-flying list, and R.A.F.V.R. officers on the non-flying list are to be transferred to and commissioned in the R.C.A.F., special reserve, non-flying list, in the same branch as that in which they are serving in the R.A.F. or R.A.F.V.R., or in any other branch for which they are considered suitable, and in their temporary, substantive or war substantive rank (whichever is the highest) in the R.A.F. or R.A.F.V.R., with seniority in the R.C.A.F., special reserve as of the date such temporary, substantive or war substantive rank (whichever is the highest) was granted to them in the R.A.F. or R.A.F.V.R. All acting ranks held at the time of transfer are to be relinquished.

11. W.A.A.F. officers are to be transferred to and commissioned in the R.C.A.F. (W.D.) in the same branch as that in which they are serving in the W.A.A.F., or in any other branch for which they are considered suitable, and in their temporary or war substantive rank (whichever is the higher) in the W.A.A.F. with seniority in the R.C.A.F. (W.D.) as of the date such temporary or war substantive rank (whichever is the higher) was granted to them in the W.A.A.F. All acting ranks held at the time of transfer are to be relinquished.

12. R.A.F. (permanent force) airmen and R.A.F.V.R. airmen are to be transferred to and enlisted in the R.C.A.F., special reserve,—

(a) (i) in the same trade and group as that in which they are serving in the R.A.F. or R.A.F.V.R., or

(ii) in any other trade and group for which they are considered suitable and which is comparable to that held in the R.A.F. or R.A.F.V.R., and

(b) (i) in their temporary rank in the R.A.F. or R.A.F.V.R., or

(ii) in their classification in the R.A.F. or R.A.F.V.R., and

(c) with seniority (if any) in the R.C.A.F., special reserve, as of the date such temporary rank or classification was granted to them in the R.A.F. or R.A.F.V.R.

All acting ranks held at the time of transfer are to be relinquished.

13. Similar provisions to those set out in the immediately preceding paragraphs are to apply to the transfer of W.A.A.F. airwomen from the W.A.A.F. and their enlistment in the R.C.A.F. (W.D.).

14. No rights, credits or any financial advantages accruing from or because of service in the R.A.F., R.A.F.V.R. or W.A.A.F. may be carried over into or will be given credit for in the R.C.A.F. or R.C.A.F. (W.D.). All applicants must understand that from a financial standpoint they are starting anew. Officers so transferred shall not be entitled to the uniform allowances given to R.C.A.F. officers upon first appointment.

15. The effective date of transfer to the R.C.A.F. shall be decided in each case between air ministry and the R.C.A.F. authorities.

The hon. member for York South asked a question along somewhat similar lines with regard to rehabilitation facilities and educational facilities being made available to Canadians in the R.A.F. This afternoon I put on *Hansard* a statement to the effect that predemobilization education and vocational training in either force would be available to the members of the other force. I have tried to make myself plain. In other words, if a Canadian is with an R.A.F. unit he could take advantage of the R.A.F. educational facilities. If a Britisher is with the R.C.A.F. he can take advantage of our educational facilities.

Mr. NOSEWORTHY: A Canadian who is in the R.A.F. cannot always take advantage of these facilities provided for the R.C.A.F.

Mr. POWER: It all depends upon where he is located. If he is located at certain stations he might have a chance.

Mr. NOSEWORTHY: I was thinking more of the period following the war.

Mr. POWER: Rehabilitation?

Mr. NOSEWORTHY: Yes.

Mr. POWER: With respect to pensions, if a man enlisted after 1935, or four years before the war in the R.A.F., he would be entitled, and if unfortunately he were killed his dependents would be entitled, to the same advantages and benefits as if he had enlisted in the R.C.A.F. That is covered by section 46A of the act. In connection with rehabilitation I am sure the Minister of Pensions and National Health would be better able to explain that.

The leader of the opposition asked a question with regard to civil aviation. While I am in entire agreement with him I would rather he would discuss this matter with the Minister of Transport who is in charge of that phase of aviation. With regard to travelling time I may say that I am having this looked into and will have a reply ready on Monday.

With regard to equality of pay for our women's division I may say that I am entirely in agreement with the hon. member for North Battleford (Mrs. Nielsen). At one time there was a distinct difference in the rates of pay in all services. The women obtained only seventy-five per cent of the men's pay, and only seventy-five per cent of trades pay—which seemed to be somewhat of an anomaly. We did raise the seventy-five per cent to eighty per cent. Why we did not raise it to 100, I do not know. But we of the service did succeed in having a logical thing done, that if they were carrying on a trade and drawing trades pay, it did not seem sensible to give them only two-thirds of the trades pay; if they were doing a job of work they should at least have got 100 per cent.

Mr. GRAYDON: "Equal pay for equal work."

Mr. POWER: And that, at least in trades pay, has been arranged. As to the basic pay, it is still four-fifths of the full pay, and I have every sympathy with anybody who wants to raise it to the full amount.

Mr. GRAYDON: Why does the minister not raise it?

Mr. POWER: I will to-morrow, if somebody will give me the money.

Mr. GRAYDON: Surely we have money enough to raise the pay. I am afraid that is not a good enough answer. I do not say there is anything else the minister can say.

Mr. NOSEWORTHY: Put it in the estimates; the house will pass it.

Mr. POWER: I think so. On the question of leave for aircrew and groundcrew, I prefer to take that up and make a more general statement later on.

The question of prisoners of war is really a matter that comes under the Department of National War Services. The question of parcels for prisoners of war is a matter which does not come under this department at all. I am not aware, and would have no means

of being aware, except indirectly, of what goes on with respect to prisoners of war parcels or prisoners of war.

Mr. BENCE: It comes under the Department of National Defence. There is a committee headed by a colonel of the department.

Mr. POWER: I am sorry. I am corrected. I should have known that Colonel Clarke is in charge of it. I could not quite define his duties.

Mr. BENCE: General supervision.

Mr. POWER: At the moment he has general supervision, and he has been very active indeed. He has done great work in trying to get parcels to prisoners of war in the east and in arranging for parcels for prisoners of war in Germany. The air force has a representative on the committee over which Colonel Clarke presides.

The hon. member for Saskatoon wanted to know why we did not add the factor of congestion to the factors taken into consideration in the matter of closing of schools. I must tell him that we do. We are endeavouring to close schools in the large centres, rather than in the smaller ones where the economic life of the community would be more seriously disturbed. With regard to Ottawa, I understand the school to which my hon. friend refers is what is called the W.E.T.P. school. It will be closed shortly. It is not a school where flying goes on; all the men connected with flying in the Ottawa district are accommodated either at Uplands or at Rockcliffe, where we have ample accommodation for them. They do not cause any congestion of accommodation in the city of Ottawa.

Item stands.

Progress reported.

On motion of Mr. Mackenzie (Vancouver Centre) the house adjourned at 11.05 p.m.

Friday, March 3, 1944

The house met at three o'clock.

HOUSE OF COMMONS

SPECIAL COMMITTEE TO ASSIST MR. SPEAKER IN REVISION OF STANDING ORDERS

Mr. SPEAKER: I have the honour to present the first and final report of the special committee appointed to assist Mr. Speaker in revising the standing orders of the house.

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health): With the consent of the house, I move:

That the report of Mr. Speaker for the special committee on the revision of the standing orders be referred to the committee of the whole on Tuesday next.

Motion agreed to.

ITALIAN GOVERNMENT

RECOGNITION BY ALLIED GOVERNMENTS—CONSULTATION WITH CANADA

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): I wish to direct a question to the Prime Minister. Has Canada joined in the recognition of the government of Marshal Badoglio and King Victor Emmanuel in Italy? Has the government been consulted in regard to such recognition, or if not, has the government voiced any disapproval of such recognition?

Right Hon. W. L. MACKENZIE KING (Prime Minister): My hon. friend gave me a copy of his question and I shall reply. At the time of the surrender of Italy, September 8, 1943, the royal Italian government was recognized by the governments of the united nations as the responsible government to conclude the Italian armistice. It has subsequently been recognized by the allied governments as a co-belligerent. Canada was consulted about the recognition of the Italian government for these purposes, and approved.

NAVAL SERVICES

CONSTRUCTION OF BARRACKS IN TORONTO

On the orders of the day:

Mr. T. L. CHURCH (Broadview): I should like to ask the Minister of National Defence for Naval Services a question. I have not often asked him questions this session. As a former chairman of the harbour board of Toronto, I may say that the Toronto members have to-day received a letter from the mayor and the board of control with reference to the construction of naval barracks west of the Toronto baseball grounds on the waterfront. The minister might be able to give information as to what is going on. The city has spent from twelve to fifteen million dollars on western harbour improvements.

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): I hope to be able to make an announcement on that point by next week. My hon. friend is quite right in saying that the city of Toronto has given a certain very desirable area of land there for the use of the naval services. As I told the mayor in a letter a few days ago, the whole matter is being care-

fully considered, and I hope by the time my estimates are up next week to be able to give a definite answer on the point.

CONFERENCE WITH PROVINCES

INQUIRY AS TO PROBABLE DATE

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): May I ask the Prime Minister a question? I did not give notice of it because I have just come into the house. When does he expect to be able to indicate the date of the dominion-provincial conference?

Right Hon. W. L. MACKENZIE KING (Prime Minister): My hon. friend has cut into ground which the hon. member for Parkdale (Mr. Bruce) is seeking to hold.

Mr. GRAYDON: When we have a good thing it is of course well for both to hold it.

Mr. MACKENZIE KING: The hon. member for Parkdale sent me a copy of a question he proposed to ask. It is as follows:

At the first meeting of the social security committee on Wednesday last, when considering the draft bill of the proposed act respecting health insurance, we were informed that before finality could be reached it would be necessary to consult the provinces, especially in respect to the financial provisions of the bill.

Is the Prime Minister in a position to say whether he will be able to hold this conference in Easter week, as contemplated?

Answering both hon. gentlemen, may I say that I am not in a position to state at the moment whether it is going to be possible to hold the dominion provincial conference during Easter week. Certainly with respect to the financial provisions of any bill on health it would not be possible to have the conference take up that measure at Easter. I should say with regard to what my hon. friend from Parkdale (Mr. Bruce) refers to as a draft bill of the proposed act respecting health insurance which he indicates was before the social security committee on Wednesday last, that I understand there were certain departmental proposals respecting health insurance put before the social security committee; but no bill which has been before the social security committee has been even submitted to the government up to the present time. That was made quite clear before the social security committee. What they have been considering are certain departmental proposals respecting health insurance. Those proposals will come before the provincial governments as well as before the federal government before any bill is introduced which may or may not be based upon whatever proposals may be approved.

[Mr. A. L. Macdonald.]

Mr. GRAYDON: If I understand the Prime Minister correctly, should there be a conference at Easter time it will not be possible to deal with the health insurance matter?

Mr. MACKENZIE KING: I doubt if it would be possible to deal with the financial provisions of it. There may be other aspects of a bill that might be dealt with, but the financial provisions of a health insurance bill would necessarily be considered in relation to financial provisions respecting other measures as well, and that is a very large subject. I doubt if it would be possible to have it considered at Easter time.

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health): With further reference to the question asked by the hon. member for Parkdale and the hon. leader of the opposition, and supplementing the reply of the Prime Minister, may I say that the dominion council of health will meet in the next six weeks or two months to discuss as many features as possible of the departmental proposals regarding national health.

Mr. GRAYDON: The dominion council of health?

Mr. MACKENZIE (Vancouver Centre): Yes, with the provincial governments represented.

RADIO BROADCASTING

ADDRESS OF MR. PHILPOTT—NEWS COMMENTATORS

On the orders of the day:

Mr. J. G. DIEFENBAKER (Lake Centre): On Monday, February 28, I directed certain questions to the Minister of National War Services in regard to the control and censorship of news commentators, and in particular Mr. Philpott in reference to the McNaughton case. The minister undertook to give me a reply. I brought up the matter again a day or so later. Is the minister in a position now to give me an answer to these questions?

Hon. L. R. LaFLECHE (Minister of National War Services): I brought some information to the house this afternoon, but the hon. member for Lake Centre asked this question before I had the opportunity of giving him the information he asked for the other day. I wish to table a copy of Mr. Elmore Philpott's week-end review of February 20, 1944.

In regard to the matter of censorship, I have looked it up and I shall read into the record directive No. 1, to be found in the censorship directives handbook which was tabled in this house on January 28, 1944. It is headed "Onus of Responsibility," and is as follows:

Broadcasters are reminded that the full onus of responsibility for observance of the defence

of Canada regulations, in so far as they affect radio, is vested in them. To this end, every precaution should be taken to safeguard against the broadcast of any information likely to help the enemy, or inimical to the national interest. Irrespective of their position or function, all speakers should be fully familiarized with the censorship restrictions now or hereafter in force.

Broadcasters in all categories should be thoroughly conversant with the censorship requirements in order that all danger of violation may be reduced to an absolute minimum.

Information was sought also on the point of "the limitations short of censorship placed on the commentator." I find nothing explicit in that connection. But I understand that the limitations are those of good taste and good judgment, and, of course, observance of any C.B.C. regulation which may be applicable to any case in point.

I am advised that the script in question was not sent to Ottawa. I surmised that the other day; I now confirm it. I am told that no one in Vancouver read through Mr. Philpott's script before it was broadcast.

Mr. GRAYDON: Has the department or the C.B.C. under consideration any tightening of the regulations which would prevent a recurrence of an incident of this kind?

Mr. LaFLECHE: I cannot speak explicitly; I do not know. But perhaps what has happened in this case will move them to consider the point.

Mr. COLDWELL: I should like to ask the minister a supplementary question, if I may. Have the regulations regarding the broadcasting of addresses before political organizations over private radio stations been changed?

Mr. LaFLECHE: I think this question had better stand as a notice.

LABOUR CONDITIONS

MONTREAL TRAMWAYS EMPLOYEES—QUESTION AS TO INVESTIGATION

On the orders of the day:

Mr. ANGUS MacINNIS (Vancouver East): I should like to ask the Minister of Labour if the department has appointed a commissioner to investigate the recent tramway troubles in Montreal, and if so has a report been made to the department?

Hon. HUMPHREY MITCHELL (Minister of Labour): The Department of Labour did not appoint a commissioner to investigate the tramway troubles in Montreal. What actually happened was the government of Quebec asked that we lend them one of our conciliators to serve with one of theirs to report on the situation in Montreal.

SIXTH VICTORY LOAN

ANNOUNCEMENT OF DATE AND OBJECTIVE

On the orders of the day:

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): On behalf of the Minister of Finance I wish to make an announcement with respect to the forthcoming victory loan.

The sixth victory loan campaign will open on Monday, April 24. The objective of the loan has been set at $1,200,000,000, of which $525,000,000 will be sought from individuals and $675,000,000 will be sought from the special names group, consisting largely of corporations, life insurance companies and other investment funds. The house will observe the objective is the same amount as that of the fifth victory loan.

Borrowing needs for the continued prosecution of the war remain at very high levels, and the Minister of Finance is confident that once again Canadians everywhere will show their determination to support their fighting forces by a financial achievement greater than on any previous occasion.

NATIONAL FLAG

REFERENCE TO ANSWER TO QUESTION ON FEBRUARY 28

On the orders of the day:

Mr. T. L. CHURCH (Broadview): I hope the Prime Minister will pardon me for not giving him notice of the question I am about to ask. Would he care to clarify the answer he gave to the question regarding the national flag asked by the hon. member for Quebec-Montmorency (Mr. LaCroix) on Monday last? In reading the answer I find that it goes much farther than the answer which was given to the same hon. member last June; and it has been accepted as a declaration by parliament, which it is not. I think the Prime Minister is quite right in saying that these matters should not be brought up during war, but I think he will agree with me when I say that the last reply goes much farther than the previous one. Would he care to look into the question again and clarify it?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I have nothing to add to what I have said already. I thought what I said the other day, in addition to what I had previously said, was in the nature of a clarification, and I should not wish at this time to attempt to clarify the clarification.

Mr. CHURCH: There is only one national flag and one national anthem.

SUPPLY

The house in committee of supply, Mr. Bradette in the chair.

DEPARTMENT OF AGRICULTURE

1. Departmental administration, $130,406.

Mr. ROWE: Mr. Chairman, it is not my purpose to hold up the estimates of the department, or to deal with them in as great detail as has been my practice in other sessions. I observe with interest, of course, that these estimates are substantially larger than they have been in other years. I can recall that not so many years ago the agriculture estimates were little more than a third as large as they are at the present time; and in addition to what has been spent on agricultural services, as was pointed out not long ago in reply to a question asked by the hon. member for Haldimand, in the last two or three years we have spent on Canadian agriculture something approaching a quarter of a billion dollars. It may be said, and with some truth, that much of this money has had to be spent because we have not progressed as far as we might have in connection with scientific agriculture, or indeed because we have never had an over-all national agricultural policy. It has been a more or less haphazard policy, and now we seem to be paying the penalty. Just to what extent bonuses and subsidies will have to be carried on is not known even to those who may feel optimistic of the support that has been given to agriculture during these difficult years.

I notice that included in the estimates is some $50,000 or $75,000 to be spent by the entomological branch for the protection of forests, which I suppose would include the distribution of insecticides to deal with all sorts of forest diseases, and I wish to draw the committee's attention to the relative importance of the forest industry of this country and to indicate what little attention has been given it in this parliament. I think I can say that during the last twenty years the estimates of the Department of Agriculture have been more thoroughly discussed than those of any other department of the government. On many occasions we have discussed wheat; we have dealt with live stock and dairy products, plant diseases and everything else that comes under this department. I believe that in many cases the money spent by this department has been spent wisely, but I do not believe the estimates of any other department have received anything like the attention and discussion that parliament has given the estimates of the Department of Agriculture. On the other hand we have all the great industries associated with our forest resources, to which we have given no attention in years gone by and on which very little money has been spent. I suggest to the minister that the government should give some consideration to the reorganization of the various services involved, to the end that the great forest industry of this dominion may be given more national attention.

We look at the estimates and find that all the forestry services furnished by the federal treasury cost a total of only about $300,000. This is only thirty per cent of what is spent annually on our national parks. Then we see that $1,875,000 annually is spent in order to provide the services of the fisheries department. I know the Minister of Fisheries will not want that amount reduced, nor will the fishermen throughout this dominion, because it is a very valuable resource which I believe produces some $50,000,000 to $70,000,000 annually for that industry. On the other hand the forest resources of Canada return to this country's treasury approximately $79,000,000 in tax revenue alone each year, of which less than one-half of one per cent is spent in the protection and conservation of our great forest wealth.

During the last few weeks we have done a good deal of talking about the post-war period. Indeed, it has seemed to me that we spent a great deal of time talking about post-war rehabilitation problems when we should have been spending more time considering how to win this war, because it is not won yet. With the single exception of agriculture no industry contributes more to the favourable trade balances of this country than does the forest industry; none produces more of the things necessary to carry on the war; none contributes more to the employment of our people. To-day the products of our forests are contained in the parcels that go to the battle fronts, in the waddings used in the hospitals, and in hundreds of new commodities which have been developed during the last five years. Long ago Germany and other countries which are now our enemies planned constructive forestry policies and gave their great forest resources a prominent place in their national considerations. Other countries, such as Sweden, have considered their forest resources—

Mr. GARDINER: On a point of order, Mr. Chairman, I have no objection to my hon. friend discussing the expenditures made in connection with entomology so far as our forests are concerned, when we come to that item, but I submit that the discussion he is

carrying on now should come under the estimates of the Department of Mines and Resources. We in the Department of Agriculture have nothing to do with forestry as such; that is a matter which should be brought up on the estimates of another department.

Mr. ROWE: I would draw the minister's attention to his own report on forest insect investigations and services, which indicates that substantial sums have been spent on this work.

Mr. GARDINER: On entomology.

Mr. ROWE: On forest insect investigation, carried on by his department. I understand that we had a perfect right under this first item to discuss anything dealt with in these estimates, and I see no particular point of order at the moment. When the minister raised the point of order I believe I was emphasizing the importance of the industry, and the fact that it is highly indigenous to this country. I submit that I have a perfect right to proceed.

The CHAIRMAN: I believe the point of order raised by the Minister of Agriculture is well taken. The item under consideration certainly has not much to do with forestry. The minister points out that the estimates of other departments will be before the committee, at which time forestry can be discussed.

Mr. SENN: I do not often speak on a point of order, but I must point out that page 26 of the report of the Department of Agriculture deals with forest pathology. Reference is made to investigations which have taken place in connection with the decay of poplar, and it is stated that some of the pulp and paper companies have been adversely affected by forest conditions. There is reference to disease in red pine plantations, and so on. Certainly in my judgment the question asked by the hon. member is a proper one. My understanding is that any of the estimates in the Department of Agriculture can be debated when the first item, the item for administration, is called.

Mr. GARDINER: If we are to follow the procedure of discussing every item in the estimates on the general administration item, then I am sure we shall have this discussion on another occasion. The rules of the house are intended to prevent just that. There is no reason why questions having to do with the preservation of forests, through expenditures on entomology, and also studies of diseases of trees, should not be discussed under the proper item. But to discuss forestry under the general item of administration is not, in my submission, in accordance with the rules.

Mr. ROWE: Speaking again to the point of order, it is on the very feature to which the minister has referred—

Mr. McNEVIN: The chairman has already given his decision. This is all out of order.

The CHAIRMAN: We will hear the discussion, if it is brief.

Mr. ROWE: It is the fact that we have our forest insect service under the item for entomology, in the Department of Agriculture, to which I am directing my remarks. If I am given the time to do so I will suggest to the minister ways and means by which he may be relieved of forest insect investigations. I am endeavouring to do this in a constructive way, not in any spirit of criticism of this or any previous government. This is a neglect which is apparent to many people, and a condition which has been given too little attention in committee. I am not referring particularly to the service which has been given, because, as the minister knows, it would not take us long to discuss that. I have in mind departmental rearrangement. In view of this fact I submit it is proper that we discuss the general set-up of the estimates on the administration item.

Mr. GRAYDON: May I say one word? I happen to know that the hon. member for Dufferin-Simcoe has given much research and study to the point involved, and the subject is one of very great importance. Having given some thought to the matter myself it is my view that he might discuss his thesis on this item.

Mr. ROSS (Moose Jaw): He may not be here later.

Mr. GRAYDON: The hon. member for Moose Jaw enters into this now. I can understand why he would make that remark. It was not a very becoming one, at that—

Mr. ROSS (Moose Jaw): Is that so?

Mr. GRAYDON: —having regard to what happened last year when the estimates of the minister were before the committee.

In all fairness I say the minister might very properly allow the hon. member to continue. This is a matter of some importance, the discussion of which could not properly be had under any other item in the estimates. The minister will be the first to agree that wide latitude is given in the discussion on the administration item. I submit this is not one of those detailed matters which would normally fall within any of the actual items.

The CHAIRMAN: I believe I must repeat my first statement, namely, that item 135 at page 20 of the estimates, providing for an expenditure for dominion forest service, would afford an opportunity for this discussion. It is true that when the first item of any department is called a certain amount of latitude is allowed, but it must be realized that when specific questions are asked, in order to give answers the minister must have officials before him. The hon. member for Dufferin-Simcoe was asking some direct questions.

Mr. ROWE: No.

The CHAIRMAN: A question was put to the minister, and the minister has said he is not in a position to answer it. His point of order was well taken. It is now proper to have a general discussion, but I believe hon. members will realize that the minister is not now in a position to answer questions on all the items in his department.

Mr. CRUICKSHANK: Speaking to the point of order, I should like to conform to the discussion of the items as they are called. However, we had a discussion with regard to potatoes, in connection with which an emergency had developed, and we were told by the minister that he would prefer to have the discussion under item 26. If the estimates are discussed as they were last year it will be about July 26 when we reach that item. That is not an exaggeration; it is borne out by *Hansard* of last year. The condition with respect to potatoes is an emergency condition, and I do not want to wait until item 26 is called.

The CHAIRMAN: If the hon. member is stating a point of order, it is my view that the subject should be discussed under item 26; otherwise representations will be made over and over again and there will be repetition. I am in the hands of the committee, and am not attempting to set up rules. I believe there is no doubt however that potatoes might be considered when item 26 is called.

Mr. CRUICKSHANK: May I speak again to the point of order?

The CHAIRMAN: I have given my decision on the point of order.

Mr. LEADER: Since you have made your ruling, Mr. Chairman, while I do not wish to interrupt the hon. member for Dufferin-Simcoe, may I take it that if he is out of order I may proceed?

The CHAIRMAN: The hon. member for Dufferin-Simcoe had the floor.

[Mr. Graydon.

Mr. ROWE: In what I have to say I shall try to keep within the services of the agriculture department. It is not my purpose to hold up the estimates. As I have said, I am not criticizing the administration of the department, although I believe there is room for criticism.

Mr. GARDINER: May I make it perfectly clear that I am not objecting to anything that has been said so far. I have no objection to what has been said; that is not the point. I do wish to know, however, whether we are going to discuss forestry under my estimates. If we are, then every other hon. member may do the same, and I hesitate to sit here all afternoon and evening discussing the estimates of some other minister's department.

Mr. ROWE: I think I am still in order when I recommend that the Minister of Agriculture take the forest service entirely out of his department. I refer to the surveys with respect to insects carried on by his department. I would suggest, too, that two or three pages of the report of his department referring to that subject could then be deleted. If we cannot discuss this matter under the estimates of this department, then I think there should be a reorganization in order that this problem can be more fully considered. Surely we would be in order as a committee to discuss the advisability of taking out some of the service items that are now in these estimates and placing them, if you will, under the Department of Mines and Resources where I think they should be.

The hon. member for Fraser Valley (Mr. Cruickshank) has mentioned that there are emergency problems, but I would point out that this matter is an emergency problem. We must realize the great damage that has been done during the last four or five years. We should endeavour to arouse this committee to arriving at some solution or making a greater effort than the small effort being put forth to-day. I am merely pointing out that the services having to do with this great primary industry should be solidified and consolidated under one department. Something should be done along that line.

As I suggested at the outset, the minister must share at least a part of this responsibility with the Minister of Mines and Resources. Neither department is doing very much, nor has much been done in the past. I am laying this matter on the doorstep of the government, because it is their responsibility; but it must be admitted that for the last seventy years very little has been done for this great primary industry, which has grown to be the most important in this dominion; employs the most

labour, and produces a greater favourable trade balance than any other industry. It has made to the mother country an important contribution to the war by providing over a billion and a half feet of lumber per year. It has given assistance to our friends in the United States by assisting in their requirements for explosives, for alcohol, for glycerine and many other things made from these products. Yet for seventy years this industry has been allowed to grow up almost like Topsy so far as national direction is concerned. During the last twenty years problems have arisen which I submit create an emergency now. They should be dealt with before next spring. There is the spruce bark beetle, the bronze birch borer, the budworm, the jackpine sawfly and mountain pine beetle. Hon. members from British Columbia know the damage that these insects are doing. Every part of this dominion is affected. I know it has been said that we cannot deal with these matters because the provinces have autonomy over their own civil and property rights, but I submit that this government should review without delay the possibilities of establishing a national forest policy to cooperate with the provinces.

Some department should be made responsible for preventing the terrific losses we have sustained. From 1878 to 1886 very large quantities of the accessible timber in the state of Maine and the provinces of Quebec and New Brunswick were destroyed. The preponderance of balsam since that time has made our forests more vulnerable to the spruce budworm. From 1910 to 1920 from forty to sixty per cent of the accessible spruce and balsam in the state of Maine and in large sections of Quebec and New Brunswick was affected by this insect. The present budworm infestation began in the district north of Sudbury in 1935 and 1936. Foresters in that district claim that because of this infestation there was more damage by fire in two days in 1941 than there had been in the previous ten years—the ravages of the budworm making the trees so much more susceptible to fire hazards.

An estimate made by the best forestry authorities in the dominion indicates that this budworm infestation now threatens 45,000 square miles. The area damaged spreads through Ontario, Quebec, and part of New Brunswick, and over 15,000 square miles of forests are already destroyed. Do hon. members realize what that means The minister's report states that 40,000 square miles are seriously affected. This represents the destruction of 50 million cords of wood, or sufficient pulpwood to keep the pulp and paper mills of this country going for thirty-five years. Yet the federal government and this parliament have done practically nothing about it.

As has been stated by the leading entomologists in this country, we are twenty years behind the times in our effort to overcome this devastating budworm menace. Other countries have national policies in connection with their great resources. We talk a lot about rehabilitation, about free money, about giving pensions, about finding places for our men, and very little about conserving and preserving and developing our own resources, which are so fundamental to our great primary industries. It is upon these industries that much of our national wealth and national employment and national prosperity depend. It is true that something has been done, but it touches only the fringe of the problem. From 1909 to 1920 over 200 million cords of spruce and balsam pulpwood were destroyed in Quebec and the maritime provinces by the spruce budworm.

This problem transcends the borders of the dominion; it affects the United States of America as well. On two or three occasions the state of Maine has suffered great loss. I am glad to note that there is a bill now before congress which will provide large sums for investigation and research work in an effort to arrive at a solution of this problem. Many things have been tried. Because of the nature of the problem, dusting by aeroplane has not proven entirely successful, but there is no doubt that much can be done through proper forest management, protective service and cooperation between the provinces and the dominion.

We have not faced this problem, and we must face it in order to arrive at a solution. We cannot sit idly by and watch what is happening. Every infestation affects millions of cords more than the previous one. We have been warned repeatedly during the last quarter century by the leading entomologists that unless something is done, resources of great value will be lost to the dominion. True, when you look over the map you can see enormous areas of timber still in Canada; but remember, our resources are not inexhaustible. We have excellent yellow birch in the far east, stately firs in British Columbia, and large white pines in this old province, much of which, however, has been exploited, and now we have left in its place a growth of balsam, which is fertile ground for the budworm to do its work.

I submit, Mr. Chairman, that we certainly have not met this problem. There is no industry which gives more employment in Canada to-day or has more capital invested in it than the allied forest industries, and they depend entirely on the raw production from these great forest areas. I believe that there is more hope for employment after the war

through new uses of wood products than there is in any other single industry in Canada, but that industry is dependent upon the accessibility of sound timber. After the war we shall have to compete with Sweden and Finland and even Russia, and therefore I think it is fitting under our good neighbour policy that we take this problem up with the United States of America. I ask the government of the day to face this problem and see if we cannot bring about some joint cooperative effort between Canada and the United States to deal with it. It is not only a provincial or a dominion problem, but from its very nature it is as well an international problem. If a great forest fire starts in the Gatineau, we soon know it down here because we smell the smoke. But until we are almost on fire ourselves we do not seem to wake up. Insect infestation can prepare vast areas of our forests, square mile after square mile, in one year for a forest fire. The fallen timber through insect infestation creates a fire hazard and now causes greater annual destruction than all the timber cutting itself in this dominion.

Remember, the figures I have given are not small figures. Forty thousand square miles is a large territory, and 15,000 square miles is now a fire hazard and a prey for the fungi and insects to which I have referred.

It does seem to me that excuses such as provincial rights should not brush aside this problem. We must grapple with it in a national way, establish surveys and detection services, international in scope, and enlist the joint efforts of the federal bureaux of entomology and plant pathology in an endeavour to solve it. It is true that we have made certain strides forward in the distribution of insecticides and parasites, and there has been more research into control methods. We have a laboratory at Belleville. The Imperial Institute has been moved out from England for the duration, and is doing excellent work. It has been shown that parasites can be produced in sufficient numbers to be spread over areas in such volume as to prevent this insect infestation, if the work is done in time. But they cannot be spread over 15,000 square miles, and many entomologists are agreed from past experience that this work must be done in time if the forests are to be saved. And so I say, Mr. Chairman, that we must have surveys made and detection services set up. I leave it to this house to say, no matter whether the problem comes under this department or not, whether we are giving the necessary attention to this great national resource, a resource that brought to this country in 1941 alone a production of $537,000,000 worth and a favourable trade balance of $350,000,000. It is an industry which directly and indirectly is supporting over half a million of our people.

The question is important from many other angles as well, of which hon. members are no doubt familiar. There is the effect upon our climate and upon soil erosion. We spend a lot of time in the different provinces in discussing reforestation policies. I can well remember the time, a quarter of a century ago, when reforestation was started by our county councils, and in Simcoe county, where I live, we have been reforesting ever since and now have substantial reforestation areas. But it takes a long time to reforest 15,000 square miles, and mother nature has proven to be the best reforestator we have yet seen. Again I repeat, we have wilfully neglected the great major national resources of this dominion. It seems to me that we, the representatives of the people in this house, should urge upon the government that more time and effort be spent on national research and the development of these resources and on their conservation and wise and scientific utilization. If we spend more time on these vitally important matters and less time on some of the wild dreams some people have of giving people something for nothing, it will open the door to opportunities and restore the confidence necessary not only to industry but especially to the labouring man himself. Nature has blessed us with timber resources in greater abundance than those possessed by any other people. Surely we should not fritter them away. I hope that the history of the next seventy years will not be a repetition of the last seventy, in which we have recklessly neglected an important obligation which rests right on the shoulders of this government—

Mr. GARDINER: Rests right on the provincial governments.

Mr. ROWE: There again we come back to the excuse of provincial rights.

Mr. GARDINER: Mr. Chairman, I must rise to a point of order. We have wasted thirty minutes listening to this discussion, which is entirely on provincial matters having nothing to do with this department. I would respectfully suggest that you enforce your ruling.

The CHAIRMAN: I have given my ruling. There is no doubt that the hon. member for Dufferin-Simcoe has not obeyed my ruling. I cannot see how a discussion of forest resources can be tagged on to a discussion of agriculture estimates. It is the first time I have heard such a discussion on these

estimates. There will be an opportunuity when we reach item 135, for dominion forest service, to discuss the matter the hon. member has been discussing. I rule again that he is absolutely out of order.

Mr. ROSS (Souris): Mr. Chairman—

The CHAIRMAN: I have given my decision on the point of order. Surely the committee must respect the decision of the Chair. If my ruling is disputed, an appeal can be made from it.

Mr. ROSS (Souris): I was not going to speak to the point of order, Mr. Chairman, but wanted to discuss another matter, unless the minister is going to reply.

Mr. GARDINER: I am not going to reply, because the remarks have to do largely with matters not in my department.

Mr. ROSS (Souris): Then I should like to discuss—

The CHAIRMAN: I saw the hon. member for Renfrew North (Mr. Warren) first.

Mr. WARREN: I did not intend to discuss this item Mr. Chairman, but I had the good fortune to listen to an eloquent and fluent speech by the hon. member for Humboldt (Mr. Burton) on February 25, which is recorded at page 909 of *Hansard,* and I should like to draw attention to some of the statements he made.

It is true that we Ontario farmers have been brought up in a hard school. We have passed through the dark days when an extra five-dollar bill on a farmer's tax account was a lot of money. Any person who was interested in municipal affairs during those dark days when my hon. friends to the left were running the affairs of the country will know something about the value of even a five-dollar bill. But since coming here we have been asked to vote huge sums of money which have gone to the western provinces under the Prairie Farm Rehabilitation Act and the Prairie Farm Assistance Act, and the hon. member for Humboldt now comes to us as a new member from the province of Saskatchewan with experience, I understand, as a former member of the socialist group in the legislature of that province, so that I presume he speaks with authority and knowledge. He brings us some examples of the way in which the money that we have been voting is being handled in his own riding. I think it is something that should receive attention.

For example, he told us that under the Prairie Farm Rehabilitation Act an inspector comes along to a certain community of an evening and there are six or seven dugouts to be inspected. I had a wonderful regard for these dugouts, from what I was able to learn about them. It is a wonderful thing that you can dig a hole in that western soil, if you get it in the proper location, and it will fill with water in the spring, or during a shower of rain, and will remain clear and sweet and will not go stagnant all summer, so that you can even use it for your own household purposes. If we attempted anything like that in any part of this province, so far as I am aware we would have to line it with cement, and we would have to line it thoroughly. But even at that the water would not remain cool and sweet during the summer months.

That of course has been big business all over the western provinces. It costs a lot of money, and these dugouts have to be dug in the proper location and dug properly, and I suppose it is quite necessary that there should be inspectors. There must be quite a staff of inspectors to administer these large sums of money that we have been voting, but here is this fresh voice from the west telling us that this particular inspector had an opportunity of inspecting six or seven of these dugouts in an evening, and instead of doing so he drives back to Humboldt and later makes six or seven different trips out to inspect the dugouts. If it was possible for him to do it in the evening and he did not do it, we would like to know why. If that condition is general we would like to know why.

Mr. BURTON: Before the hon. gentleman leaves the question of the inspection of dugouts, he will have noticed that I said dugout locations. Did he ever notice what an inspector did in connection with the inspection of a dugout location?

Mr. WARREN: If it is the inspection of locations, that is a different matter. I can hardly imagine that a man would be able to go into a district and in an evening take tests to find out whether there was gravel beneath or whether the dugout in that particular spot would hold water or not, make a survey, find the proper location, decide the nature of the subsoil, and so on. That would be a big job, and I very much doubt if a man would do six or seven of them in an evening.

The other report was in connection with the Prairie Farm Assistance Act. This man drove along and met the hon. member for Humboldt, who perhaps was not in a good humour. His combine had broken down, his grain was ripe, and I have a good deal of sympathy with him if he was not very civil to an inspector. I can understand if he gave short answers. Perhaps

the fellow had more knowledge than he suspected and was only trying to have a little conversation with a farmer along the way. That would be quite natural. In any case, he accuses the man of being absolutely ignorant and not knowing the difference between a twelve-bushel crop and a thirty-bushel crop.

The point is that if I had received reports like that, and I sometimes get letters from the west, I would have gone to the Department of Agriculture. Judging by my experience, I would say they must have a marvellous filing system, because it would be only a short time before I would get a complete report from some person in the west through the minister's office. A copy of a letter would be sent to me giving full details regarding the matter. But what strikes me more than anything else is that this whole administrative staff is being besmirched by the hon. member for Humboldt in his accusation against two men, I should think it would be the duty of the hon. member to go further, and if he is not able to give the names of these two particular criminals he should at least give us the year and the approximate month. If he will do so I can assure him that we will get a full report on the activities of these two inspectors and we shall learn something as to whether these men were trying to steal public funds, whether they were falling down on the job, and whether they are still on the job.

In fairness to that staff as a whole—and surely there must be honest men in Saskatchewan who do this kind of work—I think the hon. gentleman should go further and give the Minister of Agriculture a chance to clear the matter up.

Mr. BURTON: I only gave you a start.

Mr. WARREN: I noticed that the hon. member said he could regale us until midnight with instances of this kind, but in fairness to the people of Saskatchewan I suggest that when a man gives such an instance he should at least give the minister a chance to investigate the matter and clear it up. I ask the hon. member to give the minister that opportunity of looking into these accusations, on behalf of the staff of honest inspectors, who are administering this money that we comparatively poor Ontario farmers are voting for the assistance of Saskatchewan farmers.

The member for Humboldt also referred to an office he had visited—I expect there is quite a staff—and he described it as a war office. My own experience, in visiting the war offices, is that a war office is quite an efficient spot. If you want service in a war office you get it in a hurry. But that did not seem to be at all the interpretation of the hon. member. He referred to it as a war office. Let me quote from the remarks of the hon. member as reported at page 910 of *Hansard*:

> I said, "I was in a war office." They said, "Where is that?" I said, "Down there on a certain street in the city. It is war."

Then he goes on to say:

> I remarked that the way these fellows are going about their work we shall have a war before we get the bonus, and things straightened out. There were men running through the province drawing salaries and building up these handsome expense accounts who did not do anything else but make a heap of trouble for the people.

We ought to know something about that office and about the way it is handled. If it is handled in such a way that it is a sort of wild house, as the hon. member for Humboldt indicated, then we ought to know about it, because we are going to be asked to vote not $10 but millions of dollars to carry out the provisions of the Prairie Farm Rehabilitation Act and the Prairie Farm Assistance Act.

I wish to deal with another point, namely, the hon. member's criticism of the expense account of the Minister of Agriculture. The Minister of Agriculture is the minister of agriculture for Saskatchewan, but I remind my hon. friend that he is also the minister of agriculture for Ontario and for the other seven provinces. The hon. member for Humboldt complains that the expense account of the Minister of Agriculture is too high, the intimation being that he travels too much. I have watched the Minister of Agriculture during my limited experience here and, speaking for myself, I do not know of any other man in Canada who knows more about farming in its varied angles than the present minister. It is something to know about growing Saskatchewan wheat and raising Saskatchewan hogs, but it is something else to know about milk and all the different milk products. It is something to know about apples in the Annapolis valley and in the Okanagan valley. It is something to know about flax, and the grading of cattle and hogs, and the marketing of them. I do not know of any other man in Canada who is so well qualified to handle the affairs of agriculture all across Canada. How did he get that way? Simply because he had ambition and energy enough to go and develop himself along those lines. Instead of sending ten men to look at the problems and receive ten different views, he just gets up and goes to see for himself. He travels from Nova Scotia to British Columbia if he thinks it is necessary. That kind of travelling is no pleasure jaunt.

Mr. CRUICKSHANK: It is, to British Columbia.

Mr. WARREN: I remember hearing—I did not hear it from the Minister of Agriculture, because he takes it all as a part of the day's work—that we were going to be asked to vote money to take care of certain portions of Alberta and Saskatchewan under the relief system. The federal government was asked to be responsible for one hundred per cent of the cost of relief in certain portions of Saskatchewan and Alberta. I have not the figures with me and I cannot give the exact numbers but I do know that the Minister of Agriculture took his car, did most of his own driving, took some other men with him and travelled some thousands of miles all around the territory concerned. He ran up a tremendous mileage every day, and did the job himself. He might very well have sat in his office in Ottawa and asked someone else to do the job. It was a big job. It is not any fun; it is hard work; but the minister, because he had been there and had seen the situation for himself, was better qualified to understand it and handle it.

Mr. ROSS (Souris): He wants to do that now, but you are holding him up.

Mr. WARREN: That is all right. If the hon. member for Humboldt will give the minister a chance by giving him some data with regard to the accusations he made, then we shall get along.

I should like to say to the hon. member for Humboldt that so far as I am concerned, since I have come to know the minister I have the utmost confidence in his ability. One of the reasons for that confidence is that he goes and sees for himself. I do not know where you would find any man who would have the ambition to make those tiring trips. It is true that he does ask us to vote money for these things. Sometimes when we see the amount we just gasp. For example, when he asked us to vote money to purchase all the surplus apples in the Annapolis valley and in the Okanagan valley, naturally we gasped. But the apples were purchased and processed and put on the market; the apple situation in Ontario was cleared up, and that problem was solved. When there was a surplus of butter we were asked to pass legislation which would remove that surplus off the market. That succeeded. Many similar problems have been brought to the attention of the Minister of Agriculture, and he found a way of solving them. So far as I am concerned I have no complaints regarding his expense account. And I challenge the hon. member for Humboldt to find any padded accounts in the personal accounts of the Minister of Agriculture.

There is no reason why I should undertake to scold or educate, because I am not capable of it.

Mr. WOOD: You are too modest.

Mr. WARREN: I shall put it this way: there is no reason why I should undertake to advise the hon. member for Humboldt, but I was surprised to hear him refer to swivel-necked politicians.

Mr. CRUICKSHANK: Let these other fellows on the side turn around.

Mr. WARREN: A few days ago the hon. member for York East referred to this house as being the greatest hot-air joint that he knew anything about. When I hear expressions of that kind I always remember that when Hitler was striving to bring about a revolution in order to attain office for himself and his body of gangsters, one of his favourite methods was to belittle the public men who were giving their service to his country, to treat them with contempt, to treat their parliamentary system and organizations with contempt. When I hear expressions of that kind applied to our public men and our public servants it gives me a cold chill, because I remember what happened in Germany. After all, if we cannot respect ourselves and our fellow members of parliament and our public servants, how can we expect the rank and file to have respect for us? If fellow members of parliament and public servants are referred to as swivel-necked politicians and as talking hot air, I do not think there is very much chance to get the respect of the rank and file, especially in such critical times as these. I think that is one of the things we ought to be very careful about.

Mr. LEADER: I should like to take this opportunity to make a few observations in regard to agriculture. I assure the committee I shall not be long; but if I were to keep quiet at this time my silence might be construed as a repudiation of the opposition I have expressed to some of the legislation brought down by the government through my esteemed friend the Minister of Agriculture. I shall have some commendation to offer, and perhaps some mild criticism. I want to commend the action of the government in setting a price of $1.25 a bushel for No. 1 northern wheat at Fort William.

Mr. GARDINER: That is an advance, not a price.

Mr. LEADER: That is so, and I hope the initial payment will be followed by a substantial final payment. That would be only fair. I am glad the minister said it was only an advance. We are living on the same continent as our friends to the south. Even if we are paid $1.25 a bushel for our wheat at Fort William it means only $1.10 at Portage la Prairie for No. 1 northern, and we have not had any No. 1 northern there to my knowledge for perhaps three years, though I have never grown better wheat than we have produced during that time. I was going on to say, however, that when our neighbours to the south set a cash price of $1.70 there should not be any opposition to a price of $1.25 for Canadian wheat, which is much better wheat than they have in the United States.

I want also to commend the announcement by the minister of the discontinuance of the wheat acreage reduction bonus. I do not think this action will be regretted. On the contrary, I believe it will cause profound satisfaction not only in western Canada but all over this country, because I am convinced that many hours of discussion in this house would have been avoided if we had not had to listen to the opposition put forth by hon. members from Ontario, though I am not blaming them.

Mr. EVANS: We are reaping the benefit now.

Mr. LEADER: The minister says we are reaping the benefit now. How can he say that when he is only giving us $1.25 a bushel for wheat which is worth $1.70 on the other side of the line?

Mr. GARDINER: I did not say anything.

Mr. LEADER: Well, some hon. member did.

Mr. EVANS: I was speaking of the Ontario farmers, who are reaping the benefit in connection with coarse grains now.

Mr. LEADER: The Ontario members can defend themselves, but I have always taken the attitude in this house that members from the west as well as members from Ontario should have the best interests of this country at heart, and there should be no division between east and west. I have never done anything to cause such a division. Canada for Canadians both east and west.

Mr. McNEVIN: I do not think the hon. member should class all the Ontario members together; for I believe I stood with him when he asked for a higher price for western wheat.

Mr. LEADER: Yes, Mr. Chairman; when the hon. member was making a speech in this house two or three years ago in which he suggested that the price of wheat should be increased I asked if he would agree to a further increase, I just forget the figure I suggested, and he replied, "We will face that when we come to it." I know he did favour an increase, however, and I told my people at home that when we were pleading for the government to give us a price of 80 cents for wheat the Ontario members would have supported a price of $1—not on all our wheat, of course, but on the proportion the government could buy. That has always been my stand in this house.

All these interruptions have sidetracked me on to another theme, so that it may take me a little longer to conclude my remarks. I was going on to say that the demise of the wheat acreage reduction bonus is not regretted, but I wanted to add that before burial is consummated I should like to review the remains. I know that certain hon. members on this side and perhaps some on the other side of the house, have declared substantially that all our farm legislation during the past four years has been infallible. I do not want to take that view, because, as I said at the commencement, it would be a repudiation of my words and actions in this house during that period of time. When I took that stand I said I was speaking not only for myself but also for my constituents, and if I have to face my constituents again they will have my record before them. I was speaking also for the western wheat pools. Time after time they criticized government legislation in regard to the wheat acreage reduction bonus and offered suggestions which I think should have been accepted. I spoke also for the Canadian Federation of Agriculture. More than once they submitted proposals to the Minister of Agriculture which I think would have been far more beneficial to the people of Canada than the legislation the government put through. I remember that I supported the delegation which came here from the three prairie provinces, headed by John Bracken, when it was intimated that the fixed price would be 60 cents a bushel; I do not know whether that was the announced policy of the government at that time, but it was intimated, and they came down here to defend the price of 80 cents. I, together with five Liberal members of this house, voted against the government on that occasion; and among the five was our dear departed friend, the former Minister of Agriculture, Mr. Motherwell. Then when that well-remembered Saskatchewan delegation came to Ottawa to plead for $1 wheat I supported their conten-

tion; I thought then and still think it was reasonable. So I say that the wheat reduction bonus was wrong in conception and inequitable in administration. It could not be otherwise, because, as I have said before in this house, more than a third of the farmers in the three prairie provinces did not participate in its doubtful benefits. The minister knows that very well; I gave the figures in a previous speech.

Mr. GARDINER: But 182,000 of them did.

Mr. LEADER: That is less than two-thirds of the total.

Mr. GARDINER: Not of the wheat growers.

Mr. LEADER: A great many farmers have only a small acreage in wheat; perhaps fifty per cent of them have less than fifty or sixty acres, and those farmers were not protected at the very low prices we were getting and the quota we had to have. I am not quarrelling with the quota, because it was necessary, but one year it was paid on only three bushels to the acre, at 70 cents a bushel. Imagine what a farmer could do with that amount of money in paying his threshing gang, buying twine and so on.

Now I come to what I suggested to the government. I realized that we had a surplus of wheat in Canada and that the price could never go up until we either got rid of that surplus or at least substantially reduced it. At the same time I realized we had not a market for all our wheat, but we had one for a certain portion of it. I argued that if the government would come out boldly and say to the farmers of Canada, "We can sell 280,000,000 bushels of your wheat. We will pay you a fair price for it per bushel, and if you wish to grow more wheat, you can take care of it yourselves," we would have rid ourselves of paying for the storage of millions and millions of bushels, storage charges paid to the elevator companies of this country, including the pools. I know someone will mention the pools. That has been done before, so I will say, "including the pools." I argue that if the government had paid us a fair price, a price which most of us agreed should have been about a dollar a bushel, they would not have needed the wheat reduction bonus. Let me remind the committee that I am criticizing only that one bonus, namely the wheat reduction bonus. Some of the other bonuses, especially those provided under the Prairie Farm Rehabilitation Act, command a great deal of respect from me. I believe there are great possibilities in that measure, and it should be continued in operation. And yet there are dangers, may I tell the Minister of Agriculture. I repeat that there are dangers in that act, because if we persist in paying farmers to grow wheat on land which should be in grass, then we are doing an injury to our country, and injury to the farmers who stay on that kind of land.

Yes, a fair price for the wheat, and we would have got away from that bonus. We could have built our granaries on our farms. Possibly I should have said at the outset that for two years farm storage was paid to the farmers, and was then discontinued. If we had been granted the storage charges paid to the elevator companies, we would have had that money. The farmers could have built their granaries and the government would not have been out one cent. They would have got it all back. But, while that was the policy of the United States, it was not the policy of this government. I shall not go into further detail in that regard.

May I commend the government upon its anti-inflation policy? Certainly it is necessary to hold down the prices of farm products. Where would they go, if we did not have set prices for them? They would rise to the price levels in the United States. I am dealing particularly with wheat and coarse grain. The result was that we had to have some control over prices. By that action undue inflation was prevented. Farmers are just as keen as any other class of people in their desire to prevent inflation, and I now commend the government for its action in that regard.

May I compliment the Minister of Agriculture, too, upon the long-term agreements he is endeavouring to make. I have in mind particularly the four-year hog contract with the old country. Whether the terms have been finally agreed upon, I cannot say; but the endeavour is well worthy of commendation.

May I compliment the government, too, for the inference contained in the speech from the throne with respect to the setting of floor prices on farm products. That is a splendid undertaking. Nothing will give the farmer more confidence than the knowledge that when the war is over he will be able to realize from the sale of his products at least the cost of production—at least, I say, the cost of production. I should add that if he is to continue in business he is entitled to a fair margin of profit above that cost of production. That is a hope which we may carry with us, and we trust that that will be the government's policy. But if those floor prices are not adequate they will be of no use to the farmers. I believe it was the federation of agriculture that suggested that the present ceiling prices on coarse grains should be the floor prices to continue after the war. I shall not argue the

merits of that suggestion, but I do know that unless the floor prices are adequate we shall have economic disturbances after the war.

Just before coming to Ottawa I attended a meeting in Portage la Prairie, and suggested that the government's action in setting floor prices should be commended. I asked at that time that a resolution of commendation be passed, but that it should be pointed out that unless the floor prices were adequate, such legislation would be insufficient. I had to leave the meeting hurriedly to catch the train, and I do not know whether or not the resolution was ever passed. It was suggested further that the resolution should be sent not only to the hon. member for Portage la Prairie, but also to a certain member from Alberta. I said if they were going to do that I would suggest they should send it to at least every member of parliament from Manitoba, irrespective of party. I pointed out, too, that if they were going to seek out any one or two members they should, by rights, send the resolution to every member of parliament. But as I have said, I do not know whether it was passed. I did not receive a copy of it, and if any other hon. members have, then they have that advantage over me.

There is one other point I would mention. I was in Ottawa in September, when the Liberal convention was held. While we were in session the announcement was made that we would be paid 10 cents a bushel on oats and 15 cents on barley. Mind you, I do not call that a bonus; it is not a bonus at all. It is only the price we would be getting for the grain if we were shipping it to the United States.

Mr. ROSS (Souris): It is not that price, either.

Mr. LEADER: It is just a little higher price.

Mr. GARDINER: We guaranteed a floor, no matter what it sold for in the United States.

Mr. LEADER: All members who discussed the matter at that time were pleased that the announcement had been made, but we agreed it was going to upset the equilibrium of the hog industry unless the government gave a bonus to cover the extra 10 cents a bushel on oats and 15 cents on barley. We thought that was a reasonable procedure to take. And, by the way, I had expected the minister to say, "You are getting the bonus." But there is the trouble; there was a delay of three or four months before the announcement came with respect to the extra three dollars on grade A and two dollars on grade B-1. Meantime we heard, although statistics now prove differently, that thousands of sows and immature hogs were being sent to the stock yards, because barley and oats were worth more when sold as grain. That was the situation. Is there not some other way of doing business, some way which will not upset the equilibrium?

Mr. GARDINER: Instead of just listening to that story, I went out and checked on the farms.

Mr. LEADER: Meantime the hogs were going on the market.

Mr. GARDINER: But they did not; as the hon. member has said, they did not go.

Mr. LEADER: I said the figures showed that they did not go. But we cannot go altogether by those figures; more hogs might have remained on the farm and we might have had increased production.

Mr. GARDINER: And the hon. member cannot go by propaganda put out by interested people, either.

Mr. LEADER: There is the situation. Farmers I talked to said, "Why in blazes did they not announce the bonus on hogs when they announced the increased payments on barley and oats?"

That is all I have to say in the matter. The criticism I offer may be regarded as unwarranted. However, I am just handing it out to the minister and the government, and I am showing that that was the sore spot with the hog growers not only of western but of eastern Canada also.

Mr. ROSS (Souris): I should like to take up with the minister one or two matters which probably involve two departments, because we have production under the Department of Agriculture and marketing under the Department of Trade and Commerce. I have been receiving letters from farmers in the west during the past few days pointing out that they think the government should guarantee a fair floor price on oats and barley, otherwise they will seed their entire acreage this year to wheat. Some of these farmers will begin seeding operations in a month's time, and they should know what they can expect as a floor price on coarse grains.

I know there is a price now, but I think the floor price should be what it is now plus the bonus referred to by the hon. member for Portage la Prairie, although he did not call it a bonus. This would give the farmers a return far below the prices prevailing in the United States. I put some figures on *Hansard* on February 1 when I was speaking in the debate on the speech from the throne. The

government should be able to give the producers some assurance as to what they can expect as a floor price on coarse grains. If that is not done our whole programme of production will be disrupted and we shall be disappointed in the acreage sowed to oats and barley in many sections of the west.

The next matter I should like to refer to has to do with flax. The government have announced that they will pay $2.75 per bushel for flax grown this year. In my opinion that price is not satisfactory, and this is borne out by what has been said by many who are more conversant with the matter than I am. The government itself realize that this is the case because in the quarterly review on Canadian coarse grains dated February 14, 1944, they point out in connection with flax:

—a further increase of 500,000 acres took place. A new high was established in 1943 when 2,947,000 acres went into flaxseed.

Maintenance of the 1943 level of acreage in 1944 was the objective presented at the dominion-provincial agricultural conference last December, but a much lower acreage in 1944 was indicated for the west, especially by the representatives from Saskatchewan. It is believed, however, that the figure which emerged from the conference and which showed a reduction of about 1,000,000 acres from the 1943 level as the probable acreage in 1944 is not acceptable to those charged with the wartime programme affecting fats and oils. Every effort will yet be made to repeat the 1943 flaxseed acreage this year.

The price of No. 1 C.W. flaxseed to the grower (basis Fort William) was raised to $2.50 per bushel as of August 1, 1943, an increase of 25 cents per bushel over the previous fixed price, and unlike wheat and coarse grain, this crop can be marketed without quota restriction.

The statement goes on further, but I shall not burden the committee by quoting it. During the past few days a meeting was held in Winnipeg of the national barley and linseed flax committee, and they recommended to the officials in Ottawa a price of at least $3.25 per bushel for flaxseed, in keeping with need and price relationship to the standard crops. Flaxseed is not an attractive crop to grow and should be worth two and one-half times the price of wheat. Mr. F. H. Lehberg, the technical adviser to the oils and fats administration, wants a supply of flax on hand in order to trade with the United States.

The government have admitted that they do not think they will get this production. I would point out that the guaranteed price in the United States is $3.05 per bushel in their funds, which means approximately $3.35 in Canadian funds. There is quite a difference. If this production is essential we should have an enhanced price in order to get the desired production. In my part of Manitoba flax is not grown extensively. Many of those who endeavoured to grow it during the last two or three years do not intend to do so under the present rules and regulations and the prevailing price. If it is essential I hope the government will reconsider the price.

These are important matters. The hon. member who preceded me (Mr. Leader) said that he thought the producers in Canada should receive the same prices as are being paid in the United States. I have advocated on previous occasions that there should be no trade barriers between the united nations. There should be freer access to the markets of the united nations for goods which are essential to our war effort. The other evening it was announced that meat rationing would be abandoned for the time being, but I do not think this will prove a cure-all for the difficulties we are facing in the marketing of cattle. I have wondered why we do not have access to the United States market for our live stock, especially when we are fighting our battles side by side. It has been pointed out before that the margin is not great enough between feeder or stocker cattle and finished beef. Men cannot buy cattle and feed and make a profit with the spread that now exists.

There are also some minor difficulties in connection with hog marketing. I have suggested on previous occasions that because of the great increase in the production of live stock, especially hogs, we should have a live stock commission to look after marketing problems. I still hope the government will consider this matter. I repeat that I hope the government will be able to tell the producers of this country what they may expect as a floor price for the coarse grains they produce in 1944. Something will have to be done to encourage them to increase their flax acreage, and a few weeks hence will be too late for this information to be of any value.

Mr. GARDINER: So far as flax is concerned just a few days ago the Minister of Trade and Commerce made an announcement that the guaranteed price this year would be $2.75 per bushel. I do not know that there is any intention of changing that announcement. So far as oats and barley are concerned, the guaranteed return is the floor price—on oats it is 45 cents a bushel, and on barley 60 cents a bushel—and in addition there is a further guaranteed return of 10 cents a bushel on oats and 15 cents a bushel on barley.

Mr. ROSS (Souris): For 1944?

Mr. GARDINER: I am speaking of the period up to the end of July, 1944. The actual return is about six and one-half cents

higher than that on oats, or 51½ cents, and on barley it is 64¾ cents, or approximately five cents higher than the floor. Then in addition there is the 10 and 15 cents per bushel which is guaranteed no matter where the price is between the floor and the ceiling. Also in addition there is guaranteed to the farmer the actual return obtained from selling oats and barley in the United States and in Canada, if it is more than the 10 and 15 cents per bushel. The 10 and 15 cents a bushel is simply a guaranteed return, that is, we guarantee the floor price plus the 10 and 15 cents a bushel. No matter what the price is in Canada, or no matter what the price is in the United States, the government will see that that is paid, but if the price goes up to the ceiling in Canada, the producer gets the additional price. If the price of oats and barley sold in the United States is sufficiently high to make further profits, those profits are divided under participation certificates. I do not think there is any possibility of those prices being lowered for the crop being sown in the next two or three months.

Mr. DIEFENBAKER: There are several matters in connection with agriculture which I wish to bring to the attention of the minister. I should like to secure from him answers to several questions dealing with particular matters, as well as to some dealing with the situation in general.

With regard to the request of the hon. member for Souris that there should be an increase in the price of flax, apparently the view he expressed represents the views of the members of the legislature of Saskatchewan, for only a few days ago a resolution was introduced there requesting, among other things, that because of the hazards in flax production and the urgent need for oil, the federal government should give immediate consideration to the desirability of increasing present guaranteed prices for flax and other oil-bearing seeds. I find that there is general support for the request which has been made by the hon. member.

On the question of farm income, farmers generally throughout Canada have had their hopes considerably raised by the government's promise that it intends to bring into effect a floor for farm prices. But legislation setting out farm floor prices will be ineffectual unless the parliament of Canada secures the necessary powers to pass such legislation. The general feeling and demand throughout the west, and throughout Canada, is, I think, that the most effective method of maintaining an increasing farm production through the establishment of price levels would be by stabilizing the floor prices at levels sufficient to guarantee to all producers returns comparable with those of persons engaged in other industries. to use the words of the resolution introduced in the Saskatchewan legislature. I should like to hear something from the minister in regard to this matter. The promise of a floor base for farm prices will mean nothing after the war, after the terms of the War Measures Act cease to be operative, unless there is either an amendment to the constitution as it now stands or enabling legislation passed by the provinces. I brought this matter up on one occasion previously, and the minister in the course of his reply merely touched the subject without going into it in any detail. All of us believe in the necessity of establishing farm floor prices, but a promise not made effective by legislation will remain but a promise, without being implemented.

Mr. BLACKMORE: Does my hon. friend see any constitutional difficulty in the way of the government establishing floor prices by means of subsidies?

Mr. DIEFENBAKER: At the moment I was not dealing with that particular phase, but it does raise an interesting question. What I was going to point out was that if the government in setting floor prices does not secure the support and cooperation of the provinces, then its legislation, while it will offer a promise of assistance to agriculture, will be ineffectual.

Mr. GARDINER: That will depend on the nature of the legislation.

Mr. DIEFENBAKER: I am not going to ask the minister to deal with the legislation itself but would ask that he answer one question. Has the government secured the legal opinion of the Department of Justice to the effect that this parliament has the power to bring into effect such a system of basic farm prices effective after the conclusion of the war? If the minister gives that assurance, if he tells the house and the country that the Department of Justice answers that question in the affirmative, then a promise that is so looked forward to by the farmers of Canada may very well be carried into effect. But if that assurance is not given, this promise may be mere window-dressing. In answering, the minister does not have to disclose what the scheme will be or the nature of the legislation to be introduced. All I ask him to do is to bring hope to the Canadian farmer that the legal right, power

and jurisdiction rest in this parliament to implement a promise which holds out so much hope to the farmers of Canada as a whole.

I pass to another phase, and that is in connection with the plans for the future development of agriculture. I think Canada was greatly honoured in the appointment of the Minister of Agriculture as a member of the united nations food board. I think he has a great contribution to make there. This board met some months ago and made plans for the future, for the interconnection of north American food problems, for Canada's contribution in the production fields. According to the news item I have before me, the importance of Canadian food supplies made it "appropriate and desirable" that Canada be represented directly as a member of the board. This board was set up originally in June, 1942, to coordinate the prosecution of the war effort by obtaining a planned and expeditious utilization of the food resources of the united nations. I think the country has the right to ask for a report from the minister as to the stand Canada is taking on this food board, as to the plans that are being made for the correlation of food production in the United States and Canada. Canada contributed a billion dollars last year to mutual aid. How much of that billion dollars represented agricultural products? To what extent was the future market for Canadian farm products established by the fact that there was delivered under this scheme a large proportion of Canada's food production?

In the United States the farmer has been encouraged in the disposal of agricultural products by the assurance that his surplus production otherwise not disposable will be absorbed by the system of lend-lease. According to the figures I have, in the two years of lend-lease between March, 1941, and February, 1943, the United States expended more than $9,500,000,000 in connection with the administration of that vast and important organization for victory, and of this amount foodstuffs and agricultural products accounted for $1,449,-064,000. That is to say, fifteen per cent of the total amount advanced for mutual aid went in the disposal of surplus agricultural products. I should like to secure a statement from the minister, and I think the country has a right to it, as to the policy of the government in the disposal of agricultural products under the system of mutual aid. What proportion of the amount disposed of by mutual aid consisted of agricultural products and the like?

I pass to another matter, which has already been mentioned by the hon. member for Souris. It is generally agreed now that a substantial surplus of beef will be on hand in Canada. Will the minister place before us something of the representations, if any, that have been made for the export of our surplus beef to the United States, for the removal of any embargo that there is to-day. What is being done in this direction? During the past few days I have had a number of letters from farmers, pointing out that it is difficult for them to market heavy beef at the present time, there being no market in Canada. Surely, when the United States and Canada can co-operate in a great united nations food production board, it should be possible so to correlate production between the two countries that any difficulties in the marketing of our beef might be removed at this time. I would ask the minister to enlighten the committee in this regard.

The hon. member for Portage la Prairie (Mr. Leader) mentioned the wheat acreage reduction policy and its discontinuance in the present year. I do not know what the situation is in Manitoba, but I have received a considerable amount of correspondence from Saskatchewan in regard to this matter, pointing out that, in view of the great need for coarse grains for live stock production and the furtherance of that programme, the wheat acreage reduction policy should be continued during the present year. The minister has already stated that it will not be, and I would appreciate it if he would tell the committee why this policy was so abruptly discontinued after many farmers had done their summer-fallow operations in 1943, believing that it would be in effect in 1944.

Furthermore, and this is something peculiar to my own constituency, under the Prairie Farm Assistance Act there is an area which the minister knows of near Bethune in which over a period of years the farmers have had little or no crop, and yet under the law as it now stands they are unable to get any assistance through that act. I realize that legislation cannot be brought down to cover every possible contingency and to meet individual cases; and while I am very much opposed to orders in council and to order-in-council government, there are occasions when orders in council may be utilized to protect the rights of individuals. There are a number of farmers in that area who for several years, while contributing year by year, are in a position where they are denied that payment, separated as they are by a valley from the township in which the prairie farm assistance allowance is paid. I would ask the minister to look into

the situation to the end that these farmers be given consideration in the payment of this allowance.

There is one other matter that was dealt with by the hon. member for Souris. Some months ago Mr. John Bracken came out in favour of the establishment of a board of live stock commissioners. To-day that is a matter of universal demand without regard to party considerations. We have asked for it in the interests of the live stock producers; my hon. friends in the C.C.F. have asked for it, and in the legislature of Saskatchewan a resolution has been introduced requesting the establishment of such a body with producer representation. That resolution was introduced by two Liberal members in the legislature. Would the minister be prepared to advise the committee as to what attitude the government is taking with respect to the establishment of such a board and whether the matter is now under consideration.

I shall now refer to the matter of releasing wire for hog and poultry fencing. I would point out that the farmers are asked to produce hogs and poultry, and yet no arrangements are made to secure for them a release of the necessary allotment of wire for the purpose. There was for a time an order in effect freezing nails and wire. That order remained in effect while threshing operations were taking place in the west last fall. The farmers could not get the necessary nails to build granaries at the time they required them. Later on, by the time a good portion of the threshing had been completed in many parts of the province, the order was lifted and a general supply of nails was made available. I trust there will not be a repetition of that situation this year, which was most serious in parts of Saskatchewan. The farmers were able to get the necessary lumber, but could not get nails and they found themselves in the position of having to dump the wheat on the ground. The fact that such a condition exists shows that there is not the necessary cooperation between some of these war boards and the Department of Agriculture. There is need even to-day for an increase in the supply of wire, and I would ask the minister to bring to the attention of the board which is in charge in that regard the needs of the farmers and to request from that board a release of further amounts for the purpose.

These are a few of the matters on which I think the committee and the country deserve enlightenment from the minister. They are brought forward, not in a spirit of partisanship but from a desire to direct to the attention of the minister such conditions as, in my opinion, deserve to be brought to his notice. They should receive serious consideration immediately.

[Mr. Diefenbaker.]

Mr. GARDINER: As regards floor prices, all I can say at the moment is that the government has on a number of occasions announced its intention of establishing a system whereby floors will be possible under farm commodities after the war as well as during its progress. It has been made through a plan which at present we are operating under the War Measures Act, and that act goes out of existence six months after the war is over, in which event anything done under the act will cease to be done.

The matter of preparing legislation to be brought down this session has been referred to officials of the department and is being considered with the Department of Justice. I am not aware that there is any difficulty whatsoever in setting up a plan under which that policy can be carried out, a plan which will be within the rights and powers of the parliament of Canada.

Mr. DIEFENBAKER: Has such an opinion been secured from the Department of Justice?

Mr. GARDINER: With the assistance of the Department of Justice officials of the Department of Agriculture are proceeding to draft legislation in which it is contemplated we shall do first something which we have done before with the consent and advice of the Department of Justice. That was done even before the war started. I do not think there will be any more difficulty in doing it after the war is over than there was before the war started. That is all I wish to say at the moment, because the matter will be discussed more fully when the legislation comes down. But my opinion is there is no doubt that we can provide legislation which will make it possible for us to establish returns to farmers on a floor basis.

Mr. BLACKMORE: Does the government scheme for putting floors under agricultural products involve the putting of ceilings on costs entering into the production?

Mr. GARDINER: I would judge that whoever happens to be minister of agriculture at any time when the legislation is being put into effect will take into consideration the question of costs at the time that any floors are being arranged; but I am not in a position at the moment to say how that matter will be dealt with in each individual case.

Mr. DIEFENBAKER: Will the minister permit one further question? What legislation had he in mind as having been in existence before the war?

Mr. GARDINER: I am not speaking so much of legislation as of things that we have done.

Mr. DIEFENBAKER: What did the minister have in mind?

Mr. GARDINER: There was nothing illegal in our going and buying cattle in the western part of Canada during the drought period. There was nothing illegal in our buying one million pounds of butter and giving it away in 1938. There was nothing illegal in a number of things that have been done, and the principle can be applied. It is not a question of there being any legal difficulty; it is a question of whether or not the House of Commons and the people generally will agree with the policy which is proposed under which it is to be done. I repeat I do not think anyone need to fear that it is not possible to carry out the policy which has been announced, and which, I believe, can be carried out. I am quite sure that Mr. Bracken assured himself of that before he adopted the same policy that we announced previously.

Mr. GRAYDON: The minister had better not be humorous about this.

Mr. GARDINER: So far as beef is concerned, the suggestion is made that the committee ought to know something about the relationship of Canada's position to that of the United States. Hon. members of the committee know that prior to the war we had a trade agreement with the United States. That trade agreement still exists. It provided for our sending to the United States 193,000 head of beef cattle, weighing seven hundred pounds or more, in any particular year, provided we could deliver that number with quotas divided up into four covering three-month periods throughout the year. Let me repeat, that provision is still in the agreement which we have with the United States, and that agreement has been extended from time to time. But in 1942 we found it impossible to feed our own people on the beef which was coming to market. Because of the limitations which were placed on the consumption of pork we found it impossible to feed our own people and at the same time supply the United States market with the quota which might have been supplied under the agreement. I should like to call this to the attention of the hon. member for Portage la Prairie who is not in his seat at the moment. The policy that he speaks so much in support of is the policy which is largely responsible for what had to be done. It is becoming a habit in the house and outside for people to criticize things that the government has done and then follow this up with the statement: "I am a very strong supporter of price control". One cannot be a very strong supporter of price control as we have it in the Dominion of Canada and at the same time say that our price levels must be the same as they are in the United States. The price controls in the two countries are not the same. The situations governing the necessity for price control are not the same and therefore, of course, differences must exist.

That was true with regard to beef cattle. We had a price ceiling. We had a wage ceiling. There is a relationship between the wage ceiling and the price ceiling. If you permitted cattle to be sold in the United States on the United States price level of that particular time, then only one thing could happen. Not only would you not have any beef for sending to Great Britain, but you would not have enough beef to eat in the Dominion of Canada if you maintained your price ceiling. Therefore, one of two things had to be done. Either the policy which everyone seemed to be in support of had to be abandoned, or there had to be some Canadian attempt to control the marketing of beef. Accordingly it was determined that cattle would be kept on this side of the line as long as they were required here, and that if there were any surplus to be sent out of Canada, that surplus should be sent to Great Britain. That decision was not reached as a result of a discussion which took place on this side of the line only. It was a decision which resulted from discussions between the government of Canada and representatives of the government of the United States. It was thought inadvisable, for example, that the United States should import cattle from Canada and then lease-lend an equal poundage of beef to Great Britain.

When that statement is made some people say, "What about the arrangement that was made with Mexico?" Well, making an arrangement with Mexico is a little different from making an arrangement with Canada. Mexico is not a part of the British empire, and up to the present Mexico has an entirely different relationship to the war from that of either the United States or Canada. Therefore the United States people might accept an arrangement which is entered into as between Mexico and their own people and at the same time have reason to object to cattle coming from what is a part of the British empire into the United States and they in turn giving it to the British. The natural thing for those who are producing cattle in the United States to say is: if anyone is going to give or provide, under mutual aid to Great Britain, beef which is

purchased in Canada, then it ought to be the Canadian government and not the United States government that does it. Therefore the position is this. There is a complete understanding between the United States and Canada. There is no possibility of any misunderstanding regarding any relation to the trade agreement which was made before the war, as a result of what has happened up to date. The United States people understand the reason for it. They are in agreement with what is being done. I am not so sure that they might not suggest that it ought to be done if the Canadian government had not considered their position in the matter when the policy was announced.

That brings me down to the time when we found that there was a surplus of certain kinds of beef in Canada. I would remind the committee that since the house was in session last year an arrangement was made, and it was announced in the house. Under the arrangement the meat board of the Department of Agriculture can purchase beef. That arrangement was to the effect that when beef—not cattle—which was being sold on this market reached the floor or came within one-eighth of a cent of the floor, the meat board of the Department of Agriculture could purchase that beef and put it down for freezing in order to send it to Great Britain.

We have been operating under that understanding, I think since May of last year, and there was no necessity to purchase any beef under that arrangement until quite recently. A small amount was purchased before Christmas, I believe, and some has been purchased since that time; but in regard to creating a proper attitude in Great Britain toward the beef which is shipped from Canada the regrettable feature is that none of the higher grades of beef has been materially below the ceiling, in the form of either beef on the market or of cattle being marketed. The only beef that has been down to and below the floor is cow meat, and anyone who is familiar with the meaning of that term knows it is not the kind of meat we want to send to Great Britain in any volume. However, we have purchased some quantities of cow meat and meat from the lower grades of other animals and sent it to Great Britain, but we have not been able to purchase any of the higher grades under the plan which has been in existence.

Under that plan, in spite of all the discussion that has gone on in Canada in regard to people going out of the production of meat, the quantities coming onto the market have been increasing constantly; and it is not the lower grade hogs that have been coming on the market in greater numbers. As a matter of fact, the high grade hogs that are coming on the market have kept well up to the average for any period one might wish to take in connection with our marketing. I think we are still getting upward of 100,000 hogs a week more than we got at the same time last year, and a reasonable proportion of those hogs are of the grades which produce bacon which is sent to Britain. As a result we have considerable stores of bacon. At the same time we have more of the lower grades of beef coming on the market than we can absorb, and we have producers who are concerned as to whether they should place higher grades of cattle on the market, in the fear that they might be called upon to take a lower price than they had anticipated. I do not think it can be shown that any considerable number of persons have had to take lower prices for beef this year than they took in the same period a year ago. There is the occasional individual, of course, who sold high on the market last year and low on the market this year, who can send in a statement showing that he did not get as much this year as he got last year; but the latest averages I have seen indicate that prices across Canada for cattle have been higher this year than a year ago. We know, however, from the figures in regard to storage and marketing that there is, and has been for some time, the danger that so many high-grade cattle will come on the market in the spring of this year as to cause loss to those who have produced them, through the prices for cattle and beef going down to the floor, or through our storages being filled to the point where it is impossible for the plants to handle and process that beef as it must be processed in order to be sent to Britain. So that the action of a few days ago was taken, and I do not wish to go into that in further detail at the moment.

I come back to the point raised a few moments ago by the hon. member for Lake Centre, the question of our relationship to the United States with respect to the particular matter of the marketing of cattle. One has only to read the accounts of what has taken place in the United States in order to understand the situation there. On all these matters we are in the closest possible communication with the countries concerned. As a matter of fact, we were in communication not only with the government of the United States but with the government of Great Britain as to what ought to be done or what could be done to best serve the purpose. To understand the situation in the United States it is necessary only to point to the fact that a few hours before we took our action on Tuesday evening of this week, the United States, knowing

what we were expecting to do, took action themselves which indicated that they are having just as much difficulty in processing the meat that is coming to their plants as we are having in processing the meat that is coming to the plants of this country. In addition, they are having difficulties similar to ours in providing for the movement of meat from this continent to the other side in the quantities which are available here at the moment.

I need only recite these facts in order to make it apparent that it would be foolish for the Canadian government to reverse its policy at the moment in relation to the issue of permits. Up to the present the United States government has done nothing about the matter. The contract is as it was before the war. The understandings have all been maintained right through the picture. The United States understands why we have done what we have done, and our actions have been taken after consultation with them. If, under those circumstances we were to reverse our policy and say that we were not going to require permits for the shipment of cattle into the United States, or that requiring permits we were going to issue them immediately and allow our cattle to be shipped to the United States, at a time when they are experiencing just as great difficulty in connection with processing as we are, I need hardly suggest to the committee how the Americans would be justified in looking upon an action of that kind. It is not our intention to give them any reason to feel that we do not understand the difficulties of their position, just as we understand our own difficulties.

However, we are attempting to work out at the earliest possible date a plan under which we can send high-quality beef to Great Britain. The present intention is to work out a plan somewhat the same as that under which we have been operating in connection with bacon and ham. With a contract of some kind which will assure that shipping will be available to take whatever quantities of meat we feel can be shipped or ought to be shipped to Great Britain under the circumstances, we shall be able to assist in feeding the British population from surpluses we have here. We believe that if we are going to follow a policy of that kind it ought to be applied to the higher, rather than to the lower grades of meat. We were spending a considerable amount of money prior to the war in an effort to convince the British people that we could put a high-class of beef products on the British market. We were selecting some hundreds of cattle from time to time, and shipping them over to Great Britain in the form of baby beef. We were spending money in order to do that, and in order to demonstrate that we in Canada could produce good beef. Even during a considerable period of time before the war started, we had been selling on the British market in competition with Scottish-fed beef, and competing at even better prices, sometimes, than the Scottish beef was bringing. But the smallness of the movement, and the fact that it was only an experiment rather than a commercial activity, led to the fact that we lost money in sending that beef over. But we were prepared to lose money in order to advertise the fact that good beef of that kind could be secured for any market which might exist in Great Britain.

Now that we have an opportunity during war time of doing two things at one time, namely, doing a patriotic act and supplying beef to Great Britain at a time when she needs it, I believe we should demonstrate to the British people that we can supply good meat, the very best of it; because, when the war is over, if we are producing as many cattle as we are producing to-day—and all of us hope we shall be—we shall be requiring sooner or later a market for about 300,000 head of cattle. If we are not able to find that market on this continent, there is possibly only one other place where we can find a market, and that is in Great Britain. Therefore I say that we should establish the fact that we can produce in Canada beef which will compare favourably with beef secured from elsewhere. That, I think, is a full enough explanation of the government's present position and policy in connection with the marketing of beef. I would repeat that those policies are being followed with the fullest possible understanding between the British and Americans, with regard to the whole position.

Some suggestion was made by the hon. member for Portage la Prairie, and I understood, disagreed with by the hon. member for Lake Centre, to the effect that we were not getting rid of wheat acreage reduction payments any too soon. As a matter of fact, I believe the suggestion made was that we should never have had them.

Mr. DIEFENBAKER: That was not my suggestion.

Mr. GARDINER: No, that was not the suggestion of the hon. member for Lake Centre; rather it was that of the hon. member for Portage la Prairie. I believe the hon. member for Lake Centre would disagree with that stand, judging from what was said by him.

The hon. member for Lake Centre called attention to the fact that resolutions are being passed, or that they had been passed by different organizations in western Canada pro-

testing against the announcement made by myself to the effect that we are going to discontinue in this year the payment of the wheat acreage reduction bonus. I am pleased that these resolutions are being passed, because in the past I have heard in the house very little but criticism of the fact that we were paying on account of the wheat acreage reduction. Therefore I am glad that those outside the house who have had an opportunity of benefiting, or otherwise, from these payments, are now passing resolutions to the effect that it might be a good thing if the reduction payments were maintained.

Hon. members will, however, recall that there cannot be any misunderstanding among members of this committee as to the intention of the government in the first instance with respect to wheat acreage reduction. The main attack made by the official opposition upon me, as the minister introducing the policy, was that I had brought it in by way of regulation, and not by a bill. I gave my reasons at the time for bringing it in by regulation, and not by bill. I pointed out that it was not intended to make this a permanent policy, that it was only a temporary arrangement and, in answer to a question at that time by the hon. member for York-Sunbury (Mr. Hanson) I stated definitely that my reason for bringing it down by way of regulation was that we did not intend to continue it, and that in all probability it would not continue for more than one year.

At the end of that year, when we found it necessary to continue the measure for another year at least, I yielded to the suggestions of hon. members that it be brought down in the form of legislation. The measure was submitted to the committee on agriculture, if I remember correctly, and was finally recommended to the house and put into effect. Again it was made quite apparent that this could not be a permanent policy.

We have come to the conclusion that this is the time to discontinue the wheat acreage reduction payments. Our reason for that is, I am sure, apparent to most farmers of western Canada. The contention was, at the time the policy was introduced, that we should not be making acreage payments, but that we should be increasing the price of wheat—just as was stated a few moments ago by the hon. member for Portage la Prairie. We said at that time what he has already said, namely, that there would be farmers in western Canada producing three or five bushels to the acre, and others producing thirty or forty bushels to the acre; and that if we were to attempt to assist farmers to carry over from one period to another, producing the crop which we wanted them to produce, rather than one for which, for the time being, we had no market, we ought to provide that payments be made on an acreage, rather than on a bushelage basis. More particularly was that so when we were asking them not to grow so much wheat, but rather to grow more oats, more barley, more feed crops and to produce more live stock. We felt we should not take that action by raising the price of the commodity we did not want, but rather should say that in lieu of that particular commodity we would prefer to make a certain payment on an acreage basis.

There has been only one condemnation I have ever heard, since the policy has been in effect, and since it has been found that 182,000 farmers took advantage of it. And now it should be recalled that there was never anything in the regulations which compelled anyone to take advantage of it. We simply said to the farmers, "Here is the condition: If you wish to grow wheat, you can grow it. The government will give you an advance. We will pay you an advance upon it if you deliver to the wheat board, and give you a participation certificate. Then, some day we will pay you the earnings from that wheat, if it is sold for a higher price. If you can get by for any term of years under a system of that kind, then go ahead and grow all the wheat you like." Some people did that. We said to others, "If you require to have cash coming in week after week and month after month from something you have to sell, there is only one way we can guarantee that, namely; if you feed live stock. If you feed live stock we can sell everything you produce and get you increasing returns from year to year." I repeat that 182,000 farmers who had been producing considerable acreages of wheat took advantage of the suggestion that if they would reduce their wheat acreage and put in something else or put their land to summer-fallow, the government would pay them certain rates per acre. The fact is that the government has paid over $80,000,000 since that policy was brought into effect. That is no sum to be laughed at by anyone anywhere, particularly by those who have been growing wheat in western Canada.

Mr. BLACK (Cumberland): Or by those in the maritime provinces.

Mr. GARDINER: Or by those in the maritime provinces. We did not forget Ontario and the maritimes. As a matter of fact, some of the highest payments made out of the treasury to farmers since the war started were paid to some of the farmers in the maritimes.

Mr. GRAYDON: There is no part of the country that needs it more.

Mr. GARDINER: I agree. As I say, the fact is that $80,000,000 was paid under the programme. I was surprised to hear the hon. member for Humboldt make the statement he did the other night about inspectors who had gone out under the acreage payment plan. A considerable part of what was paid out, not only under this plan but under the prairie farm assistance plan, was paid out in the area which he represents in this house. I have no doubt that any inspector who called upon him in order to ask his opinion did so in the same way as he called upon others. I am a little surprised to know that a man who has been the reeve of his municipality, a member of the provincial legislature and a farmer over a long period of time could not, while he was driving a combine himself, tell the inspector how much his land was going to yield per acre without driving around the field a few times with the combine. I am sure that if he expected an inspector to walk over, take a look at it and make an estimate without going more than three or four hundred yards from the road, he should have been able to tell the yield fairly closely when he had been growing grain on that field for a number of years.

Mr. BURTON: May I correct the minister and tell him that I never was reeve.

Mr. GARDINER: Perhaps I was giving the hon. member too much credit.

Mr. BURTON: I do not want more credit than is coming to me. But I still stand by what I said. When that man came there and made that sort of estimation I was not going to waste time talking to him. The minister knows well enough that there were plenty of inspectors running around who were useless.

Mr. GARDINER: What year was that?

Mr. BURTON: That was the year in which the minister required farmers to report to the elevators and take an affidavit as to the number of bushels they had threshed. I wanted to know why it was necessary to have inspectors running around before the farmers were in a position to do that.

Mr. GARDINER: Was that in 1941?

Mr. BURTON: 1938.

Mr. GARDINER: There was no such thing in existence at that time.

Mr. BURTON: It was the year they had to go to the elevators.

Mr. GARDINER: 1939, probably.

Mr. BURTON: I would not be definite as to the year. I know it was the only year the farmers were compelled to go to the elevators to make a declaration.

Mr. GARDINER: As was stated to the house at the time the regulations were brought in, the prairie farm assistance was to be paid on a township basis, on the estimated yield in the township rather than on any individual farm. The reasons for that have been given many times. Inspections were made while crops were growing and again when the crops were being threshed. Certain announcements were made as to what townships would come under the regulations, and other townships claimed that their land had not been properly inspected. These complaints came in through the municipal councils and the government undertook to make a check of a certain number of townships well scattered over the area in order to determine how close our inspections were to the actual threshings. We found that they were uncannily close to the actual threshings.

There are members of this house who covered their districts to make absolutely certain that those checks were properly made. They did not sit beside their fields and refuse to give information to the inspectors who came around; they helped the inspectors in every way possible and saw to it that the checks were properly made.

Mr. BURTON: I should like to ask the minister in what way—

The CHAIRMAN: The rule is that when an hon. member is speaking he must agree to another hon. member asking a question.

Mr. GARDINER: It is all right.

Mr. BURTON: I took it for granted that with the minister's usual good nature I would be given that privilege. Now that I have that privilege, I would ask the minister in what way he would expect any farmer with a crop as variable as that crop was to give an estimate of what it would be before he had an opportunity really to see what it was like. I contend that at that time no inspector or no farmer could make a reasonable estimate, and I still say that those inspectors were a waste of money.

Mr. GARDINER: I have before me what was said the other evening, but I am not going to read it. I do not think there is any doubt that the criticism the other evening was for the purpose of demonstrating to the committee that we had men checking these crops who did not know their business.

Mr. BURTON: I still stand by that statement.

Mr. GARDINER: The hon. member says that he still stands by that statement. The hon. member has been a farmer for a considerable period of time and has held some fairly

important positions, even though he has not been reeve of the municipality. Does he want the farmer members of this house to believe that he could not estimate that crop before he started to cut it? Does he want them to believe that he could not estimate, within two or three bushels of the actual yield, a crop which he had grown on his own farm for a considerable number of years? I can only say that if he could not do that, then he is a much poorer farmer than I thought he was.

As a matter of fact, he knows and I know that he was in a position to give the inspector information which he could have taken back and which would have assisted in checking that particular municipality or township. At that time there was considerable criticism of the idea of paying prairie farm assistance. People were going around western Canada saying, "It does not matter whether you are below twelve bushels to the acre, you will never be paid." That was heard in every constituency in western Canada at that time. Later on, when they were paid, some of them were the most surprised people in the district, because people who had been looked upon as reliable had said that they never would be paid.

While we were trying to establish the fact that these inspectors had done a good job, we set up an appeal board—there had not been an appeal board previously—and we said to districts which believed they had not been properly treated: "You can make an appeal, and if you do so, we will check with the elevator returns." First, we went out and took a declared statement from each farmer as to how much he threshed and how much he marketed off his crop. Then we checked his statement with the elevators and anyone else we could check it with, and again I repeat, there were not very many townships in the whole of western Canada that were changed as a result of that check from where they had been when these men reported who, my hon. friend says, cannot check a crop and do not know how to check a crop, and who checked it at the time the crop was growing.

I only recite that to emphasize that when we keep on saying a thing often enough we are apt to believe it ourselves, and my hon. friend has been making that statement for a number of years in a house where I do not have the right to reply to him, but I have read in the newspapers what he has been saying. But now he is here and I have an opportuntiy to reply to him in this house, instead of reading at second hand what he said in some other house. I can only repeat that the inspections were properly made.

Then my hon. friend referred to dug-outs. My hon. friend over here who farms near Pembroke knows more about farming in western Canada apparently than the hon. gentleman who lives out there. The other night the hon. gentleman gave the committee the impression that all these inspectors had to do was to go and look over a certain site and say: "Dig a dug-out there." He also said that they could look at seven in one evening or afternoon, pick the dug-outs, and that was all there was to it.

As a matter of fact, when we took over the prairie farm rehabilitation we took in upwards of 5,000 applications, if I remember correctly, for dug-outs and small dams, and again, if I remember correctly, we have about 15,000 applications now which have not yet been acted upon. What happens under conditions of that kind is this. Many of these outfits are owned by municipalities, and some are owned by individuals, working in different communities. The men who make the inspections and the men who do the testing with regard to these dug-outs must keep that equipment operating. As my hon. friend the member for Souris, who was, I think, the reeve of a municipality, knows, these outfits will dig a dug-out every twenty-four hours. They operated twenty-four hours a day. They dug a dug-out here to-day, and the next morning they were over somewhere else ready to dig another one Of course, there were times when the men who were passing upon whether the dug-out should be dug or not dug had to pass upon one in one community and go over to some other community to keep the outfit going there. They could not waste time by going around and looking at seven in the one community because sometimes to keep the outfits going they had to reach some other community. To have done otherwise would have tied up the equipment doing a $150 job. The inspector, who is costing us a few dollars a day, has to look ahead and keep the operations going and have them passed upon. Of course, anyone who does not know that or does not understand it can make general statements in the house with regard to the construction of these dug-outs and make them sound very bad.

Again, the inspector who comes along and looks over a dug-out in the district, before he passes upon it, must in many instances have information that my hon. friend did not mention at all, but an hon. member for an Ontario constituency mentioned it. The first thing that has to be done is to have lines run to see how much run-off there would be to fill up any dug-out or any dam that might be built. The next thing that has to be done is to put down test-holes to find out whether

there is a clay subsoil or a gravel subsoil, to determine whether it would be necessary to cement the dug-out to hold water, or whether it would not be necessary to do so. After all that work is done, the location is staked by engineers, just as staking is done on any other construction job. When all that is done, the inspector makes a report that certain findings have been made and that "you can proceed with this particular dug-out" but "you cannot proceed with some other dug-out."

Mr. BURTON: I quite agree with what the minister says as to inspections and testing of dug-outs. That is the course followed. But where I wish to correct him is this. I know of dug-out locations, quite a number of them, where these very same precautionary measures which he says should be taken by the inspectors were not taken. There was just a casual glance over the lay of the land.

Mr. GARDINER: Again I think that hon. members from eastern Canada would understand why that would be the case. There are certain areas in western Canada—I do not know my hon. friend's constituency well enough to pick out the areas there, but I do know that there are areas in my own constituency—

Mr. BURTON: The minister spent a little time in my constituency.

Mr. GARDINER: And I shall probably spend more there. There are areas in my constituency and south of Regina, where everyone knows the land over the whole district will hold water; there are no runs of gravel in it, and what has to be found out is the water runs on the surface of the area. By looking at these particular locations one can determine what the results will be. I think I know my hon. friend's constituency well enough to know that by far the greater part of it is not that kind of territory. There is much of it where all the engineering work I have spoken of must be done and where an inspector would be merely wasting time by going around and checking seven or eight of these dug-outs before that preliminary work had been done by the engineers.

Mr. BURTON: Would he lose more time by doing it on seven different days?

Mr. GARDINER: It would depend when the work was completed on the whole seven, and upon whether there was an outfit waiting somewhere that he had to keep operating, in which event he would come back there and pass upon it later.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. GERSHAW: I should like to bring to the attention of the minister a few matters regarding southeastern Alberta. That great district has suffered more severely perhaps than any other agricultural district in the last few years. It is true that away back in 1915 and 1916, later in 1928 and again in 1938 and 1942, there were reasonably good crops in the district, but good years come so seldom that they cannot be relied upon. Consequently people who have settled in that district have fallen upon very hard circumstances and have had a difficult struggle. When we know that the average precipitation in that district is around twelve inches a year, and last year as low as nine, whereas in the east the precipitation ranges from twenty-five to forty inches, we can realize what a hard time they have out there to make the land produce enough to provide even the barest necessities of life for the people who live in that locality.

In those dry districts wheat is the grain crop most likely to grow, and therefore seventy-nine per cent of the grain produced there is wheat. Also, as regards ranching and stock raising, the cattle rancher can do a little better than any other producer of live stock. During the years of depression restricted markets brought ruinously low prices. The drought was quite severe, so that even grass and trees could not grow; the soil drifted, and many of the other hazards of farming were so great that it was almost impossible for the people to keep off relief. Consequently many of them had to seek relief during those years.

I wish to appeal to the government at this time to be lenient in the collecting of the seed grain liens which were put on during those years of depression, because, while the principal has not changed, the interest has mounted until it is often more than the principal, and it is very difficult for these people to face that debt at the present time.

In fact, the district has been called the Canadian desert, for away back in 1874 Colonel Walker, going through the district, said that during his whole life he had never seen a pasture field so lacking in feed as were the prairies at that time. But that district need not be a desert. On an experimental farm which this government started, 2,400 tons of hay were produced off an area which otherwise would not have provided fodder for one animal. This shows that the district can be improved, and the government has done a good deal to improve it by establishing community pastures, stock-watering reservoirs and dug-outs; and by planting trees, by regrassing

and by improving methods of farming. There is still much that needs to be done, however, because cattle and wheat are not the products that the market requires especially, nor are they the products which the health of the people of Canada demand. What is required is more in the line of dairy products, fruits and vegetables and commodities of that kind, and these people are entitled to have comfortable homes where they will have shelter belts, gardens, small fruit trees, flowers and so on, as well as water for poultry and live stock which they could keep around their homes.

So that in addition to the work done by the Prairie Farm Rehabilitation Act, it is essential, if that great desert is to be reclaimed, that the larger irrigation projects be kept in mind. The department has published a little pamphlet, and I observe that the large irrigation scheme at St. Mary and Milk rivers is being considered. That scheme looks to the reclaiming of 345,000 acres at a cost of $45 an acre. In north Saskatchewan the William Pierce scheme looks to the reclaiming of 1,400,000 acres at a cost of $74.89. There is one other scheme, however, and I cannot see why it should not be mentioned, because $13,000,000 of private capital has already been spent on it. That particular scheme contemplates the reclaiming of 200,000 acres on which government engineers are now employed, and which can be irrigated for about $20 an acre. I hope that the fact that it is not mentioned in the pamphlet does not mean that the government have given up the consideration of that scheme. May I ask the minister whether it does mean that this particular scheme has been considered unfavourably, because in this pamphlet the statement is made that the larger projects at St. Mary and Milk rivers and in north Saskatchewan are the ones being considered.

In view of the great possibilities for good which these large schemes represent, I suggest that, as soon as the war is over and labour and material are available, as a reconstruction project nothing would give more permanent results and bring greater blessings to the people than the reclamation of those desert areas.

Mr. GARDINER: I am sorry I missed the point of the question toward the end. To what scheme was the hon. gentleman referring?

Mr. GERSHAW: The Redcliff Ronelane in southern Alberta.

Mr. GARDINER: My understanding of that is that the plan was under consideration, under prairie farm rehabilitation, when the war started. The other two larger schemes were not under consideration at that time as a development under farm rehabilitation. They have been investigated by our engineers, and some investigational work has been carried on in cooperation between the Department of National Resources and the Alberta government. But it is the two larger ones that we are suggesting may come back for reconsideration under prairie farm rehabilitation after the war. The particular scheme to which reference has been made has been under consideration throughout the period and still is.

I would point out that discussions on this matter can better come under item 29, which has to do with prairie farm rehabilitation and water storage. I would rather we left the discussion until that time.

Mr. WEIR: Referring back to the minister's remarks with reference to the meat situation in this country and in the United States, I believe we can take from what he said that among the chief difficulties is the question of storage and transportation. Can he say anything with respect to the storage situation in Great Britain and the possibilities of attempting to get a larger quantity of these meat products delivered to the other side to relieve the situation in this country?

Mr. GARDINER: The matter of storage has always been under consideration on both sides of the ocean, and I think it will be agreed that our position is at least as favourable on this side as it can be in Britain under the circumstances. The fact is that when we get the meat over there it is nearer to the point where it is to be consumed, and we would rather have it there to the extent that it can be stored. I mean that when the meat is over there they can handle very much more than we can in a given time if unlimited supplies are available. The question as to how much is there or what the space is, is something we probably would not get any information about.

Mr. WEIR: I think that is an important statement for the minister to have made and I am very glad he made it.

Mr. GRAYDON: I think only under this general item may I raise the point that I desire to make as an inquiry of the minister. This matter came up in a rather casual way in one of the other debates in the house during this session, but since it directly affects the minister and his department I wish to ask whether it is the intention of the government to appoint a parliamentary assistant to the Minister of Agriculture? I raise that question for one particular reason.

Mr. MACKENZIE (Vancouver Centre): The inquiring mind.

Mr. GRAYDON: I can understand that the minister who has now interrupted would not need a parliamentary assistant.

Mr. MACKENZIE (Vancouver Centre): Yes, he does.

Mr. GRAYDON: If he does then he is worse than I thought he was. In any event, however, I wish to ask the Minister of Agriculture if the government has given consideration to the whole question of a balance between eastern and western agriculture through the medium of the appointment of a parliamentary assistant to the Minister of Agriculture? I think the minister will be the first one to recognize that there are two main divisions, if one may say so, in connection with the agricultural affairs of the dominion. I believe there has been a feeling existing in agricultural circles that a proper balance between the east and the west could be obtained. The minister coming from western Canada, although originally an easterner, would, I fancy, find that the appointment of a parliamentary assistant, if he were an easterner closely identified with the interests of eastern agriculture, would be a popular move. I think that appointment would receive general approval throughout the country.

As I said before in a previous debate, if the principle of parliamentary assistants is a good one; if experience shows that it works out well, and if there is any argument in favour of parliamentary assistants, then that argument should apply more forcibly to the Department of Agriculture than perhaps to any other department of government. For the reasons I have mentioned and not only because it is a heavy department, but because of the balance that must necessarily exist between the east and the west, I raise the point to seek information as to whether the minister has in mind the appointment of some one of the very worthy members of the House of Commons to represent eastern agricultural constituencies at this time.

Mr. GARDINER: I have no intention of exceeding my prerogative in discussing the question as to whether there should or should not be a parliamentary assistant to the Minister of Agriculture. That, of course, is the right of choice of the Prime Minister who invites people into the government or people to take positions in support of those who are in the government.

In answer to the latter part of the statement, I should like to point out that there is a difference as between the Department of Agriculture and some other departments to which parliamentary assistants have been appointed. This difference has not been made apparent in the remarks of the leader of the opposition. One of the differences is that the Department of Agriculture is only one of ten departments of agriculture in Canada. There is a department of agriculture in each of the Canadian provinces. Of course there is not a minister of defence in each Canadian province; there is not a minister of munitions and supply in each province. There is, of course, a provincial treasurer in each province, but not with the same responsibilities as we place on a minister of finance here. That might be one reason why the situation might be quite different in some of the departments that have been mentioned from what it is in the Department of Agriculture. The activities of agriculture are fairly well divided as between provincial responsibility and federal responsibility. We have the cooperation of all ministers of agriculture across Canada to carry out the activities in relation to agriculture. But I have no argument to put forth on one side or the other of the question as to why there should or should not be a parliamentary assistant.

Mr. BRYCE: I should like to get some information from the Minister of Agriculture. I have been shipping live stock to the public markets and packing plants for the last twenty-four years. In every statement that I receive there is a deduction of half of one per cent for animal insurance. Can the minister give me some information as to on what authority the packing company deducts that money from my statement?

Mr. GARDINER: The arrangement which has just been referred to by the hon. member for Selkirk is one resulting from an agreement which was entered into by producers and packing plants many years ago. It is not an arrangement—

Mr. BRYCE: Excuse me; what year?

Mr. GARDINER: I have forgotten the year, but it is away back, I think, in 1907. It has been in existence for a long time. It had to do with the fact that animals that were delivered on the market were affected with tuberculosis or some other disease which required their slaughter for uses other than for human consumption. Instead of the person who shipped the one diseased animal taking the whole loss, it was agreed between producers and those who purchased the animal that a deduction would be made from all animals coming in, and then that fund would be utilized for the purposes of paying for any losses that an individual might have to bear. In other words, it is an insurance fund. It is not compulsory. Anyone delivering live stock on the market to-day can say that he does not wish to share in the insurance fund, and

therefore he does not wish to have the half of one per cent taken off the amount which is due him. If he does so, then any time he ships in cattle or hogs that are diseased, he will have to take any losses which are involved in connection with that shipment. They would not come under the insurance plan.

That fund has been examined from time to time, and it has always been found that the first intention of it is carried into effect in the activities of those who are handling it. The examinations have been made by themselves, not necessarily by the government. We have checked as to what has been found through those examinations, but as far as I understand it we have no authority whatsoever in the matter.

Mr. DOUGLAS (Weyburn): Can the minister explain who keeps the fund?

Mr. BRYCE: Has it ever been reviewed since 1907 when that general agreement was made between the packers and some other gentlemen or producers in the farming business?

Mr. GARDINER: I did not get the first part of the question.

Mr. BRYCE: Has the agreement been reviewed since 1907?

Mr. GARDINER: It has been up for discussion. I have heard of the discussions many times since I became minister. It is up for discussion, I think, at most of the live stock meetings that are held across Canada. The unfortunate fact is that most of them pass resolutions which have very little relationship to the origin of the scheme. They seem to think that there is some responsibility on the government and that the government should do something about it. Of course, the fund was set up as a result of an arrangement between the producers' organizations and the packers' association. As I said a moment ago, no individual needs to be a party to it at all. He can ship his cattle without that fund being made responsible for taking care of any losses; therefore I think it is a matter entirely between those organizations that set it up in the first place.

Mr. DOUGLAS (Weyburn): Would the minister explain in whose name the fund is in Saskatchewan, whether or not it is audited, and whether any financial statement is presented to any body?

Mr. GARDINER: I am not certain of that; I doubt it, but again I say it is the responsibility of those who entered into the agreement. If they insisted on an audit being made and a report being sent to them I see no reason why it should not be done.

Mr. DOUGLAS (Weyburn): Most farmers are under the impression that it is compulsory.

Mr. GARDINER: My information is that it is not, as a matter of fact.

Mr. BRYCE: I should like to draw the minister's attention to some figures I have, to show the injustice that is being done to farmers to-day through this condemnation insurance. This is the first time I ever heard that it was not compulsory; every statement I have received in twenty-four years has had that condemnation insurance taken off at the stockyard or the packing plant. In 1940, animals slaughtered in Manitoba numbered 1,114,900, of which 4,296 were condemned, but the insurance collected on these animals was sufficient to pay for 5,574. In Saskatchewan in the same year, 285,637 animals were slaughtered and 708 condemned, but the condemnation insurance collected was enough to pay for 1,428. In Alberta in the same year, 1,053,432 animals were slaughtered and 2,639 were condemned, but the condemnation insurance assessed against the farmers was sufficient to pay for 5,267 animals. We have the same story in 1941, 1942 and 1943. Last year in Manitoba, 1,254,014 animals were slaughtered and 2,499 were condemned, but the condemnation insurance collected was sufficient to pay for 6,270. In Saskatchewan we had 685,696 animals slaughtered and 1,442 condemned, but the insurance collected was sufficient to pay for 3,428. In Alberta in the same year, 1943, we had 1,710,558 animals slaughtered and 3,021 condemned, but the condemnation insurance collected would pay for 8,553 animals. The minister told us this evening that this scheme was started in 1906 or 1907, which is thirty-eight years ago. I have checked these figures from his department, and I find that in the beginning it took about one-half of one per cent to carry the scheme. To-day it takes less than one-quarter of one per cent to carry it; yet we are still paying one-half of one per cent.

I have the figures here in regard to hogs that have been slaughtered and the number condemned for the whole of Canada, as follows:

Year	Killed	Condemned carcasses	Con. ins. collected for	Percentage of one per cent
1940	3,961,882	8,782	19,809	·22
1941	5,884,677	13,497	29,423	·23
1942	6,339,311	13,695	31,696	·22
1943	6,140,614	12,022	30,703	·19

This is a serious state of affairs. The value of the live stock sold in the stockyards across Canada in 1943, shipped to public markets and abattoirs, was approximately $323,000,000. The farmers paid condemnation insurance amounting to one-half of one per cent on that amount, which would be about $1,615,000 The figures issued by the government would indicate that only about three-eighths of one per cent of the live stock were condemned; thus under the present set-up the farmers have been compelled to pay to the packing industry approximately $500,000, in 1943 alone, more than the condemned animals were worth. Now that I have brought this matter to the attention of the minister I hope he will look into it.

I should like to ask one further question. Did I understand the minister to say that the quota to the United States was 293,000? I understood that it was 193,000.

Mr. GARDINER: That is correct; it is 193,000.

Mr. BRYCE: Can the minister tell me where the meat board was when the packing industry was buying sheep on the Winnipeg market for seventy cents each?

Mr. GARDINER: In the first place I have no record that anyone bought a sheep for seventy cents. Perhaps some did, but the meat board had nothing to do with it; they had no authority to buy sheep at that time.

Mr. BRYCE: Why did the meat board not have authority?

Mr. GARDINER: I do not think there was a meat board at that time. There was a bacon board.

Mr. BRYCE: There was a meat board.

Mr. GARDINER: In what year?

Mr. BRYCE: Last fall; 1943.

Mr. GARDINER: I do not know when sheep were sold for seventy cents.

Mr. BRYCE: I can give the minister the evidence.

Mr. GARDINER: What kind of sheep; how old?

Mr. BRYCE: The age of the sheep does not matter. The wool on the back of a sheep is worth at least twenty cents a pound, and we are paying three and four dollars a hundredweight for meat meal and things of that kind.

Mr. GARDINER: Just by way of illustration, about a month ago I sold two cows of about the same weight. I received $99.97 for one from which I had obtained fifteen or sixteen calves; for the other, sent the same day and on the same train, I received $47, and I think I got as much as either one was worth because I know all the facts in regard to them. If the hon. member will tell me all the facts about the sheep probably I shall be able to answer him.

The CHAIRMAN: I believe this part of the argument of the hon. member should have come under item 17. I do not wish to curtail discussion, but for three sittings we have had a general discussion and I believe we should come to the items. Hon. members may make general statements now, but they should not refer to specific matters. When it comes to a discussion of the different items, hon. members should wait until the items are called. I believe that is the wish of the committee.

Mr. BRYCE: I accept your ruling, Mr. Chairman; but could I have an answer from the minister as to whether or not he will look into this condemnation insurance?

Mr. GARDINER: In the first place it is questionable whether the figures produced are of real value. That is, I am not at all sure whether the figures given the committee cover just the animals which were condemned and sent for tankage, or whether it also covers animals only parts of which were sent for tankage. When I say that, I mean one can have an animal condemned for tuberculosis, and when it is examined it may be found that the disease is confined to a gland in the neck. A piece is cut out of the neck, and while that part would go for tankage, the animal may be slaughtered and the rest of it sold for human consumption. Such animals are only partly condemned; the other parts are sold at whatever price they will bring, and the amount is returned to the individual. It is most difficult to determine from those figures exactly what they mean.

On the other hand, my understanding is that each separate packing plant collects its own insurance premiums and makes its own payments. So that in order to get at the exact results as to what happens one would have to examine the accounts of the different packing plants across Canada.

In addition to that, may I say that we have made investigations. It is not a case of whether we shall make them or not; we have made them very recently. I am not in a position to give a full or final account with regard to the matter; but if the facts which have been presented to us are correct, and I assume they are, then there has not been very much more collected than has been paid

out in most of the plants. That is all I can say at this time. I would, however, remind the committee that this is a question as between producer organizations and plants, and the agreements into which they have entered. I am sure, if producers can demonstrate that they are paying more than they ought to pay, they can find some other way of insuring that live stock.

It has been suggested that hon. members did not know they had a choice. I have been shipping live stock now for some twenty odd years, as has the hon. member who has just spoken. I did not know until these inquiries came in that I had any choice in the matter. But now that I do know I have a choice in the matter, I certainly would not undertake to have a loss on any live stock. I would still pay half of one per cent before I would take any chance on that. I believe, too, that is the decision to which most farmers have come. Probably that is the main reason there is not much inquiry made into the matter. However, I see no reason why organizations could not demand an inquiry, and have it, as between themselves and the plant to which they ship their stock.

Mr. CASTLEDEN: What was the percentage of swine condemnation in Canada for 1943?

Mr. GARDINER: I have not those figures before me, but I can have them when we reach the live stock item, which, by the way, is the place where questions of this kind should be asked.

Mr. CASTLEDEN: The government's own figure, in their own report, is ·19 of one per cent.

Mr. FARQUHAR: May I say just a word with respect to the marketing of hogs for export. I am informed by the minister's department that only farmers living in the vicinity of packing plants, where there are government inspectors, can take advantage of the bonus paid by the government. I am thinking of many good farming sections in the northern part of Ontario, many of which are in my constituency of Algoma East. At those points farmers have gone in extensively for the raising of select hogs. Farmers in my constituency market their hogs at the packing plants in Sudbury and Sault Ste. Marie. I understand there are no government inspectors at either point. Could some arrangements be made whereby farmers in those sections could bring their hogs to some central point where they could be inspected when slaughtered by government inspectors, so that advantage could be taken of the bonus paid by the government?

Mr. GARDINER: The present provision is that wherever there is a slaughterhouse or a butcher killing fifty hogs or more a week, provision is made to see that inspection is provided. Where there is less than that it has not been thought advisable to have inspection. When individuals live in communities adjacent to points where inspection is made, their stock could be taken to such points, and grading would be done there. I do not think the committee would expect that we would have inspectors all across the country, at every small place where half a dozen, twenty or thirty hogs may be killed. We have set the figure at fifty hogs, and we are trying to work it out on that basis.

Again I would say we are getting down to details, and the proper place of their discussion would be under the live stock item.

Mr. QUELCH: I listened with a good deal of interest to the minister's statement before the evening recess respecting the wheat acreage reduction regulations. I believe those regulations have served a useful purpose in the past and, that purpose having been completed, I believe the government is wise in discounting the operation of the regulations, and in increasing the price of wheat. Any criticism I made in the past respecting those regulations was based upon the administration of certain sections, rather than against the principle of the regulations themselves.

We are assured in the speech from the throne that a floor price is being placed under agricultural products. No doubt the time to discuss that matter will be when the measure is before the house. In passing, however, I would say that when the floor is introduced it should be at a level sufficiently high to stabilize agricultural prices at a level based upon parity. However, a parity price alone would not rehabilitate agriculture on a permanent basis because, more than any other industry, agriculture faces tremendous hazards. Therefore I say it is most desirable that the government should introduce a comprehensive scheme of crop insurance.

The minister may feel that the Prairie Farm Assistance Act is, in fact, a form of crop insurance. In reality, however, I think hon. members will agree it is nothing more or less than a form of drought relief. I am very much in favour of that act, and I am not criticizing it. The constituency I represent has benefited, owing to the fact that the greater portion of the drought area in Alberta is in my constituency.

Nevertheless the Prairie Farm Assistance Act cannot be considered crop insurance. A man who is farming in the west may suffer total crop failure after having contributed to the scheme for ten years, and then still not be eligible to benefits under the act, in any shape or form. In the house on earlier occasions the minister has taken the stand that a scheme of crop insurance would not be practicable. He has said that, as a matter of fact, it would encourage inefficient farming.

Mr. GARDINER: My position has been that it is not within the power of the House of Commons.

Mr. QUELCH: I cannot see why it would not be. The government has introduced the Prairie Farm Assistance Act, under which it has taken a levy from every farmer, in tribute. If it is possible to pay to cover the cost of the Prairie Farm Assistance Act, I cannot see why the government could not introduce a similar measure to take care of crop insurance. The minister may deny that he criticized this on the ground that it encouraged poor farming, but I remember quite well in the past that one of the reasons he gave—

Mr. GARDINER: I wish to put the hon. member right on that. I have always taken the position that to attempt to put it on an individual farm basis, even the prairie farm assistance as we now have it, would tend to provide to keep people on sub-marginal land or to permit poor farmers getting assistance whether or not the weather had anything to do with their poor crops. That is entirely different from saying that the matter is one which could be brought within the powers of this parliament I am not giving that as my own opinion; that was the opinion I received at the time we brought forward this legislation. It was the opinion we received in all three of the prairie provinces.

In the early part of the century the request was made to bring in hail insurance as a federal measure, but it was stated at that time that the only legislatures having power to bring in hail insurance or any other kind of crop insurance were the provincial legislatures. In each of the provincial houses in western Canada hail insurance measures were brought in. That was a form of crop insurance. That is the position taken to-day.

When this measure was before the committee of the other house the then leader of the Senate, who was a very able lawyer, the Right Hon. Arthur Meighen, asked if I had consulted the Department of Justice as to whether this was ultra vires. I stated that I had and that they had given the opinion that it was intra vires. The legal adviser to the committee, Mr. O'Connor, was present. He turned to Mr. O'Connor and asked for his advice. Mr. O'Connor stated that there was some question as to whether the Prairie Farm Assistance Act was not a form of insurance and he went on to indicate that if it were insurance it would be ultra vires. He then offered the further personal opinion that this legislation would be beneficial to western Canada and he thought it was worth while trying it out. I do not think the question whether the present legislation is ultra vires has ever been put to the test. This has been accepted as legislation favourable to those for whom it was provided, and as far as I know all of Canada has accepted the principle that assistance ought to be given. I repeat that the question of whether we should provide insurance is a provincial matter. My understanding is that in at least one province they have a board or commission set up which is examining into a number of questions, including crop insurance. They realize that this is a provincial responsibility.

Mr. QUELCH: I think the minister will agree that any comprehensive scheme of crop insurance would be quite a large undertaking and perhaps beyond the means of a province to carry out. I hope that this question will be taken up at the next conference with the provinces. If the three western provinces are ready to agree to come under a scheme of crop insurance to be operated by the federal government, then the question as to whether or not it would be ultra vires would not arise. The scheme in operation in the United States has a great deal of merit. I have before me the annual report of the manager of the Federal Crop Insurance Corporation, which reads in part as follows:

> The Federal Crop Insurance Corporation was created for the purpose of furnishing the wheat growers of the nation a form of protection that is offered by no other agency, governmental or private. In discharging its responsibility the corporation performs a great public service, a service of direct benefit to 1,380,000 wheat growers and, indirectly, to millions of others in rural and urban communities, as well as to the government itself.

I understand that every year the number of farmers taking out this insurance voluntarily has increased. The amount of acreage covered has not increased, but the number of farmers has. The plan of operation is as follows:

> Under the wheat crop insurance programme a farmer may insure himself against loss in yield below seventy-five per cent or below fifty per cent, whichever he chooses, of his average yield. An insured farmer is protected against loss due to drought, flood, hail, wind, winter-kill, tornado, insect infestation, plant disease, and

other unavoidable hazards. No insured farmer is protected against loss due to negligence, malfeasance, poor farming practices, or from causes which he is in a position to prevent.

The last reference is to poor farming. I understand that in the United States committees are set up under the AAA which have the responsibility of seeing that farming methods are carried out on a satisfactory basis. It seems to me that their scheme has considerable merit. It has been extended beyond wheat, and other farm products are to be insured along similar lines.

I think the federal government should make a thorough examination of this scheme so that at the next conference with the provinces they may be able to discuss it and see whether the provinces would be ready to come under such a scheme on a national basis. A scheme of this kind is beyond the financial ability of the provinces to handle satisfactorily. If such a scheme is put into operation without sufficient financial backing it will fail absolutely.

Mr. WEIR: Could the hon. member tell us the manner of payment and the amount of the premium under the scheme?

Mr. QUELCH: The payment of the premium is made in wheat. Committees are set up which estimate the average yield of a piece of land over a period of years. The farmer then insures for either seventy-five per cent or fifty per cent of that average yield. Then he may either pay the premium in cash or give a note in payment. The premiums are worked out on an actuarial basis. In the fall any claim for payment may be met in wheat instead of in cash. When the farmer receives wheat he can sell the wheat under his quota and receive cash. The whole thing is done on the basis of grain. The premium may be paid in grain and any return from the insurance may be made in grain. It is up to the farmer to decide whether he wants to keep the grain or whether he wants to sell it.

Mr. CRUICKSHANK: This item deals entirely with administration and I have a question to ask under that heading. Apparently everything is being discussed, including the hon. member for Peel offering me a position as parliamentary assistant, were I able to curl. I should like to know under what item I would be able to discuss the recent flooding of Canada with potatoes. It was suggested the other night that I could bring up this matter under item 26, but upon checking what happened last year I find that item 26 was not taken up until the middle of July. This matter concerns my district at the present time not in the middle of July. Apparently arrangements have been made for the importation of potatoes into Canada while we still have a surplus in this country. I wish to quote from a report in the Ottawa *Citizen* of February 23, stating that special arrangements were made by governmental agencies, which I assume refers to the minister's department. Later on the article states:

> Potatoes, it was explained, were grown in Maine and their shipment to Canada was part of the effort made by United States agricultural officials to clear last season's potatoes before the new crop.

In other words, the state of Maine is being allowed to dump its surplus potatoes in Canada in order to maintain higher prices in that state. We have shipped out from the Fraser Valley this year to different parts of Canada and elsewhere 20,000 tons of potatoes, and yet we have kept ample supplies within the province to supply our whole domestic market. On this same item of administration, the hon. member for New Westminster and I last year asked for a contract for the dehydration of potatoes, and we were informed by the minister in the house and by the deputy minister on several occasions before the agricultural committee that we could not get a contract because we did not have an ample supply of potatoes in British Columbia to supply the domestic market. Both the hon. member for New Westminster and I pointed out, and I have *Hansard* here to show it, that we had ample supplies of potatoes not only to supply the domestic market but to ship potatoes outside the province as well; yet we could not get a contract without a fight. So far this year we have exported 20,000 tons of potatoes out of the province to other parts of Canada and to the United States, and yet some government official under this item of administration has arranged to allow the state of Maine to dump 150 carloads of potatoes into Canada, while we in Canada have to ship out our potatoes, if we ship at all, and there is a duty of $7.50 a ton imposed by the United States on certified seed potatoes and $12.50 a ton on domestic potatoes. In other words, we cannot export our potatoes to the United States over that prohibitive tariff. I am not now arguing for free trade. There are only three free traders in the House of Commons, two from British Columbia and the Minister of Agriculture. But I believe in free trade working both ways, and I want the minister to explain why his department, under this item of administration, permits the state of Maine or any other state to dump its surplus potatoes into Canada when we have an ample supply of potatoes in this country. We were told last

year that we could not produce enough potatoes in British Columbia to satisfy our own requirements. Yet we have not only done that but have shipped out of the province 20,000 tons of potatoes this year, and in addition supplied potatoes to an immense army in Canada on the Pacific coast, and a large number of Americans on the Pacific coast. I think that is proof that we have ample supplies of potatoes in Canada.

I wish to speak of another matter, and I bring it up now because in British Columbia we cannot wait until July to get a decision. Therefore under this item—

Mr. GARDINER: If I might be permitted on a point of order, Mr. Chairman, my hon. friend is not speeding up things by asking these questions on this item because these matters are not under my department at all, and if this department is to be held here while hon. members discuss matters that do not come under my department we shall never reach the item in the estimates on which his questions might be answered. I am not in a position to answer at any time the questions my hon. friend has asked. They will have to be answered by someone who is speaking for the prices board, and I do not speak for the board. In so far as I can speak for them at all, all I can say at the moment is that I understand that the only potatoes in Canada on which the prices board are paying freight in order that they may be distributed to other parts of Canada are British Columbia potatoes. I think that ought to be said in justice to the board. I understand there is no duty on potatoes coming from the United States into Canada except during a short period when new potatoes are coming in; otherwise potatoes come in free. The peak export of potatoes from this country comprises seed potatoes going from the maritimes to South America and the British West Indies, and, on some occasions to some parts of the United States, and arrangements are made accordingly. But again I say that this is one of those questions in relation to which we all apparently agree that something ought to be done, and we rise one after another and say that we are in favour of price control, and price control requires some of these things to done. All I can say at the moment is that this is not a matter which comes under my department, and if the hon. member wants to get an answer we should at least pass this item of administration and go on to the commodity items.

Mr. CRUICKSHANK: The minister's explanation bears out what I fully thought, that agriculture is no longer under the Department of Agriculture but under the wartime prices and trade board.

What I am going to bring up now—

Mr. GARDINER: I wish Mr. Chairman that you would insist on the committee staying in order. What my hon. friend has to say relates more to the item of fruit and vegetables, and certainly not to this item.

Mr. CRUICKSHANK: I was going to speak of a different matter.

The CHAIRMAN: The point of order is well taken by the minister. We have had a general discussion lasting some days and I understand that it is the wish of the committee to ask direct questions on individual items as they are reached. Again I must ask the committee to remain within the orbit of the item before the Chair. We are on item 1, dealing with administration.

Mr. CRUICKSHANK: I am particularly interested in item 1, Mr. Chairman, because I have some questions to put to the minister in connection with administration. I assume this item covers all phases of agriculture.

The CHAIRMAN: Order. The item does not cover all phases of agriculture.

Mr. CRUICKSHANK: I should like to speak on departmental administration in connection with the administrator of fertilizer.

Mr. GARDINER: That is provided for under another item farther down.

Mr. CRUICKSHANK: I think I am entitled to say this, Mr. Chairman. I represent the largest farming riding in British Columbia. I do not say the best but the largest, and we are entirely dissatisfied with agriculture as run by any other department than that of the present competent minister of that department.

Mr. NICHOLSON: Although the minister is not making very rapid progress with his estimates, I think the general comments that have been made have been of such a nature that one might conclude that the farmers across Canada are not as much dissatisfied with agricultural policies as on former occasions. In my opinion the farmers of this country deserve a great deal of credit for having achieved such records of production in spite of the fact that they were dissatisfied until very recently with government policies relating to agriculture. They felt that there was no good reason why agricultural prices should be kept at such low levels when the government was buying everything else on a cost-plus basis. But in spite of their dissatisfaction they have surpassed all previous records of production.

It has been demonstrated that we do not have to have foreign markets in order to produce large quantities of food and to give our people more bread, more milk, more cheese, more butter, and more bacon. It is interesting to note that we were able to ship to Great Britain in 1943 over 5,000,000 hundredweight of pork products as compared with 1,800,000 hundredweight in 1939; 98,000,000 bushels of wheat in 1943 as compared with 61,000,000 bushels in 1939; 868,000 hundredweight of fish as compared with 368,000 hundredweight in 1939; over 1,000,000 pounds of cheese as compared with 811,000 pounds in 1939; 40,000,000 dozen eggs as compared with 1,000,000 dozen eggs in 1939. In spite of these very large gifts, and everyone in Canada agreed that these gifts should be made to the people of Great Britain, who were making sacrifices such as we in Canada were not required to make, we were able to consume more milk ourselves, more cheese, beef, pork, chickens, potatoes, eggs, tomatoes and citrus fruits, as well as coffee and cocoa. We were short on butter and refined sugar and tea, but we actually consumed more pounds of these other commodities than we did in the year before the war. I think, therefore, that any administration in the future will find it difficult to satisfy the Canadian people that we cannot produce at least enough food to maintain a healthy nation in this dominion. What I really wish to discuss—

Mr. REID: I rise to a point of order, Mr. Chairman. A short time ago you pointed out to the hon. member for Fraser Valley (Mr. Cruickshank) that he could not make the remarks he was making and be in order under administration, and we have been listening to the present speech on everything under agriculture. I do not object to his speech, but I am asking for fair play.

The CHAIRMAN: Surely the committee does not expect me to rise every minute—

Mr. REID: You are the chairman.

The CHAIRMAN: —and call hon. members to order. Hon. members should realize the importance of observing the rules. I have pointed this out several times to-day, and I suggest that the time has come when hon. members should stick to the item before the chair.

Mr. NICHOLSON: I said that I was about to conclude my remarks on this particular matter, but I do not see that it is possible for me to say what I have to say on any other single item; and it is unfair for certain members, after they have spoken as long as they pleased, to require that further discussion be shut off. I would like the minister to make a statement as to the division of jurisdiction between the provincial departments of agriculture and the federal department. I have in mind the provision for the health of animals. The federal government apparently thinks some money should be spent in connection with this important branch of agriculture; but when it comes to providing a comprehensive scheme to see that the policies which any government might wish to be put into effect should be carried to their logical conclusion, the administration does not want to go far enough. For example, we want to inspect the carcasses of animals that are slaughtered in the abattoirs of the country. We want to make sure that cattle slaughtered in Winnipeg and shipped to Toronto or Montreal shall have been inspected so that the people in these places will not be expected to consume meat that is unfit for human consumption; but there is not a town or village in the province in which I live where we have any organization to supervise the carcasses that are offered for sale.

The CHAIRMAN: Order. Under item 16 on page 4 of the estimates we find health of animals, administration, et cetera. The present discussion could come under that item.

Mr. NICHOLSON: But I would not be permitted under that item to discuss the relationship between the federal health of animals branch and the provincial branches.

Mr. GARDINER: If you have any right to discuss it anywhere, that is where you can discuss it.

Mr. NICHOLSON: That is a matter of administration that must be discussed now if it is discussed at all. However, I must abide by the Chairman's decision.

Mr. GARDINER: There is an item of administration in each of the divisions. This is general administration we are now discussing, but there is an item for administration in each one of the divisions of the department and we shall come to them as we go down the estimates.

Mr. DOUGLAS (Weyburn): I rise to a point of order. I would point out that the hon. member for Mackenzie (Mr. Nicholson) was not dealing with the health of animals except by way of illustration, to inquire of the minister exactly what is the liaison between the federal department and the provincial departments. The hon. member cannot rise on each item and ask, "What is the liaison between the federal department and the provincial department with respect to this matter?" He is asking a general question con-

cerning the whole field of administration. He wishes to know how the work is coordinated between the federal department and the respective provincial departments, and that is a perfectly legitimate question which comes within the purview of this item.

The CHAIRMAN: According to standing order 58, speeches in committee of the whole must be strictly relevant to the item under consideration. I ruled a few moments ago that the remarks of the hon. member for Mackenzie should be reserved until we reach item 16. That item affords ample scope for the discussion of the subject he is now bringing up

Mr. DOUGLAS (Weyburn): We are not discussing health of animals or contagious diseases except as a matter of illustration.

The CHAIRMAN: I have given my decision.

Mr. NICHOLSON: I discussed this matter with the department recently to find out where their jurisdiction starts and where it ends, and the information I was able to get was that the federal department was concerned about the health of animals from the point of view of interprovincial trade but was not concerned about it from the point of view of seeing to it that the people in the towns and villages have milk that is produced under proper conditions, so that there will be in every rural community proper tests to find out whether cows are infected or not.

Mr. GARDINER: The purpose of this particular vote is to provide for expenses of the minister's office, the deputy minister's office and their respective staffs, and also the departmental library. These are the items we are discussing, and I would suggest that while it has been usual to allow considerable latitude in discussing matters having to do with agriculture when considering the general vote on administration, when we get to the point where no one can rise in his place and make a new speech on the item but deals with the details provided in the different votes, then the Chairman is quite within his rights in ruling that we had better go on with those items and get down to a proper discussion of a particular item before the Chair. The present speech would be a good one on the health of animals division; but if we are to have a discussion on health of animals now, and a week from now come back and discuss the same question all over again, then we are breaking every rule that the house has set.

The CHAIRMAN: The hon. member for Swift Current has the floor.

Mr. GRAHAM: I am bowing to the minister's remarks. I will wait until I come to the proper item.

Mr. RICKARD: I rather hesitate to take part in this debate to-night after listening to the remarks made by the chairman and by the minister. What I had in mind was more a discussion of general problems of agriculture and I thought that might come under administration as well as anywhere else. What prompted me, perhaps more than anything else, to say what I am going to say is that on February 18, the hon. member for Yorkton spoke for about forty minutes and he discussed the problems of agriculture, wheat, stock of all kinds and fruit and everything along that line. The hon. member for Yorkton painted what I would consider a very gloomy picture for agriculture. I do not think that is the proper thing to do. I believe that we should paint a picture for agriculture so that the boys we have on the farms to-day and the boys we have overseas fighting our battles will come back to the farms and remain in an industry that is something worth while.

As reported at page 644 of *Hansard* the hon. member for Yorkton spoke about the policies of the government. He concluded by saying, "It has failed entirely". I take exception to that, because I do not think there has been a government in a good many years that has done as much for agriculture as has this government. I believe the Minister of Agriculture, his officials and the government as well are to be congratulated upon what they have done for the farmers.

The hon. member for Yorkton went on to talk about wheat, the grain exchange and the packing plants. He spoke about the price of cattle and the price of cows. He complained that in the west they could get only 7½ cents a pound for cows. I have two cows in my stable and last week I could get eight cents a pound for them. I think that is a good price for cows. I do not think there is any very great complaint about the price of 7½ cents for cows at farms in the west. He then went on to speak about fruit and the fruit growers of the Okanagan valley. He said that the price was so low it was not up to the cost of production. Well, I do know something about fruit. I think the apple growers in particular are well satisfied with the policies of this government and with what this government has done for the fruit industry. We have had good prices this year for all kinds of fruit. The government have spent thousands and thousands of dollars on the fruit industry. They thought it was a

war casualty, and it was. They have spent thousands of dollars to protect the apple growers and to give them a decent break.

As I said before, I do not like to hear agriculture put on such a low plane. I have been a farmer all my life and I think that to-day there is no better job than farming. During the last five years the farmers have made a wonderful contribution to this war. They have done it with a scarcity of labour, a shortage of machinery and many other things. They are to be congratulated upon what they have done and the government are to be congratulated upon what they have done for agriculture.

The Minister of Agriculture has been criticized all over this dominion. I have not always agreed with him. I have not any particular use for any man who is a yes-man. I think when you have an idea you should express it. Nor have I any more use for a man who is always finding fault, always criticizing. If we have criticisms to offer, we should offer them in a constructive way and try to be of some assistance to the government, especially in time of war.

The Minister of Agriculture was criticized about the price of hogs at the time of the last agreement with Great Britain, because he suggested that the quota might be lowered and for, I believe, not increasing the price to $20 a hundred. At the time I said that the price should be more than it was. I think everybody agreed with that. But the minister announced the increase by bonuses and that has been of great help to the hog producers. If that had been announced at the time of the agreement it is possible there would not have been as many sows sent to market. However, that is not the only reason why sows were shipped to market. I know in Ontario we had the worst grain crop we have had in a great many years. That is the main reason why hogs were shipped to market in this province. A great many farmers would rather have $30 or $40 from their sows than pay $300 or $400 for grain, because they have not been used to doing that kind of business. There is the odd man in the business who does that, but the ordinary farmer in Ontario does not do it. What the government did in regard to freight assistance has been of great help to the eastern farmer. There is no question about that.

I was not too favourable to the coarse grain proposition when the minister brought it in some two or three years ago, but as far as Ontario is concerned it has turned out that we have the grain in years like this. As the minister said this afternoon, it has cost $80,000,000 of the people's money to put that programme across. It might be money well spent.

The other night I listened to one or two members talking about the price of cattle and the spread that there should be between the price that the stocker would sell at and what one should receive for cattle. I can well remember that when I was a boy my father used to tell me he would need to have a profit of two cents a pound plus the gain on the steer if he was going to make any money. I have not followed that business very closely, but I think it is perhaps about right. However, I cannot see how any government can legislate for people in that business. I think they have to know their business, and not pay too much for their feeder cattle.

Then we heard the subject of wheat debated. Perhaps I am a little out of order now, but not any more out of order than some other hon. members have been. I believe the government is paying $1.23 or $1.25 a bushel for No. 1 western wheat at Fort William, plus participation certificates which may amount to anywhere from sixteen to twenty cents. In Ontario we are getting only $1.10 or $1.12 a bushel for wheat at the barn. I think something should be done. I do not know how many western members are going to rise and support the eastern wheat grower. It is true we do not produce very much wheat, probably twenty million bushels. In order to get participation certificates we have to export our wheat, which we do not do. I think some arrangement should be made whereby Ontario wheat should return $1.50 a bushel at the mill.

Then there is the question of fruit, eggs, cheese, butter and all other farm products. I was amused this afternoon when the hon. member for Souris said he was interested in the United States market. He thought we should still be shipping cattle across to the United States. It is not so very long ago, as I well remember, that we heard our friends of the Conservative party of that time saying, "No truck or trade with the Yankees. We do not want to have anything to do with them."

Mr. ROSS (Souris): You never heard that from the hon. member for Souris.

Mr. MACKENZIE (Vancouver Centre). We heard it from your friend Mr. Stevens.

Mr. ROSS (Souris): I never made that statement.

Mr. RICKARD: "No truck or trade with the Yankees." I well remember that statement being made a few years ago. Let me say this to the hon. member—

Mr. MACKENZIE (Vancouver Centre): Is the hon. member for Souris repudiating the statements of his former colleague from Vancouver?

Mr. GRAYDON: He is not under cross-examination. Sit down.

Mr. RICKARD: I remember when I was getting three cents a pound for hogs, four cents a pound for cattle, twelve cents a dozen for eggs, eleven or twelve cents a pound for butter. I do not think there is any very great argument as far as the Conservative party is concerned about what they have done for the farmers. I believe history will write that story pretty well.

Mr. GRAYDON: The farmers do not think much of you fellows.

Mr. RICKARD: Without taking more time, Mr. Chairman, I want to repeat that in my opinion this government should be congratulated upon what they have done for the farmer. I have no doubt in my mind that the next parliament will still be under a Liberal government, for I do not believe the farmers of this country will support the party led by Mr. Bracken or the C.C.F.

Mr. MARSHALL: I have quite a number of questions I should like to ask the minister, but I know perfectly well that as soon as I commence my examination I shall be declared out of order. However, there are one or two questions which I am sure are perfectly in order. I think very few people in Canada realize that the Minister of Agriculture is the custodian of the morals of the people when they are at the race tracks, since I understand he is the supervisor of all race track activities. I hope I am in order on this?

Mr. GARDINER: Yes, the hon. member is in order.

Mr. MARSHALL: I have been in this house for a considerable number of years, but I have not yet heard the minister give an account of his stewardship in that regard, and I think it is about time he did so. I understand that race track activities are supervised by the mounted police in certain provinces, while in other provinces they are under the supervision of the civilian authorities. I do not understand why there should be this difference, and I should like the minister to give an explanation. I wish to know also the arrangements with respect to jockeys and horses coming across from the United States, and the arrangement with regard to the payment of prize money, which naturally would go back to the United States. Would the minister care to give the committee a full and complete explanation of this, for it does seem to me strange that from an activity as great as this the receipts as far as the department is concerned should be only about $7,000 in 1942-43, and $5,000 in the previous year? That seems a very low figure, and I would ask the minister to make a statement with respect to the operation of these race tracks.

Mr. GARDINER: I think it is true that the policing in every province with the exception of Quebec is done by the mounted police; in Quebec it is done by civilian appointees. That has been the situation for a very considerable length of time; I am not sure just when it had its origin, but it has not been changed. I do not know of any particular reason why it should be the one way or the other, but apparently the policing is being done satisfactorily, since we have had no complaints with regard to it.

Mr. MARSHALL: I also asked with respect to jockeys and horses coming from the United States and the prize money won by these horses. What arrangements have been made between Canada and the United States with respect to money taken back across the line?

Mr. GARDINER: That matter is handled by another department; we have nothing to do with it. The arrangements in regard to jockeys coming from the United States to perform in this country are made between the racing associations. As far as the money is concerned, that is a matter for the Department of National Revenue.

Mr. MARSHALL: Could the minister say why civilian authorities do the policing in the province of Quebec?

Mr. GARDINER: I gave the only explanation I know of; they have always done it, as far as my records go. There has been no complaint; apparently the policing has been absolutely satisfactory, and we have not changed the system.

Mr. GRAYDON: As the hon. member for Camrose has pointed out, the supervision of race track betting very properly belongs to the Minister of Agriculture. Bearing in mind the fact that the minister has occupied this position for some eight years now, I would presume that naturally, in carrying out his duties, he would make periodic inspections of the race tracks to see how things were progressing. Could the minister tell the committee how many inspections he has made during that time and what plan he follows in supervising the work which is under his jurisdiction?

Mr. GARDINER: I am sorry to have to admit that I have not seen a horse race in eight years. I should very much like to find time to see one.

Mr. GRANT: I am not going to make a speech, Mr. Chairman; I wish to say just a few words in order to keep the record straight. The last time the minister's estimates were under consideration the hon. member for Selkirk said, as reported at page 672 of *Hansard*, that he had sold cattle for $2.65 a hundredweight and hogs for $2.50. At that time I tried to get him to be a little more definite, but he brushed me aside by saying, "You are all tarred with the one brush". I tried to show that he had not sold cattle and hogs at such low prices under this administration. When I went to my room I telephoned the marketing branch of the Department of Agriculture for the prices of hogs and cattle from 1931 to 1943. In 1936, after the Liberals had been in power for only a few months, the general price for cattle was $3.45 a hundredweight, which price increased every year until in 1939 it reached $5.10. The price of hogs in 1936 was $7.95 a hundredweight, and that price also increased each year under Liberal rule until 1939, when it was $9.64. So that the hon. member should not include the last five years of that decade in the depression period. When the hon. member told me we were all tarred with the same brush he received great applause from the Conservative benches, which just goes to show that while hon. gentlemen on that side of the house do not love the Cooperative Commonwealth Federation they always applaud them when they misrepresent this party.

Mr. BRYCE: I can assure the hon. member that I sold hogs in Winnipeg for $2.65 a hundredweight. I sold steers for two and a half cents a pound on the Winnipeg market.

An hon. MEMBER: When?

An hon. MEMBER: 1932.

Mr. GRANT: Not since 1935, but they might have been sold for fox meat.

Mr. BRYCE: It is the system we are living under that caused it, and one is as bad as the other. I do not think the Conservatives would be any better if they were in power; they would not do any better than the present government are doing—and maybe a lot worse. But what led up to the $2.50 hog? A Liberal government led up to it—one government after another. We can go back sixty years, and we find the same thing.

Mr. TUCKER: What system are you in favour of?

[Mr. Graydon.]

Mr. GARDINER: I think the hon. member was a Liberal at that time.

Mr. TUCKER: Are you in favour of the recently adopted policy of the C.C.F. in British Columbia, a system of collectivization of farm lands, as in Russia? Are you in favour of that?

Mr. BRYCE: The hon. member surprises me.

The CHAIRMAN: Shall the item carry?

Mr. DOUGLAS (Weyburn): No. Two weeks ago I asked the minister one or two questions, but in the general melee of discussion he has not dealt with them. I would ask him now to make a statement, first, as to whether it would be possible for the government to announce coarse grain prices within a short time.

Mr. GARDINER: I dealt with that this afternoon when the hon. member was out of the house.

Mr. DOUGLAS (Weyburn): With reference to the 1944 crop?

Mr. GARDINER: Yes. I dealt with it this afternoon in answer to the hon. member for Souris. I think my hon. friend was out of the house, but he can read it in *Hansard* to-morrow.

Mr. DOUGLAS (Weyburn): All right. My second point is this: Is the minister prepared to accede to the request by the Canadian federation of agriculture that these subsidies on various prices be included in the floor price, and thereby to adopt the same principle for agriculture that has already been adopted for labour? The minister knows the cost of living bonus is now included in the basic wage, and the suggestion has been made by agricultural organizations, and I think properly so, that subsidies paid to agriculture should be incorporated in the floor price; because, as every hon. member knows, six months after the war these subsidies automatically cease. Floor prices then will be far below what the farmer is now receiving.

Then, would the minister make a statement, either now or when we reach the item respecting wheat acreage reduction, as to whether there will be any compensation, in view of the fact that there is to be this reduction in subsidies to the farmer by the discontinuing of the wheat reduction bonus? I suggested the other evening to the minister that, after all, the wheat acreage reduction bonus was paid to the farmer, not as a subsidy but in compensation for the fact that he was not going to be allowed to sell more than sixty-five per

cent of his basic acreage. It was not the farmer's fault that the government was not in a position to accept or store all his wheat. The government was asking him to grow less wheat, and in return for the smaller receipts from his wheat crop it agreed to give him this bonus.

I realize this comes under the Department of Trade and Commerce, but I asked the minister if by way of *quid pro quo* consideration could be given to giving the farmer, in return for the discontinuance of the wheat acreage reduction bonus, some compensation by way of the removal of the wheat quota, or increasing the quota so that the farmer would be allowed to deliver all his basic acreage.

Then, would the minister under this item make a report to the committee with respect to UNRRA—United Nations Relief and Rehabilitation Administration?

Mr. GARDINER: That comes under the Department of External Affairs.

Mr. DOUGLAS (Weyburn): It is my understanding that the deputy minister of the Department of Agriculture attended a conference at Hot Springs, Virginia, and acted on behalf of the Canadian government.

Mr. GARDINER: That had nothing to do with UNRRA which was set up much later, and has to do with the Department of External Affairs. We are not represented there.

Mr. DOUGLAS (Weyburn): But we were represented at the united nations food conference at Hot Springs.

Mr. GARDINER: Yes, at the food conference.

Mr. DOUGLAS (Weyburn): Then, either now or at some later time would the minister make a report to the committee with respect to the outcome of that conference? Most hon. members think that conference was a forward step, and we were very glad the Canadian people were so ably represented. I believe the minister ought to take this or some other early opportunity to tell the country something about the objectives of that conference, and the part Canada is to play in the task of feeding the people of the united nations.

I believe most hon. members have received a copy of the address delivered by H. H. Hannam, president of the Canadian federation of agriculture, who was one of the delegates to the food conference. His address is interesting indeed, because in it he points out that the conference set the united nations the task of producing in adequate supplies the right kind of food for all the human family. I believe Canada can play a great and important part in the post-war era, under a scheme such as set out at that conference. Hon. members and the country generally would be interested in any report the minister would make respecting plans which emanated from the conference, the part Canada played in the preparation of those plans, the contribution we shall make with other nations, and the co-ordination there will be among various nations in supplying food for the post-war world.

Mr. GARDINER: This afternoon I dealt with all the items mentioned by the hon. member, with the exception of the last one. I spoke to the committee for half an hour or more, and during that time covered the points he has mentioned. I do not think I should be expected to go back over them for the benefit of those who were not in the house at the time.

With respect to the last matter he mentioned I would point out to the committee that the Hot Springs conference was held last summer, and following it a report was made to the house by the Prime Minister. I would hesitate to make a report again, as Minister of Agriculture, when one had been made on behalf of the government by the Prime Minister.

In addition to that, there has been some activity since last summer, and reports have been made with regard to the activities of certain committees. Those have not yet been presented to council, but after they are presented they may be discussed here, either by the Prime Minister or by myself. At some later time, perhaps when the items under the war expenditures measure are being discussed, we might have a discussion.

Mrs. NIELSEN: I intended to support what has been said by the hon. member for Weyburn. It would be greatly in the interests of Saskatchewan farmers if the Minister of Agriculture could give them greater assurance than they now have as to the possibility of an increase in farm production during the immediate post-war years. I realize, however, that this discussion might be more properly had when the war expenditures estimates with respect to agriculture are before the committee. I believe the minister has made that suggestion.

Mr. PERLEY: This afternoon there was a general discussion respecting floor prices. Did I understand the minister to say that legislation was being prepared to provide for floor prices, but that prices would be practically the

same as are paid now; that is, on oats and barley an addition of ten and fifteen cents respectively, and that for wheat the price would be practically the same as is now being paid by the wheat board?

Mr. GARDINER: When we were discussing coarse grains I was not referring to floor prices. The hon. member for Souris asked me whether the present prices, plus subsidies of ten and fifteen cents, would apply on next year's crop. I stated to him that while this was a matter that really came under the Department of Trade and Commerce I was able to say without any hesitation that I did not think there is any intention that the return would be lowered for the crop to be seeded in 1944. But I did not discuss that in relation to floor prices. The bill with regard to floors which will be brought in will be in general terms. It will give authority to do certain things and those things will be done as the circumstances arise.

Mr. PERLEY: The minister says he is quite certain they will not be any lower, but what interpretation is he putting on that?

Mr. GARDINER: It is the interpretation which I gave this afternoon. Add the payment of ten cents a bushel to forty-five cents for oats and that gives fifty-five cents; add the fifteen cents a bushel to sixty cents for barley and you get seventy-five cents; then you take what can be obtained on the market. If you obtain the ceilings you would have 6-1/2 cents for oats and 4-3/4 cents for barley. Therefore, you could say that the prices could be up to seventy-nine cents for barley and about 61-1/2 cents for oats.

In addition there would be profits on sales made in the United States at prices higher than Canadian prices. The farmers would have participation certificates upon which they could draw additional earnings on oats and barley, provided the United States prices are higher and that a sufficient quantity is sold to counteract any sales made in Canada at the ceiling price and still give a profit. That is the present position, and I cannot conceive of there being any lowering of that position in relation to the crop to be seeded in the spring of 1944.

Mr. PERLEY: Could the minister indicate at what price our barley is being sold in the United States? I understand they are paying $1.27.

Mr. GARDINER: Our oats and barley would be sold on the United States market at whatever prices are being paid there. Those grains are being sold on this market at the ceiling prices, and in the accounting the two amounts received are put into a pool and spread over all the sales of oats and barley, both in Canada and in the United States. If there is anything left over and above the ten cents on oats and the fifteen cents on barley, it is paid to the farmers under participation certificates. Again I may say that we are discussing trade and commerce affairs.

Mr. PERLEY: Who is doing the exporting, the wheat board or the exporters on the exchange?

Mr. GARDINER: The grain exporters are doing the exporting, but it is being exported under permits given by the wheat board.

Mr. DOUGLAS (Weyburn): The minister said he had covered my question in the answer he made to the hon. member for Souris. He dealt with coarse grains, and I should like to know if the same principle will apply to other commodities subsidized by the government. Is it the intention to include the subsidy in the floor price?

Mr. GARDINER: I do not think those would be included in any arrangement for floor prices. I am simply saying that that is a position for next year. The provisions of the bill providing floor prices to be brought down, at which time all these matters may be discussed, will apply six months after the war is over. We are now working under the War Measures Act which will run until six months after the war, and the bill to be brought down will provide for activities following that time. We will then take action based upon the circumstances then existing.

Mr. FAIR: Since the Saskatchewan combatants have cooled off to some extent, perhaps I shall have a chance to say a few words without getting into the family squabble. I am not going to discuss any particular phase of agriculture at this time, but I wish to say something about agriculture in general. We have heard a number of armchair farmers state this evening, and it has been said before, that the farmers are prosperous. Even some of our practical farmers have said that agriculture is better off to-day than it has ever been before. I want to show, if possible, that our farmers are not yet receiving anywhere near that to which they are entitled.

I think it is generally agreed that the farming population of Canada comprises about one-third of the total population. If we are to have fair play in Canada, then one-third of the population should receive approximately one-third of the national income. I do not know of any group that works harder or

longer hours than our farming population. I should like to give the percentage of national income which our farming population has received over a period of years, starting with 1926, one of our good years. The figures are:

Year	Per cent
1926	17·8
1927	16·4
1928	17·6
1929	14·6

This is the period which some of our economists have used in arriving at parity prices. During that time our farmers received an average of 16·6 per cent of the national income, or approximately one-sixth, when they were entitled to receive one-third. I do not think it is right to attempt to compute parity prices on that basis. Taking wheat as an illustration, if parity prices were in existence to-day we should be receiving not less than $1.41 or $1.42 a bushel. Since we were receiving only one-sixth of the national income at that time, I think the committee will readily agree that a price of $1.41 is much below what it should be if we are given that to which we are entitled.

We are told about the $80,000,000 which has been paid in bonuses. If we look back to the time when we were receiving seventy cents a bushel for No. 1 northern wheat at Fort William, it would appear that we were losing not less than $200,000,000 on our wheat crop alone in one year. We are told also about the good prices which have prevailed since the present government came into office. My recollection is that in 1935 wheat was selling at 87½ cents a bushel, and on one occasion since then it has gone down as low as seventy cents a bushel. Then a bill was brought into the house to pay sixty cents a bushel for No. 1 northern at Fort William. The fact that we are receiving $1.25 a bushel to-day for our wheat is not due entirely to the policies of this government. The war has brought about these present prices, and when we consider the cost in human life, it has been expensive indeed. Going back to the percentages of national income received by agriculture, I quote again:

Year	Per cent
1929	14·6
1930	9·6
1931	6·3
1932	5·0

Our farmers are being criticized because they are in debt, and on occasion they have been charged with dishonesty because they do not pay their debts. If some of these armchair farmers or politicians can tell me how farmers can pay their debts when they are receiving only five per cent of the national income, then I shall learn something very valuable. The figures continue:

Year	Per cent
1933	6·6
1934	9·1
1935	9·3
1936	11·4
1937	11·5
1938	10·9
1939	12·5
1940	11·0

I am not giving figures beyond 1940, because that is when the war started. If agriculture is to be placed on a sound footing; if Canada is to be placed on a sound footing, then our farming population must receive a different deal. A rise of half a cent or one cent in the price of different commodities will not by any means correct the injustices that are being put over our farmers. I intend to speak of other agricultural matters as we reach other items, but for the time being I make these few remarks on behalf of Canadian farmers east as well as west.

Mr. WRIGHT: Can the minister give the committee any information as to whether a long-term bacon contract has been negotiated with Great Britain? When the two-year contract was negotiated, quite a bit of publicity was given to the fact that a longer term contract would be negotiated the next time. We have heard nothing of that since, and I was wondering what progress the negotiations had made.

Mr. GARDINER: I informed the hon. member for Portage la Prairie this afternoon that the contract had not yet been signed. I would prefer to discuss it on the war vote, by which time there is a possibility it may be signed. It has been pretty fully negotiated, but final signatures have not been put to the contract.

Item agreed to.

2. Publicity and extension division, $103,248.

Mr. CRUICKSHANK: Does this cover potatoes?

Mr. DOUGLAS (Weyburn): I notice by page A-10 of the auditor general's report that expenditures last year for salaries and wages were $70,575.51, and the cost of living bonus, $7,302.23, making approximately $78,000; and the amount spent for printing and stationery was $12,448.24. It struck me as strange that a branch that gets out publicity should spend six and a half times as much on salaries and wages as on printing and stationery, which has to do with the main function of the branch. Would the minister explain?

Mr. GARDINER: The preparation of the material is done under this vote, but the expenditure on publications and pamphlets is charged up to each branch concerned, each carrying its own printing costs. All the salaries and wages are charged to this vote.

Mr. DOUGLAS (Weyburn): Then the $12,000 odd would be only for the printing done within the branch, and not for the publicity matter they get out?

Mr. GARDINER: That is so.

Mr. DOUGLAS (Weyburn): What publications have they put out over the past year?

Mr. GARDINER: There have been 1,300,000 publications mailed on personal request; 576,500 publications mailed in bulk for distribution; 1,591,059 copies of market reports mailed on request; 9,991,852 copies of mimeographed and multigraphed publications on market information, news comments, leaflets, et cetera.

Mr. MARSHALL: Does this tally with the information found on page 134 of the annual report of the department?

Mr. GARDINER: The report is for the preceding year, ended March 31, 1943. We are now discussing next year's vote.

Mr. MARSHALL: But the list of publications which the minister gave was for the current year?

Mr. GARDINER: Distributed in the current year, yes.

Item agreed to.

3. Advisory committee on agricultural services, $2,000.

Mr. MARSHALL: How much of this vote was spent last year? I understand that the year before the amount of the expenditure was only $336.19.

Mr. GARDINER: The vote last year was practically all spent, and there is an increase of $320 provided for this year.

Mr. MARSHALL: Last year the expenditure was only $336.19.

Mr. GARDINER: That was the previous year.

Mr. MARSHALL: Was the vote last year all spent, and who are the members of the advisory committee?

Mr. GARDINER: There are quite a number of committees. The national committee is composed of Doctor H. Barton, deputy minister of agriculture; G. I. Christie, president, Ontario Agricultural College; W. R. Reek, deputy minister, Ontario Department of Agriculture; G. Morin, acting deputy minister of agriculture for Quebec; E. S. Archibald, director, experimental farm services; J. M. Swaine, director, science services; A. M. Shaw, director, marketing services; R. S. Hamer, director marketing services, Ottawa; L. C. McOuat, general agricultural agent, Canadian Pacific Railway Company; A. E. MacLaurin, acting general secretary, C.S.T.A., Ottawa; W. H. Cook, National Research Council, Ottawa; H. L. Trueman, assistant director, science services.

Mr. MARSHALL: Is that a permanent organization?

Mr. GARDINER: It carries on from year to year but can be changed.

Mr. DOUGLAS (Weyburn): Was the whole expenditure spent on the national committee?

Mr. GARDINER: No; there are a number of subcommittees and, as a matter of fact, the money is nearly all spent on the meetings of the subcommittees. The national committee is composed of men working for the federal government or provincial governments who are drawing their regular salaries. There is also on the national committee the agricultural representative of the Canadian Pacific railway. Since they all are drawing their regular salaries, their expenses would be light.

Mr. DOUGLAS (Weyburn): Why is the vote down to $1,680 this year? Is it contemplated to have the committees meet as often as before?

Mr. GARDINER: The decrease is largely owing to the fact that the war is on and these men are engaged in various war activities, but we hope as we get to the end of the war and out of it we may have more meetings.

Mr. MARSHALL: Is the vote not increased?

Mr. GARDINER: It is increased for next year as compared with this, but there is a decrease as compared with a previous year.

Mr. GRAYDON: I did not hear how often the advisory committee on agricultural services had met during the last fiscal year. Is the minister prepared to table a report of the advisory committee, as I think he promised to do last year?

Mr. GARDINER: The advisory committee does not really make a report in the sense of the reports which are tabled in the house. They are advisory to myself as minister and to the different provincial governments with regard to certain activities in relation to agriculture. There are subcommittees from which reports come.

Mr. GRAYDON: The minister omitted to answer one question, and that is the number of meetings held by the advisory committee during the past fiscal year.

Mr. GARDINER: There was really no general meeting of this committee. There have been meetings of subcommittees set up which were held in the last year. I have not the exact number, but there have been meetings and the fact that this committee has not met this last year is in part the reason why the expenses are down at this time for that purpose. Among the names I have given will be found those of the men who are busiest in the department during the war period, and it is difficult to have meetings.

Mr. GRAYDON: When the minister mentions subcommittees, is the general advisory committee divided into subcommittees for reasons of convenience and dispatch?

Mr. GARDINER: They appoint standing committees with different personnel.

Mr. DOUGLAS (Weyburn): Has the minister the personnel? I do not want a long list, but it would give some idea as to who the men are and what organizations they represent.

Mr. GARDINER: They could be put on *Hansard*, though I might read the names of the different chairmen: Agricultural Outlook Committee, Doctor J. F. Booth; Barley and Linseed Flax Committee, T. J. Harrison, of the Dominion Board of Grain Commissioners, Winnipeg; Seed Grain Committee, Doctor L. H. Newman; Regional Committee on Soil Drifting, Doctor E. S. Hopkins; Sheep Committee, James Telfer; Feed Committee, W. R. White; Beef Committee, R. S. Hamer; Weed Committee, Doctor K. W. Neatby; Soil Survey Committee, Doctor A. Leahey. The list can be given.

Mr. DOUGLAS (Weyburn): I hope that provision is made for representation from farm organizations like the pools and the cooperatives.

Mr. WEIR: These are scientific committees.

Mr. DOUGLAS (Weyburn): Well, even on scientific committees.

Mr. WEIR: Research.

Mr. DOUGLAS (Weyburn): I know that some are research, but it would be an excellent thing to have someone from the federation of agriculture or from the live stock or poultry or dairy pools sitting on the committees. After all, in the labour organization there has always been some labour man sitting on the committee, or where there has not been there should have been. The same should be true of agriculture. If the government is to get the best possible cooperation from the farmers across the country it will be obtained by having some farmers on the committee.

Mr. GARDINER: These committees consist of technical men from the provincial and federal branches, but they do hold meetings to which representatives of farm organizations are invited. They attend and discuss matters with them. The question whether there should be representation is one that can be given consideration, but up to date it has not been considered wise to have such representation on the committees. However, representatives of farm organizations are free at all times to discuss these matters with the committees, and they do make considerable use of that freedom.

Mr. DOUGLAS (Weyburn): It would be a fine gesture to have on the main committee the president or secretary, or perhaps the president and secretary, of the federation of agriculture, or some other person who would have contact with farmers' organizations. They could bring matters to the attention of the minister's department more readily and the minister would be able to make known his wants so as to get full cooperation from the farmers in any venture undertaken.

Mr. GARDINER: I shall hand the list to *Hansard:*

Subcommittees of the National Advisory Committee on Agricultural Services

Agricultural Outlook Committee

Doctor J. F. Booth, Chairman, Marketing Service, Dominion Department of Agriculture, Ottawa.

J. E. Lattimer	E. C. Hope
J. B. Rutherford	F. M. Clement
T. G. Major	W. V. Longley

Barley and Linseed Flax Committee

T. J. Harrison, Chairman, Dominion Board of Grain Commissioners, Winnipeg, Man.

O. S. Longman	Doctor L. H. Newman
L. Hutchinson	Doctor R. Newton
P. F. Bredt	Doctor E. W. Crampton
J. S. Moffatt	B. Catton
P. C. Watt	J. M. McCabe
Doctor H. C. Grant	R. Whiteman
G. Bailey	Doctor K. W. Neatby

Seed Grain Committee

Doctor L. H. Newman, Chairman, Dominion Cerealist, Central Experimental Farm, Ottawa.

W. T. G. Wiener	J. E. Blakeman
P. J. Olsen	S. H. Vigor
O. S. Longman	T. W. L. Burke
F. E. Foulds	N. Young

Regional Committee on Soil Drifting

Doctor E. S. Hopkins, Chairman, Associate Director, Experimental Farms Service, Ottawa.

O. S. Longman J. Mitchell

Sheep Committee

James Telfer, Chairman, Production Service, Dominion Department of Agriculture, Ottawa.

E. S. Archibald R. D. Sinclair
F. E. Lathe W. H. J. Tisdale
A. Morin G. W. Muir
R. Newton J. B. Smith,
A. M. Shaw Secretary

Feed Committee

W. R. White, Chairman, Production Service, Dominion Department of Agriculture, Ottawa.

R. G. Knox E. W. Crampton

Beef Committee

R. S. Hamer, Chairman, Director, Production Service, Dominion Department of Agriculture, Ottawa.

J. P. Sackville C. F. Bailey
R. G. Knox W. D. Davies
L. B. Thomson Secretary

Weed Committee

Doctor K. W. Neatby, Chairman, Director, Agricultural Department, North-West Line Elevators Association, Winnipeg, Man.

E. S. Hopkins W. H. Wright

Soil Survey Committee

Doctor A. Leahey, Chairman, Central Experimental Farm, Dominion Department of Agriculture.

F. A. Wyatt P. C. Stobbe
G. N. Ruhnke

Item agreed to.

4. Contributions to empire bureaux, $36,407.

Mr. GRAYDON: Perhaps this was put on *Hansard* last year, but the answer is not fresh in my mind. What is the function of the empire bureaux, and how are the contributions, as far as Canada is concerned, arrived at in the figures shown in the estimates?

Mr. GARDINER: The amounts paid by each of the different countries contributing are arrived at at conferences held from time to time. The last conference was in 1936, and present contributions have been set as a result of that conference. The different countries within the empire meet together for the discussion of questions that are of mutual interest.

Mr. GRAYDON: Who are the representatives on the bureaux as far as Canada is concerned?

Mr. GARDINER: The names of the different bureaux that make up the organization are: soil science bureau; animal health bureau; animal nutrition bureau; animal genetics bureau; two bureaux of plant genetics, one at Cambridge and one in Wales; bureau of fruit production; and bureau of agriculture parasitology. That is the group. There are special men who are carrying on that kind of work, scientific experts representing all the countries.

Mr. GRAYDON: Are any of the bureaux located in Canada?

Mr. GARDINER:: There is one here at the present time, Farnham House. That has been located here during the war, but its home is in Britain.

Mr. MARSHALL: There are four: Farnham House laboratory, imperial agricultural bureaux, imperial bureau of entomology; imperial bureau of mycology.

Mr. GARDINER: Yes.

Mr. MARSHALL: Are these bureaux the minister has just mentioned subdivisions of the four main organizations mentioned in the auditor general's report?

Mr. GARDINER: I should have read the additional bureaux organized since 1928. They are: dairy science bureau; the mycological institute, and the institute of entomology. These have been organized since and brought into the bureaux.

Mr. MARSHALL: Are they taken care of under the vote?

Mr. GARDINER: Yes, all of them.

Item agreed to.

Science service—

5. Science service administration, $25,005.

Mr. PERLEY: Under science service there are five or six items that are important. In the minister's report for the year ended March 31, 1943, page 11 refers to science services. In the second paragraph it states that the work of the science service is directed toward a solution of practical problems of agriculture through the application of scientific investigation. I think very important work is being carried on in that connection, and I should like to ask the minister what system is used for distributing the information. I know pamphlets are sent out from time to time by the department and occasionally I get some. Generally, what is the system, and is there real value given for the expenditure and the work carried on? I mean, does the public get the information that this service can give?

Mr. GARDINER: In connection with that activity every possible means of communication is made use of. We issue pamphlets and publish items in the weekly papers and have announcements made on the radio. As a

matter of fact, we utilize practically every possible means of getting information related to this particular activity over to the public.

Mr. PERLEY: What is the response? Do you get any response?

Mr. GARDINER: Yes. I understand there is continuous response coming in. We receive applications for further information and for some of the information that is referred to in write-ups in the press and announcements over the radio.

Mr. GRAHAM: I think this is the item under which I can secure the information from the minister that I would like to have. My question is in regard to a matter of which I have little personal knowledge, but in which I have a considerable interest, namely, the suggested scientific development in the matter of the growing and cultivation of sugar beets. My interest arises from the fact that in my constituency a very substantial irrigation project is under way. The soil is suited to the growing of sugar beets, but we are all aware that compared with cane sugar the production of sugar from sugar beets has not been free from added cost, so much so that one hesitates to impose this cost upon the consumers of this country. It is for that reason that I took considerable interest in an article that appeared recently in a magazine. In this article it is suggested that in the United States they are now able to split the beet seed. As I understand the difficulty with regard to the cost of growing sugar beets either in the United States or in Canada, it has been a matter of the very great amount of hand labour required. The seeds grow in clusters and the plants grow out of these seeds in clusters. The only way to properly cultivate and take care of the sugar beet plant was by hand labour. The suggestion is that recently a Mr. Roy Bainer has invented a machine or a process whereby the beet seed cluster is split into single seed units. The seeds can now be sown separately and, in addition to that, by some of the other labour saving devices that Mr. Bainer has brought forth, the plants can be cultivated and taken care of by machines rather than by hand labour. It is suggested that the labour costs would be reduced in this way by some ninety per cent.

Incidentally I notice that in the United States it is suggested that until that development had taken place, in order to support a $100,000,000 industry, bonuses by way of subsidy or otherwise had to be paid to the extent of some $300,000,000. It is no wonder that the sugar beet growers would hail with delight a development that would put them in a competitive position with growers of cane sugar. If it is correct, we in Canada can reasonably look forward to growing economically our own sugar supplies. As I say, on the irrigation project in Swift Current, which stretches from Swift Current through Waldeck, Rush Lake, Herbert, Morse and south towards Hodgeville, an area served by both the Canadian Pacific and the Canadian National railways. There is land very suitable for the growing of sugar beets if this were economical. I would like to know from the minister or from his officials whether their attention has been drawn to this development in that particular agricultural product, and if Canada is paying the attention that it should to the suggested economy in producing sugar from sugar beets.

Mr. GARDINER: There have been articles, I think, in *Time* magazine, the *Reader's Digest* and some other publications of that kind which have put forth the idea that you could take a sugar beet seed, which is in clusters, break it up into individual parts and thereby sow just one seed where you now sow clusters, and thus reduce the labour in connection with the thinning of the plants. I have some memory of hoeing beets and turnips and a few other things in my younger days, and I hope that this gentleman is right, that they have some kind of machine that will thin out these different vegetables, the seeds of which are sown in large numbers, and thus do away with the manual labour that has been necessary in the past. We have nothing to indicate that any system has been worked out which will get away from at least a greater part of the labour of thinning out these different kinds of plants which must be sown much thicker than you expect to have them finally in order to make sure that you have sufficient of them there to produce what you want to produce. Having sown them in that way by some method, you must go through and thin them. That is all the information we have in the matter, the information we read in these different articles that have been written with regard to it.

Mr. DOUGLAS (Weyburn): I do not know whether the question I am about to ask comes under this item, but last year there was a discussion in the committee with regard to Russian dandelion, and it was said that twenty per cent latex was being derived from them. I believe the minister said that some investigation was being made into it. Has the minister or his department a report of their findings?

Mr. GARDINER: We are growing the dandelions experimentally. It would be quite proper to discuss it under botany, or plant pathology, or experimental farms. The experiments are being carried out on our farms, and

the discussion might properly come under botany. Probably we can make greater headway if we discuss it when Doctor Archibald is here because he has more knowledge of it.

Mr. BLACKMORE: Before we get too far away from the subject which the hon. member for Swift Current raised, the matter of sugar manufactured from sugar beets, I think it would be well to point out to the committee that in 1937 the beet sugar factories located in my constituency sold their sugar at four cents a pound. That sounds almost unbelievable, does it not? Yet in that year they made over $150 an acre for every acre in sugar beets that year. That sum of money was divided between the farmers and the manufacturer. I think that gives the lie to those who have maintained that the production of beet sugar in Canada is uneconomic. Then more recently the process which was mentioned by an hon. member has come into use, and several new types of labour-saving machinery have become available or are on the verge of becoming available, so that I think and in fact I am safe in saying I am sure the production of beet sugar in Canada will become an industry which we simply cannot afford to ignore. It has great possibilities.

Mr. GARDINER: I presume the $150 were the gross receipts?

Mr. BLACKMORE: No; I believe those were the net profits; however, I shall get the figures. I had expected to discuss this matter under another item.

Mr. GARDINER: It really would come under the experimental farm item; but I would suggest that the hon. member get the figures, because if there is a net profit of $150 an acre on land growing sugar beets there is not much of an argument for some of the demands that have been made upon the government.

Mr. BLACKMORE: I am not prepared to say whether that figure was gross or net, but I shall be prepared to discuss the figures in detail when the suitable item comes up. Canada has been exceedingly unwise in neglecting the beet sugar industry for the last ten years, and the Canadian people are paying the price that the foolish administration of the country has made them pay.

Item agreed to.

Science service—

6. Animal and poultry pathology, $174,300.

Mr. SENN: It seems to me this is one of the most important items coming under this branch of the department. The live stock industry has become perhaps one of the greatest industries in Canada. On a previous occasion and again to-day the minister gave figures to show the rapid increase in poultry production in this country, and I think I am safe in saying that more difficulty is encountered in raising live stock than in any other branch of agriculture. Every year literally millions of dollars are lost to the farmers through different animal diseases. I suppose the minister will say that a large sum of money is provided under the health of animals branch for administration of the Animal Contagious Diseases Act, but it seems to me that more could and should be done for the farmers of Canada from the point of view of research.

A number of animal diseases are prevalent in this country at the present time. First, we have tuberculosis which, however, has been eliminated to a certain extent and is pretty well under control. Then we have Bang's disease, which is causing great loss to our farmers. Unfortunately farmers very often try to hide rather than treat this disease. I understand that serums have been developed and that the policy of the department has been changed to permit the use of such serums, though only two or three years ago they were not allowed, I suppose for obvious reasons. Even so, however, the manufacture of these serums is largely confined to small areas. I believe the Guelph agricultural college does produce serums for vaccination against Bang's disease, but I think this department might very well undertake the manufacture of such serums or at least see that they are manufactured in plentiful supply. Another bad disease which very much concerns live stock producers in Ontario is what is called shipping fever, or hemorrhagic septicaemia. Farmers buy cattle in the Toronto stockyard, or other places, and take them home for feeding. They must have those animals vaccinated right away, or they may suffer very serious loss, and in some instances that loss is suffered in spite of the vaccination. A farmer brings home a carload of cattle for which he has paid a good price, only to lose one or two from this disease, and I think something should be done to control this disease in the stockyards and in the cars in which these cattle are shipped. Then again we have nutritional diseases in swine; we have poultry diseases; we have parasitic diseases, sheep stomach worms and so on. I feel that I am giving the minister wise advice when I say that a great deal more money should be provided for research purposes along these lines. After all, the loss from these causes amounts to millions of

dollars, and I would ask the minister what is being done particularly in regard to Bang's disease and hemorrhagic septicaemia.

Mr. WOOD: Before the minister replies I should like to add a word to the observations made by the hon. member for Haldimand, who has brought up a matter of vital importance to the farmers of Ontario. Farming in this country would be made much easier if something could be done about the diseases which have been mentioned by the hon. member, but I should like to add to the list the disease of mastitis, which is causing the dairymen serious loss. I believe there are certain fields that might be investigated in connection with the control of that disease. Some serums have been used for a time and have appeared to be quite successful, but later they have been found to be of very little value. It seems to me one of the greatest hazards with which the farmer has to contend.

Mr. SENN: That is, the dairy farmer.

Mr. WOOD: Yes. Then it seems to me that some research should be done in connection with pullorum, a disease which attacks poultry, and that a serum might be developed which would create immunity to this disease, because we know that certain flocks have become immune to it. The present method of having to blood test every chicken to find out whether its eggs should be retained is laborious work; but if a flock could be made immune it would mean a great deal to the farmer. I believe it to be a fact that pullorum can never be stamped out. Sparrows have it; pigeons have it, and they more or less mix with the farm flock, so that it would seem futile to try to eradicate the disease unless we are prepared to wipe out all the wild birds. I believe, however, that an effort might be made to develop a serum which would give immunity to the disease, and if that could be done it would be a great step in the right direction.

There is another matter to which I think the department should give some attention, namely, the protection of pure bred breeders in connection with a system of breeding which is becoming quite popular in many sections; that is, artificial insemination. This will lend itself to a great deal of fraud if something is not done to give authority to certain men to practise in this particular field. Many farmers assert that they can carry on this work just as well as anyone else. I believe, however, it should be confined to a certain number of people, so that they will have some authority to sign a certificate, thereby ensuring that the mating of those animals has not been done fraudulently, and so that there would be sires of calves which would set up a system of artificial insemination.

Mr. WRIGHT: I should like to add my voice to those of other hon. members who have spoken with respect to the advisability of increasing or supplementing this important vote. To my mind it is a most important one. Our live stock industry has greatly increased, and with that increase there has been an advance in the incidence of disease among live stock. Among hogs in western Canada in the last two years, because of increased production we have found an increased development in disease. That disease may have been in existence before, but we had not had it on our farms. I know many farmers have become discouraged and are going out of hog production because certain diseases have cropped up. I believe that there should be more investigation and that any information the department has should receive wider circulation than it now receives.

In my view the circulation of such information might be done through municipal offices in western Canada. The people in those offices are interested in our farming population, and the information could be distributed through them. I would urge that there be more investigation in connection with hog diseases. There is a loss of from twenty-five per cent to thirty per cent in young pigs, and I believe that half of that might be saved if there were a little more knowledge on the part of people who are in production. It is a matter of being penny wise and pound foolish, if we do not have more work along this line, and have a greater distribution of information.

Mr. GARDINER: I would first answer the question asked by the hon. member for Haldimand with regard to Bang's disease. This is a matter which has been discussed each year since I have been in the department. The story is simply one of advancement in treatment, and attempting to deal with the attack this disease has made upon cattle in Canada. It has been determined that the vaccination of calves during calf-hood, particularly if they are vaccinated at from four to six months of age, gives a considerable amount of defence against invasion of the causative organism of Bang's disease. This is being made use of in a practical manner in controlling infectious abortion. It can only assist and will never replace sanitary measures.

Along with this comes the question of the possibility of vaccinating mature cattle with strains of low virulence. Since the organisms introduced must be alive, there is the possibility that these may colonize in the animal and produce the disease, and result in abortion

or permanent infection. Experiments of considerable proportions are under way in regard to this subject, and it is hoped that in the relatively early future this factor in Bang's disease particularly will be clearly understood.

That is the end of the review of what is being done, and the results that have been obtained from the experiments carried on up to date. I may say that the practice of marking animals which have once been found to have Bang's disease was brought into effect the first year I was Minister of Agriculture. They are marked with a "B" in the ear, and anyone who is buying cattle can know that they have been tested, and that they have shown reaction.

Mr. SENN: Would the minister say that the blood test which is made can be relied upon in all cases?

Mr. GARDINER: Yes, we rely upon it in all cases. There may be mistakes occasionally, but it is just as reliable as tests made for tuberculosis.

With regard to mastitis, I may say that experiments are continuing. Our studies with the various chemo-therapeutic agents which have been suggested have not given encouraging results, except when they are used in the very early stages of infection. So far as our studies have advanced they suggest that the control of economic loss from mastitis must be done by sanitary measures, together with chemo-therapy in the early infection.

Shipping fever has been given considerable attention in our laboratories. This is a disease which is generally considered as being due to the causative agent of haemorrhagic septicaemia, and appears to have a much wider etiological cause. We suspect, although we have not been able to prove it, that it is associated with a virus. At any rate, we can say that clinically shipping fever is not always due to the causative agent of haemorrhagic septicaemia, and that vaccination with this organism is not a satisfactory method of control. That experience we have had with it up to the present time.

Mr. SENN: But it is the only control there is, is it not?

Mr. GARDINER: Yes; it is the only control known at the present time.

The other question, as to the spread of disease among live stock, and particularly among hogs, owing to the fact that more farmers are raising hogs, and raising them in greater numbers, is one which is being taken care of, as far as is possible, through cooperation with the provincial authorities. That is to say, we have our men out working on it, and the provincial authorities have their men. We cover the different rural districts from time to time, and everything which can be done to assist farmers is being done; that is, everything that can be done with the expenditure of money we are now making.

The question as to whether expenditures should be increased is one which is always involved in building up our estimates. During war time we do not think we can spend any more than we are now spending. I quite realize it may be said in answer that probably we would be doing a great deal more for production of meat, and that kind of thing, by that method than by some other method. But there is the difficulty that we have a shortage of qualified men to act in the outlying districts, largely because for a long period of time it has not paid very well for men to take up the studies of a veterinary. The result is that we have not had as many as we could use, particularly with the number of stock spread across Canada. Probably there is not as much being done as might be done in that regard.

Mr. BLACKMORE: Would the minister consent to reverting to item 5? I should like to read a statement of the figures to which I referred a moment ago, so that it may be correct in *Hansard*. I went to my office to get the figures, and I now read from the submission of the Alberta cooperative sugar beet growers' association to the royal commission on dominion-provincial relations, commonly known as the Rowell-Sirois commission. This is what I find at page 2:

> To indicate the value of this industry—

And this is a reference to the sugar beet industry—

> —to the agriculture of our district, the community in general and the Dominion of Canada, we submit the following figures relating to the 1937 beet crop:
>
> 235,481 tons of beets were produced from 19,829 acres of irrigated land—an average of 11·88 tons per acre.
>
> 75,603,700 pounds of sugar were manufactured.
>
> 3,813 pounds was the per acre yield of refined sugar.
>
> $3,040,000 worth of sugar was manufactured.
>
> $155 was the total gross return per acre.
>
> $77.50 was the gross return to the manufacturer.
>
> $77.50 was the gross return per acre to the farmer.
>
> The farmers' costs approximated $60 per acre which includes $25 per acre paid for hand labour by the farmer. These figures were given in a speech made by T. George Wood, manager, Canadian Sugar Factories Limited, at Lethbridge, Wednesday, March 23, 1938. We believe that this land is producing more food value per acre than any other land in the dominion.

Mr. GARDINER: What became of the rest of the $155? The farmers' cost was approximately $60.

Mr. BLACKMORE: The rest of it would be income on irrigated land.

Mr. GARDINER: The cost of operating irrigated lands.

Mr. BLACKMORE: I shall go into this in greater detail if the minister desires.

Mr. GARDINER: Those figures show a gross return of $155 an acre and the farmer's costs approximate $60 an acre. Would that be labour?

Mr. BLACKMORE: The farmer's costs approximate $60 an acre, which includes $25 an acre for hand labour.

Mr. GARDINER: That other figure of $77.50, was that the profit of the refinery?

Mr. BLACKMORE: The farmer was getting $77.50 and the refinery was getting $77.50. The farmer's net would be $77.50 less $60 or $17.50.

Mr. FAIR: Could the minister give us the total value of cattle destroyed on account of Bang's disease since he became minister?

Mr. GARDINER: If the hon. member would wait until we get to health of animals we shall have those figures. It is eight years since I became minister.

Mr. FAIR: Is the best treatment for this disease to kill the animal, or can the disease be combated successfully by other means?

Mr. GARDINER: I stated a few moments ago that if the calf vaccine is used early enough, when the animal is from four to six months old, it is possible to check the disease to a certain extent, but as animals get older it is thought best to kill them.

Mr. FAIR: Have any other methods of taking care of this disease been discovered?

Mr. GARDINER: We have a Bang's disease control policy, but I repeat that the general idea is that when once an animal is marked as being afflicted with the disease the best thing to do is to kill it. There are quite a number of herds in Canada which are Bang's disease free. Animals have become marked and the owners simply have got rid of them.

Mr. FAIR: My experience has shown that even though diseased animals are cleaned out of the herd, other animals continue to get the disease. Has that been the experience all over Canada?

Mr. GARDINER: The fact that an animal has been afflicted and destroyed is not a guarantee that the rest of the herd will not become infected from some other source. That is possible at all times.

Mr. SENN: The minister has promised to bring down figures showing the losses on account of this disease.

Mr. GARDINER: The number of animals slaughtered.

Mr. SENN: There is another phase which concerns dairy animals particularly. When such an animal is infected the milk production is affected and there is great loss. Has any computation been made of that loss? The minister has stated that one of the means of controlling Bang's disease and hemorrhagic septicaemia is to adopt sanitary measures. I realize that those measures would be quite effective, but has anything been done to acquaint live stock producers with what sanitary controls are necessary? Is any literature being circulated?

There is another question I should like to ask. What laboratory facilities are available in the department at the present time? Where are these laboratories located and how are they manned? I suppose they are manned by veterinary surgeons, but are these men qualified to do research work? I should like a general statement on the laboratory situation throughout the country.

Mr. GARDINER: The main laboratory dealing with Bang's disease is just across the river in Hull. Then there is one at Lethbridge and one in British Columbia, just outside Victoria. They met with considerable success in their experiments. The material which I placed on *Hansard* this evening emphasizes that sanitary control is the important thing. That is true also with diseases that afflict hogs. Many farmers make a practice of not running hogs too long in the same yard. They move them from place to place in order to avoid having them become afflicted. There are pamphlets sent out covering all these things, and they go out by the thousands to farmers all over the country. They show the farmers how to take care of their flocks of sheep, their litters of hogs and their herds of cattle. The farmers are encouraged to write in for these pamphlets.

Mr. SENN: Many farmers who are in trouble with these diseases do not know that these pamphlets are available. Is any advertising done to acquaint the farmers with where they can obtain these pamphlets? The minister has stated that a number of herds are free from Bang's disease. I understand the

United States accepts the blood tests made on Canadian cattle. The minister also referred to the vaccination of calves at a certain age. As I understand it, this vaccine contains live organisms, and I should like to know if this vaccine remains effective until an animal reaches maturity. I understand that these organisms are never entirely absent from an animal. I think the minister understands what I am getting at.

Mr. GARDINER: The information I have is that they do not colonize in the calf and that as a result they are not found in the animal when a test is made in later life. They do not carry it on through.

Mr. SENN: Do they establish immunity?

Mr. GARDINER: Yes, they establish immunity. There was some question in the minds of officials of this department in the earlier stages in the use of the treatment, but I think they have come to agree that there is considerable merit in it and that it does establish immunity. Of course, one cannot be sure how long that immunity will last.

Mr. SENN: I do not think it is permanent.

Mr. RICKARD: Have these calves been vaccinated when under six months of age? Has the department had experience with the vaccine when the calves are eight months old? Will they be free from Bang's disease after that age, or is it only up to six months?

Mr. GARDINER: The treatment has been proven in experiments up to eight months, and experiments are being made with older animals. It has been pretty well established that the treatment is effective up to eight months.

Mr. RICKARD: Does it take longer to clear up after eight months?

Mr. GARDINER: Slightly longer.

Mr. NICHOLSON: I see under this vote that two veterinary inspectors are engaged at $2,520 each. How long have they been with the department and at what salary did they start?

Mr. GARDINER: They are two officials who are working in the plant at Hull and are classified as veterinary inspectors. They have been on the staff here for quite a few years.

Mr. COLDWELL: Are they qualified veterinary inspectors?

Mr. GARDINER: Yes.

Mr. COLDWELL: I wonder why they do not go into veterinary practice.

Mr. GARDINER: In the section where I am farming it was difficult until recently for a veterinary to make a living.

[Mr. Senn.]

Mr. COLDWELL: Can they live decently on that salary?

Mr. GARDINER: It is more than the average veterinary out in the country has been making in the last two or three years.

Mr. NICHOLSON: These men have to take university training, and I think it is unfortunate that the federal department should pay them such low salaries. The minister said they have been with the department for a number of years. Exactly how many years has a veterinary surgeon to work before he gets a salary of $2,520 a year? How long have these men been with the department?

Mr. GARDINER: The student has to take a five-year course, or just about as long as medicine for human beings, and it is rather an expensive course, but the difficulty is that many farmers do not make use of the veterinary to the extent they should sometimes because prices of animals have been low and they have not considered it worth while to use the veterinary's services.

Mr. COLDWELL: But these men are employed by the government.

Mr. GARDINER: Yes, doing inside work.

Mr. NICHOLSON: How long have they been with the department?

Mr. GARDINER: One for about twenty years and the other for about fifteen years.

Mr. NICHOLSON: Before the minister brings down his estimates for next year, some consideration should be given to an increase in salaries, especially after the minister has admitted that the health of animals is so important nowadays. It is disgraceful to require trained technical men to work for fifteen or twenty years at such a low salary range.

Mr. GARDINER: All of these men right through this list are veterinaries. They are not listed as such, but every man there is a veterinary, right up to the head of the branch, where the pay is $4,320. The salary depends upon the work they are doing. Apparently these two men are prepared to do the work which is required in these particular positions at that salary. I imagine they would appreciate it very much if they got more, but the salaries are standardized by the civil service commission.

Mr. SENN: I do not wish to hold up this item, but I wish to make one more appeal to the minister that more should be expended on this service. The losses to the live stock industry because of diseases are very great, and I think more should be expended on the prevention of diseases of animals, even if it is not expended under this item. I was going to

make a suggestion to the minister that if no other way can be found of increasing the amount, a small tax could be put on the live stock producers, who I am sure would be glad to pay a small amount per head of stock to see this research work enlarged and a much more comprehensive programme of research carried on. It would take very little per head of live stock throughout the country to raise sufficient funds to make this service a real asset to the farmers of the country. I leave that suggestion with the minister, that in any event more money should be expended on this service.

Mr. QUELCH: Who is responsible for granting permits to United States veterinaries to practise in Canada?

Mr. GARDINER: I understand that that comes under the provinces.

Mr. DOUGLAS (Weyburn): Would the minister make a statement now, or at some later stage when his estimates are before the committee, with reference to this and the other scientific service branches, dealing with their work for the benefit of those members of the committee who are not farmers. As I understand it, these are research branches seeking to gather information in regard to certain animal diseases. How are the results of their researches made available to the farmers? The minister says that literature is sent out. I should like to know on what basis it is sent out. Does the farmer know where to send for it? Is a mailing list kept? Also with regard to vaccines, are they made available to farmers through the provincial departments of agriculture? Going around last fall, I found the live stock producers experiencing contagious abortion among cattle and erysipelas among hogs. The veterinaries were terribly overworked. In the second place I found that many farmers did not know how to go about dealing with that particular situation because some of them had started to raise live stock only since the war began. How do they go about getting this information? Would the minister tell the committee so that the farmers will know how the results of this research work can be made available to them.

Mr. GARDINER: Health, of course, whether of animals or of human beings, is largely under the control of the provinces, and in most of the provinces they have district representatives who are out covering those areas. That is true in Saskatchewan and elsewhere. These men are very well informed as to all the different treatments that can be given, and then there are, of course, in some districts the veterinarians who are consulted. Publications are put out in great numbers by the department in all sections of the country, and there are articles in the local papers which can be read by the farmers, and which give a great deal of information. In the district in which I farm, the best agent is the druggist who handles many of the treatments. He gives more publicity to what can be done and probably gives better service to the farmers than anyone else. He is in the district and keeps track of all treatments that can be used, and he takes the trouble to go among the farmers and indicate what can be done. That, of course, is part of his own business in distributing the things he has to sell. In the different districts it is done in different ways, but most farmers are well informed as to what can be done, where to get information and how to use the different treatments, though, of course, it is like everything else concerning disease; the treatment is not always administered at the right time and is, therefore, not preventive but rather curative.

Mr. DOUGLAS (Weyburn): Does the federal government supply the vaccine to the farmers?

Progress reported.

On motion of Mr. Mackenzie (Vancouver Centre) the house adjourned at 11:05 p.m.

Monday, March 6, 1944

The house met at three o'clock.

PRIVILEGE

REFERENCE TO REMARKS IN SASKATCHEWAN LEGISLATURE

Mr. M. J. COLDWELL (Rosetown-Biggar): Before the business of the house is proceeded with may I say that in the Ottawa *Citizen* of Saturday, March 4, there appears on page 9 a report of a meeting of the Saskatchewan legislature. In the course of that report Mr. Carl Stewart, member for Yorkton, Saskatchewan, is reported to have said:

> I make the charge that Mr. Coldwell, Mr. Castleden and Mr. Feeley have improperly interfered with the board to keep men out of uniform.

Mr. Feeley is a member of the Saskatchewan legislature, and the board referred to is the moboiization board. I wish to say that the charge is wholly false, and comes from a person of whom the present chairman of the mobilization board, Mr. Justice Anderson, said on December 4, 1943, that "people who know Mr. Stewart would not take his criticism too seriously."

Some hon. MEMBERS: Order.

Mr. COLDWELL: I think it is my right to say that if Mr. Stewart has any charge to lay against any member of parliament for improper conduct the place to lay it is with the responsible minister in order that the matter may be reported to this house and dealt with in a proper manner.

Mr. G. H. CASTLEDEN (Yorkton): On a question of privilege, Mr. Speaker, arising out of the same dispatch, my name was mentioned as having improperly interfered with the operations of the same board in the province of Saskatchewan. I also wish to state that this charge is absolutely false. Evidence produced at different times in this house proves fairly conclusively that the Saskatchewan board is completely out of line in its attitude towards potsponements with the other boards across Canada. As an instance I refer to the statement of the Minister of National War Services, which is found on page 4306 of *Hansard* of November 12, 1941, which reveals that during the training periods—

Some hon. MEMBERS: Order.

Mr. SPEAKER: The hon. member is now going far beyond any question of privilege.

Mr. CASTLEDEN: On a question of privilege have I not the right to state that in the absence of any evidence to support this charge we are asking for the tabling of all correspondence with respect to the dealings of this board, and we repeat that this statement is absolutely false.

CANADIAN ARMY

DECORATIONS FOR GALLANTRY

Hon. J. L. RALSTON (Minister of National Defence): On February 28 I told the house that the list of the members of the Canadian army who have received decorations for gallantry in this war would be tabled just as soon as a number of recent operational awards had been gazetted. Those latest awards have now been gazetted and appear in the special edition of the *Canada Gazette* published to-day.

I now have the privilege of submitting to the house the names of almost five hundred members of the Canadian army to whom honours have been awarded by His Majesty for deeds of gallantry and devotion to duty in this war. With the unanimous permission of the house I would ask that these names be given a permanent record on *Hansard*.

With the exception of the Victoria Cross, it is not the practice to publish the citations showing the detailed circumstances under which the awards were earned. In the case of the award of the Victoria Cross the practice is to publish not only the name but the citation as well. That decoration, as the house knows, is the highest award for valour and devotion to duty that can be conferred on a member of the fighting forces by his king.

There are two awards of the Victoria Cross in the list which I am submitting to-day. One has already been published. It is the award to Lieutenant-Colonel Cecil Merritt for heroic and inspiring leadership at Dieppe. The citation appeared in the *Canada Gazette* of October 10, 1942. I shall read it, Mr. Speaker, in order that it may be on *Hansard*:

> The King has been graciously pleased to approve the award of the Victoria Cross to:
>
> Lieutenant-Colonel Charles Cecil Ingersoll Merritt, the South Saskatchewan Regiment.
>
> For matchless gallantry and inspiring leadership whilst commanding his battalion during the Dieppe raid on the 19th August, 1942.
>
> From the point of landing, his unit's advance had to be made across a bridge in Pourville which was swept by very heavy machine-gun, mortar and artillery fire; the first parties were mostly destroyed and the bridge thickly covered by their bodies. A daring lead was required; waving his helmet, Lieutenant-Colonel Merritt rushed forward shouting "Come on over! There's nothing to worry about here."
>
> He thus personally led the survivors of at least four parties in turn across the bridge. Quickly organizing these, he led them forward and when held up by enemy pill-boxes he again headed rushes which succeeded in clearing them. In one case he himself destroyed the occupants of the post by throwing grenades into it. After several of his runners became casualties, he himself kept contact with his different positions.
>
> Although twice wounded Lieutenant-Colonel Merritt continued to direct the unit's operations with great vigour and determination and while organizing the withdrawal he stalked a sniper with a Bren gun and silenced him. He then coolly gave orders for the departure and announced his intention to hold off and "get even with" the enemy. When last seen he was collecting Bren and tommy guns and preparing a defensive position which successfully covered the withdrawal from the beach.
>
> Lieutenant-Colonel Merritt is now reported to be a prisoner of war.
>
> To this commanding officer's personal daring the success of his unit's operations and the safe reembarkation of a large portion of it were chiefly due.

Mr. BLACK (Cumberland): If the minister would allow me to do so I should like to add that this man is also a great grandson of a former prime minister of this country, Sir Charles Tupper, one of the greatest of Canadians.

Mr. MACKENZIE (Vancouver Centre): And he comes from Vancouver city.

Mr. RALSTON: The other award of the Victoria Cross appears in the special edition of the *Canada Gazette* which is issued to-day, along with about fifty other late operational awards. The recipient is Captain (acting Major) Paul Triquet, a member of the famous Royal 22nd Regiment. The award to Captain (acting Major) Triquet is also for heroic and resourceful leadership. The scene was the battle of Ortona in Italy. I shall read that citation:

The King has been graciously pleased to approve the award of the Victoria Cross to:

Captain (acting Major) Paul Triquet, Royal 22e Regiment.

For determined leadership and example.

The capture of the key road junction on the main Ortona-Orsogna lateral was entirely dependent on securing the hamlet of Casa Berardi. Both this and a gully in front of it had been turned by the Germans into formidable strong points defended by infantry and tanks.

On 14 December, 1943, Captain Triquet's company of the Royal 22e Regiment with the support of a squadron of a Canadian armoured regiment was given the task of crossing the gully and securing Casa Berardi. Difficulties were encountered from the outset. The gully was held in strength and on approaching it the force came under heavy fire from machine guns and mortars. All the company officers and fifty per cent of the men were killed or wounded. Showing superb contempt for the enemy, Captain Triquet went round reorganizing the remainder and encouraging them with the words, "Never mind them, they can't shoot," finally when enemy infiltration was observed on all sides, shouting "There are enemy in front of us, behind us and on our flanks, there is only one safe place, that is on the objective," he dashed forward and with his men following him broke through the enemy resistance. In this action four tanks were destroyed and several enemy machine gun posts silenced.

Against bitter and determined defence and under heavy fire, Captain Triquet and his company in close cooperation with the tanks, forced their way on until a position was reached on the outskirts of Casa Berardi. By this time the strength of the company was reduced to two sergeants and fifteen men. In expectation of a counter-attack, Captain Triquet at once set about organizing his handful of men into a defensive perimeter around the remaining tanks and passed the mot d'ordre "Ils ne passeront pas." A German counter-attack supported by tanks developed almost immediately. Captain Triquet, ignoring the heavy fire, was everywhere encouraging his men and directing the defence, and by using whatever weapons were to hand personally accounted for several of the enemy. This and subsequent attacks were beaten off with heavy losses and Captain Triquet and his small force held out against overwhelming odds until the remainder of the battalion took Casa Berardi and relieved them the next day.

Throughout the whole of his engagement Captain Triquet showed magnificent courage and cheerfulness. Wherever the action was hottest he was to be seen shouting encouragement to his men and organizing the defence. His utter disregard of danger, his cheerfulness and tireless devotion to duty were a constant source of inspiration to them. His tactical skill and leadership enabled them, although reduced by casualties to a mere handful, to continue their advance against bitter resistance and to hold their gains against determined counter-attacks. It was due to him that Casa Berardi was captured and the way opened for the attack on the vital road junction.

Mr. Speaker, the Canadian army is proud indeed of the exploits of all these gallant comrades. The record in all these cases shows high qualities of sacrifice and heroism and endurance. These deeds are not only an inspiration to their comrades; they are equally an example and a challenge to those of us at home. They have brought great honour to Canada.

The list of names and awards follows:

APPENDIX "A"

Operational Gallantry Awards

Victoria Cross (V.C.)
Distinguished Service Order (D.S.O.)
Bar to The Military Cross
Military Cross (M.C.)
Distinguished Conduct Medal (D.C.M.)
Military Medal (M.M.)
Mentions in Despatches
Foreign Awards

Operational Gallantry Awards

The Victoria Cross (V.C.)

Rank and Name—Corps—Address

Lt.-Col. C. C. I. Merritt, Canadian Infantry Corps, 201 Charles Street, Belleville, Ontario.

Capt. (A/Major) P. Triquet, Canadian Infantry Corps, Cabano, Temiscouata Co., Que.

The Distinguished Service Order (D.S.O.)

Maj.-Gen. J. H. Roberts, M.C., Kingston, Ontario.

Brigadier S. Lett, M.C., E.D., 1728-40th Avenue W., Vancouver, B.C.

Brigadier C. C. Mann, 150 Balmoral Avenue, Toronto, Ontario.

Lt.-Col. R. D. King, Canadian Infantry Corps, Summer Street, Cornwallis Manor, Halifax, N.S.

Lt.-Col. D. Ménard, Canadian Infantry Corps, 189 Blvd. de L'Entente, Quebec, P.Q.

Major J. Begg, E.D., Canadian Armoured Corps, 633-7th Avenue W., Calgary, Alta.

Major D. G. Cunningham, Canadian Infantry Corps, 270 Albert Street, Kingston, Ontario.

Major A. H. Fraser, Canadian Infantry Corps, 935 St. Charles Street, Victoria, B.C.

Major A. T. Law, Canadian Infantry Corps, 117 Sunnyside Blvd., Sturgeon Creek, St. James County, Man.

Major J. E. McRae, Canadian Infantry Corps, 2209 Oak Bay Avenue, Victoria, B.C.

Captain (A/Major) M. E. P. Garneau, Canadian Infantry Corps, 2174 Lincoln Avenue, Montreal, P.Q.

Captain W. D. Whitaker, Canadian Infantry Corps, 5 Montclair Avenue, Toronto, Ontario.

Captain G. A. Browne, The Royal Canadian Artillery, 55 Delaware Avenue, Ottawa, Ontario.

Maj.-Gen. G. G. Simonds, C.B.E., DeBary Apartments, Wardlaw Avenue, Winnipeg, Man.

Brigadier H. D. Graham, E.D., Trenton, Ontario.

Brigadier C. Vokes, 433 Besserer Street, Ottawa, Ontario.

Lt.-Col. E. L. Booth, Canadian Armoured Corps, Penetanguishene, Ontario.

Lt.-Col. J. C. Jefferson, E.D., Canadian Infantry Corps, 11319-79th Street, Edmonton, Alta.

Lt.-Col. B. A. Sutcliffe, E.D., Canadian Infantry Corps, R.R. No. 2, Trenton, Ontario.

Lt.-Col. G. Walsh, The Corps of Royal Canadian Engineers, Oakville, Ontario.

Major H. P. Bell-Irving, Canadian Infantry Corps, Vancouver, B.C.

Major K. J. Southern, The Corps of Royal Canadian Engineers, 584 Red River Road, Port Arthur, Ont.

Major G. A. Welsh, The Royal Canadian Artillery, Sunderland, Ont.

Brigadier A. B. Matthews, 3 Clarendon Crescent, Toronto, Ont.

Lt.-Col. B. M. Hoffmeister, Canadian Infantry Corps, 4749 Belmont Ave., Vancouver, B.C.

Lt.-Col. G. Kitching, Canadian Infantry Corps, Shoreham-by-Sea, Sussex, England.

Lt.-Col. H. M. Hague, E.D., The Royal Canadian Artillery, 4477 Montrose Ave., Westmount, Que.

Major W. G. Bury, E.D., Canadian Infantry Corps, 10933-80th Ave., Edmonton, Alta.

Major A. S. Donald, Canadian Infantry Corps, 9842-112th St., Edmonton, Alta.

Brigadier R. A. Wyman, E.D., 11214-67th St., Edmonton, Alta.

Lt.-Col. J. P. E. Bernatchez, O.B.E., Canadian Infantry Corps, Montmagny, Que.

Lt.-Col. M. P. Bogert, Canadian Infantry Corps, 1227 Sherbrooke St. W., Montreal, Que.

Lt.-Col. I. S. Johnston, Canadian Infantry Corps, 81 Binscarth Roard, Toronto, Ont.

Lt.-Col. J. N. Lane, The Royal Canadian Artillery, Halifax, N.S.

Lt.-Col. C. H. Neroutsos, Canadian Armoured Corps, 1757 Allison Road, University Hill, Vancouver, B.C.

Major (A/Lt.-Col.) C. B. Ware, Canadian Infantry Corps, 66 Forest Hill Road, Toronto, Ont.

Major R. B. Fraser, The Corps of Royal Canadian Engineers, 312 Lonsdale Road, Toronto, Ont.

Bar to the Military Cross (M.C.)

Captain P. Lieven, M.C., The Royal Canadian Artillery, Montreal, Que.

Captain N. B. Buchanan, M.C. The Royal Canadian Artillery, St. Stephen, N.B.

The Military Cross (M.C.)

Capt. L. G. Alexander, The Royal Canadian Army Medical Corps, 1306 Scotland St., Calgary, Alta.

Capt. H. B. Carswell, The Royal Canadian Artillery, Ottawa, Ontario.

Capt. F. W. Hayter, The Royal Canadian Army Medical Corps, Alameda, Sask.

Capt. H. J. Kennedy, Canadian Infantry Corps, 1100 Ouellette Ave., Windsor, Ont.

Capt. R. H. Lajoie, Canadian Infantry Corps, 360 Redfern Ave., Westmount, Que.

Cap. D. F. MacRae, Canadian Infantry Corps, 214 Pitt St., Cornwall, Ont.

Capt. R. J. Wilkinson, Canadian Infantry Corps, 18 Clappertor St., Barrie, Ont.

H/Capt. J. P. Browne, Canadian Chaplain Services, Dauphin, Man.

Lieut. J. C. H. Anderson, Canadian Infantry Corps, 65 Burnaby Blvd., Toronto, Ont.

Lieut. P. Benoit, Canadian Infantry Corps, Montreal, Que.

Lieut. J. G. Counsell, Canadian Infantry Corps, 5226 Cote St. Antoine Rd., Montreal, Que.

Lieut. W. A. Ewener, The Corps of Royal Canadian Engineers, 494 Wellington St., Sarnia, Ont.

Lieut. J. B. Gartshore, Canadian Infantry Corps, R.R. No. 3, Dundas, Ont.

Lieut. A. C. Kavanagh, Canadian Infantry Corps, 571 Home St., Winnipeg, Man.

Lieut. P. P. Loranger, Canadian Infantry Corps, Montreal, Que.

Lieut. J. E. E. McManus, Canadian Infantry Corps, 554 Driveway, Ottawa, Ont.

Capt. J. Runcie, Canadian Infantry Corps, Mayfair Apts., Winnipeg, Man.

Lieut. A. A. Masson, Canadian Infantry Corps, 5978 Durocher, Outremont, Que.

Capt. A. F. Graham, The Royal Canadian Army Medical Corps, 112 St.Clair Ave. West, Toronto, Ont.

Capt. W. H. V. Matthews, Canadian Infantry Corps, c/o Milnes Landing, Sooke, Vancouver Island B.C.

Capt. N. B. Buchanan, The Royal Canadian Artillery, St. Stephen, N.B.

Capt. P. Lieven, The Royal Canadian Artillery, Montreal, Que.

Capt. R. C. Coleman, Canadian Infantry Corps, Montreal, Que.

Capt. W. K. MacDonald, The Royal Canadian Army Medical Corps, 220 Kent St., Charlottetown, P.E.I.

Capt. H. D. P. Tighe, Canadian Infantry Corps, 8 St. George's Cresc., Edmonton, Alta.

Capt. N. R. Waugh, Canadian Infantry Corps, 224A Pitt St., Cornwall, Ont.

Lieut. (A/Capt.) L. Bouchard, Canadian Infantry Corps, Riviere du Loup, Quebec.

Lieut. (A/Capt.) M. J. A. Trudeau, Canadian Infantry Corps, 613 Rue St. Jean, Quebec, Que.

Lieut. G. E. Atkinson, The Corps of Royal Canadian Engineers, Port Rowan, Ont.

Lieut. R. Carey, Canadian Infantry Corps, Davie Street, Vancouver, B.C.

Lieut. H. T. Carson, Canadian Armoured Corps, 127 Second Avenue, Ottawa, Ont.

Lieut. N. W. Dickson, The Corps of Royal Canadian Engineers, 519 Burnell Street, Winnipeg, Man.

Lieut. G. C. Evans, The Royal Canadian Artillery, McAdam Junction, N.B.

Lieut. W. K. Heron, The Corps of Royal Canadian Engineers, Asbestos, Que.

Lieut. E. St. J. C. Murdoch, The Royal Canadian Artillery, MacLeod, Alta.

Lieut. P. F. Potvin, Canadian Infantry Corps, 85 Rue Claire-Fontaine, Quebec, Que.

Lieut. O. L. Roberts, Canadian Armoured Corps, 269 Dufferin Avenue, London, Ont.

Lieut. R. W. Ryckman, Canadian Armoured Corps, LeRoy Avenue, Darian, Conn., U.S.A.

Capt. G. L. F. McNeil, Canadian Infantry Corps, Grand Narrows, N.S.

Capt. D. J. Watson, The Royal Canadian Artillery, Pincher, Creek, Alta.

Lieut. E. W. S. O'Toole, Canadian Armoured Corps, 2156 Sherbrooke St. W., Montreal, Que.

Lieut. G. Robitaille, Canadian Infantry Corps, 5 Ste. Catherine St., Lauzon, Levis, P.Q.

Capt. (A/Major) D. W. McLean, Canadian Infantry Corps, 4299 Montrose Ave., Montreal, Que.

H/Capt. (A/H/Major) R. O. Wilkes, Canadian Chaplain Services, 627 Young Street, Winnipeg, Man.

H/Capt. J. L. Wilhelm, Canadian Chaplain Services, Walkerton, Ont.

Capt. R. M. Dillon, Canadian Infantry Corps, 25 Marley Place, London, Ont.

Capt. G. M. C. Sprung, Canadian Intelligence Corps, 260 Metcalfe Street, Ottawa, Ont.

Lieut. M. C. D. Bowman, Canadian Infantry Corps, 362 Walmer Road, Toronto, Ont.

Lieut. J. A. Dougan, Canadian Infantry Corps, Barrie, Ont.

Lieut. G. R. Guy, Canadian Infantry Corps, 217 Cobourg Road, Halifax, N.S.

Capt. H. W. Chestnut, The Royal Canadian Army Medical Corps, Moosomin, Sask.

Capt. G. D. Mitchell, The Royal Canadian Artillery, 661 Grosvenor Avenue, Westmount, P.Q.

Capt. (A/Major) E. A. C. Amy, Canadian Armoured Corps, Kentville, King's Co., N.S.

Capt. (A/Major) J. P. Fletcher, The Royal Canadian Army Medical Corps, 19 Tranby Avenue, Toronto, Ont.

Capt. (A/Major) F. J. Hammond, Canadian Infantry Corps, 336 Christie Street, Pembroke, Ont.

Capt. (A/Major) H. A. Smith, Canadian Armoured Corps, Dauphin, Man.

Capt. (A/Major) J. R. Walker, Canadian Armoured Corps, 1183 Gauthier Street, Three Rivers, Que.

Capt. (A/Major) S. W. Thomson, Canadian Infantry Corps, Salmon Arm, B.C.

Capt. P. L. Cadegan, The Royal Canadian Corps of Signals, 6 Blackett Street, Glace Bay, N.S.

Capt. L. I. Knowles, Canadian Armoured Corps, 180 Lisgar St., Ottawa, Ont.

H/Capt. J. F. Goforth, Canadian Chaplain Services, 55 Belmont Street, Toronto, Ont.

Lieut. (A/Capt.) J. H. Jones, Canadian Infantry Corps, 23 Elliott Street, Dartmouth, N.S.

Lieut. (A/Capt.) J. C. MacNeil, Canadian Infantry Corps, 140 Mountain Road, New Glasgow, N.S.

Lieut. (A/Capt.) H. A. R. Martin, The Royal Canadian Artillery, 3459 Peel Street, Montreal, P.Q.

Lieut. J. L. K. Buchan, Canadian Armoured Corps, 48 High Park Blvd., Toronto, Ont.

Lieut. A. J. Charbonneau, Canadian Armoured Corps, 554 Lisgar Street, Ottawa, Ont.

Lieut. F. W. Hamilton, The Corps of Royal Canadian Engineers, Baldur, Man.

Lieut. S. C. Kenyon, The Corps of Royal Canadian Engineers, 36 Longwood Rd. S., Hamilton, Ont.

Lieut. D. R. Sharpe, Canadian Infantry Corps, 150 St. John St., Woodstock, Carleton Co., N.B.

Lieut. J. F. Wallace, Canadian Armoured Corps, 48 Mary Street, Barrie, Ontario.

The Distinguished Conduct Medal (D.C.M.)

D61000 W.O.1 (RSM) R. Levesque, Canadian Infantry Corps, 974 Amherst Street, Montreal, P.Q.

H19266 W.O.2 (CSM) G. Gouk, Canadian Infantry Corps, 844 Ingersoll Street, Winnipeg, Man.

P/2/Lieut. V. H. Zala, Canadian Infantry Corps, 941 McDonald St., Duncan, Victoria Isl., B.C.

K71360 Corporal J. Carlson, The Royal Canadian Army Medical Corps, Bellevue, Alta.

Mr. GORDON GRAYDON (Leader of the Opposition): Following the tabling of the names of those who have been decorated for gallantry I should like to compliment the minister for his references to the two gallant gentlemen, Lieutenant Colonel Merritt and Captain Triquet, who by their heroism have shown that Canada is playing a part in this

global war which excites the enthusiasm of us all and merits our undying gratitude. Last session I suggested to the Prime Minister that these awards should be mentioned in the house from time to time, and I want to thank the government for having done so.

I rose particularly to make a personal reference in connection with this matter, for which I hope I may be pardoned. Before war broke out a young man, William Manley, went from my own town of Brampton and became a private in the British army. In the early battles in Libya, in 1941, he died at his post after displaying such gallantry that he was posthumously awarded the Victoria Cross. I think he was the first man from Canada to win this highest of all decorations, though at the time he was not a member of the Canadian army. We are very proud of this young man, and I thought that pride should be shared by this parliament and this nation.

RETURN TABLED

SOLDIER SETTLERS—QUIT CLAIMS AND REPOSSESSION

Hon. T. A. CRERAR (Minister of Mines and Resources): I wish to table return No. 435, moved for by the hon. member for Battle River (Mr. Fair), in respect to soldier settlers who signed quit claim deeds or who were served with repossession notices, and so on, asking the dates of the original purchase in each case, and similar questions. For the information of my hon. friend, and by way of apology and perhaps explanation, I want to say that this motion first appeared on the order paper last June in the form of a question. On July 1, 1943, it was passed as an order for return, so that considerable time has elapsed since the order was passed. I may say, by way of apology to my hon. friend for the delay, that the return did involve a considerable amount of work. I asked the treasury official in the department to give me a summary of the time spent in preparing the reply, and the value of the time so required. I find that two senior members of the accounting staff, Mr. Woolsey and Mr. Little, were employed for two months, on an average salary of $230 per month. Then, four of the clerical staff were employed for two months in assembling detail, and their average salary was $125 a month. In addition, three typists were employed for a week in typing and checking the final return, and for that time their salaries aggregated $60. In addition to these I find that one senior clerk was employed for one month reviewing files and records of acreage development over an average of twenty-three years, and also looking up values at dates of rescission. This service cost $200. I give this information to my hon. friend in explanation of the delay. The full value of time employed in preparing the answer to the return was $2,180.

Mr. ROBERT FAIR (Battle River): I thank the minister for bringing down this information. I had a specific reason for getting it. I believe if the minister would compare some of the hardships endured by those settlers about whom I have inquired he would agree the amount he has mentioned is infinitesimal indeed. I thank him however for bringing down the return.

FORM OF QUESTIONS AND MOTIONS FOR PAPERS—TIME AND COST INVOLVED

Mr. MACKENZIE KING: Mr. Speaker, this might be an opportune time to draw the attention of hon. members to the amount of investigation required in the departments in answering some of the questions and bringing down some of the returns.

As hon. members will have heard, the return just tabled has cost the country $2,180. I doubt very much if that particular expenditure will be approved by the country. Many orders are passed calling for more information than should be asked from the administration, and this particularly at a time when war expenditures are very heavy. In addition there is the time members of the public service require to get information of the kind asked. I believe it is only right to suggest to hon. members that in asking questions, and particularly in respect of motions for orders for returns, they consider the most compact or concise form in which these questions and motions might best be put.

Mr. GRAYDON: I agree with the Prime Minister that there is no special reason why either individual departments or the government should be subjected to an undue amount of work, or, in particular, be put to undue expense, in preparing answers to returns and questions. But I believe the Prime Minister will be the first to agree that the value of answers to questions and of returns to orders of the house cannot be measured fully from the point of view of the work involved, or from that of dollars and cents. Often these questions and returns are founded on a principle which, in the days that lie ahead, will save large amounts of money, because the information brought down brings to the attention of the government and the house the urgent need for reforms. I believe we must judge each question upon its merits, rather than accept a broad or general statement

covering all returns and questions in respect of different matters which might be the subject of inquiry.

Mr. FAIR: I am not sure whether I am expected to make an apology for the expense, but if that is the case I have no intention of doing so—I believe the soldier settlers have been wronged and if the government will give them clear titles to their lands—

Some hon. MEMBERS: Order.

Mr. FAIR: —I shall ask nothing further in connection with this matter.

RADIO BROADCASTING

REGULATIONS RESPECTING BROADCASTING OF ADDRESSES BEFORE POLITICAL ORGANIZATIONS

Hon. L. R. LaFLECHE (Minister of National War Services): Mr. Speaker, I should like to answer a question put the other day by the hon. member for Rosetown-Biggar (Mr. Coldwell). He asked whether the regulations governing the broadcasting of addresses before political meetings and organizations over private radio stations had been changed. The last directives are to be found in the censorship directives handbook I laid on the table on January 28, 1944.

JUDGES ACT

SALARIES OF JUDGES IN OFFICE AFTER REACHING THE AGE OF SEVENTY YEARS

Mr. S. H. KNOWLES (Winnipeg North Centre) moved for leave to introduce Bill No. 9, to amend the Judges Act (salaries of judges).

Some hon. MEMBERS: Explain.

Mr. KNOWLES: Mr. Speaker, this bill would add a new subsection to section 28 of the Judges Act, which is chapter 105 of the revised statutes of Canada, 1927. The authority for legislation such as that proposed in this bill is to be found in section 100 of the British North America Act.

The purpose of the proposed addition is to provide that any judge of a superior court of any province or of the Yukon territory who continues or is continued in office after attaining the age of seventy shall have his salary reduced to an amount equal to that which he would receive by way of retiring allowance if he were retired at seventy, less any sum which he may receive from a provincial government by way of other remuneration. The new salary rate will commence when the judge attains the age of seventy years, or on the 1st day of September, 1944, whichever is the later date. In the case of a judge, appointed prior to the passing of this bill, who would not be entitled to a retiring allowance if he were to retire at the age of seventy, the operation of the act will be postponed until he is eligible for a retiring allowance.

This bill is similar to one which was passed by the House of Commons on the 10th of May, 1933, but which was rejected by the senate. Apart from the effective date, the bill is exactly the same as the one passed by this house in 1933, but for two differences. In the first place the former bill stipulated seventy-five as the age at which the provisions of that bill were to apply, whereas this bill stipulates the age of seventy. Secondly, the former bill made an exception in the case of judges not eligible for retiring allowance at the stipulated age, whether appointed before or after the passing of the bill. In this bill the same exception is provided, but only in the case of judges appointed prior to the passing of this bill.

This bill is in line with the points made in the house by the governments of the day, both in 1927 and in 1933, relating to the judiciary. I submit that it offers a reasonable way of effecting a desirable change, pending amendment of the British North America Act.

Motion agreed to and bill read the first time.

QUESTIONS

PRODUCTION OF GARMENTS FOR CIVILIAN USE

Mr. NICHOLSON:

1. What was the estimated production of children's garments for the year 1943, and how many of these garments had been delivered for sale in Canada by January 1, 1944?

2. What is the estimated annual production of men's overalls for civilian use during, (a) 1935 to 1939; (b) 1941; (c) 1942; (d) 1943, and how many of the overalls produced during 1943 were available in stores by January 1, 1944?

3. What was the estimated annual production of white flannelette during, (a) 1935 to 1939; (b) 1941; (c) 1942; (d) 1943, and how much of the flannelette produced in 1943 was available in stores by January 1, 1944?

4. What is the estimated quantity of towelling manufactured for civilian use during, (a) 1935 to 1939; (b) 1941; (c) 1942; (d) 1943, and how much of the towelling produced for civilian use in 1943 was available in stores by January 1, 1944?

Mr. ABBOTT:

1. The estimated production of children's garments for the year 1943 was 2,453,273 dozen; consisting of:—

	Dozen
Woven fabric garments for children up to 14 years	950,412
Woven fabric garments for infants	267,051
Knitted outer wear for children up to 14 years	343,636
Knitted outerwear for infants	145,347
Infants' and children's underwear	746,827
Total	2,453,273

There was in addition, estimated production of 92,949 dozen hats and 1,500,000 dozen pairs of socks and stockings. It is estimated that practically all of this production had been delivered for sale in Canada by January 1, 1944; that there was no accumulaton of inventories in manufacturers' hands. Nominal numbers of some of these garments were procured for export to countries dependent on Canada for supplies and small numbers were procured by relief organizations for the bombed out children of the United Kingdom.

2. The estimated production of men's overals for civilian use in the years 1935 to 1943 inclusive was as follows:

1935	2,903,580
1936	2,891,952
1937	3,303,536
1938	2,741,580
1939	3,175,764
1940	3,219,520
1941	3,834,019
1942	3,245,862
1943	3,025,971

The above production data included in all years a number of overall coats. The comments in respect of the quantities delivered for sale by January 1, 1944, given in 1 above apply in this connection as well. It is not known how much had been moved into retail stores by that date. A small number of overalls was supplied to Alaska highway and other international construction projects in 1943, and to countries dependent on Canada for some part of their requirements.

3. There are no statistical data on the production of flannelette for the years 1935-1941 inclusive. It is estimated that the production of the year 1942 was about 24,000,000 yards and of the year 1943 it was 24,263,060 yards, as determined by questionnaire of the wartime prices and trade board. Of this latter production, it is estimated that 12,600,000 yards were of the Saxony type, including white, blue and pink. Production was moved from the mills as rapidly as possible and practically the whole of it had been put in manufacturing and distribution channels by January 1, 1944. It is not known how much had been moved into retail stores by that date. Substantial yardages of this fabric were procured in retail and wholesale outlets by Canadian Red Cross and other organizations furnishing comforts to the bombed out victims in the United Kingdom and to relief projects elsewhere.

4. There are no authentic data on the all-inclusive production of towelling and towels for the years 1935 to 1942 inclusive. Supply for the civilian economy then consisted of domestic production and imports of towels and towelling. An effort is being made to develop comparative data from the statistics available in the Cotton Institute and the Dominion Bureau of Statistics. Report of these researches will be made in due course.

[Mr. Nicholson.]

MOBILIZATION ACT—ATTESTATIONS FOR OVERSEAS SERVICE

Mr. HAZEN:

1. Have any men who have been conscripted into the Canadian army for home defence and have not volunteered for overseas service been sent overseas?

2. Were men who had been conscripted into the Canadian army for home defence sent to Borden, England, instead of Borden, Ontario?

3. If so, how many were sent, when did they arrive in England, and what was done with them after their arrival there?

Mr. MACDONALD (Halifax):

1. Men enrolled into the Canadian army through the provisions of National Resources Mobilization Act who have not volunteered for general service have been sent to Newfoundland (including Labrador), British West Indies, Bermuda, Alaska (including Kiska) but not elsewhere overseas.

2. No.

3. Answered by No. 2.

OPTIONAL PURCHASE PROVISIONS IN AGREEMENTS WITH PRIVATE CORPORATIONS

Mr. COLDWELL:

1. (a) Are there any optional purchase clauses contained in government agreements with private corporations in connection with government investments in any industry, plant or machinery since May 28, 1943, the date of sessional paper No. 369; (b) if so, with what companies, and in respect to what plant or facilities, has the government made such optional agreements; (c) what are the terms of all such agreements that have been made by the government?

2. (a) Are there any clauses contained in government agreements with private corporations requiring the government, on notice, to remove from any site government-owned plant or facilities; (b) if so, with what companies, and in respect to what government-owned plant

or facilities has the government made such agreements; (c) what are the terms of all such agreements that have been made by the government?

3. (a) Are there any clauses contained in government agreements with private corporations restricting in any way the use, or uses, to which government-owned plant or facilities can be devoted after the cessation of hostilities; (b) if so, with what companies and in respect to what plant or facilities has the government made such agreements; (c) what are the terms of all such agreements that have been made by the government?

Mr. HOWE:

1. There are no options to purchase contained in government agreements with private corporations in connection with government investments in any industry, plant or machinery since May 28, 1943.

2. (a) Yes. The general conditions form M & S 1307 (capital expenditures) which are annexed as schedule "B" to order in council P.C. 6284 dated July 20, 1942, contain the following provisions:

Under part II—dealing with additional equipment:

"7. Removal of additional equipment

The contractor may at any time after the lapse of twelve months from the termination of the war in which His Majesty is presently engaged, give notice in writing to the minister requiring His Majesty to remove the additional equipment from any building which is the property of the contractor or which the contractor occupies as tenant by virtue of a lease made with a lessor other than His Majesty, and upon receipt by the minister of any such notice, His Majesty shall, provided that the additional equipment in the opinion of the minister is not required for the manufacture of munitions of war or supplies in any such building, cause such additional equipment to be removed therefrom within a period of thirty days following the receipt of such notice, or within such extended period as may be reasonably required for such removal. The right herein conferred shall mutatis mutandis be exercisable by the contractor on behalf of any of its sub-contractors in any case where any additional equipment has been installed with the consent of His Majesty in any building which is the property of any such sub-contractor or which any such sub-contractor occupies as tenant by virtue of a lease made with a lessor other than His Majesty."

Under part III—dealing with plant additions:

"10. Title to vest in His Majesty

Subject to the provisions of the agreement the plant addition, both during construction and after completion, shall be the property of His Majesty, provided that if the plant addition is constructed upon lands owned by the contractor, such lands shall remain the property of the contractor but if so required by His Majesty, shall be made available to His Majesty, free of charge, until five years after the cessation of hostilities in the present war and His Majesty shall have an irrevocable option, exercisable until but not after five years after the cessation of the present war in which His Majesty is engaged, to purchase such lands at a fair and reasonable price to be determined by mutual agreement or, in default of agreement, by the exchequer court."

In cases where the extensions and additions have been built within the contractor's plant for war purposes and which are likely to interfere with the operation of the plant for civilian business, it has been agreed that within a reasonable period after the cessation of hostilities the government and the contractor will review the matter and if no satisfactory arrangement can be arrived at with respect to the disposal of the extensions and additions, the same will be removed by the government.

(b) To answer this question it would be necessary to examine each capital assistance contract entered into by the government and to list all the items acquired by each contractor. It is impossible at the present time to divert the necessary staff required for this purpose.

(c) Answered by (a).

3. The answer to this question is contained in the schedule forming part of sessional paper No. 369, tabled on May 28, 1943.

VETERANS' LAND ACT

Mr. CASSELMAN:

1. Has the Veterans' Land Act yet become operative?

2. If so, how many loans have been made to discharged service men to February 15, 1944?

3. What is the total value of these loans?

4. Have the officers of the Veterans' Land Act purchased any farms or other property?

5. If so, from whom did they purchase the farms or property?

6. Where are they located?

7. What was the purchase price of each piece of land?

8. Do the officers inspect each piece of land offered to them for sale?

9. If not, how do they determine where they are going to purchase land?

10. What are the names and addresses of the officers engaged in purchasing these lands?

11. What are the salaries of each?

12. What experience has each had in farming or in buying farm lands?

Mr. CASSELMAN: As a result of a conference some days ago with the director of the Veterans' Land Act, certain requests were made to me with respect to changing the form of this question. With some of these I am prepared to concur, but I am not with regard to others. I would ask that the question be dropped so that I may frame a new question.

Question dropped.

SOLDIER SETTLEMENT

Mr. FAIR:

1. How many returned veterans held land under contract with the soldier settlement board as at, (a) September 1, 1939; (b) December 31, 1943?

2. During the period September 1, 1939, to December 31, 1943, how many of those veterans, (a) obtained title deeds to their lands; (b) signed quit claim deeds; (c) were served with 30-day notices to vacate; (d) enlisted for service in any of the forces; (e) had a portion of their dependents' allowance deducted and applied on their debt to the soldier settlement board; (f) applied for extension of time under order in council No. P.C. 10472?

3. What is the total indebtedness to the board of those veterans whose contracts were still in effect at December 31, 1943?

Mr. CRERAR:

1. (a) 8,608; (b) 6,190.

2. (a) 1,404; (b) 466; (c) 342; (d) 966; (e) 234;—voluntary, 200; under order in council, 34; (f) 288.

3. $8,684,553.70.

BEEF SUBSIDIES OR SUBVENTIONS

Mr. TUSTIN:

1. Does the government of Canada pay a subsidy or any other form of subvention for the movement of beef cattle from western Canada to the central Canada market?

2. If so, from what date has such subsidy or subvention been in force, and what are the terms and conditions?

3. To whom is the subsidy or subvention actually paid, (a) to the producer; (b) to the packer; or (c) to the commission man?

4. What is the total amount paid out of the federal treasury on such subsidies or subventions to date, and to what firms or persons?

5. Is any of the beef upon which subsidies or subventions have been paid by the government purchased for use by the government purchasing agencies for the armed forces or British account, or any other government account?

Mr. ABBOTT:

1. The government does not pay a subsidy on the transportation of beef cattle but does pay a subsidy on the movement of beef from zones in the prairie provinces to the eastern provinces. Through the commodity prices stabilization corporation, limited, shippers of beef are reimbursed to the extent that transportation charges per pound exceed the difference between the maximum price in the zone of destination and the maximum price in the zone of shipment.

2. Provision for payment of this subsidy came into effect on February 8, 1943, and was suspended as of October 31, 1943. The subsidy was again brought into effect on shipments made on and after January 1, 1944.

The terms and conditions are as follows: "Only the shipper of beef may apply for this subsidy to commodity prices stabilization corporation limited, 60 Rideau street, Ottawa. Such applications must be accompanied by shippers' signed invoice in triplicate, addressed to said corporation, setting forth full particulars of the amount claimed, made up in the following form:

(a) Initial icing charge
  1. Done by shipper.....
  2. Done by railway or other second party .....
(b) Rail freight at carload rate.....
(c) Icing charges en route.....

Less differential between price of dressed beef in shipping zone and price of dressed in delivery zone.....

3. To the shipper of beef.

4. Total amount paid $286,022.96. Shippers who have received subsidy are: Burns & Co., Ltd., at Regina, Winnipeg, Prince Albert and Calgary; Canada Packers, at St. Boniface, Edmonton; Gainors Ltd., at Edmonton; W. C. Johnson & Co.; Katchen Bros., at Calgary; Modern Packers Ltd., at Calgary and St. Boniface; Morantz Beef Co., at Montreal; O.K. Packing Co., at St. Boniface; Public Abattoir, at St. Boniface; H. & I. Rosenfeld, at St. Boniface; Rosenfeld & Pinsky, at St. Boniface; Swift Can. Co., at St. Boniface, Moose Jaw and Edmonton; St. Boniface Abattoir, St. Boniface; Wilsil, Limited, at Montreal.

5. Yes, for Eastern Canadian Camps.

RURAL MAIL ROUTES

Mr. NEILL:

1. What is the total number of rural mail routes (on land only) in each of the different provinces, each province shown separately?

2. Since the passage of order in council 4960, how many applications in each province have been received from or on behalf of rural mail carriers to have their rate of remuneration increased under the operation of that order in council?

3. How many were granted an increase in each province?

4. In each province, what percentage of the applications were granted increases?

5. How many rural routes (on land only) are there in the electoral district of Comox-Alberni?

6. How many applications, as above, were received in that district?

7. What percentage of applications were granted?

Mr. NEILL: In deference to the remarks of the Prime Minister with regard to curtailing expense, I ask that this question be dropped. I think I can get the information in a different way.

Question dropped.

WHEAT BOARD—BROKERAGE AND OTHER FEES

Mr. PERLEY:

How much in brokerage fees, commission or any other fees was paid by the Canadian wheat board to the following export firms since August 1, 1943: Alberta Pacific Grain Company Limited, Bunge North American Grain Corporation (Canadian Agency Limited), Cargill Grain Company Limited, Continental Grain Company Limited, Laval and Company Incorporated, McCabe Brothers Grain Company Limited, Searle Grain Company Limited, K. B Stoddart & Company Limited?

Mr. MacKINNON (Edmonton West): The information asked for by the hon member for Qu'Appelle in this question is not available in the form in which it is asked and it would involve a considerable amount of expense and time in its preparation. In any event, the answer to the question would disclose the competitive position of individual companies, and, moreover, would have an adverse effect on the board's future operations through these companies. I would therefore recommend that the question be dropped.

Mr. PERLEY: Before the question is dropped I should like to have an opportunity of conferring with the minister. To say that these accounts cannot be separated is all bunk. If the minister will permit me an opportunity to discuss the matter with him and get certain information, it will be all right.

Mr. MacKINNON (Edmonton West): I shall be glad to confer with the hon. member for Qu'Appelle. In the meantime the question can be dropped.

Mr. GRAYDON: The minister has set up several lines of defence, first second and third; in case the one is no good, he intends to rely upon the others. I do not think the minister should ask to have this question dropped. Perhaps it could be allowed to stand, because there is no special reason why the hon. member should not be able to frame another question. I think the minister should be courteous enough to allow the matter to stand for one day anyway.

Mr. SPEAKER: Stand.

STORAGE FEES ON GRAIN IN TERMINAL ELEVATORS

Mr. PERLEY:

1. What was the total amount of storage fees paid on grain in terminal elevators at Fort William and Port Arthur for the crop year 1942-43?

2. How much was paid to each individual terminal company?

Mr. MacKINNON (Edmonton West): The hon. member for Qu'Appelle has asked for the total amount of storage fees paid on grain in the lakehead terminals for the crop year 1942-43. In reply I would say that the terminal elevator companies are not required to report such earnings, and I regret that there is no information available.

Mr. PERLEY: Here again, if we had the report of the operations of the wheat board as we should have, this question perhaps would not be necessary. I ask that it stand until I have an opportunity to discuss it with the minister.

Mr. HOWE: It has been answered.

WARTIME INDUSTRIAL TRANSIT AUTOMOBILE INSURANCE—BRITISH COLUMBIA

Mr. MacINNIS:

1. What amount has been collected in the province of British Columbia by the wartime industrial transit automobile insurance from its inception to date?

2. What amount has been paid out in claims since its inception to date?

3. What has been the cost of operation for the same period?

4. What risk or risks is the policy designed to cover?

Mr. HOWE:

1. The wartime industrial transit plan is not operated by the government. The government does not collect premiums, pay claims or bear the cost of operation. For this reason the information asked for is not available. See also the answer to question No. 4.

2. Answered by No. 1.

3. Answered by No. 1.

4. The insurance coverage was developed in discussion with the provincial superintendents of insurance who were the executive of the provincial superintendents' conference. The policy settled and approved by the provincial superintendents covered

only the legal liability of the drivers to their passengers carried under the plan. The companies, however, undertook by the policies not to raise any guest laws, and high policy limits eliminated the possibility of guest laws being raised against passengers by drivers. At the same time, the transit controller through the provincial superintendents and the representatives of the insurance companies procured from all insurers in Canada an undertaking that "ride-sharing" involving contributions from passengers would not be treated as invalidating automobile insurance coverage. This undertaking extended to all automobile insureds but it had particular application to the W.I.T. plan insurance where contributions among workmen are common. While the policy written was technically a liability policy, the pool has found it possible and desirable to pay compensation to every passenger workman injured while carried under the plan regardless of the quantity or in fact the existence of negligence on the part of the driver. In addition, the policy which strictly only covered claims of passengers approved for carriage by a particular driver, has in practice been treated as covering in respect of any passenger workmen of the same plant or any other plant operated under the plan. The provincial superintendents later settled and approved an endorsement which adds accident coverage on each driver including an indemnity provision of up to $30 per week for 100 weeks. If reserves set up against unpaid losses are adequate, the pool has established a surplus to date, but drivers are frequently injured and occasionally killed while driving under the plan and it is expected that the combination policy may exceed a safe loss ratio. The premium, which was experimentally set at $1 per car per month, remains unchanged. The expressed object of the pool is to operate as closely as possible to a five per cent margin basis with any balance of premiums allocated to a pool fund to maintain the rate level against the increased losses anticipated. The pool also intends that the experience and rate level will be reviewed again at June 30, 1944.

WHEAT—STREET AND CASH PRICES

Mr. DONNELLY:

1. What was the cash price for No. 1 Northern wheat at Fort William on September 27, 1943?

2. What was the street price for No. 1 Northern wheat at stations taking a 25-cent freight rate in western Canada on September 27, 1943?

3. What was the cash price for No. 1 Northern wheat at Fort William on September 28, 1943?

[Mr. Howe.]

4. What was the street price for No. 1 Northern wheat at stations taking a 25-cent freight rate in western Canada on September 28, 1943?

Mr. MacKINNON (Edmonton West):

1. $1.23¼.

2. 92¼ cents.

3. Trading in wheat was discontinued as at the close, September 27 and the Canadian wheat board was empowered to acquire for government account all unsold stocks of wheat in commercial positions in Canada. The closing prices of September 27 were published on succeeding dates "For record purposes only."

4. See answer to No. 3 above. As of September 28, the Canadian wheat board become the buyer of wheat at country points at an initial price of $1.25 per bushel for No. 1 northern, basis in store Fort William/Port Arthur. The board's initial payment for No. 1 northern wheat on a street basis at a 25-cent freight rate point is $1.07. This figure is not comparable with the 92¼ cents quoted for September 27 unless the adjustment for that date of 12½ cents per bushel made by the purchasing company to the producer and the increase of 1¾ cents in the price are taken into account.

*MOUNTED POLICE—COST-OF-LIVING BONUS

Mr. TURNER:

1. Is the cost-of-living bonus paid to members of the Royal Canadian Mounted Police?

2. If not, will consideration be given to paying such bonus to the members of this force?

Mr. ST. LAURENT: As there has been expressed in the house at times such a high appreciation of the services of the Royal Canadian Mounted Police I think hon. members will be more than ordinarily interested in the answer to this question. For this reason perhaps I may be permitted to give the answer orally.

The answer to the first question is no. The members of this force were not included in the terms of the order in council of August 26, 1941, being P.C. 6702.

With regard to the second question, consideration has been given to the proper recognition of the work being done by the members of the Royal Canadian Mounted Police at this time because of the added war duties that have been placed upon them. In recognition of that, His Excellency in council approved on March 3 a recommendation of the treasury board that extra war duties pay to all members of the Royal Canadian Mounted Police be authorized for a period of one year from February 1, 1944. This is to recompense the

members for the extra duties they have been called upon to perform on account of the war. The rates are as follows:

	Per diem
Officers	$1.25
Non-commissioned officers	1.00
Constables	.75
Special constable guards employed in guarding vulnerable points, public utilities, public buildings, et cetera and ordinary special constables, as approved by the commissioner	.50

The numbers to whom this scale of extra war duties pay will apply are as follows:

Officers	95
Non-commissioned officers	893
Constables	1,900
Special constable guards and ordinary special constables	1,934
Total	4,822

Mr. GRAYDON: Is the total of 4,822 the total strength of the Royal Canadian Mounted Police?

Mr. ST. LAURENT: Yes.

Mr. GRAYDON: In changing its policy is the government going to make the cost of living bonus retroactive to the time when the bonus was introduced as a policy?

Mr. ST. LAURENT: There is no cost of living bonus involved. This is a special war duties pay to apply as from February 1, 1944, for a period of twelve months, and to be subject to review and modification as circumstances may warrant at the end of that time.

Mr. GRAYDON: In other words, it is not retroactive?

Mr. ST. LAURENT: No. It is from February 1, 1944.

Mr. GRAYDON: I think it should have been retroactive.

Mr. LOCKHART: Will this include the special guards who are brought in by the Department of National Defence and attached to the Royal Canadian Mounted Police?

Mr. ST. LAURENT: Yes, special constable guards and ordinary special constables.

ELEMENTARY FLYING TRAINING SCHOOLS

Mr. CRUICKSHANK:

1. What is the cost per pupil graduate in each elementary flying training school?
2. Which instructors are paid by the government at each of these schools, (a) R.C.A.F. personnel; (b) civilian instructors?
3. Which are paid by private companies?
4. What was the average cost per pupil graduate in each of these schools prior to July 1, 1942?

Mr. McLARTY:

1.

	From Inception To July/42	To Jan./44

No. 16—Edmonton transferred to No. 32, Bowden.
No. 18—Boundary Bay transferred to No. 33, Caron.
No. 21—Chatham transferred to No. 26, Neepawa.
No. 22—Ancienne Lorette (Quebec) closed 3rd July, 1942.

2. All R.C.A.F. personnel at E.F.T.S. are paid by the government; all civilian instructors are paid by the operating companies.

3. Civilian instructors are paid by private (the operating) companies.

4. See (1) above.

R.C.A.F.—OFFICERS RETIRED

Mr. SINCLAIR:

How many officers of the R.C.A.F. of air rank have been retired since September 10, 1939, (a) of the permanent force; (b) of the auxiliary force; (c) of the special reserve?

Mr. MACMILLAN:

1. (a) (i) One officer of the permanent force.

(ii) Three permanent force officers presently on retirement leave—two retirements effective in June and one in July, of this year.

(iii) Five permanent force officers whose retirements have been authorized but not yet promulgated.

(b) Nil.

(c) Nil.

UNEMPLOYMENT

Mr. MacINNIS:

What was the average number of persons unemployed in Canada for each of the years 1938 to 1943 inclusive?

Mr. MITCHELL:

1938-39: The dominion bureau of statistics has estimated (in "Annual review of the employment situation in Canada", for 1938-1939) that the average unemployment among wage and salary workers was as follows: 1938, 401,000; 1939, 388,000.

It should be noted that these figures do not include an estimate of unemployment among young persons who had never worked and who were seeking work, which was substantial in these years.

1940: No figures available. The estimates of unemployment prepared by the dominion bureau of statistics were discontinued in 1939.

1941: According to the population census, there were 124,165 wage and salary workers unemployed on June 2, 1941.

1942-43: According to the records of the unemployment insurance commission, the average number of unplaced applicants was as follows: 1942, 65,666; 1943, 73,677.

REDEMPTION OF WORN AND MUTILATED COINAGE

Mr. ISNOR:

What action, if any, has been taken to redeem smooth and mutilated Canadian coinage?

Mr. ABBOTT:

Silver, nickel and bronze coin of the Dominion of Canada, which is worn smooth by natural abrasion, is redeemed by the Bank of Canada at face value. Silver, nickel and bronze coin which has been appreciably reduced in weight by any means except natural abrasion is redeemed by the Bank of Canada at a discount of 25 per cent of its face value.

The withdrawal of smooth and mutilated coinage from circulation is, in the first instance, a responsibility of the commercial banks. The procedure is to have the coins forwarded for redemption to one of the various agencies of the Bank of Canada.

It is possible that due to the shortage of subsidiary coinage caused by unprecedented demands arising out of the war, some branches of the commercial banks have found it necessary, in order to meet public demand, to keep in circulation smooth or mutilated coins instead of withdrawing them as rapidly as prior to the outbreak of war.

TRENTON, N.S., SHELL PLANT

Mr. GILLIS:

1. How much money did the government put into the shell plant at Trenton, Nova Scotia?

2. What was the cost per shell in this plant?

3. How many plants in Canada are manufacturing naval shells, and where are they located?

4. What is the cost per shell at the other plants?

5. Did the orders previously filled at the Trenton plant go to the plant located in Toronto, Ontario?

6. What specifically was the reason for closing the plant at Trenton, Nova Scotia?

Mr. HOWE:

1. Capital expenditure, $576,249.29, for facilities created for war production at the Trenton steel works, title to which is vested in the crown.

Buildings	$ 31,108 00
Machinery	428,409 91
Equipment	45,445 38
Installation	60,675 00
Jigs, Tools, Dies	6,642 00
Gauges	3,969 00
	$ 576,249 29

2. H. E. Shell, $5.60; H. A. & L. A. Shell, $5.41.

3. One other plant only is manufacturing for naval requirements and this plant is producing practice and proof shot only. The plant is located in New Brunswick and was in operation before the closing of the Trenton plant.

4. This shell is not being made at any other plant.

5. No. See also answer to 4. The Toronto plant is producing 40 M/M shell.

6. Contracts were completed and there are, up to the present, no further requirements.

THREE RIVERS—STE. ANGELE DE LAVAL BRIDGE

Mr. DUBOIS:

1. Has the government given effect to a resolution passed by the House of Commons on March 9, 1936, concerning the examination of a project for the construction of a bridge between Three Rivers and Ste. Angele de Laval, county of Nicolet-Yamaska?

2. Will the government consider the advisability of including this project in its programme of public works reconstruction after the war?

Mr. MICHAUD:

1. No.

2. Consideration will be given to its inclusion in post-war programme when the magnitude of the problem is known.

WAR PENSIONS

Mr. HANSON (Skeena):

1. Of pensions in force with regard to the great war, (a) how many are related to death or disability of members of the forces who served in a theatre of war; (b) how many with regard to persons who did not serve in a theatre of war?

2. Of pensions in force with regard to the present war, (a) how many are related to death or disability of members of the forces who served in a theatre of war; (b) how many with regard to persons who did not serve in a theatre of war?

Mr. MACKENZIE (Vancouver Centre): Return as of December 31, 1943:

	Number	Percentage
1. (a)	82,378	88·6
(b)	10,597	11·4
	92,975	100·0

Return as of December 31, 1943, and including members of R.C.A.F. attached to the R.A.F.:

	Number	Percentage
2. (a)	7,844	76·2
(b)	2,448	23·8
	10,292	100·0

AIR OBSERVER AND ELEMENTARY FLYING SCHOOLS —COST OF LIVING BONUS

Mr. DIEFENBAKER:

1. Are the employees of air observer schools and elementary flying training schools entitled to cost-of-living bonus?

2. If the answer is yes, do all schools pay it? If not, which schools do not?

Mr. MACMILLAN:

1. Yes, in accordance with regulations laid down by national war labour board.

2. Yes.

PERMITS TO EXPORT CHARCOAL

Mr. POULIOT:

What persons have been granted permits to export charcoal to the United States since the beginning of the war?

Mr. MacKINNON (Edmonton West): With reference to this question, may I say that the information contained on an application for an export permit is given to the government in confidence. The tabling of this information would disclose to competitors the details of business carried on by individual firms and in accordance with usual government practice we are unable to disclose these details. In the public interest, therefore, I suggest that this question be dropped.

Question dropped.

PRICES—BEEF, EGGS, ETC.

Mr. BLAIR:

What was the lowest price during each of the years 1929, 1932 and 1943, on, (a) beef; (b) eggs; (c) cheese; (d) butter?

Mr. MacKINNON (Edmonton West): Lowest prices listed below have been taken from the following records:

(a) Beef, good cows—Montreal, Toronto, Winnipeg, Vancouver.

(b) Eggs, fresh seconds or Grade B's—Halifax, Saint John, Montreal, Toronto, Winnipeg, Saskatoon, Calgary, Vancouver.

(c) Cheese, new large—Montreal, Toronto.

(d) Butter, creamery prints—Montreal, Toronto, Winnipeg, Regina, Calgary, Vancouver.

Lowest wholesale price—	1929		1932		1943	
(a) Beef, good cow, lb...	Winnipeg	$0·135	Winnipeg	$0·048	Winnipeg	$0·145
(b) Eggs, fresh 2nds, doz.	Calgary.	$0·220	Saskatoon	$0·082	Saskatoon	$0·266, gr. B
(c) Cheese, new large, lb.	Montreal	$0·195	Toronto	$0·093	Montreal	$0·200
(d) Butter, creamery prints, lb.....	Calgary	$0·380	Regina	$0·160	Regina	$0·330

PRICES—MILK

Mr. McNEVIN:

What was the price paid at the farms, to producers, for whole milk for the Toronto market, during the months of December and June of the years, 1929, 1932 and 1943, including bonus.

Mr. MacKINNON (Edmonton West):

	1929		1932		1943	
	June	Dec.	June	Dec.	June	Dec.
Price to producers for Toronto market. Price at farm not available. Whole milk (8 gal. can at dairy).....	$1·950	$2·393	$1·195	$1·195	$2·268*	$2·474*

*Calculated from per cwt. prices of $2.75 for June and $3.00 for December.

PRICES—SHEEP, STEERS AND CALVES

Mr. McNEVIN:

What was the price of, (a) choice sheep and lambs; (b) butcher steers; (c) veal calves, on the Toronto live stock market on December 15, and July 15, in each of the years, 1929, 1932 and 1943?

Mr. MacKINNON (Edmonton West):

	1929		1932		1943	
	July	Dec.	July	Dec.	July	Dec.
Live stock, Toronto stockyards						
Lambs, good handyweight, cwt.	$15·100	$12·410	$7·390	$5·180	$18·380	$12·380
	Good 1,000-1,200 lbs.		Good and Choice over 1,050 lbs.		Good up to 1,050 lbs.	
Steers, cwt.	$11·150	$ 9·630	$6·140	$4·100	$12·530	$11·680
Calves, good veal, cwt.	14·850	15·760	5·460	6·030	14·800	15·450

PRICES—NO. 1 ONTARIO FALL MILLING WHEAT

Mr. McNEVIN:

What was the market price of No. 1 Ontario fall wheat (milling) on December 16, 1929, 1932, 1943?

Mr. MacKINNON (Edmonton West):

	December	December	December
No. 1 Ontario wheat (milling) f.o.b. shipping point, monthly average, bushel.....	$1·210	$0·403	$1·130

QUEBEC CONFERENCE, 1943

Mr. RAYMOND:

1. Was Churchill-Roosevelt conference held in Quebec city in August and September, 1943, convened at that place upon the invitation of the Canadian government?

2. Out of the sums expended by the Canadian government for the holding of such conference, what amount was paid for liquor to the Quebec liquor commission?

Mr. MACKENZIE KING:

1. Yes.

2. The representatives attending the historic conference were the guests of Canada. It is not the practice of countries which have the honour of entertaining heads of states and distinguished representatives of other nations to make public such details.

PRICES—STEERS, CALVES, ETC.

Mr. FAIR:

On December 16, 1919, what was the price on the Winnipeg stock market for, (a) No. 1 choice butcher steers; (b) calves, good and choice veal; (c) lambs, good handyweights; (d) sheep, good handyweights; (e) hogs, grade A dressed basis, delivered off the trucks at yards and plants?

Mr. MacKINNON (Edmonton West):

Wholesale Prices of Certain Specified Live stock on the Winnipeg Market

Item	Description	Unit	December 3,* 1919
			$
Steers	choice, heavy, 1,100-1,200 lbs.	cwt.	9 50-10 50
Calves	veal	cwt.	7 50- 9 50
Lambs	fat	cwt.	10 00-12 25
Sheep		cwt.	7 00- 8 50
Hogs	selects, fed and watered	cwt.	14 50

*Prices on December 16, 1919 not available. The above are the only descriptions for which records are available at Winnipeg.

CANCER RESEARCH

Mr. LEADER:

1. Is anything being done by the Department of Pensions and National Health to investigate the cancer research work conducted by Dr. J. R. Davidson, of Winnipeg?

2. If so, of what nature is such investigation, and what person or persons are conducting same?

3. When the investigation is completed, will the findings be made public?

Mr. MACKENZIE (Vancouver Centre):

1. An application for financial assistance in continuing his cancer research work has been made by Dr. J. R. Davidson to the national research council. The application will, it is expected, be considered soon by the associate committee on medical research of the council, on which committee the Department of Pensions and National Health has representation.

The function of the committee is to consider any information which an applicant may submit, and it is within the competence of the council to make expenditures from public funds to assist in forwarding research work recommended by the committee.

2. No investigation, other than the procedure mentioned in the answer to No. 1, is made.

3. Answered by No. 2.

SHACKLING OF CANADIAN PRISONERS OF WAR

Mr. CHURCH:

1. Has the government received any additional information this session as to the shackling of Canadian prisoners by Germany?

2. Has all the information available been secured from the protecting power in Switzerland, or through the international Red Cross, and do the government agencies also protect them?

Mr. MACKENZIE KING:

1. Yes. The government is regularly receiving information about the treatment of Canadian prisoners of war in Germany.

2. Information on conditions in prisoner of war camps in Germany is received through the Swiss government, which is the protecting power for Canadian interests, and through the International Red Cross. The Canadian government itself can only act to protect Canadian prisoners of war through the protecting power and, in matters affecting general welfare and camp conditions through the International Red Cross.

QUESTIONS PASSED AS ORDERS FOR RETURNS

R. C. A. F.—STRENGTH AND CASUALTIES

Mr. ROY:

1. What is the total strength of the Royal Canadian Air Force?

2. How many Canadians are now serving in the Royal Air Force?

3. What are the casualties to date, giving names and addresses, (a) in the Royal Canadian Air Force; (b) among Canadians in the Royal Air Force?

BRITISH COLUMBIA FISHERIES—DRAGGER TYPE BOATS

Mr. HANSON (Skeena):

1. Has the government contributed towards the construction of a seiner dragger type of boat on the Pacific coast? If so, from what source did the request for the assistance towards the construction of this type of boat come?

2. What official or officials of the government visited the Pacific coast and arranged for assistance towards the construction of these boats?

3. What was the minimum length and tonnage of the boats to be?

4. On whose suggestion was the length or tonnage arrived at?

5. What was the reason for setting the minimum length and tonnage arrived at?

6. How many boats have been constructed on the Pacific coast under government assistance? What are their names, and by whom is each boat owned?

7. What number of boats, and who are the owners of same, that are not yet completed?

8. Have any of these boats been transferred from the original owners?

9. What was the cost of each boat when completed?

10. What amount has the government, by way of direct subsidy and depreciation, obligated themselves to contribute?

11. Is the original owner required to retain the ownership of this boat for a set period? If so, what is that period?

12. Has the government assisted in the construction of these boats by reason of having taken boats for defence purposes? If so, why did they not construct them themselves and turn back to the owners the boats they had taken for naval purposes?

13. Was there, at or before the war, submitted to the Department of Naval Services and the Department of Fisheries a plan for the construction of a halibut packer type of boat? If so, why was not this type of boat constructed instead or as well as the type that was agreed upon? Are such boats to be used by the government for defence purposes during the war, then sold to fishermen?

14. What is, or was, the length and tonnage of the dragger type of boat, to the building of which the government has contributed on the Atlantic coast? Why was this minimum set?

15. What assistance has been given towards the building and converting of vessels on the Atlantic?

16. What person or persons have availed themselves of this opportunity?

17. How many vessels or boats have been converted or built, and what are the names of the owners?

PERMITS UNDER ORDER IN COUNCIL P.C. 9440—IMMIGRATION STATUS OF REFUGEES

Mr. DORION:

What are the names, the previous residences and the racial origin of the persons to whom permits have been issued by the Minister of Mines and Resources, under order in council P.C. 9440, December 10, 1943?

Mr. CRERAR: This question should stand as an order for return. It will take considerable time to get the information requested.

PUBLIC SERVICE—UNITED STATES NATIONALS

Mr. BLACKMORE:

1. Since September, 1939, and up until March 1, 1944, how many people of United States citizenship have been employed by the civil service of Canada or put on the federal government payroll in any capacity at salaries of $1,200 and higher per annum?

2. What are their names, salary, and what position is held by each of them?

RETIREMENT ANNUITY PLANS

Mr. KNOWLES:

1. What was the number of retirement annuity plans for employees in force under the annuities branch of the Department of Labour in 1923, 1928, 1933, 1938, 1939, 1940, 1941, 1942, 1943, in each of the following classifications, (a) government bodies such as federal, provincial or municipal; (b) private companies and other non-governmental employers?

2. What was the total valuation of retirement annuity plans for employees in force under the annuities branch of the Department of Labour for each of the above years in each of the above classifications?

CANADIAN FORCES—STOVES FOR BUILDINGS

Mr. FRASER (Peterborough West):

1. How many stoves were bought by any department of the government for the purpose of heating buildings used by the armed forces?

[Mr. O. Hanson.]

2. What was the make, and the unit cost of these stoves?

3. How many of these stoves have been discarded or replaced?

4. If any, how many of these have been sold, and at what price?

5. Have any of the discarded stoves been broken up and sold as scrap?

6. If so, how many, and how much per pound was received for the scrap?

REPRINTS OF MEMBERS' SPEECHES

Mr. PURDY:

1. Did the printing bureau prepare any pamphlets containing more than one speech of members of parliament during the year 1943?

2. If so, (a) how many different pamphlets were prepared, what were the titles of same, and whose speeches did they contain; (b) how many of each issue were prepared, and what was the price received for each issue; (c) what was the cost to the bureau of each issue, and did such cost include allowance for overhead, depreciation and a reasonable profit; (d) during the time such pamphlets were in preparation, did the bureau place orders for government printing with private firms, which could have been handled by their plant had the pamphlets not been on order?

3. What is the estimated average percentage added to costs by private printing firms for overhead, depreciation and profit?

BOOKLET BY MORLEY CALLAGHAN—"CANADA THINKS OF THE FUTURE"

Mr. CHURCH:

1. How many copies of a booklet of Canadian affairs entitled "Canada Thinks of the Future", Vol. 1, No. 14, by Morley Callaghan (the Marsh report), were published, and who authorized it?

2. Where was it circulated, and at what cost?

3. Why was this contentious booklet circulated among troops overseas, and for what purpose?

4. What has been the total cost of all these publications, how many were issued, and where were they circulated overseas?

5. Will issues like these be discontinued in future?

HOUSING—TORONTO

Mr. CHURCH:

1. What has been done since last session to relieve the very serious need of small houses and the housing situation in Toronto, (a) for civilian citizens; (b) soldiers and their families; (c) soldiers from overseas returning home?

2. Who is in charge of it at Toronto?

3. What has been spent there on houses for war workers?

4. What has been spent on dwelling conversions there, and at what cost each year since the present war began?

CANADIAN FORCES—SPORTING EQUIPMENT

Mr. CHURCH:

1. What amount of money has been spent each year by the government in supplying sporting equipment goods of all kinds to soldiers, (a) the forces in Great Britain; (b) Italy, Africa and other fronts; (c) camps of the various forces in Canada; (d) prisoners of war overseas; (e) all other theatres of war overseas?

2. Is this work under government control, and is there any duplication?

MAPLE PRODUCTS

Mr. LACOMBE:

1. For the year 1943, what was the total value of maple products in Canada, (a) in sugar; (b) in maple syrup?
2. What was the domestic consumption of these products in Canada?
3. What was, in pounds, the quantity of our exports in maple sugar during the same year?
4. What was, in gallons, for the same period, the quantity of our exports in maple syrup?
5. Are those products now rationed in Canada?
6. If so, why?
7. Has the price of these products been fixed?
8. If so, what is the ceiling for sugar and for syrup?
9. Has the government, in establishing a ceiling for the price of these products, taken into account the increase in the cost of labour and production?
10. Has consideration also been given, in fixing the price of maple products, to the very high price of firewood required for such production?

MOBILIZATION ACT—TRAINEES RECEIVED AT BRANDON

Mr. MATTHEWS:

How many trainees have been received at each of the following centres since the outbreak of war,—No. 2 manning depot, Brandon, No. 12 S.F.T.S., Brandon, No. 4 artillery training centre, Brandon?

CANADIAN FORCES OVERSEAS—CURRENCY USED IN PAY AND ALLOWANCES

Mr. DORION:

1. Are the members of the armed services stationed overseas paid in the currency of the different countries in which they are stationed?
2. If so, (a) what is the amount of their pay in local currency; (b) what is the actual value of these currencies on the Canadian market; (c) by what means are Canadian funds transferred to these countries for the purpose of paying the members of the armed services?

MOBILIZATION ACT—LOCATION OF INDIVIDUALS WHOSE ADDRESSES ARE UNKNOWN

Mr. DORION:

1. Following order in council P.C. 2278, dated March 22, 1943, how many cases have been referred to the Hooper-Holmes bureau, Toronto, to locate the whereabouts of individuals whom the divisional registrars have been unable to locate?
2. How many such individuals have been located by this organization?
3. What have been the amounts claimed by this bureau for this special work?

MOTIONS FOR PAPERS

UNEMPLOYMENT INSURANCE REGULATIONS

Mr. FRASER (Peterborough West):

For a copy of regulations issued under the authority of the Unemployment Insurance Act, 1940, and including P.C. 3581, May 23, 1941, and P.C. 2587, of April 1, 1943, together with copies of all orders in council or regulations amending, altering or extending same and passed between May 23, 1941, and January 31, 1944.

STEEL CONTROL—LICENCES

Mr. ROSS (St. Paul's):

For a return showing,—1. The number of licences issued under authority of order No. S.C. 25, steel controller, dated March 5, 1943, from the date of the order to January 31, 1944.

2. A list of the names of the firms or persons so licensed in the cities of Montreal, Toronto, Winnipeg and Vancouver.

3. A list of the names of firms or persons who have applied for but who have been refused licences in each of the aforementioned cities.

POST-WAR EMPLOYMENT

Mr. KNOWLES:

For a copy of the questionnaire (or questionnaires) sent out by Dr. G. M. Weir in connection with the preparation of his report on post-war employment opportunities.

Mr. MACKENZIE (Vancouver Centre): Return tabled.

CANADIAN NATIONAL RAILWAYS—TRAINING CENTRES—SPUR LINES AND SIDINGS

Mr. SHAW:

For a copy of each agreement entered into between the government, or any government department, or any official thereof, and the Canadian National Railway relative to the extension of spur lines into air training centres or the construction of sidings adjacent to such training centres.

Mr. POWER: Return tabled.

LOSS OF TIRES BY FIRE AT EMERSON GARAGE, WYNYARD, SASK.

Mr. NICHOLSON:

For a copy of all letters, telegrams, memoranda and other documents in possession of the wartime prices and trade board and the Department of Munitions and Supply in connection with the loss of tires at the time of the Emerson garage fire at Wynyard, February, 1942.

Mr. NICHOLSON: Mr. Speaker, I would ask that this motion be dropped.

Motion dropped.

NORTHWEST FIELD FORCES—PENSIONS

Mr. CHURCH:

For a return showing—1. How many members, by provinces, of the Northwest field forces (1885) are still living, according to the records of the Department of Pensions and National Health?

2. How many have been given any form of aid?

3. How many of such force are known to be in necessitous circumstances?

4. What is being done, if anything, towards granting them $40 a month pension, or some grant or living allowance in lieu of pension, including hospitalization and other reasonable allowances?

5. A copy of all correspondence received by the department since November 1, 1943, to the end of January, 1944, in relation to this matter.

Mr. MACKENZIE (Vancouver Centre): Return tabled.

Mr. GRAYDON: I hope the minister is going to grant to members of these forces the war veterans' allowance.

CANADIAN WHEAT CROP, 1942-43 AND 1943-44

Mr. PERLEY:

For a copy of the agreements between the Canadian wheat board and, (a) interior elevator companies; (b) terminal elevator companies; (c) export grain companies; (d) brokers, in connection with the handling and exporting of Canadian wheat for the crop year 1942-43 and to date for the crop year 1943-44.

Mr. MacKINNON (Edmonton West): Return tabled.

UNITED KINGDOM CAPITAL INVESTMENTS ACQUIRED BY CANADA

Mr. FRASER (Peterborough West):

For a copy of order in council P.C. 1/3233, April 19, 1943, together with a statement describing the "capital investments" of the government of the United Kingdom acquired by the government of Canada and referred to in the above order; also for a statement giving amounts of refunds of duties and/or taxes granted to contractors, as referred to in paragraph (1) of the said order; and for a statement of what government-owned plants or incorporated crown companies received the benefit of remission of customs duties and/or taxes, referred to in paragraph (4) of said order; also amount of refunds or remission of duties and/or taxes paid to or granted to contractors, or increases in contract prices made under paragraph (7) of the said order.

Mr. HOWE: It will be very difficult to bring down a reply to this motion in its present form. My hon. friend is mistaken about the measures adopted to which this order in council refers. I wonder whether he would have the motion dropped and see me before rewording it? I think we can give him the information he desires if the motion is properly worded.

Mr. FRASER (Peterborough West): That will be all right. I will reword the motion after seeing the minister.

Motion dropped.

[Mr. Church.]

SUPPLY

The house in committee of supply, Mr. Bradette in the chair.

DEPARTMENT OF EXTERNAL AFFAIRS

36. Departmental administration, $410,189.

Item stands.

DEPARTMENT OF JUSTICE

88. Departmental administration, $165,975.

Item stands.

Progress reported.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, March 2, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF NATIONAL DEFENCE FOR AIR

2. Pay and allowances, $323,315,744.

The CHAIRMAN: Shall the item carry?

Mr. BENCE: I had thought that the minister was going to answer some more of the questions before we went into these items.

Mr. POWER: We are now on item 2, and we have answers to a number of questions.

Mr. MACMILLAN: The hon. member for York South (Mr. Noseworthy) asked several questions with regard to the wartime bureau of technical personnel. The questions and answers are as follows:

1. Does the wartime bureau of technical personnel cooperate with the R.C.A.F. in the enlistment of technical personnel?

Answer: Yes. The wartime bureau of technical personnel cooperates fully with the R.C.A.F. In the past the bureau has supplied the R.C.A.F. with a considerable number of technical personnel for technical appointments and also, since the inception of the science student regulations, December 1, 1942, the bureau has given its consent to the enlistment as aircrew of a large number of undergraduates who have applied for consent.

2. Are such personnel prohibited from enlisting as aircrew?

Answer: No. Science graduates may enlist as aircrew provided they obtain the consent of the wartime bureau of technical personnel. The bureau, however, is reluctant to give its consent to a science graduate if there is an unfilled demand at the time, from the

armed forces or essential civilian employers, for men with the training or experience possessed by that graduate.

The present regulations with regard to science students apply only to those students who have graduated subsequent to December 1, 1942; neither do they apply to undergraduate science students who leave university prior to graduation. These men may enlist in any branch of the armed forces.

3. Are they prevented from enlisting in any capacity?

Answer: No, but the conditions which apply in paragraph 2 which I have just read, are applicable in that regard also.

The hon. member for Cape Breton South (Mr. Gillis) asked a question with regard to the application of the order in council to Canadians serving in the R.A.F. The Minister of Pensions and National Health (Mr. Mackenzie) on June 23, 1943, made the following statement, which I think answers the hon. member:

Inquiries have been made as to whether Canadian boys, who left Canada a few years before the war to enlist in the Royal Air Force, subsequently saw active service and returned to Canada, at the time of their discharge, are eligible for benefits under the post-discharge reestablishment order (P.C. 7633).

This is the order in council which provides several of the most important measures of government assistance to ex-service men in their reestablishment problem, including vocational training, out-of-work benefit, and educational assistance.

It is the intention of the department to grant the benefits of this order in council to Canadians who serve in the R.A.F. as just described, and no additional legislation or order in council is considered necessary.

The post-discharge order provides, with respect to members of His Majesty's forces other than Canadian forces, that they must have been domiciled in Canada at the time of their enlistment therein in the present war.

Domicile is a question of intention and of fact that cannot be divided by an arbitrary date line. Any regulation stating that those who enlisted subsequent to a particular date shall be deemed eligible might have the effect of excluding somebody who, under the present legal position, would be eligible.

The department has taken the view that any Canadian boy who left Canada two or three or even four years prior to the outbreak of war for the purpose of enlisting in His Majesty's imperial forces and who returns to Canada upon his discharge would not have forfeited his domicile for the purposes of the order.

I wish to state, therefore, that Canadian boys who left Canada a few years before the war to join H.M. imperial forces to serve in the present war, and who return to Canada upon their discharge, have not necessarily by so doing lost their domicile, and will be regarded as eligible under the order unless there be some circumstance in the individual case indicating that the applicant has actually transferred his domicile permanently out of Canada.

The hon. member for York South also asked this question: Are R.C.A.F. personnel attached to the R.A.F. and serving in India required to stay there for four years?

Present arrangements with respect to (i) aircrew personnel, (ii) R.D.F. personnel, (iii) ground crew personnel are as follows:

Aircrew personnel: Upon completion of each operational and non-operational or instructional tour future employment will be decided upon by the Air Officer Commanding-in-Chief, R.C.A.F. Overseas, in consultation with the appropriate R.A.F. authority. The number of such tours to be served in India before return to the United Kingdom in any particular case will depend upon the availability of replacements and operational expediencies.

Such tours of duty for aircrew personnel are as follows:

(a) Operational: A tour of operational duty presently expressed either as a number of sorties or as a number of operational hours flown will, irrespective of the theatre of war in which the tour is served, remain as at present constituted, subject to the overriding time limitation of eighteen months or such shorter period as may be in effect in the command concerned.

(b) Non-operational or instructional tour for ex-operational personnel: The duration of the instructional tour will be twelve months or such shorter period as may be in effect in the command concerned.

(c) General: The tour of duty outside of Canada for R.C.A.F. aircrew personnel will not exceed three years reckoned from the date of departure from Canada until embarkation upon relief.

R.D.F. personnel: The normal tour of duty outside of Canada, including India, for R.D.F. personnel of the R.C.A.F. serving with the R.A.F. shall be three years computed from the date of departure from Canada. Priority in repatriation where possible will be given to those R.D.F. personnel serving outside the United Kingdom.

Ground crew personnel: The tour of duty of R.C.A.F. ground crew attached to the R.A.F. and serving in India is indefinite, depending upon the availability of replacements and operational expediencies as may be determined from time to time by the Air Officer Commanding-in-Chief, R.C.A.F. Overseas.

The hon. member for Halifax (Mr. Isnor) asked why it was necessary to transfer the "Y" depot to Lachine.

Owing to the extreme shortage of civilian accommodation in Halifax, Nova Scotia, it was

necessary that as many service personnel as possible, living in civilian accommodation, be moved into government quarters. Personnel of the Royal Canadian Navy made up the majority of service personnel living in civilian accommodation and there was no naval accommodation available to house these personnel. Therefore, it was decided to turn over the buildings occupied by the R.C.A.F. "Y" depot to the navy and move the R.C.A.F. "Y" depot personnel to a new location. Priority was given to naval personnel in this regard as it was esential that they remain in Halifax, whereas the R.C.A.F. "Y" depot could be accommodated elsewhere with no loss in efficiency.

He also asked, was the transfer justified in view of extra cost in transportation to R.C.A.F. and personnel of the R.C.A.F. The answer is: The transfer of the R.C.A.F. "Y" depot to Lachine was justified inasmuch as Lachine, P.Q., was a more strategic location for an embarkation depot, permitting the overseas shipment of personnel from the American north Atlantic ports as well as the Canadian north Atlantic ports without increasing the travelling distance of the overseas drafts. The utilization of American north Atlantic ports was, of course, impossible prior to December 7, 1941, and hence Halifax, the largest Canadian north Atlantic port, was the most suitable location when R.C.A.F. "Y" depot was first formed prior to the entry of the United States of America into the war.

The hon. member for Halifax (Mr. Isnor) asked: Are facilities through New York as good as or better than through Halifax?

Answer: With the numerous rail lines converging on the port of New York and the extensive terminal facilities available there, that port is considered equal to Halifax for embarkation purposes.

(2) Is New York embarkation as efficient as Halifax?

Answer: Yes; embarkations of air force personnel at New York are supervised by air force embarkation staffs and are as efficient as Halifax embarkations.

The following question was asked of the minister: Can Canadian nationals now serving in the R.A.F. as groundcrew be transferred to the Royal Canadian Air Force?

Answer: Yes, under the conditions and subject to the restrictions laid down and agreed upon by the governments of the United Kingdom and Canada as tabled in the house.

The hon. member for North Battleford (Mrs. Nielson) and the hon. leader of the opposition (Mr. Graydon) asked a question with regard to the pay and allowances of the members of the women's division.

Answer: (1) Responsible officers of the three services have given very full consideration to this question and they are of opinion that the principle of equal pay for equal duties is fully recognized in the present pay arrangement.

(2) Men and women may be equally useful in the trades sphere, and indeed we recognize that they are by granting the same additional and trades pay.

(3) It is only in the basic rates of pay that women receive four-fifths of the rate of pay for men. Service authorities do not consider that women can perform the same duties as men, because in event of enemy attack the men must man guns and meet the enemy in combat. Wherever there has been possibility of enemy attack, the male ground personnel have been instructed in combat duties and detailed to defence posts.

(4) In the United Kingdom, the women's forces receive approximately two-thirds of the rate of pay for men, including trades pay. We have placed our women comparatively on a much higher level of pay.

The following questions were asked with regard to aircrew messes:

(1) Why do they eat separately?

(2) What is ration scale compared to ground?

(3) Size (capacity).

The answers are as follows:

(1) Accommodation for aircrew messes, where all aircrews, regardless of rank, take certain meals together during periods of operational duty, has been established at the following units in Canada and Newfoundland (in many cases this accommodation is arranged for in existing messes): Yarmouth, Sydney, Gander, Dartmouth, Torbay, Goose Bay.

(2) These special messes are provided for crews of squadrons that are engaged in long operational patrols. Crews of these squadrons are, by the nature of their duties, required to be absent from the units for long periods and therefore some special arrangement regarding their meals is essential. As a rule these crews, officers and other ranks, have a very early breakfast together at the unit. This provides arrangements for all personnel entitled to special rations to be messed together and centralizes the preparation of foods to be consumed aboard aircraft, as these crews take with them food for frequent light meals during the day, such as hot drinks, soups, fruit juices, sandwiches, et cetera. Frequent feedings are

recommended to delay the onset of fatigue and maintain efficiency. On their return late in the evening, after the normal supper hour at the unit is over, these crews are fatigued and hungry and are given a hearty evening meal.

(3) Special rations have been provided for aircrew on operational duty for consumption during flight when absent from their unit during meal hours and also to provide for meals served at irregular hours in the aircrew mess. These rations include the ordinary ration normally supplied to groundcrew with the addition of increases of such items as fresh milk, fresh meat, fruit juices, sugar, tea, coffee, butter, and also includes other foods, such as canned soup, canned beef stew, cooked meats, canned vegetables and canned fruits.

(4) Size and capacity of such messes is determined by the number of squadrons engaged in operational duties from the unit.

(5) These messing arrangements apply only to operational units. At training stations three messes (airmen's, N.C.O.'s and officers) are in use.

The following questions were asked with regard to transportation:

(1) Has any change occurred in the situation regarding free transportation for troops on leave?

(2) What is the present situation?

The answers are as follows:

(1) Yes, since the last session of parliament, arrangements have been made whereby repatriated casualties and ex-prisoners of war are provided with free transportation to their homes.

(2) (i) Repatriated casualties and ex-prisoners of war are provided with free transportation to their homes.

(ii) Other personnel may purchase a round-trip ticket for one-third of the cost of a single fare on the following occasions:

(a) On anual leave—limited to one such purchase per leave year.

(b) On embarkation leave.

(c) On disembarkation leave.

(General): The cost of special leave warrant issued to personnel under the circumstances referred to in (a) (b) and (c) of paragraph (ii) answer 2 above, is proportioned as follows:

One-third of the cost is borne by the government; one-third of the cost is borne by the railway company concerned; one-third of the cost is borne by the personnel.

Under these arrangements, the annual cost of the government is estimated to be as follows:

In the case of	
(a)	$1,454,500
(b)	415,200
(c)	26,000
Total	$1,897,700

If the government absorbed that portion at present borne by personnel and the railway company continued to absorb one-third of the cost, it is estimated that the cost to the government would be as follows:

In case of	
(a)	$2,909,000
(b)	830,400
(c)	56,000
Total	$3,795,400

The additional cost, therefore, would be $1,897,700.

The hon. member for Vancouver North (Mr. Sinclair) asked a question with regard to R.A.F. warrant officers serving with R.C.A.F. overseas stations. The answer is as follows:

R.A.F. personnel serving with R.C.A.F. overseas stations or units are paid from air ministry funds on the basis of R.A.F. regulations. It is considered that the R.A.F. would have very strong objections to personnel of their service in the United Kingdom being paid at other than R.A.F. rates, particularly in view of the invidious comparison which would arise between such personnel and other R.A.F. personnel serving at R.A.F. units in the surrounding area.

The hon. member for York South (Mr. Noseworthy) asked a question with regard to educational service in the units. The answer is lengthy. I think hon. members would like to have it on *Hansard*, and I shall therefore, read it:

The provision of opportunities for service personnel to continue their formal education was made in the early days of the war. The Caandian Legion educational services provided correspondence courses at high school and university level for service personnel. Tutorial classes and lectures in any subject for which there was a demand were also arranged. It was gradually realized, however, that the educational needs of service personnel could be met most adequately only if there was organized within the R.C.A.F. an educational branch. Therefore, in March, 1942, the R.C.A.F. undertook to provide education officers throughout the service. Appoint-

ment of education officers was accordingly made at all R.C.A.F. units and stations whose size warranted such action.

The R.C.A.F. educational branch now offers the following services:

Unit education officers. Almost all units of any size now have an education officer. At others there is an officer who devotes part of his time to educational duties. This applies in the case of elementary flying training schools.

The education officer on a unit or station has many duties. Among them are the following:

(a) To advise the commanding officer on all matters relating to educational services.

(b) To ascertain the educational needs of all personnel on the unit and advise such personnel with regard to educational facilities.

(c) To make appropriate recommendations regarding the educational qualifications of all personnel who desire to remuster to aircrew. To administer the necessary classification tests in this connection.

(d) To organize educational courses, trade improvement classes, progress of war study and tutorial classes as may be necessary.

(e) To advise personnel with regard to educational facilities available through the Canadian Legion educational services and to supervise all examinations in connection with educational activities on a unit.

(f) To give progress of war lectures to aircrew trainees in accordance with the syllabi of training.

(g) To organize the station library.

(h) To assist the commanding officer in organizing discussion and study groups in current affairs and progress of war.

Pre-aircrew education. At most units where there is an education officer, ground personnel who desire to remuster to aircrew and who lack the required educational qualifications are given the necessary courses organized on the unit by the education officer. To date nearly 11,000 airmen have remustered to aircrew.

A large number of personnel who enlist for aircrew duties are qualified in all respects except education. Pre-aircrew training schools have therefore been organized under the war emergency training plan at fifteen points across the dominion for these aircrew trainees. These schools are operated by the dominion Department of Labour and the educational services of the R.C.A.F. have complete responsibility for direction and supervision of training. The schools give courses ranging from six to sixteen weeks and give preliminary training to prospective air gunners, wireless air gunners, pilots, navigators, flight engineers, air observers, air bombers. The subjects studied are science, mathematics, English, signals, aircraft recognition, drill and P.T. and progress of war.

In addition to these fifteen pre-aircrew W.E.T.P. schools there are eight university R.C.A.F. detachments across the dominion. The courses offered vary from six to sixteen weeks in length according to the aircrew category of the trainee. The subjects studied are the same as in W.E.T.P. schools.

To date 22,604 aircrew trainees have graduated from W.E.T.P. schools and pre-aircrew education detachments.

Progress of war. It is recognized nowadays that modern mechanized warfare requires not only technical training and skill but also a high standard of general information and intelligence. The strains of modern warfare can best be endured by men who know actually what they are fighting for and what they are fighting against. To meet this need the R.C.A.F. has organized a progress of war programme which consists of two main types of activities:

(a) There is a programme of progress of war lectures and discussion for pre-aircrew and aircrew trainees. Definite training time is allotted and the programme to be followed is outlined in the various training syllabi. Progress of war lectures in training time are included in the syllabi for pre-aircrew, I.T.S., E.F.T.S., S.F.T.S., air gunner and navigation schools.

(b) Discussion groups and lectures are organized for all personnel. The organization of discussion groups for all officers, airmen and airwomen at all R.C.A.F. units and stations is the responsibility of commanding officers.

(c) Basic material for discussion groups is provided in the publication *Canadian Affairs* which is published twice monthly by the wartime information board in cooperation with the directors of education of the three armed services. It is distributed in Canada and overseas. The aim of *Canadian Affairs* is to keep service personnel informed with regard to significant social and economic developments in Canada with special attention to the effects of the war. Questions for discussion and comment have been included and a resume of news of the home front has been given in each issue.

In connection with progress of war activities, every effort is made to employ films to the best advantage. Film libraries are established and all commands and the command education officer is responsible for organizing film circuits for all units. The selection of suitable films dealing with the background

of progress of war is made at air force headquarters.

The object of the discussion groups scheme is to make all ranks of the R.C.A.F. better acquainted with the high ideals for which the war is being fought; with the important and responsible part which they must play in order to hasten the day of victory and with the possibilities which the post-war work holds for the ordinary man and woman; in a word, to make them more effective members of the air force community to-day and better citizens of the world to-morrow. The scheme should thus contribute materially to the general keenness and efficiency of the service and should counteract any tendency towards slackness or apathy which there may be, particularly among those whose duties are monotonous or seemingly unconnected with active operations against the enemy.

Trade improvement. The technical efficiency of all personnel in ground trades is a matter of vital concern to the service. For this reason trade tests are given at regular intervals, to facilitate advancement and correct grouping of members of the service. It is the duty of the education officer on the station to organize classes for ground crew personnel who have not reached their maximum trade proficiency. The educational services of the R.C.A.F. have provided manuals for students and instructors covering various trades in order that trade improvement classes may be organized in the most effective manner. The best teaching techniques are carefully outlined and every effort is made to organize instruction and material in such a manner that the student and instructor may derive the most benefit. Manuals have already been issued in such trades as aero-engine mechanics, airframe mechanics, equipment assistant, clerks, wireless mechanics and wireless operator, motor mechanics (mechanical transport), manual for seamen, welders and metal workers, and machinists.

Additional manuals are prepared in other trades as the need for them becomes apparent. Trade improvement classes have contributed materially to the high efficiency of R.C.A.F. ground personnel.

Self-improvement classes. This term covers a great variety of educational activities. There are service personnel who wish to use their spare time for the improvement of their academic standing. Such personnel may enroll for matriculation or university classes in nearby educational institutions. The latest educational reports from stations indicate that personnel are studying such subjects as mathematics, history, French, Spanish, German, Russian, economics, psychology, chemistry and bacteriology. This work is carried out under the necessary arrangements with the educational institutions. In many cases he also gives tutorial assistance and organizes station classes in academic subjects.

Other personnel are interested in the following commercial courses such as typing, shorthand, and bookkeeping. Here again the classes may be organized on the station or the personnel may enroll at nearby commercial schools.

Still others are interested in improving their technical knowledge and ability. Arrangements have been made for these to enroll in technical schools in the vicinity of their units in order to follow courses in such subjects as welding, carpentry, electricity, motor mechanics, plastics, diesel engineering, mechanical drawing and so on.

Unit education officers are giving particular attention to the provision of worth-while educational activities for W.D. personnel and at many stations throughout Canada W.D. personnel are taking part in courses such as the following: Cooking and home making; clothing and home management; art; dramatics; music and singing; current events group; language groups.

In addition to the more formal courses outlined above various handicraft groups are being organized on the stations. This programme has been particularly valuable from the point of view of morale and of self-improvement.

At present there are well over 7,000 personnel who are making constructive use of their spare time in academic, business or technical courses or in participating in handicraft work or in some other similar line of activity.

Correspondence courses. Unit education officers have enrolled over 10,000 personnel in correspondence courses at high school and university level who desire to continue their formal education. The correspondence course work of these personnel is often supplemented by the organization of tutorial classes at units.

Libraries. Station libraries are proving to be a very necessary supplement to the various educational activities of the units. The unit education officer is chiefly responsible for the organization of station libraries.

The educational services of the R.C.A.F. are endeavouring to meet the following objectives:

(a) To advance the skill and raise the technical efficiency of those who are already engaged in a particular trade in the service.

(b) to assist those who wish to learn a new trade, or fit themselves for a better post-war vocation.

(c) to assist those who wish to continue their general or professional education.

(d) To promote intelligent interest in the war.

To the extent that the above objectives are met, R.C.A.F. personnel will be the better equipped to carry out their duties, in the service, and as citizens in time of peace.

A course in English, twelve to sixteen weeks duration, is provided at No. 1 manning depot, Toronto, for French-Canadian trainees, to give them greater facility in the use of the English language and thus enable them to take the subsequent service courses of training. In the course of English emphasis is placed on the technical vocabulary of the various ground and aircrew trades. The school of English also provides the trainees with a course in progress of war and current events.

To date over 7,000 French-Canadian trainees have graduated from the school of English.

No. 1 ground instructor's school was organized in August, 1943, for the training of ground instructors in classroom techniques. Over 300 ground school instructors have already taken the course, which is of three weeks' duration, and it is considered that this school has contributed materially to the efficiency of ground school instruction at training schools.

Mr. SINCLAIR: I do not think that is a satisfactory answer to my question about R.A.F. personnel. I asked whether the government had given consideration to paying R.A.F. personnel who are serving with R.C.A.F. squadrons at R.C.A.F. rates of pay. The answer I got was that it was considered that the R.A.F. would think it invidious to have R.A.F. personnel in Canadian squadrons drawing more than their personnel with R.A.F. squadrons. I suggest it is not as invidious a position as that of the R.A.F. squadron leader who commands a Canadian squadron and who has to learn that the commander of the squadron receives less than the flight-lieutenant, less than the flying officer, less than the pilot officer, less than the flight-sergeant pilot, and just a little more than the sergeant pilot. The Royal Navy does not think it invidious to let the Royal Canadian Navy pay Royal Navy personnel on Canadian ships at Canadian rates. Has the R.C.A.F. suggested directly to the R.A.F. that, since they are taking the full cost of R.C.A.F. squadrons, they are willing to pay these R.A.F. personnel at R.C.A.F. rates of pay?

[Mr. Macmillan.]

Mr. POWER: I did not suggest it directly. I did mention it in the course of conversations, but I would not be particularly keen to do it at the present time.

Mr. SINCLAIR: The question is not very important so far as Canadians in the R.A.F. are concerned, because they are going to be transferred. But my appeal, made a few days ago, was one for the airmen. We are using these airmen. We are taking them on, because they are good key men. Why should these two warrant officers in the squadron about which I spoke lead that crew at the pay of a corporal? I do not like to hold up the other services as a model for my own service, but in this instance I believe the Royal Canadian Navy is to be commended upon accepting these chaps as Canadians.

Mr. POWER: My hon. friend will remember that practically all the R.A.F. men serving in Canada are paid at R.C.A.F. rates of pay.

Mr. SINCLAIR: I understand that.

Mr. FRASER (Peterborough West): Before the war a number of our boys went overseas and joined the R.A.F. At the present time they are not considered eligible for the Canadian volunteer medal. They feel they are slighted in that regard, and that they should be entitled to it. Has the minister considered the point?

Mr. POWER: This is the first time I have heard of it, but I shall be glad to look into it.

Mr. FRASER (Peterborough West): I have talked with a number of those boys, and have received a number of letters. This is a paragraph from one:

> It seems very unfair to me that fellows like myself who went overseas before the war to join the British service are not considered as Canadians and volunteers and are therefore not eligible for the Canadian volunteer medal.

He goes on to say:

> I hope you will urge for some similar medal for Canadians. And there are many who volunteered for service before the war when things looked very black at the time of Munich. In our town alone there were—

A number of boys—

—who joined the R.A.F. before the war.

He states also that those who joined the Royal Navy and the British army should be considered. There is some merit in that suggestion.

Mr. POWER: My understanding is—and frankly, I speak subject to correction, because I do not know much about it—that the volunteer medal is entirely a Canadian medal. I have some doubt as to whether a man serving in another force would be entitled

to put it up. However, I am not sure about that. Perhaps the hon. member for Royal would know more about that than I.

Mr. FRASER (Peterborough West): Could there not be another kind of medal for those boys, similar to the Canadian volunteer medal?

Mr. POWER: I would have some difficulty in explaining how the Canadian government could strike a medal for the use of people serving in other forces. But if it can be done, I would have no objection.

Mr. FRASER (Peterborough West): These boys are still Canadians.

Mr. POWER: I understand that; but the question with me is whether the other services would allow them to put it up. However, I do not mind looking into the matter.

Mr. FRASER (Peterborough West): Does the minister not think the suggestion has some merit?

Mr. POWER: So far as I am concerned it does not matter to me at all. I shall look into it.

Mr. SINCLAIR: All Canadians in the R.A.F. will get the general service medal, 1939-43, from the British government, which they would not have got had they stayed in Canada. Most of them are prouder of the fact that they wear the Canada badge on their shoulders than they are of the service medal. That shows that they are Canadians.

Mr. FRASER (Peterborough West): I think they would also like to have the volunteer medal.

Mr. BROOKS: I believe it was stated that it was considered invidious for Canadian airmen in the R.A.F. to receive more pay than R.A.F. personnel received. My understanding is that we are sending about 1,500 army officers to the British army, and that they are to receive Canadian pay. Frankly I do not see how it would be more invidious for the airmen to receive such pay than for the army. I believe there should be some co-ordination between the air force, the army and the navy in matters of this kind; if one receives a certain rate of pay, they should all receive the comparative rates.

Mr. POWER: These are men who are in the R.A.F., and who now have the opportunity to transfer, if they like, under certain circumstances. If they prefer to stay in another service, and then ask us to pay them in another service, I think my friends in the treasury might object. On the other hand the men about whom the hon. member for Royal has spoken are Canadians who have been lent to the imperial army, in the same way as a good many R.C.A.F. men have been lent to the R.A.F. Canada pays their full salary, of course.

Mr. BROOKS: The fighting, it seems to me, is the same, and the service is the same. No doubt the responsibilities these men have taken are the same. Those are factors which should be taken into consideration perhaps more than some which have been mentioned by the minister.

Mr. GILLIS: I asked a question on Friday respecting Canadian nationals in the R.A.F. subject to income tax.

Mr. POWER: I remember that question. I was astonished when my hon. friend stated in the house that the Americans—or perhaps it was not my hon. friend who said it—who had transferred from the R.A.F. back to the American force were reimbursed the amount of the income tax they had paid into the treasury of Great Britain. My hon. friend was not quite clear as to whether the reimbursement was made by the American government or the British government. I learned afterwards—I believe from the hon. member for Vancouver North—that the British government had done it.

Mr. SINCLAIR: When they joined they were promised that it would not be deducted. They were promised that in America before they went to England.

Mr. POWER: I see; that is another story. I am informed there has been no approach made by the British treasury to repay those Canadians any income tax they may have paid the British treasury. That is as far as I have got. It will involve communication with the other side to get further information. If it is not a fact that the British government are going to consider reimbursing these men, then that will involve a diplomatic approach on my part to our treasury.

Mr. GILLIS: What I am concerned about is whether the minister's department intends to make that representation. My information on the United States angle—I do not intend to elaborate this—comes from Canadian nationals in the R.A.F., and I think it is authentic.

Mr. POWER: I do not know just how it was worked, whether the United States government reimburse these men for income tax paid to the British treasury or whether, as the hon. member for Vancouver North says, the arrangement was that where Americans enlisted in the R.A.F. they were not to be

subject to British income tax. If that is a fact, naturally the British treasury would reimburse them.

Mr. BENCE: Is the minister or his parliamentary assistant in a position to give us some information with regard to retirement of members of the permanent R.C.A.F.? I notice the minister answered a question asked by the hon. member for Vancouver North, but I do not know just what information was given. I asked a question the other evening in connection with the retirement of high ranking officers. I wanted to know what rank they held when retired, what rank they held at the beginning of the war, what pension is being paid, some indication of the ages of these men and whether they are capable of carrying on similar work or whether their health is so much impaired that they would be of no further service.

Mr. POWER: Nine permanent officers have been or are being retired since the beginning of the war. I may say that the retirements were not based on health.

Mr. BENCE: What were their ages?

Mr. POWER: Their ages ran around fifty years. In the statement I gave I said it was proposed to retire men who were comparatively young. As I said, there is a thick ceiling of comparatively young men at the top. Through no fault of their own, these men have not been able to see active service, and it was hoped that men who had seen active service would gradually get to the top as they returned from overseas. I do not mean that men necessarily will be retired in order of age, that a man of fifty-one or fifty-two years of age who is an air vice marshal will be retired and a man of forty-nine years of age take his place. It may be that a man of fifty-nine years of age will be retired before a man of fifty-two years of age, not necessarily because his services are not satisfactory but—I think the country will agree with me in this—because it is imperative that we show these young men that there is a way through this ceiling by which they can get to the top. That is the general policy.

The pensions they receive are quite reasonable amounts. I have not the details, but they run from $4,500 to $5,500 per year. These are contributory pensions under the Militia Pension Act, which has been in effect for some thirty or forty years. There is no great hardship involved in retiring these men, although my hon. friend has raised a point in that connection. For some considerable time the treasury may have to pay fairly high pensions, but I do not think the air force should be asked to keep these men in positions where younger men will not be able to come forward. It is part of the pension scheme under which they enlisted. It may be a little expensive for the country, but I suppose the country will have to put up with it for the good of the service generally.

Mr. BENCE: It all depends upon how rapid their promotion was during the last four years.

Mr. POWER: Promotion was exceedingly rapid, but you cannot have the expansion of a force from 4,000 to 200,000 without having rapid promotions. You must give men ranks called for by their increased responsibilities. A man who in peace time may have been in charge of ten or twenty men, would probably be in charge of from 2,000 to 3,000 men now. A man who was in charge of an equipment depot of $100,000 worth of goods, will now be dealing with an equipment depot with $100,000,000 worth of goods. Responsibilities increased as we expanded, and these men necessarily obtained promotions. As I said in my statement, rapid expansion means rapid promotion, rapid promotion brings its own penalty of early retirement.

Mr. BROOKS: Does the same principle apply to the army and navy?

Mr. POWER: I understand the army beat me to it.

Mr. BROOKS: Good for them. It is the first time they have done it.

Mr. POWER: The Minister of National Defence stated that in the house. They have been doing it for eight or ten months.

Mr BENCE: Could the minister give us any information as to how many high ranking officers over the age of fifty-five years have been retired?

Mr. POWER: Very few; I do not suppose there would be ten. I have a copy of the answer that was given to-day. The question asked was:

> How many officers of the R.C.A.F. of air rank have been retired since September 10, 1939. (a) of the permanent force; (b) of the auxiliary force; (c) of the special reserve?

The answer given was:

> (i) One officer of the permanent force.
> (ii) Three permanent force officers presently on retirement leave—two retirements effective in June and one in July of this year.
> (iii) Five permanent force officers whose retirements have been authorized but not yet promulgated.

There seems to be an idea that it is only permanent force officers who are to be retired, and that idea seems about to be made into a

grievance. In addition to the permanent force officers, there was a large number of officers who entered the force at the beginning of the war. These were men of considerable experience in business and the professions; they were lawyers, engineers and so on. Some of these men have risen rapidly, but few of them are receiving the salaries which they would have enjoyed in civil life. Some came from prominent positions in the business world. These men have done a wonderful job, as the hon. member for Spadina has stated. They have been doing administrative work, since they were too old to go overseas to fight in squadrons. Early in my administration I passed regulations by which no one of aircrew age and fitness could enter the air force as an administrative officer. That is to say, if a man was under thirty-two years of age, no matter what his experience may have been as a lawyer or in any other profession—the exception was the medical profession—he could not get a commission. Therefore we had these men of experience in business who became administrative officers, and they have done a marvellous job in the expansion of our force. No one can say that their work has not been as patriotic and as helpful as that of other men in our own force or in other forces. They have now trained younger men to take their jobs, perhaps men who were in the permanent force and who are going to continue in the service after the war. I should like to state publicly that if any of these men feel that they would like to return to their occupations in civilian life, unless they are essential key men I will put no obstacle in the way of their retirement. Already that has gone forth through the services and quite a few officers, some N.C.O.'s in the higher categories whose firms require their services, are asking that they be allowed to retire. We are allowing them to do so and thanking them for the great services they have rendered.

Mr. ADAMSON: Do they receive any retiring allowance?

Mr. POWER: They will get the rehabilitation grant and whatever war service gratuity is given, of course.

Mr. ADAMSON: Even for those who retire voluntarily?

Mr. POWER: I am not quite sure that that point has been straightened out as yet.

Mr. ADAMSON: The army does not do it.

Mr. POWER: We do not do it yet, but I think it will be arranged that we shall, very shortly.

Mr. ADAMSON: I understand that anybody in the air force who is seriously wounded and sent back to hospital in Canada gets the pay of his rank until he is either sent back to duty or discharged to civilian life.

Mr. POWER: If he is discharged to Pensions and Health, he comes under Pensions and Health regulations.

Mr. ADAMSON: The air force has the same regulations as the army in that matter?

Mr. POWER: Absolutely.

Mr. MacNICOL: On comparing the typewritten list of probable cash requirements for 1943-44 and estimated requirements for 1944-45, with the details for air services given on page 394 of *Hansard* of February 11, 1944, under the war appropriation, I find that the figures of probable expenditure for 1944-45 on the typewritten list and in *Hansard* tally, but that the figures on the typewritten list of probable expenditures for 1943-44 are not in any particular similar to those given on page 394 of *Hansard*, the difference amounting in the aggregate to about $60,000,000.

Mr. POWER: I think I know the reason, but I will have the officers of the department come down to help me explain. There was a revision of the estimates as first brought down. I am not sure whether that came between February 11 and February 25, but I shall be glad to have the officers look into it, and then answer my hon. friend.

Mr. GREEN: What is the policy of the government with regard to the use of the Royal Canadian Air Force in the war against Japan? There has been very little said on that subject in the discussion of these estimates. I notice that on March 2 the minister said, at page 1067 of *Hansard*:

> There would be the problem of shifting personnel from one theatre of war to another when we go toward the Japanese theatre and so on.

It would be interesting if the minister would tell the committee whether the air war on the Pacific so far as Canada is concerned is to be a defensive war until Germany is beaten, or whether there is some idea in mind of Canada taking part in the air war there in the meantime. I should think it would be wise to give at least some of our airmen training in fighting against the Japanese. Would the minister explain the situation?

The CHAIRMAN: Order. We have passed item 1, on which a general discussion was allowed, and we are now on item 2, pay and allowances.

Mr. POWER: I will answer the question anyway, Mr. Chairman.

Mr. GREEN: I submit, Mr. Chairman, that the men on the Pacific coast will have to be paid, so that I think my question is pertinent. This item is for pay and allowances.

Mr. POWER: Canada will be in the war against Japan until the very end. I am no strategist and cannot tell my hon. friend just what part we are going to take in the war on the Pacific, but we are going to shift from the European theatre to where we can do the most harm against Japan at the proper time.

Mr. GREEN: Are steps being taken to give our airmen training in the warfare against Japan?

Mr. POWER: Steps are being considered along those lines, if that will satisfy my hon. friend.

Mr. GREEN: The minister on March 2 asked for suggestions with regard to what should be done towards helping our airmen take their places in civilian life. It just so happened that over the week-end one or two airmen were speaking with me and made certain suggestions. They said that even instructors on the stations in Canada have very little information about the government's rehabilitation plans. We all know that certain publications have been issued giving a summary of what is proposed, but apparently these are not being distributed on the stations at all. These lads suggested that it would be very helpful if such publications were distributed, and if the men on the stations were asked for their suggestions, as they are the ones most vitally concerned, and apparently have been giving great thought to this matter. It would be helpful if they knew just what the government's plans are.

Another suggestion was that some attempt should be made to find out how many of the airmen would be willing to serve in the air force after the war; that is, to join the permanent air force. Apparently quite a few would be glad to do so, but I am told that no attempt has been made to find out just what proportion would like to do that. Inquiry should also be made as to how many would be willing to serve for six months, say, or a year, after the termination of hostilities, the understanding being that they would not thereby lose their privilege of taking vocational or university training once they had been discharged. These lads seemed to think that it would be very helpful if the minister could get that information. I notice that in the committee on reconstruction and reestablishment the suggestion was made on February 23 that there would be from 135,000 to 150,000 men in the armed services, including munitions and equipment factory workers, after the war. I do not know whether the air force have made a rough estimate of how many will be required in that service, but it looks as though the number will be quite large. I think it would be well worth while for the minister to have inquiries made among his air force personnel to find out what proportion are interested in staying in the force.

Mr. POWER: Replying to my hon. friend's first question with regard to rehabilitation, as he knows, that is a matter for Pensions and National Health. I understand that Pensions and National Health have set up a public relations office and that they are now in the process of distributing as widely as possible all the information dealing with rehabilitation to civilian life.

In reply to the second question, one at least of our service papers, *Wings*, has been giving explanations of the rehabilitation programme. I have a copy here of an article in *Wings*, headed "Fighting for the Future. What do I do when the war is won?" This is in *Wings* of March. I know there was something in the issue of February, and also, I believe, in that of January, about return to "civvies." The Minister of Pensions and National Health says that about 100,000 copies of this little blue book were distributed.

Mr. GREEN: Are they distributed among the forces?

Mr. POWER: Among the forces overseas, yes.

Mr. GREEN: And in Canada also?

Mr. MACKENZIE (Vancouver Centre): If I may answer the question, a new one is being got ready and will be sent to all next of kin in Canada. It is a little more comprehensive than the other.

Mr. POWER: In one of our service papers —I think, *Contact*, published at Trenton— there was a kind of Gallup poll as to what the boys wanted to do after the war, and I am told that fifty per cent thought they would like to stay in the service. So that to the extent of the Gallup poll, at least, they have been consulted. As to what the strength of the air force will be after the war, as my hon. friend knows, we are studying the matter, but so many factors enter into the question of the strength and nature of the armed forces of Canada after the war that I should be reluctant to make any pronouncement. I know that we shall keep a certain number for the occupational phase of Europe, a number for the policing of Europe if Canada decides to participate in it, and a large number will remain in Europe,

[Mr. Power.]

or wherever they may be, for quite a while after the Germans fold up, because there will not be shipping to bring them back. That will be one of our troubles. I do not think there is any prospect of an extremely hasty demobilization, at least of the people overseas.

Mr. GREEN: Would it be wise to establish more operational training units in Canada than there are at the present time? Apparently a good deal of that work is done in Great Britain, and the suggestion has been made that it might very well be done in Canada.

Mr. POWER: On various occasions we have thought of it, and we are doing some, but our great difficulty has been to get operational aircraft for operational training units, because all this class of aircraft is wanted directly for fighting the enemy. As my hon. friend knows, we have several operational training units in Canada.

Mr. ROSS (Souris): What policy is followed in the selection of training personnel? The minister has stated that some of the senior administrative officers are being retired to make room for younger officers who are coming along. Is any policy of that nature in effect for the selection of training personnel in this country?—as, when a class graduates, so many go overseas, so many are selected for training. Is there at this stage of the war any policy under which those who have had actual experience in foreign lands have the opportuuity of coming back as training officers? If so, what is the policy?

Mr. POWER: That gives me an opportunity to answer the leader of the opposition. In operational training units, instructors must be men who have had operational experience—actual experience in contact with the enemy. In our arrangement with the United Kingdom government in 1942, when we decided to open operational training units here, we asked that all those who were sent here as instructors of our operational units should be Canadians, and they have to a certain extent followed out that policy; but that, also, has its difficult side. Some who come back here to our operational training units will in due course go to training units which are not operational. But we have made arrangements whereby most of the operational training units are up close to the front line. We shall never be able to get away from that. As a man returns from his first operational tour he is sent back for a tour in an operational training unit, because they want to use his very latest experience in the front line. The result is that a good many of our Canadians as soon as they finish their operational tour must do a tour of what is called non-operational work, that is in an operational training unit, but it keeps them overseas a very long time before they return here. We have recently made an arrangement with the United Kingdom government whereby we shall retain in England, in the east, or in whatever theatre we maye be operating, a number of men who have done their operational work, their actual fighting operations, to work as instructors in operational training units, the number to be in proportion to the number of men we actually have in the front line of operations. Until recently the United Kingdom government just kept them Now we have reached a compromise whereby they will do their one tour of operations, one tour of instruction in operational training units, and then return to Canada.

Mr. ROSS (Souris): There is no such policy in mind for the schools in Canada other than the operational schools?

Mr. POWER: There is for the schools; but because these men are latest from the scene of operations, they must, after they have done their operational tour, go to an operational training school before they come back to another school. That is the general policy followed, and that is the policy we have agreed to.

Mr. ROSS (Souris): And there is as yet a lack of those officers for other schools in this country?

Mr. POWER: Yes, but as soon as we get them back they will have first choice of any instructional work. I may say that all of them do not like it. Even those who come back now are offered instructional work as soon as they get here.

Mr. GREEN: Have any of the Royal Canadian Air Force been trained in transport planes and the transporting of troops by air?

Mr. POWER: We are opening a transport O.T.U. next month in Canada.

Mr. CASTLEDEN: Would the minister give us some figures with regard to the number of non-commissioned officers, warrant officers and commissioned ranks who are prisoners of war, and what the policy of the department is with regard to granting promotions to these men after they are prisoners of war? Is there any difference in automatic promotions as between warrant officers and N.C.O.'s and commissioned ranks?

Mr. POWER: I am not sure I have that information here. I have not got it broken down. The total number of officer prisoners

of war appears to be 363, and the total number of N.C.O.'s, 847. I know that we have a policy developed on that, and I know the general lines of it, but I should prefer, if my hon. friend will wait until this evening, to give him then the policy more specifically.

Mr. MACDONALD (Brantford City): When the minister gives that information will he also inform the committee as to the method of granting commissions? We have discussed this in previous years under the estimates of the Department of National Defence. I was one of those who suggested that all members of aircrew should be commissioned—not that I believe in that in principle, but because so many commissions had been granted that I felt, as did others, that there should be a general granting of commissions to members of aircrew. If I remember correctly the method adopted in Canada in 1940 was to grant commissions to one-third of those who graduated and subsequently to grant commissions to seventeen per cent more when they got overseas; that is to say, fifty per cent of each class graduating in Canada eventually received commissions. In 1942 there was a change made, if I remember correctly, and all pilots, observers, navigators and air gunners who were considered suitable according to the standards of the government of Canada, and who were recommended by their commanding officers, were commissioned. I think the standard set in Canada was sixty per cent for each subject and seventy per cent in all during training operations; that is to say, a young man taking a course as a pilot in Canada would have to receive sixty per cent in each subject and seventy per cent on his total in order to get a commission on graduation. I approve that method because it sets a standard toward which a man can strive while he is taking his training. But I do not think those who do not succeed in reaching that standard during their training should be deprived of ever getting a commission. I think they should still be considered as worthy of commissions after they have proven themselves in the air. I believe they should still be allowed to strive for a commission, and I hope that when the minister replies he will tell the committee whether opportunity is given to those who do not attain to sixty per cent or seventy per cent during their training to obtain commissions later on.

Another matter I should like to bring to the minister's attention is the question which was raised by the hon. member who spoke with regard to granting commissions before I rose to speak. I refer to the question of men who are taken prisoners. Do the enemy recognize commissions which are granted after a man has been taken prisoner? Suppose he were not gazetted until some time after he had been forced down in enemy country, is the commission then recognized? As far as I am concerned I should like to think that all men who fly over enemy territory are commissioned, because without doubt they receive better treatment as officers than as non-commissioned officers.

The hon. member for Vancouver North, speaking the other day from his very wide experience, suggested that there should be a mess where all aircrew should dine and live together. I understood that that was so when they were in actual operations. He referred to certain messes in North Africa. I approve of that. I think it is only fair, but it does not meet the objection with regard to airmen who are forced down over enemy territory. They have not a common mess with officers who are prisoners of war. Nor does it meet the objection with regard to young men who have flown as sergeants or warrant officers probably on many, many occasions over enemy territory and who when they return to Canada are still non-commissioned officers and are not admitted to officers' messes. As long as there are two ranks, the non-commissioned officer and the officer, in aircrew, then I think we should extend the principle of a common mess where they can all live. It does not seem right that a young man who is a sergeant and has command of a plant when it is in the air—and in the same plane there may be a commissioned officer, who must take his orders from the sergeant while the plane is in the air—must, as soon as the plane comes to the ground, walk out after the officer and go to his own mess while the officer goes to his. They do not associate. I hope that the minister will be able to tell us that commissions are being granted to these men who in training do not get the standing required. I hope he will tell us that commissions are being granted to them after they have proven themselves to be officer material, after they have proven themselves to be good flyers, after they have had a number of operations over enemy territory.

Mr. POWER: The answer to the last question, of course, is yes. There is no bar to any man getting a commission. He may not get it immediately if he does not pass the required test, but he is certainly encouraged to proceed to a commission, to carry on useful work with every hope that he will obtain a commission even if he does not get it on graduation.

Mr. GREEN: Are any Royal Canadian Air Force officers being seconded for duty

with the military governments in occupied countries. I believe in that way some of those men, who would otherwise be retired, may render further useful service to Canada.

Mr. POWER: We have some following courses now, not very many.

Mr. GREEN: It is open to air force officers.

Mr. POWER: Yes.

Mr. FAIR: Are pensions paid to the wives and families of flying instructors killed in Canada?

Mr. POWER: Yes.

Mr. ADAMSON: I think Captain Balfour, Miinster for Air in Great Britain, said the other day that one-third of the fleet air arm was trained in the United States. Are we training any men for the fleet air arm?

Mr. POWER: Yes; we have two elementary and two service flying training schools training for the fleet air arm in Canada.

Mr. ADAMSON: We are not sending any of our men down to the United States?

Mr. POWER: These are all men who come here from the British admiralty under some kind of a R.A.F. contract. In other words, the R.A.F. have handed over part of their schools to the admiralty to train men for the fleet air arm. We deal with air ministry only.

Mr. ADAMSON: Are there any specific limits to the operational tours?

Mr. POWER: In answer to my hon. friend—

Mr. ADAMSON: How flexible is the arrangement?

Mr. POWER: I would prefer not to give it because it has been kept more or less as a secret.

Mr. ADAMSON: That is all right.

Mr. POWER: It is a secret that everybody on operations knows. It differs. The Americans have one criterion. There is one involving sorties in the bomber command. It is hours flown in the coastal command, and so on. It is a complicated matter, but it has been always marked "secret". I do not think there is any very great secret about it, but because it is marked "secret" when it comes to me I would prefer not to make it public in the committee.

Mr. COLDWELL: I presume that when R.C.A.F. personnel fly in R.A.F. units, the planes are provided by the unit?

Mr. POWER: Yes.

Mr. COLDWELL: I should like to endorse what the hon. member for Brantford City has said regarding commissions. He will remember that when we were in Great Britain over two years ago, we were approached by a group of young officers who pointed out to us how ridiculous it was that they were flying every day with non-commissioned officers and that as soon as they arrived at the bomber station they had to go to two different messes. The minister will remember that we made representations in this regard when we reached London, and I think, as a matter of fact, we made representations in this house also. I just wish to lend my support to the expressions that have been uttered in this house again this year along these lines.

Mr. POWER: I can report progress in the commissioning; we are getting ahead much better than we were. Offhand I can say that so far, out of some 32,000 who hold commissions in the air force, 25,971 persons have been commissioned from the ranks, which is not bad.

Mr. MACDONALD (Brantford City): How many officers are there in the air force altogether?

Mr. POWER: About thirty-two thousand. As hon. members know, when we started this training plan the procedure first followed was that the top thirty-three per cent of the graduating class obtained commissions, and that seventeen per cent more were to obtain commissions overseas. The first trouble that developed was that we had great difficulty in finding that other seventeen per cent, so that in the 1942 agreement with the United Kingdom we made arrangements under which these men could themselves apply to their commanding officers, and if their commanding officers did not agree that they were commissionable still they could go on and eventually wind up before a board at Canadian headquarters, where the standards of these men for commissioning would be judged by Canadians.

Then we thought the quota system was not satisfactory and we instituted the merit system, under which the number of points a man obtained on graduation would count, that number being sixty in each subject and seventy over all. That developed a far greater number of commissions than the quota system; in fact, in some classes it went up to eighty per cent, while in others it went down to twenty or thirty per cent, depending upon the calibre of the class; but no longer did it depend upon a certain quota. Then we ran into difficulties with the boys overseas who had not received their commissions. They

asked how it was that a lad just graduated would come over as an officer while a fellow who had been there for two years had not received his commission. That had the salutary effect of making us try to speed up the commissioning overseas, and I think we have been fairly successful in catching up with the backlog. There may be some who are still lost somewhere in the blue, or whose immediate commanding officers do not as yet understand the procedure. It has come to my notice that certain of our own lads who are isolated in R.A.F. units would make application and ask that their application be sent on to Canadian headquarters, but it took a long time for those applications to get there if they ever did get through. I must say that whenever we called the attention of air ministry to the matter they did not hesitate a bit in hauling their own people over the coals. That was largely because the commanding officer perhaps had never been made familiar with the agreement entered into between the United Kingdom and ourselves. I do not put it down to any ill-will at all; as far as I have been able to ascertain, now at any rate there is the best of good will prevailing between the two services. However, it is very difficult for a squadron leader in Burma or India or the middle east to know everything that is undertaken by way of agreement between the two governments. So that a large number—I do not know how many, but at least some—of our men have not as yet had their applications go through.

That is the number one backlog; that was the important thing we were trying to clean up, and I think we have cleaned it up fairly well. Then we applied the 60-60-70 ratio to all those who had graduated, no matter where they were, prisoners of war or anything else. We just looked over their marks, and if we found that they came within this ratio we promptly commissioned them wherever they were. That caused a little trouble for a while, too, but that has been cleaned up. So that the commissioning is on a pretty fair basis at the present time, though the ultimate for which a good many of us had hoped, namely, that everybody would be commissioned, has not as yet been reached.

Mr. MACDONALD (Brantford City): That is, all aircrew.

Mr. POWER: Yes; but I would be deterred from putting that into effect at the moment because it would be so difficult. If we were to say now that everyone would be commissioned on graduation we would still have that backlog of boys who have done good service overseas, whom we have not been able to find and whom perhaps we could not commission; or perhaps we might have some who had done very good service but had deteriorated since then so that we could not by any means give commissions to them. Therefore I think we shall have to proceed as we have for the past six months, with a broader and more generous commissioning policy, and an agreement, firmly confirmed, with the United Kingdom covering all categories of aircrew, not only pilots, bombers and navigators, whereby the United Kingdom government definitely agree that commissioning is a matter for the Canadian government alone, and that this government shall commission according to its own standards and irrespective of those of any other nation.

Mr. CASTLEDEN: What is the percentage of aircrew with Canadian squadrons in Britain who are commissioned?

Mr. POWER: I may be giving information from which, by adding or subtracting, somebody may find out something of value to the enemy; but as I figured it the last time I looked at it, it was about two to one for pilots, about the same for navigators, and about one to one for air bombers. Of course gunners are away below that; only five per cent were granted commissions on graduation. We have thousands of them over there whose cases we are now reviewing, trying to bring them up. Then wireless operator air gunners were only allowed ten per cent on graduation, with another ten per cent to be commissioned for service in the field.

The CHAIRMAN: Order. I believe the present discussion should come under item 13, which covers the maintenance of overseas squadrons. I must remind the committee again that we are now on item 2, which covers pay and allowances.

Mr. CASTLEDEN: The pay and allowances for N.C.O.'s and officers are different.

Mr. POWER: I think it is still pay and allowances, Mr. Chairman; it is all one to me whether I answer the question now or later. I have the ratio of officers to other ranks. Overseas the ratio is two officers to five other ranks in the R.C.A.F. squadrons; I am not talking about our men in the R.A.F., because I have not that information. In the Canadian squadrons, among aircrew, there are six officers to five N.C.O.'s, showing that we have made a great advance in commissioning. In the ground-crew there is one officer to thirteen other ranks, and the over-all ratio is four officers to nine other ranks.

Mr. CASTLEDEN: These figures scarcely seem to bear out the statement just made

by the minister in regard to prisoners of war, where I think he said there were 362 commissioned officers and 847 N.C.O.'s.

Mr. POWER: Of course a good many of these N.C.O.'s were taken prisoner some time ago. That would not be the very latest report.

Mr. CASTLEDEN: Then could the minister give us the cost of training a wireless air gunner and the cost of training an air bomber?

Mr. POWER: We have not a recent figure, I am told, because of a change in the syllabus. I am instructed that it has been altered so many times that it would not be fair to give any kind of figure.

Mr. MACDONALD (Brantford City): Could the minister tell the committee whether enemy governments recognize commissions that are granted after N.C.O.'s have been taken prisoner?

Mr. POWER: Perhaps I can say yes to that now. To the same inquiry I was not in a position to make that answer last year. However now I know they are doing it. But how quickly that recognition is given, and what steps are taken to move N.C.O.'s who become officers from an N.C.O. camp to an officers' camp, I am unable to say.

Mr. MacNICOL: I should like to ask some questions respecting one or two classes of people who have been associated with the air force. I have in mind, first, those young Canadians who, both before and during the war, wanted to join the air force and go overseas, and who at a later time did go overseas and joined the Royal Air Force. These were Canadians, and in some instances they were killed. Some of them had married English women overseas, and had children. What will be the status of those women and children, when coming to Canada? Will they receive pensions the equivalent of Canadian pensions, although their husbands were not in the Canadian service?

Mr. POWER: Yes.

Mr. MacNICOL: That is, a man who went overseas, joined the R.A.F. and married an English girl, or an old country lady—

An hon. MEMBER: That sounds better.

Mr. MacNICOL: They are all good—English, Scotch, Irish or Welsh. This man, as I say, after marrying was killed in action. If the wife and mother returns to Canada with her children, will she receive a Canadian pension?

Mr. POWER: My colleague the Minister of Pensions and National Health says yes.

Mr. SINCLAIR: Will that also apply to Canadians who went over after the outbreak of war and joined the R.A.F.?

Mr. MACKENZIE (Vancouver Centre): Yes, if they were domiciled here before they went over.

Mr. BLACKMORE: How much worse off financially is the young man after he becomes a commissioned officer than he was before?

Mr. POWER: I have not the figures, but I know a great many find that after they become officers they are not anything like as well off as they were before.

Mr. BLACKMORE: Does the minister not think something ought to be done about that? Surely a boy ought not to be penalized financially because he accepts a commission in the forces of his country?

Mr. SINCLAIR: He is not.

Mr. POWER: I understand it does not apply in commissioning from the rank of sergeant, but it does apply when commissioning from the rank of warrant officer first class —and second class?

Mr. SINCLAIR: No.

Mr. POWER: No; I am informed it is just when commissioned from warrant officer first class. The W.O.1 receives reasonably good pay. Although he does not have the privileges of the officers' mess, he stands high in the community, as a rule. I may say that he runs the army.

Mr. BROOKS: And he is entitled to be called "mister".

Mr. POWER: Yes. Then, he gets what is equivalent to an officer's uniform, and does not have to pay for it.

Mr. ROSS (Souris): And he does not want to take a commission, either.

Mr. POWER: As a rule he does not want a commission.

Mr. BLACKMORE: I am informed that not only is this condition revealed on paper, but the results are serious in connection with certain small matters. For example, a commissioned officer is expected to incur certain incidental expenses which, in the aggregate, amount to a considerable sum of money, and constitute a deduction from the money he receives. So that, although on paper he may receive a certain amount, he is actually much worse off financially. Is there any definite information on the point?

Mr. POWER: He usually has a somewhat higher standard of living. I suppose his messing is better than it would be if he were a non-commissioned officer. My experience, however, is that the N.C.Os. usually live just as well as the officers. However, the officer has to pay more for his messing privileges—although I do not think the messes are as expensive in this war, either in the air force or in the army. I can give my hon. friend the rates of pay for N.C.Os. and officers, if he wants that information. I must say to him, however, that I do not know just what extras the officers would be called upon to pay, apart from their generally higher standard of living.

Mr. BLACKMORE: It is my opinion the minister should institute a rigid investigation into the matter, and see that there is a sufficient difference in pay to make it financially worth while a accept a commission.

Mr. POWER: I shall be glad to do so.

Mr. ADAMSON: There is a machinery for liaison with the Canadian personnel, including officers, N.C.Os. and other ranks, serving with the R.A.F. in the United Kingdom. I met some of the officers who were doing that work. Is there any similar machinery elsewhere in the world?

Mr. POWER: Yes.

Mr. ADAMSON: With respect to messing, there was some discussion a year ago in connection with air force messes. That discussion, which appeared in the English press, stated—whether true or not—that some of the English R.A.F. messes were very expensive. I think the average messing in an army mess could not, by statute, go above three shillings a day. That was the maximum messing we were charged in the army. But I understand that in the air force some messes ran as high as fifteen shillings a day.

Mr. POWER: In war time?

Mr. ADAMSON: Yes, in war time. At least, that was the complaint in the English press. It was brought up in the House of Commons at Westminster at the time. Has the minister any information on that?

Mr. POWER: No, but I shall be glad to look into it. Fifteen shillings a day is a lot of money.

Mr. SINCLAIR: There is an order saying that two shillings a day is the maximum. So far as the hon. member for Lethbridge is concerned, no R.C.A.F. man suffers by having a commission. The highest pay for aircrew warrant officer is $5.75 a day, and the lowest pay for aircrew pilot officer is $6.25 a day. This is how the R.C.A.F. differs from the R.A.F., because in the R.A.F. the man does lose pay by taking a commission.

[Mr. Blackmore.]

Mr. ADAMSON: Could the minister give information respecting the liaison machinery?

Mr. POWER: Yes, we have liaison officers. We have a headquarters at Cairo, one at Naples, one in India, one in Tunis, and liaison officers in about a dozen different parts of the United Kingdom, if I am not mistaken. The hon. member for Vancouver North could tell us about that.

Mr. ADAMSON: There are a couple in London.

Mr. POWER: Yes, about half a dozen. There are about a dozen different liaison or district officers who are in touch with Canadians in R.A.F. squadrons.

Mr. ADAMSON: And if they find a Canadian who is, shall we say, unhappy, because of being in an R.A.F. squadron, they may make recommendation to have him moved to another squadron?

Mr. POWER: That is what they are appointed for.

Mr. MACDONALD (Brantford City): With respect to the allowances granted officers, N.CO's and airmen in Canada who do not live on the stations, it is my understanding that any officer when stationed in Canada is allowed to live out, provided his wife and family live near the station. In such event subsistence allowance is granted to him. Is the same privilege granted N.C.O's and airmen? That is, if an N.C.O. is fortunate enough to be stationed at No. 5, which is near the city of Brantford, is he allowed to live out? And if he lives out, is he granted subsistence allowance? Is there any limit to the number of N.C.O's who can live out? If so, is there a limit to the number of officers who may live out?

Mr. POWER: I am informed that, with regard to both N.C.O's and officers, the answer is broadly this: If there is room and accommodation in the station, while they may live out if they choose, they do not receive subsistence allowance. They can live out with the permission of the commanding officer, but they do not get any subsistence allowance. That allowance is given to them only when there does not happen to be room on the station, when there is no accommodation for them and they are obliged to live out. I understand that this is the common practice throughout all the services.

Mr. GILLIS: Is there any immigration restriction on the wives of R.A.F. Canadian nationals coming to this country? Has the minister any knowledge of just what is the immigration policy in that connection?

Mr. POWER: How do you mean?

Mr. GILLIS: I am referring to a Canadian national serving overseas with the R.A.F. Can his wife enter Canada?

Mr. POWER: That would come under the Department of Mines and Resources.

Mr. FRASER (Peterborough West): She would have to get an exit permit from the British government.

Mr. POWER: He would be a Canadian who had been domiciled in Canada, and I would think by marrying him she would become a Canadian. However, the question of citizenship is somewhat involved. I have heard it discussed in the house many times, but I could not really give my hon. friend an answer offhand.

Mr. DIEFENBAKER: There are a couple of questions I should like to ask in connection with this item. First, what is the basis of the inequality in flying pay as between officers and non-commissioned officers? As I understand it, where an officer and a non-commissioned officer are travelling on the same plane, the first receives $2 flying pay and the second receives only seventy-five cents. What reason is there for this difference? It has become the subject of considerable complaint.

Mr. POWER: It is a fair question but I have not the answer. I shall see what I can do about getting it for my hon. friend.

Mr. DIEFENBAKER: It is something which cannot be justified. The officer receives considerably more pay than the non-commissioned officer and yet the two men are in the same plane. Up until last year there was considerable complaint over the fact that non-flying officers were able to secure exemption from income tax by flying a certain number of hours. I understand that a new rule has been put into effect whereby non-flying officers, administrative officers and the like, can be designated by their commanding officer as officers to whom exemption is to be granted, even though they are not flying.

Mr. POWER: My hon. friend is perfectly right. We cannot now be made the object of accusation that we are now flying in our income tax, so to speak. There has been created a certain number of what are known as annotated positions. These positions call for a considerable degree of flying. They have not been established by the grace or pull of the commanding officer; they have been set up by the air member for organization working with a committee of officers of the R.C.A.F. They have decided that certain positions shall be annotated and the occupants thereof exempted from income tax during the time they occupy such positions.

Mr. DIEFENBAKER: Is it not a fact that there are quite a number of officers occupying these annotated positions who do little or no flying? By flying I mean to accompany pilots on flights. By being appointed to these annotated positions they have been able to secure exemption from income tax which otherwise they would not be able to get.

Mr. POWER: I shall have to get a report on that.

Mr. DIEFENBAKER: The minister possibly can give us an answer that will cover the situation by telling us the number of administrative officers who fill annotated positions and who thereby secure exemption from income tax although they are not actually engaged in flying.

Mr. POWER: I am told that they must be general list officers and not administrative officers.

Mr. DIEFENBAKER: That is the point I am making. The information I have is that certain administrative officers have been annotated and that as a result they are exempted from income tax. I should like to have the number who have received exemption by being placed in these annotated positions, the number who have received exemptions even though they have had less than fifteen hours in the air accompanying crews in one year.

Mr. MacNICOL: I should like to pursue a little further the question asked by the hon. member for Cape Breton South with reference to widows of Canadians who went overseas and married women there. The hon. member inquired as to their eligibility to enter Canada. The Minister of Mines and Resources is in his place and perhaps he could give us an answer. I see he is now listening. I realize he has nothing to do with this department, but may I tell him that a few moments ago the hon. member for Cape Breton South asked the minister a question in connection with the admission of old country women who had married Canadians who were in the R.A.F. and who had since become deceased. The hon. member wanted to know if such women would be admitted to this country without

difficulty, and I understood him to say that there was some difficulty about their entry. The minister could not give a full answer because he did not know. Perhaps the Minister of Mines and Resources could give us the answer.

The CHAIRMAN: Unless the minister wants to answer I do not believe it would be in order. He has not his officials before him and I really think that question should be allowed to stand.

Mr. MacNICOL: Can he not enter the debate?

The CHAIRMAN: Certainly, but this has nothing to do with the item before the committee.

Mr. GRAYDON: The minister appears to be anxious.

The CHAIRMAN: I repeat that it has nothing to do with item 2. If the minister wants to answer it is up to him.

Mr. MACDONALD (Brantford City): One department at a time.

Mr. MacNICOL: The minister can take part in the debate if he wishes.

The CHAIRMAN: I want to make my point clear that this question has nothing to do with the item under discussion.

Mr. LOCKHART: I have a case in mind.

Mr. CRERAR: If I understand the question aright, I see no reason why the lady could not be admitted to Canada, assuming that she comes within the requirements of the Immigration Act. There are prohibitions in the act against entry of certain people, but if the lady is not in any prohibited class I see no reason why in due time she should not come to Canada.

Mr. GRAYDON: There could be nothing controversial over the minister's statement.

Mr. MacNICOL: If a lady overseas marries a Canadian, she at once becomes a Canadian, so far as our immigration laws are concerned.

Mr. CRERAR: No; that would not overcome the prohibitions in the Immigration Act. Take, for instance, a person afflicted with epilepsy. That person would be prohibited entry under the act. But assuming that the lady in question can meet the requirements of the act, I see no reason whatever why in due time she should not be permitted to come to Canada.

[Mr. MacNicol.]

Mr. MacNICOL: I wish to thank the minister for interjecting and answering a question that already had been asked by another hon. member.

Mr. SINCLAIR: I should like to say a few words with respect to the matters raised by the hon. member for Lake Centre. He may have given a wrong impression as far as certain non-flying officers are concerned. There are non-flying officers, gunnery instructors, navigation instructors, signalling instructors, for instance, whose duties entail travelling around, and they are deserving of all the flying pay they get. I must join with the hon. member, however, in his suggestion that no administrative officer should secure exemption from income tax because he travels from one place to another in an aircraft. Let me give an example that happened to me quite recently. I had an opportunity to go for a flip in a Canso—I had never before ridden in a Canso. Seventeen other officers piled in and we had an enjoyable flip. The next day the adjutant asked me for my name and number so that he could post me $2 for a flip for which most of us would have gladly paid $5. The time has come, I think, to cancel special flying pay for non-flying personnel.

Mr. POWER: Would my hon. friend pardon me. We are now talking about exemption from income tax.

Mr. SINCLAIR: I am talking about flying pay. It is double-edged. Not only do they get exemption from income tax but $2 extra as well.

Mr. POWER: Flying pay is a different thing. That applies to all the service.

Mr. SINCLAIR: I think the minister has mistaken my point. Administrative officers who take casual flips ought not to get $2 extra a day for that, and exemption from income tax as well. It is a very nice bonus for them.

Mr. MACDONALD (Brantford City): Do they not have to be on the general list?

Mr. SINCLAIR: No. Any non-flying officer who can claim that he is flying on duty—and it may be a very flimsy reason—gets $2 for that flip and the N.C.O. and an airman seventy-five cents, and some of them run up quite a respectable sum in a month. Flying in an aeroplane is as safe to-day as travelling in a bus or train, except for those who are flying over Europe or are on operational duty. I would suggest that flying pay for non-flying personnel, other than navigation men, signal

men, bombing and gunnery men, should be eliminated, and for all flips. The time has come to end that.

Mr. MACDONALD (Brantford City): Both at home and abroad?

Mr. SINCLAIR: Yes.

Mr. POWER: The pay regulations to which my hon. friend refers have been in existence for a long time, since pre-war. That is to say, under the regulations any officer or airman who goes on a duty flight gets $2 a day for flying. If my hon. friend were detailed for duty in Montreal he would get $2 for his trip there. But if there has been abuse of the regulations such as my hon. friend mentions, of a man taking a trip in a plane just to get flying pay, I am glad that my hon. friend has called my attention to the matter. I can assure him that it will not happen again, and the boys will have to pay for their flights. But I do not see how I could overcome, without serious difficulty, a pay regulation which has been in effect for quite a long time and which provides that even though a man be on the general list, and his position is not annotated, if he is detailed for duty somewhere else, he gets $2 for flying to that particular place, if he is an officer, and somewhat less if he is an N.C.O. or an airman. But that is not the point my hon. friend brought up. His point was that in some way they evade payment of income tax.

Mr. SINCLAIR: If they do it often enough, they evade payment of income tax and get the $2 for the flip as well.

Mr. POWER: The $2 a day is a different matter. That is the practice and has been in the regulations for quite a long time, and I could not promise to change it without perhaps having to turn the whole service upside down. But I will certainly look into the abuse of annotated positions referred to by the hon. member for Lake Centre.

Mr. DIEFENBAKER: And will the minister give the committee a list of the annotated positions?

Mr. GRAYDON: I think a number of members have received letters from various air observer schools on behalf of civilian pilot instructors. They have taken some pains to make a case with respect to income tax, comparing their duties with similar duties in the ferry command. I do not rise to do more than simply ask the minister for the explanation which must underly the position which the government takes with respect to income tax. I would be very glad if he will enlighten the committee on that.

Mr. POWER: There has been a concerted drive put on, and I think I have answered every member who has written me a letter about it. The reply is one of those formal ones. I will bring it down for my hon. friend to-night. If it is not satisfactory I think the only thing for hon. members who are being asked by these civilian instructors to present their case would be for them to present it to the Minister of Finance. I have made my reply and I shall be only too glad to read it into *Hansard* to-night.

Mr. GRAYDON: I think the minister ought to do that, and if there is anything further to be done when the estimates of the Minister of Finance are before the house, we can deal with the matter then.

Mr. GILLIS: Are there any regulations on the subject of messing with respect to R.C.A.F. personnel in Canada? From time to time I have received complaints from different stations that at some stations the food is not so good and there is a fixed messing fee, while at other stations there is no messing fee. Where there is a fixed fee, a monthly deduction is made from the pay cheque.

Mr. POWER: This applies to other than officers?

Mr. GILLIS: Just to the rank and file below warrant officer. Is there any regulation that permits those administering an operational station or training school to make a deduction for messing from the pay cheque of any of the personnel below the rank of officer?

Mr. POWER: I gave instructions about a month ago to abolish that. It had been hanging fire for six months.

Mr. GILLIS: It was abolished a month ago?

Mr. POWER: Yes. It is six months since my hon. friend called my attention to it and I determined that the practice should be abolished. There were, however, certain reasons for it which I felt were not very strong, and eventually I got my way.

Mr. GILLIS: There is no regulation to-day which permits it?

Mr. POWER: There is a regulation prohibiting them from doing it.

Mr. SINCLAIR: With regard to the point raised by the leader of the opposition, probably all of us have received these letters from civilian pilots. I should like to point out one thing that is not mentioned in the letter. A sergeant pilot who goes on leave as a civilian pilot to an air observer school gets $300 a month. A sergeant pilot who stays with the air force and flies over Europe gets $105 a

month. I think most hon. members will agree that civilian pilots can afford to pay income tax.

Mr. POWER: I will not give any answer, now, if that is satisfactory.

Mr. GRAYDON: I was not raising any question, but merely asking for information. So many hon. members have received these letters from time to time that I thought it was a matter about which the committee ought to know something. I am much obliged to the hon. member for Vancouver North. I think most of us who were not fully acquainted with the circumstances in this connection would like to have the facts put on *Hansard* for our information.

Mr. BROOKS: Before we pass this item of pay and allowances there is a matter about which I intended to speak to the minister privately and personally. I believe it has already been brought to his attention, but he might be able to give us some further information. It has to do with young men who join the air force and are sent to places like Ottawa, and other centres, to the technical schools and colleges for training. These boys are put on subsistence, and frankly I think the rate is very low. It does not come near to paying their expenses. Here in Ottawa the allowance is $1.25 a day, and these boys are paying $1 for their room, and the other twenty-five cents is all they have, if it is not supplemented from some other source, for their meals. Possibly the minister is making other arrangements.

Mr. POWER: I am afraid I cannot make any other arrangements, except to see to it that as few as possible of our men are on subsistence allowance, and I think, as time goes on, there will not be many. It is almost an impossibility to work out a system of subsistence allowances in different zones or in various parts of the country. What a man gets is $37.50 a month: it is not enough for the time he stays here, but these men do not stay very long in congested centres.

Mr. BROOKS: Well, they stay for two or three months. I think some arrangement should be made if possible to put them in barracks.

Mr. POWER: We are trying to do that.

Mr. BROOKS: I do not think they should be wandering around at night.

Mr. POWER: But I could not raise the subsistence allowance.

Mr. BROOKS: It is better to have them in barracks. They are under discipline and receive better care and attention.

Mr. CARDIFF: Has the minister any control over the way in which food is served in the R.A.F. camps? As he knows, some of the air force are transferred to R.A.F. camps, and the complaint has come to me at different times—I have a boy in the service—that the food service in these camps is not comparable with the service in R.C.A.F. camps.

Mr. POWER: Does the hon. member mean overseas, or in Canada?

Mr. CARDIFF: I mean in Canada. I imagine that the food supplied to all the camps is the same. Presumably the objection is to the way in which it is put up and served, but there seems to be a great difference in the way it gets to the men, as between R.A.F. and R.C.A.F. camps.

Mr. POWER: I have heard that complaint frequently. The food is the same.

Mr. ADAMSON: The rations are the same.

Mr. POWER: The rations are exactly the same. Although we have full authority over the R.A.F. here we hesitate to infringe on their autonomy. But we have put in our sergeant cooks at times, and we have put in our own messing officers. I was under the impression that the situation had improved considerably during the past year, but it may still be that at some R.A.F. stations the cooking is not as good as it should be. They come under our command messing officers, and our people inspect as frequently as they can.

Item agreed to.

3. Travel, transportation and freight, $27,345,330.

Mr. ADAMSON: Will the minister give some break-down of this item?

Mr. POWER: The reason for the increase?

Mr. ADAMSON: Yes.

Mr. POWER: I will give reasons for the increase. The cash requirements for the fiscal year 1944-45 are $27,345,330. This represents an increase of $615,330 over the probable 1943-44 expenditure, due mainly to (1) additional sea transportation costs resulting from (a) the number of personnel proceedings overseas; (b) the number of personnel returning to Canada as repatriates or on special leave after completion of tours of duty; (2) increased requirements in respect of freight and drayage charges in Canada. Ocean transportation for Royal Canadian Air Force personnel proceeding overseas was assumed by Canada as of April 1, 1943. These costs were absorbed by the United Kingdom prior to that date. Is that sufficient?

Mr. ADAMSON: Has the minister any idea —or is it secret?—as to what it costs to send an airman overseas?

Mr. POWER: It is £17 now; I am informed it will be £15 next year. That is a flat rate applying to all ranks.

Mr. ADAMSON: Does it also include transportation on the Canadian railways?

Mr. POWER: No.

Mr. ADAMSON: It is purely from the—?

Mr. POWER: —boat.

Mr. ADAMSON: From the coast?

Mr. POWER: On board the boat.

Mr. ADAMSON: And it does not include any transportation of equipment?

Mr. POWER: We take only our personal equipment with us.

Mr. ADAMSON: I mean, no aircraft transportation?

Mr. POWER: No; we do not take any aircraft with us.

Mr. ADAMSON: Does it include those who have anything to do with the R.C.A.F. transport command?

Mr. POWER: They fly.

Mr. ADAMSON: Yes, I know. This is purely by ship; it does not include any of the men who fly at all?

Mr. POWER: No.

Mr. ADAMSON: I mean, the lucky officers get taken over by air. It does not include them?

Mr. POWER: No.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. POWER: The leader of the opposition asked me a question about income tax exemptions for instructors at civilian schools. I have in my hand a form letter which I sent to several members of the committee who have written to me. I shall leave out the name of the member to whom it is addressed. The letter reads as follows:

> Your letter of February 22 received relative to the request of Mr. ..... for a reduction in his income tax on the grounds of the danger of his occupation as a staff pilot at ..... air observer school.
>
> Mr. ..... suggests that since these schools have increased in size, the hazards of his occupation have increased. I am glad to say this is not borne out by our accident records and I am at a loss to understand his reference to higher insurance rates.
>
> At these schools we have a number of service personnel, on leave without pay, employed as staff pilots and they are adjudged as of civilian status for income tax purposes and, consequently, there is no discrimination as suggested.
>
> Similar inquiries having previously reached this department caused a thorough investigation to be made, into which the Department of National Revenue (income tax division) was drawn. This investigation satisfied us that, after payment of income tax, pilots on leave without pay, employed at air observer schools are slightly better off financially than in the service.
>
> For your information I am attaching a schedule of comparative income of civilian instructors at A.O.S.'s, and sergeant pilots, R.C.A.F., after making provision for a proposed tax on 1942 incomes.
>
> It is to be noted that the rank from which civilian instructors are drawn is sergeant pilot, and in order to make a fair comparison of their relative incomes, an amount of $1 per day being the value of the subsistence allowance at both service schools and air observer schools has been added to the pay of the rank of sergeant pilot.
>
> From the schedule presented it can be seen that the net cash income of the instructor at the civilian school after the deduction of both the tax and savings element is greater than the income of a sergeant pilot in any degree of marital status.

I have here the schedule, and with the consent of the committee I ask that it be placed in *Hansard:*

Schedule of comparative incomes civilian instructors at A.O.S.'s and sergeant pilots, R.C.A.F., after making provision for a proposed tax on 1942 incomes

	Status	Gross income	Tax	Income after deducting tax	Compulsory savings	Net cash income
Single	Civilian	$3,600 00	$1,106 40	$2,493 60	$288 00	$2,205 60
	Sgt. pilot	1,715 50	.....	.....	.....	1,715 50
Married	Civilian	3,600 00	812 40	2,787 60	360 00	2,427 60
	Sgt. pilot	2,135 50	.....	.....	.....	2,135 50
Married and 1 ..	Civilian	3,600 00	668 40	2,931 60	396 00	2,535 60
	Sgt. pilot	2,279 50	.....	.....	.....	2,279 50
Married and 2 ..	Civilian	3,600 00	524 40	3,075 60	432 00	2,643 60
	Sgt. pilot	2,423 50	.....	.....	.....	2,423 50
Married and 3 ..	Civilian	3,600 00	424 20	3,175 80	424 20	2,751 60
	Sgt. pilot	2,531 50	.....	.....	.....	2,531 50
Married and 4 ..	Civilian	3,600 00	370 20	3,229 80	370 20	2,859 60
	Sgt. pilot	2,603 50	.....	.....	.....	2,603 50

1. An amount of $365 has been added to cash income of sergeant pilot as value of subsistence allowance at $1 per day.

2. Deductions for compulsory savings may be reduced by the amount paid out for insurance premiums, mortgages on home, pension funds as provided in proposed amendments to the income tax act.

3. The salary of $3,600 shown for civilians is the salary attainable after provisional period with civilian school.

Mr. GRAYDON: In order to obtain information may I ask the minister a question? I have not had an opportunity of interviewing any of these men. I simply passed on the letters that I received in order to get the information in a public way. How do the air observer schools or the other training schools recruit these civilian instructors? From what group in the air force are they taken?

Mr. POWER: They are largely sergeant pilots who have gone through the air training plan; are given leave without pay, and are then employed at civilian schools.

Mr. GRAYDON: In most instances are they men who have had operational service overseas?

Mr. POWER: Not any of these.

Mr. GRAYDON: I am quite sure that most members of the committee are a little confused when the question is answered in this way. Are these sergeant pilots who find themselves in the position of civilian instructors picked out or chosen from the sergeant-pilot class because they have special adaptability or special training? How do these men happen to get leave without pay and then be taken on, as the hon. member for Vancouver North says, at $300 a month? What is the test by which these men are chosen?

Mr. POWER: Originally when we started the civilian schools these men were civilian bush pilots or men who had done some flying before the war. For some reason or another they did not care to come into the R.C.A.F., or perhaps they did not qualify for aircrew on some ground or another; therefore they were employed by these schools. As time went on, they either did not join the R.C.A.F., or disappeared from the scene and got other jobs in other civilian occupations, so that we had to fill those schools either with these men whom we took into the R.C.A.F., blanketed them in as civilian instructors, or with some of our own graduates who, for some reason or another, were perhaps not fit for overseas or who had probably joined through the civilian schools and had been sworn into the R.C.A.F. with that purpose in mind. I am not sure about that. I know that at one time the civilian schools could not get any more civilian pilot instructors. They came to us and we said: "We will take them all over and make them R.C.A.F. men." In that way we probably absorbed some who otherwise would not have joined the R.C.A.F. at all. We did that in order that we could have some control over them. We can send them overseas.

Mr. GRAYDON: They are available for operational work overseas?

Mr. POWER: They are now. We can call them back any time.

Mr. GRAYDON: Would the minister give the committee some information as to how many civilian instructors of that class there are in Canada?

Mr. POWER: I would not guess. I would have to find out. I can give the number of schools, but I cannot give the number of instructors with any degree of accuracy.

Mr. GRAYDON: Is an opportunity given to those who have completed operational work overseas and who have come back to Canada to take up work of this kind?

Mr. POWER: Oh, yes; we are looking for these men. Unfortunately quite a few of them do not want to be instructors. More and more as time goes on we shall fill all our schools with instructors who have had overseas experience. That is the intention and the policy.

Mr. GRAYDON: Some of these men who have made the claim are no doubt men who have had operational training overseas?

Mr. POWER: No.

Mr. GRAYDON: None of them?

Mr. POWER: I do not think there are any civilian instructors or R.C.A.F. men on leave without pay in our air observer schools of the class who are now complaining about income tax, who have had actual experience overseas.

Mr. MacNICOL: When the committee rose I was on the point of asking a question in connection with travel. At Christmas time I met a number of young airmen in my riding who had just returned from British Columbia. Two of them told me—and maybe others went through the same experience—that they were well into Alberta and some in Saskatchewan before they were able to get a berth. In other words, they had to sit up all the way from Vancouver, or wherever they boarded the train in British Columbia, to well across

the prairies. I suppose the same condition applies to those who board trains at Halifax or Saint John or anywhere in the east. I have been wondering if in the case of holidays like Christmas and Easter or stated holidays when large numbers of these young men are returning to their homes in the east and west, the government could not provide sleeping cars, especially for airmen or service personnel returning to their homes in the central provinces from both east and west coasts.

Mr. POWER: I do not think any of the services have ever provided berths and meals for personnel travelling on leave.

Mr. MacNICOL: But where there are such numbers travelling at Christmas time from British Columbia or Halifax does the minister not think something should be done? These men are coming to their homes in Ontario and other provinces, and they are entitled to accommodation. As I said a moment ago, it would only be fair to provide one, two or three cars, or whatever is required, wholly for the service personnel. I speak now of the air force, but the same thing will apply to the others as well.

Mr. POWER: I think that would be a matter for the railways. There is always a shortage of accommodation at that particular period of the year. It would be for the railways to arrange that, provided the men would pay for their berth and meals. The services do not pay.

Mr. MacNICOL: The minister is so persuasive with the railways and everybody else that I have the notion if he would interest himself in the matter something would be done.

Mr. POWER: Very often I would like to get a berth for myself, but I cannot get away with that.

Mr. MacNICOL: I am speaking of special occasions, not ordinary trips such as the minister and I take. When a large number of these young men are returning after a holiday, such as Christmas, two or three cars could be provided for them if an effort were made.

Mr. HARRIS (Danforth): As the minister probably knows, it is a practice in the United States, something that has grown up as a courtesy rather than under any rules or regulations, for civilians to stand aside until such time as men in uniform have found accommodation on the trains. I should like to take this opportunity to say to the people of Canada through you, Mr. Chairman, while this matter is being discussed, that it would not hurt the civilians of this country to step aside, when men in uniform are boarding trains, and let those boys have everything that is coming to them. I agree with the minister that it is a matter for the railways. I do not suggest that the railways should make any rules or regulations in this regard, but I do ask the civilians of Canada, who are not doing nearly so much in behalf of Canada as those lads are doing, to step aside on station platforms in order that those in uniform may go through first and have their choice of accommodation. Then we can take what is left.

Mr. NEILL: I should like to add a word in a different connection. Only to-day I received a letter from which I should like to read a few lines:

> I wonder if some day you would ask the hon. Minister of National Defence for Air why air force personnel are not allowed any travelling time with their fourteen days annual leave? The navy and the army get it, the latter get seven days paid travelling time. This has always struck me as rather unfair and I can see no good reason for our being denied this privilege since the same taxpayers and government are paying us all. Last fall when the new K.R. (Air) was issued travelling time (8 days) was included as one of the new regulations, but shortly after this was, so I am told, cancelled.

Then this girl goes on to give an instance of a girl going from Toronto to the west coast, stating that she had only five days at home out of the fourteen days leave. Are members of the air force treated differently from members of the army and navy; and, if so, why?

Mr. GRAYDON: When these appropriations were first before the committee I raised the matter which has been mentioned by the hon. member for Comox-Alberni, and I should like to support what the hon. gentleman has said. This particularly concerns those who travel from the part of the country from which the hon. member comes. Travel takes so much of the time that there is not much time left for these boys and girls to spend at home, though they have planned and saved for months in order to make the trip; and every-

one knows that it is not very easy to save money on the pay they get in the armed services. I do not think there can be any very good reason for longer withholding from those in the air force the privileges which are granted to those in the other branches of the armed forces. I understand the situation to be as outlined by the hon. member for Comox-Alberni, and perhaps the minister would be good enough to explain it.

Mr. POWER: I do not think it is quite as has been stated. I must say that I am surprised to find the situation to be as it turns out to be, because I was always under the impression that the other services complained that the air force had too much leave. This is the information I am given. A table has been prepared setting out in detail the regulations of the army, navy and air force with respect to the leave. That table is attached to this statement, and I can place it on *Hansard*. It is pointed out that the information contained in the table, with respect to the army and navy, has been taken from the latest available regulations and orders of the navy and army, and it is suggested that before this is tabled and used it might be advisable to have it approved by the appropriate army and navy representatives. I think this has been done. As indicated in the table, no travelling time is granted by the R.C.A.F., except in the case of special leave at isolated units. Similarly, no travelling time is given by the army, except in connection with embarkation leave or furlough, when personnel of the army warned for overseas service may be granted leave or furlough sufficient to provide two clear days at home. All personnel of the R.C.A.F., when posted overseas, are granted fourteen days embarkation leave irrespective of where their homes are located, and this period is considered sufficient to allow personnel proceeding on this leave, even from one coast of Canada to another and return, to have the same, if not more, time at home than is given to army personnel on embarkation leave.

I am not prepared to discuss that, because it may be a pretty broad statement. However, my information goes on to say that it is therefore considered that in general the army and air force regulations with respect to travelling time in addition to leave are on the same level. The navy does grant travelling time in addition to normal leave. This is considered justified in view of the fact that the larger proportion of the personnel of the navy are serving at sea and leave must be taken from whatever port the ship may arrive at and at a time when leave can be granted. The conditions of service of Royal Canadian naval personnel who are serving at sea differ from personnel of the army and air force serving at fixed units in Canada, and because of this, travelling time in addition to normal leave is justified. It is also considered that reasons to justify the granting of travelling time in addition to normal leave to naval personnel are not present to justify the granting of such travelling time to army and air force personnel.

Then there is a long story here setting forth the different kinds of leave: annual leave, embarkation leave, disembarkation leave, even political leave, with the conditions in the three services set out. If the committee would like to have this table on *Hansard* I would have no objection.

The CHAIRMAN: By unanimous consent of the committee.

Mr. POWER: The table is as follows:

Leave and Passes

1. Annual Leave.—Personnel who are continuously employed on flying duties are eligible for 14 days leave with pay once every six months. Personnel not employed on flying duties are eligible for 14 days leave with pay once every fiscal year. Leave not taken may be accumulated in exceptional circumstances, but this is not encouraged.

2. Granting of.—Normally leave is not granted during the first six months service of officers and airmen, and trainees other than aircrew are not given leave until completion of training. Leave may be granted to aircrew trainees when time is available between courses and in such cases is not charged against annual leave.

3. Isolated Units.—On completion of a tour of duty of not less than six months at isolated units, personnel are eligible for seven days special leave in addition to annual leave authorized, together with travelling time actually required for the return journey to the mainland or railhead, but not to exceed five days in any case.

4. In the case of personnel posted to isolated units on the east coast, arrangements are made for them to take annual leave prior to posting, and they are not granted annual leave during their tour of duty at such isolated units. This does not apply to aircrew. While such postings are for an indefinite period, in practice personnel are posted away after a tour of duty of from 12 to 18 months. At the request of the A.O.C., W.A.C., this restriction was not extended to the west coast.

5. Indefinite Leave.—Indefinite leave without pay is no longer granted, and applications for this type of leave to return to essential industry are treated as application for discharge, provided a certificate is obtained from national selective service that the individual's services are

essential to the efficient conduct of the industry concerned, and that there are no other personnel available with comparable qualifications.

6. Farm Leave.—A.O.s.C. have authority on the C.O.'s recommendation to grant spring farm and harvest leave to personnel who can be spared from their duties, up to a maximum of two months, for each type of leave. Such leave is without pay and allowances, including dependent's allowances.

7. Sick Leave.—Sick leave is granted by C.O.'s on the recommendation of a medical board.

8. Compassionate Leave.—Compassionate leave may be granted either with or without pay, depending on the circumstances of the case.

9. Embarkation Leave.—R.C.A.F. personnel and C.T.E. trainees from Newfoundland are given 14 days embarkation leave, including travelling time, irrespective of the leave destination. Where possible personnel other than trainees proceeding overseas on posting, or for a period of not less than six months on temporary duty, are given 14 days embarkation leave.

10. Repatriation Leave.—Personnel who have carried out a term of two years on ground duties overseas or aircrew who have completed an operational tour, and who have been returned to Canada for other than disciplinary or medical reasons, are given 30 days leave including travelling time. Personnel who have carried out a term of duty extending for a period of at least six months overseas but less than two years in the case of groundcrew and aircrew who have not completed an operational tour, and who have been returned to Canada for other than disciplinary or medical reasons, are given 14 days leave, including travelling time. In exceptional cases such personnel may be given leave not to exceed 30 days.

11. Passes.—Periods of absence from duty of 48-hours or less are considered as a pass and are not charged against leave entitlement. Some flexibility is necessary under active service conditions, and the exact number of off duty pass privileges is left to the discretion of C.O.s. including decisions as to whether these pass privileges are to be given on week-ends or during the week.

12. Transportation on Leave.—Personnel proceeding on authorized leave may be granted one special reduced fare annually to return to their bona fide homes, at a cost to themselves of one-third of the existing reduced rate which is round trip at the price of a single fare. In addition, a similar warrant may be issued on embarkation or disembarkation leave.

13. Furlough warrants, i.e., return ticket for the price of a single fare, may be purchased by personnel in uniform or in possession of Canadian passenger association form 95, which is issued by the adjutant of the station, and these tickets are available without retsriction as to number.

48- and 72-Hour Passes

48-Hour Passes.

1. The regulations relating to the granting of 48-hour passes are contained in A.F.A.O. A.24/6, paras. 7 to 10, inclusive.

2. Certain instructions were issued in amplication of the provisions of this A.F.A.O. with respect to personnel at air force headquarters and command headquarters, and such instructions are now being issued generally by way of amendment to this administrative order. The amendment has been forwarded for promulgation and will provide as follows:—

"Forty-eight hour passes at air force headquarters, command headquarters and stations or units other than those where personnel are actively engaged on flying duties or where the pool system is operated are only to be granted to personnel who have put in a reasonable amount of overtime during the month prior to the application for the pass or in other extenuating circumstances."

3. Personnel to whom 48-hour passes are granted fall under two classes:—

(a) Personnel who normally work a five and one-half day week. Such personnel only receive a 48-hour pass where they have put in a reasonable amount of overtime work or in special circumstances where such a pass is required to take care of urgent personal affairs.

(b) Personnel who normally work a seven-day week. Such personnel, at the discretion of their commanding officer, are normally granted two 48-hour passes a month to compensate for the continuous nature of their employment. Such passes are given either in rotation or periodically during the month as may best fit in with the type of training carried on at the particular unit.

72-Hour Passes.

4. There are no regulations in force which authorize the granting of a pass of more than 48 hours.

Comparative Table of Leave Entitlement for the Armed Forces in Canada

Royal Canadian Navy

1. Annual Leave (Normal Leave)

(a) Up to 28 days normal leave plus travelling time may be granted in each year if the exigencies of the service permit—1st April–31st March.

(b) For periods of less than a year, officers and ratings may be granted 14 days normal leave plus travelling time for a completed period of six months service, plus two days for each complete month's service, subject to the conditions that no leave will be granted until the completion of six months active service—1st April–31st March.

(c) When the journey by the most direct route to or from the home of an officer or rating exceeds 24 hours, additional leave to cover the period of travelling in excess of 24 hours each way is to be granted once annually.

(d) Leave for service ashore in Canada will not be cumulative from one leave year to the next, and any leave not taken before the end of the leave year will lapse.

(e) Leave for service at sea or outside Canada will be cumulative up to a maximum period of 60 days.

(Naval order 3241/43, paras. 4, 5, 6, 7, 8 and 9.)

2. Embarkation Leave

Normally no embarkation leave, but such leave may be granted in exceptional cases to attend to personal affairs if absence from duty permits. (No reference.)

Canadian Army (Active)

1. Annual Leave (Ordinary Leave and Furlough)

(a) Officers may be granted leave, not exceeding 14 days with pay during each fiscal year, i.e., 1st April–31st March. Such leave may be granted on the authority of the district officer commanding.

(b) Other ranks may be granted furlough not exceeding 14 days with pay during each fiscal year, i.e., 1st April–31st March. Such furlough may be granted on the authority of the officer commanding the unit.

(c) Leave and furlough authorized under (a) and (b) above is not accumulative, and, except as provided in para. (d) will not be granted until the officer or soldier has completed six months continuous service in an active unit of the Canadian Army. In no circumstances will ordinary leave or furlough exceed 14 days during a fiscal year.

(d) (i) Personnel in advanced training centres selected for trades training may be granted furlough at the completion of advanced training and prior to proceeding to trades training, even though the soldier concerned may not have completed six months service as required by sub-para. (c).

(ii) Furlough may be granted to personnel of units other than advanced training centres who are selected for trades training provided they have completed five months service with their unit.

(C.A.R.O. 2347.)

2. Embarkation Leave and Furlough

(a) Personnel warned for service overseas may be granted embarkation leave or furlough to provide for two clear days at home.

(b) The fact that an officer or soldier has had ordinary leave or furlough will in no way prejudice the grant of embarkation leave or furlough.

(C.A.R.O. 699.)

Royal Canadian Air Force

1. Annual Leave

(a) 28 days a year, i.e., 14 days every six months may be granted to personnel continuously employed on flying duties.

1st April-30th September
1st October-31st March.

(b) 14 days leave may be granted to personnel not continuously employed on flying duties—1st April-31st March.

(c) Annual leave is not to be granted until the completion of six months paid service or until the completion of training, whichever is the longer, with the exception that commanding officers may grant annual leave not exceeding that authorized under (a) and (b)

(i) in urgent circumstances connected with family affairs.

(ii) on posting to remote operational units if circumstances permit.

(d) Athough the taking of leave within these periods is to be encouraged, the air or other officer commanding may authorize the carrying forward of the whole or part of the leave not taken, provided he is satisfied that special service circumstances have prevented it being taken within the stipulated periods and provided that not more than one year's leave may be accumulated and carried into a subsequent year.

(A.F.A.O. A.24/5.)

2. Embarkation Leave

14 days leave may be granted to all R.C.A.F. personnel on posting overseas.

(A.F.A.O. A.24/5.)

100—77

3. Disembarkation Leave

Nil.

4. Compassionate Leave

May be granted by commanding officers in exceptional cases. Such leave is normally deducted from normal leave, but where no normal leave is due, such additional leave may be granted with the approval of a flag officer, a commodore, or commanding officer, reserve divisions.

(Naval order 3241/43, para. 17.)

REVISED EDITION

5. Agriculture or Essential Industry

A period of leave not to exceed two months to return to agriculture or essential industry may be approved by a flag officer, a commodore or commanding officer, reserve divisions, only where exceptional circumstances such as death or disability of a member of immediate family render it essential that the rating concerned return to his home for a short period. This leave is subject to the conditions laid down in Naval Order 3241/43, paras. 18 and 19.

Note:—Although not stated in the order, it is understood from Naval authorities that agriculture or essential industry leave is granted without pay and allowances.

3. Disembarkation Leave

(a) 30 days leave may be granted personnel who have been overseas for a period of two years, or personnel who have served in a theatre of operations regardless of length of overseas service.

(b) 14 days leave and one additional day's leave for each completed month served overseas in excess of six months up to a maximum period of 30 days leave may be granted to personnel who have been overseas for a period of at least six months, but less than two years, and who have not been serving in a theatre of operations.

(C.A.R.O. 3912.)

4. Compassionate Leave

To meet special cases involving hardship, compassionate leave or furlough not exceeding 10 days may be granted with pay to officers and other ranks irrespective of length of service in the C.A.S.F., on the authority of the district officer commanding. Such leave on compassionate grounds is to be restricted to cases where the D.O.C. is satisfied of the urgent necessity for the grant.

(C.A.R.O. 699.)

5. Farm Leave

The army may grant assistance to agriculture in two ways:

(a) by granting of leave (known as compassionate farm leave) to certain personnel under the provisions as outlined in appendix "A" to C.A.R.O. 3456—

(i) This leave may be granted to men for the purpose of working on farms owned by members of their immediate family where there would be undue hardship if the leave were not granted. This leave is applicable where the relative working the farm is, because of old age or disability, incapable of continuing to do so, and, by reason of their enlistment or enrolment, there is no other member of the family available to assist.

(ii) The general officer commanding or district officer commanding may authorize leave for period applied for or for such period as he deems advisable, but not to exceed six months.

3. Disembarkation Leave

(a) 30 days leave may be granted to personnel who have carried out a term of two years on ground duties overseas or aircrew who have completed an operational tour and who have been returned to Canada for other than disciplinary or medical reasons.

(b) 14 days leave may be granted to personnel who have carried out a term of duty extending for a period of at least six months overseas, but less than two years in the case of ground crew, and aircrew who have not completed an operational tour and who have been returned to Canada for other than disciplinary or medical reasons. One additional day's leave may be granted for each completed month served overseas in excess of six months, up to a maximum period of thirty days leave.

4. Compassionate Leave

Air officers commanding may grant leave on compassionate grounds up to a period of 30 days in excess of that normally permitted during the year. Compassionate leave is to be counted against any portion of annual leave that has not been taken.

(A.F.A.O. A.24/5, para. 5.)

5. Spring and Harvest Leave

The regulations covering the granting of spring and harvest leave are laid down each year by instructions to all commands. In 1943 the conditions governing the granting of both spring and harvest leave were as follows:

"Air officers commanding are authorized to grant spring and harvest leave during the 1943 spring and harvest season subject to the following conditions:

(a) Where the commanding officer is satisfied and certifies that personnel can be spared from their duties without interference to training or operations, leave may be granted up to a maximum of two months and no extensions are to be given. The maximum period of two months is not to be granted if the commanding officer considers a shorter priod would prove satisfactory.

Comparative Table of Leave Entitlement for the Armed Forces in Canada—*Continued*

Royal Canadian Navy	Canadian Army (Active)	Royal Canadian Air Force
	Subject to the exigencies of the service, the same officers may grant extensions for such periods not exceeding six months as they consider advisable. (iii) Compassionate farm leave will be without pay of any kind or allowances of any kind, or subsistence, and soldiers will not be entitled to medical or dental attention, hospitalization, or compensation due to illness, injury, or death, while on compassionate farm leave. (b) By the detailing for duty on farms (known as farm duty) of certain designated personnel under authority of P.C. 5931, as outlined in appendix "C" of C.A.R.O. 3456 and under the provisions as outlined in appendix "B" of C.A.R.O. 3456. (i) In order to meet the present emergency in addition to the granting of compassionate farm leave, men may be directed to work on farms under arrangements to be made by G.O.C.s. and D.O.C.s. with the director, dominion-provincial farm labour plan. Requests for soldiers for farm duty will be made in writing by the director, dominion-provincial farm labour plan, to the G.O.C. or D.O.C. concerned. (ii) Personnel from which assistance may be provided are (a) personnel in disposal wings of depots; (b) personnel in home war establishments who by readjustment, and rearrangements it may be possible to release for the time being. Regard shall be had to the continuing withdrawal of general service personnel for overseas duty; (c) personnel in operational units, also having regard to the continuing withdrawal of general service personnel for overseas duty; (d) personnel of the Veterans Guard of Canada. (iii) Normally the period of absence of such personnel from their units will not exceed 30 days, but in exceptional cases G.O.C.-in-C. or D.O.C. may authorize such reasonable leave extension as they may see fit.	(b) This leave is not available to any personnel undergoing training including aircrew under recruit's training at manning depots, except on extreme compassionate grounds. (c) Personnel who have not completed annual leave may if desired be granted annual leave with pay and allowances, plus the remainder without pay and allowances to complete the maximum of two months. (d) Where annual leave has been completed, the entire period of leave granted will be without pay and allowances. (e) This leave is to be granted only to those personnel who wish to return to their own farms or to farms operated by their parents and is subject to the exigencies of the service. Personnel required for posting or duty may be recalled before the termination of the leave period."

100—77½

6. Special Leave

(a) Special periods of leave in excess of 48 hours granted in Canada such as Christmas leave, leave in accordance with Naval Order 2877, leave for R.C.N.R. officers to sit for mercantile marine certificates, etc., are to be deducted from normal leave. (Naval order 3241, para. 20).

(b) Survivors' Leave—Up to 28 days as recommended by the medical officer plus travelling time may be granted whether or not there is any normal leave due and may be granted in addition to normal leave, but must not run consecutively with such leave. (Naval order 3241/43, para. 14).

7. Political Leave

May be granted as provided for in Order-in-Council P.C. 3205, dated 31st May, 1943.

8. Sick and Convalescent Leave

Sick or convalescent leave may be granted at the discretion of commanding officers, on recommendation of the medical officer. Not more than two months sick or convalescent leave is to be granted at any time. Officers and ratings are to be medically re-examined on completion of any leave so granted. (Naval order 3241/43, para. 16).

6. Special Leave

Nil.

7. Political Leave

May be granted as provided for in order in council, P.C. 3205, dated 31st May, 1943.

8. Sick Leave and Furlough

(a) Officers may be granted sick leave under the provisions of K.R. (Can.), para. 1113.

(b) Other ranks may be granted sick furlough for a period not exceeding 60 days without a medical board provided they are not being considered for discharge on medical grounds by general and district officers commanding. Sick furlough in excess of 60 days will not be granted without recommendation of a medical board. (C.A.R.O. 3397).

6. Special Leave

(a) Isolated Units.—On completion of a tour of duty of not less than six months at isolated stations on the east and west coasts, personnel may be granted 7 days special leave in addition to annual leave authorized. (A.F.A.O. A.24/5, para. 6).

(b) Between Courses.—Commanding officers on the authority of D.A.P.S. may grant leave to aircrew trainees up to a period not exceeding 14 days on receipt of posting instructions in the following circumstances:

(i) if time is available between courses (including operational training and advanced training) or

(ii) when retained at a unit pending posting instructions, or,

(iii) if subsequent to course commencement at a new unit such trainees are surplus to course requirements.

(c) Special Aircrew Leave

(i) It has been agreed between air ministry and R.C.A.F. headquarters that aircrew personnel of the R.C.A.F. serving in the U.K. may be granted special leave to proceed to Canada after the completion of an operational tour plus an instructional tour at an O.T.U. or other tour of non-operational duties.

(ii) The period of special leave in Canada, including outward and return passages, will not exceed eight weeks.

7. Political Leave

May be granted as provided for in order in council P.C. 3205, dated 31st May, 1943.

8. Sick Leave

Sick leave is to be granted by commanding officers in accordance with instructions contained in K.R. (Air), para. 286, which states that sick leave for a period not exceeding six months in the case of an officer and two months in the case of an airman may be granted by a commanding officer on the recommendation of a medical officer, or, where a medical board has been assembled on the recommendation of the medical board.

Comparative Table of Leave Entitlement for the Armed Forces in Canada—*Concluded*

Royal Canadian Navy	Canadian Army (Active)	Royal Canadian Air Force
		Note.—A medical board shall be assembled before sick leave is granted to an officer or airman for a period of time exceeding 28 days, including any periods of sick leave granted during the previous six months.
9. Essential Industry As laid down in para. 5 above.	9. Essential Industry Soldiers of the active army, including N.R.M.A. personnel serving as "members (H.D.)" may be granted leave to return temporarily to war industry under the following conditions: (a) The application for the return of a soldier to temporary civil employment must be originated by the employer who will submit it to the officer commanding the unit in which the soldier is serving, giving complete information as to the nature of the man's employment before enlistment, and future employment if granted leave, indicating the nature of work, grading, and rate of wages, and verifying that no other suitable man could be obtained, from an employment bureau or any other source. The employer will show what effort he has made to train other men to do the work of the soldier on whose behalf application is made and will state the length of time during which the soldier's services will be required in civil employment. Only applications in respect of men considered craftsmen, and not apprentices, will be entertained. (b) All leave so granted will be without pay and allowances. (c) The soldier at all times, will be subject to recall to military duties on 48 hours notice. (C.A.R.O. 1935/42).	9. Return to War Industry Personnel are not to be granted leave to return to industry. (A.F.A.O. A.24/5, para. 13).
10. Travelling Time Royal Canadian Navy personnel on normal leave when the journey by the most direct route to and from the home of an officer or rating exceeds 24 hours, are granted additional leave to cover the period of travelling in excess of 24 hours each way. Such additional travelling time is granted once annually. Naval order 3241/43. (Reference para. 1 above R.C.N.).	10. Travelling Time Travelling time for Canadian army (active) personnel in Canada is not granted, in addition to leave periods, except for embarkation leave, when personnel warned for overseas service may be granted leave or furlough sufficient to provide two clear days at home.—Canadian active service routine order 699/40, para. 4. (Reference para. 2 above C.A.S.F.).	10. Travelling Time Travelling time for R.C.A.F. personnel in Canada is not granted, in addition to leave periods, except for personnel stationed at isolated units on the east and west coasts. An additional leave period not to exceed 5 days in any case is granted to personnel of such isolated units to cover time actually required for the journey to the mainland or railhead and return having due regard to the method of travel, i.e., air or sea. (Reference para. 6 (a) above R.C.A.F.)

Mr. NEILL: It is not clear to me yet why these girls should get practically no leave at all while soldiers get as much as five days paid travelling time. This girl went from Toronto to the far side of British Columbia, and she had only four days at home.

Mr. POWER: I do not know how the time would figure out, but the army get two clear days at home, as I understand it, while the air force get fourteen days all told.

Mr. NEILL: That is not enough; it is not fair.

Mr. POWER: I am not arguing for the army. They get two clear days at home while we get fourteen days to make the trip, stay at home and return.

Mr. NEILL: But that discriminates against the remote places.

Mr. GRAYDON: The minister is making a better case than I thought he would make, but even at that it falls short of being a convincing case. It seems to me that under this plan you cannot help having discrimination against places which are located at a distance. I do not think there should be any discrimination because a person happens to live far away. After all, one Canadian is just as good as another in the air force, and I do not think a person's leave should be cut down by virtue of the distance he may have to travel. I think the minister should give consideration to the whole question of leave in relation to travelling time.

Mr. POWER: I am rather inclined to agree with my hon. friend. I had an idea that they got more leave than this, and I do not believe this is very satisfactory.

Mr. ROSS (St. Paul's): I have always wondered how the posting of recruits in the air force was arranged. For instance, we may find someone from Toronto posted to Vancouver, and someone from Vancouver posted somewhere else. There is probably a very good reason for this, and that reason may have much to do with the difficulty of arranging leave. I had thought that in connection with the first part of the training—I think they call it pre-I.T.S., do they not?

Mr. POWER: Yes.

Mr. ROSS (St. Paul's): I have often wondered why the boys should be sent so far away. Probably they like to go, because they enjoy seeing the country—and when I say that I speak from experience. On the other hand, they are a long way from their homes. Is there any other reason why they are posted at long distances from home?

While I may not be in order, I should like to ask a further question. Last year the minister gave us an idea of the length of time it took to train aircrew of one kind or another; that is, pilots, gunners, navigators, radio operators and so on. I do not know whether he would care to give us that information again, and if he does not I shall not press for it. I believe, however, that the information would be of interest, because he has told us the courses have lengthened materially from what they were last year.

Then we must consider the cost of transportation for the forces. They do get a reasonable rate when they are travelling on leave, but I do not think it would cost the country very much to give them free transportation either on annual or on embarkation leave. I do not believe that privilege would be abused. Probably in respect of a 48-hour leave it is proper to have them pay on a reasonable basis; but when they have either embarkation or annual leave I can see no reason in the world why they should not have their transportation free, and receive decent accommodation.

The hon. member for Danforth has just spoken about civilians giving up their places in cars to air force men, and men in the army and naval forces. I agree with the hon. member, and I believe some other arrangement ought to be made whereby these lads might be given better consideration. I have seen them standing all the way from here to Toronto on the afternoon train. It does not seem right that they should have to do that.

Mr. POWER: I would say that postings present a very difficult problem. We have been trying as far as possible not to post men too far away, and to keep them within the command at which they entered the service. But it often happens that a course has to be filled. A class may be opening on a certain date, and has to be filled by pupils who have entered their training in Ontario. The course in question may, for instance, be in Alberta, and we have to send men out there. The same applies all along the line. Sometimes it looks easy on paper to say that so many hundred will graduate at a certain date from such-and-such a school from, let us say, Toronto. They may have gone to E.F.T.S. at some point close to Toronto. In that event it would be St. Catharines. Or, in respect to Ottawa, it would be Pendelton. After going through that school they would move to S.F.T.S. at Uplands. But it does not always work out that way.

Our people are constantly striving to prevent extra travelling by posting the men, in so far as possible, within the area whence they started their training.

With respect to the length of time required, I can give only approximate figures, because the time is constantly changing. At the time this estimates book was prepared, namely around October, a pilot in service flying training school stayed sixteen weeks; a navigator-B stayed in navigation training school twenty weeks; a navigator-W stayed in navigation training school twenty-two weeks; a straight navigator stayed twenty weeks; air bomber, six weeks; air gunner, twelve weeks—I believe that has been raised. Then, W.O.A.G., six weeks, and flight engineers two weeks. On top of that I believe there are twenty-eight weeks somewhere else.

There have been constant changes, and in order to estimate how long a man would be in training I would have to find out in what category he was, the availability of places in schools, and the backlog in reserve. Sometimes they stay two months on tarmac duty before they enter their training schools. Then they go from that school to elementary, on to service flying; from there to operational training, and so on. I would not guarantee that anyone would become a pilot nowadays under eighteen months.

Mr. FRASER (Peterborough West): Last year under this item we passed an estimate of $20,838,068. The sheet this year shows that that amount was exceeded, and the actual cost was over $6,000,000 more; it was jumped up to $26,730,000. Could be minister tell us why he estimated last year's expenditures would be $20,838,068, and he had to spend $26,730,000? I notice that this year his estimate is a million dollars more than that, again.

Mr. POWER: The estimate for travel and transportation requirements for personnel of the J.A.T.P. and western hemisphere organization is calculated at the rate of $50 a head. The actual expenditures to date indicate the cost to be approximately $100. The cost is higher than we estimated.

Mr. ROSS (St. Paul's): This afternoon the minister gave us an idea of how much was split up between the railways for transportation on leave. If we were to pay transportation for the lads on embarkation and annual leave, how much would it cost the country?

Mr. POWER: I think I put that on *Hansard* this afternoon.

Mr. GILLIS: I do not think this matter of leave should be so difficult to settle. There has been a good deal of complaint. The minister states that as far as possible they are posting R.C.A.F. personnel in Canada close to their own homes, or in the provinces in which they live. If that is the policy, then there should not be many in stations east and west who would have to be transported. The suggestion I have with reference to men posted from Quebec to Alberta or British Columbia is a very simple one. They claim all that is required in addition to the fourteen days' leave now granted is the addition of the 48-hour pass to which they would be entitled, were they back in their stations. Apparently in some commands that is done, but in the eastern air command it is not done when granting leave to those travelling west of Ontario; they do not include the 48-hour pass. The suggestion I have is that if that were done it would solve the problem. Another question I should like to ask is in connection with R.A.F. personnel attached to the Canadian forces in Canada. Are they subject to the same leave regulations as members of the Canadian forces while they are serving in Canada?

Mr. POWER: Yes.

Mr. GILLIS: They claim that in England they get four weeks' leave and four travelling warrants and eight 48-hour passes. The question is why that practice is not followed out in Canada with reference to that particular personnel.

Mr. POWER: We are less generous with regard to leave and warrants than they are, but do not forget that these men get Canadian rates of pay. I think they would be sorry to give up their rates of pay in order to get the leave advantages.

Mr. GILLIS: The British government taxes a lot of it back from them.

Mr. NOSEWORTHY: A number of hon. members have raised the question of the cost of travelling for boys and girls in the air force when on leave. A suggestion was made in the house last year that those required to travel long distances should not be required to pay more than a maximum mileage. If personnel were being moved more than 500 miles away from their homes the suggestion was that no one should be required to pay more than a maximum amount.

Mr. POWER: A ceiling on the amount the personnel should have to pay. The last time I heard this matter discussed was about two or three weeks ago and I think it is still under active discussion. It is one solution of what is admittedly a difficulty. I do not know just what stage it has reached now. These matters are discussed in order to arrive at

some common policy, and I know that for some time that solution was being discussed but it certainly has not come into effect as yet.

Item agreed to.

4. Construction, purchase, repairs and operating expenses of properties—
(a) Capital expenditure, $39,750,000.
(b) Repairs, operating expenses and rentals, $17,689,838.

Mr. STIRLING: Will the minister give us some explanation of this item which I see is about half of what it was last year. Will he describe how the $56,000,000 is to be spent. Several times reference has been made to establishments being closed in different places in Canada. What use is being made of these places and are they to be fitted into the general scheme which is being considered for the use of military establishments of various descriptions after the war?

Mr. POWER: I would have to divide in two the answer to the last question. The hon. member, coming as he does from British Columbia, is probably referring mainly to defensive aerodromes, and for security reasons I had better not say anything about those that are closed. In my opening remarks I stated that there were four agencies which would study the use to which aerodromes could be put. First, there was the post-war civilian aviation committee of the war committee which is now endeavouring to work out some means of utilizing these for post-war civil aviation. Next, there is the Department of Pensions and National Health which will require accommodation at some time or another for convalescent homes or for the training of returning soldiers. Next, there is the Department of Labour which is seeking to obtain space for vocational training. Fourth, there is the Department of Transport which inevitably will come into possession of the aerodromes which we are abandoning for air force purposes.

Mr. STIRLING: Are these establishments just being cared for now by caretakers?

Mr. POWER: They are being put on care and maintenance. This closing-down policy with regard to the empire training plan has only been developed to any extent within the last two weeks. We are just looking around. With regard to defensive aerodromes, we are gradually moving to the point where we have concluded that some of these need not necessarily be garrisoned at this time because of the favourable turn in the war situation.

No specific provision has been made for the construction of new projects in 1944-45. Expenditures for new construction will be limited to the cost of items which must be provided during the year and liquidating existing contracts in respect of construction work now in progress. Perhaps the committee will be interested in the following figures which show the cash requirement for 1944-45:

Joint air training plan	
Operating expenses	$ 6,979,741
Construction	18,000,000
Repairs	3,120,000
Total	$28,099,741
Western hemisphere operations	
Operating expenses	$ 4,295,000
Construction	21,000,000
Repairs	2,641,000
Total	$27,936,000
Overseas	$ 594,000

I have some other statistics which may be of interest and which can be placed on the record.

Mr. STIRLING: The minister did not give any figures covering purchases.

Mr. POWER: Construction would include purchases.

Mr. STIRLING: Are lands and buildings being purchased at this stage?

Mr. POWER: No; there is nothing proposed to be purchased this year. This is a summary of the buildings erected under the British commonwealth air training plan:

Number of hangars	494
Number of drill halls	98
Number of other buildings	5,476
	6,068

Paving. Concrete and bituminous surfaces and the paving of runways, taxi strips, parking areas, et cetera, 251,116,000 square feet or 2,377 paved miles 20 feet wide.

Parade grounds, 9,000,000 square feet or 91 paved miles 20 feet wide.

Paved hangar floors, 18,000,000 square feet or 177 paved miles 20 feet wide.

Total, 2,648 paved miles 20 feet wide.

If the committee is interested I have a long list of places where construction has been stopped, where construction had been planned and has since been stopped because of the closing of some of our units. This is four or five pages long and since it is mainly of local interest perhaps it need not go on *Hansard*.

Mr. STIRLING: Would the cost of dealing with snow conditions come under this item of operating costs?

Mr. POWER: Yes.

Mr. McIVOR: I think we should have the places that are closed put on *Hansard*. I notice there is a reduction of $54,000,000 in this item and I should like to know if any other airfields are to be closed?

Mr. POWER: As I indicated to the hon. member for Yale, we have not definitely arrived at the indication of what particular

air units are to be closed. Within two or three days I shall have a list of the schools which are to be closed up to about September 1, and shall be glad to place it on *Hansard*.

Mr. PERLEY: Are any schools in Saskatchewan to be closed?

Mr. POWER: Yes, there are schools all over.

Mr. PERLEY: Would the minister name them?

Mr. POWER: When I give them all.

Mr. NOSEWORTHY: Has the minister any figures regarding the cost of grading and the amount of gravel used at Mount Pleasant airport in Prince Edward Island as compared with normal airports?

There is another point. I found last summer that large numbers of groundcrew who were enlisted in the air force were working for the construction contractor. Is that the usual practice, and what are the terms of payment? How much does the contractor pay to the government for the difference in their pay? Just what is the arrangement?

Mr. POWER: I could not give the cost of grading at Mount Pleasant offhand; it will take time to dig that up.

With regard to my hon. friend's other point, some time ago we found it impossible to get contractors to do work in isolated places, particularly in the northern parts of British Columbia and along the east coast—along both coasts—especially for the building of small units to house from four or five to ten men. It was impossible to get contractors to do the work in isolated places along the coast and to look after the maintenance of a number of stations on the northwest staging route, for instance, or along the coast of Newfoundland, Labrador and the Pacific. Therefore we formed what are known as construction and maintenance units and enlisted in them are tradesmen of all kinds. The maintenance units have been carrying on that work for us in places where we could not get a contractor to do the work. Recently, now that the manpower shortage has eased up a bit, we are doing some of this work in the more settled portions, in Halifax, for instance. There was some protest there from labour unions, but we said that we would take all the civilians we could get to do the work and that we would withdraw our men in equal proportion to civilian labour we could secure. I can assure my hon. friend that it was not with any intention of taking work away from civilians but simply to get the work done where we could not get civilian labour.

[Mr. Power.]

Mr. MacNICOL: Would the tradesmen to whom the minister has just referred as having enlisted in the air force be paid union rates of pay or air force rates when they worked in these camps as plumbers, steamfitters, carpenters and so on?

Mr. POWER: We have trade rates of pay for all these classes, and a fitter would be paid more than less skilled tradesmen, and so on.

Mr. MacNICOL: Will a portion of this item be used for the construction of the camp at Mossbank, Saskatchewan?

Mr. POWER: That work was pretty well finished before the maintenance units were formed. There may be still some maintenance work to do there, such as the fitting of doors and windows or work of that kind—repairing the tarmac, for instance.

Mr. PERLEY: From how many miles did they have to bring the water for Mossbank?

Mr. POWER: I do not think our maintenance units were engaged on that.

Mr. MacNICOL: Where does Mossbank camp get its water?

Mr. POWER: I shall have to look over my last year's answer to that question. I answered it last year and the year before, and I do not think the answer was ever satisfactory to anybody. I really could not say offhand. Perhaps that answer is not satisfactory. Then I shall have to find another answer if I can.

Mr. MacNICOL: I have been trying to find out for three years where Mossbank camp is getting its water supply.

Mr. NOSEWORTHY: To return to the question of pay, the boys I met last summer enlisted as aircrew and were receiving $1.30 a day, with no extra pay as tradesmen. They were working for a contractor at $1.30 a day and were getting nothing extra. I was wondering if the contractor was paying anything to the government.

Mr. POWER: They should not have been working for that if they were aircrew; I cannot understand aircrew being on maintenance work. Perhaps my hon. friend would give me the details.

Mr. NOSEWORTHY: The men were groundcrew, working for the contractor and receiving regular air force pay of $1.30 a day. They were just new recruits.

Mr. POWER: The money coming from the contractor goes to the receiver general. These men must have been doing the same kind of work they would have been doing as ground-

crew at the station. Had they been doing tradesmen's work they would have received tradesmen's rates of pay.

Item agreed to.

5. Personnel, supplies and services: Food, medical and dental stores, clothing and personal equipment, $38,515,252.

Mr. GILLIS: Is there any regulation specifically covering recreation facilities at air force stations? I know of one station where moving pictures are brought in and operated by an outside concern, and the boys at that station are obliged to pay an admission fee of twenty-five cents to see the show. My recollection is that when the last canteen fund committee sat, it was understood that all canteen funds were to be used to provide recreation facilities in and around any of these camps and stations, and I am wondering if the boys at the station I have in mind are not being exploited. Upon making inquiries I find that at some stations the boys are charged nothing, and at others they are charged ten cents, but the station I have in mind charges twenty-five cents. It is not because the entertainment is extraordinary; it is just the regular run-of-the-mine show as provided at all the stations and camps across Canada. Would the minister care to comment on that?

Mr. POWER: I would think it was a civilian moving-picture organization using one of our recreation halls and getting it rent free, light free, and accommodation free, and that if any profits were made they would go to the canteen fund to be used for the benefit of the men. I have never heard of twenty-five cents being charged, but it might have been done without my knowing it. It is a matter of arrangement between the canteen committee and the person showing the pictures.

Mr. GILLIS: It is the station at Sydney I have in mind, and the boys there think they are being exploited.

Mr. POWER: I shall certainly be glad to look into the matter. My impression is that any profits would accrue to the canteen fund. I cannot see how we would give the use of the hall free, and free light and heat, if necessary, just for the purpose of making some money for a civilian concern. If that is being done, it will certainly be stopped.

Mr. GILLIS: Does the minister's department get a report on these canteen funds? I understand that the reverse is true; the canteen funds were to be used for that purpose instead of the canteen fund being provided in that way with extra profits. Is a report on canteen funds at the R.C.A.F. stations made to the department?

Mr. POWER: Yes; every quarter our financial people receive a report on canteen funds from every station, from every unit.

Mr. MACDONALD (Brantford City): In 1942 a special committee was appointed to consider the whole question of canteen funds. At that time the committee was advised that one per cent of the gross sales of all canteens operated by the R.C.A.F. was paid to the R.C.A.F. benevolent fund. It was further represented to the committee that the only persons entitled to benefit from the R.C.A.F. benevolent fund were members of the permanent force. The committee recommended that no further payments should be made to the benevolent fund until provision was made that all members of the Royal Canadian Air Force now serving should be allowed to participate in that fund. I would ask the minister if that recommendation has been put into effect.

Mr. POWER: I would say yes: the benevolent fund now is for the benefit of all members of the R.C.A.F., past, present and future.

Mr. FRASER (Peterborough West): I have had complaints from boys who have had their "medical" in the different air force pools and have then been told that they would have to report at a certain time. When they report they are lined up, perhaps with ten or more other boys, to go through, and then one, two or three of them are called out and told, "Well, now, you have not a full medical", or some other reason is given, and they are not allowed into the air force. Perhaps these boys have been counting for three or four months on going in, and it is certainly a great disappointment to them. Could the minister arrange that these boys shall have a full medical?

Mr. POWER: Have what? A full medical?

Mr. FRASER (Peterborough West): Yes. I do not know the reason for this practice. It may be that there is something about a boy which determines them not to accept him, but it works a hardship on these lads. Many of them have had going-away parties attended by a number of their friends, and it is pretty hard for them to return to their ordinary life again.

Mr. POWER: If my hon. friend will tell me where this has occurred I shall be only too glad to check up with the medical officers.

Mr. FRASER (Peterborough West): I shall do that. I put a question on the order paper some days ago with regard to the clothing supplied to our boys overseas. It appears that

Great Britain supplies these uniforms. Some of the boys complain that the uniforms which they are getting there are not of as good quality as those supplied here. Is there a chance of their receiving uniforms from Canada? They state that the clothes they get overseas are a little coarser and are not as comfortable.

Mr. POWER: We have had that complaint before. We have made representations to Great Britain. My hon. friend will realize that if we started distributing uniforms and all the other equipment overseas we would have to set up a pretty big establishment, a kind of ordnance corps, overseas, and I do not think that at this stage we are justified in doing so.

Mr. FRASER (Peterborough West): I hardly meant that. There are friends of these boys who are quite willing to buy clothes and send them over. Would they be allowed to do that?

Mr. POWER: I have never heard of any "other ranks" in either the army or the navy or the air force buying their own clothing, and I am sure that if we permitted such a thing there would be a howl of indignation from this house which I would never get over.

Mr. FRASER (Peterborough West): There are some who would be willing to supply the clothing.

Mr. ROSS (St. Paul's): Do the Royal Canadian Air Force make their own messing arrangements or are they supplied by the army service corps?

Mr. POWER: The army service corps feeds us.

Mr. ROSS (St. Paul's): There are only one or two of these training schools about which I have had complaints, but one about which I have heard several, is Lachine. I do not know whether the minister has had any complaints along these lines. I was wondering whether the R.C.A.F. have general supervision, over and above the army service corps.

Mr. POWER: We cook the food and serve it and all that. We get our supplies from the army service corps, and we look after all the messing.

Mr. ROSS (St. Paul's): You look after all the cooking?

Mr. POWER: Certainly, and wash the dishes.

[Mr. G. K. Fraser.]

Mr. ROSS (St. Paul's): Has the minister had any complaints about that sort of thing at Lachine?

Mr. POWER: Not lately. Off and on, I suppose, I have had complaints with respect to pretty nearly every station of the air force. As soon as we get a complaint we hand it on to the chief messing officer of the particular command, and he makes an investigation and reports to me. Usually the matter is cleared up. I have not had anything lately with regard to Lachine; that is, not for the last six months or a year. It may develop rapidly, and sometimes it evaporates just as rapidly when checked up.

Mr. ROSS (St. Paul's): These lads who have been to camps all over the country usually have nothing but praise for the food; they do not think it could be bettered. But there are just one or two exceptions, among them Lachine. That is why I asked the minister if there is something wrong with the place, because I have had several complaints about it.

Mr. POWER: Lachine has changed its organization. It was a manning depot; it is now a "Y" depot, and probably the whole organization of messing has been changed in the last two months. If my hon. friend receives another complaint and will let me know, we shall have a look at it.

Mr. WRIGHT: I have a question with respect to Canadian personnel serving in the Royal Air Force overseas. I understood the minister to say that the British government supplies them with their personal equipment, rations, et cetera. What is the financial arrangement with respect to that? Does the Canadian government reimburse the British government? Also, what is the position with regard to expenditures, say, on ammunition, wastage in aeroplanes and equipment which our men who are attached to the R.A.F. are using?

Mr. POWER: That is all in the lump sum payment of $345,664,944, item 13, maintenance of overseas squadrons for the year 1944-45. It also includes all our personnel overseas.

Mr. WRIGHT: What is the arrangement with regard to the personnel in the R.A.F.? Is that paid on a per capita basis?

Mr. POWER: Yes.

Mr. MacNICOL: On page 394 of *Hansard* I find that item 5 in the list of estimates contains "personal equipment", as well as "personnel". The words "personal equipment" are not in the typewritten list. If the item as

detailed on page 394 of *Hansard* is correct, what is included in personal equipment?

Mr. POWER: My hon. friend is talking about item 5 at page 394 of *Hansard?*

Mr. MacNICOL: Yes.

Mr. POWER: It reads: "Personnel supplies and services: food, medical and dental stores, clothing and personal equipment." In my sheet the words are "personal supplies." I think it is the same. The list is: "Personal supplies and services, clothing, rations, barracks stores, laundry and medical."

Mr. MacNICOL: Personal equipment is left out?

Mr. POWER: Yes. Clothing would cover that, I suppose. Rations would be food. I think it is intended to cover the same thing anyway, although there might be a different enumeration.

Mr. FRASER (Peterborough West): Are there any psychiatrists in the medical service of the air force?

Mr. POWER: Eighteen.

Mr. FRASER (Peterborough West): How many of those are overseas?

Mr. POWER: I have not that with me; I shall have to find out.

Mr. FRASER (Peterborough West): The reason I ask that is this: I notice in the British *Hansard* that twenty-three per cent of the men discharged from the British army were discharged for psychiatric reasons. I wondered if the minister had a good staff from over there?

Mr. POWER: We have the number of discharges from the air force for various reasons.

Mr. FRASER (Peterborough West): Can the minister give them?

Mr. POWER: I shall give the numbers. Perhaps I had better put the table on *Hansard.* It is rather interesting, being a reconciliation of present strength of R.C.A.F. personnel to total who have served in the present war:

Reconciliation of present strength of R.C.A.F. personnel to total who have served in present war

	Officers	Airmen	Officers (W.D.)	Air-women	Total
Total names recorded	33,639	214,270	648	16,549	265,106
Less duplication—number commissioned from the ranks	....	25,392	...	579	25,971
Total who have served	33,639	188,878	648	15,970	239,135
Less:					
Loss by casualty	3,495	7,976	2	10	11,483
Final discharge	....	14,933	...	1,303	16,236
Retirements	1,399	....	20	....	1,419
Resignations	312	....	7	....	319
Deserters—					
Americans (discharge action pending)	6	433	...	3	442
Other deserters	12	198	...	2	212
*Leave—definite	....	1,372	...	....	1,372
indefinite	23	895	...	....	918
Taken on strength not yet entered on records	....	32	...	....	32
Total	5,247	25,839	29	1,318	32,433
Present strength R.C.A.F	28,392	163,039	619	14,652	206,702

*Personnel on definite leave are aircrew recruits, and occasionally a very small number of ground tradesmen, enlisted and ordered to report on a definite date in the near future. Personnel on indefinite leave comprise aircrew and groundcrew employed by civilian operated R.C.A.F. schools and W.E.T.P. schools, and a few personnel released temporarily to private industry.

I have the break-down here. It is long, but I shall give it to my hon. friend.

Mr. FRASER (Peterborough West): The minister said that some were definite and some indefinite among those who had not been posted; is that so?

Mr. POWER: That is right. The number of discharges were—perhaps these figures do not gibe because they are a week earlier than the ones I gave. I gave the total discharges as 16,236. I have the break-down here. It is quite long, but I shall put it on *Hansard:*

A.M.O./D.S.D. 28th February, 1944

(a) Discharges

(i) Reasons for discharge:

In accordance with K.R. (air)—1943, para. 195, the following are the reasons for which airmen and airwomen may be discharged from the R.C.A.F.

(1) Having been irregularly enlisted;
(2) Having made a false answer on attestation;
(3) Having made a misstatement as to age on enlistment and being:
  (a) under 17 years of age at date of application for discharge, or
  (b) between 17 and 18 years of age at date of application for discharge;
(4) Not likely to become an efficient airman for any one of the following reasons:
  (a) being considered within three months of enlistment unsuited for further service,
  (b) having become unsuited for further training in the trade in which he was enlisted;
(5) By purchase (except on active service):
  (a) having claimed his discharge on payment of $80 within three months of his attestation,
  (b) after three months' service on a three-year engagement on payment of $4 per month of unexpired service.
  (c) after three months' service on a five-year engagement, on payment of $2.50 per month of unexpired service;
(6) Having claimed his discharge for purposes of pension (except on active service);
(7) To take up civil employment;
(8) On compassionate grounds;
(9) Having been convicted by the civil power before or during his service;
(10) For service misconduct;
(11) Having been sentenced to be discharged with ignominy;
(12) (a) medically unfit for any form of air force service,
  (b) medically unfit for air force service under existing standards;
(13) The termination of his period of engagement;
(14) Having reached the age limit for further service;
(15) On appointment to a commission in the air force;
(16) For the purpose of appointment or enlistment in another force;
(17) His services being no longer required (reason to be specified). Airmen and airwomen are discharged under this para. for miscellaneous reasons and when none of the other specific reasons apply;
(18) Demobilization.

(ii) Number of discharges:

The number of airmen and airwomen discharged up to and including January 31, 1944, and the reasons for their discharge are as follows:

		Airmen	Airwomen
(1)	Having been irregularly enlisted	136	20
(2)	Having made a false answer on attestation	5	1
(3a)	Having made a misstatement as to age on enlistment and being under 17 years of age at date of application for discharge	34	6
(3b)	Having made a misstatement as to age on enlistment and being between 17 and 18 years of age at date of application for discharge	38	9
(4a)	Not likely to become an efficient airman—being considered within three months of enlistment unsuited for further service	268	12
(4b)	Not likely to become an efficient airman—having become unsuited for further training in the trade in which he was enlisted	2,124	6
(5a)	Having claimed his discharge on payment of $80 within three months of his attestation	..	..
(5b)	After three months' service on a three-year engagement on payment of $4 per month of unexpired service	..	..
(5c)	After three months' service on a five-year engagement on payment of $2.50 per month of unexpired service	..	..
(6)	Having claimed his discharge for purposes of pension (except on active service)	2	..
(7)	To take up civil employment	54	1
(8)	On compassionate grounds	321	118
(9)	Having been convicted by civil power before or during his service	118	..
(10)	For service misconduct	263	2
(11)	Having been sentenced to be discharged with ignominy	29	..
(12a)	Medically unfit for any form of air force service	6,130	375
(12b)	Medically unfit for air force service under existing standards	179	11
(13)	The termination of his period of engagement	..	..
(14)	Having reached the age limit for further service	1	..
(15)	On appointment to a commission in the air force	24,349	514
(16)	For the purpose of appointment or enlistment in another force	2,206	1
(17)	His services being no longer required (reason to be specified) airmen and airwomen are discharged under this para. for miscellaneous reasons and when none of the other specific reasons apply	2,886	705
(18)	Demobilization	...	...
		39,143	1,781
	Total airmen and airwomen, including discharges to commissions		40,924

[Mr. Power.]

(iii) Terms of rehabilitation following discharge, etc.:

Rehabilitation benefits for other ranks include the following:

(1) Rehabilitation grant—30 days' pay, and dependents' allowances where applicable, if six months' continuous service has been recorded.
(2) Clothing allowance—$65.
(3) Transportation—transportation with travelling expenses is provided to the point of enlistment, or to the place of residence at the time of enlistment, or to any point in Canada that can be reached without additional expenditure.

(b) Retirements and Resignations of Officers.

(i) Reasons for retirement or resignation:

Reasons for retirement are as follows:

Medical grounds; transfer to U.S. forces; unable to meet service requirements; retired to pension; other reasons (including over-age, cannot be advantageously employed, and return to civilian employment).

Reasons for resignation are as follows:

Compassionate grounds; transfer to other armed forces; unsuitable for service life; other reasons (including over-age and return to civilian employment).

(ii) Number of retirements and resignations:

The number of retirements and resignations from the outbreak of the present war to 31st January, 1944, is as follows:

Retirements:	
Medical grounds	227
Transfer to U.S. armed forces (in Canada)	504
Transfer to U.S. armed forces (overseas)	371
Unable to meet service requirements	175
Retired to pension	10
Other reasons	139
Total retirements	1,426
Resignations:	
Compassionate grounds	42
Transfer to armed forces (other than U.S.A.)	50
Unsuitable for service life	127
Other reasons	91
Total resignations	310
Total retirements and resignations	1,736

The above figures include retirements and resignations approved by the minister but not yet promulgated as at 31st January, 1944. Also included are 15 retirements and 7 resignations of officers of the R.C.A.F. (W.D.).

(iii) Terms of rehabilitation:

Rehabilitation benefits for officers include the following:

(1) Rehabilitation grant—30 days' pay, and dependents' allowances where applicable, if six months' service has been recorded.
(2) Clothing allowance—no clothing allowance is provided for officers.
(3) Transportation—transportation with travelling expenses is provided to the point of enlistment, or to the place of residence at the time of enlistment, or to any point in Canada that can be reached without additional expenditure.

Mr. WRIGHT: I should like to ask the minister a question with respect to medical services rendered to aircrew injured in Canada. Is there any discrimination as between ranks? It was brought to my attention recently that in an accident a sergeant pilot and a wing commander were injured. The sergeant pilot was placed in the public ward in one of our hospitals, while the wing commander, who was not injured as seriously as the sergeant pilot, was given a private room with a special nurse. I am wondering if that discrimination exists.

Mr. POWER: I am inquiring about the answer. I do not know. It may well be that that happens. I shall look into it. Is the hon. member speaking of an accident that happened recently at St. Hubert?

Mr. WRIGHT: Yes.

Mr. POWER: I shall find out.

Mr. BROOKS: The question I am about to ask may not arise out of this item, but it arises in connection with the minister's state-

ment with regard to the number of Americans discharged from the Canadian air force. How many United States pilots are there in the Canadian air force at the present time?

Mr. POWER: I can find out. I think between two thousand and three thousand were returned home. Some are represented as deserters. Some of them have done very well in their own service, but they did not say, "Thank you, good-by," before they left, and they were put down as deserters. I am clearing them up.

Mr. BROOKS: In the casualty lists that we receive there are a great many Americans.

Mr. POWER: I can get that figure, but we shall have to subtract from that number the number who have returned to the United States forces. I did have some pretty clear information as to what the number was a couple of years ago, but it has slipped my memory since that time. They were very numerous. I shall put it on the record.

Mr. ROSS (St. Paul's): Are musical instruments supplied to the bands? It is very important that we have lots of bands.

Mr. POWER: We have lots of bands. I am told by my Scottish and musical friend, the Minister of Pensions and National Health, that we have the best bands in Canada. He ought to know.

Mr. ROSS (St. Paul's): I do not agree with the minister; I know of many pipe bands that are a little ahead of that one, though it is a very good band.

Mr. POWER: I should say my colleague was not a good judge of music; he plays the bagpipes.

Mr. ROSS (St. Paul's): Some people understand music and others do not; you have to be Scotch to really understand it. I just wanted to know whether these instruments were supplied, because I think it is wonderful to have bands of one kind and another.

Mr. POWER: We have bands both here and overseas.

Mr. ROSS (St. Paul's): Do you supply the instruments?

Mr. POWER: Yes:

Item agreed to.

6. Signal and wireless equipment, line construction, etc., $34,654,365.

Mr. STIRLING: Are all these instruments and materials purchased through munitions and supply?

Mr. POWER: Yes; everything.

[Mr. Brooks.]

Mr. STIRLING: Does the minister indicate his preference as to whether these instruments should be purchased in this country or in another country?

Mr. POWER: I am told that this signal and wireless equipment is always purchased in Canada if we can get it here, or in other countries if we have to go there.

Mr. STIRLING: The minister does not indicate any preference?

Mr. POWER: No.

Mr. STIRLING: He gives Munitions and Supply a free hand to supply that which the R.C.A.F. require, according to their specifications?

Mr. POWER: Yes; but I would imagine that in things such as signal equipment our technical officers might say that such a gadget was better than another gadget. I really do not know.

Mr. STIRLING: That was what I wanted to know.

Mr. POWER: I think for a long time it was not a question of indicating where this sort of equipment could be obtained; it was a question of trying to get people to make it. I think that was the great difficulty, and in the earlier stages we were very much bothered with that.

Mr. STIRLING: A considerable change took place in the course of last year, I think.

Mr. POWER: I would not know; we simply send our financial encumbrances and our requirements to Munitions and Supply, and they make the purchases.

Mr. NOSEWORTHY: I think I shall have to crave your indulgence, Mr. Chairman, in asking this question; probably I should have asked it under item 2. It has come to my attention that wireless mechanics require anywhere from twelve to fifteen months to finish their course and that they are kept on the basic pay of $1.30 a day until the course is completed, whereas in most other branches of the services the pay is stepped up from $1.30 to $1.40 and then to $1.50 at the end of three or six months. Has the minister given any consideration to stepping up the basic pay of the wireless mechanics at certain periods of their training, on the condition that their progress is satisfactory?

Mr. POWER: I am told that all our men automatically get up to $1.50 after six months service.

Mr. NOSEWORTHY: Is a wireless mechanic brought up to $1.50 at the end of six months?

Mr. POWER: Yes, so I am told.

Mr. NOSEWORTHY: My information is that they get their first increase when they complete their course.

Mr. POWER: I do not think that is right, but I shall check into it. My officers tell me that they get their increase after six months, but I shall make sure that this is accurate.

Mr. CASTLEDEN: This afternoon the minister intimated that he would make a statement in connection with prisoners of war.

Mr. POWER: I shall do so when we get a little farther along. I am waiting for it to come from upstairs.

Mr. MacNICOL: In item 6, at page 394 of *Hansard,* the words "line construction, etc." appear, but in the typewritten sheet those words are left out. Is line construction included in the word "communications" on the typewritten sheet?

Mr. POWER: The same thing is meant, but perhaps they did not consider line construction so important this year, because it is not proposed to build as much as we built last year. We had a very big programme of line construction last year and it is not quite so big this year; we are only completing what has been started. Any change in the phraseology was not done with intent; it is supposed to mean the same thing. This item would cover the construction of lines which we have to carry out this year.

Mr. STIRLING: But there is a considerable increase in the item.

Mr. POWER: That is largely a carryover on account of articles and equipment ordered previously, sometimes as long as two years ago. There was a very great shortage of manufacturing capacity in connection with signal and wireless equipment. When it started to come in we got a lot of it, and I may be quite frank in telling the committee that we received some that is not of much use to us, since it is almost obsolescent by the time it comes in. This has almost become a problem with us, because developments in reference to wireless are going ahead so rapidly that the production of one particular gadget is just about completed when a better one comes on the market and we almost have to throw away what we thought was the latest thing up to that moment. However, the increase is largely due to what is coming in now, with the increased productive capacity both here and in the United States.

Mr. FRASER (Peterborough West): Have more teletype machines been installed this year?

Mr. POWER: That is included in this item, but we only show rentals of teletype machines, no new purchases.

Item agreed to.

7. Ammunition and bombs, $18,175,000.

Mr. MacNICOL: Why would there be a reduction in this item when we are just about to enter the most vicious phase of the war?

Mr. POWER: This is for Canada only. The bombs and so on that we use on the other side are obtained from the R.A.F. We have a goodly supply of bombs for practice and for our western hemisphere operations in connection with anti-submarine patrols and so on.

Mr. MacNICOL: Under what item shall we find the estimated amount to be paid for material purchased from the R.A.F.?

Mr. POWER: That would come under item 13, covering maintenance of overseas squadrons.

Mr. MARSHALL: There seems to be a difference between the statement appearing in *Hansard* and this typewritten statement, as far as 1943-44 is concerned. On the typewritten sheet the amount under this item is $17,000,000, while according to the statement in *Hansard* it is $23,990,000. Would the minister explain the reason for the difference?

Mr. POWER: At page 394 of *Hansard* we compare last year's estimate with this year's estimate. On the sheet which my hon. friend is holding we compare the probable expenditure under this item with the estimate for 1944-45. That is how the difference arises.

Item agreed to.

9. Fuel costs for aircraft, M.T. and marine craft, $19,892,038.

Mr. GRAYDON: Is this item for Canada only.

Mr. POWER: Yes.

Item agreed to.

10. Aircraft engines and spares, including overhaul, $188,947,545.

Mr. FRASER (Peterborough West): Does this cover equipment for paratroopers, too?

Mr. POWER: No.

Mr. FRASER (Peterborough West): And gliders?

Mr. POWER: I am told we have to provide machines in connection with the training at Shilo, but I do not think we are doing much of it at this time. It has nothing to do with the machines overseas.

Mr. FRASER (Peterborough West): This is just for Canada?

Mr. POWER: Yes; this is for Canada. Offhand I cannot say how much we are providing for machines to carry parachutists. That is all we do, in fact; we carry the parachutists to their targets, and drop them.

Mr. FRASER (Peterborough West): I asked the Minister of National Defence and he did not give me an answer. Now the minister does not give me a satisfactory answer.

Mr. POWER: I shall find out for my hon. friend. I cannot for the life of me recollect whether or not we may have two, three, four or five aircraft at Shilo, where parachutists were trained at one time. If we have, I shall let my hon. friend know. But that would be the limit of our responsibility in training the paratroopers.

Mr. FRASER (Peterborough West): These other boys go to the United States to train, do they?

Mr. POWER: They are army; they have nothing to do with us.

Mr. FRASER (Peterborough West): That is all American?

Mr. POWER: Yes, it is all American.

Mr. MacNICOL: Mr. Chairman, I notice that this item provides for an expenditure of more than $188,000,000 for aircraft engines and spares. We ought to have an explanation of this item. What kind of engines are these? I know they are aircraft engines, but of what particular kind? This is a huge amount of money, and there ought to be some explanation for a sum of that size.

Mr. POWER: My hon. friend will see that there is a reduction of about $72,000,000 from 1943. The reduction is accounted for by reduced aircraft requirements, owing to a revision of our defence of Canada plan, because a more favourable situation, and to the end that we shall require no further provisioning of aircraft for the British commonwealth air training plan. We shall have enough aircraft. We have provisioned for, I think, up to 1945 or 1946, so that we shall not require to purchase more. Moreover, aircraft contracts have been liquidated more rapidly than anticipated during 1943-44. That is to say, we are getting in more aircraft than we anticipated, in the fiscal year 1943-44, thereby reducing the amount of long-term liability to be liquidated in 1944-45. But we still have a tremendous amount of aircraft to pay for in 1944-45. Aircraft for training and aircraft for combat units on the coast are included. I do not wish to give numbers, but I think we have reached the stage now in the war where we can to some extent give numbers of aircraft.

The aircraft position for this year shows that the total number to be delivered is 960 aircraft. We now have over 11,000. I shall not give the exact figure, but we have over that number. That is 60 single-engine aircraft, and we have over 5,000. That is only in the air training plan. Of twin-engines we expect delivery of 862, and we have nearly 6,000. That is in the air training plan alone, and does not include the defence of the coasts.

Mr. MacNICOL: And that is not for overseas?

Mr. POWER: No, not for overseas at all.

Mr. ROSS (St. Paul's): What is the wastage of them?

Mr. POWER: I cannot really say—and I do not know whether I should say. In other words, we expect the total of over 900 planes to be delivered this year, and in 1945-46. We have nearly 12,000 already, in the air training plan alone, exclusive of what we need for western hemisphere defence operations, and for overseas. Those figures I do not care to give.

Mr. MacNICOL: This is a summary for air training alone?

Mr. POWER: Yes, air training alone.

Mr. MacNICOL: What types of aircraft are we using now for air training? Up and down the years the minister has told us about the different kinds of aircraft. We have heard a different story every year. What types does this amount cover?

Mr. POWER: I would say that we are now using Cornells, chiefly, for elementary training. Then, for single-engine trainers we have Harvards and Yales. For twin-engine training we use Ansons, Cranes, Oxfords, Beechcraft and Lockheeds. For bombing and gunnery trainers we use Battles, Bolingbrokes, and Lysanders. For wireless trainers we use Forts, Harvards, Yales, Norseman. For single engined transportation we use the Norseman aircraft. For operational trainers we use Hurricanes, Cansos, Liberators, Mitchells, Mosquitoes, Beechcraft, Dakotas, Venturas, Baltimores and Swordfish.

Mr. MacNICOL: How many of these are made in Canada?

Mr. POWER: Cornells and Ansons—and Lysanders were. Bolingbrokes, too, were made here; and Harvard, Norseman, Hurricanes, Cansos and Mosquitos. I believe that is about all.

Mr. MacNICOL: Is any part of this item of more than $188,000,000 connected with the Department of Munitions and Supply? How much of it is supplied by that department?

Mr. POWER: We buy everything from the Department of Munitions and Supply—every cent of it.

Mr. MacNICOL: Does any of this amount appear in the estimate of the Department of Munitions and Supply, later on?

Mr. POWER: I do not think so, no.

Mr. NOSEWORTHY: Included in this item is an expenditure for aircraft engines and spares. Have we yet undertaken the manufacture in Canada of aircraft engines?

Mr. POWER: The answer is no.

Mr. GRAYDON: To follow up the question by the hon. member, has any move been made by the government with respect to setting up a plant and the necessary equipment for the purpose of manufacturing aircraft engines in Canada?

Mr. POWER: I should much prefer that that question be asked of the Department of Munitions and Supply. All I do is use the engines I can get, wherever I can get them and when I can get them. If my hon. friend would ask the Minister of Munitions and Supply, whose job it is to procure these things, I am sure he would get a much better answer than I can give him.

Mr. GRAYDON: I am not so sure about that. I only ask the question of the minister because in all our aircraft industry in Canada, and all our development in connection with aircraft manufacturing, the one great bottleneck which will occur, perhaps, in the post-war period is that we shall have to go elsewhere to get the engines. The minister will recall that in a former debate—I am not sure but that it was 1942—the question of replacements and overhaul was stressed as being a very serious problem for the air force. I remember at the time listening with no small degree of gloom to the minister's statement as he uttered it. It seemed to me, a layman, that our position with respect to repairs for the machines we had became a serious matter. Would the minister tell us now whether we are able to get ample planes, and able at the same time to repair and overhaul them, so that there will be no difficulty as far as our men in training are concerned, and no interruption of that training?

Mr. POWER: At one time back in 1941 there was a really acute situation. I expressed the fear in this house, and I had reason to do so, that the opening of some of our schools might have to be delayed and that others might have to curtail their operations owing to lack of spares, No. 1; lack of repair facilities, No. 2, and lack of new planes coming in, No. 3, which probably should be No. 1. We had a critical period for several months, but since then we repaired a lot more of the aircraft in our own establishments. We recruited men, turned out mechanics and put them into our own establishments to do the work. Fortunately we were able to get spares although, as I say, there was a shortage for some considerable time. Aircraft had come in at a greatly accelerated rate. There is no difficulty in securing training aircraft at the present time, except that operational training aircraft, which are of the same type as those used in combat overseas, are hard to come by.

Mr. GRAYDON: How many hours of flying does a training plane complete before it has a general overhaul?

Mr. POWER: There is airframe and engine overhaul. It runs from 800 to 1,200 hours.

Mr. ROSS (St. Paul's): That would vary with the machine?

Mr. POWER: Yes.

Mr. ROSS (St. Paul's): I think two years ago the figure given was 400 hours.

Mr. POWER: That has been raised since.

Mr. POTTIER: A few moments ago the minister gave the number of training planes. Would that number include those used in the R.A.F. schools?

Mr. POWER: The figure of 11,000 or 12,000 would include the planes used in all R.A.F. schools.

Mr. ROSS (Souris): How many overhaul stations are there in Canada, and what portion of this $188,000,000 is for overhauling?

Mr. POWER: I cannot say offhand how many establishments there are for overhauling, but the amount is $41,500,000.

Mr. WRIGHT: Is most of this work done in government- or privately-owned plants?

Mr. POWER: This $41,000,000 would be civilian contractors.

Mr. ROSS (Souris): How many contractors are doing this work for the department?

Mr. POWER: I get a report every week as to the progress of civilian contractors on overhauls, but I do not happen to have it here. I could put the list of civilian contractors on *Hansard*. They are arranged for by the Department of Munitions and Supply; I have nothing to do with them except to pay them.

Mr. ROSS (Souris): What portion of this expenditure would be for engine spares? We would then have the break-down of the three items.

Mr. POWER: The $41,000,000 is for repairs, The estimated cost of additional aircraft is $19,000,000. The estimated cost of additional engines is $6,000,000. The estimated cost of spares for new aircraft and maintaining existing equipment is $17,000,000. That gives a total of $43,000,000. Some equipment, such as guns et cetera, would go in, totalling $830,000. Then there is $32,000,000 for airframe overhaul; $10,000,000 for engine overhaul, giving a total of $43,000,000. From this we deduct the work done in our own repair depots to the extent of $6,000,000 which would give a total of $37,000,000 under the plan alone. Under western hemisphere operations, the amount for overhaul of airframes is $4,000,000, and for engines, $1,000,000. From that total of $5,000,000 we knock off fourteen per cent for repairs we complete in our own repair depots. That gives a net figure for repairs to engines and airframes for western hemisphere operations of $4,300,000. The cost of aircraft to be purchased during the fiscal year for the British commonwealth air training plan will amount to $11,224,000, and engine spares to be purchased will amount to $934,600.

Mr. ROSS (Souris): That is not a very satisfactory break-down. Surely the minister can give us the totals for aircraft and for engine spares in addition to the total he has given us for overhaul of some $41,000,000.

Mr. POWER: I gave it for aircraft as well. My officers will work it out. The trouble is that it is divided between the western hemisphere operations and the plan.

Mr. MacNICOL: This item totals $188,000,000 and so far we have had but two figures, one of $37,000,000 and another one, $41,000,000. We are not finding any fault, but I think we should have a proper break-down of this $188,000,000.

Mr. POWER: As regards the $37,000,000 and the $43,000,000 it was just my mistake in reading the figures. The total cost of airframe overhaul and engine overhaul was $43,000,000, but we as a service do $6,000,000 worth of work. This is charged to another item as pay and allowances because our own men do the work, so that the total under this item would be $37,000,000.

Mr. MacNICOL: The minister understands that I am not finding any fault with him because he is really a good minister, but his officials should be able to give him the exact break-down of this figure. That is what they are there for.

Mr. POWER: We have lots of figures.

Mr. MacNICOL: When the minister asks for an expenditure of $188,000,000, his officials should be able to hand him a slip showing the break-down.

Mr. POWER: We have it broken down, but in a different way. We have enough mathematicians to give all the break-down possible. I may be able to satisfy my hon. friend in this way.

For the joint air training plan it is estimated that it will cost $67,163,710 for aircraft in 1944-45; for home war, that is western hemisphere operations, $79,292,650; overseas, $1,100,550. That is aircraft for our own use overseas; it has nothing to do with combat aircraft. Then, under the air training plan, overhauls for 1944-45 will cost $37,054,145; overhauls for western hemisphere operations, $4,336,490. Overhauls for overseas are in the total figure. That makes a total of $188,947,545.

Mr. MacNICOL: There you get the $188,000,000 odd.

Mr. POWER: I was going to break it down still further. For the joint air training plan the total, in round figures, for aircraft and engines is $67,000,000; for overhauls, $37,000,000, making a total of $104,217,000. Then, for western hemisphere operations, aircraft and engines, $79,292,000, and overhauls, $4,000,000, making $83,000,000 in round figures. Then for overseas, for transport aircraft, $1,100,000. That makes a grand total of $188,947,545, which is the figure I started out with. If my hon. friend wants any more break-downs I shall have to see what I can do for him.

Mr. MacNICOL: The minister has my sympathy. We have been voting millions so easily and generously from this side of the house that perhaps everybody is getting a little befuddled with the magnitude of the figures.

I wish to ask a question with reference to overhauls. The government has some crown plants making aeroplanes, one at Malton and one out on Dufferin street, Toronto. Those are two very large crown plants.

Mr. HOWE: DeHavilland is not a crown plant.

Mr. MacNICOL: Has any of the overhauling and repair work been done in crown plants? I understood the minister for air to say a few moments ago that all the overhauling was done by private companies. Why not use some of these huge crown plants for overhauls and repairs?

Mr. POWER: DeHavilland is turning out a certain type of fighter aircraft and Malton is turning out bombers.

Mr. HOWE: Repair work interferes with production. It is much more economical to do overhaul work in separate plants. To put overhaul work into production plants interferes with the production line and is very expensive.

Mr. MacNICOL: I helped operate a big plant for a long time and we did not send our overhauling out to be done.

Mr. HOWE: Perhaps you were not very busy.

Mr. MacNICOL: We had 925 men on our payroll.

Mr. HOWE: We have 8,000 at Malton.

Mr. MacNICOL: And we paid them out of profits from production in a private plant. We did not have a government to get the money from. It is a different proposition. We had to run it as a business. The minister has been in business, and when he looks back to his own system of operating business he knows very well that he had to pay for his repairs and overhauls out of profits. He would have gone to the wall if he had not done so.

Mr. GRAYDON: In regard to overhauls and repairs there was a time, not recently perhaps, when Yales and Harvards were overhauled at what is now Victory Aircraft, but that was perhaps when production was being changed over from one type to another.

Item agreed to.

11. Miscellaneous stores and equipment, including machine guns and other armament, $15,992,000.

Mr. FRASER (Peterborough West): The minister said that some of the air fields would be discarded. Is that right?

Mr. POWER: Yes, but not under this item, of course.

Mr. FRASER (Peterborough West): This item deals with maintenance, stores and equipment, which would be removed when the air fields were discarded.

Mr. POWER: Yes; that would be under care and maintenance. I suppose my hon. friend refers to barracks stores and things of that kind.

Mr. FRASER (Peterborough West): Yes.

Mr. POWER: I would hope that my hon. friend the Minister of Pensions and National Health, when he is starting new hospitals or other institutions, would take advantage of the fact that we have spare beds and bed equipment of all kinds which would be suitable in these other institutions.

Mr. FRASER (Peterborough West): I have suggested before that he take over some of the staff houses for hospitals.

Mr. POWER: I hope he will.

Mr. FRASER (Peterborough West): Because after the war they will not be used, and some of them could be taken over right now for hospitals. There might be a chance that under this item the minister might have some old planes and engines. We have some wonderful air cadet corps throughout Canada, and those boys would be tickled to death if they had an aeroplane engine.

Mr. POWER: They have got them.

Mr. FRASER (Peterborough West): Not all the corps.

Mr. POWER: Let my hon. friend ask for one and I shall be glad to give him an aeroplane and an engine any time.

Mr. FRASER (Peterborough West): Good! That is fine!

Mr. SINCLAIR: Almost all the items of equipment that I can think of are covered by items 5, 10 and 14, and yet here is an item of over $15,000,000 for miscellaneous stores and equipment. Can the minister tell us just what the items are?

Mr. POWER: I have a list here: Small arms; A/C machine-gun mountings; ground machine-gun mountings; ordnance and ordnance sights; guns and spares; machine-gun firing gear; machine-gun sights; filling and positioning machine; special tools for armament equipment; armament ground instructional equipment; bomb gear; range finders; Browning guns; miscellaneous electrical stores; cable and wire electrical; aircraft electrical stores—

Mr. SINCLAIR: That is enough.

Mr. POWER: I have two pages more.

Mr. SINCLAIR: It is armament, in other words.

Mr. LOCKHART: Will the chassis of aeroplanes be available to vocational and technical schools as the minister said they would be for cadet corps?

Mr. POWER: While I am in a generous mood, because the committee has been very good, and am willing to give away a lot I do not think I would have authority to give away to civilian institutions crown property that belongs to the R.C.A.F., but if my hon. friend will make application for what is required for a vocational training school I shall do the best I can to get it to him somehow. The air cadets, of course, are in a different position. They belong to the air force and it is easy to give them anything.

Mr. LOCKHART: The difficulty arose years ago when we were trying to get something started in vocational schools. We would have been in a little better position to step things along and have more of the boys air-minded if some of this equipment had been available. I still maintain that there is a great need of such assistance in many of the vocational schools which have been developed across the country, developed, I appreciate, under the provincial governments. But, instead of selling this equipment to the salvage companies, which I suppose will be the destination of a great deal of it, the needs of these schools should receive attention. I notice that the miscellaneous stores and equipment item is reduced by $3,000,000. Is any of it being turned over to salvage companies?

Mr. POWER: Not at the present time.

Mr. LOCKHART: It will be handled through some crown company, I suppose.

Mr. POWER: It will be turned over. Perhaps my hon. friend would like me to explain the set-up of surplus asset disposal?

Mr. LOCKHART: I shall be glad to have a brief review of the matter. But I would again impress on the minister that there are lots of useful avenues into which such articles as these chassis could be turned instead of being broken up into scrapiron. They would be extremely useful in such places as vocational schools if some arrangement could be made with the provinces.

Mr. POWER: That is why I said that it is easy enough for the R.C.A.F. to arrange for the disposal of some of its own stores to one of its own components, namely the air cadet league, but it is not so easy to dispose of them to civilian organizations. We have a new set-up under order in council, namely an assets disposal committee, operating under the Minister of Munitions and Supply, which decides on all policies with regard to surplus assets. If I have spare aeroplanes, barracks stores, engines, rubbers, shoes, clothing or what-not, they are handed over to the surplus assets committee, which decides on the policy generally to be followed out in disposing of such assets. If it is decided that they shall be disposed of by sale they are handed over to the crown assets corporation, which actually does the selling.

Mr. GRAYDON: War Assets Corporation.

Mr. POWER: War assets. But the committee first deals with the policy. My hon. friend, for instance, would know that certain vocational schools require a certain type of equipment to assist in their training. He would probably ask the air force if he had reason to believe that we have surplus supplies of this kind, and we would pass the request on to the surplus assets committee, which could then say, "Well, in the general interest of the country any of these surplus assets could very well be given to such an organization rather than be held for sale by the crown corporation."

Mr. HOWE: May I just correct that? Crown assets cannot be given away. That has been decided.

Mr. GRAYDON: The minister for air has beaten you to it. He has given a couple of aeroplanes away already.

Mr. HOWE: Air cadets' property, of course, is still retained in the crown. No one can give away crown property, not even the committee.

Mr. LOCKHART: I wish to make my position clear on this matter of giving equipment away. I am not asking for something for nothing, but I would point out that when the war clouds were gathering, before the year 1939, small groups of men banded themselves together and established civilian flying schools in connection with municipal airports, and certain types of aeroplanes, such as antiquated Moth planes, were used, although they were always falling to pieces. I recall that there was some difficulty about getting possession of one or two of these chassis, which proved a great inspiration to the young boys who at that time were going through the vocational schools. I cannot substantiate this, but I am reasonably certain that my information is correct, that on two occasions old Moth planes were sold for scrapiron in spite of efforts which were made to have them turned over to groups of boys who were working in vocational schools and were very much interested in aeroplanes at that time. I suggest to the minister that he make sure that whatever crown organization is formed will not make any difficulties

about dealing with municipal bodies, and will not allow some of these planes of obsolete design to go into scrap when they might be an incentive to the training of the young boys who are coming along and who will do our commercial flying in the days to come. I point out that we did have difficulties a few years ago, just before the war, obstacles owing to what may be called red tape. At least let it be known that some of these obsolete types are available, so that application may be made.

Mr. POWER: We are making it known now that we shall have a lot of them.

Mr. GRAYDON: With respect to the matter of disposal of assets such as the minister has described, this matter arose in a similar way when the appropriations relative to the army were before the committee. While I have not personally had any requests from persons in the air force for an opportunity of procuring machines when the war is over, I have one or two requests with respect to the disposal of jeeps to members of the armed forces.

Mr. POWER: I want one myself.

Mr. GRAYDON: Well, the minister would look pretty good in a jeep. It is a vehicle very appropriate to the minister. I believe that one of the things which men in the air force will want to do when the war is over is, continue their flying. It would seem only fair that if aeroplanes are to be disposed of, some of them should be available for the men who want them, provided, of course, they are suitable for use in civilian operations. Has the government any policy in this matter?

Mr. POWER: I have known quite a few officers to say that they would like to buy a small Moth plane or something of the kind to go travelling around in after the war. I assure my hon. friend that there will be, as he can readily understand, surplus aircraft of all sorts and conditions, and that the corporation presided over by my colleague, the Minister of Munitions and Supply, will, I think, be glad to receive offers for air frames before they are broken up, because there would not be much salvage in breaking them up.

Mr. GRAYDON: Perhaps I should not delay the committee at this time on something which I fancy does fall in the category of the debate which would normally be expected to take place on the War Assets Corporation. Perhaps I need not proceed any farther with that, but I should like to content myself with this one observation in connection with salvage. Let us not forget as a parliament and as a government that at the moment the public is ready to spend money if it is spent for war purposes; but the pendulum will swing—

Mr. POWER: It has swung already.

Mr. GRAYDON: Yes, I think the minister is correct in that. The pendulum will swing more and more. The whole question of waste and the utilization of the assets that have been bought is becoming of great importance as far as the public is concerned. I think the government might well take into consideration the position in which we shall find ourselves with respect to public opinion in that regard. After all, while the public is ready to put money into these things to-day for the purpose of winning the war as speedily as possible, the same public in years to come will be—as the minister says they are now—more alert and more conscious of the disposition that is to be made of those assets once the nation has no further use for them in connection with the war or before they become obsolete or something of that kind occurs. I am hopeful the government will make sure that such economies with respect to salvage—and there are a lot of economies possible with respect to salvage that the two ministers now in front of me will readily attest—will be carried out so that the public will not get the idea, as the years roll by, that this material is to be thrown on the market at bargain prices, that no attempt will be made to overhaul it and put it into salable shape; in other words, that the whole matter will be let go in a reckless form of abandonment.

Mr. MacNICOL: A few moments ago the minister referred to the company. Did I understand him to say that it had been set up? My information is that it has not been set up. The Minister of Munitions and Supply will know. About ten days ago I was in several plants and I saw some surplus equipment. In one of those plants I learned that a company was to be set up, and the gentleman who told me said that perhaps in a few days it would be brought before parliament. I am heartily in accord with the setting up of a crown company to conserve the vast quantity of equipment which is likely to be a hundred per cent usable and can be resold. I do not suppose the company has been set up. I have heard the names of some of the men who are to be chosen to head that company and they were all first-class men. If the Minister of Munitions and Supply names these men to form the company. I shall be glad to support the

proposal. The minister spoke as if the company had already been set up.

Mr. POWER: The order in council is passed.

Mr. MacNICOL: I do not want to ask the Minister of Munitions and Supply if it is so or not until he wishes to announce it. I was under the impression it would be announced in parliament.

Mr. POWER: The order in council is passed. I am not sure that the company has actually been incorporated, but the order in council dealing with all this was passed some time ago.

Mr. HOWE: Perhaps I can explain this a little further. The company has been functioning for about six weeks. It was set up by order in council as a matter of urgency. The surplus problem was becoming rather acute. Later in the session there will be legislation dealing with the whole matter.

Mr. MacNICOL: That is the information I received. It was said that later on it would be announced in the house. It should have been announced in the house. Parliament has been in session now for four weeks or more.

Mr. CRUICKSHANK: What is the item?

Mr. MacNICOL: The hon. member says, "the next item." I should like to tell him something. The opposition has supported the government in putting through large sums of money. We could not alter the amounts if we talked for a month, but the minister has been kind and courteous. We have been trying to be kind and courteous, and we have tried to help him put through his estimates. There is no use in saying, "next item."

Mr. FRASER (Peterborough West): I think the hon. member said he wanted to go on with potatoes.

Mr. MacNICOL: Pardon me. I thought the hon. member said, "next item." I apologize to him now. Let me return to the crown company. The crown company has been set up by order in council but has not been announced in parliament until to-night; at least I have not heard it. I would appreciate it more if it had been brought to parliament earlier. Anyone who knows anything of business knows that such a company would have to be set up, but in courtesy to the House of Commons, it should have been announced here first. I should not have to be told of it in a plant.

Mr. POWER: It was set up by order in council before parliament sat. The intention is to put legislation through the house; it was set up because the business was getting acute, and it was thought well to have some little experience in dealing with these surplus assets and getting the whole set-up in good shape before the bill was brought down. The bill ought to be brought down at any time now.

Mr. MacNICOL: The names that were given to me were all of good men, men who have had experience. I support that.

Mr. POWER: It was announced in the speech from the throne that legislation was to be brought down.

Mr. MacNICOL: Exactly, but it has not come down. Yet the company has been set up and parliament will be asked to support something that has been done.

Mr. HAZEN: What are the positions in civil life of the members of the crown company?

Mr. HOWE: I do not remember. I think there are twelve directors. I shall be glad to give my hon. friend a partial list from memory. I shall be glad to get the information and give it at a later date if that is satisfactory.

Mr. HAZEN: I happened to hear this matter discussed briefly not long ago, and the suggestion that was made that there should be among the directors a man who was engaged in the retail business. Are there any men like that on the board?

Mr. HOWE: Yes. Originally the list did not contain men from the retail trades, but that has been corrected in the last two or three weeks. We asked the retail organizations to nominate a panel of men, and we chose one from that panel. He has now been added to the board. I think the situation has been rectified.

Mr. NOSEWORTHY: Is it not correct that that company has already been disposing of some of the equipment?

Mr. HOWE: No, it has sold nothing at the moment. The committee delivered certain material to it within the last week, I think, but the company has actually sold nothing up to this time.

Mr. LOCKHART: I wrote the department several weeks ago with reference to a serious complaint about tents being sold. I received a reply saying that it was not tents that had been sold but that mill ends of tent canvas had been sold. The company must be operating, and the public are a little bit concerned about the disposition of certain material

which they seem to think will go into the junk piles. I urge upon both ministers—

Mr. POWER: Would my hon. friend say whether that was army tents?

Mr. LOCKHART: I cannot tell where these tents might have been used.

Mr. POWER: I understand that this has to do with raw material, which hardly has to do with air force estimates.

Mr. SINCLAIR: Hear, hear.

Mr. LOCKHART: Oh, that "hear, hear" stuff is all right.

Mr. SINCLAIR: What has this to do with the air force?

Mr. LOCKHART: It has to do with disposing of surplus materials. Do not get overanxious.

Mr. HOWE: Prior to the establishment of the disposal company each branch had some means of selling its surplus waste material. The army had its disposal branch; my department had its branch; other departments had their branches, and it was sold through that channel, not through the crown company.

Mr. NOSEWORTHY: There are two features in this connection I should like to bring to the minister's attention, though perhaps I might do so more properly later on. In the first place there are a great many boys in the air force who have received mechanical training and who would like an opportunity to acquire some of this equipment in order to establish themselves when they return to civil life. There is a concern felt that this may be all disposed of to civilian employers or others before these men return, and it is believed that their need should be taken into consideration and an attempt made to see that they have an opportunity to share in the purchase of some of these items. The second point is that a vast quantity of this material would be invaluable to the schools that will train or retrain some of these boys. I would suggest that before any plans are made for the disposal of this material the educational authorities should be consulted, to the end that any of this equipment that may be used in schools for the education of the boys who come back, and to extend vocational training among the general school population, should be kept for that purpose, and that this matter should receive first consideration before this equipment is disposed of.

Item agreed to.

12. Flying training contracts, $29,345,667.

Mr. PERLEY: Would the minister give us a break-down of this item, giving the reason for the increase of $2,500,000? I should also like to know how many of these training schools are operated in Canada and particularly in Saskatchewan; what the contract terms are, and what profits these companies may make under their contracts.

Mr. POWER: The contract is very long and my hon. friend has a copy of it; he asked for it last year. There are sixteen elementary and eight air observer schools in Canada. In Saskatchewan there are elementary schools at Prince Albert, Regina, Davidson and Assiniboia. There were air observer schools at Regina and Prince Albert, but they have been closed.

Mr. PERLEY: What are the terms of the contract, and what profits are allowed to be made? Has there been any particular change in the contract in the last year?

Mr. POWER: They are still on a no-profit basis. Certain changes were made. Operation and maintenance expenses are paid to civilian operators on the basis of schedules which have been prepared, and take into account estimated normal expenditures for each type and size of school. In the event that the actual expenditure for a given period is less than the target expenditure, eighty per cent of the saving reverts to the Royal Canadian Air Force and twenty per cent is retained by the company. The amount retained by the company cannot be distributed but must be held in reserve account until the termination of the contract. Similarly, in the event that actual expenditure exceeds the target, eighty per cent is repaid by the Royal Canadian Air Force and twenty per cent must be charged by the contractor to the afore-mentioned reserve account. The disposition of reserve accounts at the expiration of contracts will be made as follows: E.F.T.S. balances will be paid to flying clubs approved by the minister or will revert to the crown. I may tell my hon. friend that many of the E.F.T.S. were offshoots of certain civilian flying clubs; if they make any profits they may, with the permission of the minister, pay those over to the flying clubs, not to be used for any individual members but to be used by the clubs, and if there is no such club they revert to the crown. With regard to the air observer schools, all the profits and balances go to the crown.

Mr. LOCKHART: What percentage is permitted to those who put their money into the original set-up?

Mr. POWER: They were getting 5 per cent, but as far as elementary schools are concerned, we have bought them all out.

Mr. NOSEWORTHY: Would the minister give the committee a complete list of the centres at which these contracts were made, the types of schools, the holders of the contracts, and the estimated cost of each contract?

Mr. POWER: I believe that information was given last year, but I shall be glad to give it again.

Item agreed to.

13. Maintenance of overseas squadrons, $345,664,964.

Mr. FRASER (Peterborough West): Would the minister break this down? I notice that it is up by about $12,000,000.

Mr. POWER: We have extra squadrons.

Mr. FRASER (Peterborough West): I know that.

Mr. POWER: And we have converted to newer and better aircraft.

Mr. FRASER (Peterborough West): This is all paid to the British government.

Mr. POWER: The purpose of this item represents a provision for maintenance costs relating to the operation of Royal Canadian Air Force overseas squadrons, together with certain ancillary units, formed for service in conjunction with the Royal Air Force. Provision is made herein for all maintenance costs, with the exception of the items of pay, dependents' allowance and clothing which are shown separately in estimates under the appropriate headings of pay and allowances, and personnel supplies and services, respectively.

This item also includes, in addition to maintenance costs, a provision for the initial capital costs for the equipment of certain Royal Canadian Air Force squadrons to be established overseas during the first few months of the 1944-45 fiscal period.

Mr. FRASER (Peterborough West): That includes aircraft, too?

Mr. POWER: Yes, it applies to aircraft. Arrangements have been completed recently with the air ministry of the United Kingdom whereby six additional Royal Canadian Air Force Squadrons will be established overseas by the transfer of certain complete squadrons at present organized in Canada for operation within the home war establishment. We shall have to buy planes for those six, too.

The present and future strength of the Royal Canadian Air Force overseas squadrons in accordance with present operational plans would be, roughly, forty-four squadrons, divided into heavy bomber squadrons, fighter squadrons and coastal command squadrons. Heavy bomber squadrons, of course, cost more money, because the bombers are very expensive.

Provision has been made in the 1944-45 estimates for the above-mentioned squadrons, together with ancillary units as follows:

Capital charges, six squadrons....	$ 13,667,285
Maintenance, forty-four squadrons.	327,353,125

These two figures make a total of $341,020,410. Then, ancillary units include personnel reception centre; personnel disposal centre; bomber group headquarters; bomber group communication flight and fighter reconnaissance wing, and total $4,644,554. The grand total is $345,664,964.

These charges include only the capital cost of aircraft required for the initial equipment and immediate reserve of the six additional squadrons to be established during 1944-45, together with the cost of unit equipment for these squadrons. Unit equipment represents aircraft handling equipment and other important items which are taken on the charge of each particular squadron, and normally move with the squadron from station to station.

Maintenance charges are billed to Canada quarterly by the United Kingdom air ministry on the basis of annual squadron charges which are dependent upon the type of aircraft and the operational role in which aircraft are employed by the Royal Canadian Air Force squadrons. The basis of squadron charges and the elements of cost included therein have been carefully reviewed in the United Kingdom by responsible Royal Canadian Air Force officers, and are considered to be fair and reasonable in accordance with past experience and available information. Arrangements have been made whereby squadron charges will be reviewed annually for the purpose of making any necessary adjustments which may be required as a result of new conditions.

Mr. FRASER (Peterborough West): Last year the minister said he was buying helicopters.

Mr. POWER: They are not included. We did not buy them.

Mr. MacNICOL: Are salaries included in this item?

Mr. POWER: No. They were in the second item.

Mr. MacNICOL: This is all the equipment and it includes that in Italy, North Africa and at every point where Canadians are engaged.

Mr. POWER: Wherever there are Canadian squadrons.

Item agreed to.

14. Sundries, including printing, stationery, telephones, telegrams, teletype rentals and other costs not included in above items, $8,981,443.

Mr. ROSS (Souris): What portion of this is for air cadets? Is it expected that authority will be granted the air cadets to fly? That matter has been discussed lately. If, as the minister has said, he is going to let these local units have some aircraft, I trust they will be able to use them.

Mr. POWER: The amount included for air cadets is $1,012,480. The question whether or not we could allow these air cadets to fly in their two weeks' training is one which, I am frank to say, is giving me a great deal of concern. Sometimes I feel like saying yes, and more often I feel like saying no. Frankly, last year I was inclined to agree, and to obtain a waiver from the parents. Shortly before that, however, we had several severe accidents in training—not the cadets, of course; I am referring to our own airmen. I received a flood of letters from parents of boys who were in training, blaming us for the equipment, or the maintenance, or carelessness of people. The result was that I changed my mind with respect to the cadets. I thought that if we were to be blamed for the accidental deaths of men actually in training, whose job it is to take those risks, we might be blamed far more by parents of boys of fifteen or sixteen years. Even though the parents might sign a waiver, they might complain. That is the state of mind I am in this year.

Last year, over and above all this, there was the very good reason that we would not have had the time. This year, with more schools—although some of them will not be schools until later on—and with more instructors available, it would have been possible. But there is a risk involved. A great many parents might sign a waiver, but if the boy of certain parents were unfortunately killed or badly injured as a result of an aeroplane accident, the parents would never forgive either the minister or the air force for having given their boy a chance. I am open to conviction either way on the subject.

Mr. ROSS (Souris): I agree with the minister that this is a very important decision to make. However, it is a live question. There is no decrease anticipated in the cadet programme?

Mr. POWER: No.

Mr. FRASER (Peterborough West): Before the Minister of Munitions and Supply leaves the chamber, I would point out that he said there was nothing disposed of by this company.

Mr. POWER: I can answer that. That was one reason why the company was formed. Normally, as the minister says, each department disposed of its own, through a salvage officer, who is an officer under control of the treasury. We had a certain number of surplus aeroplanes, and we had to hand them over to the salvage officer. He called for tenders, and the only tenders he could get were for this small amount. It was after we went through this experience—although we had been thinking of it for some time—that it was borne in upon my mind just what the situation was. One of my officers said that the disposal of surplus assets would become one of the greatest rackets since the invention of loaded dice, unless someone took charge of it pretty soon.

Mr. FRASER (Peterborough West): It was, after the last war.

Mr. POWER: Therefore we got to work. I asked my officers; other ministers who were likely to have large surplus assets asked their officers, and we evolved the present set-up which will be placed before the house by way of legislation. The answer which my hon. friend has indicates just what would happen if this surplus equipment were left to disposal by the calling for tenders. It is not my baby, it belongs to the surplus assets corporation. I became interested at some stage of the matter because we found that to dispose of assets of this kind by simply calling for tenders would get us into all kinds of trouble and lose much money for the country.

Mr. ROSS (St. Paul's): There is about a million dollars for air cadets; how is that sum arrived at?

Mr. POWER: Does my hon. friend want it on *Hansard,* or shall I read it? It provides for instructors, travelling and transportation, clothing, miscellaneous stores, ammunition, targets, rifle cleaning materials and certain medical services.

Mr. STIRLING: That is all included in the million dollars?

Mr. POWER: The amount is $1,012,480.

Mr. STIRLING: Where does the money go in the case of a typical corps in one of our towns?

Mr. POWER: The officers are paid for fourteen days summer camp with a maximum of fifty-five days in the year. The average rate is $4 a day.

Mr. STIRLING: Would there be one officer to a corps?

Mr. POWER: They have a larger establishment than that. I believe it calls for over 2,000 officers.

Mr. STIRLING: How many corps are there?

Mr. ROSS (St. Paul's): How many cadets?

Mr. POWER: There are between 29,000 and 30,000 cadets, in 367 squadrons.

Mr. STIRLING: And there would be several officers in each squadron?

Mr. POWER: They would average probably a little more than three. My recollection is that there are three to a squadron of fifty, and as the numbers in the squadron go up there would be more officers.

Mr. STIRLING: There would be from 1,000 to 1,200 officers receiving this pay for the fortnight camp, plus fifty-five days?

Mr. POWER: Yes.

Mr. ROSS (St. Paul's): How are they distributed across the country?

Mr. POWER: I think they are in every province.

Mr. ROSS (St. Paul's): By military districts?

Mr. POWER: They would be distributed by our six commands.

Mr. ROSS (St. Paul's): Are the cadets paid when they go to camp?

Mr. POWER: No.

Mr. STIRLING: The cost of transportation is paid?

Mr. POWER: We pay the transportation; it averages about $3. The total cost is estimated as $66,900.

Mr. STIRLING: That is taking the corps to the summer camps?

Mr. POWER: Yes, to and from the camps.

Mr. ROSS (St. Paul's): When the minister was talking about the dangers of flying did he have in mind that these lads might fly with instructors?

Mr. POWER: Yes.

Mr. ROSS (St. Paul's): Several of these boys have spoken to me and they are extremely anxious to have a flight. Would it be possible to have some of them taken up?

Mr. POWER: The latest proposal is that it be done on the basis of merit, but I cannot guarantee that there will not be any accidents. It does not matter whether they go up with the best instructor in the world, in the best plane in the world, there may be an accident because flying is a dangerous game. If the committee is strongly of one opinion or another I should like to get its advice on the matter.

Mr. ROSS (St. Paul's): They take the same chances riding in automobiles and perhaps they are safer up in the air than they would be driving along some of our roads. This would be a great stimulus to the cadets.

Mr. GLADSTONE: Could I have some information about the graduating schools of the R.C.A.F.?

Mr. POWER: Aircrew on graduating may obtain further instructions in their duties as commissioned officers or as non-commissioned officers. Four schools have been established within the last two months and three are now operating. There are schools at Maitland, Three Rivers, Valleyfield, and one at Calgary will be opened on March 10. The hon. member for Yorkton asked this afternoon about the policy with regard to commissioning and promoting prisoners of war. The policy regarding the commissioning of R.C.A.F. personnel, provides for the commissioning of a non-commissioned officer prisoner of war provided there is no adverse report in existence and no adverse circumstances surrounding his capture if (a) he has attained the 60-60-70 standard on graduation, having been graduated prior to the inauguration of this standard or (b) he has been recommended by his unit commander prior to date of capture.

Mr. GRAYDON: What does the minister mean by adverse circumstances?

Mr. POWER: Disgraceful circumstances; provided there are no adverse circumstances, provided a man did not just go and give himself up. As a flyer that is not very likely because he just comes down; he does not give himself up.

Mr. NOSEWORTHY: Earlier in the evening the minister undertook to look into the question of the pay of wireless mechanics.

Mr. POWER: I can answer that on *Hansard* in reply to a question on the order paper if my hon. friend puts it in that way.

Mr. MACDONALD (Halifax): Does the Canadian government accept responsibility when damage is occasioned to someone by a member of the R.A.F. driving a motor car? Supposing a man in Canada sustains personal injuries or property damage because of the

operation of a motor car by a member of the R.A.F. in the course of his duty, has he a right of action against the Canadian government, or has he to proceed against the British government?

Mr. POWER: My hon. friend knows that has been a matter of discussion between the lawyers of the Department of Justice and, I think, his department and ours. An attempt has been made to arrive at a conclusion as to what should be done in connection with claims against persons belonging to other forces. I took part in these discussions, but I cannot say what the order in council which was eventually passed contains. My hon. friend will probably know better than I.

Mr. MACDONALD (Halifax): I want to know what a man can do who is injured through the actions of a member of the R.A.F. while carrying out his duties in Canada.

Mr. POWER: I believe all three services are bound by the same order in council, but I cannot just say what it contains.

Mr. MACDONALD (Halifax): I know it is generally recognized that there is some responsibility on the part of the Canadian government, but I have not been able to find out how the man who is injured can get redress, or to whom he should look for payment or whom he sues if the matter has to go to litigation. I should like to know what course he is to take.

Mr. POWER: An order in council has been passed, but I do not know just what its provisions are.

Mr. WEIR: A few moments ago the minister announced a policy in the matter of commissions with respect to R.C.A.F. personnel who might become prisoners of war. Can he inform the committee similarly with regard to Canadian personnel in the R.A.F. who may become prisoners of war?

Mr. POWER: No.

Item agreed to.

Mr. GRAYDON: Before progress is reported may I make this clear? I presume the minister still has some queries to answer with respect to his war estimates.

Mr. POWER: I think they are nearly all cleared up.

Mr. GRAYDON: My impression was that some were outstanding. We are anxious to preserve our rights with respect to those. I hope, therefore, that it will not be understood that the minister has cleared himself completely as far as his war appropriations are concerned until those questions are answered, and that supplementary comment may be made later.

Mr. POWER: If it is satisfactory I could answer any queries that are outstanding, during the discussion of the navy war appropriations, which will be coming on in the next two or three days. But I am in the hands of the committee. I have done very well so far, and I am not complaining a bit.

Mr. GRAYDON: No; I do not think the minister should, but I am anxious that the discussion shall not be regarded as closed in case there is something we wish to bring up at the time the minister provides the outstanding answers. While it may be most convenient and expeditious to have the navy go on at the next sitting, I wish to reserve our rights as I have already indicated.

Mr. POWER: Quite.

Progress reported:

Mr. CRERAR: If the house is agreeable we might go on with supply, agriculture. It would require unanimous consent to go into supply again to-day.

SUPPLY

The house in committee of supply, Mr. Bradette in the chair.

DEPARTMENT OF AGRICULTURE

Science service—

6. Animal and poultry pathology, $147,300.

Hon. J. G. GARDINER (Minister of Agriculture) Mr. Chairman, we had considerable discussion on this item the other evening, and if there are no further questions we might proceed to the next item.

Item agreed to.

Science service—

7. Bacteriology and dairy research, $44,620.

Mr. GARDINER: The purpose of the vote is to provide for bacteriological research and in cooperation with other divisions and services research into soil fertility, crop production, milk production, technical problems in milk processing and the manufacture of dairy products, utilization and preservation of foodstuffs, utilization of agricultural by-products and work in connection with standards of products within the scope of the department.

Mr. BRYCE: Does the cost of the milk production survey in Manitoba come under this item?

Mr. GARDINER: I have not a report on the Manitoba investigation, but I might say that the question of finding a practical procedure for determining the bacteriological quality of raw milk is of importance to the whole dairy industry and of aid in improving the supply. Increasing interest is being taken in the reduction test, and attention is being given to details of technique with the idea of increasing the usefulness of this test, which appears to have many advantages over the older methylene blue test. Many points have still to be considered, including that concerned with an examination of the dyes so that the test can be standardized.

Mr. BRYCE: Have they taken into consideration the cost of the production of milk in the western provinces?

Mr. GARDINER: That does not come under this.

Mr. TUSTIN: Last year the agricultural food board designated where milk should go, whether to cheese factories or to condenseries. I have had a good many complaints recently from farmers who have had to send their milk to cheese factories. Last fall, when usually a number of factories would be closed, a subsidy was placed on milk for cheese factories, and consequently a number were kept open during the winter months. The complaint that I have from a good many farmers in my constituency is that the price of milk going to the cheese factories is not comparable with the price of milk going to condenseries. There is a good deal of dissatisfaction over that and a number of farmers appealed to me just over the week-end, saying that they had applied to the agricultural food board to be allowed to change over from sending their milk to the cheese factory but were refused permission to ship it to the condenseries. I have in my office a table which was prepared over the week-end, showing the difference in the amount the farmer receives according to whether his milk is shipped to a cheese factory or to a condensery. I have not it here because I did not know this item was coming up to-night. If I remember the figures correctly, a man who had twelve or fifteen cows last year showed me by a table that he had lost almost $200 by having to ship his milk to a cheese factory when he could have shipped it to a condensery if the food board had given him permission. On top of that, over the last several months the condensery plant at Napanee has been shipping a good deal of milk to the city of Toronto for distribution, and all the milk shipped from there to the city of Toronto pays a premium to the farmer of twenty-five cents a hundred. So that the farmers, if they had been allowed to ship the milk to Toronto for distribution, would have benefited to that much greater extent. I appeal to the minister to give this matter consideration, because it is of much concern to the farmers. I should be glad to let the minister have the table I have in my office or present it to the committee at a later stage.

Mr. GARDINER: That would not come under this item. As a matter of fact, it would hardly come under any item in the main estimates, since the authority which we have to deal with that comes from the War Measures Act and the moneys provided come under the war appropriation. But I would be pleased to discuss the matter at that time.

This particular item has to do with scientific investigation of the qualities of milk and the treatment of milk as against different bacteria and things of that kind. It is just the scientific treatment of milk itself.

Mr. SENN: I understand that the different uses to which the by-products of milk might be applied could be investigated under this item. For instance, the use of whey. Whey comes from the production of cheese. In some instances it is worth quite a considerable amount for feed; but if it gets too sour, if it is not properly cared for after the cheese is made, it is not nearly so valuable. Then there are the other by-products of the manufacture of butter, such as skim milk powder and casein, and the different manufacturing outlets which I suppose should be investigated to see how much the price of them does add to the value of the milk. However, if I am in the wrong category I do not want to continue.

Mr. GARDINER: All the research in connection with the fact that bacteria exist in the different products of milk comes under this particular item. I am not so sure that the values of milk as defined by the hon. member would come under this item. For example, the first matter dealt with is methods for measuring the quality of raw milk; next, care of milking machines, methods of taking care of them in order to avoid bacteria getting into the milk; surface deterioration in storage butter; the cause and remedy of discoloration in print butter; winter flavour in creamery butter; rancid flavour in Cheddar cheese; the

matter of studies on clarification of milk for Cheddar cheese making. These are the chief items under which discussion comes.

Item agreed to.

Science service—

8. Botany and plant pathology, $312,520.

Mr. GRAYDON: I know that the item has been carried with respect to dairy research, but there is one matter to which I wish to refer. In the mines and resources estimates, under "national research council," a rather large sum of money, something over $300,000, is being appropriated, as the minister indicated at the beginning of his estimates, for research on agricultural matters. This dairy research, together with bacteriological and dairy research, as proposed under the increased vote indicated in the mines and resources estimates, will then be carried on under the auspices of the national research council. Does it not raise the whole question whether the council is the organization under which money voted for agricultural research should be expended? The minister will find himself, I believe, with research being done in the national research council under a vote in the mines and resources estimates, and he will also be saddled with another research branch having to do with problems of bacteriology and dairying. This matter was brought up before and received some attention in the discussion. I am inclined to think that those who took part favoured the retention in the Department of Agriculture of the research facilities which were being thus expanded. If the minister would give an explanation in this connection it would be helpful.

Mr. GARDINER: It will not affect at all the matter of research as it is spoken of here. This has always been carried on in the Department of Agriculture under its usual activities, and will so continue. But there was a vote of $200,000 put in the agriculture estimates last year, in a supplementary vote, which was set apart for the purpose of doing certain research, more particularly in connection with oil-producing plants and the growing of different products particularly in the west and the extreme east. That vote does not appear in the estimates as they now are. It is my intention again to submit a $200,000 item to the treasury board and to the government in connection with our supplementaries this year in the hope that it will be continued. I am not now in a position to state whether it will be continued or not. But there is an item, as has been suggested, of something over $325,000 in the Department of Trade and Commerce to carry on certain research. It is not this type of research: it is to try to find new uses, namely commercial uses, for different farm products, such as the utilization of wheat in the making of rubber. It may be that not much money will be spent on that particular object, but it will be things of that type—using wheat or grains for some other purpose—and a vote of that kind does not interfere with this one.

Mr. GRAYDON: The minister is satisfied that it should be left with the national research council?

Mr. GARDINER: I am satisfied that some of it has to be. That which is associated closely with industry is probably better left with the national research council. Where the question is whether one can produce some particular type of plant in a certain area of Canada, I think it should be investigated by the Department of Agriculture, and the same may be said of projects such as the cross-breeding of plants to determine whether one can get better varieties for growing in this country.

Mr. ROSS (St. Paul's): A new type of experimentation has been going on in the preservation of meat and the sterilization of milk and so on by electronics. Is that being undertaken by the National research council? Probably the question would come under the item affecting the research council, not the Department of Agriculture.

Mr. GARDINER: On all that kind of research we work in cooperation with the national research council. We ask them to do work for us and they do it. That was the intention in setting up the council, that all the research work which could be done by the research council would be done for all departments of government, and our department, in common with all others, gets as much done as we possibly can.

Mr. GRAYDON: Mr. Chairman, let us be clear. The item which was carried before was item 7, but the minister was good enough to allow me to ask a supplementary question. That item is carried, but not item 8. Item 7 having been carried, let us call it eleven o'clock.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Tuesday, March 7, 1944

The house met at three o'clock.

PRIVILEGE—MR. KNOWLES

JUDGES ACT AMENDMENT—ERROR IN PRINTING OF BILL

On the order for motions:

Mr. S. H. KNOWLES (Winnipeg North Centre): Mr. Speaker, yesterday by leave of the house I introduced Bill No. 9, to amend the Judges Act in reference to the salaries of certain judges on attaining the age of seventy. This morning I received, as did other hon. members, a printed copy of what purported to be my bill, but on looking inside I found that there had been printed in error a proposed amendment to the Exchequer Court Act which bears no relation to the contents of my bill; I understand that this is a government measure which is to be brought down at a later date. I hope some day to have the privilege of introducing legislation on the government side of the house, but I must disclaim any responsibility for this bill.

Mr. SPEAKER: I was informed this morning that a mistake had been made in regard to the hon. member's bill, which was put out for distribution in error. That error is being corrected, and the copy of the hon. member's bill will be in the post office to-day.

HOUSE OF COMMONS

CONSIDERATION IN COMMITTEE OF REPORT OF SPECIAL COMMITTEE ON REVISION OF STANDING ORDERS

Right Hon. W. L. MACKENZIE KING (Prime Minister): At the conclusion of last night's sitting it was announced that the first order of business to-day would be consideration of the report of the committee of His Honour the Speaker on standing orders. The house will recall that on February 1 the following were appointed a special committee to assist His Honour the Speaker in the revision of the standing orders; the motion made by myself was as follows:

That a special committee consisting of Messrs. Black (Yukon), Fauteux, Golding, Hanson (York-Sunbury), Isnor, Mackenzie (Vancouver Centre), MacInnis, McIlraith, Maybank, St. Laurent and Quelch, be appointed to assist Mr. Speaker in revising the standing orders of the house with a view to simplify, accelerate and expedite its business, and to report to the house during the present session.

On Friday, March 3, Your Honour presented the first and final report of the committee, and the Minister of Pensions and National Health (Mr. Mackenzie) moved that the report be referred to the committee of the whole on Tuesday next, which is to-day. In order to permit of the report being considered I would now move:

That Mr. Speaker do now leave the chair for the house to resolve itself into committee of the whole to consider the report of the special committee on the revision of standing orders.

Hon. members will understand that this report is for the consideration of members of the house themselves. They are at liberty to discuss it freely. The government does not assume any responsibility as to either its acceptance or rejection. It should be understood that hon. members may take whatever position they desire with respect to its recommendations, or as to the report as a whole, and may vote as they please.

Motion agreed to and the house went into committee, Mr. Bradette in the Chair.

The report of the committee follows:

Your committee, in the performance of the important duty assigned to it by the house, has taken into account the existence of general criticism of parliament both by members and representative citizens. It has fully realized that much is expected of the House of Commons where the views of the people are finding expression and where industrial and economic conditions are demanding parliamentary attention and solution. The main question before the committee was whether procedure should be amended so that the house may be able to do more legislative work in the time at its disposal and increase its efficiency as a critical and controlling assembly. Criticisms of parliament seem to have been inadequately considered in relation to the whole structure of parliament, the necessary party system and the complex situation created by a war which is now in its fifth year.

These criticisms arise from opinions concerning the functions of parliament which are often based upon such misconceptions as the view that parliament is primarily a board of directors with the members of the cabinet as its executive staff, and that members, instead of endeavouring to reconcile as much as possible all the elements of public opinion, which is difficult in our diversified country, should rigidly consider every question on its own exclusive merits. Such however is not the true function of a legislative body composed of 245 members elected to discuss the management of public affairs. Debates may sometimes be lengthy but they bring home to the administration the advisability or unpopularity of a particular line of policy and they must be heard because democratic government rests upon public opinion. Parliament is the assembly of representatives elected by the people where great issues are debated, or should be debated; it is not primarily a body of auditors charged with the inspection of departmental accounts. Freedom of speech is one of the inalienable privileges of members of the House of Commons. It is in truth the privilege of their constituents

and it is secured to members not for their personal benefit but to enable them to discharge the functions of their office. Without it, the essence of the country's liberty does not exist.

The present procedure was devised to reflect the freedom of all the members of the house, but we must realize that in wartime parliament is bound to divest itself of some of its prerogatives in order to strengthen the government's power. The principle of majority rule is a constitutional convention upon which all British parliamentary government is built but this must collapse in proportion as the principle of the protection of minorities begins to decay.

Rules are not sufficient to preserve freedom of speech and to uphold the dignity of the House of Commons. Standing orders depend for their success upon the prevalence of good will amongst all members who have to work under them. The house must rely on the forbearance of its members and on the general acquiescence in the enforcement by the Speaker of the rule which requires that members should strictly confine themselves to matters immediately pertinent to the subject of debate. In a report presented to the United Kingdom House of Commons in 1931, the following statement appears:

> Your committee would urge that unless understanding and a common loyalty prevail there will be a danger of the collapse of the system of representative government.... If the principles of equality among members, publicity of the house's proceedings, freedom of speech, majority rule, or the right of the minority to an adequate expression of opinion are consciously challenged, there is an indication of some serious defect in the life of the nation. These larger considerations cannot be regulated by rules and orders: they are the responsibility of each member of the house.

Your committee, in all its deliberations, has kept in mind the importance of not impairing the rights of minorities. Two fundamental principles govern the procedure of the house. They are, that the government shall, so long as it can maintain a majority, be able to secure such legal powers as it considers necessary for administration, and that minorities, however small, shall be able to criticize that administration. Standing orders must protect them, and it is all the more important that they be founded on right and justice because they are merely resolutions of the house which can be swept away by a majority vote. Your committee is of the firm opinion that these rights cannot be alienated even if the house, in maintaining them, may protract sessions and lay itself open to severe criticism.

The suggestion that estimates should be referred to standing or select committees has been given earnest consideration and carefully reviewed. It strikes at the root of ministerial responsibility and it divests members of the privilege of criticising from the floor of the house without advice, suggestion or influence of any kind, all departmental expenditures submitted by the government. No proposals subversive of this settled rule of action can be safely embodied in any scheme for securing closer parliamentary control. One of the objections to this proposal is that if all the estimates are referred to a standing or select committee the motion for the Speaker to leave the chair shall be abolished, which means fewer opportunities for private members to move amendments setting forth grievances or expressing want of confidence in the government. The procedure required to keep this privilege unimpaired would reduce the efficiency of the committee's functions and it would be so involved as to be misunderstood and hard to enforce. Certain estimates may be occasionally referred to a select committee in order to ascertain facts which the house desires to know, but this practice should be adopted guardedly and only in very special circumstances. Your committee does not think it would be advisable to change the present system and it believes that the elasticity of the present rules makes it possible to apply them in new situations from time to time. We, however, desire to submit that considerable time could be saved if the committee of supply sat oftener in the early part of the session. We therefore recommend that, when the yearly estimates have been brought down, one day a week be set aside for consideration of supply. If this is done, the house is not likely to find itself under the necessity of passing a great part of the estimates in the dying days of the session.

The allotment of a certain number of days for the debates which appear to become protracted was considered. Your committee was averse to multiplying rules of this character. There are already several restrictions which have been found necessary for parliamentary work and which are accepted in almost every elected assembly. We have recommended a few amendments but we feel that this house cannot go further in regulating its discussions. In spite of limitations now existing, every resolution and bill is given ample opportunities for debate in committee of the whole, standing and select committees and on the second and third readings; but as the allotment of days, under a special rule, might prevent members from speaking, it should not be ordered under the authority of a standing order. Your committee is not prepared to recommend such an inovation in our procedure which must be adapted to our own conditions and be thoroughly Canadian. Our recommendation is that, when there is reason to believe that debate will be protracted, parties and groups recognized in the house shall confer and make arrangements either for allotting days or laying any plan for saving time whilst protecting freedom of speech for every representative of the people who sits in this house.

Your committee did not think it advisable to take up at this time the question of the alleged suppression of initiative on the part of the private member. As the nation has been at war for over four years and government business has been given precedence over private members' motions and bills, this is not the proper session to consider that part of our procedure. Conditions prevailing in war time are such that private members' notices of motions and private bills must give way to war measures. The order of business followed since 1940 has been based on resolutions which practically abolished private members' days. It is an exceptional situation and perhaps the house had better wait until normal conditions return before the private member's place in the house can be fully considered.

Rules of practice are necessary in the House of Commons as well as in any court of justice and other public institutions, but the multiplicity of standing orders dealing with the

basic principles of parliamentary procedure ought not to be encouraged. There were no standing orders relating to public business in the United Kingdom House of Commons until 1707, and there were only three from 1715 to 1821—over a century. There are 95 to-day. We have 81, besides 10 dealing with the staff and 28 governing the library of parliament. Your committee is aware that members of this house are reluctant to impose restrictions on their freedom and independence, and that any attempt to translate procedure into precise rules will deprive them of the very quality which render them adaptable to new and varying conditions, or unusual combinations of circumstances, and might have the effect of restricting rather than safeguarding their privileges.

The following amendments to the standing orders are recommended:

Standing order 9 reads:

> Upon a division, the yeas and nays shall not be entered upon the minutes, unless demanded by five members.

Proposed amendment: That the following be added:

> And every member present in the chamber when the question is finally put by Mr. Speaker shall be obliged to vote, and if he does not vote Mr. Speaker shall call upon him to vote and his name shall be recorded accordingly. If he persists in not voting he may be named by Mr. Speaker for having violated a standing order of the house.

There never was any standing order governing this matter in the Canadian House of Commons. The practice for many years was that a member who remained seated during a division was often required by the Speaker to declare on what side he voted. If he persisted in not voting, neither the house nor the Speaker had authority to penalize him. In 1906, the United Kingdom house passed its standing order 29 which relieves members of the obligation to vote; and our house seemed to have been so influenced by this new practice that our speakers have hesitated to demand that all members present when the question is put are bound to vote. The procedure was not uniform, which was not fair to members who are entitled to know what are their rights in a matter of this kind. Under the new standing order, a member who may have objections to vote one way or the other shall not be forced to do so against his will as he will be free to stay out of the chamber when division takes place.

Section (1) of standing order 12 reads:

> Mr. Speaker shall preserve order and decorum, and shall decide questions of order, subject to an appeal to the house without debate. In explaining a point of order or practice, he shall state the standing order or authority applicable to the case.

Proposed amendment: That the following be added after the word "debate" in the fourth line:

> provided no division shall take place thereon unless demanded by twenty members.

Under the present procedure, when Mr. Speaker has given a decision, any member may rise and say: "I appeal from your decision." The question is then put on that appeal, and if five members rise, a division has to take place. This amendment provides that, in the future, the house will only divide on the appeal if a division is demanded by twenty members.

Section (3) of standing order 31 relating to the motion to adjourn the house for the purpose of discussing a definite matter of urgent public importance reads:

> He (the member) then hands a written statement of the matter proposed to be discussed to Mr. Speaker, who, if he thinks it in order, and of urgent public importance, reads it out and asks whether the member has the leave of the house. If objection is taken, Mr. Speaker requests those members who support the motion to rise in their places and, if more than twenty members rise accordingly, Mr. Speaker calls upon the member who has asked for leave.

Proposed amendment to be added as subsection (g) of section (6):

> There shall be no appeal from Mr. Speaker's decision as to the urgency of discussing the matter mentioned in the written statement submitted to him by the member who proposes to move the adjournment of the house.

The object of this amendment is to bring the rule in conformity with the present practice of the house and several Speaker's decisions which have been invariably sustained. The theory is now accepted that the Speaker in declaring that there is no urgency to debate the matter brought to the attention of the house does not rule on a point of order. He takes the responsibility of deciding whether or not the question proposed to be discussed is of such national importance that it should be given precedence over the appointed proceedings of the house.

Standing order 37 reads:

> No member except the Prime Minister and the leader of the opposition, or a minister moving a government order and the member speaking in reply immediately after such minister, or a member making a motion of "no confidence" in the government and a minister replying thereto, shall speak for more than forty minutes at a time in any debate.

Proposed amendment: That the following be added as section (2):

> Provided always that in the committees of the whole, supply or ways and means, no member shall speak more than once on a particular motion, clause or item under consideration, and not more than twenty minutes continuously, but his right to ask questions relating to the subject-matter of the said motion, clause or item under consideration shall not be thereby restricted.

When Mr. Speaker is in the chair, a member can only speak once, but there is no limit to the times of speaking when the house is in committee. Under the present rule, a member may make two or three forty-minute speeches during a sitting of the committee which does not last longer than three hours at a time. This amendment provides for a more equitable apportionment of time and allows more members to take part in the discussions.

Section (2) of standing order 40 reads:

> Mr. Speaker or the chairman, after having called the attention of the house, or of the committee, to the conduct of a member who persists in irrelevance, may direct him to discontinue his speech, and if the member still continues to speak, Mr. Speaker shall name him, or, if in committee, the chairman shall report him to the house.

Proposed amendment: That the following words be inserted after the word "irrelevance": "or tedious repetition".

Your committee hopes that this addition will meet with the general approval of the house.

Section (2) of standing order 43 reads:

> A reply shall be allowed to a member who has moved a substantive motion, but not to the mover of an amendment, the previous question or an instruction to a committee.

Proposed amendment: That the following be inserted after the word "motion": "or the second reading of a bill, and to a minister of the crown who has introduced a government measure". The amended section will read:

> A reply shall be allowed to a member who has moved a substantive motion, or the second reading of a bill, and to a minister of the crown who has introduced a government measure, but not to the mover of an amendment, the previous question or an instruction to a committee.

In recent years, the ministers have had to obtain leave or unanimous consent in order to answer criticism and as no objection was ever taken to this course, the house may now regulate the practice by adopting this new rule.

Standing order 44 regulates questions placed on the order paper, but does not deal with questions addressed to ministers on the orders of the day being called.

The committee proposes that the following be added as section (5) of this standing order:

> A question of urgent character may be addressed orally to a minister on the orders of the day being called, provided a copy thereof has been delivered to the minister and to the clerk of the house at least one hour before the meeting of the house. Such a question shall not be prefaced by the reading of telegrams, newspaper extracts, letters or preambles of any kind. The answer shall be oral and may be immediately followed by supplementary questions limited to three in number, without debate or comment, for the elucidation of the information given by the minister.

The custom of asking questions before the orders of the day are proceeded with has taken such a development that it is now part of our parliamentary practice. It is neither possible nor advisable to do away with it. As it seems to meet the wishes of the majority of members, the house may adopt this amendment so that the Speaker will in future be guided by a standing order when members' rights in this connection are challenged.

Standing order 49 reads:

> Only one amendment and one subamendment may be made to a motion for Mr. Speaker to leave the chair for the house to go into committee of supply or ways and means.

Proposed amendment: "That the following words be inserted after the word 'motion': 'for the Address in Reply to the Speech from the Throne' ", so that the standing order will read:

> Only one amendment and one subamendment may be made to the motion for the address in reply to the speech from the throne and to the motion for the Speaker to leave the chair for the house to go into committee of supply or ways and means.

The debate on the address in reply to the speech from the throne covers the whole ground of administration and is repeated when the budget is brought down. This debate has been abolished in the House of Assembly of South Africa where the following standing order is now in force: "Mr. Speaker shall report to this house the governor general's speech, and there shall be no debate on such report".

Your committee felt that the house could not abolish this debate, but it realized that the scope of discussion was so wide and the question of relevancy almost nonexistent on this particular occasion that the freedom of speech of every member, party or group would be fully preserved by limiting the number of amendments in the same way as on the motion for committee of supply. These two motions are in the same category, namely, they furnish occasions for airing grievances and making suggestions to the government.

Standing order 60 reads:

> If any motion be made in the house for any public aid or charge upon the people, the consideration and debate thereof may not be presently entered upon, but shall be adjourned till such further day as the house thinks fit to appoint; and then it shall be referred to a committee of the whole house, before any resolution or vote of the house do pass thereupon.

Proposed amendment: That the following be added at the end after the word "thereupon":

> provided that if the aid or charge is to be a subsidy provision of a bill to be later introduced, the motion creating it shall be considered without the house resolving itself into committee.

Your committee has reached the conclusion that there is an immense advantage in informing the members of parliament as to the nature of a money bill upon the committee stage of the discussion. The obligation to refer a resolution to the committee of the whole is one of the traditional rules of British parliaments, and though it may sometimes seem superfluous, there may be occasions when it will prevent obnoxious legislation. There can be no question of abolishing this part of our procedure, but there is no doubt in our minds that the committee stage can be avoided when the charge created by a bill is a subsidiary feature such as the payment of a staff or travelling expenses, the bill should be introduced without the formality of a resolution and the committee stage.

Standing order 75 reads:

> Every public bill shall be read twice in the house before commital or amendment.

Proposed amendment: That the following be added at the end of this standing order:

> with the exception of divorce bills passed in the Senate which shall be referred to the standing committee on private bills as soon as received from that house.

Under this new rule, divorce bills will come before the house only once. They will be thoroughly considered in the committee on private bills prior to being submitted to the

house. They are now mentioned three times before their second reading: first, when the message is read from the Senate; secondly, on first reading and thirdly on second reading. The object of the new rule is to avoid this unnecessary procedure.

Your committee is of the opinion that divorce by legislation should not take place to such an extent that bills seeking it sometimes fill many pages of the order paper. The matter is not one that can be settled by standing orders. The whole question should be given full consideration with a view to eliminating divorce bills from parliament, and your committee strongly recommends that this be done as soon as conveniently possible.

On Friday, the 25th of February last, speaking on behalf of your commitee, I asked members who may desire to place their views on procedure before your committee to write to me or the clerk of the house and I stated that their letters would be given every consideration. No suggestions have been received.

Your committee does not recommend radical changes in the rules of the house, but it believes that practices, which have been followed for years by unanimous consent, ought to be permitted by standing orders. It is only by a process of evolution that the rules can be materially altered.

Mr. GLEN: Mr. Chairman, the committee appointed by the house to assist the Speaker in the revision of the rules consisted of Messrs. Mackenzie (Vancouver Centre), St. Laurent, Hanson (York-Sunbury), Black (Yukon), McIlraith, McGarry, Fauteux, Golding, Maybank, MacInnis and Quelch. All of these hon. gentlemen are experienced parliamentarians with intimate knowledge of the needs and requirements of this house. In addition we had the benefit of the advice and the great experience of the Clerk of the House, Doctor Beauchesne.

In their deliberations the committee addressed themselves to the question of maintaining the prestige of the House of Commons, and while they have not made many changes they have recognized certain features of our parliamentary life which through custom have become part of our jurisprudence, and have endeavoured to embody in the rules amendments which they feel are necessary. The committee took cognizance of and carefully considered general criticism of the proceedings of parliament, and on page 146 of *Votes and Proceedings* of March 3, last, they gave effect to their viewpoint by stating

Your committee, in the performance of the important duty assigned to it by the house, has taken into account the existence of general criticism of parliament both by members and representative citizens. It has fully realized that much is expected of the House of Commons where the views of the people are finding expression and where industrial and economic conditions are demanding parliamentary attention and solution. The main question before the committee was whether procedure should be amended so that the house may be able to do more legislative work in the time at its disposal and increase its efficiency as a critical and controlling assembly. Criticisms of parliament seem to have been inadequately considered in relation to the whole structure of parliament, the necessary party system and the complex situation created by a war which is now in its fifth year.

These criticisms arise from opinions concerning the functions of parliament which are often based upon such misconceptions as the view that parliament is primarily a board of directors with the members of the cabinet as its executive staff, and that members, instead of endeavouring to reconcile as much as possible all the elements of public opinion, which is difficult in our diversified country, should rigidly consider every question on its own exclusive merits. Such however is not the true function of a legislative body composed of 245 members elected to discuss the management of public affairs. Debates may sometimes be lengthy but they bring home to the administration the advisability or unpopularity of a particular line of policy, and they must be heard because democratic government rests upon public opinion. Parliament is the assembly of representatives elected by the people where great issues are debated, or should be debated; it is not primarily a body of auditors charged with the inspection of departmental accounts. Freedom of speech is one of the inalienable privileges of members of the House of Commons. It is in truth the privilege of their constituents and it is secured to members not for their personal benefit but to enable them to discharge the functions of their office. Without it, the essence of the country's liberty does not exist.

Hon. members will notice in the report that a paramount thought in the minds of the members of the committee was to see that the rights of minorities were not impaired. On page 147 of *Votes and Proceedings* of March 3, last, the committee has stated this principle in exact language:

Your committee, in all its deliberations, has kept in mind the importance of not impairing the rights of minorities. Two fundamental principles govern the procedure of the house. They are, that the government shall, so long as it can maintain a majority, be able to secure such legal powers as it considers necessary for administration, and that minorities, however small, shall be able to criticize that administration. Standing orders must protect them, and it is all the more important that they be founded on right and justice because they are merely resolutions of the house which can be swept away by a majority vote. Your committee is of the firm opinion that these rights cannot be alienated even if the house, in maintaining them, may protract sessions and lay itself open to severe criticism.

Some considerable criticism has been offered from time to time in the press and elsewhere regarding the consideration of estimates. The committee very carefully considered this mat-

ter and the right of that criticism, but came to the conclusions as stated in the said page 147 of *Votes and Proceedings,* as follows:

The suggestion that estimates should be referred to standing or select committees has been given earnest consideration and carefully reviewed. It strikes at the root of ministerial responsibility and it divests members of the privilege of criticizing from the floor of the house without advice, suggestion or influence of any kind, all departmental expenditures submitted by the government. No proposals subversive of this settled rule of action can be safely embodied in any scheme for securing closer parliamentary control. One of the objections to this proposal is that if all the estimates are referred to a standing or select committee the motion for the speaker to leave the chair shall be abolished, which means fewer opportunities for private members to move amendments setting forth grievances or expressing want of confidence in the government. The procedure required to keep this privilege unimpaired would reduce the efficiency of the committee's functions and it would be so involved as to be misunderstood and hard to enforce. Certain estimates may be occasionally referred to a select committee in order to ascertain facts which the house desires to know, but this practice should be adopted guardedly and only in very special circumstances. Your committee does not think it would be advisable to change the present system and it believes that the elasticity of the present rules makes it possible to apply them in new situations from time to time. We, however, desire to submit that considerable time could be saved if the committee of supply sat oftener in the early part of the session. We therefore recommend that, when the yearly estimates have been brought down, one day a week be set aside for consideration of supply. If this is done, the house is not likely to find itself under the necessity of passing a great part of the estimates in the dying days of the session.

It has been widely suggested that protracted debates should not be encouraged. The committee was fully aware of this defect in our procedure but did not feel it should further curtail debate, because after all there are a number of standing orders which, if exercised, can prevent undue debate. They are standing order 39, the rule with regard to closure; standing order 55, which provides for the previous question; standing order 48, which states that when a question is under debate, a motion can be made to amend it, postpone it to a day certain, for the previous question, for reading orders of the day, proceeding to another order, to adjourn debate or to adjourn the house; standing order 38, respecting undebatable motions, including adjournment motions, decided without debate or amendment; standing order 49, stating that only one amendment and one subamendment may be made on a motion for Mr. Speaker to leave the chair to go into supply or ways and means.

The committee did however think that some amendments should be made with regard to the speech from the throne and also to the proceedings when the house is in committee, and these matters will be discussed when the amendments are before this committee.

Mr. HANSON (York-Sunbury): Mr. Chairman, the Prime Minister (Mr. Mackenzie King) made it quite clear—and I thank him for it—that this is to be a free discussion. I hope hon. members will take full advantage of the opportunity now presented to them to investigate the various matters dealt with in this report, and all allied subjects which may commend themselves to their consideration.

It is not often the rules of the house are revised. The last occasion was in 1927, now some seventeen years ago. While I had the honour and privilege to serve on that committee, I do not pretend to be an expert on rules or procedure. I am afraid that in a busy life I have not taken advantage of the opportunities which might have been mine to study such matters. And yet they are important. I am surprised that the general invitation extended by Mr. Speaker to hon. members, to make representations to the committee respecting improvements which in their opinion might be made, was not taken advantage of, either orally or in writing. I understand that not a single representation was made to the committee by any member, outside the members of the committee, although ample opportunity was afforded for so doing, and an invitation was extended to them to appear in person if necessary. That rather indicates—I do not say this in any carping spirit of criticism—indifference on the part of hon. members.

Why was this committee set up? I venture to suggest that there are two reasons. First there was the criticism from outside, particularly from the press, which in days gone by had been directed at the proceedings of the House of Commons. In parenthesis may I say that I held the view, which I may hold alone, that a good deal of that criticism was uninformed. I say this is no spirit of bitterness or revenge because of the criticism which had been levelled at the house. So far as I am concerned I have endeavoured in season and out of season to uphold the dignity of this parliament so that it may commend itself to the people of Canada as the highest court of the people.

Why are rules of parliament set up? The first reason is that there may be an orderly conduct of the public business. This is fundamental, just as it is in connection with the affairs of any other deliberative assembly or any joint stock company. There must be

rules to govern not only the internal operations of a company but the procedure at its meetings. If you will read history you will see that for generations the mother of parliaments has had rules of procedure governing the course of public business. One fundamental right we have gained after a long struggle is that which is extended to minorities in order to protect them against the machinations or the power of governments. Any revision of rules which would take away from the minorities any of the rights which have been extracted from parliaments over a long period of years would not make for good government in this country. The very essence of democracy is the right of opposing parties to criticize and expose weaknesses, and if possible, by means of cross-examination or other arts to which resort may be had, to arrive at the truth. Any infringement of the powers and privileges which have been thus set up over a long period of years, both in the mother of parliaments and in Canada since confederation, yes and in the assemblies preceding confederation, would be a weakening of democracy itself.

The order of reference to the special committee was quite wide—that the standing orders be revised with a view to simplifying, accelerating and expediting business. I should like to pay a tribute to the members of this committee. There was not a single attempt made to abrogate or abridge the rights of minorities. I have never served on a committee where there was a better spirit of cooperation. We approached the matter objectively and there was a unanimous desire to improve conditions. On several occasions when the committee was meeting I wished I could say the same about all committees of the house. There was an entire absence of partisanship or of attempts to put something over. We were all seeking a way to do well that which we had been appointed to do, and I think we have arrived at some sane conclusions.

May I say that the conclusions of the committee were by no means unanimous. I could not follow Mr. Speaker in his remarks, but my understanding is that while there was a difference of opinion, there was the view that the report represented a good cross-section of the opinion of the committee. Anyone was left free to criticize any particular item he might desire to criticize.

I think one of the reasons this committee was set up was the criticism throughout the country that there were too many speeches and that speeches were too long. I remember that this was the chief item of consideration by the committee set up in 1927. The recommendation of that committee for a forty-minute limitation on speeches was accepted by this house, but so far as my observation goes it did not have the effect of correcting what was then alleged to be an evil. I do not sympathize very much with the view that per se a long speech is an evil. If we took that as a standard, the Prime Minister would stand convicted over and above every one of us. It is what is in a speech that counts.

Mr. MACKENZIE KING: Hear, hear.

Mr. HANSON (York-Sunbury): I think we all agree with that statement of general principle. I hope the Prime Minister will agree with the facetious remark I have just made that he of all men has made the longest speeches in this house that I have ever heard. Some of them may have been good, and some of them may have been bad.

Mr. MACKENZIE KING: My hon. friend has made the worst.

Mr. HANSON (York-Sunbury): That may be true. One is always the poorest judge of his own efforts, and we shall have to leave that question to posterity. I was a little more generous in my reference to the Prime Minister's efforts. I said that some of them were good and I will say that some of them were exceedingly bad. However, that is only in passing.

The limitation of forty minutes did not bring about the results which the committee of that day and the House of Commons thought would be brought about. Therefore the matter was again considered by the committee which has now reported. I am bound to say that the consensus was that the cutting of speeches down to thirty minutes—there were exceptions to this point of view—would be an abridgement of the rights of private members. Personally I could not bring myself to agree to that abridgement. Private members have only two or three occasions during the session when they can make what is termed a set speech for the benefit of their constituents. I remember discussing this very matter one day with an old parliamentarian, Mr. D. D. McKenzie, who was very friendly to me when I first came to this house. He said to me, "Every member of the House of Commons who has anything to say ought to make one good reasoned speech a year and send it out to his constituents to let them know that he is there." I thought that was sound advice, and for a number of years I followed it. This brings us to a consideration of how long a man who only makes one speech in a session should be allowed to speak. If he has anything to say, if he has any ideas to

present, he cannot present them in less than forty minutes, and I am opposed to any further abridgement of that time. But when it comes to speaking in committee—I am looking particularly at some members opposite, and commend this especially to them—I think there should be an abridgement of speeches. Under the present rule members can speak forty minutes in committee and cover a wide field, and if they are interrupted, or something intervenes, they can go on and make another forty-minute speech. That is repetitious and tiresome, and the special committee was unanimously of the opinion that a limitation should be put on speeches in committee of the whole. Therefore we have recommended, and I concur fully in the recommendation that speeches in committee shall be limited to twenty minutes on any particular clause or item—I think that is the term used in the report—and that there shall be full opportunity of questioning.

I am not going through the report seriatim. I have indicated certain general views, and Mr. Speaker in the course of his remarks has pointed out what I think very many members and most of the press, if I may be rash enough to admonish them on this point, feel—that there are many opportunities in the hands of the administration and of the house itself to restrict debate. The trouble is that the remedies that are readily available are not called into operation. There is the closure. How many times has the closure been used in this house? What brought about the provision for closure? Obstruction—filibustering—that was the only reason. Something had to be done to stop it, and the closure was introduced. I was not here at the time, but I have read about it. Fortunately we do not have much obstruction nowadays, and perhaps it is not necessary to use the closure. But there is another medium, and that is the medium of consultation and cooperation between groups in the house, which would have the same effect. I commend to the party leaders and to the party whips the use of the voluntary system, which after all is a pretty good system if you can get it to work, and it can be made to work if we see things with sweet reasonableness.

Mr. Speaker has enumerated all the other methods that may be resorted to for restricting debate. We have, in fact, everything in Canada, so far as I can see, that they have in the mother of parliaments for restricting debate excepting the guillotine, and I am not sure that we have not something reasonably approaching the guillotine. I am not going to go into details in these matters.

There is one part of the report with which I am not in accord, and that is that the Speaker should be the sole judge of the question of urgency. I believe that I am in a minority in the committee on that point. It was stated in the committee that the Speaker's decisions are never overruled. That I think is true in general, but I do remember one historic occasion on which the Speaker's decision was overruled. On the question of urgency it seems to me that we are limiting the rights of private members if we put into effect the proposed amendment to the rules. But I am not going to argue the point at length; I shall not repeat the arguments that were made in the committee. There are other members of this committee who understand the position, and I shall leave the matter to them.

There is just one other point I want to discuss. With the exception of the question of the Speaker being the sole judge of urgency, I am in favour of the report of the committee and intend to vote for it, though how I shall be able to reserve my vote on that one point is not quite clear. I suppose we shall have to accept or reject the report in whole, or move to strike out a particular part, but if we cannot amend a particualr part I shall have to vote for the whole report.

The question of parliament dealing with divorce bills is the other question to which I wanted to refer. It is a matter of procedure. But any attempt merely to shorten the method of procedure with respect to divorce bills is not dealing with the root of, I will not say, an evil, but a situation which confronts this house. I take the broad view that no divorce bills should be brought into parliament at all, that divorce should be exclusively referred to the courts, and I am going to say that that is a matter of public policy in which I think the government should give a lead. I know it is a delicate question. I am not going to hurt the religious sensibilities of anybody. I believe in the principle of divorce. I believe that there is such a thing as unholy wedlock, and it may develop into unholy deadlock. That is not original with me. Mr. A. P. Herbert wrote a novel on that which I commend to the Prime Minister as good reading for relaxation. If he will only read that book it might convert him to the point of view I am trying to set forth, if he is opposed to it.

Mr. GRAYDON: It might encourage him to get married.

Mr. HANSON (York-Sunbury): That is hopeless at his time of life. It is only old

widowers who get married at his time of life. Perhaps they have more courage than discretion.

But let us be serious about this question of divorce. The recommendation with respect to procedure on divorce bills is the best that the committee could evolve, having regard to the limited length of time we devoted to a discussion of the subject. I support that recommendation and I ask hon. members of the house to support it, but it is not dealing with the problem as it ought to be dealt with.

This is the suggestion I make to the government. Get this vexed question of divorce out of the arena of parliamentary government. Get it out of the Senate and get it out of the House of Commons. Let us set up a division of the Exchequer Court of Canada, a division which will be clothed with jurisdiction to deal with divorce. We can do this, and then let us relegate the whole question of divorce to the courts, where it ought to be, just as we have referred the question of contested elections to the courts. It will not take away from us our right to deal with the question of divorce by legislation. Neither have we by referring contested elections to the courts robbed parliament of its jurisdiction to deal with that subject. Parliament right down through the ages has decided that questions of the kind which involve judicial discretion and that sort of thing can best be dealt with by the courts. My recommendation to the Prime Minister and to the government and to the members of the house, and may I say with the utmost candour to those who perhaps differ with me as to the ethical or religious aspects involved, that I believe the proper course for them to support would be to get this vexed question out of parliament and into the hands of a judicial body which will approach it fully qualified by education and by administrative experience and by knowledge of the law and of procedure to deal with it in a judicial manner. I commend that to the whole house. Let us not pussyfoot with this question any longer. Let us have an expression of opinion, if you like, although I am not inviting extensive debate; let us try to do something constructive in the matter and get this question off the order paper once and for all.

Mr. MacINNIS: I understand that the various recommendations made by the committee will be discussed in the order in which they were made and will be decided by a vote of this committee. I do not therefore think it is necessary to take very much time in a general discussion. To do so, I think, would be to act contrary to the purpose for which the committee was set up. I wish to associate myself with the hon. member for York-Sunbury (Mr. Hanson) in what he said about the committee. I was very glad to find that all its members, regardless of what party or group they belonged, were equally determined that the rights of the minorities should be maintained. In that connection, I think, we also recognized that the minority rights were not rights of groups only, but were rights of individuals. As has been very well put into the report by those who drafted it—*Votes and Proceedings* page 147:

> It is in truth the privilege of their constituents and it is secured to members not for their personal benefit but to enable them to discharge the functions of their office.

That is the spirit in which the committee approached its work. There may be a feeling, possibly a justifiable one, that the committee did not go sufficiently deep into the rules of procedure and bring in a fuller report—that is, a report proposing changes which would expedite the business of the house to the extent that we think it should be expedited. But the committee felt that we were dealing with the subject at an abnormal time. This is a time of war, when ordinary parliamentary procedure is, necessarily, upset, and we grant to the government, because of the necessities of the times, many powers which would not be given to it in ordinary times. I believe that when we return again to normal conditions a similar committee should be set up to go more fully into the rules.

There is another point which the committee had in mind. While we tried to maintain and were anxious to maintain the rights of minorities, we realized that there is such a thing as the rights of the majority; that the government, after what might be considered sufficient time has been given to debate any matter, must have resources to curtail debate and get on with the business which has been entrusted to it by the country.

The hon. member for York-Sunbury referred to the necessity of preserving the dignity of the House of Commons. I think we are all agreed on that. But after all, the people of the country want something more than dignity; they expect parliament to do business, and I believe business can be done just as well in a dignified as in an undignified way. But let us not lose sight of the fact that the people of the country to-day have come very close to parliament. When parliamentary institutions were in process of growth, parliament had very little to do with the everyday life of the people. Parliament was a sort of policeman; it arranged for granting the ruling monarch money to run the country, and concerned itself with a limited range of things of that kind. But to-day

parliament is concerned with the everyday life of the people in an intimate way, and all are agreed that in future it will be more concerned with that than it has been in the past or is even to-day.

If we are to be successful in carrying on with our democratic institutions, something more than standing orders and rules will be necessary. Democracy in the ultimate depends on self-discipline, and I believe we can promote that practice here in the House of Commons. The government of the day could facilitate and speed the work of the house and obtain cooperation from the opposition by approaching the opposition in a spirit of cooperation, but it will have to be done in such a way as to satisfy the opposition that the government has nothing "up its sleeve," as the saying is. I am satisfied that if the opposition is approached in this way a great deal can be accomplished. Perhaps the reason I lean so definitely in that direction is that I myself am a cooperative person; I hate to be driven, but I respond quickly to cooperation, and I find that that is also true of the people with whom I am associated.

There are one or two recommendations with which I do not fully agree, and I shall have something to say on those as they come up, so that I will not at this point take any further time of the committee.

Mr. QUELCH: As one who sat on the committee I should like to say that I appreciated the expeditious way in which, under the able chairmanship of Mr. Speaker, it concluded its sittings. I suppose some hon. members will feel that the committee did not go far enough, and I do not doubt that a good deal of criticism in that regard will be heard from people outside the house. On the other hand there will doubtless be many hon. members who believe that the report goes too far.

I believe we all agree it is desirable that measures be introduced with a view to expediting the business of the house. We have all been aware that business has on occasions dragged on day after day without anything really worth while being accomplished. On the other hand we all agree that the rights and privileges of individual members and of minorities must be guarded jealously. So that when you try to expedite the business of the house without infringing upon the rights of individual members or minorities, you face a difficult problem. These points were plainly in the minds of the committee during its sittings.

As I understand that the different sections will be taken one at a time, I will conclude by saying that, generally speaking, I am in full accord with the report.

Mr. LACOMBE: I want to make a few remarks concerning the amendment proposed to the parliamentary rules and forms of the House of Commons. It was a real pleasure and satisfaction for me and my colleagues to hear a few moments ago the speech delivered by His Honour the Speaker. Elected to this house in 1925, I remember that His Honour was at that time, as he has been at all times, one of the best debaters in this house. Mr. Speaker is now speaking with the same eloquence.

(Translation): Generally speaking, the proposed amendments to the Rules of the House are excellent. However, I am bound to oppose one of them, for it is detrimental to the rights and privileges of members of this house. Why should the support of twenty members, instead of five as heretofore, be necessary in the future to force a vote on a decision of the hon. Speaker? This is a harsh proposition which should not go through. Thus, when a minority group numbers less than 20 members, it will be impossible for them to force a vote without the support of members from other groups with political tenets inconsistent with their own. In most cases it will be absolutely impossible. Such a measure would deprive the representatives of the people of the freedom of speech to which they are entitled in moving amendments to government policies. Indeed, what would be the use of moving such amendments if those members are deprived of the privilege of forcing a vote on a decision of the hon. Speaker, due to conditions which render the taking of a vote an impossibility?

I am not finding fault with the other proposed amendments. On the contrary, they will result in shortening the debate, especially in connection with the estimates. Mr. Chairman, measures should have been adopted long ago to curb the abuses that have been so common at every session of parliament, when the estimates are before the house. I have seen members repeatedly taking part in the debate on a single item, making the same utterances ten and even fifteen times over. At last, the government realize the futility of such goings on, which unduly lengthen the sessions of parliament.

I shall close my remarks by a few words on the divorce bills. The committee entrusted with the revision of the Rules of the House have recommended some amendments which would render the adoption of divorce bills more difficult. I congratulate them for it. I shall go further and state that divorce bills should not be submitted either to the house or

to a committee of the house. When such bills apply to Roman Catholics or when one of the parties is a Catholic, the bills should simply be dropped.

The civil code of the province of Quebec contains measures entitling the interested parties to apply to the courts of the province for an action in separation from bed and board or a decree of invalidity in certain special cases. Therefore, I wonder why the federal government does not adopt an act to refer Catholic husbands and wives to our courts, where they could avail themselves of French civil laws. Besides, the Roman Catholic dogmas hold that marriage is indissoluble and that its bonds can be severed only by the death of one of the parties. The federal government, when adopting divorce bills concerning Catholic married couples residing in the province of Quebec, not only transgresses against the civil code of that province, but also violates Canon law and the precepts of the Catholic faith.

One further remark, Mr. Chairman. The granting of these divorce bills, like a cancerous growth, eats into the very life of society, of which the family is the living cell. Divorce is one of the worst evils of our days. It should once for all be banished from civilization. It is a disgrace for both parents and children. The government is contemplating the implementation of a complete programme of social legislation. Will they allow divorce to keep on eating away at the very heart of society, the family? We claim to be fighting for civilization and still we adopt divorce bills worthy of Zulus and of the most backward tribes of the universe. Why not, once for all, close the doors of parliament against these divorce bills which have done us and are still doing us so much harm? Thus we would protect parents against themselves and children against the deplorable errors of their elders. This is a social as well as a national duty. The government must not and cannot avoid the issue. On behalf of family, society and civilization, I urge that divorce, this canker of society and the home, be prohibited.

Mr. BLACK (Yukon): I have had the pleasure and honour of serving on two committees while a member of this house, which committees were set up to consider the rules and standing orders of the house. As the hon. member for York-Sunbury (Mr. Hanson) said, he was on the committee in 1927 and I had the honour of being on that same committee. The late Speaker Lemieux was chairman of that committee, as our Speaker to-day is chairman of the committee which has brought in this report.

I do not think any member of the committee would pretend to ask the house to accept the report as a complete solution of all the problems that arise from time to time in procedure in this House of Commons, but I hope the house generally will feel that some improvement is offered by the report in this respect.

I do not propose to go into the report in detail, but I would refer to two or three of the proposed amendments. For instance, standing order 37 now reads:

> No member, except the Prime Minister and the leader of the opposition, or a minister moving a government order and the member speaking in reply immediately after such minister, or a member making a motion of "no confidence" in the government and a minister replying thereto, shall speak for more than forty minutes at a time in any debate.

That forty-minute limitation applies not only when the Speaker is in the chair but in committee as well. As has been pointed out by previous speakers, any member in committee of the whole can make as many forty minute speeches as he likes, and, the afternoon session lasting only three hours, two or three members can take up the whole time of the house. It is with a view to improving that condition that this amendment is offered as section 2 of standing order 37, in these words:

> Provided always that in committees of the whole, supply or ways and means, no member shall speak more than once on a particular motion, clause or item under consideration, and not more than twenty minutes continuously, but his right to ask questions relating to the subject matter of the said motion, clause or item under consideration shall not be thereby restricted.

To some extent that does cut down the time that a member may take up in committee, but I do not think it takes away any substantial rights that he may enjoy as a private member of the house.

The proposed amendment to section 2 of standing order 43 in effect adds to the rights of a minister of the crown as the rules now stand. That section reads:

> A reply shall be allowed to a member who has moved a substantive motion, but not to the mover of an amendment, the previous question or an instruction to a committee.

It is now proposed that the following words be added:

. . . or the second reading of a bill, and to a minister of the crown who has introduced a government measure.

Once a minister has introduced a government measure, criticism or commendation is offered, and it seemed to the committee only right that the minister should have the privilege of replying to all that had been said regarding that measure, though under the rules as they are constituted at present he has not that right.

Then a recommendation is made in regard to questions asked on the orders of the day, which I know have been a source of worry, shall I say, to all Speakers of this house. The committee did not see fit to curtail the right of hon. members to ask questions of ministers on the orders of the day, and in that I heartily concur; but following the British practice it was thought that the procedure might be improved, and the committee has proposed that the following be added as section 5 of standing order 44:

A question of urgent character may be addressed orally to a minister on the orders of the day being called, provided a copy thereof has been delivered to the minister and to the Clerk of the House at least one hour before the meeting of the house. Such a question shall not be prefaced by the reading of telegrams, newspaper extracts, letters or preambles of any kind. The answer shall be oral and may be immediately followed by supplementary questions limited to three in number, without debate or comment, for the elucidation of the information given by the minister.

I hope the government will approve this recommendation, and that it will meet with the support of hon. members of the house.

Mr. ROY: Mr. Chairman, at the moment I do not intend to comment on the recommendations that have been presented by this committee. Rather I should like to direct attention to another recommendation which in my opinion would be very desirable but which the committee has not seen fit to include in its report. Citation 314 under standing order 41 reads:

It is a rule in both houses of parliament that a member must address the house orally, and not read from a written, previously prepared speech, for the reason that "if the practice of reading speeches should prevail, members might read speeches that were written by other people, and the time of the house be taken up in considering the arguments of persons who were not deserving of their attention."

It has been the custom of a great many hon. members of this house to read their speeches, though roughly and freely; and when no objection has been taken Mr. Speaker has allowed them to continue to do so. Unfortunately, however, some of those who usually read their own speeches would object to other hon. members being given the same privilege. In my view this situation should be settled, and I had hoped that the committee might recommend that standing order 41 be done away with altogether, or on the other hand that the rule be applied strictly to all hon. members of the house.

Mr. REID: Mr. Chairman, it is some seventeen years since the rules of the house were last amended. I have been a member of the house since 1930, and before we go on to deal with the individual recommendations I should like to say a word or two in general. First, in reference to the remarks of the hon. member for York-Sunbury (Mr. Hanson), it is my opinion that hon. members did not send in suggestions to the special committee because we all realized that the committee was composed of members experienced in the rules of procedure; and speaking for myself, I felt that I could not make any suggestion of which the members of the special committee would not have personal knowledge already. As the hon. member for York-Sunbury was speaking, however, I noted his reference to the support he gave to the proposal that in committee of the whole members should be limited to twenty minutes. If my timing was accurate the hon. member took a little over twenty minutes this afternoon, which indicates to me at least that we should be very careful not to change these rules too quickly because in so doing perhaps we may shut off an hon. member who has something really worth while to say.

The hon. member for Vancouver East (Mr. MacInnis) pointed out that we are at war, that certain changes are necessary during war time, and that after the war is over we might go back to the old rules. Well, Mr. Chairman, I am not as sanguine as the hon. member is in that regard, because every change that has been made in the past in regard to the rules has remained in effect. The fact that it is some seventeen years since the rules have been changed shows at least how reluctant we are to alter the rules which have to do with the conduct of the House of Commons. Very few hon. members have made a study of the rules, but I think most of us have at least a sense of what they should be, realizing that after all we have an important position to uphold and that we should set an example in decorum and good behaviour.

The hon. member for Gaspé (Mr. Roy) had a word to say with regard to the reading of speeches. I trust that what I am about

to say will not be taken as a reflection upon the present Speaker or upon any hon. member of this house, because that is not my intention; but the reading of speeches has been a very sore point, shall I say, with many members of parliament. I am one of those who take the position that while there is a duty imposed upon members of this house to uphold the rules, there is also a duty upon those who conduct the proceedings of the house or the committee. The duties of members of the house are well expressed in the report brought down, where it is stated that—

> Rules are not sufficient to preserve freedom of speech and to uphold the dignity of the House of Commons. Standing orders depend for their success upon the prevalence of good will amongst all members who have to work under them. The house must rely on the forbearance of its members and on the general acquiescence in the enforcement by the Speaker of the rule which requires that members should strictly confine themselves to matters immediately pertinent to the subject of debate.

That is all very true. When I first came to the House of Commons, like most new members I felt rather timid and on that occasion attempted to read my speech. But I had a difficult time in getting through, because one hon. member on the government side—we were sitting in opposition at the time—drew Mr. Speaker's attention to the fact that I was reading my speech; and the then Speaker, the present hon. member for Yukon (Mr. Black), rose I believe something like five times in an endeavour to have me desist from reading my speech. I shall not forget the example set for me on that occasion. It was a good lesson to me. I had come to the chamber with my speech fully written out, as a new member of the house. Had I been stopped on that occasion from reading I must confess the speech might not have been delivered. Perhaps it does not matter now whether it was delivered or not. The fact is that I was stopped. I did feel it keenly when, after that, I saw other hon. members deliberately reading their speeches. No member with any great sense of feeling likes to rise in his place and draw Mr. Speaker's attention to the fact that another hon. member is reading his speech. I did not do it then, although I might well have done it; and had I wanted to get back at members on the government side, I had reason to do it. I personally object to the reading of speeches; it is a dangerous procedure which has grown up in our House of Commons. I say at once that a well-read speech, if it is a good one, is much better than one which is not well delivered and may not contain as much good material, but it is better that the member express his own thoughts. After all however we had better be careful that we do not countenance the thoughts and mind of someone outside the house. It is the easiest thing in the world for individuals belonging to any party, or for independents or the members of any group, to have speeches deliberately written for them and handed to them when they are entering the house. It is very easy to read those speeches. I do not say this in any spirit of criticism, but I do believe we are drifting toward the American system, where members may hand in a whole speech. One of them, I believe, handed in the whole Book of Isaiah.

Mr. GRAYDON: That would be at least better than the speeches.

Mr. REID: I offer that as an illustration to show to what extent the reading of speeches has progressed across the boundary line, and how we are drifting in that direction. As was pointed out by the then Right Hon. R. B. Bennett, it is not a good thing to introduce the 246th member into the house when there are only 245 places.

I shall leave that part of my remarks by saying this, that I for one believe that the rules should be strictly enforced on everyone alike. I believe that in that event every hon. member will not object, believing that the rules offer ample assurance that every one of us may speak, no matter on which side of the house he may sit. All hon. members realize that we must have rules in the house, just the same as does a ratepayers' association, if it is to run its own show with decency and decorum. We would have bedlam and confusion on many occasions if half a dozen hon. members were trying to speak without having the rules brought into effect.

May I now return to one of the provisions in the suggested rules to which I think I shall have to take exception at the proper time. I refer to the suggested rule that a member may speak only once for twenty minutes continuously when the house is in committee of supply or ways and means. If that means that an hon. member may speak only once on an item, whether it be for five minutes or twenty minutes, and that following that his right is only that of asking questions, I must oppose it. I would ask hon. members to give serious consideration to this suggestion. If it means something other than I have described, the wording is not clear. I shall not read the paragraph now, because we shall reach it later in the debate. I would view with alarm, however, any curtailment of the rights of members.

I know that at times we refer to what takes place in Great Britain. But after all, the people of Great Britain are different from us. Their philosophy goes back hundreds of years and, more or less, they are all the same kind of people. On the other hand we are a new country to which people have come from all other countries of the world.

There are some who hold the view which I deprecate, that ability to speak is the sole indication of ability. I contend that is not always so, because many I have heard who have ability to speak had nothing much left of ability after they had spoken. We are living in days of public speaking. Every man in public life to-day must be able to hold forth. I remember a certain person being referred to as a Moses who would lead the people out of the wilderness. I said to the person who had made the reference, "I wonder if you have read Holy Writ." You will find that when the man Moses was chosen to lead the children of Israel out of the wilderness his first remark to the Lord was, "O my Lord, I am not a speaker." The Lord in reply said, "I am not looking for a speaker; I am looking for a leader. We will get someone else to speak." All leaders in those days were chosen as such, but to-day our philosophy is different, and I do not know that it is all for the better.

I shall take these amendments into consideration, but I am afraid I shall have to vote against the limitation respecting the twenty-minute speech, if it means that a member cannot speak more than once on one item. Suppose a member is speaking on a certain item, and someone across the floor makes observations which should be answered; if the original speaker is confined to twenty minutes and has already used that time, he is denied the right to reply. Certainly I am not in favour of that, and I would ask hon. members to be careful how they vote when that amendment is before them.

Mr. POULIOT: Mr. Chairman, I pay tribute to Mr. Speaker and to his predecessor, who is now one of our esteemed colleagues in the house, the hon. member for Yukon (Mr. Black), and to all hon. members of the committee for the work they have done. I pay tribute, too, to hon. members who have already spoken in a non-partisan spirit.

I have read the report carefully, and it reminds me of a remark once made to me by a learned theologian, a holy man who had listened to a sermon delivered by a young clergyman. I noticed the theologian was walking in the corridor and counting on his fingers. Afterwards I said to him, "Did you pray during the sermon?" He said, "No, I was counting the heresies." If we read the preamble of the report we find there are many statements which stare at each other and put us under the obligation of accepting the report, not with a grain but with a pail of salt.

The first sentence reads:

> Your committee, in the performance of the important duty assigned to it by the house, has taken into account the existence of general criticism of parliament both by members and representative citizens.

Whoever heard of general criticism of parliament, even by the press? There have been some tycoons who have tried to impose their views upon parliament, who have tried to discredit the work of members of parliament, but that is all. I should like the members of the press gallery to change places with us some day and let us pass judgment upon their work. I think they would find it pretty hard to do what hon. members are doing, not only for their constituents but for the Canadian people at large.

My first observation is that this report has been actuated by fear—fear of the yellow press and of certain club men who know nothing about what is going on in parliament but who pass judgment upon us while smoking long cigars between drinks of Scotch and soda. I deny most emphatically that there has been a general criticism of parliament, especially by members of parliament. For a member to do that would be for him to prove himself unfaithful to his colleagues. He would be forgetting the work that they are actually doing in this house for the Canadian people. If there has been criticism by representative citizens, it has been by only a handful of men who do not know what they are talking about.

The report goes on:

> It has been fully realized that much is expected of the House of Commons where the views of the people are finding expression and where industrial and economic conditions are demanding parliamentary attention and solution.

Mark you, those are the words of an optimist. When have we been able to solve industrial and economic problems? We are called here simply to vote money and impose taxation. That is the only thing we have done since the beginning of the war. The report goes on:

> The main question before the committee was whether procedure should be amended so that the house may be able to do more legislative work in the time at its disposal and increase its efficiency as a critical and controlling assembly.

We must read between the lines. In the first place, it is not the business of hon. members to initiate legislation; that is the duty of

the government. A private member may introduce legislation, but it never gets beyond the second reading. Private members cannot be blamed if the legislation is not satisfactory. This part of the report is a reflection upon the kind of legislation that has been brought before the house by the government. It cannot be otherwise, because we are precluded from bringing in legislation. I quote again:

—and increase its efficiency as a critical and controlling assembly.

Note those words, "controlling assembly." That means the controlling of accounts, but we have no accounts. How can we control accounts that we do not have? Year after year I have insisted upon the reestablishment of the old system of accounting, and where did I get any support? I received some support from two of my friends in the Conservative party, the hon. member for Broadview (Mr. Church) and the hon. member for Davenport (Mr. MacNicol). I also received some encouragement from the hon. member for Lethbridge (Mr. Blackmore), the leader of the New Democracy group. I admit that the former leader of the opposition agreed with me and with the other hon. members whom I have mentioned already, but he said we should wait until after the war to see to it. He admitted that the complaint was well-founded but thought it would be in the public interest to wait until after the war when we could discuss the whole thing.

There was a third point of view expressed by a member of the Conservative party. It was put forth by one of the members from Toronto who said that I was playing Hitler's game when I was doing some work for my own constituents and for the Canadian people. I was simply asking for information. That statement was made in plain language by one of the members from Toronto whom I would name if he were in his seat at the present time. It is pretty hard to be doing something in this house for the Canadian people and then be treated in that way by one of my colleagues. There is something lacking in this report. It should contain a provision to permit you to call to order any member who accuses any one of his colleagues of doing something to help the enemy when he is just trying to defend his own people. The report continues:

Criticisms of parliament seem to have been inadequately considered in relation to the whole structure of parliament, the necessary party system and the complex situation created by a war which is now in its fifth year.

And later on:

Parliament is the assembly of representatives elected by the people where great issues are debated, or should be debated; it is not primarily a body of auditors charged with the inspection of departmental accounts.

Two of those statements contradict each other. One states that the House of Commons is a controlling assembly and the other states that we are not a body of auditors. How is it possible to reconcile those two statements? I have referred to the attempts I have made to have proper public accounts and a proper report by the auditor general brought before us. Every cent expended by the treasury should be accounted for. What do we get? Practically nothing. The right of audit, which is the right of parliament has been taken over by the Department of Finance, by the comptroller of the treasury. The Minister of Finance alone has the right to approve the payment of items voted for any department. He is empowered with the right to audit those payments. The office of the auditor general has become just a mockery. I quote:

Freedom of speech is one of the inalienable privileges of members of the House of Commons. It is in truth the privilege of their constituents—

That is false. It is true to a certain extent, but it is not complete. We are not here only to represent our constituents. We are here, each one of us, to represent the Canadian people at large. And how does it work? It is very easy to understand. We are passing legislation that applies to every citizen of this country. Therefore a member of parliament does not represent only his constituents. A member of parliament, every one of us, down to the last man on the last row just as much as the Prime Minister and the leader of the opposition, represents the whole Canadian people at large. The report goes on:

The present procedure was devised to reflect the freedom of all the members of the house, but we must realize that in wartime parliament is bound to divest itself of some of its prerogatives in order to strengthen the government's power.

I am against it. I am against it for a very simple reason. It is that the power of the government is entirely different from the power of parliament. The power of the government, according to the British North America Act, is an executive power, and the power of parliament is a legislative power. The power of government is executive, the duty of the privy council being to execute the legislation passed by parliament. Therefore the suggestion in the report is contrary to the spirit of the constitution. I do not see how we can delegate our legislative powers to the government, although the thing is done. I know very well that the courts will support

our one-man legislation passed by controllers of every description on account of the war. Nevertheless it is legally unsound. We cannot so delegate our powers as a parliament. By virtue of the constitution the government has the right to execute the legislative authority. But there is an old principle that is known by everybody. It is an old Latin axiom which is part of the Roman law. It is known not only to lawyers but to every man with the slightest touch of education. It is *delegatus non potest delegare*—a delegate cannot delegate again. But this is what has been done. We have so much external legislation passed at the present time, passed outside of parliament, in every war department, that it is impossible for any single member to read and check it all. There is no student of law to-day in any university who could pass an examination on constitutional or administrative law, taking into account all the orders that have been passed by dollar-a-year men.

There is something in this report that I do not understand at all. It says:

> The principle of majority rule is a constitutional convention upon which all British parliamentary government is built but this must collapse in proportion as the principle of the protection of minorities begins to decay.

There are some philosophical considerations, and then we come to another contradictory statement in the report:

> Your committee, in all its deliberations, has kept in mind the importance of not impairing the rights of minorities.

For otherwise, the principle of the protection of minorities "begins to decay", to use the words of the report. It goes on:

> Two fundamental principles govern the procedure of the house. They are, that the government shall, so long as it can maintain a majority, be able to secure such legal powers as it considers necessary for administration—

That again is wrong, for the reasons I have already mentioned. My contention is that we cannot transfer any legal powers to the government. It goes on:

> —and that minorities, however small, shall be able to criticize that administration. Standing orders must protect them, and it is all the more important that they be founded on right and justice—

Why?

> —because they are merely resolutions of the house which can be swept away by a majority vote.

Is it not absurd, Mr. Chairman? The standing orders must be founded on right and justice, it says, because they are merely resolutions of the house which can be swept away by a majority vote. That is why they are founded on right and justice. Again, the report says:

> Your committee is of the firm opinion that these rights cannot be alienated even if the house, in maintaining them, may protract sessions and lay itself open to severe criticism.

They are ready to accept criticism now.

Fourteen recommendations are made by the committee. The first one is that one day a week be devoted to supply. Most of our time here, when we are not busy passing tax legislation, is devoted to a discussion of the estimates of the war departments. We have had twenty-six sitting days since the beginning of the session. The address was voted on the eleventh day, and from then on the house has considered only war estimates.

The second recommendation has to do with the suggestion of the allotment of a certain number of days for debates, with a view to saving time. The report says:

> Our recommendation is that, when there is reason to believe that debate will be protracted, parties and groups recognized in the house shall confer and make arrangements either for allotting days or laying any plan for saving time whilst protecting freedom of speech for every representative of the people who sits in this house.

It is doubtful how that would work. Theoretically the right of speech is the right of every hon. member, but a large number of members never exercise that right, and never will even with a change in the rules.

The third point mentioned by the committee was not a recommendation but an observation that war business has priority, and therefore government business has priority over private members' bills. Well, nobody will quarrel with that.

There is mention of the standing orders, and that there are 95 in the English house to-day. Once a member of the New Zealand parliament remarked to me, "What is the use of bothering about the rules of the house? There are none." In fact, parliamentary practice is the common law of parliament; and parliamentary practice, which is based on the rulings of the Speakers, being a composite picture of all their rulings, is the best commentary on the standing orders.

We now come to the matter of compulsory voting. Why should we be forced to vote? Sometimes a member will not agree with either of two contradictory propositions. For a long time it has been the practice to allow members the freedom of voting or not voting when Mr. Speaker was in the house. I remember that on one occasion, when some hon. members refrained from voting, they had to leave the chamber when the matter was dis-

cussed afterwards, but they were told that they were right, that nothing could force them to vote. I am against compulsion. If an hon. member is present and is dissatisfied with any proposal emanating from the government or from any private member, I do not see why he should be told to go out of the chamber, to go behind the curtain, to hide himself, instead of exercising his right to remain here and not to vote.

Then as to the appeal from Mr. Speaker's ruling, it is now proposed that the house shall divide only if division is demanded by twenty members. This is in contradiction of the proposal for compulsory voting. There is the further proposal that there shall be no appeal from Mr. Speaker's ruling. My object is not at all to cast any reflection on the wisdom of Mr. Speaker, but it is of the utmost importance to have the votes recorded in this house. Sometimes members speak in one way in the house and speak differently before their constituents. It is a very good thing that they should be on record as to what they think is the best policy to follow. It should be an easy procedure to appeal from Mr. Speaker's ruling—not to cast any aspersion on his wisdom, which I recognize and to which I pay tribute, but just to show where hon. members stand on matters of public interest.

Then there is the proposed amendment of standing order 37, relating to the number of times a member may speak in committee. As all hon. members enjoy the same rights, I do not see why any difference should be made between the right of any one and any other. In all fairness, what is good for one hon. member, even though he be a cabinet minister, should be good for any other hon. member. Why should there be any exception to the rule governing the time for speeches? I will go further. If the length of a speech were curtailed to ten minutes to each member, I should have no objection, provided that cabinet ministers and private members were treated alike. I do not see why there should be any objection to that. Moreover, I recognize that when we go into committee it is largely to ask questions of the minister in charge of the department concerned. It is said that there will be no restriction on the right of any hon. member to ask questions. But then we should come to an understanding that, when a member has a series of questions to ask a minister, nobody shall intervene to change the course of the interrogator; the member should be able during five, ten or twenty minutes to go on asking questions. But it is not so long ago—this was not under the present chairman, but one of his predecessors—that I was told from the Chair that when we were in committee we were there to make speeches, not to ask questions. I suffered very much at the time, and I got some experience which it is hard to forget.

Then there is something in the report about "tedious repetition". Well, this is governed by the law of relativity; it is dependent upon who is in the chair. I admire your patience, sir; I admire that of Mr. Speaker; but there have been sometimes in the chair gentlemen who were greedy for plums and who were ready to find everything tedious which was keeping the plum away. I respect very highly, sir, your wisdom and that of Mr. Speaker. But what happened in the past may happen in the future, and if we do not suffer from it now, other hon. members may suffer from it in the future, and it is our duty to protect them as best we can.

Then there is the matter of an amendment to a motion. I have just noted the fifth and the seventh recommendations—no appeal from Mr. Speaker's decision, but on the other hand, compulsory voting. How do they work together? It is most contradictory; it is illogical. On the one hand the report recommends compulsory voting, and afterwards it says that it is a bad thing because we shall not vote to appeal from Mr. Speaker's ruling. How many people composed that report without talking to each other before passing it over? It cannot work. If one thing is good, the other is bad. If compulsory voting is accepted there should also be an easy appeal from Mr. Speaker's ruling.

Then there is a reference to the fact that South Africa has abolished the debate on the address in reply to the speech from the throne. That is their business. Here an opportunity is given to members of all parties to express their views at the beginning of the session, to lay before the house the complaints of their constituents, and to say whether their constituents are satisfied or dissatisfied. That is their business and it is a very good thing because it gives the government a bird's-eye view of the Canadian people.

The question is not whether a member shall be able to make a speech that can be printed at the printing bureau and sent to his constituents as a masterpiece that will be translated two thousand years hence. That is not the question. The point is that a member comes here and informs the government and his colleagues of what has been going on, to his knowledge, since the last time parliament was assembled.

There is a proposed amendment, with regard to resolutions or votes in the house,

that the procedure shall be simplified. When we have resolutions for the expenditure of money amounting to billions of dollars they are worthy of consideration, and it is precisely those men who complain about us in the yellow press, who complain about members who do their duty in this house, who complain afterwards about taxes. Well, we discuss the cause of taxation and it seems to me that in debate the cause deserves as much consideration as the effect.

There is a recommendation concerning divorce bills. I object to the discussion of divorce bills in this house and also very strongly to their publication in the statute books, and the sooner parliament gets rid of divorce legislation the better.

Before closing my remarks I should like to quote from the report of 1925 on the rules of the house. The second paragraph of the preliminary note reads:

> Your committee has adhered to the principle that the greatest freedom be allowed the house in both its debates and proceedings. Factors tending to restrict liberty have been eliminated. The tendency has been to restrict the number of rules and reduce them to a minimum, with the object that only absolutely necessary rules be enforced, so that the house will be more particularly guided by the general principles followed in British legislative assemblies and familiar to parliamentarians in Great Britain and the self-governing dominions.

That is a very fine statement of what should be the application of the standing orders in this house. There should be no atmosphere in this house. Of course, it is impossible to prevent it by standing orders; but how many times has not cowardice been imputed to members just because they were doing their duty in the House of Commons? It will be recalled that many times members of the government have risen in protest when complaints have been made against civil servants who were usurping the rights of parliament, who were more powerful than the Prime Minister, who had a salary that was twice that of the Prime Minister, men who were considered indispensable and untouchable, not in the Hindu sense of the word, but in the sense that it is impossible to criticize them, that they are high above criticism. I did criticize them, however, when the former government was in power, and I deny anyone the right to prevent me from doing so at any time.

Let me say this to the government, as a Liberal member of old standing who is true to the principles that he has preached since he went into politics years ago, which he preached at a meeting at which Sir Wilfrid Laurier was present and also in numerous other campaigns, on the side of the Prime Minister and on the side of the late Mr. Lapointe and other members of the Liberal party: I believe in liberty, and I believe in liberty for all.

The CHAIRMAN: The hon. gentleman has spoken for forty minutes.

Mr. MACKENZIE KING: The select committee whose report we are considering at the moment was appointed to assist His Honour the Speaker in revising the standing orders with a view to simplifying, accelerating, and expediting the business of the house. I think the time has come in this debate when this committee of the house might well consider how it can accelerate and expedite the final disposition of the report.

Mr. HANSON (York-Sunbury): There should be free discussion first.

Mr. MACKENZIE KING: As I said at the outset, it is of course wholly for the committee to decide what it wishes to do. So far as the government is concerned there is no desire in any way to restrict or to direct the discussion, but I imagine hon. members generally have been asking themselves just how the debate should be conducted from now on, and what procedure should be finally adopted in reaching a conclusion.

If we look at the report, it appears to be divided into two main parts. The first is in the nature of general observations on matters pertaining to procedure, and I should think also some of the considerations that have governed the members of the committee in reaching the conclusions they have with respect to the proposed amendments. The second, the concluding part of the report, which begins at page 149 of *Votes and Proceedings* of March 3, 1944, sets out specific amendments to the standing orders which the committee recommends should be adopted.

We might well assume, I think, that so far as the first half of the report is concerned, if I may so designate it, hon. members should not be committed too literally to all the statements which it sets forth, or to all its observations. They are general in nature, and in voting for or against the adoption of the report, if we are expected so to do, we might well, I think, be allowed to have certain mental reservations with regard to the adoption of all that appears there. I mention that because I see, for example, at page 147:

> The suggestion that estimates should be referred to standing or select committees has been given earnest consideration and carefully reviewed. It strikes at the root of ministerial responsibility . . .

I cannot accept that as a correct statement. For years estimates have been referred to

special committees at Westminster, and the parliament at Westminster is as careful in observing ministerial responsibility as any parliament in the world. Something may have been in the minds of the hon. members responsible for that statement which is not apparent on the face of it, but if I were to support the report as a whole, as I intend to do, I should not like it to be asserted at some future time that this House of Commons had virtually determined that the reference of estimates to select committees would be striking at the root of ministerial responsibility and therefore should not be permitted. I had hoped very much that the committee might have found it possible to endorse the reference to a committee not of all estimates but at least of certain of them, while, of course, safeguarding the right of every hon. member to criticize the estimates in whole or in part when they came back to the house for discussion. That has not been done, however, and I would not like to have it for a moment assumed that it was not done because the committee was seeking to preserve some ministerial responsibility, which would have been lost if any such recommendation had been made.

The committee has laboured, I believe, under two handicaps, if I may so describe them. One has already been mentioned. It is, that the committee has been considering the revision of the rules in a time of war. I recall saying to the house last session that I doubted the wisdom of attempting any extended revision of the rules in time of war, when conditions were abnormal and the house had to give to the government certain rights which would not be expected at other times. For that reason it did not seem to me, at that time, advisable to appoint a committee. However, the desire for such a committee continued to be expressed and after giving the matter further consideration it was decided this year to have a committee appointed. Such limitations as we find in its report are due, in part at least, I believe, to the circumstance that the committee has been conscious of the fact that in revising the rules in time of war it should proceed very cautiously in order not to infringe in any way upon rights which hon. members certainly would wish preserved at all times as fully as possible. The other handicap, if I may so style it, has been the known wish that the committee should make its report at an early stage of the session; in other words, just as soon as possible. My hon. friend the leader of the opposition spoke of that when the committee was appointed; he said he hoped the committee would bring down its report very soon, and certainly not at the end of the session. I believe the committee should be thanked for having kept in mind the desire of the house to have it bring down its report as early as possible, and should be congratulated upon having brought its report before us within the space of a single month. If I may, I should like to take advantage of this moment to express to the members of the committee and to His Honour the Speaker, I may say I think on behalf of all hon. members of the house, the thanks of hon. members for the care and consideration they have shown in dealing with the revision of the rules, and in presenting their suggested amendments at so early a stage of the session.

The fact that hon. members did not make representations to the committee, though invited to do so, which has been mentioned already, is I think explained by what I have just mentioned. The minds of hon. members are concerned with a consideration of the great issues which are before the country and the world at the present time. The matter of the amendment of the rules of the House of Commons does not assume the importance that it would at some other time. However, the committee has submitted recommendations, some ten in all. Personally I am prepared to support the committee's suggested amendments. As one who has been in parliament for a considerable time, and has carefully observed procedure in this house, I might say that I believe the older members, if I may so express it—not necessarily in years but in time of service—will see the wisdom of the amendments that have been suggested by the committee in the reserved and cautious manner in which they are phrased. I would suggest that at this stage the committee might take up the amendments one by one; have the Chairman call them and let us vote upon them. Then, after they have been accepted or rejected, in whole or in part the report as amended, if it is amended, or as a whole if the amendments should all carry, might if deemed necessary be voted upon.

That is all I care to say at the moment. I believe we should adopt some definite procedure in the further consideration of the report, and I offer these suggestions, not as coming from the government but as coming from one member of the house, in regard to the manner in which the contents of the report may be dealt with more rapidly than might otherwise be the case, and that we may take up without the delay that might otherwise occur, other matters that are of great concern.

Mr. NEILL: I am sorry I was called outside and was not able to listen to the debate on this report, with the exception of the remarks of the first two speakers and a portion of those of the Prime Minister. I shall have to do the best I can with my own preconceived ideas, and later on see in *Hansard* what were the views of other hon. members.

This report is presented to us in rather unusual form. Generally a committee report begins by setting out the members of the committee and the reference. That is not done in this case; this report plunges into the middle of things without making any previous references at all. It does not even say what was the subject of the reference to it. We are not told how many meetings were held or what witnesses were called; we are left in total ignorance in that regard. The Prime Minister said that ten amendments were proposed, but there are also some five or six other recommendations of a negative nature that is, recommending that something be not done, so that we may take it that in all there were some fifteen or twenty recommendations. The Prime Minister suggested that we should take up these proposed amendments one by one and adopt or amend or reject them, but I doubt that we can do this; the very wording of the report forbids it. The committee does not say, "We recommend one or two or three amendments." The amendments are not put in separate paragraphs; we have a series of vague generalities, with an occasional definite recommendation, followed by an expression of the general views of the committee on the subject. We would be in a queer position indeed if the Chairman wanted to refer to a particular recommendation and I said, "Well, I want to move an amendment to that recommendation, which you will find about the middle of the third page, starting in the fourth paragraph and ending in the fifth," but really not beginning or ending anywhere. I do not think the report is in a form that permits us definitely to discuss it. We cannot tell whether there are ten or twenty recommendations; the report is in a sort of conversational style, so to speak.

Mr. MACKENZIE KING: May I ask if my hon. friend has noticed the first line on page 149, which reads, "The following amendments to the standing orders are recommended," and then they are set forth one by one. It is that portion of the report which I suggested we might consider.

Mr. NEILL: Yes, so far as the page and paragraph the Prime Minister mentions, that is correct. But there is a lot more which is not important at all, and you have to dig for them in one paragraph or two paragraphs of verbiage which do not contain any recommendations of themselves. You do not know where you are.

It seems to me that we must accept or reject the report in whole or in part. And that means giving great power to whoever—and it is not indicated who—shall have power to make these revisions.

Mr. MACKENZIE KING: May I interrupt the hon. member for a moment. I am sorry to interrupt him, but I noticed that he came in while I was speaking. Before he came in I had touched on the very matter he has now mentioned. I had said that the first part of the report was very general, and that I thought we should not, in voting on the report, be regarded as committing ourselves too literally to anything which appeared in that part. I stated that in my opinion it was mostly in the nature of observations and a discussion of certain considerations. But I pointed out that the amendments were specific, and suggested if we were going to continue considering the report, and make headway with it, we could perhaps make more rapid headway from now on by taking up the amendments.

Mr. NEILL: I am gratified to find, from what the Prime Minister has said, that my views are so entirely agreed with by him. I agree that the first part of the report is a series of generalities, and to some extent that criticism may be made of the latter part as well. But I took the report as a whole.

We are now going to give to someone the power which will amend these rules, and they will be there for a very long time—because it takes many years before they are revised again. Of late years there has grown up in the southeast corner of the vineyard a little group of political Adullamites who own allegiance to no one. We might call them groups, or political groups, groups having quite a few different classifications. There are independents, semi-independents, and so on, including myself. I see my long-enjoyed title of being the only independent in the House of Commons has been wrested from me, and I find I have come to the day when there are many other and different sorts of independents. But I would like to tell them that their rights as individuals are at stake to-day, and if they do not fight for their rights to-day they will be in a sorry state by and by.

Not one of those hon. gentlemen was on this committee. Yet if we listen to them, and take their word for it, they represent a great many people. But the committee was composed of people who were thoroughly safe, men who could be depended upon to do the right thing, and to do nothing outrageous. You hon.

gentlemen in the lefthand corner are left entirely out of the picture—and so was I. And we shall all suffer alike.

While I am on this subject may I suggest to hon. members opposite that they are in power to-day with a huge majority, and they can pass these amendments quite easily. They will get all the advantages which will accrue to the government of the day. But the day will come when they will not be over there. They will be over here, and they will be faced with what they are doing this afternoon. They will pay for it, when they find themselves on this side of the house. Remember that things do turn round, and if you play fast and loose with the privileges of individuals to-day you are likely to endanger your own safety as a party later on.

Let me quote one sentence out of the beginning of this report, which the Prime Minister damns with faint praise:

> Your committee, in all its deliberations, has kept in mind the importance of not impairing the rights of minorities.

It has, has it? Well, if they have kept that in their minds, it is still in their minds, for there is very little evidence of it in this report.

However, I must hurry on to the next point dealt with. I agree with that portion of the report which says that the house should not send the estimates to a special committee. But I see the remedy they suggest is that we should limit speeches to twenty minutes in committee, and only one speech.

An hon. MEMBER: On each item.

Mr. NEILL: Yes, once on any particular item. They also recommend that when the yearly estimates are brought down, one day a week should be set aside for consideration of supply. I shall deal with that suggestion. That sounds pretty good.. But if hon. members will remember, after the war is over we will go back to ordinary routine, which includes only three hours on Wednesday. It might so happen that if the government did not wish to have the estimates discussed at any great length, they could happen to pick Wednesday for that day on which there would be full discussion.

Then the report says, and I call the attention of the committee to what they say:

> We therefore recommend that, when the yearly estimates have been brought down, one day a week be set aside for consideration of supply.

But what guarantee is there that they will be brought down before the last week, or before the closing of the session? Then we are still in the same position.

What about the twenty-minute rule? Well, I am up in my room, or some other hon. member may be up in his room—we cannot always be here—and the bell rings. I hurry down to the chamber. I do not know what it is all about. I turn to my right to a man who happens to be a good Liberal, of his sort, and I say to him, "What is going on?" He says, "This is a vote just coming on." "Which way should I vote?" "Why, vote Liberal, and you will be quite all right."

But perhaps I am doubtful—although he is an important member. Because of my doubt I turn to my left, to a man who is a bigoted Tory—the hon. and highly respected member for Haldimand (Mr. Senn)—and I say to him, "A vote is just going to be taken, how shall I vote?" "Good heavens, Neill, there is only one thing to do; vote with us." And I have to vote. If I do not vote I am placed in a position of the greatest disgrace which can befall a member of parliament. I am named—and that means a terrific disgrace—one which I have never been able to fathom, exactly. But it is a bad thing indeed. I do not know anything worse in parliamentary procedure. I have to vote either yes or no.

Where is the necessity for this? Who asked for this? Away back in the local house of British Columbia many years ago I believe there was a ruling that one might please himself, but if he did not vote his name would be writen down as having voted against the proposal, with the idea that one must be a mossback, and did not want any change. That was the idea.

When I first came to this house a certain rule was in force. I have seen it in operation against our lady member of that time, Miss Macphail. She was told she would have to vote one way or the other. She did vote, with her accustomed grace, but not with very great willingness. That procedure went on for a while. Then some man began digging around the rules, and the British practice was looked up. That is always held out as an example to us. As I say, the procedure there was looked up and it was found that their procedure was the other way round. In the days of the then Speaker, the Hon. Mr. Lemieux, that position was allowed. And it is still allowed, namely, that one does not have to vote unless he likes.

Not very long ago I, myself, was glad to take advantage of it. I had heard the evidence on both sides, and when the vote came I sat in my seat and did not vote either yes or no, because I did not believe either side was putting forward a satisfactory case. I have forgotten the details now, but I know that at the time I felt I was thoroughly justified

in exercising my privilege of not expressing myself on a matter, the arguments supporting neither sides of which appealed to me.

There has been no trouble all these years with that ruling in force. Why dig it up now? Why compel us now, when we are getting new ideas in the house, new groups which have to sit back where they cannot hear what is going on. Yet you are going to compel them to vote yes or no. We all know what the acoustic qualities of this chamber are. There was, in my opinion, no need to introduce a suggestion of this kind.

I was going to say something about the twenty-minute limit on speeches. Well, that sounds pretty easy, too—twenty minutes on one subject. That sounds as though it would be sufficient to talk on one subject, because in committee one can say a great deal in that time on one subject only. But let us see how it works: A man has some grievance about something or another, and he rises in his place and airs his views before the minister. He holds the minister up to ridicule, obloquy or reproach, or perhaps he may eulogize the minister. Anyway he shoots off whatever he has to say. The minister, knowing the situation, just sits tight. He does not do anything —and that fellow's chance is gone, because he cannot speak again. He cannot rise again, because he has already spoken. The minister, or the man of whom he is complaining, has only to sit tight, and this member has no chance to say any more.

I recall an occasion not long ago which, to my mind, is a good illustration of the need to keep the rule we now have. I can recall one occasion when an hon. member had spoken upon some subject to which he had patently given considerable thought. It was a matter requiring an extended illustration, so to speak, but when he reached the end of his forty minutes he was told that he must sit down. He did so reluctantly, and then the Prime Minister with his usual gracious manner rose in his place and said it was a pity to choke off this man and he hoped the few words he was saying would serve as a break in order that the hon. gentleman would be allowed to go on for another forty minutes. There are occasions when it is advisable to allow a member to take more than forty minutes especially when we know that all the minister has to do, if he so desires, is to sit tight and he need not give any explanation. If at all possible I would vote against that particular amendment, although I do not say that I will vote against them all because I realize that some are quite necessary.

The recommendation in connection with the length of debates reads as follows:

> Our recommendation is that, when there is reason to believe that debate will be protracted, parties and groups recognized in the house—

Just put that in your pipe—"recognized".

> —shall confer and make arrangements either for allotting days or laying any plan for saving time whilst protecting freedom of speech for every representative of the people who sits in this house.

Where are the groups in the far corner going to get representation when this conferring takes place? They are not recognized as groups. They are out of the picture, and so am I. We used to have some rights. I certainly will vote against this proposal.

The next recommendation has to do with private members' days. With the exception of the newer members, we all remember when we used to have certain days at the beginning of the session when we could debate any resolution on any subject. Those days have been taken away during the war because of the necessity, put forward by the government, of getting on with the war business. I agreed to that. I would still vote, although very reluctantly, for that because I know how it would go. The committee decided that they had better not monkey with that, so to speak; they say that perhaps this had better wait until normal conditions return before private members' places in the house can be fully considered.

When that principle was introduced I knew that we would pay for it, and we are now going to pay for it. The question of whether this privilege is to be restored will be discussed later on. We accepted the statement of the government in good faith that when this right was taken away it would be returned immediately the war had ceased to be. Now it is proposed to wait until normal times to reconsider these rights. They are just going to consider whether we are to get our rights back when it was solemnly pledged at the time they were taken away that they would be returned immediately the war was over. This is just an illustration of giving a man an inch and having him take a good deal more.

At the present time five members can bring about a vote to appeal from the Speaker's ruling, but it is now suggested that this number be raised to twenty members. I understood that this committee was devoting itself to the liberty of the subject and the retention of our private rights. Perhaps five is too small a number, but surely the smaller groups have a right to express themselves in

the house by means of a vote. Although the vote may be against them they have shown to the people the feeling that exists in the house and they have been able to discover how many members are willing to support them. I think these votes should be permitted provided they are not carried to absurd lengths. I certainly would object to making it twenty members because that would be reducing the liberty of the minorities.

I cannot understand how the highly respected members who made up this committee stood for the passing of the next amendment. They and those who come after them will regret it for many years to come. Under this new rule the right would be given to the Speaker to decide whether or not a matter was of urgent public importance, and that decision would not be appealable. If the Speaker is to be allowed to make that decision without the right of appeal, what is to become of the very basis of democracy about which we have talked so much? The Speaker may or may not be informed about the subject. Many things come up about which the Speaker cannot be fully informed, and he might be giving a perfectly fair and honest decision when he ruled that the matter was not of urgent public importance. Hon. members who come from the section of the country affected by the condition complained about are the ones who know. There may be some question of seals in British Columbia which eastern men would know nothing about. We all have our particular problems; we know how urgent they are.

This right is to be taken away and the Speaker is to be given the right to say, "I do not consider the matter as being of urgent public importance." I have the greatest admiration for our Speaker, but there have been occasions—some of the older members will remember them—when the government was in a desperate position, when every vote counted. I heard of one case where a train was chartered at a cost of about $1,200 in order to bring in only three votes. Human nature is human nature, and when the fate of a government is hanging it is quite possible that the Speaker might be tempted to lean a little and to say, "I do not think this is a matter of public urgency," and thus save the government. This right of appeal to the house has been our practice ever since confederation and I would rather vote against the whole thing if this amendment is to be included.

It may be said that I am exaggerating because this amendment does not abolish the right of a member to move the adjournment of the house in order to discuss a matter of urgent public importance. But it must be remembered that such a motion always comes from the left of the Speaker. It is an effort to direct attention to some grievance to which the government may be indifferent. It is always a member on the left of the Speaker who moves the adjournment of the house, and after this there will never be a chance to move the adjournment because an indifferent Speaker will always say, "I rule that the matter is not of sufficient importance."

There is another paragraph in the report, which says:

> Your committee does not recommend radical changes in the rules of the house.

I think they have recommended some very radical changes, and I entirely endorse the idea expressed by the Prime Minister that we should vote on the recommendations one by one, but we cannot do that in the form in which they are now. It would be like playing a game with peas on the table. You could not tell which pea was which. I suggest that the debate be adjourned—I do not move it—so that the recommendations may be put in concrete shape and numbered, and then let us pass on them one by one.

There is one thing more I should like to say. This committee, which was composed of some of the brainiest lawyers and some of the most experienced parliamentarians of the house, sat I do not know how long, but they missed the very crux of the thing on which they should have made recommendations, a thing which has been a sore spot in our political life ever since we have had a history, namely, the question of the government's being defeated and having to resign because of an adverse vote in the house. I do not know whether it was in France, but I know that in New Zealand and in Australia, and I have seen it in the house at Victoria, where the government had a very small majority and they said: We are not going to abide by this foolish custom of resigning if the government is defeated on some trifling motion such as, should we adjourn at five or six o'clock; we are not going to throw the country into a turmoil because the government happens to be defeated on a vote because one member happened to go out to get his hair cut; we will not pay any attention to that and resign because we were defeated unless the resolution on which we were defeated contains the words, "and this house has no confidence in the government."

For many years it was the invariable custom for a government to carry on after a defeat until the Prime Minister had met the house—it might be a week or a month later—the leader of the opposition would then move that the

house had no confidence in the government, and until that was done the government never felt it necessary to resign. But as it is now, if the government happens to have only a small majority in the house, which is a good thing for the country, although perhaps not so good for the politicians, if the government gets defeated on some trifling matter—it might be no more important than whether we should adjourn at five or six o'clock to-morrow night—if the government is defeated because of some member getting his hair cut or breaking his pair, it is heralded all over the country, "Government suffers defeat in the house." It might be over the most trifling thing. It might be over some clause in a bill, whether we should put in "six weeks" instead of "two months", or a trifle of that kind. Surely we older members know what a curse that has been to good government in Canada. I put it to the conscience of everybody here if we have not many a time had to vote for something we did not wish to vote for because we felt that it would be worse to see the government defeated. But never a man spoke in the committee on this important question. That would have been a practical thing to talk about. I am sorry that the committee did not recommend that the government should not be defeated unless the words of the resolution contained the precise expression, "This house has no confidence in the government." Would that not be a good thing for Canada? Of course it would, and we all know it in our hearts, although we may not have the courage to say so. That was the most important thing of all which the committee failed to discuss. I think we should adjourn this debate, get the amendments put in definite and concrete form, and then to-morrow vote upon them separately, instead of having to go hog-wild and swallow a whole lot of stuff we do not want at all. The Prime Minister has hinted at that, and my suggestion is, to make it more practicable, that we have the recommendations printed in concrete form and numbered so that we can vote on each one separately.

Mr. CHURCH: The work which has been done by the special committee on the rules of the house will do a great deal to restore confidence in and the prestige of parliament throughout the country.

I wish to compliment the chairman of the committee, His Honour the Speaker, who in the discharge of his duties here since the war started has been most fair to all parties in the house. I should also like to compliment the Clerk of the House upon the splendid work he has done for parliamentary institutions since he has held his present office. I also wish to compliment the member for York-Sunbury, who acted for the opposition on the committee.

After all is said and done, Mr. Chairman, our parliamentary institution and its efficiency justify the high praise which the Prime Minister of Great Britain, Mr. Churchill, bestowed upon parliamentary institutions in the mother country and throughout the empire. The position of a private member has not changed very much since Edmund Burke's days. The private member is in effect the connecting link between the government of the day and the electorate, and when he fails to function, all parliamentary government is at an end. The private member has been referred to in the committee's report, which I am glad to see follows the splendid endorsation given by Mr. Churchill as to the necessity for a declaration of rights, much along the line of Edmund Burke's famous statement of the functions of a member.

I am sorry that the committee recommends that supplementary questions be limited to three. We have now, when you take in all the parties, below the gangway, six or seven or eight leaders in this house. Yet the committee recommends that only three supplementary questions can be asked. That does not give much opportunity to criticize and cross-examine and find out the truth about war matters. I would like to have seen more latitude allowed in supplementary questions. If hon. members will examine the British *Hansard* they will find several pages of questions asked directly bearing on the war. Ninety-nine per cent of the questions asked there are about the war and its conduct. This is what helped to improve the conduct of the war in January, 1942. In the debate on the address there was a lengthy criticism lasting for six or seven days on the conduct of the war on the land, on sea and in the air, with the result that reforms were introduced and adopted by the government.

After all, criticism is a tonic which stirs a government to action. Criticism that is founded on facts, and not on political bias, stimulates the efficient conduct of public business. I hope the committee's recommendation will prove to be a start in the right direction. It was private members in 1927, 1929 and 1930 who prevented three important bills from going through as they were presented. One was a bill to give away the water powers on Georgian bay and in the Ottawa valley to a particular interest, and it was due on account of the united opposition and criticism of the official opposition that that project was defeated. Otherwise all the water powers in

the Georgian bay and along the Ottawa valley would have been given away at that time. Secondly, regarding the extension of an insurance company bill, which the privy council decided that parliament had not the power to enact, if the recommendations of the opposition on common stock investments had been adopted, large sums of money would have been saved to policyholders in the companies in respect of investments lost in common stocks extraterritorially. The same applies to the Bell Telephone company, when a $75,000,000 increase of stock, mostly of water, was put in the bill, most of it affecting Ontario; criticism by private members at that time did a great deal to preserve public rights. Each of these very important bills gravely affected the taxpayers.

When all is said and done, this is the only forum in which the man in the street can get his grievances remedied. We should assert the rights and privileges of parliament along the lines I have indicated. The prestige of parliament during the present war has been materially diminished because of the way in which parliament has surrendered its rights, powers and privileges to control bodies and the like, with the result that parliament has to them abrogated all its rights and privileges.

In my opinion the resolution which the committee considered did not go far enough. In the session of 1926-27 I wanted to have a committee appointed to deal with constitutional, parliamentary, cabinet and law reforms. The subject was debated for several days.

Take constitutional reforms. Why should there be all this difference of opinion between the federal authority and the provinces? Surely there must be some way of getting together on a number of matters which are most important to our domestic economy. The duty of the opposition is as far as possible to support in a war the government of the day, and the government has received pretty good support from the opposition, including private members, since the war started. I wish to see the business of the house conducted with dispatch and efficiency and shortened as much as is reasonably possible.

With regard to parliamentary reform, how is it that we have in another part of this building, in another place, one branch of parliament which is away pretty nearly the whole session? Surely there is some way of achieving a reform such as was accomplished fifteen years ago in England between the two wars, whereby the House of Lords was reformed and the efficiency of the British parliament increased. Something should be done in this session along that line. If we are to have a second chamber it should carry out its functions and help the House of Commons and the government in transacting the country's business.

The last two matters, with which I will not deal at this time, are cabinet reform and law reform.

I wish to compliment the committee upon the good work it has been doing, and I hope its task on the other matters I mentioned is not finished. There is much more which can be done in the directions to which I have referred, and I hope it will be undertaken in the recess of parliament. The committee has acted promptly and fulfilled the functions assigned to it, but many other matters might have been considered. I believe the report will commend itself to the wisdom and judgment of the country, and do something to restore the prestige of parliament, which has been waning for reasons which I have already mentioned.

Mr. GLEN: The debate has taken much longer than I anticipated it would, and it is necessary that something be done with regard to the report. The recommendations are made in a form which enables them to be put to the committee and discussed separately; but it will not be possible to do so this evening. I therefore suggest that the committee report progress and ask leave to sit again on another day, when, if the committee so desires, we may deal with the amendments which are printed on pages 149 to 152 of *Votes and Proceedings*.

Progress reported.

GRANBY MINING CORPORATION

INQUIRY AS TO COMPLETENESS OF RETURN TABLED ON MARCH 6

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): Before the orders of the day are called, I should like to direct a question to the Secretary of State. Yesterday a return was tabled to a motion for:

> A copy of all orders in council, correspondence and other documents relating to contracts made between the Granby Mining Corporation, of Princeton, British Columbia, and Japanese interests, together with a copy of such contracts submitted to the government from time to time for its consideration or approval.

The return contains some correspondence, beginning October 22, 1940, with the Japanese minister to Canada and others, and I find, in the first letter of the Japanese minister, this statement:

> The import of copper into Japan has been conducted by a Japanese firm under a three-year contract signed in July, 1937, with the Granby Consolidated Mining and Smelting Com-

pany of British Columbia for its entire output of about 5,000 tons monthly, playing no small part in the economic relations between Japan and the dominion. In the spring of this year this contract was renewed with the approval of the Canadian government.

I can find in this return no document relating to the contract or giving the approval of our government.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I cannot at the moment recall the correspondence, but I believe that somewhere there is a communication which states that that assertion is incorrect, that there was no approval by the government of any contract. If my hon. friend reads farther on in the correspondence—

Mr. COLDWELL: I have read it through.

Mr. MACKENZIE KING: I am speaking from memory, but my impression is that the government had nothing at all to do with approving the contract, which was a private transaction. I believe that is stated somewhere in the same correspondence. Whether it has been brought down or not I cannot say.

Mr. COLDWELL: I raised it in the house in 1940 and my understanding then was that it was stated the government had given its approval.

Mr. MACKENZIE KING: I do not think so.

Mr. COLDWELL: I was just looking for that, I may say.

Mr. GORDON GRAYDON (Leader of the Opposition): I am not aware of the circumstances surrounding the basis of the question, but I take it from what the hon. member for Rosetown-Biggar says, that there was a contract between a Canadian corporation and the government of Japan. Surely our government would not have anything to do with approving a contract of that kind in a war-time period. I was wondering what the circumstances were.

Mr. COLDWELL: Not between the Canadian government and Japan but between a Canadian company and a Japanese concern. I understand they had to get the approval of our government, certainly after September, 1939.

Mr. MACKENZIE KING: My hon. friend will recall that Japan was not an enemy of ours until two years after the European war was started. As far as Japan was concerned, it was neutral until the war had been on for more than two years. I shall be happy to call the attention of the officials of the Department of External Affairs to what my hon. friend has said and see that a clear statement it made to the house on the point.

Mr. GRAYDON: The Prime Minister might also give consideration to the question of government policy covering a period which perhaps is a long way off now, but which at the same time has to do with this whole question of selling materials to neutrals of certain types. It is one that has caused no end of concern to the Canadian people. It is one that ought to receive some consideration.

Mr. MACKENZIE KING: Very careful consideration was given to that particular matter, consideration which involved not merely the government of Canada but other governments as well, and our policy was based on a consideration of general policy after consultation with the governments immediately affected. That is all I can say at the moment.

Mr. GRAYDON: We have to be careful as a nation to make sure that we are not supplying materials of war in an interim period like that to those who may be our enemies in the future. I realize that it is a difficult situation but it should receive consideration.

Mr. S. H. KNOWLES (Winnipeg North Centre): May I ask the Prime Minister, at the same time that he is looking into this situation, if he will have the Department of External Affairs or the appropriate department look into the stories that have been given currency south of the line to the effect that we are shipping war materials to Spain at the present time.

Mr. MACKENZIE KING: Stories to what effect? I did not hear.

Mr. KNOWLES: Stories to the effect that Canada is shipping war materials to Spain at the present time. I am merely asking the Prime Minister to have the matter looked into.

Mr. COLDWELL: It has been given over the radio in the United States.

Mr. MACKENZIE KING: I shall have the matter looked into, but it is a little difficult for the government to take up the many rumours that are in circulation at a time of war. Any concrete question—and I may take what my hon. friend has stated as sufficient for that purpose—can be answered; but I should not like it to be assumed that the Department of External Affairs must take account of general stories and rumours.

Mr. KNOWLES: Except that a statement of that kind given such a wide hearing over the radio is very serious.

NORTHWEST FIELD FORCE (1885)

QUESTIONS AS TO PENSIONS OR OTHER ALLOWANCES

On the orders of the day:

Mr. T. L. CHURCH (Broadview): I should like to ask the Minister of Pensions and National Health (Mr. Mackenzie) a question. I have received a great many communications with reference to some form of relief for the northwest field force. I suggest that the minister give about half an hour on going into supply some day to a consideration of the question.

Mr. SPEAKER: That question should not be asked on the orders of the day.

ARGENTINE REPUBLIC

QUESTION AS TO RECOGNITION OF NEW GOVERNMENT

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I did not give the Prime Minister notice of the question I am about to ask and it is perhaps unfair to ask it now, but I suggest that the house ought to be acquainted at the earliest possible time with the progress that has been made in the recognition of the new government of the Argentine. The process of change of government, as appears by the press, would indicate that there have been some changes of a rather major kind there, and we ought to know as a parliament what progress has been made so far as the recognition or non-recognition of the present regime is concerned.

Mr. MACKENZIE KING: I will give a statement on Thursday.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

INDUSTRIAL DEVELOPMENT BANK

PROVISION OF ADDITIONAL CREDIT FACILITIES FOR FIXED AND WORKING CAPITAL

The house resumed from Thursday, March 2, consideration of the motion of Mr. Ilsley for the second reading of Bill No. 7, to incorporate the Industrial Development Bank.

Hon. R. B. HANSON (York-Sunbury): Mr. Speaker, I had just concluded a few preliminary remarks on this bill when the debate was adjourned the other day. What I have to say to-night will be, I hope, entirely objective and perhaps constructive. I shall have some criticism of the undertaking to offer, and will endeavour to express the hope that the promoters of the ideas underlying this measure will not be frustrated in their aims and objectives if the policy outlined by this bill is put into effect.

I should like to say, and I do so with a good deal of candour as well as kindness, that I was greatly disappointed at the remarks of the parliamentary assistant to the Minister of Finance (Mr. Abbott) in introducing the bill. This is a new principle in the financial structure of Canada; new to him, new to me, new to the country, and I think the house and the country were entitled to a good deal more information than we were given by the hon. gentleman. In particular I suggest to him that he failed to show affirmatively and with a reasonable degree of effective logic that there is a substantial need for such an institution as the proposed industrial development bank. Of course in the post-war period a great deal will depend upon what is the tax structure of this country; a great deal will depend upon the other measures envisioned in the speech from the throne and incidentally referred to by the hon. gentleman as the programme which the government conceive will meet the problems of unemployment or rather, shall I say, the problems of full employment in the post-war period. This is but one chapter, and I suggest that if we are to have full employment in the post-war period we shall require a very much larger picture than has been painted by the hon. gentleman with respect to this bill. Concurrent with this measure, in the course of the next few days the revised Bank Act will be brought down; and I suggest to the hon. gentleman, to the house and to the country that it would have been the part of wisdom to have these two measures brought down together in order that we might have seen the full picture and the full measure of the government's proposals, if they have any, with respect to the vexed questions of currency and credit and, shall I say—and I mention it with bated breath—what is sometimes termed monetary reform.

So that I say to the hon. gentleman that I was rather disappointed at the meagre and sketchy outline he gave in connection with this measure. He stated that the proposed bank would not compete with the chartered banks. In one respect that is quite true; the bill prohibits this bank from accepting deposits. Its resources will depend upon the subscribed and paid-up capital stock, which will come from the funds of the Bank of Canada;

and if we may judge from the report of that bank, which we have received, and from the statements we read from time to time, the funds that will go to subscribe for the capital stock of this bank will come from the deposits of the chartered banks in the Bank of Canada. Then there is provision for the issue of the bank's own securities, in the ratio of three to one having regard to the paid-up capital and the reserve. The total picture, if there is a great need, is not one of very great vision. I estimate that possibly $100,000,000 in all will be available for all the functions of this bank; and in a country with the national income of eight or nine or more billion dollars a year that is not a very large gap to fill. If it is to be effective, that is but the proverbial drop in the bucket.

What is the need? The need is said to be that of an intermediate credit which is not filled by the chartered banks, by the mortgage companies or by the investment bond houses. I do not know what is in the minds of the managers of the chartered banks or of these other institutions, but I have very grave doubts whether this bank will not infringe upon the functions of these institutions. I would assume that it would be a substantial detriment to the investment banking houses of this country if it is to have any scope in the financial economy of Canada. Of course with respect to both these classes of lenders, the chartered banks and the investment houses, the proof of the pudding will be in the eating, and only time will tell. Therefore I revert to my earlier suggestion, that if this is only a part of a larger scheme we should have the whole scheme before us at one time, so that the house may be enabled to judge as to the sufficiency of the whole scheme to provide full employment in the post-war period.

The preamble to the bill expresses the pious thought that it is desirable to establish this bank to promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises. What does the hon. gentleman mean by "the effectiveness of monetary action"? That is the first question which naturally arises in my mind, but we are left entirely in the dark. I imagine that our hon. friends in the far corner will have something to say in regard to that problem. Then the preamble continues:

> . . . through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained. . . .

I pause here to make this suggestion, that if there is such a high level of national income in this country, no such bank is necessary; private enterprise will take care of the whole position.

Mr. MACKENZIE (Vancouver Centre): It never did before.

Mr. HANSON (York-Sunbury): But we did not have a national income as high as this; we never had it, and I suggest again what I have suggested on more than one occasion in this house, that the national income of this country to-day is a fictitious national income based on government borrowings and government spending for non-essentials. As soon as the war is over, government borrowing and government spending will cease, and the national income is bound to go down to a low level.

Mr. MACKENZIE (Vancouver Centre): No, no.

Mr. HANSON (York-Sunbury): Well, the hon. member says, "No, no." I wonder how much he knows about what is in the womb of the future, any more than the rest of us?

Mr. ROSS (Souris): The government will find it tougher going then.

Mr. MACKENZIE (Vancouver Centre): Thanks for telling us we shall be here.

Mr. HANSON (York-Sunbury): My only fear is they will not be there to take the gaff when it comes. I do not wish to get into any political discussion, but how much better would it have been for us if hon. members opposite had been returned to power in 1930, and they had had to take the gaff of the depression—a depression which they created with policies of their own making, so far as Canada is concerned?

Mr. MACKENZIE (Vancouver Centre): Better for the country, all right.

Mr. HANSON (York-Sunbury): Would it have been better for the country?

Mr. MACKENZIE (Vancouver Centre): It would have been.

Mr. HANSON (York-Sunbury): I do not think so. They would have had the grief we had, and I am sorry they did not have it.

Mr. MACKENZIE (Vancouver Centre): Well, at least the hon. member is frank.

Mr. HANSON (York-Sunbury): I certainly am; I am always honest. The preamble states: "If a high level of national income and employment is maintained". By doing what? It states, "by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises".

There is one thing in that preamble which brings some aid and comfort to me, namely, the recognition of the principle of private enterprise. I mention that for the benefit of my hon. friends to my immediate left, who are always saying, with a good many members on the other side, that private enterprise has failed. I suggest that nothing of the sort is true, and that the truth lies half way between the two extremes. That is my view of this economic problem. It does recognize the principle of private enterprise, and for that I give thus much thanks.

How does it propose to supplement? It proposes to supplement the efforts, energies and resources of private enterprise by what I term a drop in the bucket. Either this scheme is sound, or it is not sound. If it is sound, then I say this enterprise is not big enough, if it is the proper way to supplement private enterprise.

But I suggest to hon. members and to the country that there is a huge amount of money available in Canada for enterprise and industry. One has only to look at the huge volume of money on deposit in the chartered banks and elsewhere in the dominion to know there is a very large fund available for immediate use in Canada. And they just cannot use it. Why? Because of the war policy of this government. They have throttled private industry. They will defend that on the theory that war necessities are paramount—and there is an element of truth in that. I make this submission in all seriousness to the government and to the financial hierarchy behind them, which is the godfather of this idea—not the government; make no mistake about that. I submit in all seriousness to the godfather of this idea that the time has come, and is long past due, when the economy of this country should be changed so as to secure from private industry the necessary production that we must have in Canada if we are to have employment—full employment.

We have not full employment in Canada to-day. War factories are being closed. There has been an attempt—I suggest it has been an honest attempt; I am not questioning the motives behind the government's action—to transfer these men. But the fact remains that men are being let out of industry, and that we are not speeding up the production of consumer goods in this country which, I suggest, we might have.

Let me illustrate. Just prior to the Christmas holidays I had a conversation with a plumber in my town. He said to me, "Mr. Hanson, will you tell me where I can buy some clothes to keep my children warm?" I questioned him, and he said that there was not available a single garment of underwear to keep his little children warm. At the same time I understood that the clothing factories in this country had manufactured greatcoats for the army so that there was a surplus close to 300,000 on hand that the army did not need.

Mr. RALSTON: Did my hon. friend verify that?

Mr. HANSON (York-Sunbury): No; I cannot verify it, because the government will not tell me, but I do know—

Mr. RALSTON: My hon. friend has never asked for it.

Mr. HANSON (York-Sunbury): There is a large element of truth in what I say.

Mr. RALSTON: I can say to my hon. friend that the army has ordered greatcoats in accordance with the needs of the army, and the reserves which are required. I can say to my hon. friend, further, that that is why they have been ordered.

Mr. HANSON (York-Sunbury): I am drawing a comparison between what I was told with respect to the need for consumer goods. Of course I do not know of my own knowledge, and I do not think the minister knows either.

Mr. RALSTON: I know that.

Mr. HANSON (York-Sunbury): As a matter of fact, one of the first things this government ought to do, if it has not already done so, is to arrange for the production of consumer goods in this country, not only because the civilian population needs those goods, but because it will keep the wheels of industry turning, and maintain the national income.

I wish to say a word about the question of taxation. There would be no need of an institution of this kind had it not been for the severe and aggressive taxation of industry by the government in its war financing policy. How can industry prepare for the post-war period when they are not allowed to build up reserves for the replacement of machinery, and all those things so absolutely essential? They just cannot do it. It is because of that short-term policy, and because of that lack of action, that this sort of resort to semi-socialism is required. I say that because that is what it is. This bill will bring aid and comfort to our socialist friends; make no mistake about that. They are the avowed proponents of the nationalization of the banks of this country. That may be a good policy, I do not know; but I am opposed to it, at least until such time as I am shown. This is a step toward it. It will not satisfy them, and I venture to say

they will reject it on the theory that it is not even half a loaf, as far as they are concerned. But I do suggest to hon. members opposite, and to many of them who think in an orthodox fashion as I do, that this is a measure of socialism.

Nevertheless, as far as I am concerned, having regard to the auspices under which this bank is to be managed, and having regard to the parentage of the infant, I am not very fearful; because, if there ever was a conservatively-operated institution in this country, it is the Bank of Canada. I know that that will find a reecho from the reverse point of view from some hon. members opposite, and that we shall hear a lot more about it when the Bank Act is under review.

What is the need? The parliamentary assistant did not tell us what the need was.

Mr. ABBOTT: Yes, I did.

Mr. HANSON (York-Sunbury): No; he did not tell us in concrete terms what the need was. He said there was a gap between the two. I suggest that the gap is not as wide as he says—if, indeed, he suggested any dimensions at all. The banks to-day have a plethora of money which they are willing to lend to business.

An hon. MEMBER: Lend it for ten years?

Mr. HANSON (York-Sunbury): The banks to-day are willing to advance money, not only for working capital, as they always have done, but for capital expenditures, provided the term is not too long and the hazard is not too great.

Some hon. MEMBERS: Oh, oh.

Mr. HANSON (York-Sunbury): What is the position? The banks of this country lend the money of the depositors. This bank, when it is formed and put into operation, will lend the money of its stockholders who, after all, are the people of Canada, because the Canadian people own the Bank of Canada and it will be public funds that will go into the shares of this bank. That may not be technically or legally true, but the fact is that it is public money. If there is a need; if there is a gap and there is no other institution to fill that gap, then I suggest to the hon. member that it is a part of progress to fill the gap. But he did not make out a case that there was a gap.

On the other hand, there is a large volume of money which is always ready to take the risk of business. Who is there who has not had a stake in this country built up by the utilization and risk of money of his own? Business men are always willing to take a risk if the hazard is not too great and the returns are commensurate. If we cannot have that sort of thing, then private enterprise is at an end. Private enterprise is just as virile to-day except for the cold hand of government policy which makes it impossible for private enterprise to proceed and expand under the present war financial system. The system may be right or wrong, but the effect is as I suggest.

I do not want to labour the case from that point of view, but I do say that there should be a revamping in the immediate future, or near the conclusion of the war period, of the government taxation policy. Business should be able to learn at as early a date as possible what the position is to be. To my mind there are certain objections to the present system of corporate taxation. As far as I am aware this is the only country which has double taxation of the fruits of industry. I can remember when Mr. Euler was Minister of National Revenue under a government led by the right hon. gentleman who now leads this government. At that time this double taxation of corporate earnings was introduced. The system was condemned from this side of the house. There was an admission that it was double taxation, but there has never been any rectification.

I suggest that if we had not embarked upon that system in days gone by but had followed the system in vogue in England, where there is no corporate taxation but where profits of the fruits of industry are taxed in the hands of the recipients, there would have been just as much revenue obtained as has been obtained under this hardship of double taxation. I do not know, but it is probably too late to rectify that policy. The fact is that it constitutes a blot on our taxation system and is a detriment to the investment of new capital in the country.

According to the prospectus of the hon. member, assistance is limited to capital assistance. That is to say, it is not to be available for working capital. Of course, the hon. member will agree with me when I say that that would be unnecessary with respect to big industry. If these industries were operating under a proper tax system it would be possible for them to establish resources whereby they could finance themselves. There then remains the problem of assistance to smaller industries.

Mr. HANSON (Skeena): May I ask the hon. member a question?

Mr. HANSON (York-Sunbury): The hon. member may ask it but I do not undertake to answer it because I may not be able.

Mr. HANSON (Skeena): A small corporation can get working capital from the banks, but it has been my experience that such a business cannot get anything for expansion. Even if the money were available from the banks, the rate of interest would be so high that it would be no good. The large corporations do not need this assistance, but the small ones do.

Mr. HANSON (York-Sunbury): The large corporations need assistance if they are going to expand on capital account, but they get it by the use of another method, by the issue of bonds or preferred stock, or sometimes by the issue of common stock. I happen to be a director of a public utility which has neither bonds nor preferred shares. It finances entirely with common stock. As we expand on capital account the banks lend us money to cover the capital expenditure, and when that gets large enough we refund it by issuing common stock. That is a common method, and it is probably the simplest and cheapest that I know of to obtain capital funds. Then there are the other methods to which I have referred.

As my namesake and colleague says, it is quite true that small industry cannot operate as advantageously as large industry. The assets are smaller, and as a rule the management is not—I was going to say not as good —perhaps quite as efficient, and at all events they have not the credit. In local communities if the small industry has credit there is always a chance to get capital interested. Where credit is good there is always the chance to get the banks interested. The banks would not want to make a permanent capital investment because they refuse to grant frozen loans since they do not wish to tie up their capital too long, but if an industry is prosperous, if it has credit, if there are character and ability behind the management, then I suggest that there is no great difficulty in expanding and getting new capital. It is the companies which are not in this class, companies which cannot raise capital on their own ability, that may find themselves in urgent need of assistance.

Where does that bring us? That brings us to the point where government funds are to be utilized for capital investment in and capital expansion of concerns which cannot raise money on their own. That means big risks. The risk rises in ratio to the amount of the loan as against the equity in a concern. If the loan is large enough and the equity is small enough, what do we find? We find that this bank is in business. It cannot avoid being in business. It must take over, first, the direction of the business and, second, if success is not attained, the management of the business. So that we shall have the possibility —I do not say probability—of this bank engaging in business with other private industry. I put this question to the hon. member: Is it the intention that the government shall lend money through this agency to private industry in competition with private enterprise? I should like to have that position cleared up. I should like the public to know that in effect government subsidies—this may not be the true description—are to be put into private enterprise, lame duck enterprise if you will, because this does not visualize new industry—

Mr. ABBOTT: Oh, yes, it does.

Mr. HANSON (York-Sunbury): Is this bank to put public funds into new industry in competition with private industry?

Mr. ABBOTT: Where private industry has no private funds; that is the whole point.

Mr. HANSON (York-Sunbury): The private industry that is successful will have private funds. My hon. friend makes that statement, but he does not substantiate it. He does not know any more about this than I do.

Some hon. MEMBERS: Hear, hear.

Mr. HANSON (York-Sunbury): I do not pretend to be an expert, and after listening to him last week I am sure he is not.

Mr. ABBOTT: My hon. friend is too kind.

Mr. HANSON (York-Sunbury): I do not mean to be sarcastic, but I do suggest that we are both lawyers. We are not bankers or economists; we are speaking from our own experience which is rather limited when it comes to the question of business. Perhaps my experience is as great as his, and I suggest it is perhaps a little greater. I have been connected in an executive way with business. However, I did not rise to say that and I do not want to rebuke the hon. member too often, but I do wish to say that his mere *ipse dixit* proves nothing. He has answered my question immediately, that government funds are to be put into private industry to compete with private industry in existence at present.

Mr. ABBOTT: That is not what I said.

Mr. HANSON (York-Sunbury): I asked the hon. member and that is what I understood him to say. If I misunderstood, I stand corrected.

Mr. ABBOTT: I said that the funds of this bank would be lent to small and medium industry where private industry is not providing these loans. That is all I said.

Mr. HANSON (York-Sunbury): I asked a further question. I asked, are the funds of this bank to be lent to new industry? I followed that up by asking, are the funds of this bank to be lent to new industry which will come into competition with industry in existence at present? I understood the hon. member to answer that question in the affirmative.

Mr. ABBOTT: Any new industry will presumably come into competition with existing industry.

Mr. HANSON (York-Sunbury): Not necessarily. This country has put $48,000,000 into a synthetic rubber plant in Sarnia. That is a new industry and a new plant, and it is the annóunced intention of the government that that industry should carry on after the war. That will depend upon the circumstances as they exist after the war in relation to the supply of raw materials. If the natural product ever comes back again from the east or from South America, I do not see how an industry making synthetic rubber can compete with the natural product. But that is all in the future. Is it intended that this bank shall be used to finance the taking over of war factories? Is that not the whole basis of this bill? The minister of mines shakes his head. I venture to say that he does not know anything about it at all. But that is the information I have.

Mr. MACKENZIE (Vancouver Centre): The only one wise man in this assembly.

Mr. HANSON (York-Sunbury): I do not pretend to be wise.

Mr. MACKENZIE (Vancouver Centre): Daniel come to judgment!

Mr. HANSON (York-Sunbury): I put it in the form of an interrogatory. Is it the intention to use the facilities of this bank to set up new factories and to assist them in the acquisition of war factories?

Mr. ABBOTT: Not as far as I am aware.

Mr. HANSON (York-Sunbury): It may well be that there will be a lot of war factories of this country on the bargain counter pretty soon. Some will not be able to stand on their legs. They have been built so rapidly that they will not be able to stand the stress of weather. Take the factory that was built out of green lumber near Winnipeg. I heard the story out there. That was done under the stress of war and I am not blaming anybody for it. Necessity is the excuse. But we have a huge volume of money in this country taken from the people in taxes and in loans invested in war industry. Are those industries to be financed by this bank or to be taken over? I put that question to the parliamentary assistant and perhaps he will answer it when he comes to reply, as I believe he has a right to reply.

There are various other aspects with which I should like to deal shortly. I am in favour of decentralizing business in Canada. I regret more than I can say that there has been allowed to grow up in this country a system of amalgamations of industry which are centralized in central Canada to the detriment of the extremities of the dominion, particularly that part of it from which I come.

Mr. MACKENZIE (Vancouver Centre): Ours too.

Mr. REID: Hear, hear.

Mr. HANSON (York-Sunbury): To the detriment of all other parts of the country. If by the operations of this bank we can assist in the decentralization of industry I give it all the blessings I am capable of giving. It may do a lot of good in that respect. I have always thought that the progress of amalgamation of industry in this country was against sound public policy. I have recognized too, I have been obliged to recognize, that one of the chief factors in the amalgamation of industry in Canada was geography. You cannot beat geography. Take the cotton textile business in this country; review its history. I recall away back in the 1880's, when I was a little boy, there were established in New Brunswick no fewer than four cotton mills, all established by private capital. One of them is closed, and the other three are in the hands of a large textile company in central Canada. What was the reason for that? Principally geography. They were manufacturing raw materials that were not indigenous to this country. That may have been a mistake to start with. They had to haul the raw material from New Orleans into New Brunswick and haul the finished product into Ontario and Quebec where the density of population was, with the result that transportation costs throttled in a large measure that type of industry.

Geography is something one cannot get over. An honest attempt was made by this government in the 1920's to overcome in a degree the handicap of geography by the introduction of the Maritimes Freight Rates Act. That

has been a help in maintaining such industries as we have to-day. But it has been only a palliative. So that if this bank will have the effect, first, of decentralizing industry, which I am rather doubtful—at all events I express the hope that it may do that—and if it will have the effect of stimulating new industry, then I am going to bless it and wish it Godspeed. But from what we have seen, and from what we have heard from the parliamentary assistant I have faint hopes that such will be the effects. Therefore I ask him and the members on the treasury benches to lay the whole plan of the government before us for full employment in Canada. This is only a piecemeal effort. Give us at the same time what the taxation policy of this country is to be, because that is vital to industry. If you take the returns of industry you will see that to-day it is bearing the great weight of taxation. I know there are Canadian people who think industry is making millions because they are subscribing millions to victory bonds. Nothing could be more fallacious. Out of what are the subscriptions for victory bonds coming which these industries are subscribing for to-day? I say with certainty that they are coming out of the proceeds of depleted inventories, inventories that cannot be recouped because of the labour situation. The best illustration I know of is the paper companies. Look how the wood piles of the paper companies are depleted. Their inventories have been turned into cash, and the cash in turn has been invested in victory bonds. But when labour is available those bonds must be sold because they are part of the working capital of these companies.

Therefore, in conclusion, I say that to complete the picture we should have not only this feeble step but the government's whole plan laid before us, and I invite the parliamentary assistant to give it to us. In the meantime I am not going to condemn this bill. I am going to adopt an attitude of wait and see.

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I do not propose to follow the hon. member for York-Sunbury (Mr. Hanson) in his argument because I have no doubt that the hon. member responsible for the bill will have something to say to him in reply. I just point this out, that we have heard from him to-night a plea for relief of taxation in the midst of a war in which the people of this country are being called upon to make considerable sacrifices both in men and in resources for the prosecution of the war. But we are told that, if given an opportunity, business is always ready to take a risk. My mind goes back to the period from 1930 to 1939, when there were risks and there were money and resources, but business could not cope with the situation which we then faced. I say to my hon. friend that as far as we are concerned we welcome the introduction of this measure as a step in the right direction. I would agree with the hon. member for York-Sunbury to this extent, that it is indeed a feeble step, but it is a step. A publicly-owned institution of this description is an attempt, at least, to do something in the way of financing the development of this country by means of a public institution. It is not, in our opinion, adequate to ensure the volume of capital which will be necessary after the war for the promotion of socially desirable industries and for socially desirable purposes. In any event, whatever policy is followed by this industrial bank if and when it is established, it needs to be paralleled by a central bank and a national policy to maintain two things, full employment and adequate purchasing power to distribute the products of industry. In our view, as we have so often said, national ownership and control of the entire banking and financial system is necessary to meet our present problems and solve the problems of the post-war period. But this bank, compared with the matter of the bank charters which we shall be discussing in a few days, in all probability, because the time has now come when we shall have an opportunity of reviewing the bank charters, can be discussed only as a relatively minor measure, for that is what it is. However, we welcome it as a step toward the establishment in this country of a national investment, monetary and credit policy.

There are, however, some criticisms of the bill which I think we should make immediately. First of all, the measure is ambiguous in some respects. We should be sure, before we give it final approval, that the facilities of this industrial bank which we are to set up under this bill will be available not only to what we might call private industry but to cooperative societies which wish to enter into any industrial undertaking, or to any municipal or public enterprise of any sort which wishes to undertake some public industrial or worth-while development of a public nature. Second, we think it should have been accompanied by a measure to establish an agricultural bank in this country. After all, agriculture is a primary and basic industry, and for many years the political parties have been advocating at one time or another the establishment of an agricultural bank. Now we are told that such a measure is under consideration, and I hope that it will be introduced in the near future, so that it may accompany this proposed industrial bank in the statutes of Canada.

There is another industry which, I think, ought to receive some consideration but which, as far as I can see, is omitted from this bill; I refer to the mining industry. As I understand it, under existing legislation certain taxation rebates are made for certain works in connection with mining. But it appears to me that the only people who can take advantage of those rebates are the large mining companies, simply because the smaller ones are not in a position to make the kind of profit which enables them to secure the rebates of taxation which will permit them to do the necessary development work. I have always felt that in this country the mining industry is being concentrated into a very few hands; that not more than twenty-five or thirty individuals exercise any real control over the industry; and that the prospectors who do the spade work and discover the resources are, often, those who reap the least reward from the undertakings, which they make possible.

It seems too, and in this I agree with the hon. member for York-Sunbury, that this industrial bank may be used merely to assist risky and unprofitable ventures. That should be very carefully guarded against in the administration of this institution, because it would seem—again—that the profitable and more certain ventures will still be taken care of by private lending institutions.

In spite of the demand we hear frequently in this house and across the dominion to give private enterprise another chance, this bill actually removes from the operations of private enterprise any risk whatsoever, or at any rate minimizes it to a very great extent. In other words, the argument so often used that we must compensate private enterprise for the risk will, when this institution is functioning, be no longer available to those who are in favour of the complete control of this country by private enterprise. The risk is being minimized, perhaps even removed, and the public are asked to assume that risk which it is said pertains to private enterprise.

Then, it does not begin to lay the foundations for the solution of unemployment, for the provision of full employment. As has already been said, $100,000,000 for industry is an exceedingly small amount in these days. We shall find that we still have unemployment and idle resources—idle, not because there will be after the war, or is even now, a scarcity of savings, but merely because once again industry will be unable to distribute the products of industry. Profit, and not human need, is the stimulus for production in normal times. One thing the war has taught us, I believe, is that the need of the nation ought to supersede private gain, and that when we are at war we can plan to meet the great public need—far greater—we shall have to meet when we are at peace.

Thus, as I have already said, while the bill is useful in many respects, it is in my opinion quite inadequate. What we need to promote industrial development and to assist purchasing power of the people of this country is a national investment authority together with a planned monetary and credit system, designed to do two things, to produce goods and to distribute them, thus eliminating poverty and raising the standards of living by intelligent and well-defined steps. I said a moment ago that such a policy has been demonstrated as a prime necessity during the war period, and there is no reason why we should not carry the valuable experience that we have had during the war into the peace-time period that will follow. Of course, I do not intend to-night to discuss banking policy under this bill. It does not properly arise under the bill. We shall have an opportunity to discuss banking and monetary policy more particularly when the Bank Act is before the house for revision. Investment policy, however, does arise for the primary purpose of the measure as I see it is to ensure the availability of certain forms of credit—not all forms—to fill a gap to certain types of industry, as we were told when the bill was introduced.

At the moment there are certain main sources to which we look for investment funds. There are the very large accumulations of money in the hands of insurance and trust companies. Then we have the savings of other corporate bodies and the personal savings of the people, and we have of course the undistributed profits of industry. And these undistributed profits, even though we are taxing them in war time, are reaching very sizable amounts.

The private direction of these amounts available to the public and to industry cannot meet the needs of the time. In 1929 there were great accumulations of savings, of investment funds, in the hands of institutions, corporations and individuals; and yet, with all that was available at that time, we entered upon the most devastating period of depression in the history of this country. And then, when we have only private direction of investment, we often have the misdirection of investment funds into all kinds of luxury trades or even into very wasteful expansion. We have

seen in our day and generation the oil companies adopting the policy of a filling station on nearly every corner, and we have witnessed the overcapitalization of other Canadian industries, such as, for example, newsprint before the depression and before the war. These overdevelopments were costly to the community, and they are more costly because, associated with this form of investment, we have a most wasteful system of securing and placing the funds—investment brokers, syndicates, stock exchanges. Incidentally, that machinery is very largely kept in existence by the public authorities themselves, by governments, federal, provincial and municipal, who go into the market and use the machinery, paying commissions and maintaining the system in order to get the necessary funds for desirable public purposes.

I say that this form of investment control, in the hands of increasingly richer corporations and institutions, is dangerous to the public good. We have heard to-night criticisms of the concentration of wealth and power in certain areas of Canada. We who come from other parts of Canada realize how much truth there is in that criticism. But there is tremendous concentration of wealth in the hands of a few corporations in this country. It is all very well to say that when the war is over we shall deal with some of the great monopolistic corporations that have arisen in our midst; but it is much easier to say that than to break up the great concentrations of power once they have slipped from our control. At the present time we have a great concentration of financial power in a few hands, and I should like to see the government introduce a bill with much wider power than this, so that we might direct investment, not into wasteful channels, into luxury goods, but into housing, into the development of our resources, into the provision of full employment, into the building up of the kind of Canada that most of us believe we could build if we really tried.

The present form of uncontrolled investment results, too, in dangerous fluctuations in our economy. We see a great expansion of credit, investment and so on in a period of inflation, of so-called prosperity; then comes a period of depression, and we have a serious deflation of investment and money. Hence this industrial bank, though we regard it as an inadequate step, is a step perhaps toward something bigger, setting up eventually a national investment board which can direct the savings of our people, of our nation, of our public institutions, as well as of our private citizens into proper socially desirable channels. But most of all we need this instrument for the purpose of a planned investment, as I have already said, for the securing of maximum employment and to improve generally the economic, cultural and social levels of our people.

A national investment bank instead of a little industrial bank of this description should be incorporated at the present time as a part of our national banking system. Thus we should have power to use our own national bank of issue more completely than we are able to use it so far. There is no reason why a national investment bank, associated with the national Bank of Canada, the bank of issue, should not in times of deflation, in times of economic recession, issue for capital expansion interest-free money for public undertakings of a desirable sort. Then, if we did strike a period of inflation, that would be the time to get surplus money from the people by borrowing it from them. We should use the financial instrument we now have in order to control our economic structure and our economy in the manner in which it should be controlled in the public interest. Therefore, instead of a bill of this description, which may be merely a prop to private industry, we should have something that would be another real instrument of national policy. That, of course, would mean an institution with much greater capital, with much wider powers than the institution we are discussing to-night.

In the meantime, until we have such an institution, I would suggest to the government that steps should be taken to control investment now and in the post-war period so that capital may be guided and directed into socially desirable channels, not to be used wastefully but to raise the levels of our own people. In other words, instead of speculative investment, which is not the proper term; instead of speculation, to put it more correctly, by boards of directors irresponsible in the sense that they are responsible only to their own shareholders, investment should be controlled and directed by an authority set up by and responsible to this parliament or, in other words, responsible to the representatives of the people of Canada as a whole. In my opinion such a policy would cheapen the overhead of industrial organizations and assist the community in very many ways.

Therefore, in our opinion the present measure falls short of what should be done at this time; and I say "at this time" advisedly, because while I do not share the view that we could afford, at this critical time, to consider departing from the manufacture of munitions of war and supplies needed by the army

and navy, yet the time will come when we shall have to consider the provision of consumer goods for the Canadian people in larger quantities. So that I say we should be planning what we should do in those circumstances; we should be laying the foundations now. As I have said, in my opinion this institution to a very large extent destroys the argument that is so often heard in this chamber in favour of so-called free enterprise. It goes some distance in removing the risks for which the public are supposed to pay those who are engaged in free enterprise. As I say, this bill removes their risks, but they will still retain their profits. However, it is a step toward something which I hope will be more beneficial to the Canadian people when we are ready to expand its functions. Therefore we shall support the principle of the bill, and when it is in committee we shall have more to say, in the hope that we may yet widen the scope of the measure in the directions I have indicated.

Mr. J. H. BLACKMORE (Lethbridge): Mr. Speaker, the principle of this bill is to ensure the availability of credit to industrial enterprises. What is the purpose of the bill? Those who advocate it maintain that it is one of the government's devices for maintaining full employment. If the purpose of this bill is to maintain full employment I must tell the government frankly that they have put the cart before the horse. If this bill is to bring about full employment and guarantee its maintenance it should be entitled something like this: "A bill to ensure availability of money or credit to consumers to enable them to purchase the goods which private enterprise stands ready and willing to produce."

What is the haunting fear of private enterprise from coast to coast in Canada, and in fact all over the American continent? Is it that private enterprise will not be able to produce, that it will not be able to obtain money with which to produce? Not by any means; what private enterprise is worrying about is whether it is going to sell its goods after the war. If private enterprise can sell its goods after the war, private enterprise will employ the people of Canada, just as private enterprise can employ the people of Canada during the war, when the markets are provided by the government purchasing all the goods for use in the war. What is the worry of the farmer, the mining companies, the lumber companies, the milling companies, the factories manufacturing sugar, clothing, shoes, washing machines or anything else? Is it that they will not be able to get money to produce or to expand their capital equipment? Not by any means; all they are afraid of is that they are not going to be able to sell. I have talked with them by the score and they all agree. Therefore, Mr. Speaker, as I have indicated we should be considering ways and means of providing additional purchasing power, not necessarily ways and means of providing additional production. As I have contended on the floor of this house, and as I believe people are coming more and more to recognize, such purchasing power can be provided by the creation and use of debt-free money issued scientifically into the stream of purchasing power in prices, wages, dividends and through other means.

Just to establish my point let us turn to the depression years. What was the cause of unemployment in Canada during the great depression? Was it the fact that people were unable to produce? Was it the fact that industry was unable to obtain money with which to produce? Or was it the fact that industry was unable to sell? Did we suffer from lack of production, or was it overproduction, which of course was underconsumption? If that does not completely establish my thesis I fail to see how it could be established. What caused our trouble during the depths of the depression? We had 750,000 unemployed, more or less; we had 1,250,000 on relief; agriculture was impoverished; labour was living at bare existence levels, and through all we were decreasing and destroying the purchasing power which industry needed in order to be able to sell its goods. Well, if we are going to establish employment in this country we must attack the problem in the right way.

Let us turn to the United States for a few moments and examine the economy of that great nation during the year 1935. What caused unemployment in the United States? Was it inability on the part of industry to produce goods? Not by any means; United States industry, according to Harold Loeb's "Chart of Plenty", stood ready in 1935 to produce enough goods and services to supply every family in the United States with $4,400 worth a year. Were the industries unwilling to produce, I ask my C.C.F. friends? Not by any means. Were they unwilling to sell? Not by any means. Let us get these things straight. I have even heard of some Liberals across the way who apparently have been listening to the socialists and who have begun to be afflicted with the foolish idea that the thing which caused our trouble during the depression was that industry, for some unaccountable reason, would not produce or would not sell. The difficulty was that they could not sell at a price which would enable them

to carry on. That was all. What was the situation in the United States, with this capacity to produce $4,400 worth of goods and services for every family in that country during the year 1935? They had between eleven and thirteen million unemployed and about 23,500,000 on relief. Instead of every family in the United States being able to obtain $4,400 worth of goods, only twenty-one out of every 100 people were able to obtain the goods necessary for a bare subsistence, at a decent standard of living.

What was the cause of that trouble? What would have been the remedy? More production? Well, how anyone can get logic out of the contention that it would be more production passes my understanding. If it was more production, then why was it that the President of the United States was causing cotton to be ploughed under, cattle and swine to be shot and thrown into the rivers to go to sea, oranges to be destroyed? It it was a lack of production, then why was all that nonsense going on?

It was a shortage of purchasing power. What we need to be prepared for when this war closes is to supplement the stream of purchasing power in the hands of the people. Will capital expansion provide purchasing power? Some people maintain it will. I maintain it will to a certain extent, but it will not adequately. Where our difficulty lies is in this fact, that machines are displacing men. Consequently many men are no longer able to earn wages as a result of production. At the same time that machines are displacing men, those machines are greatly increasing productive capacity, and produce a vast surplus of goods which, with the present source of income available to human beings, they are unable to purchase.

There is a shortage of purchasing power. Let no one delude himself into thinking that capital expansion will provide the purchasing power necessary to distribute the goods within Canada. If he does, then heaven help the country, if he happens to be in a responsible position, and is in power. Because he will plunge the dominion into a depression worse than the one we had before.

We will grant that a certain kind of capital expenditures might assist. For example, money spent in building vast irrigation projects, vast reforestry projects, and great road projects, which would supplement the purchasing power in the hands of the people may, in some degree, provide a remedy. It would do so because it would supply purchasing power without increasing the goods available. But ordinary capital construction, for instance, in shoe factories or for the purchase of mining equipment and that sort of thing simply will not solve the problem of purchasing power.

Let us examine the bill for a few moments. The declared objective is to help overcome unemployment by providing loans to industry. Will it accomplish that objective? There are certain specific stipulations in the bill, of which this is one:

> The bank may establish branches or employ agents in any part of Canada.

Then, No. 2 the bank is to ensure:—

> . . . the availability of credit to industrial enterprises which may reasonably be expected to prove successful, if a high level of national income and employment is maintained.

The hon. member for York-Sunbury (Mr. Hanson) I thought discussed that aspect of the bill with considerable effectiveness and success, and therefore it will be unnecessary for me to deal with it.

Then, No. 3:—

> The bank may (a) lend or guarantee loans of money to
> (i) a person engaged in or about to engage in an industrial enterprise in Canada.

Then, No. 4: An industrial enterprise means:—

> A business in which the manufacture, processing or refrigeration of goods, wares and merchandise or the building of ships or vessels or the generating or distributing of electricity is carried on.

These provisions would indicate that the bill has a rather wide measure of usefulness. But there are certain provisos attached to those stipulations which tend in a large degree to nullify the possible effectiveness of the measures to which I have already referred. May I refer to one of these provisos. It states:

> . . . which may reasonably be expected to prove successful if a high level of national income and employment is maintained.

May I ask this: By whom may it be reasonably expected? Who is to do the expecting? In other words, how are we to be sure that men who are qualified for credit will be able to obtain such credit? I wonder if the province, through a government agency, or through any other agency, has anything to do with deciding whether or not a company is going to obtain a loan. If the province has no voice at all in this matter, then there will be room for gross discrimination against certain provinces of the dominion.

Will the community concerned have anything to do with deciding who is worthy of a loan, or whether a business is to be classed

as successful? Who will decide with respect to this matter of success in business? Is allowance to be made for the general economic value to the community, the area, the province or the section generally, in which the industry is supposed to be located? Is allowance to be made for economic value to the community, for example, through employment, markets, aid to other industries, or revenue production?

May I refer to one question which is in the news at this time. It is reported that Ontario is proposing to increase the subsidy on beet sugar production. Why is Ontario proposing to do that? Because Ontario considers the beet sugar industry to be of sufficient value to the economy of Ontario to justify an expenditure of public money in the subsidizing of that industry.

Is this board which will be approached by industries with requests for loans to be influenced in any degree by the value of the industry, by the value of that industry to the locality in which it is proposed to locate that industry? If it is not, we probably may have a wrong definition of the word "success".

Who is to judge what constitutes a high level of national income? Is this to be the president of the Bank of Canada, or who is it to be? There may be considerable disagreement between the board governing the bank, and the ordinary man on the street, with regard to that matter.

Now then, supposing employment is falling off, instead of being maintained at a high level; is this bill not proposed to be a remedy for unemployment? What conceivable value can the bill have if, at the very time unemployment is setting in, the bank refuses to make loans because there is no possibility of national income and employment being maintained at a high level? It seems to me the sponsors of the bill need to give attention to consistency in their stand.

Then, again, what if national income is falling off? Is it not the purpose of this bill to supplement the national standard of income? And if men who are managing the bank say, as soon as national income begins to fall, that it will be unsound for the bank to make loans, then obviously there is inconsistency again. The application of this proviso means that as soon as a slump begins, credit from the bank ceases to be available. Let us suppose, for example, that two or three years after the close of the war a slump should set in. Would the bank immediately cease to make loans? Or would those loans be available only for the very strong business? In other words, would they be available only for big business, business which ordinarily is considered to be able to stand on its own feet, without any additional assistance?

If any of the possibilities I have indicated should materialize, the whole purpose of this bank bill would be completely defeated. It would be null and void and useless, as far as the purpose for which it is purported to be designed is concerned. It looks to me, Mr. Speaker, as though this bill is a measure which, when weighed in the balance, will be found wanting, for the purposes for which it is supposed to have been designed. It looks to me as though, under the impact of stern realities, this bank will prove to be unsubstantial, and unequal to its responsibilities.

May I consider the bill from another angle? There is a place into which such a bank could fit. There is a function which it could profitably perform in Canada. Here are some of the possibilities. It could control the banking policy of Canada. We hear a great deal from our socialistic friends, for whom I have high regard, to the effect that it would be impossible to control the banking system of Canada, unless the government owned that system. I challenge that stand, categorically. A bank of the kind we are considering could be used to control the banking policy, even although it were no larger than this bank at the present time. We are proving this in Alberta by the use of our treasury branches. The treasury branch is a relatively weak institution financially, but it has a strong influence upon the financial activities of the province.

Mr. DOUGLAS (Weyburn): How would you prevent a bank from calling in its credit and thereby causing deflation if you did not own it?

Mr. BLACKMORE: If it became unsound for the banks to lend, would the government have the banks lend at a loss? For example, if the government owned the Bank of Montreal and it became dangerous for it to lend money, if there were a danger they might lose if they did lend it, would the government have that bank lend at a loss?

Mr. DOUGLAS (Weyburn): If your economy were planned it would not be at a loss.

Mr. BLACKMORE: That is the important point, the planning of your economy. How would you plan your economy? I maintain you should do it by putting purchasing power in the hands of your people sufficient to enable them to buy your products. There would then

be no danger of a loss to the banks and the banks would not hesitate to lend money. I believe all hon. members will see that stand is sound and logical.

In direct answer to my hon. friend's question I would say that if the banks persisted in refusing to lend money, then the thing for the government to do would be to develop an institution of the sort under discussion to dimensions large enough that it could lend adequately. There is no doubt that the government could. This bank is to be provided with $25,000,000 in the form of paid-up capital. That amount could just as easily be $250,000,000. The money will all be created by the Bank of Canada and will cost the Bank of Canada nothing, or it could be so created. Consequently this bank could be expanded by order in council to the point where it would be able to lend all the money necessary in any area of Canada while the banks recovered from their panic.

But the object would not be to have the government go into the banking business. It would be merely to create a corrective to bring the banks into line. Certainly our banks exist to lend money. If they found the government was taking over the lending business I should think they would become concerned about it at an early date and go in and do some lending themselves. We are finding that that is what is actually occurring in Alberta. It must be borne in mind that money can be created debt free. I do not suppose anyone in this chamber will gainsay that. Money can be created regardless of gold. A government can thus be economically and financially free. Let us face that fact realistically and honestly and progressively.

Currency could be created and lent at perhaps one per cent, and credit could be created and lent at perhaps one-quarter of one per cent. If this bank were made a bank of issue, with sufficient support by the Bank of Canada, there is no reason why it could not lend credit for working capital, and perhaps currency for fixed capital purposes. This bank could thus be used to control interest rates charged by the chartered banks. The government could control interest rates simply by lowering interest rates on money coming out of this bank. The banks would then have to bring down their interest rates to conform with the interest rates charged by the government-owned institution.

The government could control the availability of loans. If there were men in the community who were worthy of credit but to whom for one reason or another the banks would not provide credit, they could be given assistance. The bankers would thus be brought into line in a very short time. We have proved that already in many communities in Alberta. For some reason or another banks refuse to lend to certain types of industry in certain areas. A government agency of this kind could lend money to these industries and thus make sure that no discrimination existed. I have in my hand the submission of the government of New Brunswick to the Rowell-Sirois commission in which they complain bitterly of the credit policy in existence in Canada. I believe I will take the time to read a passage which appears on page 49 as follows:

> In this connection it is well that the commission should bear in mind that the Canadian banks have been centralized in Ontario and Quebec. Prior to confederation and for some years afterwards we had our own banking institutions in this province and our people were able to obtain money for the encouragement of industry here.
>
> The head office of these banking institutions were removed, after confederation, to Montreal and Toronto where they were situated more immediately in touch with the financial interests by which they were controlled.
>
> The result has been that industries in New Brunswick have not been able to obtain financial assistance in cases where such assistance would enable our local industries to compete with those in the provinces of Ontario and Quebec.
>
> Pertinent cases may be cited where local industries in this province have been destroyed because of the difficulty of financing and we submit that finances have been withheld as local industries might come into competition with similar industries in the last mentioned provinces.

There has been almost untold suffering throughout seven of the provinces because of the application of that particular principle. That difficulty of discrimination against provinces could be overcome entirely by the government using a bank of this kind. The bankers could be brought into line in the matter of lending to industries no matter in what province they happened to be.

A bank of this sort could control the economy of Canada. We hear a great deal about the decentralizing of industry. Both the hon. members who preceded me referred to the centralizing of industry in Ontario and Quebec and pointed out that it was a bad thing for the Dominion of Canada. Industry should be decentralized and spread out among all the provinces.

A bank of this sort could decentralize industry and render the various provinces of Canada more or less self-sufficient. This would be of great assistance to the maritime and the western provinces. One of the reasons why we in Alberta, Saskatchewan and other prov-

inces go into debt to the institutions in Ontario and Quebec is the fact that we have not developed sufficient industry. The result is that our people are only primary producers. They are penalized by the low prices they receive and by the high prices they must pay for the products they need. Then they have to pay railroad transportation both ways, and they pay interest upon the money involved in both transactions. If there were an industrial development in each of those provinces it would overcome the tendency of one province to go into debt to another.

A bank of this sort could render Canada self-sufficient to a much greater degree. She would not be obliged to import more than was necessary from abroad. May I point out once more that a bank of this sort can control the banking policy of the Dominion of Canada, doing it by strategic means rather than by ownership. It is not necessary for the government to own the banks in order to control them; control could be exercised by strategic means.

This question must be asked concerning this bank: will these possibilities be realized by this bank? Will interest rates be brought down, and will loans be made available equitably with a view to the greatest good to the greatest number of Canadians? Will industry be decentralized? Will the various provinces be made economically self-sufficient? Will Canada be rendered self-sufficient? Will the banking system be rendered obedient to the government? Will it be made to work for abundance for all, or for scarcity, so that a few may have great profits and power? These are the questions we have to ask ourselves in considering this bill. I fear very much that the answer to every one of these questions is not going to be "yes."

I wonder if the facts which have been adduced already in this debate do not strengthen the suspicion that this bill is nothing but political window-dressing, that it is nothing but a clever device designed to trick the Canadian people into thinking that the King government really means to do something to remedy the ill of unemployment, that it does know what to do and that it does have the power to do something effective? I am afraid that the answer to that must be "yes." It is simply window-dressing. We have had examples of this before in the history of this country. When the Prime Minister spoke of currency and credit in terms of public need in 1935 he led people in the west to think he meant what he said. Then he came into the house a few years later and explained to us very simply that he meant by currency and credit in terms of public need exactly what we had at the time he spoke. In other words, he had contemplated no change whatsoever. This kind of clever trickery coming from the Liberal party the people of Canada have to be on guard against.

This same man told the people that there would be a war against the money power waged on the floor of the new parliament. I have been here ever since that parliament convened, and the only war against the money power waged by the Liberal party has been a war for the money power and against those who were trying to control the money power. Never once have I seen the government adopt a single measure which would challenge the position of any money power.

Take another example of trickery; we were told that if we had government ownership of the Bank of Canada it would do wonders for us. I ask this question: Did government ownership of the Bank of Canada make any change whatsoever in the banking policy of Canada? Not a bit. I submit to my socialist friends that government ownership of banking institutions without a change in policy will accomplish nothing whatsoever in the interests of the country. But a change of policy, even with private ownership of the banks, will.

Mr. DOUGLAS (Weyburn): If the banks will let you.

Mr. BLACKMORE: They will let you. I am not condemning your proposals for government ownership of the banks. I say that it has great possibilities. With a change of policy the Bank of Canada could operate for the great benefit of the people of Canada.

Mr. NOSEWORTHY: If the C.C.F. were in power.

Mr. BLACKMORE: They would be hog-tied just the same as the Liberals because they would not understand what to do. Unless they understood the principle of debt-free money, they would not understand what to do.

Mr. NOSEWORTHY: We had better come to Social Credit for advice then.

Mr. BLACKMORE: You had better do so now.

What did the Bank of Canada do? Did it give employment to Canadians? Did it raise wages? Did it equalize prices? Did it lower taxes? Did it reduce duties? Did it lower interest rates? Did it make more money available to the rank and file of the Canadian people? Did it develop Canadian economy? Did it decentralize industry? Not at all. Did it do any of the things which were necessary in the Canadian economy to make life more

livable in this country? None of them was done even with a government-owned bank. Have we grounds for hoping that this new bank will do any better? We have only too little. If we are to solve the problems confronting us we must use means altogether different from those of which this new bank is an example.

I hold the view that if democracy is to prevail in Canada after the war is won, the government must take fundamental action to change the economic system of Canada from the present system of scarcity into a system of total use of Canada's resources.

The government's task is both a profound and an immensely urgent one. If it is not discharged before the war is won we shall betray our boys fighting on every battle front.

The government has presented a programme of reform. As I have already said, in face of the needs of the Canadian people, the programme is meaningless, just as meaningless as this bill is. It promises much. It can accomplish very little under the present set-up. The reason is that only total use of resources can give the Canadian people the prosperity to which they are entitled, and the fact is that the men behind the government of Canada will not permit the adoption of total use of resources because they believe that only scarcity can pay high profits. And to those concealed advisers and directors of the Liberal party, high profits for them come before prosperity for the people, even if the people should be our boys returning from risking their lives on the battlefield.

To-day there is ample evidence before parliament to prove that the doctrine of scarcity dominates the economy of Canada. Let me give the house one or two examples. Take the meat situation. Hon. members have followed for the last six weeks the development of the meat situation in Canada. Can one conceive of a situation being more pathetically and tragically bungled than the meat situation in this country? What was the reason? It was simply that the Liberal government does not dare to liberate the productive capacity of Canada, because it fears abundance. It believes only in scarcity at home. Would a bank like this new one that is proposed in any way relieve a situation of that sort? The bank might merely assist the farmers to produce more beef, and the Liberals would be all the more terrified.

Take the sugar situation. I believe solemnly that there has been no need of scarcity of sugar in Canada during this war, or for the years immediately preceding the war, nor has there been any reason or justification for the high prices of sugar which have prevailed. Evidence which I adduced the other night proved conclusively the soundness of my position. I believe that quantity and price have been affected, not so much by the circumstances of war, as by the fact that prior to the war and also during the war the production and sale of sugar have been manipulated by a sugar trust or combine and that one of the dominating units in this trust has been the St. Lawrence Sugar Refining company. I ask would a bank such as the one we are now considering in any way remedy that situation? Not by any means. How could it? There are plenty of companies that stand ready to finance new sugar refineries to produce beet sugar in this country. Do they need assistance from a bank such as this? Not by any means. All they need is markets. All they need is the go-ahead signal.

Mr. NOSEWORTHY: There are plenty of sugar markets now.

Mr. BLACKMORE: They cannot get the machinery now. I suppose hon. members would be surprised to know that since the war broke out, men came into this city and went to see responsible officials in the dominion government and offered to bring into Canada three sugar factories, and they were refused the concessions which they needed in order to give them a chance to establish sugar factories to produce sugar in this country. The men in charge of the government chose rather to let the Canadian people go short than risk an abundance of sugar—an abundance which they dreaded.

I am going to ask questions which I believe ought to be answered. What is the relationship existing between the government and this great sugar combine, and between the government and the head of this corporation, one John W. McConnell? Why has the government condoned this manipulation in the sugar industry? It would allay considerable suspicion in this house and throughout the country if the Prime Minister (Mr. Mackenzie King) would rise and categorically state that the Liberal party has never received, directly or indirectly, from the St. Lawrence Sugar Refining company, from J. W. McConnell, or from anyone representing either or both of these, or any other Canadian sugar interest any contribution of money for the campaign funds of the Liberal party.

Mr. DOUGLAS (Weyburn): That will be a $64 question.

Mr. BLACKMORE: We would be equally relieved to receive an absolute assurance from the Prime Minister that Canada Packers has made no contribution to the Liberal party's campaign funds.

Mr. SPEAKER: Order. The hon. member is now introducing something that is not within the purview of this bill.

Mr. BLACKMORE: I am dealing, Mr. Speaker, with the possibility of this bank affecting the economic situation in Canada.

Mr. SPEAKER: I understood that the hon. member was referring to campaign funds.

Mr. BLACKMORE: All I am seeking to do is to show how the government can allow scarcity to control in this country.

Mr. SPEAKER: I would ask the hon. member to desist from his references to campaign funds.

Mr. BLACKMORE: I will desist from that kind of discussion.

I have given one or two examples of the way in which the economy of this country might be influenced and controlled. I have illustrated the way in which huge concerns exercise their influence. I might have added that if it were known whether or not these big concerns which I have referred to have contributed liberally to war loans and if the government feared to disoblige them lest they should desist from lending, it would help us to understand who it is that controls this government and how the control is exercised.

Now may I say to the government that they would escape from all such pernicious controlling influences if they would adopt a sane and sound financial system, one that reflected the facts of the Canadian economy, for no concerns in this country would be able to gain or exercise control over a government which was free to issue money in relation to goods and services such as the people could produce.

May I conclude with both a warning to the government and an appeal? Once more I warn the government that scarcity must give way to abundance before this war is won; otherwise we shall betray our fighting men. I tell the government solemnly that to-day it should be ashamed to face those boys already coming home from the battlefields. If this government does nothing more than it is doing now, it will be afraid to face our conquering soldiers when the war is won. I say this because upon its performance right up to this date all the government is able to guarantee our soldiers is a return to unemployment and poverty. They are coming home right now to unemployment and poverty, and the trend to such—thousands of them—and nothing is done to alleviate the situation; that is, nothing substantial.

Here is my appeal. I have said that the people of this country have a right to the total use of their resources. That means maximum consumable production and equitable distribution of that production, distribution by consumption. I defy any man in this house to rise in his place and state that the people are not entitled to this right. I defy any man to say that the people would not have this right if parliament were free to get it for them. Then let us set parliament free. Let the government renounce its hidden bosses and take up the cause of the people. If it does so it will find loyally behind it the membership of this house without regard to party. Then Canada, both French and English-speaking, will give leadership to the English-speaking peoples of the world.

This is a great and holy cause in which we can all serve, this cause of democracy, of freedom from want and fear. Therefore, if the government continues subject to direction by the hidden hands which have thus far guided it, I appeal to all those patriots in the Liberal party to renounce their party subservience and to join with free men outside the Liberal party to set the people free, and to give a chance to the boys who come home from overseas, and to the parents and loved ones and friends who have saved and served and sacrificed to send them over there.

Mr. J. J. KINLEY (Queens-Lunenburg): As I see it, the principle of this bill is to promote the economic welfare of Canada by the establishment of an industrial welfare bank, to be set up according to the provisions of this bill which is now before the house for second reading. With its purpose I agree. I listened with some interest to the speech of my fellow-maritimer the hon. member for York-Sunbury (Mr. Hanson). While he made his usual interesting and critical statements, I could not discover whether he was for or against the bill. The hon. member for Rosetown-Biggar (Mr. Coldwell) expressed support of the bill. I listened with some interest to the leader of the Social Credit party (Mr. Blackmore), and while I believe in his earnestness and his sincerity, it seems to me the way he suggests is too easy a road for this cruel world through which we are going.

Mr. BLACKMORE: So we shall go on suffering, eh?

Mr. KINLEY: I want at the outset to say that I am in favour of sustaining the chartered banks of this country, because I believe they are well controlled and efficiently handled and that they do a splendid service to the people of Canada. Not only do they serve this country, but they operate abroad, and the banking houses of Canada are sentinels in

foreign countries for Canada's export trade. Wherever I see exports I believe there must be merit, and in order that a country may be a successful exporter to another country there must be strength and workmanship. The superiority which our banking system has maintained for many years will, I believe, stand us in good stead in the years to come, when our export trade will be a big feature in the development of our economic future.

The Canadian banks are in the vanguard to be factors for our export trade, so that it would not do unduly to interfere with or weaken them. At the same time there is no reason why we should not make an experiment and have an industrial bank as a part of our industrial equipment. We believe in competition and free enterprise, and we must keep abreast of the needs of the time. I trust there is no intention to close the road to any development; rather open it wider to meet the exceptional needs of reconstruction, at this serious period of our history, when all economic forces should be intelligently brought into play. The government has many statutory provisions whereby special financial consideration is given to our citizens, and it may be that these should be coordinated through a bank. The experiment is worth-while making.

We hear each day a lot of criticism of Canada's war-time effort. Strange to say, most of the praise comes from outside our country. Only to-day I saw in the paper an enthusiastic account of Canada's war effort by a United States commentator, who made the statement that in two years, while Canada's price ceiling had risen two per cent, that of the United States, on the same basis of calculation, had risen fourteen per cent.

The hon. member for York-Sunbury criticized the war effort in speaking of the principle of this bank. Why he had to do that I do not know. I believe that we are progressing in so far as monetary matters are concerned and that we are keeping up with the needs of the time.

Every one of us, either by reading or by personal experience, remembers the last war. We recall that the money for the conduct of that war was borrowed, whereas in this war we are paying fifty per cent of the cost as we go. During the last war victory bonds were issued bearing 5½ per cent interest. This time no such interest is paid. In addition to that, tax-free bonds were sold to the people and there was very little criticism about it at that time. Furthermore, there was no restriction on the accumulation of wealth. Wealth accumulated during the last war; tax-free bonds made it easy for the affluent to pay their taxes, and the percentage paid for borrowing money was an amount that we would not consider at all in this period of our history. So that we are making progress. While my hon. friend criticizes the action of this government, I believe the statement of the Bank of Canada, which has been presented to this house, shows that in finance Canada has made a splendid and most efficient effort. The statement of that bank, if one considers it calmly, reads like a romance in finance. I think the $15,000,000 profit it has brought to the exchequer of Canada shows that while some people opposed that institution when it was formed, it has a splendid record and engenders enthusiasm and confidence in the Canadian people to go on to other efforts.

The chartered banks of Canada are controlled by law and their activities are in the nature of a revolving cycle; circulation is in and out and it is vital to the success of the country. Frozen loans are avoided wherever possible, because the banks, in the very nature of things, must be kept liquid; they must be able to face the clearing house. Certain business is prohibited. The details appear in section 151 of the Bank Act. Certaain business of a static nature is prevented. This to a degree is the difference between our banks and the banks of the United States. It will be recalled that the banks of Canada survived the crisis of the last decade while the banks of the United States met disaster. One factor causing the American difficulties was long-term business. This is the field where present-day conditions seem to show the need, and an industrial welfare bank is eminently designed for that purpose.

Under section 15 of the act, with respect to business and powers, the bank is enabled to lend or guarantee loans of money to an industrial enterprise, including loans on real or personal property. This is now done largely by trust companies and individuals. I would say that the bank has some of the characteristics of a bank and nearly all the powers of a trust company, and it is intended to assume some of the functions of both.

I am disappointed that the interpretation section, wherein industry is defined, includes the building of ships but not the operating of ships. It is my opinion that after the war there will be plenty of ships, and the question will be, what are we going to do with them? That will be an important question. There are 80,000 men now in the Canadian navy and 44,498 in the merchant marine. Many of these men will want to continue at sea. I often meet naval officers, especially those of the Royal Canadian Naval Reserve, whose

ambition is to be part owner of a ship after the war and sail her in the merchant marine trade.

The United States built a number of ships and found them too slow, and now they are building victory ships so as to be in the forefront of the mercantile marine enterprise. It may be that we should build faster ships for the period after the war. In my opinion some provision should be made so that the men on the sea in this war who have great responsibilities in the navy may be able to continue in their calling, and I hope they will get help from their country in order that ships may be operated in the serious days of reconstruction.

In the prohibited business category in our Bank Act ships are included, and there is also fishermen's floating property along the Atlantic and Pacific coasts. Everyone fights shy of lending money on floating property and there is a need which this bank can supply if we so decide in committee. I find that the bill calls for ownership and management by the Bank of Canada. I doubt if this is advisable. It looks too much like a state-controlled monopoly. Erroneously, people have the idea that freedom is embodied in government ownership. Carried to excess, I think it means dictatorship. Competition breeds freedom, initiative and efficiency. I think we all admit that the Canadian National railway service in Canada is better because we have the Canadian Pacific railway, and I recall that Canadian Steamships is an interlocked directorate with Canadian National railways. Well, we lost most of our Canadian ships. It is hard to serve two masters, and in my opinion too much concentration of power in any arm of government is detrimental to the liberty of the subject.

This parliament has had two set-ups of the Bank of Canada. First, this government had a fifty-fifty set-up, whereby the people of Canada owned half the stock and the government the other half. This brought to the Bank of Canada the opinions of men all over the country who were interested in industry. They were elected by the shareholders and we knew what was going on. They had an annual meeting where they had to face the shareholders. It was claimed that the government must own the stock of the Bank of Canada completely to make it effective, because it must supply funds according to public needs, and the act was changed. Will anybody tell you that a person who owns fifty per cent of the stock in any company does not to all intents and purposes control that company? The government controlled that concern, but they had the advantage of the cooperation of the Canadian public, and while it cost some money in the way of dividends, that could have been controlled.

I noticed one day in the Chateau Laurier, coming down the elevator, a sign on the board: "Annual breakfast of the Bank of Canada." It seems to me that government control is hardly control by the people in its fullest meaning as it was in the original set-up.

It is argued that economies will be effected under this new set-up, but the bill provides that the directors of the proposed bank are to be paid, and they will have an entire managing staff; so why not give them some authority and let the bank stand on its own feet? Let it be strong in its own right. We are told that when we create a company we create another person in law; so let this person be strong. I believe the directors of this bank should be independent of the Bank of Canada; I think that would be eminently in the interests of the public. For want of a better word I would say that the powers of the Bank of Canada over the banking system of this country are almost judicial. The preamble of the Bank of Canada Act is quite comprehensive; it states that the bank is to regulate currency and credit in the best interests of the economic life of the nation. In section 2 of that act it is provided that the bank shall not, except as authorized by the act, engage in or have an interest in any trade or business. Evidently that provision is to be overcome by forming another company with the same ownership and management.

I am not criticizing, Mr. Speaker; I am only comparing. I note that the proposed bank does not come under the provisions of the Bank Act. That act is for the protection of the people. Under this bill there is no ceiling on business charges. I do not know that this is a serious matter, because they will be obliged to be liberal in their dealings in order to carry out the purposes of this bill. We are told that this bank is to help small industries, but there is no ceiling on the amount it can lend to any one company. It seems to me that if we say a bank is intended to help small industries fill the gap that exists in the present lending system, in order to meet the needs of the people, there should be a ceiling so that we may be sure only the small industries will be assisted. It may be said that this bank will bring uneconomic forces into play in industry. Well, if we have good management it will be like any other bank, and it is only reasonable to suppose that the management of this bank will see to it that its business is conducted on sound lines. I think I would trust them in that connection.

and I do not think we need have any great fear about hurting the chartered banks. They are very strong. Banking in Canada has been remarkably free from competition in the last decade; the banks have cooperated well with each other. In the light of our experience, Mr. Speaker; in the light of the needs of the future, I believe the setting up of this bank is in the public interest.

Mr. T. L. CHURCH (Broadview): Mr. Speaker, the motion before the Chair is for the second reading of the bill to incorporate the industrial development bank. On second reading we may discuss the principle of the bill but not the various clauses. The preamble and the interpretation section describe the functions of the proposed bank. Coming from an industrial province and an industrial city, I would hold up both hands in favour of this bill if I thought small industries in this country were going to get any relief from the intolerable artificial burdens and barriers and restraints of trade which have been imposed on small industries by this government since the beginning of the war. Under the control system of Mr. Donald Gordon and his associates on the wartime prices and trade board, $115,000,000 has been the cost of the various bonuses, subventions, subsidies and all that sort of thing, and who is going to pay for them? After all is said and done, in our economy the small industrial man has been the forgotten agency ever since this system of bonuses and subventions was started. I remember when the Farmers' Creditors Arrangement Act was brought in by the former government for the purpose of giving relief to the dirt farmers on the land. In 1935 it was extended to cover fishermen. At that time I contended that relief of this kind should be extended to small industries and to industrial workers throughout the country, but nothing was done. Then came the war, and the government of the day imposed the control system which I have indicated.

The parliamentary assistant to the Minister of Finance (Mr. Abbott) gave a lucid description of the functions of the proposed bank. The hon. gentleman has had a great deal of training, which should equip him for promotion. He stated that one of the functions of the bank would be to prepare the way. Well, they have been a long time preparing the way for the small industries of this country, who have been the forgotten members of our economic state since this war started. This measure is designed to bring about a high level of employment and national income after the war, and according to the preamble the measure is designed to promote the economic welfare of Canada by supplementing the activities of other lenders and by providing capital assistance to industry, with particular consideration to the financing of small enterprises. Then the interpretation clause defines an industrial enterprise. The provisions of this bill are contained in some thirty-four paragraphs; the parliamentary assistant gave a detailed explanation of the scope and object of the legislation. It would appear that the bank has power to guarantee loans, to acquire stock and bonds, and so on, and the bank is given power to lend money to both new and existing industrial enterprises. I should like to find out whether this measure will enable the small business man, who has had to obtain a loan from a shark loan company, to get on his feet again, and transfer to this new bank. Will those who have had to borrow money be helped under this measure? Many of our small industries have had to close up under the present control system.

The proposed bill is a Santa Claus bill. It will be a bank of faith, hope and charity, if it is proposed to aid the small industrial owner. Will the proposed bill enable him to have an account taken with respect to these shark loan companies which are charging him 2 per cent a month and more? Will it enable the small industrial proprietor to go to the subsidiary bank of the government or the Bank of Canada and seek funds from this subsidiary bank of the Bank of Canada in the manner indicated? I say there should be equality of treatment.

The parliamentary assistant said:

> I want to make it clear that this bank is intended to supplement the activities of existing lending agencies rather than to displace them. If the credit requirements of a business are of such a nature that they can be obtained from a chartered bank or in the investment market, well and good. On the other hand, if such sources are not available then the industrial development bank will consider applications to assist projects which appear to be economically sound. The industrial development bank is not being set up to finance enterprises which are obviously doomed to end in failure. It would not be in the public interest to subsidize uneconomic activities in this concealed manner. On the other hand if the industrial development bank is to fill the gap I have described, it must operate on the assumption that there will be on the average a relatively high level of economic activity. . . . The government believes that the existence of the industrial development bank will be of particular value to small business which has laboured under a certain handicap in obtaining medium and long-term capital. These small industrial establishments are an essential part of our economy, an important source of employment and production, one which we must not overlook when planning to maintain a high level of employment and income in this country after the war.

If that is so, namely, that they are an important part of our economy as far as employment is concerned after the war, then it has taken the government of the day nearly five years of war to find it out.

As I say, if this bill is going to give any help to those small industries, then I hold up both hands for it. But when I examine what the facts are I believe that in some respects this is a political bill. In other respects it might turn out to be a Santa Claus bill. Then, it may turn out to be that the industrial owners will not get the same privileges that the farmers, the fishermen and others have received under similar state-aid bills.

In the first place, I think the government in this instance has got the cart before the horse. First of all, it should announce to the house that it is going to remove some of the artificial barriers and burdens in restraint of trade which have been placed upon industry since the beginning of the war. Second, it should announce what its policy is to curb the shark loan companies, those companies which are charging more than two per cent a month. It should also announce what it is going to do about reducing taxation. Many of our industries have found that they have been driven to the wall by the barriers and heavy burdens of taxation.

In addition to that, I find that in England they are preparing for the period following the war. They are taking steps to protect small industry. Over there they have what they call a pre-war trade practices act, to put industry back to where it was before the war. We should have the same kind of bill adapted to our circumstances in Canada.

Perhaps I might point out some of the things which will have to be decided. I believe some of those young gentlemen who are popularly known as the brain trust or theorists who are behind the finance department, those men who have been the framers of the bill, as I see it, have not yet had any practical training in any competitive business. Yet we find them imposing in an unrestricted fashion these artificial burdens and barriers on business. Before the government creates this subsidiary bank it should make some announcement of policy. What is its policy going to be with respect to the proposal of one leftist party to take over the banks and the insurance companies? In my opinion, an election should clear the air and we should first decide whether or not we are to have a totalitarian state, because if we are to have that there will be no such thing as private industry or private enterprise, or any large industry or small industry in Canada. That is one of the first things which will have to be decided.

We must decide, further, if we are to have tariffs. I know of no businessman to-day, either in large or small industry, who will invest a dollar in the expansion of his industry until he knows what the electors of Canada will do with the proposal to create a totalitarian state, a state in which the banks and insurance companies will be taken over.

In Ontario, during the term of office of the Drury government in 1923, a proposal was made along the lines of free trade with our competitors and destruction of industry. During the four or five years that government was in office not a business man in Ontario would invest one dollar in any industry. The result was that many industries were driven to the wall.

A decision will have to be made on what is to be done about preferential tariffs, which are guaranteed by article 4 of the Atlantic charter. What is to be done about that? What is to be done with preferential and favoured nation agreements. And, by the way, I should like to get some attention from the ministry for a short time. For the past three years I have been asking the Minister of Munitions and Supply (Mr. Howe) what is to become of industry after the war. I should like very much to have their attention, particularly that of the Minister of Munitions and Supply. It is not often I address a question to him, and I do so now in all seriousness. In the sessions of 1941, 1942 and 1943 I proposed that the minister should make an announcement as to what he is going to do, when the war ends, with large and small industries in Canada working on war contracts with the government. It took many years after the last war before business could convert from a war-time to a peace-time economy. Money was not advanced under the Bank Act, and business was tied up, causing widespread unemployment. I presume this bill will be sent to a committee, but before it goes we should have some announcement from the government as to its policy on the matters I have raised, and a statement as to how much money it will release. I suggest that it should be up to fifty per cent, and that there should be some standard form of accounting taken immediately in all industries, so that when the time comes for a cessation of hostilities business men who could not get advances from the chartered banks on a standard plan might get it through some government policy ahead, instead of having to wait three or four years or, as happened after the last war, sometimes ten or fifteen years, to get some help and settlement of accounts here.

In my opinion small industry has been done to death by controls, subcontrols, artificial burdens and barriers put upon them by the wartime prices and trade board. Many of them have had to close up, because they could not get the labour or deliveries of parts of machinery. They were the victims of the system.

We find that this proposed bank contracts itself out of the Bank Act. Provision is made in the bill with respect to loans on real estate. A coach and four has been driven by some of the larger chartered banks as to real estate clean through section 82 of the Bank Act. Not by the widest stretch of imagination can it be said that any chartered bank in Canada to-day has power to go into commercial real estate. I should like to have the attention of some of the members of the treasury board who are here this evening, because they are responsible for the present violation of section 82 of the Bank Act which has enabled these banks to go into commercial real estate. The government are writing into this industrial development bank bill the same power given to the chartered banks, I believe by sections 22 and 23. Section 82 of the Bank Act reads:

No bank shall hold any real or immovable property, howsoever acquired, except such as is required for its own use, for any period exceeding seven years from the date of the acquisition thereof, or any extension of such period as in this section provided, and such property shall be absolutely sold or disposed of, within such period or extended period, as the case may be, so that the bank shall no longer retain any interest therein unless by way of security.

They were not to go into commercial real estate except for the purchase of buildings necessary for their business. The section continues:

2. The treasury board may direct that the time for the sale or disposal of any such real or immovable property shall be extended for a further period or periods, not to exceed five years.

3. The whole period during which the bank may so hold such property under the foregoing provisions of this section shall not exceed twelve years from the date of the acquisition thereof.

4. Any real or immovable property, not required by the bank for its own use, held by the bank for a longer period than authorized by the foregoing provisions of this section shall be liable to be forfeited to His Majesty for the use of the Dominion of Canada: provided that

(a) no such forfeiture shall take effect until the expiration of at least six calendar months after notice in writing to the bank by the minister of the intention of His Majesty to claim the forfeiture; and

(b) the bank may, notwithstanding such notice, before the forfeiture is effected sell or dispose of the property free from liability to forfeiture.

5. The provisions of this section shall apply to any real or immovable property heretofore acquired by the bank and held by it at the time of the coming into force of this act.

Notwithstanding all the provisions contained in the Bank Act for inspection and auditing and all that sort of thing, we had the failure of the Home bank and the Farmers' bank. What is to happen in connection with this industrial development bank? I do not want to throw cold water on the idea because I want to see a real bank that will give relief directly and indirectly to the small industries of this country to put them on their feet. They have been the forgotten agencies and we shall have to have some declaration of policy from the government on the various matters I have mentioned. Until that is done I do not think we can express an opinion on the functions or the objects or the proposals in connection with this industrial development bank.

There are one or two other matters I should like to raise in connection with this bill. What is to be done with the loans already arranged for with different small shark loan companies set up by the Department of Finance, which are charging over two per cent a month? Are the small industries to be given the same privileges which were granted under the Farmers' Creditors Arrangement Act to farmers and fishermen? Are these loans to be taken over by the industrial development bank? I know many small industries in my city have been driven by war and controls to the wall; there are three or four in my own industrial riding. There has been no retrenchment in taxation and I do not know how the business man is to continue with the present state of affairs.

When dealing with another matter I referred to a visit made by Mr. Morgenthau, the treasurer of the United States, to Italy. He saw some of the soldiers over there who had had individual small businesses before they enlisted. They wanted to know if in addition to suffering in flesh and blood they were to be asked, when they returned, to pay for the war as well. They wanted to know if they were to get back their small businesses. Something should be done to provide relief for these small businesses. I cannot see anything in this bill that will protect the soldier who had a small individual business and who left it in the care of his wife or some other relative. They should be able to apply to the bank for relief.

The minister is not here this evening, but his parliamentary assistant has described the bill. This country was built up largely by our industries and since confederation they have paid a large share of the taxes. They have had little or no protection from the

controls and artificial barriers which have been imposed since the war started. I hope that when this bill goes to the committee the small men—I am here to represent the small retailer and business man—will be able to get some relief which he is not getting to-day.

Mr. W. A. TUCKER (Rosthern): Mr. Speaker, I am sure that there will be general agreement with the purpose of this bill as expressed in the preamble, which states:

Whereas it is desirable to establish an industrial development bank to promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises.

The bill proposes the setting up of an institution which is to be owned and controlled by the Bank of Canada and which may lend or guarantee loans to any industrial enterprise. As I understand it, capital will be supplied to the extent of $25,000,000 by the Bank of Canada, and a further $75,000,000 will be provided by permitting the industrial bank to borrow money on bonds or debentures. There is a provision that when the reserve is built up to the extent of another $25,000,000 from profits, the bank can borrow on bonds and debentures a further $75,000,000. The extent of the capital at present available, however, would be $100,000,000.

I should think one of the main purposes of the bank would be to assist those returning from overseas to get established in small businesses. I believe it will be acknowledged that one of the difficulties encountered by anyone starting up in business who has to borrow money on long term is the interest burden. It seems to me that the rate of interest to be charged should not exceed three or three and one half per cent. That brings up one of the features of the bill which I submit should be reconsidered, and I hope the banking and commerce committee will reconsider it.

Once the $25,000,000 advanced by the Bank of Canada is used up, the remaining money will have to be obtained, under the set-up proposed by this bill, by selling bonds or debentures. Those bonds or debentures, in order to meet a ready market would have to bear interest, I suppose, of around 4½ or 5 per cent. Mr. Towers, the governor of the Bank of Canada, in giving evidence before the banking and commerce committee in 1939 estimated that it cost two per cent of the assets of the chartered banks to do business. Assuming that the cost of doing business by this bank would be in the same proportion—it might be higher because it would not be business on the same scale as the chartered banks to begin with—they would have to lend money at around seven per cent. They could not possibly hope to lend money at less than six per cent, and I submit that in order to help small businesses provision should be made for them borrowing money for a long term at not more than 3½ per cent. In order to make that possible two things could be done. In fact, both I submit should be done. One is to permit the bank to receive deposits on which it would not have to pay more than 1 or 1½ per cent. The other would be to permit the bank to make use of the rediscount privileges which the chartered banks now have. In other words, it should have the right to take its bonds and rediscount them with the Bank of Canada at the present rediscount rate of 1½ per cent and, if the rate were lowered, at the going rediscount rate.

The chartered banks have consistently taken the stand that if they are not permitted to make loans or to purchase government securities to the extent of ten dollars for every one dollar of their cash reserves, they cannot extend credit at the present rate of interest which they have to charge, which in many cases is six and seven per cent. I submit that if the chartered banks have to charge six and seven per cent with the privilege of accepting deposits and having the rediscount privilege, this new bank without such privileges would have to charge even more. The industrial development bank should be allowed to accept deposits the same as any chartered bank and have the same rediscount privileges. To deprive it of those privileges would be to force it to charge a higher rate of interest than it should if it is to carry out the function for which it is being set up.

As to the bill itself, I naturally will support it because I think it is a definite step in the right direction. It has been said that the bill does not go far enough. I remember when this government came into office in 1936 it found in existence a Bank of Canada which was owned and controlled by private interests, and it brought in a bill whereby it took control of the Bank of Canada but left the private interests owning the same number of shares in the Bank of Canada that they owned before and left them with representation on the board of directors. In other words, the private interests were left with a substantial ownership of shares in the Bank of Canada and a substantial share of control of the bank. It was suggested at that time that because the

government had not introduced a bill to establish one hundred per cent ownership and control by the public of the Bank of Canada we should vote against the bill, but my attitude at that time was this. I was not going to vote against a step in the right direction just because it did not go as far as I should have liked it to go.

My attitude in regard to this bill is the same. I do not think enough capital is provided to do the work, but that can be remedied as more and more capital is acquired. I do not think the bill provides for getting the capital at a low enough cost. That should be remedied in the banking and commerce committee; if it is not remedied in that committee it will become very plain in the actual operations of the bank that it should be done, and it will be done at any rate when the bank has had a chance to operate for a short time.

I certainly am pleased that it is proposed to introduce a bill to provide for cheaper long-term credit to the farming industry. Anyone who has watched the development of the farming industry in western Canada will, I think, agree with me when I say that one of the great difficulties of that industry has been the fact that the farmers have had to pay seven and eight and nine per cent on mortgage loans. Had those loans borne interest at around three per cent, then payment of eight per cent over a period of less than twenty years would have paid the loans off. But what happened was that in fairly prosperous years the farmers paid the eight per cent and were unable to cut down the principal of the loans, and that when times got a little worse they found the loans too heavy to carry, and the fact that they had to pay interest on these loans cut down their standard of living to a very low level. So that I think it is all important that steps be taken to lower the cost of money to the farming industry.

It is also very important that the agricultural bank when set up will have the right to accept deposits and have the right of rediscount so that it will get its money at least as cheaply as the chartered banks get theirs. If it gets its money as cheaply under the rediscount privilege at 1½ per cent, and assuming that it takes two per cent to do business it could lend money at 3½ per cent to farmers to improve their homes and buildings, to get implements, to electrify their homes, and perhaps get better breeding stock. A bill like that I hope is in the mind of the government and will be enacted this session

It has been suggested that all of the government's programme should be put before the house at once. But my answer to that would be that such a programme has to be put before the house step by step. It can all be considered in the banking and commerce committee as a whole, unless the committee decides that it wants to report each item separately.

There is one thing on which I feel I should make some comment. The hon. member for Rosetown-Biggar (Mr. Coldwell) availed himself of this opportunity once more to indicate, as I took it, that if the government took control of industry in this country there would be no difficulty at all. He referred to the period from 1933 to 1939 and spoke of the difficulty of getting private capital to invest in industry during that period, and he suggested, as I understood it, that if his party came into power and took control of all industry in the country—

Mr. CASTLEDEN: Nobody has any such intention.

Mr. TUCKER: I can only speak as I understood the hon. member. It is quite true that in certain places the C.C.F. say that they do not intend to take over control of some particular industry, and in other places they say they do. In British Columbia it is stated, for example, that their programme is actually to take control of farm land as in Russia.

Mr. DOUGLAS (Weyburn): Would the hon. member quote that.

Mr. TUCKER: I can quote it but I have not it on my desk. I would ask the hon. member this: Do the C.C.F. members in this house say that that is not the programme of the C.C.F. in British Columbia, or in Ontario? If they say it is not the programme, then I will sit down and hear them deny it. But I read the *Vancouver Sun*. It stated that the programme of the party in regard to farm lands was—I forget the exact wording, but "as in Russia" was used. That is enough for me. I would like to have the C.C.F. members say whether their supporters in British Columbia have or have not adopted that as their programme.

Mr. DOUGLAS (Weyburn): Does the hon. member want an answer?

Mr. TUCKER: Yes

Mr. GRAYDON: Be careful.

Mr. DOUGLAS (Weyburn): The hon. member has quoted something from a newspaper without having the paper here. The C.C.F. have no policy—

Some hon. MEMBERS: Hear, hear.

Mr. MacNICOL: Well, that is good news.

Mr. FRASER (Peterborough West): Truer words have never been spoken.

Mr. DOUGLAS (Weyburn): That is vociferous without being funny. The C.C.F. have no policy in any province—

Some hon. MEMBERS: Hear, hear.

Some hon. MEMBERS: Oh, oh.

Mr. SPEAKER: Order.

Mr. DOUGLAS (Weyburn): That is rather characteristic of people who will hardly wait to get an answer. The hon. member wants an answer. The answer is that the C.C.F. have no policy in any province advocating the collectivization of land as in Russia, or anywhere else; and if the hon. member wants to discuss that he ought at least to bring a copy of the C.C.F. programme with him and quote from it, rather than depend on his memory of what is stated in the *Vancouver Sun*.

Mr. MACKENZIE (Vancouver Centre): I will bring about fifty extracts next Thursday to this house to prove that what the hon. member for Rosthern (Mr. Tucker) said is correct.

Mr. DOUGLAS (Weyburn): I wish the minister would do so.

Mr. GRAYDON: I do not think that would help very much, but I would like to bring some myself.

Mr. KNOWLES: And I do not think that will help much, either.

Mr. TUCKER: I take it that the hon. member for Weyburn says that that is not the programme. He takes the responsibility for saying that that is not the programme and that his friends in British Columbia did not use the words "as in Russia," meaning collectivization of farm lands as in Russia. I gather that the hon. member is rising and undertaking to correct me and say that that is not so. I wonder if that is the case, that he undertakes to make that statement?

Mr. DOUGLAS (Weyburn): The hon. member for Rosthern is asking me to contradict something which he himself is not definite about. He says, "something to that effect." Now will he make a definite statement? I am quite prepared to contradict it; I will say most definitely that the C.C.F. in no province in Canada have at any time advocated the collectivization of land as in Russia or anywhere else. I state that most categorically.

Mr. FRASER: (Peterborough West): Your leader in British Columbia said that.

Mr. DOUGLAS (Weyburn): Not at all.

Mr. FRASER (Peterborough West): He absolutely did.

Mr. MITCHELL: And the socialization of industry.

Mr. TUCKER: I am quite satisfied. The hon. member has now stated that their party in British Columbia did not say that they are going to do the same to farm lands in British Columbia as was done in Russia. I intend, Mr. Speaker, to bring the actual statement before parliament at the very earliest possible date; in fact, if I could adjourn this debate now I would bring the statement and present it during this debate. Indeed, in view of the fact that the hon. member has undertaken to make that categorical statement I ask leave to adjourn this debate so that I can present the proof to him right in the course of this debate. I move the adjournment of this debate.

Mr. GRAYDON: Mr. Speaker, surely we are not going to reach the position in this house where an argument between two hon. members justifies the adjournment of an important debate like this.

Mr. SPEAKER: The hon. member has made the motion. I shall have to put it to the house. Those in favour will please say "yea". Those against will please say "nay".

Some hon. MEMBERS: Yea.

Some hon. MEMBERS: Nay.

Mr. SPEAKER: In my opinion the "nays" have it.

Mr. TUCKER: Mr. Speaker, as I was saying when interrupted by the hon. member for Weyburn, the Cooperative Commonwealth Federation suggest that if they take control of all industry in this country and ownership of all the means of wealth production in the country, they would have no difficulty in regard to handling the situation in Canada. I would say in that regard that, whether the state owns and controls industry or whether it does not, if we have not the markets to export the vast surpluses of food products, metal products and wood products which we produce, there will be great difficulty in handling the industrial and economic set-up,

and the fact that it is owned by the government will make it no easier to meet the situation than if it is handled by private industry. It seems to me that in advocating that a group of politicians should control the industrial set-up, instead of having it controlled by the people who are used to it, and without meeting the problem of markets, the C.C.F. are taking for granted that the Canadian people have very short memories and very little understanding as to how these things do actually operate.

Another matter which has been mentioned, and which I think is of importance, is the decentralization of industry. I have felt for some time that banking policy shows more unwillingness to extend credit to industries in the maritimes and in western Canada than to industries in Ontario and Quebec. I suggested some years ago that there should be some means whereby anyone who had a good proposition and was denied credit to develop it should have a right of appeal to some body which would have in mind the interest of the country as a whole. It is true that to-day the banks, in extending credit, consider only banking interests, and it is time that there should be some control over them in the extending of credit, so that, should they allow the interests of the banks too much weight as contrasted with the best interests of the country, there should be some public authority able to intervene.

We have a board of grain commissioners. It is suggested that we have a board of live stock commissioners. I submit that in handling a public franchise as important as public credit there should be an authority to which people or, indeed, communities, could appeal if they did not think they were getting a square deal. I suggest that, if we retain our present banking system substantially as it is, there should be a board of bank commissioners to which people could appeal if they did not get a square deal with respect to the extension of credits.

As to the necessity for providing for cheap long-term credit, I would give an example. One of the things we need badly in western Canada is mills to crush flax and oil-bearing seeds which we grow. It would save the cost of shipping them east, and it would retain to us the by-products which we can obtain from crushing these plants. As I understand it, there is great difficulty in getting credit to set up these oil-crushing plants because, most bank directors being stationed in the eastern and central part of Canada, they know only the set-up in their own areas and are less inclined to advance credit to industries on the prairies or in the maritimes. This bank, I assume, will enable people who want to set up such oil-crushing plants to get the necessary credit. It comes down to this, and I am quite frank to say so, that the banks to-day operate the most valuable franchise which this country has given to any group of people, and that franchise must be operated in the interests of the people of Canada; otherwise either they will have to be controlled or, as the other alternative, the franchise will be taken away from them. As a Liberal I believe it would be much better to control the banking system in the best interests of the country, rather than put it in the hands of politicians to operate under the control of a government.

I am quite satisfied, Mr. Speaker, that my hon. friends of the C.C.F. party, when they take the attitude that the government should control everything, are proposing a policy whereby ultimately the government would be so powerful that political liberty would become a fiction. I have no doubt that if a government got control of the entire economic activity of the country our political rights would go. I suggest, therefore, that the solution consists in steps such as this by which, to the extent required, we may improve our economic system so that it shall meet the needs of the time without transferring to the hands of a government the ownership and control of industry except as absolutely required by the needs of the time as developments occur.

On motion of Mr. Diefenbaker the debate was adjourned.

SUPPLY

The house in committee of supply, Mr. Bradette in the chair.

DEPARTMENT OF MINES AND RESOURCES

122. Departmental administration, $152,565.

Item stands.

DEPARTMENT OF TRADE AND COMMERCE

338. Departmental administration, $151,500.

Item stands.

Mr. GRAYDON: May I say to the acting leader of the government that we have now put into supply nine departments one of which, I believe, national defence civil estimates, has been concluded and passed. I would caution the government that while we are prepared to facilitate the work of the administration as far as possible, we are now reaching the point where perhaps they are straining matters a little to ask us for the moment to enter into any more departments as they are now doing. There are now nine departments in supply and that gives the government plenty of room to operate in, so that before any further move

is made the government ought to consider the suggestion I have offered.

Mr. MACKENZIE (Vancouver Centre): Speaking on my own behalf only, may I say definitely that there is no restriction on the rights of the government. There is no power on the part of the opposition to prevent the government from going into supply. There is no obligation either of rule or of procedure to prevent the government from calling any items of supply that may be entered into.

Mr. GRAYDON: The minister cannot mean that in the manner in which he says it.

Mr. MACKENZIE (Vancouver Centre): I certainly do.

Mr. GRAYDON: After all, we are willing that the government should get into supply in each of these cases, but if the government invites an amendment each time it asks for supply, then of course we shall be inclined to oblige them with an amendment.

Mr. MACKENZIE (Vancouver Centre): We called two items on Monday afternoon to give an opportunity for amendments or discussion according to the desire of any group in the house.

Progress reported.

On motion of Mr. Ralston the house adjourned at 10:55 p.m. until Thursday, at three o'clock p.m., pursuant to special order made Monday, February 21, 1944.

Thursday, March 9, 1944

The house met at three o'clock.

PRIVILEGE—MR. TUCKER

REFERENCE TO STATEMENT OF MR. DOUGLAS (WEYBURN) IN DEBATE ON MARCH 7

Mr. W. A. TUCKER (Rosthern): On a question of privilege, Mr. Speaker, on Tuesday last the hon. member for Weyburn (Mr. Douglas) categorically denied a statement made by myself as to the policy of the C.C.F. party of British Columbia.

Mr. DOUGLAS (Weyburn): On a point of order, Mr. Speaker, I should like to have your ruling. First of all, on a question of privilege has the hon. member the right to deal with what was a question of fact? In the second place, if he is allowed to do that, am I permitted to reply to his statement, also on a question of privilege?

Mr. SPEAKER: I am in this difficulty, that as yet I do not know what is the question of privilege. However, I would hope that the hon. member who is raising the question would take into consideration what has been said by the hon. member for Weyburn.

Mr. TUCKER: I will state the question of privilege. The hon. member stated that I was quoting something from a newspaper, without having the newspaper here. A fair inference would be that I was stating to this house something that was incorrect as to the reported policy of his party in British Columbia. I claim the right to show this house that I was stating the situation correctly, and was not attempting to mislead the house by quoting from the newspaper to which I was referring.

Mr. SPEAKER: I cannot agree that this is a question of privilege. Perhaps it could be brought up on the orders of the day, but certainly not as a question of privilege. If there is a dispute between two hon. members as to facts, there are other opportunities when they may make their statements.

Mr. MACKENZIE (Vancouver Centre): We can place the facts on record when the debate is resumed.

ARGENTINE REPUBLIC

STATEMENT AS TO CANADA'S POSITION IN REGARD TO RECOGNITION OF NEW GOVERNMENT

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, on Tuesday last my hon. friend the leader of the opposition (Mr. Graydon) asked if I would make a statement with respect to the recognition or non-recognition of the present regime in Argentina. I have a statement to make which is a little longer than I might wish it to be, but I believe hon. members will appreciate having a statement given at some length.

The situation in Argentina of recent months has caused considerable anxiety, both to her neighbours in the western hemisphere and to the united nations. This concern is provoked by the need for solidarity in the western hemisphere against axis intrigues and by the importance of Argentina as a source of foodstuffs and important raw materials for the united nations.

Since a coup d'etat overthrew the administration of President Castillo last June, the control of policies has passed from one military group to another, while the normal processes of democratic government have ceased to operate. parliament has not been summoned, political parties have been dissolved and the newspapers placed under more drastic controls. Within nine months, three generals have in turn exercised presidential powers, while the foreign office has been administered

by two admirals and two generals and, in addition, there have been several other cabinet changes.

On January 26 of this year the government of President Ramirez announced a rupture of diplomatic relations with the axis powers because of the revelation of axis intrigues within Argentina which were contrary to its neutrality and a threat to the security of the other American countries. This decision brought Argentina in line with the other countries of the western hemisphere, all of whom have either declared war upon Germany or severed diplomatic relations with her and other axis countries. The decision undoubtedly reflected the pro-allied sympathies of the great majority of the people of Argentina. It was thought to be a forerunner of other acts of hemispheric solidarity and defence.

In the month which followed, certain groups believed not to be in sympathy with the declared Argentine policy of joining the defence of the hemisphere were successful in forcing General Gilbert, Minister of Foreign Affairs to resign on February 15. Ten days later they secured the delegation of the powers of General Ramirez as president to the vice-president and minister of war, General Farrell.

Following these changes in personnel the United States government instructed its ambassador, Mr. Norman Armour "to refrain from entering into official relations with the new regime pending developments." A statement describing the reasons for the position taken by the United States was issued by Mr. Stettinius, acting Secretary of State, on March 4, which stressed the fact that in Argentina "the support by important elements inimical to the united nations war effort of movements designed to eliminate action already taken could only be a matter of grave anxiety."

In response to a question in the British House of Commons yesterday, the British foreign secretary stated that in view of the obscurity surrounding the circumstances of President Ramirez' delegation of his function to Vice-President Farrell, the British ambassador in Argentina had confined his communications with the Argentine government to routine matters only. The same position had been taken as regards communications between the British government and the Argentine ambassador in London. Mr. Eden also announced that this attitude would be maintained pending developments in Buenos Aires.

The Canadian government has been kept fully informed of developments in Argentina by its legation in Buenos Aires. It has also had the benefit of first hand information from the Hon. W. F. A. Turgeon, who only recently returned from serving as minister in Argentina. Pending a clarification of what remains a most confused and obscure situation, the government has instructed the Canadian charge d'affaires in Buenos Aires to refrain for the present from any official contacts with the administration of General Farrell. With the people of Argentina our friendship remains unaffected. We hope and trust that Argentina will evolve a policy commensurate with her past, worthy of her citizens and calculated to meet the needs of hemispheric defence.

GRANBY MINING CORPORATION

JAPANESE INTERESTS—REFERENCE TO RETURN TABLED MARCH 6

Right Hon. W. L. MACKENZIE KING (Prime Minister): On Tuesday last the hon. member for Rosetown-Biggar (Mr. Coldwell) referred to documents which had been tabled concerning relations before the war between Japanese interests and the Granby Mining Corporation. My hon. friend quoted a statement made by the Japanese minister in a letter dated October 22, 1940, to the effect that the contract of the Granby company with the Japanese company had been approved by the Canadian government and added that he could find in the return no document relating to the contract or to approval by the government. I informed the hon. member that my recollection was that the government had had nothing to do with the contract and that I believed this was made clear in the correspondence.

I have now had an opportunity to have the matter checked and I find that my original impression was correct. In the reply dated November 22, 1940, from the Department of External Affairs to the Japanese minister is the following paragraph, and which I should say was in the return which my hon. friend had:

> In this connection it should be clearly understood that the contract between the Granby Consolidated Mining and Smelting Company for the sale of its output of copper concentrates to a Japanese purchaser had never been "approved by the Canadian government." So far as the Canadian government was concerned, this arrangement was an ordinary private commercial contract which did not require or receive the approval or disapproval of the Canadian government.

The correspondence itself shows how the idea first gained currency that the Canadian government had given its approval. After the fact was pointed out to the Japanese minister that the contract was a purely commercial transaction which had not been given the approval of the government, the Japanese minister admitted that he had never seen any confirmation of the approval, and added:

Pending further instructions from my government, I desire to say with reference to the above, that the intimation I made in our memorandum of the 22nd ultimo to the effect that this sale of copper had been carried on with the approval of the Canadian government had its basis in a passage of the speech Mr. M. J. Coldwell delivered in the House of Commons on July 31, 1940.

This is contained in a letter of November 30, 1940, which is included in the return tabled.

The hon. member referred to the Granby Mining Corporation on three occasions in 1940, and it was really on May 20, at page 53 of *Hansard,* that he claimed that "the contract was made with the approval of the government," although he did refer to the matter again on July 31.

To conclude this question, I wish merely to point out that the Granby contract was entered into in January, 1940, almost two years before Japan entered the war. It was a commercial contract which the government was not called upon to approve or disapprove. However, as the final item of the correspondence, a letter of December 4, 1940, from Doctor O. D. Skelton to the Japanese minister, makes clear:

Like all such contracts, its performance was subject to the general conditions of the public interest, and it ceased to be binding when the copper requirements of Canada and her allies compelled the Canadian government to withhold further permits for the export of copper from Canada to other countries.

Mr. GRAYDON: With respect to the question of approval or disapproval, did the Granby Corporation require a licence for the export of that material to Japan, and, if so, did the government grant it?

Mr. MACKENZIE KING: I cannot say, but I do not think an export licence was required.

Mr. COLDWELL: Were they not required to have permits for the export of this material subsequent to September, 1939?

Mr. MACKENZIE KING: I cannot answer that question offhand, but I shall get the information for my hon. friend. What I am surprised at is that when I asked my hon. friend if this statement of mine was not contained in the correspondence which had been tabled, he said he had read the correspondence through and had it in his hand but it was not there.

Mr. COLDWELL: I got the return that day and I had it on the desk. I read it through but I missed that paragraph.

Some hon. MEMBERS: Oh, oh.

Mr. COLDWELL: It is all very well to laugh, but I did not do it deliberately. I never do. My references in the house were based on the questions I asked during the debate in this house in April, 1940, when I understood it was admitted that the government did know of this and had approved it. Permits had to be given, as I take it.

Mr. MACKENZIE KING: I do not think so, but I shall make sure.

Mr. COLDWELL: The correspondence says so.

Mr. MACKENZIE KING: My hon. friend says he has read the correspondence, and if he says that the correspondence so states, I will be prepared to take his word for it.

Mr. COLDWELL: I shall read it again.

Mr. MACKENZIE KING: Does my hon. friend say that the correspondence says that permits had to be granted?

Mr. COLDWELL: I believe it does; it says that a permit is required.

Mr. MACKENZIE KING: I do not think it does. We shall look up the facts, anyway.

[*Later:*]

Mr. COLDWELL: In view of the exchange between the Prime Minister and myself a few minutes ago, I would refer him again to copy of letter of December 4, 1940, signed by Doctor O. D. Skelton, the last sentence of which reads:

Like all such contracts, its performance was subject to the general conditions of the public interest, and it ceased to be binding when the copper requirements of Canada and her allies compelled the Canadian government to withhold further permits for the export of copper from Canada to other countries.

So that permits were required up to that time.

Mr. MACKENZIE KING: I would still like to look into that and see if a system of permits was in existence as early as 1940. I know there was a period when permits were required, but whether it was at that time or not I am not wholly sure.

EXPORTS TO SPAIN

STATEMENT AS TO NON-SHIPMENT OF WAR MATERIALS FROM CANADA

Right Hon. W. L. MACKENZIE KING (Prime Minister): On Tuesday the hon. member for Winnipeg North Centre (Mr. Knowles) asked me to look into the matter of shipments of war materials from Canada to Spain in view of the rumours concerning such shipments which apparently have been circulated in the United States. I have now had the matter investigated, and I can inform the house that exports from Canada to Spain in recent years have been negligible. In 1943 they were valued at $169,021. The chief product was

short fibre asbestos and asbestos waste used for making building materials.

All shipments to Spain must pass through the allied blockade and must therefore be cleared through the blockade controls. The allied nations obtain from Spain supplies of mercury, wolfram, cork and other materials which are needed for our war effort or which it is desired to deny to the enemy. Whatever may be the rumours to which the hon. member has referred, war materials are not being sent to Spain from Canada.

COLUMBIA RIVER BASIN

STATEMENT WITH RESPECT TO REFERENCE TO INTERNATIONAL JOINT COMMISSION

Right Hon. W. L. MACKENZIE KING (Prime Minister): I should like to make a statement with reference to matters pertaining to the Columbia river which have been referred for investigation to the international joint commission. I am making the statement now because it has been agreed that it will be made simultaneously at Washington.

The governments of Canada and the United States have agreed to refer to the international joint commission, for investigation and report, the question whether it would be feasible and advantageous to make a greater use than is now being made of the waters of the Columbia river system. The reference to the commission is being made under article IX of the treaty relating to boundary waters between the United States and Canada, signed on January 11, 1909.

As questions concerning the Columbia river basin are of great interest to the province of British Columbia, the government of that province has been consulted at all stages in the drafting of this reference.

The report of the international joint commission will not be binding on the governments concerned, but it is likely that the investigations of the commission will result in suggestions and recommendations which will be carried into effect by joint action of the two governments.

The commission has to date dealt with nine separate applications with reference to specific problems concerning the Columbia river and its tributaries. The present reference concerns the entire Columbia river system. It is based on the realization that a large part of the water resources of the two countries in this important river basin is being allowed to go to waste because of lack of adequate regulation and control, and upon the desirability of more effective flood control. The investigation by the commission will cover domestic water supply and sanitation, navigation, efficient development of water power, the control of floods, the needs of irrigation, the reclamation of wet lands, the conservation of wild life and other beneficial public purposes.

When the commission has completed its investigations there will be available to the two governments a complete and detailed report on the best uses to which the waters of this vast river basin can be put.

The Columbia river is 1,200 miles long. In comparison, the St. Lawrence from Duluth to Father Point is 1,700 miles long. The watershed of the Columbia river is 259,000 square miles, of which 39,400 are in Canada.

At present there is a total installed capacity of approximately 450,000 horse-power in the Columbia river basin in Canada. The studies to be undertaken by the commission will determine the total potential water power in the basin.

The Columbia is a truly international river. Any development, and particularly any power development, of the resources of the river on one side of the boundary is certain to have an effect in the other country. For this reason it is necessary that the plans for development of the river basin in one country should be adapted to those in the other.

It is unlikely that a complete report by the commission will be available for several years, but it is expected that the commission will bring out interim reports from time to time with regard to projects which might be integrated with post-war rehabilitation plans.

I now table for the information of the house copies in English and French of the reference by the Canadian government to the international joint commission.

Mr. THOMAS REID (New Westminster): May I be permitted to ask the Prime Minister a question regarding the commission which is to inquire into the Columbia river? Will he consider referring to the commission the question of the violation by the United States of the agreement by building dams across the line without consulting this country, thereby denying to Canadian citizens the rights they had under the treaty of 1845?

Mr. MACKENZIE KING: My hon. friend's question is not so much a question as an assertion of something of which whether it is true or not I do not know.

Mr. REID: Then he will have to take the word of an hon. member.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

PENSIONS—OLD AGE AND BLIND—FILING OF LIENS

Mr. KNOWLES:

1. In what provinces are liens filed against the property of old age and blind pensioners?

2. Is the filing of such liens the subject of any arrangement or agreement between the provinces and federal government?

Mr. ABBOTT: Stand.

Mr. KNOWLES: Will the parliamentary assistant to the Minister of Finance give the reason for the long delay in the answer to this question? It has been on the order paper for a month.

Question stands.

GRAIN—STREET PRICES AND FREIGHT RATES

Mr. DONNELLY:

1. What was the street price of No. 1 Northern wheat at stations taking a 25-cent freight rate in western Canada on December 16, 1929; December 16, 1932, and December 16, 1943?

2. What was the street price of No. 1 C.W. white oats at stations taking a 25-cent freight rate in western Canada on December 16, 1929; December 16, 1932, and December 16, 1943?

3. What was the street price of No. 1 C.W. 6-row barley at stations taking a 25-cent freight rate in western Canada on December 16, 1929; December 16, 1932, and December 16, 1943?

4. What was the street price of No. 1 C.W. flaxseed at stations taking a 25-cent freight rate in western Canada on December 16, 1929; December 16, 1932, and December 16, 1943?

5. What was the street price of No. 1 C.W. rye at stations taking a 25-cent freight rate in western Canada on December 16, 1929; December 16, 1932, and December 16, 1943?

Mr. MacKINNON (Edmonton West):

Date	Grade	Price per bushel	Remarks
1.	Dec. 16, 1929	No. 1 Northern wheat	$1 14	
	Dec. 16, 1932	No. 1 Northern wheat	0 19½	
	Dec. 16, 1943	No. 1 Northern wheat	1 07	—(C.W.B. initial advance)
2.	Dec. 16, 1929	No. 2 C.W. oats	$0 48½	—No. 1 C.W. oats not quoted.
	Dec. 16, 1932	No. 2 C.W. oats	0 07½	—No. 1 C.W. oats not quoted.
	Dec. 16, 1943	No. 2 C.W. oats	0 40	*—No. 1 C.W. oats not quoted.
	*Does not include advance equalization payment of 10 cents.			
3.	Dec. 16, 1929	No. 3 C.W. barley	$0 44	—No. 1 C.W. 6-row not quoted.
	Dec. 16, 1932	No. 3 C.W. barley	0 11	—No. 1 C.W. 6-row not quoted.
	Dec. 16, 1943	No. 2 C.W. 6-row	0 49½	*—No. 1 C.W. 6-row not quoted.
	*Does not include advance equalization payment of 15 cents.			
4.	Dec. 16, 1929	No. 1 N.W.C. flaxseed	$2 29	—No. 1 C.W. flaxseed not quoted.
	Dec. 16, 1932	No. 1 C.W. flaxseed	0 47	
	Dec. 16, 1943	No. 1 C.W. flaxseed	2 27½	*
	*26½-cent freight rate. Freight rate on flax seed 1½ cents higher than on wheat.			
5.	Dec. 16, 1929	No. 2 C.W. rye	$0 73	—No. 1 C.W. rye not quoted.
	Dec. 16, 1932	No. 2 C.W. rye	0 11	—No. 1 C.W. rye not quoted.
	Dec. 16, 1943	No. 2 C.W. rye	1 00	—No. 1 C.W. rye not quoted.

WARTIME PRICES AND TRADE BOARD—REGINA INSPECTORS OR REPRESENTATIVES

Mr. PERLEY:

1. Are T. G. Derrington and H. C. Watson, of Regina, Saskatchewan, employed as inspectors or representatives of the wartime prices and trade board out of the Regina office?

2. If so, (a) what were their respective salaries and expense accounts for the last year; (b) are they permitted to act as collectors of accounts owing to companies or private individuals?

Mr. ABBOTT:

1. Yes. Both men are investigators on the staff of the Enforcement counsel for Saskatchewan.

2. (a) T. G. Derrington—salary $1,800 per annum plus cost of living bonus. Travelling expenses during the calendar year 1943, $777.96.

H. G. Watson—salary $1,800 per annum plus cost of living bonus. Travelling expenses during the calendar year 1943, $476.85.

(b) To obtain the required skilled personnel for the board's staff, it has been necessary, on occasion, to employ members of the staff for most, but not all of their time, allowing them to devote some attention to their private affairs. In such cases, it is arranged that private business must not be given attention during the board's business hours, and that there must be no conflict with duties to the board, which are paramount. These arrangements were made with Mr. Derrington and Mr. Watson, and have been carried out.

SPECIAL PRODUCTS BOARD—ALFALFA OR OTHER SEEDS

Mr. BRYCE:

What persons, companies or organizations in Manitoba, Saskatchewan and Alberta were authorized to purchase alfalfa or other seeds for the special products board?

Mr. GARDINER: The following persons, companies and organizations in Manitoba, Saskatchewan and Alberta have been authorized by the special products board to issue participation certificates on its behalf, on seed purchased from growers:

Manitoba—

Steele, Briggs Seed Company, Limited, Winnipeg.
Brett-Young, Limited, Winnipeg.
McCabe Brothers Grain Company, Limited, Winnipeg.
Searle Grain Company, Limited, Winnipeg.
Manitoba Pool Elevators, Limited, Winnipeg.
Federal Grain, Limited, Winnipeg.
A. M. Thomson, Melita.
J. S. Wheatley, Deloraine.
C. C. Campbell and Son, Reston.
E. Holmgren and Son, Sprague.
A. E. McKenzie Company, Limited, Brandon.
Seed Marketing Company, Limited, Winnipeg.

Saskatchewan—

Steele, Briggs Seed Company, Limited, Regina.
Bell's Limited, Prince Albert.
Newfield Seed & Nursery Farms, Codette.
Newfield Seed & Nursery Farms, Nipawin.
S. A. Early and Company, Saskatoon.
Hood Land Company, Limited, Hudson Bay Junction.
J. H. Speers and Company, Limited, Saskatoon.
Saskatchewan Forage Crop Growers' Co-operative Marketing Assoc., Ltd., Prince Albert.

Alberta—

Alberta Seed Growers' Assoc., Limited, Edmonton.
Capital Seed & Poultry Supply, Edmonton.
Grimm Alfalfa Seed Growers of Alberta, Limited, Brooks.
Steele, Briggs Seed Company, Limited, Edmonton.
Philip Keeley, Sangudo.
Alberta Seed House, Edmonton.
Sangudo-Mayerthorpe & District Seed Growers' Co-operative Assoc., Ltd., Sangudo.
Pembina Valley Co-operative Seed Growers' Marketing Assoc., Limited, Cherhill.
Peace River Seed Growers' Co-operative, Limited, Grande Prairie.
Geo. W. Green & Company, Limited, Lethbridge.

PURCHASE OF PROPERTY IN KINGSTON

Mr. CARDIFF:

1. Has the government acquired the property known as Roselawn, at Union St. West, Kingston, Ontario?
2. If so, when, and what was the purchase price?
3. What is the total of expenditure made by the government on this property since it was purchased?
4. Who is occupying the property at the present time?

Mr. MACDONALD (Halifax):

1. Yes.
2. 21st December, 1942—$25,000.
3. $7,261.10.
4. No. 103 C.W.A.C. Depot Company.

*CANADIAN ARMY—MILITARY DISTRICTS NO. 12 AND 13

Mr. COLDWELL:

1. Has an investigation been conducted recently into alleged irregularities in the conduct of certain persons in military districts Nos. 12 and 13?
2. If so, are these alleged irregularities relative to the misuse of government purchasing vouchers?
3. Who is the officer in charge of the investigation?
4. What has been the result of this investigation and the nature of the misdemeanours, if any?
5. What action has been taken?

Mr. RALSTON:

1. Yes.
2. Yes, in most cases.
3. The officer in charge of the investigation was the adjutant-general and the quartermaster-general.

4 and 5. It is not considered in the public interest at this stage to state what the result of the investigation is. The result of the investigation and the action taken will appear as proceedings are taken which are regarded as warranted having regard to what has been found on investigation.

WARTIME HOUSING LIMITED—HALIFAX

Mr. ISNOR:

1. How many staff houses were constructed by the Wartime Housing Limited in Halifax, Nova Scotia, to accommodate men employed in war work?
2. How are they known or designated?
3. What was the total cost of, (a) construction; (b) furnishing of same?
4. How many men will each accommodate?
5. How many men were registered and actually occupied rooms as on December 31, 1943?

6. What rental and board is charged per man per week?
7. What has been the total cost of construction, furnishing and maintenance from date of erection to December 31, 1943?
8. What has been the total revenue for rental and board to December 31, 1943?

Mr. CHEVRIER:

1. 1 Seamen's manning pool;
1 Deep water commissary;
1 Port control building;
6 Staff houses and 1 commissary;
6 Staff houses and 1 commissary;
2 Staff houses at Eastern Passage;
1 Women's staff house at Eastern Passage;
5 Bunk houses and 1 commissary, hiring and dispatching building.

2. 1 Seamen's manning Pool, Halifax No. 4.
1 Commissary (deep water commissary for Department of Labour), Halifax No. 12.
1 Port control building (Department of Labour), Halifax No. 6.
6 Staff houses and 1 commissary (R.C.A.F.) Harbourview, Dartmouth No. 3.
6 Staff houses and 1 commissary (Wartime Housing Limited) Mulgrave Park, Halifax No. 3.
1 Staff house, Eastern Passage No. 3.
1 Staff house, Eastern Passage, No. 4.
1 Women's staff house, Eastern Passage No. 5.
5 Bunk houses and 1 commissary, also hiring and dispatching building, Halifax No. 10.

3.

	Cost of Construction	Cost of Furnishing and Equipment
1 Seamen's manning pool	$258,463 37	$35,033 51
1 Deep water commissary	17,500 00*	4,000 00*
1 Port control building	Cost paid by Department of Labour.	
6 Staff houses and commissary (R.C.A.F.)	311,524 94	35,087 25
6 Staff houses and commissary (Wartime Housing Limited)	291,068 38	63,570 30
1 Staff house (Eastern Passage)	34,150 00	3,283 40
1 Staff house (Eastern Passage)	33,976 00	3,954 09
1 Women's staff house and commissary (Eastern Passage)	56,200 00*	estimate not complete and includes furniture.
5 Bunk houses and 1 commissary	Cost paid by the C.N.R.	

*These figures are estimates.

4. Seamen's manning pool, port control building and staff houses for R.C.A.F. are not controlled by Wartime Housing Limited. There are no occupancy reports for these buildings in the possession of our department.

	Capacity
1 Deep water commissary	150 seats
6 Staff houses (Wartime Housing)	529 beds
2 Staff houses (Eastern Passage)	176 beds
1 Women's staff house (Eastern Passage)	60 beds

5. Out of the 705 beds available, as at December 25, 1943, 643 beds were occupied. The women's staff house is not complete.

6. Weekly rental rates, $5 single, $3.50 double. Weekly board rates, $6 per 21 meals.

7. $1,147,907.74.

NOTE.—The above figure does not include port control building (Halifax No. 6), the cost of which was paid by the Department of Labour and the five bunk houses and commissary built for the C.N.R. (Halifax No. 10).

8. Total revenue for rental and board to December 31, 1943, from opening of projects is $445,720.24 as operated by Wartime Housing Limited.

BEEF FOR SHIPMENT TO BRITAIN

Mr. CARDIFF:

1. From whom does the meat board purchase beef for shipment to Great Britain?
2. What is the basis upon which the price paid by the board is determined?
3. Has the price the producer receives any relationship to the price paid by the board?
4. Has the board succeeded in stabilizing the price to the producer by these purchases?

Mr. GARDINER:

1. The meat board purchases beef for shipment to Great Britain from any persons who can supply it as per specifications laid down by the board.

2. The price paid for beef by the board is based on a seasonally adjusted floor price for beef which ranges from two and one quarter to one quarter cents below the domestic ceiling, depending on the period.

3. Purchases of beef by the board provide a price support for cattle yielding carcasses of export quality, but the price for cattle is free to find its own level between the floor and the ceiling.

4. Export purchases by the board provide a floor price for beef meeting export specifications although there is nothing to prevent prices paid to producers for live cattle from fluctuating between the equivalent beef floor and ceiling values. Variations in dressing percentage may also have a marked influence on live cattle values.

COAL IMPORTS

Mr. HANSELL:

1. How much coal in, (a) tons; (b) Canadian dollar value, was imported into Canada in 1943?

2. From what countries, and what tonnage from each country?

Mr. MacKINNON (Edmonton West):

1 and 2. Canadian imports, by countries, of coal during the calendar year 1943:

Item	Country	Tons	Value
Anthracite screenings or dust	United Kingdom	13,502	$ 65,002
	United States	118,962	280,539
	Totals	132,464	$ 345,541
Anthracite, domestic sizes	United Kingdom	204,722	$ 1,554,190
	United States	2,974,460	23,589,868
	Totals	3,179,182	$25,144,058
Anthracite, smaller sizes, n.o.p.	United Kingdom	166,564	$ 1,039,534
	United States	1,002,075	4,389,422
	Totals	1,168,639	$ 5,428,956
Coal, bituminous, and coal, n.o.p.	United Kingdom	6,687	$ 46,251
	United States	23,216,375	68,995,964
	Totals	23,223,062	$69,042,215
Coal, lignite	United States	337	$ 1,487
Coal, ex-warehoused for ships' stores	United Kingdom	528	$ 3,168
	United States	404,710	1,280,030
	Totals	405,238	$ 1,283,198

PRICES—HOGS

Mr. McNEVIN:

What was the price of grade A hogs (dressed weight) on the Toronto live stock market on November 15, and May 15, in the years, 1929, 1932, 1943, and February 15, 1944?

Mr. MacKINNON (Edmonton West):

	1929[1 2]	1932[1 2]	1943[2 3]	1944[2 3 4]
	per cwt.	per cwt.	per cwt.	per cwt.
May 15	$17 84	$6 01	$16 80	....
November 15	15 36	5 22	17 15	....
February 15	....	....	....	$17 10

[1] Live weight prices basic grade converted to dressed basis.

[2] Plus $1 per head premium on grade A.

[3] Plus $1 per head provincial premium on grade A (total, $2 per head).

[4] Plus $3 per head dominion premium on grade A (total, $5 per head).

CANADIAN OFFICERS' TRAINING CORPS

Mr. DORION:

1. In order to be accepted in the C.O.T.C., must a student be classed in medical category "A", or can he be accepted when classed in a lower medical category?

2. Are members of the C.O.T.C. receiving any remuneration? If so, in what amount?

3. Are officers, military instructors and office employees of the C.O.T.C. receiving any remuneration. If so, (a) what is such remuneration; (b) out of what fund is it paid to them?

4. Have any or all of the members of the C.O.T.C. waived their remuneration? If so, (a) what is the amount of such waiver; (b) how are the moneys derived from such waiver disposed of?

Mr. MACDONALD (Halifax):

1. It was not necessary for a student (C.O.T.C.) to be classed in medical category "A". He could have been accepted in medical categories "A", "B" or "C" under the former system of categorization. With the abolition of medical categories he can now be accepted with Pulhems profile lower than that required for operational troops.

2. Yes. For the number of days authorized to train in any fiscal year, at the same rate as authorized for personnel of the Reserve Army; viz.

Colonel	$9 20
Lieutenant-Colonel	7 70
Major, if qualified as such	6 50
Captain, if qualified as such	5 20
Lieutenant, if qualified as such	3 60
Lieutenant provisional, or 2nd Lieutenant	3 00
Regimental Sergeant-Major	3 70
All other Warrant Officers, Class 1.	3 40
Regimental Quartermaster-Sergeant, Staff Quartermaster-Sergeant, Quartermaster-Sergeant, Squadron, Battery or Company Sergeant-Major	2 80
Squadron, Battery or Company Sergeant-Major (other than above)	2 50
Squadron, Battery or Company Quartermaster-Sergeant, Staff-Sergeant	2 20
Sergeant	1 90
Lance-Sergeant, Corporal or Bombardier	1 60
Lance-Corporal or Lance Bombardier	1 40
Private	1 20
Boy	0 60

For the year 1943-44 Canadian Officers' Training Corps were authorized to train as follows:

All ranks, 30 days.

Officers and N.C.O.'s, an additional 15 days where instructional duties make this necessary.

3. Yes. (a) If duly appointed or enlisted members of the C.O.T.C., for the number of days training carried out at the rate of pay for such rank as detailed in Question 2. If covering off vacancies on authorized detail of the administrative and training staff detailed for duty with a C.O.T.C., pay and allowances for full time at Active Force rates. (b) War Appropriation.

4. (a) Whilst article 86 of Instructions for Canadian Officers' Training Corps authorizes such waiving, this is purely a question for each C.O.T.C., and there is no information available as to how many members have waived their remuneration, or the amount of such waivers. (b) Paid into the Unit fund and used for the general benefit of members of each Unit, such as the purchase of articles for the comfort of the men which are not obtainable on issue and any other suitable Unit purpose the commanding officer sees fit. All such expenditures have to be properly accounted for and the fund is subject to semi-annual audit by the regimental funds board.

RADIO BROADCASTING—NEWS

Mr. MacKENZIE (Lambton-Kent):

1. Where are the C.B.C. newscasts in regard to the proceedings of parliament finally edited and prepared for broadcasting?
2. What are the names of the men and/or women who form the editorial news staffs of the C.B.C.?
3. Where are they stationed and what are their duties?
4. Where and by whom were they employed previous to appointment with the C.B.C. and what were their duties?
5. By whom were they appointed to the C.B.C.?
6. Who recommended their employment by the C.B.C.?
7. Where were they born?
8. What is their present remuneration?

Mr. LaFLECHE:

1. In Canadian Broadcasting Corporation newsrooms located in Toronto, Montreal, Halifax, Winnipeg and Vancouver. National Network bulletins, like the news summary at 10 p.m., are prepared in the CBC central newsroom in Toronto.

2, 3, 4 and 7. Chief Editor: D. C. McArthur, stationed in Toronto. Has general supervision of the news service. He was with the CBC press and information department before his appointment as chief editor. Prior to joining the CBC in 1939, he was with the Maclean Publishing Company in charge of magazine publicity. His daily newspaper experience was with the Toronto *Globe*. Born: Brooklyn, N.Y. Born of Canadian parents and returned to Canada as a child.

Central newsroom—Toronto—Senior Editor: A. E. Powley, now in England in charge of the CBC Overseas news bureau. Had twenty years news experience in Toronto with the *Mail and Empire*, the *Star* and the *Telegram*. He was telegraph editor of the *Telegram* at the time of his appointment to the CBC. Born: London, England.

W. H. Hogg: Acting Senior Editor; central newsroom in charge of bulletin production. Formerly with The Canadian Press, Toronto, and before that a reporter of the London *Advertiser*. Born: London, Ontario.

P. F. Carscallen: Associate Editor; formerly with the Calgary *Albertan* and the *Globe and Mail*, Toronto. Born: Calgary, Alta.

James Kinloch: Associate Editor; formerly with the CBC Press and Information depart-

ment; before that worked on the Toronto *Star;* the *Sunday Press* of London, England; Fort Frances *Times* and the Perth *Courier.* Born: Chorley, Lancs., England.

M. B. Smith: Associate Editor; formerly with the Winnipeg *Free Press* and the Moose Jaw *Times-Herald.* Born: St. Paul, Minnesota.

R. S. Bryden: Associate Editor; formerly with the Maclean Publishing Company, Toronto, on magazine publicity. Born: Windsor, Ont.

D. S. Curtis: Associate Editor; formerly with the Ottawa *Journal* as a news and sports writer. Born: Toronto, Ont.

Lawrence Duffey: Associate Editor; formerly with the CBC Vancouver newsroom. Before that, with the British United Press, Vancouver. Born: Vancouver, B.C.

Montreal newsroom—French Staff: Jean St. George: Acting Senior Editor; formerly reporter and editor with The Canadian Press, Montreal, and with *La Patrie.* Born: Montreal, P.Q.

G. F. Lefebvre: Associate Editor; formerly with *Le Canada, La Presse* and *Le Jour,* Montreal. Born: Lachine, P.Q.

B. Benoit: Associate Editor; worked on *L'Evenement, Le Journal,* Quebec, *Le Soleil,* Quebec and *La Presse,* Montreal. Born: Ste. Thérèse de Blainville.

L. J. A. Gravel: Associate Editor; formerly commercial editor with radio station CKAC, Montreal. Born: Gravelbourg, Sask.

R. Bourbonnais: Associate Editor; formerly with *La Patrie,* Montreal as reporter. Born: Cartierville, P.Q.

English Staff: Edward Dix: Senior Editor; formerly with the *Globe,* Toronto, Maclean's magazine, Daily *Star,* Toronto, and the Calgary *Albertan.* Born: Martinique, West Indies.

Harry Shane: Associate Editor; formerly with The Canadian Press, Montreal, and Canadian Financial Bureau, Montreal. Born: Saint John, N.B.

Halifax—V. F. Segee: Senior Editor; formerly with the Fredericton *Mail,* Saint John *Citizen;* was radio news editor of radio station CFNB, Fredericton, and also worked with the British United Press, Toronto. Born: Fredericton, N.B.

Margaret MacDonald: Associate Editor; formerly secretary with the Canadian Press, Halifax. Born: Calgary, Alta.

J. G. Murphy: Associate Editor; formerly an editor and feature writer for the Saint John *Citizen.* Born: Saint John, N.B.

[Mr. LaFleche.]

Winnipeg—W. H. Metcalfe: Senior Editor; formerly city editor and telegraph editor, Winnipeg *Free Press.* Born: Portage la Prairie, Man.

Harold Robson: Associate Editor; on army service before joining CBC staff. Before that, on newspaper reporting with the Peterborough *Examiner* and the Staffordshire *Sentinel* in England. Born: Leeds, Yorks., England.

Helen Sinclair: Junior Editor; no previous newspaper experience; a graduate of the University of Manitoba. Born: Wingham, Ontario.

Vancouver—R. E. Elson: Senior Editor; formerly re-write and radio editor with The Canadian Press, Vancouver. Born: Aberdeen, Wash., born of Canadian parents and returned to Canada as a child.

J. D. Nixon: Associate Editor; formerly radio news editor with CJCA, Edmonton. Born: Mortlach, Sask.

W. D. Smith: Associate Editor; formerly free-lance radio and newspaper writer. Born: England.

E. A. McLellan: Junior Editor; no news experience, except in the Vancouver newsroom. Born: New Westminster, B.C.

5. They were appointed to the CBC by the general manager.

6. Their appointment to the CBC was recommended to the general manager by the general supervisor of programmes, on the advice of the CBC chief news editor.

7. See above.

8. This information has not been made public in the past, as it was not deemed in the public interest to do so.

SOLDIER SETTLERS—ALBERTA

Mr. BLACKMORE:

How many veteran soldier settlers of the 1914-1918 war were evicted from their farms in Alberta during each of the years 1940, 1941, 1942, 1943?

Mr. CRERAR: 1940, nil; 1941, two; 1942, nil; 1943, two.

WESTERN FEED GRAIN

Mr. BLACKMORE:

Has the government taken any measures to avoid the development of a shortage of feed grain in western Canada and particularly in southern Alberta, arising out of the shipment of grains to eastern Canada?

Mr. GARDINER: No representations indicating a shortage of feed grain in western Canada have been made to the Department of Agriculture, but the situation is being watched in different areas.

FRUIT BASKETS AND VEGETABLE CONTAINERS

Mr. CORMAN:

1. What supplies are available for the manufacture of fruit baskets and vegetable containers for 1944?

2. What arrangements have been completed between the government and the container manufacturers so that the growers can be supplied with these containers for the coming large crop?

Mr. ABBOTT:

1. Normal supplies of raw materials are available for the manufacture of fruit and vegetable veneer packages. Assistance is being given by the administrator to maintain a supply of raw materials for basket production where manufacturers are unable to obtain supplies for themselves.

2. For the year 1943 the production of fruit and vegetable baskets reached record levels. So far, for this season, which is deemed to have begun on November 1, 1943, production has continued through the winter months while last winter basket manufacturers were practically shut down.

The manufacture of fruit packages is under a subsidy arrangement which ensures the manufacturers adequate operating profit margins.

Active assistance is also being given to enable the supply of labour to be maintained at proper levels.

There are limits to the quantity of veneer fruit and vegetable containers that can be produced with existing facilities. Everything possible is being done to ensure maximum production for this season.

The potential supply situation might be summed up as follows:

(1) The carryover of baskets into 1944 by the growers was much larger than is normally the case due to the poor crop in 1943 and peak basket production in that year.

(2) The manufacture of baskets through the winter months this year together with increased raw material production facilities, would seem to indicate a probable increased production of baskets for the 1944 season of about twenty per cent as compared with 1943.

SHIPMENTS OF ALUMINUM

Mr. CHOQUETTE:

1. From the 10th September, 1939, to the 7th December, 1941, has Canada delivered any aluminum, either unmanufactured or manufactured, to other countries than Great Britain, the British dominions and the United States?

2. If so, to what countries has aluminum originating from plants in Canada, been delivered?

3. What quantity and of what value, to each country, and what were the dates of said deliveries?

Mr. MacKINNON (Edmonton West):

1, 2 and 3.

(As exports have many varied forms such as ingots, sheets, utensils, etc., only the total dollar value is given and not the quantity.)

Exports of Aluminum (except to United Kingdom, British Possessions and United States) during periods specified.

Country.	Sept. 1 to Dec. 31, 1939	Calendar year 1940	Jan. 1 to Nov. 30, 1941
Argentina	$ 976	$ 1,058	$ 337

PRICES—WHEAT, OATS, ETC.

Mr. FAIR:

1. What was the street price of No. 1 Northern wheat at stations taking a 25-cent freight rate in western Canada on December 16, 1919?

2. What was the street price of No. 1 C.W. white oats at stations taking a 25-cent freight rate in western Canada on December 16, 1919?

3. What was the street price of No. 1 C.W. 6-row barley at stations taking a 25-cent freight rate in western Canada on December 16, 1919?

4. What was the street price of No. 1 flaxseed at stations taking a 25-cent freight rate in western Canada on December 16, 1919?

5. What was the street price of No. 1 C.W. rye at stations taking a 25-cent freight rate in western Canada on December 16, 1919?

Mr. MacKINNON (Edmonton West):

Grade	Price per Bushel	Remarks
1. No. 1 Northern wheat.....	....	No wheat grades quoted.
2. No. 2 C. W. oats.....	$0 76	No. 1 C. W. oats not quoted.
3. No. 3 C. W. barley.....	1 34	No. 1 C. W. 6-row not quoted.
4. No. 1 N. W. C. flaxseed.....	4 68	No. 1 C. W. flaxseed not quoted.
5. No. 2 C. W. rye.....	1 41	No. 1 C. W. rye not quoted.

SELECTIVE SERVICE—TRANSFERS AND WAGE REDUCTIONS

Mr. MacKENZIE (Lambton-Kent):

1. Were charges made in a circular dated November 16, 1943, addressed to members of parliament, municipal officials and others by J. W. Gilbert, Hanover, Ontario, that employers had taken advantage of compulsory labour transfer orders of national selective service, to reduce wages?

2. If so, was an investigation made into the charges?

3. What was the result of such investigation?

Mr. MITCHELL:

1. Yes. Mr. Gilbert made two complaints concerning the administration of the national selective service civilian regulations.—

(1) That, under the compulsory employment transfer orders, married men engaged in non-essential work were directed by the employment and selective service office, Walkerton, Ont., to apply for and accept essential employment at lower wage rates;

(2) That a certain employer in Hanover, Ont., (later identified as William Knechtel & Son, Limited) had "taken advantage of the compulsory selective service transfer of employees from non-essential work to lower his pay for beginners" from 36c per hour (cost of living bonus included) in September, to 31c per hour (cost of living bonus included) in November, 1943.

2. Yes, a very complete investigation.

3. The result of the investigation indicated that Mr. Gilbert based his complaints on mere hearsay without making any attempt to verify the information or to secure an understanding of the national selective service civilian regulations involved.

With regard to the first complaint, only one married man was directed to and ordered to accept employment by the employment and selective service office at Walkerton under the compulsory employment transfer orders. This man was not directed to the William Knechtel & Son, Limited, of Hanover, referred to in the second complaint. Furthermore, this man, upon being directed under the compulsory employment orders, received a wage rate of 3c per hour more from the employer to whom he was directed than he did from his former employer. In addition to this, he was directed to employment where he was able to work a greater number of hours per week than he had been working in his original employment. The charge with respect to the transfer of married men is, therefore, unsubstantiated.

In answer to the second complaint, no persons, either single or married, have been directed to employment with the Knechtel & Son, Limited, referred to. It is true that a number of men have been referred to this employer in accordance with the national selective service civilian regulations. Regarding the rate of wages paid by this firm, the records indicate that from August 1 to the present time every new employee hired received an initial wage rate of 30c per hour, plus 60c per week cost of living bonus. It is wholly untrue and contrary to the facts that the administration of the national selective service civilian regulations made it possible for this employer to lower the wage rate being paid to new employees.

AUDITOR GENERAL'S REPORT—PROFIT OF 40 PER CENT ON CONTRACT

Mr. KNOWLES:

1. If the profit of 40 per cent on cost as disclosed by the cost audit on the contract referred to in item 163 on page 50 of the auditor general's report for the year 1942-43 has been explained, what is the explanation?

2. If adjustment has been made in connection with this item, what are the terms of said adjustment?

Mr. CHEVRIER: Upon receipt and consideration of the audit report, this contractor who operates a very small business was requested to make a refund reducing the profit. As a result, the company submitted financial statements to show that their annual sales were less than $50,000 and that the profit before considering salary for the proprietor was approximately 10 per cent.

Under the circumstances, it was not considered desirable to press for immediate payment of the refund since to do so would seriously embarrass the company financially and impair its usefulness in filling further contracts. Negotiations are being carried on with a view to final adjustment on an overall basis.

BENTONITE

Mr. WINKLER:

1. Is the mineral known as bentonite being imported into Canada at the present time?

2. If so, what customs or other border-crossing charges are made?

3. What inducement, if any, has been given to bentonite producing companies in Canada to enable them to meet the increased demand by Canadian war industries?

Mr. CHEVRIER:

1. Yes.

2. Bentonite enters Canada duty free but the 10 per cent special war tax applies and 8 per cent sales tax if applicable.

3. Bentonite has never been in short supply. No inducement has been offered to Canadian producing companies.

HONEY

Mr. MATTHEWS:

What amount of honey was produced in each province of Canada during the years 1940, 1941, 1942, 1943, and what was its total approximate value in each year?

Mr. MacKINNON (Edmonton West):

		1940	1941	1942	1943*
Prince Edward Island					
Production	lb.	18,900	12,200	33,500	20,000

*Preliminary.

1943 value figures not available.

PAYMENTS TO ADVERTISING AGENCIES

Mr. ROSS (St. Paul's):

1. What method is employed in placing the classified advertising in the daily newspapers for the national selective service and unemployment insurance departments in the city of Toronto, and how are payments made?
2. Are any agents or agencies employed for this purpose?
3. If so, (a) how are they remunerated; (b) what is the basis of remuneration; (c) what payments have been made to each of such agencies?

Mr. MITCHELL: As a matter of policy the employment office of national selective service at Toronto does not secure the insertion of classified advertising.

Since the office opened one or two classified advertisements only have been paid for by the office at a total cost of less than $5. These were placed direct—not through an advertising agency.

FARM LOAN BOARD

Mr. McCUAIG:

1. How many loans were made in Ontario by the Canadian farm loan board in each fiscal year from March 31, 1940, to March 31, 1943?
2. What was the total amount of loans made in the said province during each of these years?
3. How many applications for loans in the province of Ontario were disposed of in the fiscal year ending March 31, 1943, and how were the applications not granted disposed of?
4. How many persons were employed in the Toronto office in the fiscal year ending March 31, 1943?
5. What was the total cost of the administration of the farm loan board in Ontario for the said fiscal year?
6. How much was collected from the farmers for inspection fees for the said fiscal year?

Mr. ABBOTT:

The following answer is submitted by the Canadian Farm Loan Board:

1 and 2.

Year Ending 31 March	Loans Granted in Province of Ontario	
	No.	Amount
1941	288	$621,450.
1942	158	327,300.
1943	108	272,500.

3. During the fiscal year ended 31st March 1943, 265 applications for loan in the Province of Ontario were disposed of as follows:—

108—Approved for loan
157—Withdrawn, cancelled or rejected
33—Still pending as at March 31, 1943

4. 17 as of April 1, 1942
13 as of March 31, 1943

5. $45,630.33 (Includes salaries $28,959.97 and proportion of head office expenses $10,365.79). Total cost of administration of the Ontario office for the fiscal year ended March 31, 1943 was .985 per cent of total investment.

[Mr. J. A. MacKinnon.]

6. $2,485 of which $695 was refunded to applicants.

JAPANESE NATIONALS

Mr. MITCHELL: On February 14, 1944, at page 428 of *Hansard* I gave a partial answer to a question standing in the name of the hon. member for Peterborough West (Mr. Fraser) on page i of the *Votes and Proceedings* of the house, No. 10, February 9, 1944, in regard to Japanese nationals. I should now like to give the complete answer to this question:

Mr. FRASER (Peterborough West):

1. How many Japanese have been removed from the province of British Columbia to other provinces?
2. To what provinces have they been removed, and how many to each province?
3. Of those removed to the province of Ontario, how many are naturalized?
4. How many of these are entitled to vote in federal elections?
5. Of these, how many are in each riding (federal) in Ontario?

Mr. MITCHELL:

1. 6,480, including women and children.
2. Alberta, 2,880; Saskatchewan, 57; Manitoba, 1,011; Ontario, 2,234; Quebec, 298.
3. 136.
4. Such of the above as qualify under the Dominion Elections Act 1938, section 14.
5. Number of naturalized Japanese Canadians in each federal riding in Ontario:

Algoma West	3
Brant	3
Broadview	3
Cochrane	5
Eglinton	1
Elgin	8
Kent	6
Kingston City	2
Lambton-Kent	1
Lanark	1
Lincoln	11
Middlesex East	6
Peel	5
Port Arthur	12
Rosedale	6
St. Paul	27
Spadina	14
Trinity	11
Waterloo South	1
Welland	3
Wentworth	13
York East	2
York North	1
York South	3
Total	148

(Of the 148 naturalized Japanese Canadians as listed above, 136 were evacuated from the protected areas of British Columbia as mentioned in reply to section 3 of this question.)

QUESTIONS PASSED AS ORDERS FOR RETURNS

RADIO BROADCASTING—ALLOTMENT OF CHANNELS TO CANADA

Mr. ROSS (St. Paul's):

Under the North American regional broadcasting agreements of 1941, known as the Havana agreements: 1. How many class 1A, 1B, II, III, IV channels were allotted to Canada?

2. What is the frequency of each?

3. What is the minimum and maximum power of each channel?

4. How many of them are now occupied?

5. What stations occupy them?

6. What power are they using?

7. What channels are exempted from the use of minimum power?

8. What stations since 1939 have applied for an increase of power, and what power was applied for, and what power increase was granted?

9. Has application been made since 1939 for the use of unoccupied channels?

10. If so, what power was applied for?

11. What is the minimum power of the unoccupied channels?

12. What stations have applied for permits to experiment or otherwise in frequency modulation, television, facsimile?

13. Have any permits been granted?

MOBILIZATION ACT—OCCUPATIONAL CLASSIFICATIONS

Mr. POULIOT:

How many men from each province were previously engaged in any one of the following industries before joining the army as G.S. soldiers or N.R.M.A. soldiers, (a) farming; (b) fishing; (c) lumbering; (d) mining; (e) shipbuilding; (f) aircraft production; (g) ammunition and gun production; (h) arsenals and small arms ammunition production; (i) automotive and tank production; (j) chemicals and explosives production; (k) gauge and cutting tool production; (l) petroleum refineries; (m) railways and telegraph lines; (n) construction and repair of locomotives and railway cars and maintenance of the right of way of the railways; (o) other transportation systems (air, tramways and trucks); (p) power companies (excluding tramway conductors); (q) dominion public service; (r) merchant marine; (s) the pulp and paper industry; (t) the textile industry (including the manufacture of military equipment); (u) the steel industry; (v) the rubber industry; (w) the leather industry; (x) the operation and repair of telephone lines; (y) the manufacture of alcohol for war purposes; (z) newspapers and periodicals?

BRITISH COLUMBIA FRUITS AND VEGETABLES—FERTILIZER

Mr. CRUICKSHANK:

1. Of the production of, (a) strawberries; (b) raspberries; (c) canning corn; (d) canning beans; (e) canning peas, in British Columbia in 1943, what percentage was produced west of the Cascades?

2. What is the estimated crop of the above-mentioned products for the current year in this area?

3. What is the rate of subsidy to be paid this year on fertilizer, (a) east of the Cascades in British Columbia; (b) west of the Cascades?

SELECTIVE SERVICE—LINOTYPE OPERATORS

Mr. ROSS (Souris):

1. How many applications have been made to national selective service by linotype operators for positions from July 1, 1943, to February 1, 1944, by provinces?

2. How many applications have been made to national selective service by publishers for linotype operators from July 1, 1943, to February 1, 1944, by provinces?

3. How many linotype operators have been placed by national selective service in the province of Manitoba from July 1, 1943, to February 1, 1944?

4. Who have they been placed with?

PENITENTIARIES—BORSTAL SYSTEM

Mr. CHURCH:

1. What has been done to install Borstal system in Canada's prisons since the report of the prison commission was received?

2. How many of the ages of 15, 16, 17, 18 and 19 are now confined in each federal prison, and where?

3. What recommendations of the said royal commission's report aforesaid have already been adopted?

BUSINESS OF THE HOUSE

EASTER ADJOURNMENT

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I should like to ask the Prime Minister if he could indicate to the house when he expects to be in a position to make a statement concerning the Easter recess.

Right Hon. W. L. MACKENZIE KING (Prime Minister): My hon. friend was kind enough to inform me that he intended to ask this question to-day, and I will seek to oblige him and the house by giving an answer immediately. The government proposes to have an adjournment of a fortnight at Easter. The house will adjourn, if it gives its consent, on the evening of Friday, March 31, and will reassemble on Monday, April 17. It will be noticed that by this arrangement no less than six of the days of the recess will be either Saturdays or Sundays.

ALUMINUM

REDUCTION OF PRICE BY ALUMINUM COMPANY OF CANADA

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I wish to ask the Minister of Munitions and Supply a question, notice of which I have given him already. I understand

he announced through the press on Tuesday last that a reduction in the price of aluminum sold by the Aluminum Company of Canada had been effected by agreement between the company and the government. If this agreement has been reduced to writing, will the minister table it in the house? If the agreement has not been reduced to writing, will the minister indicate to the house the principal terms thereof, and particularly what price reduction has been agreed upon?

Hon. C. D. HOWE (Minister of Munitions and Supply): I received notice of this question just as I was coming into the house. The fact of the matter is that the reduction was a voluntary reduction by the company, of which I was informed by letter. I shall be glad to table the letter on another occasion.

Mr. GRAYDON: Will it give the price?

Mr. HOWE: Yes.

MEDICAL SERVICES

INQUIRY AS TO PROPOSALS FOR SUPPLY OF PHYSICIANS IN RURAL AREAS

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): May I direct a question to the Minister of National Defence, as to whether the department has made plans for the supply of physicians in the rural sections of the dominion? If so, what are these plans, and are they of a temporary or permanent nature? I will let the question stand as a notice.

Mr. SPEAKER: That is a question which should be placed on the order paper.

WHEAT

REFUND OF PORTION OF SUBSIDIES PAID TO FLOUR MILLERS

On the orders of the day:

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Mr. Speaker, I wish to make a brief statement supplementing my reply to a question asked by the hon. member for Souris (Mr. Ross) on wheat used by millers. My original reply appears on pages 1043 and 1044 of last Thursday's *Hansard,* and while my reply was correct so far as it went, I omitted to mention that under order in council P.C. 6602, dated August 19, 1943, flour millers are required to refund to the commodity prices stabilization corporation, for account of the Canadian wheat board, all subsidies contributing to profits taxable at 100 per cent under the Excess Profits Tax Act.

While the exact amount, of course, cannot yet be determined, the effect of the provision I have just mentioned will be that a substantial proportion of the payments being made to mills on their domestic flour millings will be eventually returned to the government, and the government will not be required to refund to the millers after the war the twenty per cent as provided under the Excess Profits Tax Act on such moneys.

DOUKHOBORS

QUESTION OF COMPLIANCE WITH SERVICE AND OTHER REGULATIONS

On the orders of the day:

Mr. W. K. ESLING (Kootenay West): In view of recent demonstrations, may I ask the Minister of Labour whether he is considering or has completed the formulation of method for dealing with Doukhobors who ignore the alternative service regulations or who disobey other Canadian authorities?

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, the hon. member for Kootenay West has again raised the thorny question of the Doukhobors. I appreciate the interest he has taken in this problem. May I say to him that in a big way the Doukhobors in Saskatchewan are complying with the regulations, and most of them have appealed on grounds of being conscientious objectors and have been directed to alternate employment.

Mr. GRAYDON: Could the minister speak just a little louder?

Mr. MITCHELL: Well, if some hon. members would stop talking perhaps my hon. friend could hear what I am saying.

Mr. GRAYDON: A combination, I think.

Mr. MITCHELL: That may be true, too. In British Columbia, I am frank to admit, the situation is not as good as it is in Saskatchewan. At the moment the regulations are being tightened up and investigation is being made by the Royal Canadian Mounted Police and the provincial police of British Columbia.

LABOUR CONDITIONS

WARTIME WAGES CONTROL ORDER

On the orders of the day:

Mr. A. R. ADAMSON (York West): May I address a question to the Minister of Labour? When may we expect to have the revised wartime wage control order communicated to the house?

Hon. HUMPHREY MITCHELL (Minister of Labour): My hon. friend will know in due course, when the government decides upon it.

Mr. ADAMSON: Is order in council P.C 9384 now in effect?

Mr. MITCHELL: I think my hon. friend knows as well as I do. — Yes.

Mr. ADAMSON: It is?

Mr. MITCHELL: I should like to inform my hon. friend that notwithstanding all the criticism, we have had no difficulty whatever with the operation of that order in council.

Mr. GRAYDON: That does not mean that the minister is not going to alter it, I hope?

Mr. MITCHELL: No, absolutely not. I want to make that clear.

MAPLE SYRUP

INQUIRY AS TO CONTROL OF SALES

On the orders of the day:

Mr. LIGUORI LACOMBE (Laval-Two Mountains): I wish to direct a question to the Minister of Finance or his assistant. Will the producer of maple syrup or maple sugar be obliged this year to demand coupons from the consumer when he sells to him directly his products?

Mr. SPEAKER: That question, I think, should be put on the order paper.

CANADIAN ARMY

DECORATIONS FOR GALLANTRY

On the orders of the day:

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): Following the precedent set last year by my hon. and esteemed friend the member for Waterloo North (Mr. Breithaupt) when he mentioned the decoration that had been awarded to Lieutenant-Colonel C. C. Merritt, V.C., after the Dieppe raid, it is my privilege to-day, sir, to mention again to the house the signal honour which has been bestowed on Major Paul Triquet, V.C., of Cabano, Témiscouata, P.Q. In the whole world there is a feeling of admiration for the hero, and we of the united nations take special pride in recalling that he is the second Canadian to receive such a coveted decoration from the hands of His Majesty during this war.

Very often, in the schools, young people are told of Leonidas at Thermopylae. They should be taught modern history. If they are told about Leonidas, they should know also of Merritt and Menard at Dieppe, of Triquet at Casa Berardi in Italy, and all the heroes of our time who have been awarded decorations for their gallantry. That should be done by way of recognition of what these men have achieved, and in recognition as well of the unknown soldier.

I have two suggestions to offer. The first is that all citations giving the reasons why awards for gallantry have been granted should be sorted, and if all citations are not sent to each school, at least the citations regarding the men of each constituency should be sent to each school of that constituency in order to inform young children of what has been done by gallant Canadians during this war.

My other suggestion is a very practical one, and here again we have the example of Westminster in the matter of parliamentary grants which were awarded to Nelson, to Wellington and to all the great leaders of the navy and of the army. Moreover, we have the example set by this parlaiment, with regard to Sir Arthur Currie. In my humble view there should be a tax-free parliamentary grant to each living holder of the V.C. which would enable him to live independently.

I submit these suggestions, sir, and I take this opportunity to congratulate the family of Major Paul Triquet, V.C., on the signal honour which has been conferred upon him and which is shared by all his men.

Mr. SPEAKER: The remarks of the hon. member have raised a question in my mind. All hon. members of this house will probably in the future find themselves in the same position as the hon. gentleman, in that they will wish to call attention to the bravery, and the consequent decoration, of men in their respective constituencies. If the precedent that is set to-day is not followed on subsequent occasions I shall perhaps be in the position of having to differentiate between hon. members. I should like therefore to have the sense of the house in the matter. My own opinion is that the government should of itself do the proposed honours to soldiers who may be decorated for having distinguished themselves in the war, and that this should be sufficient for the house. Otherwise I shall be faced with this question throughout the session.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, March 6, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF NATIONAL DEFENCE FOR NAVAL SERVICES

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): Mr. Chairman, for the fourth time I come to the House of Commons with a request for the moneys which the Department of Naval Services estimates as necessary to carry on its work for the coming fiscal year, and I should like now to place on *Hansard* a table, or rather part of a table, that was presented to the house by the Minister of Finance (Mr. Ilsley) on February 11, when he introduced the war appropriation bill. This partial table shows the estimated amounts required by the naval service for the current fiscal year and the amounts asked for the next fiscal year.

Department of National Defence
NAVAL SERVICE
Comparison of 1943-1944 and 1944-1945 Estimates

Objects of expenditure	Estimates 1943-1944	Estimates 1944-1945	Increase	Decrease
1. Civil salaries	$ 6,192,054	$ 6,511,987	$ 319,933	.....
2. Pay and allowances	89,565,119	114,698,835	25,133,716	.....
3. Travel, transportation and freight	6,978,000	9,794,479	2,816,479	.....
4. Properties—				
(A) Capital expenditure	36,579,608	17,990,462	.....	$18,589,146
(B) Repairs, operating expenses and rentals	6,267,182	6,715,891	448,709	.....
5. Personnel supplies and services: Food, medical and dental stores, clothing and personal equipment.	22,015,072	27,846,280	5,831,208	.....
6. Signal and wireless equipment, land line construction, etc.	4,592,188	19,759,334	15,167,146	.....
7. Ammunition	14,245,890	23,835,200	9,589,310	.....
8. Armament stores	42,415,548	26,458,650	.....	15,956,898
9. Fuel cost of ships	25,257,798	27,806,604	2,548,806	.....
10. Acquisition, construction, charter, repair and upkeep of ships	167,571,202	82,282,000	.....	85,289,202
11. Naval stores and harbour defences: Small boats, minesweeping, degaussing, anti-submarine, fire-fighting and training equipment.	57,651,110	34,678,967	.....	22,972,143
12. Miscellaneous stores and services: Printing, stationery, laundry, office machinery, teletype rental, etc.	6,552,959	8,873,210	2,320,251	.....
13. Sundries: Postage, pilotage, prize funds and other costs not included in above items	3,261,237	2,748,101	.....	513,136
				$143,320,525
			$64,175,558	64,175,558
	$489,144,967	$410,000,000		$79,144,967

It will be observed that for the present year we estimated an expenditure of $489,000,000, in round figures. It is now certain that we shall not reach that figure. It is likely that the expenditure for the present fiscal year will be in the neighborhood of $410,000,000, or about the same as the expenditure estimated for the next fiscal year.

At such a time as this one is tempted to look back into other years and to compare the general situation of to-day with the conditions of other times. In 1941, when I first presented the estimates of this department to the house, the general position of our arms was highly precarious. The British commonwealth stood alone, the battle of Britain still raged, air assaults of great fierceness and magnitude had been launched against that

[Mr. Speaker.]

island; and even as I spoke three years ago her cities, her factories, her ports, yes, her ancient monuments even were being subjected to heavy and bitter attack from the air. The battle of the Atlantic, or the campaign of the Atlantic as it should more properly be called, was still in a most critical and indecisive stage, and the island fortress of Britain, whose very existence depended on the successful issue of that struggle, was threatened with disaster. Only a few months before, Mr. Churchill said, in a passage remarkable, even among Churchillian utterances, for its eloquent beauty:

> And now it has come to us to stand alone in the breach, and face the worst that the tyrant's might and enmity can do. Bearing ourselves humbly before God, but conscious that we serve an unfolding purpose, we are ready to defend our native land. We are fighting by ourselves alone; but we are not fighting for ourselves alone. Here, in this strong city of refuge which enshrines the title deeds of human progress and is of deep consequence to Christian civilization; here, girt about by the seas and oceans where the navy reigns; shielded from above by the prowess and devotion of our airmen—we await undismayed the impending assault.

By 1942 the forces of the British commonwealth had been joined by the great armed strength of Russia and the United States; but, on the other hand, the formidable fleets and armies of Japan had been ranged against us.

The struggle on the Atlantic assumed a more direct and sinister form for us in Canada when, in that same year, German submarines penetrated into the gulf and lower reaches of the St. Lawrence and there sank merchant ships and warships.

The year 1943 began with loudly-voiced and widely heralded threats by the new supreme commander of the German navy, Admiral Doenitz, an officer of very considerable submarine experience, who spoke confidently of new weapons and plans of attack which would disrupt our sea communications with Europe, and inflict great losses on our ships of war. But the predictions of Admiral Doenitz still stand in the realm of unfulfilled prophecy rather than in the world of solid achievement. The year that has passed marked the most successful defence ever made by our ships of war, both surface ships and air, against the attacks of submarines; and it saw the greatest number of submarine destructions ever recorded in a similar period. The Atlantic campaign is not yet won, but no one can deny that the tide of that campaign turned definitely in our favour during the year.

U-boat destruction. Well over two hundred enemy U-boats were destroyed in 1943, most of them German, but some of them Japanese and some of them Italian. In the war of 1914 to 1918 the total number of enemy submarines destroyed was just short of two hundred. Thus in the year 1943 alone the destruction of enemy submarines was greater than in the whole period of the last great war. This destruction of U-boats is of twofold beneficial effect to us. Every U-boat destroyed takes with it either to the bottom of the sea or as prisoners on allied warships the skilled enemy captains and officers on whose training and courage so much of the success of U-boat warfare depends. It also deprives the enemy of one more weapon to be used in his war against our shipping.

I come now to a point which I think is deserving of mention. In 1942, as I have said, German U-boats ranged far afield and reached the coastal waters of Canada. There immediately arose in certain quarters of this country loud demands for the redisposition of the Canadian navy. There were those who urged that the Canadian navy should be disposed in the Cabot strait, in the strait of Belle Isle and in the gulf of St. Lawrence, there to await submarine attacks. Under this arrangement, of course, we would have to rely on some other navy to protect those ships, our own Canadian ships and ships of allied nations, while they were carrying Canadian food and Canadian war supplies on the high seas. Nevertheless that was the arrangement that certain people in this country wished to see put into effect.

Those responsible for our naval strategy however held strongly to the view that while we should give protection to our own shores and coastal waters, and while certain ships should be maintained in those localities for that purpose, nevertheless Canadian ships of war operating anywhere on the Atlantic were a protection not only to our shipping but to our shores as well. And so the Canadian navy went on with its assistance in the great work of convoying allied merchant ships and attacking enemy submarines wherever such attacks presented themselves.

In the year 1943 not a single German submarine made an attack in the gulf or river St. Lawrence. The reason for the immunity which we enjoyed last year is to be found, I think, in the fact that Canadian and allied warships and planes met and attacked the U-boats far out in the Atlantic, and those under-sea marauders had little opportunity of making attacks close to our coasts.

The Atlantic campaign has gone much more successfully in the past year than in previous years, but it is a mistake, a great mistake,

to think that it has been won. I have always held the view that no matter what may happen in any other theatre of war Germany must continue her attacks on our shipping to the end. She may be driven out of Africa or out of Sicily and yet she can continue to fight on strongly. But when it comes to pass that Germany lacks the strength or the inclination to attack our shipping, then we shall know that she is ready to throw in her hand. For she knows of a certainty how important, how vital is the line between these shores and Europe, and one of her greatest hopes for victory must lie in the breaking or disruption of that line.

The Atlantic campaign has gone well for us because of the increased strength of allied naval and air forces in that ocean and because of the effective cooperation between these forces. Shore based aircraft, carrier based aircraft, have proved to be most important factors in this struggle, not alone because of their own striking power but also because of their ability to detect and report the presence of enemy underwater craft.

Shipbuilding. I come now to the question of shipbuilding, and I shall show that the increased strength of allied naval forces comes as a result of the magnificent efforts made by the managers and workers in the shipyards of the allied nations. Despite losses, the service navies of Great Britain, the United States and Canada are definitely and decidedly greater in strength than they were at the beginning of the war. All losses of fighting ships have been more than replaced.

In a few moments I shall come to deal with the production of warships in Canadian yards, but I may say at this moment that by far the greater number, indeed almost the entire number, of our fighting ships have been built in Canadian yards by Canadian workmen out of Canadian materials. When war broke out the shipbuilding industry in Canada could be described as virtually non-existent. A few shipyards existed on our east and west coasts and on the shores of our great lakes and on the river St. Lawrence; but they had become mainly ship repair yards, and probably there were not five thousand men in all Canada in the shipbuilding and ship repair industry. From these small beginnings the Department of Munitions and Supply has succeeded in developing a shipbuilding industry whose efforts have amazed the world. So far as ships of war are concerned, at first we had to import much of the material required, much of the steel for the hulls, the auxiliary machinery and other apparatus necessary for the equipment and operation of ships of war.

Probably it would be true to say that our first ships were not more than 50 per cent Canadian manufacture. But we have advanced far beyond that stage of dependence upon other countries. To-day the ships of war building in Canadian yards, in their material, their machinery, their guns and other equipment, are about 95 per cent a Canadian product. These figures, I think, speak eloquently of the successful efforts of Canadian factories, Canadian management, Canadian workmen and Canadian shipyards.

But that is not all; we have done more than build ships of war for ourselves. We have built already not far from 100 ships of war for the British Navy, and we have now building in Canadian yards or on order in those yards about the same number of ships for that great navy. We have built also a few ships of war for the United States Navy.

In the realm of merchant shipping, United States, British and Canadian yards are now and for some time have been turning out merchant ships at a rate much faster than the rate at which they are being sunk, the United States of course supplying the greater share of that tonnage. There would now seem to be every justification for the statement that we can maintain this ratio against the worst the enemy can do. We can continue to produce merchant ships faster than he can sink them. Thus both offensively and defensively the story of the sea is much brighter at this time than in previous years.

Growth of navy. Now, Mr. Chairman, let me continue in historical vein for a moment longer and give the committee some figures to illustrate the growth of the Canadian navy. I have been looking at a report recently prepared by the naval staff showing the development of the Canadian navy since the beginning of the war, and it presents a story of truly remarkable expansion. The 6 combat ships we had at the beginning of the war have grown to roughly 250 fighting ships. The auxiliary vessels and patrol craft, which numbered 7 in the early days of September, 1939, now stand at more than 450. So that the number of our ships has increased more than fifty-fold in a little over four years. When war broke out we had not quite 1,800 men on active service in the Canadian navy. To-day Canadian naval personnel number approximately 80,000, which is a forty-five-fold increase.

In September, 1939, we had only two naval bases, one at Halifax on the east coast and the other at Esquimalt on the west. To-day those two bases have been greatly expanded and im-

proved, and in addition eleven new bases have been developed on our eastern and western coasts and in Newfoundland.

These developments have involved not merely the construction of buildings where men can be housed and trained and fed, but also the construction of all the other facilities necessary for a naval base, such as docks, wharves, repair shops, marine railways and the like. Since the beginning of the war we have put into operation at one of our bases a great floating dock capable of taking ships of as great a tonnage as 25,000. We have constructed three marine railways at various points capable of carrying for repairs the largest destroyer, and another similar marine railway is building. We have built three smaller marine railways that can take corvettes and minesweepers. In addition we have built and have in operation three still smaller marine railways, and four more are building, where the lighter types of craft such as Fairmile motor launches and other vessels of that general size can be taken in hand for repair.

At the beginning of the war, the Canadian Navy did not own a single bit of land in the great space between Halifax and Victoria. The volunteer reserve divisions, which were first instituted in 1923 during the regime of Commodore Hose as chief of naval staff, under the provisions of the Naval Service Act of 1910, were living in rented quarters, some of which were totally inadequate for the purpose. We have changed a good deal of that. Most of these divisions have now been established in buildings of their own. In some cases we have bought buildings and renovated them to suit our purposes. In other instances we constructed new buildings, where naval ratings have the advantage of living, eating and being trained in proper barracks. The work of improving the facilities of these volunteer reserve divisions is still going on; for we at naval service headquarters realize that without these divisions at the beginning of the war, and without the work they have done since in recruiting men and supervising their preliminary training, it would not have been possible for us to achieve what we have achieved in the four years of war.

The committee perhaps will be more interested in later events and developments, and I propose now to give to the committee some figures to indicate what we have succeeded in accomplishing in the last fourteen months or since January 1, 1943. In that time we have added approximately 27,000 to the personnel of the Royal Canadian Navy. At January 1, 1943, we had a total complement of approximately 53,000. To-day we have a total complement of approximately 80,000. The personnel of the Women's Royal Canadian Naval Service has increased from about 1,000 at January 1, 1943, to 4,500 to-day. These Wrens, as they are commonly called, are serving at thirty-two different points in Canada as well as in the United States, Newfoundland and Canada. This service has in every way justified its existence; and the attitude of its members towards their work, as well as their behaviour when off duty, I think have won general and well-deserved praise.

Questions have been asked in the house as to enlistments by provinces, and if I may I should like to place upon *Hansard* a table showing enlistments in the naval service by provinces complete as at December 31, 1943. Perhaps I need not read the figures, if the committee will allow me to place them on *Hansard*. About forty per cent of our men are serving at sea at the present time; a large number of those on shore have had sea service. Others ashore are undergoing training or carrying on administrative, instructional or professional duties.

Mr. MacNICOL: I was thinking that perhaps we might get through with the minister's estimates to-day, but we cannot do that if we do not have the number of enlistments in the different provinces.

Mr. MACDONALD (Kingston City): The following are the enlistments from September 1, 1939, to December 31, 1943:

	Officers	Ratings
Prince Edward Island..	53	1,210
Nova Scotia	592	5,663
New Brunswick	140	2,103
Quebec	1,231	9,268
Ontario	2,044	29,958
Manitoba	262	5,979
Saskatchewan	168	4,965
Alberta	196	5,778
British Columbia	1,068	8,672
Other sources, including U.S.A. and Newfoundland	192	323

Training. Next comes the question of training. One of the great problems in a navy which has grown as quickly as ours is that of training. Many thousands of young men have been taken into the service since the beginning of the war and many of them had no knowledge whatever of ships or of the equipment which makes a warship effective. It is not enough that a man in the navy be a good sailor in the old sense. Warfare to-day in the air, on land and at sea involves the operation of technical gear, and in order to conduct this warfare successfully great attention must be paid to training.

In general, naval training is divided into two main categories. The first is the basic or new entry training which is given to the new recruits, and the second is the advanced or technical training which is provided for men who have had some experience at sea in ships. The initial stages of the new entry training take place at the reserve divisions throughout the country and those stages are completed at H.M.C.S. *Cornwallis* at Deep Brook, Nova Scotia.

At the beginning of last year the service was deficient in facilities for advanced technical training. I have said already that as of January 1, 1943, there were approximately 53,000 personnel in the Royal Canadian Navy. There was bound to be a great backlog of men with some sea time who had not had the opportunity of qualifying for promotion to higher rank. The opening of the training establishment H.M.C.S. *Cornwallis* has solved, or at any rate has helped to solve, this serious problem. Despite the difficulties of securing equipment and despite all the other problems incidental to the opening of so large an establishment, over 16,000 ratings have been given courses of one kind and another at H.M.C.S. *Cornwallis* in less than a year. I cannot emphasize too strongly what this institution has meant in the way of improving the fighting efficiency of our ships.

Some idea of the value of this establishment can be gained when I say that the number of men who have been trained for higher duties of a technical nature at this establishment in less than nine months in 1943 was almost as great as the total number trained from the beginning of the war until the opening of this establishment.

The removal from Halifax of this training establishment where the great bulk of the naval training ashore, both technical and new entry, is conducted, has had many advantages. The morale of the men has been improved by the provision of better training facilities with ample time under naval discipline. The removal of 6,500 men from Halifax to Deep Brook has allowed for the further expansion of repair facilities for ships at Halifax. The proximity of Deep Brook to Halifax permits of a free and fast flow of men to and from ships.

If one thousand men are brought from ships to *Cornwallis* or from *Cornwallis* to ships, in order that they may take courses or report back to their ships after completing courses, the question of distance becomes very important and the need of having *Cornwallis* within easy reach of our main naval base is readily apparent.

[Mr. A. L. Macdonald.]

Many of the men who joined the navy have learned trades which I hope they can put to use when they return to civilian life. In addition to those trained in the naval establishments, of whom there are a very large number, I may tell the committee that approximately 4,400 ratings have been trained in civilian schools since the outbreak of the war in such work as plumbing, electrical work, radio artificer work, internal combustion engine work, welding, copper-smithing, boiler making, machine shop work and the like. In addition more than 1,000 are at present undergoing such training in civilian schools at Halifax, Fredericton, Kingston, Toronto, Hamilton, Galt, Windsor, Calgary and Edmonton.

University Naval Training College. Now a word about the university naval training divisions. Fifteen Canadian universities are participating in the university naval training scheme. The initial enrolments took place in the spring of 1943 and there have been over 1,500 entries. Of those entries 150 have been taken on active service as ratings, thirty-eight have been discharged and there remain in the universities a total of some 1,200 men. More than 250 of these will go on active service at the end of the present school term. The training of the university students is conducted during the academic year at the universities. In the summer time the trainees all put in a special course of two weeks, either at H.M.C.S. *Cornwallis* on the east coast or at Esquimalt in British Columbia.

Naval College. The Royal Canadian Naval College was opened at Royal Roads, British Columbia, on October 21, 1942. In the first term 100 students were enrolled, fifty for a one-year course and fifty for a two-year course. In the spring of 1943 forty-three midshipmen were graduated. Of this number, 27 have been selected for permanent membership in the Royal Canadian Navy and they are now serving as midshipmen in large ships of the Royal Navy. The other 16 of the graduating class joined the Royal Canadian Naval Volunteer Reserve and are serving at sea as midshipmen on Canadian ships. All R.C.N.V.R. graduates who have served six months at sea and who have reached the age of nineteen years with satisfactory service will be promoted to the rank of sub-lieutenant, R.C.N.V.R. Midshipmen who are members of the permanent force must serve eighteen months as midshipmen before they can qualify as sub-lieutenants in the permanent force. It is a pleasure to tell the committee that I have heard nothing but favourable comment on the work of this college. Its staff has been carefully

selected. Its scholastic standard is high, and its discipline and training are in themselves valuable factors in a boy's education.

Teaching of English. In the fall of 1943, the school for instruction of French-speaking Canadians in English was transferred from H.M.C.S. *Montcalm* in Quebec, to H.M.C.S. *Prevost,* in London, Canada. Classroom space has been provided in the public library at London. The course lasts some three months and most of the work done there is in English. Trainees are billeted in homes in the city of London. To date there has been nothing but the most favourable of reports on the work done at the school and on the kindness shown by the citizens of that city.

Entry of officers.—We have made some changes as to the entry of officers. All new officers in the Executive (combatant) branch must enter the service as ordinary seamen and serve on the lower deck. If any of these men aspire to a commission they may request of their commanding officer to be so considered. Upon his recommendation and upon passing a selection board they then qualify for a short selection course at H.M.C.S. *Cornwallis* which culminates in an appearance before the permanent promotion board. Success means a commission as probationary sub-lieutenant, and in due course, entry to King's college for the prescribed four months officers' training course there.

When an officer has passed out of King's, however, he has not finished his training by any means. His real diploma as an officer is, in fact, his watchkeeping certificate. This he can only acquire after approximately six months' service at sea. Even then officers must constantly requalify and take additional courses, both in our own schools and in the training schools of the Royal Navy. New methods of sea warfare, new equipment, are constantly being developed and our seagoing officers must keep up with these ever-changing situations devised either by the ingenuity of our own scientists or by the resourcefulness of a ruthless enemy.

Operations. As I pointed out last year our men are serving on every sea of the world, in the Atlantic, in the Pacific, in the Mediterranean, in the Indian ocean, in the cold of Arctic waters, and in the balmier seas of the south.

Last year seventeen Canadian corvettes took part in the Mediterranean campaign when North Africa was wrested from the enemy. Sea power played a large part in this great achievement and Canadian corvettes definitely destroyed three submarines in the Mediterranean. In the early part of last year six of our corvettes and a flotilla of motor launches saw duty in the Caribbean area. Canadian ships of war participated in the Aleutian Islands campaign of last year, and I am glad to be able to say that their work was made the subject of a laudatory letter from the senior United States naval officer who was in charge of the operation.

In July, when Sicily was invaded, four Canadian flotillas of landing craft took part in the operation.

In September, when the invasion of the mainland of Italy began, the same four Canadian flotillas were on duty in the straits of Messina, and I am proud to report that the services which they performed were such as to win the praise of senior British naval officers.

As was announced in September, 1943, a minesweeping operation of considerable magnitude was conducted off the port of Halifax. The mines almost undoubtedly were laid by an enemy submarine which, instead of attacking ships directly, chose to lay mines in the path of convoys. A considerable number of enemy mines were detected in the area and our minesweepers cleared them up rapidly, and made safe the ocean exit from that great harbour. I should like to repeat now what I said at the time by way of appreciation of and praise for the men of the Canadian navy, who, day in and day out, sweep certain portions of the convoy channel for mines. The work is tedious, but nevertheless it is important and necessary. No lives were lost from these mines, though one ship, a convoy straggler which strayed from the channel which had been swept, struck a mine and was destroyed.

I may mention for the information of the committee that our Tribal destroyers, which are the newest and fastest destroyers in the world, have seen service with convoys to north Russia. As is appreciated, because of the threat held out to these convoys by enemy warships based in Norwegian waters, and because of the great vulnerability of that sea route to intensive bombing from northern European bases, a heavier type of protection must be provided there than is normally required on the north Atlantic. Canadian Tribals were with the attacked convoys off Bear island when the *Scharnhorst* was torpedoed on December 26, 1943.

During the summer and early fall, the Tribal destroyer H.M.C.S. *Athabaskan* was engaged in offensive operational work in the bay of Biscay. It is worthy of record to say that she was the first ship to be attacked by the newly-developed German aerial bomb. She sustained considerable damage in that action. I should add that her commanding officer, Captain

G. R. Miles, R.C.N., succeeded in trying and hazardous conditions in bringing his crippled ship safely to port. This was the second time Captain Miles performed such a feat. In December of 1940 he was in command of H.M.C.S. *Saguenay* when she was torpedoed in the north Atlantic, and after many hours on her bridge, eventually he made her fast alongside at a British port, where she was repaired, and went to sea again to continue her work in the Atlantic campaign against the submarine.

Convoys. Our main work during the year consisted, as in the past, of escorting merchant ships in the north Atlantic.

A few moments ago I pointed out that the destruction of enemy submarines had been very great during the year. That is one way of estimating the success of our battle against U-boats. I believe that the success of that battle was one of the outstanding features of the whole war during the year, but, as I pointed out earlier, it must not be supposed that the battle is over. Germany still has a great many U-boats and there is no reason whatever to think that she will not use them to the utmost in attacks against allied shipping.

The destruction of U-boats is one way of measuring the success of our convoy efforts. Another way is to consider the number of merchant ships that get safely through. Speaking in the British House of Commons on Tuesday of this week, the Hon. Mr. Alexander, First Lord of the Admiralty, pointed out that in 1941, one ship was lost out of every 181 that sailed; in 1942, one out of every 233, while in 1943 only one out of every 344 was lost. In other words, the proportion of ships getting through safely in 1943 was nearly twice as great as in 1941.

Mr. Alexander was giving here figures for all allied ships. He includes the Atlantic, the Pacific, the Mediterranean route, the Russian route, and every other ocean lane on which allied ships operate. The Canadian navy has operated in many waters, but its special area is the north Atlantic over which must pass the supplies produced in Canada and the United States, which must be safely transported to the shores of the British isles.

On this route we have at times supplied 48 per cent of the convoy escort, and during the past two years I think it can be safely said that we have never done less than 40 per cent of the convoy escort work. From the beginning of the war up to the end of 1943 the Canadian navy has escorted, or assisted in escorting, more than 18,000 ships from North America to Europe, and about 114 million dead-weight tons of shipping has safely made this perilous crossing.

One hundred and fourteen million tons of food, of war supplies of all kinds so vital to the efforts of our allies in the European theatre of war have reached their destination and more than 40 per cent of the credit must go to the navy of Canada, which began the war with only six ships capable of undertaking escort work. Is there in the history of all warfare a record more heroic and more inspiring? Young Canadians from our eastern and western ocean gateways, young Canadians from the shores of the St. Lawrence and the great lakes, and, what is even more remarkable, Canadians from the three prairie provinces, many of whom never saw the sea until after the outbreak of war—all have banded together to write one of the most romantic and remarkable stories in the history of naval warfare.

In addition to the ships convoyed from American shores to Europe, our navy has also assisted in the convoying of some 10,000 ships from United Kingdom ports to ports on this continent.

Furthermore, some 20,000 ships have sailed in Canadian coastal convoys so-called, that is to say, from some point on the North American continent to another point in the same area, and almost the entire task of convoy protection in this area has fallen upon the ships and men of the Canadian navy.

If you add all these figures together you will find that nearly 50,000 ships in one way or another have come under the protection of the Canadian navy.

It is in the north Atlantic that the fiercest efforts of German submarines are put forth. There lies the lifeline which in this war, as in the last, the enemy must endeavour to snap. That line has been subjected to many strains and stresses, but it still holds. The supplies are still going through, and not only the supplies, but the ships carrying men, Canadians and Americans, men of all services, are plying the north Atlantic route.

I cannot go into all the details of losses in transatlantic convoys since the beginning of the war, but I can say that the last six months of 1943 showed a remarkable improvement over any previous similar period since the outbreak of war. But as Mr. Alexander pointed out on Tuesday, the German submarine strength is still as great as it was at the beginning of 1943, and we have no assurance whatever that that strength will not again be unleashed against transatlantic shipping. Nor is there any guarantee that we shall not yet have to face attacks on shipping in our own coastal zones.

Losses. You cannot undertake operations of the magnitude which I have briefly described without suffering some losses. Since the 1st of January, 1943, we have lost four ships of war. The corvettes *Louisburg* and *Weyburn* were lost in the North African operations. The minesweeper *Chedabucto* was lost as the result of a collision with a merchant ship, and the destroyer *St. Croix* was lost as the result of enemy action in the autumn of last year. The *St. Croix* was one of the seven destroyers acquired by us from the United States in 1940, and I should like to say now that all these seven ships have been of the greatest value and benefit to us. The *St. Croix* was hit by enemy torpedoes, and sank, carrying with her more than half of her crew. The rest of the crew succeeded in getting aboard a British frigate, but, unfortunately, on the following night the frigate herself was torpedoed and all the survivors of the *St. Croix,* with one exception, went to their death. The sinking of the *St. Croix* marked the heaviest single loss that the Canadian navy has yet received.

Destruction of submarines. We have lost four ships, but we have had revenge. The Canadian Navy since the 1st of January, 1943, has had a hand in the definite and certain destruction of eight submarines, and in the probable or possible sinking or damaging of seven other submarines.

Of the eight submarines definitely destroyed four were sent to the bottom of the sea by Canadian ships alone. Three were destroyed by Canadian ships cooperating with British ships; and one by a Canadian ship working with a Royal Canadian Air Force plane and a British ship-of-war.

Additions to ship strength. In the past fourteen months we have added some seventy fighting ships to our navy, destroyers, frigates, corvettes, minesweepers and Fairmile motor launches. We have added two more Tribal destroyers, namely the *Huron* and *Haida* to our fleet. We have also acquired eight other destroyers from the British admiralty.

Casualties. Our casualties since the beginning of the war in dead, wounded, missing and prisoners now stand at more than 1,300. I know that the house will join with me in paying tribute to those naval officers and ratings who have died in their country's service; and in tendering deepest sympathy to their relatives and friends. Their lives have been a source of inspiration. Their deaths have been models of gallantry and courage.

Decorations. The heroism and devotion of our officers and ratings has been recognized no fewer than 513 times by decorations and mentions in dispatches. Within a day or two, I shall place on *Hansard* a statement showing the names and addresses of all those who have been thus honoured.

Navy League and Sea Cadets. The members of the committee have always been interested in the sea cadet movement. Personally, I have always tried to encourage the great work which is being done in this respect by the Navy League of Canada, and I am only too happy to repeat the tribute which I have on past occasions paid to that organization for their work not only in connection with sea cadets, but also in connection with hostels for merchant seamen, and for other welfare work undertaken by them on behalf of those people who are engaged in the war at sea.

On the 31st of December, 1943, there were eighty-six Canadian sea cadet corps and over 13,700 cadets enrolled. When the naval service assumed some of the responsibility for the training of sea cadets in 1941, there were some twenty-three corps in Canada with an enrolment of 2,300 cadets. Just now six new corps are being organized, and it is expected that very soon the authorized complement of 15,000 sea cadets will be reached.

More than 5,000 former sea cadets are now in the naval service. Accurate figures for enlistments have been kept for the past eight months ,and they indicate that while all the forces are attracting members of the sea cadet corps, the navy seems to be the favoured service for these boys.

The figures for enlistments in the past eight months are: Navy, 581; army, 80; air force, 66; merchant navy, 63.

Apart altogether from the value which this work has for the naval service, most satisfactory reports have been received to the effect that the work of the sea cadets corps—and I am sure this is true of the air cadet corps and the army cadets as well—has had a very considerable influence in reducing the number of cases of juvenile delinquency in the centres where cadet work is carried out.

There are over 750 men serving as sea cadet officers in the various corps. They are public spirited citizens who give freely of their time and who have made a great contribution to the success of the sea cadet movement. They have helped greatly to inculcate high ideals of citizenship in these young boys.

In the summer of 1943 the naval service sponsored thirteen sea cadet training camps and during the summer 6,800 sea cadets spent two weeks at camp. The navy provided officers, doctors, instructors, cooks and other personnel to operate the camps and the boys

had the advantage of some naval training, and the pleasure of swimming, of handling boats and of camp life generally. We hope that in the summer of 1944 some 9,500 sea cadets will be able to enjoy the benefit of these camps.

Future prospects. With regard to the future, I may tell the committee that in the coming fiscal year we shall add appreciably to our fleet. This year we hope to acquire from the admiralty two fine modern cruisers and we propose to man two aircraft carriers with naval crews. The acquisition of these larger ships is, I think, desirable from every point of view. They will add to the strength and effectiveness of the Canadian navy and will give a number of our officers and ratings experience in handling larger ships.

Up to now our navy has been what is commonly called a small-ship navy. Many officers and some ratings have served with the Royal Navy in British ships of the larger types, but now they will have the opportunity of manning Canadian ships of the larger class.

With regard to the aircraft carriers, I may say that the plan is that the Canadian navy will operate the ships with its own officers and ratings, but the planes and the men to fly them will be provided by the Royal Navy. Besides these larger vessels, cruisers and carriers, we hope to add about 100 other fighting ships as well as a considerable number of auxiliary craft to the strength of the Canadian navy.

In the next year we plan to take in personnel to the number of about 12,000, or at the rate of approximately 1,000 a month.

Post-war. Hitherto, Mr. Chairman, I have talked of the war and its progress. I should like now to say a word about post-war matters.

I listened to the hon. member for Danforth (Mr. Harris) last week when he spoke during the discussion of the estimates of the department for air, and I noted his plea, which was in effect that we should get on with the war and spend less time in talk about post-war problems. I have some sympathy, a good deal of sympathy with that view. The supreme task now before this government, and this house and this country is the winning of the war. All other considerations must take second place to that great consideration, and I am proud to be able to say that, so far as I can gather, that is the view taken by the personnel of the Canadian navy. They are keen, of course, to get the war against Germany over, and then they feel that they have a few matters to attend to in the Pacific. They realize that the war is not yet won. They know that in Europe the enemy is very strong on land, and still strong and dangerous in the air and on the sea. They know that in the Pacific there are long distances to traverse and heavy fighting to be successfully undertaken before the Japanese menace is completely and finally destroyed.

Yet I am unable to agree that we should give no thought now to the welfare of our service men. I do not believe that our successful prosecution of the war will be interfered with by any attention that we might here give to such a matter. Rather do I think that our prosecution of the war will be helped, for this reason; and we all agree that the service man must be well fed and clothed and paid, and must be given periods of leave and recreation, that he must feel that those who are dependent on him shall not suffer want or privation while he is away.

We believe in these things because they are right and just in themselves and because the service man will be a better service man for our doing them. In a word, we believe in maintaining morale.

I am sure that the morale of the service man is improved when he sees the people at home taking an interest in his welfare, and therefore I feel that all civilian groups in this country who try to do something for the service man are discharging a patriotic task.

I believe, for example, that one of the wisest steps we ever took in the naval service was taken when we accepted the suggestion of Captain Brand, one of our own officers, to name corvettes after Canadian cities and towns. That practice has created a link between city or town and the ship, which is helpful to both. Every time that comforts—clothing or cigarettes, books, radios or whatever you will—go from the city to the ship, it proves to the ship's company that the people back home are interested in them, and they are better sailors because of that feeling.

It is inevitable that some service men should be thinking of the post-war world. Should not we here be equally concerned? Should we not try to ensure, so far as we can ensure, that life in this country will be a little better than it was before?

I hope that I shall not be misunderstood. I hope I shall not be counted among those who felt that this country before the war was not worth fighting for, that nearly every other land was fairer than this, that other types or systems of government were far superior to ours. No. This country, from the time our fathers first came to it, has been worth fighting for, and, if need be, dying for; and 60,000

Canadians in the last war, besides many more thousands in this, have proved with their lives the validity of that statement.

Nor do I think for a moment that our service men want fantastic promises and impossible assurances that after the war they will enter upon a new and entirely different sort of life where the state will pour out money in unending and unstinted flow from a magic horn of plenty. What they want most, I suspect, is to take up again the broken skein of their peace-time lives, to return to the families and friends from whom they have been separated, to enjoy once more the privileges and the pleasures and to assume again their share of the responsibilities of Canadian life. What they want is an opportunity to make a decent living at work in this land, at work on the farm, in the factory, in the office, as their fancies and their abilities may dictate. Let us try to give them that opportunity. Let us make to ourselves and to them one pledge, in the words of Lincoln: "To care for him who shall have borne the battle and for his widow and his orphan". Let us do what is right and reasonable for them in the matter of demobilization grants, war service gratuities and pensions. Let us honestly try to help those who need help to reestablish themselves in civil life.

I have no fear that these service men will come back here as wild-eyed revolutionaries. They will have sacrificed much for Canada. They are not likely to tear down the edifice which they risked their lives to defend. Rather, I am certain, will they come back ready to play in peace a role comparable to that which they played in war, defenders and protectors of Canada.

In the naval service, as in the other two services, we have set up a directorate to give study to the problems of demobilization, rehabilitation and kindred matters. We have placed at the head of that directorate a volunteer reserve officer; for this problem is one that is of chief concern to the reserve branches rather than to the permanent forces. He was in the naval reserve before the war and in this war he has had extensive and distinguished sea service. He, and those associated with him, will work with officers from the other services and with officials of other departments such as the Department of Pensions and National Health, and with all the other departments that are interested in the matter.

I believe, Mr. Chairman, that the discussion that has already taken place in this committee on this problem has been most helpful, and I hope that members of the committee will continue to give the same earnest and helpful attention that they have already shown. I now leave the estimates of the Department of National Defence for Naval Services to what I know will be the careful, and what I hope will be the kindly, consideration of this committee.

Mr. FACTOR: I desire to ask the Minister he has unfolded. I often wonder whether the members of the committee, and particularly the Canadian people, appreciate the glorious contribution that the navy has made in this war and the sacrifices that both officers and for Naval Services one question. Before I do so, perhaps the committee would permit me to express a word of appreciation and congratulation to the minister for the story which ratings have sustained in doing their bit in naval warfare.

The question I desire to ask is rather mundane, compared with the romantic chapter that the minister has given to the committee. Some time ago the city of Toronto donated to the federal government a piece of land on the waterfront to the east of the exhibition grounds for the purpose of constructing naval barracks. I need not emphasize to the minister the desirability and the necessity of the construction of those barracks for Toronto and district. As a matter of fact, I received a letter from the mayor of Toronto inquiring about this. Perhaps the minister might look upon this as a convenient time to tell the committee what he proposes to do with reference to the construction of the barracks.

Mr. MACDONALD (Kingston City): I may say to the hon. member for Spadina that I have had some communication with the mayor of Toronto in the matter. A question was raised on this very point in the house last week by the hon. member for Broadview. In answer to the hon. member for Spadina, who has had a letter from the mayor of Toronto, I may say that it is the intention of the Department of National Defence for Naval Services to construct the new barracks in Toronto on the land donated by that city. The plans for the barracks are now in course of preparation and I hope that the work may be undertaken very shortly.

Mr. STIRLING: The committee has listened to the unfolding of a story as told by the Minister of National Defence for Naval Services which is based on the wonderful accomplishments of the Canadian people. In the figures which he gave on enlistments he has drawn attention to the most notable point in connection with naval expansion. It has also been drawn to the attention of the world by writers

from the United States that this far-flung and largely agricultural country of Canada has been responsible for an expansion in naval affairs which the world has certainly never seen before. I remember meeting Commodore Hose in 1934. He was then retiring from the position of chief of the naval staff. He had just returned from a trip across Canada, the purpose of which was to inspect establishments of the naval volunteer reserve. He was most gratified to find wherever he went that those establishments were up to strength, and, peace years though they were, that the training was being carried on which was later to have such notable effect. In that expansion Commodore Hose had a particular part to play, because it was while he was chief of the naval staff that the naval staff produced those plans which have been so efficient in the expansion which the minister was able to describe to-day.

When I left the Department of National Defence the three branches of the naval services included 2,100 officers and ratings, of which but 900 were in the permanent service. By 1939, the smoke having arisen over the European horizon and it having become more and more evident that war was in the offing, that figure, judged by recent departmental papers, had risen to 3,600, and now the minister is able to speak of 80,000. This is a marvellous accomplishment for a country of the size, shape and population of Canada.

But it must not be thought that excellencies alone depend on numerical expansion. That very expansion, and the rapidity of it, have carried with them very grave problems of training and the like which had to be solved by the naval staff, and it is possible that in the further discussion of his estimates the minister will take the committee a little more into his confidence with regard to that work of training. As the ships were required, as the ships were built, ships' complements were necessary. There had to be not only officers commanding; there had to be officers under those officers. In the very early days of new shipbuilding the difficulty was to find officers competent to take on the more specialized duties, for where could the naval staff look for them? They could not look, except in small degree, to the permanent force, which had to take care of the fighting qualities and administrative qualities, as well as to furnish the experience necessary to train men, which experience could be gained only through service. The consequence was that the minister had to turn to the young men who had been taken into the service through the naval volunteer reserve. Courses had to be set up as rapidly as possible and conducted in such a way that in the shortest possible time the young officers required for these new ships would be forthcoming. But such advances were taking place in the technical end of the naval service that it was necessary to send a certain number of those young specialists to take the courses conducted on the other side of the Atlantic, to take advantage once more of the assistance of the Royal Navy. All through this picture we must remember that we have always had the very great benefit of the assistance of the admiralty and of the Royal Navy.

The Canadian public read with very great interest the references which are continually made in the press to the warlike accomplishments of the Royal Canadian Navy, and well may they do so. I should like also, however, to pay tribute to those others whose services are just as important as those on the fighting ships; for instance, to the wireless operators on our coasts, working away with instruments so novel and so secret that we know nothing about them, but from which information is derived that is absolutely essential in both defensive and offensive work. Then there are those in the convoys. We hear about it when a convoy escort vessel accomplishes some magnificent deed; alas, we hear also when one is lost. From time to time we are told of safe journeys, but I think we should remember that our men are serving day and night, doing valiant service in extreme danger, and that as a result of all this silent work of which we hear so little the valuable tonnage required by the allied nations is safely reaching its destination. Speaking of the convoy escort vessels it is of particular interest, I think—and those who have read the story of the voyage of the *Prince of Wales* when she carried the Prime Minister of the United Kingdom to Placenta bay will know to what I refer—that after the *Prince of Wales* had to cast off her torpedo coverage because of terrible weather, and after she had spent some twenty-four hours with no coverage at all, in the fog of the western Atlantic she was met by a Canadian destroyer which escorted her to Placenta bay. Again, four or five days later, when she left on her return voyage, during the first part of that voyage she was under the protection of Canadian destroyers.

Speaking of the *Prince of Wales*, I should like to draw to the committee's attention a remarkable and human incident. On board that ship was a Canadian midshipman, born in Penticton, at the southern end of the Okanagan valley in the riding which I represent. He remained on the *Prince of Wales* until she was sunk by the Japanese off Singa-

pore, and he was rescued. Then he went aboard the cruiser *Exeter*; subsequently she was sunk, and he was not saved. That occurred on March 13, 1942. No news whatever reached the parents until a day or two after the New Year, when they received a letter from one who described himself as a member of a small committee that had been endeavouring to ascertain what actually had happened to the *Exeter* ship's company; and he regretted to say that although they had been able to account for all but six of that company, this lad was one of the six unaccounted for. On January 13 of this year, however, one year and ten months after the *Exeter* was sunk, the parents received official information that Midshipman Leir had been discovered in a prison camp in Java. This may help to keep alive the hope there must be in the hearts of so many whose loved ones have been reported missing.

As the minister further unfolds his story I hope he will give us more information in regard to what is being done concerning rehabilitation. He has briefly referred to the fact that the matter is under consideration. I wonder how far he can go in describing to us just what is being done. It is very difficult, yes, impossible, to peer into the future and see with any accuracy what will have to be done; so many factors are still a matter of surmise. I do not suppose, for instance, that the minister can say in so many words even what may be his vision of the Canadian navy after the war. I do not suppose he is able to say how rapidly we shall have to concern ourselves with rehabilitation; but I wonder whether a survey has been conducted among those at present in the navy, to give such information as the number who would like to retire from the service at the end of the war, for example, or whether after the European conflict has subsided the minister foresees the removal of the Royal Canadian Navy to Pacific waters and, as a consequence, the necessity of keeping in commission as many ships as we have in commission to-day.

No doubt if that survey is being conducted the sailors are being asked what they want to do. In that way the minister will be able to supply himself with categorical information which will at least enable him to form his plans for training. In that connection I would ask him whether it is the intention of his department to set up and carry on training classes for sailors only, or whether he intends to lean on the training arrangements conducted under the Department of Pensions and National Health. I should like him to go as far as he can in his answers, because it will be of great assistance to the many people throughout Canada, who, in groups and as individuals, are turning their attention more and more to problems of reconstruction and rehabilitation. If I understand the position of naval entry aright, with the exception of those candidates, I believe fifty in number, who because of their educational position are able to attain entry into Royal Roads, there is no direct entry into the Royal Canadian Navy.

Mr. MACDONALD (Kingston City): You mean for officers?

Mr. STIRLING: I mean for officers and men. As I understand it, all entry now occurs through the naval volunteer reserve. I am not speaking of those who, because of their experience and service, are able to enter the Royal Canadian Naval Reserve, those who have had merchant seaman experience; my understanding is that all entry into the Royal Canadian Navy is via the naval volunteer reserve.

I notice that recruiting advertisements are again appearing in the papers for ordinary seamen, communication ratings and stokers. Is there a restriction upon recruiting to-day to those listings, or, for instance, may a boy seaman enter? It is evident that the naval volunteer reserve has been successful not only numerically but also by being used solely for entry into the navy. I return once more to the excellent plans which were laid twenty years ago. They have stood the test of time. When the necessity arose at the actual outbreak of war they were capable of that elasticity and expansion which was so necessary. This service has accomplished exactly the need in view.

I do not wish to detain the committee further at this time, but I trust we shall soon be able to enter upon a discussion of the items as they appear in the schedule.

Mr. MAYHEW: Mr. Chairman, I am pleased to follow the hon. member for Yale (Mr. Stirling) who has paid the Royal Canadian Navy such justifiable and high praise. What I have to say this afternoon will be complimentary to the service and I only wish I could say it as nicely as the last speaker. It would be difficult for me to keep my seat while naval affairs were being discussed because I represent the constituency of Victoria, which includes Esquimalt, the naval base on the Pacific ocean for the Canadian navy.

Esquimalt has had a long and enviable record as far as naval affairs are concerned. Its record in length of years is not as long as that of Quebec or Halifax, but it does go back for a considerable time. It was first used as a naval base by a captain of the Spanish

navy who sailed into the port of Esquimalt in 1790. It was used for the first time by the British navy in 1858, but in 1855 Rear Admiral Bruce, then engaged in the Crimean war, sent a message to Sir James Douglas, then governor of Vancouver island, asking him to prepare buildings at Esquimalt for hospital purposes. Two years later it was occupied by him. Sir James Douglas made such a splendid job of erecting these buildings that two are still in existence.

The harbour of Esquimalt, as is indicated by its name, an Indian name meaning shoaling or gradually sloping shores, provides a safe harbour of some size. It looks out upon the strait of Juan de Fuca and to the Olympic mountains, some twenty miles away. Its growth since 1858 has been considerable. To-day one of the largest dry docks in the British empire and the only dry dock on British soil on the Pacific ocean is located here. I mention these things to show that even in those distant days it had a place in global warfare. We believe it will have a greater place in this war before we are through with our wily enemies in the islands of the Pacific.

This afternoon I wish to refer principally to the training of men for this navy of ours which has expanded so rapidly from a few small ships to over 700 and from a few hundred men to over 80,000. It was as necessary to get experienced and trained officers as it was to get men. As the last speaker has said, there was no place to look for these men except in the civilian population. In 1937 a number of young men in Victoria decided that they would take an active part in Canadian naval affairs in order to be ready should there ever be an occasion when their services would be required. Quite a large number of them went to Naden and started taking these courses at night. Without exception I think the whole of that original class is now serving as officers with the Canadian navy. Those hon. members who had the privilege of seeing the picture "Action Stations" in room 368 on Tuesday night saw what the Canadian navy does and how they discharge the task that is assigned to them. The No. 1 boy on that particular boat, Ted Simmons, as he is known at Victoria, is a Victoria boy and one of the original class. He was decorated for his part in the action which was shown in that picture, for boarding a German submarine, trying to secure documents from the ship itself when it was sinking, and for being the last man off, and finally to meet our own boats. That same boy at a later date received a bar to his medal for a similar gallant and brave action in the Mediterranean carried out with coolness and judgment.

But he is not the only one of those civilian boys who left offices or stores and have since played a gallant part in connection with the navy. A few nights ago I read in a local newspaper that the youngest officer ever to command a cruiser, in either the British or Canadian navy, was a Victoria boy, and he was commanding her at the age of twenty-six. He was another of those boys who left their civilian jobs to do a job of this kind with the navy.

Just about this time in 1940 the department realized that if it were going to have a steady stream of properly trained and properly selected officers for the navy it must have a place to train them, and with this in mind the department selected what I believe was the best place that could have been found in the Dominion of Canada. They chose what was then known to us on the west coast as Hatley Park, the home of the Hon. James Dunsmuir. It was built at great expense to him, and with great care in the laying out of the property. Without doubt it is the most beautiful spot among the many beautiful spots on Vancouver island. Here is one time when the government secured something at a very low cost. They paid for that property $75,000, which was barely sufficient to pay for the cost of the fence around the property. The property as a whole comprises 640 acres. It faces out on Royal Roads and is close to the Esquimalt naval dockyards and barracks. It has a lagoon, a natural lake, in front, and is a very suitable place for the training of naval personnel. For some years it was used for the purpose of training officers for the navy. I do not know how many of the thousand and more officers from British Columbia now serving in the Canadian navy were actually trained there, but I know there were many men from eastern Canada too who received their training in this school. When the department thought it had trained sufficient officer personnel, it converted this property into what is now the Royal Canadian Naval College. The central building is practically a castle in itself, and there are many outbuildings conforming in architecture and substance to the central building. In addition, the government has built a training school, which also does credit to the architect who designed it and to the navy itself.

I want to give a word of explanation for the benefit of many hon. members who, I hope, will take occasion to visit this college before

long. I took a minister out to see that property, and after he had seen it he said as we were coming back over the winding road through the bush, which is beautiful, "What luxury!" Well, they are luxurious quarters, and an endeavour was made to take some of the trimmings away so that the place would not look quite so luscious. The whole place was carpeted with a red carpet like may be seen in the other chamber. There was an elaborate billiard room, containing one of the finest billiard tables I think I have ever seen, and gorgeous crystal chandeliers. At the time the negotiations were going on I suggested to the man who was negotiating the deal that we should not purchase these appurtenances because it might be misunderstood by the taxpayers who might visit that piece of property. My advice was accepted, but it did not work out just the way he had thought it would, because other people became interested in this college and in the site and donated the elaborate chandeliers and the rich red carpet. The late Sir Edward Beatty thought the billiard table was a proper thing to have at the college and accordingly he donated it to the school. I make this explanation to remove any impression there might be that the government was spending the people's money unnecessarily.

I maintain that any boy who attends the naval college in Victoria enjoys a rare privilege. There are some twenty-one officers in the school, and they are selected with care. Hon. members would be delighted to meet and to know any one of them. The boys who go there are carefully selected, and mostly by quota, from all the provinces. None of them is under fifteen years and eight months and none is over seventeen years and eight months; all are physically fit, all splendid looking boys. Physical fitness and ability to make full use of their time are the principal qualifications. I have made it a practice to go out there, and my visits are indeed an inspiration to me. I am sorry that we graduate only fifty boys a year from that school, because it is the symbol of the future of our Canadian navy. We must see to it that we shall never again be in the same position as we were in during the fall of 1939. As I understand it, not all the boys are obliged to join the Canadian navy, but all are obliged to be a reserve for the Canadian navy should they be called upon. I believe that when the time comes they will give a good account of their stewardship and show themselves worthy of their training.

I do not wish to take up much time, but I have three or four suggestions to leave with the minister which I believe, if adopted, would considerably strengthen our position on the Pacific coast so far as the navy is concerned. It was thought some time ago, and I am not finding fault with the conclusion, that it would be advisable to have the senior officers of the three services located on the mainland and together. Now, with the turn of affairs in the Pacific, would be the right time to have the commanding officer of the navy on the Pacific coast and his staff go back to Esquimalt, where they would be at the very heart of naval affairs, rather than remain on the mainland.

My second suggestion is that because of weather conditions—and certainly there is no better climate in Canada—

Mr. SINCLAIR: Hear, hear.

Mr. MAYHEW: —than the climate on the southern end of Vancouver island—north Vancouver may come next—at least preliminary and elementary training of the boys should as far as possible be carried out at Esquimalt. We on the west coast appreciate the fact that the major activity for the Canadian navy is on the Atlantic coast. We hope that will change, and change soon. Until it does we know that the finishing off of our boys can be better done where there is more equipment with which to do it. But during the first stages of their training they can work more days out of doors and be comfortable on the southern end of the island, at Esquimalt, than they can at any other place.

Another suggestion I would make to the minister is that, to round out the training for Vancouver island and for British Columbia generally, a training ship should be stationed at Esquimalt, not only to train naval personnel but to train men for the merchant marine service as well.

It may be remembered that when I was giving a short history of Esquimalt I said that the first occupation of that harbour was for hospital purposes. At that time it was not thought it was too far to bring wounded soldiers from the Black sea, where they were then fighting, to Esquimalt. I think that to-day Canada should supply hospital accommodation not merely for her own personnel but for the personnel of any of our allies, or even our enemies, who might have to come to British Columbia. I know plans are going forward for further hospital accommodation, and it takes some time. We are not impatient about that; we are glad that they are proceeding as quickly as possible. But I press again, and I think I am right in doing so, that we should look further than merely to

the care of our own personnel as far as hospitalization is concerned at that particular point.

Another matter to which I should like to call the minister's attention is the lack of the best kind of equipment for the speedy repairing of ships at Esquimalt harbour. I think we should be in a position to take care quickly and adequately of any ship, no matter what its size, which may become disabled in the Pacific and the tools for that purpose should be provided. Probably some of them are so large that they would be used only once or twice in the next twenty-five years or longer, but the quick repairing of a ship when it may come to our coast at this time is one of the protections which we should provide.

I have only one further remark to make. This is the first occasion on which I have spoken in the chamber this year, and I do not expect to speak very often. I have noticed here, during this session and the last, criticism of various departments which might well have been made, and better made, in other ways. As long as we are a democracy —and I am quite sure we shall always enjoy that form of government—the minister in submitting his estimates must not only give a balance sheet but submit as well in most instances the history of each item connected therewith. I am not one to say that we should not criticize, but in war time our criticism should be reduced to the minimum, and in fact it should be so sparing that, if it were a time of peace, it might be called slackness. On many occasions, however, criticism has a tendency to make the people of Canada waiver in their estimate of the way in which the war is going. For my part, on every occasion, in my own feeble way I have tried to impress upon my people at home that the first duty of every Canadian is to stand steadfast during the war. We should not be carried away with success, nor should we be unduly depressed by losses. We must be prepared to stand steady and to carry on with our job, and anything that disturbs the people of Canada in that regard is detrimental. It is deterrent to our war effort.

I suggest that many of the things we are talking about to-day in this House of Commons will look very small indeed and entirely out of place when they are stacked up against what may happen to us when the second front opens up and our casualties begin to come back. We shall not then be worrying about this allowance and that allowance; we shall be wishing that we could call up the fellows lost on those beaches so that they might receive any allowance whatever. I think we should try to keep that in mind.

I do not believe the Canadian people will ever elect a parliament that will not recognize its full obligation to the boys who have fought and those who have died for us. I think we can safely leave to any government that may come into power the responsibility of adequately looking after the rehabilitation of these men, believing that they will not do so in any niggardly, half-hearted or penny-pinching manner, but will fully recognize the obligation of those of us who are enjoying at the present time the protection which these men afford us.

Mr. MacNICOL: Before I begin my remarks, I should like to pay a tribute to the hon. member who has just taken his seat (Mr. Mayhew), for his own family has taken a very great part in the present war. I hope and sincerely pray that the worst does not come to that family. The hon. gentleman's son has made a gallant sacrifice and I trust it will not end in the final sacrifice. I am happy to pay him my undivided respect as one Canadian to another.

As honorary president for many years of the Navy League of Canada, Ontario division, and as a member of the executive of that association for perhaps twenty-five years, I am going to pay a few words of tribute to the minister, and in doing so I make no disparagement of any previous minister who has held office either in the national defence department or in the naval department, because in their time they all did well by the Navy League. But the present minister had an opportunity that none of his predecessors had, and I am pleased to say that he has lived up to the best expectations we all formed of his ability to carry out his responsibility. I can say that from the time of his appointment he has been an ardent supporter of the work and the objectives of the Navy League of Canada, and I am sure that had it occurred to him while he was speaking—perhaps it will on another occasion—he would have paid tribute to that league for the part it has played in helping him to man the ships that he has had constructed and that are now sailing under his orders.

I believe that last year, 1943, the Navy League of Canada had some eighty-three corps throughout the country, commencing in the minister's own fine city of Halifax where there has always been an exceptionally fine corps. It is one that I inspected on one occasion in former years. There was also a fine corps in Charlottetown—I am not sure whether there is

one there now—and there are fine corps in Saint John, Sydney, Quebec, Montreal, Kingston, Oshawa, Belleville and Ottawa. There is a fine corps here; hon. members have seen it in the summer time parading on the streets. In Toronto we have the headquarters, the moving spirit behind most of the corps in Canada. There are several corps there. In Hamilton, Welland, St. Catharines, London, Windsor, Owen Sound and Sault Ste. Marie there are also very good corps and there is an exceptionally well trained one in Winnipeg. There are others in Regina, Calgary, Edmonton, Vancouver and Victoria—

Mr. BREITHAUPT: Kitchener and Waterloo.

Mr. MacNICOL: Well, there are a number of others that I should mention, but naturally some of them will slip my mind. There is a fine corps in Kitchener-Waterloo. I do not want to take up too much time, but there are others throughout the country that I should mention. All these corps have been supported by many men and women who have given valuable voluntary service. The navy league has never had any difficulty in enrolling under its banners as good as the best men and women in every community in Canada, and wherever they have applied for a corps one has been finally organized. I know that the minister will later on pay tribute to the Navy League of Canada for assisting him in the manning of his ships; for the story he told would prove that the number of enrolments on the ships to-day is tremendous. Canadians throughout the whole country will be thrilled with what Canadian sailors have done. I was pleased to hear the minister pay special tribute to the boys who came from different parts of Canada far removed from the sea. One would naturally expect to find boys from Nova Scotia, New Brunswick, Prince Edward Island, Quebec and British Columbia attracted to the sea because the shores of these provinces are washed by the sea. As I say, one would naturally expect those boys to rally to and enlist in the naval services. The minister paid special tribute to those who came from the western provinces. I was pleased to hear the other day that the representative of the navy in the cabinet of Great Britain said that what surprised him was the fact that boys who came from sections of Canada far removed from the sea had been able to train rapidly and do such a fine job on Canadian ships and on ships of the British navy stationed in different parts of the world.

My own province of Ontario and my own city of Toronto have done splendidly. Ontario, of course, is the principal centre of the Navy League. Perhaps it derives some advantage from that. I was pleased to hear the minister state that some eight or nine thousand naval ratings had enlisted from Ontario.

Some hon. MEMBERS: Twenty-nine thousand.

Mr. MACDONALD (Kingston City): Twenty-nine thousand ratings.

Mr. FRASER (Peterborough West): Ontario is the banner province.

Mr. MACDONALD (Kingston City): Over thirty-one thousand altogether.

Mr. MacNICOL: From Ontario alone?

Mr. MACDONALD (Kingston City): Yes.

Mr. MacNICOL: That is simply wonderful. That is several times more than I had written down. Ontario is the central province and the most populous province. These boys from Ontario have added fame and glory to their name as have the boys from the other provinces.

I believe there were some thirteen training camps operated last summer under the Navy League. In those camps there were some 6,800 boys.

Mr. MACDONALD (Kingston City): Six thousand went to the camps.

Mr. MacNICOL: The figures I received were 6,800, but that is neither here nor there. They were trained for two weeks. Ever since the hon. member for Kingston City became minister of the department he has been very strong in supporting the establishment of those summer training Navy League camps throughout Canada; and now the fruit is being harvested, because boys are going not only to the naval services but to the merchant marine. I do not know how many corps there are in the R.C.N.V.R. throughout Canada, but we did have several in Ontario, including a particularly good one in Toronto. I used to know it much more intimately than I do now.

Mr. MACDONALD (Kingston City): Nineteen divisions.

Mr. MacNICOL: Throughout Canada?

Mr. MACDONALD (Kingston City): Yes.

Mr. MACNICOL: Many of the men who serve as instructors served also in the great war, and during the last twenty-five years or more that I have been associated with the Navy League I have been pleased to find that the men who composed the R.C.N.V.R. put great energy and ability into the work they were doing in training young men throughout the country. During those years many people more or less overlooked the work of the Navy League and of the R.C.N.V.R., but the late

president of the Navy League, Mr. Sam Harris, never gave up. He was figuratively a fighting British bulldog. He went from coast to coast in Canada at his own expense, as did many others associated with the Navy League, stirring up enthusiasm among the corps throughout the country to keep up their good work.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. MacNICOL: Mr. Chairman, when the committee rose at six o'clock I had just paid a very short but well-deserved tribute to the late Sam Harris, former president of the Navy League of Canada. When Mr. Harris became president of the league, following the last war, he had a most difficult task to keep alive any sentiment or interest in naval affairs, but he did his job well. I might also have said a word about the late Aemilius Jarvis, who I believe was the founder of the Navy League of Canada; I joined it about the same time, but I know the late Mr. Jarvis was ahead of us all. To-day we have as head of the Navy League a gentleman who I am sure is well known to the minister, Mr. David Gibson. It is greatly to the credit of Canada that a man like Mr. Gibson, a big business executive, should be willing to devote so much time and energy to assist the department, through the Navy League, in building up the personnel of the Canadian navy. For some years now we have also had as the capable and brilliant secretary of the Ontario division of the league, Mr. Frank Trimble, who during the last war did a man's job with the Y.M.C.A. and is now doing a man's job in assisting the minister and the department to develop and maintain a naval sentiment throughout the country.

I was interested in what the minister said about the shipyards and the men working in them. I should like to add my tribute, and I might say also that I am happy to know that the technical schools throughout the country have made such a contribution in this regard. Perhaps I might refer in particular to the large technical school in Toronto, where they have shops for the training of engineers and mechanics of every description, the graduates of which have done a fine job in helping build these ships. The minister said something about the marine railways; I suppose he was referring to the shipyards.

[Mr. MacNicol.]

Mr. MACDONALD (Kingston City): To the naval yards partly.

Mr. MacNICOL: I was just going to say that perhaps from experience gained through the use of these marine railways in naval yards something may result when the war is over in connection with the building of a marine railway across the Chignecto isthmus in the minister's own province, between the bay of Fundy and Northumberland strait. I think the time is long past when something should be done to save the thousand miles of travel that would be saved by the construction of such a marine railway.

Earlier in the discussion the hon. member for Spadina asked a question about the Toronto naval barracks. This question was asked previously by the hon. member for Broadview, and I might add that all the Toronto members received letters similar to that received by the hon. member for Broadview. I remember some years ago, when the Ontario division of the Navy League built its own headquarters out on the lake shore road west of the exhibition grounds. At that time we hoped that a naval barracks would be built in the same vicinity, but apparently that is not to be so. I am heartily in accord with the erection of a naval barracks in Toronto; I think the city and the province deserve it, and I am glad the minister has taken an interest in the matter. I think the property now being considered is east of the exhibition grounds, and that is a first-class site; it will, I understand, be close to York barracks.

Mr. MACDONALD (Kingston City): Yes, near the exhibition building.

Mr. MacNICOL: I am looking forward to the time when the minister will see his way clear to bring in an item to cover the construction of this naval barracks in Toronto.

Some time ago I asked about the training of young Canadians to fly from aircraft carriers, and no doubt the minister will have some announcement to make in that regard. I know that a number of young men from Toronto and other parts of Ontario enlisted and were dispatched overseas, apparently under the direction of overseas authorities, to receive this kind of training. I am not finding fault with that at all; they have to train somewhere, and perhaps these young lads wanted to fly from carriers. However, I am looking forward to the minister's report in that connection; and later on, if the war lasts long enough and Canada has aircraft carriers of its own, perhaps these young Ontario lads may be brought back and given an opportunity of flying from Can-

ada's own carriers. I do not at all discount the wonderful work that has been done by the old country people; perhaps I should not even suggest that our own boys should come back, but if Canada is to have aircraft carriers then I think it would be only right that young lads from Canada should be brought back to fly from them.

I wish to thank whoever it was that corrected me earlier as to the number from Ontario who had enlisted in the navy. The minister stated the figures correctly, but apparently I jotted them down wrong. I had the figure as around eight or nine thousand, but during the dinner hour I reviewed the figures in the *Hansard* office and I find that the number is well on to 30,000 ratings and something over 2,000 officers. Well, as an Ontario man I am proud to see the wonderful part my native province has played in providing personnel for the naval ships of this country. In conclusion, I thank the minister and congratulate him upon the good job he is doing.

Mr. McCUAIG: I am glad to have the opportunity of following my good friend the hon. member for Davenport (Mr. MacNicol), because I know he always takes a keen interest in the work of this house and particularly in anything having to do with construction, such as shipbuilding and so on.

As I listened to the minister eloquently telling the wonderful story of our navy this afternoon, I could not help but wish that the people of Canada might have had an opportunity to be present and hear that story as it was told to us. We all realize that in the last number of years, particularly at the beginning of the war, the people of Canada became air-minded. We were able to see the planes overhead and we could see the airfields located throughout the dominion. However, the difficulty with the navy is that it is to be found only on the east and west coasts. We who live in the central parts of Canada do not have the opportunity of familiarizing ourselves with its work.

The minister referred this afternoon to the difficulties which had been encountered in connection with shipbuilding, and I should like to confine my remarks mainly to that reference. In my own constituency at Collingwood we have a shipyard which has done great work in connection with the building of ships during this war. The minister mentioned that at the beginning of the war there were practically no shipyards building ships in Canada. We were probably fortunate in the fact that the shipyard at Collingwood had built some mine-sweepers and other vessels in the few years preceding the war, but when they were given orders after the war began they had considerable difficulty in getting experienced men. Many of the men whom they had had some twenty or thirty years ago had gone into other occupations and although they could get men to work, they were unable to get the key men essential for shipbuilding.

They could have gone out and got men elsewhere, but that would have meant taking them away from other essential work. Therefore they adopted a plan, which I think was a good one, of training their own men to handle these key positions. That probably slowed down their operations during the first few months of the war, but I think their work has benefited on account of the plan they followed. When we once more have peace I hope the people will not say, "Let us have no more ships; let us discard our shipyards." If those suggestions are carried out and the time ever comes again when we need ships we shall be in the same position we were in four years ago. I suggest to those who will be in charge when peace comes again, to see to it that shipbuilding is continued, not only to ensure a supply of ships but also to keep available those key men who are essential for the manufacture of ships.

I was glad when the decision was made to build some of the smaller ships such as corvettes and mine-sweepers because these could be built in plants on the great lakes. When they are completed they can be taken down through the great lakes, the St. Lawrence river and through to the sea. It has been found that the work performed by these corvettes has added greatly to the protection we have received on the seas. Their principal work is in connection with convoys from Canada to Great Britain. It may only be a coincidence, but it is interesting to note that as the corvettes began to come into operation, which was early in 1941, ship losses immediately declined. Early in the summer of 1941 quite a number of corvettes were put into operation, and on September 30, 1941, Prime Minister Churchill said in the British House of Commons that ship losses from enemy action for July, August and September of that year were only one-third of what they had been in the three preceding months. As I say, that may be only a coincidence, but that is what happened.

The first corvette put into operation after the commencement of the war was H.M.C.S. *Collingwood,* built in the Collingwood shipyards. Two other corvettes built in those yards were also named after towns in my county, Orillia and Barrie. The keel for the *Collingwood* was laid in February, 1940; the ship was christened in July, 1940, and she was

commissioned and delivered in November, 1940. The keel for the *Orillia* was laid in the month of March, 1940; the ship was christened in September, 1940, and she was commissioned and delivered in November, 1940. These ships were started early in 1940, and at least two went out before the end of the year from the Collingwood shipyard.

I was interested in hearing the minister state this afternoon that the plan of naming ships after towns and cities had been adopted following a suggestion by Captain Brand. The corvette *Barrie* was christened by Mrs. Brand, who afterwards took a great deal of interest in the ship and provided assistance to the women of different organizations in that municipality which worked to supply woollens, radios and other equipment for the comfort of the sailors. We were perhaps also fortunate in having as the commander of that ship Lieutenant-Commander Roy M. Mosher. He was born in Nova Scotia and has often been described as a rough diamond but a loyal and capable officer. He endeared himself to the women of our town, and after he left he continued to write letters to the different organization which had been supplying the comforts. I remember reading one letter which was passed over to me in which he said that after he left Collingwood he went to the east coast where his wife was living and arrived there just in time to become the proud father of a son or, as he said, "just in time for the launching". What pleased us more than anything was the fact that he and Mrs. Mosher agreed to calling the boy "Barrie".

I mention these things to show how the different municipalities become interested in the navy, and, it may be, also in the air force. This interest is enhanced by the kindly expressions of people like Captain and Mrs. Brand, and Lieutenant-Commander Mosher.

Mr. SINCLAIR: Mr. Chairman, before I discuss the estimates of the Minister of National Defence for Naval Services (Mr. Macdonald), I should like to refer briefly to another naval matter. Last Monday the Minister of National Defence (Mr. Ralston) put on the record of this house the names of two gallant Canadians who had been awarded the Victoria Cross, Lieutenant-Colonel Merritt of Vancouver and Captain P. Triquet of Cabano, Quebec. A little later on the leader of the opposition put on the record the name of Private William Manley who had won the Victoria Cross in Libya while serving in the British army. He felt as I do that any Canadian fighting in the British forces or in the Canadian forces is fighting for his country and deserving of honour in this house. With that in mind I should like to adorn the record of this house with the name of a fourth Canadian who has won the Victoria Cross, Captain F. T. Peters of the Royal Navy. Captain Peters was born in Prince Edward Island but early showed his good judgment and wisdom by moving to British Columbia—

Mr. HANSON (Skeena): Question!

Mr. SINCLAIR: —where he settled down in the city of Nelson. I may add that he is undoubtedly the most decorated Canadian in this war, having made a clean sweep of decorations for gallantry in the face of the enemy, because he has also won the D.S.O. and the D.S.C.

Mr. MACDONALD (Kingston City): Royal Navy.

Mr. SINCLAIR: I should like to congratulate the minister upon his presentation of the exploits of the Royal Canadian Navy. I am sure that every Canadian is very proud of both the expansion of the navy and the job which has been done by our navy fighting in its little ships in the north Atlantic. It is a pity perhaps that this house has not among its members a naval officer or rating to bring a whiff of the salt sea air into this chamber. On the other hand, the navy is known as the silent service, and he might feel out of place in the House of Commons as a silent member.

Mr. GRAYDON: He would have plenty of company.

Mr. SINCLAIR: And a colleague behind me suggests that he would be all right as an Ontario member. I do not pretend in this house to be the spokesman of soldiers, sailors or airmen, but I think this is one time I can speak on behalf of every soldier, sailor and airman overseas when I tell the committee of the admiration they all hold for the work done by the Royal Canadian Navy. After all, their first contact with operations is when they go in convoy across the north Atlantic to the old country. I think most of us find it a pretty shaking experience, and when we set foot in England we heave a great sigh of relief and suddenly we realize that the navy has to do that job again and again until the end of the war.

The minister mentioned the part the Canadian navy played in the war in the Mediterranean. I think that when the whole story of the war in Africa and the Mediterranean is written it will not be the eighth army or the desert air force that will get the greatest measure of credit and honour, but the Royal

Navy under Sir Andrew Cunningham. Very briefly I should like to remind the committee, because it is a story that is not well known, of the part they played. There would not have been a man, a plane, a gun, not even a tin of bully beef in Libya but for the grace of the British navy. Every man, every tank and every plane came the long way around from England, around the Cape of Good Hope and up the Red Sea into Egypt. It was the Royal Navy that strangled Rommel, that cut off his petrol and ammunition supplies in the Mediterranean, and that made the victory at El Alamein possible. It was the Royal Navy which hurled the heaviest artillery into the ports of North Africa, which were so great a factor in that war. It was the Royal Navy which took that enormous armada of 3,200 ships of every size and shape safely across the waters on the invasion of Sicily, and I think its greatest day or night was September 14 at Salerno, when the beachhead threatened to turn into another Dunkirk. The British navy steamed in close to shore and threw a solid barrage of steel, everything they had, from their 16-inch guns down to their smallest guns, and we held the beachhead. Now they are doing it again at Anzio, and with great loss, as we read in the papers.

I think in every Briton's heart there beats tremendous pride in the British navy, whether it be in our blood, or whether it be our traditions or the songs and stories that we learned in our youth. Certainly, the most memorable sight that I saw in this war was the navy. The good book, of course, speaks of an army with banners. Its modern equivalent would perhaps be tanks going into battle, and certainly a squadron of aircraft taking off for Germany is a moving sight. But nothing is quite so stirring to a Briton as a British man-of-war putting out to sea.

I remember the night we embarked from the grand harbour at Malta for the invasion of Sicily. It was last July. We had been there a month while the squadrons were doing the bombing and softening up of Sicily before the great day of the invasion came. It was a warm July evening when we went down to the Grand harbour at Malta and loaded on a landing barge on a little beach just under the towering cliffs of Valetta. Once aboard we were all tense. I remember well the palms of my hands were a little wet and my lips a little dry, and there was a loose feeling in my bowels perhaps—not that we were afraid, but it is something like starting an election campaign. You know you can do it but you are waiting for it to get under way. Then down the harbour came a great sight—the *Rodney*, the *Nelson* and the *Indomitable* putting out to sea, and after them cruisers, destroyers, torpedo boats, and a great fleet of invasion barges. The British navy is great for show and tradition, even when going into battle, for as they sailed down the harbour they dressed ship as a salute to heroic Malta. The blue-jackets in their tropical whites stood side by side along the bows of the *Rodney* and the *Nelson*, with the Royal Marines in khaki drill with white topees and white piped webbing lined up around the stern, and on the great flight deck of the aircraft carrier *Indomitable* the brass band played "Hearts of Oak". The airmen on our barge looked at the sight and said, "Thank God we have the navy."

It was that sight which determined me when I returned to Canada to come back by a ship of the Royal Canadian Navy. So that when I arrived in London last fall I went to Canadian headquarters. Even there I found a pleasant thing. Overseas our army and our air force had felt that Canada should put on a good show and they have palatial headquarters. But the navy does things in a very modest way. Half of one floor of a very small office building, and not in one of the best parts of London, is where the Royal Canadian Navy carries on its overseas headquarters. I was given every courtesy, and I can tell this committee that half an hour after I entered I left all booked up, time and place and port, to return to Canada. The service could not have been excelled by any steamship line in civilian life, and I wish to thank the minister now for the courtesy extended to me over there. I should like to tell the committee just a little bit, from a landlubber's point of view, of life with the Canadian navy at sea. I embarked at the port of Londonderry —I do not think that is giving away any secret —and expecting the voyage to be rough and cold, I wore an old suit of battledress. I was rather ashamed when I got on deck to see everybody else looking spic and span in their tiddly blue, the officers in gleaming gold braid, and the sailors so natty with their little hats tipped over one eye, I thought I was letting the air force down by wearing my old suit of battledress. Therefore the following morning I came up in my very best blues, looking very swish, I thought, and I discovered I had made a mistake again because, once at sea, I found the sailors of the Canadian navy were just as Canadians at a hockey rink. They were wearing sweaters, ski jackets and balaclava helmets, any kind of worn dress for convenience and comfort. They were now Canadians at sea, fighting.

The actual forming of the convoy was a wonderful sight. The great ships formed up, the destroyers and corvettes and the whole flotilla under the commodore. I wish to pay a tribute to these commodores, who I think are the most heroic figures in this war. They are old British admirals long since retired from their fighting ships, but when the war came they left their firesides and went back to sea, some of them seventy, some seventy-five, and one I know, eighty years of age, with faces the colour of port, and hearts—I cannot describe their hearts. These are the men who have led the convoys back and forth across the Atlantic.

We had thought that we in Libya were living under rather desperate conditions. Mind you, since I have got back and started talking about it the conditions have become more and more desperate; at times I am rather surprised to find that I have survived. But I can tell this committee that the Canadian navy, fighting in these little ships, lives under conditions very much more exacting than the life out in Libya. By their very nature these little ships have not very much in the way of accommodation. A destroyer is away nearly all the time. These old British destroyers and the United States destroyers we have are very poorly heated, if they are heated at all. But these men in the Canadian ships, the destroyers and fair-miles and corvettes and mine-sweepers, live and fight under these conditions: they have, I think, perhaps the finest spirit of any of our fighting services. There is a healthy rivalry between the ships. The *Kootenay* for example thinks it is the best ship in the fleet; that the *Skeena*, the *Saguenay*, the *Saskatchewan* and the rest of them are not in their class. It is a very fine thing for a man to believe so thoroughly that his own ship is the finest ship afloat.

There is another circumstance, of course, which binds the men of the navy so close together. In the army and the air force, for every combatant in the front line, there are ten, fifteen or twenty non-combatants in various distances behind. In the navy, every man on a destroyer or a corvette, from the skipper on the bridge to the stoker in the hold and the cooks and stewards in the galley, are taking exactly the same risks; they experience the same hazards; they have the same pride in their ship. The convoy on which I sailed was the first convoy back after the launching of the acoustic torpedo which had resulted in the sinking of the *St. Croix*. In this country we are inclined to think that the Royal Navy, the British navy, is slow and tradition-bound. To me it was amazing that, in the seven or eight days which elapsed between the arrival of that convoy and the sailing of ours, the British navy had devised the answer to the acoustic torpedo. The men in the navy were frightfully keen, like fishermen going out with a new lure, to try out this new gear. When action stations rang the fourth night out it was amazing to see the ship transformed; all the men from cooks and stokers upwards knew where they were going and where they had to fight, and manned their posts with the most incredible enthusiasm. This was their chance to see if their gear would work and to get "one up" on the other destroyers of the Canadian navy.

As far as living conditions are concerned, a very great deal has been done for the Canadian navy both by the towns which have adopted these ships and by the Navy League and the women's organizations across this country. If there is one thing these men at sea need it is warm clothing, and they have received it in substantial quantities, but the quantity must be increased from all parts of Canada.

I should like to speak briefly now on the navy as it affects the Pacific coast. I am the member representing half of Vancouver harbour, which is the biggest year-round harbour in Canada. On the United States side are four great Pacific coast harbours—San Diego, San Pedro for Los Angeles, San Francisco, and Seattle—each one of them having a big naval establishment. The great city of Vancouver, however, has not a single naval dock or pier. There is one small barracks at Dead Man's island. The reason is obvious. We had an old and established naval base, of which the hon. member for Victoria spoke so well this afternoon, Esquimalt, established by the British government in 1853. When the British government established Esquimalt the mainland of British Columbia was pretty well a howling wilderness. Vancouver harbour was used only by the Indians. All naval supplies came by sea into Esquimalt, so the fact that Esquimalt was on an island was no handicap. Now, however, this situation has changed. All supplies or almost all supplies for Esquimalt come from the mainland of Canada; they pass through the harbour of Vancouver, and over civilian docks and by civilian transport to Esquimalt. The time has surely come when Vancouver should have naval docks and naval piers, so that naval supplies transferred between Vancouver and Esquimalt can be handled with purely service facilities. Vancouver is well equipped for this purpose, because we have plenty of good land, and deep sea anchorage; that is, in North Vancouver, and

the two biggest and best shipyards in Canada.

The hon. member for Vancouver South (Mr. Green) has shown great interest in what part the army and air force are to be permitted to play in the war against Japan. If there is one service which will play a very important part, we know it to be our navy, and when our navy moves to the west coast, Vancouver and Esquimalt must be its principal bases.

Mr. HANSON (Skeena): And Prince Rupert.

Mr. SINCLAIR: I will include the great seaport of the hon. member for Skeena. Therefore I would suggest to the minister that the time has come to build and plan on the west coast for the winding up by our navy of the war against Japan.

Mr. FRASER (Peterborough West): I was pleased to hear the hon. member for Vancouver North (Mr. Sinclair) praise the boys of the navy. The hon. member for Simcoe North (Mr. McCuaig) mentioned shipbuilding, but it is the men of the navy, the men who man the ships, who are the real heroes.

Corvettes have been mentioned. I do not believe reference has been made to the Fairmiles and the mine-sweepers. I know, from boys who have been on these ships in convoy work and patrolling, and in these mine-sweepers, that sometimes for days on end they have to stand up to their meals; the meals, just as they are, perhaps uncooked, are passed to them, because the corvettes and mine-sweepers and Fairmiles do not merely pitch; they roll and toss. It takes an extremely strong man to stand up under these conditions, and these boys and men deserve every bit of credit the Canadian people can give them; they have done a wonderful job and are continuing to do it.

Just here I wish to read a short article which was in the newspaper on March 2. It is entitled, "Six Tiny Fairmiles Ride Gale; Guard Convoy Through Night", and states:

Six tiny Fairmile launches pushed their sleek noses into the teeth of the worst maritime blizzard in years, February 24, on sudden orders to supply patrol protection, presumably for a convoy.

The story of the 12-hour, night-long battle of the little ships and their crews, withheld until now for security reasons, was disclosed to-day by naval headquarters. Details of their job were not given. It was merely disclosed they performed duty normally expected of "big ships".

Manned chiefly by volunteer reserve men, the patrol craft suffered no damage despite high seas, lashing snow and spray driven by a 50-mile-an-hour wind. Visability was cut to 200 yards. The period was an anxious one for even the largest ships in the area.

The performance of the motor-launches in a storm which saw many marine accidents and ships driven ashore drew the first signal of praise in this war for that type of work. Rear Admiral L. W. Murray, commander in chief, Canadian Northwest Atlantic, signalled commendations to the ships, which operate under Captain J. A. Heenan of Ottawa.

When I was in Halifax, Admiral Murray suggested that if I ever got the chance I should see the motion picture entitled, "Corvete K 225". If any hon. member here has not seen that picture he certainly should see it. It gives one an idea of what these boys have to go through and what they are doing.

I am very much interested in the navy owing to the fact that the Grove school is in my riding. There are over 260 old boys on its honour roll. These boys have joined the navy, and I may say that Vice-Admiral Nelles went to school at Grove, as did many of the officers of the Canadian and Royal navies. I believe it was the first institution in Canada to have a sea cadet corps, and I know that during 1940, 1941 and 1942 the flag at the school was at half-mast practically all the time for boys who had gone to the school and had afterwards lost their lives fighting in the Canadian navy. During 1943 there were not as many sinkings, and therefore the flag was not quite so often at half-mast.

The reason why Grove school is perhaps the first to have established a sea cadet corps in Canada is, in my opinion, the fact that Peterborough, the riding I have the honour to represent, is one of the boating paradises of Canada.

The minister to-day did not mention the officers of the Canadian Pacific Steamships' personnel. I find in the press of March 6 an article with reference to Canadian Pacific Steamships' officers who have been honoured. I quote:

As part of the 5,599 Canadian Pacific Steamships' personnel on admiralty, armed cruiser and shore service, ten officers have been honoured by the king "for good services" in vessels from among the twenty Canadian Pacific ships taken over by the admiralty in 1939. Awards for heroism won by the Canadian Pacific seagoing personnel in this war now total forty-one. The newcomers to join the honour roll are:

Captain R. A. Leicester, O.B.E., master of a vessel sunk in the Mediterranean when Engineer Officers Edward E. Stewart and William B. Harris, both of Victoria, won M.B.E.'s.

Chief Officer Donald Smith, O.B.E., of Vancouver and First Officer Leonard Johnston, M.B.E., of Vancouver, who guided refugees to safety after the Japs sunk their ship, the *Empress of Asia,* off Singapore.

Chief Engineer William Neilson, O.B.E., of Victoria and Captain L. C. Barry, M.B.E., for more than two years continuous operation "in dangerous waters".

Captain George Goold and Chief Officer John St. Claire Clarke, both of Vancouver, and Chief Engineer D. Cowper commended for their actions when the Italians sunk the *Empress of Canada* off West Africa.

The minister did not say anything to-day as to whether Canada intended to build any aeroplane carriers for our navy. I think he should have let the committee know what is going to be done along that line, because the Canadian navy will have to carry planes perhaps before this war is over and certainly before another war comes along.

Mr. JACKMAN: One cannot help being greatly impressed with the account the minister has given of the activities of the navy. Its growth from a small pre-war permanent force of 1,700 personnel to over 74,000 is a record of which any country may be proud. Indeed, I understand that the personnel of our navy is now greater in extent than that of the Royal Navy in peace time. In addition to that number of 74,000, we must not overlook the establishment of the Women's Royal Canadian Naval Service, which has grown since the autumn of 1942, when the first class was started, to a personnel of over 4,500, and to the Wrens I should like to pay a special tribute.

Our Canadian boys have proven themselves great sailors; and it has amazed all how the young lads, not only from the maritime provinces but from one end of the country to the other, including the prairies, have taken to the sea as if it were their native haunt. So high is the tradition of the British navy, so strong is the lure of the sea, that when a poll was taken at a boys' school near Toronto to ascertain which of the three services was the most popular the navy won the vote.

It is not my intention to praise the minister for naval services any more than I would praise the minister for air, whose partisanship when in opposition was notorious. I am not in a position to know how much better their tasks might have been fulfilled, but there are so many stout fellows in the navy as well as in the other services that I feel we cannot pay too great a tribute to their ability and to their eagerness to serve where the danger is greatest. At the same time, the Minister of National Defence for Naval Services (Mr. Macdonald) has not hesitated to adopt new ideas or, if I read correctly between the lines, to make changes in personnel in a quiet way for the betterment of the great service which is the particular care of his department.

The heroism of the men in the silent service will go down in the annals of our country. I think of one of my young friends who, in the early days of the war, lost his life when in command of the leading motor-torpedo boat in a raid which blocked the harbour of St. Nazaire. I recall another young man from my own riding who was on a corvette that rammed a submarine off the coast of Cuba, a youth who entered the navy as a rating on leaving school, and whose ability has now been recognized by his promotion to a sub-lieutenancy.

Our part in conquering the submarine menace has been a notable contribution to the war effort, for as long as that menace persisted there was little chance of organizing an effective invasion of the nazi fortress of Europe. Great Britain, in appreciation of our contribution to the common cause and of our ability to man and sail ships of war, has given Canada, by way of reverse mutual aid, two cruisers which will constitute the nucleus of capital ships for the Royal Canadian Navy.

May I add a word to the praise which the minister has already given to those splendid young women who are members of the W.R.C.N.S. The Wrens have so proved their effectiveness as an integral part of the navy in Great Britain that it was decided that the formation of a like organization in Canada would be a needed and desirable contribution to the war effort on the part of our country, relieving, as it does in some degree, our manpower shortage. At our request we borrowed from the Women's Royal Naval Service of Great Britain three of their officers to assist in setting up the W.R.C.N.S. in Canada. In April, 1942, Superintendent Carpenter, notwithstanding failing health at that time, cheerfully and ably carried out the task to which she had been assigned. After resuming duties in Great Britain she was awarded the order of Commander of the British Empire. Accompanying her was Captain Isherwood, who remained for a somewhat longer time in Canada as the first head of the W.R.C.N.S.

The high standards of the Canadian Wrens owe much to the organizing and administrative ability of Superintendent Carpenter and Captain Isherwood. Accompanying these two officers was Lieutenant Sturdee, a granddaughter of the famous admiral of that name who fought at the battle of Jutland.

While selective recruiting for Wrens was still going on apace, the present Director of Wrens, Commander Sinclair, was assigned to the British Wrens, and on the return of Captain Isherwood to Great Britain, Commander Sinclair took over the command and has since that time devoted to the organization her high executive talents.

May I here pay a tribute to Great Britain for her contribution in helping in organizing the Canadian Wrens, as well as in offering the

model for the Canadian navy. I do this not because the contribution comes from across the water but because that contribution represents the highest development which the experience of centuries has given to a service that stands ever ready and ever eager to serve its country. To appreciate fully the contribution which the Wrens are making to our war effort it is necessary to review their activities which have in virtually all cases been the means of releasing sailors for active service. They have replaced men in map plotting, signalling, as dietitians, cooks, waiters, sick-berth attendants, drivers, clerks, typists, and in the handling of mail, messengers, et cetera. May I read an extract from the official pamphlet "Canada at War" for January of this year:

A Wren officer is captain of a training ship ashore—first woman to achieve that distinction; another officer graduated from an accounting officers' course with male officers; a Wren is doing medical research for the navy in a guarded laboratory; Wren dietetics officers (under Lieut.-Commander Taylor) supervise the food eaten by naval personnel ashore or afloat; a Wren officer instructs seamen cooks at the naval cooking school at H.M.C.S. *Cornwallis* at Deep Brook, N.S.; a Wren checked all the shipping through the Welland canal during the navigation season.

As the minister mentioned, the Wrens are serving at over thirty different naval bases in Canada, Washington, Newfoundland and overseas. Indeed, one British guest child who came to Canada in the early days of the war has since returned and is now a stoker Wren running a harbour craft in one of the British ports. That she is a granddaughter of the Lord Chancellor of Great Britain is only an indication of the high quality of the young women who seek service in the Wrens. No less worthy of mention is the fact that the daughter of my office mate, the hon. member for St. Paul's (Mr. Ross) is a driver Wren.

Owing to the high type of young woman who has been attracted to the senior service, there has been little occasion for disciplinary action. The excellent training which the Wrens are receiving and the fact that they are serving together in an organization with the highest ideals of service, are making them not only better women, but better citizens of our great country.

Mr. GILLIS: Along with other hon. members I have listened with a great deal of interest to the minister's presentation. I was particularly interested in his winding-up remarks. I think the minister was perhaps more realistic at that point than during all the rest of his address, because most of his address consisted of putting statistics on the record, showing the growth and development of the navy. I am sure we all join with him in that connection in expressing our appreciation of a job well done. However, the minister stated and reiterated what the ministers of national defence for army and air stated, that our first and most important obligation is the winning of the war and that we must not lose sight of the fact that it is far from won. Second, the minister sharply disagreed with some hon. members on this side of the house, and I think rightly so, in their criticism of spending any time of the committee on post-war problems. I believe the minister was absolutely right when he stated that in order to build up the morale of those in the fighting services—all three of them—it was necessary that we at home demonstrate—particularly those in the House of Commons—from time to time that we are not unmindful of the fact that they are fighting not only against something but for something; that we in this House of Commons know what they are fighting for, and that we are utilizing our time to lay down a programme and policy with respect to the organization of the economic resources of the country to guarantee to them, as the minister stated, that when they come back they will return to a Canada that will assure them of equality of opportunity, the right to a job, and the right to earn a living. As we discuss the problems that come before the house from time to time I do not think we must lose sight of that for a moment. I believe that any time used in this house in discussions with respect to post-war problems is time well spent. I believe it is one of the most important things that this committee can do, particularly if we have those in the services in mind and if we desire to send them forward to make their greatest contribution. That contribution can only be made when they realize that we back here are doing something to change the scheme of things from what it was when war broke out. That is the greatest morale builder that we in Canada can undertake for those in the services.

So far in the debate members from both parties in the committee have risen and have led the minister to believe that his job is completed, or at least there has been no criticism. The speeches so far have consisted of straight eulogies of the presentation. Some hon. members have been doing a little job here and there for their own constituencies. As I see it, the function of the opposition is to accept what the government has to offer and to criticize any proposal that comes before the committee—constructively, of course—in order to urge the government forward to a greater

effort. I believe that can best be done by taking the policy that existed in the past year, boiling it down to cases and pointing out for the benefit of the minister just where that policy did not live up to expectation.

From time to time ministers rise in their places in the committee and say: "Individual cases should not be discussed in the committee". There is no other practical way possible that I know of whereby improvements can be made than by mention of individual cases. That is the most specific and shortest way of demonstrating to a minister the ineffectiveness of his programme as it is being administered in the country. The best way to do it is to boil it down and exemplify it. That is the shortest, most concrete and most specific way in which it can be done. I disagree with those who say that individual cases should not be discussed in the committee. A very good policy can be ruined by faulty administration, and any minister of government, particularly a minister of a war department, who has a large organization that extends in many directions is certainly not in a position to keep his finger on every specific detail of administration as it affects the people of the country. Some official or officials perhaps not as familiar with regulations as they should be, can create a situation in the country, unknown to the minister, that is adverse to the whole policy of the department. The shortest and most specific way of bringing that to his attention is to give him the case, because in my opinion a case arises in either one of two ways, either through an inefficient official or through a faulty policy. I think if it is given to the minister in that way he will have some idea of where to check and what to check for. I have no apologies to offer for mentioning one or two matters at this time, though I am not going to discuss everything I have in mind. I understand that it is the intention to proceed as we did with the air and army estimates, and that specific questions may be discussed as we go through the estimates item by item. However, there are one or two matters of policy which I should like to bring to the minister's attention.

The first matter about which I should like to speak is the merchant marine. The minister commented on the service it is rendering, and on many occasions I have stated in the house that while we recognize the job being done by the army, the navy and the air force, and we have paid them tribute time and again, the merchant marine is a greatly neglected branch of the service, although in my opinion it is one of the most important. These men have suffered casualties; they have undergone all kinds of hardship; yet they have not the right to wear a uniform and receive very little glory and very little recognition of the service they are performing. In my opinion they are badly treated. The minister may say this would come more properly under the Department of Transport, that he has nothing to do with the movement of these ships and very little to do with the manning pools through which the men are routed out to service. My contention is and always has been, and will continue to be, that the merchant navy should come under the direction of the Canadian navy. In the first place I believe that these boys have a right to wear a uniform and that they should be supplied with uniforms by the government as uniforms are supplied to other branches of the service. The hon. member for Vancouver North (Mr. Sinclair) rightly eulogized the work of the navy in connection with convoying, but he failed to mention the boys who are taking the real licking, the boys on these old ships with very little means of protection. If a ship in a convoy gets knocked off, the others carry on and that ship is left to struggle on alone. These men are taking the real chances, the real lickings; they are suffering the real hardships, and in my opinion they should be handled exactly as the other services are handled in this country.

What happens to one of these boys if he becomes a casualty? I said that perhaps the shortest and best way to bring a matter to the minister's attention was to cite an example, and I have a case here of a boy who served two years in the merchant marine. He went all over the world, then came back to Halifax and was discharged from his ship, suffering from a mental condition no doubt brought on by his service. He wandered around Halifax for a while, then was picked up and sent home to his parents in that condition. Representations have been made to everyone I could think of. The boy was placed in an ordinary mental institution in Inverness county, and not one of the best institutions in the country either; it is a place to which people are sent when all hope is gone. This boy's father has written to everyone; he has seen me, and I have written to everyone, always without results. We were given to understand that if the boy could be placed in an institution in Halifax and given the proper treatment there would be a possibility of restoring him to health, for he is only twenty years of age. But I could find no agency that would take the responsibility of guaranteeing any payment or of putting him in any institution. He is still in that place in Inverness county, and only to-day I had another letter from his father. That is pretty rotten treat-

ment to give a boy of that age, who went to sea and took everything that came in those convoys for at least two years, during which he was at Crete and all those other places. I leave that thought with the minister because I believe this country has a definite obligation to that boy and his parents, who are not in financial circumstances to provide treatment for him. The Department of Pensions and National Health as well as several other departments, both provincial and federal, have had this matter up for consideration without results. I believe that in a case like this a boy who has performed such services, whether in the merchant marine or in any other branch of our forces, should be provided with the medical attention necessary to restore him to his former condition of health. That is only one case of this kind. There may be several others, and no doubt will be.

There is another matter of policy on which I should like to ask a question, and I am going to mention another case. About eighteen months ago a young man who had a special trade made application to join the navy at Halifax. He wanted to go in a specialist branch of the service, where he could make his best contribution by carrying on his own trade. Local officials were quite ready to accept him. Then, as a result of some misdemeanour committed by his parents some years ago, his application was rejected. Now he has been called up by the army. The point I wish to make is this. This man decided where he wanted to go and volunteered his services to the navy. He wanted to go into the branch of the service where he could make his best contribution, where it would take the least training to qualify him to make that contribution. but his application was rejected.

Mr. MACDONALD (Kingston City): Is that the young man my hon. friend wrote me about? My hon. friend wrote about a case similar to this; is it the same case?

Mr. GILLIS: That is right. Now this man has been called into the army. The point I am making is that he is being pulled into a branch of the service against his will. To all intents and purposes he has been forced into the service; he is a conscript, whereas months ago he volunteered his service where he could have made his maximum contribution. In the branch of the service where he is now it will take a good deal more training to qualify him than would have been the case in the navy. I do not know why that policy should prevail; if a man is acceptable in one branch of the service as far as character goes he should be acceptable in the others. If he is not suitable for one particular branch, for certain reasons, then he should not be suitable for any branch of the service, because I put them all on the same basis when it comes to a matter of that kind. In this case I think a good deal of the country's money has been wasted. Here is a man who volunteers for the navy and who could have made his maximum contribution months ago, whereas now he is pulled in against his will and put in a branch where he will not be very well satisfied.

There is another matter I should like to call to the minister's attention, again because I think it has to do with a matter of policy. I am not going to use any names; the minister can check these matters, because they have all been before his department in the past. There was a young man serving in the navy as a petty officer. His ship was lost and he was lost with it. His mother is seventy-three years of age. She cannot obtain an old age pension in Nova Scotia because in the days of depression, when the going was tough, she went to Detroit and lived there for a few years. Because she had spent a few years out of the province she is not now entitled to an old age pension even though she is seventy-three years of age. She has made application to the Department of Pensions and National Health for a dependents' pension because her boy who would have contributed to her support was lost at sea. The matter has not been settled; it is still in the slings. They are chasing it around.

In circumstances like this I do not think there should be any question about what should be done. In his address the minister referred to the necessity of keeping up the morale of those in the service and the obligation that we in this country have to guarantee to these boys that we are looking after their dependents. I do not think this is a matter of policy; it is a matter of faulty administration. The boy was lost at sea and the mother has no other source of income. Things of this kind get around and relatives of boys in the service and others hear of it. Such things do not build up the morale which is so necessary.

There is another matter of policy which I should like the minister to check. I refer to the medical men who are serving at different ports under the present merchant marine set-up. These qualified doctors have been requisitioned for service and designated to ports like Halifax, Sydney and Vancouver as port doctors. They look after all the ships coming in, including naval ships, but they are not entitled to wear a uniform. Their income is much lower than that paid to medical men in the services. Many of them have tried to transfer to the army, navy or air force—I speak from personal knowledge—but they have

not been permitted to do so. What hurts these men most of all is the fact that they have no right to wear a service button or ribbon. Their families receive no dependents' allowance. Many of them are young men and they are making a considerable contribution, but when the war is over they are faced with the possibility of being branded as slackers. The fact is that they are carrying on one of the toughest jobs medical men can do. They are working for fourteen hours a day and are on call at any hour of the night should a ship arrive and require examination for quarantine purposes. Most of these men are qualified for the rank of major in the army, which rank I believe is given to most medical men. This is one thing the minister should check up, because it is nothing less than an oversight to place men of this calibre in this position.

There are a number of other matters that can be discussed with the minister by way of questions, but I thought these few rambling thoughts dovetailed into the matter of policy and were in accordance with the minister's statement that matters of this kind should be checked up in order not to leave the impression with those in the service that we were not interested in the small everyday things of life. If we take care of the small things, the large ones will take care of themselves.

Mr. McNIVEN: Mr. Chairman, most hon. members who have taken part in this debate have been residents of the Atlantic or Pacific coasts, or of regions adjacent to large inland waters and the committee may wonder why I, a landlubber from the centre of Canada, from a point almost equidistant from the Atlantic and the Pacific, am venturing into this debate. I do so for several reasons. Coming as I do from central Canada, I do not propose to follow the example of some of those who have spoken already and demanded special consideration for their particular harbours, nor will I attempt to vie with the hon. member for Comox-Alberni (Mr. Neill). While the debate between the hon. member for Skeena (Mr. Hanson) and the hon. member for Vancouver North (Mr. Sinclair) was going on, the hon. member for Comox-Alberni turned to me and whispered that he had a harbour at Alberni which was as expansive as the western prairies and capable of holding all the fleets in the world.

I should like to refer for a moment to the address delivered this afternoon by the Minister of National Defence for Naval Services (Mr. Macdonald) and to congratulate him most sincerely upon the picture he painted of the development of the Canadian navy. I want to commend him for the modesty he displayed in outlining those accomplishments. I listened to the remarks of the hon. member for Cape Breton South (Mr. Gillis). The other evening he and the hon. member for Weyburn (Mr. Douglas) commended the Minister of National Defence for Air (Mr. Power) for the achievement of the Canadian air force, and this evening the hon. member for Cape Breton South has commended the minister for the achievements of the Canadian navy. I hope these hon. members realize that in the development of our air force and navy there has been some intensive planning, that there was somebody who directed in order to bring about this achievement, that there was somebody who planned, somebody who charted, somebody who made the blueprints. Both these hon. gentlemen belong to a group that would have the Canadian people believe they have a monopoly upon planning, blueprinting and charting courses which result in worth-while achievement.

After making a general eulogy of the minister the hon. member for Cape Breton South stated a number of specific cases. He said that in making this reference he was making no apology to the committee. However, I think the hon. member will agree that he should have apologized to the committee, because the four cases he referred to were all outside the Department of National Defence for Naval Services. He referred to the medical men on the Atlantic coast who belong to the merchant marine and serve as port doctors, and he complained of the role they were having to play in these stirring times. He said that at some subsequent date they might be regarded as slackers. I do not think these men need have any fear. If they are performing the duties outlined by the hon. member I think they will come within the terms of that old saying "he also serves who only stands and waits".

In September, 1939, the Prime Minister (Mr. Mackenzie King) placed the assets and resources of Canada at the side of Great Britain. Since then the assets and resources of this country have been steadily mobilized for an all-out war effort. May I remind the committee that, as an initial step in that direction, a few days after the declaration of war, when the British admiralty sent a message to the Canadian government asking it how soon the Canadian navy would be ready for convoy work, the reply was sent back "Immediately", and within six days of the declaration of war eighteen ships loaded with food and supplies left a Canadian port under convoy by the Canadian navy.

Since that day the personnel of the Canadian navy has grown forty-one times, and it is interesting to note that the greater proportion of that growth is included in the Royal Canadian Naval Volunteer Reserve, drawn from the four corners of Canada, from every walk and occupation in life. These young men, some 67,000 in number, have joined the Canadian navy and are serving wherever required.

I wish to thank the minister in particular for his reference to young men from the Canadian west who have joined the Canadian navy, for of the total to which I have just referred, 25,394 ratings and 1,694 officers have come from western Canada. Many of these young men, as the minister remarked this afternoon, prior to enlistment never saw a bit of water larger than a prairie slough, or a ship larger than a sailing boat on some of our smaller sheets of water. It was gratifying to us to hear the minister pay a tribute to these young men, a tribute to their courage, their alertness, their intelligence, and to the way in which they have performed their duties which were new and novel. That same tribute has been paid on a number of occasions in different parts of Canada by the minister and likewise by the Prime Minister and by many senior officers of the navy. I suggest to you, sir, that that achievement, the number of recruits who have come from western Canada, has been made possible by the enthusiasm and the steadfastness of groups of men, who, following the last war, maintained an interest in naval matters through the operation of naval recruiting stations in different parts of Canada. In my own city of Regina we have had a naval company since the close of the last war; up to a few months ago that naval company had trained over 2,200 recruits for the Royal Canadian Navy, and these lads had later completed their special training on either the Atlantic or the Pacific. That achievement is so notable that I cannot refrain from again mentioning the names of the men who have contributed to that success. There comes to my mind Lieutenant-Commander Hall, Lieutenant-Commander Ellison, Lieutenant-Commander Grant, Lieutenant-Commander Pickersgill, all of whom are on active service in the present war; likewise Petty Officers Jeffery and Smith, who are also on active service.

I should like to commend the minister for the policy to which he referred this afternoon of naming corvettes and destroyers after important points in the Dominion of Canada. It is interesting to note that a number of corvettes have been named after Saskatchewan cities and towns. It is a matter of regret that the corvette *Weyburn* was lost in action. The corvette *Rosthern* has done excellent service, and it is a matter that should be noted, I think, that of the four submarines sunk by Canadian naval vessels unassisted, in 1943, the corvettes *Moose Jaw* and *Regina* were responsible for two of them, this being one occasion when Moose Jaw and Regina can unite in a common acclaim.

I should like to give some particulars with regard to the corvette H.M.C.S. *Regina*. When on duty in the Mediterranean she encountered an Italian submarine and blew her clean out of the water. At that time the ship was commanded by Lieutenant-Commander Harry Freeland, who, may I say to my friends the hon. member for Queens-Lunenburg (Mr. Kinley) and the hon. member for Shelburne-Yarmouth-Clare (Mr. Pottier), comes from Nova Scotia. This officer has had a splendid record, having served on H.M.C.S. *Assiniboine* and *Lord Strathcona*. At the present time he is commanding officer of the frigate *Outremont*. The present commanding officer of H.M.C.S. *Regina* is Lieutenant J. W. Radford, who has had wide experience, having served on H.M.C.S. *Collingwood* and *Orillia*.

At the outbreak of the war Canada had no shipbuilding industry. There were, as the minister mentioned this afternoon, only a few ship repair yards and some 5,000 men engaged in that industry. Since that time Canada has equipped some twenty-three major shipyards and some sixty-five minor shipyards, and in that industry now has an investment of well over $500,000,000, employing well over 100,000 men and women, turning out ships of war and ships for the merchant navy with a total commitment approximating $1,000,000,000.

The minister mentioned this afternoon the number of corvettes that had come down the slips and the prominent part that the corvettes are playing in convoy work and in action. It may be of interest to note that the first corvette built in Canada was launched in 1739 and was contracted for by N. Lavesseur and launched at the city of Quebec. It was a corvette, then called a sloop of war, a little less in size than our frigates and having many of the features of the present-day corvette. The results that have been obtained in the shipbuilding industry, both naval and marine, is a magnificent tribute to the way in which capital and labour have worked together. It is a magnificent tribute to the way in which the management and the worker have come together in Canada's emergency to produce

ships of war and merchant ships which were needed in greater production than any other commodity at the time.

It is apparent that the Canadian navy, from its accomplishments and achievements which have been enumerated this afternon, is living up to the best traditions of the British navy, which has long been the acme of national service anywhere in the world. It will be remembered that in May, 1940, at the time of Dunkirk, when Mr. Churchill made that historic speech, he said "to build the ships and strangle the U-boat." Because of the assistance given by the Canadian navy, he was able to announce in the British House of Commons on November 9, 1943, that they had broken the back of the U-boat campaign.

Canadians everywhere are proud of the achievements of the Canadian navy, and occasionally it may sound as though we were patting ourselves on the back when we eulogize the accomplishments of our own service. It is for that reason that I should like to refer to a tribute which was paid to the Canadian navy by a great publication in an allied country. I refer to the *Saturday Evening Post,* published in the United States, which on August 21, 1943, on its editorial page, said this under the heading, "Canada Saved the Day":

As this is written we seem to be well on the way toward victory in the battle of the Atlantic. The menace of the U-boat recedes as allied naval power grows and new techniques are developed for anti-submarine warfare. Land-based patrol planes and the rapidly growing use of converted carriers on Atlantic convoy have helped enormously. Britain, Canada and the United States are all sharing in this triumph over Hitler's strongest weapon.

What most Americans don't realize, however, is that there were many desperate months when Canada stood between us and disaster.

Sea traffic, like that on the rails, divides neatly into two categories—passengers and freight. Our passengers in the battle of the Atlantic are troops bound for England, the Mediterranean theatre and other war fronts. They travel, heavily escorted, in fast ships, and they are comparatively little trouble. They get through with but little loss.

But the freight traffic is another matter. It is composed of trade convoys, the rusty and battered merchantmen that deliver the goods. They carry fuel oil, gasoline, iron ore, grain, frozen meats, tanks, planes, guns, explosives and hundreds of other products vital to the conduct of war. The size of these convoys and the frequency of their sailings are, of course, information the Germans would like to have, but it can be said here that both are much greater than you probably imagine. If the trade convoys had not been kept running, the allies doubtless would have lost the European war by this time.

There was a time before Pearl Harbor when the United States contributed substantial help in the way of escort ships for the freight convoys. But after Japan struck, much of our naval strength was needed in the Pacific, and we also had to use our fighting ships to guard the troop convoys crossing the Atlantic. The burden of protecting the freighters fell chiefly upon England and Canada. Britain, with a very limited amount of help from the Norwegian, Polish and Fighting French navies, supplied fifty-one per cent of the escort vessels for the trade convoys; the United States contributed two per cent, and little Canada, amazingly, provided forty-seven per cent.

This does not mean, of course, that the United States was drowsing during those long and critical months. We supplied aircraft for freight convoy patrol and extensive ship and plane repair bases on both sides of the Atlantic. We guarded the growing stream of troops on their way to a global war. And after the fall of Singapore and Java we held the line almost alone in the Pacific. Also, it should not be forgotten that long before Pearl Harbor we had handed over to the British fifty of our over-age destroyers.

Yet the fact remains that we probably would have lost the war if the Canadian navy hadn't come through in a spectacular and heroic way. It is not surprising that Britain, with her great sea power and resources, should have been able to shoulder fifty-one per cent of the job. But it is one of the marvels of this war that Canada, an agricultural nation of less than 12,000,000 people, could have contributed forty-seven per cent of the vast fleet of fighting ships necessary to get the freighters across.

How Canada accomplished such a feat is an epic that should be written in large letters. When the war began in September, 1939, the Canadian navy was composed of a handful of destroyers manned by a personnel of less than 2,000 men. To-day that personnel has expanded twenty-five fold. As for ships of war, Hitler would like to know the exact figures; Canada's performance in the north Atlantic tells the story.

Of the fifty American destroyers which were traded to the British, Canada got seven, but while these were a real help they were only a beginning—a stop-gap. During the early months of the war, the need became apparent for a new type of war vessel: a ship designed to combat the U-boat, to be launched in large numbers, in a hurry. There was no time to be lost. The answer was an improvisation—a happy improvisation called the corvette.

The corvette is a small ship—under 1,000 tons, less than 200 feet long, but broad of beam—yet she is definitely an ocean-going craft. Her steaming radius enables her to make the transatlantic run with a reserve of fuel which destroyers may envy. Her ability to survive the most frightful weather the north Atlantic can dish up is an eternal joy to those who sail her. The corvette is slow, but the old-fashioned reciprocating steam engine—which were available when the need came—are highly reliable, and reliability means much on the Atlantic convoy route. Moreover, she is amazingly manoeuverable. Her armament is adequate for the job she has to do.

Once the Canadians had the design for the corvette and knew it was the answer, they set about building it in numbers that would shock the nazi high command if it knew. Large shipyards and small ones, even tiny boatyards whose experience had been limited to fishing boats and pleasure craft, responded in a way

that made history. And husky young lads from the prairie provinces went down to the sea to man them. Canada made do.

Now the vast resources of the United States are being brought to bear on the U-boat problem in a larger way, and the ratio of escort craft provided by Britain, Canada and America may be changing. But Canada is still doing her part and will continue to do so, we may be sure, until the day of peace. Is it any wonder, then, that the Canadian sailor may be just a trifle offended when his cousin from south of the border inquires with polite condescension: "Tell me, does Canada have a navy?"

Such was the unsolicited tribute paid to Canada, to Canada's Navy, by the *Saturday Evening Post*, a magazine which has a weekly circulation of over four millions.

In the last war and as a result of the last war, Canada became a nation. As a result of this war Canada has become a world power.

Mr. McIVOR (Fort William): I wish to ask the minister two questions, but before I do so I should like to pay a tribute to him for the masterly way in which he presented the record of his department. I do like to hear a minister who can stand up and speak up, showing that he knows what he is talking about, and then by deeds of valour proves what he has been talking about. We at the head of the lakes live on the shore of the greatest body of fresh water in the world. Before the last war we had a shipyard, and when war broke out that yard began to live, when the workers came back. The tribute paid the other evening by the Minister of Munitions and Supply (Mr. Howe) was well worthy of the workers who have been producing from the Port Arthur shipyards. Not only that, but we have had a sea cadet training centre there for years, and just as soon as war was declared there was no busier spot anywhere in Canada than that Port Arthur training centre. They all wanted to be given a chance, and I have gone there to see what I could do for boys who were burning up to get into the navy. I found a list of over five hundred who were waiting to be taken in, and they were all number one. When I think of these young men who have gone to sea, some of them when they return not looking as young as they did when they went away, it proves to me the words of the minister, that these young men are going all-out to serve their God and their country in a way that will do credit to Canada, their home, and to their city centres.

I would ask the minister if he has any good reason for the statement he made that it was a good thing to call mine-sweepers or corvettes after cities. Is there any reason apart from the kindness of the people in the local centres in helping to equip these corvettes? I would ask the minister also whether the men who are working so faithfully in the shipyards get holidays with pay, because the Minister of Munitions and Supply assured us that workers all over Canada would get holidays with pay, and I find in the records of the labour department that workers in Canada during the past year have been receiving such treatment.

Another question I would ask the minister is whether we shall have in the near future a fully equipped ship so that these boys will get the best training before they leave the head of the lakes. I know now that privately owned boats and, I suppose, boats belonging to the board of transport are used as training vessels, but we feel that we are as good as Halifax or Vancouver or any other centre in Canada, and we think that even though we are a big fresh water lake we have a right to have a training ship second to none in Canada.

I must pay my tribute to the minister. I am very proud of him, although he has more Scotch blood in his veins than Irish. He is doing a good job and I say to him, "Stick to your job and God bless you, boy."

Mr. MACDONALD (Kingston): My hon. friend's question was whether there was reason for calling corvettes after towns beyond the desire to capitalize, if I may put it that way, on the kindness of people. I can say to him, without going into all the reasons for the adoption of this policy, that it has proved very successful. As he knows quite well, there is a ship of war, a mine-sweeper, that is called after his town, the good ship *Fort William*, and there is another called after the neighbouring town of Port Arthur. He will recall particularly that about a year ago that ship distinguished itself in the Mediterranean by destroying an enemy submarine.

His second question is with regard to men working in the shipyards getting holidays with pay. He will have to take that up with the minister of munitions, because the construction of naval vessels is carried on in private yards in this country and they come under the jurisdiction of that minister.

The third question was whether they would have a fully equipped training ship at the head of the lakes where navy personnel might get training. I shall look into that matter at once, and while I doubt whether the head of the lakes is exactly on a par with Halifax, as an all year round port at any rate, it is nevertheless an important section of the country,

has given a large number of excellent recruits to the navy, and has a very fine naval division at Port Arthur and Fort William. My hon. friend knows that we are building a permanent home for that division, and I hope that we shall find it possible to give the area there the training ship for which he has asked.

Mr. LACOMBE: Mr. Chairman, the resolution reads:

1. That sums not exceeding $3,650,000,000 be granted to His Majesty towards defraying any expenses or making advances or loans that may be incurred or granted by or under the authority of the governor in council during the year ending March 31, 1945, for—

(a) the security, defence, peace, order and welfare of Canada;

(b) the conduct of naval, military and air operations in or beyond Canada;

(c) promoting the continuance of trade, industry and business communications, whether by means of insurance or indemnity against war risk or in any other manner whatsoever.

Mr. LACOMBE (Translation): Mr. Chairman, while we are discussing the estimates of the hon. Minister for Naval Services (Mr. Macdonald), I recall the loss of our ships and sailors torpedoed right in the St. Lawrence river. It was with amazement that our people heard of these naval calamities. They wondered anxiously if our country were adequately protected, and rightly so. Why is it that our air force, which according to the hon. Minister of National Defence for Air (Mr. Power) is so mighty, could not defend our navy and our crews against such onslaughts? Yet, we had warned the government that it was necessary to defend our own soil first. After all the money that was spent in this unrestrained participation in war, after all the sacrifices made by the Canadian people, they were entitled to the protection of their navy, of their sailors and of the sea coasts as well. In spite of all this, the government asks us once again to vote $3,650,000,000 for the defence of Canada, the conduct of naval, military and air operations both inside and out of Canada.

During 1943, the Royal Canadian Navy assumed unprecedented responsibilities. It increased to a great extent its responsibilities and its strength both in men and ships. Not only in the north Atlantic did it convoy merchantmen and transports laden with war material, troops and supplies, for its scale of operations has now become world-wide. It has faced the enemy everywhere, in the Mediterranean, in the Aleutians. Our navy and our sailors were sighted on the African and on the Sicilian coasts, just as they were seen in the Pacific. The fact that we were present in so many operational theatres resulted in the heavy disasters we sustained in men, equipment and shipping. The destroyer, *St. Croix* was a total loss, engulfing in the Atlantic 147 of the crew. Two of our corvettes were sunk in the Mediterranean, the *Weyburn* and the *Louisburg* after the destroyers *Fraser, Margaree* and *St. Croix* had gone to the bottom of the sea. The *Lévis, Windflower, Spikenard, Charlottetown, Weyburn* and *Louisburg*, all of them corvettes, are gone forever, just as the patrol ships *Bras-d'Or, Otter* and *Raccoon*. With these ships, 954 sailors were lost, 177 wounded, not to mention the prisoners of war.

Mr. Chairman, these figures are significant, if we consider that the responsibilities assumed by our navy will increase until the end of the war. And what shall we have to offer our gallant sailors after this war? Are the government prepared to demobilize 70,000 sailors in this country? Will they have suitable jobs for those young men who are every day facing the worst dangers? Because our navy, along with our army and our air force will have to be demobilized without any delay after the end of the war. We shall then no longer be in a position to keep afloat a navy that now includes over 600 ships but which may comprise over 1,000 at the time of the armistice. That will be the time for reconstruction and return to normal life. Our sailors should be returned to civilian life without any delay since neither they nor the people, overburdened with taxes, shall brook the slightest delay. Let the government take at this time whatever action may be necessary to effect a demobilization which will have to keep up with the rapid changes occurring in the industrial, agricultural, scientific, social and economic fields. Governments will then no longer have control over events whose irresistible force will compel them to act without delay and without question.

One last remark and I shall be through. Since we are discussing war estimates I think I may appropriately remind parliament of the appeal made by His Eminence the cardinal as well as by the archbishops and bishops of Canada urging the governments and belligerents to preserve Rome from destruction. No christian and civilized nation should disregard such an appeal. Civilian and military authorities can find ways of avoiding a catastrophe which history would stigmatize. The noble names of christianity and civilization hold a prominent place in the war aims of the united nations. Let the allies spare the eternal city and they will thus achieve the greatest stride toward victory.

(Text) Mr. GRAYDON: Mr. Chairman, I desire to avail myself of this opportunity, not to make an extended address with respect to

naval affairs but rather to ask the minister one or two questions which I think are germane to the matter now under discussion. Before doing so, however, I should like as leader of the opposition to pay my tribute to the gallantry, the heroism, the unfailing and self-sacrificing service of the officers and ratings of the Canadian navy. I think every Canadian must swell with pride when he contemplates the growth of the navy during this period of war and its unexcelled exploits in the fields in which it is operating. It is no exaggeration to say that the officers and ratings of the Canadian navy have lived up to the very best of Canadian traditions. It must be a matter of great pride to every person in Canada to follow the account given by the minister of what our navy has meant to us in a time of extreme danger and great peril to our nation and those who are fighting with us.

I wish, however, to direct the attention of the committee to one omission on the part of the minister in his statement, an omission I think he ought to make good now that it is drawn to his attention. No reference was made by the minister to very significant and far-reaching changes in the top-ranking officials of the navy. Since the war appropriations relating to his department were up for discussion a year ago, in fact fairly recently, the vice-admiral of the Canadian navy has been transferred to other work in London and his place here has been taken by Rear Admiral Jones. I think the circumstances surrounding those changes, a general description of what they mean, and the reasons underlying them, are matters which the minister will want to communicate to the committee at the very earliest opportunity, and I ask and invite him to do so.

There is another matter I should like to bring to his attention, though perhaps more properly it might come under the first item of his estimates, covering civil salaries and wages. I would ask the minister, as I asked the ministers representing the other two branches of the armed forces while their estimates were before the committee, to indicate why in the naval service the Wrens, who have such a high reputation in Canada, should not receive equal pay for equal work. I believe this question has engaged the interest and concern of many people, and in due course I hope the minister will be able to give us some answer and some explanation in that regard. I have never been quite able to understand why that situation should exist, though the minister may be able to explain it. The answers I received from the other two ministers were far from convincing, when I asked why a member of the C.W.A.C. should receive less than a man in the army, and why a member of the women's division of the Royal Canadian Air Force should receive less than an airman. Having exhausted all other avenues in that respect, I now come to the Minister of National Defence for Naval Services (Mr. Macdonald), and I am hopeful that I may finally get a satisfactory explanation.

Mr. MACDONALD (Kingston City): I am your last hope.

Mr. GRAYDON: Yes, it is nothing more than a hope, because I have had previous experience with the minister. I hope he will not repeat the answer that was given by his colleague the genial Minister of National Defence for Air (Mr. Power), who said that if anybody in the house could find him the money he would try to equalize the pay. It does seem to me like an excuse rather than a reason, and I hope the minister will find a better answer which will meet the public wishes more satisfactorily.

I was also wondering why the minister's statement was so general with respect to demobilization and rehabilitation. The Minister of National Defence for Air spent a considerable time during his presentation in dealing with those two matters. Some of my own close family connections are in the navy; many others correspond with me or come in contact with me from time to time, and they are concerned with the same thing that concerns members of the air force and the army. While the immediate problem of winning the war is naturally paramount in their minds, somehow they are asking themselves the questions, "What shall we do when we leave the forces? Will there be a job? Will there be security? What provision is the government making with respect to the important problems that will face us?" I hope that at an appropriate time the minister will go a little deeper into these matters than he went during the course of his rather general statement. I hope he may be able to give in some detail what he, in collaboration with the other two branches of the service, is prepared to do with respect to these important and far-reaching problems which will face the members of our armed forces when the war draws to a close.

I bring these matters to the attention of the minister not for the purpose of delaying his estimates but rather for the sake of information in regard to the points I have raised.

Mr. MACDONALD (Kingston City): I would ask my hon. friend to be good enough

to give me some time to think over the second and third questions he raised, namely, the reason for not giving members of the women's service equal pay for equal work, and the request for a more definite statement on demobilization. The first reference of my hon. friend was to the fact that in my statement I did not mention certain changes in the high command of the navy. I do not think my hon. friend raised that question with the minister for air, who also made a change in his high command a few weeks before I did, but that does not matter.

Mr. GRAYDON: I have no objection to raising it with the minister for air if he wants to come back.

Mr. MACDONALD (Kingston City): The point is that there is nothing remarkable in that being done. It is not only the Canadian navy that makes changes in its high command. As my hon. friend knows very well, changes are frequent in England even in the highest command. In this case, as I said in a statement at the time, I came to the conclusion that the number of Canadians serving in waters near the United Kingdom and the importance of impending events in that area made it desirable that an officer of senior rank, senior to any officer we had ever sent there before, should go to London to represent us. The choice fell upon Vice-Admiral Nelles, Chief of the Naval Staff, who was succeeded by Rear Admiral Jones. That is the story in a nutshell. I do not think anything will be gained by prolonging the discussion of the matter. Changes in command are taking place all the time. As a matter of fact, the usual time for a naval officer to spend at one place is two years; he usually moves at the end of that time. Changes are not unusual, and they are not necessarily a reflection upon anyone.

Mr. GRAYDON: I never heard there was any reflection being cast upon any of the parties concerned with the changes mentioned, but I did think that we had not received the full story with respect to what were significant changes in the top-ranking officers of our navy. It was for that reason that I raised the question.

May I ask the minister another question which arises particularly in connection with civil salaries and wages. Some of the ministers whose work is not quite as comprehensive and laborious, perhaps not quite as important as the work entailed in the portfolio the minister now holds, have been given parliamentary assistants by the Prime Minister. At times there have been rumours about the appointment of a parliamentary assistant to the Minister of National Defence for Naval Services. The names of some rather prominent gentlemen in the house have been mentioned from time to time, but for some reason or another the appointment has not been made. Is the minister in a position to give us any information with respect to the possibilities in that field? I am not suggesting that he should have a parliamentary assistant, but there was one candidate sitting beside him, or at least fairly close to him, during part of the debate. However, I attach no great significance to that. Can the minister tell us if the government intends to make an appointment of this kind in the future?

Mr. MACDONALD (Kingston City): I suppose the Prime Minister should answer for the government. The Department of National Defence for Naval Services was slated to have a parliamentary assistant.

Mr. MacNICOL: You are doing a better job without one.

Mr. MACDONALD (Kingston City): There was a great embarrassment of riches and an assistant for my department was not selected. I have not given the matter any serious attention for some months past.

Mr. GRAYDON: When you get one, do not get one who gets in the road.

Mr. MACDONALD (Kingston City): He will not get in my road for very long or I shall not have him long.

Mr. EDWARDS: Mr. Chairman, I have no word of criticism or advice to give to the minister whose report we have listened to with so much attention and enthusiasm this afternoon. As one hon. member described himself, I am a mere landlubber who comes from a foothills city, from the highest city in Canada, from a city with the mountains behind her and the great prairies at her feet. I think I can look at these matters a little more dispassionately and broad-mindedly than those who live in the lower lands of this broad nation of ours.

My heart was thrilled with the exploits and accomplishments of the Royal Canadian Navy which were described by the minister (Mr. Macdonald) this afternoon, just as it has been in the past when I hear from the lips of a man like Stoker Fisher, the sole survivor of His Majesty's Canadian Ship *St. Croix*, the intimate details of his experience. He comes from the province which I have the honour to represent. When I hear from men like him

of the exploits of our gallant seamen aboard our Canadian ships my heart goes out to the navy. The sentiments which I entertain are abroad in the land, particularly in the city of Calgary which has an active branch of the Navy League and an even more active branch of the women's auxiliary of the Navy League.

I am particularly pleased this evening—I do not know whether the announcement has been made already, but it will be made to-morrow at the latest—that plans are completed and a contract awarded for the building of the new training ship *Tecumseh* at Calgary.

For some time the navy cadets have been carrying on in makeshift rented premises. They lacked the proper facilities or accommodation to discharge their duties. The result was that in the years prior to the war the navy did not hold the spot in the hearts of our people that it should. It was a pleasure to me to hear from the minister words of appreciation and commendation for the magnificent contribution made to the Canadian navy by men from the prairies of western Canada. In checking over the figures I find that my native province of Alberta has done its full share in proportion to population in providing men who have done such a splendid job in convoying our soldiers across the sea and in fighting this war.

As the minister was outlining the exploits of our navy I could not help thinking of some ancient history. The minister is to be congratulated upon having given permanent form and shape to a vision of that great Canadian statesman, Sir Wilfrid Laurier. It is regrettable to my way of thinking that he did not have his way in 1910. If he had, we would have been a "navy-conscious" nation and we would have been able to make an even greater contribution to the winning of this war.

Our navy has changed the thinking of the Canadian people. It has broadened our vision and given us a world-wide horizon. In Calgary the people of the prairies now think of the Indian ocean, the Pacific ocean and other far corners of the earth where their men are fighting on Canadian ships. They are beginning to realize that the products of our prairies, be they grain or cattle, would pile up to surfeit us unless there were ships to carry them to distant lands and unless the sea lanes were kept open. The fact that Canada has a navy of her own, a navy built in Canada and manned by Canadians, is giving to our people a world consciousness that no other activity could possibly give.

I am also prompted to commend the minister for adopting the very fine idea which, as he said, arose in the mind of a Canadian naval officer, of naming Canadian ships after Canadian cities and towns. I am proud, as are the people of Calgary, that one of our most distinguished Canadian corvettes bears the name of my own city, Calgary. The corvette *Calgary,* which was commissioned in 1941, has made over sixty trips across the Atlantic, has seen service in the Mediterranean, and has already been credited with helping at least in the destruction of two nazi submarines. Her latest exploit hon. members will all remember having read of in January of this year, when with two ships of the Royal Navy and a sister Canadian ship she took part in running down and destroying a submarine in mid-ocean.

The navy has done something else for us as a people, in destroying sectionalism, as evidenced by the story of this corvette *Calgary.* She was built in Quebec, was commanded in the first instance by Lieutenant-Commander Gerald Lancaster of the Royal Canadian Naval Reserve, of Vancouver, who commanded her until June, 1942, when she was turned over to the command of Lieutenant-Commander H. K. Hall of the Royal Canadian Naval Volunteer Reserve, a distinguished Canadian yachtsman of Kingston, who still commands her. My information is that of the crew and officers on that ship at the present time there is not one from the province of Alberta or from the city of Calgary. Yet the people of Calgary follow with the keenest interest the exploits and accomplishments of that ship and will continue to do so simply because it bears the name of Calgary. There is an intimacy of interest akin to personal relationship which is bound to give heart and confidence to the men and officers who sail her, and at the same time it gives the people of Calgary an absorbing concern in the weal and welfare of her sailors, no matter who they are or from where they came.

It is not to be wondered at that, since H.M.C.S. *Calgary* was christened by Calgary's mayor, the Navy League of Calgary, composed of patriotic citizens, has done what? The members of that branch of the Navy League have gone out and from money raised by private subscriptions have bought an excellent building, and fully equiped and manned it for the training of naval cadets. We have in Calgary, not one, but two cadet corps, the membership of which at the present time runs to nearly 500. I say that is worth while in itself, and is a happy augury of the future of the navy in Canada.

In conclusion, I again wish to congratulate the minister and the department over which

he presides upon having decided to put the navy on a permanent basis, not only on our seacoasts but across Canada. I am proud, and justly so, that the site which the city of Calgary donated to the navy is an excellent one, situated high above the city, with a grand view of the mountains and of the city and river below; and just as it is altitudinally high, so I believe that in the years to come, as at the present time, the good ship H.M.C.S. *Tecumseh* will maintain a position second to none in the high traditions and annals of the Canadian navy.

Mr. GAUTHIER: Mr. Chairman, I just wish to add a few words to what the hon. member for Cape Breton South (Mr. Gillis) said a few moments ago and to offer him my congratulations upon his fervent appeal on behalf of the men of the merchant marine. These men undergo all the risks of the sea, and with the limited means at their disposal, truly they are wonder men. Their record is not sufficiently known to the people of this country. They disappear one day; their ship is reported lost at sea, and that is about all one hears. There are very few declarations about them, if any. But they are real sailors, sailors from father to son. They do not look upon the navy or the merchant marine as an opportunity in war. They have a love of the sea in their blood, and at the age of twelve or fifteen they leave for the sea simply because they must answer its mysterious call. Their fathers did the same thing before them, and they must do it too. Some of them never come back, and except for a brief report in the newspapers their memory continues to live only among their families. The young boys, however, still look to the sea, and some day in their turn they will sail away, with their life just begun. As a matter of fact, these men do not expect reward. They love the life on their boat, and sometimes they dislike being detained too long in any port. Their knowledge comes mostly from experience. Their endurance is extraordinary, because it is made up of fighting against the elements with limited protection and limited comforts. But they take it with a smile. They love the sea. I believe in what I have just said, being of a lineage in which every family had one or many members who sailed the seven seas and the St. Lawrence as captains or pilots in the merchant marine. One might say that I speak for my own family. Yes and no, because since the war broke out I have lost none of my relations but many of my friends.

In November, 1942, two ships disappeared within a month's time, the *Nereus* and the *Proteus*. Three young sailors of my own town and four of the parish next to mine disappeared with the ships. There is no news whether they were drowned or are prisoners. Their ages range from seventeen to twenty-nine. Investigations are going on, but no one really knows whether they are lost at sea or prisoners. The parents still hope; and since that loss, two members of these same families are already at sea. They answered the call.

I wanted to make these remarks in order to pay a tribute to people I know, to these humble heroes of the merchant marine, to these pillars of trade and pioneers of civilization; and I hope the minister will have a good thought for this merchant marine.

Mr. ROSS (St. Paul's): I listened with great interest to the minister and his excellent record of the operations of the navy and the navy department during the last year. I think he did pretty good justice to the work of the navy; no one, in my opinion, could do full justice to the achievements of the men who are manning our navy and those who are guiding its destinies. I am glad that the minister intends to put on record a list of decorations which acknowledge the services of these gallant men. In passing, may I mention the honour bestowed on Surgeon-Captain Best, who with his associates is responsible for the work which has been done to improve the diet of the naval personnel. A great many people may suppose that Captain Best carries on his job entirely in an office or a laboratory, but the fact is that he has been out on these ships—

Mr. MACDONALD (Kingston City): Many times.

Mr. ROSS (St. Paul's): He has been on all types of naval vessels and knows the needs of the men. I know him well, and the work he has done in other lines, and I think the fact that he has gone out with these ships and made these investigations should be made known to the public. His associates, also, deserve a good deal of praise for their achievements.

The hon. member for Regina (Mr. McNiven) in making his address, talked as though the naval expansion which has been going on was planned by this government. But, as was pointed out by the hon. member for Yale, the planning started away back in 1922 or 1923. To the naval board, the permanent officers of the Royal Canadian Navy, and no doubt some of the volunteer officers, should go the credit for the actual planning and preparation. The navy did it. It is not a question of governments planning for it. Probably the reason why it was not carried sooner into effect was that we did not have the

money, but the plan was in such complete form that as soon as the money was available we could do the job. The accomplishments of the Department of National Defence for Naval Services have been outstanding; one cannot praise too highly what has been done. I wish to give full recognition to the naval board, to the permanent force, and to the people of Canada as well, for what has been accomplished.

Since parliament last met there have been, as my leader mentioned, some changes in the high command. I understand that two additions have been made to the naval board, something which we on this side of the house have long advocated and which should have been put into effect years ago. Two members of the Royal Canadian Naval Volunteer Reserve are now on the board. Had the appointments been made earlier, a good deal of discontent would have been avoided. When one recalls that ninety-five per cent of the navy are composed of R.C.N.V.R. and R.C.N.R. personnel, and only five per cent are R.C.N. personnel, it is clear that this representation is fully justified.

I should like to know from the minister whether the ship *Toronto* has yet been commissioned. Several of us were notified that it was to be launched and that we would receive an invitation to attend, but I do not think an invitation has been received by any of us, and certainly I would like to have been there. I wonder if the ship has been commissioned.

I was interested to hear that, of the 32,000 persons in the navy—does that include both men and women?

Mr. MACDONALD (Kingston City): Yes.

Mr. ROSS (St. Paul's): —so large a number come from Ontario. It might be interesting to find out how many of these are from the city of Toronto itself. I imagine it is a goodly number. For many years the city of Toronto, from which I come, has been more navy-minded than any other city in the dominion. Great influence has been brought to bear for the success of the Navy League and the encouragement of the sea cadet movement. I believe there is reason for that. The lads around Toronto have an opportunity of being on the water a good deal; they get used to boats. The experience they obtain on small boats on Georgian bay makes them accustomed to the water. Besides that, there are the yacht clubs which I have mentioned before. The Royal Canadian Yacht Club deserves a great deal of credit for the part it has played in providing officers and men for the navy. I know a great number of boys, brave sons of members of that club, are in the navy. Then there is the Navy League, those men who have taken such an interest in the sea cadet corps. There is Mr. Band of Toronto, and there are several other members whom I cannot think of at the moment who deserve a great deal of credit for what they have done.

The minister said something about the education that these lads receive. I believe the education they get at these schools is very good; I have been told so, and I do not see how it could be otherwise, when you have fellows like Ketchum—I do not know his rank—

Mr. MACDONALD (Kingston City): Commander.

Mr. ROSS (St. Paul's): —and Bonnycastle. These are two chaps who have been brought up in what we call our semi-private or public schools—Upper Canada college in one case, and the other, St. Andrew's college. They are very fine types of men and the schools could not be anything but good.

The hon. member for Vancouver North (Mr. Sinclair) said a few words about the Royal Navy. Many hon. gentlemen in days gone by have spoken about our being a colony, and have stood up for our rights and talked about not helping Great Britain or worrying much about the empire. I wonder where Canada would be if it had not been for the Royal Navy. Where would Canada's navy be but for the Royal Navy? Where would we have gained the experience necessary to build up our own navy had it not been for the Royal Navy? The planning that was done was done with the assistance of the Royal Navy. Where would we be if it had not been for the Royal Navy, I repeat? In days to come, when the war is over, I hope hon. gentlemen will keep in mind the words spoken by the hon. member for Vancouver North this afternoon in this house with reference to the Royal Navy. Then perhaps they will think a little more about our place in the commonwealth—absolutely independent, it is perfectly true, but ready to go to work for any of the members of that commonwealth.

The achievements of our own navy have been excellent. The minister states that forty per cent of the convoys that have gone across the ocean are attributable to our navy. That is a great accomplishment, but we would not have been able to do that had it not been for the Royal Navy. We should keep that in mind.

While talking about the Royal Navy I would ask a question in connection with Canadians who joined up with the Royal Navy in the early part of the war. I should like to know what their position will be, as far as pension

rights are concerned, when the war is over. I understand that the boys of the Royal Air Force who are Canadians will have pension rights under our Canadian pension scheme.

One word further in connection with rehabilitation and I am through. My leader mentioned this matter a little while ago, and we have heard references to the subject, as to what we are going to do. The speech from the throne outlined a considerable programme of what was to happen this session, but we have not got very far to date. We have one piece of legislation in bill No. 7, with reference to the industrial development bank, but we have nothing else. A good deal has been said, however, about rehabilitation, and committees have been working on it. I do not know how they are getting on, but there are no bills that we know of. We ought to be working at them, discussing something concrete, instead of something nebulous and vapourous. When the minister has an opportunity, perhaps he has plans that he can tell us about for these lads when the war is over, from the point of view of their rehabilitation. There is no use in just talking about these things. What we need is something definite. The boys in the navy to-day are not interested in mere talk about all these matters; they want to know what the actual plans are and what sort of legislation there will be.

May I conclude with this observation. I cannot say anything too highly in praise of the navy for what they have done for us in this terrible struggle. They are a fine bunch of boys. I know many of them. I will not mention any names, but many of my friends have boys in the Canadian navy and in the Royal Navy as well. Their courage is magnificent, and they are certainly living up to the old traditions of the British navy in this war.

Mr. MATTHEWS: I wish to join briefly with those who have already made favourable comments upon the admirable speech given to us this afternoon by the Minister of National Defence for Naval Services (Mr. Macdonald). To me it was a speech replete with information and of absorbing interest. I suppose the same remarks might be made to apply to all the succeeding speeches, because we have certainly had several very fine addresses.

When the minister was speaking, my mind ran back a good many years to the time when I was at school. We boys then were thrilled by the traditions of the British navy that had come down to us in story and in song. As the minister dwelt upon the recital of the achievements of our present navy I could visualize millions of young Canadians, twenty-five, fifty and a hundred years from now, thrilled as we of an older generation were by that enthralling story, and I could think of the pardonable pride those millions will then take in the achievements of our naval forces of Canada to-day.

Perhaps I was more interested in the minister's speech by reason of the fact that not long ago the son of our next-door neighbour arrived home as one of the victims of a ship that had been torpedoed. He had spent nineteen hours in the chilling waters where his ship went down. He was a young man, one of the most perfect specimens of young manhood I have ever seen, for otherwise he could not have stood it. He came home a nervous wreck. Day after day and night after night he could hear the agonized shrieks of his comrades. He could still see their forms sinking into the surging waters.

But I did not rise to-night to speak so much of that as to pay a few words of commendation to the organization known as the sea cadets. I do this particularly in view of the fact that only about two months ago I received an invitation, which I gladly accepted, to witness the cadet organization in Brandon going through part of their training. I had the privilege at that time of addressing those cadets from the bridge of their training quarters. I had the unique privilege of reading to them a telegram of congratulation that their commander had received from the minister. It was an inspiring telegram, and I wish to tell the minister here and now how greatly those cadets appreciated it. I found at that time Lieutenant-Commander G. P. Woodluck and his staff of assisting officers zealously and with great success training those boys along praiseworthy lines. I felt that here was a group of men who were refraining from the usual recreational evenings of a type enjoyed by many others, who were devoting themselves to the training of boys in the ways of gallantry and gentlemanly citizenship. I can apply the same remarks to the air cadets and the army cadets, whose officers deserve our recognition and our warmest gratitude. They, too, are doing a great work in their own way. They are doing it voluntarily and unobtrusively, but nonetheless effectively. I feel it is due to them to place upon *Hansard* some reference to the devotion to duty that those officers are exercising in many part of Canada.

Mr. CARDIFF: Mr. Chairman, I have no intention of eulogizing the minister, for that has already been done this afternoon; neither do I wish to detract from anything that has been said. We all know that the war has

been brought to the point where it now is, through the efforts of all of the people of the country and not through the efforts of any one man. While the Canadian navy has expanded greatly since the war began, I wish to point out to the minister that if any further expansion takes place, we have in the county of Huron a harbour in which corvettes and smaller craft can be built very nicely. Perhaps not many in this committee know very much about it, because nobody has told them anything about it. The harbour at Goderich accommodates large grain boats. I think more grain comes into that harbour than into any other harbour on the great lakes. I believe that the county of Huron buys more western feed grain than any other county in Ontario. With very little expense I think that harbour could be utilized for building corvettes and smaller craft. In Huron we have contributed many men to the Canadian navy. I should like to impress upon the minister that if at any future time further expansion is thought of, not to forget that we have a harbour in the county of Huron and that we would be glad to build more ships for the navy.

Mr. FRASER (Peterborough West): I have a few questions I should like to ask the minister. I do not know whether they come under this item or not, but I shall ask them anyway. My first question has to do with the naval surplus disposal committee set up by the department. Order No. 3444 has this to say:

> Once an article has been reported as surplus no disposal action is to be taken without instructions from the chairman of the naval surplus disposal committee, naval service headquarters. Responsibility for safe-keeping, et cetera, of the item should remain with the officers presently charged with such responsibility until specific orders as to disposal are received and actually completed by him.

I should like the minister to tell us just how that committee is set up. There are a number of clauses in that order, but it does not say whether the goods are to be put up for tender or not. I think we should know just how they are disposed of and whether the different committees set up in the different ports, such as Halifax and other places, dispose of the goods after word is received from Ottawa, without tenders being called for.

I believe my next question comes under this item. In 1940 a friend of mine tried to enlist in the navy and was turned down. I do not know just what the trouble was, but in December of last year he received his call-up for the army. The hon. member for Cape Breton South (Mr. Gillis) mentioned a similar case to-night. This boy has been called up for the army. In fact he is in the army. He is in as a man who has been conscripted. He feels hurt because he wanted to get into the navy. He feels he should have been accepted in the navy as a volunteer. If the army can take him, surely the navy could. I think there should be some way in which these boys could be checked a little differently by the medical officers.

The minister has not told us how many new civilians have been taken on since the last item went through last year. The item is up about $400,000.

Mr. GRAYDON: May I ask the minister one question? If he cannot answer it now, he may be able to answer it to-morrow if we continue with this order of business. Who are paid the civil salaries and how many people receive them? What do the salaries cover? Before the item carries, I think that information should be available to the committee.

Mr. MACDONALD (Kingston City): I can tell my hon. friend that in a moment. Civil salaries cover 4,715 civil servants who are employed at naval service headquarters, naval dockyards, shore establishments in Canada, the United States, Newfoundland and the United Kingdom.

The hon. member for Peterborough West wanted to know how many we proposed to take on under this item during the next year. We estimate that the number to be taken on in the next year will be 567.

Item stands.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, March 10, 1944

The house met at three o'clock.

RADIO BROADCASTING

CONCURRENCE IN FIRST REPORT

Mr. J. J. McCANN (Renfrew South) presented the first report of the special committee on radio broadcasting, and moved that the report be concurred in.

Motion agreed to.

CANNING FACTORY CROPS

SUBSIDIES ON TOMATOES, CORN, PEAS AND BEANS

Hon. J. G. GARDINER (Minister of Agriculture): Some days ago the hon. member for Fraser Valley (Mr. Cruickshank) asked me

to state at the earliest possible moment the subsidies paid on tomatoes, corn, peas and beans. The subsidies for this year will be as follows:

	Per ton
Tomatoes	$6 00
Corn	4 00
Peas (shelled weight)	10 00
Peas (straw weight)	2 00
Green or waxed beans	7 50

Those are the same subsidies as were paid last year, with the exception of tomatoes, where it has been increased $3 per ton.

Mr. CRUICKSHANK: Following the answers given by the Minister of Agriculture I would like to ask, first, is there any demand this year for an extra supply of beans, corn and peas for Great Britain, and, second, is it the opinion of the government that there are sufficient food supplies on hand to meet the coming invasion ,and other demands?

Some hon. MEMBERS: Order.

PRIVILEGE—MR. MACKENZIE KING

ST. LAWRENCE SUGAR REFINING COMPANY—REFERENCE TO STATEMENT OF MR. BLACKMORE

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I rise to a question of privilege. This is a question of privilege which goes far beyond any personal consideration and which in my opinion is a matter of the privileges of parliament itself. Speaking in this house on Tuesday night last the hon. member for Lethbridge, the leader of the Social Credit group (Mr. Blackmore), made a statement, the general effect of which was that the government in dealing with the war time supply of sugar had taken a course which was detrimental to the public interest and this because of some "relationship existing between the government" and an alleged "great sugar combine" and between "the government" and what he termed "the head of this corporation, one John W. McConnell." The statement to which I refer will be found in *Hansard* of Tuesday, March 7, at page 1278 and is as follows:

> I believe that quantity and price have been affected, not so much by the circumstances of war, as by the fact that prior to the war and also during the war the production and sale of sugar have been manipulated by a sugar trust or combine, and that one of the dominating units in this trust has been the St. Lawrence Sugar Refining Company.
>
> [Mr. Gardiner.]

And again:

> I suppose hon. members would be surprised to know that since the war broke out, men came into this city and went to see responsible officials in the dominion government and offered to bring into Canada three sugar factories, and they were refused the concessions which they needed in order to give them a chance to establish sugar factories to produce sugar in this country. The men in charge of the government chose rather to let the Canadian people go short than risk an abundance of sugar—an abundance which they dreaded.

Then elsewhere:

> I am going to ask questions which I believe ought to be answered. What is the relationship existing between the government and this great sugar combine, and between the government and the head of this corporation, one John W. McConnell? Why has the government condoned this manipulation in the sugar industry? It would allay considerable suspicion in this house and throughout the country if the Prime Minister (Mr. Mackenzie King) would rise and categorically state that the Liberal party has never received, directly or indirectly, from the St. Lawrence Sugar Refining Company, from J. W. McConnell, or from anyone representing either or both of these, or any other Canadian sugar interest any contribution of money for the campaign funds of the Liberal party.

I resent very strongly the insinuations and implications which these words carry with them and which, broadly construed, are a reflection upon all political parties, and upon all governments. They are equivalent to saying that because contributions are made to campaign funds of political parties, the government that may be in office or returned to office is, because of contributions made to the campaign fund of the party to which its members belong, to be regarded as unworthy of holding a public trust, and the ministers of the crown as violating the oaths by which they are sworn to office. Such an insinuation is a reflection upon the honour and the integrity of every member of this house, and upon no one does it reflect more immediately than upon the hon. member who has thus disclosed with what judgment he judges the political conduct of others.

Except in the inferences which the hon. member seeks to have drawn from it, this question of campaign funds is not pertinent. What is pertinent, and what, as I have said, I resent very deeply, and so far as the Liberal party is concerned, deny most emphatically is the suggestion that the present government of Canada or any member of it would betray its trust at the instigation of any corporation, any special interest, or any individual. I believe the representatives of all other

parties in this house should, and on reflection will, equally resent and repudiate suggestions of this character. It is irresponsible and unwarranted utterances such as these, both inside and outside the house, which tend to destroy the faith of the people alike in government and parliament, and this at a time when faith in democratic institutions was never more needed than to-day.

What are the facts about sugar? They will show that the hon. member for Lethbridge was as wrong in his alleged facts as he was in his innuendoes. As hon. members know, at the very beginning of the war the government acted promptly and drastically to control the distribution and price of sugar, a control which has operated so effectively that available supplies have been fairly distributed and the price kept at a level about one-third of what it was at a comparable period in the last war. If, as alleged, the government had wished to assist the sugar refiners, all it had to do was to stay its hand, and allow those interests to reap the benefits of the enhanced prices which would inevitably have followed.

And what in fact has been the attitude of Mr. John W. McConnell? As long ago as April 10, 1939, I received the following letter from Mr. McConnell:

St. Lawrence Sugar Refineries Limited
Dominion Express Building
Montreal, 10th April, 1939.

Personal.
Rt. Hon. W. L. Mackenzie King,
Prime Minister of Canada,
Ottawa, Ont.

Dear Mr. King:

In the event of war—which heaven forbid—Canadian industry must cooperate to the limit with the government, particularly where essential food supplies are involved.

Having this in mind, I wish now to assure you that the plant of the St. Lawrence Sugar Refineries will be placed unreservedly at the disposal of the government.

With kindest regards,

Yours sincerely,
J. W. McConnell,
President.

My reply to Mr. McConnell reads as follows:

Office of the Prime Minister
Canada

Ottawa, April 14, 1939.

Personal.
J. W. McConnell, Esq.,
President,
St. Lawrence Sugar Refineries, Ltd.,
Dominion Express Building,
Montreal, Que.
Dear Mr. McConnell:

I wish to acknowledge and thank you for your personal letter to me of April the 10th, in which you state that in the event of war the plant of the St. Lawrence Sugar Refineries will be placed unreservedly at the disposal of the government.

I also wish to express my appreciation of the spirit which prompted you to give this assurance. While we all trust that such a tragic event may not come to pass, it is encouraging to the government to have, in these uncertain days, such a prompt evidence of willingness to cooperate, should the need arise.

With kind regards,

Yours very sincerely,
W. L. Mackenzie King.

When subsequently war broke out and it became apparent that sugar prices might rise suddenly, Mr. McConnell's patriotic offer to turn over to the government the sugar corporation in which he had an interest was not accepted only because the control arrangements promptly instituted by the government served an equal purpose without disturbing efficient management.

At a very critical stage of the early months of the war, Mr. McConnell's firm, in common with sugar refineries elsewhere in Canada, cooperated fully with the government in supplying an abnormal war demand for sugar. This cooperation placed very heavy extra demands upon both plant and shipping facilities. It was carried out without any financial benefit beyond the payment of pre-war prices for the sugar involved. Since the office of sugar controller was established in October, 1939, the St. Lawrence Sugar Refineries have been subject to the regulations as to prices and materials which apply to all sugar refineries. The industry as a whole has given loyal cooperation to the government throughout the war, and it is to be regretted that any attempt should have been made from this house to create a contrary impression.

In the ways I have mentioned and in numerous other ways, Mr. McConnell, time and again, has demonstrated his whole-hearted devotion to Canada's war effort. In my opinion his readiness to place the interests of Canada ahead of his own business interests has not been surpassed by any citizen.

I notice also on page 1278 of *Hansard* that after an interjection by the hon. member for Weyburn, the hon. member for Letbridge said that he would be equally relieved to receive an absolute assurance from myself that Canada Packers had made no contribution to the Liberal party's campaign funds. All that I have said as to the insinuations, implications and innuendoes of the hon. member's reference to Mr. McConnell and the sugar refineries applies with equal emphasis to this part of the hon. member's remarks.

Mr. BLACKMORE: Mr. Speaker, I have only this to say. The sugar question is not finished with yet in this session of parliament.

GRANBY MINING CORPORATION

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, the hon. member for Rosetown-Biggar (Mr. Coldwell), suggested yesterday that during a debate "in this house in April, 1940" the government admitted approving the Granby exports, and it was on that that he based his statement of May 20, 1940. I might say to my hon. friend that the house was not sitting in April, 1940. The session opened on May 16, only four days before the hon. member's statement. There was at no time any admission of government approval of the contract between the Canadian and Japanese companies. The only approval that enters into the question is that which might be implied in the issuance of export permits. I find that permits were required for the export of metals from Canada to any destination as from September 20, 1939. Their issuance, in so far as the Granby case is concerned, ceased on October 8, 1940. This was fourteen months before the war with Japan.

I might add that among the documents tabled on the Granby Mining Corporation there is a letter dated September 4, 1940, from myself to the President of the Canadian Legion, British Empire Service League, which explains in detail the export control policy of the government.

LABOUR CONDITIONS

INDIAN COVE COAL COMPANY MINES, NOVA SCOTIA

On the orders of the day:

Mr. CLARENCE GILLIS (Cape Breton South): Mr. Speaker, may I be permitted to address a question to the Minister of Munitions and Supply? It arises out of a telegram received from the secretary-treasurer of the mine workers' union in Nova Scotia setting out that the employees of the Indian Cove Coal Company have been idle for the past week. My information is that this company's output is largely taken by the Canadian National Railways. Can the minister explain to the house why this mine should be idle at the present time?

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Speaker, my hon. friend gave me notice of this question, and I have the information. I am told by the coal controller that there is no slow-down at the Indian Cove Coal mine for lack of railway orders, but rather that it arises from the difficulty of obtaining railway cars. Apparently there has been a bad blizzard in that district, and the railway company has not been able to move any equipment.

ALUMINUM

REDUCTION OF PRICE BY ALUMINUM COMPANY OF CANADA

On the orders of the day:

Hon. C. D. HOWE (Minister of Munitions and Supply): In reply to a question asked yesterday on the orders of the day by the leader of the opposition (Mr. Graydon) I promised to give the house a copy of a communication received from the Aluminum Company of Canada, Limited, with reference to a reduction in the price of aluminum ingot affecting deliveries under the contract with the Metal Reserve Corporation of the United States, and deliveries under the contract with the government of the United Kingdom.

I now produce a copy of a telegram received under date of November 1, 1943, from Mr. R. E. Powell, president of the Aluminum Company of Canada, Limited, in which advice is given of these reductions; also copy of a letter received in reply to that telegram, and a letter received under date of January 15, 1944, from Mr. P. S. White, assistant to the president of the Aluminum Company of Canada, Limited, in which advice is given that amendments of the contract price in the contract with the government of the United Kingdom will also apply to the contract with the government of the Commonwealth of Australia.

These reductions were made possible by the fact that the main construction programme is finally complete, and the company is now in a position to operate at maximum capacity.

(Telegram and letters follow):

Montreal, Que., Nov. 1. 1943

Hon. C. D. Howe,
Minister of Munitions and Supply,
Parliament Buildings, Ottawa.

Effective to-day all shipments crude aluminum to Metals Reserve Company will be billed at fifteen cents per pound U.S. currency instead of eighty per cent at fifteen cents and twenty per cent at seventeen cents. Also effective to-day all shipments of crude aluminum to the United Kingdom will be billed at fifteen and one-half cents Canadian currency instead of sixteen cents. Foregoing refers to base prices.

R. E. Powell.

November 2, 1943

Dear Mr. Powell,

I have your wire of November 1 as follows:

"Effective to-day all shipments crude aluminum to Metals Reserve Company will be billed at fifteen cents per pound U.S. currency instead of eighty per cent at fifteen cents and twenty per cent at seventeen cents. Also effective to-day all shipments of crude aluminum to the United Kingdom will be billed at fifteen and one-half cents Canadian currency instead of sixteen cents. Foregoing refers to base prices."

Although your wire does not mention a reduction in price to Australia I assume that metal to Australia will be billed at fifteen and one-half cents, Canadian currency, also. Please advise me about this.

This voluntary reduction in base price on British and (I hope) Australian contracts is greatly appreciated by myself as agent for these two governments. I am cabling the British government to-day, and I am sure that the news will be well received.

Please permit me to express the appreciation of the Canadian government for the spirit with which transactions in which we are interested have been carried out on the part of your company.

Yours sincerely,

C. D. Howe.

R. E. Powell, Esq.,
President,
Aluminum Company of Canada, Limited,
Montreal, Que.

Aluminum Company of Canada, Limited
1700 Sun Life Building,
Montreal,
15th January, 1944.

Hon. C. D. Howe,
Minister of Munitions and Supply,
Department of Munitions and Supply,
No. 1 Building,
Ottawa, Canada.

Dear Mr. Howe:—

In our letter of 3rd November 1943 we advised you that, as soon as some administrative details were settled, we would give effect to the reductions in base price in our metal contract with Australia corresponding to the reductions given to the United Kingdom.

We can now advise you that an amendment to our contract with the government of the Commonwealth of Australia, dated 24th July 1941, is being submitted to your department. The amendment extends to the Australians the price reductions given to the British in 1943, that is, the Australian base price will be 17 cents Canadian per pound from 1st January to 31st October 1943 and 16½ cents Canadian per pound from 1st November 1943 until 31st December 1944 or until the 183rd day after the cessation of hostilities between Australia and Germany, whichever shall be the later.

Yours very truly,

Aluminum Company of Canada, Ltd.
Paul S. White,
Assistant to the President.

INCOME TAX

POSSIBILITY OF EXTENSION OF TIME FOR FINAL RETURNS

On the orders of the day:

Mr. G. K. FRASER (Peterborough West): Mr. Speaker, I should like to ask a question of the Minister of National Revenue. Yesterday's issue of the Montreal *Star* had this to say:

The national war finance committee in charge of the sixth victory loan campaign next month is most prominent among many who have made representations to the government—

Some hon. MEMBERS: Order.

Mr. FRASER: Then my question is this: is the final date of payment and the filing of returns for the 1943 income tax to be April 30, 1944, or will extra time be given for taxpayers to file their returns?

Hon. C. W. G. GIBSON (Minister of National Revenue): The final date for filing returns is set out in the statute. For individuals it is April 30, 1944, and no extension is contemplated.

PRICES AND TRADE BOARD

APPLICATION OF OAKVILLE RETURNED SOLDIER FOR BUSINESS LICENCE

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, I should like to ask a question of the Minister of Finance, and at the same time to extend to him a welcome back to the house. Perhaps the minister will not be in a position to answer my question to-day, because I had not an opportunity to give him notice of it. I should like him, if he would, to give consideration to a matter which involves a veteran of this war, Mr. John Foster, of Oakville, Ontario, who up to the present time has been denied the opportunity of getting a licence from the wartime prices and trade board for the operation of a business in that town.

Some hon. MEMBERS: Order.

Mr. GRAYDON: I am asking the minister to give this matter his consideration, in view of the fact that it has become a public issue in the press of to-day.

Hon. J. L. ILSLEY (Minister of Finance): I shall look into the case, ascertain the facts, and inform my hon. friend of the considerations involved.

Mr. ROEBUCK: I have ten cases I should like to ask the minister to look into.

SOCIAL SECURITY

RECOMMENDATIONS OF SPECIAL COMMITTEE OF LAST SESSION

On the orders of the day:

Mr. MAXIME RAYMOND (Beauharnois-Laprairie): Mr. Speaker, at the last session the special committee on social security made

a report to the house in which there were several recommendations, one of which read as follows:

That the government review the existing regulations governing old age pensions, pensions for the blind, and war veterans' allowances, and consider the advisability of adjusting the eligibility age to a lower level and of increasing the amount of pension.

Is it the intention of the government to give effect to this recommendation?

INDUSTRIAL DEVELOPMENT BANK

PROVISION OF ADDITIONAL CREDIT FACILITIES FOR FIXED AND WORKING CAPITAL

The house resumed from Tuesday, March 7, consideration of the motion of the Minister of Finance for the second reading of Bill No. 7, to incorporate the industrial development bank.

Mr. J. G. DIEFENBAKER (Lake Centre): Mr. Speaker, I wish first to refer to the preamble of the bill, in order that the extent to which it is to be applied may be understood. The preamble recites:

By increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful . . . by providing capital assistance to industry, with particular consideration to the financing problems of small enterprises.

There is also a third reason for the measure, which can be deduced by an examination of the speech from the throne, in which we find this paragraph:

To assist in the conversion of war plants and in the development of small and medium-scale industrial enterprises, the provision of additional credit facilities, for both fixed and working capital will be required. To meet this need, your approval will be sought for the establishment of an industrial development bank as a subsidiary of the Bank of Canada.

I mention this at the outset so that I may deal with the three matters in respect to which the expenditure to be made under this bill is proposed to be used. I say quite frankly that in so far as the bill is designed to assist small industrial concerns, which are the backbone of the nation, there can be no argument, and I support it. Small industrial concerns throughout the past four or five years of war have been strangled in that they have not been given the opportunity to secure a fair and proper share of the wartime business of this nation. While hundreds of millions of dollars have been advanced to assist great industries, small industries have been gradually passing out of existence. It is interesting to note that in 1941, in comparison with 1940, in every part of Canada that small industries received a lesser amount of the total business done by the nation when compared with the share of the larger industries.

Referring first to the western provinces, I find that in 1940 there were in Manitoba, out of a total number of 1,171 industries, 698 with production to a value of less than $25,000, and 130 with production valued at between $25,000 and $50,000. In Saskatchewan there were 814 industries, of which 592 produced under $25,000, and 78 between $25,000 and $50,000. In Alberta there were 1,068 industries, of which 734 produced under $25,000, and 113 between $25,000 and $50,000. The overall picture in Canada was that of 25,513 industries in 1940, in the first category there were 15,478, and in the second, 2,954. I wonder whether I could possibly get the attention of the Minister of Munitions and Supply (Mr. Howe) to the matters to which I am referring—

Mr. HOWE: Talk to the Minister of Finance; it is his bill.

Mr. DIEFENBAKER: —and in respect to which members have the right to have his hearing. This matter deals with his department and he might very well endeavour to follow the suggestions offered by the party in opposition.

Mr. HOWE: The few remarks of the hon. gentleman at the outset were so wholly fictitious that I did not think it worth while listening to the rest. He said that small industries had been discriminated against. I am prepared to give statistics to show that small industries have been made into big industries, and therefore there are no longer any small industries.

Mr. DIEFENBAKER: There have been occasions in the past when the minister has made a similar comment upon statements I have made but which turned out to be correct. The statistics I am about to quote do not come from the Department of Munitions and Supply; they were issued by the Dominion Bureau of Statistics.

Having indicated in general the situation in this regard, I wish now to deal in detail with the matter. So far as the minister's department is concerned, the attitude since the beginning of the war has been to neglect smaller industries, even though they could have contributed to the war effort, and to give orders in the main to the greater industries. If this bill represents a changed attitude in that regard, all I have to say is that with the approach of an election the government now wishes to place itself in the position of being able to say to the small industries:

We will now give you the chance which thus far has not been given to you during this period of war.

I realize that the difficulties of the transition period between war and peace will be greater than those of the transition period between peace and war. I commend to the membership of the house one of the finest reports that has been issued on the subject of peace and war and the adjustment policy in the United States. I refer to the report by Bernard M. Baruch and John M. Hancock, which deals, among other matters with post-war adjustments and with the question of financing small corporations. I quote:

It is an easier task to convert from peace to war than from war to peace. With the coming of war a sort of totalitarianism is asserted. The government tells each business what it is to contribute to the war programme —just what it has to make and where it is to get the stuff out of which to make it. Patriotism exercises a strong compulsion. With peace, the opposite becomes true. Each has the right to make what he pleases. Governmental direction and aid disappear. The markets become free and each individual is dependent upon his vision, his courage, his resourcefulness and his energy. Everyone has the privilege of building up, but no one has the right to pull down.

To return to the point I was making a little while ago; I had pointed out that the trend to which I referred, that of disregarding small industry, is clearly evidenced by the figures which I have from the Bureau of Statistics. They show that in 1940 the production of companies, 15,478 in number, producing under $25,000, was $138,000,000, in round figures; between $25,000 and $50,000 the production of 2,954 companies was $104,000,000. Taking the great corporations, which the minister said did not receive a preference, I find that there were 677 corporations in Canada producing between $5,000,000 and $10,000,000, and producing over $5,000,000 there were 123 corporations. In 1943 the trend towards the great corporations had been accentuated. In 1941, while the companies producing under $25,000 per annum sold a total of $121,000,000 worth, those between $25,000 and $50,000 sold $116,000,000 worth, the companies producing between $1,000,000 and $5,000,000 sold $1,755,000,000 worth, and those over $5,000,000, 198 in number, sold $2,459,000,000 worth.

This has been the trend throughout Canada, and the bill now before the house will not stop it. The small entrepreneur in Canada has been at the mercy of the various boards set up by government. The proposed legislation will not be of particular benefit to the small business man, or enable the returned soldier to establish himself in business, unless the type of business in which he may engage is widened.

As the bill now provides, the only businesses that can be assisted are manufacturing concerns, or enterprises engaged in processing, power development, and the like. The statement to which I have referred, giving the viewpoint of the United States and the recommendation with regard to small business, is of particular application to Canada. It states that small business is:

The broad backbone of enterprise, that as production controls are relaxed particular care should be taken to protect the competitive positions of small business as far as practicable within the needs of the war. Cancellations of war contracts can be guided to permit the earliest releasing of small concerns which can convert back to peace-time production; also certain nuisance production controls involving only a limited amount of resources which press heavily on small concerns can be relaxed sooner than broader production controls.

The Baruch report, which is of profound interest to Canada, has recommended that so far as small industry is concerned, restricted and curtailed as it has been during the war in the switch from war-time to peace-time reduction, cash should be available to renovate plants and to tide over existing companies to permit other businesses to do things by which civilian goods can be produced. Under this bill loans can be made only to corporations engaged in manufacturing, and to power companies. It does not cover many other small concerns to which soldiers returning to the country will wish to devote themselves. Agriculture is not included. Agriculture, we are told, will be included in a subsequent bill, but as it stands to-day, the hope that this bill will to any great extent contribute to the establishment of businesses by returning soldiers is unjustified.

The recommendations in the United States are that so far as war production is concerned the lending authorities should be restricted to the Smaller War Plants Corporation. For permanent risks which the banks cannot assume, the federal banking system should be given authority to make industrial loans.

One other matter that I think should be considered by the government at this time is the whole question of taxation. No one objects to taxation in time of war. No one resists the very high taxes which we have for corporations, for individuals and for all; but when peace comes, in order to build up industrial development, those who intend to engage in industry should have some indication now from the government as to the policy it intends to adopt in the transition period.

In the United States the Baruch report states that taxes have not been too high for war time; if anything they have been too low. That is admitted, but it is pointed out two of the first problems that must be faced in the period of transition to peace is the encouragement of new industry and the determent of monopoly, both of which can be effectuated by the removal of excessively high taxes. It recommends that the government of the United States should indicate now the nature of its taxation plans; for unless taxation is to be reduced in a measure when the war is over, the returning soldier desiring to enter small enterprise will find himself unable to pay off any loans he may have negotiated; in the words of the report, "he will be chained like a galley slave to a loan he can never repay."

Our whole tax system should be part and parcel of the picture of rehabilitation after the war. We have heard nothing at all about the plans of the government. There are wrongs in the present taxation system, and one of them is this: it allows officials in the tax department a discretionary power which is contrary to the principles of parliamentary government. We had an example yesterday of how a board acts toward the representatives of the people. Yesterday the hon. member for Lambton-Kent (Mr. MacKenzie) asked a question, as reported at page 1297 of *Hansard*, with regard to the present remuneration of certain individuals in the employ of the Canadian Broadcasting Corporation. The answer given by the minister was:

> This information has not been made public in the past, as it was not deemed in the public interest to do so.

This shows the attitude of some boards and some controllers. It shows a disregard of the rights of parliament. Would an answer to this question with regard to salaries hurt the war effort? Could there be anything in it that would be beneficial to the enemy? Time and time again we are told in this house that we cannot get information because the government or the board set up by the government takes refuge behind the statement: "It is not in the public interest."

The time has come when there should be a declaration of policy on the part of the government with regard to small businesses. We do not know what the post-war picture will be. We do not know what the plans of the government are. They give them to us haphazardly, in piecemeal and indefinite fashion. They place before the house a bill with regard to loans, but do they give us the picture? Do they say what they are going to do to assist small industry to reconvert after the war? According to the Baruch report in the United States the first consideration of the government should be the early release of small industrial plants from war production in order to encourage small industry. That recommendation applies particularly to industries that can be readily converted, and where there are cancellations of industrial production, smaller enterprises should be permitted to return to production first. There is not an hon. member in this house who has any conception of what the plan is of the minister. If he has a plan, so far it has not been placed before the people.

During the past four years the prairie provinces, and to a lesser degree the maritime provinces, have been discriminated against or deliberately ignored in the development of war industry. There has been a tremendous exodus of people from the western provinces, many of whom will desire to return. This proposed legislation, if it is to be effective, must be made effective now. It must be more than a scheme to dangle before the eyes of those who desire to go into industry. It must have teeth in it. When I see the situation in the three western provinces, the failure of the government to develop industry there during war time as it should have been developed, I fear for the future in the post-war period with respect to the use to which moneys will be placed by this corporation. My own province of Saskatchewan produces twelve million bushels of flax. The sunflower seed crop is nine million pounds. The oilcake derived therefrom is required for our stock by our dairy men. While our province produces fifty per cent of the flax crop in the prairie provinces, and requires this cake for protein supplement, the production has gone ahead in other provinces and the live stock producers in Saskatchewan have to pay top prices.

The hon. member for Moose Jaw (Mr. Ross) has been particularly advanced in his ideas in this regard and has pressed his ideas on the government. There are hon. members on both sides of the house who have done the same thing, but for some reason the western provinces have not received consideration in the matter of war development and war plants. Two plants have been set up in the last two years in the east to process oilseed, one in Hamilton and the other in Toronto. I should like to ask the minister under whose control this matter comes while the war is on. What is the government going to do to assure that a fair portion of the moneys available for small enterprise under this measure will be available in the maritime provinces and in the prairie provinces?

If Canadian economy is to be built up on the basis of Canadian unity, an effort must be made now to bring about decentralization of

industry. True, some of our western provinces have not the same facilities, but each province should, according to availability of raw products, be given an opportunity to build up a diversification in industry. That is of the essence of the rebuilding planned in the United States. The national resources planning board in the United States have been viewing the situation that confronts the people there, and their report sets out the whole position in a very few words. I quote:

> One of the aims of post-war conversion should be to achieve a better regional distribution of manufacturing activity. The desirability of greater industrial decentralization has long been apparent. There is considerable room for such decentralization despite the opposing advantages of regional specialization. Manufacturing activity could bring to agricultural regions a higher income, and a more balanced and diversified economy. In many instances, decentralization would reduce cross-hauling of raw materials and manufactured goods, and thereby considerably reduce distribution costs. In addition to such economic and social gains, there would be important advantages for our future national defence.

Before this bill goes to the committee the government should give us a picture of what it intends to do with reference to the decentralization of industry in this country. We are trying to assure ourselves now that there shall not be unemployment after the war. Pious expressions of hope without action will be ineffectual. The transition to peace will be difficult—more difficult, as I have already said, than was the transition from peace to war. I hope this legislation works. It can be made to work, but not, as I see it, on the basis of the generalities set forth in the bill as presented.

This type of legislation is a novelty in Canada, though it is not new in the United States. Just because it is new some people may oppose it. I have always believed that political parties, no less than individuals, must not worship the past; their membership must not suffer from neophobia, the fear of new things. Everything must be tested, not on the basis of its tradition or its novelty but on the basis of whether or not it will be workable. To that end I suggest, in order to assure that little enterprises across Canada shall receive consideration, that certain steps should be taken in connection with this measure.

In the first place we must assure that the small amount which is to be available, $75,000,000 to $100,000,000, is not distributed in large amounts to a few great corporations, thereby rendering small enterprises unable to obtain their fair share. If this legislation is designed in the main to support the small enterprise, then I suggest that some sort of limitation or restriction should be imposed upon the amount that may be lent by this organization, as was suggested the other evening in the able speech of the hon. member for Queens-Lunenburg (Mr. Kinley). In the second place, to guard against any suggestion of political interference in connection with the various branches which are to be set up, loans should not be made without the approval of the central board of directors.

There should be some further restrictions. We are actually giving a number of individuals carte blanche to expend money, and this bill does not contain any provision limiting the powers of the board so far as loans are concerned. Private banks are limited; trust companies are limited. They lend the money of their shareholders. Is there any reason why similar limitations and controls should not be imposed upon the lending powers of a government institution? Otherwise, as I say, parliament will be giving this organization a blank cheque for the disbursement of the people's money.

I come now to the next and larger phase, that having to do with the war effort and rehabilitation scheme as a whole. As I see it, this bill brings into focus and sharp relief the whole question of the shift after the war to peace-time production. It is designed to make the road of reconversion easier. But what is the plan of the government? No one has ever heard it. We get it piecemeal; we get one act now and another act again. The time has come when this country should have placed before it the master plan which the government no doubt has and which will deal with such important matters as the unwinding of the war machine, the disposal of government owned or financed war plants, the cancellation of war contracts, and the allotment now to various industries of the production of civilian goods.

With reference to these matters this house and the country know little. In the United States a plan already is being evolved and placed before congress. Contract termination is the first step. The time has come, I believe, when the membership of this house and the country should be informed as to what production is to be cancelled this year, what industries are to be closed out, and what is to be done with such industries. In the United States, according to reliable information, the producers of ammunition, small arms, tanks and tank parts, as well as other munitions of war, have achieved such production as to necessitate the cancellation of any further orders. In that country a uniform cancellation clause has been established. If that has

been done in Canada, no one knows about it. The war assets corporation has been set up, another of the corporations independent of parliament. I have no objection to the setting up of corporations when they are to carry out the plans and decisions of the representatives of the people, but I believe we in this house have a right to full discussion of this subject, to have placed before us the government point of view with respect to rehabilitation in industry after the war, to the end that hon. members may be permitted to discharge their responsibility of placing before the government and the country the views of a large portion of our people.

I have been asked, where is the plan? This bill is not the plan; it is just one segment of the entire picture. We as members of this house, business people, those engaged in small enterprises, the men overseas who intend to return and establish small industries—all have a right to know the plan of the government. It may not be complete in detail, but it can be a comprehensive plan the details of which may be filled in subsequently. I repeat, what is being done in Canada? Is there a uniform cancellation system? Has a body been set up similar to the body in the United States, where some two hundred government contract officers are studying the whole question and will later go throughout the country advising industry as to how production may be reduced in one line and increased in others? I ask, does the government intend now to stop the freezing of small industries so far as the men returning from overseas are concerned? Those men are coming back now in small numbers. May they establish themselves in industry? May they open country stores? May they go into the types of business they followed before the war? Oh, no. That privilege should be guaranteed to them. They should be given permission by parliament; the wartime prices and trade board should immediately relax the freezing order in relation to the establishment of industries as applied to the ex-service men.

When there is a lessening in any branch of war production, I should like to know if the government has decided what civilian commodities will be produced and what businesses are to be taken out from the freezing order, in order that employment may be maintained. Has the government a plan as to what civilian production will come first? What of the surplus of army goods, the stocks of food on hand to-day, and so on? All these are parts of the whole picture, without which none of us can intelligently discuss the post-war problem as affecting industry, or the question of advancing money to assist industry. When the transition period comes and we return to the production of civilian goods, new machinery will be required, repairs will be needed, plant alterations will be necessary, and so on. Is it not about time the Minister of Munitions and Supply and those associated with him, and the Minister of Finance, advised the country whether in the reestablishment of these business enterprises such expenditures will be deducted in arriving at net income for taxation purposes?

There are other phases of this matter that could be dealt with, but they can be covered when we are taking up the different sections of the bill. I ask the minister or his parliamentary assistant to place before this house and the country something of the picture, something of the plan. Sometimes I wonder whether there is a plan. To-day there is this piece of legislation; to-morrow there is another. No one can put together this bits-and-pieces post-war programme. I should like to see it reconstructed by those in authority, to the end that business may know its position and, above all, that the men and women returning from overseas service may not be denied, as they are to-day, the opportunity to go into small enterprises but will be given the opportunity to do so, and that the money to be made available under this bill shall be devoted mainly to the assistance of small enterprises.

Mr. VICTOR QUELCH (Acadia): Mr. Speaker, I have read this measure with a great deal of interest, but the more I study it, the harder I find it to understand just exactly its purpose. I have listened to the statements of various members of this house. Some hon. members have suggested that the purpose of the measure is to salvage investments of the chartered banks which have gone sour. Others have suggested that it is to take on business which is too risky for the chartered banks to handle. The minister himself has suggested that its purpose is to fill in the gap that cannot be filled by the chartered banks.

We have no idea of what will be the rate of interest charged by this bank, neither do we know whether it will secure its funds from the Bank of Canada or by the sale of bonds to the public. We do not know what rate of interest those bonds will bear. In other words, it is a kind of pig in a poke; it is quite a bit like a blind date. You do not know what you are going to get, you do not know whether you will like it when you get it, and you do not know whether you will be able to discard it after you have it.

When we consider the expansion that has taken place during the war, an expansion which has increased the national income from around $4 billion to $8½ or $9 billion, I doubt very much if this measure will be able to play a very important part. I doubt still more whether there will be any need for such a measure after the war. This measure provides a fund of only $100 million, and, according to the parliamentary assistant to the Minister of Finance, the money will be lent out chiefly for long term purposes.

Mr. ABBOTT: Medium and long.

Mr. QUELCH: Medium and long. The result will be you will not have a rapidly revolving fund and the amount of business the bank will be able to do will not be very great. When you think of a $9 billion economy it will be merely a drop in the bucket.

As I understand it, the bonds of this bank are not to be guaranteed by the government, but I think the minister will agree with me when I say that the government could not possibly allow this bank to go by default. If there were any danger of this bank going by default the government would have to be prepared to come to its assistance. On the other hand, as these bonds are not guaranteed by the government they will have to bear a higher rate of interest than dominion bonds. As the government will have to back them in the event of the bank getting into trouble, it seems to me they should take steps to see that the rate of interest to be paid is no higher than that paid on dominion bonds. Otherwise you will be compelling industry to pay unnecessarily high rates of interest.

The minister has stated that it is not intended that this bank shall compete with the chartered banks. Perhaps that is one reason why this bank is not to be a bank of issue. In other words, it is being shackled so that it cannot compete with the chartered banks. It is not a question of whether it wishes to compete; it is being placed in such a position that it cannot compete even though it desired to do so. Perhaps that is the reason why the bonds will likely be sold to the public or to the chartered banks rather than to the Bank of Canada. It seems to me that the government are deliberately creating a set-up which will bring about higher rates of interest on industrial loans.

The parliamentary assistant has stated that this bank is needed to fill a gap. I should like to quote what he said about that gap. On page 1059 of *Hansard* he is reported as follows:

> The chartered banks are one source of credit for industrial enterprises. But since the liabilities of these banks are mostly in the form of deposits withdrawable on demand or short notice, it has always been thought desirable that they should keep their assets in rather liquid form—easily realizable in case of need.

And again:

> For the reason I have just mentioned, the chartered banks for the most part have made short term loans to industry—loans which in the ordinary course of business can be paid off in full at least once a year. Accordingly, they have been most important as a source of working capital for industry rather than as suppliers of long term funds which might only be repaid over a period of several years.

And again:

> It is to fill this gap in our financial structure and to ensure that adequate financing is forthcoming for desirable projects that the government proposes to establish the Industrial Development Bank.

That would seem to be a desirable objective, but unfortunately the resources of this bank are going to be limited and it is doubtful whether it will be in a position adequately to fill the gap. It seems to me that if there are gaps, and undoubtedly there are, then the first step we should take is to amend the Bank Act in such a way that these may be filled. We could very well let this measure stand until the Bank Act has been revised. When that has been done, and we have found out what gaps are left still to be filled, there would then be plenty of time for the government to bring down a measure to provide for the filling of them.

I want to consider briefly the situation referred to by the parliamentary assistant. I quote again from page 1059 as follows:

> But since the liabilities of these banks are mostly in the form of deposits withdrawable on demand or short notice, it has always been thought desirable that they should keep their assets in rather liquid form.

In other words, it might be said that the chartered banks are lending something which they do not in reality possess. Because the chartered banks are able to create loans at the ratio of ten to one against their cash reserves, they are not in a very sound position to make long term loans. If there was a run upon the banks they would be in the unfortunate position of being able to pay only approximately ten cents on the dollar. Naturally they try to remain in as liquid a position as possible.

On previous occasions in this house we have discussed this matter. Members of this group and of other parties in the house have suggested that it might be well worth while for the government to consider making amendments to the Bank Act along the line of the

one hundred per cent system. I think the minister is familiar with the proposal as suggested by Professor Soddy and later taken up by Professor Irving Fisher and later endorsed by Babson's Incorporated. Briefly the proposal is to amend the Bank Act so that the chartered banks will be compelled to maintain one hundred per cent cash reserves to the full amount of their demand deposit liabilities. If that were done, the banks would be in a position at all times to satisfy any demand against their demand deposits. The proposal is that the government should buy from the chartered banks a sufficient quantity of government securities to provide the legal tender backing required on that basis. The Minister of Finance has on several occasions opposed such a suggestion on the ground that it would be, in other words, a tax on the profits of the chartered banks. But there is an alternative to that proposal by which the banks would not be in any way penalized. That proposal is made by Babson's. It is a slight modification of the suggestions made by Professor Irving Fisher and Professor Soddy. I should like to quote briefly from Babson's Reports dated March 20, 1939, in regard to this proposal. I shall quote only paragraphs 7 and 10. Paragraph 7 reads:

> In order that our monetary policy may be made to conform to the new standard and become the means of attaining a high degree of prosperity and stability, legislation should be enacted, embodying the following features: (a) there should be constituted a "monetary authority" clothed with carefully defined powers over our monetary system, also control of the circulating medium.

And paragraph 10:

> The simplest method for making transition from the fractional to one hundred per cent reserves would be to authorize the monetary authority to lend, without interest, sufficient cash (federal reserve notes, credit, United States notes, or other lawful money) to every bank or other agency carrying demand deposits to make the reserve of each bank equal to its demand deposits on a specified date.

If that recommendation were carried out rather than the proposal by Professor Irving Fisher, it could not be charged that you would be taxing the profits of the chartered banks, because instead of buying up the bonds held by the chartered banks and thereby depriving them of the interest thereon, you would lend to them as collateral legal tender without interest against their holdings of government securities, and if there were a run on the chartered banks they would then be in the position of being able to meet all demands one hundred per cent. Moreover, it would be a great help to the government, because there would be no danger of inflation. The government would be in the position of issuing national money wtihout any danger of the chartered banks using the money issued by the government as a basis for expanding their loans in the ratio of ten to one. The charge has been made repeatedly in this house by the Minister of Finance and the former minister of finance who have refused to issue new money on the ground that it would create inflation. But this proposal would take care of that danger.

Some people object to the one hundred per cent idea on the ground, with a good deal of justification perhaps, that while the one hundred per cent system would prevent the banks from inflating the money in circulation, it would not, on the other hand, prevent the chartered banks from curtailing the issue of money, and therefore they say that other steps would have to be taken. I do not think it is quite fair to make that charge unless it has been proven. In other words, the government in power might decide to adopt the one hundred per cent system. They would seek the cooperation of the chartered banks and if they were unable to obtain the cooperation of the chartered banks they could adopt the alternative of nationalizing the whole banking system.

It is interesting to note this fact, that in New Zealand there is a government that was pledged to nationalize the chartered banks. That government has been in power for eight or nine years, and yet it has not nationalized the banking system of that country. It has been suggested that the reason why the banks have not been nationalized in New Zealand is that the government has never been able to get hold of enough money to buy the capital stock of the banks. But if the banks were nationalized, all that the government would be required to do would be to write a cheque against the bank itself to pay for the capital stock.

Some may say that that would be inflation. But remember, the capital stock of those banks is always readily saleable and if people wanted to obtain money for their bank stock they could obtain it readily. The fact that the people have not sold their bank stock shows that they do not want the cash, but rather an investment. If the banks in New Zealand were nationalized I do not believe one need worry that the people on receipt of money in payment of their bank stock would at once go out to buy other goods and thereby cause inflation. Rather they would immediately look for another form of investment. I just mention that fact to show that even though a nationalized banking system may

seem very desirable, as it seemed desirable in New Zealand, yet in spite of the fact that a farmer-labour government has been in power in New Zealand for about nine years they have never taken the step of nationalizing the banks there. They figure that they can control the banking system without nationalization. One can argue all one likes about the proposal, but it would be necessary to wait and see just what sort of cooperation you would obtain from the banks. If you could obtain the desired cooperation, there would be nothing to gain by nationalization so long as you had the one hundred per cent system in operation. On the other hand if they refused to cooperate, immediate steps could be taken to take them over.

As I understand it, the Bank Act is to be revised some time during the session. There will be plenty of opportunity therefore to investigate the Bank Act and its operations. If there are any gaps which the Bank Act does not fill, surely that will be the time to bring forward the necessary amendments in order to fill the gaps. If we find that we cannot fill the gaps by amendments, surely that will be the time for the government to bring down a measure to take care of the situation. Therefore, Mr. Speaker, I move, seconded by the hon. member for Lethbridge (Mr. Blackmore), the following motion:

That this bill, No. 7, be not now read a second time but that the second reading be postponed until after the Bank Act shall have been reviewed and by parliament revised.

Mr. MACKENZIE (Vancouver Centre): Mr. Speaker, I rise to a point of order, although I am not asking Your Honour to rule upon it now. Beauchesne's Third Edition, Speakers' Decisions, page 495, says:

The house resumed the adjourned debate on the proposed motion of Mr. Manion: That the Bill No. 37 (Letter A of the Senate), intituled: "An Act respecting the Canadian National Railways and to provide for cooperation with the Canadian Pacific Railway System, and for other purposes," be now read the second time, and the proposed motion of Mr. Mackenzie King in amendment thereto:

That all the words after "That" to the end of the question be left out in order to insert the following instead thereof: "the second reading of this Bill be postponed until this house have declared that nothing therein shall be taken to authorize any amalgamation of the Canadian National Railways with the Canadian Pacific Company; or to divest parliament of its rights; or to take from the House of Commons its primary duty to control expenditures of public moneys and the taxes required to meet the same; and that the provisions of said bill shall be read in the light of this declaration, and be construed so as to conform therewith, and that in so far as any of its provisions may be inconsistent therewith they shall be amended accordingly,

"and that the adoption of this amendment by this house shall constitute the declaration of its intention and purposes as set forth herein."

Mr. Speaker: There is in our journals one precedent of an amendment moved on the second reading of a bill which proposed that 'further consideration of the bill be deferred until the Tariff Bill has been disposed of.

It was a declaration of principle covering not only the second reading, but also the third reading and the final adoption of the bill, and it was moved, as a disapproval of the measure.

But the present amendment is different inasmuch as it proposes a postponement of the second reading pending a definite declaration of the house.

It does not purport to be adverse to the bill, but it makes suggestions for adding to its provisions by amendments which can only be moved after the adoption of the second reading.

May at page 390 says:

And the quotation is found at page 496. Then Mr. Speaker continued:

As this amendment has not the effect of disagreeing with the principle of the bill, it does not come within the class of amendments referred to by May.

"The allegation that nothing in the bill should be taken to divest parliament of its rights or to take from the house its primary duty to control expenditures is a declaration of general principles which can be moved as a reason for not agreeing to the second reading of a bill dealing with the constitutional rights of parliament, but which is beyond the scope of, and therefore irrelevant, to the present bill. May says at page 391 that the principle of relevancy in an amendment governs every such proposed resolution."

At page 391, May says further:

"Such an amendment may not deal with the provisions of the bill upon which it is moved nor anticipate amendments thereto which may be moved in committee."

The words "nothing therein shall be taken to authorize any amalgamation of the Canadian National Railways with the Canadian Pacific Company" anticipates an amendment which may be moved in committee.

The propostion that the bill shall be read in the light of certain declarations and be construed in a certain manner, and that its provisions shall be amended accordingly is in the nature of an instruction to the committee which cannot be moved as an amendment to the second reading.

For these reasons, the amendment is out of order.

See May 15th edition, page 391; Bourinot, page 509; Redlich, Vol. 3, page 89.

From this decision Mr. Mackenzie King appealed to the house.

And the question being put by Mr. Speaker: Shall the ruling of the Chair be sustained?—it was decided in the affirmative.

Debates, House of Commons, 1932-33, vol. 3, pages 2895-6.

Journals, House of Commons, vol. 71, pages 297, 298, 299.

I would ask Your Honour to give consideration to the arguments advanced at that time.

Mr. BLACKMORE: Mr. Speaker, it seems to me that the cases cited by the Minister of Pensions and National Health (Mr. Mackenzie) are not analogous to the situation we have here confronting us in respect of the present amendment. My submission is that the present amendment is completely in order.

Mr. SPEAKER: I shall deal with that matter a little later. An amendment has been moved to the main motion, and the debate should now take place upon the amendment. I shall deal with it later. Is the house ready for the question?

Mr. H. C. GREEN (Vancouver South): Mr. Speaker, this bill setting up an industrial development bank is a very important one. I believe it may be of great help to Canada at the present time, and also that it may be of much assistance in dealing with our post-war problems, which, as all hon. members must know, will be very difficult ones. There are several thoughts, however, which I should like to express in connection with the bill, and which I would place before the ministry and before hon. members in the hope that they will be of some help to the banking and commerce committee when it considers the bill section by section, and will also be of some help to hon. members when the bill returns from that committee.

It does seem to me that this bank might easily become a political one. It could be used for political purposes. I am not for a moment suggesting that that would be done, but it is a thought which should be kept in mind not only by the present government, but more particularly by members of my own party, the Progressive Conservative party. I say that because I believe that they are the people who will have to administer this measure in the very near future.

Some hon. MEMBERS: Oh, oh.

Mr. GREEN: I mean that, and I would ask hon. members in my own party to keep that thought seriously in mind.

Mr. GRAYDON: The hon. member never said anything truer in his life.

Mr. GREEN: It would be a great tragedy if this bank were to be handled in a political fashion, or if it were to be dragged into politics. One effect would be that immediately the Bank of Canada, an organization which thus far has been kept clear of that, would be dragged into the political arena. The effect of having this new bank mixed up in politics might very well seriously undermine our democratic system of government. I hope therefore that it will never become a political instrument.

The next thought is that the bank should work very closely with the people in the different provinces and localities in Canada. I do not believe it would do that, as at present constituted.

Mr. SPEAKER: May I ask the hon. member to resume his seat while I deal with the amendment? I have listened to the argument of the Minister of Pensions and National Health respecting the decision given on March 10, 1933, by the Hon. Mr. Black, now the member for Yukon. The amendment then moved was dealing with the second reading of the bill, but it also referred to the provisions of the bill, and amendments thereto. That is not competent on second reading. In other words, it is not competent to deal with the provisions of a bill on second reading.

The amendment at that time was:

> That all the words after "that" to the end of the question be left out in order to insert the following instead thereof: "the second reading of this bill be postponed until this house have declared that nothing therein shall be taken to authorize any amalgamation of the Canadian National Railways with the Canadian Pacific Company; or to divest parliament of its rights; or to take from the house of commons its primary duty to control expenditures of public moneys and the taxes required to meet the same; and that the provisions of said bill shall be read in the light of this declaration, and be construed so as to conform therewith, and that in so far as any of its provisions may be inconsistent therewith they shall be amended accordingly."

That was dealing with the provisions of the bill, and that is not competent on second reading.

I have here an amendment moved on June 18, 1917, which shows that the second reading of a bill may be postponed until a certain event takes place, and in connection therewith I find at page 361 of the Journals of the House of Commons for that year:

> Sir Robert Borden moved, seconded by Sir George Foster, that the bill, No. 75, respecting military service, be now read the second time.
>
> Sir Wilfrid Laurier moved in amendment thereto, seconded by Mr. Oliver, that all the words after "that" in the said motion be struck out and the following substituted therefor:
>
> "the further consideration of this bill be deferred until the principle thereof has, by means of a referendum, been submitted to and approved of by the electors of Canada."
>
> And a debate arising thereupon, the said debate was, on motion of Mr. Morrison, seconded by Mr. Barnard, adjourned.

No exception was taken to the amendment. The amendment now before us is:

That this bill No. 7 be not now read a second time, but that the second reading be postponed until after the Bank Act shall have been reviewed and by this parliament revised.

I am of opinion that that is on all fours with the amendment moved by Sir Wilfrid Laurier for the postponement of the bill before the house in 1917.

Then, at page 228 of Beauchesne's Third Edition we find this, in paragraph 657:

It is also competent to a member who desires to place on record any special reasons for not agreeing to the second reading of a bill, to move as an amendment to the question, a resolution declaratory of some principle adverse to, or differing from, the principles, policy, or provisions of the bill, or expressing opinions as to any circumstances connected with its introduction, or prosecution; or otherwise opposed to its progress; or seeking further information in relation to the bill by committees, commissioners, the production of papers or other evidence or the opinion of judges.

In my judgment this amendment could be covered by the words, "or otherwise opposed to its progress," meaning that there will be a delay until such time as mentioned in the amendment, namely, after the Bank Act shall have been reviewed and by this parliament revised.

I am of opinion therefore that the amendment is in order, and that the debate may now take place and will be confined solely to the amendment. In consequence I may have restricted the hon. gentleman in his remarks. He was speaking at the moment to the motion and I have now held that the amendment is in order. The debate must therefore be addressed solely to the amendment. If the hon. member wishes to speak to the amendment he may do so, but if he prefers to make his remarks on the motion he can wait until the amendment is disposed of.

Mr. GREEN: If the amendment is voted down, Mr. Speaker, am I free to continue my remarks on the motion?

Mr. SPEAKER: Quite. There is of course a principle involved. The hon. member having spoken, there was an interruption in the proceedings of the house. But when I point out that I interrupted him for the purpose of dealing with the amendment, the house will, I take it, recognize his right to speak on the motion. Is the house ready for the question?

Mr. GRAYDON: I have no desire at this time to inject myself into the debate, but I would point out that the effect of the amendment, if it were carried, would be to delay the bill or to prevent its disposition at all this session. Changes may have to be made in the bill, but we in this party feel that at least it should be sent to the banking and commerce committee, as the parliamentary assistant has suggested. This, of course, would not be possible if the amendment were agreed to. Our view is that after the bill has come out of that committee, and before its third reading, there may be reasons why it should be considered in conjunction with the revision of the Bank Act, but at present we are of the opinion that it would perhaps be tantamount to delaying the progress of the bill and preventing the endorsement of its principle. For that reason we shall vote against the amendment.

The house divided on the amendment (Mr. Quelch), which was negatived on the following division:

Mr. GREEN: When Your Honour stopped me in my remarks to make a ruling on the amendment that had been moved by the hon. member for Acadia (Mr. Quelch), I had just begun to place before the ministry and the members of the house my second thought with regard to the industrial development bank bill. In order that this bank may do its best work, in order that it may be effective, it is vital that it should work closely with the people in the various provinces and localities in Canada. That I believe it cannot do under the present provisions. The bill provides for branch offices, but I take it there will be comparatively few of those offices in Canada, and they will be in the larger cities only. The bill provides also that the members shall all be directors of the Bank of Canada. In other words, it is to be an entirely Bank-of-Canada-run organization.

I think it is of the greatest importance not only that the bank should have local contacts with the people out in the communities, but also that it should have their advice and the support and enthusiasm of the Canadian people from coast to coast; therefore I suggest that provision should be made for an advisory board in each province. There should certainly be an advisory board set up in each province, and in the more thickly populated provinces it might be necessary to have more than one. I suggest that these boards should include representatives, if possible, of all the parties. They should not be restricted to men who support the government that may be in office for the time being. In British Columbia we have what is known as a rehabilitation council, which was set up by the provincial government. It is made up of members of all parties in the local legislature. They have gone around the province between sessions asking for representations from the citizens in the different centres with regard to the problem of rehabilitation, asking what industries could best be established in the different towns, thereby creating interest in the post-war period and in ways of building up the different communities. I believe that provision should be made for advice of that kind to be available to the industrial development bank.

Then it is of the greatest importance that there should be representatives of labour on such advisory boards. After all, with labour this question of small enterprises and the building up of new industries is a matter of bread and butter, and I think they will be far more vitally interested in the bill than any other group of people in Canada. So that if the government sees fit to provide for advisory boards or some similar organizations I suggest that representatives of labour should be included. I also believe that the bank should adopt a deliberate policy of dispersing industry into the towns of Canada, of spreading industry out and not letting it become any more concentrated than is absolutely necessary. That is the second thought.

My third thought is this. The bill refers to the building of ships as an industrial enterprise. We all know that during the war shipbuilding has become a huge industry in British Columbia, Ontario, Quebec, New Brunswick and Nova Scotia, and that around the shipbuilding industry, or really as part of it, dozens of small, satellite industries have grown up, small shops which provide parts and equipment for ships, and so on. I know in Vancouver there are dozens of these small industries which would come under the provisions of the bill, and the industrial development bank should be of great help to them. But they are entirely dependent on shipbuilding itself; they are dependent entirely on whether or not shipbuilding is to be continued in Canada after the war. The shipbuilding industry will require more than a loan, and I do not believe that this bank by itself will be able to maintain that industry in operation. Some further steps will have to be taken by the government. Personally I believe that if we are to continue to build ships in Canada after the war direct help will have to be given by the government, perhaps by way of subsidies or by way of orders for ships.

At the present time there is the greatest uncertainty as to what Canada's policy is to be in regard to shipbuilding after the war, and in regard to the question of a merchant marine. Is Canada to continue to build ships? Is she

to have a merchant marine, or is she not? These questions remain to be settled, and the government should make an early announcement of policy. Such an announcement would be of great help. Mind you, I hope that the announcement will be to the effect that the government considers shipbuilding and a merchant marine necessary to Canada, but we have had two diverse opinions expressed by ministers of the crown. For example, I have here press clippings dated Toronto, December 13, 1943, in which the Minister of Munitions and Supply (Mr. Howe) is quoted as saying that he—

> . . . called on Canadians to-day to avoid post-war planning based on public works and the dole and set forth as his alternatives nine objectives aimed at making this nation of twelve million persons "the happiest people on God's green earth"

Then the minister set out those objectives, and number four was:

> Provide a merchant marine worthy of the dominion's export position.

Just two weeks later, however, his colleague the Minister of Transport (Mr. Michaud), who really is the man who would have to do with the merchant marine after the war, had something different to say here in Ottawa; apparently there was a failure to get together on this question. He said:

> I see no future in Canada going into the shipping business on a big scale after the war. . . . Some of the ships might well be used to develop trade between Canada and the West Indies and South America—but to enter competition for trade across the Atlantic and Pacific would be a big undertaking.

Then the press dispatch goes on:

> Mr. Michaud said that if the Canadian government entered into general merchant business it would be in competition with old steamship companies that have world-wide organizations. If a ship takes a cargo to a port, it has to have an agent there to get a cargo for the trip back.

He went on thoroughly to scuttle his colleague's policy, announced two weeks before:

> Freighters from Norway and Greece are operated by private companies with years of experience behind them and they are likely to resume operations after the war, he said. The wages paid by these foreign companies to their crews are much below Canadian scales.
>
> British steamship companies are preparing service to resume on regular schedules and they will be much faster than the ships Canada has, said Mr. Michaud.

In that last remark perhaps the minister really did refer to something worthy of note; that is, we are not building any of these fast ships, while Great Britain and the United States are, and I think Canada should be building at least some of them. In any event, there is the contradiction; and this question of shipbuilding is so vital to Canada, or certainly to the provinces on either coast, that I urge the government to make an announcement at an early date. I urge the government not to allow the shipping industry to fold up or die out, but on the contrary to see to it that this industry is maintained after the war. If that is done it will mean the survival of these satellite industries, and then the industrial development bank will be able to help them to carry on.

The same situation exists in connection with other industries. I need quote only one as an example, and I refer to housing. There are many small enterprises in Canada which depend for their existence upon the construction of homes. It would be helpful if the government would make an early announcement of policy in regard to housing. I hope that announcement will be to the effect that the Canadian people are to be rehoused. At the present time that situation is very serious, indeed far more serious than members of the ministry realize. In many cities families have to live in garrets, in basement suites or perhaps in garages. This has an effect upon the war effort, because it lowers the morale of the people who have to live in those places; it is having a serious effect upon the health of our people and has an effect also upon the men who come back from overseas and find that they must live under such conditions. It makes it just that much more difficult for a man returning to this country to enter into the spirit of things in Canada and settle back into his civilian pursuit. Therefore I suggest that an announcement on the general question of housing should be made at an early date.

Finally there are three other points in connection with this bill which I suggest the parliamentary assistant should make clear when he closes the debate. The first is whether or not the bill is intended to cover the processing of metals. I notice that it does not refer to the mining industry. In other words, no direct help can be given by the bank to the mining industry, but I should like to know whether help could be given for the establishment of a steel rolling mill, let us say.

Mr. ABBOTT: Yes, that comes within the bill.

Mr. GREEN: That is definite. Also will the bank have power to help to set up a steel and iron industry? Section 2 of the bill refers to the generating or distributing of electricity. It would be interesting to know whether the bank will have power to help municipalities in putting in electrical plants.

The bill does not make that clear. I take it that a private company could be given assistance, but I suggest that the legislation should be wide enough to enable the bank to assist municipalities in setting up power plants or other power systems.

I should like to know whether or not the bill is wide enough to enable the bank to help cooperative organizations. It refers to loans to persons and I take it that the provisions are wide enough to cover cooperatives. We should be told whether or not such is the case. In post-war years there will be a great development along cooperative lines, and we should know whether this bank will be able to help in that development.

I support the bill because I believe, as referred to in the preamble, it can be made a most effective instrument for maintaining not only a high level of national income, but also a high level of employment. I certainly hope such will be the case.

Mr. A. R. ADAMSON (York West): Mr. Speaker, there are just one or two things I should like to mention about this industrial development bank. I do not think anyone can take exception to the fostering of small industry after the war and perhaps the government is to be commended for introducing this bill. However, the sums mentioned are so small that they will hardly prove effective as a means of reestablishing small business in Canada after the war. I know of one new enterprise in my district which would take up more than the entire sum mentioned in the bill. This is merely a token bill which sets up a brand new principle, namely, the principle of the government going into the industrial banking business. That may or may not be a satisfactory solution. It may be that the chartered banks have shown that they are incapable of supplying credit to small industry, or the government may think they are incapable of doing this. That is the problem which faces the government.

The government has introduced in this bill a principle which I think more than any other was the cause of the disruption and failure of the banks in the United States under the federal banking system. I refer to the fact that loans may be made on mortgages. This is an entirely new principle in Canadian banking. Up to now we have had mortgage companies, trust companies and finance companies, but banks have not been permitted to lend money on mortgages. This is something the government should carefully inquire into. I suggest that an examination of what happened with farm loans in Ontario during the past ten or fifteen years would prove of value. I think it will be found that a tremendous number of those loans went bad. I mention this as one of the dangers which confront the government in connection with this measure.

The next danger is the fact that there is no mention of a limit on individual loans. A loan is made to an individual to permit him to start in business. He does not make a profit the first year; he has a loss, and he may have a loss for the second, third and fourth years, as is quite usual with new businesses. What will happen? Who is to decide whether that loan is to be renewed? A small industry may start up and provide employment and it may or may not have a chance of success. But because it has been financed with government money, the government must continue to pay the shot in order to keep the industry going. That is one of the dangers in the socialization of all banking—you bring your banks into the arena of politics.

The other night the hon. member for Rosetown-Biggar (Mr. Coldwell) referred to the question of taxation. Let me give an illustration. Two young men who have been in the army or air force decide to start up a new business, let us say the making of mouse-traps. They go to the bank and the bank consults its—

Mr. ABBOTT: Mouse-trap expert.

Mr. ADAMSON: —mouse-trap expert, which we will say is a firm of reliable exterminators in Toronto. They say there are no more rats left, but there are plenty of mice left to exterminate. These men go into the mouse-trap business and the world builds a nice path to the door of their factory. They start making a very special mouse-trap which kills the mouse, plays a few bars of Chopin's funeral march, throws the dead mouse over the neighbour's fence and resets itself. This trap becomes popular and they make a profit out of their business, but at the end of the first year what do they find? As there was no base rate for their company they are subject to excess profits and corporation profits taxes, and all their profits are taken by the government. Unless the government is prepared to repeal the excess profits tax you are not going to get anybody to start up new businesses. In fact these two men will probably go into the business of breeding mice in order to show their irritation with the government.

Then there is the question of the development of our natural resources. The hon. member for Rosetown-Biggar told us that the concentration of the mining industry is more

and more in the large companies. This bank, it is said, is not going to help in any way the financing of mining or prospecting, or any similar development. The taxation problem for the mining industry has been such that the large companies have been the only ones that have been able to afford to go into the exploration business. What usually happens is that a syndicate or a small group of prospectors starting out with a property would do some trenching and a little diamond drill work, which shows perhaps that they have a few assays which warrant spending a little more money. There is a trace of gold. Accordingly they go out and raise a few more thousand dollars. Then further drilling shows that they have discovered a commercial ore body. But because they are a group of only four or five individuals they have not the money to sink a shaft and provide the milling and crushing equipment required to go ahead and develop the property. So they sell it to a mining company or else form a company. They are taxed with the exploration profit they make on that property, therefore naturally the small prospector is handicapped and tied. He is discouraged in every way from going into the mining business. This is a serious matter because, up to recent years when the present taxation system came into effect, the majority of our mines were discovered by the individual or by a small group of prospectors. But to-day we have made it almost impossible by our taxation system to allow the individual prospector or the small group to operate.

In passing, let me say that if there is any industry that would pull us out of the post-war reconstruction difficulties it is the mining industry. No matter what sort of world we are going to live in after the war we shall have need of metal, both precious and base, and there is no country so bountifully endowed with metals as is Canada. We are milling to-day at the rate of approximately a hundred thousand tons a day. It takes on the average three men to mine a ton of ore; the man in the mine, the man servicing, and the man providing the equipment. As a rough empirical rule one can say that three men get direct employment out of every ton of ore milled. If we can double our production, which is feasible if we remove the restrictions, our untold mining capacity would provide work in the next five years after the war for 600,000 men directly employed in the mining industry. That, I believe, is not any dream but a practical possibility. But we are not going to do it unless we have new properties discovered, and I look with disfavour on the fact that it is specifically stated that this industrial bank is not going to aid the mining industry. I believe that the prospecting syndicates are one of the most useful means of providing employment immediately after the war is over.

Again, Mr. Chairman, it is specifically stated that this industrial bank is not interested in housing. In the city of Toronto there is a housing plan which may take a hundred million dollars or more to bring it into effect—the actual cost has not been estimated at the present time. The building industry is the key industry of this country. It is the barometer of our prosperity and of our depressions. The building industry is not only the barometer; it is the key. There are, it has been estimated by Mr. Mathers, president of the Builders' association, 450,000 men actively engaged in the building industry of Canada in normal times. Most of the building industry has been in the hands of the small builder. In many ways that has perhaps been uneconomical. Nevertheless that has been the system in Canada. One of the greatest costs in housing has been the price that the small builder and the man who is buying or building a house have had to pay for money, and I say that consideration should be given to including in this bill the provision of credit for the small builder. That is an omission in the bill which should be repaired.

Mr. ABBOTT: If my hon. friend will allow me, I mentioned in my opening statement that the government was giving consideration to and would be proposing measures to provide similar credit facilities for agriculture and housing.

Mr. ADAMSON: I thank the hon. gentleman. But it is not mentioned in the bill, and I want to emphasize to the parliamentary assistant that that is very much one of the omissions in the bill.

Mr. ABBOTT: I made it very clear in my opening statement that consideration was being given to other measures.

Mr. GRAYDON: That was an afterthought, after the speech from the throne.

Mr. MACKENZIE (Vancouver Centre): We have forethought.

Mr. ADAMSON: Finally I have this suggestion to make to the parliamentary assistant. The majority of the medium-sized industries in this country at the present time, because of the fact that they have come through a depression period, and the further fact that they are now paying almost one hundred per cent excess profits, practically all their profits, to the government, are not going to find them-

selves at the end of the war in a position to provide the necessary replacements to their plants and modernize their equipment to enter the new post-war type of trade. They are going to find their treasuries virtually depleted. But when the physical fighting ceases—the actual political declaration of peace may not be for some years—and the need for the munitions industry to work at its tremendous pitch comes to an end, I suggest that there be a tax holiday for business, to allow them to build up a surplus in order to re-tool and retrench, so that they may enter into the competitive world in which we shall find ourselves after the war.

They will see ahead of them years in which they will be faced with tremendous tax burdens. They will see, too, an almost immediate cessation of war business. What would be their reaction? They would say, "We are going to be bankrupt if we continue at the present rate, because we are faced with heavy payrolls and heavy overhead. We are going to be stuck with a tremendous taxation at the end of the next fiscal period." One thing we must avoid at the end of the war is the condition which was found at the end of the last war. In other words, when industry stopped production the men who had been working were immediately discharged, with the result that unemployment at once became a problem.

I say to the parliamentary assistant that unless industry sees a possibility of continuing, its first instinct is to do exactly what was done after the last war. After this war it will be only that much worse, because taxation is so much higher. There are some exceptions, of course, but the majority of industries have not been able to build up sinking funds or reserve funds which would allow them to go into competitive business, re-tool, establish an export market, and do the hundred and one different things which business must do in a competitive market.

We must remember that during the war there has been very little competition. The government has said, "We will buy from you all you can make." After the war we shall be in a world in which there is competition, and business will have to say, "We will make what we can sell." That is the difference in the psychologies of peace and war, and unless the government recognizes the difference we shall find business men saying, "I do not know what we can make." They may say, "Let us wait for six months, to see what the world looks like. At the end of that time we may either close the plant, or run on a skeleton staff."

[Mr. Adamson.]

That is one of the dangers, and one of the conditions this bank should help to prevent. It can be a success, however, only if there is some change in respect of corporation taxes and excess profit taxes after the war. No one minds paying taxes in a time of war. All are fighting with their last drop of blood, because we have to beat the hun. But when the war ends, a different world will emerge.

I am in favour of the bill, as far as it goes. It contains several dangerous provisions, and may lead directly to inflation; but, so far as it goes, in its small way I believe if it is controlled it will prove a step in the right direction.

Mr. T. C. DOUGLAS (Weyburn): Mr. Speaker, I had not intended taking part in this debate, because the financial proposals of this group were well stated before the house by our leader, the hon. member for Rosetown-Biggar (Mr. Coldwell). However, I am prompted to take part in the debate because of a statement made the other evening by the hon. member for Rosthern (Mr. Tucker). His statement is to be found at page 1286 of *Hansard,* as follows:

> It is quite true that in certain places the C.C.F. say that they do not intend to take over control of some particular industry, and in other places they say they do. In British Columbia they stated, for example, that their programme is actually to take control of farmland as in Russia.

We are now changed, apparently, from being national socialists to communists, depending on what part of the country one comes from, and what is the most unpopular group in a particular constituency. I challenged the statement of the hon. member at the time, and the hon. member for Rosthern said he was quoting from the Vancouver *Sun.* I was not calling in question the hon. member's integrity. I know the quotation from the Vancouver *Sun* which he had in mind. I was, however, calling in question the authenticity of the source of his information. If the hon. member for Rosthern had taken the trouble to verify, or to attempt to verify the source of his information, I doubt very much if he would have made the statement he did make. I say that because the quotation in question from the Vancouver *Sun* has on numerous occasions been publicly repudiated.

I have in my hand a copy of the C.C.F. *News* for January 20, 1944, containing a signed article by Frank J. McKenzie, British Columbia provincial secretary of the C.C.F. organization in that province. I wish to read only part of it, so that the situation may be clear

to hon. members. This article is headed "Misrepresentation of Farm Policy Repeated by Papers across Canada", and states:

The C.C.F. has found it necessary to complain about false press reports with growing frequency during the past year. An example of the effect of false reporting is to be found in the case of a report published by the Vancouver *Sun* on the British Columbia provincial C.C.F. convention of April, 1943. It is being quoted from one end of Canada to the other.

At frequent intervals since the publication of the *Sun* report, various spokesmen of the C.C.F. in British Columbia have found it necessary to explain that the provincial platform of the British Columbia section of the C.C.F. does not contain this plank: "Collective agriculture by the institution of methods of collective farming, such as have featured Soviet Russia's system."

The latest example of this to come to the attention of the writer is a statement by Captain W. R. Tucker, M.P. for Rosthern, at Saskatoon, as reported by the Saskatoon *Star-Phoenix*, January 11, 1944: "In British Columbia the farmers were swinging against the C.C.F. except in labour districts. As a factor in this swing in British Columbia, he quoted the second plank in the platform of that party in the coast province as calling for the collectivization of farms, as in Russia." There can be no doubt that Captain Tucker is relying either upon the April 19 issue of the Vancouver *Sun* or upon some other journal which relied upon the *Sun* as an authority.

Shortly after the publication of that report by the *Sun* the British Columbia provincial secretary wrote to that paper the letter reproduced below. The *Sun* published the letter, but, unfortunately, the damage was done.

Here is the letter to the *Sun*:

Editor, Vancouver *Sun*:

Sir: I would be glad if you would publish this letter by way of correcting a misrepresentation of the C.C.F., for which you are, I believe, in part responsible.

On your front page of April 19 you said: "The C.C.F. policy for British Columbia, as outlined in a statement by the party convention, will . . ." Then you set out seven "planks", from which I quote the following: "2. Collective agriculture by the institution of methods of collective farming, such as have featured Soviet Russia's system." This statement was not true.

Mr. TUCKER: That is not the end of the quotation. My hon. friend pretends to quote from the Vancouver *Sun* but he has not quoted the whole of paragraph 2.

Mr. DOUGLAS (Weyburn): Mr. Speaker, I am quoting—

Mr. TUCKER: I am challenging my hon. friend to do the same thing he asked me to do, to get the paper and quote from it, not from some letter or some alleged quotation. I suggest, Mr. Speaker, that he is not correctly quoting from the Vancouver *Sun*.

Mr. DOUGLAS (Weyburn): I am not claiming to quote from the Vancouver *Sun*.

Mr. TUCKER: Yes, you are.

Mr. DOUGLAS (Weyburn): I am claiming to quote from an article by the secretary of the C.C.F. party in British Columbia, an open letter which was sent to the Vancouver *Sun*, in the course of which—

Mr. TUCKER: I rise to a point of order. The hon. member is reading a letter in which the writer purports to be quoting from the Vancouver *Sun*. Now, if the hon. member is not taking the responsibility for the correctness of that quotation in the letter in question he should not read it in the house . I submit to you, Mr. Speaker, that he cannot claim that he is not quoting from the Vancouver *Sun* by saying that he is reading from a letter which purports to be quoting from the Vancouver *Sun*. That is hearsay twice removed and I object to that sort of thing.

Mr. DOUGLAS (Weyburn): I am not claiming to quote from the Vancouver *Sun* at all. I am quoting from a letter which appeared in the Vancouver *Sun*.

Mr. DEPUTY SPEAKER: Is the hon. member speaking to the point of order?

Mr. DOUGLAS (Weyburn): There is no point of order.

Mr. DEPUTY SPEAKER: A point of order has been raised by the hon. member for Rosthern (Mr. Tucker).

Mr. DOUGLAS (Weyburn): My point, Mr. Speaker, is that I am not quoting from the Vancouver *Sun*. I am quoting from a letter sent to the Vancouver *Sun* which denies a statement which appeared in the Vancouver *Sun*, and I have the right to place it on the record. I intend to do so.

Mr. DEPUTY SPEAKER: The hon. member for Rosthern objects to the fact that the letter written by the secretary of the C.C.F. party in British Columbia has not been quoted in its entirety by the hon. member who is now speaking. I rule that the whole letter should be put on the record.

Mr. DOUGLAS (Weyburn): I shall be glad to put it all on. The letter reads:

Moreover, it was not confirmed in any way by the accompanying story of your correspondent, James Dyer.

On June 11, the Calgary *Herald*, dealing editorially with a visit to that city by the C.C.F. leader, Harold Winch, said that one of the "planks" of the C.C.F. platform was "collective agriculture by the institution of methods of collective farming, such as have featured Soviet Russia's system." The Calgary *Herald* did not acknowledge the Vancouver *Sun* as the authority for this statement, but it is obvious that your report of April 19 was quoted.

Citing this false report, the Calgary *Herald* said: "The C.C.F. party uses the term of co-operative farms, but what is meant is cooperative farms established on the Russian model, in which the state will possess ownership and the farmers work as hirelings."

During the recent Revelstoke byelection the *Coalition* reprinted the Calgary *Herald* editorial and distributed it at Revelstoke in an endeavour to dissuade the people of Revelstoke from voting C.C.F.

The truth is that the provincial policy statement adopted by the recent C.C.F. convention said this: "Cooperative farms in these lines and in those areas where they will lower production cost must be encouraged, and production costs of such cooperative farms will become a yardstick by which to set the price level."

The letter is signed by F. J. MacKenzie, British Columbia secretary of the C.C.F. The point I want to make is that the hon. member for Rosthern, the Minister of Pensions and National Health (Mr. Mackenzie), and the leader of the opposition (Mr. Graydon), all said the other night that they could bring clippings to the house. I believe the minister was going to bring fifty.

An hon. MEMBER: He will bring them if he said so.

Mr. DOUGLAS (Weyburn): He said a great many things. However, the amazing thing is that these three gentlemen are lawyers and any one of them must know that they would not be allowed to go into court and produce as evidence a newspaper clipping of something that was alleged to have been said or that was alleged to be the stand of a political party. If any one of these gentlemen wants to find out what the C.C.F. policy on agriculture is, all he has to do is to secure a copy of the C.C.F. programme—

Mr. GRAYDON: It is a little more difficult than that.

Mr. DOUGLAS (Weyburn): —and to quote from it accurately instead of quoting from a distortion of the truth such as one might find in some newspaper articles. I have here—

Mr. TUCKER: My hon. friend says that we should look for their platform. Where is their platform?

Mr. DOUGLAS (Weyburn): If the hon. member for Rosthern is so anxious to know what the programme of the C.C.F. is, he will have no difficulty in finding out. I shall be glad to give him a copy at any time. I have in my hand the C.C.F. programme for British Columbia, which is the programme to which he referred, and which was passed at the convention in question in April, 1943. Here is the entire section on agriculture, and I invite the hon. member for Rosthern and the other hon. gentlemen who are influenced by what they read in the Vancouver *Sun*, without taking the trouble to verify what they read, to examine this programme and see if they can find anywhere in it any statement suggesting collectivized farming.

Mr. McGEER: I rise to a point of order. I do not wish to interrupt my hon. friend, but we are on the industrial development bank, and I believe that the house will agree that banking problems are complex and difficult enough in themselves, so that if we are going to mix in with that difficulty the policy of the C.C.F. and its relation to the land policy of the Soviet Union, I am afraid we shall lose sight of the bank bill altogether.

Mr. DOUGLAS (Weyburn): I agree that the question of the collectivization of land is not relevant to the industrial development bank, but I would point out that it was just as irrelevant last Tuesday evening.

Mr. McGEER: Two wrongs do not make a right.

Mr. DOUGLAS (Weyburn): The hon. member for Rosthern was allowed to place on the record a statement which is not in accordance with the facts, and I claim the right—

Mr. TUCKER: My statement was that they were reported to be in favour of collectivized farm land as in Russia and my hon. friend, as I understood him, denied that they were so reported. I have sought over and over again to show that what I stated was correct, namely, that they were so reported. The hon. member is trying to wriggle out of it by saying that the report was not correct.

Mr. DEPUTY SPEAKER: There is no doubt that the debate at the present moment is quite removed from the bill under consideration. Though agriculture might be discussed under a bill of this description, I would ask the hon. member to stay within the confines of legitimate discussion allowed on the second reading of this bill.

Mr. DOUGLAS (Weyburn): I shall be glad to abide by your ruling, Mr. Speaker, but I must insist that, in view of the fact that the hon. member has made the charge, I should give to the house the agricultural plank of the British Columbia C.C.F. organization. It is found on page eighteen of a pamphlet published by the British Columbia section of

the Cooperative Commonwealth Federation. This policy was adopted at the annual convention held last April. It reads as follows:

The agricultural policy to be pursued by a C.C.F. government will have two objectives: (1) to ensure to the farming population security of tenure, the amenities of modern life, and an income which will enable them to live at a standard at least equivalent to that of the urban population; (2) to ensure an ample supply of good quality food at prices which will enable every British Columbian family to purchase an adequate diet. In order to accomplish these two purposes a C.C.F. government must devise means to:

1. Facilitate increased production per capita of farm population, as the farmers' income is not only determined by price but also by quality and quantity produced and marketed.

2. Stimulate increased domestic consumption.

3. Eliminate all unnecessary handling charges between producer and consumer.

4. Set the prices to be paid the farmer for his product.

5. Encourage production of new crops for industrial purposes.

In all such measures to aid farmers and consumers a C.C.F. government will work in cooperation and consultation with farmers' organizations and the principle of collective bargaining, as already recognized in workers' trades unions, will be applied to all farmers' problems.

Production will be stimulated by increasing returns to the farmer but hand in hand with this must go encouragement to increasingly efficient methods of production. Provision will be made for the resettlement of those now on uneconomic farm lands.

I draw attention to the use of the next sentence, as it is the sentence upon which the article in the Vancouver *Sun* was apparently based.

Cooperative farms in those lines and in those areas where they will lower production costs must be encouraged, and production costs of such cooperative farms will become a yardstick by which to set the price level. Domestic consumption will be increased as government-sponsored enterprises distribute increased purchasing power. Owing to the constitutional inability to fix prices in the manner of the present wartime prices and trade board, it will be necessary, in order to ensure adequate returns to the farmer, to constitute the provincial government as the sole first purchaser and wholesaler of agricultural produce. Only by the creation of such a government monopoly will it be possible to control imports into the province or to eliminate those interests which now divert such a large part of the consumer's dollar to private gain. The precedent for such action has been set by the Liquor Control Act.

While it may not be feasible to set up the organization to take over all lines of agricultural produce simultaneously it will be necessary to proceed as rapidly as possible. First steps in this direction will be taken in the field of dairy, poultry, fruit and vegetable products, but the ultimate success of measures to improve conditions in the dairying and poultry branches will depend on bringing the milling and distribution of grains and millfeeds under public ownership. Marketing, buying and processing cooperative associations and credit unions will be assisted and encouraged by the government by means of legislation and education.

While recognizing that it will take time—

Mr. McGEER: Now, Mr. Speaker, I am perfectly willing to withdraw that—

Mr. DOUGLAS (Weyburn): May I continue?

—to develop the machinery for handling all lines of agricultural produce, the goal of the C.C.F. government—

Mr. McGEER: I rise to a point of order. I raised a point of order, Mr. Speaker, and in view of what was said it seemed to me that your ruling was quite correct. But we are going altogether outside the field of the policy on the ownership of farms and we are dealing with something entirely different. If that is to go on then I suppose it will be necessary to answer it. Surely that type of argument has no place in the debate upon the industrial development bank?

Mr. GILLIS: You should have ruled it out last Tuesday night.

Mr. McGEER: I am quite willing to concede that the question which was raised with regard to the policy on the ownership of land should be dealt with, but this is going much beyond that. I think the hon. member will concede that.

Mr. GILLIS: He is only answering it.

Mr. McGEER: He is going into the whole policy.

Mr. DEPUTY SPEAKER: The only reason why I allowed the hon. member for Weyburn (Mr. Douglas) to put some parts of the C.C.F. platform on *Hansard* is that a question was asked by the hon. member for Rosthern (Mr. Tucker), which I thought he should answer. I hope that it is properly answered.

Mr. MACKENZIE (Vancouver Centre): I rise to a point of order. Seeing that Your Honour has allowed latitude on this specific issue raised by the hon. member with regard to collective ownership of land, the statements made will be replied to, and I trust the same latitude will be given to the hon. member to reply as was given to the hon. member for Weyburn.

Mr. MacINNIS: On a point of order, Mr. Speaker, if you rule that the hon. member for Weyburn cannot continue, then you cannot rule that somebody else can continue later on in this debate. Either the hon. member for Weyburn continues with what he has to

put on the record or, if he has to discontinue, then no further mention can be made of the matter in this debate.

Mr. GRAYDON: May I say that I do not think anybody in the house will object to the hon. member for Weyburn having a certain amount of latitude, but it seems to me that he is reading a good part of a book into the record.

Mr. MacINNIS: A good programme.

Mr. GRAYDON: It may be he is not able to condense his farm programme into any better shape than that.

Mr. MacINNIS: The hon. member for Rosthern condensed it.

Mr. GRAYDON: I am not talking about farmers. If there is anybody in the house who is far away from the farm it is the hon. member who has just spoken. I wish to say that I feel the house does not want to confine the hon. member too rigidly, but I hope we are at the last chapter and the last verse at the moment. If that is the case probably he should continue.

Mr. SLAGHT: Do as Mr. Bracken did, hire a hall.

Mr. DEPUTY SPEAKER: I notice the intent of the house is not to curtail discussion.

Mr. GRAYDON: He did not go to the senate to do it.

Mr. DEPUTY SPEAKER: The reason why I allowed the hon. member to put his programme on the record was that a direct question was put by the hon. member for Rosthern (Mr. Tucker). I believe it has been fairly answered by the hon. member for Weyburn (Mr. Douglas) and I believe we should now continue with the bill and motion before the house.

Mr. DOUGLAS (Weyburn): Do I gather from your ruling that I must desist from reading the remainder of this pamphlet?

Mr. GRAYDON: How much have you?

Mr. DEPUTY SPEAKER: The hon. member for Weyburn should desist now because he has properly answered the hon. member for Rosthern.

Mr. DOUGLAS (Weyburn): I agree with that. The answer has been properly given. I think I have shown conclusively that the newspaper item referred to by the hon. member for Rosthern and by some other hon. members was not based on actual fact, and was not based on the C.C.F. farm programme, most of which I have placed on the record.

I wish to say just a word or two about the industrial development bank. The main criticism I have of the bill is that it cannot be much more than a political gesture in dealing with the post-war problem of maintaining full employment and preventing the deflation which may take place unless adequate measures are taken to maintain a steady flow of currency and credit after the war. The $25,000,000 capitalization, with $75,000,000 to be raised by the sales of bonds and debentures, making a total of $100,000,000 in an economy which at the present time is producing in the neighbourhood of $9,000,000,000 in goods and services is, of course, infinitesimal. Furthermore, if this money is to be lent out on long-term credit there will be no very high velocity in the rotation of this money, and consequently it seems to me that it will meet the problem about as adequately as feeding a peanut to an elephant. It will be entirely on a penny-ante basis. I have the feeling that this whole bill is in much the same class as the National Housing Act and many other pieces of legislation that the government has brought down, namely, political gestures. In principle one can only approve them, but in their scope and in the number of people who will be beneficially affected by them they are so limited as to be almost of little or no value.

I was surprised in listening to the hon. member for York-Sunbury (Mr. Hanson), who led off the debate for the Progressive Conservative party, to find that, in spite of all the talk about maintaining full employment which the leader of the opposition has indulged in, as has also Mr. Bracken, the hon. member said, as reported at page 1265 of *Hansard*:

> As soon as the war is over, government borrowing and government spending will cease, and the national income is bound to go down to a low level.

Mr. GRAYDON: You and Harold Winch do not always agree, either.

Mr. DOUGLAS (Weyburn): Am I to take it from that remark that the leader of the opposition does not agree with the statement made by the hon. member who led off the debate for the official opposition?

Mr. GRAYDON: The hon. member had better read the whole context.

Mr. DOUGLAS (Weyburn): I have read the important part of the paragraph. The leader of the opposition has not taken part in the debate as yet, and he can read the rest of it if he thinks it has any bearing.

What I want to point out is that it seems to me that the debate up to this point has reflected fairly clearly the points of view of the different parties in this house in reference to banking and finance. The hon. member for York-Sunbury (Mr. Hanson) expressed the opinion that the function of this bank can be carried out much better by private enterprise. To him this is a measure of socialism. The hon. member for Lethbridge (Mr. Blackmore), believes that the control of the issue of currency and credit can be best secured by strategy, as he said, rather than by ownership of the banking system. We in this group, I think, have made it abundantly clear that from our point of view there can be no effective harnessing of the banking facilities of this country to our economy in the post-war period unless the government is prepared, first, to assume complete ownership and control of the chartered banks and, second, to set up a national financial policy which would make the bank now being proposed in this bill part of a national investment bank. Coming as I do from an agricultural constituency and an agricultural province, I am particularly concerned that a bank such as is now proposed should be made available to the farming community. It has been said that an agricultural bank is under consideration. Well, of course it has been under consideration since 1919, when I believe Mr. Motherwell moved it in the Liberal convention of that year. That is a lot of consideration, but I should like to see some legislation.

Mr. ABBOTT: In my opening remarks on moving second reading I said, as reported at page 1058 of *Hansard*:

> In considering the present bill I hope that hon. members will keep in mind that in due course the government will be proposing other measures designed to provide financial assistance in other fields of activity such as agriculture and housing.

Mr. DOUGLAS (Weyburn): Then I would ask the hon. gentleman, will that be during this session?

Mr. ABBOTT: Yes.

Mr. DOUGLAS (Weyburn): There is no indication of it in the speech from the throne, but we are very glad that the government has finally made up its mind on this score.

Mr. MacNICOL: It is the old story; live horse and you'll eat grass.

Mr. DOUGLAS (Weyburn): May I suggest to the parliamentary assistant that when this legislation with regard to an agricultural bank is brought down it seems to me it should do two things. It should make it possible for farmers across Canada to refinance their mortgages at lower rates of interest. Second, it should make available to farmers' cooperative organizations sums of money for the carrying on of consumers' and producers' cooperatives. Already in western Canada the farmers are deeply interested not only in the sale of their own produce but also in the development of industries for the use of agricultural products. I know that some of the cooperatives already have made a thorough investigation into the cost of going into the manufacture of grain alcohol, synthetic rubber, plastics and so on. They have had correspondence and conferences with engineers and chemists in the United States who have already done a considerable amount of work along these lines. I know that even now some of these cooperatives are prepared to spend fairly large sums of money in opening up new industries in western Canada along the lines I have suggested, and either under an agricultural bank or under this measure—

Mr. ABBOTT: The facilities of this bank would be available to an enterprise such as my hon. friend has indicated.

Mr. DOUGLAS (Weyburn): That is fine, but I am afraid $100,000,000 will not go very far when you begin to spread it out over all the enterprises of Canada.

Mr. ABBOTT: It is still a lot of money, or at least it used to be.

Mr. DOUGLAS (Weyburn): It is a good deal of money, but only a fraction of what we have spent already in building factories in Canada. We have spent some $800,000,000 putting up government factories, and when you come to spread $100,000,000 over the country it does not seem to me it will give us in Saskatchewan a very large share. I would hope that the cooperative organizations would be able to borrow considerable sums of money in order to develop industries that would be of assistance not only to western Canada generally but to the agricultural population in particular.

In closing, Mr. Speaker, all I wish to say is that during this war we have built up the Canadian economy from a national income of some five and a half billion dollars in 1939 to a national income of nearly nine billion dollars. It seems to me that after this war the test will be whether or not we are to go through a period of deflation and drop back to a national income of five or five and a half billion dollars. If we do that we shall go back to having a large percentage of our people once more unemployed and on relief, producing farm commodities at depressed prices. Or we can do

the other thing; we can harness the financial institutions of this country and use them for the twofold purpose of financing so as to provide full employment to produce the greatest amount of goods possible, and financing consumption to enable the people of Canada to have the necessary purchasing power to buy either the goods we produce ourselves or those goods we get in exchange for the goods which we sell to other countries.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. J. GORDON ROSS (Moose Jaw): Mr. Speaker, at six o'clock the hon. member for Weyburn (Mr. Douglas) had just taken his seat after spending a good many minutes in discussing a statement which had been made by the hon. member for Rosthern (Mr. Tucker). As I remember it, the statement of the hon. member for Rosthern was that he had read in the Vancouver *Sun* the platform of the Cooperative Commonwealth Federation party in British Columbia. The hon. member for Weyburn—

Mr. DOUGLAS (Weyburn): May we get this straight now.

An hon. MEMBER: Sit down.

Mr. DOUGLAS (Weyburn): You cannot tell me to sit down. Mr. Speaker can tell me to sit down, but not you.

Mr. ROSS (Moose Jaw): Has the hon. gentleman asked you for the floor, Mr. Speaker?

Mr. DOUGLAS (Weyburn): Mr. Speaker. I rise to a point of order. While I was speaking you asked me to desist from discussing agriculture because it did not properly come within the scope of the bill, but you gave me permission to reply to the statement which had been made by the hon. member for Rosthern. Do we now understand that the subject is again open? If it is, will other members of this group and of other groups be allowed to continue the discussion?

Mr. MACKENZIE (Vancouver Centre): Mr. Speaker, on the point of order, may I reiterate the point that I raised this afternoon? The hon. member for Weyburn was given an opportunity to discuss the question of the public ownership of land raised by the hon. member for Rosthern, but he then went along to discuss other points. I understood we were to be permitted to answer all the points raised by the hon. member with regard to public ownership.

Mr. DOUGLAS (Weyburn): Your Honour asked me to desist from reading into the record certain evidence which I wished to read, and I did so. Am I to understand now that this is to be opened for general discussion?

Mr. ROSS (Moose Jaw): On the point of order. I may say the hon. member was discussing the ownership of land, and he then went on to discuss many other matters.

Mr. REID: What is the point of order?

Mr. DEPUTY SPEAKER: The point of order was raised primarily this afternoon by the hon. member for Vancouver-Burrard (Mr. McGeer) in connection with what had been said by the hon. member for Weyburn (Mr. Douglas). I gave a ruling that matters concerning agriculture could be discussed under the present bill. I have not seen a copy of the transcript, but the hon. member will see my words in *Hansard* to-morrow, which will corroborate what I have just said. Later on, another point of order was raised by the hon. member for Rosthern (Mr. Tucker) to the effect that the letter being quoted by the hon. member for Weyburn was not being put on *Hansard* in toto. Then the hon. member for Weyburn put the letter on *Hansard*. It was then contended that the hon. member for Weyburn was getting away from the matters covered by the bill, that he was putting the whole C.C.F. platform before the house. That is the only objection I dealt with at the time, asking him to abstain from such a discussion. I do not think we can keep away from agriculture in discussing a bill of this nature because that is one of our primary industries.

Mr. DOUGLAS (Weyburn): Are we to understand that it will be permissible for hon. members of this group to reply?

Mr. DEPUTY SPEAKER: I did not hear the question put by the hon. member for Weyburn.

Mr. DOUGLAS (Weyburn): Are we to understand that hon. members of this group will be allowed to discuss the matter contained in the Vancouver *Sun* and the whole question of the ownership of land?

Mr. REID: It will be in order for us to correct it if it is wrong.

Mr. MACKENZIE (Vancouver Centre): That is what they are trying to deny.

Mr. DOUGLAS (Weyburn): We are just trying to straighten out some of the lies in British Columbia.

Mr. DEPUTY SPEAKER: Order. Members of the House of Commons must realize that a certain latitude should be granted in

discussing the second reading of this bill. At the same time, under the rules we should keep within the limits of the bill. I repeat that agriculture must necessarily come under the bill.

Mr. MacINNIS: On the point of order, we are now dealing with the industrial development bank bill, and the matter of agriculture was interjected into the debate by the hon. member for Rosthern. I understood to-day from the parliamentary assistant to the Minister of Finance who introduced the bill that there is to be another bill in connection with agriculture. That would be the time to discuss matters concerning agriculture. I should like to draw Your Honour's attention particularly to the point that was made this afternoon. The hon. member for Weyburn desisted from discussing the point that had been raised the other evening. He stopped in the middle of a paragraph on the understanding that that was not a matter for discussion. However, if Your Honour wants to change that, it is all right with us, but we are not going to be stopped when the discussion comes up again.

Mr. MACKENZIE (Vancouver Centre): On the point of order; the situation this afternoon was precise and clear.

Mr. MacINNIS: I stated it clearly.

Mr. MACKENZIE (Vancouver Centre): I do not agree with my hon. friend. The undisputed statement of the hon. member for Rosthern was called into the question.

Mr. DOUGLAS (Weyburn): No.

Mr. MACKENZIE (Vancouver Centre): My hon. friend was allowed thirty minutes to read the most puerile nonsense I have ever heard in my life, the platform of the C.C.F. in British Columbia. We have the right to reply to these animadversions of the hon. member for Weyburn; we have as much right as any dictatorial minority in this house.

Mr. DOUGLAS (Weyburn): That is the most puerile nonsense this house has heard in a long time.

Mr. ROSS (Moose Jaw): Apparently none of the C.C.F. party wants this matter discussed, and I do not blame them a bit for not wanting to have the land socialization policy of the C.C.F. discussed in this house. As I started to say a few moments ago, I have here a copy of the paper in question, and I am going to put on the record exactly what is in this paper. This is the Vancouver *Sun* of Monday, April 19, 1943. The main heading in large type is "C.C.F. adopts Policy of 'All-Out' Socialism."

Mr. HOMUTH: They have changed it since then.

Mr. ROSS (Moose Jaw): The next heading is, "Seven Plank Platform," and then under that heading we find:

The C.C.F. policy for British Columbia, as outlined in a statement by the party convention, will:

1. Institute social ownership of public utilities and develop power and industrial enterprises to the exclusion, wherever feasible, of private enterprise.

2. Collectivize agriculture by the institution of methods of collective farming such as have featured Soviet Russia's system, and by the creation of a provincial government monopoly in the purchase, processing and wholesaling of farm products, both those grown here and those imported.

That is the quotation the hon. member for Rosthern was speaking of.

Mr. CRUICKSHANK: Does it mention votes for the Japs?

Mr. ROSS (Moose Jaw): I do not see anything of that.

The hon. member for Weyburn states that the quotation I have read was not supposed to be the policy of the C.C.F. in British Columbia.

Mr. DOUGLAS (Weyburn): The people at the convention say that it was not.

Mr. ROSS (Moose Jaw): Apparently it got into the papers some way or another, and there was no objection taken to any other plank that is in here.

Mr. DOUGLAS (Weyburn): It is a Liberal newspaper.

Mr. ROSS (Moose Jaw): The C.C.F. are noted throughout Canada for their ideas on socialization; they talk of it all the time, but they are finding that in the farming sections of Canada socialization of land does not go very well and they are trying to get away from it.

Mr. COLDWELL: We never said it.

Mr. ROSS (Moose Jaw): You did when you were leader of the Independent Farmer Labour party in Saskatchewan.

Mr. COLDWELL: I deny that.

Mr. ROSS (Moose Jaw): I was in Saskatchewan long before either of my hon. friends and I have followed politics a little more closely than they have over a long period of years.

Mr. DOUGLAS (Weyburn): And your hands are dirtier too.

Mr. ROSS (Moose Jaw): No, they are not.

Mr. DEPUTY SPEAKER: I ask hon. members to address the Chair even when they are making interruptions or asking questions. There must be a certain order and decorum maintained in the parliament of Canada.

Mr. ROSS (Moose Jaw): I ask the hon. member for Weyburn to withdraw the remark he just made about dirty hands.

Mr. DOUGLAS (Weyburn): If I have offended the susceptibilities of the hon. member I shall be glad to withdraw it.

Mr. ROSS (Moose Jaw): The real question is whether the C.C.F. party in Canada believe in the socialization of land and natural resources. That is the question they are trying to get away from.

Mr. REID: They are afraid to face it.

Mr. ROSS (Moose Jaw): They have put out literature at different times, and one of their books, or at least one that they use is called "Social Planning in Canada". On page 283 of this book I find this:

> Interest on capital and rent on land should be maintained in socialized production as a necessary accounting device, but they will no longer accrue to private individuals as income.

If that is not taking land, I should like to know what it is.

Mr. COLDWELL: Who is the author of that book?

Mr. ROSS (Moose Jaw): My hon. friend knows better than I.

Mr. MACKENZIE (Vancouver Centre): Where the government was farmer-labour.

Mr. ROSS (Moose Jaw): At page 259 of the same file I find this:

> There is no suggestion of wholesale expropriation of present farmers, but no more land would be handed over to private owners in the future.

The former leader of the C.C.F. party in this house, a man I knew well and thought a great deal of, the Reverend J. S. Woodsworth, used to speak of socializing all things in this country, and he believed in that policy sincerely. He was discussing the subject in this house at one time. I was not here then, but I remember reading the report of his speech, which I find in *Hansard* of March 2, 1932, at page 730. While discussing the socialization of land he referred to the United Farmers of Saskatchewan. This is part of the farmers' group in Saskatchewan that joined my hon. friend's Independent-Labour-Farmer group. This is what Mr. Woodsworth had to say at that time:

> I find that the united farmers of that province—

That was Saskatchewan.

> —have adopted a provincial economy policy to the effect that . . . . all land and resources now privately owned be nationalized as rapidly as opportunity will permit.

He went on to quote from a report presented at the last convention of the United Farmers of Saskatchewan, as follows:

> A community free from the domination of irresponsible financial and economic power, in which all social means of production and distribution, including land, are socially owned and controlled either by voluntarily organized groups of producers and consumers . . . . or by public corporations responsible to the people's elected representatives.

In the same speech he went on to show that some of the Manitoba farmers were also in favour of socialization of farm land, and in the same speech he quoted from the minutes of the last annual convention of the United Farmers of Manitoba held in Brandon in November, 1931, as follows:

> . . . . we recognize that social ownership and cooperative production, for use, is the only sound economic system.
>
> Resolved that with a view to security of land tenure this annual convention of the United Farmers of Manitoba adopt the principle of nationalization of land.

The other night in this house there was a bit of an argument between the hon. member for Rosetown-Biggar (Mr. Coldwell) and the Minister of National War Services (Mr. LaFleche), during which the member for Rosetown-Biggar rose to points of order, and finally, a day or so later he rose in his place in the house on the orders of the day and spoke to a question of privilege. That was on February 28, 1944, as reported in *Hansard* at page 912. After discussing whether national socialism in Canada was the same thing as national socialism in other parts of the world, which the hon. member for Rosetown-Biggar denied, he said:

> Mr. Speaker, I contend that we are at war with national socialism in Germany, and to endeavour to attack any party in this country as being a national socialist movement is to accuse that party of disloyalty to this country and falsely to imply a position which is not borne out by the facts. May I say that this movement—

I take it that he means the C.C.F., and the hon. member nods his head.

> May I say that this movement in its philosophy and outlook is exactly the same as the labour and socialist parties of Great Britain, Australia, New Zealand and other countries.

Mr. MacNICOL: Nothing whatever like Great Britain's.

Mr. ROSS (Moose Jaw): I do not think the hon. member for Rosetown-Biggar will deny that he said that they believed in the same thing.

Mr. COLDWELL: The same philosophy.

Mr. ROSS (Moose Jaw): Let us take a look at what they have done in Great Britain. Here is an extract from a resolution passed by the British Trades Union Congress at their 74th meeting in September, 1942, dealing with post-war planning in Britain:

> Congress demands that within such a policy (of post-war reconstruction) provision shall be made for:
>
> (a) The compulsory acquisition of land by the nation;
>
> (b) The national ownership and control of all the means of production and distribution.

Later, on December 6, 1943, the Canadian Press carried this cable:

> Acquisition by the state of all agricultural land in Britain as rapily as possible, with the state to provide for its management, was asked by the Labour party in a statement of policy for the future use of land and development of agriculture.

Mr. DEPUTY SPEAKER: Order. If I may be allowed, Beauchesne's Parliamentary Rules and Forms, Third Edition, citation 656, refers to matters that can properly be discussed on the second reading of a bill. I know that in the discussion of a bill of this kind considerable latitude must be allowed, but this afternoon I ruled against the hon. member for Weyburn for putting forward the policies of the C.C.F. as contained in a pamphlet. I must also ask the hon. member for Moose Jaw to remain within the orbit of the discussion, which cannot include political party platforms.

Mr. MACKENZIE (Vancouver Centre): May I suggest to you, sir, that the very essence of this measure is a combination of public support and government support of private enterprise, and I suggest that the hon. member for Moose Jaw has every right to discuss on the second reading of the bill all the implications of public ownership and private enterprise.

Mr. MacINNIS: This just goes to show where a ruling such as was made gets this house. We are supposed to be discussing the industrial development bank of Canada, but instead of discussing it my hon. friend is discussing a much more important programme to him, the programme of the C.C.F. and things of that sort.

Mr. MACKENZIE (Vancouver Centre): I think the hon. member for Moose Jaw should be permitted to make a complete reply to the animadversions of the hon. member for Weyburn.

Mr. COLDWELL: Then we also in this group reserve our right to make a complete reply to the hon. member for Moose Jaw.

Mr. DEPUTY SPEAKER: The question just raised shows the difficulties, but I have made my decision and I ask hon. members to abide by it. On the second reading of the bill hon. members should not discuss the merits or demerits of different parties.

Mr. ROSS (Moose Jaw): I have been stopped in the middle, as was the hon. member for Weyburn this afternoon. I have not even finished my last quotation. I am discussing one point, namely the nationalization or socialization of land. My hon. friend covered that completely.

Mr. DOUGLAS (Weyburn): I did not; I was still on it.

Mr. MACKENZIE (Vancouver Centre): Yes, he did.

Mr. REID: All we ask is fairness.

Mr. ROSS (Moose Jaw): I mentioned that I had an extract from a resolution unanimously adopted by the labour party of Great Britain in May, 1942. It is as follows:

> The conference therefore calls for the national ownership of agricultural land to enable its full utliziation by the development of a planned system of agricultural production.

Now, this whole trouble started because my hon. friend wants to get away from the fact that they believe in the socialization of land.

Mr. MACKENZIE (Vancouver Centre): The double shuffle.

Mr. ROSS (Moose Jaw): There are reasons for that, too.

Mr. DOUGLAS (Weyburn): Just keep to the facts.

Mr. ROSS (Moose Jaw): There are reasons for that, too; and one particular reason is that the hon. member for Weyburn is expecting an election in Saskatchewan.

Mr. COLDWELL: He is not the only one.

Mr. ROSS (Moose Jaw): He hates to have anything said about their past policy in regard to land. These hon. gentlemen have endeavoured to form a political party in which they have taken together labour and farmers.

An hon. MEMBER: It has done pretty well.

Mr. ROSS (Moose Jaw): And they say they have done pretty well. They may have done pretty well for labour, but they have not done pretty well for the farmer.

Mr. MacNICOL: And they have done less for labour.

Mr. ROSS (Moose Jaw): I do not know what they have done for labour, if anything. But I know that what the farmer wants and what the labourer wants are not the same thing, at all.

An hon. MEMBER: Are they not?

Mr. ROSS (Moose Jaw): The farmer is a capitalist.

Mr. COLDWELL: What do you try to represent?

Mr. ROSS (Moose Jaw): I try to represent both farmer and labourer, because they are all Canadian citizens.

Mr. GRAYDON: You must be Mr. Looking-Both-Ways.

Mr. ROSS (Moose Jaw): No, I am not. I am not trying to fool both of them, like my hon. friends are.

Mr. DOUGLAS (Weyburn): You are trying, but not succeeding.

Mr. ROSS (Moose Jaw): I am not trying. And I want to tell my hon. friend another thing: he has a great deal of ambition. That is a laudable thing, I will admit. I have been in the house for a long time, and when I speak now I speak my mind, not thinking at all of where the chips will fly, politically. I want to tell my hon. friend it is almost twenty years ago that I started into politics, running for this House of Commons.

Mr. HOMUTH: You are still just an infant at it.

Mr. ROSS (Moose Jaw): I have not cared a little whether I ever come in here again, and I do not care now. If my constituents, or the Liberal party in my constituency wish to select another candidate for the coming election, I will do my best to elect him. On the other hand, if the Liberal party in my constituency think I can do better in the election than anyone else, then I am willing to run again. But if I were to consult my own feelings in the matter I would be glad to get out of the game right now.

An hon. MEMBER: What has this to do with the bill?

Mr. ROSS (Moose Jaw): I have no ambition; I am not looking for anything, like my hon. friend. I intend to say in this house what I believe to be right, and if I run again my constituents will be willing to make their decision on what I have to say. I am not trying to run around and say that I do not believe in something I said I believed in ten years ago. I am still the same as when I came to this House of Commons.

Mr. MacINNIS: You have not learned anything.

Mr. ROSS (Moose Jaw): I have learned what a lot of demagogues there are in parts of this country. I have seen the type of politics now being played in Canada by my hon. friends, and I thank God the Liberal party never played politics in that way.

Mr. DOUGLAS (Weyburn): This is funnier than you realize.

Mr. ROSS (Moose Jaw): The hon. member is quite humorous himself. Then, the hon. member for Vancouver South—

Mr. GREEN: Be careful.

Mr. ROSS (Moose Jaw): —for Vancouver East (Mr. MacInnis) I should say, had something to say at one time at a convention at Regina. In the Regina manifesto of that time, namely 1933, they agreed that all natural resources and distribution—and everything else —should be socialized. But there were farmers in that meeting who did not agree with that. My hon. friend made a speech there, at that time. This was on July 20, 1933, and what he had to say then shows that the farmer and labour men in the C.C.F. party were not in agreement at that time. This is what he says:

> If the farmer wants a cooperative commonwealth in which everything is socialized but himself, he better have a cooperative commonwealth of his own.

I agree with him one hundred per cent on that.

Mr. MacINNIS: I should like to ask my hon. friend where he got that quotation.

An hon. MEMBER: You cannot take it.

Mr. MacINNIS: Where did he get the quotation?

Mr. ROSS (Moose Jaw): It was reported in the Regina *Leader-Post* of July 20, 1933.

Mr. MacINNIS: That is not an authority.

Mr. ROSS (Moose Jaw): That was published in Regina at that time. My hon. friend seems to think every newspaper misquotes. It is a terrible thing when you get to that state of mind.

Then, in connection with this matter of public, private or social ownership there is a new book now out.

Mr. HOMUTH: How much does that cost?

Mr. ROSS (Moose Jaw): One dollar each.

Mr. MacNICOL: Too much.

Mr. ROSS (Moose Jaw): It is called "Make This Your Canada." In this book there is an appendix.

Mr. MacNICOL: The appendix was not taken out.

Mr. ROSS (Moose Jaw): It is part of the Regina manifesto of 1933.

Mr. MACKENZIE (Vancouver Centre): Take out the appendix.

Mr. GRAYDON: Is that an acute appendix?

Mr. ROSS (Moose Jaw): At page 199 we find this:

> When private profit is the main stimulus to economic effort, our society oscillates between periods of feverish prosperity in which the main benefits go to speculators and profiteers, and of catastrophic depression, in which the common man's normal state of insecurity and hardship is accentuated. We believe that these evils can be removed only in a planned and socialized economy in which our natural resources and the principal means of production and distribution are owned, controlled and operated by the people.

In that he means by a government of the C.C.F. party.

Mr. MACKENZIE (Vancouver Centre): Socialization of land.

Mr. ROSS (Moose Jaw): And in the last few lines of the appendix we find this:

> No C.C.F. government will rest content until it has eradicated capitalism and put into operation the full programme of socialized planning which will lead to the establishment in Canada of the Cooperative Commonwealth.

I said a minute ago that I am a farmer. All farmers are capitalists. And my hon. friends say they will eradicate all capitalists. Thereby they will eradicate all farmers; I am sure of that.

They became excited when the hon. member for Rosthern began to speak about this matter the other day. But they fought an election campaign in Saskatchewan in 1934 when, I believe, the hon. member for Rosetown-Biggar (Mr. Coldwell) predicted, as he is predicting to-day, that his party would be the government of the province, with forty-two seats—just like that. Well, he did not get in, and neither did his party. Then they tried it again in 1938. They were going to have forty-two seats again. But he did not get in, and neither did his party.

Mr. DOUGLAS (Weyburn): We tried last August, and did pretty well.

Mr. ROSS (Moose Jaw): The hon. member is taking over, and he is going to try. No doubt before the election comes he will predict the number of seats they will take. As a matter of fact, according to them, it is in the bag. Let me tell my hon. friend that he will never be premier of Saskatchewan. The people of Saskatchewan have far too much common sense ever to listen to a policy of the kind which my hon. friend is advocating. The people of that province do not believe in the socialization of land, whereas the C.C.F. does, and they know it, and my hon. friends will never get anywhere with their socialization in Canada, especially in Saskatchewan.

Mr. DOUGLAS (Weyburn): You ought to have mentioned the bank at least once.

Mr. A. J. BROOKS (Royal): It is not my intention to-night to discuss the C.C.F. policy, nor do I intend to take up much time in the consideration of this bill. In the few days that I have been in the house I have not had an opportunity of reading the bill and of looking into each of its provisions. However, I was quite intrigued with the preamble and particularly the clause which states that it is desirable to establish an industrial development bank to promote the economic welfare of Canada.

In discussing this bill to-night I hope I shall be pardoned if I dwell more particularly on that part of Canada from which I come, the maritime provinces. If industrial development is needed anywhere in this dominion I feel that it is and has been needed in the little provinces down by the sea. We have been more or less neglected for a good many years.

The hon. member for Lake Centre (Mr. Diefenbaker) this afternoon discussed the matter of our war economy and showed how the maritime provinces and other parts of Canada have been neglected while in the central provinces most of the war contracts have been filled. That is something which we cannot change at the present time, nor would it be well for us to undertake to do so at this late date. However, our hope is that this condition, which has existed and which exists at the present time, will not continue in the future.

I am going to discuss this bill from the point of view of our post-war economy, and in doing so I would call attention to the pre-war economy of Canada. There is no doubt that after the war is over we shall have to go back to a certain degree to conditions such as they were in 1938, the year before the war. At that time the two provinces of Ontario and

Quebec had over eighty per cent of the industry in the dominion. There was $2,696,000,000 invested in the manufacturing industry in those provinces. We are told that this was due to geography, that it was due to the great water-power resources in these two great provinces and to the nearness to large markets in Canada and the United States. In British Columbia there was 6.8 per cent of the industry of Canada; in Manitoba, 3·9 per cent; in the provinces of New Brunswick, Nova Scotia, Prince Edward Island, Saskatchewan and Alberta there was less than 9 per cent of all the industry in the whole dominion; and we in the maritime provinces had less than 4 per cent. I call attention to this fact and express the hope that this condition will not prevail in the years to come.

What has been the result of this unbalanced economy in our provinces? If the house will bear with me for a few minutes, I would like to show from the census report of 1931 what really has been the result of this unbalanced economy as far as our provinces are concerned, and I think I can best do this by comparing the population of different constituencies in the maritime provinces fifty years ago with the population in the year 1931, the latest census report I could obtain at this time; there is not much difference in 1941:

Prince Edward Island:

	1881	1931
Kings	26,433	19,147
Prince	34,347	31,500
Queens	48,111	37,391

Next I turn to the province of Nova Scotia. I am not going to take all the counties, but what was true in some was true in most:

	1881	1931
Annapolis	20,598	16,297
Antigonish	18,090	10,073

Take New Brunswick, my own province, and take first my own county of Kings:

	1881	1931
Kings	25,617	19,807
Queens	14,017	11,219

Queens is also a part of my own constituency. I could go on to show the condition in the counties of Albert, St. John, Victoria, Kent and most of the other counties in New Brunswick and in the other maritime provinces, which have all suffered the same fate. What is the reason? I contend that the reason has been the unbalanced economy we have had in Canada, and I think I can truthfully say the unfair treatment which we in the maritime provinces have received. Where have our men been going? Any member from the maritime provinces will agree with me when I say that there are more of our people in the New England states than there are in our provinces at the present time. Take the cities of Saint John and Halifax. I am sure we all listened with pride yesterday to the Minister of National Defence for Naval Services (Mr. Macdonald) when he told us of the splendid exploits of our navy during this great war. He could also have spoken of the work that was done during the last war by the British navy and the small navy that we had developed. But I should like to ask hon. members what parts of Canada, what seaports of this great dominion, have played the most important part in Canada's war effort. They will agree with me that it has been the old cities of Saint John and Halifax. I wonder what would have been the result in this war, as far as providing Britain with supplies is concerned, if we had not had those open ports of Saint John and Halifax to supply the life-line to Great Britain. Have they increased in population? Have they increased in industries to the same extent as have other parts of Canada? Anyone who looks at the record of our census of fifty years ago will see that the city of Saint John had almost the same population then as it has to-day. It is true that the city of Halifax has had some considerable increase in population during these war years, but neither city has increased in any proportion like other industrial cities of Canada. Are those cities which have played such a brilliant part in this great war to go back to the same conditions after the war is over? Are they to be, as Kipling said of Tommy Atkins, "heroes" while war is on, but "forgotten by the people they served" after war is over. I make this appeal, Mr. Speaker, because I believe that if any section deserves, as this bill states, to have promoted the economic welfare of the country, it is the section of Canada from which I come.

Take, for instance, our young men. Someone made an appeal this afternoon for the young men who are returning from the war. What are our young men to return to in the maritime provinces? Are they to return home and remain there for but a short time and then have to go across the border or to western Canada or to some other place away from their homes because there has been no proper economy established in our own provinces? I do not know whether this bill will satisfy the purpose. Frankly I do not think it will. It speaks of a hundred million dollars. Why, that is a mere pittance as far

as the great necessities in this dominion are concerned. I do not know that our own banks cannot supply the great need. I have a great respect for the banking institutions of the Dominion of Canada. They are considered and have proved to be one of the finest banking systems to be found anywhere in the world. If this bill will help I am all for it. It has been characterized as a feeble step. I trust that it is a feeble step in the right direction. I hope that if it will bring any economic security to Canada, we in the maritime provinces will receive a fair and just share of that economy, something to which we have been entitled for many years and which is many years overdue.

Mr. G. G. McGEER (Vancouver-Burrard): Mr. Speaker, in rising to-night to address a few remarks to the second reading of this bill I am going to take the privilege of drawing to your attention the fact that I believe this is the most important measure that has been introduced in the House of Commons since the introduction of the Bank of Canada bill in 1934, with the possible exception of the introduction of the bill in 1938 under which the Bank of Canada became a publicly owned national institution of Canada.

When that bill was introduced I felt and said that it was one of the greatest reforms that had ever gone through parliament since the days of the Canadian federation. The bill that we are now discussing is the first step in laying the foundations for the financing of the peace that is yet to be won. Upon the action of this parliament, the course that it follows and defines and the policies that it develops with regard to financing the post-war period, will depend in no small measure whether, after victory in war, we are to have victory in peace.

In introducing the bill the distinguished parliamentary assistant to the Minister of Finance (Mr. Abbott) indicated that it was part of a programme required to maintain employment and national income after the war at a higher level. It is to finance such industrial activity as will support and sustain a national income and full employment that this bill is designed to help. The other day in the house I drew attention to a warning by the governor of the Bank of Canada to the government, to parliament, and, I take it, to the people of Canada, of the seriousness of the problem that we face in maintaining high employment and a high level of national income in the future. Let me repeat this statement which is found at page 12 of his annual report:

> After the war, some of those who are now employed will voluntarily withdraw from the working force, and the armed services may be maintained at a level considerably above their pre-war strength. It seems likely, however, that at least 4,700,000 workers will be available for employment in civilian jobs, or at least 1,500,000 more than the number employed in that sector of the economy at the present time. A working force of this size, at present rates of efficiency, will be able to produce a vastly greater volume of civilian goods and services than Canada has ever known before . . . and capital development will be necessary if this output is going to be fully absorbed and high employment maintained.

A vastly increased volume of consumption will also be required. Mr. Towers points out that the key to this problem, as to many others, lies chiefly in the maintenance of a high level of employment and income.

My first query on this legislation is: Is that the kind of job that we want to associate with the Bank of Canada? Let me draw this to the attention of the house: The new industrial bank proposed by this legislation is a part of the Bank of Canada. In my opinion it is stretching rather a long bow even to say it is a subsidiary corporation of the Bank of Canada. The Bank of Canada supplies the capital for the corporation, and exactly the same governor and board of directors are in control of both banks. Governor Towers is to be the head of this industrial development bank. I question the wisdom of having this kind of work associated with the Bank of Canada because of the special duties and responsibilities which the Bank of Canada has to fulfil. Let me draw attention to the Macmillan report upon which our Bank of Canada was founded. At page 62 of that report these questions were asked:

> To what extent and through what organization should the volume of credit and of currency be regulated?

That means the medium of exchange for every person, every corporation and every activity in the whole Dominion of Canada:

> On what body should lie the primary responsibility for maintaining the external stability of the country's currency?
>
> To what institution may the government of the day most suitably turn for informed and impartial advice on matters of financial policy?

The answer given was a central bank; and the answer given by this parliament, by the Liberal party and the Liberal government, was a nationally owned central bank, which is our Bank of Canada to-day. Now let me give the house a little further insight into what the Macmillian commission defined as the duties and responsibilities of the Bank of Canada:

A central bank is at the same time an instrument and a force. As an instrument it is the means by which the state—which must necessarily retain ultimate sovereignty in matters affecting the currency—can give effect to the national policy. As a force the central bank has certain powers in its keeping which can be used to achieve the ends of national policy. Clearly these powers are of differing efficacy according to the aim of the policy. A central bank cannot be expected to influence directly the price of a particular commodity. It is even not desirable that a central bank should be specifically charged with any responsibility for the general price level of a country. There are many factors, of varying nature, which combine to influence that level, and a central bank, working as it does purely in the monetary sphere, cannot be expected to have complete control, though it may well have a measure of influence. If it attempted to exercise any drastic control it would have to wield powers far beyond those which any body other than the sovereign authority would be entitled to exercise. It is manifest, however, that the regulation of the volume of credit is an important factor in influencing the level of economic activity and therefore of prices and this is one of the cardinal tasks of a central bank. In the absence of a central bank it is a task the fulfilment of which is either left to chance, or performed inadequately by other agencies. The regulation of the quantity of credit is effected by the action of the central bank on the reserves of the commercial banks. By increasing or diminishing these reserves, or by increasing the cost of securing them, there is set in motion a process of expansion or contraction through the ordinary channels of banking. A central bank is thus not a competitor with the commercial banks. Its functions are regulatory and indirect.

Do hon. members realize how far away from that sound appreciation of the work and responsibilities of a central bank you go when you set up a bank, right within the bosom of the Bank of Canada, and use Bank of Canada money, Bank of Canada prestige and Bank of Canada authority to go into competition with the commercial banks which you are supposed to regulate through your national central bank? So that there may be no doubt about that, let me quote what was said by the hon. member for St. Antoine-Westmount (Mr. Abbott) in moving the second reading of the bill. I refer to page 1059 of *Hansard* for March 2, 1944:

As to the bill itself, it is proposed that the bank will be a subsidiary corporation of the Bank of Canada having a board of fifteen directors composed of the members of the board of directors and the assistant deputy governor of the Bank of Canada, with the governor of the Bank of Canada as president. The capital stock of the bank is to be $25 millions all to be subscribed by the Bank of Canada, with $10 millions or more to be paid up at the time this act comes into effect.

I cannot believe that those responsible for this legislation have ever considered how completely this change in banking policy disrupts the whole policy, the independence and the power of the Bank of Canada itself. Surely that must be a question with which every member of the government and every member of this house is deeply concerned. Can anyone conceive of the governor of the Bank of Canada regulating the banks, stabilizing the price level as far as he can by the regulation of the volume of credit, and then going into the business of financing Canadian industry, in competition with the banks that he is supposed to control and regulate? That is something I hope will be given full consideration in the banking and commerce committee when this bill gets there.

The objectives of this bill are excellent; but is this the best way, the sound way to achieve them? I do not think it is. We have an example across the boundary line to the south of us in the Reconstruction Finance Corporation, which operates not as a bank, not as part of the federal reserve system of the United States, but as an independent agency of government doing a job not in creating capital and developing industry alone but in meeting, in a particular and general way as an agency of the government of the United States, the economic needs of the whole nation. Yes, I will recommend to the banking and commerce committee, when this bill is under consideration, that it be abandoned and that a reconstruction finance corporation or an institution along similar lines be substituted in its place.

The next point I wish to make is this: Does this bill conform to Liberal policy? To us on this side of the house that should be a grave and proper question for consideration, because we have great reason to be proud of the Liberal financial policy so far as it has gone. We have good reason to want to preserve and protect it. Let me recall it to you, Mr. Speaker, as it was laid down in this house in the days when the Liberal party was in opposition and when the Bank of Canada bill was introduced by the Conservative party. On June 21, 1934, the present Minister of National Defence (Mr. Ralston), who was then the recognized authority of the Liberal party in the realm of finance, denounced the Bank of Canada as created by the Bennett government on the ground that it abrogated the sovereign rights of the dominion. In his opposition to the bill he said:

The control of credit and currency is the biggest and most important public utility in the economic activities of the Dominion of Canada. I submit, Mr. Chairman, that the Prime Minister and those who have drafted the Bank of Canada bill have forgotten for the moment that after all this (the issue and control of national currency and national credit) is a state function.

And again:

I repeat that this (the Bank of Canada) is a public utility of the greatest magnitude and importance and the citizens of Canada should not relinquish control of its administration to any group of private citizens.

Our distinguished Prime Minister (Mr. Mackenzie King) who was then leader of the opposition, supported the attitude of the present Minister of National Defence with this statement on June 27, 1934, as reported at page 4362 of *Hansard* of that date:

The Liberal party believes that credit is a public matter, not of interest to bankers only, but of direct concern to the average citizen. It stands for the immediate establishment of a properly constituted national central bank, to perform the functions of rediscount, and the control of currency issue, considered in terms of public need. A central bank if necessary to determine the supply of currency in relation to the domestic, social and industrial requirements of the Canadian people; and also to deal with the problems of international commerce and exchange.

I desire to direct special attention to these words: "A properly constituted national central bank."

Also: To perform the functions of rediscount, and the control of currency issue, considered in terms of public need.

Note "in terms of public need" not possible private gain.

It will be said that because the Bank of Canada owns all the stock of the industrial development bank, it is publicly owned. So far as that goes that is all right. But when you come to the stock in trade which this bank must have to operate, when you come to its capital finance, you find something very different. I fear that with this bill we are going back to where we were in 1936 when we said we would only make fifty-one per cent of the stock publicly owned and forty-nine per cent privately owned. I opposed that bill quite bitterly because I believed that a partly privately owned and partly publicly owned bank was worse than a privately owned bank.

How are you going to finance this bank? The Bank of Canada is going to put $10,000,000, possibly another $15,000,000, of Bank of Canada cash and then you are going to sell bonds.

Mr. ABBOTT: Perhaps to the Bank of Canada.

Mr. McGEER: My hon. friend from Montreal says "perhaps". There is no "perhaps" about this proposition as far as I am concerned. Let us assume that we exercise the power that is there and sell bonds in the open market. We then change this industrial development bank from a publicly owned national utility into a partly publicly owned and partly privately owned investment corporation. Mr. Towers cannot function with his board of directors, using borrowed money from bondholders which is not guaranteed by the government, unless he respects the trust that that obligation imposes upon him to protect that private capital. Yes, we are turning the clock back, not forward.

Now let me come to those words "in terms of public need, not possible private gain." When we issue Bank of Canada stock or Bank of Canada cash to pay for the stock it can be said that we give to the industrial development bank about the cheapest kind of money any bank can get. But it is not quite as cheap as the kind of money the chartered banks get. When we give, as we do under our law, the power to the chartered banks to multiply their cash reserves by ten, we give them the power to create lending capital finance in their own bookkeeping system. Let me ask: Why can we not give to this national utility the cheapest kind of money available, money that has proven its value because our bank deposit money has financed us through this war? If you want to issue currency and credit in terms of public need, not private gain, in order to help small industry, surely you want to help them at the lowest possible rate of interest and the least cost. When you give this corporation the power to borrow in the open market you must intend that that corporation is going to borrow.

I contend that on two distinct grounds this bill violates Liberal policy. First, it is not giving money for use in this development bank in terms of public need, not private gain. Through the whole picture of the sale of bonds to raise the capital finance of this corporation appears the principle of private gain. What price are you going to get for industrial development bank bonds not guaranteed by the government? Surely not a better price than government bonds themselves. Possibly considerably more because there is another factor that cannot be overlooked. You are going to lend money only on things that nobody else will touch. I think this a weird conception of the kind of expansion and extension that we should add to the Bank of Canada.

I come now to another feature. If, sir, you will read Mr. Towers' annual report for 1943 I think you will agree with me that he correctly envisages the situation that we all know very well. After the last war we went through the post-war boom and the post-war depression, and what did we find? After the last war we had an accumulation of

credits, bank deposits, bonds. After the war we promoted production; we sent ourselves booming along the road, putting money into every conceivable type of investment, and what was the result? At the very moment that we were spending more money, turning it over at a higher rate of velocity than ever before, when we had more money in our possession and in circulation than we ever had before, you did not see this inflationary St. Vitus dance that you have seen so often here—no, it was at that period that you had a complete collapse of your price level and you went hurtling into the depression of the economics of glut.

Now here is a bank that is to come along, not to inaugurate an adjustment of an unprecedented nature, as Mr. Towers suggests, but to be a pattern of the very thing, in line with the very programme, that brought us to disaster in 1930. We are not changing; we are repeating. That is something which, in the light of the lessons we have learned, history will never justify if this parliament permits that mistake. Let me give the house an idea of the enormous volume of capital finance that we have created during this war: Bank deposits have increased from $3,378,000,000 in 1939 to $5,149,000,000 in 1943, an increase of $1,871,000,000. Our Bank of Canada cash has increased from $587,000,000 in 1939 to $1,312,500,000 in 1943; that is paper money circulating without gold. Our bonds issued by the national government have risen from $4,693,000,000 in 1939 to $11,302,000,000 in 1943. We started this war with $8,158,000,000 of bank deposits, Bank of Canada cash, and bonds of the dominion, which are liquid assets, and already to-day we have $17,753,000,000, or an increase of $9,500,000,000, in our capital available for investments—and we are supposed to need more!

Our problem in the post-war period is not going to be to secure production out of the enormous equipment that we have developed in the last four-year period. Our problem is different from that. It is to find consumption.

This bill gives us more where we already have too much. It certainly gives us more debt, and we have far too much of that to-day. It adds to the financial facilities new means of doing a job that cannot be done unless adjustments are made that are going to look to our economic needs in a different light. We in Canada must see to it that we adjust, not supply to demand, but demand to supply. This bank is not the kind of remedy that is needed now. This is not the kind of policy that will ever put Canadians to work or circulate the medium of exchange.

[Mr. McGeer.]

I wish to suggest the job we have to do, and I think it is a job on which we can drop party politics and unite as a parliament to work out a programme which will guarantee that the sacrifices already made and those still to be made will not be all in vain.

We know what we can produce in Canada. We are one of the richest people in the whole wide world. Where is there a people of fewer than twelve millions possessed of all the wealth and all the riches that we possess who dwell upon this magnificent strip of earth between the Atlantic and the Pacific? Where else are there so few who have so much? Our resources are no longer tied up. Our industrial power have proven quite capable of bringing all our resources to the service not only of Canadians but of others. How long is parliament to continue to allow this nation to be fettered and restricted in bringing into being and into use and service the things that Canadians need?

Yes, we need a change in our financial policy. We need to set up a branch of the Bank of Canada that will finance this dominion. We do not need to go selling bonds to get money to rebuild the Canadian National Railways. We do not have to go to New York or London or Berlin or any other place to get the capital finance to build our national harbours. We do not need to go abroad to get the means to finance our municipalities. We do not need to go abroad to finance the development of our Canadian natural resources or the resources of the provinces. We have proven Canada's financial independence in this war. When we went into this war we were supposed to be bankrupt, according to the doctrines of orthodox finance, and what happened? Did we go to Berlin to borrow any money for the enormous capital finance that was required to bring the nation into war production and put us on a war basis? No; Berlin was closed, and so was Paris. Did we go to London? The first thing we did was to lend London $700,000,000, and then to make a gift of another $1,000,000,000 to Great Britain. We produced the capital finance, every dollar of it, right here in Canada for that enormous programme. Will anybody say that we are to be hobbled and fettered henceforth by the theories of banker philosophy? I want to say that when this problem comes up for settlement in this parliament, this parliament will settle it to the satisfaction of an enlightened Canadian people, or an enlightened Canadian people will find a way to settle it themselves.

I wish to say a word about some of the things we must do to adjust demand to supply. We must give our schoolteachers better salaries. We must give our school children better

schools. We must give our people throughout the dominion better health services. We must give our postmen a better living allowance than they are getting.

Mr. McIVOR: And our rural mail carriers.

Mr. McGEER: Yes. We must go through our whole social structure giving the people the means of living as they should live and an appreciation of the fact that buying power helps to keep Canadian industry on the move and Canada a going concern moving forward.

There is the problem. Of course it is large, but it is nothing as compared with the problem we faced in 1939, and met with such magnificent success. Canadians have good reason to be proud of the magnificent war effort they have put forward under the leadership of this government. Their pride is not an idle thing. Properly appreciated, it gives to them the assurance that they can go forward into the peace, gleaning from their own nation's resources and their own industrial power a wealth they never dreamed they possessed. You will never get it out of St. James street or Bay street. You must get it out of this parliament, and this is the start.

There is just one other question I offer for the consideration of the house and of the banking and commerce committee. This bank could never succeed. In the first place, the only kind of loan it is going to make is one that nobody else will touch.

Mr. ABBOTT: Read section 15.

Mr. McGEER: Well, just let me quote my hon. friend, and see if my statement is any broader than his. Here is what he says, as reported at page 1059 of *Hansard:*

> This industrial development must be financed. Undoubtedly the cash resources of industry, including refundable taxes, have risen in recent years and will be used to finance part of the expenditures I have just mentioned. But industry's own resources may be far short of the total amount of financing required. It is therefore in the national interest to ensure that such additional financing as may be necessary and desirable will be available to industrial enterprises.

And again at page 1060 the parliamentary assistant has this to say:

> I want to make it clear that this bank is intended to supplement the activities of existing lending agencies rather than to displace them. If the credit requirements of a business are of such a nature that they can be obtained from a chartered bank or in the investment market, well and good.
>
> But if they cannot be obtained there, then the industrial development bank is supposed to come into the breach.

Can we imagine the governor of the Bank of Canada meeting a supplicant who has this to say, "I went to the Bank of Montreal, but they turned me down. I went to all the other chartered banks, and they turned me down. I went to all the investment brokers and they turned me down."

Mr. ABBOTT: Too small.

Mr. McGEER: Well, all right—"I went to the shark loan companies and they turned me down"—because nothing is too small for them. Why, do hon. members know that the Canadian Bank of Commerce makes personal loans to anyone who will come in and borrow from them to-day?

Mr. ABBOTT: For ten years?

Mr. McGEER: For any length of time they will take them.

Mr. ABBOTT: No, no.

Mr. McGEER: My hon. friend says no. Well, do not make any mistake about it, that if you can get your money from any other place you are not supposed to go to this bank. That is abundantly clear in the sections of the bill.

Mr. ABBOTT: At reasonable rates.

Mr. McGEER: At reasonable rates, yes. But on what grounds do you assume that, with the enormous volume of currency, credit and capital available, if you have a sane proposition anyone cannot get reasonable rates? And if that is so, are those chartered banks entitled to hold their charters any longer?

Let me carry a little farther my explanation of what the Canadian Bank of Commerce is doing. My hon. friend says that it does not lend small amounts for ten years?

Mr. ABBOTT: No.

Mr. McGEER: I happen to know of some small accounts that have been there longer than that.

Mr. ABBOTT: That may be, but I know of no Canadian bank which lends money on a ten-year loan. They may be stuck for ten years, but they do not lend it for ten years.

Mr. McGEER: That may be true. I do not believe Mr. Towers is outside of that category. But how could Mr. Towers lend where all the others refuse, even on a long-term proposition? What kind of example would he set? Mr. Towers is a banker, an orthodox banker.

An hon. MEMBER: A good banker.

Mr. McGEER: A good banker; that may be true. And if that is true, from my understanding of the term "good banker" then I say, "Heaven help the industrial development of the Dominion of Canada."

There is one other feature. To this bank we issue Bank of Canada bills, and we also issue bonds. But let us for the moment assume that we do not issue bonds, and that we float the bank, as was suggested by the hon. member who introduced second reading, by the issue of $100,000,000 of Bank of Canada cash. That $100,000,000 is going to be spent; it will find its way into the chartered banks and, under our law, they will have power to expand that $100,000,000 of Bank of Canada cash into $2,000,000,000 of bank deposits. Here we have what the Minister of Finance (Mr. Ilsley) has repudiated as inflation of the kind that would blow the lid off. Either you are going to move against Liberal principles and against Liberal policy, or you are going to move into a dangerous condition of inflation.

I think it is well that this bill should go to the committee on banking and commerce. What I am saying to-night is an indication of the stand I propose to take when the bill is before that committee. From the very beginning we should have with us the report of the Bank of Canada for 1943, and I do not think the committee should undertake to deal finally with any measure of this kind until all the financial measures of the government are before the banking and commerce committee, so that we may come back to parliament with a full and complete report.

Let me, in closing, say that this is a year of great decisions. No group in any parliament of any nation has a greater opportunity to do something really worth while than the men who are privileged to sit, let us hope, on the eve of a united nations victory, in the parliament of Canada.

Mr. E. E. PERLEY (Qu'Appelle): Mr. Speaker, when the house met at eight o'clock the hon. member for Moose Jaw (Mr. Ross) took the floor.

An hon. MEMBER: We are getting back to Saskatchewan.

Mr. PERLEY: He precipitated what might be termed a row, and there was uproar in the house. He generally does provoke discussion of that kind, and sometimes I admire his courage. But I do not think that in the discussion of this measure the policy of any party is at stake, nor is it necessary for us to discuss the policies of the respective parties. We need only consider the financial policy of the government in so far as this bill is concerned.

Following all that chaos, the hon. member for Royal (Mr. Brooks) and the hon. member for Vancouver-Burrard (Mr. McGeer), have brought the house back to a reasonable state of mind. I think the house is prepared now to listen to a moderate discussion of the measure and we have just had that. The hon. member who has just taken his seat has stated that this is a very important measure, and I certainly agree with him. I would not pretend to answer him, and I am only following him to take the opportunity this evening of saying a word or two. However, he has said many things in this chamber, not only this evening but on other occasions, which it is difficult to answer in the negative, and many of the policies he has enunciated are worthy of the careful consideration of the house.

I recall that when the hon. member came before the banking and commerce committee in 1934 he propounded some important policies with respect to finance, but he was not able to convince that committee. I do not know how he will get along with the present committee when this bill goes to it, but I listened to him carefully, as I always do, because I happen to be a member of that committee and there is a certain responsibility attaching to every member. When this measure comes before the committee I think we shall be prepared to give it reasonable consideration, and to listen to any argument from anyone, particularly the hon. member who has just taken his seat.

This is a bill to set up a bank to assist industry. No doubt we have reached the point where that is necessary. When I got a copy of the bill I reviewed it, and since I recalled the central farmers' mortgage bank I went to the library and got that act of 1938 to compare it with the one before us. I find that the first few sections are almost similar, but farther on I find two distinct fields of operation for these two measures. In this bill there is, of course, no provision for assisting agriculture. The parliamentary assistant to the Minister of Finance (Mr. Abbott), in reply to the leader of the opposition when he was speaking to the measure, in giving his general statement, as reported at page 913 of *Hansard*, said that the bill does not apply to agriculture. He stated that the government is giving consideration to other measures having a similar purpose in the field of credit for agriculture. It might have been well if we had had before us this other measure of which he speaks. In my opinion, they should both go to the banking and commerce committee and be considered more or less at the same time, because we might consider one measure and dispose of it and then, when the other came along, it might necessitate some amendments to the bill that had

been finished. I should like to have seen the measure which the hon. gentleman proposes to introduce, even before we finish with this bill, and certainly before it is disposed of in the banking and commerce committee.

I do not think the private banks have served as they should have. They have not served industry as well as they should have, because the government has been called upon to the limit. The private banks for the last few years have been running true to form, because I can remember that in the very early days in western Canada, when the private banks got settled, they were quite free with loans to farmers in particular who were buying and improving land. When, however, we got into a year or two of difficulties they put the lid on, so to speak, and clamped down on the farmers, forcing them to go to the loan companies. That was certainly a mistake, because the loan companies, while for a time they took over the financing of the farmers, ultimately found themselves in difficulties that we are aware of. We know what is happening to-day.

The question of short-term loans and banking methods with respect to loans was discussed in the last part of the speech delivered by the hon. member for Vancouver-Burrard. Banks have been lending money over a period of years and have been getting well paid for it in the interest they have collected. I have had a little experience myself, and I know that when they gave a loan for three months in the spring of the year, to assist a farmer with seeding or some other operation, that note had to be renewed. In the early days the interest was always eight per cent, because the farmer always had to wait until harvest for his return; in many instances the note was renewed again, at compound interest, and in the end the interest paid was nine or ten per cent. That is the exaction they took from the western farmers, and they are running true to form, because to-day they will not assist small industries or even farmers to any extent.

Industry has to be assisted, and for the most part I am in agreement with the measure. While it does not consider agriculture, it is at the same time designed to assist small industry, and industry has played a good part in the war. Industrialists came forward at the start, and the whole question was of such magnitude, the financing of war production was so important, that they had to have assistance. The government gave that assistance, and industry was willing to help as far as it could.

I agree with the hon. member for Vancouver-Burrard when he says that the Bank of Canada should be called upon to shoulder a greater load and to assume a greater responsibility. This bill, boiled down, really throws the whole post-war financing back on the Canadian people, and if it does, then I ask, why does the Bank of Canada not admit it and take over the whole thing? Why does it not take the load now? While we are not discussing agriculture, I would observe that the land for the last fifty years has carried a greater share in bringing about advancement and improvement in all lines of industry in Canada than it should have borne. I was going to say that for the last fifty years the land has carried the whole load, because we know what would have happened to industry in the east if there had been failure over the great bulk of the land in western Canada.

Something was said this afternoon with respect to decentralization of industry. The hon. member for Royal put some figures on *Hansard* to-night, showing the percentage of industry in each of the provinces prior to the war. Saskatchewan has only four per cent of the industrial enterprises of Canada. I think that is a small share compared with what we should have. When the hon. member for Weyburn (Mr. Douglas) got down to a quiet time in the house he made a plea for assistance to cooperative organizations. That is an important matter and the suggested bank should consider it. Many cooperative organizations in western Canada have made a start. The foundation is laid and there should be some means through this measure to assist them. We want that in western Canada. It is important that we have small industries started out there, industrial plants to process the oil-bearing seeds, pressing plants, if you like. By this means we could save the freight back and forth to eastern Canada on the raw product and the finished product. If there is to be development along that line I think we should have the development in the centre where the raw material is produced. We should have small processing plants established there. I hope consideration will be given to such organizations by this measure.

I should like to have received more details from the parliamentary assistant to the minister or the minister himself before the bill goes to the banking and commerce committee. We should have more detail than we have had in order that we could consider it in a better way.

Something has been said about the rehabilitating of returned men. I hope that due con-

sideration will be given to that. When these men return I do not think they should have to get down on their kness for a permit to establish themselves in any line of business, in storekeeping or anything else. Many of the men will go back to businesses with which they had some connection in western Canada before they went to the war. Due consideration should be given to these men to reestablish themselves. If necessary, small companies should be organized and receive assistance.

Section 5 of the bill sets out who the officers shall be. I believe we should have more detail. Of course, we may get that information in committee. The governor of the Bank of Canada, the deputy governor and his assistant will be directors. I believe we should know the other directors before the bill goes to the committee. I should like to know if a shareholder or a director of any of those companies can be on the board of directors of this bank. That is something that has not been answered and I think it should be.

I would suggest further that some pressure should be brought to bear on the chartered banks to induce them to fulfil their duty with regard to financing small industries and producers in the west, if you like. That is important.

In closing, may I say I do not think it is necessary to hold up the measure at this time. There has been a general discussion. Many points have been brought forward. I happen to be a member of the banking and commerce committee to which this bill will be sent. I look forward to a complete statement being made when it comes before that committee, much more so than we have had in this house, with respect to how the whole plan is to work out, who will be responsible and who will be on the board of directors, other than the three names given in the bill. That is important. I hope that agriculture will have some representation on the board. I am waiting with interest to get more detail on the bill when it comes before the committee.

Mr. ANGUS MacINNIS (Vancouver East): I did not anticipate when this measure was brought before the house that it would lead to so long a debate as we have had. I thought at the time that when the leaders of the various groups had indicated their attitude toward the bill it could then go to the banking and commerce committee and that we could dissect it there and get all the information required. However, I am not sorry that the debate has taken place and continued as it has. Some of what we have heard has been very informative, and, some not at all relative.

[Mr. Perley.]

I agree with hon. member for Vancouver-Burrard (Mr. McGeer) that the bill is an exceedingly important one. It is important because credit and finance will of necessity be an important part of our peace economy, as it has been an important part of cur war economy. But the bill is important for another reason. It is the first of the measures mentioned in the speech from the throne that has been brought to the floor of the house in a concrete form. If the bill as it now stands is any criterion of what the other measures mentioned in the speech from the throne are to be like, then I think my first impression of the speech was correct, that the proposals in it were put there for window-dressing.

I think several things should be clear to members of the house by this time. We have gone through two periods that should have, if we are capable of learning or capable of understanding, taught us something. Since the last war we had the period from 1929 to 1939 which can be described as the depression of plenty, and we have had nearly five years of war. Despite the fact that about one and three-quarter millions of our most productive workers are taken out of production, the Canadian people have lived better during the past five years than they have in any other time in history. Surely those facts should make us think and think to some purpose. If the period from 1929 to 1939 has taught us anything it is that so-called free enterprise has demonstrated its inability to feed, clothe, house and educate the people of this country at anything like a decent standard. On the other hand, five years of war have demonstrated that we can produce and distribute as long as we have three things: material, machines and labour, and, of course, the will to use them. Purchasing power accrues from the operation of these factors, and the government of the day should be prepared to give us something at this time that would hold out to the people of Canada more hope than they can get out of this bill.

During this debate we have heard a good deal about socialism and free enterprise, but I believe one thing is definitely accepted today: that is, that no one, I do not care whether he is an employer, a business man, a banker or anyone else, expects private enterprise to give full employment and a high standard of living when this war is over. Every statement I have seen so far says, in effect: leave it to free enterprise, and to the extent that free enterprise cannot provide full employment, then the government will step in. That is another way of saying, leave the cream to the skim milk. The only question, there-

fore, that faces us now is when and to what extent the government should intervene; and let me say again that if this measure is any criterion of what we may expect from the rest of the government's programme, the speech from the throne was indeed a barren one.

When the hon. member for Lake Centre (Mr. Diefenbaker) spoke this afternoon he said that the bill would not give assistance to small business, though that is said to be one of its purposes. I am afraid it is going to be extremely difficult to contrive any sort of scheme that will enable small business to continue side by side with monopoly and big business. In a competitive system the strong always survive and the weak always go under. That is the law of competition, and as long as we accept competition we must accept its law. The process that has gone on between big business and small business, if you like, the process of the elimination of small business, has been steady and relentless since the time the handicraft workers were deprived of their livelihood and driven into the factories by the new power machines. The same process is still going on to-day.

I should like to give a few examples to show what has happened in our own time, during the life time of everyone here. I will begin with the chartered banks. In 1911 we had twenty-eight chartered banks in Canada with total assets of $1,390,000,000. In 1942 we had ten banks, but with total assets of $4,008,000,000. Since 1911 the number of chartered banks has decreased by eighteen, but the assets of the ten remaining banks are almost four times greater than the assets of the twenty-eight banks were in 1911.

What has happened in the banking business has happened all the way down through our industries. Let me give a few more examples. The figures I am about to quote are taken from the report of the royal commission on price spreads and mass buying, which sat in 1934 and 1935. According to that report, in 1933 there were 127 tobacco firms in Canada. One of these firms, the Imperial Tobacco company, controlled seventy per cent of the business while another, the Macdonald Tobacco company, controlled the greater part of the remaining thirty per cent. This is what the commission found with regard to the Imperial Tobacco company; this is what happens to small business when big business is in control. The volume of sales during the depression was maintained by beating out competitors; prices were maintained by what the commission termed "oppressive tactics and unethical methods." Here are some of the ways in which competition was eliminated: (1) Refusal to sell to dealers who cut prices; (2) Forced on them written contracts to maintain prices of tobacco supplied by all firms; (3) Offered ten per cent discount to certain retailers to buy directly, thus eliminating the wholesaler and increasing control; (4) Insisted on preference in display advertising over other firms, and intimidating dealers. May I point out again that this was the finding of a commission composed of members of this house, the chairman of which in the latter stages, if I am not mistaken, was the hon. member for York-Sunbury (Mr. Hanson).

Then we come to meat packing. With the exception of bread perhaps no article of food goes into so many homes as meat. In the twenty-five years prior to 1933, through merger and consolidation, the meat packing industry came under the control of very big business companies. In 1933 the two largest, Canada Packers Limited and Swift Canadian Company Limited, did eighty-five per cent of the business. Canada Packers, the largest, is a typical example of this sort of monopoly. It results from the merger of four packing concerns in 1927. In 1934 Canada Packers controlled seven creameries, six packing plants, twenty branch houses, two cold storage plants, one wool pulling plant, three canning plants and three fertilizer plants. In view of this, may I say again that those who hope to resurrect small business and keep it in competition with such monopolies as these are surely optimistic. I could go down through the list: furniture, oil, milling, baking and a score of other businesses, and the story would be the same.

I wish those people who call us socialists would stop calling names for a little while and read history. They would then understand that it is not people like myself and those behind me who are bringing socialism to Canada; it is the unrelenting development of the economic means of production. I want to make it quite clear that we are socialists. We do not deny it, we are proud of it, and in the not too distant future we are going to be in a very large and worthy company. I have not the time to go into it to-night, but if we would give a little thought to what is happening in various parts of the world to-day we would realize that our hope of victory in this war is based to a large extent upon the building of socialism in the occupied countries of Europe. The united nations as a whole are not doing that and, consequently while we are winning the war in a military sense, we are losing it in a political sense. This does not come within the scope of this debate, but there is a story there that could be told.

We are told of the benefits that the world has derived from free enterprise over a period of years. No one denies that. But it is of no consequence now. What we are concerned about is what can it do for us to-day and what it is going to do for us to-morrow. If there were any further proof required of the correctness of the direction in which the C.C.F. is going, it is given by this bill which has been reluctantly brought into this house by a government which opposes its very principle.

When he was speaking the other day the hon. member for York-Sunbury (Mr. Hanson) said that the bill was semi-socialistic. Whether it is "semi" or more than that is not material; it is in that direction. The hon. member for York-Sunbury thought that since it did not go far enough this group would reject it. As I have said, we are socialists, but we are not the "socialism or nothing" variety some are accusing us of being. These same people, however, a few weeks ago were accusing us of not being socialists at all.

When I contemplate the accusations hurled at us in the debates that have taken place in this house during the past few weeks, I am reminded of a story the late Clarence Darrow, the famous criminal lawyer, tells on himself. He was going to debate the question, "Has life any meaning?" When he started to prepare for his talk he got his pad of paper, his pencil and he began to think. The first name that occurred to him was that of William Jennings Bryan, and he wrote, "No". I do not want to mention names, particularly when hon. members are not in the house, but when I think of some of the speeches made in this house I also am compelled to say, "No, life has no meaning".

We are told that the good old capitalist system has worked well down through the years. Possibly it has. The old Ford car worked pretty well when it was new, but eventually it became worn out. A brochure came to my desk the other day entitled, "The foundations of national well-being". The author is John L. McDougall, and there is something in it that I believe is of great significance. I do not agree altogether with Mr. McDougall, but facts are facts and when we meet them they must be recognized. On page 17 he gives the populations of the chief English-speaking countries, Great Britain, the United States, Canada and Australia in the years 1801, 1861 and 1931. Taking the United States and Canada we find that in 1801 the population of the United States was 5,300,000 in round figures, and that of Canada, 250,000. In 1861 the population of the United States had increased to 31,400,000 and that of Canada to 3,200,000. In 1931 the population of the United States had increased to 131,700,000 and that of Canada to 10,400,000. That was in the heyday of capitalism. Not only were we able to take care of the natural increase in population here, but we were taking people by the million from every part of Europe. The population of Europe itself was increasing during the same time. From 1801 to 1931 the population of Great Britain increased from 10,500,000 to 44,800,000, and the same thing was happening all over the world. On the American continent capitalism kept expanding by moving the frontier farther and farther west. When we filled up one area we moved our frontier farther west. But at the beginning of the twentieth century we had reached the end of the frontier and, from that time on, capitalism, instead of expanding, has been contracting. Population, instead of increasing rapidly, has been increasing very slowly, and in some parts of the world where it was increasing fast it has stopped growing altogether. These are facts the import of which we should try to understand. It is because there are no further outlets for new investments that capitalism, so-called free enterprise, has come to a standstill and can no longer feed, clothe and shelter the people, although there is an abundance of the wherewithal to do that. Let me tell my hon. friends opposite and my hon. friends to my right that these are the facts with which we are confronted, and our economic system must be so reorganized that we can produce and distribute for peace in the same manner as we produce and distribute for war.

I draw this to the attention of the house. When we were training our men for the armed services we found the money to give them all the training that was required. We found the money to give them all the clothing, all the food and all the tools and equipment—everything they needed. We did all that without any great difficulty because we had a national objective—the winning of the war. We can continue to do it so long as we have that common national objective. But the moment a man is let out of the armed services, then in greater or less degree his troubles begin. Surely it is as important that we should plan to clothe, shelter, train and educate a man for peace as it is to educate and train him for war. Why can we not do it? Because we are divided as to the way in which it can be done. We are divided as to the objectives to be attained. So long as we have contradictory objectives; so long as some persist in saying that the only way in which our economy can be carried on is to allow certain individuals to make a profit out of

feeding, clothing, housing and educating the rest, it will be difficult, yes, impossible to plan.

Let me, in conclusion, say something to those who are opposed to socialism and to the socialization of the means of production. We live by getting access to the means of production, to those things that produce food, clothing, shelter and the other things we must have in our everyday life. Which is the better way, to leave those things in the hands of a few irresponsible people, or to put them in the hands of those who are responsible to the people and to parliament? That is your choice and you have no other.

Mr. KUHL: Oh, yes, you have.

Mr. MacINNIS: My hon. friend says that we have, that you can leave the means of production in the hands of a few people and through the magic of money distribute goods and services to all the people.

Mr. KUHL: I want production, not the means.

Mr. MacINNIS: If you want production you must also have the means. The two must go together.

Mr. KUHL: No, I am sorry—

Mr. MacINNIS: I have not time to argue such silly questions.

Mr. KUHL: You cannot dispute it.

Mr. MacINNIS: I dispute it right now, but I have not the time to argue it. Make your own speech when I have finished. I say that if we have the control of the means of production no one can take away from us the fruits of our labour. The purchasing power of individuals as well as the purchasing power of nations are the goods and services that we produce. But if I work for B and he takes one-third of all I produce and gives me the other two-thirds, or if he takes two-thirds and leaves me but one-third, and does that with one hundred thousand people, then B will have more goods and services than he can consume. It may appear an easy way to issue money and buy those things from him. But let me tell you that when you create unrestricted plenty you have destroyed the profit system deader than a door-nail.

Just one other word. I would ask the opponents of socialism, which particular project among all those that have already been socialized would they like to turn back to private enterprise? Would they hand over the Canadian National Railways to the Canadian Pacific Railway? Would they hand over the Ontario hydro electric system to a private company? Would they hand over in any part of Canada anything that has been brought under public control? They certainly would not. Just to show hon. gentlemen that the trend is in the other direction, let me show what is taking place in a province that certainly is not socialistic, at least not yet, but it is on the way; do not forget it. I have an item here that appeared in the Montreal *Gazette* of February 26, 1944. It is the report of an interview by the Montreal board of trade with the government of Quebec protesting against its intention to expropriate the Montreal Light, Heat and Power Company. The board of trade statement quotes from the speech from the throne delivered at the opening of the Quebec legislature as follows:

> A thorough study of the distribution of electricity has demonstrated that reforms are urgently needed to provide the citizens of this province with electricity upon the favourable conditions offered elsewhere by state-owned enterprises. The setting up of a provincial hydro is the only solution for the problem of lower rates and rural electrification. You will be asked to pass an act for that purpose and the bill will provide, in particular, for the nationalization of the electric system and the distribution system which supplies the metropolis.

Well, are my hon. friends going to call Mr. Godbout a socialist?

Mr. TUCKER: He wants to take steps to prevent the electrical system in Quebec being taxed as it is now by the federal government. It is a private company.

Mr. MacINNIS: Yes, it is a private company.

Mr. TUCKER: And the Ontario hydro electric is not subject to taxation by the federal government.

Mr. MacINNIS: Does my hon. friend say that the Ontario hydro does not contribute as much, without taxation, as the Montreal Light, Heat and Power does with taxation? It pays the taxes in the lower rates provided.

Mr. TUCKER: That benefits Ontario. Mr. Godbout wants to get a similar benefit for the people of Quebec.

Mr. MacINNIS: And he can get the benefit only by nationalizing the Montreal Light, Heat and Power Company. That is the very point I want to make, and I am glad that at last it has dawned on my hon. friend. If he wishes to oppose public ownership, that is all right with me, but I would suggest that he

is on the losing side. However, public ownership in all phases of our industrial life is coming.

At the moment we are discussing the extension of public ownership to another section of our banking system. My hon. friend has given his approval. To-morrow and the to-morrows that are to follow will see more and more of these measures, and they will pass the House of Commons because there is only one alternative to their not passing. We cannot stop progress. We cannot stop expansion. If we try to stop progress we do so at the peril of a social explosion that may do the thing quicker than some of us might like to have it done.

Mr. A. G. SLAGHT (Parry Sound): Mr. Speaker, this bill and the principles it involves, as well as some of the details, require most minute examination by parliament. In my judgment their discussion involves, and is unalterably intertwined with the consideration which at this session parliament will be called upon to give to three other financial measures, namely the amendment of the Bank Act, the amendment of the Bank of Canada Act and the mutual aid bill, all of which are yet to be introduced.

Some features of this measure have caused me grave concern. I do not propose to discuss them to-night, but rise simply to say that when the bill is before the committee on banking and commerce, of which I am a member, I shall desire then to bring about the fullest discussion of those principles and details which, as the bill now stands, cause me concern. Therefore, having made that clear, so that there may be no misunderstanding as to my being a party to sending this measure forward, with second reading, to that committee, I shall have no further observations to make at the present time.

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, I have a few observations to make in connection with the second reading of the bill to establish the industrial development bank. Perhaps what I have to say will make some small contribution in connection with the discussion surrounding the establishment of this institution. So far as the bank is concerned, and the proposal to set it up, I believe we might as well first discuss the question of the government's position prior to the outbreak of war.

As has been described not only in this, but in other debates, with the failure of enterprise to function fully, the consequent lowering of national income coupled with a lowered degree of employment actually created a situation which governments in the past failed, I believe,

to meet. The solution then proposed was one only experimental in character. It was experimental because situations had not developed before to serve as illustrations which would help governments in solving the problem. Instead of reaching down to the root of the problem, that of maintaining a high level of national income and that measure of full employment so necessary for national prosperity, we adopted experimentally a different scheme altogether, namely that of putting people on relief and on the dole, or of attempting artificially to raise our level of employment by a scheme of public works and undertakings.

When war broke out, the whole picture was changed. As some hon. members have pointed out, and quite properly so, with the change of conditions from a peace-time to a war-time economy we found that with a great national objective in mind our nation was able within a short time to raise and to keep on raising our national income. That has been so to a point where we find it has now reached almost nine billions of dollars, and where with some very few exceptions we have attained a position of a high scale of employment. I must say, however, that in reaching a high scale of employment we must not forget that some 700,000 of our men and women are in uniform and are now outside the employment stream, so far as this nation is concerned. But when the war is over, it seems to me that if we expect to go forward and take our place among the nations of the world we cannot return to a system of public works of a palliative nature, nor shall or can this nation survive if it returns to a system of dole or relief. Those are issues which I believe are in the minds of Canadians generally.

There never was a time when there was a more vigorous determination that this nation shall have an expanding economy at the close of the war. What we have been able to master in the war-time period we must be able to master in the period of peace as well Having that definitely in mind, I think this particular measure to establish an industrial development bank, feeble perhaps as the attempt is, is commendable. I am not going to try to-night to justify all the provisions of the bill which is before us. I have heard, as the house has heard, many powerful criticisms of the bill; nevertheless, we have to make some change in connection with our economy for the peace-time period and the period of transition.

I submit, therefore, that it is the bounden duty of hon. members to support the principle of the bill at least for the purpose of having it referred to the banking and commerce committee so that a close scrutiny of the whole

problem may be made there with the help of the evidence that will be called. Moreover, as regards the industrial development bank, however necessary it may be to strengthen its provisions, I think it may be said that if the principle of the bill is to be opposed, then we as an opposition and as members of the house generally, if we say to the government in a war-time period that we do not like the provisions of the bill, have the responsibility of indicating some alternatives to the measure. That is the patriotic, the proper view to take of the bill.

I find great difficulty, members of the government are finding great difficulty, and members to my left are finding great difficulty in subscribing to many of the provisions of the bill; but fortunately the government has undertaken to have it referred to the standing committee on banking and commerce. There, I hope, many of the principles involved in the bill, many of its provisions, will be gone into thoroughly so that the bill may emerge from the committee much stronger and more powerful than it appears to be on second reading.

I say to the government and to the parliamentary assistant who is piloting this piece of legislation, that one of the things that disturb me a little in connection with the bill is the idea of too much duplication of banking arrangements and banking facilities in Canada. Frankly, I realize that perhaps the chartered banks of the country are not able to loan on long terms; nevertheless, as regards our intermediary credit, and as far as long-term credit is concerned, for the purposes which the bill contemplates, it seems to me that this suggestion at least may be offered. I do not, like some of our hon. friends in various parts of the house, pose as a financial expert. I speak strictly as a layman.

Mr. MACKENZIE (Vancouver Centre): Hear, hear.

Mr. GRAYDON: If the minister of pensions is going to take part in the debate I hope that he will be modest enough to acknowledge himself also a layman in this matter, though I have heard him in previous sessions when he has posed as a little better than that.

Mr. MACKENZIE (Vancouver Centre): Oh, no.

Mr. GRAYDON: With respect to the credit situation, I would like the banking and commerce committee to consider the possibility if it can be done, of utilizing the banking institutions we have from the point of view of government guarantees under arrangements similar to those in connection with the National Housing Act and the home improvement legislation, on a widening and more comprehensive scale. That may not be feasible; perhaps it is not the proper solution; but at least I suggest that before we embark upon a wholesale scheme of duplication we should give this point careful consideration. We see the possibility of the establishment of branches all over Canada, and before costly duplication is undertaken we should consider carefully whether, by way of government guarantees or in some other way, a plan for utilizing the facilities now available might not be properly and practicably worked out in the interests of greater credit.

I support the bill as far as its principle is concerned, in the meantime. The banking and commerce committee will have an opportunity of dealing with such matters as I have suggested, with respect to full employment, maximum production and a high level of national income. Where private enterprise, or free enterprise if you will, fails to provide that full employment, that expanding production and high national income, then in our opinion the state must underwrite this nation's prosperity; and in so far as the bill tends to that end we are in support of the principle. It is unthinkable that we should reach the transition period from war to peace, and then the period of peace itself, without having some agency that will be able to pump into our financial, industrial and economic structure new life so that the stream may go on when unemployment will no longer be known.

There are people who say that this is a bad-debt bank. Well, I would not be at all surprised if there were many bad debts as far as this bank is concerned; but while, in my opinion, bad debts must be kept to the very minimum and care must be exercised in connection with the whole lending structure of the bank, I suggest that bad debts are not nearly as important a consideration to the nation as keeping our people all at work at good wages and under proper working conditions. We have gone a long way in our progressive thought along the whole economic front.

In connection with the various matters that have been brought before the house to-night and throughout the course of the debate, we have heard a good deal about monetary reform, and in connection with all those questions that have to do with banking and money there have come proposals from various quarters in the house. This nation has done an excellent job in demonstrating that we can reach a position of maximum production. The problem in this country to-day is not

production. That, I think, is agreed. Hon. members on all sides of the house have said that. I agree with them. We have mastered the problem of production but, as some hon. members who have preceded me have said, and quite properly so, our problem is not production. Our problem in the future will not be production.

The first thing we have to do is to recognize that there is a bottle-neck between the producer and the consumer. If that bottle-neck is found to be a monetary bottle-neck, then let us be at least frank enough and honest enough with ourselves and with the nation to recognize that problem, and if it has to be solved, then let us not hesitate to have the courage to deal with it, regardless of what traditions may have meant to any of us in the past. Therefore I say to you to-night, Mr. Speaker, that I think it is very important, when the banking and commerce committee meets, that we shall not be so hidebound in our ideas of the past that we shall not give close study to the various solutions which may come from any quarter with respect to the eradication of the bottle-neck which prevents a better distribution of the maximum production of which this country is capable.

I wish to say to the government and to you, Mr. Speaker, that in so far as the new industrial development bank is concerned, as was pointed out by the hon. member for Vancouver South (Mr. Green), it must not be a political bank. It can be a bank which would be of great advantage to the country if it were properly managed to provide credit facilities made readily obtainable in those parts of Canada which by virtue of the economic and political set-up of the country have not always had a fair deal in industry.

I was glad to see the hon. member for Royal (Mr. Brooks) rise in his place and dicuss the question of the maritime provinces. I have been in the maritimes on various occasions in recent years. I do not think anyone can go to the maritime provinces, even as a layman not making a survey, without realizing that there is a job to be done as far as extending the benefits of confederation are concerned to those three great provinces on the eastern seaboard. The job that has to be done may be done partly at least by the extension of credit facilities by a bank such as this or some other kind of institution to make sure that they stand on an equal footing industrially with the rest of Canada. That is all they ask. They ask for no special privileges. They ask for equal rights with the rest of Canada. That applies to the prairie provinces and to British Columbia as well. It also applies to other parts of Canada, but I wish to mention specially at this time the maritime provinces and to emphasize the point which has been raised.

An equally important matter comes up in connection with the bank, namely, the movement toward the centralization of industry generally. It is not always a good thing. But decentralization of industry and a proper plan in that direction, if worked out economically on a properly organized basis across Canada, would inject new life into places where there has been no industrial life for many years. It would make for a more balanced economy and a greater Canada for all of us. I am hopeful that this industrial development bank will use its lending powers and its credit facilities in order that that laudable objective may be advanced and subsequently reached.

One of the unfortunate things with respect to this proposed bank, as the member for Lake Centre (Mr. Diefenbaker) pointed out this afternoon, is that the government has not submitted to the country or to parliament any plan or any scheme by which the bank may work. There is no use in setting up a bank unless the government has a plan by which those credit facilities can be operated. The whole matter of credit facilities, how they are to be given, where the need lies, must, I think, be the subject of a survey and of a plan. But so far this government has failed to disclose that plan to parliament or to the people. If I may say so, this bill indicates that the cart has been placed before the horse. It is unfortunate that before those credit facilities are to be given to the people of Canada the plan under which the whole matter will be dealt with has not been laid before the house. We should know whether the bank is established for the purpose of financing the great number of crown companies which the war has brought into being. We should have information with respect to the whole question of the War Assets Corporation with which this bank will have something to do. We should know something with respect to the corporation that is set up to handle war assets. We should know what we have as assets in that corporation. As I pointed out in my remarks on the address in reply to the speech from the throne, there is a great need for a judicial inquiry with respect to the whole matter of the War Assets Corporation. Before the assets are distributed, before the credit facilities under this act are set up, I think we as a nation should know what we have in the way of assets, because they do not belong to the government, they belong to the people as a whole. The people have put up their money and they have a right to know what they have.

Therefore I say to the government again, as has been said by hon. members on this side of the whole plan of our transition period in the post-war period is one which is overdue and embarrasses us in dealing with the matter of the industrial development bank.

Taxation, of course, has siphoned off a great deal of the resources which companies and others would require in the post-war period. We cannot at any time find fault with taxes when a war has to be won, and I have no desire to do so to-night; but I wish to say that because of the taxation there is the necessity of pumping more credit, the giving of more credit facilities to those who have to carry through in the reconstruction period. This bank, or something that will arise out of the skeleton which this bill actually proposes, is essential at this time if we are to go forward as a nation in the peace-time period. I am hopeful that the bank will go much farther than is envisaged at the present time. We talk about the little man and the little enterprises. In the reconstruction period the little man must again be brought into his own. I am not going to find any special fault with the government or with the boards, although I could do so if I desired, with regard to the concentrating into a few hands in war time of much of the business that was previously in many hands. In many quarters it may be argued that that was inevitable because of the war in which we are engaged; but if it were inevitable in a war-time period then we must see to it, whether by this method of legislation, the setting up of this bank, or in some other way, that decentralization must take place in the future, that the little man who gave up his rights in business and industry in time of war must have an opportunity after the war is over to come back and not be penalized because of the sacrifices he made for a more vigorous national effort during the war.

It has been pointed out that $100,000,000 is a very small amount. A few major loans would, of course, use up the whole amount, and I am hopeful that the minister will give the little man the first chance. After all, the big man may be able to champion himself, but it is our job in parliament specially to champion the little fellow, and unless we are prepared to do that we shall not be living up to the duties and obligations that rest upon public men at this time.

Therefore, in closing, in order that the debate may be concluded this evening, I wish to emphasize what was said earlier by the hon. member for Vancouver South (Mr. Green). That is, I believe the government is making one serious mistake with regard to this measure. If we really mean what we say about bringing labour into full partnership with management in this country, surely labour should have a voice in regard to credit facilities, which perhaps mean more to labour than to any other branch of our national economy. Agriculture will be dealt with in the bill which the parliamentary assistant has mentioned, so that I need not touch upon that at this time. As far as labour is concerned, however, too often this government and this house have simply brushed aside the rights of labour, with the idea that it is some sort of commodity and must be treated as such. In the days that lie ahead labour is going to come into its own, as it deserves, but that cannot be done without proper labour representation. Labour has done a great job in the war effort, but the whole direction of the great empire of the munitions and supply department has been carried on with scarcely a whisper of representation from labour. Let us not start out in the peace-time period as we did in the war, leaving labour to one side. Let this bank have on its board of directors some labour representation, and not a token representation either. That will not be good enough for labour. If we expect labour to be a partner in our national enterprise in peace, as it has been in war, let us not be niggardly in dealing with that great section of our people who will be so essential to the national development in the days that lie ahead.

I should like to have had an opportunity to develop some of the other points I have in mind in connection with this bank. As a party we are supporting the principle of this measure in order that it may go to the banking and commerce committee, but we hope—and we trust that our hope may not be unfounded—that when it emerges from that committee it will be a stronger and more beneficial instrument by which we may attain the objectives of full employment, expanding production and a high level of national income in the days that lie ahead.

Mr. KNOWLES: I believe there are one or two others who would like to speak, and I understand the parliamentary assistant to the Minister of Finance wishes an opportunity to close the debate. Therefore I move the adjournment of the debate.

Motion agreed to and debate adjourned.

On motion of Mr. Mackenzie (Vancouver Centre) the house adjourned at 10.55 p.m.

Monday, March 13, 1944

The house met at three o'clock.

PRIVILEGE—MR. LEADER

REFERENCE TO ARTICLE IN WINNIPEG "FREE PRESS" OF MARCH 10, 1944

Mr. HARRY LEADER (Portage la Prairie): Mr. Speaker, I rise to a question of privilege. A speech which I made in the house a few weeks ago was discussed in the Manitoba legislature and a report was published in the Winnipeg *Free Press* in its Friday's issue, which casts reflections on myself. I should like to read the paragraph in question:

"The record should be kept straight in fairness to all members of the medical profession," Mr. McLenaghen declared, after reading some correspondence on the matter.

The Hon. J. O. McLenaghen, Attorney General of the province of Manitoba, was making the statement as Minister of Health. The report goes on:

"When a layman—

Meaning myself.

—presumes to make statements concerning a matter of scientific research, of which he has no knowledge, he is assuming a great onus," Mr. McLenaghen told the house.

"A great onus rests on a public man, who makes statements and blazons them to the world. Irreparable harm can be done unless all the facts are known. Such statements could be damaging unless based on facts, creating in the minds of cancer sufferers falsehoods based on scientific experiments which have not stood the test of time," declared Mr. McLenaghen.

I just wish to say, Mr. Speaker, that the remarks which I made in the house on February 7 last were based on facts substantiated by medical authority, and the reflection which I made upon medical gentlemen in Winnipeg was based on facts I had from men who should know. I had no other object in view as a cancer patient but to give something to the world that might help others as Doctor Davidson has helped me.

LABOUR CONDITIONS

WARTIME WAGES CONTROL—AMENDMENTS TO ORDER IN COUNCIL P.C. 9384

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I wish to make a statement to the house with respect to amendments to the wartime wages control order, P.C. 9384, of December 9, 1943.

[Mr. Knowles.]

On February 10, I informed hon. members that it was the intention of the government, after receiving representations from the leading labour organizations, and considering all other representations, to make amendments to the wartime wages control order, (P.C. 9384 of December 9, 1943). I now table a copy of order in council P.C. 1727 which embodies the amendments. It was enacted today.

The amendments seek to meet the criticisms of the original order, as far as is consistent with the maintenance of the government's policy of preventing inflation.

Under the order as amended, the provision for enlarging the national war labour board has been removed and provision is once more made for a three-man board, with one member representative of the point of view of labour and one of the point of view of employers.

The national war labour board will retain the right to review and revise decisions of the nine regional war labour boards in order to secure uniformity and consistent administration across Canada. However, the national board shall not vary decisions of a regional board without giving notice to interested parties who, before changes are made, will have the right to make representations to the board.

An amendment revokes the provision placing the onus of proof of compliance with the regulations, upon the employer or employee charged with an offence under the order.

The national and regional war labour boards retain authority to authorize wage increases in cases where special circumstances exist. The limitation in the original order, which permitted wage increases only within the ability of the employer to pay without price increases, has been modified. Under the amended order, a greater latitude will be permitted for adjustment of certain wage rates.

I would not be frank with hon. members or with labour if I did not say that in making these amendments to the order, the government recognizes the risks involved in relation to the whole stabilization policy.

No part of the community has more to gain from continuing success in the battle against inflation than labour, or more to lose by failure to prevent inflation. The government realizes that the fight against inflation can be won only if all groups in the community are prepared to give their active support and cooperation to the price ceiling policy.

If the government's policy of price stabilization is to be effectively maintained, it is clear that employers and labour organizations must

cooperate in supporting this policy by limiting applications for wage increases to what should be a relatively small number of cases where special circumstances apply.

The government is not prepared to adopt a policy of paying subsidies to employers to meet the higher costs resulting from increased wage rates. An attempt to follow this course would soon break down because of the administrative difficulties involved. Similarly, the granting of price increases to offset increased wage rates, if the cases involved were to reach any considerable number, would confront the wartime prices and trade board with an impossible task, and would destroy the price ceiling.

In December last, when I announced the principles underlying the wartime wages control order, I said:

> The policy of the government is that all practical measures will be taken to keep the cost of living at present levels.

I went on to say:

> If the cost of living rises more than three per cent and remains at that level for two consecutive months, the government will review the whole programme of price control and wage control and take appropriate action.

The government will endeavour to keep the cost of living from rising more than the three per cent mentioned. We shall stand by the pledge that if the cost of living exceeds the level of October, 1943, by more than three per cent and remains at such higher figure for two consecutive months, the government will review the whole programme. I must emphasize, however, that if, under the amended order, the cases of wage adjustments which result in increases in the cost of goods and services should prove to be too numerous, the margin of three per cent would soon be exhausted. The government would then be faced with the unfortunate task of having to review, and to consider the practicability of continuing, the whole stabilization policy.

Let me repeat: the government is determined to do all it can to hold down the cost of living, and to safeguard the public against an inflationary rise in prices. In this it cannot, however, succeed without the support of every group in the community.

[*Later*]:

On the orders of the day:

Mr. A. W. NEILL (Comox-Alberni): Mr. Speaker, I should like to ask a question of the Prime Minister in connection with the orders in council he has tabled, either substituting for or amending the wage control orders. I would ask that they be printed and made available to members in quantity. I have over three thousand letters concerning the matter, and while I do not propose to answer them all, they are entitled to some consideration. I suggest further that it would help if he would have his remarks to-day on the subject of these orders in council printed separately, because that would explain the situation fully.

Mr. MACKENZIE KING: I imagine the Minister of Labour has already anticipated my hon. friend's request, and is having copies of the order in council printed. He will be prepared to supply hon. members with such copies as they may wish to have.

Mr. NEILL: And the Prime Minister's remarks?

Mr. MACKENZIE KING: Perhaps the minister would do me the honour of including my remarks too.

Mr. NEILL: Your remarks too?

Mr. MACKENZIE KING: I have just asked if he would include the statement I have made, and I understand he will.

WARTIME LABOUR REGULATION, P.C. 1003

On the orders of the day:

Mr. J. G. DIEFENBAKER (Lake Centre): I should like to ask a question of the Minister of Labour in regard to war-time labour regulation P.C. 1003. Does this proposal apply to professional engineers, mining engineers, architects or professional chemists? If it does, I would ask if it is the intention of the government to withdraw them from its application.

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, while I should not like to anticipate the functions of the wartime labour relations board, set up under the authority of the order in council, and while I should not like to interpret those functions, I would say to my hon. friend that this is still a free country—

Mr. HANSON (York-Sunbury): Quite so.

Mr. MITCHELL: And if hon. members of this House of Commons—

Mr. HOMUTH: Don't be too sure of that, now.

Mr. MITCHELL: If hon. members in their judgment wish to form a trade union, I guess they could apply to the wartime labour relations board, as a trade union, to settle their differences.

Mr. DIEFENBAKER: Is that the best answer I can get?

ALCOHOLIC BEVERAGES

REMOVAL OF FEDERAL RESTRICTION ON SUPPLIES OF BEER TO PROVINCES

Right Hon. W. L. MACKENZIE KING (Prime Minister): I have another statement, Mr. Speaker, which I should like to make to the house. It has to do with restrictions upon the sale of beer.

On December 16, 1942, the government, by an order in council known as the wartime alcoholic beverages order, limited the quantity of spirits, wine and beer to be released for sale in the period from November 1, 1942, to October 31, 1943, to 70, 80 and 90 per cent respectively of the quantity released in the previous twelve months. The period of this limitation was subsequently extended for the duration of the war.

The restrictions upon the quantity of alcoholic beverages to be released for sale, were in accordance with the government's policy, to effect, if possible, a total war effort. They were in response to an informed public opinion, and to a widespread public demand for some measure of restriction. It had become evident throughout 1942, and even earlier, that increased production and excessive consumption of alcoholic beverages at a time of war could not but impair the effectiveness of the country's war effort.

In the first three years of war, the consumption of alcoholic beverages had increased enormously. Over the same period, restrictions had been increasingly imposed upon the use of many commodities, including not a few of the necessities of life. Restrictions had also been placed upon the use of gasoline and upon travel abroad as well as at home. Moreover, the country, by the close of 1942, had reached practically the peak of shortages both of man-power and materials. The government was making every effort to divert men and resources from non-essential activities of all kinds. This policy had already affected the production of alcoholic beverages. The entire distilling capacity of the country had been converted to the manufacture of industrial alcohol for war purposes. The production of wine had been limited by the rationing of sugar. The production of beer had been restricted by a limitation in the supply of malt.

The wartime alcoholic beverages order did not, therefore, actually greatly increase the restrictions on the supply of alcoholic beverages. The basic limitation was, in fact, the result of war-time demands for man-power and materials for essential war needs. The restrictions did provide for an orderly and equitable distribution of the available supplies among the several provinces in exact proportion to the quantities released for sale in each province in the preceding year.

I wish to emphasize the fact that, with respect to alcoholic beverages, the federal limitations apply only to the quantities released for sale to each of the provinces. The retail sale and distribution of alcoholic beverages is left entirely to the provincial authorities.

It was clear from the outset that the war-time alcoholic beverages order, like other war-time restrictions would be effective only if the necessary cooperation and support was forthcoming on the part of the several provinces of the dominion. It was for this reason that at the time the order was enacted, I took care to explain in a public address the relations of the dominion and provincial governments with respect to the production and sale of alcoholic beverages, and to make a special appeal to the provinces to lend their cooperation. This I did in the following words:

> The federal government has to do with their (i.e. alcoholic beverages) production and importation; the provincial governments with their sale and distribution. In other words, while the dominion government is in a position to control the quantities of spirits, wine and beer to be released for consumption, the regulation of the retail sales of alcoholic beverages is a matter which is determined by each province according to its judgment. . . .
>
> An examination of existing war-time needs now makes it necessary for the federal government, in addition to the measures I have announced, to appeal to the provinces for their cooperation in further restricting the sale of alcoholic beverages.

In the case of most of the provinces there has been a gratifying effort to cooperate. There has been notwithstanding, much misrepresentation throughout the dominion of the government's purpose, and, as time has gone on less and less has been said about the reasons for and the limited scope of the restrictions themselves.

Within the past few days a situation has arisen in relation to two of the provinces which is so far removed from cooperation on the part of their governments that it is certain to give rise to an issue between the federal and provincial authorities. If not promptly prevented, any such issue cannot fail to create continuous friction between some of the provincial governments and the federal government, and antagonisms between one section of the country and another.

In Ontario, on the authority of the liquor control board, notices have been posted in establishments where alcoholic beverages are sold, which read as follows:

Notice: The quantity of alcoholic beverages saleable at this sales outlet is restricted by reason of order in council No. 11374 passed by the federal government Dec. 16, 1942.—This notice is posted on authority of the Liquor Control Board of Ontario.

There is no indication in these notices that the action of the federal government was a war measure, enacted to increase the country's total war effort. No account is taken or mention made of the fact that the production and consumption of alcoholic beverages in 1942 had reached the highest level in Canada's history. Instead, the poster is designed to have it appear that, in the opinion of the government of Ontario, the action of the federal government is arbitrary, unfair and unnecessary.

Since the enactment of the dominion war-time alcoholic beverages order, there has during the year been released for sale in each province of Canada, ninety per cent of the beer which was released for sale in the twelve months ended October 31, 1942. Over the whole country, this amount was some sixty per cent in excess of that which had been released for sale in the year prior to the outbreak of war. To-day the beverage rooms of Ontario, where the notices of the Ontario Liquor Control Board are posted, are not being allocated 90 per cent by the board. Instead, they are being allotted only 75 per cent. It is true that the quantity saleable in the province has been restricted by the dominion order in council, but it was not restricted by 25 per cent. That restriction on the beverage rooms was imposed by the liquor control board of Ontario.

The board's action has the approval of the government of Ontario. It was defended by the Attorney General of Ontario in the Ontario legislature on the 8th of this month. The posting of the notices certainly misrepresents the action of the federal government. It is clearly an attempt to have the federal government held responsible for the whole twenty-five per cent reduction.

On the day before (March 7), in the Alberta legislature, the provincial treasurer is reported to have stated that "some of the eastern provinces were tipped off" to the wartime alcoholic beverages order of 1942, and that the dominion government "fixed the base year to give the greatest advantage to Quebec".

The Minister of National Revenue has completely denied this statement in the following words:

> Such a statement is entirely without foundation and untrue and not one that would normally be expected to be made by a responsible minister of the crown.

While Mr. Low complains of the quota allowed to his province, it might be pointed out that in the year ending October 31, 1943, the province of Alberta failed to take up its full allotment, and was short 9,945·6 proof gallons of spirits to which the province was entitled.

If effect is to be given its war-time policies, the federal government must necessarily rely upon the cooperation of the provincial governments. This, as I have pointed out, is particularly true of war-time restrictions upon the supply of alcoholic beverages. Despite the fact that the supply is affected by shortages of essential materials and man-power, and the further fact that the federal restriction is merely a restriction upon the quantities released to each province, the public has been increasingly led to believe that the supply available for consumption, and any difficulties of distribution, are due solely to action on the part of the federal government.

In the case of spirits and wine, the reasons for the limitation of supplies are, I believe, generally understood and generally accepted. The misrepresentations and the controversies which have arisen have to do largely with the restriction upon the supply of beer.

In the case of beer, the supply is limited by shortages of malt, of bottles, of cartons and of man-power, which are likely to continue as long as the war lasts. Apart altogether from the 10 per cent reduction imposed by the war-time alcoholic beverages order, the shortages of themselves would prevent any very considerable increase in supply. No right thinking person would advocate the diversion of scarce materials or man-power from any essential war-time or civilian activity to the production of beer.

At this time of war, it is especially true that a first duty of the federal government is to see that no differences which can be prevented are allowed to interfere with the cooperation and understanding so necessary between the federal and provincial governments. In the interests of the war effort, sources of public misunderstanding and friction, where they exist, should be removed in so far as that may be possible.

The provinces, under their power to regulate the distribution and sale of beer can effectively limit the amount to be distributed and sold, and this quite apart from any federal restriction as to the amount to be released for sale. Where it is clear that causes other than federal action are restricting the supply of beer, maintenance by the federal authorities, of the 10 per cent reduction upon the 1942 output of this single commodity is not sufficiently important to the war effort to justify the risk of continuous misunderstanding and friction between the fed-

eral and provincial governments and of antagonisms between provinces. In these circumstances, it is obviously preferable that the distribution and sale of such supply of beer as there may be, should be left to the exclusive control of the provinces themselves.

The government has therefore decided to remove the restriction of ten per cent upon the supply of beer which may be released for sale to the provinces, and the wartime alcoholic beverages order has to-day, been amended accordingly.

In leaving to the provinces the exclusive responsibility for the amount of beer to be distributed and sold, the federal government is not departing from its view that a restriction of the production and consumption of alcoholic beverages is necessary to a total war effort. In all particulars, except the one mentioned, the wartime alcoholic beverages order will remain as it is.

As respects the retail distribution and sale of beer, each province is now freed from any federal restriction as to quantity of beer to be released for sale within its borders. The provinces will have the sole responsibility to make whatever arrangements each considers necessary and desirable to ensure an equitable distribution and to prevent any excesses.

Mr. Speaker, I now table copies of the order in council which was passed to-day.

Mr. HOMUTH: I rise to a point of order, Mr. Speaker, and also to ask you a question for information. Is the statement just made by the Prime Minister debatable at this time?

Mr. SPEAKER: No.

Mr. HOMUTH: Then I want to register my regret at the fact that the Prime Minister has made a right-about-face on a matter that is of concern to the whole Dominion of Canada without giving us an opportunity to debate it.

Mr. BLACKMORE: Mr. Speaker, in justice to the province of Alberta—

Some hon. MEMBERS: Order.

Mr. BLACKMORE: May I be allowed to say, Mr. Speaker, that the Prime Minister's remarks do not represent the whole of the truth.

NATIONAL HEALTH

REPORT ON SURVEY MADE BY MEDICAL PROCUREMENT AND ASSIGNMENT BOARD

Hon. J. L. RALSTON (Minister of National Defence): I desire to lay on the table the report on the national health survey conducted by the Canadian Medical Procurement and Assignment Board. Since the report is, I think, of special importance and is very voluminous, I wish to make a comment or two upon it.

The board was established on the 20th July, 1942, by P.C. 6185, and later its activities were extended to the dental and nursing services by P.C. 10360 of 17th November, 1942, and P.C. 10394 of 1st December, 1942. The board consisted of five members of the Canadian Medical Advisory Committee (appointed by the Canadian Medical Association), the Director of Medical Services of the Department of Pensions and National Health, the Medical Director of National War Services, a representative of the Director of National Selective Service and the heads of the three medical services of navy, army and air and the directors of dental services. Among the functions of the board were:

(a) to make a survey and allocate as a result of information obtained medical officers in the proper proportions for appointment to the three branches of the armed forces of Canada;

(b) to consider carefully in relation to the available supply of physicians for appointment to the armed forces, the requirements of civilian institutions, public health departments, medical schools, war industries and communities in order that there shall be no impairment of essential public health services;

(c) to undertake the responsibility for investigating conditions at first hand regarding civilian needs and the possibility of making such arrangements as are possible and expedient where there is an apparent conflict between military and civilian needs.

The board has been functioning for considerably over a year and a half. Under its auspices a complete study of the entire health services of Canada has been made, involving physicians, dentists, nurses, public health, medical research and industry. Every community in Canada has been investigated. To do this work, voluntary assistance was procured from all the provincial medical societies, the Canadian Dental Association, the Canadian Nurses Association, the Canadian Hospital Council, the deans of the nine medical schools, the Dominion Council of Health and the divisional advisory committees of the Canadian medical procurement and assignment board.

Each individual group carried out a survey of its special field. Twelve medical officers were loaned from the three armed services to act as field secretaries to these groups. In addition, the board had the active cooperation of the provincial departments of public health, the Department of Pensions and National

Health, the Department of Labour, the Department of National War Services and the three branches of the armed services.

These groups have been equally industrious in studying the needs of civilians as well as of the armed forces for medical man-power and woman-power. As a result of this study they have put into practical form a series of reports which give in detail a picture of the situation in Canada from the Atlantic to the Pacific. And at the same time they have made that survey constructive in a series of practical recommendations respecting every feature of their work.

The reports consist of nine parts, each in a different volume and on a different subject. The tenth volume is a resume of recommendations. Each of the nine subjects was dealt with by a separate group and these reports were put together by the board at Ottawa.

Part 1—Introduction.
Part 2—Civilian Medical Man-power—Medical Advisory Committees.
Part 3—Medical Schools—Association of Medical Colleges of Canada.
Part 4—Public Health—Dr. J. J. Heagerty.
Part 5—Hospital Personnel and Facilities—Dr. Harvey Agnew.
Part 6—Industrial Medicine—Dr. J. G. Cunningham.
Part 7—War Medical Man-power—Dr. A. E. Archer.
Part 8—Nurses—Miss K. W. Ellis.
Part 9—Dental Services—Dr. D. W. Gullett.
Part 10—Recommendations.

These ten volumes which I am tabling are necessarily voluminous. They contain about 350,000 words in all. Along with these reports I am tabling a summary prepared by the general secretary which I hope may be of assistance to the members of the house, the press, and the public. As the secretary indicates, the report is so detailed in its factual findings that really to summarize it would be an almost impossible task. And the summary therefore does not purport to be exhaustive; it simply brings attention to some of the salient points in the actual report.

Let me say that the report is not by any means in all respects complimentary. And I would ask that members take the trouble and time if they can possibly do so to read the report itself and not limit themselves to the summary alone.

One result of this really monumental effort was that every community, rural and urban, was surveyed in order to determine the present degree of medical care existing there. This revealed among other things details regarding the physicians, including numbers, location, nature of their work, population they are serving, availability for both civilian and military service, and existing surpluses and deficiencies.

Records have been established and a card index system set up making available for permanent use detailed information of Canada's civilian medical man-power such as has never been assembled before. These records are being kept up to date by the board.

For example, they show that in March, 1943, Canada's medical population totalled 12,235. Of this number 3,006 or about one-quarter, were in the armed forces. Of the remaining 9,229 physicians, 8,614 were practising, while 615 were retired. (As of March 1, 1944, there were 3,589 doctors in military service.)

With reference to medical schools: The report reveals that although the staffs of full time instructors at such schools have declined by 18·5 per cent since 1939; nevertheless, an accelerated curriculum which has practically abolished holidays, has resulted in a great increase in the number of graduates.

In pre-war years these schools graduated an average of 491 students annually. From 1940 to 1944, this average has been stepped up to 630, an increase of nearly 30 per cent.

The report also shows the distribution of hospitals and devotes considerable attention to the post-war hospitalization needs of Canada.

This section of the report has particular reference to the matter of how any proposed health insurance plan might affect the hospital problem.

An examination of the report further discloses the type of health supervision which is being provided in industries and the need for an extension of such health facilities.

An interesting fact revealed by the report is that Canada has 52,483 registered nurses. Of these, more than half are not engaged in nursing, nearly all of them being housewives. Of the balance of 27,574, 8,306 have expressed a willingness to enlist, but there is a waiting list of 3,741 nurses who are not at present needed by the armed services.

I think it can be confidently said that no other country in the world has had the benefit of a more complete or exhaustive study of its national health situation. It is of inestimable value not only now but for the future. Canada is greatly indebted to all the organizations and individuals I have mentioned, who have voluntarily given of their time and energy to carry out this most important undertaking.

And to all those who have participated in this major piece of useful national service, I wish to express sincere appreciation. The wealth of assistance has been contributed by hundreds, and probably thousands, of persons in the production of these reports. Rather than try to enumerate them in any number, I shall mention only one man, and his work can be said to be representative of the conscientious industry, the ample capacity, and the high devotion which has characterized the labour of all who have taken part. I refer to Doctor T. C. Routley, who has borne with outstanding ability the double load of secretary of the Canadian Medical association and general secretary of the Canadian medical procurement and assignment board.

The benefit of the effort of all these men and women will reach far beyond the realm of the armed forces to the wider field of maintaining and improving the health of citizens throughout this Dominion. It goes without saying that health is fundamental and indeed indispensable to our prosperity as individuals and to our progress as a nation. I have made arrangements to have the report and the summary printed so that copies may be available to members of the house.

Mr. ADAMSON: May I ask the minister a question? Does the report cover mental hygiene as well?

Mr. RALSTON: I cannot tell my hon. friend what part of the report covers that subject, but it is covered.

[*Later.*]

Mr. RALSTON: Mr. Speaker, with unanimous consent of the house I would ask that we revert to the orders of the day, so that I may place on *Hansard* an answer to a question asked by the hon. member for Parkdale on Thursday, March 9. This question has to do with the Canadian medical procurement and assignment board, to which I referred this afternoon.

Mr. SPEAKER: By unanimous consent we revert to orders of the day.

Mr. RALSTON: The question asked by the hon. member was with respect to the supplying of physicians from the armed forces to communities in certain special cases. I wish to say that the matter has been under intensive consideration by the Canadian medical procurement and assignment board and by the three services, the Department of Pensions and National Health and the national selective service branch of the Department of Labour.

As a result of this examination, on March 2 the Canadian medical procurement and assignment board wrote to the premier of each province, with certain suggestions for a plan to help meet civilian requirements for medical personnel in communities where requirements were specially urgent. For the reason that the matter was one which involved consultation and agreement with the provinces, it was not intended that any public announcement should be made until the provinces had had an opportunity to examine the plan.

However, some publicity has already been given and, because of this and to prevent misconceptions regarding what is being worked out, I consider it necessary to make a brief statement now:

On account of the requirements for medical personnel in connection with war activities, there was need for study of the requirements, both of the armed services and of communities, in order to endeavour to make the most of the available medical personnel. This study has been made by the Canadian medical procurement and assignment board.

The board, as I said this afternoon, was established on the 20th July, 1942, by P.C. 6185, and later its activities were extended to the dental and nursing services by P.C. 10360 of 17th November, 1942, and P.C. 10934 of 1st December, 1942. The board consisted of five members of the Canadian medical advisory committee (appointed by the Canadian Medical Association), the director of medical services of the Department of Pensions and National Health, the medical director of the Department of National War Services, a representative of the director of national selective service and the heads of the three medical services of navy, army and air, and the directors of dental service.

Among the functions of the board were:

(a) to make a survey and allocate as a result of information obtained medical officers in the proper proportions for appointment to the three branches of the armed forces of Canada;

(b) to consider carefully in relation to the available supply of physicians for appointment to the armed forces the requirements of civilian institutions, public health departments, medical schools, war industries and communities in order that there shall be no impairment of essential public health services;

(c) to undertake the responsibility for investigating conditions at first hand regarding

civilian needs and the possibility of making such arrangements as are possible and expedient where there is an apparent conflict between military and civilian needs.

In certain cases the needs of communities have become extremely urgent and some method was sought whereby consideration could be given to these exceptional cases. A plan has been evolved, with the objective of making available, on terms to be arranged with the provinces, a limited number of medical personnel to civilian communities, whose needs for medical services may be very exceptional and urgent.

The basis of the plan is:—

(a) That the provinces request the furnishing of medical personnel in particular communities where it is alleged that there is urgent need;

(b) That the need is established through the advice of the Canadian medical procurement and assignment board—this board being advised by its local advisory committee in the province;

(c) That the province, by arrangement with the municipality or otherwise, will reimburse the receiver general on the basis of pay and allowances actually paid to the medical officer and with provision for any other expenses which may be specified;

(d) That medical personnel be allotted from one of the armed services for the purpose of supplying, under the arrangement indicated, the medical personnel, the need for whom has been so established;

(e) The armed services plan to replace the medical personnel so provided to civilian communities by admitting into the armed services younger qualified doctors who have previously been rejected because they were in some of the lower medical categories. It is proposed also to use in the armed services in Canada a larger number of doctors within the call-up age group who have previously been deferred or rejected. An endeavour will be made to obtain these medical men in communities from which they can be spared, as advised by the Canadian medical procurement and assignment board.

I should make it perfectly clear that this does not mean that there is any surplus of medical officers in the armed services. I need not say that, if there is any surplus, it will be utilized for the purposes indicated. But at the present, and with the prospective requirements of this year, it cannot be hoped that the armed forces can supply these medical personnel without having them replaced. However, with the doctors who are coming into the services as they graduate, together with the calling up of others who have previously been deferred or rejected, it would appear as if it would be practicable to make a limited number of the older and more experienced officers in the services available to help to supply urgent civilian needs.

I want to emphasize also that this number will be limited and it will certainly only be possible to supply men where the need is established as really urgent. The services will not be able to supply men for all communities where a doctor might be wanted to keep up the number who would be normally practising there under peace-time conditions. I should think it likely that it would only be possible to give consideration to those communities who have recently lost a doctor from one cause or another, and only in those places where the need is very apparent after taking account of what physicians may be available at nearby points.

Two advantages will be gained by retaining in uniform the doctors who are thus made available. First, they can be directed to communities where they are most urgently needed while being assured of reasonable economic security. Second, they will remain subject to service in the armed forces if at any time the need for them should become more urgent.

As I have indicated at the beginning, this plan cannot be made final until arrangements are concluded with the provinces. I shall give the house additional information when the matter is sufficiently developed to warrant a further statement.

Mr. F. D. SHAW (Red Deer): May I ask the Minister of National Defence a question? Was any consideration given to the granting of permission to alien doctors to practise? I understand this has been done in the United States and in Great Britain, but that they have been refused permission here. I refer to men who have come to Canada, fully qualified, since the outbreak of the war. I understand there are some who are doing clerical work.

Mr. RALSTON: I cannot say to my hon. friend that consideration has been given to them.

Mr. G. J. TUSTIN (Prince Edward-Lennox): I was glad to hear the statement by the minister. Has any consideration been given to dentists? In some sections there is a great shortage of dentists.

Mr. RALSTON: No, I do not think in connection with this plan any consideration has been given to dentists. I will take the matter up, to see if it is possible to make some similar arrangement.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

WHEAT BOARD—BROKERAGE AND OTHER FEES

Mr. PERLEY:

How much in brokerage fees, commission or any other fees was paid by the Canadian wheat board to the following export firms since August 1, 1943: Alberta Pacific Grain Company Limited, Bunge North American Grain Corporation (Canadian Agency Limited), Cargill Grain Company Limited, Continental Grain Company Limited, Laval and Company Incorporated, McCabe Brothers Grain Company Limited, Searle Grain Company Limited, K. B. Stoddart & Company Limited?

Mr. MacKINNON (Edmonton West): Mr. Speaker, I have had a word with the hon. member for Qu'Appelle regarding this question. The same type of question was before the standing committee on agriculture and colonization during the 1942 session. The committee had before it a motion by the hon. member for Lake Centre, I believe, as follows:

That the board do produce to this committee a complete record of all brokerage fees of all kinds, and commissions paid since the outbreak of war, the persons or corporations to whom such payments were made; the amounts paid to each, and the particulars of service rendered therefore respectively by each of the said persons or corporations.

This motion called for all brokerage and all commissions and fees paid by the board to individual companies or persons; and the question the member for Qu'Appelle is now asking calls for the same information for a selected list of companies. When the motion to which I have just referred was before the committee on agriculture and colonization, the chief commissioner of the Canadian wheat board stated that the disclosure of such information by individual companies would be capable of misinterpretation, and in any event would be inimical to the board's future operations. The committee therefore decided that it would not accept responsibility for the disclosure of this detailed information. I might add that the Canadian wheat board properly discloses in its annual reports the total amounts of brokerage and carrying charges paid. It is the detailed disclosure by individual companies which would be inimical to the board's operations with these companies, and to which exception is being taken. I am now advised that the annual report of the Canadian wheat board for the 1942-43 crop year is expected to be ready by about the end of this month.

I would suggest that the question be dropped.

[Mr. Ralston.]

Mr. SPEAKER: Answered.

Mr. PERLEY: I cannot agree to drop the question. The minister gives as a reason that last year a question in reference to brokerage was turned down by the agriculture committee, but that does not apply to a question which is asked in this house. Surely the house has more power than the committee had. I do not see that such information could be misinterpreted or that it would do anyone any harm. On February 9 I asked the minister a question in regard to the sale of grain, and at that time he said that at a very early day he hoped to be able to give the house a statement. He made that statement on February 14, and in it he gave a list of fifteen firms who were doing this export business. Following that I asked for information in regard to some of these firms, and the minister replied—

Some hon. MEMBERS: Order.

Mr. PERLEY: I think I am quite in order in replying to the statement made by the minister. At the time in question he said it was not possible to separate these amounts, which I said I did not think was a fair statement. Then I had a conference with the minister, during which he read from some notes he had received from the wheat board objecting to this information being given. I took exception to that stand, and said it was not right at all. There is nothing about this that could be misrepresented or wrongfully used in any way. The minister himself put on record the names of these export firms, and I am asking what fees they have been paid since August 1 of last year. I think this house is entitled to the information.

Mr. SPEAKER: I have stated that the minister has answered question No. 9 as it appears on the order paper. It will be considered as answered.

Mr. PERLEY: Then I will place it on the order paper again and ask for the information in regard to all the firms.

USE BY FARMERS OF TRUCKS FOR TRANSPORTATION

Mr. DIEFENBAKER:

1. How many prosecutions, by provinces, have taken place against farmers for the use of their trucks for personal transportation purposes?

2. What have been the maximum and minimum penalties imposed?

Mr. ABBOTT:

1. There have been no prosecutions of farmers for using their trucks "for personal transportation purposes"; but the following numbers of farmers were prosecuted for offences in-

volving the use of trucks for the purpose of transporting passengers and for other uses held by the courts to be wasteful or unnecessary: Nova Scotia 2, Ontario 1, Manitoba 1, Saskatchewan 31, Alberta 1.

2. Penalties imposed, maximum $25 and court costs, minimum $2 and court costs.

FLAX—1942 CROP

Mr. BURTON:

1. How many bushels of each grade of flax did the farmers market of the 1942 crop, and to what board or agency?
2. What was the price paid to the producer at Fort William or Port Arthur on each grade?
3. How many bushels of each grade of flax were sold to the Canadian crushers of the 1942 crop, and at what price?
4. How many bushels of each grade of Canadian flax of the 1942 crop were marketed in the United States, at what price, and was this f.o.b. Fort William and Port Arthur?

Mr. MacKINNON (Edmonton West):

1. All flax of the 1942 crop was marketed through the Canadian Wheat Board. Deliveries by producers, by grades, were as follows:

4. Flax sold for export to the United States is confined to No. 1 C.W. Flax, of which 6,253,944·31 bushels were sold for export basis Fort William/Port Arthur in store values, at an average price of $2·591934 per bushel.

PRICE OF EXPORT WHEAT

Mr. PERLEY:

1. On what basis is the price of wheat sold to the United States arrived at?
2. On what basis is the price of wheat sold to the United Kingdom arrived at?
3. On what basis is the price of wheat sold to countries other than the United States or the United Kingdom arrived at?

Mr. MacKINNON (Edmonton West):

1. The basis is the differential between the values of wheat in Canada and the United States. The prices are issued daily to exporters and mills and are in force from 1:15 p.m. to 9:30 a.m. the following day, except on Saturdays when they are in force from 12:00 noon until 9:30 a.m. the following market day.

2. The wheat held by the Canadian wheat board for the account of his majesty under order in council P.C. 7942 of October 12, 1943 must be made available to fill domestic requirements and to provide wheat under the war appropriations (United Nations Mutual Aid) Act. The price at which this wheat is made available is fixed from time to time by the governor in council. See paragraph 7 of order in council P.C. 7942 of October 12, 1943. The price from September 28, 1943 to date has been $1.25 per bushel, basis No. 1 northern, Fort William/Port Arthur.

[Mr. J. A. MacKinnon.]

3. For countries included under the United Nations Mutual Aid Act, the basis is the same as for the United Kingdom (No. 2 above). For all other countries, the basis is the same as for the United States (No. 1 above).

EMPLOYMENT OF PRISONERS OF WAR

Mr. DIEFENBAKER:

1. How many prisoners of war are now employed, (a) on all projects; (b) in agriculture; (c) in pulpwood?
2. What are the numbers by nationality?

Mr. MARTIN:

1. (a) 4,117; (b) 142; (c) 3,056.
2. German, 4,044; Italian, 73.

WARTIME HOUSING LIMITED

Mr. NICHOLSON:

1. Who is the manager-director of Wartime Housing Limited?
2. What salary is he being paid?

Mr. MICHAUD:

1. There is at present no manager-director of Wartime Housing Limited. Until such time as an appointment is made, Mr. K. W. Bash is serving as acting general manager.

2. A salary of $12,000 per annum was paid to Mr. Victor Goggin, former managing director of Wartime Housing Limited.

R.C.A.F. RATES OF PAY

Mr. CRUICKSHANK:

1. What is the basic rate of pay of, (a) pilot officer; (b) sergeant, in each of the following aircrew categories: pilot, navigator, air bomber, wireless air gunner, air gunner?

2. What is the rate of flying pay per day, (a) in operations over Europe; (b) for non-flying officers riding as passengers on duty in service aircraft in Canada?

Mr. POWER:

1. (a) Pilot Officer: $6.25 a day in all categories mentioned. (b) Sergeant: Pilot, navigator, air bomber, $3.70 a day; wireless air gunner, $3.45 a day; air gunner, $2.95 a day.

2. (a) Included in base pay shown above. (b) $2 for any day on which they fly on duty.

CONSCIENTIOUS OBJECTORS

Mr. DOUGLAS (Weyburn):

1. What are the names, home addresses and ages of all persons imprisoned or sent to alternative service camps from the beginning of the present war to January 31, 1944, for refusing to do military service on the grounds that they were conscientious objectors?

2. Where are each of these individuals located at the present time, and what length of prison terms are they serving?

3. Which of these individuals were granted status of conscientious objector, and which were refused?

Mr. DOUGLAS (Weyburn): The officials of the department concerned have asked that this question be rearranged. I am quite prepared to redraft the question, and I ask that it be dropped.

Question dropped.

CAPE BRETON ENLISTMENTS AND DEFERMENTS

Mr. GILLIS:

1. What is the total number of enlistments from the county of Cape Breton, Nova Scotia?

2. Of these, (a) what are the names of those rejected and the reason therefor; (b) by whom were they rejected?

3. What are the names of the personnel of the medical examining board for this district?

4. How many deferments were there in the military district of Cape Breton, Nova Scotia?

Mr. RALSTON: I do not think it is possible to give the information asked for in paragraphs 1 and 2, so far as the army is concerned. I will take up the matter with the hon. member, who is asking for information with regard to all three services. I think the question should be dropped, and we will give the hon. member such information as we have.

Question dropped.

R.C.A.F.—AIRCREW

Mr. TUCKER:

1. At whose request was the recent air conference between the Royal Canadian Air Force and the British air ministry held?

2. Will the production of aircrew be curtailed during the next year because of the closing of schools?

3. Will the production of trained aircrew be sufficient to meet, (a) any necessary expansion of the number of operational units and squadrons in the front line; (b) any wastage or replacements?

4. Has the Department of National Defence for Air made provision for the training of sufficient recruits to fill the quota of trainees required in accordance with the terms of the recent conference agreement?

5. What schools of the B.C.J.A.T.P. will be closed as a result of the joint decision of the United Kingdom and the Canadian government at the recent conference, and on what date will these schools be closed?

Mr. POWER:

NOTE: Information contained herein covers the period up to 31st December, 1944.

1. British Air Ministry.

2. No.

3. (a) Yes (b) Yes.

4. Yes.

5. No. 2 Aircrew Graduate training, School, Quebec, P.Q.—To be disbanded 15th March, 1944.

No. 39 S.F.T.S., Swift Current, Sask.—To be disbanded 24th March, 1944.

No. 34 O.T.U., Pennfield Ridge, N.B.—To be disbanded 19th May, 1944.

No. 8 S.F.T.S., Weyburn, Sask.—To be disbanded 30th June, 1944.

No. 5 I.T.S., Belleville, Ont.—To be disbanded July or August, 1944. (May be used for other R.C.A.F. purposes).

No. 6 I.T.S., Toronto, Ont.—To be disbanded July or August, 1944.

No. 7 I.T.S., Saskatoon, Sask.—To be disbanded July or August, 1944.

No. 12 E.F.T.S., Goderich, Ont.—To be disbanded 14th July, 1944.

No. 2 A.O.S., Edmonton, Alta.—To be disbanded 25th August, 1944.

No. 2 E.F.T.S., Fort William, Ont.—To be disbanded 25th August, 1944.

No. 4 E.F.T.S., Windsor Mills, P.Q.—To be disbanded 25th August, 1944.

No. 15 E.F.T.S., Regina, Sask.—To be disbanded 25th August, 1944.

No. 25 E.F.T.S., Assiniboia, Sask.—To be disbanded 25th August, 1944.

No. 26 E.F.T.S., Neepawa, Man.—To be disbanded 25th August, 1944.

No. 31 E.F.T.S., De Winton, Alta.—To be disbanded 25th August, 1944.

No. 32 E.F.T.S., Bowden, Alta.—To be disbanded 25th August, 1944.

No. 14 S.F.T.S. Aylmer, Ont.—To be disbanded 20th October, 1944.

No. 11 S.F.T.S., Yorkton, Sask.—To be disbanded 1st December, 1944.

No. 33 S.F.T.S., Carberry, Man.—To be disbanded 1st December, 1944.

No. 2 B.G.S., Mossbank, Sask.—To be disbanded 1st December 1944.

No. 8 B.G.S., Lethbridge, Alta.—To be disbanded 1st December 1944.

No. 31 B.G.S., Picton, Ont.—To be disbanded 1st December, 1944.

No. 5 S.F.T.S., Brantford, Ont—To be disbanded 15th December, 1944.

No. 6 S.F.T.S., Dunnville, Ont.—To be disbanded 15th December, 1944.

No. 7 S.F.T.S., MacLeod, Alta.—To be disbanded 15th December, 1944.

No. 32 S.F.T.S., Moose Jaw, Sask.—To be disbanded 15th December, 1944.

No. 34 S.F.T.S., Medicine Hat, Alta.—To be disbanded 15th December, 1944.

No. 36 S.F.T.S., Penhold, Alta.—To be disbanded 15th December, 1944.

No. 4 Wireless School, Guelph, Ont.—To be disbanded 29th December, 1944.

R.C.A.F.—WIRELESS MECHANICS

Mr. NOSEWORTHY:

Is the basic pay of wireless mechanics enlisted in the air force raised to $1.50 per day at the end of six months' training or only at the completion of their course?

Mr. POWER: Basic pay of wireless mechanics is not raised to $1.50 per day after six months, nor on completion of their course. Throughout their course, covering 18 weeks at a war emergency training programme school and 28 weeks at wireless school, wireless mechanics are classified as A.C. 2, and are paid $1.30 per day. On successful completion of the course, they automatically receive "C" grouping, for which they are paid an extra 25 cents per day "trades pay". On posting to their first unit after graduation, they are normally reclassified as A.C. 1, and receive an additional 10 cents per day basic pay, bringing basic pay to $1.40 per day and total pay to $1.65 per day.

SHIPMENTS OF ANTIMONY TO THE ARGENTINE

Mr. CASTLEDEN:

What permits were granted for the shipment of antimony from Canada to Argentine during each of the years 1939, 1940, 1941, 1942 and 1943?

Mr. MacKINNON (Edmonton West): No export permits were issued for the shipment of antimony to the Argentine for the years 1939 to 1943.

FUR SEAL AGREEMENT WITH THE UNITED STATES

Mr. FRASER (Peterborough West):

1. Under the provisions set forth in the exchange of notes (December 8-19, 1942) between Canada and the United States of America, recording an agreement for the preservation and protection of fur seals, and having particular reference to article IX thereof, has any legislation been passed by the parliament of Canada giving effect to the provisions of the said agreement and providing penalties for the violation thereof?

2. If so, in what year, and by what act of parliament?

Mr. MACKENZIE KING:

1. No.

2. Answered by No. 1.

PRICES—MILK

Mr. McNEVIN:

What was the price paid to farmers for, (a) butter fat, per pound; (b) milk for cheese manufacture, per hundredweight; (c) milk for powdering, per hundredweight, on June 15 and December 15 in the years 1929, 1933, 1943, bonuses to be included?

Mr. MacKINNON (Edmonton West): Average prices received by Ontario farmers; 1943 prices including bonus:

Butterfat
cents per lb.

	1929	1933	1943
June 15	39·8	20·0	42·9
December 15 ...	40·9	24·2	47·9

Milk for Cheese Manufacture
$ per cwt.

June 15	1·70	·72	1·65
December 15 ...	1·80	·78	2·00

Milk for Powdering
$ per cwt.

June 15	2·00	·85	1·82
December 15 ...	2·08	·90	2·13

CAIRO AND TEHERAN CONFERENCES

Mr. POULIOT:

1. Was Canada represented at the Cairo and Teheran conferences held last year?

2. If so, by whom?

3. If not, is Canada bound by the decisions taken at such conferences?

Mr. MACKENZIE KING:

1. No.

2. Answered by No. 1.

3. No, but obviously any conclusions relating to the conduct of the war reached by the representatives and heads of governments participating in these conferences will carry very great authority with all members of the united nations.

QUESTIONS PASSED AS ORDERS FOR RETURNS

ACCIDENTS IN CANADA AND WAR CASUALTIES

Mr. CHURCH:

1. How many fatal accidents have occurred in Canada each year since the beginning of the war to the end of 1943?

2. How many have been injured during the same period?

3. How many deaths and injuries occurred at level crossings for the same period?

4. How many have been killed and wounded in this war, and what have been the total war casualties during the above mentioned period?

PRICES STABILIZATION—VEGETABLES

Mr. CRUICKSHANK:

1. On how many tons of imported potatoes was a subsidy paid between December 1, 1941, and December 31, 1943, by the Commodity Prices Stabilization Corporation?

2. When will an announcement be made as to the 1944 subsidies on corn, beans and peas?

DOMINION COAL AND NOVA SCOTIA STEEL AND COAL COMPANY—SUBSIDIES

Mr. GILLIS:

How much was paid the Dominion Coal Company and the Nova Scotia Steel and Coal Company in the years 1937 and 1938 by way of subsidy, subvention or other assistance?

SELECTIVE SERVICE MOBILIZATION BOARDS—POSTPONEMENTS

Mr. CASTLEDEN:

1. What persons served on national selective service mobilization boards for Manitoba, Saskatchewan, Alberta and British Columbia during 1941, 1942 and 1943, and during what periods did each of such persons serve?

2. What persons served as military, agricultural, industrial or other representatives to each of these boards, and during what periods did all of these persons serve?

3. How many applications for postponement were received in each province during 1941 and 1942?

4. How many postponements were granted by each board during 1941 and 1942?

5. What military positions did each of the military representatives in each province hold while acting as military representative to or member of any mobilization board in Canada?

NAVAL SERVICE—SUBSISTANCE ALLOWANCE TO OTTAWA PERSONNEL

Mr. ROY:

1. Are members from the ranks in the R.C.N. stationed in Ottawa being granted $1.45 per day as subsistence allowance?

2. Are members of the other armed forces also stationed in Ottawa still granted only $1.25 per day as subsistence allowance?

3. If so, what is the reason why this allowance is not the same as for members of the R.C.N.?

ACADIA SUGAR REFINERY

Mr. ISNOR:

1. What steps if any are being taken to relieve the double transportation of raw sugar being hauled over the lines of the Canadian National Railways from the port of Halifax, Nova Scotia, to inland points to be refined?

2. Do the reasons given for the closing down of the Acadia Sugar Refinery at Woodside, Halifax county, N.S., still exist?

3. Do transportation difficulties now exist to such an extent as they did two years ago?

4. Does the scarcity of fuel oil, for operating purposes, exist to the same extent as it did when the plant was closed?

DOMINION-WIDE TEACHERS' CERTIFICATES

Mr. ISNOR:

1. Has any dominion conference been called within the past two years by any branch of the government inviting provincial educational authorities with a view of studying ways and means so as to validate teachers' certificates so that a teaching certificate secured in any province may be valid for use in any other province?

2. If such conference was held, on what date, where, what were the names of representatives of provinces attending; the subjects discussed and considered, and decisions reached?

3. Was the question of free-exchange of teachers between provinces considered? If so, with what results?

Mr. McLARTY: Return tabled.

SELECTIVE SERVICE—BOUCHARD PLANT, STE. THERESE, QUE.

Mr. RAYMOND:

1. How many employees, (a) male; (b) female, in the plant known as the Bouchard plant, at Sainte-Thérèse, Quebec, have been laid off within the last two months and how many have quit work voluntarily?

2. Were those who left work voluntarily, threatened with a salary reduction, directly or indirectly?

3. Within the last two months, how many persons formerly employed at the Nobel plant, Ontario, have been transferred to the Bouchard plant, at Saint-Thérèse, Quebec, by the selective service, and who paid their travelling expenses?

4. Within the past two months, how many persons employed in other plants of Ontario and other provinces have been transferred to the Bouchard plant, at Sainte-Thérèse, Quebec, by the selective service, and who paid their travelling expenses?

SELECTIVE SERVICE—BOUCHARD PLANT, STE. THERESE, QUE.

Mr. BERTRAND (Terrebonne):

1. How many employees of the Defence Industries Limited plant at Nobel have been transferred to Bouchard, since the 1st of November, 1943?

2. What are the names and addresses of employees so transferred?

3. What was the occupation, at Nobel, of each of the persons so transferred, and what was his salary?

4. What is the occupation, at Bouchard, of each of the persons so transferred, and what is his salary?

5. Have the persons so transferred taken positions already occupied? If so, what are the names and addresses of the persons who have been replaced?

SELECTIVE SERVICE—TRANSFERS TO NITRO PLANT NEAR VALLEYFIELD

Mr. RAYMOND:

1. Within the last six months how many employees working at the Nitro war plant, near Valleyfield, operated by Defence Industries Ltd., have been laid off?

2. Within the last six months, how many new employees have been hired in the service of the same company at the same place?

2. Within the last six months, how many persons formerly employed at the Nobel plant, Ontario, have been transferred to the Nitro plant, near Valleyfield, by selective service, and who paid their travelling expenses?

4. Within the last six months, how many persons employed in other plants in Ontario and other provinces have been transferred to the Nitro plant, near Valleyfield, by the selective service, and who paid their travelling expenses?

MOTIONS FOR PAPERS

SINKING OF "B.C. STAR"

Mr. McGEER:

For a copy of all letters, communications, reports or other documents pertaining to the

sinking of the boat *B.C. Star* off the coast of British Columbia while being operated in the service of the Department of National Defence for Air.

MOBILIZATION ACT—POSTPONEMENTS IN SASKATCHEWAN

Mr. COLDWELL:

For a copy of all correspondence, letters, telegrams, memoranda and other documents exchanged between members of the House of Commons or members of the Saskatchewan legislature and the minister responsible for the administration of the National Resources Mobilization Act, or, with the Saskatchewan national resources mobilization board, or any member thereof, relating to deferments, postponements or exemptions from military service, between the organization of the said board and December 31, 1943.

MOBILIZATION ACT—SASKATCHEWAN
ROBERT MAKAROFF

Mr. COLDWELL:

For a copy of all letters, telegrams, memoranda and other documents in possession of any department of government or minister relating to the case of Robert Makaroff, of Saskatoon, Saskatchewan, together with a copy of the judgment of the mobilization board of division "M" and dated at Regina, the 25th day of November, 1943.

AGRICULTURE—EXPENSE ACCOUNTS OF CERTAIN EMPLOYEES

Mr. DOUGLAS (Weyburn):

For a copy of all expense accounts, vouchers, receipts and forms A-101 submitted during the period from June 15 to August 15, 1943, by the following persons employed by the Department of Agriculture: J. Walton, E. B. Cressman, R. G. Hobbs, E. J. Flory, J. E. Bergey, P. J. Gormicau, P. M. Johnson, P. M. Buchinski, E. W. Hartle, H. Krienke, Henry Poss, H. Roth, G. W. Newell, Colbin Erickson, Henry Theissing, H. A. Boucher, R. F. McGregor.

NATIONAL DEFENCE—SHERBROOKE, N.S., PROPERTY

Mr. GILLIS:

For a copy of all letters, telegrams, communications, exchanged between the Department of National Defence and any person or persons, relating to the renting or leasing of property in Sherbrooke, Nova Scotia, for national defence purposes.

TUNNEL BETWEEN PRINCE EDWARD ISLAND AND THE MAINLAND

Mr. BLACK (Cumberland):

For a copy of all correspondence since the entrance of Prince Edward Island into confederation exchanged between the government of Prince Edward Island and the federal government, in connection with the proposed building of a tunnel or causeway from Cape Tormentine, New Brunswick, to Prince Edward Island.

Also for a copy of all plans, surveys and estimates of cost with dates of each survey and estimate and by whom made.

[Mr. McGeer.]

Mr. MACKENZIE KING: Could not my hon. friend indicate more precisely the documents he wishes to receive? This return, as will be seen by an examination of the motion, involves going through correspondence in departments at Ottawa back to the year 1873.

My hon. friend knows that almost every year there has been some one or more persons who have felt it their duty to urge the construction of this tunnel. What plans have been made or what estimates have been made I cannot say. But I am sure of this, that it would take a good part of a year to prepare the return in the form in which it is asked for, and the expense involved in preparing it would be very large—some one has just remarked it might equal the cost of the tunnel.

Mr. BLACK (Cumberland): I should like to comply with the wishes of the Prime Minister, but I would point out to him that this involves only the correspondence between the government of Prince Edward Island and the federal government. It deals with only one subject. True, it has been lengthy, but the people of Prince Edward Island have been waiting for the solution of this problem for a long time; it was one of the conditions of confederation. I believe there have not been very many surveys and plans, and the information could be readily gathered and submitted to the house.

I suggest that the motion be allowed to stand over, and if the ministers of the departments concerned consider that the correspondence and information is too voluminous, and is not of special interest at the present time, they might confer with me, and we would reduce the correspondence to the amount required. I must say, however, that a great many people are interested in this matter.

Motion stands.

WARTIME HOUSING—RESIGNATION OF VICTOR T. GOGGIN

Mr. NICHOLSON:

For a copy of all letters, telegrams, memoranda, and other documents, in connection with the resignation of Victor T. Goggin, general manager of Wartime Housing.

MEAT BOARD—TORONTO BEEF SLAUGHTERINGS

Mr. SENN:

For a copy of all letters, including copies of orders enclosed, telegrams or other orders of communications, passing between the meat board or any of its members and its officials, on the one hand, and meat packing companies, wholesale butchers or commission merchants, doing business in the city of Toronto, during the months of July and August, 1942, and having reference to the government agreeing to take 20 per cent of all beef slaughterings; also a

statement showing the number of carcasses so taken, from whom, and at what price in each case.

IRISH FREE STATE

QUESTION OF EXPULSION OF GERMAN AND JAPANESE DIPLOMATIC AND CONSULAR REPRESENTATIVES

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, I should like to address a question to the Prime Minister. Press reports from London would seem to indicate that Prime Minister de Valera appealed to the Prime Minister of Canada in connection with the recent United States demand for a cessation of axis espionage activities in Eire. Will the Prime Minister be good enough to inform the house fully upon this point and table the correspondence or such other communications as may have passed between the governments of Canada and Eire relative thereto?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I had anticipated an inquiry from the leader of the opposition—indeed he was kind enough to give me notice of it in advance—and I have prepared a short statement for the information of the house with regard to the reports which have appeared in the press recently concerning representations which have been made to the Irish government by the government of the United States requesting the expulsion of German and Japanese diplomatic and consular representatives from Ireland.

On Friday evening, March 10, the State department in Washington made public the text of the United States note of February 21, and simultaneously the Irish legation in Washington announced the reply of the Irish Government. On the same date a newspaper report from London made the statement that Mr. de Valera had appealed to me "to mediate" in the affair, shortly after the presentation of the United States note.

It may, perhaps, clarify matters if I say at the outset that the Canadian government has not in any way endeavoured to mediate between the Irish government and the United States government, also that such representations as were received were in the nature of informal confidential conversations.

Shortly after the presentation of the notes, Mr. de Valera sent for Mr. Kearney, our High Commissioner in Ireland, and told him that he considered it would be in the mutual interest of Ireland and the united nations if through the intervention of a friendly nation the notes might be withdrawn. He suggested Canada might be willing to assume this task and asked Mr. Kearney to put his request before the Canadian government. Subsequently Mr. Hearne, the High Commissioner for Ireland, resident in this city, came to see me personally. In my reply it was made clear that, as the Canadian government was in full sympathy with the object of the approach made by the United States government, we would not wish to intervene in the matter. I believe that the informal discussions which took place through Mr. Kearney in Dublin and with Mr. Hearne here were of some help at the time in steadying a difficult situation. Since there were no written communications exchanged between the Irish and Canadian governments, there are no documents to be tabled.

Mr. de Valera made it very plain that his government had done and would continue to do its utmost to prevent the axis representatives now on its soil from using their position there to secure information which could be used to the disadvantage of the united nations. At the same time, there can be no doubt in the minds of any of us here that the axis representatives will not hesitate to abuse the privileges that have been granted them as diplomatic or consular representatives in Ireland if by such abuse they can in any way injure the united nations.

INCOME TAX

STATUS OF ARMED FORCES PERSONNEL SERVING IN KISKA

On the orders of the day:

Mr. S. H. KNOWLES (Winnipeg North Centre): Mr. Speaker, on February 29, as reported at page 1025 of *Hansard*, the Minister of National Defence (Mr. Ralston) said that before long an announcement would be made respecting the income tax status of men who went to Kiska. I refer to the 13th Canadian infantry brigade, which included along with other units the reconstituted first battalion of the Winnipeg Grenadiers. Could the minister or some other member of the government indicate when that announcement might be expected?

Hon. J. L. RALSTON (Minister of National Defence): It is expected that an announcement will be made on the matter very shortly.

SUPPLY

PENSIONS—OLD AGE AND BLIND—AMENDMENT, MR. KNOWLES

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved that the house go into committee of supply.

Mr. KNOWLES: Mr. Speaker—

Mr. HANSON (York-Sunbury): Mr. Speaker, is this a motion to go into supply?

Mr. SPEAKER: Yes.

Mr. HANSON (York-Sunbury): Do I understand that you have seen the hon. member for Winnipeg North Centre (Mr. Knowles) ahead of me?

Mr. SPEAKER: Yes.

Mr. HANSON (York-Sunbury): Is this not a new motion? I am asking for information.

Mr. SPEAKER: Yes.

Mr. HANSON (York-Sunbury): Well, the hon. member for Winnipeg North Centre is resuming the debate.

Mr. SPEAKER: No; the hon. member wishes to speak on the motion to go into supply.

Mr. S. H. KNOWLES (Winnipeg North Centre): Mr. Speaker, before Your Honour leaves the chair there is a matter which I should like to call to the attention of this house, and before I resume my seat I shall move an amendment which will set forth the points that I wish to raise.

The subject which I feel should be discussed at this time is that of old age pensions. There are four phases of the subject which I feel should be gone into by the members of this house: first, the amount of the pension now being paid; second, the question of "other income" which the old age and blind pensioners are allowed to receive; third, the question of the pensionable age; and finally, the matter of the old age pensions regulations, which I believe all members of the house feel should be thoroughly revised.

Perhaps it would be well at this time to give the wording of the amendment which I shall move as I conclude my remarks. It is as follows:

That all the words after the word "that" to the end of the question be struck out and the following substituted therefor: this house desires to record its opinion that immediate consideration should be given to increasing the amount of the old age and blind pension, and also the amount of other income which an old age or blind pensioner may receive; and further, that immediate consideration should be given to lowering the pensionable age, and to a thorough revision of the old age pensions regulations.

My reasons for raising the matter at this time are four. First of all I have in mind the experience that we had in this house last year. A number of us were most anxious that this matter should be discussed thoroughly and properly during the session of the house, but hon. members will recall that we were prevented from any adequate discussion of the subject until the item in the estimates dealing with old age pension administration had been called. That item was not called until about nine o'clock in the evening of the 24th of July, about two hours before the session was concluded. I was not here during the previous session, but on looking at *Hansard* I find that in the 1942 session this matter again was not reached until the last day, namely, on August 1, 1942, and even when it was reached that year an effort was made by the chairman of the committee of supply to prevent the discussion of matters such as are referred to in my amendment. I also point out that there has been no indication in the speech from the throne or anywhere else that this matter is due for any thorough discussion on the initiative of the government this year.

My second reason for bringing the matter up at this time is that there is in the offing, although we have not been told when it will take place, a dominion-provincial conference. It seems to me that this is a subject which should be dealt with at this conference, and it is desirable that the opinion of this house, of all of its members, should be made clear, well in advance of the holding of the conference.

My third reason for raising the question at this time is its importance to a great many of our people, especially to the 190,000 who are in receipt of the pension, as well as to many others who are not receiving it because of restrictions in the regulations and for other reasons.

My fourth reason is that it seems to me the subject is one for proper discussion along with the debate which is now proceeding on the industrial development bank bill. There we are dealing with the problem of production in the post-war period, and I raise this question as one phase of the counter-problem, that of distributing the goods we are able to produce.

I turn to the first question dealt with in my amendment, the amount of the pension, and I should like first of all to give some figures that will indicate, as well as can be indicated by the statistics available, what we are paying to our old age pensioners at the present time. According to the last report of the Department of Finance on old age pension matters, issued on March 31, 1943, the following were the average monthly amounts being paid to old age pensioners by provinces, as of that date:

Province	Average amount monthly
Alberta	$18 69
British Columbia	19 28
Manitoba	18 78
New Brunswick	15 27
Nova Scotia	15 65
Ontario	18 86
Prince Edward Island	13 48
Quebec	17 20
Saskatchewan	17 53
Northwest Territories	20 00

The average for the whole of Canada on March 31, 1943, was $17.46 per month per pensioner. I repeat, those are the figures for March 31, 1943. Since that date there have been certain increases, notably the increase announced by the Minister of Finance (Mr. Ilsley) on July 24 of last year, and which was provided for by order in council P.C. 6367 of August 10, 1943. That order in council provided for increases in some cases to a maximum of $25 per month. We have not yet been able to get figures as to the effect of that provision, and in order to try to arrive at the amount now being paid to our old age pensioners I have done this. I have found that the amount to be appropriated in the civil estimates for this year for old age pensions to be paid by the federal government is $31,526,500.

Also in *Hansard* for the present session, at page 395, I find that there is to be in the war appropriation bill, covering the extra amount provided by the order in council to which I have referred, an item of $6,942,250. In other words, the federal government is setting aside this year a total of $38,468,750 for payments to old age and blind pensioners. One must take into account the fact that this represents seventy-five per cent of the amount which the pensioners will receive; the other twenty-five per cent is to be paid by the provinces. When one makes the necessary adjustment by adding for the provinces the sum of $12,822,913, one arrives at a total figure of $51,291,663. This is the total amount provided for old age and blind pensioners for the coming fiscal year. There are, according to the statistics of the Department of Finance, 190,000 old age and blind pensioners. By a process of simple arithmetic, assuming that all this money being provided will be disbursed, we arrive at the figure of $22.49 per month as the amount we are proposing to pay on the average to our old age and blind pensioners this year. I understand that in one or perhaps two of the provinces there are amounts which are supplementary to this $22.49. I doubt if it will be in excess of five dollars, but even if these payments are being made in the two far western provinces it does not affect this as the basic average for the whole of Canada.

I need not take time to emphasize the hopeless inadequacy of $22.49 per month to maintain the existence of the old people over seventy who have made their contribution to the well-being of this country. Such words as "callous" and "inhuman", if one applies them, hardly tell the story as it ought to be told. Surely it is no longer necessary to argue the case for old age pensions as not a matter of charity but as a matter of right, as an integral feature in our modern society. The old idea lingers on that it is charity, that it is something which we hand out as it were, that it is a heavy cost borne by government; therefore, that any of us who rise and ask that this amount be increased are seeking to place too heavy a burden on the country as a whole. Actually what is involved in the payment of old age pensions is the recognition that the people of this country, when through their working years they make a contribution to the building up of the wealth and the productive capacity of Canada, are entitled, when they reach an age as a matter of fact far less than seventy, to share in the wealth and the productivity which they have helped to build up. The amount involved in making even a fairly sizable increase in the old age pension is relatively small, as I shall presently show. But before doing so I want to say that even if it were large, that in my opinion is no longer an argument against making sizable increases in the amount of the old age pension.

On July 24 of last year the hon. member for Vancouver-Burrard (Mr. McGeer) made an interesting comparison between Canada and Australia with respect to the payments for old age pensions in proportion to population. I shall not take the time to give the details which he gave then, except to state the conclusion which can be drawn from the figures which he placed on *Hansard,* namely that if we were putting into old age pensions in proportion to our population the amount that is being paid in Australia we would be appropriating two and one-half or three times as much as we are now providing for this purpose.

On this whole question of, as I put it, the relatively small amount of money it would take to increase the pensions of our people, I would refer hon. members to the remarks of the Minister of Finance on July 24, 1943, when he announced the possible five dollar a month increase. At that time he stated that the total cost of adding a flat amount of $5 per month to the pension of all our pensioners in Canada, old age and blind, would be a little less than $11,400,000.

My suggestion, although I have not put specific figures in the amendment which I

propose to make, is that we should right now be adding $15 to the amount of the pension which we are paying our people; in other words, providing for a maximum, in cases where pensioners would qualify for it, of $40 per month. This would obviously involve an additional amount of three times the figure which the Minister of Finance gave last July for a five-dollar increase. In other words the cost, even though the federal government paid the entire amount, of adding $15 to the pension of all our old age and blind pensioners, would be $34,200,000. There was a day in this house when that sum sounded very large, and it still is a lot of money, as the parliamentary assistant to the Minister of Finance (Mr. Abbott) said the other day about another sum; but I point out that it is only one-seventh of the amount by which we are reducing our war appropriation bill this year. In other words this entire amount, sufficient to add $15 per month to the pension of every old age and blind pensioner, could be paid by the federal government, could be added if need be to the war appropriation bill, and we would still be voting a war appropriation bill of $205,800,000 less than we voted last year.

There are one or two other ways in which I should like to look at these amounts of money which we pay or ought to be paying to old age pensioners. This $34,200,000, which I repeat is what it would cost to add $15 a month to every pension, sounds like a lot of money, but in relation to the total expenses of this government for this year it is infinitesimal. We have not before us as yet the final statement as to what the total expenses this year will be, but they will be in the neighbourhood, I imagine, of $5,000,000,000. I arrive at that figure by taking $3,650,000,000 as the amount of the war appropriation bill, $700,000,000 as the total of the civil estimates, and then I took the figure of $650,000,000 as a possible amount of the Mutual Aid Bill, although the minister has not yet said what it will be, except that it will be less than last year's thousand million dollars. Well, $34,200,000 in relation to five thousand millions is, I repeat, infinitesimal. In fact, in order to increase the pension by the $15 per month which I am proposing, we would have to raise, for each dollar we are now raising, an additional amount of less than seven tenths of one cent. Seven tenths of one cent additional money for each dollar we are now raising would provide the $34,200,000 necessary to add $15 to the pension of every old age and blind pensioner.

One other comment I should like to make with regard to the amount of money we are spending on old age pensions. Last year we voted in this house—and we in this group were glad, along with other members, the vast majority at any rate, to vote that money—assistance to our allies to carry out the purposes of the war. We voted to give away for that purpose the sum of $1000 million. I would point out that at the present time the federal government is spending on old age pensions only $40 million, as a matter of fact a little less. Last year we were able to give away for the purposes of the war, to other countries, a sum of money sufficient to pay the old age pension bill for twenty-five years.

I submit that we are not discharging our responsibility to these people by the small amount of money we are spending on them. Even if a larger amount were involved in increasing the payment to old age pensioners, that as I see it is no argument against the proposal that this should be done. So far as the future of our economy is concerned, there are two problems. First, there is the problem of production, and we are dealing with that at the present time. We have a bill relating in part to that problem. Then there is the problem of distribution. We have now not so much the old question, where is the money to come from; the question now is, where is the production that we are capable of achieving going to.

I contend that along with our attacking of the problems of production we have to devise ways and means of distributing among our people the goods which we are capable of producing, and I suggest that one of the best places to start on such a programme is by increasing the amount we are contributing to our old age pensioners, and that this should be as a matter of right. In the same breath I would mention the responsibility which I think we should discharge, on a generous basis, to those who come home maimed or suffering in consequence of their service in the present war. I would point out that the contribution of this money to our old people involves putting purchasing power into their hands; that money will by no manner of means be hoarded; it will be used and spent. Every argument is on the side of making such an increase without delay.

The cry that there would be inflation in adding sums of money such as these to the purchasing power of the people is ridiculous so long as we at the same time arrange for the production of goods to be set against this increased purchasing power. That is what we have done during the course of the war. Before the war broke out, thousands of our young men were unemployed. The suggestion

at that time that we should find money in order to put them to work was treated in some quarters as ridiculous and impossible. But what have we done? We have taken many of these men off the streets, off the relief rolls, and provided for them—to enable them to do a job in this war—sums of money such as many of them never before had seen. At the same time we have seen to it that goods and services, both peace time and war time, have been produced and we have not had any threat or scare of wild inflation. On the contrary, we have now, as a result of these tremendously increased sums of money in circulation, the highest level of economic activity and the highest standard of living we have ever had in our Canadian history.

I repeat therefore that the cost of raising these pensions is not great but even if it were, every argument at this stage of the game is on the side of taking this step. At this point may I say this. I feel that we should not get into any argument as to whether increases in old age pensions such as these should be paid by the dominion or by the provinces. The argument for payment by the provinces, as I see it, is a hangover from the idea that old age pensions are a form of charity to be provided as a sort of social service by the provinces. As I see it, old age pensions represent part of our philosophy of society in these days, and when a nation as a whole produces wealth such as we are capable of producing our people should share in that wealth. It is Canada as a whole that has the say as to the means whereby wealth is produced, and there is no question but that the responsibility for paying an adequate retiring allowance should rest with the federal government.

And now I want to turn to the second subject I referred to in the amendment which I wish to propose. It relates to the ceiling on other income which the old age and blind pensioners may receive. Prior to August 10 last, the amount of other income which the pensioner could receive was $125 a year, and on that date it was reduced to the sum of $65. On July 24 last year, when the Minister of Finance announced in this house the proposed increase of $5 a month, he made it clear that the government was not raising the $365 ceiling, in other words that the government was actually reducing by $60 the amount of other income which these pensioners might receive. Some of us in this house on that day spent the whole of our time in that discussion in an appeal to the Minister of Finance to alter that provision before the order in council was passed. When he came to Manitoba last summer in connection with the by-election campaign we had out there—a very interesting one—I made a public appeal to him over the radio, in view of the fact that this order had not yet been passed, to reconsider the position he had taken on July 24. But no. The order was passed on August 10. I hope there is no significance in the fact that that was the day after the by-election. The order stuck to the $365 ceiling. This has had an unfortunate and unhappy effect in the experience of many of our old people, and has produced all sorts of complications.

It seems to me it would have been the part of wisdom, and surely the part of generosity, for the government at that time to raise the ceiling, at least by the amount it was then raising the maximum pension. When the minister spoke of this increase of $5 a month he said in this house that it would cost $11,398,500, but he pointed out that, the dominion's share being only seventy-five per cent, the dominion would have to be responsible for only $8,548,875. The implication I gathered from the minister's remarks was that this government would, if necessary, be prepared to take care of that amount. However, by reducing from $125 to $65 the amount of other income that old age and blind pensioners can receive, many pensioners were denied the whole increase, and many pensioners were denied any portion of the increase at all. The result, according to the war appropriation bill of this year, is that it requires not $8,548,875 to pay this five dollar increase, but only $6,942,250. In other words the provision for reducing from $125 to $65 a year the amount of other income which a pensioner may receive saved the government $1,556,625. That amount of money is terribly small in so far as the government is concerned, yet it has meant a great loss to the old age pensioners. It is reprehensible that that course of action was taken, and I earnestly hope that the government will give consideration to raising the ceiling at an early date. As a matter of fact I feel that any decent old age pension legislation ought to make provision for old age and blind pensioners to have other income as high as $40 a month. In the meantime, one government that I know of, the government of Manitoba, has indicated that it will make representations to this government to raise the ceiling from $365 to $425 a year. That is little enough to ask for, but I say it is coming as a request from the government of Manitoba. I earnestly hope that the request will be met at an early date by this government.

There are two other points that I wish to speak on, but perhaps at this stage, I should

move the amendment which I read at the opening of my remarks. I now do so in the words that I used at the time I presented its terms to the house. The amendment is seconded by the hon. member for Vancouver East (Mr. MacInnis).

I turn now to the third provision of this amendment, which relates to the question of the pensionable age. It seems to me that the age of seventy is ridiculous. The hon. member for Vancouver East (Mr. MacInnis) pointed out on another occasion the only reason he could see for it was that someone drafting this bill must have run across that verse in the ninetieth Psalm which states: "The days of our years are threescore years and ten," and by fixing the age at that point the government would be saved the necessity of paying very much under this bill.

Mr. MacNICOL: May I say that some years ago I advocated reducing the age to sixty-five. At the same time I believe the hon. member for Vancouver East or the late member for Winnipeg North Centre introduced it in this house.

Mr. KNOWLES: I am advised the statement is quite correct, and I am sure the hon. member will welcome the opportunity to support the amendment I have moved.

At the present time it is true that there are many people in the bracket between sixty and seventy who are working at jobs of one kind and another and whose employment is indirectly, and in many cases directly, aiding the war effort. Many of those people would not want to go on old age pension at this time even if it were possible for them to do so. However, there are many in this bracket, particularly in the upper part of it, sixty-five to seventy, who are having a very difficult time to carry on because of the fact that they are denied a pension until they reach the age of seventy. My suggestion is that the age limit should be reduced to sixty, although I have not put a specific figure in the amendment which I have proposed.

I would suggest that all the arguments I have used as to the desirability of our attacking the problem of distribution apply definitely to this phase of the subject, namely, the desirability of reducing the pensionable age. In addition to the other arguments that have been put forward I would remind the house that one of the things that will be desirable in the post-war period will be the encouragement of retirements at an earlier age than in the past in order that there may be opportunities for employment of those of younger years.

If the proposal for a reduction of the age to sixty were made at the present time, even though many would not qualify or want to qualify for a pension right away, there are those, of course, who would do some calculating to try to point out that eventually this suggestion would impose an impossible burden upon the treasury of the country. To anticipate some of those arguments I should like to give a few figures to indicate what it would cost to establish an old age pension of $40 a month, starting at the age of sixty. On March 6, 1939, the then minister of finance, Mr. Dunning, objecting to a proposal which was being made along this line, said that to lower the pensionable age to sixty-five would cost the dominion an additional $19,000,000 a year. He said that to go farther and reduce it to sixty would cost, in addition to that $19,000,000, another $25,000,000; in other words, a total of $44,000,000 a year. Suppose we add to that a little and call it $45,000,000. That is what it would cost to reduce the pensionable age to sixty, leaving the amount at $20 a month. If you increase it to $40 a month, it would cost twice that, namely, $90,000,000. That would represent, however, only the dominion government's seventy-five per cent. Therefore, one would have to add to that the sum of $30,000,000, which would give you $120,000,000 as the total cost if the federal government paid it all, and if a pension scheme of $40 a month were applied to those between sixty and seventy.

I would point out that even if all these figures I have quoted were added together, even if all this responsibility were placed on the federal government to provide pensions of $40 a month at age sixty, the increased cost per year would total only $155,000,000. This is $85,000,000 less than the amount by which we are reducing our war expenditures each year. Therefore I seriously suggest these figures of $40 and the age of sixty, not as figures that are high or low, in the hope that some compromise may be reached somewhere in between, but as the minimum amount and the highest age we should be considering in a measure of this kind.

I should like to turn for a few minutes to the—

Mr. SPEAKER: Order. It would have been preferable if the hon. member had moved his amendment at the beginning of his remarks and then I should have been in a position to deal with it, because I must find that the amendment is out of order.

The amendment reads:

That all the words after the word "that" to the end of the question be struck out and the following substituted therefor: this house desires to record its opinion that immediate consideration should be given to increasing the amount

of the old age and blind pension, and also the amount of other income which an old age or blind pensioner may receive; and further, that immediate consideration should be given to lowering the pensionable age, and to a thorough revision of the old age pensions regulations.

It is provided, as the hon. member may see, on page 137 of Beauchesne's Parliamentary Rules and Forms, citation 345.

The ancient doctrine that the redress of grievances should be considered before the grant of supplies is maintained in the House of Commons of Canada by the provision of standing order 49 that the motion for the Speaker to leave the chair can be amended; and the amendments need not be relevant but may relate to every question connected with public administration.

Then I leave out a portion and continue:

Matters of detail which should be discussed in committee cannot be debated on these occasions, nor can debate be permitted relating to grants already agreed to, or to resolutions which will be proposed in the committee, or to items in the estimates.

At page 10 of the estimates I find item 52, dealing with the administration of old age pensions, including pensions to the blind; and there is a further item covering the payment of the dominion's share of such pensions. All the matters now being discussed by the hon. member are relevant to and can be thoroughly discussed on this item in the estimates, and for that reason I must rule that his amendment now, on going into supply, is out of order.

Mr. KNOWLES: May I speak to the point of order?

Mr. SPEAKER: I have already decided that the amendment is out of order, so that there is no point of order.

Mr. GRAYDON: Do I understand that this is not debatable by anyone?

Mr. SPEAKER: No.

Mr. KNOWLES: If I may not speak to the point of order, Mr. Speaker, I take it that I may continue with my remarks on the subject which I raised?

Mr. SPEAKER: I have already decided that the hon. member is discussing a matter which cannot be debated on the motion to go into supply. It is a matter which can be discussed when the proper item in the estimates is before the committee. At that time it can be gone into fully, but in the meantime it is not a proper amendment and I have therefore ruled it out of order.

Mr. COLDWELL: Do I understand you, Mr. Speaker, to rule that the discussion of old age pensions is out of order? Before you rule on the point I have just raised may I direct your attention to the fact that when the estimates are before the committee there is no opportunity to revise or change them. It seems to me that at the moment hon. members are trying to bring to the attention of the government the necessity of doing something in regard to the estimates; and while there is an item in the estimates covering old age pensions, surely the discussion of that subject is not out of order because of that fact. If that is so there is almost nothing that could be discussed on going into supply.

Mr. SPEAKER: Many matters are relevant on going into supply, matters which are urgent and which should be brought to the attention of the government. In the present case, however, the amendment asks that the house record its opinion as to the immediate necessity of increasing the amount of old age and blind pensions. That is a matter which can be discussed when the proper item in the estimates is before the committee; therefore it is not relevant to-day.

Mr. COLDWELL: But the discussion on the motion to go into supply is still before the house, I take it?

Mr. SPEAKER: That is so.

Mr. KNOWLES: Then I should like to continue to speak to the motion to go into supply. You have ruled my amendment out of order, so that I cannot further speak to it, but I should like to continue to speak to the motion to go into supply.

Mr. SPEAKER: On the same question?

Mr. KNOWLES: Yes, sir.

Mr. SPEAKER: I have already ruled that this matter cannot be further discussed at this time.

Mr. GRAYDON: On the point of order, Mr. Speaker—

Mr. SPEAKER: There is no point of order.

Mr. COLDWELL: I did not hear what was said by the leader of the opposition (Mr. Graydon).

Mr. GRAYDON: I did not get a chance to say anything; I tried to sit down as gracefully as possible under very extraordinary circumstances.

Mr. SPEAKER: There is no point of order. Is it the pleasure of the house to adopt the motion?

Mr. MacINNIS: Do I understand, Mr. Speaker, that I can continue with a discussion of the question of old age pensions on the motion to go into supply?

Mr. SPEAKER: No. I understood the hon. member for York-Sunbury (Mr. Hanson) wished to speak on the motion to go into supply, and I have no desire to deprive him of that opportunity, but at the moment he is not in his seat.

BEER—REMOVAL OF FEDERAL RESTRICTIONS OF SUPPLIES TO PROVINCES

Mr. J. H. BLACKMORE (Lethbridge): Before you leave the chair, Mr. Speaker, I should like to refer to the statement made to-day by the Prime Minister (Mr. Mackenzie King), in the course of which he said that the provinces had cooperated with the dominion very enthusiastically up to the present time. I know he wishes that happy condition to continue, and consequently I believe he should have two or three matters brought to his attention.

In regard to the disagreement between the province of Alberta and the dominion as regards liquor there are two important statements about which I think the Prime Minister would be glad to hear. The first of these was issued on March 8, and appears in the Edmonton *Bulletin* of March 9. It is by Mr. J. A. King, chairman of the Alberta liquor control board, in reference to the statement by the Minister of National Revenue (Mr. Gibson), to which the Prime Minister referred. Mr. J. A. King said:

> We certainly took all we could possibly buy. It is true that some of the distillers were unable to give us the full allotment to which we were entitled.

As the Prime Minister will recognize, that completely takes the sting out of the statement by the Minister of National Revenue (Mr. Gibson) that Alberta had not taken its full quota of liquor. Now we learn that Alberta took all the liquor it could get from the distillers, and that it could not get enough to fill its quota.

The second statement to which I should like to refer appears in the same issue of the *Bulletin*; it is by Hon. S. E. Low, and I am sure the Prime Minister will be glad to have it on record because it will put that statesman in the right light. The Minister of National Revenue stated that the contention that the eastern provinces had been tipped off was without foundation. In reply Mr. Low repeats the statement made by Mr. J. A. King, that the province bought all it could and that the distillers could not provide any more liquor although Alberta could have used more. Then Mr. Low goes on to say:

Mr. Gibson's answer is most unsatisfactory. He still has to answer why the government selected October 31, 1942, as the end of the base year, and why it made the order retroactive to that date, when it was not issued until January, 1943, and also why even after the order came into effect, Ontario and Quebec could allow so much more liquor to permittees than we could.

The Prime Minister can see that this indicates one cause of the disagreement which should be ironed out between the dominion and the province. Then Mr. Low continues:

> The answer is quite clear. Ontario and Quebec knew the restrictions were coming up, and we certainly didn't. The people in the east were given every chance to buy up the liquor.

I am sure the Prime Minister would wish to have knowledge of these statements in order that the difficulties between the dominion and the province may be resolved. I should like to assure the right hon. gentleman that the government of Alberta is desirous of cooperating with the federal government in every respect; they have no desire for any friction or lack of harmony and are just as eager to have the war conducted in an efficient way as anyone could be.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am pleased to have the assurance my hon. friend has just given. I do not question it at all; but if I caught aright the last sentence or two of what he has just read it was to the effect that Quebec knew about certain restrictions which were coming, and that Alberta did not. That is the sort of thing to which I take very strong exception. No province in this country had any intimation, as against information other provinces would have, with regard to what was to be done in respect of the restrictions made on the supply or sale of alcoholic beverages. It is the endeavour in certain quarters, every now and then to create a certain prejudice against both the government and Quebec, by referring to Quebec as though in some way it had been specially favoured, which makes difficulty in the country. I hope it will not be repeated. Perhaps what I have said to-day, or rather what the government has done to-day, may in that regard remove one of the possibilities of further repetition.

Mr. BLACKMORE: I think the Prime Minister will grant that when government officials have a certain view, it is a very good thing to give open expression to that view, so that the matter may be cleared up.

Mr. MACKENZIE KING: Yes.

Mr. BLACKMORE: I think the Prime Minister will agree that Mr. Low is perfectly

frank. If he does not understand correctly, the matter can be taken up with him.

Mr. MACKENZIE KING: That is right.

Motion agreed to and the house went into committee of supply, Mr. McCann in the chair.

INDUSTRIAL DEVELOPMENT BANK

PROVISION OF ADDITIONAL CREDIT FACILITIES FOR FIXED AND WORKING CAPITAL

The house resumed from Friday, March 10, consideration of the motion of the Minister of Finance for the second reading of bill No. 7, to incorporate the industrial development bank.

Mr. S. H. KNOWLES (Winnipeg North Centre): Mr. Speaker, I had not anticipated speaking again quite so soon, because I thought I had raised a subject on which other hon. members would be sure to speak, if given the opportunity. However, having moved the adjournment of this debate on Friday evening there are a few observations I should like to make.

Many hon. members who have spoken thus far in the debate have stated that they are prepared to support the principle of the bill, but that they have certain misgivings as to some of its details. My purpose in speaking is to state as clearly as I can the principle I am prepared to support in agreeing to its second reading. Then I should like to point out as clearly as I can the misgivings I have or, in other words, the reasons for my fear that the bill in its present form will not give full effect to the desirable principles upon which I believe it is based.

Before indicating what I believe to be the principles of the bill, may I say a word as to its effect? As I see it, the effect is to permit the Bank of Canada to engage in a function hitherto not allotted to it. It strikes me a certain amount of confusion has developed through the growing multiplicity of banking and financial institutions. In addition to the chartered banks in Canada we have the Bank of Canada. Now we are to have the industrial development bank; and the parliamentary assistant to the Minister of Finance has indicated that later on there will be something of a banking or financial nature for the assistance of agriculture and, later on perchance to assist in housing development.

This multiplicity is confusing; but needlessly so, for actually in all these banks or financial institutions of a government character we just have different functions of one banking and financial set-up. In other words, if these measures are put through we will have a government bank engaged in various functions. To my mind this confusion emphasizes the need of our establishing one nationally owned and publicly controlled banking system, as an instrument of a national investment policy.

I said I was going to try to state clearly what I believe to be the principle of the bill, and I am prompted to do so because I have heard many hon. members say they are supporting the principle, without defining the principle they are supporting. As I see it, the principle is that a public authority, under the control of the parliament of Canada, should have the say as to the kinds of activity in which at least a portion of industry will engage, or that there should be established a public authority under the control of the parliament of Canada with power to give effect to the necessary financial arrangements to make possible the kinds of industrial activity parliament regards as being socially desirable.

With that principle we in this group heartily agree. In fact we would point out that if to some extent we had not been acting upon that principle we would never have been able to achieve the vast production Canada has achieved during the course of the war. During the war years the government has stepped in and has effected the financial arrangement necessary to make possible, whether it was economic or otherwise, the production of aircraft, guns and tanks, and all the equipment necessary to fight a war. The government has taken the position that these things had to be produced. It has said that our man-power should be applied to our raw materials so as to bring about the greatest volume of war production. The job of the Minister of Finance (Mr. Ilsley) has been simply to effect the financial arrangements to make these things possible.

I repeat that we have had affirmed during the course of this war the carrying out of the principle that underlies, shall I say, or rather that is hidden in this bill, for incidentally that is one of my complaints, that while the principle is there it is almost smothered. We contend that without this principle we could not have achieved the vast volume of production which is to Canada's credit in the course

of this war, and that equally without this principle we cannot win the peace. By that I mean that without our setting up a public authority with power to decide in the name of the people the kind of industrial activity in which Canada is to engage we shall not be able to produce the vast quantities of peace-time civilian goods that we need to provide full employment and an adequate standard of living for our people in the post-war period.

Some have said during the course of this debate that we should not worry any more about the problem of production. It has been argued that that problem has been solved. I do not altogether agree. I believe the war has shown that we can solve the problem of production when we are faced with an all-powerful requirement which we are prepared to try to meet. But that does not mean that automatically when the war is over we shall go on producing in the volume in which we are producing at the present time. We shall be able to continue producing in such huge quantities after the war only if there is the same will to produce in these quantities, and only if we are prepared at that time to effect the necessary financial arrangements.

Therefore I contend that even as during the progress of the war the financial job of this government has been to effect the necessary financial arrangements to enable the production of war goods, so after the war parliament and the government through a public authority must continue to control the direction of investment, must continue to have a definite say as to the kind of things that industry is to produce.

It is also true, as others have pointed out in this debate and as I myself pointed out earlier to-day, that it is necessary to tackle the problem of distribution. We must not think we have solved the problem if we simply do something about the problem of production. We must also get purchasing power into the hands of all our people to enable them to purchase the goods they are capable of producing and are anxious to produce. And so, Mr. Speaker, I affirm my belief in this basic principle that the control of investment, the planning of investment, the effecting of financial arrangements so as to get the socially desirable goods produced is not only a good thing but terribly necessary to our welfare in the post-war period.

Oddly enough, the strongest objections to this principle, if I have heard aright, have come from Liberal members, who for the most part have contended that they were supporting the principle of this bill. They did not say that they were attacking the principle of the bill. They chose, however, to take this debate as an opportunity to attack some of the policies of this group, and in so doing they have attacked the principle of this bill. We have heard language such as this: We do not want our banking and financial institutions run by politicians, or by a government monopoly. I say frankly that I find it difficult to understand members of parliament rising in their places and complaining about politicians or speaking about governments doing their duty. If there are members of this house who feel that politics is not one of the highest forms of social effort and public service they can follow whatever course suits them, but for my part, not only is politics a very high endeavour, but I see it as the people doing their own business. The alternative to politics and the science of government, to democracy as we know it and as we in this group want to extend it, is control of our life economically and otherwise by a few. As matters now stand, there are many things that we politicians so-called, we who are engaged in politics and the science of government, control. We in this parliament have the say over such matters as war and peace, public health, taxation, housing, justice, labour relations and a whole host of other subjects which come before us during the course of the months that we are in session. Yet though it is felt that we in parliament are competent through the medium of politics and the science of government to control these things in the interests of the people as a whole, the minute the question of business and industry, the question of our economic life, is posed by some of us as a sphere in which the people's representatives should have a say, up goes the cry: Don't let the politicians get in there. It is a nice bit of phraseology to use, but it sidesteps the fact that the alternative is to allow a few people—we sometimes call them, and rightly, I think, a few big shots—to control things that are basic to the life of the country as a whole. I refer to our economic affairs, the arranging of our economic life, basic as it is to the amount of money the people will have to live on, to the amount of food they will have to eat and the kind of homes they will live in—everything relating to the life of our people. I suggest that economics, business and industry are just as important to our eleven or twelve million people as are the things which we recognize as matters with which this parliament is competent to deal—perhaps even more important, and I feel that if we are going to carry out the basic principles of democracy we should extend the control of the people into the whole sphere of economics and industry.

That is the reason I am in support of what I have tried to indicate is the principle of this bill, because it seems to me that this

principle calls for an extension of the idea that a public authority under the control of parliament should have the say as to the kind of things that industry is to produce. We feel in this group that industry should produce, not for profit to a few individuals, but the things that are socially desirable and necessary for the community as a whole. That is what we have been doing in the war. We have seen to it that there shall be effected the economic arrangements necessary for the producing of guns, planes and tanks, the setting up of air training schools on the bald prairie far away from city services of one kind and another, and so on. We have seen to it that these things are done because we felt it was for the good of the community as a whole, namely, for the defence of the country in this time of war.

Similarly, we feel that when peace comes we should have the power as a parliament, as a government, on behalf of the people to effect financially the production in industry of the things which are socially desirable for the community as a whole. I want to decry not only the kind of talk which deprecates governmental activity in the economic sphere, but also the charge that the sort of thing which is proposed in this bill is in any sense a form of dictatorship because the government would have some control over matters relating to industry and finance. It is dictatorship when the few are able to control industry, are able to control finance, are able to decide that funds will be invested where profit is to be made, say in luxury goods, rather than in goods which are socially necessary and desirable for the community as a whole. But when the people through their parliament, through their government, set up a public authority which decides in the interests of the people that socially desirable goods should be produced, that is not dictatorship, it is an extension of the principle of democracy which I feel is one of the things we are fighting for at the present time.

I said earlier that not only was I going to indicate what I believe to be the principle of this bill, and what I mean when I say that I am supporting the principle by agreeing to its second reading, but that I would try to point out what I regard as some of its weaknesses, some of the reasons for my fear that the bill in its present form will not give full effect to this very commendable principle.

First, there is the fact that the bill gives the industrial development bank, or shall I say, the industrial development wicket of the Bank of Canada, no power of issue. To my way of thinking, and as other hon. members who have spoken have pointed out, that is a serious shortcoming.

Secondly, I would point out that the amount of money to be provided under the terms of this bill for industrial development is hopelessly inadequate to meet the problem which it proposes to attack, namely, that of sufficient assistance in post-war production to maintain a high level of economic activity, a high level of industrial production. As hon. members know in general terms, there has been a tremendous increase in the value of our national production during the course of the war. According to an answer to questions by the hon. member for Vancouver East (Mr. MacInnis) to be found on *Hansard* of March 2, page 1,086, the gross value of our national production in 1938 was a little over $5,000,000,000. In 1943, according to information on the same page, the gross value of our national production was something over $10,000,000,000. In other words, from 1938, the last full year before the war, to 1943 our production has been doubled. If one had the figures to make a comparison between 1943 and 1933 I am sure one would find that the production had been trebled in that ten-year-period.

What was it that made possible the doubling of our national production from 1938 to 1943? There were a number of factors. The huge expenditures of the government in the purchase of war supplies and providing uniforms and pay and allowances and food and care for our people in uniform—all helped. Another factor which, I feel, was of importance was the amount of money which the governments of the United Kingdom and Canada made available by way of capital assistance to Canadian industry. I hold in my hand a copy of *Votes and Proceedings* of March 26 last year. It contains amongst other things a statement by the Minister of Munitions and Supply (Mr. Howe) as to the amount of capital assistance to Canadian industries by the British and Canadian governments up to December 31, 1942. I point out that that is quite a long time ago; I have not been able to get any figures later than these, but if such figures are available they will probably be a great deal larger than the figures I have here. According to the information from which I am quoting, the total capital assistance at that time amounted to $1,723,827,099. I suggest that that amount of seventeen hundred million dollars of capital assistance by governments to Canadian industries was a quite important factor in bringing about this level of production in 1943 of ten thousand million dollars.

It is admitted by hon. members on all sides of the house that one of our real jobs in the post-war period is to maintain the present level of production. That will involve a great

deal of changing over of plants from what they are doing now to other kinds of activity for peace-time needs. It will involve the building of new plants to meet other needs and provide for employment if we are to maintain this level of production. I point out that whereas it took more than $1,700,000,000 to do that only up to the end of 1942, the present bill provides the terribly inadequate figure of only $100,000,000. Thus, even if one takes into consideration all the additional money that the bank can get by the sale of bonds, debentures, et cetera, I point out that the present provision is only one seventeenth of the figure that I have quoted from the Minister of Munitions and Supply.

Another shortcoming of this bill as I see it is that it takes this very commendable and desirable principle of a public authority having something to say about effecting the financial arrangements which will make possible the producing of socially desirable goods, but introduces it only into one small end of our industrial setup, only into the end which is regarded as unprofitable and not capable of drawing investment from other sources. I hope, and that is my reason for giving support to the principle of this bill, that the day is not far distant when we shall extend the principle which is now being introduced into one small end of our industrial set up into the whole of our industrial picture, that we shall have a national financial setup, based upon principles of economic planning, to take the initiative and see to it that there is produced in Canada the kind of thing which is socially desirable, the kind of thing which is necessary to provide a high level of economic activity such as we have now and a high standard of living such as our people deserve in the post-war period.

Again, I feel about this bill that it to a large extent nullifies the principle which underlies it, by continuing the principle of interest, of huge debt which will be piled up and which, as I see it, will take away from the benefit that might otherwise be enjoyed from the principle of economic planning, the principle of a public authority effecting the necessary financial arrangements to provide for socially desirable production.

I am disturbed by the sections of the bill which provide for the continuance of the whole idea of private profit to be made out of this investment, even in this supposedly public authority, by virtue of the other seventy-five per cent of these assets which will be acquired through the sale of bonds and debentures.

[Mr. Knowles.]

I contend, therefore, that this bill in its present form, based though it is on a principle that is not only good but highly necessary in the post-war period, will fall so far short of realizing the potentialities involved in it that I dare to hope that in the committee a great many changes will be made in it. It is because this bill will not give full effect to the possibilities involved, and to the principle upon which it is based, that some of us have the fear that it is simply a case of borrowing a good principle but distorting its purpose from that of the total social good, to simply salvaging the present economic system. I submit that is not good enough in these times, and certainly it is not good enough for the post-war period.

Our job is not simply to try to buttress one system or another but to tackle the problem of replacing the four or five billion dollars' worth of war production in which we are engaged at the present time with four or five billions or even more per annum of peace-time production when the war is over. There is no time to lose. What we need is a nationally owned bank capable of doing this kind of thing. What we need is a broad investment policy, vested in a public authority under the control of parliament, with the power to effect financial arrangements so as to make possible the production of an additional four or five billions a year, or more, of peace-time goods.

In my opinion, as I have said, the principle underlying the bill is not only good but is terribly necessary for the post-war period, and I earnestly hope that when it goes to the committee changes will be made in it to bring that principle out from the restrictions which now all but smother it and to give fuller effect to its possibilities.

Mr. W. F. KUHL (Jasper-Edson): My colleagues the hon. member for Lethbridge (Mr. Blackmore) and the hon. member for Acadia (Mr. Quelch), I believe, adequately set forth the attitude of the social credit members toward this bill; consequently all I wish to do, in the few words I shall contribute this afternoon, is to refer to some of the fundamental economic principles that have been referred to by members on both sides of the house with regard to the principles and objectives involved in this bill.

This bill and others of a similar kind seem to me to be designed to stimulate production, the whole purpose being to increase the amount of goods we shall have available, and I think the remarks which were made by the

hon. member for Vancouver-Burrard (Mr. McGeer), in his excellent speech, with most of which I heartily agree, as well as some of the remarks made by other hon. members including the leader of the opposition (Mr. Graydon), should receive careful consideration. They stated that the real problem with which we shall be confronted in the post-war world will be one not so much of production as of ability to consume. When they drew attention to that fact they drew attention to what will be the real problem once we endeavour to revamp our peace-time economy.

That thought brings us back to some of the fundamental principles which I believe we shall have to keep in mind if we are to come to logical conclusions as to what we are going to do. I agree completely with the hon. member for Vancouver-Burrard and the leader of the opposition when they say that we shall have to tackle the problem of consumption or to devise ways and means to enable the people to consume the production of the country up to the limit of their desires to consume.

While I agree with the point of view expressed by these hon. gentlemen and by others as well, I did observe that they did not follow up their statements to indicate in what manner consumption could be stimulated to the point where people would be enabled to purchase all they produce. That is a conspicuous omission.

I wish to call attention again to the point which, in common with the members of my group, I have made repeatedly on the question of production. Those who are responsible for this bill—the Minister of Finance (Mr. Ilsley), if he is responsible, or the assistant to the minister, or any in the department responsible for it—seem to me to assume that all that needs to be done to have a balanced economy is to set up a business, to finance that business undertaking, to get it going, and automatically it will take care of itself, automatically purchasing power will come forth from that industry sufficient to enable the people to buy what they have produced. But that is the very point wherein the endeavour that will be made to carry out the objectives of the bill will fail, as it failed prior to the outbreak of the war.

As I have indicated again and again, what we have to reconcile ourselves to is the fact that no individual industry—and the same is true of all industry collectively—ever issues in the course of production an amount of purchasing power sufficient to buy back its own product. As the hon. member for Lethbridge pointed out in his speech, in the thirties, before the war broke out, we had no problem of production. There was nothing wrong with our ability to produce the goods we desired. We had, on every hand, goods of every type which the people had any desire to consume. Goods were there either actually or potentially, but what was lacking was effective demand in the hands of the people to buy the product.

The same situation will certainly obtain when once the war is over and the government is no longer the greatest purchaser of the products of industry. We shall again be back to the position where the value of the total production of consumable goods will be far in excess of the total amount of money which the people will have as a consequence of assisting in making that production. I believe that is an aspect of our economic system which certainly will have to be investigated by the committee when it studies the proposals in this bill, as well as any other of a similar nature which may be introduced later. I believe the members of this house must take this point into consideration, investigate it, draw their own conclusions on it and then act accordingly.

There is another angle that must be considered. I, as well as other members of my group, have referred to it again and again. It is stated that we must sustain our national income at a high level and provide full employment if we are to have a set of conditions to our liking. I do not wish to repeat all the arguments I have advanced in the past with regard to the question of full employment; but as long as the government or individuals in the opposition, or professors of economics outside of the house, or individuals anywhere, continue to contend that the purpose of the economic system is employment and jobs, I feel obliged to continue to raise objections to that idea and principle. The hon. member for Vancouver East (Mr. MacInnis) in speaking on this bill last Friday evening said, as he has done on many previous occasions along with others of his group, that private enterprise had failed to feed, clothe and shelter the people. Private enterprise is held responsible for providing jobs, for maintaining full employment, for keeping people at work. I think that is an issue which we shall have to discuss in this house more extensively than we have in the past. I consider it basic and fundamental. Thus far neither the government nor the opposition and many others throughout the nation have come to a logical conclusion as to the purposes of the economic system. I wish to reassert, as I have done on many previous occasions, that as long as we insist that the purpose of the economic system is to provide jobs rather than goods, we shall never solve

our problem. I repeat that it is not the purpose of private enterprise or government enterprise, if you wish, or enterprise of any kind, to find jobs. The only legitimate function of the economic system is to produce goods and to produce them abundantly. Our banking system and our banking policy should be aimed with that object in mind.

Mr. CASTLEDEN: How about distributing them?

Mr. KUHL: That is the real problem. That is the problem on which we ought to be concentrating our efforts. The orthodox economist holds that industry produces sufficient purchasing power through production to distribute its own goods. That is a false premise. I have placed the figures on the records in the past; I can do so again to-day. But it does not seem to make much difference whether one substantiates his contention with figures or not. They are not accepted. I am satisfied that if individuals, members of this house and all those interested in economics, will examine the balance sheet of any individual company, or examine the aggregate of the balance sheets of all companies, they will discover that industry is not self-liquidating and that, no matter how much production you have, the people are never able to buy the total product of industry with the purchasing power which is paid out in the course of the production. Therefore that leaves us to consider methods of accomplishing the distribution, which is a problem to which the leader of the opposition and the hon. member for Vancouver-Burrard pointed out, but indicated no way in which this could be achieved.

Mr. FAIR: John Bracken does not know.

Mr. KUHL: Therefore I say that instead of concentrating our efforts on devising legislation and concentrating our thoughts on amending legislation designed to stimulate production we ought to be concentrating our efforts on ways and means of stimulating consumption; for I am completely satisfied that if consumption is taken care of, production will automatically take care of itself. Take care of consumption and production will take care of itself.

In conclusion, I wish to remind the house once more that we shall reach no logical and sound conclusion as to how we shall bring about distribution unless we examine carefully the relationship of the income of the people to the value of the production which they are expected to buy. I wish to remind hon. members we shall also have to concentrate our attention on the question of the substitution of power machinery for human effort. I am perfectly convinced that we are not logical if we contend that we can have both jobs and machinery. We cannot have both. If we are to use the power machines, then we certainly must reduce the amount of man-hours on the work.

Mr. DOUGLAS (Weyburn): Or produce more goods and raise the standard of living.

Mr. KUHL: There is plenty produced as it is.

Mr. DOUGLAS (Weyburn): Oh, no.

Mr. KUHL: We are told that if we use the machinery of production that existed in 1929 it is capable of producing an income of $4,400 worth of consumable goods for every family of four in the United States; and that is without any additional plant equipment. That is certainly far in excess of what the people had been enjoying. Therefore I believe the matter of the constant technological displacement of human labour and the disparity between total income and total prices is something that will have to be taken into consideration when we consider trying to balance our economy by merely stimulating production through the use of a bank such as this bill contemplates.

Mr. J. M. TURNER (Springfield): I find myself in a difficult position this afternoon. The Prime Minister (Mr. Mackenzie King), having fixed up the beer business, has left me without a subject; nevertheless, I wish to say a few words about the proposed industrial bank. Along with many others in western Canada I have endeavoured from time to time to advance the idea of getting more equal distribution of the industrial business of this nation, particularly in western Canada. On more than one occasion in the past, when dealing with matters of finance, unemployment, relief and so on, we have emphasized this point. Last year in speaking on the budget, as recorded in *Hansard* for March 18, at page 1384, I said:

> I need not remind you, sir, because you have been here many years longer than I have, and I have heard it said many times in this chamber, that the west has asked time and time again for more factories, more industrial plants. I mention it now for this reason, that a committee has recently been set up here to study the problems of rehabilitation and reconstruction. Judging from the personnel of that committee, we shall have a progressive and worth-while report on the industrial needs and opportunities of western Canada which will be well studied by that committee. I would refer to the Defence Industries Limited plant near Transcona which is in my own riding; I do not want to see this plant closed down or salvaged

immediately after the war. The same can be said of many plants all through western Canada. I hope at least to have a chance to obtain for the constituency which I represent some plants for western Canada. In my opinion it would be a shame and a disgrace to see that fine plant, in which two or three thousand men are employed, shut down and those men thrown out of work at the end of the war. I wish to pay tribute to those men for the fine work they are doing in this war effort, because we must remember that they were taken from the villages, the municipalities and the country; that many of them never saw the inside of a plant before, and that they are doing a splendid job, and it is my pleasure to pay them this little tribute to-night. When the war is over, these men will have had these years of extra experience and be fully prepared and equipped to carry on in similar capacities after the war. Therefore I urge with all the strength I have that that part of western Canada be kept in mind by the committee and the government.

And later on:

There is something not quite right in regard to our western industrial set-up when one considers even casually the immense possibilities for industry in the prairie provinces. Consider it only from the point of view of natural resources; look at what we have to offer industries; coal, timber, oil, the natural gas of Alberta in untold quantities, thousands of units of unharnessed electrical power, minerals of all kinds, and in my own constituency that new chromium deposit now in the experimental stage. It is well advanced; I believe 200 tons have been shipped. If this proves successful, I understand this will be the biggest development in recent years in Manitoba. These are only a few of the many things we have to offer. We have two of the best equipped and managed railways in the world to take care of the needs of industry. Behind all that we have great agricultural production in all its branches, capable of supplying a population five or ten times, possibly fifteen times what we have now, with the finest food this world can produce. There is only one answer, more and more factories because, if you get the factories, you get the population.

As everyone in this house knows, Manitoba and Saskatchewan are now threatened with the loss of seven of their representatives in this parliament, owing mainly to the drift of population from the west to the east which has resulted from the heavy centralization of our war industries in the two eastern central provinces. I believe this measure will help to some extent to overcome that situation, if it is wisely administered and given a real chance to operate. It should also help to prevent large, wealthy corporations from controlling and monopolizing certain lines of industry to the detriment of the whole of Canada, by preventing special privileges of controlling the manufacture and distribution of certain goods in defined areas with no interference or competition whatever. The town of Beausejour, in my constituency, ran into a difficulty of this kind some years ago. They had a glass factory operating there which was the only industry in that town with the exception of a small brick plant. Naturally this glass factory started out in a small way, but gradually it grew larger. Winnipeg, being nearby, was the chief market for its product. It was not very long, however, before that industry was gobbled up by the big eastern interests. Not only was it closed down the week after that; it was torn down, throwing everybody out of work and forcing the people to buy glassware manufactured in other provinces, while acres of the best glass sand stand idle with a fence round them. The brick plant there also has been torn down. If this act had been in operation at that time the town, in conjunction with some of its enterprising citizens, might have saved those industries. These incidents could be multiplied many times in western Canada. The west has starved for the need of capital. To give another instance, the Tyndall and Garson stone quarries, in my riding, from which the stone used in the interior of this beautiful building was quarried, have not been operating for about twelve years, and I should think this measure would encourage the reopening of those famous quarries. To illustrate how government and private enterprise can cooperate in establishing factories with genuine benefit to all, I should like to read what I said in this house on April 17, 1939, as reported in *Hansard* for that year at page 2860. Speaking about the establishment of a sugar-beet industry in western Canada, I said:

I turn now to the subject of sugar-beet and canning factories. Here also we have an opportunity to put many men to work. As I have said before in the house, the Manitoba government has already gone on record as backing the bonds of a sugar-beet factory to the extent of $600,000. I understand a sugar-beet factory will employ about fifty permanent employees, about 250 temporary employees, and also a great many more during the tending operations and at harvest time.

A few years later a group of enterprising, public-spirited Winnipeg business men took advantage of that offer and to-day we have near Winnipeg one of the finest sugar-beet factories in Canada. This is a great help to farmers, workers and consumers alike, particularly during a war period. After the war it will help to stabilize the price of that commodity in the area now served. In my opinion this industrial development bank is definitely a step in the right direction, though I think the $100,000,000 allotted is far too little for the demands that will be made upon it, particularly when we remember that the Canol oil project in the northwest territories has already cost the government of the United States well

over $130,000,000. However, I suppose we have to crawl before we can run; and since I believe the principle of the measure is right and sound, certainly I shall give it every support.

Mr. GORDON B. ISNOR (Halifax): Coming as I do from Halifax, Mr. Speaker, I feel that I should take part in this debate if for no other reason than to place on record the part which has been played by Halifax and the merchants of that city in the establishment of the banking system we now enjoy throughout Canada. I do not imagine that many hon. members are familiar with the background of the old Halifax Banking company, but I think we can claim that we have in Halifax the oldest bank building in Canada. In 1812 a building was erected which later housed the old Halifax Banking company, which was formed by a group of Halifax merchants headed by a Mr. Enos Collins. There the first so-called bank was incorporated and carried on for a number of years, until it was taken over by the Canadian Bank of Commerce, if I remember rightly, about 1903. Even after that the bank continued to operate in that building until it was moved to a large new building on George street, some years later. In connection with that bank I remember an incident which has been a topic of conversation in that city for many years. During a circus parade in Halifax thieves entered the bank and committed a robbery. I was inquiring of my colleague from Halifax (Mr. Macdonald) to-day, and he said he thought that robbery took place about fifty years ago. At that time the bank was in charge of Mr. H. A. Fleming, who was later with the bank of Nova Scotia and who recently passed to the great beyond. When one realizes that the Halifax Banking company was organized 132 years ago, or fifty-five years before confederation, he sees that we have a real background, so far as banking history is concerned.

Then there is another feature which I believe brings us in close contact with the present banking system. I refer to the number of men from eastern Canada who have played an important part in what we know as the "big four." Until quite recently we found at the head of the Royal bank Mr. M. W. Wilson, who was a native of Lunenburg. He was succeeded by Sydney Dobson, also a Nova Scotian, born in Sydney. We have at the head of the bank of Montreal a native of Nova Scotia, in the person of Mr. George W. Spinney, who was born at Yarmouth. Then, heading the bank of Commerce, as president and general manager is Mr. S. H. Logan, who was born at Debert, Nova Scotia. Then, heading the bank of Nova Scotia is Mr. J. A. McLeod, who is a maritimer.

Mr. BROOKS: New Brunswick.

Mr. ISNOR: Prince Edward Island, if I remember correctly.

I should like to add a word about the Royal Bank of Canada, one of our leading banks to-day. It may not be generally known that the Royal Bank of Canada was originally the Merchants Bank of Halifax, and operated under that name until taken over by the Royal bank. I mention these facts to show that Halifax is closely linked with our financial system. The banking system as we know it to-day began to develop some of the features of a central banking system very shortly after confederation. In 1868 dominion notes were issued as a central note issue. Then the Canadian Bankers' Association was established in 1900, its purpose being to effect greater co-operation in the issue of notes, in credit control and in various other ways. In 1913 a central gold reserve was established, and in 1923 rediscount facilities became a permanent feature of the banking system. Then, the last big step, as far as our banking is concerned, was the setting up of the Bank of Canada. This organization was established by legislation in 1934, and opened its doors for business in 1935.

We have about eleven so-called private banking institutions operating in Canada, with about 3,000 branches. I give this background of our private banking system and the number of branches because I intend to deal with that system, from the point of view of private enterprise, as against that advocated by hon. members sitting to the extreme left of Mr. Speaker. I refer particularly to the Cooperative Commonwealth Federation. I shall endeavour later in my speech to show that there is a definite place for both public and private ownership in our banking system.

As I have pointed out, we have 3,000 branch banks, extending from the Atlantic to the Pacific. Four of the larger banks have something like 2,000 branches, with the result that a merchant in the extreme east doing business with Quebec, Montreal, Toronto, Winnipeg or Vancouver may carry on his business operations without the least trouble. Goods may be purchased to-day, and the signing of a draft by the merchant two or three thousand miles away serves to carry out the business transaction.

I believe private ownership has a definite place in our social economy. I have taken that stand before, and I do not hesitate to repeat it to-day. True, so far as the chartered banks are concerned there has been a gradual lessening of note issue. This was brought about by the provisions of the legislation setting up the Bank of Canada, which provided for a

certain reduction each and every year. The result is a large drop in the note circulation of the chartered banks as compared with their circulation a few years ago.

These figures may serve to show the point I have in mind. In 1934 there were outstanding, belonging to the chartered banks, notes to the value of $135,537,793. In 1940 this amount had dropped to $91,134,378, and to-day, in 1943, it is down to $42,200,000. Perhaps in itself this is a good thing; but I contend that the facilities we enjoy under our present banking system—and I speak as a business man—are such as to give us the facilities and the necessary financial assistance to make possible the carrying on of our business, be it either large or small.

We are now discussing a measure having for its purpose the setting up of an industrial development bank. I am glad to note that practically every group in the house is in agreement with the general principle underlying its formation. So that there may be no misunderstanding as to my position may I point out at once that I am in favour of bringing such a bank into being. The only question in my mind is whether the term "bank" covers this type of institution as well as would the term "loan company." After all, the functions of this industrial bank will to a large extent be those of advancing loans. I am pleased to note that this institution will take care of loans such as would not be handled by the private banks. I have in mind those long-term borrowings which will be required to re-establish and reconvert plants to peace-time industries. I believe it is most necessary that we have an institution of this kind, and I am glad the government has taken steps to bring about its formation.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. ISNOR: Mr. Speaker, before the house rose at six o'clock I was discussing Bill No. 7, an act to incorporate the industrial development bank, and I had outlined Canada's banking system from the early days when a bank was first established in Halifax 132 years ago down through the years and referred to the facilities that were afforded by the eleven private banking institutions existing in Canada to-day, mentioning particularly the facilities extended by the bank branches extending from the Atlantic to the Pacific. I stated that I felt there was a definite place in our economic system for the private bank. I also stated and I feel that there is a definite place in our commercial life for a bank such as is proposed by this bill which has been introduced and explained in such an able manner by the parliamentary assistant to the Minister of Finance (Mr. Abbott). He outlined the bill in such a way as to make it clear to us all what facilities would be provided through the medium of this bank in our post-war development. He pointed out that on account of the reconversion of a large number of the present war plants to peace-time activity a bank such as this would be necessary because under our present banking system long-term loans are not made by the private banks today. He also outlined the objects of the bill, with which I shall deal in discussing the bill in a more detailed way and he stated what he felt were objects of a worth-while nature.

When I was dealing with the issue of bank notes, I mentioned that there had been a gradual reduction in the amount and number of bank notes in circulation after the establishment of the Bank of Canada, the reduction being from something like $135,000,000 to $42,000,000 at the present time.

I should like to point out in connection with our banking system extending over a period of 132 years, particularly to those members who sometimes question whether private enterprise has served this country properly, that during the past sixty years not a single dollar has been lost to any banknote holder in the dominion. That is an interesting fact which speaks well for the integrity of the banks and the experience of the men at their heads and the manner in which they have carried on this important branch of our financial and commercial life.

One feature of a bank's activities that we are apt sometimes to overlook is the great part which the banks have played in Canada's war effort. I do not know just what we would have done in Canada if we had not had a banking system such as we have extending from the Atlantic to the Pacific and serving every little hamlet and every district in our vast domain. The banks have played a very important part particularly in the victory loan campaigns, when they have placed their whole organization at the disposal of the Canadian government to serve the public in the best possible manner. The banks have taken orders for victory bonds, given information and advice to their customers as to the manner in which they should subscribe, and also have assisted them from time to time in financing their loans. Because of the experience and resources and organization of these banks I believe that thousands and thousands of people in this country invested in the

recent victory loan who would not otherwise have bought victory bonds, and in that way the banks have helped the war effort. They have also played an important part in selling war savings certificates, as well as in the larger effort of selling victory loan bonds.

The banks have also established branches in a large number of the camps throughout this country, thus making it possible for men in the armed forces to enjoy the same banking facilities that would be open to them in civilian life in the cities and towns. Many members of the armed services were thus able to purchase victory bonds.

From a commercial and business point of view the banks are also doing a great service. It does not matter whether one is in business in a large or small way. Once he has established his business connection he can go to the bank and arrange, after a purchase of goods, to accept a draft in payment of the goods with the least possible trouble. I do not know just what our commercial progress would have been had we not had at our disposal the banking facilities provided by the eleven private banks throughout Canada.

I stated and I wish to repeat that I am in favour of a banking system such as we have in Canada. I feel that it has served our commercial economy in a very, very satisfactory manner. I also feel that the Bank of Canada, established as it was not as a private bank but rather to regulate the activities of the chartered banks, has done excellent service. I also believe that the proposed industrial development bank or loan company, if you wish to call it that, will perform a very useful service in the post-war period.

I do not wish to discuss details, because we are now discussing the general principle of the bill and the details can be considered when the bill is taken up in committee clause by clause. I must say, however, that the objects of the bill as outlined by the parliamentary assistant to the Minister of Finance should in my opinion not only include loans for the purpose of building ships but, as was suggested by the hon. member for Queens-Lunenburg (Mr. Kinley), also provide means for their operation. I have particularly in mind, as no doubt the hon. member for Queens-Lunenburg had, the fishing fleets and the larger type of ship that operates on the Atlantic coast. Just as we provide funds for the carrying on of agricultural operations, I believe that funds should be made available by this new bank to assist the fishing industry to carry on its operations on both east and west coasts, thereby adding to the wealth of our dominion.

[Mr. Isnor.]

Dealing more particularly with the bill, I observe that the objective underlying the setting up of the bank is to make credit available to industrial enterprises, which means a business carrying on the manufacture, processing or refrigeration of any goods, wares and merchandise, or the building of ships or vessels, or the generating or distributing of electricity. That is a fairly wide scope, but I would commend to the thought of the parliamentary assistant that he should enlarge it so as to take care of the fishing industry.

I am in accord with the hon. member for Springfield (Mr. Turner) who, speaking before six o'clock, questioned the adequacy of the amount. The provisions of the bill call for a capitalization of $25,000,000, of which $10,000,000 is to be paid up, and three times the amount of $25,000,000 to be issued in the way of bonds, which would place at the disposal of the bank, if the capital is fully subscribed, something like $100,000,000. I am just a little concerned as to whether this bill will be sufficient to meet the requirements of our post-war era, because it has been stated time and time again that the purpose of the government is to ensure the provision of employment for all. It may be that $100,000,000 will be too small an amount, and I question whether it is wise to limit it to the figure mentioned in the bill.

There is another feature to which reference has been made by at least one other speaker; and although it may be regarded as a matter of detail to be considered by the committee, it is open to criticism whether, by there not being provided a ceiling or limit to loans, the full amount might not be taken up by fifty or one hundred large manufacturers, and thus many others who would like to take advantage of the provision would find that the amount provided for had already been taken up. I suggest that hon. members should consider that question when the bill reaches the committee stage.

There is one feature which I would draw to the particular attention of an hon. member who spoke the other evening. He said that the facilities provided in this bill are also provided by private banking institutions and that they can make long-term borrowings. I think it is definitely stated in the Bank Act that loans shall be of a liquid nature, and that no loan shall be made on real estate. I am pleased to note that in this measure, apart from long-term borrowings or loans, there is a definite provision for borrowing on real estate.

I recall the experience about twenty years ago of a young business man in Halifax, and I commend it to the notice of some hon. members who are continually talking against private enterprise and advocating public ownership—which, if there were only one bank, would be a monopoly in the truest sense. This young business man had beeen engaged in business in a certain building in Halifax. He found that the executors of the estate wished to dispose of that property, and a man came from Boston for the purpose of selling the building. Our business man heard about it and interviewed the representative of the executors. He procured a forty-eight hour option, and his next worry was as to where he was to get the money to purchase the building. He felt that, having learned the business and having earned, as he thought, the right to stay there, he should make every effort to maintain his stand in that particular section of the city. It was on a Friday, after banking hours, that he called on his banker and made a request for a certain amount of money. That particular bank manager could not see his way clear to advance the necessary funds. What did the young man do? He was a little disappointed for a few moments, until he realized that there were other banks which could be approached. The following morning he turned his attention to another banking institution and the necessary funds were made available from that source. Therefore I say that, with our eleven separate private banking institutions operating throughout Canada, any person who can present a good claim and has a clear background can obtain the assistance which will enable him, provided he has the ability, to make a success of his business. I contend that those who advocate doing away with our present banking system and embarking on a wholly publicly owned policy would do well to reflect upon the splendid record of our private banking institutions, which have carried on over the last 132 years.

Other features of this bill, Mr. Speaker, I should like to mention in passing. I have referred to long-term loans, which we do not have an opportunity to enjoy under our present system. I have referred to the amount of capital; I have mentioned the matter of the building of ships. I believe I have covered the main purposes of this measure. I believe in the principle as outlined in the bill, and that it will certainly help Canada to bring into effect post-war activities which should take care of the employment problem to a very large extent.

In closing, let me reiterate that I agree with those who favour a banking system such as we have to-day. I agree that there is a place for public ownership. But I am satisfied that, as we have competition between the Canadian National Railways and the Canadian Pacific Railway Company, between the privately-owned radio stations and the publicly-owned radio system, so we must have competition between the private banks and the public banks if we are to have that keen rivalry which makes for the maximum of efficiency.

Mr. J. R. MacNICOL (Davenport): Mr. Speaker, I can heartily endorse what the hon. member (Mr. Isnor) who has just taken his seat has said about the Canadian banking system. He paid it a well-deserved tribute. Our money is perfectly safe in the hands of the present banks throughout Canada. I endorse also what he said as he resumed his seat, that this proposed bank, if it carries out what I interpret from the bill to be its purpose, will to a large extent act as a competitor of the present banking system.

I am not on the banking and commerce committee, but if I were I would feel grateful to most, I should say all, of the members who have participated in this debate. I do not endorse what all of them have said, but I endorse a great deal, and so far as that which I do not endorse is concerned, if I were a member of the committee it would be like a watch-dog.

Most hon. members who have spoken have proceeded along two or three different lines. Some have made the burden of their remarks the fact, as they say, that the establishment of the bank would result in decentralization. I am afraid very few understand what decentralization would mean in business. For instance, how could you decentralize the steel company in Sydney, Nova Scotia? I do not think it could be done. When big manufacturing concerns are established they take into consideration all the factors—where the raw product comes from, where power is to be obtained, the market, and so on—and then they decide, with all these factors before them, exactly where to set up their business. I do not believe it would be possible to decentralize the Ontario hydro electric commission, because they produce vast quantities of power where a vast volume of water is obtainable. There are perhaps businesses that could be decentralized, but most folks talking about decentralization either have not had much experience in business or do not fully appreciate the ramifications of the term.

I am going to direct most of my remarks to the second section entitled "interpretation", and specifically, indeed almost wholly, to the words "generating or distributing of electricity is carried on". Much has been said in this

debate about starting business, and I believe that if the bank is properly operated it can serve a purpose in setting business in motion. However, one fundamental that lies at the bottom of any manufacturing business is power; so that in starting up businesses throughout the country I hope—at any rate I am going to interpret the measure in such a way as to warrant the hope—that this bank will permit of assistance to provincial governments or to private power companies to enable them to produce power on a large scale. If this is done throughout the country new businesses can be set up, and there should be thousands of them when the war is over, so that those who wish to invest money, including the bank itself, will at least have the fundamental, which is cheap power, to start with.

I am glad to say that in Ontario our great hydro electric power commission, of which we in this province are all proud, and to which the province owes in largest measure its great industrial development, is ready to take advantage of any business being offered where power is required.

Most hon. members know that not so long ago, last summer I believe it was, the DeCew falls power plant was opened in the Niagara peninsula. I do not know what would have happened to a great number of businesses had that power plant not been put in operation. If this bank does not provide for the production of power under this clause, then it will lose much of its possible use from my point of view. I repeat, I do not know what would have happened had it not been for the DeCew power plant.

What has happened recently in northwestern Ontario? An iron mine is to be put in operation. There was a power plant not far from the mine, on a river that had to be diverted. The water had to be allowed to go from its reservoir. I believe the plant was generating 10,000 horse-power. It belonged to the Ontario and Minnesota Pulp and Paper Company, which was a power-producing concern also. Fortunately the Ontario hydro electric commission was able to purchase the immediate power rights of the concern by being able to deliver 10,000 horse-power to the said company by merely installing one more generator on the Nipigon river at Alexander Falls.

I should like to see other provinces placed in the same position. I am one of those who believe that the more business there is in a province, the more manufacturing companies that are set up in that province, the better it will be for all the other provinces. I cannot for a moment subscribe to the assertion that by advocating, as I do, the production of power in other provinces and the introduction of more business in those provinces, this will take business away from Ontario. I believe that, on the contrary, it would greatly increase the business activities of Ontario. I want to be in a position, therefore, to help other provinces to get on their feet, as in these two instances I have mentioned.

The Ontario hydro electric commission at the moment is developing, from its own plants, 1,630,000 horse-power. That is a large volume of power to be developed by a power commission belonging to a province. It buys another 910,000 horse-power. It has, therefore, under its control a total of 2,540,000 horse-power, so that it is in a position to take advantage of the supply of power to companies wishing to start up if the bank will advance the money. Outside Quebec, what other province is in that position? Quebec has a great deal of power which is produced cheaply. I should like to see the maritime provinces enabled to deliver power in large blocks and cheaply, and if the province of New Brunswick, for example, is not able to do this from its power plant on the St. John river at Grand Falls, I should like to know why it is not. Perhaps this bank might come to the rescue of whoever controls that power plant at Grand Falls by bringing about some agreement with our cousins to the south so that the head waters of the St. John river could be stored in reservoirs to provide a large source of power. If that were done New Brunswick would have more cheap power and on a larger scale, and many industries could be started in that province. So far as the Petitcodiac power potentiality is concerned, I do not know what development could take place there. That is a tidal proposal which has been mentioned for many years. I do not know of any tidal electric power plant of any magnitude anywhere. I believe there is a small one in Nova Scotia, but what I am thinking of is a large plant that could deliver large volumes of power, and if Petitcodiac can be developed, so much the better.

Those who have been observing the advertisements of the Ontario hydro electric commission will know that they are right up to the minute in preparations for delivering vast volumes of cheap power and circulating it throughout the province. They have at present 120,000 users in rural communities, of whom 65,000 are farmers. That places the farmers in a position to enter into many little industries in the rural areas to make material they could sell. Why should not every other province be placed in the same position with regard to cheap power? I con-

tend they should be. This bank may enable them or their power commissions to get into that position. I hope it will. They will then be in a position to start thousands and thousands of businesses, which they could not start in any other way; because anybody entering into a business wants to know, first, the cost of power; second, where are the raw products; third, where are the markets and fourth, where can the operators be obtained to work the plants, big or small? Ontario is in that position. The Ontario hydro electric power commission is in a position to deliver any amount of power to thousands of small businesses which I hope will start up as a result, not particularly of the amount of money mentioned in this bill, because I take that only as a start. If $100,000,000 can be voted this year there is no reason why the bank could not expand and be voted another $100,000,000 next year, and continue in that way from one year to another. After all, $100,000,000 will not go very far in thousands of industries. We have to be in a position to have thousands of industries to take care of our great heroes when they come back from overseas.

The Ontario hydro electric power commission has cut down the price of power delivered to the farmers until to-day a farmer can buy 420 kilowatt hours in three months for $10.68. In some of the small communities many people will be able to operate a one-eighth horse-power motor, or a one-quarter horse-power motor, or a one-half horse-power motor and make many things and be monarchs of all they survey. There are dozens of people, with many of whom I am acquainted, who make things and sell many small products to the big stores and others throughout Canada. There is no reason why we should not have thousands of new industries established throughout the country, but we must first have cheap power. Ontario is in a position to increase its power production very rapidly to a very large volume. It could increase it another million. There is a plant about to be established on the Ottawa river, not far from here—the name has slipped my mind for the moment—where they are making preparations to produce another 400,000 horse-power. At many other points Ontario is in a position to do that. That is in addition to the proposed development of 1,000,000 horse-power on the St. Lawrence waterways. I hope that is carried through. It will mean that 1,000,000 horse-power in the international section of the St. Lawrence is developed for us and 1,000,000 horse-power for the United States; I am glad to see that the President of the United States is moving in that direction. When that is done everything will be electrified and electricity will come into its own as never before. I am convinced it will provide hundreds of thousands of jobs. There is nothing like it.

I wish to say a word about our western provinces. I have a very warm feeling for the western provinces. I want to see them get on their feet in the power production field. The province of Manitoba uses at the present time about 395,000 horse-power and has a surplus of 25,700 horse-power. As I said a few moments ago, under the hydro electric power commission Ontario is producing and buying 2,540,000 horse-power. Manitoba has only a small part of what we produce here, but they can have a lot more power in Manitoba. They can produce it cheaply. I hope this bank will be so organized that if the Manitoba hydro power commission wishes to get some of this money to create more cheap power it will be able to get it. In any event, if it does, the bank's money will be safe.

To-day Manitoba has a surplus of about 25,700 horse-power; that is a total of 420,700 horse-power. That surplus would not much more than serve the little plant which was recently started in northwest Ontario. It would supply sufficient power for such iron mines and so forth. If Manitoba were called upon to supply 30,000 horse-power to develop more mines—and they have lots of mineral resources to start with—they would require more power. They have ample opportunity to generate it. There is a splendid falls in the northern part of your province, Mr. Speaker, on the Nelson river. It is called White Mud falls and is down river east of lake Winnipeg where the river drops about thirty-five feet, and where the volume is about 35,000 cubic feet per second. It could be easily harnessed. There would be no difficulty in developing a power plant there. The minimum capacity of that plant would be over 100,000 horse-power. The maximum would be two or three times that. If the level of lake Winnipeg were raised by a dam on the Nelson river it would be still more. If a power plant were established there it would in time open up scores and scores of industries in that part of Manitoba which is overflowing with natural resources. These resources are waiting for cheap power.

If this bank can advance money to the Manitoba power commission under this clause to make more power and cheaper power available, it would be a fine thing for Manitoba, would it not? That province is now proposing to go into the electrification of farms. I hope it does. I have recently read that the government of Manitoba proposes within a period of —I am not sure how long the programme is—

ten years to electrify 30,000 farms. The Ontario power comission has a programme in mind to spend $6,000,000 for the further extension of power in this province. That will result immediately in orders to the electric equipment companies in Ontario and elsewhere up to the amount of $4,000,000. That will mean a lot of employment in electric manufacturing plants in Ontario, apart from the provision of cheap light and power to farms for grinding their fodder, and it will increase the possibility of enlarging the stock population and so forth. If this bank can do for Manitoba what we have been able to do in Ontario, so much the better for Ontario as well as for Manitoba, because every additional thousand dollars made in Manitoba means more business for Canada from Victoria to Halifax.

I wish to say a word or two about Saskatchewan. This is one province that certainly deserves the help and support of this bank, and I now have in mind what was said by two or three speakers who preceded me about the industrialization of Saskatchewan. There are two or three things that can encourage industrialization in that province. Saskatchewan should be industrialized; but what chance has that fine city of Regina and that fine city of Moose Jaw to secure their due of industries? If you ask me why, I shall say the lack of water. There are scores of fine industries that would like to start in those cities, but they cannot start because there is no water for industries requiring large quantities of water. They have hardly enough there to supply their domestic needs, quite apart from the vast quantities that are used in many industries. I shall not take the time of the house to name industries. Perhaps the hon. members know them. But there are many of them. I hope this bank will come forward and help the province of Saskatchewan and help the cities on the plains to get water. If the bank can help provide water for them and at the same time provide power, they will revolutionize the whole centre of that province.

Mr. McNIVEN: I wonder if the hon. member for Davenport would permit me. I appreciate very much everything he has said and done for the province of Saskatchewan, but I must point out to him that over a period of some thirty-five years the city of Regina has never been short of water. We have been short of other things, but not water.

Mr. MacNICOL: I thank my hon. friend for his interjection, but all I can tell him is that if he bases his interjection on what I was saying about water for water-requiring industries, then he does not know what he is talking about. The same applies to Moose Jaw. If anyone says they have enough water in Moose Jaw to take care of a large number of industries that might go in there and require water, he would not know what he was talking about. I am sorry to say that to my hon. friend because before I came down to the chamber tonight, I read a statement made by one of the great power men in Saskatchewan, intimating this very thing, the lack of water in both Regina and Moose Jaw—in large quantities, I mean, for manufacturing. Why, Mr. Speaker, what was the hon. gentleman talking about? If he knows the water requirements at Moose Jaw he knows that the total average volume may reach as high as 1,500,000 gallons a day, for a city of 26,000.

Mr. McNIVEN: I was speaking of my own city of Regina.

Mr. MacNICOL: Let me finish; I can see that the hon. gentleman does not know anything about it, and I am too fond of him to expose him. I do not rise in my place to talk about things on which I am not thoroughly posted, particularly when it comes to water and electricity. I hope that when this bank is organized it will come to the rescue of both those cities and provide water in large quantities, not only for domestic purposes, about which my hon. friend may be talking, but for scores of factories, which require almost as much water as a city requires for domestic use. Saskatchewan can have power; it can get it in large volume in three places, and I hope this bank will rally to the support of the Saskatchewan power commission. Only to-day I had a letter from that commission, and I can tell my hon. friend that the total production in Saskatchewan at the present time is 125,000 horse-power. I am sure he will not rise in his place and say that is what it should be. I should like to see it a million and a quarter horse-power and some day, if I have my way, Saskatchewan will have that much, because it can be produced at many places. It can be produced at Fort a la Corne, on the Saskatchewan river, where I spent a good deal of time surveying, going down to the river over a very steep and difficult way. When I am on a survey I let nothing block me, so that when I come back I know what I am talking about. I am not so sure about the power that can be produced on the south branch, near Saskatchewan Landing; I am not sure that the foundations have been found there, though they have been found at Fort a la Corne. If they can be found near Saskatchewan Landing they will have a large volume of hydro-electric power at the northern end of the province, a large volume at the southern

end, and they can have a good deal of power developed at Estevan. Therefore I do not see why this bank would not rally to the support of whoever produces power at Estevan, where they are getting about 10,000 horse-power private and public to-day but where they should be getting 50,000 horse-power, so that the farmers of Saskatchewan could have electric power also. Only 140 farmers in that whole province receive electricity from the power commission to-day. Of course many farmers have Delco plants, but no Delco plant can produce power as cheaply as hydro-electric power can be produced.

I am glad the Minister of Agriculture (Mr. Gardiner) is in his seat, because I know he has a warm feeling for Saskatchewan. If the time comes when this government decides to aid the western provinces, particularly Saskatchewan, in producing power, I hope they will absorb the cost of the lines required to connect up the present power plants at Moose Jaw, Regina, Prince Albert, Saskatoon, Estevan and Battleford. The production at Regina to-day is 40,000 kilowatt hours; if that is divided by ·746, it gives 53,000 horse-power, and that is the maximum for that city. Moose Jaw has about 20,000 kilowatt hours; Saskatoon has about the same. The fine city of Prince Albert, where the hon. member for Lake Centre (Mr. Diefenbaker) resides, has 5,000 horse-power, while Battleford and Estevan each have 3,500 horse-power. All these systems should be connected. To-day in Ontario the hydro electric commission is eliminating costs all the time because it wants to encourage a vast increase in manufacturing in this province. Although the cost of power is low to-day, before they finish what they are doing it may be a good deal lower, and the other provinces should have the same opportunity.

As far as Alberta is concerned, I hope this bank will lend its assistance to such projects as the irrigation scheme of the Canada Land and Irrigation company. If they could be lent, say $4,000,000—and it need not be given to them in one year, because they might not be able to do all the work in one year—distributed over two or three or four years, we would be doing a great service to eastern Alberta, because that would bring irrigation right up to the suburbs of Medicine Hat. These are some of the things for which I believe this bank could be used. These enterprises cannot get money to-day, and of course I am not blaming the ordinary banks for that, because they have your money and mine in their vaults and they are not permitted just to hand out large sums here, there and everywhere. That can be done by this proposed bank, however; that is its purpose, to develop business; and if the Canada Land and Irrigation Company could be lent $4,000,000, in the long run it would not cost the country anything; you would get your money back again, and in the meantime you would do a great service. As to British Columbia, they have a great volume of electric power out there, or could have it. There are falls in that province which can be harnessed easily to produce a large quantity of cheap horse-power. If they did that perhaps they would be able to develop iron mines, just as Ontario is doing at Steep Rock, in the northwestern part of the province.

Here is the way I feel about this bank. I am not arguing as to whether it has or has not value; I am accepting it in good faith that the government's intentions are to give the bank power to assist in the creation of many new industries. If that is one of its purposes my support will not have been in vain . I believe we shall have to do something, because even in the midst of war every other country is preparing for the peace. Even the Japanese are beginning to get ready to capture the markets they have lost. I remember very well what they did in England before the present war began, because I made a careful survey there to find out how they had been able to build up so many thousands of small enterprises all over the country. Outside London at a place call Slough, I think it was called, they had over five hundred new industries; northeast of London they had another five hundred, and southeast of London another five hundred more or less. Then outside Manchester they built up another great industrial area. How was it done? By insisting that the material exported to the continent under their trade agreements with European countries should have at least fifty per cent British content and by cheapening power. One result was that many small plants had to move from Canada to England. I visited quite a number of those plants myself; many of them began in a very small way, but by the time war broke out some of those little factories had grown to quite a size. One small firm in my own riding, making valves, went over there first with a staff of fifteen, but when I saw them they had a staff of about 250. That is what we must do in Canada; we must use all our ingenuity to build business and give men jobs. If we do so, there will not be any depression after the war, and the people of Saskatchewan, Alberta and Manitoba will be in an infinitely better position than they are in to-day if they can get chceap power, and small industry to develop their own products. At the present time they must ship their goods in order to have them pro-

cessed. Many of those goods could be processed out there, and freight would be saved on the finished products, with the result that they would cost less.

What would be the result? It would be as it should be, namely that articles would be available at much lower cost. I was in business, and the objective at all times was to produce the best materials at the lowest possible price. We tried always to turn out the finest grade of material at the lowest cost. Only in that way was a huge plant built up, a plant growing from only a few men to many hundreds of men. I know of no other way of building a business. Make a good product and make it as cheaply as you can. If we can do that in Canada after the war with the help of this bank and the other financial institutions and our own standard banks—because I will not go back on them; they have given yeoman service all through the years, without loss of money to our people—what will be the result? Men will be working everywhere. Women will be working everywhere. Homes will have electric washing machines, electric radios, electric irons, electric this and electric that, and there will be jobs all along the line.

Why should the people not have these appliances? Why should they not have the use of electric equipment? Why should only 140 farmers in Saskatchewan have the advantage of electric power? In Ontario there are 65,000 who have that advantage, and another number of thousands who are about ready to receive this advantage from the hydro electric power commission.

If this bank does anything to supplement the work of the standard banks in the creation of a large number of industries, by assisting wherever necessary in the production of cheap power, it will have done a fine job and will be worthy of the support it is receiving generally throughout the house.

Mr. LIONEL BERTRAND (Terrebonne): Mr. Speaker, I will make only a few remarks concerning this bill. As the representative of a constituency which will have to face many problems after the war, I cannot permit this occasion to go by without stating that I approve the principle of this industrial development bank.

The county of Terrebonne is one of the most industrialized rural counties of the province of Quebec. There are at least twenty very important industries whose products are sold not only in this country, but also on foreign markets. As many factories manufacture for local or national needs. Furthermore, the plants of Defence Industries Limited, at Bouchard, are located within the limits of my county.

When the war is over, these war factories must be transformed into peace factories. These war plants may be handed over to powerful organizations which will dispose of capital sufficient to assure their transformation. If these companies, however, in order to balance their production, need additional capital, the industrial development bank will be in a position to help them. It is also quite possible that a plant like that at Bouchard, the proportions of which are immense and which has on its property an immense system of roads, railways, aqueducts and sewers, and even a fire protection service, may be granted by sections to a series of small or medium industries which would form, with a common pool of commodities, an altogether ideal manufacturing centre. In such event, the industrial development bank, which will have $100,000,000 at its disposal, will be very useful to give industrial concerns, whether new or previously existing, additional funds for their expansion.

A number of small and medium industries, actually in operation in Canada, will have to face post-war problems. Most of them, the normal production of which was curtailed by the war and its restrictions, will have to re-establish, after the war, a standard of production which was quite upset. Owing to a fairly extended period of slow production; owing to the enormous taxes which they have paid and to overhead costs which are not recovered through adequate revenues; owing also to the fact that they must buy more modern machinery, many firms will be obliged to contract loans extending over rather long periods of time. If the government also favours small concerns, it will be well. In our country, the smaller industry plays a part which one cannot neglect. During the depression, the towns which had small varied industries were in a position to pass through this period with greater ease than those which had but one or two large concerns. This does not mean that we have to neglect the larger firms in their legitimate requirements, but it is befitting that special care be taken of the smaller industries. They are a vital element in our economic life, first, owing to the employment which they afford and, second, owing to the aid they give to general production.

I appreciate the cooperation given to industry by the chartered banks, but their loans are usually granted only on short terms. The industrial development bank will grant long-term loans, and this will be a new and profit-

able accommodation for industry. But the industrial development bank does not take the place of the chartered banks. The latter will also be able to grant loans. This bank simply completes the activities of our banking institutions and does not harm them. The loans which it will grant to concerns offering sound guarantees will be intended to develop industry. When industry is successful there is work, and work ensures the success of the labouring class. A bill which makes $100,000,000 available to help industry to recuperate, to help smaller industry to make better progress after the war period which undoubtedly will have dealt it rough blows, to transform war industries into peace plants and to give financial help to the companies concerned is one which embodies an interesting innovation. I should have liked it to include agriculture also, which lies at the very basis of our general economy. I should have also liked it to include a plan whereby ownership would have been rendered easier for the labourer. It was stated that the government has additional measures in these two domains, and I am quite glad of that. For the moment the question relates to a measure intended to increase the level of production, which also means an assurance to labour. I am in favour of the bill, since its object is to help the labouring classes by securing work for them, and since it also intends to foster private enterprise. Too much will never be done in this respect. Nationalization would be disastrous for the country, and furthermore, for the worker. Private enterprise is the foundation-stone of all true democracy. It is the duty of Canada to sustain it

Mr. J. A. ROSS (Souris): Mr. Speaker, I desire to offer a few observations on this bill to establish the proposed industrial development bank. May I first refer to the preamble, which says:

> Whereas it is desirable to establish an industrial development bank to promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprise which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprise.

As I go through the definitions I can find none that defines what may constitute a small enterprise. Nor is there any limit set on individual loans. I wonder if the real thought in setting up this proposed bank may not be to transfer existing government-owned plants to corporations as the war ends. If that is the case, I do not believe that it will meet with the wishes of the great majority of the citizens of Canada. According to the "Canada Year Book" for 1940, in the year 1938 just before the war, in the two provinces of Ontario and Quebec were centred eighty per cent of the industries of the dominion. There was invested in manufacturing industry in these two provinces some $2,096,000,000. We are told that this was due to geography, the proximity of Canada to the United States, and such like reasons. In British Columbia there was 6·8 per cent of the industry of Canada; in Manitoba, 3·9 per cent; in the provinces of New Brunswick, Nova Scotia, Prince Edward Island, Saskatchewan and Alberta, there was less than nine per cent of all the industry of the whole dominion; and the maritime provinces had less than four per cent of the industry of the whole dominion. This situation has been greatly aggravated during these years of war by governmental action.

(And Mrs. Casselman having taken the Chair as Acting Speaker:)

May I be the first, Madame Speaker, to congratulate you on the distinction of being the first lady to occupy the Speaker's chair during the debates of this house.

In Canada we had in 1938 approximately a five billion dollar production, and in 1943 that had risen to approximately ten billion dollars. In other words, our production has been doubled during these war years. These facts should have a great bearing on the livelihood of our people at the present time. Many hundreds of millions of dollars have been advanced during the war to assist great industries. I think that over $1,700,000,000 has been advanced for industrial expansion alone, the very great bulk of it in the two central provinces, and this at a time when small industries have been gradually passing out of existence. It is interesting to note that in 1941, in comparison with 1940, small industries in every part of Canada received a lesser amount of the total business done by the nation as compared with the share of the larger industries. If I might be permitted to use some figures which my colleague the hon. member for Lake Centre (Mr. Diefenbaker) used the other day, in 1940 there were in Manitoba, out of a total number of 1,171 industries, 698 with production to a value of less than $25,000, and 130 with production valued at between $25,000 and $50,000. In Saskatchewan there were 814 industries, of which 592 produced under $25,000, and seventy-eight between $25,000 and $50,000. In Alberta there were 1,068 industries, of which 734 produced under $25,000, and 113 between $25,000 and $50,000. The over-all picture in Canada was that of 25,513 industries in 1940; in the first category there were 15,478, and in the second, 2,951.

I could quote many other figures along that line to emphasize the great disparity existing between our western and maritime provinces as compared with the industrial growth in the two central provinces. This trend has been going on all through the war years, and in my opinion this bill will not stop it.

The proposed legislation will not be of particular benefit to the small business man, nor will it enable the returned soldier to establish himself in business unless the type of business in which he may engage goes beyond the scope of this bill, which is limited to aiding industrial enterprises, the building of ships and the generating or distribution of electricity. I do not have to point out to members of this house that during these war years many operators of small businesses have been forced to close down, and I think they should be kept in mind when this bill is being discussed by the banking and commerce committee. The viewpoint of the United States with regard to small businesses and the recommendations that have been made there are, I think, of particular application to Canada. I quote:

> The broad back-bone of enterprise, that as production controls are relaxed particular care should be taken to protect the competitive positions of small business as far as practicable within the needs of the war. Cancellations of war contracts can be guided to permit the earliest releasing of small concerns which can convert back to peace-time production; also certain nuisance production controls involving only a limited amount of resources which press heavily on small concerns can be relaxed sooner than broader production controls.

The recommendations in the United States are:

> So far as war production is concerned the lending authorities should be restricted to the Smaller War Plants Corporation. For permanent risks which the banks cannot assume, the federal banking system should be given authority to make industrial loans.

The prairie provinces, and to a lesser degree the maritime provinces, have during the past four years been discriminated against or deliberately ignored in the development of war industry. There has been a tremendous exodus of people from the western provinces, many of whom I hope will desire to return.

This proposed legislation, if it is to be effective, must be made effective immediately. It must have teeth in it. When I view the situation in the three western provinces and the failure of the government to develop industry there during war time as it should have been, I fear for the future in the post-war period with respect to the use to which moneys will be placed by this corporation.

May I point out that in the three prairie provinces practically all of the flax seed in Canada is produced, some 17·6 million bushels out of a total production of 17·9 million bushels—practically all from the prairie provinces. Canada's sunflower seed crop is 17·9 million pounds, all of which is produced in the three prairie provinces. The oil cake derived therefrom as a by-product is required by the live stock producers of the prairie provinces both for their dairy cattle and for beef production. The greater part of the flax seed and other oil-producing seeds must now be shipped east for processing, and our producers pay transportation costs both ways, despite the difficult transportation problems which now prevail in this country.

The western provinces have not received consideration in the matter of the development of war plants during these years. In the last two years plants have been established at Hamilton and Toronto for the processing of oil seeds. I do not think I need remind hon. members that before anyone can establish a plant a permit must be procured from the federal authorities.

If our Canadian economy is to be built up on a basis of Canadian unity, there must be decentralization of industry. On many occasions I have raised in this chamber the question of grain alcohol and especially its use in these difficult times in the manufacture of synthetic rubber. Paul J. Kolochov, a Russian chemist, now chemical expert and technical counsellor to Joseph E. Seagram and Sons, of Louisville, Kentucky, has stated in the last few days that eighty per cent alcohol is now used in motors throughout Brazil. He also states that in this country there are great possibilities for the use of alcohol as a fuel for motors. Canada's most up-to-date synthetic rubber plant, at Sarnia, Ontario, has just been completed at a cost of some $48,000,000, and here petroleum products are used, despite the scarcity of these same products. Agricultural research will, I am convinced, develop many other possibilities in this line.

My colleague the hon. member for Davenport (Mr. MacNicol) spent much time in discussing the possibilities, not only in his native province of Ontario but throughout Canada, of the development of electrical power. While we realize how great that development has been in Ontario, I do not believe that either in respect of developing or the possibilities of developing power, we of the province of Manitoba on a per capita basis need to take second place even to the great province of Ontario. Manitoba has abundance of electrical power and power possibilities, the cheapest in North America to-day, and adjacent to raw materials. We have always been told in the past that industry must be

developed close to cheap power and raw materials, and assuming that to be true, I would point out that these are just what we have in Manitoba. The organization and development of industry on the prairies, and especially in Manitoba, in pursuance of the aims of this bill, would save a great deal in transportation costs and avoid many of the difficulties we are experiencing to-day, with relief and benefit to Canadian taxpayers in general. Canadian industry should and must be decentralized if we are to make Canada what it is capable of becoming.

I was pleased to hear from the parliamentary assistant to the minister that a little later a bill is to be introduced to provide for an agricultural bank. I am surprised that such a measure has not been presented to the house before the industrial bill, because I do not need to remind anyone of the difficulties which agriculturists have been through of recent years, and which many of them are still experiencing as a result of the controls imposed for the war effort. I believe it will be generally agreed that western farmers have had to pay too high rates of interest, running from seven to nine per cent. Because of the difficulties with which they have had to contend they have not been able to pay interest, let alone principal, and have undergone, in many cases, a meagre existence. It is important that when this bank is set up they should have the right to rediscount their present obligations. I trust this bank will receive funds, as do the chartered banks to-day, at approximately one and one-half per cent. Assuming they can do business for another one and one-half or two per cent, it should be possible for many farmers to have their obligations rewritten at a reduced rate, say three and one-half per cent, which I think is the rate provided for in the soldier settlement land scheme. That would mean a great deal to the agricultural producers of this country. The vast majority of them still need funds at a low rate of interest in order to procure farm implements. There is a tremendous backlog in this respect. Farm buildings are in a very bad state of repair. Also, farmers should be able to raise funds at a low rate of interest in order to build up a much better type of live stock than many of them have to-day.

I shall have much more to say on this matter when the measure dealing with agriculture is presented to the house. I trust there will also be a bill for better housing in Canada.

I hope that ex-service men and others will be assisted under this industrial development bank bill, and that it will not be made a means of further centralizing industry. As I have already pointed out, it should not be a means of turning over present government-owned agencies to private individuals or corporations. To do so will not meet the requirements of this country, and the bill should not be so used.

Mr. V. J. POTTIER (Shelburne-Yarmouth-Clare): I wish to say a few words, because there is one thing in this bill which above all pleases me and in my opinion meets a growing demand; that is the purpose, expressed in the preamble, to promote industry "by providing capital assistance to industry with particular consideration to the financing problems of small enterprises." Those two words, "small enterprises," are being heard more and more, perhaps too late, but it seems to me that if the struggle is continued it will result in benefiting this type of industry.

We have seen in Canada, unfortunately, of late, perhaps going back a decade or more, a centralization of industry brought about by attempts to freeze out small industry by large industry, also by large industries establishing themselves in the more populated centres. This has had the effect of centralizing industry in two ways. From the provincial point of view we find industry centralizing in the capital cities or the larger populated centres, the pull being in that direction; while from the dominion point of view we find industry being centralized—whether hon. members from the central provinces like it or not—more and more in the two provinces of Quebec and Ontario. At the same time industry has moved from the parts of the country remote from that area. It may be said that we have to expect that sort of thing, that geography comes into the picture, that transportation facilities bring that about, that cheap power is responsible for such a situation. That may be so, but another feature that must be considered is the credit that goes with centralization, the credit that is brought about by large organizations, interlocking directorates, the fact that they can obtain money and credit to develop their own industries. This tends to further centralization and a further enlarging of the big centres, while small industries have not that opportunity.

This is not the first occasion on which I have discussed the difficulties with which we are faced in the maritime provinces. In March and April, 1941, in connection with the shipbuilding industry, I indicated that we could obtain, and in fact had orders for our shipbuilding concerns, or for some of them at any rate, but that the credit was not available to enable them to proceed. Let me refer to some remarks I made on March 10, 1941,

when I pointed out that we could not build ships because we had not the credit to finance the undertaking. I quote:

> It is not a ship beyond their powers of construction of which they do not have the necessary mechanics or material.

The hon. member for York-Sunbury (Mr. Hanson) then observed:

> It was beyond their financial capacity.

I replied:

> Yes; the financial capacity was lacking.

Then I went on to show that they could not carry out the orders because they did not have the credit or finance. I repeated the same thing again in April in connection with the same industry. I refer to that as one of the developments which have taken place as the years have gone by, whereby orders could be obtained if we had the necessary finances to carry them out. The idea of helping small industries is an excellent one. I trust it will result in the establishment of such industries, because, if it does not, as far as I am concerned this bill will be meaningless; it will be of no assistance.

I hope that in some of the sections of the bill provision will be made for the fishing industry so as to bring that calling within the meaning of the words "industrial enterprise". I trust that when the bill goes before the committee this point will be made quite clear. One of the things I am afraid about in this bill is that if it does help small industry it will result in the further centralization of such industry in the larger centres. When the bill goes before the committee I hope this point will be given due consideration.

With a view to preventing the centralization of small industries in the two central provinces—because there is danger of that, seeing that our financial institutions to-day are so centralized, their head offices and larger branches being in those provinces—I suggest that if we are not careful this bank will become centralized and further small industries will be taken away from the maritime provinces and the western provinces as well. Therefore, to meet that situation, I suggest that consideration be given to the allotment of certain credits by areas. I believe that should be indicated in one way or another. Besides that, I suggest that administration be by regions and not from central headquarters as by the directors of the Bank of Canada at the present time.

If these points are not very carefully watched; if we do not approach the subject from the angle of regional allotments and regional administration, centralization will continue to the detriment of those areas of Canada lying on the outskirts of the two large provinces I have mentioned. In order to check that trend, there are certain considerations to be noted. There are energies that can be used to the advantage of the Canadian people. I am not suggesting that in some cases centralization is not necessary for the large industries. There are places for centralization, just as there are places for decentralization where the energy and the qualifications of individual effort can be made use of. That can be taken advantage of by a proper use of the provisions of this bill. If we take care of our small industries; if we encourage individual effort; if we promote small enterprise working in cooperation, in the country districts, with the small farmers, these two types of individual that go to make a healthy country, we shall bring about a new spirit and a new hope, and the people outside the large cities will find a new life and the Dominion of Canada will benefit thereby.

Mr. CLARENCE GILLIS (Cape Breton South): I have listened patiently for several days to this discussion. I had no desire to take part in it, and had someone else expressed my opinion I would not now be taking up the time of the house. However, I regard the measure which is at present before the house as one of the most important that will be discussed at this session. I realize that this bill, when it has been thoroughly discussed in this house, will go to the banking and commerce committee, and after carefully listening to the debate that has taken place so far I believe that the one man who in my opinion understands banking and the functions of money—I refer to the hon. member for Vancouver-Burrard (Mr. McGeer)—sounded a timely word of warning to the members of the house with regard to the job that this bank has to do and the shortcomings of the bill in its present form.

I will endeavour to provoke the thoughts of the banking and commerce committee along lines other than those I have heard discussed so far. A good deal of time has been taken up on this bill in criticism of what this group stands for, and so forth and so on. That has no relation to the particular measure, but I would say that when our hon. friends all around us hurl the kind of stuff that has been thrown over here during the last several days, it is a complete indication of the fact that they fail to recognize the seriousness and the responsibility of parliament in the present situation. It does not make very much difference what this small group thinks or advocates. We are here with a programme given to us by the membership of our organization

across Canada. They make that programme, and that programme reflects their thinking whether we like it or not. That is the road they desire us to travel, and the criticism that comes across the floor of the house does not apply to us. That criticism is being made against those who draft the programme. Hon. members should keep that in mind. That programme reflects the thinking of the Canadian people who are interested in this movement at the present time, and they make up a large body across Canada. Calling us names because we happen to represent those people will not change the situation one iota. Organized society is moving forward all the time. No organization in this house can have a static programme. The programme must be subject to change as changes are brought about in the economic structure. What someone in this organization said ten years ago or five years ago, does not make any difference to-day. If we have a democratic order of society, then it must be so arranged as to move forward in accordance with the thinking of the people and the developments of society itself. I am not going to waste any more time on that because it does not bother me. It merely demonstrates the fact that someone is not thinking when he wastes the time of the house on that kind of discussion.

I said I considered this bill perhaps one of the most important measures to come before the house. I do so for this reason, that it is, in my opinion, the first step that the government has taken in this field of social change as it pertains to the future. All our other measures have been merely along the lines we have been following for many years.

Mr. MARTIN: What about unemployment insurance?

Mr. GILLIS: Well, it is about fifty years late in Canada, but—

Mr. MARTIN: You said the first.

Mr. GILLIS: —it is a feeble step in the right direction.

Mr. BLACKMORE: Feeble is right.

Mr. GILLIS: I am not unmindful of the fact that practically every organization that has appeared before the reconstruction committee, which has been sitting for two years, has wound up its discussion on its post-war programme with one statement, namely, that this programme is contingent upon the government of Canada making available the necessary finances to carry it through. This is the first step that the government has taken with respect to the formation of some central organization that will have the authority to make funds available.

I am rather sceptical of the job that this particular bank is going to be able to do. To start with, the amount of money available will not do more than scratch the surface in a post-war programme. Second, I am afraid that the setting up of the industrial development bank in Ottawa with that amount of money appropriated, instead of being designed to do the job that has to be done in Canada in the post-war period, is merely a prop to a system that has already broken down. That is my opinion. While the chartered banks have the business of the large solidly organized and well financed industries of this country within their sphere, in the field of experiment where risk has to be taken the small industrial bank will be used to handle anything in the post-war period.

The banks and industries of this dominion are, in my opinion, one organization. They have interlocking directorates. Many of the large industries must requisition for their machinery to-day through the banks. When you talk about the chartered banks and the established industries you are talking about the one economic organization. They are practically all controlled by the same group. We must not forget that all our large well-established industries to-day were small struggling industries not many years ago. We did not have centralized banking in Canada many years ago. As was pointed out by the senior member for Halifax (Mr. Isnor), our centralized banks of to-day were small provincial banks years ago. They were functioning within their own spheres; but with the development of the merger idea where it is more economic to have the administration of a certain industry under one head, the octopus grew. The small industries in the various provinces were brought together, and finally there was centralized control in the two central provinces. Along with that was built up the necessary power to operate them. Therefore I do not place much stock in all this talk about establishing industry east and west. I know it is badly needed in my own province. The maritime provinces have been merely the overseers of the poor for the last thirty years, as far as industry is concerned. Where there is a large concentration of power, there you will have your industry under the present scheme of things, and that is in these two central provinces.

As I visualize the function of this bank, this is what is going to happen. The war is over and there are certain development risks to be taken in post-war reconstruction. A small amount of money will be made available to develop post-war products across Canada.

It cannot be very large. The money will be made available from this small central bank, sectionally. Small industries will be permitted to develop until the risk is gone and there is a market for the commodity. When there is no longer any risk, under the present legislation, both provincial and federal, the big fellow who has control of the field will reach out and take it under his arm. That has been the history. This bank is not going to change it, because it is not making a fundamental change in the system. The province of Nova Scotia is a very good example of it.

In 1940, I put figures on the record to show the number of banks we had in our province. I do not want to repeat the figures. I also enumerated the small industries that we had. The province was standing on its own feet both financially and industrially, but it all came into the central provinces because of the development of the system and the centralization of power into fewer and fewer hands. This bank is not going to change that. As small industries develop they will gradually find their way into this central organization. I visualize no changes.

I should like to call to the attention of the members of the house the fact that at the present time the Canadian people have an equity in Canadian industry to the extent of $800,000,000 in the form of plant, equipment, barracks and so forth. The people have not much control over it. A small committee, called the War Assets Corporation, has been selected and given the right to dispose of those assets. We have very little say in it. We are now definitely in the field of government ownership of industry. I think the Minister of Munitions and Supply (Mr. Howe) has gone a long way on that road. We must not forget that because we have a considerable investment in the industries of this country; whether it is to be protected or not in the interests of the people of Canada I am not prepared to say at the moment, but it is something we are going to watch very, very carefully.

I visualize no progress in the future in the kind of bank that we now propose to set up. I see no redress for the people. I wish to point this out definitely, because after a lot of thinking about it during my lifetime I became convinced of it. I am convinced that the cycle of the scheme of things as they are now has definitely turned. What we see at the present time is a dying system going out the hard way. I am convinced that the peoples of the world want a reorganized society to distribute the products of industry to the people on the basis of need. I am honestly convinced of that. I am also convinced that a certain transition must take place in order to bring about that result in a logical and democratic way. I do not think that transition will be made from the top. I do not visualize a time in the future when the state will be supreme in this country, nor do I believe the organization of state banks is the answer to the extension of a democratic order of society. If we are to make that transition it must come about through the people themselves, and in any new scheme of things that we may develop we should fully utilize the people and make them a part of it.

I should like to remind the house that the field of finance is not something new to the Canadian people. Some ten years ago, out of their neeeds, the people of Nova Scotia began to study this question; and from coast to coast in Canada to-day thousands of people are engaged in a movement which aims at establishing the credit of the people in the various communities across the country through the medium of that credit union movement. Thousands of people in study groups in my province have gone very carefully into these questions of finance and credit during the last ten years. There is a complete circle of credit unions through that province, and every province has them to-day. Instead of setting up a bank for the purpose of developing industrial and other projects in the post-war period, a state-controlled bank with power concentrated here in Ottawa, we should fully utilize the cooperative movement in Canada generally, and particularly the credit union movement that is in this field of credit and finance exclusively. We should be thinking of a central cooperative long-term loan and mortgage bank, set up in Ottawa, with the various credit unions across Canada making up the service organizations in the field. In addition, there are available a few million dollars which now stand as the surplus which has grown up in that movement, which is not permitted under present legislation to extend its activities into the field of long-term and mortgage credit. If we established something on the basis I have suggested, giving the credit unions across this country the right to go out and sell bonds, as is proposed under this bill, it would enable all the people to become shareholders in that bank. The credit unions would be enabled to become individual shareholders and directors of that central cooperative bank; and in the scheme of things to come, when small industries and community projects are under consideration, they could be developed by the people themselves, so that when they came into operation they would be owned and operated by the people, while any profits accruing would go

back to the people through the medium of their own organization. That is the incentive necessary to build a new Canada.

It is my suggestion that if you could plan your industrial set-up on this basis and keep it free from interference on the part of the large monopolies that now exist, in twenty-five years you would have a basis of comparison between private enterprise, operated for profit, and government-owned industry owned and operated by the people themselves in the fields where the actual work is performed, with control of their own finances. Then you would be able to see definitely which organization should guide Canada's destinies in the future. There is no need to tear things down or to quarrel among ourselves. We have had seventy-five years under the one system, and it has failed both in time of peace and in time of war, because the government had to take it over in war time in order to properly organize it so that we might make our maximum contribution. The test can be made in that way. Many times we wonder at the contribution Russia has made, but the answer is very simple. There are no employers or employees in Russia; the people work for themselves, and the entire country is the corporation for which they work. That is the incentive which made them fight as they did at Stalingrad, and that is the incentive we must build up in Canada, not as it was done in Russia but as I am trying to describe it now. The transition should be made through the medium of the machinery that we are setting up now; we have tried the other method and it will not work. To-day in Canada we have thousands of people who have studied finance the hard way; if I had time to put on record the funds now available through these credit unions I think it would be enlightening to most hon. members.

There is no other way in which it can be done; there is no other way in which society can be kept democratic, because we have definitely departed from the scheme of things as they were, and the development to-day is toward centralization, state control and ultimately the road to dictatorship. That is the accusation which is hurled across the chamber at us, but I want to tell you, Mr. Speaker, that not a group in this house is more alive to that particular development than the group in this corner, nor do I think anyone in Canada will fight harder against that kind of set-up. That is the trend to-day, whether or not we realize it, and there is only one way to offset it. When this bill goes to the banking and commerce committee, instead of any hurried decision on the matter I hope they will study the proposal I am now making in regard to the utilization of the Canadian people through the medium of their own financial organizations, which they have built up over a period of years to give themselves some say in the future scheme of things with respect to the reconstruction of Canada. It is worth trying. I am not afraid of that test; I know what the answer will be twenty-five years after it is made. Unless we realize that the test must be made in this way I am very much afraid of what is coming in the future. We kid ourselves about the international situation and all that kind of stuff. Anyone who follows the international situation at all carefully is fully aware of the fact that in the aftermath of this war we shall have our most serious struggles; and unless we are alive to the situation and utilize the brains of the people of this country in the reconstruction that must be carried on, in order that the people may have a large stake in it, we are not going to have a very nice time after the war is over.

I am not going to occupy any more of the time of the house, except to suggest that I see absolutely no hope in the proposal now under consideration. I recommend to the banking and commerce committee that instead of the bank now proposed, which is merely a palliative or a prop for something already fallen down, they consider the possibility of establishing a central long-term loan and mortgage bank for the cooperative movement in Canada, using as service organizations in the field the credit unions already established throughout the country. To raise the capital required it is only necessary to give that movement the same privilege the government is now giving this bank, the privilege of issuing bonds in denominations of $10 and $100. It will give all of us a chance to become part of that set-up. It will give the credit unions a chance to put their surplus into that bank. It will give those unions a medium through which they can become part of that board of directors. In my opinion, in the maritime provinces the only industry that will ever be developed is the industry developed by that kind of organization. There will never be any subsidiary industry in the maritimes under the set-up now proposed. The trend is just the reverse. They are closing things down already, in that part of the country. The Trenton plant, into which we put half a million dollars a few years ago, has already closed down. The Ferguson Brothers yards at Pictou have been pulled up and transferred to Montreal.

That is the present trend of things in the maritime provinces. But I am reasonably sure that if that cooperative movement in Nova Scotia had some assistance, and had the help of some legislation, it would develop industry.

I should like to say this, too, that whether we get assistance or not, we are going to do that in the aftermath of the war. The people of that province are going to develop their own industry and subsidiary industry after this war is over, and they will do it through the medium of that cooperative movement. It may be made much easier; it may be made national. Thousands of people have studied the matter in the last ten years—because it is not new; it is well grounded and ably led. This government could now utilize that organization across the country and give the people a stake in the aftermath of the war. That is something to work for, instead of having them watch the stock market, and wondering where they will be next week.

I strongly urge that the banking and commerce committee consider this proposal. I shall have more to say when the bill is considered section by section.

Mr. F. D. SHAW (Red Deer): Mr. Speaker, before bill No. 7, to incorporate the industrial development bank, is given second reading and referred to the committee on banking and commerce, for amendment and clarification, I wish to make a few observations. Part of what I shall say will have to do with the possibilities of the bank, with, as some suggest, its impossibilities, with its provisions, and again, as some suggest, with respect to its lack of provisions.

When the parliamentary assistant to the Minister of Finance introduced the bill on March 2 he said it was a part of the government's programme for maintaining a high level of employment, and also for the maintenance of a high level of national income. He said further that it is in the national interest to ensure that such additional financing as may be necessary and desirable will be available to industrial enterprise. I concur wholly in the remarks of the hon. member for Lethbridge (Mr. Blackmore), when he asserted a few days ago that it is of necessity imperative that we secure more information relative to the suggestion that the loans will be made where necessary and where desirable. A great deal will depend upon who determine the necessity and the desirability, and their method of arriving at conclusions.

Then the parliamentary assistant said that a purpose of the bank, further, would be that of filling the gap in our financial structure, and to ensure that adequate financing is forthcoming for desirable projects. For these reasons the government proposes to establish this bank. Here again I concur heartily in the remarks of the hon. member for Acadia (Mr. Quelch), who asserted that until such time as the necessary revision is made in The Bank Act it will be virtually impossible to ascertain the extent of the gap that may exist in the period of reconstruction following the war.

I regret intensely that our amendment to defer consideration of this measure until the banking and commerce committee has given consideration to the Bank Act was rejected by the house. Undoubtedly the purpose of introducing the measure to establish the industrial development bank arose as a consequence of the government's realization that probably a million and a half to two million people in Canada are vitally concerned and worried not a little about the possibilities of employment, proper income and related matters following the war. It has been said time and again in the house in recent weeks that we have approximately 1,200,000 employees in Canada who hold jobs which, in a sense, could be said to have been created by the government. They are jobs which did not exist prior to the war, and which may not exist following the cessation of hostilities. We know that approximately half a million employees in Canada are engaged in war enterprises such as shipbuilding, the manufacturing of aircraft and the like. It has been said that a certain number of them will be required in those industries after the war, and with that statement I agree. But it could hardly be said with any degree of certainty that more than ten per cent of those now employed in those industries will be employed in them during the period following the war.

Then we know, too, that in our mining industry, and in certain plants, such as chemical plants, production has increased by from four to ten times its normal extent because of war conditions, and also it is known that employment in those industries has increased in this time of war to the same degree. No matter what our programme may be after the war with respect to the mining industry or the chemical industry, it is hardly possible that the total number who are now employed in those industries will continue to be so employed after the war. It is also true that we have about 800,000 of our young people in the services. A good deal of faith has been placed in the measure enacted by parliament a year or so ago guaranteeing that under certain circumstances many persons who left employment to join the services will be guaranteed that their jobs will be waiting for them when the war is over. I suggest, however, that we should not at any time lose sight of the fact that many of those jobs which were

quite desirable prior to the outbreak of war may not be nearly as desirable when the war is over.

I may give as an illustration this fact, that hundreds, perhaps thousands, of the service personnel who were engaged in certain occupations where the salaries were comparatively low have now assumed the responsibilities of married life. Some of them now have two or three children. Jobs which paid $80 or $90 a month, and which, as I say, were satisfactory under the circumstances that prevailed when they joined the forces, will be entirely unsatisfactory when the war is over.

We see industries closing in certain parts of the country. The hon. member for Cape Breton South (Mr. Gillis) referred to the situation developing in Nova Scotia. In my own province of Alberta I know that much of the work in connection with the Alaska highway project in the north has come to an end and that many Canadians who were employed on that project are without employment. While a certain number of them have been absorbed into other industries, a great many of them have not. We are also informed that many of the aerodromes throughout the country are to be closed. In my own constituency there are two. We have an elementary flying training school, with approximately 240 civilian employees, a great many of them older men, men who will not be absorbed into other industries even during war time because of their age.

I think it is because of these things that the government has decided to take this one step at least at the present time, if for no other purpose than to allay the fears of many of our people. Speaking in this house the other day, the leader of the opposition (Mr. Graydon) said, as reported at page 1387 of *Hansard:*

> I do not, like some of our hon. friends in various parts of the house, pose as a financial expert. I speak strictly as a layman.

I hope the leader of the opposition does not assume that merely because we are so bold, if I may put it in that way, as to speak on a measure of this kind we are presuming to be financial experts. Speaking of that same thing, may I say that since I entered public life I have come in contact with a great many so-called experts and authorities, especially professing authorities and self-styled experts in the field of finance, production, distribution and allied subjects, and I have come to this conclusion, that so much contradictory advice and so many conflicting opinions have been given with respect to matters of finance, reconstruction, employment and unemployment, that success would seem to lie in a candid examination of the facts by men who are not professing to be experts, by men who are not hampered by certain preconceived theories. When it comes to a matter of this kind I think the best possible work we can perform is to devote our attention to it as laymen, not professing to be experts at all.

The bill is designed, we are told, to assist industry. Naturally one who comes from the west cannot but consider his own part of Canada in the light of secondary industry. I have at times come to the conclusion that secondary industry in western Canada, and I know this is also true of the maritimes, has definitely been sacrificed in the interests of central Canada. In Alberta, for instance, we have an abundance of power, in our coal, in our oil, in our natural gas and in our gasoline. I know, too, that we have many raw materials there which can be processed by secondary industry. My colleague, the hon. member for Lethbridge (Mr. Blackmore), who represents one of the great sheep-raising areas in western Canada, has time and again pointed out the possibilities for the woollen industry in that part of Canada. In the little town of Magrath in southern Alberta they are enjoying outstanding success in the manufacture of blankets and certain other woollen products. I know that clothing as well as blankets could be manufactured in that area. But we must have some encouragement naturally for the wool-growing industry and some certainty that the returns from the products thus manufactured will be reasonable. I know, too, that from the vast cattle ranges in that part of western Canada we can secure the leather necessary for the manufacture of shoes and other leather products. I know, too, from a bit of investigation, that we can develop in Alberta with signal success the paper industry, the furniture industry, also chinaware, pottery and tiles industries, the asphalt industry, a dyes industry, and other industries from the by-products of coal, also biscuits, cereals, glassware, canned goods, matches, brushes and so forth, and as the hon. member for Lethbridge says, also cement. I am not endeavouring by any means to cover the whole field, but just to give an idea of the possibilities.

I know it has often been said that in Alberta we lack iron deposits. I realize that thus far we have not been successful in locating iron deposits in the province; I am not going to say that they are not there. But the proximity and extent of our power resources would indicate to me that it would be just as sensible to ship iron ore out to Alberta to be manufactured, as it would be to ship our power to the source of the iron ore.

Before secondary industry can hope to thrive in western Canada, certain injustices must be removed. I think first of freight rates. In the city of Red Deer in my constituency we have a condensery, a very successful enterprise. I know that in 1938, the latest figure I have, canned milk shipped from Red Deer to Vancouver, a distance of approximately 800 miles, was shipped at a freight rate of ninety-eight cents per hundredweight, while canned milk was shipped from Tillsonburg, Ontario, to Vancouver at a freight rate of seventy-five cents per hundredweight. In other words, the condensery at Red Deer was endeavouring to compete with an industry in Ontario for the Vancouver market and paying a freight rate of twenty-three cents per hundredweight more than its Ontario competitor whose canned milk had to travel three times the distance.

Again, at Taber, in southern Alberta, we have a vegetable canning factory. That area, a good deal of which is under irrigation, is ideal for the growth of vegetables. Canned vegetables shipped out of Taber to the Vancouver market, a distance of 800 miles, were subject to a freight rate of $1.16 per hundredweight, while canned vegetables shipped from points as far east as Montreal to Vancouver, a distance of 2,877 miles, enjoyed a freight rate of seventy-five cents per hundredweight. There was a difference of forty-one cents in favour of the shipper from Montreal, 2,077 miles further away from the Vancouver market. Conditions of that kind, Mr. Speaker, must of necessity be given consideration and rectified.

There are other forces at work militating against the establishment of secondary industries in Alberta. The figures I have are not entirely up to date. I think we can consider them as applicable to the year 1938, and while there may be a difference at the present time we may well expect, if there are no changes, that we shall go back to those conditions following the war. Live cattle shipped at that time from Alberta to eastern Canada were shipped at the rate of $1.14 per hundredweight. If we had butchered our cattle there and had shipped the fresh meats the cost would have been $1.88, or we would have laboured under the penalty of an amount equal to 68 per cent. Let us go on. If we had shipped at that time four hundred boxes of Alberta butter from Edmonton to Toronto it would have cost us $762.82; that is less, of course, the icing charges. On the same weight of Ontario condensed milk, which of course is another dairy product, from Aylmer, Ontario, to Edmonton, a little longer distance, they would pay only $467.46, or a difference of approximately $300. That creates an extremely difficult situation for us who are engaged in the dairy industry in Alberta.

Then let us take lard and lard substitutes. Shipped from eastern Canada to a point in British Columbia, the rate at that time was one dollar per hundredweight, but from Alberta to British Columbia, a distance 2,000 miles less, the rate was 98 cents per hundredweight—practically the same rate, with a difference of 2,000 miles.

I am going to refer to just one or two others. I shall not read the whole list. On hides and edible tallow from Vancouver to eastern Canada the rate is $1.25 per hundredweight, but from Alberta—say Calgary or Edmonton—approximately 800 miles less, we pay a higher rate, namely $1.50 per hundredweight. What I am trying to point out is this—

Mr. SPEAKER: I would call the attention of the hon. gentleman to the fact that what he is quoting does not seem to have any relevancy to the bill. I should be glad to know just how he associates what he is discussing with the terms of the bill.

Mr. SHAW: I shall be very happy to try to establish the relevancy. We are discussing assistance which we hope will be granted to secondary industry in Canada. That assistance, since we are not told more definitely, may be granted in various forms. Some of it may go, if the proper thing is done, toward assisting us or subsidizing us, let us say, in connection with our freight rates, or may affect any one of a number of factors which enter into this matter. I trust, sir, that there is relevancy.

One other factor to which I should like to see some serious consideration given, and which finances from this bank may assist materially in meeting—I can only assume this since the bill is very indefinite—is in connection with the tariff.

Some hon. MEMBERS: Oh, oh.

Mr. SHAW: It may be remote.

Mr. SPEAKER: We are not dealing with tariffs in this bill. I do not think remarks of the hon. gentleman on that matter are relevant.

Mr. SHAW: I bow to your ruling, Mr. Speaker. However, the bill is so desperately indefinite that we may discover at a later date that it goes far beyond any point to which my imagination may have taken me. Anyway I shall refrain from that matter. I will say, however, that in my opinion it is extremely imperative that if assistance is to be given to secondary industry in Canada through this bank, such assistance, at least in part, shall go toward what has been called the decentraliza-

tion of industry. I believe it is an established fact that back about 1897—if I am in order in going back that far—industry in the central provinces, particularly Ontario, was having an extremely difficult time. I have here a newspaper clipping of 1907 which refers to this matter, and from which I shall quote only one or two short paragraphs. It states:

For a decade this problem—

That is referring to the west.

—was worse than ignored by a policy which plundered the western provinces while it strangled the opportunity for western settlement and development; and the result was reflected in the industrial and commercial paralysis of the dominion from sea to sea. Manufactures languished from lack of markets; mechanics, unable to obtain employment, tramped the streets of Ontario cities under the gruesome signal of starvation; foreign capital held aloof from the unpromising field, while thousands of Canadian-born fled to the United States to find the opportunities of livelihood denied them at home.

Then it refers to the change of policy, namely the opening up of western Canada, and in another short paragraph it notes the beneficial effects which this had brought to central Canada:

The marvel of the west is its productiveness, the inrush of population, most of all the consuming capacity, the consuming possibility of that population for manufactured goods of all kinds. The farmers of the west—

Remember that this applies, Mr. Speaker, to a period at the turn of the century.

—do not haggle over prices, they have the money to buy all kinds of things, and with their rapidly increasing numbers they can support an immense population in some other portion of the dominion better suited for industrial and manufacturing purposes.

Then in a short sentence it states that the central provinces are the parts of Canada particularly adapted to profit from this large increase in population on the prairies.

I read that simply for this purpose. I contend that when the west was opened the primary purpose was that the industrial life of central Canada was in need of stimulation; in other words, in need of support which the editorial indicates would be forthcoming from the west. Ever since that day forces have been at work in central Canada preventing the west from becoming industrialized, in order that that support might be continued on behalf of the central provinces of Canada. I think it has been proved beyond question that all the western provinces and all the provinces in what we regard as the maritimes are capable of supporting a greater number of secondary industries than they now enjoy. Unless it is recognized that the government must take definite and concrete action to prevent the forces, both industrial and financial, which are consolidated in this part of Canada from maintaining the strangle-hold—I will call it that for want of a better word—upon western Canada, western Canada will wait and wait for its proper recognition in connection with secondary industry.

I do not desire to take very much more of the time of the house upon this occasion. I am not unduly impressed with the possibilities which such assistance to industry will give to employment and to the matter of effective demand and consumption. It was pointed out very well this afternoon by the member for Jasper-Edson (Mr. Kuhl) that the mere fact that we stimulate industry in order to create a certain amount of employment will only create such employment as long as the people of Canada are in possession of the purchasing power necessary to buy the products of industry. To think that industry can function while the people of Canada are not in possession of the means whereby they can procure the products of industry is to live in a day-dream. I could quote extensively from reports, which I believe would command the attention of the house, to show, as the hon. member for Jasper-Edson said this afternoon, that industry in itself does not pump into the system of purchasing power sufficient purchasing power to buy the goods which modern industry is capable of producing.

I do not say that the measure will not provide a degree of relief; but is not the mere fact that we are introducing a measure such as this clear enough proof that the financial facilities which have been available in the past have not met the requirements of industry or of the workers or of the people of Canada at large? In connection with the same point, I do not know what is going to happen eventually, with all the banks that the government find it necessary to establish. For my own part I would say that if it becomes necessary to establish more banks it is only because they must beforehand have reached an agreement to the effect that the present banking facilities are not meeting the requirements of the people.

We have a bank of international settlement. It is known that we have a Bank of Canada. It is also known that we have some provincial banks. It is a fact that on the statute books we have a central mortgage bank, though it has not become a reality. There are credit unions, referred to by the hon. member for Cape Breton South. Now we are to have an industrial development bank, and it has

been hinted that there will be an agricultural bank. What is the ultimate outcome to be? Is there or could there be an attempt to establish so many banking institutions in Canada that we shall never be able to segregate one to criticize it?

I would say, as was pointed out by other speakers in this group, that we have undoubtedly reached the stage where there must be drastic revisions in the Bank Act. I would say that such revisions should be carried on until such time as the banking institutions that we have in the country serve the purpose for which I believe banking institutions should be established. This idea that, after all, the chartered banks can make only short-term loans, therefore cannot possibly meet the situation, and that, as a result, we must have another bank, is just talking in circles.

The hon. member for Acadia (Mr. Quelch) asserted clearly that it would take only a revision of the Bank Act to make it possible for these long-term loans to be made. I find myself a bit confused by government policy. I wonder what the ultimate objective is. It may be a case of just wait and see; but I have been doing that now for almost thirty-five years. I hope that by the time another thirty-five years have gone by I shall have seen something more satisfactory than the various financial proposals which have been made by the orthodox governments of Canada from time to time since there was a Dominion of Canada.

Mr. F. G. HOBLITZELL (Eglinton): With regard to this bill I would say that the small business man has not been entirely forgotten though he has been almost so. While I have not made myself heard in this chamber very often, I have on numerous occasions approached those in charge with reference to what we could do to build up the small business man and his morale. If this bill is designed to give assistance to small industries it can be very helpful indeed; but, Mr. Speaker, I have very much doubt. I will give the reasons for that. This bill No. 7, to incorporate an industrial development bank, has been drafted by the Minister of Finance (Mr. Ilsley) or his department. They still have in that department some advisers who are also administering the wartime prices and trade board, and I am going to make this suggestion. I think the two of them should get together, because one is proposing to bring forth a development bank to assist the small business man, to help to establish him in the post-war years. It seems to me, however, that an effort to prevent things from happening is far better than to establish something later on.

I have before me the edition of March 1, 1944 of the *Canadian Grocer*. I hope the parliamentary assistant to the minister will correct me if I am wrong. I am going to quote:

> The wartime prices and trade board paid $460,618 to Canadian chartered banks for services in connection with ration-coupon banking for the period March 1 to November 30, 1943—a period of nine months. This information was recently given out by Hon. J. L. Ilsley, finance minister. On the other hand, grocers who handle more than two billion coupons annually for the board get nothing for their services.

I remember, the first time I rose in the house to speak, I made the statement that labour is worthy of its hire. I certainly do not object one iota to paying for services rendered, and I do not object to this money being paid to the chartered banks, but I would ask this question. If the small grocer or the small business man, who has been handling two billion coupons annually, which he has to tear out of books and then lick them and paste them in, is willing to do this gratuitously, why should the chartered banks be paid? On the other hand, if the chartered banks are paid this sum of money, why do we not offer the small business man the same compensation for the services rendered? One or the other is wrong. In my opinion they should all be paid because it is a service rendered.

War brings casualties of all kinds, and the most sorrowful of all are those who have made the supreme sacrifice. Our deepest sympathy goes out to those who have lost their loved ones. But we have casualties at home among our small business men. Speaking in Toronto before one of the service clubs, one of the managers of the R. G. Dunn Company, a large mercantile agency from coast to coast, gave figures, which I believe he was in a position to give, showing that approximately ten thousand small business men had closed their doors. This is a large number of casualties.

I have repeatedly objected to some of the regulations put into force not only by the wartime prices and trade board but by some of those other boards which have been created and which are presided over by some of those dollar a year men. I shall qualify my statement somewhat with regard to those dollar a year men. Some of the dollar a year men who have been working here have given wonderful service. On the other hand, some of the regulations issued by some of the boards do not even make horse sense, let alone common sense. It is pretty hard to establish confidence in many small business men when things of that kind are carried out.

I have been in business as a small business man for some years. I do not mind going out

into the field of enterprise and fighting my way against competition. I believe that if this government wants to do something to assist the small business man it should not pass legislation for the benefit of the few in preference to the masses. If we legislate for the benefit of the few, then there is no alternative, in my opinion, but state control. I am not one of those who agree with government control. I believe in private enterprise where one's initiative can reap the rewards of one's own efforts. In that connection I shall quote a definition which I clipped from one of the magazines. It is as follows:

What is private enterprise?

It is the natural desire to make your own way, as far as your ability will take you: an instinct that has brought to this continent the highest standard of life enjoyed by any people on earth. It is the spirit of democracy on the march.

Before this bill goes to the banking and commerce committee I should like to see the Minister of Finance meet with the wartime prices and trade board, because it looks to me, judging from this bill and the regulations, as if they are working at cross purposes. I think we shall all be confused until something is done one way or the other.

Mr. R. T. GRAHAM (Swift Current): Along with many others who have spoken on this particular bill I am convinced that it is very important, important because it is a departure from the policy pursued by Canada in the matter of credit institutions during the whole course of its history. I realize, of course, it is meant to be a part of the reconstruction programme that without exception the members of this house are anxious to see the government undertake. I realize also that the wording of the bill would indicate that it is meant to assist small industry; yet, probably it has a greater desire to assist small industry only in order to give employment and to increase the productivity of the business activities of the whole of the people of Canada, so that the production of that particular group may swell the total of our national income and thus permit some of the legislation that has been referred to in the speech from the throne to be of fruitful benefit in the post-war period. On the other hand, by the very nature of the legislation it would appear that it is expected that this particular lending institution will take a certain measure of risk in the lending of money that would not be expected of our commercial banks, mortgage and loan corporations, or insurance companies, or any other of the privately owned or chartered lending institutions.

I think all of us will agree that commercial banks, trust and loan companies or insurance companies, being the trustees either of their depositors or of their policyholders or of their shareholders, cannot, without risk to the structure that they are managing, take undue risks in the lending of other people's money; and to the extent, therefore, that it has been found necessary in the reconstruction programme to take care of that group of business activities which is not already served by the existing institutions, I, of course, agree that the government has done well to tackle and to try to meet that particular situation.

In addition to the institutions to which I have referred, I would point out, as the hon. member for Cape Breton South (Mr. Gillis) indicated, that there are at present in this country credit unions which are part of the great cooperative system that performs in a small way in an individual community and contribute for many needs a useful service in the lending field. It is, indeed, an important part of the business growth of Canada. But I would point out that in my opinion he has failed completely to appreciate the real base upon which the credit union system operates and thrives and plays a very real part when he suggests that we can make it an adjunct of this industrial development bank. I agree with him that perhaps in the development of our financial system we shall do as the United States has done and institute banks for the very purpose of making loans to cooperative enterprises. That particular business has grown to an immense size in the United States. In 1942, the sixteen organizations whose function it is to lend to the cooperative enterprises, lent an amount of some $330,000,000. Believing as I do in the very great contribution that cooperative enterprise has to make in Canada, I have no doubt that this will be another development which will have to be undertaken by government in this country. Nevertheless I wish to point out to the Minister of Finance and to his parliamentary assistant that there is a great deal of weight in the comments made by the hon. member for Vancouver-Burrard (Mr. McGeer), when he suggested that we should be careful to remember the purposes for which the Bank of Canada was created and to see that those purposes are not lost sight of, and that the Bank of Canada's usefulness is not enmeshed in enterprises for which it was not intended.

I wish, like the hon. member for Vancouver-Burrard, to recall to the house the basic principle underlying the creation of the Bank of Canada. It was created for the purpose of regulating the volume of credit and of cur-

rency in this country. It was not intended as hon. members know, to become a bank to transact lending business with individuals. It is not a bank of deposit in which you and I can leave whatever savings we have after the payment of our income tax. Like the hon. member for Vancouver-Burrard, I think the Minister of Finance and the banking and commerce committee should look carefully into the question of whether this bill will in any way impose upon the Bank of Canada duties it was never intended that the central bank should undertake.

Since this bill provides that the capital stock of the bank is to be subscribed by the Bank of Canada, after which it will be permitted to sell to the public bonds or debentures to an amount not exceeding $75,000,000, we shall have a partly publicly-owned and partly privately-owned institution. The bonds or debentures issued by this bank to the public will not be guaranteed by the dominion; and as I went over the provisions of the bill it struck me that we should be careful not to involve the credit of the Bank of Canada in a financial venture to which the public are invited to subscribe through the purchase of bonds, unless we are prepared to see to it that the venture will be a success and that there will be a reasonable return on the money invested by the public. Having in mind the purposes of the bill, the rate of interest paid on the bonds will be small. This institution will make loans for fairly long periods to at least some individuals who may not be considered A-1 risks but who will have a good prospect of succeeding in their ventures and making a contribution to the productive life of this country. Therefore it stands to reason that if the purposes of this bill are to be carried out there will be an element of risk and that at some stage of the bank's career there will be losses. It seems to me, therefore, a dangerous thing to have the Bank of Canada in close association with an institution which may find it impossible to pay a reasonable return to those who invest in it, and which, in fact, may find itself at some period facing a substantial deficit in its capital structure.

For this reason, Mr. Speaker, I suggest to the parliamentary assistant to the Minister of Finance (Mr. Abbott) that he and his departmental officers consider whether or not the suggestion made by the hon. member for Vancouver-Burrard is not of value. This institution is intended to serve a purpose which we think should be served, but we should dissociate it from that great central bank of ours. We want this bank to be courageous in making these loans; we want it to recognize

the small industry, the small business man who needs money with which to start an enterprise which will have a reasonable hope of achieving success. For that reason I suggest to the parliamentary assistant that it might be well to revise the machinery set up in this measure and, instead of the public being invited to subscribe any portion of the necessary funds, to have the government create an organization completely apart from the Bank of Canada, with all the money necessary for the working capital subscribed by the government. I believe we can look to the future with great hope; yet the experience of the past surely tells us that there may be periods of stress again in the world which may impose upon our banking and financial institutions, as upon all our institutions, a load some cannot carry. In the past this central dominion authority has proved a great source of strength when our municipal and provincial governments found the going too hard. Fortunately for us we had the solid stability of the central institution which was able to supply the help necessary to carry us through to better days. Therefore I leave that thought with the parliamentary assistant, that he reconsider the set-up of this institution.

May I express my satisfaction at the announced intention of the government to set up a similar type of credit institution to deal with agriculture. In common with all other speakers from western Canada and the maritimes, in the past I have deplored, as I deplore now, the centralization of industry in Ontario and Quebec. Let me assure you, Mr. Speaker, that it is not mere provincialism that dictates this attitude on my part, nor, I am sure, on the part of those other hon. members who have spoken in the same way. I believe the people most concerned with finding a solution to this problem are, strangely enough, not those who live in the outlying provinces. In their own interests, and particularly in view of the larger stake they have in this country, the people most interested in solving the problem of the centralization of industry and finance in Ontario and Quebec are the very people of those two provinces. I think it essential that hon. members should keep this in mind, and that we should all work with the government and with each other to find a way out of this difficulty, because in doing so we shall bring about less criticism, greater harmony and more prosperity for the whole of Canada, of which these two provinces form such an important part.

Had I the time, I should like very much to deal with the remarks of the hon. member for Cape Breton South. As always, I listened to his address with a great deal of interest, but

I am afraid he labours under a good many illusions. I think he fails to understand that socialism is the very antithesis of democracy, and that you cannot have democracy under statism or socialism.

Mr. CASTLEDEN: Will the hon. member permit a question?

Mr. GRAHAM: No; I am sorry, but I have not time.

Mr. CASTLEDEN: Did the hon. member ever hear of democratic socialism?

Mr. GRAHAM: The hon. member for Cape Breton South and others who hold his views make the very great mistake of believing that the cooperative movement is part and parcel of socialism. I say to them that nothing could be farther apart than the true spirit of the cooperative movement as I know it and the spirit of statism or socialism. So that the whole argument advanced by the hon. member falls because his premises are wrong. He states, for instance, that the difficulties we met during the depression were the result of the failure of the present system, which is sometimes called capitalism and sometimes free enterprise. Let me suggest that the reverse is true, and that if we look back over the history of that period we see that nation after nation made the mistake of so planning its economy that the rest of the world would be excluded and it alone would reap some benefit from that policy. The Bennett government that was in power from 1930 to 1935 brought in its Canada-first programme which, to the extent that it was carried into effect, was a planned economy. All hon. members know the result. I say that the closer we keep to the natural laws which govern the economy of the world and all countries therein, just to that extent shall we have fewer depressions, and depressions of less intensity when they do come. I cannot imagine anything which would be more likely to bring about a depression, or which would make the depression of the thirties look like a picnic, than would statism or socialism, if it were put into effect in this country in the future.

There are other matters I should like to mention, but I rose chiefly to bring to the attention of the parliamentary assistant to the Minister of Finance some of the things which should be carefully considered before we finally adopt the very fine idea expressed in this bill.

On motion of Mr. Jackman the debate was adjourned.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Tuesday, March 14, 1944

The house met at three o'clock.

ALCOHOLIC BEVERAGES

REMOVAL OF FEDERAL RESTRICTIONS ON SUPPLIES OF BEER TO PROVINCES—STATEMENT OF PREMIER DREW

On the order for motions:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I should like to refer to a statement which Premier Drew is reported to have made in the Ontario legislature yesterday, and which has been given general circulation in the press of Canada by the Canadian Press. The dispatch is dated Toronto, March 13, C.P., and reads in part as follows:

After studying the text of Prime Minister King's anouncement, however, Premier Drew issued the following statement:

"Mr. King does some truly remarkable juggling with figures in his attempt to distort the effect of the notices put up by the liquor control board of Ontario.

"All the beer available for sale in Ontario under the restrictions imposed by the dominion government has been sold. The notices simply conveyed the information that the alcoholic beverages available at the sales outlet were restricted by the dominion order. That statement was correct.

"Mr. King has not furthered the cause of dominion-provincial cooperation by misrepresenting the facts to the whole of Canada regarding the action of the Ontario government.

Elsewhere the report states that Premier Drew had said:

Press reports quoted Mr. King as saying the wartime order called for a 10 per cent beer cut and Ontario had made it 25 per cent.

In order that there may be no misrepresentation of the facts or misunderstanding concerning them, may I read what I did say yesterday on this subject, as reported in *Hansard*, page 1392, with reference to the posting of the alcoholic beverages notices:

In Ontario, on the authority of the liquor control board, notices have been posted in establishments where alcoholic beverages are sold, which read as follows:

"Notice: The quantity of alcoholic beverages saleable at this sales outlet is restricted by reason of order in council No. 11374 passed by the federal government Dec. 16, 1942,—This notice is posted on authority of the Liquor Control Board of Ontario."

There is no indication in these notices that the action of the federal government was a war measure, enacted to increase the country's total war effort. No account is taken or mention made of the fact that the production and consumption of alcoholic beverages in 1942 had reached the highest level in Canada's history. Instead, the poster is designed to have it appear that, in the opinion of the government of Ontario, the action of the federal government is arbitrary, unfair and unnecessary.

Since the enactment of the dominion wartime alcoholic beverages order, there has during the year been released for sale in each province of Canada, ninety per cent of the beer which was released for sale in the twelve months ended October 31, 1942. Over the whole country, this amount was some sixty per cent in excess of that which had been released for sale in the year prior to the outbreak of war. To-day the beverage rooms of Ontario, where the notices of the Ontario Liquor Control Board are posted, are not being allocated 90 per cent by the board. Instead, they are being allotted only 75 per cent. It is true that the quantity saleable in the province has been restricted by the dominion order in council, but it was not restricted by 25 per cent. That restriction on the beverage rooms was imposed by the liquor control board of Ontario.

The board's action has the approval of the government of Ontario. It was defended by the Attorney General of Ontario in the Ontario legislature on the 8th of this month. The posting of the notices certainly misrepresents the action of the federal government. It is clearly an attempt to have the federal government held responsible for the whole twenty-five per cent reduction.

That is the entire statement I made in regard to the notices, and it will be seen that I expressly said that it is true that the quantity saleable in the provinces has been restricted by the dominion order in council. That is what Mr. Drew says is true. But what has been omitted altogether from the notices which were posted is any reference to the fact that this is part of a war measure, that the restriction was only 90 per cent, whereas 75 per cent was all that was being given out in the beverage rooms.

Mr. Drew goes on to say, in the report which I have just read:

It is typical of Mr. King that he failed to inform the people of Canada at the same time that I had written to him last Friday asking for an appointment so that the attorney-general, the commissioner of the Liquor Control Board and I could meet him in Ottawa in an effort to find some solution to the unsatisfactory situation which had developed.

I presume I am to accept to-day's announcement as his idea of an appropriate reply designed to encourage cooperation. In dealing with the matter in the legislature, Premier Drew read the letter he had sent to the Prime Minister asking for an early conference on the beer situation.

I have a copy of the letter, and as it has been tabled in the Ontario legislature, I would ask permission to table it here. The previous correspondence was tabled some days ago. What I wish to call to the attention of hon. members is this statement of Mr. Drew:

It is typical of Mr. King that he failed to inform the people of Canada at the same time that I had written to him last Friday—

[Mr. Mackenzie King.]

Et cetera, et cetera. And then:

I presume I am to accept to-day's announcement as his idea of an appropriate reply designed to encourage cooperation.

What are the facts with regard to the receipt of Mr. Drew's letter and the statement I made yesterday? To begin with, it was on Saturday, March 4, that the press of this city and of other parts of the country reported that a notice had been posted in all liquor and beer sale outlets in Ontario. That was on Saturday, March 4, and on Wednesday, March 8, the morning papers reported a statement the provincial treasurer of Alberta, the Hon. Solon Low, made in the legislature; the statement to which I referred yesterday. On the afternoon of that day, having seen the notices, and having observed what Mr. Low was saying in Alberta, I communicated with my colleague, the Minister of National Revenue (Mr. Gibson), and indicated to him that I thought immediate action would have to be taken to prevent further misrepresentation of the position as between the dominion and the provinces and that in my opinion, it would be necessary, to leave the control of restriction on beer wholly within the purview of the provinces so as to give them complete control —in other words, to have single rather than dual control, particularly as the provinces have complete jurisdiction with regard to distribution and sale.

It was on Wednesday, March 8, that I so communicated with my colleague the Minister of National Revenue. On Thursday, March 9, the morning papers reported a statement of the attorney general of Ontario defending the notices posted by authority of the liquor board.

I had hoped it might be possible for me to take up the matter on Friday the 9th, and to make a statement in the house immediately, along the lines of the one which I made yesterday, but I was too pressed with other matters to be able to get a statement prepared in that time. I therefore gave the statement yesterday, having taken part of Saturday to prepare it at some length in order that it might set out all the essential facts. As a matter of fact, therefore, the decision with respect to the action to be taken in regard to restrictions was made two days before Mr. Drew's letter was written. Mr. Drew's letter was written on March 10.

May I say a further word with regard to the time at which I received Mr. Drew's letter. I did not receive the letter until last night at half past eight o'clock. I think the house will understand very clearly how that came to be

when I give to them the particulars which appear from the envelope, and also from what they know of the proceedings in the house yesterday. The letter is dated March 10, 1944. It bears the postmark, "Toronto, March 10, 11.30 p.m., 1944, Ontario"—11.30 p.m. on March 10, which was Friday. It could not possibly have reached Ottawa until late on Saturday at the earliest. The probability is it came on the following day but the Ottawa date stamp is not on to so indicate. The letter would not be sent to my office until Monday morning. But on the envelope it is also marked " personal." My secretaries follow the custom of putting by themselves letters marked "personal," so that when I have had a chance to get through with public communications I may personally look at the letters so marked.

I had no chance yesterday even to look at communications that came in dealing with public business generally until late in the afternoon. I had important matters to take up in the cabinet and I had the statements that were given yesterday, one regarding the wages control order as well as the other on beer restrictions which I had to look over and further revise. I also received from the leader of the opposition (Mr. Graydon) a communication intimating that he wished to ask a question respecting the communication from Mr. de Valera. The result was that I did not get an opportunity even to have any luncheon before I came into the house. I made the statement I did without any knowledge whatever that there was a communication from Mr. Drew. At about half past four or five I went to my private office here and had a cup of tea and a sandwich—not a glass of beer and a sandwich, but a cup of tea and a sandwich. I was kept in the office until after seven at night. When I got back to my residence I found some personal letters. I took advantage of the opportunity to have a bit of a meal first, and afterwards I opened and read the letters marked " personal." The first letter I noticed on the top was one from the Premier of Ontario, which I have in my hand and which is marked "personal."

With all due respect, I say that this particular statement:

> It is typical of Mr. King that he failed to inform the people of Canada at the same time that I had written to him last Friday. . . .

—is hardly the kind of comment that one would expect in the circumstances.

Mr. HANSON (York-Sunbury): Sounds like a tempest in a beer pot.

Mr. MACKENZIE KING: Then further:

> I presume I am to accept to-day's announcement as his idea of an appropriate reply designed to encourage cooperation.

All I wish to say as to that is that I do not deal with public business in that particular way.

Mr. GORDON GRAYDON (Leader of the Opposition): Having heard the explanation of the matter covered by the Prime Minister, I should like to say this. The Premier of Ontario could hardly be held accountable for the office arrangements of the Prime Minister of Canada, and it seems to me, while we must respect the explanation which has been given by the Prime Minister with respect to his not having received the letter, nevertheless I think the house and the country will be in agreement that the statement made last night by the Premier of Ontario, having in mind the fact that he had on Friday sent a letter to the Prime Minister, was in every respect a proper and an appropriate statement to make. I hope that the Prime Minister will not attempt, because there is a Progressive Conservative government in Ontario, to pick unnecessary fights with the Premier of Ontario.

Mr. MACKENZIE KING: May I say to my hon. friend, I hope he will not attempt to make a lot of petty party politics out of this particular matter.

Mr. HANSON (York-Sunbury): What are you doing?

Mr. MACKENZIE KING: I am seeking to conduct this discussion on the plane on which it should be carried on. When my hon. friend says to me that the Premier of Ontario is not responsible for the arrangements of my office, may I tell him that the Premier of Ontario, if he has a letter which is a public communication that is being sent to the Prime Minister to be read immediately, should not mark that letter "personal". More than that, if he attached importance to the letter, he could easily have sent me a telegram informing me of its dispatch or sent the letter by air mail or special delivery. I hope the day will never come when, so far as office arrangements are concerned, I am to be expected to have all my personal mail opened by secretaries to be dealt with before I have any opportunity of dealing with official business. So far as the statement made by the Premier of Ontario is concerned, all I can say is if the circumstances had been reversed and I had been communicating with Mr. Drew and had felt the matter important enough to refer to publicly, before imputing

motives, I should have taken care to inquire, first of all, whether my letter had been received, and if not, what the reasons were.

NAVAL SERVICES

AWARDS FOR GALLANTRY

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): As I promised last week, I now table a list giving the names and addresses of 452 members of the Royal Canadian Naval Service who have received awards for gallantry or mentions in dispatches since the beginning of this war, together with a further list giving the numbers of non-operational awards.

Mr. KNOWLES: May I inquire whether the list of names which the Minister of National Defence for Naval Services has tabled will be included in to-day's *Hansard* as was done in the case of the Canadian Army and the Royal Canadian Air Force?

Mr. MACDONALD (Kingston City): I prepared the list in response to a request from the leader of the opposition (Mr. Graydon). I think I stated last week in my introduction to the naval estimates that I intended to put the table on *Hansard*. With the consent of the house it will go on *Hansard*. I assumed that the consent would be granted.

The list of names and awards follows:

OPERATIONAL AWARDS

O.B.E.	20
M.B.E.	10
B.E.M.	32
D.S.O.	7
D.S.C.	49
D.S.M.	29
Conspicuous Gallantry Medal	1
